of Madras have agreed to the promotion of such companies and will be a partner in them formally taking a share equal to that of the Central Government. Existing operators will not be subject to any pressure to join such companies or to discrimination if they refuse, but it is hoped that the manifest advantages will be sufficient persuasion. Such a company would be protected from competition, to the extent that if all the present road operators joined it and so it held a *de facto* monopoly new permits would not be given to any new operator on the route in question. On routes operated by both a joint road rail company and private operators Government would normally offer any additional permits to the road rail company.

APPENDIX IV.

[Vide item 11 at page 1521 supra.]

To

THE HONOURABLE THE LEGISLATIVE ASSEMBLY,
MADRAS.

THE SELECT COMMITTEE appointed to consider the Madras Essential Articles Control and Requisitioning (Temporary Powers) Bill, 1946 (L.A. Bill No. 2 of 1946), have the honour to make the following report.

2. This Bill was published in the *Fort St. George Gazette* (Extraordinary), dated the 29th August 1946.

3. It was referred to the Select Committee on the 5th September 1946 with the instruction that its report be made on the 9th September, 1946.

4. The Committee met on Sunday, the 8th September 1946, both in the forenoon and in the afternoon and considered the Bill clause by clause. No substantial amendments have been made in the Bill as introduced in the House, and the few amendments made are of a simple nature. Mr. N. S. Varadachari and Mr. V. I. Muniswami Pillai took strong objection to the punishment by imprisonment for contravention of provisions of clause 7 of the Bill, and they wanted their objection to be recorded.

5. The Bill as amended is annexed.

T. PRAKASAM,
Chairman.

8th September 1946.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Inter-bank call money is nominally quoting ¼ per cent; and, by every indication, banks are chockful of funds. There is hardly any taker of new money while bankers, quite condescendingly, may accept renewals. It is now announced that Calcutta exchange banks will allow as from July 1, only ¼ per cent on Government account balances. This may be said to provide an eloquent commentary both on the present money market situation and on the finances in the present war. Time was, and it was not so long ago, when interest allowable on current account credit balance was 2 per cent. Till two decades ago, most banks paid 2 per cent while a few banks allowed 2 per cent in the slack months and 3 per cent in the busy season. It was then possible to fix up special arrangements whereby, if the current account balance was maintained over a minimum of, say, Rs. 5 lakhs, interest as high as 3 per cent was paid throughout the year. Nearly 10 years ago, the interest on current accounts was reduced to 1 per cent. It was expected that the reduction on current account interest from 2 per cent to 1 per cent might adversely affect the flow of deposits to banks. This apprehension proved unfounded; far from deposits coming down, the last few years have witnessed a sensational increase in the funds placed with banks. The interest was reduced to ½ per cent two years ago. This, too, did not stem the spate of deposits. It may be safely said that the present reduction to ¼ per cent will likewise make no difference.

The most noteworthy feature of this war is the continued prevalence of cheap money. That money conditions have remained easy more or less throughout the 34 months of the war, could not cause any surprise to readers of "Indian Finance". Both on the eve of the war and after the outbreak of the war, *Indian Finance* proclaimed with clear conviction that this war should prove clearly different from the previous wars from the point of view of the money market; that funds would be in plethoric supply; and that giltedged prices would rule at top levels. The expression of views so diametrically opposed to the experience of all wars in history was not calculated to receive ready credence. Most people were prepared to admit the originality and daring of our forecast of monetary and giltedged conditions; but the general view was that it was too optimistic and too good to prove correct Among the many changes which the time-spirit has wrought, the most notable is what we may call the exchange of boots between the 'haves' and 'have-nots'. In the old days, it was the lender that held the whip hand. It is the present-day borrower that dictates the terms. This kind of change has spread to other relationships also. The debtor has now come into his own as against the creditor; the tenant as against the landlord; labour as against capital; masses as against classes; and, may we add, feminines as against masculines. In this transformation, little sympathy will be felt for the vested interests who have thus been given a sound shaking; and we may discern a juster order of things.

With respect to the money and giltedged markets, however, what has affected the change is not any keen sense of justice. It is the perfection of the technique of control and regulation on the part of the Government, aided and abetted by the central banking authorities. There is conscious and scientific pursuit of a correct technical policy and practice of correct technical methods in countries which have well developed money market organisations. We cannot claim that India has any greatly developed money market sense or money market regulation. But the repercussions on the Indian money market of the influences at work in the London money market have all conspired for cheap money and dear giltedged. Moreover, the intrinsic factors in the Indian money and giltedged situation are more propitious for cheap money and dear giltedged than they are even in London.

This is the second week during which tender bills for Rs. 8 crores were offered to the public. The bidding was not as big as in the last week; but the bidding seems to have been keener. Applications received on June 30, were Rs. 14.29 crores and Rs. 16.99 crores on June 23. The average discount rate was only annas 10 and pies 9 per cent per annum as compared with 12 annas and pies 5. In view of the lower rate at this week's auction, the Reserve Bank authorities have properly decided to maintain the next week's offer of tender bills at Rs. 8 crores. There is every reason to believe that banks will evince as great avidity as now for the past few weeks. The deposits of scheduled banks with the Reserve Bank have risen from Rs. 61.13 crores on June 19 to Rs. 62.72 crores on June 26. The expansion of cash is particularly noticeable in the Imperial Bank statement. Cash in hand and with banks on June 26 was Rs. 36.05 crores against Rs. 32.20 crores on June 19. A new altitude of deposits is achieved by the Imperial Bank at Rs. 133.88 crores. It is remarkable that, while treasury bills in the hands of the public were over Rs. 65 crores at the end of last week, balances maintained by banks with the Reserve Bank were as high as Rs. 62¾ crores.

The statement of the Reserve Bank for the issue department for the week ended June 26 discloses currency expansion for Rs. 5 crores against transfer of sterling securities from the banking department to the issue department. The latest figure for sterling securities in the issue department is Rs. 261.85 crores. Active note circulation sets up a new record at Rs. 443.19 crores as against Rs. 439.00 crores. Rupee coin shows a further rise from Rs. 26.37 crores to Rs. 27.56 crores. As on the last occasion, we may repeat on the present, that the increase of the rupee coin held by the Reserve Bank is most probably due to the delivery of one-rupee notes by the Central Government.

The closing rates are: Banks buy T. T. London Ready to six months forward at 1s. 5 31/32d.; banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks sell three months D. A. bills for first and second months at 1s. 6 9/32d., and for the third and fourth months at 1s. 6 5/16d.

Money is easy with interbank call at ¼ per cent.

Firms' money for one to four months' deposits is also ½ per cent.

Banks buy T. T. New York Ready at Rs. 329½ for $100.

Banks sell T. T. New York Ready at Rs. 332¾ for $100.

Government of India

3 per cent. Loan 1951-54 (2nd Issue)

(Third Defence Loan)

Redeemable at par not earlier than 1951 and not later than 1954.

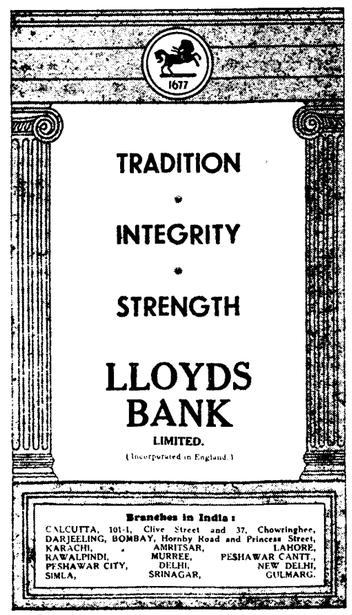
Subscriptions in *cash*, unlimited as to amount, will be received from 8th July, 1942 until further notice.

The issue price from the 8th July, 1942 to the 11th July, 1942 will be Rs. 100-10-8 and thereafter increasing by 8 pies per cent. weekly. This weekly increase approximates to the net interest which accrues on the securities.

Copies of the Notification and Application Forms will be available at the offices of the Reserve Bank of India, Bombay, Calcutta, Cawnpore, Delhi and Madras, at branches of the Imperial Bank of India at other places, and at all Government Treasuries.

Finance Abroad

Thursday Evening.



The disaster in North Africa will affect oil shares rather than gilts, shape the prices of Kaffirs rather than Home Rails, mainly because the rate of interest does not move, and long or short be the term, the money is available. No stringency, indicative of a crisis, was in evidence last week; and the cue has been taken in India. The London money market is steadier than ever, but the rate of exchange for the Egyptian pound must have moved slightly at least. The advance into Egypt must have had effects on the exchange and cotton markets. It is no longer a threat but actual invasion. Bombay has plumped for gold again in the old way but that is of no significance as compared with the desire shown in London to keep funds idle and restrict buying of bills last week. Last week there was no taking of bills but call loans were as usual to be had below one per cent. The demand for treasury bills was keener and the rate of allotment went down. The Treasury took £40 million in deposits in addition to £75 million in 3 months' bills last week as also this week counting as usual on the market ignoring the debate and Sebastapol alike.

The exchange market is unaffected by the war and the same holds good of India where foreign currencies are anchored. Home Industrials are clearly untouched by war developments, and it is only the movement in the Funds that shows any sign of feeling. The Banks have plenty of funds; the note issue is rising and the Bank Return hardly provokes any comment. But everything is unimportant compared with another block grant for aid to Russia. Last August the Treasury put up £10 million, this time the grant is bigger at £20 million because the danger is greater. As it is presumed generally there will be no reckoning with after the war, one need not talk of what return Russia can give the Allies. Congress has not pronounced on Mr. Roosevelt's views on lease-lend in working. Mr. Lippman's views have been cabled. He does not like collecting debt when the debtors have suffered heavily. He also wants lease-lend to continue after the war for reconstruction in peace. All for the good of the U.S.A. which has got to prosper only when others can buy. That means there will be no collection of money from China. The foreign debt of China must be regarded as dead by now, and recent measures to unify and strengthen the note issue are part of the Allied plan of help. Last year China had her exchange stabilisation; this year she gets a single bank of issue and makes the paper money coherent. The Chungking plan is simple. It goes back to the Charter Act of 1844 passed in England to give the English bank note the backing it deserved. The other banks of note issue (two have branches in India) go out and their notes will be merged in the reorganised note issue. The message received this week is curt, but it shows a part of the plan to keep China going. The Allies want to keep the Far Eastern front, and British loans this year have certainly been larger than anticipated and there is no difficulty about assistance from banks as in 1938-39.

The Chinese note issue has expanded enormously in wartime and borrowing had become difficult for Marshal Chiang by the start of the Pacific war. After the monetary reforms of 1935-36 China has been on a paper standard and it is only the question of getting reserves of foreign exchange that interests the outer world. Assistance under lease-lend makes China independent of exchange and the monetary problem was solved in reality by the Japanese attack on America. The real question now is one of routes from India and of developing local production in the near future.

Few utterances have excited so much comment as Mr. Macmillan on the colonies' need for goods. The African colonies have been neglected long. They want goods but import control is general. So Britain must sell goods or make grants for the benefit of the colonies. The idea of sacrifice is inherent in the theory of the dual mandate. Lord Swinton has clearly been sent to West Africa to keep Britain in touch with Africa's needs. Guarantees for the cocoa crop are nothing as compared with West Africa's needs. Rubber output has to be developed; so also tin mining. Gold production has developed since 1934 when the 'Jungle' issues got popular in London. It is now the Freetown and Monrovia—memorials of rubber and tin from the Congo and the British colonies. The Colonial Governors can work without the help of the Colonial Office, but Britain must pay the natives in goods; and India may win more markets in Africa than seemed possible after the spate of import regulations last year. The really important struggle with Vichy is for Dakar on which one eye must be still kept. The U.S.A. is interested in Africa because of Freetown and Monrovia—memorials of Abolition. The major financial development is still the rise in U.S. public expenditure. The Governors are all backing the Administration which got 66 ships out in a single month and is not deterred by spending billions on the war. The year 1941-42 saw an all-time high but this year the Federal

(*Continued on page 21*)

STOP PRESS.

Saturday Morning.

A Government of India Notification, issued this morning, announces the issue of the third Defence Loan.

The Third Defence Loan is in the form of a second issue of the three per cent 1951-54 loan. It will be remembered that the three per cent 1951-54 loan was issued in August 1935. The total amount outstanding on this loan is Rs. 31.92 crores. The present market quotation is Rs. 98-10.

The issue price for this loan which is now being issued as the third defence loan is Rs. 100-10-8 from July 8th to July 11th 1942 and will thereafter increase by 8 pies per cent every week. This weekly increase approximates to the net interest which accrues on the stock. The issue price of Rs. 100-10-8 includes interest for sixteen weeks amounting to ten annas eight pies. That is to say, the loan is being issued at par.

The issue price at Rs. 100 compares with the market quotation of Rs. 98-10. This is a most satisfactory feature, as the high issue price must have an immediate effect in putting up the market price of the stock to par, and in generally levering up giltedged prices.

The reception which the new loan will thus get in the market will ease considerable buying pressure and cause an all-round advance in prices of Government securities and promote a confident outlook.

It is the ideal setting for the success of a new loan.

For years and years, *Indian Finance* has been raising the plea that the aim in respect of each loan must be to create such a setting. This is the first new loan in regard to which *Indian Finance* can feel fully satisfied as the technique which it has been suggesting is completely adopted.

The new loan planning of Sir Jeremy Raisman has uniformly showed technical adroitness and a correct sense of market psychology. This is further borne out by a comparative study of the three Defence Loans.

The essential fact about the three Defence Loans is that all of them are on a 3% basis. Sir Jeremy has taken care so far as India is concerned that this is a 3 per cent war.

The first Defence Loan was an essentially a short-term loan being a 1946 loan issued at par and repayable at Rs. 101.

The second Defence Loan was half way between a short-term and a medium-term being a 1949-52 loan issued at par and repayable at par.

The third Defence Loan, now announced, is a medium-term loan, being a 1951-54 loan, issued and redeemable at par. The period of the loan has thus been skilfully fixed; and each loan is more favourable to the Government than its predecessor.

This, we may add, is an essential condition for the continued strength of the giltedged market.

The third Defence Loan has been well-planned. The groundwork has been well prepared; and we have more than once referred to the open market operations devised to this end. Above all, the new loan is well-timed. Banks are now loaded with swelling funds. Deposits of member banks have touched the highwater mark of 62¾ crores, in spite of the floating debt exceeding the 65 crores mark.

By all tokens, the immediate response to the loan must be extremely gratifying. It is quite possible that any adverse development in the battle of Egypt may upset initial calculations. But as has occurred after the surrender of France the capture of Crete and the entry of Japan into the war, political shocks have, in the present war, only temporary effects. The long-term influences in the giltedged market are all healthy and make for full prices; they have again and again proved irrepressible. They cannot be shaken by the Battle of Egypt.

Sweet Bitter

The speech delivered by Mr. D. R. Narang, Vice-President, at the extra-ordinary general meeting of the Indian Sugar Syndicate is in the nature of a swansong.

As part of wartime measures, various controls have had to be set up; and the interests affected as well as the general public have, on the whole, accepted the controls without demur. Some controls like those of exchange and steel have been functioning with comparative smoothness; and this, perhaps, is due to the smaller number of vested interests embraced in these controls. Tea control has been efficient from the point of view of war requirements and agreeable from the point of view of the tea industry. One of the controls which has given rise to dissatisfaction in the industry and to discomfort among the public is the sugar control.

Yet, one would have thought that sugar industry, because of the various regulations, governmental and otherwise, to which it has been subjected in recent years, will lend itself admirably to control. In broad terms, the sugar industry may be viewed under two categories. The sugar factories in Bihar and the United Provinces belong to one category; and the factories in the rest of India come under the second category. So far as the factories in Bihar and the United Provinces are concerned, they have been under some manner of control or other for over five years. The worst feature of the rapid expansion of the sugar industry in the last decade was the overcrowding of factories in Bihar and the United Provinces. This created various complicated problems. To solve which, the concerns affected realised that they should pull their weight together. In answer to this widespread feeling, the Indian Sugar Mills Association was started. Soon followed the creation of the Indian Sugar Syndicate.

Even while the Syndicate had a purely non-official status, it played an important part in effecting a great deal of co-ordination among the sugar factories in Bihar and the United Provinces.

The Governments of Bihar and the United Provinces realised, in due course, that their revenue was largely bound up with the fortunes of the sugar industry. This industry seemed specially destined, on the one hand, for a career of vicissitudes and, on the other, for recurring imposition of taxes by the Central Government. This led to the Governments of Bihar and the United Provinces deciding to intervene in and regulate the sugar industry in a variety of ways. The climax was reached when the Sugar Control Acts were placed on the statute book. This means that, in many ways and at various stages, the sugar industry in these two provinces became a largely state-controlled industry. One of the essential features of this control was the conferment of an official status on the Indian Sugar Syndicate.

It is not possible to say that, either while it was a non-official body or while it was an organisation with an official status, the working of the Indian Sugar Syndicate was all that it could be. Some of the activities of the Syndicate came in for criticism now and again. There was also internecine quarrel among the members of the Syndicate. These developments were responsible for the Governments' decision to remove the Syndicate to Cawnpore and to appoint a full-time executive official, in regard to whose appointment the governments had an important say.

It thus happened that the industry was having less and less influence in the Syndicate and the governments more and more influence.

Taken all in all, the Indian Sugar Syndicate has an impressive record of achievement. It has certainly brought in a large degree of unity and common purpose among members who are disposed to pursue individualistic and even selfish policies. It has accustomed member to abide by the system of quotas. It has regularised selling policies and made possible bulk sales. It has greatly rationalised the marketing plans. The working of the Syndicate has resulted in due regard being paid to the four interests connected with the sugar industry, namely, cane-grower, labour, capital and consumer. The fixation of minimum price for sugar has been a boon to the cultivator while the public have certainly been getting their sugar at reasonable prices.

At the threshold of this war, the Sugar Syndicate was, thus, in the process of making those changes and adjustments which the mistakes of the past had suggested as necessary. It is in such circumstances that the Central Government have deemed it necessary to establish sugar control and appoint a sugar controller. While sugar control may have to be accepted as unavoidable, and the appointment of a sugar controller inevitable in the circumstances, it is difficult to see why the Syndicate is not being utilised as one of the organisations for giving effect to the control scheme. Mr. Narang claims that, if this had been done, there would have been greater chances of sugar being sold at the controlled rates and sugar being distributed properly throughout the country. In the light of their past record both with regard to prices and distribution, Mr. Narang's claim must be said to be well-founded.

The Government, however, seem to have taken an opposite view and paid more heed to the views of the representatives of the merchants, who advised control of prices and distribution of the product through recognised dealers and through the provincial price control authorities. The advice tendered by the merchants has, it is now realised, been totally unsound. The control order, far from making sugar available to the consumers at reasonable rates, has brought about a famine for sugar; and, everywhere, there are complaints that either sugar is unobtainable or it can be had only at exorbitant prices. With regard to the prices and availability of sugar, there now reigns intense chaos in every part of India.

For our part, we believe that a serious mistake has been committed by the Government in rejecting the offer of the Indian Sugar Syndicate to work as one of the executive agencies for the control scheme. And, we believe, it is not too late to rectify the mistake.

The Indian Sugar Syndicate is dead: Long live the Indian Sugar Syndicate!

AFTER THE WAR

To formulate aims and express desires is the least part of the vanity that overtakes all nations in time of war. Plans for building from the ground level, like plans for underpinning the most ramshackle edifices are so common that people are apt to ignore them as unrelated to existing achievements or present problems. It is, however, strange that when the compromise with totalitarianism has proceeded far in Britain the most familiar of post-war plans should dwell on the virtues of freedom. The status quo ante still casts a spell. At the annual meeting of the Federation of Chambers of the British Empire, held recently, Lord Dudley the President said that the Federation was ready to forward to overseas members a copy of the report on post-war economic reconstruction issued by the Associated British Chambers which memorandum is incidentally treated as a plea for bringing back the old order as far as possible, though the items are impressive in their way. The shifts and turns of wartime are, in the main, viewed as inapposite, and all private enterprise wants to have a clear run after the war. It is not unlikely that Indian businessmen are of the same way of thinking. They might think justifiably that if the class war and social reform alike fail to appeal as convincing slogans at present, they might yet hope to make the most of an undying and ardent economic nationalism While it is generally agreed that economic or other nationalism has no place in the world, the Anglo-American trade agreement wants to break away completely from the various restrictions that produced the depression and led to the war. To that extent, it is a return to the old orthodoxy, an orthodoxy that has scarcely impressed Indian opinion which is always apt to discuss aims in relation to probable needs. We must, therefore, start by discussing reform and reconstruction in terms of post-war needs. The probable effects of the war, still in the making, will determine the nature and quantum of reconstruction. Peace may not be produced by economists; it cannot be divorced from economics either. War demands munitions, tanks, locomotives, surgical supplies, etc., but they are wholly unrelated to peace, and none of us should mistake the expansion associated with the Supply Department's activity as in any way calculated to produce permanent benefits. The pacifist ideal may not command much support, but the idea of waste associated with all wars must not be discarded. All the present ordnance factory expansion, shell manufacture and making of uniforms is utterly divorced from gainful activity. The major job will be to make good the waste and loss of the war period. To that extent, economic progress is abruptly broken and sacrificed to the war.

Part of the industrial progress recorded in the war years in India may be really permanent, not because of inherent merits or advantages, but through the inability of old rivals to come back. Local enterprise may make good in the post-war period, even if tariff advantages are withheld. The old rivals of course are prepared to win back and hold their old position. It is the last possibility which excites more alarm than either the damage done to established industries or the setback to normal activity. Recent expressions of opinion, which must be interpreted as authoritative, have concentrated on the incompatibility of objects set forth in the Atlantic Charter as regards open access, interpreted in turn by Lord Halifax and Mr. Welles in February, and India's own ambitions. They do not converge on the sacrifices entailed by the war, or the loss actually occasioned by high taxation, soaring prices, lost investments and the inadequacy of measures taken to meet the immense demands of reconstruction. Estimates of war time progress detail the progress of the Indian machine tool industry, the beginnings of shipbuilding and repairs, without indicating whether the progress is likely to be permanent This alone provokes fears of a post-war slump. The war and all its effects are viewed as unrelated to the original trend and the successful establishment of substitutes in former markets makes many take a gloomy view of post-war prospect in export trade. The restoration of old standards of living is going to be more than ever difficult in the East. The Colonial markets are lost for both India and Britain, because they will be in poor condition after a late victory. If all available capital is drained by borrowing for the war, as may be inferred from the absence of new issues, it is highly improbable that India can get her new industries. A state of dependence on imports is disagreeable; hence the demand for planning now, for adoption of U.S. methods and all-out effort. But due regard must be had to the factors that make for the restoration of normalacy. If food crops displace cotton and oilseeds in the future, the reduction in the post-war quantum of foreign trade can be safely ignored. If the mills take all the cotton grown in India, and textile imports are displaced for good, the effects of peace on employment and profits in the mills will be negligible. If the growth of capital and enterprise alike is checked by present rates of taxation, there will be few infant industries struggling for assistance. If Poland and Japan alike are debilitated, the Indian woollen industry will have few anxieties; if the leather and rubber industries develop rapidly the hides and skins and rubber exporter will switch over to the home market. The permanent handicaps that will be thrown on Germany and the Occupied countries after the war, which will limit reconstruction in Europe, are sure to help iron and steel manufacturers in India. The large food reserves held in America against the return of peace will divert shipping away from India and check general imports while enlarging the demand for jute manufactures. If one chooses to think out resolutely what will come, should peace return swiftly, one might even venture to say that, except for a change in bullion prices conditioned by Anglo-American agreement as to exchange, there will be no grave shock to Indian trade and industry. The position won in markets like Afghanistan by Indian sugar will be retained, because Java and Russia alike are incapable of returning as suppliers to countries east of Suez. In regard to coal, cement and paper, the export trade of India should in effect increase rather than decrease owing to the post-war demand in the East. Present difficulties in regard to liquid fuel would certainly disappear, and such industries as power alcohol production would probably take a knock. Specialised war production also would naturally suffer but normal peacetime demand is enough to keep iron and steel going as also minor industries like glass and cutlery. They have chances of coming out alive. If the flow of fresh capital is checked by the war itself, it is not without benefit to older enterprises which have no fears of overproduction to haunt them. What may perhaps be demanded is a skilful diversion of investment in the post-war period mainly to keep alive the promising younger industries while allowing the Government to liquidate its own factories engaged in war production. Disarmament will be a bigger industrial factor than it is known. The larger reserve of trained artisans, if diverted to peaceful enterprise, will prove to be an asset in raising the average efficiency of labour. Indian enterprise would admittedly gain in that way, and the difficulties in the way of oversea investment would help to keep out foreign combines. Local industries would have a fair field. There is in reality no justification for pessimism and some ground for optimism actually exists. Neither plenty nor penury is to be expected under peace. Government's present indifference to rapid industrial advance and mass production may be based on the calculation that it is a mistake to take any leap which Nature avoids. An extensive scheme of subsidies for new plants would be a fiscal burden, which India cannot shoulder, and the few who are alarmed by evidence of Anglo-American co-operation should be aware that Latin America presents greater opportunities to the U.S.A. when European rivals are in retreat.

But after the carnage and waste, the enormous cost and the bill to pay, the post-war prospects may not be inviting, but it is not one of unrelieved gloom. Prospects for all plantation industries including cocoanut are much better, and the food planning drive, with its decisive effects on national nutrition may influence both poverty and health. To suggest that the losses in Burma outweigh all conceivable gains is to miss the significance of the establishment of basic industries like aluminium in India on the rapid development of heavy chemicals—neither of which can be threatened by the advent of peace. Though the addition to India's wealth cannot be gauged by regular imports of treasure as in the last war, there is the repayment of external debt (and presumably the purchase of foreign interests in Indian concerns) which confers greater stability on the rupee exchange and makes any impending reduction of the balance of trade of little consequence. Like the prosperity of the older industries, still in evidence, it is of vast potential benefit, for a reduction under debt and merchandise imports means a reduction in invisible imports as well, and puts an end to the drain that has always put consumption askew. A post-war glut is not to be dreaded because readjustment of living standards is already taking place. And the only other feature to which attention may be drawn is the present shortage of many goods and possibly the re-stocking that will begin when war ends. That is again of primary interest to Indian industrialists since it implies a maintenance of demand and prices when the present official support is lacking. What is more important is that there has been no large irregular diversion of resources or equipment as in Britain. After war recovery is likely to be facilitated by that single fact rather than by the conversion of war equipment to peacetime uses, though that consideration will be stressed in any attempt to strike a balance.

NATIONAL INSURANCE COMPANY, LIMITED

Directors' Rerort For the period of of 12 months from 1st January to 31st December, 1941.

The Directors have pleasure in submitting their *Thirty-fifth Report* of the Company's operation together with the Audited Revenue Accounts and Balance Sheet as at the year ending 31st December, 1941.

During the year, 8,936 New Proposals under Life Assurance and Capital Obligation Fund were received for sums aggregating Rs. 1,98,49,753 and for Annuities of Rs. 916/- per annum. Of this number 7,456 were accepted and resulted in New Policies including one annuity of Rs. 420/- per annum. The total sum assured is Rs. 1,67,60,178 including sums reassured of which the sum assured under Capital Obligation Fund is Rs. 13,57,524. The rest were either declined or accepted on terms which have not been agreed to by the proposers, or are awaiting completion. The net Annual Premium Income attaching to the New Business for the year after deduction for sums Re-assured is Rs. 7,98,556-3-0.

During the year claims on account of death have been presented for an aggregate sum of Rs. 10,57,774-11-6 and the further sum of Rs. 17,08,293-0-0 became due in respect of matured Endowment Assurances.

The Life Assurance Fund now amounts to Rs. 3,69,81,039-8-5 as compared with Rs. 3,46,35,456-12-3 at the beginning of the year. The funds have thus increased during the year by the substantial sum of Rs. 23,45,582-12-2. The Capital Obligation Fund stands at Rs. 6,18,632-15-0.

The total Interest Income of the Company on its investments was Rs. 15,88,511-3-2 after deducting Income-Tax. The ratio of Expenses of Management to Premium Income in the Life Revenue Account is 26.4%.

During the year the Valuation Report of the Company for the quinquennium ending 31st December, 1940 was published and showed a surplus of Rs. 1,30,677 which was carried forward uappropriated. Provision was made for an Interim Bonus in respect of policies maturing for payment subsesuent to the Valuation date and before the next Valuation is made at the rate of Rs. 15/- per thousand on Whole Life Assurances and Rs. 10|- per thousand on Endowment Assurances in respect of each policy anniversary that may have been passed subsequent to the Valuation date.

During the year Mr. K. B. Ghose resigned his seat on the Board owing to illness and the Directors accepted the resignation with regret.

Mr. J. Chaudhuri and Mr. G. P. Dutia retire from the Board of Directors by ratation and being eligible offer themselves for re-election.

Mr. J. P. Dutia, Lala Yodhraj Bhalla, Mr. G. K. Khemka and Mr. Susil C. Sen were invited to join the Board since the last Annual General Meeting and in accordance with the provisions of Article 92 of the Articles of Association they now retire and being eligible offer themselves for re-election.

As for the Policy-holders' Directors, notice for holding the Meeting on 27th August, 1942, for the selection of 3 Policy-holders' Directors has already been published and the Meeting will be held accordingly.

The Auditors Messrs. Batliboi, Purohit and Darbari retire and offer themselves for re-election as Auditors for the current year.

The Directors recommend the payment of Dividend of 6% free of Income-tax for the period under report payable on or after 12th June, 1942.

The Directors wish to record their appreciation of the work of the Agents of the Company and of the Officers and Staff at Head Office and Branches.

At the closing of the year our Kuala Lumpur Branch had ceased to operate owing to enemy occupation of the area. Subsequently our Rangoon Office suffered the same fate. The business of both Branches is being carried on by Head Office in respect of Policy-holders who have escaped from or are not resident in the area. The Assets of the Company affected are a very insignificant proporation of the total assets of the Company. The only physical possession secured by the enemy is our Rangoon Building which is, we believe, undamaged so far.

Statement pursuant to Section 132A of the Indian Companies Act of 1913 as amended by Act XXII of 1936:—The National Fire & General Insurance Co., Ltd., has not declared any dividend during the period uder repoort and the credit balance of the Profit and Loss Appropriation Account has been carried forward in the Accounts of that Company.

NATIONAL INSURANCE COMPANY, LIMITED

Presiding at the Thirty-fifth Ordinary Annual General Meeting of the Company, held at the Company's Registered Office, No. 7, Council House Street, on the 11th June 1942. Mr. J. Chaudhuri, The Chairman said :—

GENTLEMEN,

The Report and accounts have been circulated and you will no doubt desire that, as usual, they should be taken as read. It is, I think, a very remarkable thing that the Report and Accounts for the year ending 31st December, 1941—the third report to be issued during the greatest war of History—is so normal. If at the out-break of War a forecast had been made as to the distinctive features that might be expected in this Report to be presented nearly 3 years later, it would probably have been foretold that there would be much lower new business, a very much higher rate of interest and therefore considerable depreciation and probable evidence of the strain of adverse mortality. In fact, none of these things have happened. The sum assured of our new business is only 9 lacs less than in 1939. The rate of interest yielded on the average Life Assurance Fund is exactly the same as it was in 1939. No depreciation has had to be provided for. We have not experienced any appreciable war mortality. Our expense ratio this year is 26.4 as compared with 29.4 in 1938, 28.8 in 1939 and 27.4 in 1940.

In fact, the only indications of war to be found are the references to the enforced cessation of our Kuala Lumpur and Rangoon Offices owing to enemy occupation and increased payments of surrender values. The amount paid by way of surrender is 6¼ lacs whereas in 1938 surrenders were 3½ lacs. A part of the increase is of course due to the normal growth of the business but the major portion represents surrenders consequent upon war conditions. That many of these surrenders have been forced upon our policy-holders owing to the sufferings they have had to undergo is obvious but I am sorry to say that another appreciable portion arises from policyholders in areas untouched by the war operations and are due to the alarm and insecurity from which the country has suffered. I think that the normality of the report and Accounts should be a reassuring factor against that public insecurity.

From the entry of Japan into the War your Board had to consider the possible effects of invasion of India—now happily less imminent, although it cannot be ignored—and they have taken such special precautions as seemed to them possible and desirable to conserve the administration of the business of the Company during any emergency that might arise. I will not touch on the controversial subject of evacuation of offices nor will I for obvious reason give details of the steps that have been taken but our policy-holders can rest assured that by the maximum possible duplication of records and special arrangements for decentralisation in emergency their interests are protected so far as practicable. The Board recognises that continuation of business as usual by every large Life Office is a material factor in preserving public confidence and allaying panic. The Board has been fully conscious of the responsibility which lies upon it in this respect.

The precautions that have been taken against emergency have of course involved the Company in a measure of expense. These expenses will be included in the Accounts for the current year.

This is not the place nor will you expect me to make any forecast as to the future. That the tide of Japanese aggression is turning is obvious and as the United Nations gather their strength and their almost unlimited resources of supply, the Nemesis falling upon Japan is likely to be swift. The East cannot be considered apart from the West but in the West also the tide is turning.

As the writing on the wall becomes plainer and the crushing of this uprising of aggressive force more inevitable, world-wide insecurity will disappear. We may then see more clearly that never was there better ground for sober optimism than the present moment. Out of the evil of this War comes social developments sought unavailingly throughout the ages. It is not too much to hope that Privilege already dethroned by the exigencies of War in several portions of the world may not be re-established and that the Rights of the individual may rank higher than the demands of the profit motive. In the moral world revolution that is going on, the public service of Life Assurance must prosper as never before. The interest of the policyholders in a Life Office must always be the deciding factor in proper management. The future as it is now shaping itself will compel even greater consideration of those interests than in the past.

There are, I think, two principal needs of every Life Assurance Office at the present time. Firstly, a calmer and less alarmist feeling amongst the public—greater public security in fact—and secondly, avoidance of the development of inflation. *In both these matters* the wise conduct of Life assurance bodies can and do assist. I have already pointed out that the report and accounts now before you evidences the continued security of a Life Office. Every Life policy maintained and every new policy effected is a help towards the avoidance of inflation by absorption of some of the spending power of the country so greatly increased by industrialisation through *War Industry*.

I, therefore, urge our Agents to greater efforts despite the difficulties of the time and I invite every policyholder to put before his friends the advantages and security derived from a Life Policy. Every policy maintained and every new policy effected is of assistance to the people and to the country.

NATIONAL INSURANCE CO., LTD.—BALANCE SHEET—Contd.

AUDITORS' REPORT

We have audited the Balance Sheet of the NATIONAL INSURANCE COMPANY, LIMITED, as at the 31st day of December, 1941, above set forth, and also the annexed Balance Sheet of the Life Assurance Fund as at the 31st day of December, 1941, and the Life Assurance, the Capital Obligation and the Guarantee Business Revenue Accounts and the Profit and Loss and the Profit and Loss Appropriation Accounts of the said Company for the year ended 31st December, 1941, in which are incorporated Returns certified by the various Branch Managers and Agents, and we have obtained all the information and explanations we have required. In our opinion the above Balance Sheet, the Balance Sheet of the Life Assurance Fund, and the Revenue and Profit and Loss and Profit and Loss Appropriation Accounts have been drawn up in conformity with the Insurance Act, 1938, and the Balance Sheet exhibits a true and correct view of the state of affairs of the Company according to the best of our information and the explanations given to us and as shown by the books of the Company. In our opinion books of account have been kept by the Company as required by Section 130 of the Indian Companies Act.

We certify that no part of the assets of the Life Assurance has been directly or indirectly applied in contravention of the Insurance Act, 1938, relating to the application and investment of Life Assurance Fund.

We have verified the Cash and Bank balances at the Head Office in Calcutta, and, those at the Branches have been taken as per the Returns certified by the Branch Managers, and we have verified the Securities relating to the Company's loans and investments by actual inspection of the documents and Scrips concerned or with the certificates of the parties and the Banks concerned with whom such documents or Scrips were lying deposited.

BATLIBOI, PUROHIT & DARBARI, *Incorporated Accountants, Registered Accountants,* } *Auditors.*

CALCUTTA, 9th *May*, 1942.

We hereby certify that:—

1. The Investments in Stocks and Shares have been shown in the Balance Sheet at Book Values after careful scrutiny of each Sepurity and the market values have been arrived at from the published market quotations.

2. The Values of all the Assets have been reviewed as at the date of the Balance Sheet and that in our belief the Assets set forth in the Balance Sheet under the several headings are shown in the aggregate at amounts which taking into consideration the Investment and Contingency Reserve Fund and the General Investment Reserve Fund do not exceed their realisable or market value.

3. No part of the Assets of the Life Insurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relating to the application and investment of Life Insurance Funds.

Winter Oilseeds

In the final memorandum on the winter oilseeds crop of 1941-42 is shown the area and yield of rape and mustard, linseed etc. in the greater part of India. The largest area under rape and mustard is met with in the U. P. though the Punjab with a million acres under rape is not to be overlooked. The total area under rape and mustard is shown to be 6.2 million acres and the estimated yield of 400 lbs. per acre raises this time the probable outturn in spite of a slight fall in acreage. Total yield is estimated at 1.16 million tons. The linseed crop, which enters largely into India's exports is expected to be smaller than in 1940-41. Total area is returned as 3,340,000 acres showing a fall of 8 per cent. on 1940-41 showing a fall of 17 per cent. The crop forecast provides an adequate explanation for the firmness in evidence since May. In regard to linseed, the major producer apparently is the U. P. though the C. P. alone have over a million acres. Yield, however, is highest in Bengal where the crop this year has been affected by a drought in certain districts, yet the Bengal crop promises to be 10,000 tons more in 1941-42. In regard to rape and mustard, the crop in Punjab threatens to be subnormal though the U. P. the bigger producer at all times is likely to have a crop 80 per cent. of the normal. Among the States listed Alwar is evidently the biggest producer of rape and mustard.

The biggest factor in the linseed situation at present is the serious deficinecy in the C. P. Crop as the average outturn is put at only 56.3 per cent. of the normal. In the Hyderabad State, too, despite an increase in acreage, the crop is likely to be smaller and the U. P. crop, both pure and mixed, is also smaller than anticipated. The acreage figures might suggest that rape and mustard are more important for Indian agriculture and the crop also less liable to fluctuations but linseed is more important in spite of the fact that India's exports in 1941-42 have obviously fallen. The total shipments for the ten months ended January is known to be 187,000 tons as against 238,000 tons in 1940-41. When compared with the pre-war exports of 318,000 tons (shipped in 1938-39) it is clear that the loss of foreign markets has hit the Indian trade. There has been a reduction in acreage since 1939 and the proportion of home consumption to exports of linseed has risen. India is not the only big producer since Argentina with seven million acres under linseed produces usually over 1½ million tons. According to the memorandum the 1941-42 Argentine crop forecast shows an area of 6.77 million acres with an yield of 1.64 tons against 7.1 million acres and 1.44 million tons in 1940-41. Very big increases are reported by the U.S.A. and Canada. The U.S.A. aims to plant 4½ million acres and Canada is likely to return a crop larger than the 160,000 tons harvested in 1941. Since the New World is more than ever self-sufficient as regards linseed and the Argentina crop must determine world prices it cannot easily be argued that linseed prices will stay up. But Argentina has a farm programme and in recent months Plate linseed has often been quoted higher than Calcutta linseed. As regards rupee prices the Bombay quotation is invariably higher and the price for September delivery of late has drawn level with spot. As mentioned already, it is the fall in crop yields and the keen demand from Indian crushers that has impelled the Ministry of Food to modify its tender rates in respect of both groundnuts and linseed.

China's Plans

The Pacific War is said to have caused a change in China's trade policy this year. According to the China Information Bulletin, China looks to India for supplies along new routes still in the making. China does not mind being cut off; she is developing production and markets. The repeal of control measures adopted previously in regard to tung oil was directly due to the war. In May 1942 all restrictions were withdrawn by the Ministry of Finance. The Foo Shing Corporation was authorised to issue export papers to all merchants who were only barred from dealing with enemy-occupied areas. New uses for wood oil were being sought. Mention is made of efforts to repace gasolene by such wood oil. Restrictions on the holding and sale of bristles were withdrawn. No permits were demanded for the sale of tea of occupied areas and the special duties on regional tranractions of tea were also abolished. China's tea crop is to be restricted. The National Tea Corp. A subsidiary of the Foreign Trade Commission, has orders to bring in 200,000 half chests (of 111 lbs.) this year or one-third of the allotment for 1942. They are to be procured from Chekiang, Anhwei, Kiangsi, Fukien and Hunan. The tea corporation has been given 10 million dollars to buy the quantities required at official prices. The Chinese Government aims to raise the quality of tea by renovation of plantations. Steps are being taken to procure the greater use industrially and medicinally of tea leaves and to reduce the size of tea bricks which are principally exported to Russia. The factories of the Ministry of War and the Chinese Co-operatives also intend to use more wool this year for Army uniforms and blankets. The Foo Shing Corporation has orders to purchase 30,000 piculs this year. The Chungking Government's purchases of bristles, raw silk and hides will continue as before present though on a restricted scale. The primary object is to ship out as much as transport means will allow. The transport of brick tea, raw silk and hides to the U.S.S.R. under the barter agreement will carry on over the north-west highway. To China's allies also bristles, raw silk and mineral owes such as tin, tungsten and antimony may be shipped by planes to meet war demands. The Chinese Government's main object is to let the rural industries develop as before and to conserve as much of the material resources as possible. China's foreign trade should survive the latest offensive as trade with Russia has developed considerably in recent months. and supplies from India are being drawn as planned after the loss of Rangoon.

Coming Conference

This month a conference will be held to secure continuous collaboration between employers and workers. The usual tripartite discussion has been arranged for, since this is different from the original Labour Ministers Conference. Some have seen in the report that a permanent panel will be set up the germs of an industrial council like the one recommended by the Whitley Commission. Since labour is a Provincial subject there is no place for anything except an advisory panel. With a new unofficial adviser on Labour Welfare touring the country for the war front there may be an ambition to look for big results but the need to restrain optimism will be admitted by those who have watched the slow adoption of ameliorative measures and the equally slow evolution of long-desired uniformity. The extensive use of conciliation does not obscure the growth of industrial unrest in the first half of this year. The promulgation of ordinances has not been an adequaate remedy for large scale withdrawal and lightning strikes, and it is now clear that Government is even more anxious to secure labour's co-operation than that of employees. It is not merely the war effort that calls for labour's hearty support to management but also Government's own desire to see that the Trade Disputes Act of 1934 is modified in order to cut strikes out. Apart from the fact that the Government itself is a big employer, many concerns on war work are anxious to avoid trouble. But the cost of living goes up and discontent is evident everywhere. There is a general hope that these factors will be assigned their proper weight in the ensuing discussions since the organised unions are agreed that everything is possible, if adequate compensation is forthcoming, as in the case of maritime labour. The argument that only employers can put forth a fresh vigorous effort will not be readily accepted by the Government which thinks of promoting an understanding with labour for its own sake. That more regular consultation with labour leaders will help the Government can be proved by the reference to the stable relations between the Railwaymen's Federation and the Government. Conjoint machinery for consultation is needed for a speed-up in ordnance factories and the main purpose like the amendment to the Hours Section may be relaxation of union standards and a dilution of labour. The British Government has always been concerned to get the big unions on its side when it was anxious to expand arms production and what India is copying was done by Mr. Neville Chamberlain four years ago. There has been in recent years much legislative activity and the enforcement of new laws calls for co-operation from labour in factories and workshops. It is not hard to conceive of the likley agenda. Adequate representation from the employers' organisation will indeed be of help in convincing where and how profit margine must be preserved, at least in the interests of labour and of efficinecy. Consultative machinery must indicate clearly that wage-freezing and price-stops are not always acceptable, however admirable might be the notion of perpetual peace and continuous co-operation. Negotiation for wage increases supervision might secure quicker results and indicate to Government also how their own contract conditions must be modified. The danger of stagnation is latent in present ordinance raj and it is for employers and workers to break the barriers that lie between workers and the higher standards of life and work.

Indian Cotton Statistics

The annual report of the Indian Central Cotton Committee deals in the usual fashion with the facts and figures for the cotton year 1940-41. Exports went down because short staple cotton was not in demand but exports of long and medium staple actually increased by 122,000 bales. Mills took 1,260,000 bales more than in the previous year. At the end of the year, the cotton stocks used by mills were higher by 721,000 bales. Total mill consumption in 1940-41 at 3,617,147 bales is described as an all-time record showing a rise of 567,041 bales on the preceding year. Bombay Island alone accounts for about 61 per cent. of the increased consumption. The balance of 39 percent was distributed over other mills centres except in Mysore which reports a slight reduction. Over 6 million bales of cotton were pressed as against 5 million bales in the preceding year. The press returns explain the increase in cotton stocks held by mills and the trade amounting to 2.64 million bales. Ginning statistics are not clear or complete, but there is every reason to argue that the larger carry-over is not the major problem. Indian mills are said to have taken two million bales of cotton of seven-eigth inch staple and above, while such exports amounted to .72 million bales out of the total 2.79 million bales held at the end of August, 1941 over 1.1 million bales consisted of staple varieties. The appendices throw much light on the trade position. The Punjab produced (according to statements returned by mills) 165,000 bales of Deshi cotton classed as Bengals but it also produced a far larger quantity of American Cambodias are lumped with Americans but are not so important at present as Sind-Americans. The bulk of the Oomras comes from C.P. and Berar and Hyderabad State. The total quantity of foreign cotton received by mills is shown as 575,000 bales and the greater part appears to be East African and Egyptian. From the analysis of exports, it appears that Japan and China alike were buyers of Punjab-American. Exports to Japan consisted largely of Oomras as much as 493,000 out of 908,000 bales shipped belonging to this variety. The mill stock position was better than before under long staples, the surplus of Oomras is to be measured in the rise under stocks held at the end of August, 1941. Madras mills held the largest stock of Americans and Bombay mills held a larger quantity of African cotton. An important index of the progress of the cotton mill industry is the advance in mill consumption in India from two million bales in 1926-27 to 3.61 million bales in 1940-41. In Bombay alone the annual cotton consumption has risen by over 400,000 bales. More remarkable is the progress shown in Madras where Indian cotton consumed in mills has increased from 185,207 bales to 525,611 bales. Consumption in the States has increased to the same extent as in British India which consumed 2,994,735 bales in 1940-41 against 249,408 bales in the previous cotton year. Consumption in Bengal improved from 111,383 bales to 135,227 bales and the improvement as already noted was far more pronounced in Bombay island than in any other centre. During the great depression mill consumption did not decline except perhaps in 1930-31, and has responded more strongly to the stimulus of war than expected.

New Enactment

The Industrial Statistics Act passed this year is the result largely of the Bowley-Robertson enquiry and of the resolution adopted by successive Industries Conference. The Viceroy gave his assent to the Act XIX of 1942 on April 3. Its chief provisions are to be found in sections 3 and 5 which define the statistics to be provided and authorise its collection. The Provincial Government is invested with power to apply the Act by notification in the Gazette. Industrial statistics cover any matter relating to factories, attendance, living conditions including housing, water supply and sanitation, indebtedness,

rents of dwelling houses, wages and other earnings, provident and other funds provided for labour, benefits and amenities provided for labour, hours of work, employment and unemployment and finally industrial and labour disputes. Factory is according to the definition given in section 2 of the Factories Act of 1934 or premises deemed to be a factory under any declaration made under section 5 of the Factories Act. The local government is empowered to appoint the statistics authority who can under section 5 serve notice calling for information or returns in such manner and at such times as may be prescribed. The authority is also given the right of access to records and documents by Section 6. Protection is vouchsafed to industrialists by section 7 which states that no individual return and no part of a return made and no information given by an undertaking for the purposes of the Act shall without the previous consent of the owner for the time being of the undertaking or his authorised agent be published in such a manner as would enable particulars to be identified as referring to any particular undertaking. Except for the purposes of prosecution under this Act or the Indian Penal Code, no person not engaged in collection of statistics shall be permitted to see any return or information. The penalties for infringement of section 3 or 6 are laid down in section 8 and a fine up to Rs. 500 and in the case of a continuing offence a further fine which may extend to Rs. 200 for each day after the first during which the offence continues. The offence covers laying false information instead of true. Protection against improper use of information by officials is conferred by section 9 but sanction for prosecution of misuse of powers has to be given by the local government which has also to take directions (under section 11) from the Central Government for the enforcement of the Statistics Act though, it can make its own rules for application of the Act and more particularly of section in regard to right of access to papers etc.

Axis Wheat Supplies

The world wheat situation is so bound up with transport that it is not hard to find Brazil buying more wheat from Argentina this year than from the U.S.A. which may be expected to show interest in Latin America as was generally presumed last year. The supplies in 1941 showed a fall because of the carry-over. The withdrawal of Danubian basin supplies does not make much difference. Yet the stories of wheat famine in Greece deserve to be considered in relation to Germany's moral responsibility for the Occupied countries. At the end of last year Germany and Italy had wheat stocks which were considered ample though below those of 1940. Wheat consumption in Europe is said to have fallen by 13 per cent in 1940-41 so that it would not have been very difficult to adjust supplies to reduced demand. A new factor is the German labour shortage leading to the plantation of Dutch citizens in Eastern Europe. The possibility of Germany's getting Ukrainian supplies must be deemed uncertain. A report of the Food Research Institute prepared in 1941 suggested that the harvest was gathered in without difficulty in the Baltic States, Russia, Poland and Bessarabia. But in the Ukraine the scorched earth policy was applied and the winter harvest had been largely taken by the Russians before the Germans moved in. Whether the Germans laid in stocks for the winter or prepare food reserves for the 1942 campaign, is hardly known, but the opinion that little would have gone to Germany proper was expressed. This certainly means that the Axis is not likely to get any increase in its grain supplies and Germany's present anxiety to take over the available surplus of the Eastern occupied territories becomes understandable. A point to consider in this connection is the fact that the agriculture of the Ukraine as a whole was highly mechanised and therefore heavily dependent on oil. Since Germany is using up oil in the terrible tank warfare little will be left for exploitation of newly-won territories this spring. If Germany can hope for little, the Russians themselves are likely to experience a shortage. Last year the war spoilt their harvest and there must be serious regional shortages this year because the Ukraine is gone. But Russia can get wheat from the Allies and Britain showed even last year a desire to take Canadian wheat for shipment to Russia. But Canada's own supply last year was reduced to some extent by the enormous increase in cattle feed requirements. Dairy farming and meat production alike called for the use of 53 million bushels of grain in Canada. The development of meat exports should naturally take up more grain for internal requirements.

Rubber-Grower's Representation

The enhanced price paid for rubber under the Indian Control scheme is an admission of the justice of arguments previously addressed by planters on the score of higher costs and the need for full parity with Colombo prices. The rubber-grower has big opportunities but few can forget that he has faced difficult years in the past and open encouragement of synthetic rubber militates against undue optimism as to the future. What the rubber-grower expects has been outlined in a recent memorandum placed before Sir Fred. James, the Honorary Rubber Adviser. There are 136,664 acres under rubber in India, but about half of the area belongs to small growers with less than 100 acres. These have no inducement to produce more rubber at controlled prices according to the representation. The memorandum suggests that an average income of Rs. 56½ per acre valued Rs. 750 will have to include an annual amortisation charge of Rs. 25 per annum. A proper return on capital cannot be secured under present prices and the Indian planter has to pay more by way of wages and other charges. A price of Re. 1 per lb. is advocated as desirable by the Rubber-growers Association of India which argues that the incentive to maximise output must be provided since sterling companies liable to E. P. T. are not quite keen. Other steps suggested include the removal of the ban on fresh planting. The memorandum suggests that additional output can come only from small growers who are in debt and are anxious to get out of it by tapping to the maximum. Other measures meant to help the small grower especially when demand is slack is the buying of rubber for stock by the Supply Department. Shortage of rubber is foreseen by shoe manufacturers who certainly are advocates of both price control and maximum production. But to secure the latter the present schedule of prices has to be modified. To this end the Planters Association of Travancore supports the Rubber-growers Association which asks for extension of rubber cultivation as part of the war effort and revision of prices in order to square control with the needs of the small planter in India. In view of the sensational rise in copra and pepper, coffee and tea during the past three months, it is only proper for the Indian rubber-grower to ask that his product should sell at a price acceptable to the marginal producer. It is hardly necessary to show that present prices are below those ruling in 1928 and the vicissitudes of a decade naturally have to be considered in relation to the demand for a return of 12 per cent on invested capital in the case of rubber estates.

Egypt's Difficulties

The sudden revival of interest in Egypt's defence is due to the British reverses in Libya. Mustapha Nahas Pasha has again indicated that Egypt will not be an active participant in this war. Since the statement that treaty obligations were respected and there was an end of the matter, as far as Egypt was concerned. Alexandria has been raided, and the frontier post at Mersa Matruh has been evacuated. In the peculiar circumstances of to-day, the defence of Egypt is mainly a British responsibility and the Kingdom is a protectorate to the extent that Egypt's foreign policy is subordinated to British war aims. Egypt being independent of the Saadabad pact which Turkey has signed. The general presumption that Rommel would strike south has been belied by the advance along the coast towards Alexandria. Should Alexandria be involved in the war operations, the business and other interests of Egypt would greatly suffer. The food position is none too secure and Government's directions to add to the wheat supply have not been carried out in an efficient manner. If Alexandria were attacked, the cotton-grower would suffer, and so would the Sudan cotton-grower. A depression in Sakel may be readily predicted at present on the score of shipping difficulties alone. There is the war threat as well. Though futures are of little consequence to-day, any steep fall in Egyptian prices would affect Bombay and force down the price of Indian cotton. The possibility of India importing more Egyptian cotton in return for wheat or other grain must also be considered. Any increase in imports would necessarily push down the price of Indian cotton though not of Sind, American and other superior styles. By and large, Rommel's advance is to be viewed as a depressant for cotton, but not for wheat. The price trend at Karachi seems a little uncertain but merchants will doubtless take note of the probable effects of a march down the Nile Valley which may abruptly reduce the supply of Egyptian cotton and make Indian mills dependent on Kenya and Uganda cotton to a greater extent. Indian exports to Egypt have been constantly increasing in the war period. They are likely to suffer a severe check if Rommel strikes down the Delta. On a balancing of probabilities such as appear in every commentary, it may be urged that only the coastal belt will be affected directly by the war, but Alexandria is more important than Cairo and its foreign colony certainly runs Egypt's business. That is why the war situation is of special interest to Bombay, and the western side of India. Coal exports beyond the Arabian Sea are sure to go down and the promising openings for Indian manufactures must be regarded as closed.

National Insurance Results

A fall in the year's expense ratio 26.4 percent is enough to confer exceptional interest on the National Insurance Company's report for 1941. A severely limited decline in new business as compared with the pre-war standard is about the only direct result of the war which has not clearly touched revenue or investments. For this happy position, supported by ample evidence, the Board of the National may well take full credit. It has carried out extensive precautions independently as Mr. Chaudhuri described at the annual meeting. The only thing in the revenue account attributable to the spreading war is the increase in surrenders. That should be viewed as a temporary aberration, for one knows at present that nothing can affect insurance. Even in occupied Europe the policyholder is wholly secure and the average policyholder in India can endorse the view that business as usual is a working principle for himself and the company to which he is bound by a contract. The Company can clearly fulfil its contract and it is for the policyholder to accept the same view of his obligations. How reassuring the position is can only be inferred from the figures presented in the annual accounts. An old, established company like the National with its tradition of impeccable management has no reason to regret a setback in new business. The total shown for 1941 is Rs. 1.68 crores including re-assurances. The new business yields a premium income of over Rs. 7.98 lakhs. The revenue account shows premiums exceeding Rs. 59.3 lakhs. The year's outgo in respect of claims is Rs. 27.65 lakhs and surrenders took Rs. 6.27 lakhs in the past year. Investment receipts total Rs. 15.88 lakhs. After meeting all expenses of the year, the Fund receives an addition of over Rs. 23.45 lakhs. Eminently satisfactory from the point of revenue and funds alike, it will be concluded. The Company's business in Kuala Lumpur and Rangoon is at an end, but the Head Office deals with the policyholders who have left enemy-occupied territories.

The increase in the Life Fund to Rs. 3.69 crores if of course in line with successive additions to the Fund which has advanced year after year to new heights. The importance of the balance-sheet published in "Indian Finance" derives largely from the distribution of the funds. The figures in respect of liabilities as at the end of 1941 are of little importance as against the distribution of assets. The mortgages held by the Company amount to Rs. 20.36 lakhs. The Company has advanced a substantial sum, as much as Rs. 50.67 lakhs, on the security of its policies. The policyholder of the National gets more than the usual liberal assistance. The holding of giltedged securities, exclusive of the usual statutory deposits, is large—Rs. 67.62 lakhs in Indian Government stocks; Rs. 26.26 lakhs in Provincial loans and Rs. 51.72 lakhs in other trustee stocks in addition to Rs. 4.97 lakhs in British and Colonial stocks. The proportion of giltedged to total investments is reasonably large, but the National's Board has carried out with admirable forethought the principles successfully evolved by British life offices which have successfully limited their holding of giltedged and mixed investments in order to reduce risks in regard to value and marketability, and increase at the same time the average yield on the funds. The limited amount under mortgages is reassuring and the only item on which doubt may be cast is House property out of India shown as Rs. 11.36 lakhs while that in India is shown at Rs. 28.42 lakhs. The cash is not large but the agents' balances are as low as Rs. 25.658-8-5 proving that the National's effecient management keeps down one item rigorously. The revenue items, premiums, outstanding interest due etc. are ample in relation to outstanding liabilities and premium deposits. These are the points that deserve emphasis in every balance-sheet, and the National being old, sound and prosperous, provides a pattern. When that is said, comment is finished; but one may well ask the policyholder, present and prospective, to examine how his own contribution to economic stability matters at present. Regular saving makes for avoidance of inflation and the duty to keep up premium payments can be discussed in relation to the maintenance of confidence and the sterilisation of purchasing power. The National's Chairman, it is good to note, discussed this aspect in asking for continued support from agents and others.

Lakshmi's Progress

In the absence of any important developments in the war situation till the end of the year, the better class of insurance companies have been able to write a larger amount of new business in 1941. It would perhaps have been possible for many companies to present a rosier picture had it not been for the outbreak of the Japanese war in December of that year. It has to be remembered that nearly half the amount of new business is done in the last three months of the accounting period and the setback to new business in the busiest part of the year proved to be unfortunate. This was specially true of those companies which had overseas branches in Malaya, Burma and Ceylon.

The Lakshmi Insurance Company, however, had no occasion to suffer much by the loss of overseas business as the proportion of business from this source was only about 6 per cent. of the total business written. In 1940 when there was a decline in the amount of new business written, the company was not in the least hampered. It was pointed out that it was more advisable to consolidate the position of the company than make efforts to force up new business. The directors were perhaps sure of their being able to write a larger amount of business when conditions were more normal through the popularity and esteem the company enjoyed.

The results for 1941 fully justify this observation. Against 4,844 policies issued assuring Rs. 1.18 crores, 4,304 policies were issued assuring Rs. 1.01 crores. In 1940, 4,153 policies were issued assuring Rs. 82,69,125. It will be noticed that there is a marked rise in the average value of the policies and that the increase in the volume of new business is appreciable.

The total receipts for the year amounted to Rs. 45.71 lakhs of which Rs. 13,38.44 lakhs were received from premiums. The excess of income over outgo amounting to Rs. 23.80 lakhs was added to the Life Fund. The total receipts in 1940 were Rs. 43.34 lakhs while the addition to the Life Fund was Rs. 21.73 lakhs. It will be seen, therefore, that nearly the whole of the increase in receipts has been transferred to the Life Fund. Such a large accretion to the Life Fund has been due mainly to the reduction in the overall expense ratio to 24.69 per cent. from 25.77 per cent. in the previous year. The reduction in the expense ratio along with a substan-

THE LAKSHMI INSURANCE COMPANY, LIMITED, LAHORE

Report of the Directors for the period 1st January, 1941 to 31st December, 1941

To

THE SHAREHOLDERS,

THE LAKSHMI INSURANCE COMPANY, LTD.,

DEAR SIRS,

The Directors have great pleasure in submitting to you their report along with the Balance Sheet, Revenue Account and other statements for the year ending 31st December, 1941.

NEW BUSINESS.

In this year 4,844 proposals were received for assurance amounting to Rs. 1,18,04,110. Out of this and those pending from the previous year 4,304 policies assuring Rs. 1,01,41,075 were issued. Proposals of the value of Rs. 25,61,360 were either rejected or postponed or accepted on terms which were not agred to by the proponents or which are awaiting completion. In addition to this 4 Annuity Contracts were also issued during the year.

INCOME AND OUTGO

The total receipts for the year amounted to Rs. 45,71,362-4-0 of which Rs. 38,44,127-5-9 are derived from premiums. The outgo is Rs. 21,91,533-8-7. The excess of income over outgo being Rs. 23,79,828-11-5 has been carried to the Life Assurance Fund. The expenses for the year amount to Rs. 9,40,849-12-0 and the over-all expenses ratio after providing 7½% of the single premiums and consideration for annuity for expenses on that class of business, amounts to 24.69% as against 25.77% in the previous year. This is lower than the previous year's ratio by 1.08%. The renewal expe ratio for this year is 16.99% as against 18.98% in the previous y

CLAIMS

Our traditions regarding the prompt settlement of claims h been fully maintained. During the period under report claims the value of Rs. 5,50,376-15-0 accrued by death and Rs. 4,30, accrued by maturity. These include bonuses but exclude amou reinsured. Out of these and those which were outstanding fr the previous year, claims to the extent of Rs. 8,94,350-7-0 h been paid during the year under report leaving a balance Rs. 3,23,256-13-3.

RESERVES.

Investment Reserve.—The investment reserve which at the of 1940 stood at Rs. 4,86,578-14-8, now stands at Rs. 4,71,340-4 The difference represents the short-fall due to sale of some securit and a small deficiency in another investment. Market value of investments in stock exchange securities on 31st December, 1941 lower than the book value by Rs. 11,359-14-9. This short-fall a the probable deficiency in other assets and other unforeseen circum tances are fully provided for by the amount standing in this accou

Building Depreciation Reserve.—This reserve has been furth increased by the addition of Rs. 42,714-11-4 and it now stands Rs. 1,43,551-13-4.

Furniture and Fittings Depreciation Reserve.—Reserve depreciation in the furniture, medical instruments and motor cars been further increased by transfer to it of a sum of Rs. 15,690-12-

General Reserve.—The General Reserve Account stood at the end of the last year at Rs. 1,75,636-6-0. The amount was reserved for payment of income-tax and super-tax. Out of this a sum of Rs. 49,097-1-8 has been paid as income-tax and super-tax for the year 1939-40. A further sum of Rs. 75,000 has been transferred to this account to provide for future contingencies, if any.

DIRECTORS.

Raizada Hans Raj, Director of the Company resigned from the membership of the Board and the Directors exercising power under article 124 of the Articles of Association of the Company filled in the vacancy by appointing Mr. M. R. Dhand as a Director of the Company.

R. B. Dewan Badri Dass, Lala Jagan Nath Aggarwal, Dr. Nihal Chand Sikri, Dr. Dhan Raj Bhasin and L. Aftab Rai have ceased to be the Directors of the Company by the operation of Article 119(c) of the Articles of Association of the company and the Board has appointed L. Balmokand Shah Sawhney, Dewan Harbhagwan Nanda and L. Kanhya Lal Sawhney in the places of R. B. Badri Dass, L. Jagan Nath Aggarwal, and Dr. Nihal Chand Sikri respectively.

The approval of the appointment of Mr. M. R. Dhand, Lala Balmokand Shah Sawhney, Dewan Harbhagwan Nanda and L. Kanhya Lal Sawhney under the bove article 124 is recommended.

L. Balmokand Shah Sawhney and Mr. M. R. Dhand retire this year. They are eligible and offer themselves for re-election.

L. Aftab Rai but for his ceasing to be a Director of the Company would also have retired. The Board recommends that this vacancy be not filled in for the present. They further recommend that the vacancy caused by Dr. Dhan Raj ceasing to be a Director be not filled in.

AUDITORS.

Messrs. B. M. Chatrath & Co., and Messrs. Aiyar & Co., Auditors are retiring this year. They are eligible and offer themselves for re-election.

GENERAL.

In recognition of the excellent services rendered by the General Manager and Managers and as a mark of confidence in them the Directors have extended the agreement of the General Manager for a period of four yars and have also given the Managers an agreement of service for a period of six years commencing from 1st January, 1942.

The Directors wish to place on record their appreciation of the valuable services rendered by other employees of the company also both in the office and in the field and the extremely good work put in by the Chief Agents and agents throughout the territories in which the Company is operating.

By order of the Board,

Chairman.

Notes:—

(1) There is a contingent liability of Rs. 4,000/- for partly paid shares of Joint Stock Companies.

(2) A Director of the Company by virtue of his nomination on the Board of the Directors of another Company received a sum of Rs. 16/- as remunerations from that company for acting as Director.

tial increase in new business speaks well for the management. It has to be remembered that in the previous year also there was a drop in the expense ratio to 25.77 per cent. from 31.54 per cent. in 1939. A seven per cent. reduction in working expenses in two years on the basis of an income of over Rs. 40 lakhs means an additional saving of about Rs. 3.0 lakhs per annum. The renewal expense ratio was only 16.99 per cent. in the previous year.

The mortality experience of the Company has continued to be satisfactory and as usual claims have been promptly settled. Claims by maturity amounted to Rs. 4.30 lakhs and claims by death to Rs. 5.5 lakhs.

Fully reflecting the difficulties of many policyholders in 1941 is rise in loans to policyholders within their surrender value to Rs. 14.48 lakhs from Rs. 12.83 lakhs and in loans under non-forfeiture clause to policyholders to Rs. 5.28 lakhs from Rs. 4.75 lakhs.

There seems to be a distinct change in the policy of the directors regarding investment of funds. In the last balance sheet the directors were inclined to put more money in loans on mortgages and property in India. In the latest balance sheet, there is a substantial decrease in loans under this head from Rs. 33.36 lakhs to Rs. 20.73 lakhs. The risks to urban property from air raids and the absence of any method of guarding against them have perhaps been responsible for the decline in loans under this head. The new and diverted funds have naturally been invested in central and provincial government securities. The absence of any appreciable increase in interest income and rent is perhaps due to this reason. House property in India at cost is not very much changed at Rs. 33.83 lakhs. Investments in giltedged and other approved securities including statutory deposits amounted to Rs. 84.72 lakhs against the total Life Fund of Rs. 1.79 crores. Investment in debentures and other stock exchange securities were Rs. 21.67 lakhs. There has always been judicious distribution of the company's assets. The market value of investments in stock exchange securities at the close of the year was only Rs. 11,359 less than the book value. There has been an appreciable rise in the market value since then. At the close of 1941 conditions were abnormal and depreciation was inevitable. Otherwise the Investment Reserve Fund of Rs. 4,71,340 provides fully for any probable short-fall in the market value over book value.

A Chairman Speaks:

No speech could be apter or clearer than that of Rao Bahadur U. S. Desai at the annual meeting of the Bombay Mutual Life Assurance Society. The report (referred to in the first place) shows an increase in new business raising total assurances in force to Rs. 13.18 crores nearly. The Life Fund stood at over Rs. 2.5 crores at the end of 1941 as against Rs. 2.09 crores at the beginning of the year. The Society's remarkable achievement in 1941 in regard to business income (rising by over Rs. 8 lakhs compared with 1940) funds enhances the interest of the proceedings reported in this issue of "Indian Finance." The growth of new business proves that a Mutual office can face the handicaps of the war period, since faith in insurance has survived the fears and doubts that assailed many towards the end of the last year.

The position in regard to investments was also reviewed, and the fall in the average yield to 4.16 per cent. was explained as being due to the grounding of interest rates, the interruption of work on the Calcutta premises still under construction and the restrictions on freedom of investment laid by Section 27 of the Insurance Act. But the Society has not been reluctant to offer concessions to its members in Burma and Malaya. The Board has framed liberal rules for revival of policies and payment of claims. The Bombay Mutual has certainly given a lead in regard to clearing up many doubts raised by enemy action in Burma. The Society's office in Burma has been put out of action by the war. The Society's staff there suffered and the Board's sympathy has been expressed adequately by Mr. Desai. As regards the suggestion of no-bonus payments in wartime the Rao Bahadur supports the Oriental's Chairman in deprecating any rule copied from Britain. The main task in India is to develop life insurance and convince people that it is a good investment. The no-bonus in war rule would prejudice the growth of business, and for that reason, Rao Bahadur Desai asks for the preservation of the present position when it is open to any office to recommend or refuse a bonus after the usual valuation. Opinion therefore appears to be divided in spite of the Advisory Committee's views.

As to the Society's attitude in regard to civilian war risks the position has been fully discussed by Mr. Desai who has again indicated that the record of life insurance is such as to still all doubt and rout all anxiety. The report and accounts were adopted. It is only necessary to add that the balance-sheet as at the end of 1941 supports the Society's reputation as one of India's oldest offices. It held over Rs. 175.5 lakhs worth of investments, advanced Rs. 44.74 lakhs on its own policies and owned house property worth Rs. 31.58 lakhs. It had an investment reserve of Rs. 2.15 lakhs nearly and a Building Depreciation Fund of Rs. 1.32 lakhs. It is likely that changes in the Society's articles proposed at the special meeting will help to provide freedom 'plus' security.

BELIEVING in ENEMY BROADCASTS cost him his LIFE'S SAVINGS

1] Business is good for the bania when people are frightened. Prasad finds it easy to sell his valuable possesions — for half their real value!

2] At the Railway Station Prasad and his wife fight for a place on the train. Thousands of others are in a panic, too. Luggage is left behind, children are injured.

3] Idle and unhappy in a far-away place, Prasad reads the newspaper every day. But weeks go by and no calamity befalls the city. In the meantime his resources are dwindling and his wife is wretched.

4] At last, realising that the Enemy Radio has been lying in order to frighten him, Prasad returns to the city to resume his work. He is determined not to be frightened again!

5] But when he re-visits the bania to try to get some of his possessions back, the bania insists on the proper price which Prasad can no longer afford. Prasad finds that through his rash panic he has lost his life's savings and become a poor man.

Enemy Broadcasts mislead unthinking people—purposely. Their object is to frighten you, send you running away from your work, so as to weaken India. On the other hand, the B.B.C. and A.I.R. Broadcasts, your own broadcasts are designed to help you with truthful news and guidance. Avoid misery and financial loss by believing in your friends and not your enemies.

Tune in to B.B.C. and A.I.R. News & Programmes-

The further expansion of the Viceroy's Executive Council, now announced, must elicit wide-spread approval from the point of view of the personal element. At the same time, from the standpoint of political implications, it cannot give satisfaction to any of the principal sections of the Indian community.

Any detailed discussion of the political aspects of the present decision is outside the relevance of this column and beyond the ability of yours most obediently. I must content myself with a brief assessment of its repercussions on the general situation in India with which are bound up the maintenance of the integrity of the financial structure, the tenor of national economy and the utilisation of the industrial opportunities provided by the war.

Addition of a few more members to the Central Cabinet does not take the solution of the Indian political problem any forwarder. In the present context, it may be reckoned a most retrograde move. The mere enlargement of the Council to fifteen or the choice of men of undoubted talents and of unquestioned leadership in some sphere or other or even the prospect of an overwhelming majority for the Indian members in the Council cannot perform the miracle of transforming an irremovable and irresponsible Government into a national government.

Yet, the supreme need of the hour is a National Government. India is, for all practical purposes, already a theatre of war. Vizagapatam and Cocanada on the east coast were raided by enemy bombers. Manipur, Chittagong and Silchar have received the attentions of Japanese airmen. The progress of enemy forces in Burma has brought them very near India's eastern border.

It is true that there has been a lull in Japan's activity within the last few days. Whether this is the calm before the storm, the next few weeks will show. It may well be that any action Japan may decide to take against India is kept pending till the outcome of the Battle of Egypt is known.

This is the new menace that has developed within the last few days. The fall of Tobruk has come as a cruel shock to the British public. It must be understood as an even more cruel shock to India. With the fall of Tobruk, the position of the British navy in the Mediterranean and of the British forces in Egypt has been made extremely grave. Rommel's army and General Auchinleck's army are now engaged in fierce combat; and there is no gainsaying the fact that the British side is demoralised by unexpected reverses and the Nazi troops are bucked up by their recent sensational success.

In his House of Commons speech on Thursday, Mr. Churchill was, as was to be expected, particularly cautious in the expression of his views as to the likely result of the Battle of Egypt. The plain fact of the matter is that the possibility of Rommel's hordes reaching the Suez cannot be ruled out.

Once Britain's hold on the Suez is effectively challenged India must be prepared for a very grave menace from the west through the Red Sea and the Arabian Sea. The present position, then, is that India is threatened both from the east and from the west.

From the point of view of India, this week has provided the most terrible news. The simple question to ask is whether, even in such circumstances, Mr. Amery and Lord Linlithgow are content with a solution which they propounded nearly twenty-four months ago. All that I can say is that they seem incapable of learning even in the school of bitter experience.

It is now generally realised that the present war is so different from the past wars that what is needed for winning this war is not only adequate defence forces and defence equipment but an adequate measure of civilian morale. The full facts about the rout of the Allied forces in Malaya and in Burma are yet to be known. But this much is now well known that the disaster in these two theatres was accelerated by the local populations being pro-Japanese rather than pro-British.

It is also easy to realise that General Auchinleck's strategy could be planned on more confident lines if the people of Egypt were also feeling that it is Egypt's war.

If Malaya, Burma and Egypt have one lesson more than any other to teach, it is that the war in India can be won only when Indians are able to feel that it is India's war. Such a feeling can be inspired throughout the country only if there is a national government at the Centre.

The fifteen true and trusty men who will hereafter make up the Viceroy's conclave are just not a national government; they cannot enthuse the Indian public in ways that will make them whole-heartedly identify themselves with the war. In simple terms, from the point of view of India and the war, the Viceroy's Executive Council, expanded, more expanded, and yet more expanded, has no significance.

The press note announcing the further expansion of the Executive Council stresses the words "within the framework of the present constitution." The criterion that any change has to be with in the framework of the present constitution provides convincing and conclusive testimony of the wooden and ante-diluvian outlook of the men who shape Britain's larger policies. It is significant that the present communique contains no reference to the need of satisfying Indian opinion or of enthusing Indian morale.

The main purpose of the present expansion is, "as in the previous expansion of 1941, to associate representative Indian opinion more closely in the conduct of the war and to provide for the increasing burden of war work within the framework of the present constitution."

The membership of the Viceroy's Executive Council, which, at the outbreak of the war, was seven with three Indian members, was increased to twelve in 1941 and is now raised to fifteen. In the present expansion, the Indian majority will be eleven. Six new members have been appointed; and, from the point of view of the personal element, it must be owned that the choice is admirable in every way.

What impresses one most about the Viceroy's Council as now expanded is that it will contain an illustrious galaxy of business and industrial experience.

We have already in Sir Homi Mody an industrialist who has been associated with the cotton industry for over two decades and who, as a member of Tata Sons and as the Chairman of the Central Bank, has had versatile experience in business and finance.

Mr. N. R. Sarker, who is now being transferred to Commerce, had, for years, been the President of the Bengal National Chamber of Commerce; and he was also the President of the Federation of Indian Chambers of Commerce which is the highest honour that is in the gift of the Indian business community to confer. Though connected mainly with insurance, Mr. Sarker has made specialised study of various economic problems such as jute, local public bodies and banking.

They will now receive powerful reinforcement from Sir Edward Benthall, Sir Jwala Prasad Srivastava and Sir C. P. Ramaswami Iyer. Sir Edward Benthall was the head of Bird-Heilgers group for years. More than an industrialist and a practical businessman, Sir Edward has always kept himself in the closest touch with current economic literature. He is one of the few businessmen who are versed equally in practice and theory.

Sir Jwala Prasad symbolises whatever is most progressive in Cawnpore, one of the most important industrial cities in India. He has enterprise, outlook, zest for new ideas and even new experiments.

Though, ordinarily speaking, Sir C. P. Ramaswami Iyer cannot be reckoned among the ranks of industrialists or businessmen, few among our leaders trained purely in the political sphere have such a sure grip over the economic problems of the country as Sir C. P. The colossal hydro-electric grid which binds the southern Presidency is Sir C. P. Ramaswami Iyer's contribution to Madras. The schemes with regard to generation of power from hydro-electric sources had been lying in Secretariat recesses for years. It was Sir C. P. who, while he was an Executive Councillor, took the matter on hand and enabled the project to materialise.

Within the few years he has been Dewan of Travancore, he has introduced the grid in this State also ; and the economic and industrial life of Travancore has been greatly quickened during his regime.

The greatest significance of the present expansion of the Viceroy's Council lies in the fact that it has five members with business knowledge and outlook. I have always maintained that, while politics divides, business unifies. There is every reason to hope that, within the limitations I have described, the new members of the Viceroy's Council may be expected to work with an assured sense of collective responsibility and with the determination to view every problem constructively.

It is all the greater pity that the new Council will miss the valuable experience of Sir A Ramaswami Mudaliar. During the three years he has been Commerce Member, he has had to deal with a hundred and one problems of most vital import to India's present and post-war economy. I, for one, would have liked to see him continue to serve the cause of India's economy at New Delhi.

ENDURANCE

The IRON PILLAR

The famous Iron Pillar of Delhi, which bears a Sanskrit inscription dating back to A. D. 300, has successfully withstood the ravages of time. Likewise, we claim that our STEEL Equipment, even if it may not last for centuries, does definitely last for much more than a life time.

Important, too, are other advantages . . . Steel Equipment is insect, fire and burglar-proof. It will not warp. Each unit remains for years in the same condition as when originally purchased. The first installation cost is the last. May we quote for your individual requirements ?

(*Continued from page 5*)

Govt. will spend more because about 43 billions have been voted for the Army alone. And the U.S.A. cannot stop to think of any limit to spending. The fourteenth deficit will not be large even after the war outlay has topped 26 billions in 1941-42. The U.S.A. is steeled to any amount of spending far above the 1919 level because their national income is still rising and the Government can get what it wants by taxes or loans. The more important factor is the Governors' Conference, meant to promote abolition of the party line for the sake of the war. The U.S.A. wants to get on with its job of beating totalitarian production, soldiers tour, war plants to stimulate industrial output. Every time the estimate of cost is being revised and 60,000 planes a year are no pipe dream. It is idle to deny that the U.S.A. has got to help all the Allies except perhaps Britain. That is one reason why she is not too proud to fight this time. Not the loss of gold mines in the Philippines but the razing of Cebu will be deemed the reason for revenge. The U.S.A. has cause for satisfaction in the entry of many Central American countries into this war. The biggest thing so far is the Army bill, which provides for an army to serve abroad. The U.S.A. may even send troops to Egypt. A part of its Army has been deliberately trained for service in Africa.

The Eastern Bank with its large interests in Iraq has definitely overcome the troubles caused by Rashid Ali. The statement of Sir James Leigh-Wood to his shareholders refers to the prosperity of countries around the Gulf. The Iraq Government is well off and it is backing the Rafidian Bank recently set up as the preliminary framework of a Central Bank. The cut in dividend was explained as also the reduction in Advances. Deposits of the Eastern Bank have risen by £5 million showing that the youngest of the Eastern exchange banks is making unusual progress. Cash and short-term assets rose in 1941. So clients are well protected.

The most important result of the new civil regime in Jap-occupied Burma is the ban on capital exports. Indians leaving Burma cannot bring gold or silver out. At the frontier posts or even points further up like Kalewa a search is said to be the rule, and Burma notes, too, are not to be brought out. The principle is familiar, but the hardship is great. The occupation authorities evidently adopted the defence rules primarily in force and are anxious to keep money in Burma. The destruction of notes is decidedly helpful to the Indian Government and the non-influx of gold and silver is a factor in favour of the bullion market. But such deductions are out of place compared with the losses of people still pouring in from Burma.

The Japs have no qualms for they are looting the Philippines. Co-prosperity is spoliation since the sugar plantations are being given over to cotton cultivation. Surplus sugar is to be turned into motor fuel because oil supplies are depleted by scorched earth tactics. The Philippine's economy is subordinated to Japan's needs and radio stories of self-sufficiency support the belief that looting has been thorough. The economic system of Thailand has been wrecked, that of the Philippines has been shattered, because Japan, despite the Nazi legend, is desperately anxious for raw materials, and the occupied territories are far from co-operating voluntarily. The contradictions of propaganda do not disguise the plunder that has taken the place of policy. The colonies are likely to suffer permanently and the demands of reconstruction will exceed certainly those of reconquest.

(From Our Correspondent)

New Delhi, July 1.

The newly set-up War Resources Committee is having active consultations. Very soon another announcement is expected to show what further measures are proposed to be taken in pursuance of the Grady recommendations. It will probably be wrong to assume that the Government of India have definitely set their face against the creation of a separate Production portfolio. Unfortunately the traditions of the Government of India have been so conservative in the past that they do not easily change over to new ideas. The demands of production have, however, become so urgent that old methods cannot be persisted in. Anyway the general expectation in New Delhi is that before long though it may not be in the new changes in the Viceroy's Council which are to be announced in the next few days, a separate Production Department may be set up with a separate Member in charge. The contention of the Supply Department is that Production work is really its main function. That, however, is more or less an academic controversy. One of the first questions which the new War Resources Committee will have to take up is to settle this question.

* * * *

This week-end will probably see the official announcement of the new appointments to the Viceroy's Council. Owing to the long delay there has been a variety of speculations, but the final choice is said to be more or less on the following lines: Sir Feroze Khan Noon for Defence, Sir Mahomed Usman for Posts and Telegraphs (the bifurcated Communications portfolio), Sir J. P. of Cawnpore for Civil Defence, Sir Edward Benthall for Railways, Dr. Ambedkar for Labour, Sir Joginder Singh for Education, Health and Lands, Sir C. P. of Tranvancore for Information and Broadcasting, and Mr. N. R. Sarker for Commerce vice Sir Ramaswami Mudaliar going to London for the War Cabinet. According to to-day's reports certain last-minute consultations are still going on over the distribution of portfolios, but the final list is expected to be ready within a week or so. One name which appears to have been considered and dropped is that of Sir A. F. Rahman who recently retired from the Federal Public Service Commission. The new Council will consist of 15 members of whom five will be Europeans including the Viceroy and the Commander-in-Chief, four Hindus, three Muslims, one Parsee, one Sikh and one scheduled caste representative. If and when a Production Member is appointed, the number will be sixteen.

* * * *

One effect of the recent war developments in the Far East is the drastic reorganisation which is now taking place in the offices of the Eastern Group Council. In the absence of Sir Archibald Carter who has gone to London for consultations with His Majesty's Government, Mr. M. S. A. Hydari has been busily engaged in reorganising the work of the office. Its volume of work is even now very large, for though Malaya, Burma and Hong-Kong have gone out of the picture, the Council's work has considerably increased so far as India and South Africa are concerned. According to the seaborne trade figures for April Indian merchandise exported to South Africa during the month was of the value of over a crore of rupees as against only Rs. 25 lakhs in April last year. The number of articles which the Eastern Group Council's offices are now dealing with is said to be about 70,000. Still as a result of internal reorganisation and the depletion of work owing to the closing of certain big supply areas like Burma and Malaya, the strength of the Eastern Group Supply offices has been reduced from 400 clerks and 10 officers to 200 clerks and 6 officers. No change has yet been effected in the Central Provision Office which still has 500 clerks and 60 officers.

* * * *

An interesting scheme, which in a way has been necessitated by the course of the war itself, is now being considered by the Eastern Group Council. It has been felt that "bazaar capacity"—in other words, the capacity of small producers—has not been sufficiently exploited for meeting war supplies. The Eastern Group Council is now preparing an elaborate scheme to reach this class of people and get as much as possible out of them. For this purpose it is proposed also to supply small producers with the required machinery and raw materials to enable them to go forward with their production plans and increase their capacity. As "bazaar capacity" is by no means inconsiderable from the point of view of war supplies and this will mean not only regular but fairly large encouragement to cottage industries, the success of this experiment will be watched with interest.

* * * *

The Government of India have now announced the personnel of the Central Food Advisory Council which was recommended by the Food Production Conference. It will be presided over by Mr. N. R. Sarker, the Education Member, and consist of 20 other Members. There are five Indian non-officials representing various interests of whom one is a Congress Member of the Central Assembly. The rest of the Council is composed of representatives of the Departments concerned and technical experts including

(From Our Correspondent)

Bombay, July 1.

THE death of a large number of people in the City building disaster is not likely to be forgotten. The labourers hailed from Hyderabad, were Telegu-speaking men, and they had their children on the spot. That is why the disaster seems more than horrible, for the building was a brand-new concrete structure, in course of erection, not a crazy old fabric. The A.R.P. people rushed up to do what they could, but the majority of the workmen were past caring for. The disaster reported from Churchgate Reclamation cannot be explained by reference to characteristics of subsoil, sabotage or anything else. It is both violent and unexpected, and the only question that arises is whether the fact that the labourers of the house at which the collapse took place lived there and died on a Sunday would affect the usual claim for compensation. The words course of employment must be interpreted liberally in this connection, and the major job now is for the labourers' legal representatives to press their claims against the contractors. Municipal charity or public donations mean little. The disaster took place on a Sunday and it was a complete shock to the city since nothing more surprising than the fall of a half-complete 5 storied building was expected. Obviously the edifice could not be covered by insurance and the financial loss arising from the accident must be considerable. An inquiry might lead to satisfaction.

Bombay will have a new type of Middle School meant for village lads. It is a post-primary course which excludes English and is therefore advisable for rural areas. Lokashalas as they are called are to be worked also for examination purposes, for a certificate is to be issued. Ordinary secondary schools can set up the vernacular departments and work for grants in aid. Girls's schools, too, can choose to open new departments for those who do not care for English. The equivalent of a teaching certificate will be offered in Indian languages, and primary school teachers can sit for the examination to be held next April. Local authorities have been told that they can open lokarshalas but the schools will differ from the lamous one at Mogha because a vocational bias will be absent. Syllabuses are being got ready along with the new examination rules. The Government plan answers to the conditions laid down in the More report which suggested that continuation classes must raise the standard of education for village boys.

Last Friday the local stockbrokers held as usual their annual meeting. Mr. K. R. P. Shroff was in great form and discussed the brokers' part in the war effort. Brokers must fight rumours, he declared, and exonerated the market from spreading news. He said that the market's nerves were much stronger. The heavy carryover of transactions totalling Rs. 9 crores had been reduced to Rs. 4 crores. High politics figured in the speech because special advice was tendered to both the people and the British Government. The market developments were described, and the acute crisis of January-February was mentioned. But the market as a whole, felt it must carry on despite the feeling of brokers that business should stop. Facilities for sale and transfer of investments remained necessary, and the brokers, according to Mr. Shroff, must be prepared for work in conditions of siege economy. The Association feels it has done well in spite of 1941 and its late jitters. The exchange again wants to show that it can stand anything but not a surrender to panic. The annual meeting got through its routine business and passed on to discuss the Tisco decision. A unanimous resolution, adopted at once by Bombay's brokers, deprecates the decision to pay dividends on ordinary and deferred shares, partly in cash and partly by issue of investment stock certificates. The very idea of deferred payment is unpleasant to the brokers who cannot base valuation on current yield. Mr. Shroff drew the attention of brokers to the difficulties that might result in their own clearing house merely from paying dividends in part in the form of income stock certificates. The tax authorities will have another headache in settling whether stock certificates are income or capital. It is not easy to tax post-dated warrants. Postponement will help the assessee but not the revenue and this point must come out of the Directors' decision criticised by influential circles already among investors here.

Every day sees a press note on sugar or flour or something like that. Profiteering is not at an end. Food-hoarding is the latest aspect of the drive for bigger profits begun by tradesmen. Stocks are split and kept at various places. Returns are easily cooked, and price control through supervision of distribution is defeated. This is a more serious difficulty than overcharging. Blacklisting is being tried, but that promises little satisfaction. Shortage of foodstuffs is causing alarm. Morale has been sapped by such deficiency. There is actually no scarcity, e.g., of kerosene as 75 per cent of former supplies are held. Retailers are not upset by the new Government. Shops which are now handling tea sent on by some large firms which have got wagons and brought in tea. Small tea-growers are definitely worried about prices and their idea that Government should buy up their crop, and keep prices up, is not in accord with the big jump in retail prices. Hoarding of sugar is punishable, but so many things are bought up in advance that nobody knows what can be had and where. There have been many complaints about firewood prices and supplies and the only thing of which no shortage has been noticed so far is talk.

Every rise in the working class cost of living invites public comment. That a new index is being got ready does not cause excitement. The local textile workers are not satisfied with a bigger allowance. It is not adequate, says Mr. Joshi who asks why the special enquiry committee's views have not been implemented. With 60 hours of work as at present the strain is greater. The wages are not rising because coarse stuff is usually manufactured and the worker has not got the protection of standard wages. The labour movement further is handicapped by the arrest of its leaders who alone can line up labour for war production. Communists in Bengal are set at liberty because it is felt they will help the war effort and get recruits for war work.

Resume of Commodity Markets

THE British reverses in North Africa have naturally had a restraining influence on all commodity markets, but there has not been any appreciable change in the tenor of prices. Only the bullion market has benefited by the recent development and a substantial rise in prices has taken place. As regards the grains and seeds markets, the position has remained unchanged. As regards export commodities, jute and jute manufactures were absolutely dull and uninteresting and, only towards the close, there has been a slight rally. The cotton market was inclined to be somewhat irregular earlier in the week, but there has been a sharp jump in prices towards the close in view of the recovery in the stock markets and the strength of the seeds market. The expectations that supplies of Egyptian cotton will be affected by the recent developments and that incidentally, it might mean greater demand for Indian cotton, have also been a helpful factor.

The problem of effective price control of staple commodities is as difficult as ever. Strenuous efforts are being made by the governments concerned to stabilise prices but, owing to the wrong approach to the problem on every occasion, energy has been wasted in certain directions. It is to be hoped that with a re-arrangement of transport facilities, and proper distribution, prices would be more effectively controlled.

Jute

Greater buying on the part of mills has not in any way helped the jute market which has been guided mainly by the strength of the goods market. Supplies of the new crop will be plentiful and in the absence of large exports mills can buy leisurely.

The problem, as always, is one of finding freight. Raw jute is greatly needed by the U.S.A. The War Production Board has issued an order from March, sharply restricting the use of raw and processed jute, and barring future imports from use or sale except in defence orders and curtailing the amount already allotted for non-defence products.

Raw jute has been put in the free list of commodities, no import license or other permission being required for its importation into the U.S.A. Jute has been classified in the category of "other critical war materials imported from India and essential to the war efforts." It is understood that the U. S. Maritime Commission has recently sent instructions to the steamship companies concerned, to load sizeable tonnage of raw jute on each vessel berthing at Calcutta. According to this procedure ship space hitherto used for manganese and other ores out of India is to be utilised.

How far the increase in exports will help the Bengal Government in disposing of the surplus crop remains to be seen. But all hopes in this regard have been smothered by the reports that the Central Government have approached the jute industry for rationalisation of the industry and to close certain types of jute mills in order to conserve coal and electric power.

There is nothing on the face of this to suggest that there will be a reduction in the production of jute manufactures, though the less efficient mills may be asked to close down. But the fact that the industry is at the present moment devoting only 20 per cent of its production directly to war purposes gives rise to a fear that production may be curtailed. The Bengal Government, however, cannot take kindly to any proposal which means a reduction in the consumption of the golden fibre and the throwing out of employment a large labour force.

Cotton

The Bombay raw cotton market was inclined to be easier and prices were moving irregularly. But there was never, at any time, any suggestion of weakness. Towards the close, bull buying in the absence of any large tenders, has resulted in a substantial rise in prices. Broach April-May has closed at the highest level for the week. No date has been fixed for the new hedge contract.

Sugar

The Government have been finding it very difficult to solve the problem of distribution of sugar and the difficulty is felt most in Bombay. It has been always pointed out that there are plentiful stocks of sugar and that if there had been any undue rise in prices in "black markets," it has been due to the absence of proper transport facilities and the fixation of a low control price.

The latest control order, strengthening the hands of the Government in future and the black-listing of firms, as in Bombay, may serve to discourage wholesale dealers from profiteering. But, as has been pointed out, it is no use attempting effective control without proper distribution arrangements. The stock position is certainly satisfactory. It should be remembered that till May last year there was a glut and the rapid absorption of sugar by the trade in the last six months of the year, is still a mystery to the producers. Stocks at the end of season were estimated at 2.6 lakhs tons, and the purchases of sugar in the latter half of the season could not have moved into consumption.

According to a press *communique* issued by the Government, physical stocks of sugar (sold and unsold) with factories in British India on the 20th June, 1942, are estimated at 4,24,000 tons. It may be safely assumed that stocks with factories together with such stocks as are held by dealers provided that they reach the consumers regularly, will meet the country's requirements until the next season's sugar comes into the market. Consumption of sugar is less than a lakh tons per month and with the possibility of an early crushing season in 1942, the position in regard to stocks is taken as very satisfactory. The *communique* lays emphasis on the provision that stocks should reach the consumers regularly, perhaps with reference to hoarding, but many have pointed out that the problem is mainly one of transport and distribution. The new season's sugar should certainly be cheaper in view of the possibility of larger production and a longer crushing season.

Rice

Considerable difficulty is being experienced in controlling the price of rice. It is surprising that this should be so in a province which produced 33 per cent of the whole Indian crop. It has been necessary to prohibit exports from the province of Bihar. In Calcutta there was a hartal of rice dealers and retailers refused to sell at the control price on the plea that their stocks were acquired at a higher level. It is unnecessary to emphasise that the action of the Bengal Government is important as it will have repercussions on parts of the country which are less favourably placed.

(*Continued from page 22*)

the Commissioner of Civil Supplies and the Director of Foodstuffs. It is a strong and representative committee, though of course, there is some complaint about the inadequacy of non-official representation in it. Probably Mr. N. R. Sarker's difficulty was that as the Council had already 21 members, it might become unwieldy if more non-officials were added. The functions allotted to the Council are not only comprehensive but highly important. It is to pool, study and disseminate information about food, plan on an all-India basis a food production programme for different regions and advise the authorities about the equitable distribution of food stocks. This will be more than sufficient to keep the Council busy for some time. There is also little doubt that if the Council carries out its work efficiently, it will be of immediate assistance to the country in solving the difficult problem of civilian food supply.

COMPANY MEETING

BOMBAY MUTUAL LIFE ASSURANCE SOCIETY, LIMITED

INCREASE IN NEW BUSINESS IN 1941

Difficulties on account of war

CHAIRMAN'S REMARKS

A General Meeting of the Bombay Mutual Life Assurance Society was held on the 25th June, 1942.. Rao Bahadur U. S. Desai presided.

GENTLEMEN,

This is for the third consecutive year that we are meeting under the clouds of war for the adoption of the Annual Report and Accounts of the Society. For the first two years after the commencement of hostilities on the Continent of Europe, the War was considerably away and the Indian public had no reason for panic although the signs of the public morale having been shaken were not absolutely absent. During the year under review Japan treacherously attacked England and America in December, 1941. The course of events is too fresh in your mind to need any recapitulation at my hands. With the fall of Singapore and Burma India's eastern outposts are in the hands of the enemy and the war of India has aleardy begun. The clouds of war, heavier and darker than ever before, are, therefore, already over our heads and our business has now entered a trying period in its history.

With these preliminary remarks, which constitute the background of the Directors' Report and the Audited Accounts for the year ending 31st December, 1941, which have been in your hands for some time past and which, therefore, with your permission I take as rad, I proceed to review the various features which have characterised the Society's operations during 1941.

NEW BUSINESS

The New Business of the Society registered during the year amounted to Rs. 2,05,86,500 of which business to the extent of Rs. 1,70,68,500 has resulted into policies. This records an increase of a little over Rs. 19 lakhs over the returns of the previous year. Having regard to conditions in general and the international situation in particular, which affected Burma and the adjoining Indian Provinces, the results should be considered as specially gratifying. With the spread of the war from continent to continent and with the decline in insurance business all round during 1940, the year 1941 held no promise of any improvement. The results of the year's operations have, however, sprung a surprise by showing a considerable increase in business over that of the previous year. This achievement undoubtedly redounds to the credit of the Society's workers and I am especially happy to pay a tribute to them on this occasion for having put shoulders to the wheel when public confidence in credit institutions was fast weakening and for having succeeded to a considerable extent in bringing the insuring public round to have faith in the institution of life assurance. I need hardly state that I am very proud of them and I have full confidence in their ability to brave the trying period through which insurance business will now be passing.

PREMIUM INCOME & LIFE FUND

The premium income during the year amounted to Rs. 62,85,409-7-3 as against Rs. 57,58,840-10-0 during 1940, and the Life Fund advanced to Rs. 2,50,30,801-15-7 from Rs. 2,08,63,403-12-1 during the previous year. Looking to the circumstances through which we are passing the addition of about 42 lakhs to the funds could be considered as satisfactory.

EXPENSE RATIO

You have already seen that we had in the course of the year an increase of about 19 lakhs in new business. The incidence of the expenditure in respect of this increased new business, combined with a slight increase under the headings of printing and stationery and postage in connection with the additional general meetings held in the course of the year is reflected in the overall expense ratio for the year, which stood at 23.65 as against 22.83 during 1940.

INVESTMENTS

We addded in the course of the year an amount of Rs. 41,95,926-0-5 to our investments bringing the total to Rs. 2,51,88,094-14-8.

I must pause here for a while to place before the members the situation created by Japan's entry into the war.

The work of the Society's building at Calcutta, which was contracted for to be ready in December last is at a standstill with four out of the seven storeys completed. The work could not be carried on for want of the necessary labour. The work has, therefore, been discontinued for the time being and arrangements have been made for the safety of the Society's building materials. When a building is under construction the amount invested in land and building is an idle investment until the structure is ready for occupation. The abandonment of the construction for the time being until labour becomes available has, therefore, delayed the date from which the building investment becomes productive. Members of the Society will, therefore, realise that a reduction in interest yield on the Society's investments for some time to come is inevitable. The second thing to which I would like to draw your attention is the amount of investments in Rangoon Electric Tramways and the Rangoon Municipal Loans which have been shown in the footnote separately in the Balance Sheet. Burma has at present become an enemy territory and it is difficult to visualise the loss the Society may have to suffer on account of this international upheaval. According, however, to a recent notification in the press, it is a matter of some consolation that the interest on Rangoon Municipal Loan and Port Trust debentures will be paid by the Imperial Bank of India. The Society had also deposited 5% Government of India Loan 1945-55 as shown in the Balance Sheet with the Reserve Bank of India, Rangoon, as security for Burma policyholders. We were anxious over the fate of these investments but we are informed by the Bank's authorities that they made the necessary arrangements for the removal of the assets held in trust to a safe place in India before the Japanese occupation of Rangoon.

The net yield during the year was 4.16 as against 4.42 during 1940. I have on several occasions in the past already told the members that the era of low interest rates has already begun and there is no knowing how long it is going to last. The yield is further affected by the investment in Calcutta Building as already stated, and by the provisions of the Insurance Act.

CLAIMS

Of the outstanding claims by death and maturity as shown in the Balance Sheet a sum of Rs. 4,22,014-13-0 has been since paid and claims amounting to Rs. 2,31,278-9-3 have been passed for payment and are awaiting proofs of title.

An investigation into the Society's mortality experience during 1941 will be shortly undertaken by the Society's actuary and although there will be some time before the results are available I am in a position to say even from the figures at our disposal that the experience is bound to be satisfactory. The amount of death claims during 1940 amounted to Rs. 8,11,532-0-0 on a business in force of about 12 crores and the amount under the same head during 1941 is Rs. 8,73,329 under a business in force of about Rs. 13,17,00,000.

WARTIME CONCESSION

I must pause again for a while to place before the members the Society's obligations under conditions created by the War. When Rangoon was bombed on 22nd of December, 1941, it was decided by your Board to extend the days of grace to policyholders in the affected area upto 31st March, 1942. This concession had to be announced because it was *normally impossible for some of the* members to pay premia in time. After the Japanese occupation of the Malaya Peninsula and a portion of Burma inquiries started pouring into the office as to the Society's policy towards policyholders who would be within the enemy occupied territory. The Life Offices Association had already recommended a line of action for member companies in this respect and the President of the Association had also made an announcement for the information of the public. Your Board has, therefore, decided as follows:—

"That where policies have lapsed during war through non-payment of premium, by application of war measures the Society will permit the restoration or revival of lapsed policies by accepting payment of premiums with interest at the usual rate within 3 months after the cessation of war and that with regards to policyholders of the Society residing in Malaya or in any part of Burma or the time being in enemy occupation, so long as their policies had not lapsed upto the date, when it may have become impossible for them to remit further premia due to lack of facilities there for, any claims which may occur out of their policies through the death of the policyholders or the maturity of the policies will be met in full within one year after communications are restored subject to the satisfactory evidence of death of the policyholders if a claim arises and subject to deduction of premiums unpaid with interest provided that nothing in the international situation at that time prevents this being done."

Policyholders seeking revival within 3 months after the close of the war, will, therefore, not be required to produce evidence of health, and will have their Insurance cover restored on payment of premia and interest only. Policyholders seeking revival after this period of three months will have to submit to all the usual formalities for revival. Although the announcement for the time being applies to the Society's policyholders in Burma and Malaya, it is the intention of the Board to extend the same benefits to policyholders in any other part of India in case the same situation arises.

The enemy's progress in the East has so far hit *only* one of the Society's offices and that is the Chief Agency Office in Rangoon. This office functioned and had been serving the Society's policyholders in Burma to the last until it was compelled to close down as a result of the terrific bombing by the enemy on the 22nd of December, 1941, when all the employees and the Chief Agent, Mr. R. N. Banerjee himself were hit. For about a month thereafter they were all reported to be lying in the hospital and I regret to report that one of the employees has already succumbed to the "War" injuries. This departed soul, who died at the post of duty deserves the sincerest appreciation at the hands of the Society's members. His is the first case so far reported as a civilian claim arising out of the enemy action which, according to the avowed policy of the Board has been already admitted and passed for payment to the legal claimant.

BONUS DURING WAR

You are probably aware that the Commerce Department of the Government of India is at present advised on all insurance matters by an Insurance Advisory Committee consisting of representatives of various insurance interests. Following the step taken by the British Life Offices or probably on a representation to that effect from certain quarters, the Committee considered in the course of the year the advisability of non-distribution of profits by life offices during the currency of the war. You will probably remember that, while addressing you in December last, when you adopted the last Valuation Report, I had expressed the view that the step taken by British Life Offices would not be suitable for us. I do not think

(*Continued on page 27*)

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 2nd July.

THE controversy between the Jute Mills and the Loose Jute Sellers in the matter of the interpretation of the present form of contract, has advanced a step further. After an abortive meeting between representatives of the Mills and Sellers' Associations, when it soon became evident that no reconciliation of the opposing views was possible, it was decided to submit the matter for Counsel's opinion, and cases are now being prepared for submission. The question of war risk insurance during transit has for the time being dropped into the background, pending decision of the major issue of ownership of the goods during transit. In this connection it is interesting to note that, while after handing over the goods to the carrier the seller cannot interfere with them in any way without a release by endorsement of the shipping document by the buyer, on the other hand the buyer can, and frequently does, exercise the rights of ownership during transit, by for instance diverting the goods to a destination other than that named in the documents. With regard to the sellers' contention that their implementation of the contract, except in respect of the quality and weight of the goods, is completed when the goods are handed over to the carrier at the point of despatch, it is further instructive to note that the due date for the determination of the contract is the final date for the *shipment* of the goods. The date when the goods are actually delivered at the Mill does not enter into the matter. Moreover, all the provisions in the contract regarding fulfilment or default hinges on the *presentation of documents* and on the date of such documents, and not at all on the actual delivery of the goods at the Mill.

In the meantime Mills have been advised that they should continue to cover goods in transit against war risk for the new quarterly period commencing 1st July. An aspect of the situation which might well engage the attention of the Government of Bengal as guardians of the interests of the cultivators, is the lightly-veiled threat contained in the view expressed by Mills that, in the event of their interpretation of the question of ownership not being upheld, they would have to consider a change in the present methods of business. If this suggests, as it would appear to do, that payment would only be made on delivery at the Mill, the repercussions on the movement of the crop would be most far-reaching. It has been pointed out that even the short period between the shipment of the goods and the receipt of payment against the documents is, in existing circumstances, largely financed through banks, so as to secure the rapid return of capital upcountry for further purchases. Very few sellers could contemplate with equanimity the tying up of capital which would be involved if payment were to be withheld till goods actually arrived at the Mill. Either the capital involved in their business would have to be increased by something like ten times, or their turnover would have to be reduced in the same proportion. The latter is the more likely contingency, if sellers concluded it was worth while at all to carry on business under such revised conditions. Already it is apprehended that the moving of the crop from the districts to Calcutta will be considerably hampered this season on account of the requisitioning by the military authorities of all descriptions of transport. If these difficulties are to be further accentuated by restriction of the finance necessary for the handling of the crop, the cultivator will be deprived of a free market in which to dispose of his jute, the consequence of which will almost inevitably be a serious fall in price levels, with disastrous results to the economic life of the province. The repercussions involved in the dispute are liable therefore to extend far beyond the purlieus of Clive Street and the matter is doubtless already engaging the anxious attention of the Special Officer, Jute.

The Fatka Market officially ceased to exist on 30th June. Few mourners were present at the ceremony. In fact a quorum had to be whipped up for the meeting of the Board of Control which fixed Rs. 50 as the spot rate of the day on which basis all transactions for the June settlement have te be closed out. As there is no account open for the September settlement, there will be no further need for the Board to function. The Fatka virtually committeed *hara kiri*, when it deserted its post at the time of emergency, and few will be anxious to see it resurrected. Actually there have been no fresh transactions for several months, merely an open account which is now closed.

Among many interesting features contained in a lengthy review of the Jute and Burlap trade in the U.S.A. during 1941, quoted by the Bulletin of the Indian Central Jute Committee from the Daily Mail Stock Reporter, is an analysis of the channels of consumption into which the vast quantities of Burlap or Hessian cloth, exported to that market, flows. Apparently the result of the enquiry was a surprise to the American trade itself. We imagine the information will be entirely fresh news to the industry in India, one of its failings being an almost complete ignorance of the ultimate uses of its products. The analysis shows that only some 78 per cent of the burlap imports are actually consumed by the bag manufacturing industry. It appears to have been the belief over there that at least 85 per cent was the proportion thus consumed. About half the balance at least 85 per cent was the proportion thus consumed. About half the balance is fairly equally divided between the furnishing and the automotive industries while the remainder is distributed over carpet, cordage and miscellaneous packing requirements. Another interesting fact which the report reveals is that the proportion of jute goods shipped from the U. K. to the U.S.A. is only about 5 per cent of the total imports. As Continental supplies are, of course, entirely cut off at present, virtually 95 per cent of the U. S. requirements are supplied by India.

Raw jute is urgently required in the U.S.A. and there is a very large quantity sold to that market lying awaiting shipment in Calcutta. It has therefore been decided that, of the wagon space available for shipments to Bombay, 19 per cent will be allowed for jute for the United States and only 6 per cent for jute for the U. K. Instructions have also been issued for all steamers berthing at Calcutta to load for the U.S.A. to lift raw jute in preference to manganese and other ores which previously had preference over jute. As freight space seems to be available in increasing quantity, the jam of jute awaiting export to the United States may now be steadily relieved.

Not enough is yet known about the reported Government proposals for the "rationalisation" of the jute manufacturing industry to justify comment beyond the fact that it deems that the judgment of several Solomons will be required to arrive at any solution which will not cause much heart-burning. If, as would appear to be the case, the crux of the trouble is transport and wagon supply, it might be no bad thing to tackle that side of the problem first.

In the Export jute market the only notable business reported has been a quantity for South America, to be shipped when freight is available, the prices being Lightnings at Rs. 39 Old Crop and Rs. 43 New Crop, and Hearts at Rs. 30 Old Crop and Rs. 33 New Crop. Mills have only taken small quantities the rates reported being Rs. 54 Firsts, Rs. 27 Hearts and Rs. 18 for straight morahed Rejections.

In Loose Jute some further business was put through in New Crop European assortment at Rs. 9-8 for Middles and Rs. 6-8 for Bottles. Supervised Jat is reported done at four annas under these rates. Some Weedings are also reported done at considerably varying rates. Estimated arrivals of Jute into Calcutta for the month of June amount to only 1,71,000 bales against 6,33,000 bales in June 1941. This brings the total arrivals for the season July 1941 to June 1942 to 58,04,000 bales against 94,56,000 bales in the previous season.

The Fabrics market has shown a sharp recovery, possibly due to the possibility of curtailed production. Hessians have not been extensively dealt in, but after dropping to Rs. 13-14 and Rs. 17-14 for nines and elevens respectively the market closes nominally at Rs. 4-4 and Rs. 18-6. Business with Mills is reported for October-December elevens at Rs. 19, the minimum price at which Mills may sell. The Heavy goods section has again been active both for near and further forward. "B" Twills sold at Rs. 39-4 to Rs. 40-4 ready. Liverpools improved from Rs. 42-12 to Rs. 43-4 ready and business was also done at Rs. 42 September and at Rs. 41-8 October-December Cornsacks also met with enquiry and sales resulted at Rs. 39-8 July, at Rs. 39 to Rs. 39-4 August-September and at Rs. 37-8 October-December. Woolpacks were reported at Re. 1-13 September.

EAST INDIAN RAILWAY
TENDER NOTICE

Annual Contract Item Costing Over Rs. 8,000/- Class I Contract.

Sealed tenders are invited for the following and will be received in the General Manager's Office, East Indian Railway, 105, Clive Street, Calcutta, upto 11 a.m. on 28th July, 1942.

Tender No. S|SP|752|Gb10|357|C for the Supply of Brooms Cocoanut with Wooden Plugs and Wire Bound.

Tender forms with full particulars can be had from the Controller of Stores, East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta. and on production of his receipt when applying for the same.

Firms outside Calcutta, may, however, remit the amount to the Controller of Stores direct by money order. No refund is permissible.

Sealed tenders delivered by hand should be presented for registration in the General Manager's Office and then put into the tender box outside the Deputy General Manager's (Works), room by the Tenderer or his representative.

R. E. MARRIOTT,
General Manager.

JUTE MANUFACTURES

Calcutta, July 2.

A rather sharp decline in prices has been recorded in the jute manufactures market during the past week. The immediate outlook is not considered quite encouraging though it is generally held that greater shipping space will be available in the next two or three months. That was the reason why ready goods were at a discount earlier in the week. Ordinarily, the reports regarding the rationalisation of industry and "the closing down of certain types of mills" should have had an encouraging effect on the market as it would mean a lower level of production and in the present state of the market operators are not prepared to take notice of the factor. 9 Porters ready are now quoting Rs. 14 for all positions and 11 Porters Rs. 18/- for all positions.

In the heavy goods section also there has been very little doing. Demand from Punjab and Bombay has been satisfied and quotations have been marked down. B Twills for ready delivery sold on the basis of Rs. 39-4, Liverpool Twills Rs. 42-12 and Cornsacks Rs. 39-8.

JUTE

Calcutta, July 2.

The raw jute market has been dull and uninteresting in sympathy with the goods market. It is reported that there is a possibility of greater shipments of the raw material in the immediate future but with plentiful supplies of the crop and the depressed state of the goods market values have remained mostly unchanged. Jute mills have shown greater interest in loose jute and purchases are reported to have been made in sizeable quantities. The new crop harvesting is progressing satisfactorily and rivers have risen to normal levels. Arrivals, however, continue to come into Calcutta in very small quantities.

In the loose, jute section, supervised Jat Bottom were done at Rs. 6 per maund. New Crop Indian Jat Middles and Bottoms were done at Rs. 9-8 and Rs. 6-8 per maund.

In the pucca bales section, not much business has been passing. Shippers have been rather disinterested. Mills have bought Morahed rejections at Rs. 18/- per bale.

GOLD

Calcutta, July 2.

With the deterioration in the war situation and the small arrivals into Bombay, the gold market has been more active and prices have been marked higher. Closing quotations are nearly 1½ points higher on balance. Gold ready are quoting Rs. 51-3 and First Rs. 51-2 against Rs. 49-8 and Rs. 49-6 respectively at the end of last week. The London price is unchanged at 168s.

SILVER

Calcutta, July 2.

In sympathy with the strength of the gold market, silver prices also have been marked higher. The reaction in prices early in the week on profit-taking has been only temporary. Indian Mint Silver Ready are quoting Rs. 85-4, First Settlement Rs. 84-8 and Second Settlement Rs. 84-11. It will be noted that the premium for ready over first settlement has narrowed down considerably.

In the London market, there has been very little doing and the quotation for both spot and forward has remained unchanged at 23½d.

PIECEGOODS

Calcutta, July 3.

The piecegoods market has been slightly easier and business passing has been on a smaller scale. The adverse developments in the war situation have had a restraining influence. Demand from upcountry centres has been on a small scale. There is good export enquiry for a few lines. For indigenous goods, demand has been confined mainly to the standard lines.

COTTON

Calcutta, July 2.

The Bombay raw cotton market has been rather quiet and quotations have been fluctuating in very narrow limits. Earlier in the week, operators were inclined to adopt a more optimistic attitude as it was pointed out that the growth of Egyptian cotton might be affected by the entry of Germans into the country. But towards the close a generally easier feeling has been noticeable. Broach April/May are quoting Rs. 197, Oomra July Rs. 169-8 and Bengal July Rs. 168.

The New York market has been more active and a substantial rise in prices has been recorded. There has becn greater buying of the distant positions. Trade buying has been good. October quoted 19.04 cent and December 19.23 cents.

BOMBAY MUTUAL LIFE ASSURANCE SOCIETY, LIMITED

(Continued from page 25)

that circumstances have so materially altered as to change our opinion. Your Board, therefore, opposed the step although in doing so the Society was going counter to the opinion of several Indian Life Offices. But the step was advised in the wider interests of the life insurance business. In the first place India stands almost lowest among the countries of the world in the matter of per capita insurance protection. Secondly the approach of the war nearer to Indian borders is acting as a deterrent to the undertaking of fresh commitments by the people. And if in addition to this we were to support the proposal of non-distribution of bonuses, we would probably be adding another deterrent inasmuch as people might begin to entertain serious doubts regarding the solvency of this business and may cease, rightly or wrongly, to look at it even from the investment point of view. I, therefore, feel that the Department of Insurance would be well-advised not to embark on any legislative interference in this respect, but to leave the matter to the discretion of individual life offices, subject, of course, to the statutory check exercised by the Department of Insurance.

Another problem which faces Insurance Managements to-day is the question of accepting business from those parts of the country, which have become war zones. When the enemy made his inroads into Burma, this question was discussed and it was decided by us in pursuance of the recommendation from Life Offices' Association to charge Rs. 10|- extra per Rs. 1,000|- sum assured per annum to new proposals on civilian lives. Some such step will have to be pursued when, if at all, any other part of India comes within the range of warlike operations. It is to be remembered that this step would be a tentative attempt to cover the risk the magnitude of which it is difficult to gauge at present. Should, however, at any date the nation be faced with country-wide operations the matter would be subject to fresh consideration by the Board.

THE PANIC

Before I close my observations let me refer for a while to the panic which has overtaken the policyholders in general. In the last few months since the fall of Singapore and the attack on Burma there has been an unprecedented demand for loans, so much so that the department had to be reinforced considerably to cope up with work. I would like to sound a note of warning to these policyholders that no step could be more unwise than this, if they are taking loans to keep liquid cash on hand.

It is our experience very often that these loans are the precursors to the lapsing of policies and the consequent loss of cover need of which was never so great and essential as it is to-day.

GENERAL

I have mentioned on several occasions in the past that the importance and advantages of life assurance cannot be overestimated. The present times lay additional emphasis on this fact. Under the unsettled conditions prevailing to-day no duty is more incumbent than that of saving and there is no method of saving which offers greater advantages than those of Life Assurance. Moreover the existing policyholders as also those remaining uninsured are assured by the Society that the risk of death to Civilians from enemy action is covered by our Policies and it is the desire of your Board to continue to provide Life Assurance to civilians in this country, against enemy action without payment of any extra. Your Board, hopes that on occasion to modify this assurance will not arise at all.

Life Assurance to-day is thus a protection *par excellence*, come what may. Secondly even as investment it is as safe as any other form of security in addition to its value as protection tot he family. It is, therefore, wise to keep the contract alive by payment of premia; nay, it would be wiser still to go in for additional assurance if it could be conveniently done. To those who are remaining without insurance cover even in the face of danger I would like to sound a note of warning that at no stage of their life, insurance cover was more essential than it is to-day. I would request the Society's agents to broadcast this advice to the public as widely as they can.

To sceptics, who shrug their shoulders when a life agent approaches them. I can do nothing better than point to the hundreds of life offices all over the world, which have been serving humanity during the last century and a half through thick and thin, booms and depressions and wars and epidemics. Their existence to-day and their recognition among the articles of Treaty of Versailles signed by the nations at war after their war fever was over is another testimony to sterling qualities of this provision for the future.

In conclusion I take this opportunity to thank sincerely all our chief agents and fieldworkers for their hard work which is leading the Society from success to success and I request them to continue to work in this hour of trial with the same zeal and enthusiasm which they have shown hitherto.

To the Secretary and staff we owe our appreciation for their good work and devotion to duty. In recognition of their services your Directors recommend the payment of one month's salary as bonus to such members of the staff as have served for 12 months and half a month's salary to those, who have served for six months or more and who are now and who were in the Society's services on the 31st of December, 1941. I may add here for your information that we have decided to pay compensation to the dependants of any employee of this Society, who may be a victim to enemy attack while in active service with the Society to the extent of four years' substantive salary upto a maximum of Rs. 10,000 as a benefit attaching to Society's employment during the currency of the war. I believe you will readily realise the necessity of this step taken by your Board with a view to reward the continued loyalty to the Society on the part of the Society's staff even at the risk of death and hope that it will be appreciated by and will have the approval of you all.

In view of the great increase in the work to be done by your Auditors we recommend that their remuneration be increased to Rs. 3,500 instead of Rs. 2,500 as at present.

Gentlemen, now I beg to move that the Directors' Report and Audited Revenue Account and Balance Sheet for the year ended 31st December, 1941, be approved and adopted.

The Directors' Report and the Audited Revenue Account and Balance Sheet were adopted. Mr. S. A. Brelvi and Mr. Ambalal S. Parikh were re-elected as Directors. Messrs. Sohrab S. Engineer & Co., were reappointed as Auditors for the current year.

Stock Markets to-day and to-morrow

TATA IRON AND STEEL DIVIDENDS

It is perhaps the first occasion when stock markets have kept steady during a period when there has been a sudden deterioration in the war situation. Even with the rapid advance of the Germans into Egypt there was no anxiety to liquidate holdings and but for the declaration of lower dividends by the Tata Iron and Steel Company, Limited the decline in prices in the Bombay market would perhaps have been not so pronounced. The debate in the House of Commons and Mr. Churchill's reply to his critics have had an encouraging effect on the market. Closing prices are slightly better than the lowest levels for the week. The outcome of the Battle of Egypt is awaited with keen interest.

* * * *

As we go to press I understand that the Government of India are shortly coming into the market with a new defence loan on terms more favourable to the borrower.

* * * *

The fears of certain Bombay operators that there would be a reduction in the dividends of the *Tata Iron and Steel Company, Limited* for the year ended March, 1942 have come true. It was, however, never at any time expected by investors that the directors would choose to reduce the dividends especially as production was on the upgrade and the same prices were available on sales. The decision, however, of the directors to pay only a portion of the dividends in income stock certificates is understandable as the company is in need of finance for extensions to plants and the best way of conserving resources and satisfying shareholders is to declare the dividends and make a deferred payment.

After the first and second preference dividends, the ordinary shares are to receive Rs. 27 per share against Rs. 29 per share previously and the deferred shares Rs. 158-4 against Rs. 179 per share on the former occasion. A sum of Rs. 15 per ordinary share and Rs. 72-4 per deferred share is to be paid in cash and the balance of Rs. 12 per ordinary share and Rs. 86 per deferred share will be satisfied by the issue of income stock certificates carrying simple interest at 3 per cent per annum at the option of the company within three years.

The declaration of lower dividends by itself should have been discouraging to the market. It was not surprising, therefore, that there was a sharp fall in prices when it was known that there was to be deferred payment of a portion of the dividends. The readiness of the Central Bank in coming forward with the proposal that the income stock certificates would be paid at par has had a slightly encouraging effect towards the close.

The willingness of the Central Bank to pay the income stock certificates at par is not surprising as they provide a source of good investment for a short period at an attractive rate.

The directors of the Tata Iron and Steel Company, Limited should have valid reason for recommending slightly lower dividends. And in the absence of the accounts for 1942/42 we must defer comment.

I can only point out that with excellent prospects the shares afford a very high yield. The company's properties are fully covered under the war risks insurance scheme. At this time last year, the quotation for ordinary shares was around Rs. 400.

* * * * *

The highest dividend since 1933 is paid by the *Kingsley-Golaghat Assam Tea Company, Limited* out of the earnings for the year 1941. As in the case of the other companies the big improvement in profits was due to the larger crop turned out and the higher average price realised. The net profit, before providing for taxation and depreciation is as much as Rs. 2,95,947 against Rs. 1,20,347 for 1940. The amount set aside to depreciation is Rs. 11,840 (Rs. 12,726) while the provision for taxation is Rs. 91,779 (Rs. 23,652). The transfer to General Reserve is Rs. 30,000 (Rs. 10,000). The final dividend of 40 per cent, with the interim dividend of 15 per cent already paid, makes 55 per cent for the whole year against 25 per cent previously. I think this is the first instance of a tea company which has been able to recommend a substantially higher dividend this year.

The crop turned out was 13,487 maunds against 12,201 maunds for the previous year. The average price realised was twelve annas nine pies per lb. against ten annas seven pies per lb.

The tea sold for export exceeded the allowed quota by 228 maunds and export rights were purchased to cover the quantity.

* * * *

In spite of difficulties in getting machinery and effecting shipment, the *Aluminium Corporation of India, Limited* has made substantial progress since the management was taken over by Messrs. J. K. Limited. At the annual general meeting held on June 18, 1942, the Chairman pointed out that the Corporation was almost ready to start the production of alumina. So far as aluminium is concerned, work has been held up on account of the difficulty in getting electrical equipment. We have the Managing Director's assurance that a better account of the achievements and progress of the Corporation will be given when the next report is presented.

* * * *

The talks regarding the rationalisation of the jute industry have naturally had a discouraging effect on the market. It is not known whether the production will be lower as a result of rationalisation or whether particular mills will be closed down and others worked more intensively. It is reported that the Government of India have approached the jute industry with proposals for rationalisation as recommended by the Grady mission. The need for rationalisation is for conserving coal supplies and power. As the industry is devoting only 20 per cent of its production on war orders it is feared that some companies may be affected. But in view of the other difficult problems of providing work for discharged labour and finding use for surplus jute it remains to be seen as to how the rationalisation proposals are effected. The investor is naturally inclined to await further developments.

* * * *

The *Hooghly Bank's* progress in 1941 has raised the balance-sheet total to over Rs. 50 lakhs. Rather good for a Bank, which began in a small way, but has made good, as is proved by the consistent renewal of fixed deposits until definitely abnormal conditions supervened.

The rates paid on these deposits have been reduced after a time, and it has been found that if interest takes up a fairly big part of its income, it has been due to the reduction of advances, made usually at fully profitable rates, though it must be said the manner of distribution against goods, shares and bills generally points to a remarkable adjustment of policy in relation to changing conditions. Some interesting data as regards the composition and character of advances has been obtained. I believe that Barclays examined the question from many angles and it has been left to a small bank in Bengal to collect some quite interesting figures as to interest and expenses in relation to policy. The figures justify the policy so far pursued but the real remedy would appear to lie in an addition to paid-up capital which would bring the Hooghly Bank into the Schedule, raise its status, and add to its resources. This is a suggestion which is *obiter* but not irrelevant.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 3.

THE developments in the war situation in the Middle East have naturally had a discouraging influence on the Calcutta Stock Exchange during the past week. The announcement of a final dividend by the Steel Corporation had an encouraging effect on the market towards the close of last week, but with the weakness of the Bombay market and the rapid advance of the Germans into Egypt the improvement in values proved to be only short-lived. It is satisfactory, however, to note that there has been no rush for selling and that prices have been marked lower only slightly. Business passing has been on a very small scale. Giltedged securities have not recorded any further appreciable decline in prices. Operators and investors alike are inclined to await further developments and the outcome of the Battle of Egypt, which is now going on, is awaited anxiously.

Not many transactions have been recorded in giltedged securities and prices are a shade easier. The continuance of easy conditions in the money market and the confident assertions by the British Premier have prevented any large scale selling. 3½ per cent. Paper is selling at Rs. 90-14 and 3 per cent. Paper at Rs. 77-14. Among terminable loans, 3 per cent. 1963/65 were Rs. 91-13, 4 per cent. 1960/70 Rs. 106 and 5 per cent. 1945/55 Rs. 107-10. There has been a decline in the treasury bills rate from twelve annas and five pies per cent. per annum to ten annas and nine pies per cent. per annum.

There has not been much doing in bank shares. *Reserve Bank* were easier at Rs. 99 while *Imperial Bank* were unchanged at Rs. 1,540.

A small number of transactions has been recorded in public bodies' debentures, 3¼ per cent. *Howrah Bridge* debentures being noted at Rs. 88, 5 per cent. *Calcutta Port Trust* debentures 1956/86 at Rs. 104-8 and 6 per cent. *Calcutta Port Trust* debentures 1955/85 at Rs. 113.

Among industrial debentures, 5½ per cent. *Dalmia Cement* debentures changed hands at Rs. 104.

First class preference issues also have been easier with the general trend of the market. *Alliance* were Rs. 118-8, *Bengal* Rs. 103-8, *Birla* Rs. 116, and *Hukumchand* Rs. 130. *Dalmia Cement* were Rs. 125, *Steel Corporation* Rs. 108, *Shree Gopal Paper* preferences Rs. 135 and *New Victoria* Rs. 9-4.

In the Coal section, very little interest has been shown with *Bengal* quoting Rs. 359, *Bhalgora* Rs. 5, *Equitable* Rs. 34-4 and *West Jamuria* Rs. 29.

In the Jute section there has been little business in ordinary shares. *Budge-Budge* were Rs. 328, *Cheviot* Rs. 168-8 and *Gourepore* Rs. 620. *Chitavalsah* were Rs. 14-6, *Naskarpara* Rs. 16-4 and *National* Rs. 21-4. *Rameshwara* were noted at Rs. 9-1. The talks regarding the rationalisation of the industry, apart from other developments, have had a restraining influence. As it is pointed out that certain types of mills will have to be closed down there is considerable speculation as to which will be the units of the industry affected if the proposals regarding rationalisation are given effect to.

Sugar shares have not been very much affected with *Buland* quoting Rs. 29-10, *Carew* Rs. 13, *Cawnpore* Rs. 27-12, *Purtabpore* Rs. 13 and *Raza* Rs. 30-12. *South Behar* deferred changed hands at Rs. 4-4.

Among Tea shares, *Dimakusi* were noted at Rs. 28-2, *Pussimbing* at Rs. 9 and *New Dooars* at Rs. 1,000.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were noted at Re. 1-14 and Rs. 2 respectively. *B. I. Corporation* were lower at Rs. 5. *Aluminium Corporation* were Rs. 11-8, *Borooah Timber* Rs. 15-4 and *India General Navigation* Rs. 76. *Assam Bengal Cement* were Rs. 11-4 and *Dalmia Cement* Rs. 15-2. Among Paper shares, *Orient Paper* were Rs. 18-6, *Star Paper* Rs. 14-12 ex-dividend and *Titaghur Paper* Rs. 18-2 ex-dividend.

In the Engineering section, rather quiet conditions have been noticeable with *Indian Iron* quoting Rs. 26 and *Steel Corporation* Rs. 16-4 *cum*-dividend. *Indian Galvanizing* were Rs. 30-4 ex-dividend and *Bhartia Electric* Rs. 13-6. *Kumardhubi Engineering* changed hands Rs. 9-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 2.

The discouraging news from the war fronts and the declaration of lower dividends by the Tata Iron and Steel Company, Limited for the year ended March, 1941 have been responsible for the rather weak tone of the Bombay share market during the past week. The assumption of command by Gen. Auchinleck in Egypt and the report that the Central Bank of India would pay at par the income stock certificates of the Tata Iron and Steel Company, Limited have been responsible for a slight recovery in prices towards the close.

Securities.—Giltedged securities have been rather quiet and quotations are slightly lower. 3½ per cent. Paper is quoting Rs. 90-14, 2¾ per cent. 1948/52 Rs. 97-3, 3 per cent. 1951/54 Rs. 98-10, 3 per cent. 1963/65 Rs. 91-10, 4 per cent. 1960/70 Rs. 106 and 5 per cent. 1945/55 Rs. 107-10.

Textiles.—Textile issues have been marked lower in sympathy with Steel issues. There has been a tendency to resist selling pressure as it is believed that with the recent large orders mills will be very busy. The total value of these orders is estimated to be Rs. 50 crores.

Bombay Dyeing were Rs. 1,230, *Central India* Rs. 353, *Century* Rs. 462, *Kohinoor* Rs. 472 and *Simplex* Rs. 197 ex-dividend.

Steels.—As apprehended, the directors of the Tata Iron and Steel Company, Limited have decided to recommend lower dividends for the year ended March, 1942. Not only have the dividends been lowered but it has also been announced that part of the dividends will be paid in income stock certificates. There was a slump in the quotation for ordinaries and deferreds to Rs. 275 and Rs. 1,360 respectively. The willingness of the Central Bank to discount the income stock certificates at par has resulted in a slight rally towards the close, the quotations being quoted around Rs. 1,381-8 and Rs. 281 respectively.

Hydro-Electrics.—Quotations have been marked lower in this section in sympathy with the giltedged securities section. *Tata Hydro* were Rs. 165, *Andhra Valley* Rs. 1,607-8 and *Tata Power* Rs. 1,460.

Miscellaneous.—*Alcock Ashdown* were Rs. 475 while *Belapur* were weak at Rs. 222. *B. E. S. T.* were Rs. 131, *Shivrajpur Syndicate* Rs. 34-8 and *Premier Construction* Rs. 117. *A. C. C.* were Rs. 165-8 and *New India Assurance* Rs. 45.

COMPANY MEETING

ALUMINIUM CORPORATION OF INDIA LIMITED

MR. R. R. GUPTA ON PROGRESS OF FACTORY'S WORK

Mr. Ram Ratan Gupta, the Managing Director of Messrs. J. K. Ld., the Managing Agents of the Aluminium Corporation of India Limited, in a short speech at the Third Ordinary General Meeting held at Devashram, Arrah, on June 18, 1942, made the following observations in regard to the progress of the Corporation:—

"I must say a few words about the progress of the factory's work. Many of you are aware of the state of affairs which existed in the company's work before Messrs. Juggilal Kamlapat took over charge of the Managing Agency of your company, but I am glad to inform you, gentlemen, that since they have taken over the charge, the affairs of the Corporation are being pushed forward with very great speed and are showing progressive improvement in all the works of the company.

Machinery and Stores

"Machinery, stores and materials required for the erection and construction of machines, tanks to complete the various departments of the factory, as well as stores and articles needed for the running process, have almost all been ordered or received. Building, erection, construction and fabrication work of the Boiler House, Water Plant, Turbine Plant, Alumina House (Red Mud House and White Mud House) have almost been completed and tried. The Boiler, Water Plant and one Turbine are already running to meet the power requirements of all the sections of the factory except Cell House. The workshop of the factory has been fully equipped to meet all the demands of getting the machines and materials required to be constructed in our own factory.

"We are almost ready to start the production of alumina, but so far as aluminium is concerned, we are held up for want of electric generator, switches, etc., to supply D.C. current required for this process. The orders for these plants have long been placed with the firm of the General Electric Company (India) Ltd. Our latest information is that one generator is already shipped and the others are ready for shipment.

"I wish to assure you, gentlemen, that in spite of very great difficulties placed in the way due to the abnormal situation created in the country since Japan entered the war, we are leaving no stone unturned to expedite the completion of the plant as speedily as possible and safeguard your position, rights and interests. Our efforts are directed towards the attainment of one end—that of promoting the best interests of the Corporation by all possible means and all possible ways. With the help of the Almighty, the day is very near when we shall see the realization of the country's long-cherished dream—the production of aluminium in this country—from the country's own resources and raw materials, with the country's own labour and capital, and under the country's own management.

Ideal Industry

"I may add with all the emphasis, that the aluminium industry is the ideal industry in India from every point of view, because of the economical production of the metal at a price at which it can be very profitably exported even to foreign countries, thus opening up a new avenue of export in this country. To-day, there are but few, if any, industries in which aluminium and its alloys in one form or other do not play their part. Aluminium is regarded the key metal of armament and world's statistics show that of all the metals sought after by most of the Powers to-day, aluminium occupies the foremost place. All economic experts have agreed that aluminium is No. 1 metal of the world. India is ideally situated for the development of this great industry and now India will see the successful fulfilment of this great economic vision—the manufacture of aluminium—and for this, our thanks are due to the promoters of this concern.

"I thank you, gentlemen, for your co-operation and I feel that the Managing Agents will be able to give a better account of the achievement and progress of the Corporation in their next report."

Dividend amount ..	59,062	68,906	68,906	85,594
Dividend per cent ..	7½	8¾	8¾	11¼
Carry forward ..	7,659	2,789	4,773	26,181

(*Half-yearly meeting, 7th July, 1942 at 11-40 a.m.*)

*Includes Rs. 12,000 transferred from Contingency Reserve.

Audited accounts for the half-year ended 28th February, 1942:—

	Rs.	A. P.
Balance available for appropriation after the inclusion of the amount brought forward from the previous half-year and after transfer of Rs. 12,000 from Contingency Reserve is	66,121	7 9
Out of which is recommended the payment of a dividend at the rate of 15 per cent per annum, free of income-tax absorbing ..	59,062	8 0
Leaving to be carried forward	7,058	15 9

Output of steam and other grades of coal as compared with the two preceding half-years was as follows:—

Half-year ended.	Barkui. Tons.	Chandametta. Tons.	Total. Tons.
28th February, 1942 ..	59,357	60,682	1,20,039
31st August, 1941 ..	61,174	55,140	1,16,314
28th February, 1941 ..	60,193	48,412	1,08,605

Sales.—Raisings and despatches were adversely affected throughout the half-year by the continued shortage of wagons. The heavy increase in costs of stores and advances in the rates of wages of all labour are reflected in the results.

Managing Agents.—Messrs. Shaw Wallace & Co.

Authorised Capital—Rs. 12,00,000 *in* 1,20,000 *shares of Rs.* 10 *each. Issued and Subscribed—Rs.* 7,87,500 *in* 78,750 *shares, fully paid-up.*

Synopsis of the balance sheet as at 28th February, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.

		Total Liquid Assets ..	9,67,816

KINGSLEY-GOLAGHAT ASSAM TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1941:—

	Rs.	A. P.
The balance available for appropriation after the inclusion of the amount brought forward from the previous year is	1,92,929	7 8
From this is to be deducted the payment of the following dividends, free of income-tax:—		
On the Preference shares at 6 per cent for the year absorbing ..	14,400	0 0
On the Ordinary shares ad-interim at 15 per cent for the year absorbing ..	36,000	0 0
On the Ordinary shares a further ad-interim at 40 per cent which it is proposed to conform as final, making a total of 55 per cent for the year, absorbing ..	96,000	0 0
	1,46,400	0 0
Leaving a balance of	46,529	7 8
Out of which it is proposed to place to General Reserve	30,000	0 0
Leaving to be carried forward	16,529	7 8

Crop.—Comparative figures of the 1941 and 1940 crops are as follows:—

	1941 crop. Mds.	1940 crop. Mds.
Borkatonee	5,112	4,950
Gorunga	2,474	2,151
Deha	2,697	2,225
Sotai	3,204	2,870
Total ..	13,487	12,201

The tea sold for Export exceeded the allowed quota by 228 maunds and Export Rights were purchased to cover this quantity.

Sales.—The teas were sold at a gross average price of 12 annas 9 pies per lb. The divisional average prices were as follows:—

	1941 As. P.	1940 As. P.	1939 As. P.
Borkatonee ..	12 4	10 7	11 8
Gorunga ..	12 9	10 11	10 8
Deha	13 0	10 5	11 1
Sotai	13 4	10 4	11 8
Total ..	12 9	10 7	11 4

This company entered fully into the contract for the supply of tea during 1941, to the Ministry of Food, United Kingdom.

Manufacture.—The teas were of a satisfactory standard throughout the season.

Planted Area.—The area under tea remains unchanged and is as follows:—

	Acres.
Borkatonee	646
Gorunga	330
Deha	338
Sotai	262
Total ..	1,576

Condition of the Property.—The gardens are in good order and all garden works received careful attention during the year.

Buildings and Machinery.—These were maintained in good order. During the year one McIntosh Tea Sorter and one Electric Fitter were purchased for the Borkatonee Division.

Labour.—The numbers on the roll on 31st December, 1941, were as follows:—

	(Men, Women and Children) Total.
Bokatonee	1,120
Gorunga	488
Deha and Sotai ..	622

EEstimates for Season 1942.—These allow for a restricted crop of 12,400 maunds at a total cost on Revenue Account of Rs. 5,32,764.

Managing Agents.—Messrs. Shaw Wallace & Co.

Authorised, Issued and Subscribed Capital—Rs. 4,80,000 *in* 2,400 *Ordy. and* 2,400 6 *per cent Pref., both of Rs.* 100 *each, fully paid-up.*

THE HOOGHLY DOCKING & ENGINEERING COMPANY, LIMITED

Audited accounts for the half-year ended 31st December, 1941:—

Accounts.—The trading result for the half-year shows an increase as compared with the preceding half-year, the Gross Profit amounting to Rs. 6,19,083-2-4 as against Rs. 5,17,489-11-3. After deduction of all charges for Auditors' fees, Debenture Interest, Debenture Trustees' fees and Managing Agents' commission and providing for Depreciation and Taxation, there is a net profit for the period of Rs. 2,25,871-0-9.

This sum, together with a credit of Rs. 1,000 on account of reserve for Debenture Trustees Fees no longer required, deducted from the debit balance of Rs. 7,95,752-15-1 brought forward from the preceding half-year leaves a net debit on Profit and Loss Account of Rs. 5,68,881-14-4 to be carried forward.

General Report.—The net value of work done during the period amounted to Rs. 18,94,399-7-0 against Rs. 18,48,198-1-6 for the preceding half-year.

Managing Agents.—Messrs. Martin & Co.

Authorised, Issued and Subscribed Capital—Rs. 12,50,000 *in* 25,000 *shares of Rs.* 50 *each, fully paid-up.*

ISSUED WEEKLY

Vol. XXX. No. 2 SATURDAY, JULY 11, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

WITH interbank call money quoting nominally at ¼ per cent, short credits have been in superabundant supply. Such exceptionally easy conditions in the money market are appropriate to the time of the year; nonetheless, it is remarkable that monetary ease has been accentuated what time colossal sums are *being drained from the market* through sales of treasury bills. Between May 20, and end of June, sales of treasury bills amounted to Rs. 32½ crores. Sales so far this month came to Rs. 16 crores. Thus, in seven weeks, total sales amount to Rs. 48½ crores. Treasury bills outstandings at the hands of the public at the present moment, are Rs. 71½ crores. That, despite such a high floating debt, total and such large sales of treasury bills for weeks, cash is piling up in the hands of banks, may be said to be an indication that a good part of the increased note circulation finds its way into banks as deposits. Against Rs. 8 crores of tender bills offered on July 7, applications came to Rs. 14.44 *crores* as compared with Rs. 14.29 crores on June 30 and Rs. 16.99 crores on June 23. Bidding has been quite keen as is shown by further reduction in the average treasury bills discount rate from annas 10 and 9 pies per cent per annum to 10 annas and pies 3. The offer of tender bills for next week remains unchanged at Rs. 8 crores. There is every reason to believe that bidding at the next week's auction will be as keen as in recent weeks. Deposits maintained by scheduled banks with the Reserve Bank have risen further from Rs. 62.72 crores to Rs. 63.49 crores. This increase has taken place in spite of a sharp decline in Imperial Bank's cash from Rs. 36.05 crores to Rs. 32.28 crores. This means that the cash resources of banks other than the Imperial Bank, are also receiving substantial replenishment. The statement of the Imperial Bank for the week ended July 3, discloses a sharp increase in investments from Rs. 76.74 crores to Rs. 79.39 crores. Whether this increase is accounted with treasury bills it is difficult to say. The terms of the Third Defence Loan were announced last Saturday; and they were such as to lever up giltedged prices. The Imperial Bank must have known of the impending issue of the Third Defence Loan and, in anticipation, might have bought fairly substantial parcels of government securities. In our necessarily brief comment on the defence loan in the last issue, we forecast that the 3 per cent 1951-54 loan, which was quoting roundabout *Rs. 98½ at that time*, must shoot up to par and that there should be an all-round advance in giltedged prices. This forecast has been borne out by the events of this week. If the Imperial Bank had, as we presume, bought inconsiderable quantities of giltedged securities in the last week, it should be showing a good profit on this transaction. It must be added that the Imperial Bank also appears to have taken substantial interest in treasury bills during the week ended July 3. Bills discounted and purchased have sharply advanced from Rs. 2.87 crores on June 26, to Rs. 5.14 crores on July 3. It is hardly possible for the Imperial Bank to discount trade bills for as large an amount as Rs. 2¼ crores in one week. The increase under bills is presumably accounted with the transaction in treasury bills. This is somewhat confusing as treasury bills purchased are shown by the Imperial Bank sometimes under investments and sometimes under bills. It will be much easier for scribes, who have to review markets if the Imperial Bank should pursue a uniform policy. We would, in fact, suggest that treasury bills should be shown under a separate head. In this connection, we may stress that it was at the suggestion of *Indian Finance*, more than ten years ago, that the Imperial Bank started showing ways and means advances as a separate item in the weekly accounts. In spite of the usual month—early disbursements, deposits of the Imperial Bank established a new high record at Rs. 135.26 crores.

The returns of the Reserve Bank for the week ended July 3, reflect the changes consequent on the usual monthly receipt on payments through His Majesty's Government. *Foreign balances in the banking department* have risen from Rs. 60.77 crores to Rs. 80.06 crores. This increase has taken place after the transfer of Rs. 5 crores from the banking department to the issue department. This means, that streling payment received from the British Government in June is of the order of Rs. 25 crores. There has been currency expansion for Rs. 5 crores against sterling securities, the latest figure for which in the issue department is Rs. 266.85 crores. As a result, active note circulation establishes a new record at Rs. 446.78 crores as compared with Rs. 443.19 crores. Notes held in the banking department have also risen from Rs. 12.92 crores to Rs. 15.05 crores. This large sterling payment from the British Government has enabled the Central Government to liquidate ways and means advances of Rs. 5 crores and to strengthen its cash balance from Rs. 4.36 crores to Rs. 14.93 crores. Deposits of provincial governments show a slight increase at Rs. 7.22 crores.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills were opened on Tuesday, July 7, 1942. Total amount offered was Rs. 14,44,00,000 (Rupees 14 crores 44 lakhs). Tenders at Rs. 99-13-3 per cent and above were accepted in full and those at Rs. 99-13-0 per cent were allotted approximately 20 per cent. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-10-3 per cent (Rupees nil annas ten and pies three per cent) per annum.

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills will be received on Tuesday, July 14, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, July 13, 1942, at other centres. Successful tenderers should make payment on Friday, July 17, 1942. Other conditions are as usual.

During the week ended July 3, 1942, Government of India Treasury Bills for Rs. 3,60,50,000 (Rupees 3 crores 60 lakhs 50 thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

(Continued from previous page).

We understand that Sir Jeremy Raisman has taken up with the British Government the question of providing a guarantee for the debentures of the Rangoon Port Trust and the Rangoon Corporation. Considering the energetic and satisfactory measures which he took for clarifying the position of the debentures of the local and public bodies in India, we may be sure that Sir Jeremy must have strongly recommended to His Majesty's Government that a guarantee in similar terms must be furnished by the British Government with respect to the local bodies in Burma. Holders of these securities will, therefore, be well advised to desist from selling them in the present depressed market. While we are on this subject of debentures of local bodies, we may draw attention to a bloomer committed by the Imperial Bank in their circular to Calcutta banks with respect to the securities of the local bodies in this City. The circular mentioned the new Howrah Bridge Loan also. We understand that the new Howrah Bridge Loan is already guaranteed by the Government. Widespread knowledge of this fact should help a sharp recovery in this scrip.

The closing rates are: Banks buy T.T. London Ready to six months forward at 1s. 5 31/32d.; banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

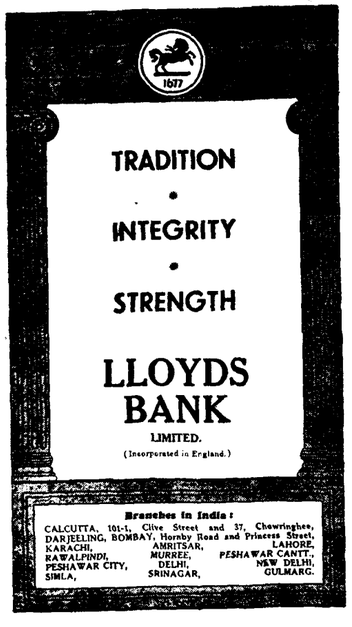
Banks sell three months D.A. bills for first and second months at 1s. 6 9/32d., and for the third and four months at 1s. 6 5/16d.

Money is easy with interbank call at ¼ per cent.

Firms' money for one to four months' deposits is also ½ per cent.

Banks buy T.T. New York Ready at Rs. 329½ for $100.

Banks sell T.T. New York Ready at Rs. 332¾ for $100.



Finance Abroad

Thursday Evening.

THE last Bank of England return presents no more notable feature than the rise in Bankers' deposits lumped with other deposits. Bankers' deposits at the beginning of July, totalled £171.6 million, indicating that banks at the end of the first half-year were successful in keeping a fully liquid position. The note circulation in England had passed the £800 million mark by the end of June having risen in a single quarter by £46½ million. The last return shows it to be £801.6 million. The original forecast that the circulation would keep rising has been proved correct, but banks are keeping large balances with the Bank of England as free lenders only to the Government though their resources are still growing. The Banks' holdings of securities is larger than usual at £187.7 million. It is much larger than the Bankers' deposits and the latter are covered by notes and coin shown at £30 million in last Thursday's statement. The holding of bullion is about the same for a month, but there has been a fall in the Proportion to 12.89 per cent. The change is invested with no significance for the fall and rise during the course of the last twelve months appears to have invited little comment. Towards the end of the month the London money market had turned to the Bank to some extent as the discounts and advances were known to be £6.1 million according to the last return. The important feature is that the Government securities total as much as £187.7 million. The Bank has been a pillar of the Consols market. More important from every aspect is the support that is promised by the Treasury. The Chancellor told the House of Commons only last week that control would continue after the war. The Government does not want a boom or slump, even in giltedged, and would retain the scheme of minimum prices along with all controls. The market rose at once for an assurance that stability of quotations is a direct war aim has been given and there is nothing to worry about concerning any change in the price of money after the war. Dear giltedged and cheap money will continue after the victory, and that must not be lost on investors, who should not be encouraged to look for better yields. Last week significantly enough, holders stuck to giltedged and Consols rose.

The turn of the half-year was not too easy as the Bank was obliged to take up bills in order to help the market. But after July 1st the conditions were slacker and on Friday last £144 million was put up for the tender issue of £75 million in three months' bills. The rate was around 1 per cent as usual. The Government's borrowing this week has been reduced since the six months' deposits wanted will be only £35 million as against £40 million taken last week.

The confidence debate appears to have had no effect on the market, and almost exceptionally, the victory of Mr. Churchill led to a rise in many stocks. Home Industrials hardened towards the end of last week along with the Funds and there is a definite revival in oils under the lead of Mexican Eagle. Eagles have gone up to over 10 shs. as the Shell Chairman's statement that it is not going to pursue its claims has been modified by the report that Standard Oil is trying to pull its chestnuts out of the fire by some agreement as regards the expropriated claims. The lift must have helped all oil issues but Anglo-Egyptian. The coal and iron groups were inclined to harden after the advance in Powell Duffryn and Guest, Keen. The biggest surprise was the advance in Courtaulds and even more surprising was the rise in British Celanese towards the end of last week. The main changes in developing Kaffirs towards the end of the week favoured holders so that the present half-year is not at all bad from the British investor's angle. The lift in Cable and Wireless should have encouraged many, as many as the rise in War Loan and firming up of South American rails. The position cannot be regarded as obscure when Argentine rails are hardening in the wake of higher commodity prices. The stock exchange position this week appears to be still improving since the industrial group is brighter. Wall Street still lacks vitality, but that does not concern the average American who watches U.S. production hit a new high while commodity prices are still bouncing. The U.S.A. is extending lease-lend still without worrying about the cost. The Netherlands Government has qualified for lease-lend recently. Ways will probably be found to help the struggle still going on in Java. There is a native Minister in the Dutch Cabinet to inspire further resistance to the Japanese. The U.S.A. is getting in return something from Australia. Mr. Curtin indicated that Australia like Britain is giving aid in return for lease-lend supplies. The actual ratio of such aid to U.S. supplies does not concern any country but the U.S.A., and the U.S.A. of course does not think about borrowers or creditors because that country is getting in a big stock of wheat just to help the world after the war. A new-comer is Greece which is to get the benefit of lease-lend.

EASTERN BANK, LTD.

INNER RESERVES STRENGTHENED

Sir James Leigh-Wood's Statement

The annual general meeting of The Eastern Bank Limited was held on May 6 in London.

The following statement of the Chairman, Sir James Leigh-Wood, K.B.E., C.B., C.M.G., has been circulated with the report and accounts for the past year:—

I propose to confine my remarks to our own affairs as shown in the accounts now presented to you. The profit and loss account is of immediate interest and I hope it will be agreed that the net profit of £95,358 14s. 2d. is a satisfactory result of the year's trading. This represents a decrease of some £7,000 from the preceding year, and, having regard to the situation in the East, it has been considered prudent to effect a reduction in the total dividend for the year to 4½ per cent, as against 6 per cent for 1940.

The shareholders will doubtless approve of the further strengthening of contingencies account by the allocation of £40,000 from the net profit, thus increasing the inner reserve additional to the reserve fund of £500,000 shown in the accounts. The principal change in the balance-sheet lies in the great increase in current and deposit accounts of some £5,500,000 in round figures, with the corresponding aggregate increase in our assets of cash, bills receivable, incuding Treasury Bills and Government securities, showing a position of great liquidity; I may add that the increase in our securities is wholly represented by Government loans. You will observe that while the requirements of our approved customers for the acceptances of the bank have continued to decline, advances are practically unchanged from last year.

POSITION AT SINGAPORE

In view of the occupation of Singapore by the enemy since the date of our balance-sheet, I think it right to reassure shareholders that our assets there, now beyond our control, are relatively small. Although the ultimate outcome is obscure, the board are satisfied that at the worst it should have no appreciable effect on the position of the bank as a whole.

I am distressed to report that we have received no news from our manager, Mr. Steel, although he and the accountant, Mr. Barden, are known to have sailed from Singapore on February 13. We are also without news of Mr. Howgate, the assistant accountant, who was serving in the Local Defence Force. I am thankful that the families of all are safe, having reached England or Australia, and we are, of course, making suitable financial provision for their support.

SITUATION AT OTHER BRANCHES

The situation in India and Ceylon is known to you from the public Press, and it is only necessary to say that steps have been taken at the branches to avoid possible consequences of enemy action so far as compatible with the efficient conduct of our duty to our customers. A policy of co-operation has been adopted by the exchange banks in matters concerning their common interests and frequent conferences have taken place between them in London and elsewhere.

The normal course of overseas trade in Iraq has necessarily been disturbed during the past year, but the financial requirements of the Imperial Forces have materialy increased the volume of banking business passing through our hands. The financial affairs of the Government of Iraq continue to be comfortable and conservatively managed. I am pleased to report that harmonious relations are maintained with the Government and also with the Rafidian Bank, recently instituted by the Government as the preliminary framework for a central bank.

It is with great regret that we record the death of the ruling Sheikh of Bahrein in February, 1942. He was a true friend of Great Britain and generous in his financial aid to our war aims. Apart from this he was always a supporter of the bank as ruler

MERCANTILE BANK OF INDIA
LIMITED

STRONG CASH POSITION

SIR CHARLES INNES REVIEW

The Annual General Meeting of The Mercantile Bank of India, Limited, was held on May 19, in London.

The following statement by the chairman, Sir Charles A. Innes, K.C.S.I., C.I.E., had been circulated with the report of directors and balance-sheet for the year ended 31st December, 1941, and had been taken as read:—

I have decided to continue for another year the practice begun last year and instead of making a speech at the annual general meeting again to circulate a short statement with the accounts. I believe that, as long as the war lasts, this practice which has been generally adopted is convenient for shareholders.

INDUSTRY STIMULATED BY WAR

I do not propose to say very much. The grave events which have happened recently in the Far East and the implications of those events for the bank must be fully present to your minds, and quite clearly they limit the range of subjects on which I can usefully comment. For instance, it would be a waste of time to review the course of trade in the past year. International trade in the Far East has to a large extent been brought to an end by the war, but there is one tendency of permanent significance, which I must again emphasize. I referred last year to the way in which the growth of industry in India had been stimulated by the war. During the past year the pace of advance has been accelerated, an astonishing variety of new industries have been started, and India is now playing an increasingly important part in the joint productive effort of the allied nations.

This development is an encouraging fact. It means, of course, that India will end the war with a very different economy, but if the result of these developments is a general raising of the standard of living and an increase in the purchasing power of the vast population of India the effects on the volume of the world's trade in the future may be very far-reaching. Another matter of great significance has been the repatriation since the war began of practically the whole of India's external debt.

BRANCHES IN ENEMY HANDS

I do not think that it is necessary for me to spend much time on the accounts or to analyse them in detail. They present the latest information in our possession, but the balance-sheet cannot, of course, give a complete picture of the bank's position at the end of 1941. Quite briefly, I may say that at the end of November, it looked as if, in spite of the many difficulties and anxieties, we should be able to report that the bank had another prosperous year and was in a stronger position than ever before. In December, however, the Japanese attack began, and before the end of the month our branches at Shanghai, Hong-Kong, Bangkok and Penang had passed temporarily into their hands.

In respect of these branches all we have been able to do is to incorporate in the balance-sheet the latest figures available—namely, those relating to the second half of October in the case of Shanghai and to the first half of November in the other branches. We have had to adopt the same course as regards our Rangoon branch. The final accounts for the year were despatched from Rangoon, but we have not received them, and we can only suppose that they have been lost in transit. Moreover, since the beginning of the current year the rest of Malaya and a large part of Burma, including Rangoon, have also been overrun, and all our branches in those countries are now under Japanese control.

In the circumstances there are only one or two comments which I think it necessary to make. As in the case of most banks, there has been an increase in our current accounts, with a corresponding rise in our holding of Government securities. The increase in bills receivable and loans receivable and advances is largely due to lack of shipping and to delay of bills in transit.

You will notice that our cash position is again very strong. Normally, of course, we should not keep so large a proportion of our assets idle, but it is part of the policy which we have deliberately followed for the last two years. We had constantly to bear in mind the possibility that the Japanese would enter the war against us, and so far as lay in our power we tried to provide against this and the other contingencies inseparable from a war so widespread. Losses have inevitably been incurred, but had it not been for Mr. Crichton's foresight and prudence, it is fair to say that they would have been considerably greater.

Next, I would direct your attention to the profit and loss account. The profit for the year at £173,000 is lower than in recent years, but you must remember that we have taken no account of the substantial profit made in the second half of the year by the four branches before they were overrun. Moreover, before striking the balance we have judged it advisable to transfer a considerable sum from the profits of the year to contingencies account as provision for losses so far ascertained. The truth is that, in spite of our misfortunes in December, the profits of the year were good. Nevertheless, we have thought it prudent to reduce by half the second interim dividend which is in effect the final dividend for the year. We have again allocated £25,000 to premises account, we have increased our addiional allocation to contingencies account from £30,000 to £40,000, and we have slightly added to our carry-forward. I regret very much the reduction of the dividend, but I am sure that you will agree that circumstances call for a policy of strengthening the internal resources of the bank. You will also agree that, considering all the difficulties of the past year, the results reflect the greatest credit on Mr. Crichton and all our branch managers.

FATE OF THE STATE

Since the Japanese invasion began, one of our chief anxieties has been for our staff in the occupied branches and for their wives and families. As regards the latter, I am glad to be able to say that, with few exceptions, all the wives and families of our European staff were safely evacuated, some to Australia, some to India, some to South Africa, and some to this country. The European staff stuck nobly to their posts. All those in Shanghai, Hong-Kong, and Bangkok are prisoners of war, and such news as we have been able to get of them from various sources indicates that they are reasonably well-treated. Most of the younger members of the staff in Malaya had joined the Forces, and so far we have had no information about them. The other members of the staff were ordered by the Government to leave the island just before the fall of Singapore. Four of them, including three managers, are now in India, but we have no news of the others, including, I am sorry to say, Mr. Ross, our manager in Singapore. Altogether 33 of our European staff in the occupied branches are either prisoners of war or unaccounted for.

The staff in India and Ceylon have had an arduous year. In India all European officers have been called up, other than those certified by the Governor of the Reserve Bank of India to be essential for the carrying on of the bank. Heavy work and much responsibility have developed upon the few officers remaining and our thanks are due to them for the cheerful and uncomplaining way in which they have carried on. They have received valuable help from the Indian assistants whom we have been training in recent years and whose numbers we hope to increase. In Ceylon it is the same story. Some officers have been called up and most of those that remain have had to add part-time military training to their heavy work in the bank. In Burma all our European staff except two were called up. The branch was first transferred to Mandalay and now has been removed to India. I should mention that the cost of living in all these countries has been greatly increased by the war and various allowances have been made to the local staff. I am sure that you will agree that such expenditure is unavoidable.

DIVIDEND PROSPECTS

You have no doubt realized already what the overrunning of so many of our branches means. It means that for the time being the earning power of the bank has been greatly reduced. Our operations are now confined to India, Ceylon and Mauritius, and, so long as the war lasts, the board must pursue a cautious policy, and I am afraid that you must expect smaller dividends than you have been accustomed to in the past. As regards the position in occupied branches, we must wait until the end of the war before we shall know exactly how we stand.

I told you last year that the fortunes of the bank were bound up with the outcome of the present war. In recent months the Allied Forces have suffered serious reverses in the Far East, and, through no fault on our part, the bank has been caught up in the web of these misfortunes. The bad times will pass, and I have no doubt that in the fullness of time the Allies will recover what has been lost and that our branches will again be opened. Till then we must possess our souls in patience. I can say with confidence that the interest resources of the bank were never so strong as when the Japanese made their onslaught, and our policy for the time being must be one of rigorous economy and conservation of those resources. The turn of the tide may come sooner than we expect, and I hope sincerely that next year I may have better news to give you.

The efficiency and the gallantry of the R. A. F. Bomber Command are two of most important factors in winning the war.

Give all you can to the EAST INDIA FUND and help to purchase more bombers. New or increased monthly subscriptions are particularly requested.

NATIONAL BANK OF INDIA, LTD.

Profits Mantained Provision for Taxes

Mr. R. LANGFORD JAMES' ADDRESS:

The Ordinary General Meeting of the National Bank of India, Ltd., was held in the Bank's Premises at 24, Bishopsgate, London, E.C. on May 12. Mr. R. Langford James, Chairman, presided, which had been circulated with the report and accounts, was as follows:—

As was the case last year, the proceedings at our General Meeting will be purely formal. This short statement which accompanies the Report and Balance Sheet is therefore in substitution of the usual address by the Chairman.

Since we last met Mr. J. K. Michie has been appointed Deputy Chairman of the Board and I take this opportunity of expressing our appreciation of the services he is rendering to the Bank in that capacity. In September, 1941 we lost a distinguished and highly respected colleague, Sir John Hewett, who had been a member of the Board since 1915. Sir John, who was a great personality, was possessed of outstanding ability. The value of his service to India and, after he retired from the Civil Service, to the Companies with which he became connected will not soon be forgotten. To fill the place of our old friend we appointed Mr. W. G. Lely, of Messrs. Wallace Brothers & Co., Ltd., to a seat on the Board and we have every reason to congratulate ourselves on securing his services.

Owing to the war-time uncertainties of the postal service it has again been found impossible to complete the 1941 Accounts at the usual time and our Annual Meeting must necessarily be held some few weeks later than the normal pre-war date.

In my last year's address to the Shareholders I expressed some apprehension as to prospects for 1941. My fears, however, in regard to the Bank's results were not justified as the net profits—amounting to £437,738—closely approximate those of the previous year, after providing a substantially increased sum for taxation and after making full provision for bad and doubtful debts.

PAYMENT OF DIVIDEND

In order that there should be no undue delay in payment of the final dividend this was again declared in the form of a second interim but at the rate of 6% instead of 8%, reducing the total dividend for the year from 16%—a rate at which it has stood for the past few years—to 14%. Although circumstances have indicated that pessimism as to the 1941 results was not justified it is patent that the entry of Japan into the war cannot fail to have repercussions on our business. Up to the present we have been relatively fortunate in that, not having any Branches further to the East than Burma, Rangoon and Mandalay are the only places from which it has been found necessary to move (temporarily we both hope and believe). But whatever may be the outcome of the Japanese efforts to penetrate further to the West it appears obvious that, until the Allied Nations can impose greater restraint on the naval activities of our enemies, trade from and to the Bengal Ports and the areas they serve must suffer some restriction, and the same may apply not only to other Indian Ports on the Bay of Bengal but to Ceylon also. This being the present position shareholders will doubtless approve of our having decided, as a measure of prudence, to make a slightly smaller distribution from the profits which enables us to add £38,000 to the sum carried forward—raising it to £284,253—after allocating £50,000 to the Pension Funds and £70,000 to House Property Account.

With regard to the Balance Sheet, the Bank's total Liabilities and Assets are £5,000,000 higher than at the end of the previous year. On the Liabilities side this is almost entirely accounted for by an increase in Current, Fixed Deposit and other Accounts, while amongst the Assets, Cash and Bullion appear as £1,000,000 higher, British and Indian Government Securities are nearly £3,000,000 up and the figure representing Bills of Exchange shows an increase of £1,700,000 as compared with the previous year. The long period occupied in transit of mails has again swollen this latter item. Discounts, Loans Receivable and other sums due to the Bank appear at £600,000 less. The ratio of the combined items of Cash and Government Securities to the Bank's total liability on Current, Fixed Deposit and other Accounts is 70%, which indicates a sound position.

It is a pleasure to pay a tribute to the Staff of the Bank both at home and overseas who have maintained an efficient service notwithstanding the depletion caused by the large number now on duty with His Majesty's Forces which has necessitated their replacement by a less experienced staff. In consequence an extra strain has been placed on the senior members of the staff remaining with us who have cheerfully overcome their difficulties and enabled our business to be carried on with as little dislocation as possible. Our appreciation of the work of all members, both old and new, is well deserved.

(*Continued from page 49*)

as well as in his private capacity. We wish every happiness and prosperity to his successor.

TRIBUTE TO STAFF

The shareholders will, I am sure, support the action of the board in having authorised an allowance to all European and local employees in the East to avoid hardship resulting from the increased cost of living. Suitable grants-in-aid have also been made in London.

Our senior officers have earned our warm thanks for their able conduct of the bank's affairs under difficulties which have been frequently increased in the East by unavoidable delays in communicating with head office. On your behalf and that of the board of directors I wish to express our deep appreciation of the unflagging loyalty of all members of the staff both here and overseas. They have indeed given of their best in circumstances of great difficulty and we are grateful.

A WAR-TIME DIAMOND JUBILEE

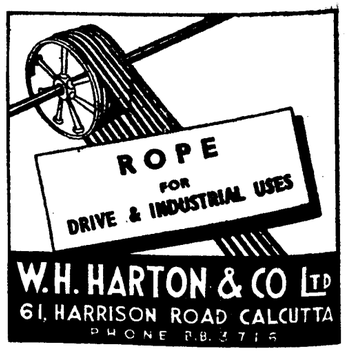
Under happier conditions we would have wished to celebrate more elaborately the sixtieth anniversary of the Titaghur Paper Mills, which occurs this year.

Circumstances make this both undesirable and impracticable.

We are proud, however, to be able to look back to-day upon an achievement, which has established for all time, the manufacture of pulp and paper as an Indian Industry.

We are grateful to those who have contributed to this achievement, by word and by deed, by expressing confidence in the ultimate success of the Titaghur Paper Mills, and last but not least, by buying our products in those days when imported paper constituted a serious menace to a young indigenous industry.

To-day our main resources are engaged upon war work, and whereas we appreciate our loyal customers, we regret we cannot supply their requirements in full nor can we increase the number of our customers at present.



We dedicate this Diamond Jubilee to the future of both India and the Titaghur Paper Mills.

Editorial Comments

January—June

The first half of 1942 is remarkable in many ways from the point of view of money market tendencies and developments. The year opened amidst the complications, upsets and uncertainties caused by Japan entering the war at the end of 1941. This state of tension and unsettlement lasted till March; but, in the second quarter, most of the adverse tendencies were reversed. And it may be said that, as the half-year was drawing to a close, the monetary position was more favourable from every point of view than it was on the eve of the declaration of war by Japan.

On the outbreak of hostilities with Japan, there was panicky withdrawal of deposits from banks. There was also frenzied buying of gold and silver for hoarding purposes. Both these factors contributed to a definite stiffening of money rates. Towards the finish of 1941, some of the smaller and medium banks found themselves obliged to take loans against Government securities from the Imperial Bank. Most of these loans were liquidated in the course of January. From February, there was gradual abatement with regard to panicky withdrawal of deposits from banks. Soon thereafter, not only were these deposits returning, but new money began to pour in a spate. One peculiar feature with regard to bank deposits in this period is a marked diversion of deposits from foreign banks to Indian banks and a definite preference in favour of Indian banks on the part of those who had money to put out. These developments were reflected in money rates.

Inter-bank call money which was quoting ¼ per cent right up to the first week of December 1941—½ per cent with hardly any borrowers—hardened to ½ per cent with lenders over; and the altitude of ¾ per cent was reached in January, borrowers remaining unsatisfied. By the middle of January, however, inter-bank call money receded to ¼ per cent; borrowers were comfortably able to secure their requirements. In the second quarter of 1942, the call money rate has remained more or less nominal. Short credits have been in increasingly plethoric supply with none so poor as to need loans.

The three months' fixed deposit rate was no more than ¼ per cent in the third quarter of 1941. Banks were willing to pay ¾ per cent from September. And this rate hardened to 1 per cent to 1¼ per cent in the second week of December in response to the monetary pressure caused by Japan's entry into the war. The rate of 1 per cent to 1¼ per cent was maintained in the first quarter of 1942. There has been a gradual reduction in the rate and, from May onwards, banks are not prepared to pay more than ¼ per cent for three months' money. Even at this rate, banks are not particularly keen on accepting new money.

The treasury bill discount rate, which was an average of twelve annas in November, shot up to annas fifteen and pies eleven on December 9. In January and February, the rate fluctuated between annas fifteen and one rupee. The rate hardened further in March, reaching a high altitude on March 20 at rupee one annas two and pies five. There was further hardening in the discount rate in April; and the rate fluctuated between rupee one and annas three to rupee one and annas five up to the end of May. During this period, the treasury bill discount was far from being in consonance with general money market rates. This was due partly to the desire on the part of banks to continue to maintain as large a proportion of cash as possible on account of the persistence of grave political news.

June, however, witnessed such piling-up of the cash balances of banks that it has been possible for the Government to effect rapid increases in the weekly offer of tender bills. From the second week of February to the end of May, the weekly offer was kept at Rs. 2 crores. In addition, tap bills were being sold. Sales of tap bills began to make better and better showing from the last week of April. Sales of intermediate treasury bills were discontinued towards the close of May. The weekly offer of tender bills was increased to Rs. 3 crores in the first week of June, to Rs. 4 crores in the second week, to Rs. 6 crores on June 16 and to Rs. 8 crores on June 23. In spite of this rapid stepping-up in the offer of tender bills, there has been exceptionally keen bidding at the weekly auctions. Applications are on the large side; and, despite increased demands made on the market, the Treasury bill rate has been rapidly declining. Treasury bill outstandings in the hands of the public stood at Rs. 30.15 crores on December 25, 1941 and rose to Rs. 67.18 crores on June 27, 1942. The figures for the corresponding period of 1941 and 1940 are as follows:

December 23, 1939, Rs. 36.01 crores; June 29, 1940, Rs. 23. 2 crores;

December 27, 1940, Rs. 31.86 crores; and June 28, 1941, Rs. 37.35 crores.

Most of the expansion in the floating debt has occurred in May and June, particularly in June. The avid interest shown by banks in the two closing months is in marked contrast to their caution or indifference towards treasury bills in the early months of the year.

The increased resources which banks have been commanding towards the finish of the half-year are largely connected with considerable increases in active note circulation. The half year under review records the highest percentage of increase in active note circulation in India, which rose from Rs. 314.52 crores on December 26, 1941 to Rs. 440.19 crores on June 6, 1942. The increase is, thus, Rs. 128.67 crores, which works out to an expansion of 40.9 per cent. In the corresponding period of 1941, active note circulation rose from Rs. 228.59 crores on December 27, 1940 to Rs. 288.80 crores on June 27, 1941—that is, by Rs. 60.21 crores or by 26.3 per cent. In the corresponding period of 1940, active note circulation in India expanded from Rs. 224.50 crores on December 29, 1939 to Rs. 234.29 crores on June 28, 1940, that is, by Rs. 9.79 crores or 4.36 per cent.

The expansion in note issue was effected mostly by transfer of sterling securities from the banking department to the issue department of the Reserve Bank. It might be added, however, that there was withdrawal of considerable sterling securities in March in connection with the repatriation of the 2½ per cent and 3 per cent India sterling stocks. Against this withdrawal of sterling securities, the Government delivered to the Reserve Bank rupee securities in the form of ad hoc treasury bills. Sterling securities in the issue department stood at Rs. 227.04 crores on December 26, 1941, rose to Rs. 273.63 crores by February 27, but declined to Rs. 193.85 crores on March 6 owing to payments connected with the repatriation of sterling debt. Since then, there have been further accretions to sterling securities in the issue department which stood at Rs. 261.85 crores on June 26, 1942. Balances held in the banking department rose from Rs. 47.15 crores to Rs. 60.78 crores between December 26, 1941 and June 26, 1942. There has, thus, been an increase of Rs. 48.44 crores in the total sterling assets of the Reserve Bank in spite of the utilisation of £80 million for sterling debt repatriation.

Rupee securities which stood at Rs. 41.50 crores up to February 27 rose to Rs. 131.28 crores in March as a result of the transactions connected with sterling debt repatriation. Further transactions connected with rupee securities held in the issue department are partly connected with ways and means operations in which connection additional currency was created by delivery of ad hoc treasury bills to the Reserve Bank, and partly with the Central Government taking over both the liability and the assets in respect of Burma notes, in connection with which the liability of the Reserve Bank was reduced by Rs. 28¾ crores in the first week of June, resulting in a corresponding withdrawal of rupee securities.

While active note circulation in India rose by Rs. 127.67 crores during the half year, deposits of scheduled banks, time and demand, increased from Rs. 327.07 crores to Rs. 364.45 crores between January 2, 1942 and June 26, 1942. During the same period, advances and bills of all the scheduled banks declined from Rs. 127.37 crores to Rs. 95.77 crores. With deposits on the increase and advances on the decline, the cash resources of member banks recorded a substantial advance from Rs. 41.04 crores on January 2, 1942 to Rs. 75.44 crores on June 26, 1942.

The sterling exchange market was more or less featureless throughout the year. The market has been dominated by the difficult freight position. The rates remained unaltered.

Figures with regard to sterling purchases and remittances for the six months period under review are not yet available; but the following table, which provides information regarding the sources of the supply of sterling and its disposal from the beginning of the war to March 31, 1942, will be found interesting:

	Rs. Crores
Sterling assets held by the Reserve Bank, Aug. 1939 ...	64
Sterling purchased by the Reserve Bank, September, 1939—March, 1940 ...	86
April, 1940—March, 1941 ...	76
April, 1941—March, 1942 ...	98
Sterling payments by His Majesty's Government ...	258
	552
Sterling amounts utilised for repatriation schemes (up to the end of March, 1942)	218
Other sterling commitments	80
Sterling holdings of the Reserve Bank at the end of March, 1942	234
	552

FACTS AND FEARS

Since the unfavourable implications of the surrender of Tobruk a fortnight ago were noted there have been striking developments in the Near East. The invasion of Egypt has come as quickly as anticipated, and the fall of Sebastopol after the long siege has been announced last Saturday. Why should the surrender of two places on the Mediterranean and the Black Sea mean so much? Mainly because of prevailing fears. The march towards Suez has been clearly arrested but the Middle and Near East will not be spared the anxiety arising from the fall of the naval base at Sebastopol. Two things deserve to be noted. The Russians are not cut off from the Black Sea as much as they are from the Baltic. In spite of the prompt suggestion that the Soviet fleet is independent of Sebastapol, many have judged it necessary to link Soviet resistance in the south with the siege of the fortress. Instead of the siege being raised by the counter-offensive in the Ukraine, they remark that the fortress has fallen. Von Mannstein has won his spurs, and it is no longer possible to talk of landings on the coast as calculated to dislodge the Germans from the Peninsula according to many pessimists. They command the Straits of Kerch and the Sea of Azov as well. They are again moving forward across the Ukraine far beyond Kharkov while the Russians are in retreat. The picture is now definitely sombre as the threat to the Caucasus is manifest. With oil consumption remaining at twelve million tons or so according to not-so-old estimates, the Nazis are really keen on oil. But it is not certain if it can be had by a direct assault on the Caucasus and the summer offensive may therefore take an unexpected direction.

In spite of indications to the contrary, there is much reason to argue that Hitler's summer campaign will be in the Mediterranean. So long as Malta and Cyprus stand, his position in the Central and Eastern Mediterranean will be insecure. Complete mastery of the Levant alone can help to put the Haifa-Alexandria line out and convince Turkey that neutrality can be maintained only on Germany's own terms. In spite of the elastic use of the phrase Middle East in recent times, it must be remarked that the Middle East is not threatened. Any threat to Iraq can come only if the Nazis overrun Turkey and threaten the Caucasus and Iraq alike. Of that no sign has appeared as yet. But Turkey certainly found a place in Mr. Churchill's defence. The evil effects of the Libyan reverses may extend to Turkey, it was confessed. It is, therefore, as a threat to Turkey that the fall of Tobruk and the subsequent fall of Sebastapol must be interpreted. Turkey's difficulties are many. The budget is up; defence charges are rising; and shortage of supplies has led to rationing, even of bread. Assuming that Turkey sticks to the policy laid down in the winter by the Turkish President it must be noted here that she was unable to prevent the movements of Italian tankers into the Black Sea last year. She has to take account of the control of the Black Sea held by the Balkan air fleet. The ability of Turkey to defend herself against a formidable modern army may be doubted in spite of the many assurances that Turkey is pro-Allied and finds nothing in the Anglo-Soviet treaty running counter to her interests.

The only question that arises at this stage is whether Turkey would sacrifice her economic interests, secured by the British

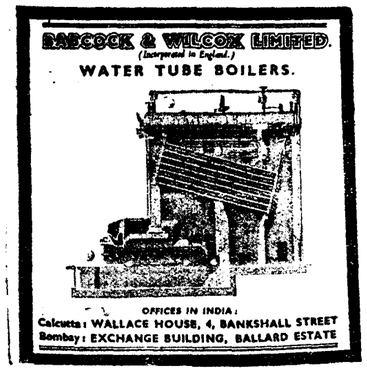
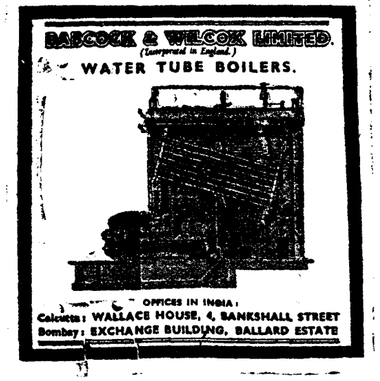
credit given in 1940 and since then by regular exports, latterly from territories outside Britain. Now the trade is at stake, while the suppliers, too, stand to lose. The jump in insurance rates after the fall of Tobruk is a reminder of the untoward effects on trade. The Middle East Supply Council in Cairo will naturally have to modify most of its plans. While the fall of Tobruk does not compromise the development of secondary industry in Palestine, it is certainly a danger to the convoy system generally in the Mediterranean. The direct threat to Alexandria has not so far developed, but the base is in danger, and the drop in Egyptian Unified, a fortnight ago, in the foreign bond market in London, was a clear admission of the adverse possibilities arising from the precarious hold on the Mediterranean.



The danger to Egypt cannot be measured by the order relating to a total black-out in both Upper and Lower Egypt. It must rather be sought in the danger to food supplies in a small, thickly-populated country. All the Egyptian ports are in the danger zone since raids on Suez have been reported and the State railways will be taxed, if supplies have to be taken from Port Sudan. Fortunately as it happens, the right flank is secure. Two years ago, the Sudan was in danger because Kassala was lost and frontier posts in Kenya had been given up. The present position is altogether more cheerful. The entire coast of Africa is secured by the control of Madagascar, obtained this year. It is the narrow coastal strip in the north that is in danger, not the ports of British and Portuguese East Africa. There can be no conflict near the head waters of the Nile and the Sudan, we imagine, is now one of the safest places in the world because the Axis troops are not likely to push south. The danger to Egypt then appears to be a limited one, explaining in part the Government's desire not to depart from non-belligerency. It is as a danger to her economic life that the invasion demands attention. Egypt's food position is none too secure and local industries are few. Cotton, cotton seed and tobacco exports are all jeopardised by involvement in war and the chances of finding markets in Africa itself are by no means, bright. But that is a consideration which strategists can ignore. Any threat to Egypt and the Suez Canal will bring the southern corner of Arabia into the foreground. A dash towards Sinai cannot be reckoned as impossible and another desert war may blaze up in the corner of Arabia. It is in this context that the vacillations of the Arab world which have puzzled and angered many last year will have to be studied. The framework of security in the Arab world is non-existent. The Saadabad pact promotes accord between Iraq and Iran but does not bring Sultan Abdul Aziz into the picture. It is only the continuance of cordial relations between the Sultan and Britain since Sir Gilbert Clayton made the Treaty of 1926 that still affords security to Iraq. The excellence of the relations between the U.S. oil interests and the Sultan deserves to be noticed in this connection. There is no Anglo-American conflict and a very clear demonstration of U.S. interest in Arab welfare as opposed to Axis intrigue came when Syria was taken over. Relations with Vichy did not blind the U.S. to the danger to Turkey and Iraq alike, and the independence of the mandated territories was recognised. The major factor at present in the Middle East is the Ninth Army stationed in Syria. It has as its object keeping the Arab countries safe. Another army in Iran helps to guard one flank of Iraq and both are of direct value to Turkey in this anxious period. What part they will play in the battle of Egypt is not known, but there is no trouble in Iraq where Nuri Said Pasha is both Premier and Foreign Minister at present and Rashid Ali's adherents have all been got rid of.

Friendship certainly confers an advantage on the Allies who can use Iraq's airfields and the port of Basra for the despatch of supplies towards the Red Sea. The mere fact that there is absolutely no occasion for anxiety around the Gulf serves to show that the Middle East proper is untouched by the war. Iraq is safe; though the Iranian Government may have trouble with the Kurds, the Allies are on top, and the only prince of the Sheriffian dynasty, the Emir of Transjordan, is wholly devoted to the British cause. Such feeling as must develop over the violation of Egyptian territory can only be advantageous to the Allies, despite the old trouble over Palestine. But feeling is of little use against immediate assistance. The Middle East provides oil and little else. It has to import its food and clothing. It does not make munitions, and really competes for goods with the Imperial Army serving overseas. To raise the Arab world, still discrete and divided, against the Axis is by no means easy, and all present views may not be unrelated to Turkey's attitude as it develops in the light of events. The difficulty of making predictions is not reduced by the reading of translated extracts from Baghdad papers about relations with China. What we must remember is that, after the swift suppression of Rashid Ali, the Arab world is more friendly. The proceedings in Syria have convinced the Arabs that the Allies play fair. That is of special help in determining what they would say if it were pretended that Egypt's independence is being respected at the same time as her cities are bombed. But an immediate advantage lies in the Japanese oppression of Muslims in newly-conquered territories. The Japanese pan-Asiatic propaganda cuts very little ice. It is the way we look at it that will help us to say why the Middle East will be secure and sound. Britain has created goodwill by providing essential supplies, abolishing monopolies in Iran, and getting Turkey the benefit of lease-lend goods from America. These must have modified the neutrality of the Arabs, even in Palestine, where the Italian bombing of mosques has not been forgiven.



The coast of Syria is now wholly under Allied control, and this can be used to save Cyprus or Turkish territory when the need arises. But it will not be pretended that the Allied position is very strong when so many islands are merely enemy airfields. The Allies have no light task in protecting Egypt and Rommel's dash up to el Alamein led many to picture the situation as fast deteriorating. It is however clear this week that Rommel's own supplies are not large or wholly safe, and the real power in Egypt is now engrossed by Air Chief Marshal Tedder. When we grasp that and, note also the recorded loss of the enemy's tanks and guns, we may feel impelled to change older views. There is no threat to the Middle East but only to the Nile delta and to tiny European Turkey. Hitler's aims are likely to be circumscribed by the dominance of Iraq re-established last year. Hitler cannot hit at the Middle East because he has no allies like Rashid Ali. The fact that Russia is not looking towards Syria or the Straits must weigh with all countries including Turkey which may be forced to regret the survival of a frontier in Thrace.

In the Aden protectorate nothing has happened to show that British influence is shaken. The unpopularity of the Axis is undeniable. The Arabs may know nothing of the Atlantic Charter, but they know that Egypt and Iran are allied to Britain by treaty, that the Trucial Chiefs of Oman are faithful feudatories and Syria is independent only because the Vichy regime was liquidated. The remarkable effect of these achievements must not be ignored in saying how the Arabs would take it if Turkey chose to accept any German ultimatum, as is widely feared.

The Turkish view as to the New Order will not affect the Arabs in Asia which cannot be touched by events in Africa. The danger to the Mediterranean route affects supplies for the armies in Egypt but it does not threaten Arabia because the Red Sea is clear of Italians and there is no rival to Britain in Yemen. Any danger really lies in a cut at Suez which would bring the enemy's aircraft towards Arabia. But there is nothing to show that Rommel is going to have a pleasant jaunt to the Canal. If the Canal is held, the Near East is safe, even if Turkey should wobble. Bombing the desert would not give the Germans control of the Arab world. France and Italy do not count for anything in the Levant and Germany's challenge is so recent that it cannot be called serious except by Britain. The Japanese navy has difficulty in keeping its end up in the Pacific. And it is to the Italian navy and air force alone that the Nazis can look. But the Italians cannot have forgotten Cape Matapan and Cunningham's great victory. That again deserves to be treated as an important factor when it is being suggested that the Royal Navy cannot hold the place it has held since June 1940 simply because the Eighth Army has been in retreat. Even assuming that much new trade is broken and supplies and markets lost to India, there can be no justification for imagining that a big pincer movement would remove the Frontier province out of India into the Nazi jaw. While a neutral Afghanistan in which Axis influence has no place, endures, the pincer and claw are stupid figures of speech. Let us look at the distances and the desert to deduce that the Middle East is hungry, uncomplaining and necessarily loyal to its old friends. The Arabs may not trouble about Indian valour at Bir Hakeim, but they are not unaware of the golden shower released by the Haj. Self-interest alone will keep the Arabs trustworthy, and the march of the Nazis into Egypt will merely act as the cement that holds indignation and hope together in the Middle East. There is no direct danger to the Canal when the other side, the Arabian, is inviolate. Raids on Suez do not spell danger to Ismailia or Kantara. That again should impress many who would also like to show that even if the Nazis cross the Dardanelles and take Suez there is no danger to the Arab countries because Turkey will not be quiet when the Allies can back her. And if developments in French North Africa and Spain are unfavourable to the Allies, that in turn cannot touch the Middle East which has no reason to believe that the U.S.A. will permit the Axis to enter Asia at any time.

Editorial Notes

Growing Influence

The U.K.C.C. triumphed only last October over Dr. Clodius in regard to Turkey's chrome ore and it has gone further to acquire a far more prominent position in Turkey's foreign trade. An Ankara despatch from Leonard Kirschen indicates that the Minister of State in Cairo will hereafter guide the U.K.C.C. and the Middle East will become its sphere of operations. There are no European neutrals anxious and ready to trade as in 1940-41 with Britain, and countries like Sweden and Switzerland are not much interested in exports to Britain. The concentration of activity in the Near and Middle East is thus intelligible. The Middle East Supply Council is said to have invested the U.K.C.C. with special functions as its own helper. Because of help promised by the latter Turkey has agreed to lift the ban on timber exports. Railways in the Middle East can get sleepers, and railway development in Iran and Iraq can proceed according to plan. More important is the U.K.C.C.'s acquisition of agency functions on behalf of the Turkish Government in Britain and the Allied countries. It is not clear if the Corporation is the sole purchasing authority or merely forwards goods. What is clear is that diversion of wheat and flour supplies to Turkey has paid the Corporation. Moreover, Turkey's undue dependence on Germany is modified by Britain's readiness to sell such goods as are available in the East to Turkey. Mr. Kirschen suggests that Turkey has obtained special consideration in the matter of wheat with the result that bread rationing in Turkey is not so burdensome as before. Whether the U.K.C.C. has the same special position in Egypt remains to be known, but in Turkey the U.K.C.C. representative, Lord Carlisle, has clearly staked out a very large claim for Britain. The bulk of the trade of Turkey with the Empire is handled by the semi-Government organisation. This monopoly is not likely to make Levantine Jews more friendly to Britain or Armenians less friendly to Germany. But the backward countries of the East find monopolies convenient and their previous trade relations with Russia were on the basis of exchanges between monopolies. Tea and coffee monopolies were set up in Turkey as from June 1 and the retail trader is just a commission agent for Government which takes the profits. The U.K.C.C. is sure to take up the export of tea and coffee from India, its own privileged status securing unusual advantages in regard to shipping space, etc. The manifest advantages of securing for many Indian exports the position held by Russian and German goods should not be overlooked in any inferences drawn from the growth of the U.K.C.C.'s interests in the Near and Middle East. Responsible directly to the Minister of State in the Middle East it has to secure the goodwill of millions of Muslims in strange countries so that its propensity to cut out trade rivals elsewhere may have unexpected consequences in its new sphere of operations.

New Colony and New Crops

The British Cotton-growing Association has done much for Indian cotton and Sir William Roberts' account of the big farms at Khanewal is of surpassing interest, if only for the steady extension of American cotton in the Punjab. For about 21 years the Khanewal farms have added to the tilled area in the Punjab and helped the cotton-grower in many ways. The article in "Indian Farming" shows that revenue remitted by the Punjab Government has gone into a development fund to assist tenants. The usual Lambardari fee paid by Government also goes into the fund. Khanewal is in many ways typical of the Punjab canal colonies. The annual rainfall averages only five inches and the canal water has to be distributed to the familiar squares of 25 acres each over tilled land only. The crop rotation is one of wheat, fodder and cotton. The article lays stress on the saving of water effected by packing the channels with a sludge of bicarbonate and bhusa as recommended by Dr. Mackenzie Taylor. Inter-culture with the hoe or harrow is meant to avoid waste of water by evaporation. It also checks weeds. At the point where the four squares of the tenants meet, there is a small plantation to shelter cattle and stock manure. Pits are dug and all refuse is added on the spot. Seventy glades are flourishing, and the Estate farm thus provides timber for implements and house repairs. A large-scale manure pit factory on the Indore lines is also working in the Estate. As elsewhere tenants pay half the crop as rent, and the landlord in this case contributes his share to the common fund provided by the tenant's contribution of half a seer per maund harvested. Ploughs, harrows and other implements are kept at village headquarters and loaned when necessary. Estate farming has not so far obscured the communal aspects of agriculture and in this case original methods have improved. Late sowing of cotton has kept down crop damage. Cotton is sown in June invariably and picking starts in November and is finished by the end of January. Sir William Roberts emphasises the part played by Khanewal in popularising American cotton since 1921. The most successful is a type evolved eight years ago by Mr. Roger Thomas for the B.C.G.A. itself and now grown over 200,000 acres in the Punjab and 1,000,000 acres in Bahawalpore and Sind. The production of 289 F types is said to be 4½ lakhs of bales, and the area under these types in the Punjab, Sind and Bahawalpore is over a million acres. The B.C.G.A. having made a success of Khanewal has since leased large areas in Sind, Bahawalpore etc. It controls over 200,000 acres of irrigated land and operates thirteen ginning and pressing factories, also two large oil mills. The Agricultural departments still look to Khanewal for pucca seed. The B.C.G.A. besides being an improving landlord has improved rural housing. Tenants' houses in the villages are being reconstructed. Nearly half the houses have been rebuilt, and the work will be completed in three or four years more. A dispensary at the headquarters village serves the tenants. Midwives have been trained and a welfare fund has been started so that the tenants can directly help in the plans for self-improvement and village reconstruction.

Argentine Crops

The Argentine linseed and wheat crops are unusually good this year according to a correspondent of the Imperial Economic Committee reporting in April. Though Argentina may have difficulties in exporting her crops owing to the war, the supplies there will influence world prices. By April, threshing of both the linseed and wheat crops was over and the very good quality and yields anticipated were confirmed. There was an increase in Argentine exports of wheat in March, but there was also the huge carry-over of over 3.25 million metric tons. Added to the 1942 crop of 6.2 million tons, the supplies were estimated to be over 9.45 million metric tons showing an increase of nearly 1.9 million tons on the previous year. Domestic requirements including seed are expected to take 3 million tons leaving an exportable balance of 6.46 million tons which is 1.6 million tons more than the 1940-41 export surplus. In spite of an increase in shipments up to March wheat supplies are 1½ million tons more than 1940-41. The larger volume accounts for the slackness of trade commented upon in all Argentine trade reports. Shipping was a difficulty and European demand had shrunk. Apart from relatively small sales to the U.K. business with Europe was regarded as impossible. Relief should have come, however, from the trade mission sent by Spain to negotiate purchases of wheat and maize on credit to the extent of 160 million pesos which sum presumably includes some 77 million pesos for grain already shipped, but not paid for either in cash or goods.

The only steady customers are Brazil and the neighbouring countries which continue to purchase at the Grain Board's price of 6.90 pesos per quintal for old crop since permits for new crop were not issued up to April. It was surmised that new crop would sell at the higher price of 8½ pesos per quintal in view of the higher quality. The Argentine price would be equal to roughly 69 cents per U.S. bushel. The report adds that 3½ to 9 million tons of this crop are believed to have been purchased by the Board. The acreage under wheat in the coming season is not expected to fall on account of the Argentine Government's policy of pucca stabilisation. Crop restriction was not officially recommended except for a recent special decree suggestive of a desire to curtail the wheat crop. The Argentine Government aims to reduce the supply of sunflower seed by lowering the minimum price though a bonus is payable if profits are made on sales by Government after it takes up the farmer's crop. The linseed crop is also larger at over 1,670,000 metric tons. Total supplies at the end of March showed an increase of about 700,000 metric tons but allowing for the larger demand at home, the increase is only 550,000 tons. The export surplus is larger to that extent. Export demand was altogether absent. The U. K. had made no purchases and Russia was not a buyer of either seed or oil for lack of transport. The U.S.A. having large stocks of its own showed no interest and the U.S.A. further aims to increase her own crop this year. But all the same Argentine prices were rising as the Grain Board had raised the price promptly after freights to the U.S.A. had been raised by 35 per cent. The main conclusion suggested by the report is that the Argentine has ample supplies of linseed and if the shipping position warrants it, she would sell freely. The sellers in the old world should perhaps take note of the supplies that can come on the market at any time and restrain hopes of a further rise in prices.

Peak Output

The new call-up of older women for war work and older men for active service announced on Friday last shows that the labour reserve has almost vanished. It is proof of the correctness of the claim that twenty-two million out of the population of thirty-three million, aged between 14 and 64 is engaged on full-time war work. Britain's war effort in the third year puts an end to all doubts as to the mobilisation of resources and personnel. Mr. Lyttelton during his visit to America went to the microphone to tell the Americans that everything has been put into the second place as compared with war production. The engineering trades have benefited through co-operation between workers and managements on factory production committees. Mr. Lyttelton's radio speech was meant to show how far Britain has made good Mr. Churchill's claim that a lot will come in the third year and will become a flood in the fourth. Mr. Lyttelton explained that if a direct comparison were made an equal measure of mobilisation in the States would absorb 60 million people. Among the production figures (made available in a recent cable to the Associated Chambers) are the total for tanks etc. Mr. Lyttelton declared that the output of tanks, jeeps and mechanical vehicles was 257,000 per year; the output of big guns was 40,000 with 25 million rounds and of small arms the production runs into millions with 2,000 million rounds of ammunition. In regard to merchant shipping alone he said there was a notable increase of 57 per cent in tonnage over the last quarter of 1940, a particularly notable effort. British production certainly keeps step with America for Mr. Lyttelton declared that there was no business as usual; no production as usual, and no profit as usual. We have thrown everything we have into this war, he observed, and we shall never quit. Mr. Lyttelton's chief claim was that peak output had been reached, and if the United States was going far ahead, Britain did not at all feel sorry. The contribution of Britain to the Allied pool is not small, and lease-lend helps America as much as Britain. Read in the light of the latest Washington statement on identity of aims, the story of bigger production in Britain shows that there are two arsenals, not one, for democracy. The first year of war brought little increase; it is only in the third year, when exports are dismissed as of no account, and the air war too is milder than expected, that war production has substantially risen. The rise in national expenditure has brought in 1942 results immediate and beneficial for the Allied cause.

South Africa's Plans

Conditions in South Africa may be said to reflect the shortage of many goods and rising prices in the Union. In April it was again noticed that shopping demand was very keen and dealers were striving to conserve stocks by observing shorter business hours and by partial execution of orders. A shortage of industrial stocks was also evident, but the Government had its control schemes in operation, and local sources of supplies were being developed to supplement imports. The Government had applied various measures to conserve tinplate, rubber, petrol, etc. Price control was also in force and this kept down the rush of buyers. The general price level was restrained also by the absorption of excess funds in loans, savings and taxation; also by increased productivity following the development of the Union's material resources. The price control system is to be modified this month since an announcement was made that the regulation freezing the prices of goods actually in stock on October 15 last at levels in force at that date would be withdrawn at the end of June though it was understood that only a small fraction of unsold goods would benefit by the decision taken. From July 1st, only the general formula issued in October would stay in order to help the Government in its price control policy. That the position is not easy is indicated by reference to a hope that higher prices would choke off the demand for non-essential goods but that the demand for necessities would be unaffected and the Government would have to act in the interests of consumers. The S. A. department of agriculture asked for increased production of foodstuffs to meet the increased demand and to make good the heavy losses caused by drought and pests in the past. Season farmers in winter-cereal-growing areas have been advised to plant as many suitable varieties as possible, and farmers generally are asked to leave no land unproductive at this stage, except, of course, where ploughing would lead to erosion damage. The maize crop is known to be below average and the wool clip too below expectations. The price control applied to maize led to a standstill in business, and the fair demand for wattle bark from India and

the United States this year provided the sole bright feature in the last quarter of 1942. The citrus crop started moving early but other fruits commanded an indifferent market according to reports which referred to the quantity in storage and marketing difficulties.

A Railway's Career

At the last annual meeting of the B and N. W. Railway Company held in London on April 30, Colonel Gracey reviewed the history of the company for the shareholders. Floated in 1882 the company entered in 1886 into another contract besides the original one, and obtained only land free of cost. There was no guarantee of interest. The contract contained a provision for the purchase of the railway by Government in 1932 and at the earlier dates the contracts were renewed. The decision to take over the line was preceded by negotiations in which the company offered concessions which were refused. Colonel Gracey mentioned that payment has to be made within four months from December 31, after which the Government will have to pay interest at 4 per cent. on unpaid balances. In his account of the company's fortunes, Colonel Gracey indicated that for 10 years the stockholders got only 4 per cent. or less and the first dividend of 5 per cent. was reached only in 1896. It took about another 10 years to raise the rate to 6 per cent. in 1905 by which time policy had been settled and profits were rising. The overall average yield in the total capital outlay in the company's life has averaged 6¾ per cent. only. The company's success can be measured by the maintenance of a 18 per cent. dividend in recent years, and even more by its success with the Tirhut State Railway which had a debt of Rs. 19 lakhs when it was taken over for management from the State. In point of fact, the Government has been getting 7½ per cent. on the line, a return better than that on the B.N.W.R. stock during the sixty years of its life. After the jubilee year when much of its mileage has been doubled, the liquidation proceedings will start. The railway has been served by able agents to whose memory Colonel Gracey added his tribute as also to a loyal staff at Gorakhpur. Employees of the London office are to receive compensation, and Colonel Gracey expected that the winding-up would take up some months. Lord Meston testified as a former Governor of the U. P. to the services rendered by the company to India. The company's year ends on September 30, so that a full year's dividend will be paid on stock before the pay-off comes. The main payment after liquidation is expected early in 1943 and Colonel Gracey suggested that the price paid for stock would be more than 300 per cent. what may be called quite a moderate price in view of the excellent dividend record.

Oil From Tobacco

The Virginia tobacco plant yields a seed which has various uses. These were described recently in the Indian Journal of Agricultural Science. In Madras alone, 300,000 acres are under tobacco mostly in the Guntur, Kistna and Godavari districts. About 125,000 acres of the total area are under Virginia tobacco, which is allowed to flower and pod freely, unlike the local cigar variety which is invariably topped in order to secure texture and colour in the leaf. The present yield of seed per acre is put at 150—200 lbs. Before the crop is pulled after picking of leaf is over, sheep and goats are usually allowed to eat the flower and pods. Much of it is burnt up as fuel. Since it was learnt that the seed held an oil, experiments in cold drawing were conducted by officers interested. The cold-drawn tobacco oil was then examined. It was found that the new vegetable oil was transparent, light yellow, pleasant in smell and agreeable to taste, almost like first-class gingelly oil. The hot-drawn oil was much the same in colour etc but it was slightly bitter. The oilcake like the seed was acceptable to goats, sheep and cattle. The tobacco seed and oil was tried for cooking and found okay. Hence it has been suggested in the article that the tobacco-grower should collect and get the oil out of the seeds in the usual wooden press. The extraction of oil by the hot process as in the case of castor oil is also quite possible; only it appears that tobacco seeds seem to need a higher temperature and more pressure than castor seed for efficient extraction. And some change in the presses may be required. When the seed is taken for hot drawing thus, it should be crushed in flour mills before pressing for oil.

The properties of the new oil and cake called for examination. Analysts found no trace of nicotine and 13.77 percent of carbo-hydrates. Guntur seed contains 35.37 percent of oil and can be used as an edible or semi-drying oil and for soap-making or illuminants. It is used as an edible oil in Bulgaria according to reports. Use as a semi-drying oil and in soap-making has also been ascertained. The oil cake cantains about 30.25 percent crude protein and 27 percent of carbohydrates. It is free from nicotine. It compares favourably with the familiar gingelly cake and cattle eat it freely. Feeding trials showed that such cattle are normal. Elsewhere horses are said to be fed on this cake. As the cake contains nitrogen, phosphoric acid and potash it can be regarded as a useful manure, equal to castor cake. If crushing and extraction are not possible, the seed by itself can be used for feeding cattle. As it has a sort of shell it should be soaked for two days, washed and ground like horsegram before it is fed to cattle.

As a semi-drying oil the tobacco oil has possibilities in Madras which has to get linseed oil or tung oil from elsewhere. The latter certainly have their points, but tobacco-seed oil, being free from linolenic acid, saves white paints from going yellow. It looks as if it should be preferred to linseed oil for white enamels and paints. In regard to the economic aspect of the new source of oil the total supply of seed is put at 8,800 tons estimated to yield 2,200 tons of oil and 6,600 tons of cake. The cash value is placed at Rs. 1.3 lakhs. Several paint manufacturers have placed orders for the supply of oil and the Government granted Rs. 500 to open up a market for oil. Meanwhile samples have been sent to manufacturers of paints and varnishes for report. The industrial uses of the oil appear to be many and preliminary experiments at Tenali have been quite encouraging. The Madras Government is naturally interested in promoting the use of the seed in some way other than fuel. Anyway the cake is being used as manure for dry, wet and irrigated land to determine the best manner of its use. Crushing methods are also being studied, and the use of the seed itself for cattle feed is being popularised. The article suggests that a new branch of oil-crushing industry

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

The only steady customers are Brazil and the neighbouring countries which continue to purchase at the Grain Board's price of 6.90 pesos per quintal for old crop since permits for new crop were not issued up to April. It was surmised that new crop would sell at the higher price of 8½ pesos per quintal in view of the higher quality. The Argentine price would be equal to roughly 69 cents per U.S. bushel. The report adds that 3½ to 9 million tons of this crop are believed to have been purchased by the Board. The acreage under wheat in the coming season is not expected to fall on account of the Argentine Government's policy of pucca stabilisation. Crop restriction was not officially recommended except for a recent special decree suggestive of a desire to curtail the wheat crop. The Argentine Government aims to reduce the supply of sunflower seed by lowering the minimum price though a bonus is payable if profits are made on sales by Government after it takes up the farmer's crop. The linseed crop is also larger at over 1,670,000 metric tons. Total supplies at the end of March showed an increase of about 700,000 metric tons but allowing for the larger demand at home, the increase is only 550,000 tons. The export surplus is larger to that extent. Export demand was altogether absent. The U. K. had made no purchases and Russia was not a buyer of either seed or oil for lack of transport. The U.S.A. having large stocks of its own showed no interest and the U.S.A. further aims to increase her own crop this year. But all the same Argentine prices were rising as the Grain Board had raised the price promptly after freights to the U.S.A. had been raised by 35 per cent. The main conclusion suggested by the report is that the Argentine has ample supplies of linseed and if the shipping position warrants it, she would sell freely. The sellers in the old world should perhaps take note of the supplies that can come on the market at any time and restrain hopes of a further rise in prices.

Peak Output

The new call-up of older women for war work and older men for active service announced on Friday last shows that the labour reserve has almost vanished. It is proof of the correctness of the claim that twenty-two million out of the population of thirty-three million, aged between 14 and 64 is engaged on full-time war work. Britain's war effort in the third year puts an end to all doubts as to the mobilisation of resources and personnel. Mr. Lyttelton during his visit to America went to the microphone to tell the Americans that everything has been put into the second place as compared with war production. The engineering trades have benefited through co-operation between workers and managements on factory production committees. Mr. Lyttelton's radio speech was meant to show how far Britain has made good Mr. Churchill's claim that a lot will come in the third year and will become a flood in the fourth. Mr. Lyttelton explained that if a direct comparison were made an equal measure of mobilisation in the States would absorb 60 million people. Among the production figures (made available in a recent cable to the Associated Chambers) are the total for tanks etc. Mr. Lyttelton declared that the output of tanks, jeeps and mechanical vehicles was 257,000 per year; the output of big guns was 40,000 with 25 million rounds and of small arms the production runs into millions with 2,000 million rounds of ammunition. In regard to merchant shipping alone he said there was a notable increase of 57 per cent in tonnage over the last quarter of 1940, a particularly notable effort. British production certainly keeps step with America for Mr. Lyttelton declared that there was no business as usual; no production as usual, and no profit as usual. We have thrown everything we have into this war, he observed, and we shall never quit. Mr. Lyttelton's chief claim was that peak output had been reached, and if the United States was going far ahead, Britain did not at all feel sorry. The contribution of Britain to the Allied pool is not small, and lease-lend helps America as much as Britain. Read in the light of the latest Washington statement on identity of aims, the story of bigger production in Britain shows that there are two arsenals, not one, for democracy. The first year of war brought little increase; it is only in the third year, when exports are dismissed as of no account, and the air war too is milder than expected, that war production has substantially risen. The rise in national expenditure has brought in 1942 results immediate and beneficial for the Allied cause.

South Africa's Plans

Conditions in South Africa may be said to reflect the shortage of many goods and rising prices in the Union. In April it was again noticed that shopping demand was very keen and dealers were striving to conserve stocks by observing shorter business hours and by partial execution of orders. A shortage of industrial stocks was also evident, but the Government had its control schemes in operation, and local sources of supplies were being developed to supplement imports. The Government had applied various measures to conserve tinplate, rubber, petrol, etc. Price control was also in force and this kept down the rush of buyers. The general price level was restrained also by the absorption of excess funds in loans, savings and taxation; also by increased productivity following the development of the Union's material resources. The price control system is to be modified this month since an announcement was made that the regulation freezing the prices of goods actually in stock on October 15 last at levels in force at that date would be withdrawn at the end of June though it was understood that only a small fraction of unsold goods would benefit by the decision taken. From July 1st, only the general formula issued in October would stay in order to help the Government in its price control policy. That the position is not easy is indicated by reference to a hope that higher prices would choke off the demand for non-essential goods but that the demand for necessities would be unaffected and the Government would have to act in the interests of consumers. The S. A. department of agriculture asked for increased production of foodstuffs to meet the increased demand and to make good the heavy losses caused by drought and pests in the past. Season farmers in winter-cereal-growing areas have been advised to plant as many suitable varieties as possible, and farmers generally are asked to leave no land unproductive at this stage, except, of course, where ploughing would lead to erosion damage. The maize crop is known to be below average and the wool clip too below expectations. The price control applied to maize led to a standstill in business, and the fair demand for wattle bark from India and the United States this year provided the sole bright feature in the last quarter of 1942. The citrus crop started moving early but other fruits commanded an indifferent market according to reports which referred to the quantity in storage and marketing difficulties.

A Railway's Career

At the last annual meeting of the B and N. W. Railway Company held in London on April 30, Colonel Gracey reviewed the history of the company for the shareholders. Floated in 1882 the company entered in 1886 into another contract besides the original one, and obtained only land free of cost. There was no guarantee of interest. The contract contained a provision for the purchase of the railway by Government in 1932 and at the earlier dates the contracts were renewed. is likely to develop soon when a market for the oil is established within the paint and varnish industry which has developed beyond recognition in the war period.

Bank Chairmen's Speeches

For any estimate of prospects for the Exchange Banks in the East one must turn to the statements presented to the shareholders with the 1941 reports. The difficulties of the present can never overshadow the achievements of the past in the case of the Banks; and no strain can be too great in relation to their organisation and resources. Of that and more, one is necessarily reminded in perusing the speeches "Indian Finance" is privileged to publish in this issue. Normal progress was maintained up to the outbreak of hostilities in the Far East, and the melancholy events of the first quarter of 1942 while creating unusual difficulties led to the conviction that the reduction in dividends did not impair the standing of the banks which have re-recreated their evacuated branches in India. In fact, net profits for 1941 were quite good despite higher taxation as Mr. Langford James told the National Bank of India's shareholders. Then was an advantage for the National that only the three branches in Burma have been affected by the war. The cut in dividend is merely a precaution. Allocation to funds have been made as usual and the carry-forward is higher. In the case of the Exchange banks as a group, the growth of deposits was as marked in 1941 as in earlier years. The National Bank reports an increase of £5 million in deposits and the cash and bullion held at the end of the year was fully a million higher. Much of the increase in funds was diverted to the gilt-edged market, and something like normal progress was maintained in this case as is shown by the increase of £1.7 million in bills discounted. The major factor in this difficult period is liquidity and the National has more than preserved it, since cash and securities shown among its assets are equal to 70 per cent. of total deposits. The growth of business in a time when trade has shrunk, and financial operations generally are on a greatly reduced scale, cannot be looked for, but the Bank's sound position warrants confidence as to the postwar conditions. Business in India where the exchange banks are very strongly placed should result in the maintence of earning power and assist in the taking up of broken threads.

Sir Charles Innes in reviewing the affairs of the Mercantile Bank referred to the wartime stimulus to Indian industry and emphasised its permanent significance. Sir Charles clearly looks forward to the continuance of favourable conditions for Indian industries, old and new, and this should hearten many others besides the shareholders of the Bank. It was only in December last that the prospect for the Exchange Banks became forbidding. The figures may not wholly be correct or complete, but in this case again, there is an increase in demand liabilities. There is an increase under investments too while that under bills and advances is nominal, if not accidental.

Like the National Bank the Mercantile Bank adheres to a strong cash position. Sir Charles explained that losses have been severely restricted by the foresight and prudence of Mr. Crichton. That is one reason why the cash resources are ample. The allocations to funds have been maintained, and the dividend is lowered, with benefit to the carry-forward. The dividend outlook was assessed in the light of war developments. India, Ceylon and Mauritius are not in the war zone, but the Bank's opportunities are inevitably restricted by the war. Smaller dividends were foreshadowed but shift recovery of lost business in enemy-occupied regions also was anticipated by Sir Charles Innes in his address of May 19. The reasoned optimism is supported by present indications. Valuable openings in the Middle East are not lacking, and the experience of years has been conserved alongside of exceptional losses among the staffs and destruction of property. As Mr. Grantham told the Chartered Bank's shareholders sometime earlier, it is difficult to put an exact figure on assets remaining in enemy-occupied territory or to calculate the exact proportion of losses to current assets. What can be ascertained after the war cannot be discussed at present. In the past year the Chartered Bank obtained its due share of the increase in deposits characteristic of the war period. Its inherent advantage lies in its association with the oldest of India's jointstock banks, but others retain advantages in the privileged position held in East Africa and Iraq. The Middle East is undergoing on its own an economic revival which should create fresh opportunities for banks which can serve the countries in alliance with the British Empire. The traditional alliance between famous agency houses in India and the exchange banks is not the least important of the imponderables. In India the secure and dignified position of the Exchange Banks is still supported by a record of careful and skilled management that has inured greatly to the advantage of the entire banking system. The Indian public which has displayed unshaken confidence in the Exchange Banks over a long period will naturally expect them to develop closer ties with India and her neighbours.

The United Industrial Bank

The bank statements of 1941-42 have this in common. They indicate a highly liquid position and a very limited increase in Advances. The expansionary influence is still marked in regard to deposits and is least noticeable as regards Bills, while changes in the value of investments can be relegated safely to a secondary position. India's joint-stock banks in the third year of war appear to encounter conditions which make for stability, but militate against profits. Such general considerations however do not always apply, for instance to a recent but distinguished entrant into the banking field. The United Industrial Bank with its exceptional connections can claim to have inherent advantages denied to many. Its latest report, therefore, records a striking improvement in regard to current and savings accounts alike. And the result is better than may be expected for an increase of 50 per cent in a year under Deposits alone is apparent. Total deposits at the end of March 1942 have gone up to Rs. 37.97 lakhs. Working funds are anyway much larger in view of the paid-up capital having risen in 1941-42 from Rs. 15.91 lakhs to Rs. 16.27 lakhs nearly. The United Industrial Bank still retains the original advantage of an adequate issued capital. It has since made a happy beginning with an appropriation of Rs. 10,000 from profits to its Reserve Fund

TRAVEL ONLY WHEN YOU MUST

MEN OF STEEL 1.

Sturdy sons of Baluchistan, working in a modern steel factory, no longer depend on the crude production methods of their forefathers. Today, with the help of modern machinery, they have learnt to shape vast masses of molten steel into the essential tools of peace and war.

With these men a new generation has been born in India—Men of Steel.

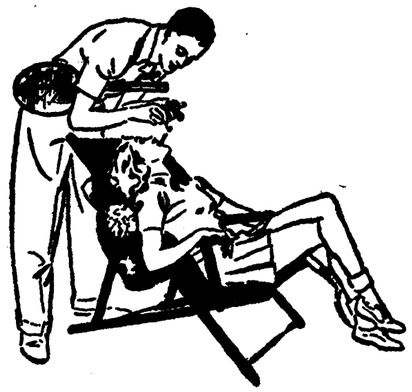
Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

Some of the Indian commercial bodies have come to realise the importance of the problem arising from the hydra-headed accumulation of sterling balances in our currency reserve. In a recent issue, I stressed the need for our leaders of business and public opinion giving constructive thought to the utilisation of this stupendous change in our international balance sheet for the best interests of Indian economy. The figures furnished in the Reserve Bank's annual review on currency and finance, issued this week, are interesting as indicating the magnitude of the problem. In another section of this issue is given a table showing the sources of supply of sterling and its disposal from the beginning of the war to the end of last March. Apart from the sterling purchased by the Reserve Bank in the open market, the sterling payments received from His Majesty's Government during this period amounted to Rs. 258 crores. As much as Rs. 218 crores was utilised for the repatriation schemes of our sterling debt. Rs. 80 crores was placed at the disposal of the Secretary of State for his expenses. In the result, sterling holdings of the Reserve Bank on March 31, 1942 were Rs. 284 crores, showing an increase of Rs. 220 crores as compared with August 31, 1939.



If sterling purchased from the open market in 1942-43 proves to be as much as in 1941-42, the estimate for the current year must be put at over £70 million. In addition, net refunds from the British Government during 1942-43 are estimated at £164 million, after allowing for the repayment of 3½ per cent. India sterling stock and the payment of £13 million for the purchase of the Bengal and North-Western and of the Rohilkund and Kumaon Railways. As I have pointed out, sterling holdings of the Reserve Bank as at March 31, 1942 already showed an increase, during the war, of Rs. 220 crores or £165 million. To which must be added £70 million on account of sterling purchases in the current year and £164 million on account of the net refunds from His Majesty's Government. The net increase as at March 31, 1943 will, therefore, be £399 million. Say, £400 million in round figures. Is it in the best interest of India that she should accumulate sterling holdings for £400 million? Apart from the unwisdom of placing all eggs in one basket, we have to consider what the status of sterling is likely to be in the postwar period.

The developments in the first three years of war are not calculated to contribute to the strength of sterling. On the other hand, much has happened to remove some of the important props of sterling in the international exchange market. The future status of sterling is already engaging the attention of economists; and Lord Keynes has begun to emphasise the need for the fullest expansion of export trade for the maintenance of Britain's post-war economy. It may be said, in broad terms, that, in terms of domestic economy, Britain may find the postwar factors quite favourable. This is also the view of the National Planning Association of America which has issued a pamphlet on Britain's postwar economy with special reference to her balance of international payments. The Association expresses the view that, from the standpoint of technology, the United Kingdom will emerge from World War II stronger than before.

The damage to properties, factories and buildings caused by enemy air raids is no doubt colossal; but the reconstruction programme in this connection may prove the stimulus to a building boom which is generally the precursor of an industrial boom. The building materials necessary for reconstruction and new construction, and the capital sums required for the purpose, should be well within the capacity of the United Kingdom to provide. Lord Keynes estimates that the building industry must be able to keep employed at least one and a quarter million in the early postwar period. The various plants that have been established for armament production can be, with suitable adaptation, changed over to the manufacture of civilian needs. In the rationalisation and regimentation which British industries have been obliged to accept under the stress of war, obsolete methods and out-of-date machinery have had to be discarded. Industries in the post-war period in Britain are assured of more modern machinery and more efficient processes.

D. F. SANDERS, *General Manager*.

The war has also stimulated, fostered and strengthened technical skill among the workmen. Thus from the point of view of domestic economy, war experience provides British industry with better technique and keener efficiency for peace time.

But Britain's domestic economy is, in a large measure, dependent upon her ability to import the necessary foodstuffs and raw materials from abroad. The simple question, therefore, is whether Britain will be able to sell enough abroad to pay for the necessary imports. This question can be answered only if we can gauge what the international balance-sheet of the United Kingdom in the postwar years is likely to be.

The broad features of prewar Britain's balance of payments are firstly that, with respect to merchandise trade, the import surplus was roundabout £300 million; and secondly that a good part of this unfavourable balance was made good by invisible exports. The most important of the invisible items was income from investments and from shipping. As a leading financial centre of the world, London accounted for a considerable income in the shape of commission etc. In all these respects, Britain will be in a considerably worse position after the war.

The National Planning Association of America points out that in two years of war, the United Kingdom lost probably £900 million in gold and earning assets and incurred liabilities of some £650 million to the United States manufacturers (outside lease-lend) and to Empire and foreign banks and governments. The Association estimates that the total decline in the net worth of the United Kingdom against the rest of the world, at $1,050 million, is more than a third of the £4,200 million of foreign assets with which she began the war. In the third year of war, the very big income which the United Kingdom used to derive from her investments in Malayan tin and rubber has disappeared. Also considerable income from oil and timber in Burma. During the fourth year of war, India will have paid off her sterling debt in full. Canada and South Africa have likewise been redeeming their sterling debt.

The National Planning Association's pamphlet expects that the shrinkage in Britain's income from overseas investments in postwar years will be over £120 million. Income from shipping also will be adversely affected. British banks and British insurance companies may find that they have lost considerable ground in foreign countries. London as an international monetary centre may not be its old self again. Taking all these circumstances into account, the pamphlet estimates that, whereas the United Kingdom's balance of payments was unfavourable to the extent of £44 million taking the average for 1936-37 and 1937-38, the deficit after the war may be roundabout £200 million.

The calculations in the pamphlet are based upon the assumption that international trade, and particularly the foreign trade of the United Kingdom, will be largely dependent on the prosperity of the United States. The pamphlet makes its calculations in relation to three different assumptions: firstly the assumption of U.S.A. national income being $45,000 million, secondly, of U.S.A. national income being $70,000 million and thirdly of U.S.A. national income being $100,000 million. The following table gives the National Planning Association's estimate of the United Kingdom's balance of international payments in relation to the three assumptions :—

Trade	1988	Average 1936–8	Estimated postwar U. K. "deeply depressed"	U. K. "quasi depressed"	U. K. prosperous
Exports	422	562	300	500	700
Imports	—685	—950	—600	—900	—1,200
Import surplus	—263	—388	—300	—400	—500
Services Government payments	—2	—7	—	—	—
Shipping	65	105	40	60	100
Net investment income	160	203	60	80	120
Net commissions	30	36	15	20	30
Other receipts*	10	7	—	—	50
	263	344	115	160	300
Balance of payments	0	—44	—185	—240	—200

*Including tourist expenditure.

Taking merchandise trade as well as invisible items, the United Kingdom will, thus, be confronted with an adverse balance of £200 million; and the question is whether the leeway can be made up by any special export drive.

Lord Keynes has now, as always, provided a correct picture of the nature and requirements of Britain's economy after the war. Speaking at Manchester a month ago, he emphasised the importance of Lancashire recovering her export markets it is not a question, he said, whether Lancashire can: it is a question of must. This is an issue which affects not only Lancashire but Britain's postwar economy. In a recent broadcast, Lord Keynes reverted to the theme:

"Immediately after the war the export industries must have the first claim on our attention. I cannot emphasise that too much.

Until we have rebuilt our export trade to its former dimensions, we must be prepared for any reasonable sacrifice in the interests of exports. Success in that field is the clue to success all along the line."

The problem of the recovery of markets for British exports cannot be solved merely by the drive and single-minded purpose of British industrialists and economists. Much has happened in the present war which has the effect of setting up new rivals for British industry. Above all, the British export trade cannot hope for any special preference in a postwar world. Its ultimate salvation must be found in the development of products which British industry can make better and cheaper than the rest of the world and in harnessing to British industry a keener sense of research and a more thorough-going spirit of efficiency than it has shown in the past.

The National Planning Association of America is, for its part, convinced that some form of exchange adjustment such as a depreciation of sterling will be found necessary to bring about an increase in exports in relation to imports.

This analysis brings into prominence two facts:

(1) The postwar balance of payments of the United Kingdom will prove considerably unfavourable to sterling. Which is another way of saying that the postwar status of sterling will be much weaker.

And (2) to make up for this adverse balance, Britain must devise steps to stimulate exports; and currency depreciation may be the only way by which such expansion of exports can be affected. Which means that we cannot rule out the possibility of sterling being depreciated after the war.

If so, is India wise in holding all her foreign investments in a currency that is threatened with increasing weakness and

THE
THIRD DEFENCE LOAN
1951–1954
3%
available from JULY 8th.

The loan is issued at par and as interest for the full half year will be paid on the 15th September 1942, the price from the 8th—11th July will be Rs. 100-10-8 to allow for the approximate accrued interest up to that period. The price will thereafter increase by 8 pies per cent weekly until further notice.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Olympus

(From Our Correspondent)

New Delhi, July 8.

THE new appointments to the Viceroy's Council, announced on Friday last, have generally been well received. An effort has been made this time to fix portfolios with some regard to the experience and the wishes of the Members concerned. It appears to have been the choice of Sir C. P. Ramaswami Iyer himself to take up Information though originally he appears to have been thought of for Civil Defence. There is little doubt that with his vast experience of public life Sir C. P. Ramaswami Iyer will be able to make a success of his work as Information Member. Dr. Ambedkar, being himself prominently connected with the Labour movement, has rightly been selected for the Labour portfolio, but it has to be remembered that the Labour portfolio includes such big administrative Departments like the Central P.W.D. and the Geological Survey. The transfer of Mr. N. R. Sarker to the Commerce portfolio is also welcomed as an attempt to put the right man in the right place. Sir Mahomed Usman was originally thought of for Defence, but as the Punjab put in a claim as "the sword arm of the country" it could not be resisted. In the result Sir Firoze Khan Noon found himself shifted to Defence and Sir Mahomed Usman to the new Department of Posts and Air. The main reasons for the selection of Sir J. P. Srivastava are two—firstly, owing to the large part which Indian industry is playing in the war effort, the Viceroy was anxious to have one more industrialist in his Council, and secondly, representation had to be given to the United Provinces. It was as a result of last-minute arrangements that Sir J. P. Srivatsava was chosen for Civil Defence.

* * * * *

It is well that the War Resources Committee has already come into existence, for with so large a Council as 15 Members, the need for setting up a smaller body which can effectively function as an Inner Cabinet has to be recognised. The new War Resources Committee has been particularly busy during the last few days—meeting practically daily. At its instance, the question of rationalising three important industries—jute, rubber and general engineering has been taken up for increasing production and saving transportation. Special officers have been appointed for preparing rationalisation schemes in close consultation with the industries themselves in order to avoid compulsion. It has also been announced that a sum of Rs. 8 crores has been sanctioned for putting into effect new schemes for improving telegraph and telephone facilities. Of particular value is the inquiry ordered in order to prevent wasteful use of transportation facilities by Government and Military Departments. Though considerable help is expected from the United States in the shape of large and immediate supplies of locomotives and rolling stock, the development of transport facilities by securing the most effective and economic use of existing facilities has to be provided for. In pursuance of the Grady Mission's recommendation that the production of power alcohol should be pushed on at once, twelve plants are now reported to have been ordered from the United States.

* * * * *

As a wrong impression has been created that the Government of India are trying to shelve the recommendations of the Grady Mission, it is well that the War Resources Committee is making arrangements to keep the public informed of what it is doing. A communique issued today says that special progress reports have been called for on the new expansions in the steel industries and the production of aluminium and measures for the better conservation of motor spirit, rubber and tin are under consideration. This is evidence of fairly good work. There is still a hope that the Government of India will revise their views on the question of having a separate Production Department and appoint a full member for taking charge of production. In this connection one cannot overlook the general feeling that the grouping of Departments and the distribution of portfolios in the Government of India has been more or less a haphazard growth and must, in the interests of the Government's efficiency itself, be revised. Something was done at the time of the last expansion, but this time nothing has been ordered beyond the bifurcation of the Communications portfolio. If the new Council takes up the question of reorganising the administrative machinery of the Government of India for securing quicker and more efficient work, it would be an excellent beginning for its work.

* * * *

There are to be a number of conferences during the coming few weeks which will keep the Central Government's authorities busy for some time. A good deal is expected from the first meeting of the Central Food Advisory Council for which arrangements are now being made. It will review the progress made in food production programmes in the various provinces and arrange for a big drive in the coming months. There will also be a meeting of the Governing Body of the Imperial Council of Agricultural Research at the end of the month which will also pay special attention to crop planning and food production. No serious anxiety is felt in official circles regarding the food position, but as the difficulties of the future cannot now be foreseen it is proposed to make every effort to attain regional self-sufficiency in the matter of food crops and other necessaries. The Education Member, Mr. N. R. Sarker, has taken the right step in appointing a trained Indian economist (associated with the Federation of Indian Chambers of Commerce) as the Technical Secretary of the Food Council.

* * * * *

Two other bodies which are shortly to meet are the Central Sugar Advisory Board and the Price Control Conference. The complications which have arisen in the sugar trade are receiving the urgent attention of the Commerce Department. According to official accounts, the production of sugar in the country is quite sufficient for the country's needs. Transport difficulties have caused some trouble, but as the War Resources Committee has taken up the question of transport organisation in order to prevent waste and delay, some improvement may be expected in the near future. It is however said that at present nearly 50 per cent of the sugar produced during the last season is still lying in the factory godowns. This is a problem to which the Government have to give serious attention. As new problems have arisen the coming session of the Price Control Conference in the first week of August is also of considerable importance.

HILL-BIRD.

(Continued from previous page).

that may be depreciated even by deliberate official policy?

Advertisements have a helpful effect, for we know that much history can be compressed into one like that of the Titaghur Paper Mills appearing in this issue. When one can contemplate achievement serenely and sincerely it is not improper for all concerned to rejoice. The sense of achievement is something infinitely more pleasing than vanity, and the right note of austerity has been struck in this case merely by the avoidance of the usual jubilee celebrations. Yet Titaghur's jubilee is definitely an event to record and descant upon. Sixty years on—and never a pause. From infancy to maturity the record is fully satisfying, for Titaghur has crossed into the wartime transition with no handicap but a sense of responsibility. That is perhaps because the age and standing of India's oldest paper mill is against the shrill self-advertisement that goes with the new rich. The Titaghur Company's reports are pitched in a minor key; the profit figures provide all the padding needed. I should perhaps avoid mention of profits because I should duly stress that the Company had its fill of troubles until the claim to tariff protection for pulp and paper was recognised by the Indian Government. The company has taken the reconstruction and reorganisation of capital in its stride though the events are appropriate reminders of the troubles overcome by skilled production methods and successful sales organisation. The company however efficient cannot be dissociated from the house of Heilgers. It is most emphatically a Bird-Heilgers jubilee, for Titaghur—the town and its industry are the creation of the great enterprise in Royal Exchange Place. One does not ask leave to remember this connection because the success of the mill with its thousands of Indian shareholders is esentially the product of commercial statesmanship.

There is no need to check the Company's record in declaring that the treatment of Indian bamboo and other grasses for Indian paper mills is the main claim of Titaghur to public admiration today. The Elephant mark is more than familiar; it is famous, and rightly too, for it is a guarantee alike of price and quality for all including yours truly. There is hardly any justification to speak again of the debt of editors to paper-makers for I have done so often, and with good reason, I feel. The present Titaghur range, as every dealer assures you, is impressive; the quality is equally so; the prices even more advantageous to the loyal and less powerful customers. The Papermakers Association and the Paper Sales Association have supplemented Titaghur's good work. When that is said there must be a formal mention of Mr. Mellor who more than upholds the Titaghur Paper Mills tradition. Nothing should encourage the mill management, its servants and customers than the sixty glorious years of adventure. It has been an adventure for all concerned to build up a sound, efficient and profitable industry. And India has benefited doubly —through the use of local raw materials and the creation of ancillary chemical industry. The Titaghur earnings record is found in every investor's year book. If is not found is a mention of the int[illegible] that have contributed to well[illegible] success.

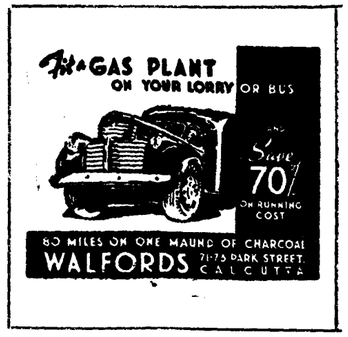
(From Our Correspondent)



Bombay, July 8.

LOCAL Press comment on the further expansion of the Council has been mixed. *The Times* is cock-a-hoop about the Defence membership. It is taken as a victory of the civilian over the military. The Defence Member has many things to do; he will supervise the use of manpower and apply conscription to European—perhaps to technicians as well, having been a Labour Member. The advent of a non-official European, which displeases the Indian Merchants Chamber, is satisfactory as it goes in the opinion of the *Times*. The War Member will remain, where he is and that will be an advantage for the Council to learn how Britain with her allies is defending India. The Jam Saheb's delegation to the War Cabinet gives even more pleasure to a few. He is called a representative of the Princes going out as Chancellor of their Chamber. The Standing Committee has expressed prompt approval. The new Labour Member's selection is no surprise. The National Defence Council was just a warming-pan for so many of the new appointees that Mr. Jamnadas Mehta may express concern over the non-selection of himself or other Interim men. The Europeans certainly are glad to see Sir E. Benthall back. It means an end of the Parliamentary abmitions of Sir Edward who cannot hope to achieve the recent fame of Sir John Wardlaw-Milne, who is widely pooh-poohed for suggesting a Royal Duke as C.-in-C., when Royal Dukes are presumably meant to go round for the National War Front. The Indian majority in the bigger Council is treated as a big gain, without reference to the fact that the Viceroy can overrule all or any of them. People here are sorry to find that Linlithwaite government for the duration is their fate. But if anything goes wrong in the near future, there will be none to blame except the Councillors. The Liberals at Poona have said flatly that they do not like the appointments which accentuate irresponsibility. The Congress does not worry about the caravan passing, and is turning readily towards Wardha.

The Zenith Life meeting this year was remarkable for Sir Homi Mehta's brilliant survey of the general position of Indian insurance. Each time that Sir Homi discusses the question of investment, he does not fail to suggest tax relief for insurance concerns. The company has increased its capital without any difficulty because the 1941 results are very good. Sir Homi told the meeting last week, that new business yielded 1,215 policies for a total of Rs. 29.02 lakhs thus showing a big rise of Rs. 9 lakhs on the 1940 total. The higher average value of each of the 1941 policies must also be considered. Premiums gave Rs. 7,48,741 and investment receipts produced Rs. 1,18,815 showing a rise of Rs. 61,867 in the total annual income shown at Rs. 8,67,556. The Company's funds have increased, investments alone showing a big jump of Rs. 2.58 lakhs in a single year. About half the total investments of Rs. 29.2 lakhs is in approved securities and the issue of Rs. 3.27 lakhs in policy loans attests the friendly interest of the company in its own supporters. The Life Fund stands at Rs. 29.94 lakhs showing an increase of Rs. 3.41 lakhs on 1940. The increase in capital to Rs. 6 lakhs is expected to promote rapid progress of a company that is just 25 years old and is holding its own despite the war. Zenith policies cover civilian war risks; only those on active service have to pay extra premiums. The no bonus issue was raised by Sir Homi, who asked that the Advisory Committee views should be assigned great importance. Indian life offices should be advised to conserve resources in wartime. Sir Homi quoted the British precedent. He explained that 27 offices which made a valuation in 1939 and later in 1940, had large surplus and declined to declare bonuses. The twenty other companies which obtained a surplus in their 1941 valuation did the same thing. Surplus is rightly added to reserves in such cases, because the Boards are really trustees for policyholders, and all money saved now is meant for subsequent distribution. Sir Homi has asked the India Government to respect the lead given by the British offices and ignore suggestions made by some that surplus must be made available at once to policyholders. He declared that securities may depreciate and the rate of interest might drop further; so there was every reason to play safe.

Mr. C.R.'s visit has been a nine-days' wonder. South Indians here have done their best to boost him and his new policy. That is the realism praised by Professor Coupland, by everybody who wants India should be subject Mr. Rajagopalachariar has yet to convince the Congress that he is right. People here give him a short run. South Indians are not really worried about the Japs but about the principle of Dravidistan for which the League may extend its support. Mr. C. R. has still got Japs on the brain when Gandhiji wants the British to leave India. Immediate division is not foreseen by Mr. C. R. who naively hopes that another organisation will spring up against the League and oppose Pakistan. The idea of examination of Pakistan as a project is one thing, allowing the Muslims to work for it deliberately all the time is another. Dr. Moonje has met C. R. on his own ground and given him a chance to make a reputation by forswearing the black treachery which Sir Tej Bahadur Sapru has referred to. The Mahasabha is not upset by the fear of Japanese invasion and is ready to meet it by guerilla warfare. Mr. Jinnah does not worry about the Japanese. Dr. Moonje is all in favour of military training as part of the war effort, and the expanding Army will help to break communal prejudice. A different view is still taken by the Congress which believes in storing up energy while Allied troops may do what they like in India. Small industries are doing their best for the war. Weavers are said to be weaving for victory in the U. P. where the cottage industries are doing much under direct encouragement. Camouflage nets, ropes, medical stores and many utensils are made by cottage workers. Orders distributed by the Industries Department have put half a crore into the village industries. Village crops are making good against big manufacturers and foreign imports as well. Bombay is behind the U. P. but the Industries Department here has plans. Shipbuilding in the maritime states is a languishing industry for which a revival is predicted. Many village artisans may find in jobs in Cutch Mandvi where the shipbuilding tradition persists. This industry means more work for sailmakers, ropemakers and carpenters. That would not be a cottage industry, but something much bigger, for sailors can go to work on steamers and warships and keep to fishing if nobody signs them on. Shipbuilding is still recommended for Bombay's minor ports and the papers here do not stifle the discussion of what can be done.

Only last week did the Atlas Assurance Company sent out greetings to people here in connection with a jubilee in its career. The Branch Office was opened in 1942, and its first manager was Mr. T. H. Symington, father of Mr. Symington, who was in the Bombay Secretariat before becoming A. R. P. Controller. The Bombay branch has done remarkable work in the fire insurance field, and Indian businessmen will be the first to say that the Atlas can carry any burden. Mr. Symington's thorough work has stood the branch office in good stead, for the Atlas Assurance is still among the foremost fire offices, and the continuous development of trade and industry has helped it onward. The Atlas office has naturally received many expressions of goodwill from local businessmen, who should be aware that in Calcutta the Atlas has an even greater name as a dependable old Insurance Company. Many agency houses represent Atlas for sufficient reasons.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 9th July.

THE Government proposals for the "rationalisation" of the Jute industry must be giving those concerned furiously to think. But before we go on to discuss the matter, it might be instructive to review the situation as revealed by the Mill stock figures at the end of June. These show a total advance from the 31st May figures of 10,700 tons, considerably less than might have been expected in the circumstances. Stocks of commercial hessians are up by 2.16 crores yds. or 5,450 tons. Commercial Sackings are down by 46 lakhs yards or 1000 tons. All descriptions of goods held on Government account show advances, mainly in Sandbags, 1.08 crores yards and in other descriptions of Hessian cloth, bags and Canvas, 1.32 crores yards, altogether an increase of 6,350 tons. To summarise, total hessian descriptions are up by 4.44 crores yds. while sacking descriptions actually show a decline of some 20 lakhs yards, the result doubtless of the recent brisk demand for the country trade.

To arrive at the quantity shipped during June from these figures, it may be taken that the total Mill production for that month, actual figures not being yet available, was not far short of 90,000 tons. Therefore it follows that, as stocks have increased by less than 11,000 tons, close on 80,000 tons of Jute goods must have been shipped during the month of June. It is known that the export freight from the port of Calcutta has shown a distinct improvement. The quantity railed to Bombay and other Western India ports for shipment cannot have exceeded 20,000 tons and probably fell well short of that figure, owing to the congestion prevailing in these ports. Additional wagons must also have been available to carry a very considerable tonnage of goods to upcountry markets. It may be recalled that during May the shipments must have amounted to around 70,000 tons, so that the lifting of 80,000 tons during June shows quite a marked improvement. It should also be kept in mind that virtually the whole of the goods left in stock in Mill godowns are already sold and only await shipment as opportunity offers. All these points should be kept in mind when considering the proposals for the "rationalising" of the industry.

The Government proposals seem to be based on an estimate that world requirements of jute goods of all kinds amount to 55,000 tons per month. It is suggested that this figure has been arrived at after enquiry from the consuming markets, but judging by what the industry itself knows of the potential demand, it is difficult to reconcile the Government estimate with actualities, and it might be suggested that before proceeding further, this estimate might be checked. Working on this very doubtful estimate, Government proceed to propose that, in order to conserve wagon supplies for more essential purposes than carrying coal to the Jute Mills, all units whose power plant consists of reciprocating engines should be closed down, and manufacture confined primarily to such units as take their electric supplies from public supply stations with the balance of production made up by units generating their own power for turbo-electric drive.

It may be admitted that some economy in coal consumption could be effected in this drastic fashion, but it may be a surprise to find that the coal consumed by Jute mills other than those drawing their power from public supplies, amounts to less than 3 per cent of the coal consumption of the country. Moreover, the lead from the collieries to the jute mills is one of the shortest commercial leads which the railways can boast of and we have little hesitation either in averring that it is one of the most economical in wagon tonnage, for it is a fact that delay in releasing wagons placed at Mill sidings is reduced to a minimum. The proportion of wagon hours entailed in supplying Jute Mills wth coal must therefore be very much less than the 3 per cent their consumption bears to the total required for the carriage of coal. This might be even further reduced by the establishment of depots at the river side at suitable spots to which deliveries from the collieries could be made in rake loads, and delivery taken by Mills in boats. This would involve some pooling of existing contracts for coal supplies to Mills and the confining of supplies to collieries with facilities for loading rakes, but these are matters capable of adjustment and of very minor importance compared with the suggested shutting down of something like two fifths of the jute machinery and the throwing out of employment of well over one lakh of workers.

It is also a curious sidelight on the wagon situation that it should be impossible to secure jute to Mills on the East side of the river, whereas bookings are being accepted for stations on the Howrah side, while at the same time wagons are being returned empty to the coal districts from up-country jute stations. This does not sound like the most economical use of the wagons available.

Other aspects of the situation will require deep consideration. How, for instance, Mills which may be shut down be compensated by those still permitted to run. It is not merely a matter of loss of profit, but of actual loss, for the upkeep of an idle mill on a care and maintenance basis may run up to Rs. 50,000 per month, when War Risk Insurance is taken into consideration. Another point which may have escaped the authorities is the possibility of the public electric generating stations which supply the active mills, being put out of action as a result of raids.

Enough has been said to indicate that the question is not one which is amenable to hasty decision, and we again suggest that the first detail to be checked is the basis on which Government has decided that 55,000 tons of jute goods is sufficient to fill world requirements, when only as recently as the end of April, Government approved the reduction of working hours to 54 per week with the sealing of 10 per cent of loms already idle, which rate of working would produce on an average 90,000 tons per month. Also, how does Government reconcile their estimate with the undoubted fact that, in two months of the most acute freight difficulty yet encountered since the outbreak of war, goods to the extent of 150,000 tons have been despatched from Calcutta mills, who still hold another 180,000 tons of commercial goods, paid for and awaiting shipment.

In Export Jute the only feature of interest has been the placing of another order for Russia, reported to amount to some 17,000 bales. Prices have not yet emerged, but covering transactions will doubtless be recorded in a day or two. Quotations are fully steady, partly owing to scarcity of imports and partly owing to rising packing costs. Mills have paid Rs. 41 for reliable lightning marks; Mixing Cuttings at Rs. 9-8 and N. C. at Rs. 10-8.

There has been a moderate interest shown in Loose Jute. Some further sales have been reported in Old Crop Indian Bottoms at Rs. 5-12 and Rs. 6 and in X mark at Rs. 3-12. In New Crop, small business has been done in European Tops, Mids and Bots at Rs. 11-8, Rs. 9-8 and Rs. 6-8, with Supervised packing at four annas less and Indian Jat at even money. Mofussil reports are on the whole satisfactory. Rivers have risen rather rapidly in some sections and some flooding is reported, but not to an extent as to cause damage. In many districts the low land cutting is already completed, but imports are still lagging, but should be in good supply within a fortnight.

In the Fabrics section Hessians have continued neglected though quotations have hardened in sympathy with the strength of the Heavy Goods section. Nominal rates are Rs. 14-8 for nine porters and Rs. 8-10 for elevens. Further sales of 45/11oz for July are reported at Rs. 20-8. The order for the South African Government for Liverpool Twills amounted to something like 84,000 bales, a very substantial quantity even though spread over a number of months. The rates paid were Rs. 44 July, 43 August, Rs. 41-12 and Rs. 42 Aug/Decr. and Rs. 41-8 Octr./March. A considerable turnover has again taken place in "B" Twills at Rs. 40-4 to Rs. 41 for ready and July, Rs. 40 August and August/Septr. Rs. 39 Septr. Cornsacks sold at Rs. 40 for August/Septr. and Septr. Sugar bags at Rs. 46 and Rs. 47 July and Woolpacks at Rs. 1-13-6 July. The market closes steady at the following rates.

	Ready	July	Aug/Sep
	Rs. A.	Rs. A	Rs. A.
9 porters ..	14 8	14 8	14 10
11 porters ..	18 10	18 12	18 13
"B" Twills ..	40 8	40 4	39 8
Cornsacks ..	41 0	41 0	39 12
Liverpools ..	44 8	44 8	43 4
Heavy Cees ..	38 4	38 4	38 0

JUTE

Calcutta, July 9.

RATHER more interest has been shown in the raw jute market during the past week, mills being reported to be buyers of both old and new crop. But with the uncertainty regarding the rationalisation of the industry and the arrival of imports in the mofussil, there could not possibly be any rise in prices. The possibility of any large increase in arrivals in mofussil circles, however, can be ruled out with weather uncertainties as they are, and the difficulty in transport facilities.

Conditions in the jute growing districts are reported to be satisfactory but, with the rapid rise of rivers, cutting of the crop, which has not fully matured, has begun.

In the loose jute section, balers have bought new European Jat Tops, Middles and Bottoms at Rs. 11-8, Rs. 9-8 and Rs. 6-8 respectively. Supervised Jat Bottoms were done at Rs. 6-4 per maund.

In the pucca bales section, mills bought early in the week Firsts at Rs. 54 and free from Samla Firsts at Rs. 65 per bale. Some business was also reported in cuttings M. C. and N. C. at Rs. 10-8 and Rs. 9-8 per bale respectively.

JUTE MANUFACTURES

Calcutta, July 9.

THE jute manufactures market has been better during the past week with rates quoted higher. There has, however, been no appreciable increase in the volume of business. The strength of the market has been due to the expectations of a reduction in production. Having regard to the difficult conditions in June, the stock figures also do not make a bad showing. 9 Porters ready are quoting Rs. 14-8, July Rs. 14-10 and August-September Rs. 14-10. 11 Porters ready are Rs. 18-10, July Rs. 18-11 and August-September Rs. 18-12.

The heavy goods section has continued firm. Shipment business has been reported for South-Africa. The stock position is very satisfactory so far as sacking is concerned. "B" Twills are Rs. 40-12 and Cornsacks Rs. 41-4.

The local stock figures for the month of June reveal that the increase in hessians cloth and bags is not entirely on account of the decline in ordinary consumption. Out of the total increase of 4.44 crores yards, stocks on government account are for 2.27 crores yards, the remaining quantity being in respect of stocks for civil consumption. Sacking cloth and bags show a decline of 20 lakhs yards.

GOLD

Calcutta, July 9.

THANKS to the slightly more hopeful war situation in Egypt, the gold market has been easier during the past week. Selling and profit-taking at the higher levels have resulted in a substantial decline in prices. Gold ready are quoting Rs. 50-15.

The London price has remained unchanged at 168s.

SILVER

Calcutta, July 9.

THE silver market also has been easier in sympathy with the gold market. The decline in prices is more pronounced for the ready position, Indian mint silver ready being quoted at Rs. 83-5 and second settlement at Rs. 82-13.

The quotations at the end of last week were Rs. 85-4 and Rs. 84-11 respectively.

The silver market has been rather quiet with business passing on a small scale. The quotation for both spot and forward is unchanged at 23½.d

PIECEGOODS

Calcutta, July 9.

THE piecegoods market has been quite steady. Owing to the difficulty in ensuring supplies, some business has been reported in handloom products. Also, greater interest has been shown in the local market for products made by Bengal mills as it is feared that it will not be possible to get regular supplies from Bombay. The general outlook is very satisfactory and if only freer movement of goods were possible more active conditions can be witnessed. As it is, not much of forward business has been passing with Bombay mills.

COTTON

THE Bombay raw cotton market has staged a sharp rise in prices this week. Good investment buying in ready cotton, the firmness of the stock exchange and bull activity were mainly responsible for the rise in values. During the last two days, a slightly easier tendency has been noticeable. Broach April-May are quoting Rs. 214-4, Oomra July Rs. 195-12 and Bengal July Rs. 177-4. The quotations at the end of last week were Rs. 197, Rs. 189-8 and Rs. 168 respectively.

The new hedge contract is expected to open in the middle of this month.

The New York market has been more active on expectations of compromise over farm legislation and greater mill buying. July quoted 19.13 cents and October 19.45 cents.

(*Continued from page 59*)

and has earned a net profit which has covered the preliminary expenses incurred in 1940 and has effaced the small loss on the first year's working. To this marked change in earning power, as compared with the results for the first ten and a half months of working, the expansion in cash credits and overdrafts by as much as Rs. 12.05 lakhs has definitely contributed. Mr. Jadu Nath Roy told the bank's shareholders at the annual general meeting last week that the Naraingunge Branch is doing very well and the progress of the city branches has been checked only by the exodus. A comparison between the balance-sheets appended to the first and second annual reports furnishes an indication of unusual progress. The United Industrial Bank alone is able to report a bigger increase under Advances than Investments. This neutralises the depreciation in the value of securities to which Mr. Jadu Nath Roy adverted. His remarks on the intrinsic position of gilts deserve to be noted. The depreciation in the market value of our investments was entirely unavoidable, he declared, but with the steady expansion of currency, accompanying India's increasing war expenditure, it is hoped that giltedged securities will gradually attain a higher level. Lesser men might try to whip up enthusiasm, but habitual restraint of language marks the brief but significant reference to a problem of tremendous importance for investors. The giltedged outlook is more than fair after the issue of the third defence loan, and Mr. Jadu Nath Roy's confidence is supported by present indications in the money market. As he pointed out the last quarter of 1941-42 can only have interrupted the progress to which the balance-sheet figures revealing a growth of about Rs. 14½ lakhs in a year in the working funds testify. The enlarged employment of funds and the smooth and efficient working due to able management are adequate guarantees as to the future of the Bank. On behalf of shareholders present, the policy of the Board was approved, and mention was made of the possibility of a dividend at the end of the current year.

The Ideal Bank

Mr. Nandalal Chatterjee, Manager, Dass Bank Ltd., Clive Street, Calcutta, writes:—

The main function of a bank is to help trade, industry and commerce. An ideal bank pays due heed to the following:

First, the banking business is essentially commercial business.

Second, the bank cares not less but more for the smaller business firms and ordinary individuals.

Third, the bank is run on a business budget.

Fourth, the bank has well-trained personnel. They must not only know banking but they must know people also.

Fifth, the bank has advertising campaigns and every advertisement must appear under the signature of its Executive Head because it is a belief in Chicago that there is an advantage in a bank having as its Executive Head an individual who is known by name to the public. It makes the bank more approachable, more business-like, more human.

Sixth, the bank encourages all reasonable employee activities, provides provident fund and life insurance for employees and issues its house organ which must appear on their desks every Monday before 9-30 a.m., to enable them to catch up on the bank news and start with knowledge of what is going on in the bank.

Seventh, the bank has trained fieldmen who travel constantly, mix freely with small town bankers and the public alike, visit behind the rail, come across local manufacturers needing accommodation. These fieldmen send detailed reports of each visit which describe generally the crop conditions and intimate facts about the local bank or manufacturer and the business handled.

Now let me tell something about the methods of developing banking business. The development of the business of the bank is helped by advertising in newspapers and banking journals and by organising representatives calling on selected business houses. At first, the bank should advertise its policies, especially its attitude towards the smaller accounts. Such advertising not only attracts small accounts but also large ones. It should change its 'copy' at intervals to enable the general public to form an idea of the bank. These advertisements, if based on avowed principle, will, no doubt, attract favourable comments from all quarters. Messages therein should be friendly, intimate and human.

They should neither make any extravagant promise nor cast any reflection on other banks and bankers. Rather they should be helpful to them and their problems. This spirit of friendliness should be the key-note of banking policy. Secondly, the bank should have representatives who will stress in business quarters that their bank is unusually friendly, the whole bank is salesminded, the officers are approachable at the wish of the visitor and rail officers devote themselves to serving customers and making friends for the bank. Every afternoon, some of the officers of the bank should call on their customers at their place of business. They should enquire of them if there is any thing the bank can do that is not being done. If the customer is dissatisfied for any reason, however trivial, they should find it out and correct the complaint, if reasonable. If the customer maintains a confortable balance, they should mention the fact and thank him on behalf of the bank. They should show their appreciation for his patronage. Often as a result of these friendly talks, the customers naturally recommend their bank to their relations, friends and acquaintance. Thus the business of a bank develops as the result of such recommendations on an indirect method—the best of all methods.

Above all, it cannot but be said that the selection and training of the personnel of the bank plays an important part in the development of the business of an ideal bank; and advertisement campaign follows, not pecedes, the equipment of a suitable staff.

FAVOURABLE RECEPTION TO NEW LOAN

THE behaviour of all markets during the past two weeks should encourage operators and enable them to take a more optimistic view of the future. As a matter of fact I suggested last week that the resistance to selling pressure should be considered rather satisfactory and that given favourable developments markets should rally. The better news from the Middle East and the announcement of the terms of the Third Defence Loan have, therefore, had a steadying effect on the markets and a substantial rise in prices has been recorded especially in the Bombay market. It is generally felt that this country is relatively free from danger. But with a troubled internal situation and the deteriorating Russian situation one can be none too optimistic. As a matter of fact in the absence of any fresh encouraging news the tone in the several sections has been easier towards the close.

* * * *

The feature of the week is the announcement of the terms of the Third Defence Loan. The news came all of a sudden for with the grave international situation it was not expected that the Government of India would start on a new borrowing programme. The healthy condition of the giltedged market and the plethoric conditions in the money market have, perhaps, been responsible for the early decision of the authorities.

The new loan is a second issue of the three per cent 1951-54 loan issued at par and redeemable at par. This loan was at first issued in August, 1935. The issue price of Rs. 100-10-8 between July 8 and July 11, 1942 includes the approximate interest on the loan, which is payable half-yearly on March, 15 and September 15. Thereafter, there will be a weekly increase of 8 pies. The lists will be kept open until further notice and subscriptions will be accepted for unlimited amounts.

At the time the terms of the new loan were announced the quotation in the market for 3 per cent 1951-54 loan was Rs. 98-10. There has been an appreciation to Rs. 99-14. The rise in 3½ per cent Paper is very pronounced, the quotation being higher on balance by nearly two points.

* * * *

In the absence of fresh channels of investment and with a higher yield available on analogous loans there has naturally been a rush for buying in the market. It is also reported that there was some bear covering. With the rise in prices for analogous securities to a level at which the return available is the same as on the new loan the prospects are assured and liberal subscriptions should be forthcoming.

* * * *

I expressed the view last week that the fall in prices for Tata ordinaries and deferreds was rather overdone and that with a proper appreciation of the prospects and the position of the Company there would be a substantial recovery in the values for the shares. The fact that the fall in prices last week was due more to disappointment with the declaration of lower dividends than to other factors will be evident from the sharp rebound in the quotations during the past few days. The report that the Central Bank of India will be prepared to cash all income certificates at par within three months from the date of issue has also been helpful.

* * * *

It is very encouraging to note that the War Resources Committee is busy implementing the Grady Mission's proposals. I have always held the view that the complete adoption of the Mission's proposals should hasten the pace of industrialisation in this country and improve technical efficiency. Transport facilities are to be improved and more effectively used while the problem of fuel is to be solved, to a certain extent, by the manufacture of power alcohol. It is already reported that orders have been placed for twelve plants with the United States.

* * * *

Increase in the manufacture of power alcohol means an increase in the earnings of the sugar industry. Already the sugar industry has been asked to produce more sugar in the next season and the entire output of 1940-41 and 1941-42 seasons has been sold out. The better class of sugar shares, therefore, merit attention.

While on sugar shares it is well to remind our readers that the Mysore Sugar Company, Limited, is manufacturing power alcohol. Besides, the factory is placed in a locality where sugar is needed most. Accounts for the year which has just ended should make very interesting reading. The expectations of a bonus have been revived. Will they materialise at least this time?

* * * *

Some time ago I pointed out that cotton textile issues were preferable to jute shares owing to the assured prospects for the Indian Cotton Mill industry. The cotton textile industry is now very busy on war orders. Only recently large orders were received on Government account. It is estimated that orders during the next six months will amount to as much as Rs. 50 crores. Besides the large Government orders demand for internal consumption also is on a big scale and if only internal transport facilities were freely available there will be greater movement of goods and it will be possible to meet demand.

It should not occasion surprise, therefore, if the *Simplex Mills Company, Limited*, has been able to report a big jump in earnings for the year ended March, 1942. The net profit, before providing for taxation and depreciation, for the year is Rs. 21,95,777 against Rs. 5,93,390 for the previous year. The amount set aside to depreciation is Rs. 2,50,000 (Rs. 2,51,000) while the sum of Rs. 1 lakh (nil) has been placed to Machinery Renewal Reserve Account. The dividend is higher at Rs. 10 per share against Rs. 6 per share previously. A bonus of Rs. 2 per share is to be paid in addition. The balance of Rs. 16,58,762 is carried forward subject to provision for taxation. The amount brought in from the last account was Rs. 1,48,985.

Inspite of the large increase in earnings it has not been possible to declare any large dividend owing to the low level of earnings for the standard period.

The financial position of the company is being strengthened. During the year the Company made a payment of Rs. 1.5 lakhs to the Chartered Bank in further reduction of the mortgage loan. During the last four years Rs. 4 lakhs has been repaid.

* * * * *

Benares Electric Light and Power Company, Limited has been able to report satisfactory progress during the past few half-years. The increase in earnings for the half-year ended December, 1941 would have been more pronounced but for the higher working expenses on account of the increased cost of stores, fuel etc.

The net profit, before providing for taxation and depreciation, for the half-year is Rs. 1,79,895 against Rs. 1,47,069 for the previous six months. The sum of Rs. 56,373 against Rs. 56,507 has been set aside to depreciation. The transfer to Reserve for Contingencies is Rs. 5,000 against Rs. 10,000 formerly. There is an allocation of Rs. 20,000 to the General Reserve in addition. The provision for taxation is Rs. 38,000 (Rs. 32,000). The dividend has been maintained at six per cent. per annum. The amount carried forward is Rs. 7,391 against Rs. 7,475 brought in.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

THE better news from Egypt and the announcement of the terms of the Third Defence Loan have had a definitely encouraging influence on the Calcutta Stock Exchange during the past week. The rush for bear covering in the giltedged securities section on the encouraging nature of the terms of the new loan resulted in a substantial rise in values especially for short and medium-dated loans. The strength of giltedged and the more hopeful situation in Egypt have naturally imparted a firmer tone to other sections though there has not been any large increase in the volume of business Towards the close the news from Russia has not been quite encouraging. There is a tendency to await further developments. It can be said, however, that with the present conditions in the market if there are any favourable developments in the war situation a further recovery in values can be expected.

The giltedged securities section, as pointed out above, has been very firm on the announcement of the terms of the Third Defence Loan. The decision of the Government of India to come into the market with a new loan came as a surprise to operators as with the grave situation in Egypt it was believed that they would choose a much more opportune moment. There is also reason to believe that the market has been given support through open market operations. As a result of bear covering and fresh buying 3½ per cent. Paper has improved from Rs. 90-14 to Rs. 92-12. 3 per cent. 1940-52 have been quoting two annas above par while the market quotation for the new loan has improved from Rs. 98-10 to Rs. 99-14. 3 per cent. 1946 were noted at Rs. 101-14, 4 per cent. 1960/70 at Rs. 107-14, 4½ per cent. 1955/60 at Rs. 111-6 and 5 per cent. 1945/55 at Rs. 108-10. 3½ per cent. 1947/50 were Rs. 102. Not a single transaction has been recorded in provincial loans.

Among fixed interest securities, greater interest has been shown in public bodies' debentures with the strength of giltedged securities. 3¼ per cent. *Howrah Bridge* debentures were Rs. 88-2, 4 per cent. 1974 *Calcutta Port Trust* debentures Rs. 94-4, 5 per cent. 1956/86 *Calcutta Port* debentures Rs. 108 and 3 per cent. *Calcutta Municipal* debentures Rs. 90-8. Among others, 6 per cent. *Associated Hotel* debentures were done at Rs. 100-8.

First class jute mills preferences also were marked higher with *Adamjee* at Rs. 130 ex-dividend, *Anglo-India* at Rs. 142, *Auckland* at Rs. 124 and *Cheviot* at Rs. 127. *Empire* were Rs. 28, *Lothian* Rs. 135 and *Reliance* Rs. 145. *Alkali and Chemical* changed hands at Rs. 116 and *B. I. Corporation* at Rs. 170. *New Dooars* were Rs. 162 cum-dividend and *New Victoria* Rs. 9-4. *Steel Corporation* were Rs. 108-8 and *Dalmia Cement* Rs. 126.

In the Bank section, *Imperial Bank* contributories were noted at Rs. 377, and fully paids at Rs. 1,545. *Reserve Bank* were Rs. 95 ex-dividend.

With the considerable difficulties in getting transport facilities the outlook for coal companies cannot be considered quite encouraging. It is not surprising, therefore, that this section has been neglected for quite a long time. *Bengal* were Rs. 358, *Bhalgora* Rs. 4-15 and *Union* Rs. 33-12 ex-dividend.

The jute industry also is very much concerned regarding the rationalisation proposals. Unless something definite is known in this regard operators will not enter into new commitments. *Agarpara* were dealt in at Rs. 18-10, *Budge-Budge* at Rs. 326 and *National* at Rs. 21-2.

In the Engineering section, Indian Irons and Steel Corporations have been marked higher but the rise in *Steel Corporations* is more pronounced. *Indian Iron* are now quoting around Rs. 26-12 with *Steel Corporation* at Rs. 17-8. *Bhartia Electric Steel* have been in good request being marked higher at Rs. 14-12. *Indian Malleable Castings* deferreds were Rs. 2-10, *Kumardhubi Engineering* Rs. 4-14 and *National Iron and Steel* Rs. 10.

Sugar shares have continued steady with *Carew* at Rs. 12-12, *Cawnpore* at Rs. 27-2, *Champarun* at Rs. 23-12 and *New Savan* at Rs. 14-8.

Not many transactions have been recorded in the Tea section, *Teen Ali* being noted at Rs. 14-4 and *Singell* at Rs. 81-8 ex-dividend.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* have remained unchanged at Rs. 1-15 and Rs. 2-1 respectively. *B. I. Corporation* were Rs. 5, *Borooah Timber* at Rs. 15-10, *Dalmia Cement* at Rs. 15-6 and *Indian Cable* at Rs. 19-14. Among Paper shares, *Mysore Paper* were Rs. 16-12, *Orient Paper* Rs. 18-14 and *Titaghur Paper* Rs. 18-4 ex-dividend.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

The better situation in Egypt, the announcement of the terms of the new loan and the issue of a circular by the Stock Exchange authorities that the standing business of July settlement can be carried forward to August settlement were responsible for the firmer tone of the market early in the week. The slightly easier feeling during the last two days is due to the discouraging news from the European front. Quotations in all sections, however, are substantially highe on balance.

The giltedged securities section has beer considerably firmer on fresh buying and bea covering with the announcement regardin the flotation of the new loan. 3½ per cent Paper was quoting Rs. 92-10 against Rs. 90-1 at the end of last week while among termin able loans, 2¾ per cent. 1948/52 were Rs. 98-4 against Rs. 97-3, 3 per cent. 1951/5 Rs. 99-14 against Rs. 98-10, 3 per cent 1963/65 Rs. 93 against 91-10, 4 per cent 1960/70 Rs. 107-14 against Rs. 106 and 5 per cent. 1945/55 Rs. 108-4 against Rs. 107-10.

Textiles.—A sharp recovery in prices has been recorded in this section in sympathy with Steels and the encouraging reports from the cloth market. Export trade is reported to be rather slow. *Bombay Dyeing* were 40 points higher at Rs. 1,270, *Central India* at Rs. 368 against Rs. 353, *Century* at Rs. 478 against Rs. 462, *Kohinoor* at Rs. 482 against Rs. 472 and *Simplex* at Rs. 206-8 against Rs. 197.

Steels.—The fall in prices for Steels last week was rather overdone. Buying at the lower levels has resulted in a sharp recovery in values. *Tata* deferreds are now nearly a hundred points higher at Rs. 1,480 and ordinaries fifteen points at Rs. 296. The accounts for the year ended March, 1942 are eagerly awaited.

Hydro-Electrics.—*Tata Hydro* were four points higher at Rs. 169 while *Tata Power* were 25 points higher at Rs. 1,485. *Andhra Valley* were not very much changed at Rs. 1,610. There are reports that there may be a bonus issue by the *Poona Electric Supply Company Limited*. The quotation for the shares is Rs. 215.

Miscellaneous.—*Alcock Ashdown* were steady at Rs. 475 while *Belapur* were five points higher at Rs. 227. *B.E.S.T.* were Rs. 131-12, *Premier Construction* Rs. 120-8 and *A.C.C.* Rs. 167. *New India Assurance* were Rs. 49-8 and *Scindia Steam* Rs. 20. *Shivrajpur* have registered a sharp rise to Rs. 39-8.

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

FOUR weeks of treasury bills sales on the basis of Rs. 8 crores per week have made no difference to monetary conditions. Inter-bank call money continues to be in super-abundant supply at ¼ percent. It is also remarkable that, despite such large sales of treasury bills, the discount rate maintains the downward trend though the decline this week is comparatively small. Against Rs. 8 crores on offer on July 14, applications received amounted to Rs. 12.01 crores as compared with Rs. 14.44 crores on July 7. The average rate of accepted tenders was annas 10 this week as compared with annas 10 and pies 3 percent per annum last week. The offer for next week remains unchanged at Rs. 8 crores. Though any further reduction in the average discount rate will be unappreciable, there is reason to think that bidding at the next week's will prove quite satisfactory. Deposits of member banks with the Reserve Bank have risen from Rs. 63.49 crores to Rs. 63.92 crores. In the case of the Imperial Bank the rise in cash is particularly marked. Imperial Bank's cash at Rs. 33.05 crores on July 10 compared with Rs. 32.28 crores on July 3. Banks have thus enormous cash resources still awaiting investment and, for some time to come, their appetite for treasury bills will continue to remain keen. It may also be added that, in the week ended July 10, the Imperial Bank does not appear to have increased its holdings of treasury bills to any great extent. The bank's investments show only a slight increase from Rs. 79.39 crores to Rs. 79.82 crores. On the other hand, the bill portfolio shows a considerable shrinkage from Rs. 5.14 crores to Rs. 3.56 crores, presumably, due to the maturing of treasury bills held by the Bank. It is, therefore, quite possible that the Imperial Bank takes considerable interest in the next week's offer of treasury bills. The returns of the Reserve Bank do not disclose any major changes, except for a decline in Central Government's deposits from Rs. 14.93 crores to Rs. 11.28 crores.

The Reserve Bank's annual report on Currency and Finance for 1941-42, which was issued last week, is an even richer storehouse of statistical information and economic data than its predecessors. The publication of the annual report remained the responsibility of the Controller of the Currency until the inauguration of the Reserve Bank of India. With the abolition of the office of the Controller of the Currency the publication of the report on currency and finance has been taken over by the Reserve Bank; and sinc the Reserve Bank took up this responsibility, the fullest information on every aspect of India's trade, finance, budget, currency, debt, exchange and economy is given. The report for 1941-42 is specially welcome as the war has necessitated the suspension of the publication of money, trade and other figures which were usually available to the public till 1939. This report is especially valuable to us as confirming many of the conclusions which we had drawn in these columns on the basis of our own estimates and calculations. Our readers will recall that, with reference to India's finances, we emphasised three points: (1) India is the only country whose budgetary deficit is a small fraction of the total budget; (2) India has been able to raise her defence loans on the basis of 3 percent; and (3) India is the only country which does not record any increase in her Public Debt at the end of thirty months of war. We have detailed calculations based on our estimates to prove the last point. Valuable confirmation is now available from the Reserve Bank's anuanl report. The position is even more favourable than we had indicated. The rupee debt of India as at March 31, 1939, was Rs. 709.96 crores. By March 31, 1942, it had increased to Rs. 942.29 crores. The total increase is thus Rs. 232.33 crores. Rupee debt in this calculation includes, as on March 31, 1942, Rs. 163.49 crores in undated loans; Rs. 258.53 crores in loans maturing after ten years; Rs. 72.60 crores in loans maturing between five and ten years; Rs. 119.81 crores in loans maturing within five years; Rs. 136.98 crores in treasury bills; Rs. 94.98 crores in Post Office Savings Banks Deposits and Cash Certificates; and Rs. 95.82 crores representing other obligations. While the rupee debt has increased by Rs. 232.33 crores India's sterling debt has decreased, in the same period, by Rs. 289.10 crores from Rs. 469.10 crores on March 31, 1939 to Rs. 180.00 crores on March 31, 1942. The net result is that the Public Debt of India, taken as a whole, has actually gone down by Rs. 56.77 crores since the war began. India claims a unique record in this respect. Far from there being an increase in our Public Debt, there has been a decrease of over Rs. 50 crores. How is this to be explained? First of all, as we have already pointed out, our budgetary deficits have been conspicuously on the small side. Secondly—and this accounts for the actual decline in the Public Debt—the Central Government have been helped in various ways in the management of their ways and means budget. In the years preceding the war the Reserve Bank, in terms of the Reserve Bank Act, was returning rupee coin to the Government against which it received rupee securities in the form of *ad hoc* treasury bills. This transaction meant that the debt of the Government was correspondingly increased. Since the war began, however, the reverse process has been in operation. The Reserve Bank has been exercising its right to demand delivery of rupee coin. Rupee coins for Rs. 15 crores has thus been handed over by the Government to the Reserve Bank. These coins have been delivered from the suspense account; and it has cost the Government nothing to make the coins available to the Reserve Bank. At the same time, the transaction has resuled in the reduction of the Government's debt by Rs. 15 crores. One-rupee notes were issued as a measure of war finance. These are treasury notes. We do not know the exact amount of one-rupee notes that have ben delivered to the Reserve Bank. But the main point to note is that one-rupee notes, as and when delivered to the Reserve Bank, means a corresponding replenishment of the cash balances of the Central Government. The Government have also been selling silver from the suspense account. The sale proceeds of silver have been in the nature of a windfall. The annual allocation of Rs. 3 crores towards the reduction or avoidance of debt has also to be taken into account in this connection. The funds accumulating under various other heads such as profits from small coin, cotton duty and war risks insurance make up quite a tidy amount in the aggregate. All these accruals have played a part in the reduction of Public Debt. India's budgetary position has been exceptionally strong, though the results for the current year may prove more

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 14th July, 1942. Total amount offered was Rs. 12,01,00,000 (Rupees 12 crores 1 lakh). Tenders at Rs. 99-13-9 per cent were accepted in full, and those at Rs. 99-13-6 per cent were allotted approximately 92 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Re. 0-10-0 (Rupees nil annas ten) per cent per annum.

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 21st July, 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 20th July, 1942 at other centres. Successful tenderers should make payment on Friday, the 24th July, 1942. Other conditions are as usual.

During the week ended the 10th July, 1942, Government of India Treasury Bills for Rs. 7,42,00,000 (Rupees 7 crores 42 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

(Continued from previous page).

adverse than the original budget estimate. Even in regard to the current year, any worsening of the budgetary position should be largely made good by the inner reserve built up in the nature of the cash provision made for lease-lend supplies received by India. The financial position in India is equally satisfactory. Cheap money conditions have ruled throughout and, what is more, continue to prevail in spite of treasury bill outstandings with the public standing at the high altitude of Rs. 77 crores.

The Public Debt position of India is, above all, most satisfactory. At the end of thirty months of war India's Public Debt is actually lower—a state of affairs unparalleled in any country in the world. In a few months more, the entire Public Debt will be in the form of rupee debt. Another noteworthy feature is that the interest payable on the Public Debt is more than covered by the income from the productive capital assets owned by the State.

The closing rates are: Banks buy T.T. London Ready to six months forward at 1s. 5 31/32d., banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. bills for first and second months at 1s. 6 9/32d., and for the third and fourth months at 1s. 6 5/16d.

Money continues easy with interbank call at ¼ percent.

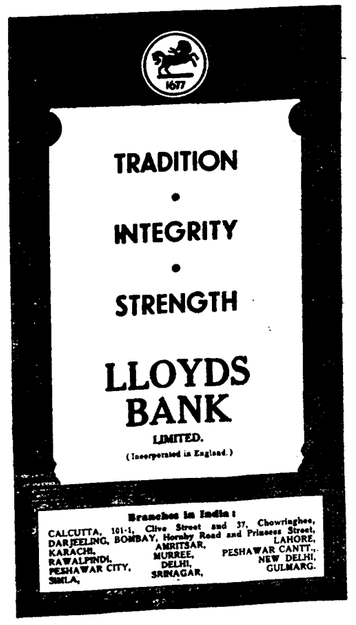
Firms' money for one to four months deposits is also ½ percent.

Banks buy T.T. New York Ready at Rs. 329½ for $100.

Banks sell T.T. New York Ready at Rs. 332¾ for $100.

Finance Abroad

Thursday Evening.



AFTER the announcement this month that Russia was to get a credit of £20 million sterling to supplement the £10 million given in August 1941, the *Daily Herald's* diplomatic correspondent discussed the way in which the Russian surplus of imports from Britain is being paid for. The credit does not cover civil supplies which amount to millions and are probably paid for in goods. Russia's foreign trade must virtually be at an end so that the credit is more than useful. She is like China in that respect and she differs from the U.K. and the U.S.A. and even Germany which trade in spite of the blockade proclaimed by both sides. The *Daily Herald's* extract indicated clearly that supplies to Russia are independent of money. That Russia can perhaps pay off gold for goods is beside the point. She is an ally entitled to lease-lend and the £20 million credit is in the nature of a lease-lend appropriation. Russia is not bound by any economic agreements for the post-war period, and in that way differs from the two great Allies. The *Daily Herald* spoke of £25 million, not of £20 million as mentioned in the reports of the recent agreement made at Moscow. Armaments from the U.K. and British Dominions will be provided gratis and the Soviet has expressed the wish that assistance should be carried out on the basis of reciprocity.

What Russia can ship or sell at present can only be guessed. It is curious that the actual effects of the loss of the Ukraine on Russian industry and trade have not been discussed so far. What has been said about the danger to Voronej is, however, quite frank. The German descent down the Don has provoked anxiety as to the economic stability of Russia in spite of the shift of industry to safer places. The Soviet can be crippled by the lack of the Donetz Basin like France which is deprived of Alsace Lorraine. Hitler has certainly done that so that greater significance attaches to outside supplies than ever. There has been renewed talk of supplies across Iran through the Caspian. The supply problem is bigger on account of Allied shipping losses; yet the immediate question is what will Russia do about her reconstruction after the war. Who will lend the money, and on what terms, and why can only be guessed. The Anglo-Soviet treaty says little or nothing about the way Russia will behave except for holding down Germany in defeat.

The London money market enjoys relative immunity from the war. The Government is unexacting because borrowing on 2½ p.c. tap bonds is easy. The changes in employment support hopes of a bigger revenue. During the week, there has been a rise in the funds. Money has clearly returned from the market for investment. The old war loan has gone ahead to £106 and 4 percent 1960-90 is higher on the week at 115¾. The previous week saw a giltedged setback after a rise; this time the recovery has been rapid and complete. The oil share market is relatively unsteady and all the firm spots are found only in Home Industrials.

Since applications were larger and the market quota was lower last week the Treasury Bill results were according to anticipation and the absence of any change in discount or exchange rates remains remarkable. The war news and prospects of larger trade with the Middle East should help sterling to become the dominant currency as the exchange standard is in vogue.

New York markets have brightened of late. The report that 12½ million people are on war work may send up stocks. Mr. Paul V. McNutt said on Monday that five million more would be taken on. The present estimate of the war expenditure gives little significance to the $6¼ billion tax bill sent up by the House Committee. The Corporation tax schedule has been revised in the committee. A flat rate of 87½ percent of excess profits may give the Treasury $2,291 million from corporations. The U. S. budget year has begun but nothing is known about what the Federal Government is going to spend though we know that in June the war bill was 158 million while there is much about arrests of suspected Nazis. The money side does not concern the U. S. Government which expects people to buy war bonds and pay in part for the war by paying higher taxes. The U. S. Treasury's aims are known. It does not want a war boom. It asks for money to pay for bigger production right now. The object is to spend 45 billion dollars on supplies. The War Production Board has had a shake-up. Mr. Nelson's promised visit to London is as big an event as this week's debate in which Sir Andrew Duncan said that Britain was doing her best. Mr. Nelson is to see what is being done under lease-lend:. U. S. garrisons overseas will clearly have the benefit of U.S. supplies or local supplies made in return for U. S. generosity. The British have given radio-location devices, so that it is easy to see that reciprocity is a mark of lease-lend at present. Lease-lend is a matter on which discussion has been extensive without being profitable. It is essentially a matter between Governments and private people have nothing to do with it. There is no threat to private interests because lease-lend stuff is specialised war material and it might be usefully remembered that Indians' dollar securities were taken over before lease-lend came into force.

Lease-lend is now merged in the general war plans of the U. S. Government which is responsible only to Congress. The other side has nothing similar to show and clashes in Greece, Slovenia and Macedonia show that the Axis is not perfect.

The third partner has plenty of difficulties of her own. The Japanese Finance Minister wants 23,000 million yen. It sounds like asking for the moon. Retail sales have been stopped by demand. Five years of penury have reduced lending power. The Bank of Japan may do some more juggling because the occupied countries with their booty valued at £2,500 million can provide little unless officials go out and govern. But there is no chance to do that when the Chinese wage war as before and buy planes from their own donations. The Japanese who are trying to plunder the Philippines have lost heavily in ships including men of war although Yamamato's battle fleet remains. But imports are harder and invasion has drained stocks. Mr. Kaya's call to his people to buy less and spend less indicates that chronic inflation and chronic shortage go towards creating a passion for goods as opposed to paper money.

In the anxiety precipitated by Japan's assault on the East few have had time to examine how much underground resistance remains. The Japs in Java are not having an easy time. The natives led by the Dutch are giving trouble. Guerilla warfare persists, and Queen Wilhelmina's government may be the instrument chosen for opening up a third front. Lease-lend has recently been made available to Holland as to Poland. Something bigger than what Greece will get is ensured for Holland because the Dutch in their homeland are fighting back. Dutch Nazis on leave from the Russian front are treated with contempt. Sabotage is as common as in Belgium where special pro-Nazi guards have to be kept in every factory. The secret newspaper foments resistance. It has been reported that the Liegeois are pleased to find that shortage of copper has interfered with the department making cartridges at the Horstal works taken over by the Nazis. There is, of course, no guarantee that shortage even of soldiers will check the German war effort. The big raids have not forced factories out of business and little faith is placed in economic warfare or in the appraisal of resources. The Nazis are applying all they have and can get. Their industrialists and banks are working in concert to exploit Europe and work-creation is hardly necessary, when the resources of eight countries are in their hands. They have stifled capitalism for it is being at last recognised that big business has no influence on Nazi policy which is independent of everything but the Gestapo. The Germans have not been fought to a standstill in thirty-five months. Nickel, sugar or oil can have no effect. No material is strategic when the will to fight is blazing.

Bigger Exports in Wartime

It has become the fashion to underrate the influence of war on economic conditions or outlook and ascribe important results to policy rather than to external factors or secular trends. Few of us, however, can afford to fall into the trap set by the continuance of controls. New, divergent aims may dominate policy on account of the war but the older changes like progress in industry, the additions to savings and the drift towards self-sufficiency are too deep and permanent to be ignored in India.

The war has stimulated the cotton mill industry, reversed the depression in the jute mill industry and enhanced the prospects for sugar. But with every month comes a change in outlook for each industry so that few can argue that the major influence is the war. Before the war broke out indeed conditions in the cotton mill industry were quite good and only after two years of war has there been a return to pre-war prosperity aften an interval of mixed experiences.

There are many debatable points in every appraisal of conditions with reference to the past. The majority of observers are unimpressed by the super-imposition of control but not many are disposed to question its utility. The year 1940-41 is the first full year in which foreign trade was controlled. Import control was extended without specific reference to the conservation of exchange and export licensing procedure was safely extended when Europe was overrun. The course of India's foreign trade in relation to the amazing changes from Dunkirk to Crete is a large subject which is competently treated in the accepted manner only by the official reviewer of India's trade in 1940-41. There are no departures from convention and the general survey describes the first effort in the field of defence borrowing from June 4, 1940 to January 25, 1941 which got about Rs. 31½ crores. The second defence loan made its appearance immediately but what it netted in the two months is not known. It is singular that the volume which records the failure of the Provincial Loans in 1940 does not contain any reference to new private issues. The review which discusses so many things does not treat the joint-stock company figures in relation to saving and investment. The review describes with painful accuracy the treasury bills programme and yet does not mention the debentures of major concerns issued during year. It is a gap that seems surprising in view of the importance given to present comparisons between private issues and public ones. It is known that in seven months about Rs. 32 crores went into defence bonds etc. But what happened in this period to the company promoters' hopes? The general review thus sheds little or no light on capital market activity and in that way does not indicate what is happening to new industrial ventures. If we know how much of institutional saving goes into giltedged, and how much of it into new private issues, we may have some notion of the effects of a stock exchange boom or slump on the average investor's mind. It is essential that changes in the annual volume of investment should be measured regularly. The growth of bank deposits and additions to the premium income of life insurance offices represent major aspects, but what happens to companies, how they finance expansion in wartime, how the investor views new ventures and backs them to what extent cannot be determined, for the review is silent and there is no discussion either of flotations or liquidations.

The general survey which is full of the ordinances of the year does not dwell on the exports of treasure (under license of course) or of repatriation of India's oversea investments during the years under the vesting orders. These are admittedly important for gauging how much money has gone into or through the stock exchange in a year in which the leading industries, excepting coal, reported an increase in earnings. Profit indexes, however, belong to the preceding year, and the second year of war can only be examined in the light of dividends announced in 1941-42. It has been shown some time ago that industries were shaping well in 1941-42 to judge from profit statements of most reporting concerns. The direct interest of the analysis of profits arises from the restoration by 1940 of profitable conditions in jute, the recovery in cement and the remarkable growth of earnings in the paper industry. India had begun to export paper to colonial markets by the end of 1941-42. Profits in 1940 were roughly three and a half times larger than in 1938. The war has levered up interest in secondary industries like paper and chemicals, it was said two years ago, and the review endorses the opinion, for it says, Indian paper mills had no rival in regard to many varieties of paper. Other paper producing countries dependent on Scandinavian pulp cut their production and exports. Simultaneously the internal consumption of paper was rapidly increasing. India's paper production showed a substantial increase in 1940-41. In some of the older mills, production was maintained at a maximum capacity and a substantial volume of forward business was booked for several months ahead. Prices rose and costs also rose. Production of requisite raw materials also rose and the situation, according to the review, still left a substantial balance of advantage in favour of the industry. Output rose in 1940-41 by 437,000 cwt on the previous year since two more mills had come into production. The threat of over-production was displaced by one of shortage. Stocks had melted and the main question was one of allocating supplies among various customers. The average index for paper shares was 239 as compared with 222 in 1939-40 indicating again that the investor fully retained his faith in paper. Imports had become difficult in spite of the increase in U. S. and Canadian supplies during 1940-41. Import restrictions came into force in December and newsprint also was controlled after March.

The review contains little to indicate the progress made by the chemical, glass and other industries in the war period but its brief mention of the Supply department's contribution to industrial progress is enough to show that this war has conferred direct benefits to languishing enterprises. The decline in the value of most imports is only a rough measure of the progress reflected in the rise in the value of tanning and dyeing substances as compared with 1939-40. The fall of Belgium explains the precipitous fall in imports of precious stones and the big rise in sugar imports was merely a result of the fall in Indian sugar production of one and a half lakhs of tons. To be exact, the material contribution made to industry by the war must be sought on the export side as well. The growth of exports of cotton goods to 390 million yards valued over Rs. 10.64 crores shows how the rise in prices and acquisition of markets helps the mill industry which gained also from the 23 per cent. decline in imports recorded during 1941-42. Another textile industry gained from the large increase in imports of raw wool which rose from 7.7 million lbs. in 1939.40 to 22.9 million lbs. Supplies in 1940-41 came from New Zealand as also Australia. At the same time India's imports of yarn and knitting wool fell though imports of woollen goods from Japan increased. Japan sent two million yards worth Rs. 41 lakhs as against 330,600 yards valued at Rs. 15 lakhs from the U. K. These figures are cited merely to show that India's woollen mills, now governed by priority procedure, have an unusual opportunity to get the entire market in woollen and mixtures as also of shawls and lohis, imports of which in 1940-41 from Japan were valued at Rs. 3 lakhs. Japan sent also Rs. 3 lakhs' worth of hosiery. Since much has been said about the effects on India's trade since July 25, one might pause to look at the figures relating to silk, raw and manufactured. In the year ended March, 1941, total imports fell to Rs. 1.72 crores. Imports of raw silk fell from two million lbs. in 1939-40 to 1.7 million lbs. in the next year while the value rose from Rs. 63 to Rs. 76 lakhs. Imports of silk yarn fell from 910,000 lbs. to 719,000 lbs. but the value rose from Rs. 24 to Rs. 32 lakhs. Japan sent 256,000 lbs. valued Rs. 20 lakhs. The subsequent renewal of protection for sericulture clearly had little to do with the changes in the trade on silk which was affected largely by the import restrictions in force from May, 1940.

The review indicates how far the neutrals gained in a past year in India's trade. The share of the U. K. in imports went down to 23 per cent. in 1939-40 and the U.S.A. provided 17.3 per cent. as against the 13.8 per cent. of Japan. These figures clearly show that trade with the U.S.A. was increasing even before the Meek-Gregory Mission went out. The European markets disappeared in succession and trade with neutral Switzerland and Sweden became difficult. Supplies of Swedish hardware and machinery were correspondingly reduced while U. S. supplies were substantially larger in 1940-41. The increase in Indian exports to the States during 1940-41 is easily the biggest feature of the war period. Next only to the U. K. as a customer the U.S.A. took more than neighbouring Burma or more remote China. The review records an increase in trade with the Middle East in which Sumatra is incongruously lumped with Asiatic Turkey instead of with Java. Exports to the Middle East rose only slightly but there should have been a big increase since Iran came under Allied control after August, 1941. The Dominions became more important than ever for India's trade, but Canada took only 1.7 per cent. of exports while imports were 1.9 per cent. because of the exchange difficulty. How important the U. K. is may be inferred from the main changes in the direction of exports. Over 90 per cent. of the tea exports of the year went to the U. K. along with 40.1 per cent. of jute and 16.5 per cent. of jute manufactures of which the U.S.A. took as much as 27.9 per cent. The U. K. took in 1940-41 as much as 14 per cent. of cotton exported and 64.7 per cent. of oilseeds together with 67 per cent. of hides and skins and 10 per cent. of food grains. The normal pre-war porportions have vanished altogether though it must be said that in regard to food grains the most important outlets have always been Ceylon and the Middle Eastern countries which still expect India to play the role of chief supplier. An increasing share of raw jute and hides exports went to the U.S.A. where the defence programme materially enlarged the use of Indian raw materials.

Not the least arresting feature is the fall in imports from the U. K. of cotton goods, paper, provisions and oilman-stores. The U. K. sent more machinery and more liquors like the U.S.A. though total imports in this group showed a fall of 7.12 per cent. as compared with 1939-40. It is certainly necessary to examine the results of the loss of Burma. In the year 1940-41 it is recorded that Burma provided 18.2 per cent. of India's total imports and took 8.7 per cent. of her exports. The total trade accounted for Rs. 46.45 crores owing to larger exports from Burma of rice and teak. Imports of rice totalling 173,000 tons valued Rs. 12½ crores give an idea of India's dependence on Burma. Imports of teak valued Rs. 212 lakhs show that

NORTH WESTERN RAILWAY
Tender No. 212-S/2/3
Code word "CAREER"
Tenders are invited on rupee basis for conversion of scrap brass and scrap copper into bars. Teners must reach office of the Controller of Stores, N.W.R., Lahore, not later than 14 hours on Monday the 3rd August, 1942, and will be opened in his office at 11-00 A.M. on the following working day. Tender forms and other relative documents can be seen at and obtained from the office of the Controller of Stores, on and from 13th July, 1942. The sale price of the tender is Rs. 2/- local and Rs. 2/8/- Muffusil excluding the cost of specification and drawing.

more than half the imports fall in two groups. Burma provided potatoes and some other vegetables and fruits. The war has closed a promising market for cotton goods in Burma. And it must be said here that Burma took Rs. 203 lakhs worth of jute manufactures and Rs. 138 lakhs worth of tobacco, largely in the form of cigarettes in 1940-41. Vegetable oils and sugar figured among the exports but the end of the trade in these articles will not be regretted at present. If the loss of trade with the S.S. which provided the bulk of betel-nuts and farinaceous food, creates many difficulties for India, it must be set against the fall in imports of condensed milk, jam, biscuits etc., though the U.S.A. provided a larger share of Indian imports in 1940-41 than in any year. What is essential to note here is the opportunity afforded to Indian manufacturers of biscuits and cakes, confectionery, canned and bottled fruits and canned fish, mainly through the reduction in imports. Australia sent more butter, cheese and milk products as also ham. Clearly her ability to export on the same scale is compromised by the war, and one might well conclude with a reference to advantages conferred by the war on the makers of milk products, jams and jellies. The figures in the review relate to 1940-41 yet support tht conclusion as to the future of miscellaneous exports from India, for instance to South America which takes tea in addition to jute and gunnies.

THE
THIRD
DEFENCE
LOAN
1951~1954
3%

The loan is issued at par and as interest for the full half year will be paid on the 15th September 1942, the price from the 8th—11th July will be Rs. 100-10-8 to allow for the approximate accrued interest up to that period. The price will thereafter increase by 8 pies per cent weekly until further notice.

Application forms can be obtained at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi and Madras; at branches of the Imperial Bank of India at other places and at all Government Treasuries.

Good Work for Tea

New opportunities arose in Britain for carrying the message of Tea as the 1941 report of the International Tea market Expansion Board shows. Tea propaganda in the U.S.A. has not been unduly restricted and supplies of tea were adequate except perhaps to Canada and Egypt. The foreword of Sir Alfred Pickford indicates that African colonies are making contributions to the work of the Board though they are not subject to regulation. The office in Plantation House ran a successful campaign in the U.S.A. Helping the tea trade there and allied food industries has been the special job of the Tea Bureau which has shown much ingenuity in advertising tea through retail stores. An apparent advantage was secured for black tea through the cessation of green tea. The report, however, adds that it by no means follows that the consumers habituated to green tea will turn to black tea if unable to get green tea which in reality is a different beverage, says the report in this connexion:

"It is a matter for particular regret that normal funds are not available to take advantage of this unique opportunity for increasing the number of black tea drinkers. In spite of the war, the U.S.A. got supplies of tea since tea is classed in Washington as a priority import. Total imports in 1941 rose by 14 million lbs. to 89.5 million lbs. from regulating countries alone Stocks were higher by 7 million lbs. and re-exports accounted for 3 million lbs. Grocers in the U.S.A. kept more coffee and tea towards the year-end and irregular imports should not interfere with consumption."

In its account of work in Britain the report speaks of the thousand tea cars run by the Y.M.C.A. More important work was undertaken in the factories by giving tea to workers at intervals Government has asked factories with more than 250 workers to keep a canteen. Not all could run one, and the Empire Tea Bureau came to the rescue with its National Catering service. In a big aeroplane factory the whole canteen service was run under the Board's auspices. This encouraged it to take up catering for 50 ordnance factories under the Ministry of Supply. Four ways of getting tea out to workers have been in vogue. Tea trolleys, tea bars, workers' teacars where the man are scattered and serving tea from main canteens are used in accordance with needs. The Army and other service institutes have had the help of the Bureau in improving their canteens and agricultural workers got the benefit of an experimental tea car service.

Results were not so good in Canada where advertising had to be given up. A teacar that survived the London 'blitz' was shown in Canada after its tour in the U.S.A. Promotion work has been vigorous in factories and camps. The stoppage of green tea imports influenced the desire to create a wider market for black tea. Supplies have been determined by shipping facilities so that Canada did not have adequate supplies even while stocks were running low. Maximum prices for tea were fixed by the Government. In Australia work has been different and more vigorous and the factory tea service is a feature. Army cooks have been taught the right way to make tea. In spite of rising prices imports grew and Australia was not short of tea. The average price rose by 9d. per lb.as compared with 1940 so that the report gives expression to the fear that high prices might damage pospects there. In South Africa the native received special attention and teacars invaded the reserves in South Rhodesia where local tea-growers gave full support. The tea campaign has spread from the Union to the Rhodesias where again the native is being told through his own papers about tea. On the Rand tea figures in the miner's rations and in the Rhodesian copper mines also tea has got a start. Unfortunately the rise in tea prices has spoilt things whereas coffee has risen only slightly in price and is available. Tea is scarce and dear. Egypt got limited imports of tea and thefts of tea fom the Imperial Army's stores attest the keener demand for tea.

The Indian Buffalo

The Indian buffalo has its advocates because the animal is specially bred in India for dairying. There are many good breeds as Mr. Iqbal Ali Shah of the Punjab Veterinary Department tells us in "Indian Farming." The animal is useful, highly tractable and not at all exacting in the matter of diet. It is not venerated like the cow, perhaps an advantage from the breeder's point of view. Average yields of milk are higher in every region where the buffalo is used. That is why the buffalo is popular: as butcher's meat, the buffalo is profitable but temporarily it is important to get better cattle than to boost milk yield. That is why attention is paid to buffaloes which have increased by 13 per cent. in the last 25 years, and in the Punjab particularly outnumber cows. Tests in respect of milk yields have established that the buffalo gives double the milk: so the Punjab peasant has a real weakness for the buffalo. The average buffalo is superior to the average cow in most parts of the country and is much better looked after. There is a greater purity of type and a well-marked freedom from disease, deformity and unthriftiness.

There are four well-marked basic breeds. The Murrah which includes 20 per cent. of the total number of buffaloes occurs in Sind, the Punjab and the U. P. The Jafarabadi of Kathiawar is a heavy milker producing more butter than any other breed. From Bombay comes the lighter Surti and Mehsana breeds prized for early calving, regular breeding and good milk yields. The Nagpuri breed with its long horns is distinctive but produces less milk yet is accounted good. It is only in the Punjab that buffalo breeding is studied and encouraged. Stock has been bred at the Bahadurnagar Farm in the Montgomery District. A big herd is maintained and pedigree bulls are being bred in the interest of the dairying industry. There were 598 stud bulls in the Punjab in March 1940, a number much less than the total of approved bull buffaloes. Milk records are being maintained to help the breeder in his selection. Co-operative societies interested in the buffalo have sprung up and the Veterinary department, according to Mr. Shah, has many plans for registration of stock, recording milk yield and helping the Punjab to lead India in both cows and buffaloes. Ghee production being vital, the buffalo's importance increases for the making of "khoa" and other products. In other countries, buffaloes are used for work, not only for dairying. Because the Indian buffalo is able to convert coarse fodder into rich milk with a high content of butter it will stay in favour. At military dairy farms, the buffalo has demonstrated its powers. For the villager the buffalo is always the cheaper beast as she can pick-up much grazing on the roadside. The hide is not unimportant, and the decisive argument in favour of the milch buffalo strangely enough is that for avoiding undue concentration on milk yields in the case of cows. Bullocks are meant for work and the best breeds should be kept up by turning more and more to the buffalo. There is really no lasting or extensive prejudice against the buffalo's milk though Europeans are usually struck by the fact that Indian farmers are mostly dependent on the buffalo for milk. The Nili and Ravi breeds of the Punjab along with the Murrah are bting improved in accordance with the Department's plans seconded by the I. C. A. R. to some extent. Breeders have taken up farms on lease and get the Veterinary Department's help. Murrah buffaloes have taken prizes at the New Delhi show for milking and for appearance too.

Diversion of Supplies

The effects of a growing shortage of metals are to be found in recent steps for metal conservation. In the United Kingdom the failure of supplies owing to losses of territory in the East, the demands of war industries and the shipping difficulty have combined to extend the scope of control of essential materials. According to a recent report drastic restrictions have been imposed, for example, on the use of lead in plumbing, building maintenance

and repairs and in rubber for various purposes and as the manufacture of plimsolls while the basic petrol ration, for the past few months existing in attenuated form, has ceased altogether. Control has been extended over additional materials including refractory dolomite, chromium, coir fibre and yarn. Cuts have been made in the ration of feeding stuffs for poultry. Sweets of all kinds will be rationed soon, and ice-cream will cease to be made at all. These are examples of the general tightening up which is evident in many directions. Parallel steps are being taken to secure the maximum collection of scrap, and a recent order makes it compulsory for the occupier of premises to make a complete return of all available metal. The new definition of potential scrap is comprehensive. It includes any metal forming part of a building structure, machinery, plant or article which is disused, obsolete or redundant or otherwise serving no useful purpose. The scrap is meant for winning steel or other metal which is hard to get and hard to carry. More steel is certainly needed for shipbuilding which is the pivotal industry. The means of accelerating ship-building in Britain has been discussed in many quarters in view of the urgent need for tonnage. The question has been asked whether the time has not come to denude other industry of material and labour from British yards. The question of priority is obviously difficult, but it must be considered whether even those engaged in other engineering works directly contributing to war effort might not be better employed for building ships in so far as their labour would secure an increase in tonnage in the near future. Mr. Turner stated at the Amalgamated Engineering Union's Conference that there might have to be a transfer of men from armament production to shipbuilding and ship-repairing.

Still Critical

Indian commercial opinion remains critical of measures so far adopted to meet the demand for responsibility at the Centre. The comments of the Indian Merchants' Chamber in regard to the appointment of Sir Edward Benthall have been given undue publicity, for the same defect may be found in all his new colleagues. Sir Edward represents a cohesive and intelligent community which the other appointees do not. And if the non-League Muslims were to choose they would not certainly light on Sir Mohamad Usman. There has been a complaint from Muslims about the non-selection of Sir A. F. Rahman but, the major grievance is about the lack of authority. As Mr. G. L. Mehta pointed out last week, the expansion of the Council so as to secure a majority of Indian members does not meet the demand of moderate Indian opinion for complete Indianisation of the Central Executive which was the least the public expected as a measure of advance of constitutional development. Much less is it adequate to meet the present grave situation and the vital need for an authority drawing its strength and power from the people.

Bifurcation and duplication of departments is criticised by Mr. Mehta who has referred to the vesting of the Finance and Home Departments in non-Indian hands. Sir Stafford Cripps threw out a vague hint about safeguards in the future and some may say the balancing of communal interests in the new Council has led to the acceptance of the British non-official as a distinct entity in a body politic. Mr. Mehta is dissatisfied on this count as well, and has called the Council expansion a negation of the demand for autonomous and representative government. As might be expected, the deputation of Sir A. R. Mudaliar to London has been ignored by the givers of interviews. They attach no more importance to it than to the advent of an American Relations Officer in the person of a retired Civil Servant who is perhaps an expert in the field of public relations though ignorant of India except as a tourist. The Federation of Indian Chambers has indicated through its spokesman that it objects to the policy not personnel, just as the Liberals and the non-partisans object to an addition in numbers though not in strength.

Railway Traffic and Receipts

Apparently the Central Government continues to get the benefit of larger railway traffic and bigger receipts. The total approximate earnings of all State Railways for the ten days ending June 10th amounted to Rs. 388 lakhs, a sum which exceeded the earnings for the corresponding period of 1941-42 by Rs. 22 lakhs. The running total for the current year up to June 10 is known to be Rs. 25.88 crores showing an increase of Rs. 3.41 crores on the actuals for the previous year, and if 1940-41 is chosen for comparison, the increase is as much as Rs. 5.26 crores. Twenty days earlier, the surplus was Rs. 2.18 crores as against the Rs. 3.41 crores reported after June 10th. While customs revenue has fallen since the year began

the Central excises and railway receipts alike are producing larger revenue. In spite of wagon shortage, trade is brisk, though much of the traffic still must be on Government account. The last available statement of wagon freights up to the fifth period ending May 20 showed a bigger fall under metre gauge loadings than broad gauge owing to a decline in all traffic except home line stores and materials as comparel with 1941-42. The last available Railway Board communique in analysing earnings indicated that the improvement in revenue was mainly due to coaching receipts though the N.W. and G.I.P. reported increases in goods earnings as well. In the growth of earnings as from April 1, the largest increases are shown by the N.W. and the G.I.P. but considerable improvement is shown by the N.W. and C.I. owing to the heavier military traffic.

The wagon loading figures under cotton, grain and pulse, and oilseeds support the view that transport influences both supplies and prices. A big fall as compared with 1941-42 is shown under loadings of coal and coke wagons on both broad and metre gauge lines. The decrease is least under miscellaneous small wagons on the broad gauge. The increase under coal for home line on three Class 1 Railways is part of the increase under home line stores and materials referred to. Restrictions in booking account for the fall in wagon loading of miscellaneous smalls and the shrinkage of cotton and oilseeds freight is largely due to changes in export trade. In the case of the E.I. and N.W.R. the enhancement in charges this year is responsible for a part of the increase in coaching income. In the case of the S.I.R. heavy booking of parcels in the ten days ending May 20 is referred to, and a greater movement of grain and pulse, oilseeds, timber tiles, cocoanuts, salt and military stores accounted for an increase in goods earnings. The wagon loading totals on the basis of a comparison with 1941-42 reveal a decline of 13.5 per cent. for four wheel wagons on the broad gauge and 23.4 per cent. on the metre gauge. Yet total revenue was up in the same period by Rs. 2.18 crores owing to the movement of troops and military stores. For civilians to reduce demand for transport at the present is, therefore, advisable, and the appeal to defer or avoid journeys springs from a desire not to unduly strain the limited resources available to the Railways; only the wagon loading figures can throw light on why passengers should yield to essential goods. The goods are wanted even more than the useless traveller and the fact that marriage parties proceeded as usual on some railways in May in spite of the Travel Less appeals can only be taken as an instance of wilful indifference to reasoned advice.

Supplies And Prices

In the address of Mr. Sen to the Bengal National Chamber two weeks ago will be found a full analysis of the situation arising from the shortage of foodstuffs. A shortage of essential goods including foodstuffs has been noticed in Bengal and difficulties in regard to coal and oil are still being felt by industries. These difficulties are attributed, in some cases, to inadequate supply, and in others, to the inability of the internal transport system to function as smoothly as before. The overriding claims of military requirements have, to a great extent, resulted in ordinary normal trade being deprived of the necessary transport facilities. According to Mr. Sen, the situation has been further complicated by the restrictions on the plying of country boats in the Eastern and Southern districts of Bengal. Mr. Sen declared that unless inconveniences were reduced to a minimum, Bengal would face a critical situation at a time when morale has to be kept up to the highest pitch. Mr. Sen also expressed the view that the grow more food campaign should have been started much earlier and the local Government should have realised the necessity of making Bengal self-sufficient in regard to essentials like rice and salt.

Having discussed the causes for the shortage he expressed regret that the Government had as yet not taken effective steps for the stoppage of export of rice from India. The salt situation caused Mr. Sen to deprecate the dependence of a seaboard Province on imports Government's salt policy was called callous, and it was pointed out that in spite of representations by the Provincial Government, the Government of India have not taken any concrete action so far. The report that standard cloth would come on the market, when manufacturing and destribution arrangements are settled, was welcomed. The Government's intention to buy tea in quantity for export was also referred to. Mr. Sen said "I trust the Indian section of the tea industry will co-operate, provided that the Government enhance the rates both for the existing quotas and for the proposed purchase by at least three to four annas per lb.,taking into consideration the greatly increased cost of production, the present demand position and the extra burdens imposed upon the industry by the war. It is also necessary that the interests and the view-point of traders who have so much helped to open out-markets should be taken into consideration before taking any final decision.' Mr. Sen's views do not seem to be as emphatic as those of the Calcutta Tea Merchants Association which has protested recently against the proposed control of exports. Control, it has been urged, would benefit foreign consumers at the expense of Indian producers and shippers, who were already supplying more than 70 percent of their production at practically pre-war prices, with only a slight increase in cost being allowed, and making up their increased costs form outmarkets where higher prices are obtainable. The Association feels it would be very unfair if profits in these out-markets also are taken up by the U.K. Government on whose behalf the Government of India presumably proposes control. A further argument against export control is found in the long-standing connections and large commitments of Indian merchants in various export markets. Government has been asked to desist from proceeding with the proposal to set up a monopoly of exports.

Flagging Output

The exodus of workers from cities pulled down production in many industries during February and March. That is proved by the figures relating to cotton mill output in February. Indian mills produced 338.2 million yards against 366 million yards in January. Imports also fell to 4.8 million yards compared with 21.5 million yards in February 1941. The conditions in the industry were more unsettled. Double shift working was reduced and the percentage of idle equipment rose by 7 per cent. Demand was slack, if stocks were moderate. Prices reacted though exports showed a big rise in January and February. The enhanced

duty pulled down imports of cotton while exports showed a striking recovery, at least in February. Mill consumption of Indian cotton was lower than in January, but much better than in February 1941. In the jute industry the fall in output as compared with January can be put down to the shorter month. Since September last the longer working week led to a rise in the monthly output of jute manufactures. Stocks continued to increase from December since exports, if higher than in 1941, showed a tendency to fall. Actually the export figures are not so bad as was feared, and hessian prices actually rose during March.

Since November last imports and exports of iron and steel have fallen away rapidly while exports of pigiron in the second half of 1941-42 were on a reduced scale. Home production of iron and steel can only be guessed but control held prices down. Japan's entry into the war led to a rise in the price of galvanised sheets. The stability characteristic of coal prices was due to a striking fall in exports during February. Imports were minute and exports for 11 months at the end of February 1942 were lower by 300,000 tons. Prices rose before the cold weather and stood unchanged. The one industry where advance in output can be readily ascertained is the tea industry of Northern India. By the end of December 1941 the production of tea was up by 26 million lbs. No figures relating to cement or petrol production can be had. The industrial recession can be measured most easily through the fall in the sales of electric energy. There was a fall in industrial power used. The quantity of paper made in India alone has risen appreciably after December. The fall recorded in October-November was temporary. The fall in wheat flour production was clearly due to short supply of wheat. It is only in the textile industries that expansion has been most marked in 1941-42 but the biggest changes are not to be found in statistical records because nothing is found about clothing, the engineering trades and ordnance factories.

Afghan Enquiries

Since it has been decided to raise the status and add to the functions of the Indian trade agency at Kabul where a neutral government keeps the market open for goods, it is not without interest to record the remarks in the last published report. Kabul is said to have its quota of scarcity and looks mainly to India though she is well placed in regard to petrol etc. Since Japan is out of the running, the kingdom is a bigger market for Indian textiles. In the months of August and September 1941, the Agent turned over enquiries from the State Medical Depot for glass flasks, blow lamps, grinding mills for preparing medicines and medicine bottles. In the recent past Afghanistan used to get many things from Germany through Russia but the war put an end to that. Medical and surgical equipment had to be got from elsewhere, and the enquiries were forwarded to India. The war again accounted for the Afghan Government's request to get the names of firms to do electrical instrument repairs. The Government's cinema at Kabul needed attention and Indian firms were told that the equipment was of German make and they wanted carbon rods. Russia's war then had created difficulties. Before that difficulty was got over, Iran was under Allied supervision and Afghanistan, fully neutral has ejected Axis representatives. Requests for butter-making machinery from Indian dealers had to be passed on and liaison took the form of sending on the Russian trade agent's enquiry for a transport company that could arrange for trade between India and Russia through Afghanistan. A local man was put in touch with the Russian agent for the occasion. The Russian agent came to know also of an Indian tea firm's agent in Kabul. As regards shippers the trade agency was told that it was possible to give information only when an idea of Russia's requirements was afforded. The Soviet Government had no arrangements for most supplies and tried to reach out to India through the neighbouring kingdom. Both were hit by the loss of trade with Germany and Afghanistan clearly came to lean more on India. The local view is that factories cannot produce enough cloth or sugar and the war will accentuate shortage while Afghan exports of furs and skins are likely to suffer much through this war.

Average Prices

In view of the upward trend of prices it seems advisable to look at the trade returns which describe the average values of certain imports and exports in a specified month. Since April is good enough from every point of view one might examine the trade statistics of the month. A big fall in rice imports by Rs. 109 lakhs in value as compared with April 1941 was recorded in April 1942. Rice exports in the same month showed an appreciable increase as compared with April 1941. The change in the price of some of the exported articles is admittedly small. Rice not in the husk was valued at Rs. 7-9-5 per cwt. in April as against Rs. 7-5-8 last year. The advance in price is slight in relation to the vast change in trade. Tea exports in April showed a striking increase on 1941. The average value was also higher in this case. From Re. 0-14-7 in April, 1941 the price per lb. of tea exported had risen to Re. 1-0-6 per lb. More striking is the rise in coffee exports at the same time as the average price per cwt. of exports in April had risen to Rs. 54-7-9 per cwt. Cases in which exports had declined in volume, and the average value had not risen, are teakwood and tobacco. The prices of the rest have clearly moved in response to larger and more pressing demand. The case of coal is enough to dispel the belief that the expected change in wholesale prices had not come. The average value of every ton exported is shown as Rs. 10-15-10 as against Rs. 9-3-2 in April last. The rise is uniform in the case of wheat and flour while imported sugar showed a rise of over 65 per cent in value as against April last. Raw cotton was exceptional in being cheaper than in April last, but all other imports were dearer. Those who are unaware of the parallel movement in home and foreign prices, of simultaneous improvement in the value of exports and imports alike should study the comparison by table to learn how in the third year of the war prices have risen. The landed cost of salt was more than double what it was in April last. Kerosene and silk were notably dearer and dyestuffs alone seemed cheaper by comparison with April 1941. The decline shown under tinplate must be called deceptive. Piecegoods (imported) were even more dearer than yarn, and the higher average price of imported soap seems an adequate reason for the general revision of soap prices of late. Contrary to the general impression jute and hessian exports in April had a higher recorded value, and the rise under cotton piecegoods seemed altogether moderate. Oil seeds like all raw materials were dearer by April. The spread of war did not upset prices for long. Lost ground was clearly recovered by April, and staggering increases were noticed under shellac and paraffin wax. While the price of imported steel has shot up the price of imported silk goods was shown to be lower in April, obscuring the original market influences which had sent up the price of raw silk and resulted in the prohibition of exports.

Quality in Petrol

High octane aviation spirit and dealings therewith have been the subject of licenses and prohibitions etc. What octane stands for is explained in the latest Burmah-Shell News Letter. Anti-knock properties in fuel are compendiously described by specifying the octane number. A high compression ratio without detonation is possible with alcohol, but then it has drawbacks. It is only in petrol engines that freedom from knock is important. The various numbers are given by matching a control mixture made of octane and normal heptane. The anti-knock value determines the number given after test with a standard engine which measures detonation. High octane value in the spirit used for the petrol engine means that a high compression ratio can be used on the engine. This means higher efficiency and bigger power output. An engine with high compression takes less fuel, and it is also lighter in relation to power developed. High octane petrol actually means high cost and that is why high compression engines have not generally been put into automobiles. The cost of fuel does not matter with regard to aeroplane engines. So while cars run on spirit whose octane number is 60 to 70 the average aviation spirit has a number between 75 and 85. The better grade spirit puts up performance, improves the pay-load and raises the cruising range. Latterly 100 octane spirit has been made for military aircraft. The super-fuel also means safer take-off and a better pick-up in emergencies. The high quality fuel improves overall performance. Economy does not matter in regard to military aviation; so the superior performance of British as compared with German aircraft is due not to the defects of the average Daimler-Benz engine's design, but to the lower octane number of the fuel used. The lower speed and cruising range is a function of the octane number of the spirit used. It is not the freedom from detonation that makes for super-performance but it is about the easiest way to determine fuel quality. Special ingredients improve anti-knock quality and put up the octane number of the grade of petrol used. The favourite chemical compound is tetra ethyl. Aviation spirit is usually blended and during this process tetra ethyl is added. There is however a limit to the improvement got by putting in chemicals to impart anti-knock quality. It is the original fuel and its octane number that matters. Various brands and grades have their own numbers as may be learnt from any account of the differences in brands of commercial petrol.

A recent announcement provides the information that Sir Theodore Gregory, Economic Adviser to the Government of India, has accompanied Sir Jeremy Raisman on his important mission to London.

An earlier message stated that Sir Theodore would make himself familiar, by personal contacts and enquiries, with the movement of thought in international trade and in post-war social and economic reconstruction so as to be better able to help the Government of India's four reconstruction committees with advice on post-war problems.

We are further told that Sir Jeremy may not be staying out of India for more than two or three weeks. With regard to Sir Theodore, however, there is reason to believe that his stay out of India will be a much longer one.

There are two aspects of this matter, which need careful examination. Sir Jeremy Raisman will, we learn, discuss certain problems arising out of the working of the financial settlement relating to war expenditure. The allocation of expenditure as between the British War Office and the Indian Exchequer has, so far, been made in pursuance of an agreement arrived at in the early months of the war. This agreement must be considered as generally fair to India. And I have, on more than one occasion, expressed appreciation of the shrewd stewardship of India's finances by Sir Jeremy Raisman.

The press announcement does not refer to any idea of modification of the agreement. One gets the impression that Sir Jeremy's visit to Britain is more connected with the solution of some of the practical problems that may have arisen in connectoin with the working of the agreement. If this be so, there is no foundation for the suspicion that has been aroused in certain quarters with regard to Sir Jeremy's mission.

In fact, it has been suggested that, as in the last war, there is a proposal that, during the present war also, India should make a lump contribution to Britain; and that Sir Jeremy's trip to Britain is connected wih this proposal. For my part, I cannot believe that either the Indian Government even in its present irremovable capacity or the British Government in the present context of Indo-British affairs would put forward such a proposal.

Any decision to pay a contribution of this kind to Britain will have a most adverse effect on Indian public opinion. It may even have the effect of converting the present sullenness into definite hostility towards Britain. I have no doubt that the British interests are fully aware of the consequences that are bound to follow such action.

The real problems connected with the military settlement between India and Britain are two. The first pertains to the colossal accumulation of sterling balances to the credit of India. The second refers to the steeply accelerated expenditure that India has now to bear on account of war reaching India's shores. The argument in this connection is that the Indian Government involved this country in the war without consulting the legislature. From this point of view, the war in India is mainly Britain's responsibility. And India should not be asked to bear a war burden more than her slender shoulders can carry.

This is a point of view adopted by many sections of the people. But, as I have said, the existing arrangement as between British War Office and the Indian Defence Department with regard to heads of expenditure is as satisfactory as we could hope for in conditions in which Indians have hardly any say and the British officials could conclude arrangements without reference to the legislature.

Nor need Britain be unduly worried about her share in the gross war expenditure incurred in India. I have, more than once, explained the technique by which Britain makes payment to India with respect to war obligations and war supplies. These payments are now being made by Britain without her experiencing any manner of financial strain. All that takes place is a few book entries; and there is no problem of exchange transfer or of raising the requisite finance by borrowings from the public. The arrangement is both simple and comfortable for Britain. From her point of view, she cannot ask for any revision of the arrangement.

From the point of view of India, however, the piling-up of sterling resources has already reeached an embarrassing stage. If the war lasts another year or two, India will find herself in the position of holding sterling resources far beyond any imaginable requirements.

Moreover, there is the likelihood of sterling being deliberately depreciated by official policy after the war.

That is to say, India will hold all her foreign assets for colossal amounts in a currency that is likely to suffer depreciation. That is a matter which was ventilated in this column a long while ago. It has now attracted the attention of the commercial bodies.

Sir Jeremy Raisman cannot be unaware of its serious import. If his visit is connected with the desire to find a solution for the problem, we have every reason to feel further gratified that Sir Jeremy is a zealous watch-dog of India's finances.

The utilisation of a portion of the surplus sterling assets for purchasing all the securities of the local public bodies and utility undertakings as well as for the nationalisation of some of the industries in India, is a plan that has been mooted in this column. It requires detailed examination and study.

The least that the British Government must do is, firstly to indemnify India against any loss that may occur in the contingency of sterling being depreciated in terms of gold; and, secondly, to guarantee the conversion of a portion of our sterling assets into gold if, after the war is over, this country chooses to do so. In simple terms, the South African gold sent to London for sale must be made available to India in exchange for part of our sterling assets.

The occupation of Burma by the enemy has posed various conundrums. The Burma Government is now installed in Simla; and liability has been undertaken with respect to salaries of officials and the leave salaries of many others. Disbursements made in these respects by the Government of India are debitable to the British Treasury.

There is also the question of the debt due by the Burma Government to the Indian Government.

The debentures of the Rangoon Port Trust and the Rangoon Corporation require to be rehabilitated. With respect to the debentures of the local public bodies in India, the Government of India have undertaken to back them up; and the provincial governments concerned have also joined the Central Government in this undertaking. A similar guarantee is urgent and imperative with regard to Burma debentures; but such a guarantee has to be provided by the British Government. I understand that this question has already been taken up by Sir Jeremy Raisman with the authorities in London.

It may well be that Sir Jeremy's discussions with the British Treasury authorities include the issues raised by the enemy occupation of Burma.

It is clear that Sir Jeremy's mission is concerned with definite problems of present urgency and future importance; and if, as in many other matters, he secures a solution for them in a way that safeguards Indian national interests, he will have added one more achievement to an already impressive list that entitles him to be considered as the fairest war minister that India could ever have had.

But what exactly is the role of Sir Theodore Grégory in these discussions? There is nothing in the Indian career of Sir Theodore to suggest that he is overflowing with solicitude for the genuine interests of this country.

When the office of the economic adviser to the Government of India was created, ready at hand was available Dr. John Matthai. One would have thought that Dr. Matthai's choice for this office was inevitable. He had the ablest equipment and experience.

THE MUNICIPAL CORPORATION OF RANGOON

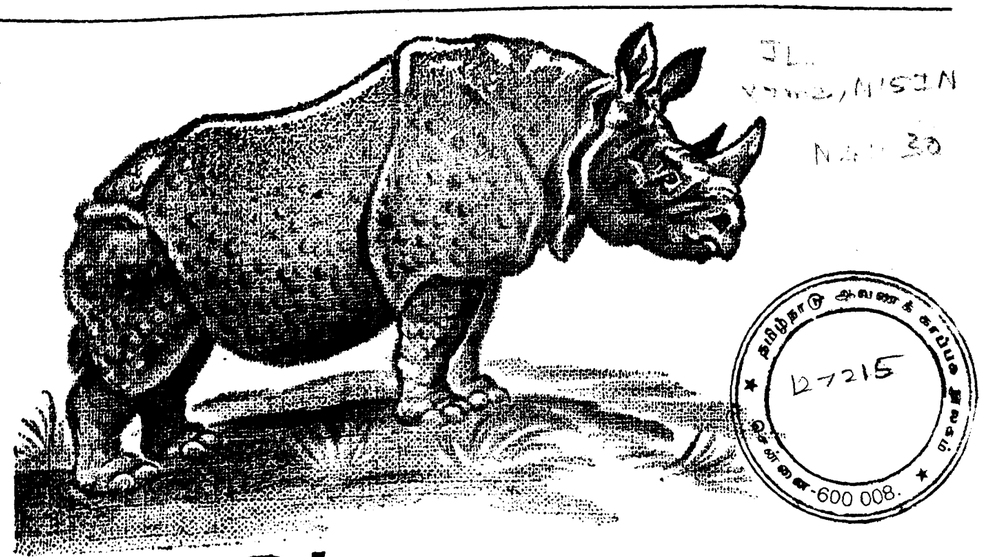
He had a distinguished academic career both in India and in Britain. He joined the Indian Educational Service and was Professor of Economics in the Southern Presidency. As an academician, he built a great repute for great erudition, sound judgment, versatility and well-poised outlook. His selection as a member of the Tariff Board was, therefore, acclaimed as the wisest selection. First as a member, later as the chairman of the Tariff Board, he acquired detailed knowledge of the practical working of over a score of Indian industries. He became, thereafter, the Director of Commercial Intelligence and Statistics; and this gave him a unique opportunity for a thorough study of problems connected with trade in particular and Indian economics in general.



At the time when the decision was made to create the post of economic adviser to the Government of India, the obvious choice was Dr. Matthai, of whom it could be said that he had been gathering the experience, as though by design, for this particular office.

Sir James Grigg did not like Dr. Matthai. Sir James had strong dislikes and exercised those dislikes in the appointments in the Imperial Secretariat. So Dr. Matthai was left to continue in a routine job; and Dr. T. E. Gregory was brought out from England to advise the Indian Government on economic matters.

I shall readily own that Dr. Gregory had already established an international reputation as an economist. That is to say, the Government of India could not be held guilty of foisting an obscure economist on India.

But, then, what did Dr. Gregory know of India's finances and India's special economic problems? Before he could advise the

(From Our Correspondent)

New Delhi, July 15.

THE sensation of the week was the sudden departure of the Finance Member, Sir Jeremy Raisman, for London accompanied by Sir Theodore Gregory, the Economic Adviser. Though, according to an official announcement, the later's visit is intended for a study tour in connection with the post-war reconstruction work which the Commerce Department has undertaken, it is assumed in New Delhi that he will also assist the Finance Member in the London discussions. It is now fairly clear what the problems to be discussed are. Owing to the urgency and importance of the problems, the Finance Member himself has gone to conduct the negotiations on behalf of the Government of India. And that is a sound decision. It may be remembered that when the Chatfield report was under discussion between the two Governments, the then Finance Member, Sir James Grigg, was personally anxious to go to London and put forward India's case. Had he gone, India would certainly have gained in the final settlement of financial adjustments, for Sir James was known to have strongly contested some of the War Office claims. Sir James was, however, overruled. According to talk then, the Chatfield settlement was finally made by the Secretary of State himself on behalf of the Government of India. Two years ago, an official of the Government of India, Mr. Coates, was sent to London to discuss questions connected with war expenditure, but from what one hears, that did not lead to satisfactory results on many points.

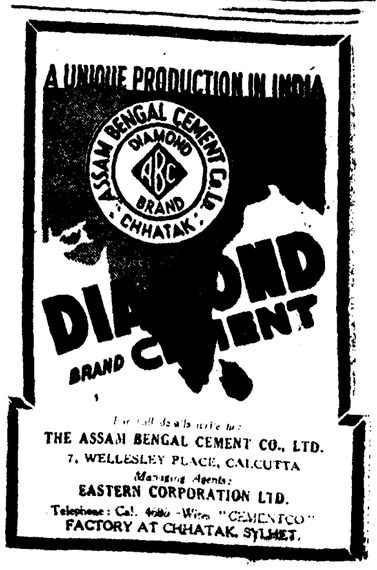
* * * *

It is a particularly busy season for the Finance Department. It would have been better if he had taken one of the Indian Members also with him. A man like Mr. N. R. Sarker would have been of great help to him—in any case it would have helped to remove public apprehensions. Unfortunately the way in which the Viceroy's council is working, from the point of view of collective responsibility, is not all that one may desire. The unwillingness to transfer Home and Finance portfolios to Indian Members even though there have been two expansions, shows the unfortunate spirit still prevailing. It is understood, however, that the Finance Member will be in constant consultation with his colleagues here. No important decision is likely to be taken without previous discussion in the Viceroy's Council. It is undoubtedly a pity that Sir Jeremy could not postpone his departure or arrange to take Sir Ramaswami Mudaliar also with him, for his presence in the War Cabinet at the time of these discussions would have been of considerable value. There is a hope, however, that no final decisions will be taken before Sir Ramaswami Mudaliar's arrival in London.

* * * *

The major problem which Sir Jeremy has to discuss with the officials of His Majesty's Government relates to war expenditure. The burden is already very heavy on India. The daily war bill is already nearly half a crore per day. As Army expansion is now being speeded up to maximum capacity the cost is daily growing greater. Formerly India was chiefly a training and supply base for major operations outside the country in Libya, in Iraq, in Malaya and other theatres of war. The cost of these operations was, under the existing financial arrangement, borne by His Majesty's Government. The position has, however, radically changed this year as the Indian Command has now to be prepared for major operations itself. For this reason, the various Commands in India have already been turned into operational armies to meet the possibility of any direct aggression from the enemy. This has raised the cost and will raise it even higher if major operations have to begin, or if offensive operations have to be undertaken to drive back the enemy from India's frontiers. As the cost of a fighting army is much higher, India may have to be prepared for a scale of expenditure which may bear no comparison at all to its revenues. And it has to be remembered that our revenues this year have shown a declining tendency owing to war conditions under some of our most important revenue heads. It is necessary therefore that the whole question of allocation of military expenditure has to be reviewed in the light of present conditions and future needs in order to ensure that no undue burden is thrown on India's exchequer with its limited resources.

* * * *



Sir Jeremy has a hard task in front of him, but with the goodwill of the War Office and the British Treasury officials, he may be able to bring back a formula which is fair and reasonable to this country. Another important question which requires elucidation is the operation of Lease-Lend arrangements so far as India is concerned. India has derived the benefit which it has a right to expect from these arrangements. It is not clear how far India has the right to deal directly with the American authorities and make purchases for India's essential war requirements. If India has to deal through His Majesty's Government or has to work under its instructions, the present difficulties are bound to continue. It is hoped that Sir Jeremy will be able to come to a satisfactory settlement regarding future policy so that India can get the fullest advantage out of Lease-Lend facilities and go ahead with war industrialisation programmes in accordance with the Grady report. It may be mentioned that Sir Archibald Carter is already in London to confer with the authorities.

* * * *

Lastly comes the problem connected with the cost of services and supplies given to the American forces who are in this country and also the expenditure over European evacuees which the Government of India is incurring on behalf of His Majesty's Government. These may not raise any serious difficulties, but there are certain questions of principle and procedure which have to be settled. Sir Jeremy is not expected to stay in England for more than two or three weeks, for he will have to be back for the meetings of the Public Accounts Committee next month. Sir Theodore Gregory will stay longer and may take the opportunity to visit the United States also before returning to this country. Sir Theodore is expected to submit a report to the Government of India on postwar reconstruction work in England and the United States.

D. F. SANDERS, *General Manager*.

Gateway of India

(From Our Correspondent)

Bombay, July 15.

WE are in the throes of price-control, and what are called ceiling prices have become bottom-rates with every prospect of chaos being conserved. We have a Director of Civil Supplies who has more civility to bestow than supplies to offer, and he pleads his limitations while black-marketeering is rampant. Queues of men and women may be seen at the doors of kerosene shops, each waiting for a thimbleful. At Dadar shopkeepers even allow disappointed customers to have a look behind the counter to ward off suspicions of hoarding. Merchants are of the view that there would have been less hoarding if price-controllers had not fixed rates on paper, and in a regular battle of wits, the dealer is always able to outmanoeuvre the snooping bureaucrat. If the market were left alone, there would have been less irregularity of price-movements, and Government officials as grocers find the job too tough for the filing clerks who put up their hands at the novel routine of Government grain shops.

* * * *

Sir A. Ramaswami Mudaliar recently remarked that his proudest achievement was the system of contacts he had established between the business-world and the Civil Service. Many innocent I.C.S. men have been put in trade-appointments. Lest the merchant be deemed to have a better claim, I.C.S. officers are turned overnight into business-specialists and fitted into key-positions. The *subjanta-wallahs* operate all the controls and act as pointsmen on duty in the labyrinth of the Supply Department. Mr. P. C. Chowdhary, I.C.S., who had been Deputy Controller of Broadcasting, has just come to Bombay as joint-controller in a trade-department, another proof of Sir A. Ramaswami Mudaliar's claim. After being a controller of broadcasting and music, he is here, the versatile I.C.S. man, ready to face the music. Someday they will get hold of the Meteorological Department saying that meteoric careers are indispensable for victory.

* * * *

Dr. Ambedkar quits No. 50, Improvement Trust Chawls, this week, to become Labour Member. Before he left for education in England, he had been an occupant of No. 50; and, on his return after a distinguished university career, he, out of sentiment rather than necessity, resumed his stay in the old "Log Cabin". Dr. Ambedkar has a hold on Labour, so has Mr. Nimbkar recently appointed as Labour Adviser. Mr. N. M. Joshi is in the circle so that Labour has more than one friend at court. Whatever form the political movement might take, Labour will remain loyal, bound by anti-Fascist leadership, not to mention the good wages they earn at times of peak-production. Ambedkar for Labour, is the right selection.

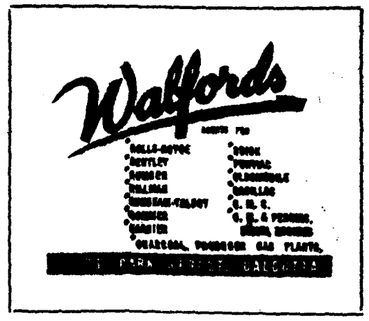
* * * * *

Mutual cribbing in the Indian press occasionally leads to the repetition of errors. A fortnight ago, the *Mail* (Madras) published an editorial article praising the administration of Indian finance and congratulating the country on the ground that since 1912, *no* Indian Loan had been raised in London! On July 11, it occurred to the *Times of India* to publish an eulogy of a similar kind in the course of which it said:—

"As India advances industrially, as internal capital resources grow and as financial facilities improve, the task of raising money from Indian investors becomes correspondingly easier. This trend was in evidence for some time, and since 1912 the Government of India has raised no loan in London. The war has provided a tremendous stimulus; both industrially and financially India is rapidly becoming self-sufficient.

* * * * *

The bloomer originally committed by the Madras paper thus reappeared in the *Times of India*, a paper professing knowledge about Indian finance. Sir Purshottamdas Thakurdas took up the cudgels in the interests of truth and pointed in a letter to the Editor how large sums of money were raised in London by the Secretary of State after 1920. In fact, the total amount of such borrowings amounts to £181 million at rates ranging from 7, 6, 5½, 4½ and 4 per cent with only £20 millions at 3½ per cent and 3 per cent. After disposing of ill-informed criticism, Sir Purshottamdas says:—



Without grudging in the least the credit due to quarters deserving the same, is it not pertinent to inquire why in spite of such "successful finance" the condition of the masses in India is to-day as unsatisfactory as it is admitted to be? Should "successful finance" of India's economic structure not be measured by the general condition of the majority of her people—the masses—and judged from that point of view? Does the review given by the *Manchester Guardian* and reproduced by you not indicate the necessity for a deeper scrutiny of the factors which go to make the prosperity of this country than mere satisfaction at reduction of one variety of her debt, the sterling debt, however so welcome such a reduction may be? I write this in the hope that it may provoke serious thought in this direction.

* * * *

The Bombay Government have issued orders regarding the requisitioning (and acquisition) of properties for defence purposes including A.R.P. Collectors of districts and other requisitioning authorities have been instructed to give, in consultation with the local defence authorities, as much notice as possible to persons who are to be evicted from their lands or buildings, and see that no person is evicted unnecessarily. In requisitioning agricultural land, annual compensation equal to half the value of the gross produce of the land requisitioned will be awarded as soon as possible. When the award of compensation is likely to be delayed, a small amount for maintenance will be granted immediately in cases where it is necessary. In cases where lands are acquired permanently, an advance not exceeding half the value of the land as estimated by the acquiring authority will be paid immediately to the persons concerned and it will be adjusted in due course against the amount of compensation finally awarded. In the requisitioning or acquisition of houses and evacuation of villages, compensation will be determined having regard also to the cost of removal and the cost of constructing new houses. The cost of removal will be paid to the persons concerned at once along with the notice of eviction, while the cost of constructing new houses will be paid as soon as possible.

* * * * *

In addition, suitable sites for the construction of new houses will be provided on Government waste land. If suitable waste lands are not available, steps will be taken to requisition lands for this purpose and temporary arrangements will be made, where necessary, for housing the persons evacuated. In the case of requisitioning or acquisition of building sites and residential houses in large towns and cities, compensation to be paid will be determined under section 19 of the Defence of India Act and paid as soon as possible. If the decision regarding compensation admissible is likely to be delayed an advance equal to less than half the value of the full compensation estimated by the requisitioning authority will be paid where necessary in order to avoid hardship to the persons concered, the advance payment being adjusted against the compensation awarded finally.

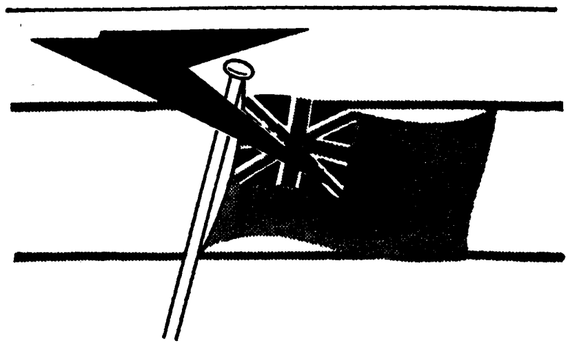
BRANCHES AT IMPORTANT TRADE CENTRES OF INDIA



Hercules Insurance

The Hercules Insurance Company maintained its usual progress in 1941. Business in all branches showed an increase and the net income rose by over Rs. 1 lakh. The excellence of the underwriting results can be inferred from the fire revenue account which shows a surplus of Rs. 80,778-2-2. Premiums came to Rs. 3.53 lakhs nearly and claims took Rs. 91,529-13. The Fire Fund stands at Rs. 1,58,647 and is reinforced by an additional reserve of Rs. 225,000. The premium revenue in the accident branch amounted to Rs. 98,481-11-11; claims absorbed Rs. 29,676-15-8 and the fund at Rs. 59,317 is higher on the year in this branch as well. Premiums in the Marine branch provided Rs. 2,43,126-6-10 and claims took Rs. 1,00,753-14-4. The favourable loss ratio accounts for the addition of over Rs. 74,000 to the Marine Fund at the end of the year. The sum transferred to Profit and Loss account is Rs. 5,803-3-5 as against Rs. 26,383-1-11 transferred from the Accident branch. The biggest charge on profits is aftehr laxation which takes Rs. 85,000 the allocation to Reserve, of Rs. 75,000 this time. The General Reserve is almost equal to the funds which stand at Rs. 4.2 lakhs while the capital is quite large at Rs. 9 lakhs. The funds have risen by Rs. 1,66,382 in consequence of a rise in premium income and the maintenance of a large surplus. The Hercules balance sheet conforms to anticipations. Besides the funds there are shown among the liabilities a tax reserve, advance premiums and sums due to others. Investments inclusive of statutory deposits amount to Rs. 22.84 lakhs while cash totalling Rs. 3,44 lakhs nearly is greatly in excess of outstanding claims. The liquid position is in any event fortified by the holding of over Rs. 4.99 lakhs in Treasury Bills. The classified summary indicates that book value of the Company is in all cases lower than the market value as on December 31. The unusually favourable position in regard to investments lends importance to the Chairman's statement that giltedged stocks are short or medium-dated. At the annual meeting prospects were rated somewhat obscure but the company had added to its resources and connections while 1941 results were described as the best yet recorded by the Chairman.

Timber in the War

The Army is a big buyer of timber. Its war uses are many, and the present demand is great. According to a recent account the demand is largely for coniferous timber. Conservation has kept up the supply from the submontaine tracts. The trees are long-lived and attain a great size. From the Himalayas to the plains, the timber counts after it is felled. The hundreds of milles down the rivers have to be taken in stages. The Forest Department sees to the selection, cutting and transport available up to a point where the rafts are made. It is then that the logs are sorted and graded. On the Jhelum River stands the largest timber market in India. Kashmir's timber comes down by water. The trip sometimes takes months and every year 8 million cubic feet of wood is handled. Men and buffaloes are used to take the timber. The Government saw-mills take the timber passed by the authorities. Loading is done by manual workers whose physique is so good that the Jhelum of any Punjab district supplies most recruits to the Army. The large demand for timber accounts for official purchases worth Rs. 13 crores since war broke out. Of this timber claims Rs. 9 crores and wooden wares Rs. 4 crores. A lot of tool handles to-day have to be made of wood and this year alone it appears that about 10 million handles for axes, hammers and shovels will be wanted.

Indian teak is most in request since timber cannot be obtained as before from Burma or the Andamans. New sources are being sought, Indian teak goes for lorry building, ammunition boxes; Provincial and State Departments have offered to help and planks, logs, etc., are being purchased in larger quantities. Plywood manufacture has made much progress. An Indian firm is using mango, salai and semul or silk-cotton wood for making plywood. Shesham plantations in the Punjab constitute one of the chief sources of both timber and firewood. The Punjab Government expects to buy up all the timber on offer this year, and in one other way will the Punjab be helping the war effort.

A Parallel...

The Merchant Navy is an indispensable auxiliary to the Royal Navy, and in a similar manner the Merchant Fleet of the Air is complementary to the activities of the Royal Air Force.

Pilots and other navigating personnel together with the ground staff of British Airways constitute that British Merchant Service of the Air which, like the Merchant Marine, continues to operate day by day in face of the difficulties and dangers of war.

Government and war needs must of necessity take priority, but certain accommodation is still available for private air-travel, and you will still find the same efficiency and courtesy as you experienced in peace-time travel by

FOR HOUR TO HOUR NEWS READ The Telegraph

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 16th July.

THE published production figures for the month of June show that the estimates we made last week of Mills' production and shipments were on the conservative side. Total production amounted to 95,683 tons, of which almost 20,000 tons, or 21 per cent was on Government account. Production of commercial hessian was 1,093 lakhs of yards and of sackings 978 lakhs yards. The gross production figure of 95,683 tons coupled with the fact that stocks had risen during the month by only 10,700 tons, provides the conclusion that, during June, Mills despatched to consumers jute goods to the extent of no less than 85,000 tons, and this during a period when freight facilities were severely restricted. How this fact is to be reconciled with the Government estimate that the world's requirements can be satisfied with 55,000 tons of jute goods per month, is difficult to understand. What is important to bear in mind is that the actual shipment of the 85,000 tons of goods is an undeniable fact while the 55,000 ton figure evolved by Government is only an estimate and obviously pretty wide of the mark.

It is learned that surprise and regret have been expressed in high quarters at the lack of cordiality with which the Government proposals with regard to "rationalisation" have been received by the Industry. We understand that a deputation of three from the Mills Committee is proceeding to Delhi towards the end of this month to place before the authorities the considered views of the Association on this question.

With the issue of the June production figure, we get a total figure of jute goods produced during the seasonal year, July 1942 to June 1942, of 1,225,106 tons, an average of over one hundred thousand tons per month. When it is considered that Mills have been able, without difficulty, to sell up to this rate of production, it becomes still more difficult to credit the accuracy of Government's estimate of world requirements at a little over half this figure. Jute goods can scarcely be described as a luxury product. One can scarcely visualise the average citizen squandering his winnings at the races on buying some gunny bags. It is to be presumed therefore that this production, all of which would have gone into consumption except for the scarcity of freight, is a necessity in world economy. It is certainly hard to explain it away.

A production of 1,225,000 tons of jute goods means a consumption of nearly 69 lakhs of bales, a fair quantity of which has had to be drawn from Mill stocks. In the preceding season Mills used 53,84,000 bales but purchased 76,50,000 bales, carrying into the current season excess stocks.

The Preliminary Jute Forecast figures have been issued without causing as much as a ripple on the surface of the markets. Of course, the issue is of even less value now than formerly, for it is not even an estimate of the area sown, but only a record of the area licensed for sowing. There is nothing to indicate whether the total licensed area has actually been sown or not. The total area shown as under jute in all the provinces is 37,40,395 acres. In this figure we have taken Orissa at 25,000 acres, the estimate from that province not being yet to hand. This total area shows an increase over last year of 74 per cent. Districts outside of Bengal were not, of course under the same restriction last year and their estimates are all lower for this year, slightly so in the case of Cooch Behar and Bihar, but quite markedly, by 21 per cent, in the case of Assam. Bengal districts altogether show an increase in area of 106.5 per cent, but the ratio is by no means constant. The increase is greatest in Lower Bengal, where Faridpur shows an advance of 138 per cent, Noakhali of 150 per cent Backerganj of no less than 178 per cent over last year's acreage. The reason is that these districts suffered rather severely from flooding last year and much of the area sown in jute never came to maturity. The important Mymensingh district shows an increase of 119 per cent and Tippera is about the same, though private reports make the area sown in that district less than twice last year. The only curious feature in the report is the district of Rajshahi, where the increase is recorded as only 27 per cent. Why this should be, has not yet been ascertained, and it is of interest to note that of the districts bordering on Rajshahi, Dinajpur shows an increase of 81 per cent, and Bogra, Pabna, Malda and Murshidabad all over 100 per cent increases.

Working on the old-fashioned rough and ready method of 3 bales to the acre, this prospective acreage of 37,40,000 should yield a crop of around 112 lakhs of bales, an ample supply in view of the somewhat doubtful prospects for the industry. Conditions in the mofussil are generally satisfactory. The rapid rise of the rivers was followed by an almost equally rapid fall, so that while good steeping water conditions were established, there seems scarcely time for any appreciable damage to have been done by the temporary flooding. Wet weather has somewhat delayed the arrival of imports into the hauts, and firm prices are demanded for what jute there is offering. More ample imports should be appearing very soon and prices then should tend to ease off. Meanwhile Mills, or certain of them, are studiously disregarding their Association's recommendation to avoid purchasing low assortment, and the demand has been almost exclusively for either Bottoms alone or an assortment containing a preponderance of Bottoms. This is not a healthy tendency and is liable to lead to a raising of the standards, particularly in a season when the general level of quality promises to be better than for some years past. Estimated arrivals of jute into Calcutta for the first fifteen days of the new season, up to 15th July, are only 79,000 bales as against 2,76,000 bales in the same period last year

About the only business which has appeared in the Export Jute market was covering of the order for Russia, rates reported being Rs. 51 and Rs. 52 for Firsts and Rs. 39-8 and Rs. 40 for Lightnings. Mill purchases of old crop jute include Lightnings at Rs. 41, Hearts at Rs. 30 and 31 and Out-port Tossa Fours at Rs. 40 and Rs. 41. A sale of New Crop First marks is reported at Rs. 50 to Mills, shipment being half July/August and half July/September.

There has been a steady demand from Mills for Loose Jute, but the assortments generally wanted have been low and containing a large percentage of Bottoms. This is not attractive business at this early stage of the season, but failing much enquiry for higher assortments, it has been met fairly freely, the rates recorded being Rs. 9-8 and Rs. 6-8 for European packing, with Supervised Jat standard at Rs. 9-4 and Rs. 6-4 and Supervised District at Rs. 8-12 and Rs. 5-12. At the close Sellers are inclined to be reserved so far as low assortments are concerned but would go in freely for a higher assortment and for further forward shipment.

In the Fabrics section, Hessians have again been neglected except for a steady demand for 45/11 oz which has been selling Rs. 20-8 to Rs. 20-12, ready. Rs. 18-11 was recorded for ready eleven porters and Mills sold at Rs. 19 (minimum price) for Octr/Decr. shipment. Heavy goods have again met with good enquiry and there has been a good turn over in "B" Twills at Rs. 40-10 to Rs. 41 ready and July, at Rs. 40 Septr. and at Rs. 39 Oct/Decr. Liverpool Twills sold at Rs. 45 to Rs. 45-12 for ready and July and Cornsacks at Rs. 41-8 to Rs. 41-12 ready. 2 lb. "Bs" sold at Rs. 36-8 for August/Septr and at Rs. 35 Oct/Decr and D. W. Flours at Rs. 45 Oct/Decr. The market closes steady in tone.

(*Continued from page 101*)

Government of India, he had himself to learn Indian economics from the alphabet upwards.

I must also add that, while Dr. Gregory enjoyed a considerable repute, he was at no time in the ranks of economists of the calibre of J. M. Keynes. In fact, Dr. Gregory had nothing outstanding to his credit to warrant the claim that he was in any sphere a leader of economic thought.

If I remember right, Dr. Gregory has been in India for over five years; and, in this period, there is no achievement of which we could say that it is Dr. Gregory, and only Dr. Gregory, that could have done it. He has been economic adviser to the Government of India for five years without one single plan or policy that bears witness to any surpassing economic prescience. To be frank, Dr. Gregory, in spite of the clouds of glory that trailed behind him when he accepted the office in India, has been no better than any other routine official that might have been selected for the office.

It was about three years ago that Dr. Gregory met me to discuss some of the problems connected with the Bengal Ministry's plan for control of jute. All his ideas were based on the orthodox conceptions popularised by the vested interests in Clive Street. He showed no undue anxiety to understand the other side of the case. I asked him a simple and direct question; "Have you visited the jute districts? Have you seen the conditions in which jute is grown? Have you made any personal investigation of rural economy in Bengal?"

Dr. Gregory had to admit that he had not visited the jute districts. Nor was he acquainted with the problems of the jute-grower in any detailed sense.

The next questions I asked him were: "Have you visisted any villages in the Punjab or the United Provinces or Behar or Guzrat or Madras? Have you made any attempt to understand the India that lives in the eight lakhs of villages?" Dr. Gregory had again to admit that he had made no effort to get personally acquainted with Indian villages and their conditions, with Indian crops and their significance to national economy.

I offered to Dr. Gregory my assistance in planning a tour to provide him personal knowledge with rural life and rural economy under the varying conditions existent in India. I suggested a tour of jute-growing districts, of villages in which land was permanently settled, of villages in which the ryotwari system was in vogue, of villages in zemindari tracts, of villages in Indian States, and of villages which grow dry crops and wet crops. He was grateful for the offer but has not availed of it to this day.

That sums up the interest which Dr. Gregory has for the India which is outside Simla and New Delhi, outside of Calcutta and Bombay and Madras.

I went to the length of suggesting to Dr. Gregory that if he was to be more than the economic adviser to the Government of India, that is, if he was to be the economic adviser to India, knowledge of Indian village conditions by personal investigation and study was the *sine quo non*.

Now that Sir Theodore Gregory has been selected to study the trends of thought in foreign countries with respect to post-war reconstruction, all that I can say is that he may be able to gather valuable information so far as the information pertains to the international sphere. As far as India is concerned, however, he has yet to start his study on the problems of real India which is rural India.

Dr. Gregory's knowledge of general economics, to improve which the present trip at the cost of Indian tax-payer has been planned, cannot greatly help in the solution of India's special post-war problems.

JUTE

Calcutta, July 16.

THE raw jute market has been more active during the past few days. Greater mill buying and the fall in arrivals from the mofussil imparted a slightly steadier tone to the market, but there has not been any appreciable rise in prices. The reports regarding the possibility of a reduction in production as a result of rationalisation proposals and the enhanced preliminary forecast figures should continue to have a depressing influence. The immediate outlook, however, is considered satisfactory and sellers are not inclined to sell freely for immediate shipment.

The recent rains in East Bengal have resulted in a rapid rise in rivers and the floods have in some districts necessitated early cutting of the crop. This it is believed will result in a slight deterioration in the quality of the fibre.

In the loose jute section, Supervised Jat Middles and Bottoms were done at Rs. 9-4 and Rs. 6-4 per maund respectively. Balers were interested in Tossa grades at varying rates. Early in the week District Bottoms were done at Rs. 5-12 per maund.

The pucca bales section has continued steady. Some business has been reported in Firsts, Lightnings and Tossa grades. Sellers of Daisee and Tossa are reserved.

JUTE MANUFACTURES

Calcutta, July 16.

THE jute manufactures market has been quite inactive so far as hessian is concerned. There has been no demand for hessians for any appreciable quantities and prices have been sustained only with the expectations regarding rationalisation proposals. 9 porters ready are quoting Rs. 14-10, July Rs. 14-10 and August-September Rs. 14-12. 11 porters ready are Rs. 18-11, July Rs. 18-12, and August-September Rs. 18-14.

The heavy goods section has been more active. There has been good buying especially of Liverpool twills. Business has been done as far as ahead as March. "B" twills for ready delivery are sold on the basis of Rs. 40-12, Liverpool twills for the same position Rs. 45-8 and Cornsacks Rs. 41-12.

The production figures for the month of June show a slight reduction only in spite of the fact that mills have been running 54 hours per week throughout the month with 10 per cent of the looms sealed. The reduction in production is in respect of goods for ordinary consumption. The figures are given below:

Total Reported Production of Manufactured Goods

(By the mills in the membership of the Association and also by Gagalbhai Mills).

Description.	Quantity.
1. TWIST AND YARN—	
(a) for sale ..	2,306 tons
(b) all other, including that used in sewing bags ..	1,464 tons
2. CANVAS—	421 tons 7,87,797 yards
3. GUNNY BAG (Tonnages exclude sewing twist) ..	3,803 tons 1,62,68,129 yards
(a) Hessian ..	73,79,427 number
(b) Sacking ..	39,712 tons 9,36,93,363 yards 3,86,81,901 number
4. GUNNY CLOTH—	
(a) Hessian ..	25,749 tons 9,31,22,516 yards
(b) Sacking ..	1,030 tons 41,41,399 yards
5. OTHER MANUFACTURES (including ropes) ..	150 tons
6. TOTAL PRODUCTION (above figures combined)—	
(i) All kinds ..	75,735 tons
(ii) Hessian (both as bags & cloth)	9,78,34,762 yards
(iii) Sacking (both as bags & cloth)	10,93,30,645 yards
(iv) Canvas (both as bags & cloth)	7,37,797 yards

The returns of Maheswari Devi have not been received and are excluded.

*Exclusive of all Government orders.

Total Reported Production of Goods Manufactured on Government Account

(By the Mills in the membership of the Association and also by Gagalbhai Mills).

Description.	Quantity.
7. Sandbags ..	7,468 tons 3,49,89,121 yards
8. Scrim Cloth ..	1,743 tons 59,86,616 yards
9. Hessian bags and cloth and canvas	6,156 tons 2,29,62,953 yards
10. Sacking bags & cloth ..	4,581 tons 1,13,67,472 yards

The returns of Maheswari Devi have not been received and are excluded.

The following is the memo of total reported stocks of manufactured goods, exclusive of stocks of manufactured goods, exclusive of Government Orders, at the end of June, 1942:—

The June figures include the returns of Gagalbhai in addition to those of members, but the returns of Raigarh, Kathihar and Maheswari Devi have not been received and are excluded.

GOLD

Calcutta, July 16.

FOLLOWING the improvement in the Egyptian situation a rather quiet tendency was noticeable at the time of last writing and quotations were marked down appreciably. But with the deterioration in the Russian situation, there has been a resumption of buying and quotations are again higher. Gold readily closed at Rs. 51-12 and second settlement at Rs. 51-11, nearly one point higher.

The London price for gold has remained unchanged at 168s.

SILVER

Calcutta, July 16.

THE silver market also has behaved likewise. After being quiet earlier in the week, there has been a slight rise in prices in sympathy with the gold market. Indian mint silver ready was quoting towards the close at Rs. 84-8 and First settlement at Rs. 83-14 against Rs. 83-5 and Rs. 82-13 respectively.

In the London market the quotation for both spot and forward is unchanged at 23½d. Demand has been officially satisfied.

PIECEGOODS

Calcutta, July 16.

WITH the need for buying for the Puja season, the local piecegoods market has been rather active and in a market short of supplies prices have been marked higher considerably. There is considerable difficulty in getting goods and transport difficulties are adding to the difficulties of operators. The fears regarding shortage of cloth is evident from the campaign conducted for "useless cloth."

Standard cloth is awaited eagerly by the market.

COTTON

Calcutta, July 16.

THE Bombay market has continued steady. The tightness of the spot position and the paucity of tenders have been responsible for the strength of the market. Business in new crop began on Wednesday and on good buying a considerable rise in prices has been recorded. The new hedge contract has got the approval of the Bombay Government. Instead of April-May the dates for the new contract have been fixed for January and March 1943; Broach July-August closed at Rs. 217, Oomra July Rs. 198 and Bengal July Rs. 175. Broach January were Rs. 357-4 and March Rs. 350-8.

The New York market was rather active on the passing of the bill in the Senate authorising full parity loan. There was good buying by mills and commission houses. There has been a decline in prices towards the close on some selling. *July quoted 18.90 cents* and October 19.22 cents.

Stock Markets to-day and to-morrow

TATA'S DIVIDEND POLICY JUSTIFIED

THERE are no important developments to be recorded during the past week. With a smaller turnover, business has been on a rather restricted scale in the several sections on the Calcutta Stock Exchange. The German successes in the Don Basin have made operators in the Calcutta Stock Exchange rather cautious. The Bombay market, however, has been firmer towards the close. The undertone in the several sections is very satisfactory. Given favourable developments prices can be expected to record further improvement.

* * * *

I expressed the view two weeks back that the reduction in dividends to ordinary and deferred shareholders could not in any way be due to the decline in earnings for the year ended March 1942 as there had been an increase in production. The accounts for the year now available reveal that the Company has done exceptionally well during the twelve months ended March 1942. Gross earnings show a rise of nearly Rs. 1.5 crores to Rs. 8.95 crores. The increase in earnings has been mainly due to the economies in working expenses. While sales show a rise to Rs. 18.17 crores from Rs. 17.43 crores in 1940-41 or an increase of Rs. 74 lakhs; gross earnings show a rise of as much as Rs. 1.46 crores at Rs. 7.49 crores. The earnings before providing for taxation, depreciation and bonus are Rs. 8.95 crores against Rs. 7.49 crores. The increase in the provision for taxation takes away nearly the whole of the increase in profits. Against the rise in earnings by Rs. 1.47 crores the increase in provision for taxation is Rs. 1.37 crores, the total provision in this regard being Rs. 3.82 crores against Rs. 2.45 crores on the former occasion. The sum of Rs. 20 lakhs has been provided for Employers' War Risks Insurance. The charge to depreciation is Rs. 1.25 crores against Rs. 1.50 crores while the Reserve Fund gets a larger allocation of Rs. 1 crore against Rs. 75 lakhs. The dividends of Rs. 27 and Rs. 158-4-4 per share have been recommended to be paid on the ordinary and deferred shares respectively. Only Rs. 15 per share is to be paid in cash on the ordinary shares and Rs. 72-4-4 per share on the deferred shares. The balance of Rs. 12 per share and Rs. 86 per share is to be satisfied by the issue of bearer deposit certificates bearing interest at 3 per cent per annum. The amount carried forward is Rs. 11,63,751 against Rs. 11,99,171 brought in.

As a result of the deferred payment of dividends, the company is able to keep back Rs. 84 lakhs. Thus, with the amount of the commission which the managing agents have agreed to leave with the company free of interest so long as the income stock certificates remain unpaid, the ways and means position of the company has been strengthened by over Rs. 1 crore.

With more units coming into operation during the current year, and with the possibility of a further increase in production earnings for the current year should be much higher.

Production figures cannot be given in wartime but the directors point out that the output of the main products with the exception of steel ingots was the highest in the company's history. What is important from the point of view of the company is the production of new kinds of steel, the manufacture of which has never before been undertaken in this country. The wheel, type and axle plant which was opened on November 29, 1941, has a production capacity adequate to meet the requirements of Indian railways.

The scheme for the conversion of deferred shares could not be put through as the necessary sanction has not been obtained from the High Court.

Criticism has been made in some quarters regarding the decision of the company to effect a deferred payment of a portion of the dividends. I have pointed out already that the directors of the company were justified in adopting such a procedure having regard to the conditions created by the war situation and the need for conserving the resources of the company and keeping the borrowing powers intact. The Managing Agents have issued a statement replying to the criticisms made against them in recommending the dividend. The full text is given below:—

The scheme for the payment of part of the dividends by means of deposit certificates has met with criticism on the following grounds:—

(1) that it is novel;
(2) that the required amount could easily have been borrowed from Banks and the dividends paid in cash;
(3) that it adversely affects the credit of the Company; and
(4) that the Agents have failed in their duty to provide finance.

2. As regards the first point, it is not reasonable to condemn the scheme on the ground that it is a novel or unprecedented one. The world is passing through abnormal and unprecedented times, which provide ample justification for the adoption of exceptional measures, provided such measures are otherwise sound. We are convinced that the scheme adopted by the Board is intrinsically sound, and that it is fully justified by the exceptional circumstances ruling at present. There is a tendency amongst shareholders and members of the Stock Exchange to ignore entirely the exceptional nature and gravity of the present situation and the fact that there is a world war being fought, one important theatre of which has reached India's frontiers.

3. The fact that no enemy action of a major character has taken place anywhere in India upto now has led people to believe that India has remained largely unaffected by the war, and that there is no cause for concern. This is far from being true, as in fact serious developments have already occurred which would be greatly accentuated and multiplied if India were directly attacked. To mention but two, we would draw attention to the heavy exodus of labour which took place in various parts of India and particularly in the vital industrial areas of Bengal and Bihar when an attack on India seemed imminent and secondly to the considerable dislocation which, has occurred and exists to-day in the railway transport system of the country. As regards the former the situation was kept in better control at Jamshedpur owing to the prompt and adequate measures taken at great cost by the Company to protect and reassure its workmen, but in spite of that, a considerable movement out of Jamshedpur took place. It is important to note that these events happened without a single bomb having been dropped in either of these two provinces, and the result of an aerial attack on any material scale can therefore be imagined. In this connection it is perhaps not fully realised that the major industrial targets in Bengal and Bihar are within two hours' range of enemy land bases and even less in the case of an attack originating from aircraft carriers at sea.

As regards the present dislocation in the transport system, it has at times been so serious that on one or two occasions the necessity of curtailing the operations of the Works at Jamshedpur seemed imminent. We consider that the Company would fail in its duty not only to its shareholders but to its employees and to the country if in the present state of things and with the grave uncertainties facing it, it failed to conserve its resources as best it could, particularly when its cash position was beginning to show signs of deterioration.

4. If the necessity for conserving cash in the present emergency is accepted, the practical means of doing so are found to be limited. Most of the Company's commitments cannot be postponed for any length of time; for instance, taxes, war insurance premia, purchase price of new plant, profit-sharing bonuses, etc., must be paid when due. The only practical way in which the Company can conserve its cash is to distribute less of its profits to shareholder's and the simplest method of doing so is to declare much smaller dividends or to postpone the payment of dividends altogether until the war situation is clarified. It is, however, because the Agents and the Directors realised the great hardship which either of these steps would cause to the shareholders and wished to avoid it and also because of the serious complications which would arise in regard to labour who would have to forego their bonus under the profit-sharing scheme that they devised the present proposed scheme,

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 17.

RATHER quiet and uninteresting conditions have been noticeable on the Calcutta Stock Exchange during the past week and quotations have been fluctuating in narrow limits. The discouraging news from the Russian Front and the stalemate in the Egyptian situation have not been helpful to the market. Values, however, have been maintained. Only the amount of business passing has been on a smaller scale. Operators and investors alike are inclined to await further developments. Apart from the uncertainties regarding the war situation there is anxiety regarding the internal political situation. The fears regarding the possibility of the war effort being affected, if any mass movement is started by the Congress, cannot be ruled out.

The giltedged securities section has been quietly steady with quotations more or less unchanged. Business passing has been on a slightly smaller scale. With the continued easiness of the money market one would have expected that a rise in prices for short and medium-dated securities would be recorded. 3½ per cent paper, after being lower at Rs. 92-6, is now quoting Rs. 92-14. 3 per cent 1963-65 were Rs. 93, 3 per cent 1949-52 Rs. 99-14, 3½ per cent 1947-50 Rs. 102-2 and 5 per cent 1945-55 Rs. 108-7. 4 per cent Punjab bonds 1944 were done at Rs. 103-8. As evidence of the cheap money conditions, the treasury bills rate has declined to ten annas per cent per annum, from ten annas and three pies per cent per annum, last week.

Public bodies' debentures have been in greater request with 4 per cent 1915-75 *Calcutta Port Trust* debentures at Rs. 95, 6 per cent 1955-85 at Rs. 116-12 and 3 per cent 1966 at Rs. 8-12. 3¼ per cent *Howrah Bridge* debentures were noted at Rs. 89.

Among preference shares, *Auckland* were noted at Rs. 126, *Bally* at Rs. 141 and *Clive "A"* preference shares at Rs. 132. Among other sections, *Steel Corporation* were noted at Rs. 110-8, *B. I. Corporation* at Rs. 172 and *Dunlop Rubber* First preferences at Rs. 135.

Among Bank shares, *Imperial Bank* fully paids were noted at Rs. 1,516 and *Reserve Bank* at Rs. 97-8.

Coal shares have again been neglected. *Ghusick and Muslia* were dealt in at Rs. 4-12, *Union* at Rs. 33-12 and *Lakurka* at Rs. 11-8.

Cotton shares have remained firm with *Elgin* at Rs. 33 and *Cawnpore Textiles* at Rs. 9-12. Calcutta shares in particular have been in good demand, the recent large orders placed with Bengal mills being responsible for the greater interest evinced in these shares. *Kesoram* were Rs. 10-2 and *Bengal-Nagpur* Rs. 23-4.

In the Jute section, only a few number of transactions has been recorded. *Budge-Budge* were Rs. 329, *Bally* Rs. 216, *Gourepore* Rs. 635, *Hukumchand* Rs. 12-8, *Kanknarrah* Rs. 365, *National* Rs. 21-3 and *Nuddea* Rs. 59. *Reliance* were Rs. 51-4 and *Waverley* Rs. 56.

In the Engineering section, *Indian Iron* and *Steel Corporation* were fluctuating for the most part of the week around Rs. 26-14 and Rs. 17-12 respectively. In to-day's session a slightly better feeling is noticeable with the quotation at Rs. 27-3 and Rs. 18-1 respectively. *Bhartia Electric* were further higher at Rs. 14-12. *Jessop* were Rs. 17-4, *National Iron and Steel* Rs. 10-8 and *Kumardhubi Engineering* Rs. 4-14.

Sugar shares have remained unchanged with *Balrampore* at Rs. 13, *Carew* at Rs. 12-12 and *Cawnpore* at Rs. 27. *Champaran* were Rs. 23-14 and *Purtabpore* Rs. 12-15.

In the Tea section, *Banarhat* were Rs. 422, *Dimakusi* Rs. 28-4 and *New Dooars* Rs. 1,100.

In the Misecellaneous section, *Burma Corporation* and *Indian Copper* were quoted at Rs. 2 and Rs. 2-2 respectively. *B. I. Corporation* were Rs. 5, *Bararee Coke* Rs. 25-10 and *Aluminium Corporation* Rs. 11. *Assam Bengal* were Rs. 11-12, *Dalmia Cement* ordinaries Rs. 15-8 and deferreds Rs. 3-6. Among Paper mills, *India Paper Pulp* were Rs. 145 and *Titaghur Paper* ordinaries Rs. 18-10. *Orient Paper* have been in good request, being done upto Rs. 19-10. It is reported that the Company is doing very well. *Assam Saws* were Rs. 2-14 and *Delhi Four* Rs. 18.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 17.

The period under report is short-working as markets were closed on Tuesday and Wednesday. Thursday's session has been rather active and an all round rise in prices has been recorded. The general sentiment is inclined to be optimistic though operators like to await further developments in the Russian war situation.

The giltedged securities section has been quitely steady with not much change in prices. Buyers have not been so keen to enter into commitments. 3½ per cent Paper shed a few annas earlier in the week, but the lost ground was recovered towards the close. 2¾ per cent 1948-52 were noted at Rs. 98-8, 3 per cent 1951-54 at Rs. 99-14, 3 per cent 1963-65 at Rs. 93, 4 per cent 1960-70 at Rs. 107-14, 4½ per cent 1955-60 at Rs. 111-10 and 5 per cent 1945-55 at Rs. 108-7.

Textiles.—The proposals to increase production further in order to relieve cloth shortage have had an encouraging influence on this section. *Ahmedabad Advance* were 12 points were higher at Rs. 360 while *Bombay Dyeing* were 25 points higher at Rs. 1,305. *Central India* were Rs. 385 and *Century* Rs. 488. *Gokak* were outstanding with a sharp rise in the quotation to Rs. 267. *Kohinoor* were Rs. 502 and *Simplex* Rs. 210-8.

Hydro-Electrics.—With the possibility of a large increase in power consumption, hydro-electric issues have been marked higher with *Tata-Hydro* at Rs. 171, *Andhra Valley* at Rs. 1,620 and *Tata Power* at Rs. 1,525. The rise in Tata Power is significant.

Steels.—*Tata* ordinaries and deferreds have been marked further higher. The publication of the accounts for the year ended March, 1942 has had an encouraging influence on the market. The quotations towards the close were Rs. 305 and Rs. 1,521-4 respectively against Rs. 26 and Rs. 1,480 respectively at the end of last week.

Miscellaneous.—*Alcock Ashdown* are again unchanded at Rs. 475 while *Belapur* were higher at Rs. 232. A.-C.-C. were not very much changed at Rs. 169-8, but *Scindia Steam* were a shade better at Rs. 20-2, *Shivrajpur Syndicate* were again higher at Rs. 48-8. The rise during the last two weeks is thus as much as thirteen points. *New India Assurance* were Rs. 40-4 and *Bombay Steam* were Rs. 337-8.

THE GHUSICK & MUSLIA COLLIERIES LIMITED

NOTICE

is hereby given that the Seventieth Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday the 31st day of July 1942, at 3 P.M. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st March, 1942, declaring the dividend recommended by the Directors and to transact any other ordinary business of the Company.

SPECIAL BUSINESS—To approve a temporary variation in the Managing Agents' remuneration whereby their commission will, until further notice from them, be calculated at the rate of 5% on net profits (after providing for depreciation) instead of at the rate of 1% on sales and bonus to which they are entitled under their agreement and to confirm the same variation which has operated during the past three years and also the reduction during such period of their office allowance by 50%.

The Share Transfer Books of the Company will be closed from the 24th July to the 31st July 1942 both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

To the Shareholders of the Ghusick & Muslia Collieries Ltd., and in particular to :—

Miss E. O. V. Perry, Capt. J. F. W. Read, Mrs. P. D. S. Ballard. Lt.-Col. H. F. A. Pearson, Mrs. B. T. T. McAndrew, Lady E. B. Blakeway, Comdg. Genl. Sir Baber S. S. Jung B. R., Messrs. J. C. Pearce, N. A. R. Watson, A. Holden, J. Hampson, Mrs. M. L. S. Macfie, Messrs. J. W. Madeley. H. V. D. Bell, Messrs. H. P. Martin, N. Hamilton, F. E. Robertson, Mrs. H. J. Latimar, Messrs. A. N. Sassoon, A. Gibb, Maj. K. H. Lloyd, Mrs. E. V. H. Henfrey, Mr. H. Marley, Mr. R. A. Scott. Mr. J. Adam, Lt.-Col. E. H. V. Hodge, Mr. T. S. Starling, Maj. Genl. Mahabir S. S. Jung B. R., Mr. D. Mudie.

Dated, Calcutta, the 14th July, 1942.

HARINAGAR SUGAR MILLS, LIMITED

GOVT. CONTROL ORDER CRITICISED

DECLARATION OF 10 PERCENT DIVIDEND

The Tenth Annual General Meeting of the Harinagar Sugar Mills, Ltd., was held at the Registered Office, at 207, Kalbadevi Road, Bombay, on Tuesday, the 30-6-42 at 4 p.m. under the Chairmanship of Raja Narayanlal Bansilal. Placing before the shareholders the Report of the Directors and the Audited Statements of Accounts for the year ended 30th September, 1941, the Chairman said :

This year our Company has made a profit of Rs. 3,60,930-10-0 and you will see from the Balance Sheet presented to you that our Company has been making good progress and the Block Account which was more than the Capital last year is almost equal this year. From this year's Profits, the Directors have recommended to give you 7½ per cent Dividend free of Income-tax and 2½ per cent Bonus, *i.e.*, total 10 per cent, which I hope will have your approval. Our Industry this year has had to suffer a lot of difficulties due to Sugar Control from the Government, which it is not possible for ordinary people to imagine. The Government has done a lot of harm to the whole Sugar Industry by issuing Sugar Control Order, 1942 and has disorganised Sugar markets putting thereby the millowners and the people into difficulties. Ordinary consumer finds it difficult to get Sugar at the Government Controlled rate despite the Order. Sugar which was available to ordinary consumer in Bombay at Rs. 13-8-0 per Bengal Maund before the Government Control came in force, has been sold upto Rs. 20 per maund and the situation has been steadily growing worse.

Difficulties about getting the wagons for despatch of Sugar and for transporting it from one place to another have made the position still worse. The Government would have served the purpose of enabling people to find sugar had it consulted the factory-owners about it and after trying to understand their difficulties found out a way for the above purpose with their co-operation. It would have been beneficial to all and the present abnormal situation would not have developed. The Government should have only followed their own plan as they did through the efforts of our well-known liberal leader, the Hon'ble Sir H. P. Mody, in forming a cotton mills panel resulting in smooth working and giving satisfaction to all parties.

To-day there are more than 42 lakhs maunds of sugar which is more than one and a half lakh tons lying in U. P. and Behar Mills, sold and ready to be despatched and for want of wagons could not be sent. It is necessary that the Government should arrange wagons to despatch these goods without delay to proper destinations. The Government and the people find fault with the factory-owners that they are not selling the goods. How can they do the same when even after selling they are not able to despatch and then incur on the same interest, godown rent, war risk insurance, etc., and the risk of deterioration, and have yet no knowledge of when the same would be despatched? The Government has been issuing every now and then in the name of Sugar Control, new orders and rules, thereby placing the merchants and mill-owners in an awkward position.

I wish the Government would give greater attention to actual supply of wagons where they are necessary, rather than issue these orders, so that the present situation may ease.

I may inform you that there are about four lakhs tons of sugar in the Sugar Mills of U. P. and Behar which, the mill-owners want to sell and despatch. There are also other stocks in Bengal, Punjab and South India. People think there is scarcity of sugar in India, but it is *not* correct. Whatever sugar is necessary for one year's consumption it is there, but what can be done when the availability of wagons is wanting. According to me there are at least at present five lakhs tons of sugar in India and the demand for sugar is not more than one lakh tons per month. The mills will again commence the work in October and new Sugar will be coming out.

You will see from the above that the mills have goods to sell, but they do not get wagons and it is because of this that the mill-owners and the merchants are troubled.

You all know that most of the Sugar Mills in India are in U. P. and Behar, where there are more than 100 factories with 25 crores of Rupees invested. When in 1937 the Sugar Industry came into trouble, almost all the mills in India formed into the Indian Sugar Syndicate. They have been distributing their production which is 80 per cent of the total production of India for the last five years. The Government has disregarded the advice and help offered by this Institution and has issued the above Order with the help of the Advisers, who have no stake in the Industry. The Government has further ordered the factories to deliver their goods only to certain merchants. I believe by this method seeds of distrust have been sown between the Merchants and the Factory-owners. The Government ought to have taken both the factory-owners and the merchants into its confidence and fixed maximum rates and the merchants and the factories would have found out a way to sell sugar either at the Controlled rate or below it and the people would have got the goods as they desired. It is feared that if this state of affairs continues, people would not be able to get sugar as they desire in time.

A lot can be said on the subject, but I only stop here by saying that the Government will consider the question of taking the Syndicate into confidence before it is too late and will improve the situation by supply of wagons and make the way of Sugar Industry easy. I resume my seat after thanking you all.

Dated the 30th June, 1942.

HARINAGAR SUGAR MILLS, LIMITED

Directors' Report for the year ended 30th September 1941.

The Audited Statement of Accounts for the year ended 30th September, 1941, shows a net-Profit of Rs. 3,60,930-10-0. This together with the Balance of Rs. 255-6-5 brought forward from last year's account makes a total of Rs. 3,61,186-0-5 which the Directors propose to dispose of as follows:—

	Rs.
Provision for Depreciation	1,25,000
Dividend at 7½% per annum, free of Income-tax	1,00,000
Bonus at 2½% per annum, free of Income-tax	
Provision for Income-tax and Super-tax	85,000
Provision for Reserve	50,000
Total	3,60,000

leaving a balance of Rs. 1,186-0-5 which your Directors propose to carry forward to the next year.

A total sum of Rs. 1,077-0-0 has been given in charities, which your Directors hope will meet with your approval.

During the year under report, the Indian Sugar Syndicate worked well. On 14th April, 1942. The Central Government put into force the Sugar Control Order, 1942 and a Sugar Controller for India was appointed. Since then the Control Provision, Orders and Directors made thereunder being not so clear, the position of the mill-owners was found to be extremely difficult to carry on their normal trade. However, our Company is endeavouring its best to work in conformity with the Control Orders.

The Company's property including buildings machinery, stock and railway siding has been insured for Rs. 24 lakhs; and loss of profits and standing charges, etc., have been insured for Rs. 3 lakhs.

Managing Agents.—Messrs. Narayanlal Bansilal.

Authorised Capital—Rs. 15,00,000. *Issued and Subscribed Rs.* 10,00,000 *in* 7,500 *shares of Rs.* 100 *and* 25,000 *shares of Rs.* 10, *both fully paid-up.*

Synopsis of the balance sheet as at 30th September, 1941:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital Paid-up	10,00,000	Fixed Capital Expenditure	22,54,259
Depreciation Fund including latest allocations	8,79,013	Stores, etc.	2,15,643
Reserves	3,53,350	Live Stock	2,068
Provision for Taxation	1,36,855	Stock of Sugar	19,54,152
Current debts	24,20,695	Investments	31,108
Carry forward	1,186	Outstandings	3,26,442
		Cash Balances	7,427
		Total	47,91,099
Total	47,91,099	Total Liquid Assets	25,36,840

COMPANY REPORTS

BIRLA JUTE MANUFACTURING COMPANY, LIMITED

	Half-year ended			
	31.3.1942	30.9.1941	31.3.1941	30.9.1940
	Rs.	Rs.	Rs.	Rs.
Net profit	14,00,045	13,43,536	8,27,231	7,33,513
Allocation to funds including depreciation	2,00,000	1,99,938	1,10,000	1,50,381
Provision for taxation ..	8,00,000	7,70,000	3,50,000	2,00,000
Dividend amount ..	3,72,078	3,74,387	3,74,369	3,77,831
Dividend % Ordy. ..	12½	12½	12½	12½
Dividend % Pref. ..	3¾	3¾	3¾	3¾
Carry forward ..	33,354	5,386	6,175	13,313

(Half-yearly meeting, 20th July, 1942 at 3-15 p.m.)

Accounts for the Half-year ended 31st March, 1942:—

The accounts show a profit of Rs. 16,61,247-10-1. After deducting Rs. 11,92,191-13-9 for Commission, Depreciation, Taxes etc., and transferring Rs. 1,00,000 to Reserve fund and making sundry adjustments, there is a balance of Rs. 4,05,432-2-3 at credit of Profit and Loss Account.

The Directors recommend:—

Dividends on 23,642 Preference Shares at 7½ per annum less Income-tax	67,878	6 6
Dividends on 2,43,360 Ordinary Shares at 25% per annum (or Re. 1-4 per share) ..	3,04,200	0 0
the balance to be carried forward ..	33,353	11 9

It is gratifying to note that the results of the past Half-year are better, but the directors regret that, due to the fact that a large amount has to be provided for taxation, additional benefit does not go to the shareholders.

(Half-yearly meeting, 28th July, 1942 at 3-30 p.m.)

Audited accounts for the Half-year ended 31st March, 1942:—

	Rs.	A. P.
The balance available for appropriation after the inclusion of the amount brought forward from the previous half-year is ..	1,29,952	15 7
Out of which the directors recommend the payment of a dividend at the rate of 17½ per cent per annum, free of income-tax, sorbing	1,02,812	0 0
Leaving to be carried forward	27,140	7 7

Sales.—The improvement in the raising and despatch figures for the period under review would have been more pronounced had there been full supplies of wagons available.

Throughout the half-year output and deliveries had to be regulated according to the supply of wagons.

*Includes Rs. 5,000 transferred from Reserve.

(Annual Meeting, 23rd July, 1942 at 4-30 p.m. at Bombay. Dividend payable on and after 28th July, 1942).

Audited accounts for the year ended 31st March, 1942:—

Accounts.—The operation of the company during the year have resulted in a profit of Rs. 2,68,549. After providing for taxation and an appropriation to Workmen's Compensation Reserve, transferring Rs. 5,000 to General Reserve, and writing down Promotion Expenditure by a like figure, a balance of Rs. 1,79,790 is carried to the Balance Sheet.

Adding to this sum the amount of Rs. 327 brought forward from last year's accounts, a total of Rs. 1,80,117 is available for distribution, out of which Rs. 72,251 has been disbursed in paying an *ad-interim* dividend at the rate of Rs. 3 per share free of income-tax which was declared by the Directors in December last.

This leaves a balance of Rs. 1,07,866 for disposal.

It is accordingly recommended that the balance available should be applied as follows:—

	Rs.	A. P.
To payment of a dividend for the second half-year ended 31st March, 1942 of Rs. 4 per share proportionate to the amounts called up (making 7 per cent for the year), free of income-tax	1,05,780	0 0
Balance to be carried forward	2,086	0 0
Total ..	1,07,866	0 0

Share Capital.—The Final Call of Rs. 25 per share on the 9,445 ordinary shares issued in July 1936 was made payable on 1st October, 1941, making this Issue fully called up.

New Connections.—During the year the number of consumers connected to the mains increased by 708 to a total of 9,150.

Energy Purchased.—The number of units purchased from the Bulk Suppliers was 20.5 per cent in excess of the figure for the previous year.

Although progress has been good the demand for lights and fans was adversely affected by the A. R. P. restrictions. Considerable unprovement in sales of energy for Power purposes was recorded during the year due to the development of new industrial concerns whose business is directly or indirectly connected with war production.

Distribution.—The company's distribution and transmission system were maintained in good and efficient order, and continued to give trouble-free service, except for a short period in June-July 1941 when, due to abnormal weather conditions, unavoidable interruptions to supply were experienced in Bandra and Santa Cruz. Opportunity was taken during the year to reorganise the trans-

former capacity installed at the various sub-stations in order to ensure the most efficient use of the plant, and to release transformers wherever possible for use elsewhere to meet new demands.

Development.—Four new sub-stations were brought into commission and H. T. and L. T. mains were laid as necessary to meet new development. The work in connection with the new Receiving Station has been taken in hand, and the 22 k.v. cable is nearly completely laid. The building itself is well advanced, and it is hoped that the new station will be brought into beneficial use before the end of 1942.

Agents.—Messrs. Killick Nixon & Co.

Authorised Capital—Rs. 50,00,000 in 50,000 shares of Rs. 100 each...Issued—Rs. 26,44,500 in 26,445 shares, less calls in arrears Rs. 25.

Synopsis of the balance sheet as at 31st March, 1942:—

TATA IRON AND STEEL COMPANY, LIMITED

Audited accounts for the year ended 31st March, 1942:—

The disposable profits for the year are as under:—

	Rs.
Net profits after providing for income-tax, super-tax and excess profits-tax and after setting aside a sum of Rs. 1,25,00,000 for depreciation and after providing Rs. 20 lakhs for employees war risks insurance	3,67,56,083
Add—Amount brought forward from last account ..	11,99,171
Add—Income-tax deducted from dividends on Preference Shares (1940-41)	11,77,842
The amount available is thus	3,91,33,096
Out of this, the Directors have transferred ..	1,00,00,000
To the Reserve Fund, which leaves a balance of ..	2,91,33,096

The Directors have determined to dispose of this amount as follows:—

A. To Shareholders:	
(1) A dividend of Rs. 9 per share on First Preference Shares	4,50,000
(2) A dividend of Rs. 7-8-0 per share on Second Preference Shares	52,03,642
(3) A dividend of Rs. 15 per share on Ordinary Shares	52,50,000
(4) A dividend of Rs. 72-4-4 per share on Deferred Shares	35,23,203
(5) An additional dividend of Rs. 12 per Ordinary share to be satisfied by issue of bearer deposit certificate bearing interest at 3 per cent per annum, redeemable at any time at the Company's option within three years from the 10th August, 1942	42,00,000
(6) An additional dividend of Rs. 86 per Deferred share to be satisfied by issue of bearer deposit certificate bearing interest at 3 per cent per annum, redeemable at any time at the Company's option within three years from the 10th August, 1942	41,92,500
B. To Employees: Bonus under the Profit-Sharing Scheme ..	51,50,000
C. Carry forward	11,63,751
Total ..	2.91.33,096

(Dividends on First and Second Preference Shares will be subject to deduction of Income-tax).

While the gross profits of the year under report were larger than those of the preceding year, the net profits are slightly lower owing mainly to the very much larger provision for taxation which amounts to Rs. 332 lakhs as compared with Rs. 245 lakhs last year. A provision of Rs. 125 lakhs has been made towards depreciation. Considering the strain on the plant and the very heavy wear and tear to which it is being subjected owing to its being worked at high pressure on account of the war, this sum is no more than is required. The sum of Rs. 100 lakhs has been carried to the Reserve Fund.

A special feature of the year which requires explanation is the payment of a portion of the Ordinary and Deferred dividends in the form of Certificates. As a result of recent developments in the war situation and the proximity of the nearest theatre of war, the situation is fraught with serious possibilities, which if they materialised even partially, would imperatively necessitate the conservation of the Company's financial resources to the maximum possible extent. Apart from this factor, transport difficulties, A. R. P. measures and various restrictions consequent on the war have begun to interfere considerably with the transport of raw materials and finished goods and production. If the situation, were to become worse in the future, even though, as is earnestly hoped, the more serious circumstances mentioned above do not arise, the position of the Company would be seriously affected. In the face of such uncertainties it is the duty of the Company to prepare itself for a possible emergency by conserving its resources and by keeping its borrowing powers unimpaired. One way of doing so would have been for the Directors to declare a considerably smaller dividend. In view, however, of the scale of profit made in the last year and of the hardship which such a step would cause the shareholders, the Directors have decided to reconcile the two points of view by declaring a reasonable dividend payable partly in cash and partly in the manner mentioned above. As soon as the situation is clarified and and the immediate dangers are lessened or removed, the Company will liquidate the certificates. As the certificates will carry interest and as they will be bearer certificates and will therefore be readily negotiable the shareholders will have lost nothing by the adoption of this measure, while they will have made a useful contribution to the strengthening of the Company's financial position. In this connection The Central Bank of India have informed the Company that they will be prepared to cash the certificates at par at any time within three months of the date of issue.

The Managing Agents have agreed to leave with the Company free of interest a substantial amount out of their commission for so long as the certificates remain outstanding.

As a result the Ways and Means position of the Company will be strengthened by a sum of over Rs. 1 crore.

Reference at some length was made in the Chairman's speech last year to the scheme for the conversion of Deferred shares. *The Directors regret very much, a regret in which they feel sure the vast majority of the Deferred shareholders will now join, that the scheme could not be put through and has been postponed pending further orders of the High Court.*

The manufacture of special steels required for war purposes referred to in the last year's report was carried on further and several new types of special steel were successfully produced. High speed tool steel for own requirements as well as for some requirements of Government was made. It is proposed, to manufacture ferro tungsten and possibly ferro vanadium at Jamshedpur and also to put up a plant for the manufacture of high speed tool steels requiring ferro alloys.

Practically the whole of the Company's output is now taken up for direct and indirect requirements of Government for war and for the Railways and urgent civil purposes. Except in the case of galvanised sheets, prices under the main war supply contract with Government were not raised during the year. Measures are being devised by Government under which prices for billets, scrap and re-rollable steel required by re-rollers will be fixed. The conversion costs of re-rollers have already been fixed. This will enable Government to obtain their requirements from re-rollers at fixed prices allowing them a reasonable profit and thus eliminate one source of profiteering. The prices for the very small quantity of steel dribbling to the general consumer remain at a very high level.

Operations.—The instructions of Government prohibiting the publication of figures of actual production and sales of different products remain in force. For the same reason no statistical statements have been appended to the Report. The Directors are glad to report, however, that the output of the main products, except steel ingots was the highest in the Company's history. The production of steel ingots was very slightly lower than in the previous year because it included a higher percentage of alloy steels and slab steel than in the previous year. The new steel-making plant by the Perrin process or, as it is now called, Steel Melting Shop No. 3 could not be completed and put into operation during the year under report owing to various difficulties caused by the war. One furnace producing acid steel was, however, put into commission on the 8th of June this year.

The Benzol plant for the recovery of motor spirit and toluol was put into operation in May 1941 and it was subsequently decided to extend the plant in order to increase the output of these two products.

An Ingot Mould Yard for the cleaning and setting of moulds at the Open Hearth furnace was put into operation in October 1941.

An Ingot Stock Yard with an overhead crane was brought into operation in November 1941 to facilitate the handling and stocking of hot ingots.

Two more Soaking Pits remodelled on modern design were put into operation during the year.

Eight more Lee-Wilson Annealing Furnaces were installed at the Sheet Mill.

A 15,000 k.m. Turbo-Alternator set was borrowed from the Cawnpore Electric Supply Corporation through the Government of India as a safeguard against any possible breakdown of Parson's 27,500 k.w. set in Power House No. 3, pending the installation of a second 27,500 k.w. set.

There was again a record production of edge tools at the Agrico factory. Picks, beaters and hoes accounted for nearly 79 per cent of the total output, the remainder being made up of hammers, octogonal bars and miscellaneous tools.

Collieries.—Equipment at all the Collieries has been maintained in good condition. The turbo generator and other electrical equipment required for the Jamadoba Power House was received in Bombay, but unfortunately damaged owing to fire on the steamer before unloading. The generating set will be repaired, if possible. The Digwadih crushing and screening plant was completed towards the end of the year.

Stowing operations continued at Sijua and were completed at Malkera-Choitodih. They were suspended at Jamadoba for want of necessary stowing materials and could not be commenced at Digwadih on account of the non-completion of the aerial ropeway.

Labour conditions at the Collieries were satisfactory.

Managing Agents.—Messrs. Tata Sons, Ltd.

BANK PROFITS

PUNJAB NATIONAL BANK, LIMITED

"The working of the half-year ending 30th June, 1942, subject to audit, has resulted in a net profit of Rs. 7,52,800-3-4 (exclusive of Rs. 43,621-8-3 brought forward from the half-year ending 31st December, 1941)."

IMPERIAL BANK OF INDIA

The Directors of the *Imperial Bank of India* at the Meeting of the Central Board held at Bombay on Monday the 13th instant, declared a dividend to shareholders for the half-year ended 30th June, 1942, at the rate of 12 per cent per annum, payable on and after the 20th July, 1942.

The profits available, including Rs. 45,29,000 brought forward from the previous half-year, amounted approximately to Rs. 96,31,200 which sum was disposed of as follows:—

	Rs.
I. Payment of a Dividend of 12 per cent per anumn, free of income-tax	33,75,000
II. Transferred to Reserve Fund	7,50,000
III. Transferred to Pension Funds	1,23,300
IV. Bonus to Staff	8,50,000
Carried forward to next half-year ..	45,32,900
Total ..	96,31,200

The average rate for Demand Loans during the half-year was 3½ per cent.

BANK OF BARODA, LIMITED

The profit of the *Bank of Baroda, Ltd.*, for the half-year ended 30th June, 1942, subject to audit, including Rs. 1,57,207-1-0 brought forward, amounts to Rs. 5,67,041-3-10.

The Directors have resolved to declare an *ad-interim* dividend at the rate of 10 per cent per annum, free of income-tax on the paid up Capital which will absorb Rs. 3,00,000 and to carry forward the balance of Rs. 2,67,041-3-10 to the next account.

FORTHCOMING MEETINGS

Bengal Coal Co., Ld.—Meeting, 31st July, 1942 at 11 A.M. Transfer Books closed from the 17th to the 31st July, 1942. *Dividend proposed Rs. 10 per share.*

Amalgamated Coalfields, Ld.—Meeting, 28th July, 1942 at 3-30 P.M. Transfer Books closed from the 21st to the 28th July, 1942. *Dividend proposed 17½ per cent per annum.*

Birla Jute Manufacturing Co., Ld.—Meeting, 20th July, 1942 at 3-15 P.M. Transfer Books closed from 6th to the 20th July, 1942. *Dividend proposed Rs. 1¼ per Ordinary Share.*

Kyang Tea Seed Co., Ld.—Meeting, 20th July, 1942 at noon. Transfer Books closed from 13th to 20th July, 1942. *Dividend proposed As. 4 per share.*

Albion Jute Mills Co., Ld.—Meeting, 23rd July, 1942 at 11-30 A.M. *Dividend proposed Rs. 4 per Ordinary Share.*

Budge-Budge Jute Mills Co., Ltd.—Meeting, 23rd July, 1942 at 11-20 a.m. *Dividend proposed Rs. 12½ per Ordinary Share.*

National Co., Ld.—Meeting, 23rd July, 1942 at 11-25 a.m. *Dividend proposed Rs. 12 per Ordinary Share.* Transfer Books of all these three companies closed from 10th to the 23rd July, 1942.

Borooah Timber Co., Ld.—Meeting, 24th July, 1942 at 10 a.m. Transfer Books closed from the 17th to 24th July, 1942.

Dilaram Tea Co., Ld.—Meeting, 29th July, 1942 at 3-10 p.m.

Barduar Tea and Timber Co., Ld.—Meeting, on the 29th July, 1942 at 3-25 p.m. *Dividend proposed As. 4 per share.* Transfer Books of these two companies closed from 15th to 29th July, 1942.

Murphulani (Assam) Tea Co., Ld.—Meeting, 4th August, 1942 at 3 p.m. Transfer Books closed from 20th July to 4th August, 1942. *Dividend proposed on Preferred Ordinary Shares at Rs. 1¼ per share and As. 12 per Ordinary Share.*

THE GUZERAT RAILWAYS COMPANY, LIMITED

NOTICE is hereby given that the THIRTY-SECOND ORDINARY GENERAL MEETING of THE GUZERAT RAILWAYS COMPANY, LIMITED, will be held on Wednesday, the 29th day of July, 1942, at 4-30 p. m. at the Registered Office of the Company, Home Street, Fort, Bombay, to transact the following business:—

1. **To adopt the Directors' Report and Audited Statement of Accounts made up to 31st March, 1942.**
2. **To declare a Dividend.**
3. **To elect Directors in place of Mr. Dadubhai P. Desai and Mr. R. C. Giles, who retire by rotation, but are eligible and offer themselves for re-election.**
4. **To appoint Auditors for the current year and fix their remuneration.**

The Transfer Books of the Company will be closed from Friday, the 24th July, to Monday, the 10th August, 1942, both days inclusive.

By Order of the Board,
KILLICK, NIXON & CO.,
Agents.

Bombay, 24th June, 1942.

N. B.—The Dividend, when declared, will be made payable at the Chartered Bank of India, Australia, China & Bombay.

(Continued from page 109)

which reconciles the need for conserving cash and the reasonable expectations of the shareholders and the employees. The Board believed that the shareholders would prefer to receive part of a larger dividend in the shape of certificates than no dividend at all or a much smaller dividend all in cash, particularly as those shareholders who need money can convert their certificates into cash by selling them in the market, or to Banks. The announcement by the Central Bank of their willingness to buy at par all certificates offering within three months of the date of issue should, we think, have removed the least doubt or misgiving amongst the shareholders.

5. It is argued that it was open to the Company to resort to direct borrowing from Banks in preference to what is termed "compulsory borrowing" from the shareholders. This, of course, was practicable and easy and would have been the course taken by the Company in normal times. But the times, as explained above, are far from normal. Any borrowing from Banks at this juncture would have resulted in an appreciable reduction in the Company's borrowing powers which the Board have resolved to keep intact to meet a serious emergency if such should unfortunately arise. The total amount of cash which the Company will retain as a result of the recommendation of the Directors, and of the offer of the Agents to leave with the Company a proportionate amount of their commission, will be over a crore of rupees. We do not know what proportion of the certificates issued to the shareholders will be cashed with the Central Bank or other Banks, but we do not expect it to be a large one and the net result will thus be that the Company's capacity to borrow will have been conserved at a substantially higher level than would have been the case if a loan of a crore or so had, as suggested, been taken from Banks at this stage.

6. As regards point (3), we do not agree that the scheme is calculated to reduce the credit and prestige of the Company. The fact that the Company has given this clear indication of its determination to strengthen its ability to face any emergency, should enhance rather than lower its credit and prestige in the eyes of the public. Its position *vis-a-vis* the Government of India in the event of circumstances arising which will necessitate its turning to Government for help, will certainly be more favourable than if it had made no effort to conserve its resources.

7. Concerning the last point, it is one of the duties of the Managing Agents to provide finance for the Company and the Managing Agents have in the past faithfully carried out this duty. At a serious crisis in the affairs of the Company they did not hesitate to give away twenty-five per cent of the commission in perpetuity in order to secure the required finance to save the Company from disaster and the Ordinary and Deferred shareholders from the total loss of their capital. Even to-day they have guaranteed the cash credit arrangement of one crore of rupees with the Imperial Bank. Although the Company to-day has substantial liquid assets at its disposal, a situation may well arise in times like the present where this guarantee would become a personal liability to be met by the Agents out of their own resources. It does not follow that because it is the duty of the Managing Agents to provide finance, they should make no effort to strengthen the Company in times of impending danger and to conserve its resources. The Agents therefore consider they have done their full duty to the Company by recommending to the Board the scheme in question, and by making the offer of leaving with the Company for so long as the certificates remain unredeemed a substantial part of their commission for this year without interest, and in doing so they have been guided by no other consideration than that of the interests of the Company and of its shareholders. It is worth mentioning that the scheme recommended by the Agents was unanimously adopted by the Directors.

8. Tatas' own stake in the Steel Company is a very large one and is represented not only by the existing agency agreement, but also by the very substantial holdings in the shares of the Company. They are to-day the largest individual holders of its Ordinary and Deferred shares. The Managing Agents naturally aspire to have the good-will of the shareholders and they feel that they have had it so far, but in the long run they can retain it only by doing their utmost to consolidate and fortify the position of the Company and to safeguard its future in these very critical times. Their duty to the real owners of the Company, to its thousands of employees and to the country as a whole which has made sacrifices to promote the industry, must be discharged in such a manner as not to jeopardise the stability of the Company or its permanent interests for the sake of immediate gains."

* * * *

Criticism of the policy of the Managing Agents is, therefore, largely based on misunderstanding. The purpose and the necessity of the decision is quite clear.

* * * *

Raja Narayanlal Bansilal, Chairman of the *Harinagar Sugar Mills, Limited*, quite naturally criticised the policy of the Government towards the sugar industry. The control has not been effective as the sugar interests were not properly consulted. The wagon shortage has added to the difficulties of the industry.

The Company has made good progress during the year ended September 1941. Out of the net profit of Rs. 3,60,931 the sum of Rs. 1,25,000 (Rs. 1,40,000) has been set aside to depreciation while Rs. 85,000 (Rs. 44,000) has been provided for taxation. The allocation to Reserve Fund of Rs. 50,000 is the same as before. The dividend is to be maintained at 7½ per cent but a bonus of 2½ per cent is to be paid in addition.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Within our experience, we have not come across such plethoric conditions as obtain today in the short money market. The Government have been able to secure their full quota of Rs. 8 crores from treasury bills every week; and, though offer of tender bills on this scale has continued for some weeks, there is no abatement in the appetite of banks for short-term bills. During the week, there was even keener bidding at the auction than last week; and the average discount rate records a decline, though a small one. In spite of such a heavy drain from banking circles, deposits maintained by member banks with the Reserve Bank register a further rise. While the increase in deposits is general to all banks, the Imperial Bank is now in a position to build a record for high deposits almost every week. Considering the position of the Imperial Bank, from the point of view of swelling deposits, diminishing trade advances and persistently large cash balances, it can be said that the Bank is one of the most important pillars for treasury bill plan; and that it will continue to lend powerful aid in the coming weeks.

While, in the first two and a half years of war, only a small proportion of the increased active note circulation came back to banks as deposits, the trend in recent months seems to be that the increased note circulation results in increased deposits with banks and increased sales of treasury bills. From this point of view, it may be said that, so far as increased note circulation in recent months is concerned, it has not tended towards inflation.

On July 21, the amount of tender bills on offer was Rs. 8 crores; and applications amounted Rs. 15.29 crores. The average rate of accepted tenders was annas 9 and pies 9 percent per annum as compared with annas 10 last week. The offer of tender bills for next week is unchanged at Rs. 8 crores. From the return of the Imperial Bank, it is clear that, in the last week's auction, it took a substantial interest in treasury bills. The bank's investments are higher by Rs. 5½ crores at Rs. 85.37 crores. That is to say, nearly 75 percent of last week's sales of treasury bills was taken up by the Imperial Bank. In spite of this, the Bank's cash balances are only Rs. 1 crore down to Rs. 34.09 crores. For, as against the big bulge in investments, there has been, on the one hand, a big decline in advances from Rs. 31.30 crores to Rs. 28.88 crores, and there has been, on the other hand, a substantial rise in deposits from Rs. 136.74 crores to Rs. 139.46 crores. The total of treasury bill outstandings in the hands of the public is now Rs. 82 crores; and it is quite on the cards that the Rs. 100 crores mark is touched in the course of August.

The returns of the Reserve Bank for the week ended July 17 reveal a further payment made by the British Government to the Indian Government. Foreign balances held in the banking department have risen by Rs. 4.84 crores to Rs. 84.32 crores. We may, therefore, assume that sterling payments received from the British Government are of the order of Rs. 5 crores. This must be, presumably, in final settlement of June dues. This accounts for the rise in Central Government's deposits with the Reserve Bank by Rs. 3.87 crores to Rs. 15.15 crores. Payment in receipt of inter-governmental transactions is rather unusual in the middle of the month; but the present receipt of Rs. 5 crores brings up the total payments for June to the level of recent months. The deposits of the provincial governments have risen by Rs. 30¾ lakhs to Rs. 7 crores. Deposits of member banks record a substantial rise from Rs. 63.92 crores to Rs. 65.70 crores. Investments have risen from Rs. 8.12 crores to Rs. 9.30 crores.

There is no change worth mention in the return of the issue department except for a decrease of Rs. 1 crore in the active note circulation. This is the first week which records a decline in active note circulation since the beginning of the year. Till now, week after week, the return of the Reserve Bank has been recording continuous and fairly substantial increases. The change in the trend in the week under review does not, however, portend any change in the currency situation. At the same time, we may emphasise, in this context also, the important part played by large sales of treasury bills in regard to the keeping of inflationary forces under control.

The exchange market has been somewhat steadier with more bills showing and with fair remittance enquiry.

The closing rates are: Banks buy T.T. London Ready to six months forward at 1s. 5 31/32d.; and banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. for first and second months at 1s. 6 9/32d., and for the third and fourth months at 1s. 6 5/16d.

Money remains easy at ½ percent.

Firms' money for one to four months deposits ½ percent.

Banks buy T.T. New York Ready at 329½ for $100.

Banks sell T.T. New York Ready at 332½ for $100.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills were opened on Tuesday, July 21, 1942. Total amount offered was Rs. 15,28,75,000 (Rupees 15 crores 28 lakhs, 75 thousand). Tenders at Rs. 99 13-6 per cent and above were accepted in full, and those at Rs. 99-13-3 per cent were allotted approximately 16 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-9-9% (Rupees nil annas nine and pies nine) per annum.

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills will be received on Tuesday, July 28, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, July 27, 1942, at other centres. Successful tenderers should make payment on Friday, 1942. Other conditions are as usual.

During the week ended July 17, 1942, Government of India Treasury Bills for Rs. 9,36,00,000 (Rupees 9 crores 36 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday morning.

It is enough to record the fall in the treasury bill rate in London last week to below 1 percent to infer that there is no material change so far in money conditions. In the context of war developments the ease is exceptional, but a cable of Saturday last added that tightness developed as banks reduced the buying of bills. The reason canot be any public demand for cash since Bank deposits are growing as fast as ever. The Exchequer returns are said to be going up, as revenue flows in and war damage contributions are being paid. The Treasury has reduced this week its usual requirements of 6 months' deposits to £20 million though the tender for bills is the same as before. There was at the end of last month a feeling that the taxpayer's holiday would end by the middle of July and the flow of revenue would promptly increase. The cable referred to provides evidence of rising revenue in the middle of the month itself because certain reliefs have ceased and the usual quarterly payments have come in earlier. What money the tax certificates are giving can only be guessed. But the unemployment insurance fund must be helping the Exchequer greatly since the 'labour reserve' is known to be less than 100,000. In the second year of war, the number of workless fell to below a million. In the third year it has dwindled rapidly in the face of rising war production. Only recently Sir S. Reed commented on the increase in production in relation to the demands of the war. He argued that it is mainly a question of transport to Russia and the Middle East. All efforts directed towards dealing with the shipping problem have appeared of greater moment than adjustments of manpower. But manpower is not unimportant, and Britons overseas are reminded of their duty to serve the country. The conscription procedure is to be applied to the British in Egypt which is an independent country where the Britons are all presumably in essential jobs. The latest news indeed suggests that drafts on manpower will increase because the mining industry has got to produce more than ever to meet the demands of war production. The miners have given up their wage demands, following the award of the Master of the Rolls, but they are bent on forming a big union to deal with the Ministry of Fuel and the Mining Association. Nationalisation is not apparently a live issue at present like the increment in wages.

The general position is still one of reaching out to the Nazi standard of all-in warfare. Parliamentary debates reveal that the British war effort is realised to be inadequate; at least as not enough to break the Nazi war machine. The Bomber Command alone cannot secure victory, and the British public is enjoined to sacrifice more by way of reducing private fuel consumption in the interests of war production. The 'Tank' debate revealed some scepticism as to the British success in this field in relation to needs in the Middle East and Russia. The object of full, enforced production in the country has to be viewed as urgent and in this context the continuance of cheap money is essential. In relation either to the war or postwar reconstruction needs finance is of little moment as Mr. Keynes confessed. The problem for the State is not the same as that of the individual; it is merely a question of maintaining full employment in the present or the future by cutting down non-essential spending. Today when much fuss is made about the taxation in India, it is well to remember that the demands of reconstruction here will be small, and British experience will clearly show what policy to pursue after the war. Mr. Keynes has argued that the British Treasury is borrowing money at only half the rate of interest paid in the last war, with the result that the interest paid in 1941 on the new debt incurred in this war was actually more than offset by the relief to national resources of not having a large body of unemployed. In the light of this dictum one can readily say that the fall in unemployment this year is of exceptional interest as showing that additional production is being secured. Moreover, the continuance of financial controls is promised after the war. The controls may be retained in order to bring about a swift recovery in Britain's export trade. Home consumption must be restrained in the interests of export industries. Mr. Keynes has insisted over again that success in that field is the clue to success all along the line. Re-stocking and development will meet the demands of those discharged from war factories, and the whole thing resolves itself into a question of pace at which the postwar programme is put into operation, neither so slow as to cause unemployment nor so rapid as to cause inflation.

The problem for India will not be dissimilar and that is why an expert inquiry in advance has to be undertaken. The postwar committee must learn what has to be done to produce the right atmosphere and the present attempts to curb inflation are important for the avoidance of post-war inflation. The British Government, at any rate, has no idea of relaxing control, and its borrowing programme this year will have the important support of the usual big investors and of private persons who are paid off by concerns whose debentures mature for repayment. Conversion is feasible, but improbable, and the methods adopted a year ago to keep Home Corporations out in regard to new issues and conversion arrangements will furnish a clear precedent as to the way big companies should leave the field clear to the Treasury.

The tap bonds on sale from May must sell better in the autumn. The stock exchange is distinctly brighter. Last week again Home Industrials firmed up, and this week too all the good spots are in the industrial market. The interest in Oils has not waned of late but the rise in Courtaulds is more significant as proving that its American interests are a permanent standby. The lift in tobacco shares proves that taxation does not deter the investor. The stage is clearly set for a boomlet corresponding to that recorded after last August. The recovery in Egyptian loans is symptomatic of what is to come on the stock exchange. But that will be only a sideshow as compared with the rocklike firmness of giltedged in London. This behaviour is sure to have an effect in India in spite of the convergence of market interest on bullion and food grains at intervals.

Mr. Elmer Davis' office has opened a branch to publicise American war effort. Three things are mentioned as requiring publicity. The first is inflation. The Administration is dead against it. Stability in everything is the first aim. The President's war on inflation goes on. The tax bill providing for a 90 per cent levy on excess profits and taking out 45 per cent of corporation earnings is more than a revenue measure. It is meant to put down dividend distributions and remove the temptation to the recipients of higher dividends to spend. A determined effort is being made to divert idle money into the savings bonds and the complete identity of policy as between Britain and America deserves to be studied in India where a real need to educate the public in the use of money in wartime persists.

In the U.S.A. also bank deposits have been steadily rising so that a real need exists there to immobilise private funds. Since the flow of treasure imports has been checked in 1941 by the war the usual means of sterilisation is absent. The U.S. Treasury added to its stocks of gold by 20 million ounces valued at $741.8 million. The increase as compared with 1940 was inconsiderable. Result was that the Treasury held 650 million ounces worth $22.7 billion at the end of 1941. The holding at the end of June is known to be larger. The Treasury reduced its purchases of silver in 1941 and the total holding was 3,280 million ounces. On the basis of the present market price the Treasury must hold over a billion dollars' worth of silver at present and can provide at will all the silver that China and India may want at any time though the silver bloc is opposed to sales of foreign silver. The point deserves to be noted in connection with the present tendency to boost bullion prices because of everybody assuming that imports are impossible. If post-war inflation is unlikely, there is no justification for present prices of bullion—out of line with London and New York—to stand indefinitely. High prices as a concomitant of inflation are understandable, but the general belief is that inflation has been arrested by Government's measures. If Government had borrowed more at home, and accumulated bullion on its own account, a check of a more effective character would have been administered to speculation in bullion this year.

Editorial Comments

January-June—II

Commodity Markets

The first six months of 1942 have been full of surprises in the war situation as a result of the Japanese entry into the war on the side of the Axis powers, and as such, the disturbance to shipping routes and the alternative sources of production have considerably affected the course of stock and commodity markets. The year 1941 ended with gloomy forebodings in the markets and there was general anxiety to know what the war had in store for them in 1942. It was generally agreed that the new year would be more difficult, but it was never perhaps anticipated that there would be such a rapid collapse in British resistance and that Singapore, N. E. I., Rangoon and, later, the whole of Burma would come under enemy occupation. The enemy is now at our very door. Apart from the deterioration in public morale which the spectacular Japanese successes have caused, the rapid enemy advance has given rise to various new problems. While the Government of India should have been aware of the consequences of such enemy advance, they were caught unprepared and it is very difficult at the moment to bring about a satisfactory solution of the various problems concerned. In the short time that has elapsed, many things have been accomplished and, with a greater effort, much more can be done. The inactivity on the part of the Japanese during the past two months has, to a certain extent, alleviated general anxiety and the general feeling at the end of the half-year under review was much more hopeful than in the earlier months. It would be foolish, however, to minimise the difficulties of the problems involved and without greater effort and greater understanding it will not be possible to bring about a solution satisfactory to all concerned.

It was said that the outbreak of the war in the Far East has had far-reaching influence and has resulted in a considerable disturbance to the internal economy of the country. From the point of view of commodity markets, the entry of Japan into the war meant a dislocation of the supply routes in the Pacific. It will be remembered that the improvement in the freight position in 1941 was brought about only with the greater use of the Pacific supply routes. Supplies to the Middle East from the U.S.A. and exports of raw materials from this country were effected mostly by the Pacific route. The lease-lend ships did good work. There were good exports of jute manufactures, cotton for mixing purposes, manganese, mica, oilseeds and the like. It was possible to bring in imports of wheat, rice, sugar and other much-needed raw materials and manufactured articles. The position now, however, is very different.

Jute :

Export commodities have been very badly affected. Jute has been the worst sufferer. Only in November 1941, it was decided, after a good deal of controversy, that the jute crop should be ten annas of the recorded acreage in 1940. Mill consumption was expected to be maintained at a higher level and it was believed that exports would improve. The anticipations in this regard, however, have not come true. It has not been possible to find the necessary shipping space. The Bay of Bengal became unsafe for navigation and for a time exports had to be effected from Bombay. A considerable quantity of material is being sent to Bombay from Calcutta to be exported. This meant a strain on the internal transport system as well. The Bengal Government realised in February this year, that they were wrong in their calculations and the Premier issued an appeal to the growers to reduce the crop to eight annas from ten annas. As the licenses for growing the crop had been issued on the basis of ten annas, the growers were asked to treat the licenses as if they were issued for eight annas. Preparation of the land and even sowings had been finished in certain places. It now appears from the preliminary forecast figures that the Government propaganda has been in vain.

With mounting stocks of manufactured goods and abundant supplies of raw materials, mills could not naturally be induced to lay in large stocks. There is no possibility of an early increase in shipments. As a matter of fact, with the "rationalisation" proposals so much in the limelight, it is highly doubtful whether it will be possible to find any additional use for jute. The mill working hours were reduced in May from 60 to 54 hours per week and 10 per cent. of the looms also were sealed.

Indian Jat Middles have come down from Rs. 11-8 per maund to Rs. 8-8 per maund and even at the lower prices, there are not many buyers. Mofussil prices are below Calcutta parity prices as prices in Calcutta have been kept higher owing to the difficulty in getting transport facilities and higher packing costs.

Business in the futures market has been at a standstill and for a long time the quotation was around Rs. 56 per bale. With the leaving of many operators in the exodus early this year, no interest was taken at all. After a good deal of controversy, there was a reduction in the controlled rate to Rs. 51-8 per bale at which rate all the transactions for June delivery were closed. It was reported that there were no defaulters.

Jute Manufactures :

Prices for jute manufactures closed around the minimum prices fixed by the Indian Jute Mills Association at the end of 1941. The absence of selling by producers and the revival of demand caused a recovery in the quotation for 9 porters ready from Rs. 19 to Rs. 26 in February. The new war orders had an encouraging influence. But since March, prices have been on the downward grade. By the end of June, they were considerably below the minima fixed by the Indian Jute Mills Association. 9 porters were quoting Rs. 14-4. There was very little demand for hessian goods. Heavy goods were relatively better and prices for certain styles were above the minima fixed by the Indian Jute Mills Association. The outlook for jute manufactures is considered unsatisfactory. In the absence of any appreciable increase in shipments, it will not be possible to prevent further large increases.

Cotton :

As for cotton, it was at first feared that there would be a big slump in values especially for the short staples. Japan is the largest consumer of Indian cotton. But even prior to the outbreak of hostilities there was a steady decline in cotton exports. The freezing of Japanese assets in India had a considerable restraining influence. The initial decline in prices was not quite heavy and, for a time, in January, prices were kept up with the technically sound position and with the difficulty in tendering cotton on account of the shortage of wagon supplies. The course of prices in February and March, however, was in line with other markets. It was found necessary by the Government of India to issue appeals to the growers to reduce the acreage under new crop and switch over to the production of food crops. It was also announced that compensation would be paid to growers. This did not have quite the desired effect. The creation of a special fund, by increasing the duty on cotton import by one anna per lb., announced earlier, resulted early in a temporary rally. For several weeks there were reports that the Government would come out as buyers in the market for substantial quantities. Prices nevertheless continued to decline. By March-end, Broach April/May came down to Rs. 161-8, a drop of more than sixty points in the course of three months. The announcement by the Commerce Member that arrangements had been made for the purchase of cotton in mofussil centres through appointed agents brought about a rally. Thereafter the placing of large war orders and the liberal use of Indian cotton by mills resulted in a rally. At the close of June, most of the lost ground had been recovered. The cotton problem is not considered very difficult now.

Bullion :

Gold and silver prices in India have been moving independently of values in other countries. The rigorous exchange control and the absence of any imports have naturally resulted in a large appreciation in values with bursts of speculative buying. Whenever there was a deterioration in the war situation there was a jump in prices for both silver and gold. With the threat of a Japanese invasion of India and the loss of confidence in stock exchange values, Silver ready, therefore, touched a level as high as Rs. 96-8 on March 12, 1942. The loss of silver supplies from Burma, the decision of the Government of India to reduce the silver contents of the rupee and subsidiary coins and the exercise of the option by the Reserve Bank of India to deliver silver either in bullion or cut coin were contributory factors. The Reserve Bank was not in a position to interfere effectively. Only profit-taking and an improvement in the war situation brought down the rate to Rs. 80. The quotations have, in recent months, fluctuated between Rs. 82 and Rs. 85.

The London market has been absolutely uninteresting. Moderate trade demand was satisfied on occasions by official or producers' selling. The quotation for both spot and forward was, for the most part of the period under review, at 23¾d. Only on two occasions the rate went above the ceiling fixed by the Government to 23 9/16d. on speculative buying from India.

The gold market has been very sensitive to war developments and the quotation at Rs. 42 odd per tola has been left behind long ago. Ever since the outbreak of the Japanese war, the quotations for both ready and First settlement were nearer Rs. 50. The highest level for the war period was touched on March 1942 at Rs. 58-4 for Gold ready. The premium for ready gold over first settlement was as much as Rs. 2-12 on occasions. Quotations came down to below Rs. 50 only for some time and in recent weeks have been hovering around Rs. 52. There is a shortage of stocks in Bombay. Even with small investment or speculative buying, rates are, therefore, marked higher.

Sovereigns have been in greater demand. The assured fineness of gold content was responsible for the large buying and as they were available freely, a considerable premium was offered. The Reserve Bank also was agreeable to deliver sovereigns only at a premium of Rs. 6 per tola. A level as high as Rs. 42 was touched in March 1942. There was a reaction to Rs. 36-8, but there has since been a rise to Rs. 39-8.

Oilseeds :

As for oilseeds, the smaller crops and the increase in internal consumption enabled operators to adopt a reserved attitude. The strength of the grains market also was a helpful factor. During the past few weeks the British Government have found it difficult to get their requirements at scheduled rates and sellers have not been keen to dispose of quantities even at 10 per cent above the scheduled rates.

So far regarding export commodities and bullion.

Wheat :

As regards food grains, wheat and rice have presented very difficult problems. The shortage of wheat was felt even earlier. The reports regarding the suspension of buying by the British Ministry of Food and the control of prices in the U.P. and the Punjab failed to check the rise in prices. Sellers were not eager to dispose of stocks and as with the difficulties of shipping, Australian wheat supplies could not be secured, retailers sold at levels considerably above controlled rates. There was an acute shortage of wheat and flour in Delhi and stocks lying in godowns in the Delhi district had to be requisitioned by the Government. The measures in the Punjab and the U. P. to bring out hoarded stocks proved to be unsuccessful. For some time, exports from the Punjab and U.P. were banned and only after the appointment of the Wheat Commissioner to regulate exports from the provinces, the ban has been lifted. Futures trading has been suspended in Hapur and will not be revived without modifications in the method of trading.

Rice :

The question of providing adequate rice supplies did not acquire importance before the occupation of Burma by Japan. India is deficient to the extent of 3 per cent of her requirements of rice. The deficiency in this regard was secured from Burma till recently. The exports from this country in earlier months has accentuated the shortage. Even in Bengal, which accounts for one-third of the total crop, considerable difficulty is felt and the non-availability of transport facilities has added to these difficulties. In Madras, it has been necessary to reduce consumption in certain districts to provide other areas which do not grow enough rice. The control of prices was first adopted by the Bengal Government as from the beginning of this month. An announcement in this regard was made towards the end of June.

The third article in the series, January-June—III, A Review of Banks and Industrial profits, will appear in the next issue. The first article on Currency, Exchange and Finance appeared in the issue of "Indian Finance", dated July 11, 1941—Ed. I. F.

ANGLO-AMERICAN EFFORT

Few will hesitate to admit that on the Anglo-American conjunction of resources and experience depends not only the outcome of this war but the satisfactory development of the world's resources in peacetime. In a few days more will come the anniversary of the Atlantic Charter. That instrument excites little enthusiasm in India; but the United Nations have all learnt to think of it as a starting-point for reconstruction in peace. The more important aspects of co-operation, however, belong to the application of lease-lend and the acceptance of plans for pooling of resources for victory.

But co-operation for the war is one thing; that for peace is different. The U. S. A. has recently made arrangements similar to those concluded last July by the British Government with the many free Governments in London. The answer to the New Order has been slow in coming; but it has certainly taken shape. Not in the form of appropriations for the war but in the execution of doctrines appropriate to the period which follows the World dark age. It is in this setting that Anglo-American plans have to be examined. There has been shallow criticism of the trade treaty signed by Lord Halifax. It must be remembered that the treaty of February 1942 is different in scope and spirit from that of 1938 which was meant to break Imperial preference, as much for the benefit of the U.S. exporter as of the British manufacturer. This year's treaty is meant to serve other ends. To translate into a practical document the very vague aims propounded in two clauses of the Atlantic Charter has been the aim alike of Lord Halifax and Mr. Welles who has been content to give effect to Mr. Hull's plan for peace by economics.

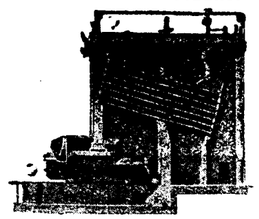
The treaty as such has no propaganda value—hence the inadequate publicity. And it is deemed unacceptable in India merely for its emphasis on low-tariff policies in the post-war world. On the other hand Indians have not learnt to recognise that by its pledge of reciprocal assistance and guarantee of stability the treaty is a prophylactic against a post-war depression. Freedom of trade and unrestricted investment are essential parts of reconstruction after the war. The problems of occupied countries will be many. They will require solution through free lending, unreserved relief activity and extensive shipment of materials. The doctrine of self-sufficiency in poverty deserves to be broken down for ever. The restoration of old ideas and methods appears essential in the view of those who are aware of the sufferings of occupied countries. The duty to help the occupied countries after the recovery of freedom is recognised by the U.S.A. which holds wheat stocks for Europe's benefit. The mere fact that the Dresdner Bank has got hold of one undertaking after another in Europe should not be allowed to weigh against the consideration that compensation for the unfortunate Allies must be provided by the victorious Allies. If the first job is the reconstruction of Europe America's interest is twofold. First, because she is in the war of her own choice, and secondly, because she has recognised of her own accord the claims of the Free Governments, first, by the freezing orders relating to American assets and latterly by extending lease-lend aid. The last war was fought and won before the Fourteen Points were enumerated. This time the Eight-Point plan appeared after the German conquest of Greece, and after Russia was invaded, but well in advance of the entry of America into the war and the amendment of the Neutrality Act of 1939. These are essential points to remember in describing how the U.S.A. which reverted to normalcy and adopted the Fordney tariff in 1921 will view the

world in a different light after the present war. The concentration of gold and silver in the U.S.A. increases the many responsibilities of the U.S.A. at this juncture. Mr. Morgenthau's admission early this year that he is all for Anglo-American co-operation and a single stable medium of exchange was a direct result of the Administration moving towards a concept of extra-hemispheric responsibilities. Until 1941 the U.S.A. by adhering rigidly to the Monroe Doctrine assumed no responsibility for either Europe or Asia. To-day the main doctrine of foreign policy is the extension of the good neighbourism to the whole globe and the elimination of all obstacles met with in that process. It is therefore possible for us to assume that the U.S.A. will be the big one at the peace conference, not only because disarmament and the problems of the Pacific cannot be settled by separate conferences, but because the U. S. A. has enormous post-war responsibilities. The U. S. agencies have been active in upholding Pan-American unity since 1940 by the Export-Import bank. In the post-war period it may be expected that Latin America will demand attention because trade with Europe will be slow to recover and secondly, because the developmental work undertaken, for example, in regard to Brazil's rubber will have to continue. There will be inevitably an awkward period. Brazilian cotton cannot -go back to Japan as before, and European markets will have to be secured. It is clear that U. S. cotton will suffer to some extent, and Britain as the chief buyer of U. S. cotton will have to consider such questions in a new light. The extensive development of North America's aluminium resources on the basis of Greenland's cryolite and Guiana's bauxite will limit opportunities for both Norway and France. Obviously U. S. aluminium, copper and steel must furnish the basis for Europe's reconstruction. The damage arising from years of war will have to be made good. Whether Germany contributes in the form of reparations or not, the reacquisition of colonies alone will not help Holland and Belgium to stand on their feet.

The European allies of Britain obviously constitute a definite charge on U. S. goodwill. The assumption of responsibility will help to promote a European settlement, more equitable than the Versailles settlement and secure for the few minor neutrals some say in the affairs of Europe. The readjustment of boundaries can be left to Europe's diplomats but reconstruction in broad aspects will have to be shouldered by the U.S.A. Food, medical supplies and housing will be the main immediate needs of the occupied countries. The rehabilitation of industry on the basis of U. S. participation in local industry or the grant of large loans is a bigger post-war issue. What Britain can do remains doubtful and the U.S.A. manifestly has unusual opportunities which she must accept. She has no intention of dodging them. The re-creation of the Polish textile industry or the Dutch aircraft industry are only specific aspects of the problem which entails continuous study. A common aim comes before a common policy, and the doctrine of continuous collaboration has to be made familiar in this year, when a new Congress has to be elected. The U. S. electorate's mandate is desired for the Administration's view of joint effort. The trade treaty with Britain is something to show to the third of the Senate that will be renewed by election in November. The U.S.A. cannot run the risk of getting a hostile committee go back on its plans for fundamental revision of the world's fiscal policy after the war.

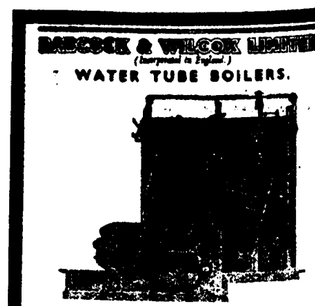
The unity of purpose mirrored in the trade pact is no concern of the British Empire which has qualified for U.S. aid and is unlikely to ask for the status quo ante because the Dominions have gained largely already. There is hardly a price for U. S. assistance except for return lease-lend facilities whereas the U.S.A.'s leaders aim at restoring the former standards of living in Europe and resuming overseas investment for the good of others.

Britain's exhaustion will be a depressing factor in the after war period and that is one reason why Britain has indicated she has no passion for quotas and bilateralism after the war. Until the Continental steel industry recovers fully British production will be seriously strained by home demand and the U.S.A. will have to help Europe. There is no going back to the cartel and concentration on a domestic boom of the type envisaged by Lord Keynes will leave Britain no time to devote to Europe.



A revolution in the defeated countries will multiply the responsibilities of victors, and the defeated will then have real claims for help. After the last war, during the blockade, Britain could, and did, give help. What she can do after the war is doubtful, for Britain has suffered like France, and her own need of U.S. materials may make her ready to dispense with the Import Duties Advisory Committee. In the postwar period British tariffs will probably have no influence on wages or employment, and the resumption of export trade will perhaps call for the reduction of costs. The U.S.A. also thinks of a postwar period different from the 'twenties, first, because the level of taxation will be such as to make exports more important than in the past, and secondly because capital goods will have to be turned out rapidly for a ravaged Europe and a starved home market which has been asked, for instance, to go short of sugar though Cuba and Puerto Rico are near.

The industrial demands of the future are definitely independent of the claims of new ventures in India. Their right to exist may be conceded, but the demands of European reconstruction must not be overlooked. There is no denying the claims of all countries to get U. S. materials at the lowest cost for competition must have its day. Europe will have to forget its tariffs. Most countries will have to accept Holland's old example of free trade and a big entrepot trade where that is possible. If India hopes to develop such a trade for the Middle East, clearly her interest lies in unreserved acceptance of the Anglo-American policy of greater freedom of trade. The treaty roughs in what M. Paul van Zeeland wrote up in his report. Economic appeasement will be highly necessary after the war, mainly because public debts are swollen and all nations except the U.S.A. are impoverished and will have to borrow heavily. It is true that India's requirements will be limited and a brisk import trade might prejudice the maintenance of wartime prosperity in her industries. But it must be admitted at the same time that the lost Colonies will have to get a new deal, and it cannot be suggested that preference for Indian textiles should be retained by Burma to the disadvantage of the Burmese consumer. It is probable that after the war India may not need rice from Burma and it would be intolerable, in the average Burman's view, to pay for the privilege of importing Indian cloth. Whatever benefits may have accrued from Colonial Preference cannot be expected. Should it appear necessary to favour Plate linseed against Indian in the post-war period or abolish the preference retained in favour of Empire tea it must be done, first because the U.K.'s obligations to the U.S. transcend anything known in history, and secondly because the U.K. will have different industries. Concentration would have knocked out the textile trades and stimulated the heavy industries. Fiscal policy must then be subordinated to industrial organisation. There is the further consideration that home agriculture must be supported in its present proportions. On that reckoning alone Lincolnshire's beet is more vital than West or East Indian sugar.



Until export trade with Europe is normal the U.K. will have a large excess of imports from the U.S.A. and due recognition of the inescapable economic consequences of the war calls for adequate concessions. The tax system may try to reduce the importance of all indirect taxation and Britain may have to go back to a regime of free imports at least for the good of her exporters, who would naturally object to barriers in old markets. Those who have vehemently argued against the Anglo-American treaty as a measure designed to abridge industrial progress in India by dividing up the import trade after the war do not care to note what losses have been sustained by the major industries. It is clearly impossible for British tyre manufacturers to get back their original share or for aluminium exporters to compete with indigenous concerns. Large scale imports of manufactured goods are uncertain on any calculation of Europe's needs. Woollen and silk goods will not be poured into India unless there is a two-shilling rupee or a two-rupee dollar to support the foreign manufacturer. And there is no real threat of exchange dumping. Our anticipation of a general scarcity of consumer's goods like cars, ice-boxes and typewriters in the U.S.A. itself naturally cuts at the root of any striking growth of trade with the U.S.A. on the basis of special arrangements.

The U.S.A. has practised preference only with her own dominions and Mr. Hull's policy since 1934 has sought to destroy exceptional privileges by extending the low-tariff area. To ask for special privileges either in India or Britain would be inconsistent with the record of Mr. Roosevelt and let it not be forgotten that Europe and Latin America will claim U.S. attention more than we know. There is again China where the British can do little after the war and the Americans can do much. If Indian Chambers of Commerce had an adequate idea of the strain involved in Britain's war effort there would be little talk of what has been done to stake out post-war claims in India. Tired and hungry nations are not keen on letting trade follow the flag. An assurance that import control, as practised at present, will end may be implicit in any pact, but surely it is to the interest of one and all that the absurd system of restrictions should end. The Indian manufacturer whose costs are forced up by slow, expensive and uncertain imports will certainly support the view that restrictions are as undesirable as the 20 per cent surcharge in force at present. We should admit that the foundations of a post-war world are being laid by joint planning, but India's claims are few just as her war effort is of small proportions. To suggest that her needs should be given undue importance would be an impertinence. As may be inferred from the loss and waste occasioned by the war Europe's needs will be many and acute. The U.S.A. will have to help out Britain and satisfy Latin America. A poor country like India cannot present special attractions and the industrialists who dream of a glut of U.S. goods jumping over the Indian tariff wall, which will remain high as duties are renewed without inquiry, are clearly sketching what is absurd. The U.S.A. may send cotton, tobacco and steel—goods for which there is demand despite the tariff but the U.S.A. will have to take up also Japan's role as supplier of manufactured goods and capital for China and India. Any large offtake of Indian materials will naturally impose an obligation to take in return many goods, more likely equipment and apparatus than high-cost consumer goods.

Still More Changes

Important changes in Australia are calculated to strengthen the Federal Government's position. Now that war expenditure is put at £1 million per diem since 1942-43 war outlay is put at £360 million. Australia needs to have a stronger central authority. The opposition leader, Mr. Hughes, asked last month for a referendum because he argued that the States can do useful work in local matters but the day for posturing in the robes of sovereignty was gone. The Commonwealth has succeeded in getting a uniform tax in the States though four of thtm wanted to get the High Court to pronounce on the validity of the acts passed in June by the Lower House. Australia's food problem is not of the same sort as Britain's. It is one of adjusting the demands of defence services with those of civilians. Planning of production would devolve on the Food Council set up by the Supply Minister, Mr. Beasley. It is expected that the Council will review the food needs of the nation with the object of determining what action, if any, is necessary to increase production or control the distribution and export of food. Restrictions are envisaged. There has been an appeal to householders to grow their own vegetables to ease the load on commercial suppliers. To make sacrifices and conform to regulations is felt to be necessary. The possibility of rationing is foreshadowed by rules relating to the shape of bread. Only three shapes of bread made of white, or wholemeal and white flour will be permitted under the zoning system ordered by the Department of War Organisation of Industry which will license all bakers. There will be no fancy types. The whole of the Metropolitan areas will be zoned for the delivery once a day of bread and milk. Butchers are not permitted to deliver meat to householders within a mile of their shops. The saving of time and labour is in line with the plans to divert manpower. Mr. Curtin formulated at a Trade Unions Conference the three principles of wartime labour policy, namely rationalisation, employment of women and dilution of labour. The first principle of rationalisation is already being carried out by the Department of War Organisation of Industry in two hundred industries or sections of industry. Because of the necessity of providing for war work and defence services, rationalisation in order to eliminate waste of labour, material and transport in a large number of industries had begun. Labour leaders have admitted that rationalisation would prove of value even after the war. Long overdue reforms are being effected under the Federal Government's wartime powers. Even the Civil Service is being combed out for men of military age. Official estimates show that there are betwetn 16,000 and 17,000 permanent and about 10,000 temporary male civil servants aged between 16 and 44. There is in addition a small army of employees not subject to the Public Service Act. A recent report states that Government departments have discarded the policy of restraining staff from joining the forces, and in future only indispensable men would be reserved.

"Indian Finance" understands that at a meeting of the members of the Indian Jute Mills Association an alternative scheme for "rationalisation" has been prepared. This scheme will be submitted to the Government of India by the deputation that is proceeding to Delhi this week-end. It is pointed out that the scheme, as prepared by the I.J.M.A., will enable a reduction of 40 per cent. in wagon supplies to the jute industry.

The industry is opposed to rationalisation as it will result in the unemployment of a large number of workers and disturb the internal economy of the province.

Australia's Government has announced its decision to put down the manufacture of cosmetics, nail lacquers, bath salts, scents and brilliantine will be soon unprocurable because of the prohibition. The order will certainly secure for national service a number of chemists. In the same way, Australia has recently resolved to cut beer production by a third. Drastic action has been taken by the Production Executive of the Federal Cabinet to curtail production of beer immediately, also to restrict sale of vertising of spirituous liquors.

Australia's war effort has many aspects in addition to price-stops and strike-bans. Partial prohibition will not appear unwelcome though the shareholders of brewery companies will feel the draught.

Co-operation in China

China is poor, rural, backward and at war. She differs, however, from India in having a viable co-operative movement. Its growth in the war period, since July 1937, has been amazing. From 46,983 societies with about 3.1 million members in 1937, the movement has progressed to 154,378 societies with about 9.4 million members. At the end of 1941 the total capital was $44.33 million. Ten years earlier, the movement was anaemic; now war, entailing the death of organised industry in occupied areas, has given great scope to co-operatives. The China Information Bulletin states that the Executive Yuan ordered the Government organisations to establish co-operatives to help the members of the public services and their families. For the solution of wartime economic problems co-operation has proved adequate as producers and consumers' co-operatives have made good and further have increased rapidly in numbe More societies are to be organised, and th Ministry of Social Affairs has asked th Chinese National Government to assig $200 million out of the U. S. loan mainl to promote co-operation which woul enlarge production and keep down price the prime object of the U. S. loan mad recently. In 1941, the village town, an paid societies were grouped within th new hsien or county. At the end of 194 Kiangsi claimed the best results i membership and capital and Suiyan th most indifferent. The majority of the ne societies were credit societies, but in th city of Chungking the majority ar inevitably consumers' associations. Th growth of the movement in the war perio redounds to the credit of the Governmen In the quicksands of war co-operatio alone seems stable and the best way o extending self-help. The consumers' co porations are a defence against profiteer ing which is endemic in wartime. Tha surely holds a lesson for India where th co-operative movement stands 'frozen' i more ways than one. In the course o 1941 the Chinese co-operatives attracte about a million new members. Ne societies are expected to spring u Farmers have been helped in the past t keep agriculture going and the shift o industry to the far west is one of th achievements for which the co-operative may take some part of the credit.

U.S. Post-war aims

The changes in American economy un der the stress of war have impelled a revi sion of aims. Keeping the war effort go ing without a boom is of course an accept ed aim but to that has been appende another for avoiding a slump after th war. The plan to keep up full employ ment continuously has been prepared b Professor Hansen of Harvard for the Re sources Planning Board. Prof. Hanse expects a boom after the war on accoun of accumulated shortages. But a slum usually follows a boom and it can b avoided, for he denies outright that th world will be too poor to stand a boom He argues that the U. S. will get its wa production going and larger employmen will remain when there is a diversion o labour to consumers' goods and industries It is urged that technical equipment an skilled labour will remain alongside o larger resources for progress. The national income must go up and the stan dard of living will be higher. Prof Hansen claims that the U. S. national in come will be $100 million in terms of 194 dollars. The higher incomelevel must b held by keeping up production. Private business should help, and the Govern ment purchases too must be on a liberal scale.

They must join in keeping up payrolls and maintain full employment. Taxation has its function like borrowing after the war. Complete transfers of income from one group to another will make for stability. With annual income up by 50 percent paying interest on war debt will not be hard in the future. There is really no need to pay off debt contracted in wartime. Annual interest charges alone matter. The old austerity of complete punctual repayment will bring a depression nearer. Prof. Hansen argues that a big debt causes no worry to the citizen who should think of it as a means to correct mistakes in the distribution of income. Prof. Hansen lists high corporate and private income-taxes along with an E.P.T. as desirable. He asks for sharply progressive estate duties and broadening of the tax base together with steeply graduated surtaxes along with a sharp increase of excess on commodities competing with the war programme. He favours part payment of wages etc. in defence bonds. Deferred wages and compulsory saving is approved by the U.S. economist and the most radical change in consumption so as to use wood or concrete in place of steel and cotton in place of wool or silk. Any such change will militate against recovery in foreign trade but will help home industries. While wartime controls and taxes will be left U.S.A. should reduce taxes on consumption in the postwar period apart from the measures to stimulate private investment by preparing plans beforehand. Taxation of companies is to be lightened but everything else is to stay so that reconstruction and development could be financed without difficulty. Increases in social service expenditure are part of the afterwar plan submitted by Prof. Hansen who wants the Treasury to resort to public works as in the New Deal era and revert to big spending for public welfare.

Cotton Futures

From Bombay University comes a study of the cotton markets. It is a subject of perennial and dominant interest. Changes in hedge contracts effected this week are unusually important for price-changes this year and the restricted purchases of the middleman do not reduce his importance. It must, therefore,be said that Mr. Dholakia's study of the Indian cotton market (New Book Co., Bombay, Rs. 10) breaks new ground in discussing the scope of forward trading in cotton, which used to be India's chief export in most years. The E.C.I.A. and the Mahajan Association hove not yet coalesced but the experience obtained in the market has suggested some lines of reform. Speculation, as a means of insurance, has its familiar aspects; but its effects on quality, standardisation etc., are also to be mentioned. Bombay as an organised market has no history prior to 1875 but the start was poor. It is to the credit of Sir James Mackenna and Sir N. N. Wadia that they made the legislative framework of the Bombay cotton market after their enquiry for the better regulation of the trade. The world's trade associations are autonomous but the biggest, that at Liverpool, is now out of business because the import and distribution of cotton is now done by an official Controller. Straddle selling is not peculiar to Bombay and it is an element making for stability at all times. It is all over and done with, it will be argued at present; but within the country it presents definite advantages. The cotton market is active and sensitive and option business adds an element of stability. The spot market is clearly ancillary to hedging for which a futures market is essential. Mr. Dholakia's study indicates that the cotton-grower is definitely helped by the continuance of a futures market though control measures in war-time appear desirable.

Bombay Life

A big event in Bombay for insurance circles was the speech of Mr. Manecklal Premchand at the Bombay Life Meeting a fortnight ago. New business in the case of this company did not go up, but the expense ratio fell by 3 per cent. in 1941. The company's progress is readily measured by the last report. New business produced 5,109 policies for Rs. 1.11 crores. As one of the two companies with good business in Malaya, the company is hit as it is by the loss of Burma though not to the same extent. The decline in new business last year arose largely from the reduction in oversea business. Premiums gave Rs. 40.5 lakhs and investments gave Rs. 6.44 lakhs. Owing to the larger provision for taxes the increase in 1941 was only Rs. 63,000. Net yield on the funds is put at 4.06 per cent. as against 4.28 per cent. in 1940. Investments are being carefully chosen to give the best yield consistent with maximum safety. Expenses fell despite the rise in business and income. The ratio has fallen from 30.44 to 27 per cent. in a single year. It is likely to fall further as promised by the Chairman. The fund has risen by Rs. 24 lakhs as a result of successful business. The value of investments actually was higher than the cost. The loss incurred through previous depreciation has been made good, and the Board is going to transfer back the investment Reserve to the Life Fund. Mr. Premchand is against declaring a bonus in the war period and hopes that Government will accept the Insurance Advisory Committee's recommendation in the matter.

Canadian Production

Winter was a slack period for Canadian industry which recovered only in February when the production index rose to 164 per cent. of the 1937 quantum. Reorganisation and regrouping for the Pacific warfare was assumed to be over by February when the utilisation of current factory capacity was also larger than in January. War industry showed longer output but civilian consumption trades were dull except for the seasonal increase in the women's clothing trade. The production of foodstuffs, especially confectionery fell away. Footwear and furnishings fell off like the outturn in the furniture trade. It was only in the sawmills that employment was larger. The secondary industries were clearly being diverted to war uses. Automobile output was adjusted to meet either war or vital commercial needs. Expansion in the iron and steel trade was clearly guided by the war. The most recent reports suggest that an increasing number of metal-working industries are operating special armament sections. In this many will again detect a resemblance to the jobbing that prevails in India. Progress in Canadian industry during 1941 is to be measured mainly in the expansion of pulp and paper products. In February, 1941 only 91 per cent. of current capacity was utilised. A year later the output was equal to 109 per cent. of capacity while the index in relation to 1937 was fully 15 points higher. Progress is most marked in the iron and steel trades particularly, the heavy branch. Appreciable progress is to be noted under non-ferrous metal products as well. Chemical production has risen to a limited extent. Employment in the manufacturing industries had risen steadily during 1941 to stand at the highest point in December. A slight recession followed in January but the payroll index was 41 points higher as compared with January, 1941. The improvement in receipts of both the Canadian Pacific and the National Railways is a measure of the increase in industrial and trade activity in 1941. There was shown in January alone a rise of over 20 per cent. in railway earnings as compared in January, 1941. Bank clearing statistics reflected in equal measure the same expansion of activity. The Dominion Government's revenue, particularly from income-tax, kept rising throughout the last year. The new and enhanced excises contributed largely to the rise in revenue for the 10 months ended January which was 80 per cent. ahead of the 1940-41 receipts; yet fell short of expenditure by 221 million dollars. The rise in note circulation like the rise in prices, up to and after January, shows that Canadian conditions resemble in many ways Indian. Prices of agricultural commodities rose in February since exports of cattle to the U.S.A. were larger. A distinctive feature of the dairy industry is the large increase in cheese production. Canada is clearly concentrating on meeting British demand.

Import Control

The working of import control on the Empire is attested by the many notifications reproduced from time to time in the "Indian Trade Journal." Ceylon has a long list defining the things which should be secured under license. Because of control absolute prohibition extends and furniture but not to hides and skins, raw and salted The Controller of Imports cann grant exemption in certain cases. Ceylon like India distinguishes between Canada and Newfoundland and other parts of the Empire in permitting imports from the latter under license. The license is required in case of all imports despatched after May 1 from territory other than Canada or Newfoundland or from enemy-occupied

regions. The license is required for beans, rice, coffee and currystuffs as also milk and milk foods, sugar and sugarcandy. Fertilisers are also to be imported only under license so that Ceylon is regulating imports of essentials and non-essentials in the same way. The list contains 165 articles and includes writing and printing paper, stationery, rubber tyres and tubes, tea-chests and silver bullion and coin. Agricultural tools and instruments other than machine tools, ploughshares and harrows if of Empire origin and electric wires and cables of Empire manufacture which are excluded from the open general license can be obtained by permit.

Another market in which the outlook for Indian manufactures must remain a trifle doubtful is Egypt. The Anglo-Egyptian trade treaty has been renewed provisionally for another year as from February, but the Prime Minister has issued a proclamation defining the aims and scope of import control. Permits have to be procured before imports are allowed, and sea transport priority will be afforded to certain imports only. The Egyptian control defines the license procedure superseding earlier regulations and special preference is shown to Iran, East Africa, Rhodesia and Turkey which can send to Egypt certain articles like soap and silk. Permission is accorded to the importation of alum, caustic soda, dyes, tanning materials, raw metals, wool and iron and steel in various forms, but exclusive privileges are conferred on the factories which need chemicals etc. and the merchants who supply them. Permission is also given by the Ministry of Finance for the import of chemicals, drugs medicines, paints and colours, printing paper, wrapping paper, jute sacks, cotton manufactures and coffee. It is clear that the licensing procedure will no more prejudice the Indian exporter than the 5 per cent. surcharge on customs and excise duties at present in force in Egypt. The Egyptian Government stipulated that import should be regulated by known consumption and raw materials meant for home industries should be given preference. New dealers have been told that they will have no chance against old, well-established importers. The Ministry has announced that goods wanted for Government or the Army would be given preference. Evidently permits are not issued by the Middle East Supply Centre since it has been announced that the Egyptian permit number should be quoted for reference by the authorities in exporting countries and no correspondence should be addressed to or enquiries made at the Middle East Supply centre.

New Zealand has increased her import quotas of drugs, essential oils and gums and resins but every other item of trade intelligence points to the adoption of control meant to save at once exchange and shipping space. Tanganiyika has imposed a customs surcharge and Kenya has announced that carpets and rugs and also floor covering of any kind except durries cannot be imported into Uganda, Kenya, Zanzibar and other territories. The only items of interest to India are the reduction of duty on hemp and jute bags imported into Chile. The reduction in duty was effective as from Jan. 8 and will continue for one year. The only country which has relaxed recently import control is Newfoundland while Iraq has waived the rule as to certificates of origin for cotton, silk and artificial silk piecegoods so that Indian shippers will have a privileged position.

Japan's Burdens

How the war is pulling Japan's finances to pieces can be inferred from a Chinese estimate of the costs of the Pacific war for Japan. A special article in the China Times dwelt on the fact that the war budget at 22,330 million yen constituted 72 per cent. of the whole budget. After entry into the war an emergency appropriation of 2,800 million yen had to be made on December 16. The succeeding budget reflects the enormous spending enforced by the war. The 1942-43 budget approved by the Diet provides for 18,000 million yen as war expenditure and 8,698 million yen for ordinary expenditure. The ordinary revenue of course is far below the expenditure. Though the war cost is superficially lower in respect of 1942-43 Japan has been forced to increase indirect taxation. It has risen to four times the pre-war level. The per capita burden is nearly as much greater. But all the same higher taxation leading to bigger revenue will meet only a fifth of the war costs. Borrowing is indicated so that up to the end of March, 1942 war bonds issued amounted to 28,300 million yen. It is assumed that 40,000 million yen will have to be raised in the current year. The only big regular buyer of bonds is the Bank of Japan which starts to issue notes against the additions to its securities.

War expenditure showed a big rise in 1941 and threatens in 1942 to be more than double the 11,743 million yen recorded in 1941. Ordinary expenditure has been rising at the same time as war expenditure. Large increases were reported by the Army, Navy, Industry and other ministries. Although expenditure on the promotion of civil aviation, new enterprises and the care of soldiers' families were closely related to the war they were not assigned to the war bill but treated as regular recurring expenditure. If the Army and Navy estimates are added to the war costs the total for five years would appear to be 55,000 million yen equal to 75 per cent. of the total public expenditure for the five years. The Army and Navy will in 1942-43 take up 3,000 million yen in addition to 18,000 million yen allotted for the prosecution of the war. The rise in military expenditure explains the swollen debt. In June, 1937 the total debt was 10,580 million yen inclusive of external debt. At the end of March, 1942 new issues had pushed up the debt by over 17,672 million yen. No considerable redemption of debt in the war period has taken place. Total debt stood in March at 28,252 million yen which is not large in relation to the annual budget but is dangerously high after five years of chronic borrowing against swelling deficits. The last vote of credit led to a new issue of war bonds though the debt rose by 5,877 millions between 1941 and 1942. The Chinese estimate is that the total debt must be more than 40,000 million yen. Heavy borrowing has forced down the standard of living though the price control system is theoretically protecting them against the inflation engendered in part by the heavy subscriptions to war loans by the Bank of Japan. It is the financial suicide portended by the debt that led Marshal Chiang to remark recently that Japan's real strength must not be overestimated. The trade and shipping losses represent a loss of income that must affect total tax revenue which came to 3,690 million yen in 1941 and is likely to fall away, thereby increasing the annual addition to debt of which a part is forced on the people whose difficulties

are not likely to diminish through the 'spend less, save more' campaign.

New Opportunities in Education

Of the work of the Board of Education in wartime little is known. But it is certainly meeting its responsibilities and it is taking up the job of putting young people between 16 and 18 into jobs of some kind or other. Mr. R. A. Butler in a broadcast this year said that the Board is co-operating with many voluntary agencies. Evacuation and reception cast special responsibilities but the Board is now busier with those who have left school. Mr. Butler declared that children taken out from cities to safe areas gained in health and educational opportunities. He spoke of the gain under nature study. Camp schools which have the merit of being in the country and introducing the boarding idea were made available to evacuees. Mr. Butler hoped that the new experience will play its part in ending the divorce between town and country. School meals and school milk have been maintained and Mr. Butler declared that thanks to the magnificient supplies of food which have come to us from the U.S.A. and the Dominions we have been able to safeguard the meals of children and we have made a point of improving them. He added that at the time of the year they had reached the figure of half a million children receiving meals at school. In the next few months it is hoped to double the figure. As for milk, three-quarters of the children in British schools are receiving milk at school.

An important development due to the diversion of women to war work is the care of younger children. Mr. Butler stated that wartime nurseries are being set up to meet the needs. Courses of study are being improved, according to Mr. Butler. He said that special courses are being given on the history and customs of America. Other new ideas, provided the child's day is not too crowded, are to be tried in the schools. Mr. Butler mentioned that children seemed to be doing as well in the exams as ever they did in the years before the war. Children at school are not forgetting national service. In some areas the acreage of school gardens has been more than doubled. In one county the school gardens produced something like 120 tons of vegetables. Children are also doing salvage work, collecting savings and working for the country's welfare. The children in Britain have not been neglected by any means and the biggest achievement of the Board of Education in wartime has been to keep up schools to the mark and overcome successfully all the difficulties and disabilities noticed in 1940.

U. S. Sugar Rationing

A note in "Indian Sugar" details the U. S. Government's action in regard to sugar. The maximum price has been fixed and rationing has also come. It is the first food article to come under the price ceiling rule. Both are meant to curb the rise in prices. Sugar consumption in the U.S.A. is on the average about 100 lbs. per year but of this high per capita figure 25 lbs. goes to industry and only 75 lbs. goes into direct consumption. The chief aim of rationing is to lower the average consumption in 1942 to 50 lbs. per head as compared with 75 lbs. in 1941. Rationing is the result of the loss of the Philippines and the reduction in imports from Hawaii. Moreover cane supplies in Puerto Rico and Cuba are utilised increasingly for black-strap molasses to be converted into smokeless powder. The U.S.A. aims also to ship this year 950,000 tons of sugar to Russia. To keep supplies going smoothly the O.P.A. stated on rationing. It asked those with private stocks to sell sugar back to shops or friends.

The rationing procedure is justified in order to keep up the industrial uses of sugar. Imports are not controlled as they are in Britain. The ration-book procedure belongs to Britain because each buyer is tagged to a retailer. In the U.S.A. the buyer has only to tear off stamps against purchasers. He can take his choice of shops and can take any quantity he wants. The War Production Board checks up on sugar production at the refineries and assigns trade areas. The problem of supply is largely one of import and distribution. Whether the U.S.A. gets more or less sugar depends to a greater extent on shipping facilities upon ability to import than upon whether they grow more beets in the west or more cane in Louisiana. The O.P.A.'s observations for obvious reasons deserve reproduction. Distribution is a big factor in the job of preparing for rationing. The problem is to get the sugar around. There has to be sugar in every part of the country to back up every ration stamp because stamps are a form of currency. A consumer's money is no good unless accompanied by a stamp. O.P.A. asked for willing co-operation as rationing is meant to ensure fair and equal treatment for every citizen.

Provident Funds

In the Bengal Chamber's last Abstract of Proceedings will be found a reference to the subject of claims for taking out provident funds by resignation or retirement. The Chamber asked the Government of India to take note of the tendency apparent among classes of industrial and commercial employees to submit resignations with the express purpose of obtaining possession of balances standing to their credit in provident funds. The Chamber pointed out that unless prompt and effective steps were taken to check this tendency it might have serious effects. The practice of resigning with the object of securing possession of substantial sums of ready money is much the same as hoarding which the Government discouraged. Normally the existence of a staff provident fund makes for ultimate security and continuity of service; the present circumstances, said the Chamber's letter, produced the opposite effect. Employees essential to war production were encouraged to leave their posts by the chance of taking the balances in the provident fund. The Chamber discussed the further effects of the tendency referred to. Large amounts were invested by recognised and other provident funds in Government and other trustee stocks. If by reason of large scale resignations provident funds were forced to sell their securities to pay outgoing employees the effects on an already depressed stock market would be embarrassing and the result would be to encourage otherwise loyal employees to follow suit before the falling market went further against them. In asking for effective measures the

Chamber conceded that it was a temporary phase arising from the threat to Eastern India. The Chamber recognised certain other aspects of the question. Allowances must be made for those who lost their employment or gave it up on account of the war. Moreover part of the fund was the employer's own money. Remedies were suggested and it was recommended that employers should delay settlement of provident fund accounts unless resignation was justified. The Government of India replied that for the sake of temporary conditions they would be reluctant to take action which might result in a permanent loss of confidence among employees. The reply to the Chamber stated that the intention behind Explanation 2 added to section 5 of the Essential Services Ordinance, 1941, is that permission to resign should be refused unless satisfactory reason is established where the retention of the person concerned is of importance to the working of the scheme in question or where a number of other resignations essential to the undertaking might be expected to follow. The procedure of the provident fund withdrawal could be dealt with by delay and its ill-effects reduced. The letter stated that steady and consistent strengthening of the stock market and the decision of Central and Provincial Governments to stand behind approved securities together with the Reserve Bank's readiness to buy stocks on offer have produced improvement after which Bank advances should be obtainable against trustee securities so that payments against legitimate claims could be made. Government concluded by stating that it would prefer to take no action but would watch developments.

Oil in 1941

The world's oil production in 1941 can only be guessed but the output of crude oil exceeded that of 1940 owing to the increase in consumption in many countries. Estimates of production usually vary but it is universally recognised that the spread of war has more than offset the curtailment of civilian consumption. The estimate of the "Petroleum Times" made in the April number puts the world outturn of petrol and its substitutes in 1941 at 2,360.16 million barrels as against 2,182.88 million barrels in the previous year. The estimate is higher than that of other authorities, but it points decisively to a rise of 8 per cent. in world output. Consumption in 1941 was higher than expected and the total of 2,066.65 million barrels is exclusive of military consumption except in the U.S.A. The U.S.A. alone used up 1,492 million barrels or over 70 per cent. of the world's oil. U.S. consumption because of an increase of 153.23 million barrels over 1940 reached an all-time high. Military consumption largely accounts for this growth. The spreading war takes up more oil and civilian consumption generally has declined by over 109.5 million barrels in all countries excepting the U.S.A. The estimate of consumption reveals an addition to world stocks but the addition cannot be in Axis countries. The total output available to the Axis is put at 89 million barrels. In a normal year the countries under the Axis used up 183 million barrels. Even if civilian consumption were cut by 80 per cent. about 37 million barrels would be needed and the Axis would have to manage with 52 million barrels. In any event previous stocks must be drawn upon. Japan's production of oil or substitutes is put at 8.2 million barrels but of this as much as 5 million barrels must be earmarked for civilian consumption. A margin of 3.2 million barrels for war purposes seems too narrow and carefully built up stocks must have been heavily drawn upon. There is, however, nothing to suggest that shortage of oil, as suggested before the war broke out, must force Japan out of the war. The assumption of many writers that Japan would not stand a six weeks' war finds no support because Japan had collected stocks before July last and the need to import oil on the same scale as in 1938 was absent. The difficulty of making use of Sumatra's or Borneo's oil has been frequently referred to recently. Voluntary destruction of wells and equipment in Burma and elsewhere has been thorough. Britain looks to Trinadad for much oil to-day. Among the Dominions Canada alone is well placed in regard to oil but even there the rationing procedure has been adopted and charcoal gas producers have become common. The war has raised the world output with the exception of Russia. Venezuelan production keeps rising and the Caribbean belt like the Middle East is vital for the United nations.

The efficiency and the gallantry of the R. A. F. Bomber Command are two of most important factors in winning the war.

Travancore's Development

In the valedictory survey of Travancore's affairs by Sir C. P. Ramaswami Ayyer there will be found much to supplement details in the budget presented last week to the State legislature. Travancore's industries after languishing for a period, are flourishing. Industrialisation has been assisted by the Pallivasal Project; minor industries are making headway. The rubber factory, for instance, made a profit of Rs. 5 lakhs last year and the profit is expected to increase to Rs. 7 lakhs. China clay and plywood are among materials asked for by the Supply Department. Both are being produced by State-owned concerns. Sir C. P. Ramaswami Ayyer mentioned the expected advent of a glass factory in Travancore. He stated also that an agreement had been entered into for starting a cement factory. Pending the establishment of a factory, the cement manufacturer had agreed to sell cement to the Government on the same basis as it would get if the factory were at work. A new by-product, for which American demand is expected to be large, is cashewnut oil. The older coir industry seemed on the verge of collapse but it has pulled itself together since the Government of India placed a large order. His reference to rubber indeed suggests that Travancore's planters will work together for maximum production. The Dewan detailed measures for new planting and for control in the direction of conserving supplies for essential purposes. Tapioca was described as an article with unusual prospects in both the textile and paper industries, since tapioca's value as a source of starch is being recognised of late.

The progress of local industry is clearly reflected in the State budget. A surplus of Rs. 5.09 lakhs is anticipated but even more striking is the growth of revenue during 1941-42, an increase which will continue into the coming year. The total revenue for 1942-43 on the basis of cautious estimates is put at Rs. 290.22 lakhs because of the continuous growth of revenue from forests, customs etc. In the current year revenue rose to over Rs. 304 lakhs and the surplus of Rs. 24.32 lakhs has been allocated to the Revenue Reserve Fund. In spite of a rise of Rs. 8 lakhs in total expenditure as compared with 1941-42 the State will have a surplus. The increase in expenditure is accounted for by larger appropriations for education and uplift of backward classes. The Medical, Public Works and Agricultural Departments will also benefit through larger provision. New taxation proposed is that the export cess on rubber should be raised from Re. 1 to Rs. 1-8 per cwt. The higher cess and larger exports will be only an acknowledgement of the prosperity of Travancore planters who are evidently prepared for maximum production since schedule prices have been revised. The State is even more fortunate in having surpluses in succession, not surprising as gross revenue has risen by over Rs. 50 lakhs during the present Dewan's term of office.

Bharat's Achievements

Bharat in virtue of its age and standing in Northern India has always been among the first half a dozen life offices in India. The Company has certainly succeeded in holding new business up to the 1940 level. The report states that 6,902 proposals assuring in the aggregate Rs. 159.94 lakhs were received and 6,435 resulted in policies assuring in the aggregate over Rs. 141 lakhs. Total premium income for the year amounted to Rs. 41.09 lakhs. First year's premiums yielded Rs. 5.56 lakhs nearly. The single premiums alone totalled Rs. 1,84,970. The year's receipts were raised by about 9.52 lakhs by way of interest, dividend and rent. The revenue account shows also miscellaneous receipts in addition to an income-tax refund of Rs. 2.2 lakhs. The revenue account shows that, apart from gains on the sale of securities, the net appreciation in securities to the extent of Rs. 23.22 lakhs has been utilised. The result is that the Life Fund is strengthened by over Rs. 17 lakhs. The Life Fund is definitely over Rs. 2 crores at the end of 1941. The net annual income is over Rs. 50.35 lakhs and the company's stronger position at the end of 1941 is proved again by the expansion in income and the addition to the Life Fund. The most remarkable achievement of the year relates to the reduction in expenses. Claims in the year took over Rs. 20.07 lakhs. The transfer to Investment Reserve of Rs. 23.22 lakhs is a self-balancing entry in the books as may be inferred from the balancesheet which shows that the previous depreciation has been made good by the improvement in values in the next year. This is of less interest than the big reduction effected in the expense ratio for 1941 which is now reasonably high at 26.9 per cent.

The continued growth of business will naturally guide the policy of the Company in regard to expenses. The biggest change of recent years is not however the increase in giltedged securities held by the Company, for giltedged have their disadvantages, but in the large holding of sound preference shares. The Company at the end of 1941 held over Rs. 55 lakhs in giltedged and over Rs. 114.04 lakhs in preference and other shares. The proportion is unusual, but distinctly advantageous. The Company's investment in Lahore Electric in the form of preference and ordinary shares is known to be as high as Rs. 83.25 lakhs. In view of the Punjab Premier's recent statement, that the Government is going to buy out the Company the principal beneficiary of any such transaction must be the Bharat. The results of a carefully chosen and quite secure investment will be obtained when

A WAR-TIME DIAMOND JUBILEE

Sixty years ago we opened our first paper mill in India.

Though our Diamond Jubilee is overshadowed by stormy events we are proud in having contributed towards the development of commerce in India during the past and present century.

Looking back on our early years in this country we are gratified to realize that in the face of many obstacles we succeeded in establishing an indigenous industry—to-day of vital national importance. Largely due to our customers' faith in the quality of our products, pulp and paper are now available in India, which are of the greatest value in the present emergency.

Just now our main resources are engaged in war-work, and whereas we appreciate our loyal customers, we regret we cannot supply their requirements in full nor can we increase their number at present.

We dedicate this Diamond Jubilee to the future of both India and the Titaghur Paper Mills.

SIXTY YEARS A PAPER MILL COMPANY

By all tokens, the closing month of the third year of war holds the threat of proving the most anxious and critical month from every point of view.

Let me first examine the position in India. Vague fear of the future dominates the economic outlook. Recent dividend announcements have been most satisfactory: and the current working of most industrial concerns is reported to be highly favourable. But stock exchanges have been hesitant; and both investors and operators are unwilling to enter into any long-term or considerable commitments. In relation to profits made and dividends distributed, prices of equity shares must be 50 per cent. or 100 per cent. above the present levels. But none so brave to dare the risk which the political situation holds.

The third defence loan was announced a fortnight ago; and "Indian Finance" acclaimed it as a well-conceived and well-planned new loan. The effects of the announcement of the loan on the giltedge market were as anticipated in this paper. There has been all-round levering-up of prices in the whole range of Government securities; and, except for vague fear of what may be in store, giltedged must be forging ahead in strident style. All factors other than the political are favourable.

Idle cash in the hands of banks is piling up; and member banks' deposits with the Reserve Bank have established a new record at nearly Rs. 65 crores. This is all the more remarkable as treasury bills sold to the public have established a high record at over Rs. 80 crores. In spite of such substantial purchases of treasury bills, the banks are groaning under an increasing weight of uninvestible cash.

In such circumstances, there should have been most avid demand for giltedged securities, especially the short-dated ones. Market circles, however, report absence of buying for any considerable amounts.

The Central Government are, therefore, finding that one of their best planned loans is, for the time being, a frost. That no notification has so far been issued with regard to the subscriptions for the third defence loan, seems to suggest that the public response to the loan does not make an impressive showing. The disappointment which the Government must be feeling in this regard is largely mitigated by the gratification that it is now possible to sell treasury bills on the basis of Rs. 8 crores per week at a progressively declining rate.

But treasury bills provide only a temporary solution to ways and means problems. From the present look of things, it seems reasonable to infer that treasury bill holdings in the hands of the public will touch the Rs. 100 crore mark in the course of August. This is a development, of the materialisation of which "Indian Finance" has been dreaming.

But now that the dream has become a fact, we have to hope that conditions in the short loan market will continue to be favourable enough to permit the Government to borrow on the present scale of Rs. 8 crores per week. Should there be any rebuff to this hope, the ways and means conundrums should occasion great anxiety.

These ways and means difficulties are what we may call the great difficulties of the great; and, unless they persist over a period of time, the alternative solutions that can be found, even if they be make-shift arrangements, are many. But the difficulties of the general population are not amenable to such easy solution; and their poignancy affects the lives of the masses at many points.

For the masses, the most anxious problem to-day is the adequate supply of the necessaries of life at reasonable prices. The mechanism of price control appears to have completely broken down; and arrangements for distribution among the far-flung areas of the country have proved far from satisfactory.

So far as India is concerned, it is not contended that there is any real shortage of articles which must be considered as essential for the average man. Rice and wheat, sugar and salt, kerosene and cloth—these are the six items which figure most prominently in the average man's budget. The total available supplies of these articles in the country are said to be sufficient for domestic consumption, though extreme care and thorough-going avoidance of waste are essential if shortage is to be avoided.

But the fact of the matter is that conditions are fast developing in which there is every prospect of a famine in these essential articles in various localities in the country.

Even in Calcutta, residents in Shambazar and Bhowanipore cannot get sugar except in homoepathic doses. For some days, salt too was doled out by shop-keepers in similar doses. Elaborate price control has been devised; and the authorities seem to be intent on ensuring that the control is not only in name but in fact. Many of the big rice dealers have been hauled up. But more than one rice supplier has told me that the fixation of

a top price for rice and a general haul-up of rice-dealers cannot solve the problem so long as the fundamental question with respect to supplies of rice in Calcutta is not tackled.

The rice-dealers are not able to supply rice because they cannot bring rice by any manner of conveyance into Calcutta. And more than one man in the know has told me that Calcutta is actually threatened with a shortage of rice in the very near future.

If Calcutta which is the seat of the Government and where public opinion commands weight is experiencing these acute difficulties with regard to essential supplies, it is easy to imagine the state of affairs in mofussil stations. Letters from many places in South India suggest that, for weeks, sugar has been practically unobtainable in the mofussil; and that the price of rice is not the same for two days together.

In Great Britain, there is admittedly a deficiency of home-produced foodstuffs; but, through a well-functioning price control system and through an impartially worked rationing plan, country-wide arrangements are smoothly working for equitable distribution. Generally speaking, the poor in Britain are getting as fair a deal as the rich.

In India, where there is no similar problem of shortage of supplies, there has, so far, been no plan for equitable distribution. The result is that the poor are unable to get many of the essential commodities except at fabulous prices. The well-to-do and those who are connected with business interests, are able to get what they want; and they get it at controlled prices.

Price control without a system of rationing has been shown, by the experience of the last three months, as hurtful to the poor and as fairly favourable to the rich. I do not know whether the Government are contemplating any measures for rigorous and equitable rationing.

If nothing is done in this regard pretty quick the discontent of the masses may show in sundry ugly manifestations. This is, in my opinoin, the most urgent problem; and any delay in tackling it and finding an equitable solution will have the effect of making social discontent a fellow-conspirator with political turmoil.

The nature and measure of the imminent political crisis is indicated by Gandhiji's epigram 'anarchy or God.' The Mahatma has not even hesitated to use the words 'open rebellion.' The All-India Congress Committee will be in session in the second week of August to consider and decide on the proposal for mass civil disobedience. What form or forms the contemplated civil disobedience will take, has not yet been disclosed.

But it is clear that, unless negotiations are started forthwith, and successfully concluded in extra quick time, this country has to be prepared for the gravest developments. It may well be that, as did Lord Willingdon, Lord Linlithgow might think that the most effective way of dealing with Gandhiji's satyagraha is to nip it in the bud; and that, in line with such reasoning, detention orders are passed on Gandhiji and such other workers as have an admitted leadership.

One can understand this line of argument but cannot be sure if the expectations that the bud will be nipped will be fulfilled. Even those who disagree fundamentally with Mr. Gandhi must admit that it is he who has, all these years, kept elements of violence under check; that, at the commencement of the war, he accepted for himself and his followers, the creed of non-embarrassment to the British; and that he has, till now, faithfully lived up to the creed. The gods who live in New Delhi have always been prone to under-estimate the influence of the Mahatma with the masses; and, many a time in the past, they have laid the flattering unction to their soul that Gandhiji's influence is on the wane; and that he does not command the same following.

They may commit a similar error of judgment on the present occasion. For, if any restraint order is served on Gandhiji, it cannot but release the violent forces that he has so far successfully controlled. Indeed, it is difficult to see whether the havoc of mass disobedience or the disquietude and unrest caused by action taken against Gandhiji will be the more terrible.

The question, therefore, is: Is it to be the path of war or the way of peace? From the pronouncements of Maulana Abul Kalam Azad, it is clear that, so far as he is concerned and so far as his weight in Congress circles counts, the door is open for negotiations; and he will prove a friendly influence to such discussions.

Equally is it obvious that Pandit Jawaharlal Nehru is greatly concerned over his commitments and contacts with China and Russia, with labour leaders in Britain and not a few leaders in America. I have a feeling that the Panditji will be glad if some solution comes through the intervention of President Roosevelt.

At the moment, even such few friends as India had in Britain and America are greatly incensed at the attitude of the Congress. They think that Congress has let down people who, though in a small minority, helped a great deal to the better understanding of India's rights. But the latest comment of the "Daily Herald" contains a hint that negotiations with the Congress must be started at once.

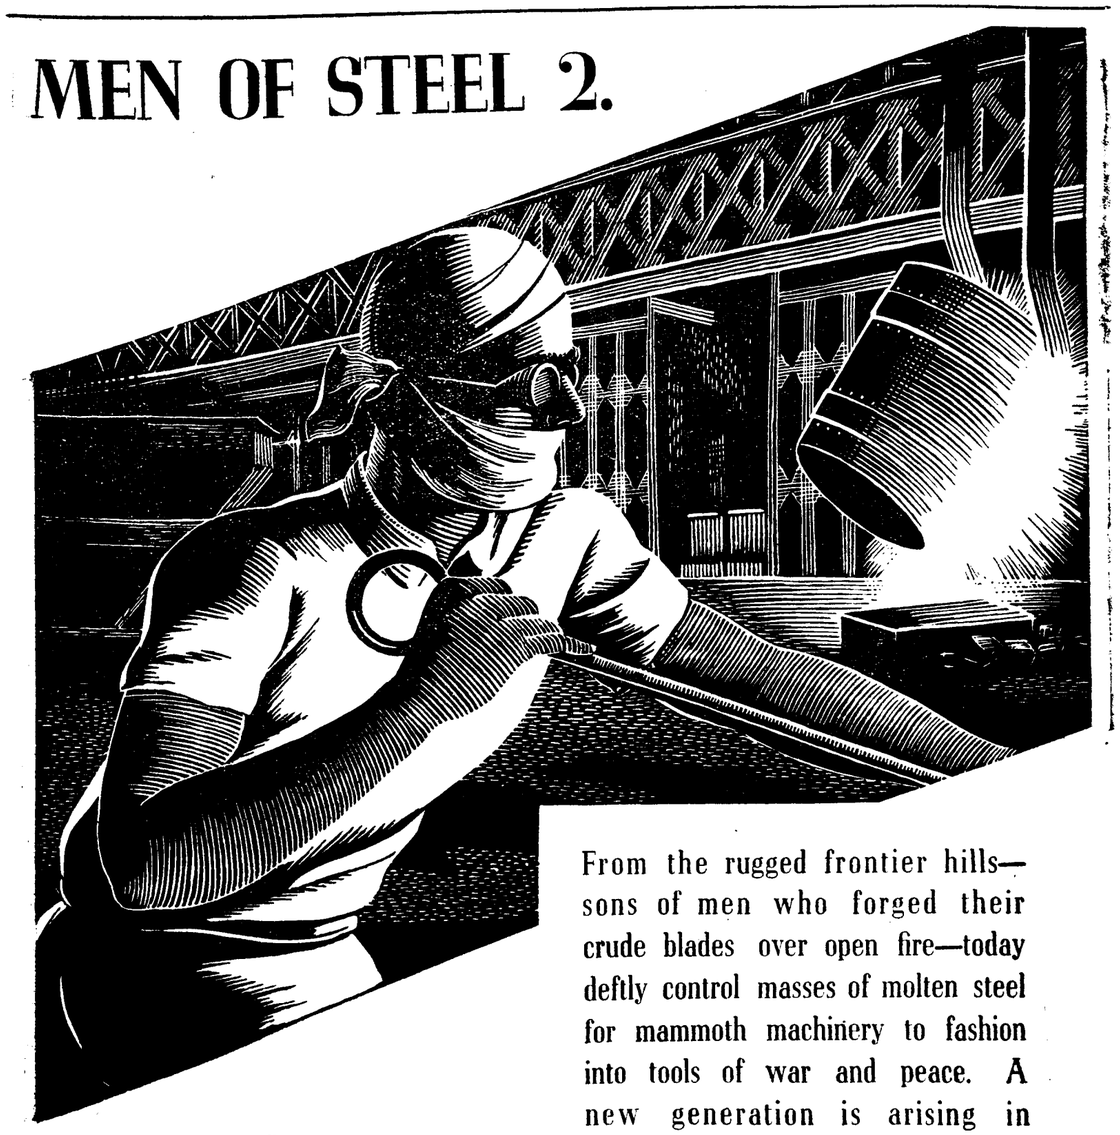
This is the only sensible course of action that prudence and statesmanship suggest. The British official and non-official community in India has always set great store on prestige. Initiation of negotiations with a body which has spoken of open rebellion is opposed to their notions of prestige.

This is no occasion for prestige, false or otherwise. The critical situation to-day does not admit of cheap parading of prestige.

The fundamental facts are clear. Firstly, with the threat to Egypt and possibly to Syria, Iraq and Iran, and with Japan in full possession of Burma, India's importance as a strategic base for the future operations is growing.

Secondly, every leader who has any status in the Congress has, without mental reservation or equivocation of any kind, condemned Fascism, Nazism and Tojoism. Even before the British Government and their gramophone records in India began to feel friendly towards China and Russia, the Indian National Congress and the Indian national leaders have been fervently championing the cause of China and Russia.

Thirdly, while Gandhiji's faith in non-violence remains unaltered and unalterable, the Working Committee resolution emphasises that non-violence in the context of the present war is not the view of the country.



Fourthly, the Congress has equally stressed that, in the fight against Axis powers, the army of Free India will fight side by side with the British Army and the American Army.

When such big issues are at stake, it is not only unhelpful, but dangerous, to keep our gaze fixed on the differences: the better part of wisdom lies in the recognition of the many points of identity and in the exploitation of these factors of unity for the breaking down of the differences. It is in that spirit that sincere, earnest and determined talks must begin at once between Britain and India, with America as a sympathetic and helpful common friend.

From the point of view of the international situation, August may witness the war at its climax. I have already exceed-

(From Our Correspondent)

New Delhi, July 21.

UNDOUBTEDLY an anxious situation has been created for the Government of India by the issue of the Congress resolution. The Viceroy has been engaged in consultations with his Members and is also in communication, it is reported, with His Majesty's Government. Though no official statement has been issued by the Government of India explaining their position in answer to the Congress resolution, non-official Members of the Viceroy's Council have decided on a new policy in view of the seriousness of the situation facing the country. Contrary to the old practice of keeping themselves aloof from public political discussions they have now decided to come out with political statements. Sir Firoze Khan Noon has already issued his statement, but as they are his personal views, other Members like Mr. N. R. Sarker and other politically-minded Members are expected to come out soon with their public statements on the present situation. These are evidently intended to create the proper atmosphere for resuming negotiations if the next few weeks offer a chance. The view among Indian Members is reported to be that though Mahatma Gandhi appears, at the moment, to have taken up the attitude that there is no room for further negotiation, the statements of Moulana A. K. Azad show a distinct desire to enter into negotiations under certain conditions.

* * * *

Is there a way out at all? That is the question now anxiously being discussed in New Delhi. The question whether the Congress is strong enough to deal with a mass movement started by the Congress, raises a different issue altogether, but the next few weeks will have to show whether, as a result of the British Government's initiative or the efforts of the Indian Members of the Viceroy's Council, a new situation can be created which will make the Congress revise its decision and enter into further negotiations for a political settlement. Unfortunately the fatal mistake committed by the authorities was in leaving the Government at the Centre exactly as it was before the war. The increase in the number of Indian Members has not changed the constitutional position of power in the hands of the Viceroy and the Secretary of State continues as before. There are many who think that if the Viceroy's Council had been reconstituted on the lines broadly indicated by Sir Stafford Cripps, the complete Indianisation of the Council including the transfer of Finance, Home, Defence and Communications, the introduction of Cabinet Government on the Dominion model, the elimination of the Secretary of States control, and the conversion of the Viceroy's position to something analogous to that of the King in England—the present situation would not have arisen at all. Will that be done at least now? It is difficult to say, but such a change will certainly strengthen the hands of the Indian Members in their efforts to negotiate with the Congress and find a basis for settlement.

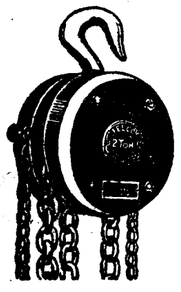
* * * *

Official circles appear to be surprised at the outcry raised in the Indian Press in connection with the Raisman-Gregory Mission. Unfortunately those charged with the responsibility of making big decisions in New Delhi, do not care to keep in view political realities in the country. According to reports in New Delhi, the decision to depute the Finance Member to London was not taken by the Viceroy's Council on its own initiative—the Members of the Council were apparently only informed of the decision after it had been taken elsewhere. Had the Council been given an opportunity to discuss the question in detail, it might have urged the importance of associating an Indian Member with Sir Jeremy Raisman—if not also one of two Indian non-officials. No one doubts Sir Jeremy's ability and good intentions, but the apprehension in the public mind evidently is that Sir Jeremy, being only an official, may not be able to stand up against Whitehall. Even Sir James Grigg, though he fought hard for India's rights at the time of the discussions some years ago on the allocation of military expenditure, could not have his way. So naturally there is a fear that Sir Jeremy may not be able to resist pressure from Whitehall. The question of military expenditure is in itself an important one from the point of view of India's finances. No less important is the Government's policy regarding the large sterling resources which are accumulating in India's favour, for if this question is neglected or badly handled, the consequences may be serious to the country after the war. It is obvious that at least now something must be done to satisfy the country and remove public apprehensions. An assurance can be done that no final agreement will be entered into without taking the consent of the Viceroy's Council and also consulting the Central Legislature.

* * * *

The Government of India have created the post of Deputy Economic Adviser and appointed to it Mr. J. V. Joshi, Director-General of Commercial Intelligence. As Sir Theodore Gregory is now away in England to assist Sir Jeremy Raisman Mr. Joshi will for the present carry on the duties of the Economic Adviser also. It appears that the term of office of Sir Theodore Gregory who was originally brought here on a contract for five years, has been further extended. According to present arrangements he is due to retire only four years hence. However able he may be, the appointment of Sir Theodore was a serious injustice to the many Indian economists who can fill this post with distinction. Now that a Deputy Economic Adviser has been appointed, it is hoped that he will be automatically selected for the Economic Advisership when it falls vacant. In fact it is not difficult even now to find other work for Sir T. E. Gregory and give the Economic Advisership to an Indian.

* * * *



The appointment of Sir Gurunath Bewoor as Secretary for the Posts and Air Department appears to have been a last minute decision. The Posts and Air Department is second to none in its importance from the point of view of war needs. Any dislocation in its work is bound to affect the war effort and also cause inconvenience to the public. As already there have been complaints about serious telegraphic delays, a Special Officer Mr. Brokenshaw, has been appointed to look into the question. A scheme for improving and extending telegraphic and telephone facilities which is to cost about Rs. 9 crores has been sanctioned by the Government of India. In view of these facts the Government of India appears to have decided that Sir Gurunath Bewoor who has previous experience of the Posts and Telegraphs Department as Director-General, is the most suitable person for the Secretaryship. Mr. Trivedi goes to the War Department as Secretary—a new Department whose exact functions are still not clear. The Defence Secretary, Mr. Ogilvie, will on return from leave take charge of Sir Firoze Khan Noon's newly created Defence Department. As a result of these changes, Mr. A. de C. Williams, who was Defence Co-ordination Secretary, leaves the Government of India and reverts to his province. The post of Secretary to the Governor-General's Council, held hitherto by Mr. Williams, will be taken up by Sir George Spence, the Secretary of the Legislative Department.

* * * *

There is also the question of allotting seats in the two Houses of the Central Legislature to the new Members of the Viceroy's Council. As there are now two Members, one for War

(From Our Correspondent)

Bombay, July 22.

HEARTBEATS at Wardha regulate the pulse of Bombay, and the atmosphere is full of mutual questionings as to what the future has in store for us after the meeting of the All-India Congress Committee convened here in the first week of August. Wiseacres interested in the *status quo* argue that the time is not propitious for any mass civil disobedience because the mills and merchants are making war fortunes; as for the workers, are they not well paid? Have not 70,000 recruits enlisted in the month of May, easing the bread-line and strengthening the National War Front? Are not the Japanese an abomination to the *intelligentsia*? *There* is, nevertheless, a sense of uneasiness at the potentialities of the movement and its reaction on business. There is distress in the mofussil and the rumblings of loot in times of scarcity were heard last week in Nasik, next door to us. Price controls continue as before at sixes and sevens.

* * * *

Why Sir A. Ramaswami Mudaliar selected an obscure meeting of students to tell them about the failure of the Bombay proposal for the manufacture of motor-cars, is difficult to guess. He said the scheme was "morbid"; the memorandum had not been published; it was "nebulous" asking Government to contribute to capital and guarantee a dividend. Sir M. Visveswarayya has taken up the cudgels on behalf of Mr. Walchand Hirachand questioning the statements. What stands out in the controversy is that the Government Army Department declined to accept the proffered vehicles for the Forces; and with the main customer in view gone, a flop was bound to ensue irrespective of other details in the dispute.

* * * *

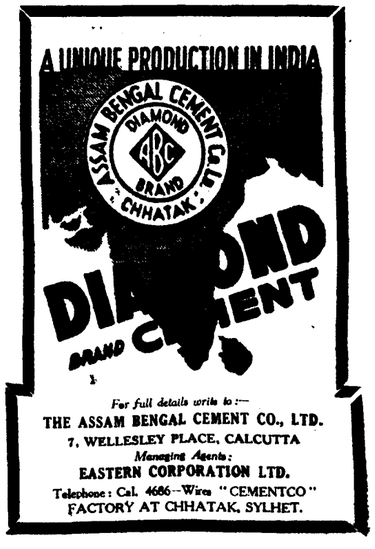
Under Section 81 of the Defence of India Rules, the Government can order the arrest of people who hoard supplies essential to the civil population, and the police raided a shop last week seizing 180 tins of kerosene. The shop-keeper was produced before the Magistrate in a crowded court when His Worship announced: "As Government intends amending the orders regarding the sale of kerosene oil, orders have been given for the case to be withdrawn." The 180 tins were restored to the owner who is now being assiduously courted by customers for a few drops. The inference in legal circles is that "the mere refusal to sell kerosene oil to the public does not constitute an offence," just as the mere refusal to give alms to the poor would not constitute an offence though the beggars might regard it as very bad form with gentlemen having jingling pockets. Government interference in trade had better be held down to the minimum for bulk transactions.

A new form of Indian Cotton Contract has been adopted by East India Cotton Association with the approval of the Government. It is confined to the duration of the war after which markets now shut off from India are bound to open out. Cotton not absorbable in Indian mills is a drag on the trade and at a time of slender waggon supply it is prudent to co-ordinate quality with necessity. The new hedge-contract takes Jarilla cotton of three quarters of an inch staple length as the standard. In announcing the innovation, Sir Purshottamdas Thakurdas, President of the East India Cotton Association, said: "The new contract is linked definitely with the cotton which Indian mills require in India." Japan and Central Europe being in the black-out of war, India's range of custom is diminished. Sir Purshottamdas explained: "It depends more for its functioning on the requirements of Indian mills than those of consumers abroad."

* * * *

The face of the Indian cotton crop had also changed materially during the last decade. The production of staple cotton had increased and the time was surely arriving for the hedge contract to take into account those changes. But the war had accelerated the pace of these changes and necessitated an earlier revision of the hedge contracts. Referring to the differences of opinion in the trade regarding purchase on account of rejected tenders and also of defaulting sellers, Sir Purshottamdas said that the scheme of compromise suggested by the Board under war conditions should meet the case.

* * * *



There had been considerable misapprehension in the trade regarding the option provided by the by-laws to the buyer to demand from a defaulting seller delivery upcountry. Rules for this purpose would be made after the draft amendments had been sanctioned by Government. If the buyer preferred not to demand delivery upcountry, he had the option of involving back the cotton to the defaulting seller who might not have tendered to him even on the last day at the room rate of the day plus a penalty of Rs. 7-8 per candy. If the buyer preferred to demand delivery upcountry and the seller failed to give delivery, the buyer had the right to invoice back the cotton with a penalty of Rs. 25 per candy. In order to prevent this contract covering about 2,500,000 to 3,000,000 bales, from being a seller's contract, it had been necessary to devise the scheme of a discount for all growth tenderable under this contract, except the product of Jarilla seed and similar strains mentioned in the schedule. Otherwise this contract would have been liable to the same apprehension as the existing Broach contract and would have been used only for hedges by sales.

A very wobbly scheme of property insurance has been published by the Director of Information, apparently on the model of the British War Damage Act but the premia proposed are preposterous. The property-owner is asked to "contribute an amount equal to 2 per cent of the value" of the property in question. That would be twice the rate of the present house-tax whereas the British Act calls for 10 per cent of the *annual* income in comparison with the Bombay stipulation of 36 per cent. Somebody has bungled. It would be well to get expert opinion on property insurance before fixing rates for buildings of the value of Rs. 325 crores.

* * * *

A resolution expressing the view that the orderly and prompt marketing of the cotton crop is of paramount importance to the cotton grower and urging upon the Government of India to provide the ginning and pressing factories with the necessary facilities for their working by placing on the priority list their requirements, especially in regard to coal and other fuel, in good time, was passed on the motion of Sir Purshottamdas Thakurdas at the monsoon meeting of the Indian Central Cotton Committee held in Bombay last Friday. Mr. P. M. Kharegat, Vice-Chairman of the Imperial Council of Agricultural Research presided.

The Committee reviewed its financial position and felt, while agreeing with the view expressed by the Government of India regarding the desirability of maintaining a minimum balance of Rs. 9,00,000, that the strict application of the prescription would not be in the best interests of cotton culti-

vators, as urgent and necessary work might, as a result, be held up or indefinitely postponed. It, therefore, urged upon Government that if for good and sufficient reasons it considered that new work should be undertaken or that a scheme already in operation should continue, thereby necessitating incursions into the minimum balance, the Government of India should at least restore the minimum balance to the prescribed limit, as and when required, by granting a subsidy to the Committee from the recently created cotton fund. Sir Purshottamdas Thakurdas, who moved the resolution, was supported by Mr. Roger Thomas, Sir Shree Ram and several other members. The general opinion appeared to be that the distribution of bonus on increased food crops would not give a permanent advantage to the cotton-grower even though it was conceded that there were no administrative difficulties.

How RUMOUR Traps the Unwary

HERE'S WHAT HAPPENED TO A CREDULOUS SHOPKEEPER...

BELIEVING IN UNCONFIRMED RUMOUR LOST HIM EVERYTHING

Tragedies like these are happening every week in India because of false rumours which in many cases are started by the enemy. The Chinese say, "Every rumour is an enemy bullet", for the panic caused by rumour weakens the whole nation.

To avoid loss, rely on Government announcements.

DISTRUST RUMOURS THAT ARE UNCONFIRMED

BUILD THE NATIONAL WAR FRONT AGAINST THE JAPANESE

(*Continued from page* 147)

ed the allotted space to-day and must content myself with the briefest indication of the international position.

It is evident that Hitler aims at achieving quick success in his eastward thrust simultaneously carried out against Suez and towards the Caucasus. It cannot be gainsaid that that he has gained valuable ground in Russia though he has been obliged to pay a heavy price. Timoshenko's armies in the Don region have been obliged to retire to positions which can be better defended.

As Wickham Steed points out, Hitler's tactics of mass assault regardless of cost and the speed of his eastward thrust confirm the conviction that, pressed for time, he is striving swiftly to gain results before the full weight of the British and United States forces can tell against him.

This leads to the question of the second front. There is now insistent demand both in Britain and in America that now is the time for the aggressive opening of the second front. It is no secret that strong United States air and land forces are now in Britain awaiting orders to attack the enemy.

A world in extreme suspense is, equally eagerly, wanting to know when the orders to attack the enemy will be given. Meantime, the Japanese forces are on India's border, perhaps no less eagerly, awaiting developments in the Battle of the Nile and the battle for Caucasian oil.

Others might officiate in his absence, but nobody in Calcutta can think of the Improvement Trust without its Chairman, Mr. Cyril Gurner. An announcement in the papers today runs to the effect that he will remain the Chairman for another term of three years. The announcement is specially pleasing to the citizens of Calcutta who are duly impressed by the progress made in the many schemes accepted by the Trust. The Improvement Trust is, I believe, nearly 40 years old and set up Lord Curzon to improve an Empire's capital. The last ten years have been exceptionally fruitful, for the southern parts of the city have been developed out of recognition, of course to the advantage of property-owners and others. How much unearned increment is in reality due to the Trust's work cannot be computed by anyone. When I say the Trust's work, I really mean Mr. Gurner's work, for the magnificent extensions have been carried out in his time. The Lake area and the Lake itself—so convenient to canoeists are the result of Mr. Gurner's efforts. The playgrounds set apart in the vicinity of the Lake are the token of a characteristic considerateness. You can see a dozen vacant plots undeveloped to let children have their pleasure. The commercial instincts of improving landlords have been restrained by the Chairman and the Trustees. No wonder then that the care-free motorists and the children romping on the grass will in future years tender thanks to Mr. Gurner. The busy parts of the city have not been neglected either. Most of the ten years that Mr. Gurner has spent with the Trust have been marked by big dealings in real estate. In connection with one scheme alone that for linking Strand Road to Dalhousie Square, the cost of land came to Rs. 3 crores nearly. Sales obviously go on in the same way, and if I can go by old administration reports, the Trust has made regular sales of its own land for all the people who want offices away from the crowded streets near the river. The older part of the city has in recent years felt the breath of the Trust's operations for improving itself for the Trust is not cold and remote. It is certainly a body ready to clear slums and rehouse many if the vacant lands are used properly. Mr. Gurner has had an advantage in having a practically static and autonomous body to guide in the years that have been marked by building activity. With what advantage to the city it has gone on can be realised by the ordinary visitor to Calcutta who reads up the guide-books and finds the reality pleasanter. The most striking memorials to the Trustees' work will be the approaches to the New Howrah Bridge. In the diversion of traffic along new routes that was enforced by the evacuation craze there was an opportunity to see how many roads gave on to the bridge from Calcutta. Two separate schemes were involved, it seems, and the dovetailing was achieved. A more widely appreciated job performed by the Trust is the widening of many thoroughfares in Burra Bazar. The emergies of the Trust, I fear, will be taxed in the crowded network of alleys but the Chairman can be trusted to provide all the additional drive needed. The northern part of the city has been changed already: it will wear a different aspect when the schemes are ready. Already, the average pedestrian who looks towards St. Andrew's Church can see the vast improvement. While private builders may pause the Trust cannot afford to rest and Mr. Gurner by himself is expected to stoke up the activities of a body which has done much to make Calcutta live up to its name as the city of palaces.

Resume of Commodity Markets

NOTHING of importance has happened in commodity markets during the past week. Jute and Jute manufactures markets have remained uninteresting. The Bombay raw cotton market also has been fluctuating in narrow limits. Bullion prices also have been narrowly irregular. Only there is the same struggle to get primary commodities. Rice, sugar and wheat are as scarce as ever and any amount of effort on the part of the authorities has not been able to improve the consumers' lot.

Another instance of a wrong approach to the price control problem is provided by the latest order of the Bengal Government in increasing the prices for the coarse and medium varieties of rice. It is pointed out that the enhanced prices take into consideration the costs of stockists and mill owners. The wholesaler and the hoarder have thus again been able to get their ransom. If this is the way in which every price control order is to be amended it is better to have no price control at all. In recent weeks there has been a sharp rise in values for the essential commodities and if the prices are allowed to rise further they may have far-reaching effects. In the absence of a reorganisation of transport facilities and arrangements for more effective distribution of the affected commodities through Government or Government authorised agencies the consuming public should continue to be at the mercy of the stockist or the wholesaler.

Jute

The consolidated forecast figures are rather confusing. The increase in the licensed area last year is not explained. On the basis of the licensed area for 1942-43, which is subject to revision, as it is not the actual area sown, the crop is expected to be more than 115 lakhs bales. With the recent fall in rivers there is a tendency to obtain a greater yield by allowing the crop to stand for a longer time. The indications are, therefore, that we may have another bumper crop.

While the prospects for the new crop are quite encouraging the industry is apparently not able to come to any decision regarding rationalisation proposals. The difficulties in the way are many. The Bengal Government too, seems to be disturbed over the prospect of a reduction in the output of mills if there should be rationalisation. A deputation of the members of the I. J. M. A. is proceeding to Delhi next week. It is also reported that the Bengal Premier and the Finance Minister are seeing the Central Government in this connection.

Jute Manufactures:

With the rationalisation proposals yet under consideration and with the gloomy prospects regarding shipping position operators in the hessian market cannot submit themselves to any view. The latest U.S. stock and consumption figures are very discouraging indeed. There has been a gradual decline in stocks afloat in recent months and the reports regarding the improvement in the shipping position have not materialised.The sharp decline in consumption is understandable, for, with the control regarding the movement of new goods into consumption the figure should be naturally lower. Actual consumption may be very much higher. The developments during the next two weeks should be of great interest to the markets.

Piecegoods:

The piecegoods market has been very active in recent weeks. With the approach of the Poojah season sellers are not prepared to part with their goods. Bombay mills have received numerous enquiries but with an increasing proportion of their production being taken up by the Government and the difficulties in ensuring delivery they are not very keen on taking new orders. Bengal mills have been very busy as also handloom weavers.

Rice:

A *communique* has been issued by the Bengal Government announcing an increase in prices for the medium and coarse varieties. It is pointed out that as a result of further discussions with the trade interests it has been decided to increase the wholesale price of coarse and medium rice by one rupee per maund. The revised price compensates the millowners for the increased charges on account of factory and war risk insurance and is more in parity with current prices of the essential commodities specially foodstuffs.

The prices are expected to remain in force till the next Aman crop comes into the markets. It is a pious wish. Whether the latest order at least will be able to bring out hoarded stocks remains to be seen.

Meanwhile, it is reported that the Government are taking a census of the total stocks of rice and paddy available in the province. A communique issued early this week prohibits the export of rice and paddy from the province. It is pointed out that recently there have been large exports of paddy and rice by sea to other parts of the country. In the opinion of the Government a small surplus is available over and above the needs of the province. But pending the census no export can be made.

(Continued from page 143)

the Company gets an anticipated profit of Rs. 40 lakhs. The classified summary shows policy loans for Rs. 22.2 lakhs and house property worth Rs. 38.8 lakhs. The distribution of assets suggests no rigid subservience to new-fangled rules but a wise catholicity that is essential when the yield on giltedged is depressed by the lowness of interest rates. Outstanding liabilities on the balancesheet are seen to be covered by revenue items and cash balances equal to Rs. 4.88 lakhs. Readers will do well to note that the sum due from the Peoples' Bank of Northern India at end-1941 is as low as Rs. 619-9. There is nothing at all to suggest the existence of any handicap for the Bharat Insurance Company whose major achievements in a difficult year should be readily translated into terms of bonus at the latest valuation.

Jute and Jute Manufactures

(By Our Jute Correspondent)
Calcutta, 23rd July.

AT the first glance, the figures issued for American Stocks and consumption are rather startling. Consumption is returned at no more than 27 million yards, while spot stocks are down to 89 million yards and afloat stocks to only 30 million yards. The low figure for stocks afloat is understandable, for it is well-known that exports to U.S.A. have been far below normal recently owing to freight scarcity. Spot stocks have also, for the same reason, shown a steadily declining tendency since the beginning of the year and at the end of June were little more than half what they were in January. The consumption figure of 27 million yards compared with 49 million in June of last year, which itself was almost the lowest level to which consumption fell during 1941, cannot be taken absolutely at its face value, or to indicate that the demand for jute goods has fallen off to that extent in the U.S.A. It must be taken as the quantity permitted for ordinary consumption under the Government Conservation Policy, which requires that two-thirds of all imports must be appropriated to Government priority or direct war purposes. So the low figure returned as consumption must not be read as the total burlap which is wanted by the trade in U.S.A., but as all they are permitted to get. Whether the stock figures also make allowance for what has to be set aside for Government requirements and represent what is available for normal trade purposes, is not clear. Even in that aspect, stocks are at an unprecedentedly and dangerously low level, while if they represent the total of goods in sight for all purposes, the position must be regarded as critical. And at this juncture the Indian Government is proposing that the industry here should further reduce its production when its principal customer for hessian cloth is apparently at starvation point for goods.

Reverting to the Government proposals for the "rationalising" of the jute industry, an analysis of the coal requirement situation shows that the saving to be expected from the drastic steps suggested to be enforced will be in the nature of 33 wagons per day. To achieve this it is proposed to throw the whole economy of the province out of gear by reducing the quantity of raw jute which will be consumed by mills to a very small percentage of the crop which is just coming to market this new season. It is proposed to throw out of employment, without hope of compensation, something like 140,000 mill-hands at a time when living costs provide a problem even for the man in regular employment. Unrest and disaffection will inevitably result, and in all fairness it can only be admitted, not without justification. And all this to save 33 wagons per day, when sidings packed with stationary wagons meet the eye in all directions. Whether these wagons are loaded or empty we cannot say, and that is immaterial when they are stationary. The Railway advertisements beseech the public to "keep wagons moving." The public can do their bit by rapid loading and unloading, but a stationary wagon in a siding is a job for the transportation departments of the railways and we do not think that Government can prove their case for the "rationalising" of the jute industry till they can show cause why so many stationary wagons cannot be "rationalised" into movement. This is no time to haggle over whose mote or whose beam should be removed first. But we hope that the deputation which is proceeding to Delhi this week-end will be able to persuade the Commerce Member of the paltry result likely to be achieved at the expense of throwing out of gear the main industry of Bengal.

A constructive proposal for the solution of the transport difficulty so far as the jute industry is concerned would be the elimination of the present makeshift and wasteful system of railing a certain quota of jute and jute goods from Calcutta to Western India ports for export abroad. One steamer per week placed in the port of Calcutta would lift the equivalent quantity of goods that one train per day can move to Bombay, and the consequent release of wagons would represent four times the number which the Government of India's proposals would save by closing down two-fifths of the jute mill machinery, with the resulting chaos which has been indicated above. Another constructive suggestion put forward is that coal depots should be established at suitable points on the west bank of the river, to which coal consignments in rake loads would be despatched from such collieries as can load rakes, delivery from the depots to be taken by mills in their own boats. This system would involve pooling of existing coal contracts, but would have the advantage of releasing many more wagons for other purposes and of reducing the wagon-hours required for coal supplies to mills to an insignificant figure. Undoubtedly these points will be pressed by the deputation and it will be difficult for the Commerce member to resist their logic if he brings an unbiassed mind to bear on the subject.

The Consolidated statement issued for the preliminary Jute Forecast is an uninformative document. No light is thrown on any of the points on which we commented last week regarding the issued figures. The only new point of interest which arises from its issue is the fact that the estimate for Orissa is down by half—12,250 acres against 25,055 last year. No reason is advanced for this unless that the stocks in the hands of cultivators are reported to be considerable. It was in Orissa that an experiment in co-operative selling on a graded basis was supposed to have attained considerable success. An immediate reduction in the area does not seem to reflect much faith on the part of the cultivators in the scheme. Meantime the Indian Central Jute Committee has sanctioned the extension of these co-operative experiments to other areas, but there is a strong impression that they will have to be operated on much more realistic and business-like lines before they can be of any value.

Practically nothing has been reported from the Export Jute market during the past week. Nor have mills been active buyers of pucca bales, only a few small transactions having been reported—Lightnings at Rs. 41 and Rs. 42, Out-port Tossa 4s at Rs. 41 and some old crop Firsts for ready shipment at Rs. 53.

The Loose Jute section has been less active too though a moderate day to-day business is going on at steady rates. European Middles alone sold at Rs. 9-8, and Bottoms alone at Rs. 6-10. In assortment European packing is still offering at Rs. 9-8 and Rs. 6-8 Middles and Bottoms for August-September shipment. Supervised Jat sold at Rs. 9-4 and Rs. 6-4 Middles and Bottoms with still sellers at the rates. Indian District Bottoms alone are reported done at Rs. 5-12. Enquiry still tends to run on low assortments while here and there some premium can be got for quick shipment.

Mofussil markets are firmer in tone with demand greater than imports in many places. Imports have not come forward as rapidly as was expected and sellers are in many cases faced with early shipment sales to cover at once. Generally speaking conditions continue favourable, but rain would be beneficial some places to improve steeping water. Quality is scarcely turning out so good as expected, the proportion of Top and Middle jute yielded by present imports being disappointing. It is possible that this aspect may show improvement as imports increase.

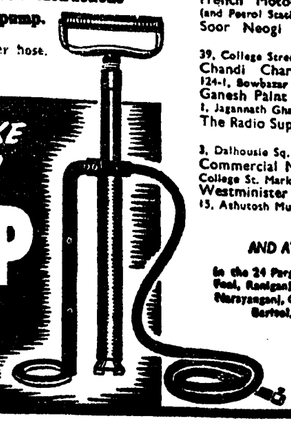
The Fabrics section of the market has shown less activity than of late and the movement in Hessians is almost imperceptible. 45/11 oz. continues to be dealt in, sales being reported at Rs. 21 to Rs. 20-12 July. Occasional sales of P. D. O. goods are recorded, usually eleven porters at around Rs. 18-10. Small sales have been reported with Mills at minimum rates, Rs. 15 for nines October-December and Rs. 19 for eleven August-September. Heavy goods continue in fair request, the principal demand this week having been covering of Cornsacks at Rs. 42 to Rs. 41-12 for July, Rs. 41-8 August-September and at Rs. 41 for 15th and all October. Liverpool Twills have sold at Rs. 45 and Rs. 45-4 ready, "B" Twills at Rs. 41 to Rs. 40-12 for ready and July and at Rs. 40 for October. Woolpacks are recorded at Re. 1-13-6 to Re. 1-14 for August shipment and D. W. Flours sold at Rs. 52-4 for July and at Rs. 51 for August.

"I LEARNT A THING OR TWO"

SAYS CLOTH MERCHANT FROM RANGOON!

During an air-raid an unnoticed incendiary bomb landed in my godown. All my attempts to put it out failed and by the time I had warned the Fire Fighting Party, my textiles and my home were a pile of ashes.

My cousin, Lal, also found an incendiary bomb in his furniture ware-house. Fortunately he possessed his own stirrup-pump, and with the aid of his family saved all his property in ten minutes.



He was able to help me to start a new business in Calcutta. One of the first things I bought was a stirrup pump, and with my family I have started a stirrup pump party.

Now is the time to buy a Stirrup Pump for home and business in order to safeguard your property and to protect those dear to you. Not only is it a vital necessity and a war-time measure but it is also of great practical use in cleaning your car, for watering your garden, etc. A booklet with full instructions is supplied free with every pump.

Price: Rs. 25/- including 25 ft. of rubber hose.

JUTE

Calcutta, July 23.

RATHER quiet conditions have been noticeable in the raw jute market during the past week. The absolutely uninteresting conditions in the hessian market have been none too helpful. In the absence of any large business, however, it is interesting to note that prices have been maintained. The recent fall in prices has to a certain extent checked the harvesting of the new crop. Arrivals into mofussil centres have not been coming in fast enough so that balers have been finding it difficult to fulfil their commitments. The Midland crop was recently affected by the floods and if the rivers kept rising, it would have been necessary to cut it. It now appears that they will be allowed to stand for a longer time to obtain a greater yield. The long-term outlook, therefore, is essentially bearish though in the immediate future there may not be any appreciable decline in prices—with the difficulties in transport and the early demand for jute by balers.

In the loose jute section, mills have bought supervised Jap Middles and Bottoms at Rs. 9-4 and Rs. 6-4 per maund, 40/60 assortment. Old crop European Bottoms sold at Rs. 6-4 per maund.

In the pucca bales section, mills bought old crop Lightnings 2/3 at Rs. 42 per bale. Sellers of Tossa and Daisee varieties were reserved owing to the scarcity of imports from upcountry.

The consolidated statement shows the total area under jute at 3,727,645 acres in 1942-43 against 2,152,010 acres in 1941-42.

The increase in the crop is mostly on account of Bengal, the area under the crop in 1942-43 being estimated at 3,190,415 acres against 1,532,855 acres. The figures are given below:—

The following is a preliminary forecast of acres under the jute crop, 1942, for Bengal, Bihar, Orissa, Assam and Indian States. The estimated area under jute in the three other provinces, two Indian States and the licensed* area in Bengal is 3,727,645 acres.

Area under jute.

Name of Province and State.	1941. Preliminary. Acres. Licensed.	1941. Final. Acres. Licensed.	1942. Acres Licensed.
Bengal ..	1,633,900 Estimated.	1,532,855 Estimated.	3,190,415 Estimated.
Cooch Behar State ..	38,600	38,600	36,880
Tripura State ..	17,000	17,000	15,000
Bihar ..	237,400	242,500	238,600
Orissa ..	15,700	25,055	12,250
Assam ..	270,000	(a) 296,000	234,500
Total ..	2,212,600	2,152,000	3,727,645

*Subject to modification when the examination of Jute Lands under section 14 of the Jute Regulation Act is completed.

JUTE MANUFACTURES

Calcutta, July 23.

THE jute manufactures market has been absolutely dull and uninteresting. No business of importance has been reported in the hessian market. Demand for exports has been poor. However, the shipping situation has to be mainly blamed for the present state of the market. The U. S. stock and consumption figures for the month of June reflects in full measure the difficulties experienced by the lack of shipping space. The consumption figure of 2.7 crores yards is the lowest on record. The figure for June last year was 4.9 crores yards. Stocks spot were 8.9 crores yards and afloat 3.0 crores yards. The figures are given below:

	Stocks at the end of Month. Spot 1942	Spot 1941	Afloat 1942	Afloat 1941	Consumption for Month. 1942	1941
January ...	161	120	107	149	43	57
February ...	142	132	138	83	53	60
March ...	134	123	116	64	65	67
April ...	100	105	90	84	68	55
May ...	98	98	42	116	49	47
June ...	89	107	30	114	27	49
July ...	...	121	...	104	...	64
August ...	...	126	...	72	...	60
September	...	110	...	108	...	63
October	...	92	...	150	...	63
November	...	101	...	164	...	58
December ...	...	145	...	64	...	75

In the heavy goods section demand has not been quite good, though prices have been well maintained. B. twills were done at Rs. 40-10, Liverpool Twills at Rs. 45-4 and Cornsacks at Rs. 41-12.

PIECEGOODS

Calcutta, July 23.

THE piecegoods market has continued active and quotations have been marked higher all round. There is a definite shortage of supplies and in view of the high level of prices for ready goods and the difficulty in ensuring supplies speculators are afraid to enter the market. Mills are demanding high rates and are not eager to accept new orders. Handloom products have been receiving greater attention in recent weeks and prices, though not proportionately higher, have continued to be on the upward trend.

COTTON

Calcutta, July 23.

THE Bombay raw cotton market has been rather firm and quotations are higher on balance. Mill buying, the firmness of the seeds market and the strength of the piecegoods market were helpful factors. Broach July-August were Rs. 212-12, Oomra July Rs. 195-8, and Bengal July Rs. 188-12. New contract January 1943 was Rs. 363-8 and March Rs. 357.

Business in new contract, it will be remembered, was commenced last week. The new contract replaces the old system of Broach, Oomra and Bengal contracts which has been in existence for over 25 years. The basis for the new contract is fine Jarilla of staple length of ¾ ins. This new contract is to be in force for the duration of the war and sometime thereafter. The purpose with which the new contract has been introduced is to bring in cotton to Bombay which is used by the Indian mills. As no large exports of short staples are now made to other countries it is no use bringing Oomras and Bengals into Bombay to be tendered against contracts. The main purpose is to save wagon space. The amendments to the bye-laws of the E.I.C.A. have been made with the consent of the Bombay Government. The new method of trading has got general approval and has been very well received.

GOLD

Calcutta, July 23.

THE Bombay gold market has been rather uninteresting during the past week. Demand has been satisfied and operators are inclined to await further developments. The improvement in the Russian war situation should have a discouraging influence on the market but operators want to make sure of the position. Gold ready are quoting Rs. 51-11, First settlement Rs. 51-11-6 and Second settlement Rs. 51-9-6.

Sovereigns are quoted Rs. 39-2.

SILVER

Calcutta, July 23.

SIMILAR conditions have been noticeable in the Bombay silver market. A slightly hardening tendency was noticeable earlier in the week, but closing quotations are a shade easier. Indian Mint Silver ready are quoting Rs. 84-10, First settlement Rs. 84 and Second settlement Rs. 84-9.

In the London market, nothing of importance is to be recorded. The quotation for both spot and forward is unchanged at 23½d.

Stock Markets to-day and to-morrow

ENCOURAGING RUBBER INDUSTRY PROSPECTS

After earlier firmness stock markets in Bombay and Calcutta have been rather quiet during the past two weeks. The earlier strength of the markets was mainly due to the successes of the Russians in the Voronezh area and the British resistance to the German pressure in Egypt. The reports regarding the march of the Germans east of Rostov, however, have had a discouraging influence towards the close. The Bombay market reacted more violently to the bad news. In Friday's session there has been some selling on the Calcutta Stock Exchange and the quotations for Indian Irons and Steel Corporations have been pushed down to Rs. 27 and Rs. 17-4 respectively. The undertone in the several sections is quiet and operators are eagerly awaiting further developments.

* * * *

With the acute timber shortage, timber companies in this country can be expected to do very well. Till very recently Burma was supplying the major portion of the requirements of timber and now that this particular source of supply is cut off there is a greater demand for Indian timber.

But for the difficulty in procuring the labour the *Borooah Timber Company, Limited*, would perhaps have been able to show a greater increase in earnings for the year ended March 1942. Forest working during the year was satisfactory although at times labour conditions proved difficult as a result of the increased demand in the Mayurbhanj district for the carrying out of urgent works in connection with the war. This has also interferred with extraction of timber by lorry and may cause serious difficulties in the forthcoming working season.

The net profit, before providing for taxation and depreciation, during the year is Rs. 2,52,468 against Rs. 1,93,995 for the previous year. The provision for taxation is Rs. 89,923 (Rs. 52,252) while Rs. 65,712 (Rs. 49,230) has been placed to General Reserve, depreciation and other funds. The dividend has been only maintained at 12 per cent. In view of the satisfactory financial position of the company the directors could have possibly recommended a higher dividend.

* * * *

With the loss of Malaya and N.E.I. Rubber has scarcity value. The question is now one of producing enough to meet the war demands. South Indian plantation companies are therefore enjoying boom conditions. Since 1937 the new companies were having a rather bad time. The improved conditions in the industry now should, therefore, be of help to them. The better-established companies have been able to show good progress during the last three years.

Cochin Malabar Estates Limited has done very well during the year ended February 1942. Without any appreciable increase in the yield, the crop for the year 1941-42 being 1,357,118 lbs. against 1,292,185 lbs. for 1941-42, there is a rise in net earnings by more than 30 per cent. The net profit, before providing for taxation and depreciation for the year is Rs. 4,10,200 against Rs. 3,18,470 for 1940-41. The amount set apart for depreciation is is Rs. 9,722 against Rs. 7,288 on the former occasion. The provision for taxation is Rs. 15,000 (Rs. 27,288) while Rs. 50,000 (same) has been placed to general reserve. Investments have been written down by Rs. 11,299 to bring the book value to market value as on February 28, 1942.

The directors have been very liberal in the declaration of the dividend. The final dividend of 35 per cent., with the interim dividend of 15 per cent already paid, makes 50 per cent for the whole year against 30 per cent for 1940-41.

* * * * *

There was considerable speculation regarding the final dividend two weeks back though it was generally expected that there will be a larger distribution. The market seems to have been agreeably surprised. From Rs. 10-4 two weeks back the quotation is now Rs. 14-6 cum-dividend.

The crop of 13,57,118 lbs. was again a record one and was harvested at a cost of 3.53 annas per lb. f.o.b. and realised an average price (sales and valuation) excluding proceeds of quota, of 8.61 annas as compared with 7.43 annas per lb. in the previous year.

* * * * *

The small number of units sold has naturally resulted in a decline in the earnings of the *Dacca Electric Supply Company Limited* for the year ended December, 1941. The net profit, before providing for taxation and depreciation, is Rs. 1,63,122 (Rs. 1,82,388). The amount set aside to depreciation is Rs. 70,550 (Rs. 56,744). There is an allocation of Rs. 15,000 to General Reserve in addition. The dividend has been reduced to 2½ per cent, from 7½ per cent. It is hoped that with the restoration of peace in the city it will be possible to declare a higher dividend out of the earnings for the current year.

* * *

Britannia Engineering Company Limited has done very well during the past year. The workshops have been very busy and the earnings for the year are perhaps the highest in the history of the company.

The profit, before providing for taxation and depreciation, for 1941 is Rs. 5,79,656 against Rs. 2,25,750 for 1940. The charge on account of depreciation is Rs. 62,392 (Rs. 56,853). The allocation to General Reserve is Rs. 90,000 (Rs. 60,000). The provision for taxation is naturally very much higher at Rs. 3,25,000 (Rs. 62,000). The dividend on the ordinary shares has been increased to twelve annas per share from eight annas per share. Even after all these substantial allocations the carry forward is considerably higher at Rs. 69,363 against Rs. 23,349 brought in.

The shares of the company now quoting around Rs. 12 should be considered rather cheap.

* * * *

The large increase in working expenses has resulted in a decline in the earnings of the *Bengal Coal Company, Limited*, for the six months ended April, 1942. The net profit, before providing for taxation, is Rs. 11,93,122 against Rs. 14,96,550 for the previous half-year. The sum of Rs. 3 lakhs, the same as before, has been charged to depreciation while the provision for taxation and cesses is Rs. 5.5 lakhs (Rs. 7 lakhs). The dividend has been maintained as usual at 10 per cent. The amount carried forward is lower at Rs. 2,10,754 against Rs. 2,66,832 brought in.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 24.

SLIGHTLY firmer conditions have been noticeable on the Calcutta Stock Exchange during the past week with the success of the Russians in the Voronezh sector during the past week and the stalemate in the Egyptian situation. A longer list of transactions has been recorded with Engineering and Cotton issues especially in favour. Coal and Tea shares also came in for slightly more enquiry. Giltedged securities were firmer with more business passing. The general undertone in the several sections was satisfactory till the close on Thursday. This morning's news regarding the German advance east of Rostov should have a discouraging influence on markets. The developments during the next few days are very important from the market point of view.

Giltedged securities have been firmer with some buying from institutions. 3½ per cent. Paper is a shade higher at Rs. 93 with 3 per cent. Paper at Rs. 79-14. With the suspension of sales by the Reserve Bank, 3 per cent. 1963/65 are higher at Rs. 93-7. 5 per cent. 1945/55 were in demand at Rs. 108-8 and 4½ per cent. 1955/60 at Rs. 112. 4 per cent. 1960/70 were Rs. 103-4, 3 per cent. Second Defence Loan Rs. 100-2 and 3 per cent. Defence Bonds 1941 Rs. 101-12. Among provincial loans, 3 per cent. Punjab 1952 were Rs. 98-2, 3 per cent U. P. 1961-66 Rs. 92-6 and 5 per cent Punjab Bonds Rs. 103-14.

Among public bodies' debentures, greater interest has been shown in Calcutta Port Trust debentures and useful rises in prices have been recorded. 3 per cent. *Calcutta Port Trust* debentures 1951 were noted at Rs. 94-8. 3¼ per cent. *Howrah Bridge* debentures changed hands at the higher level of Rs. 90 while 4 per cent. *Calcutta Port Trust* debentures were Rs. 95 and 5 per cent. 1956/86 Rs. 108-8. *Calcutta Municipal* debentures 1915/45 were Rs. 100-8. Among industrial debentures, 5½ per cent. *Dalmia Cement* debentures were Rs. 103-8 and 4½ per cent. *Clive Building* debentures Rs. 95-12.

Preference shares also have been marked higher with *Anglo-India* at Rs. 150, *Howrah* 7 per cent. Preferences at Rs. 150 and *Reliance* at Rs. 151. *Steel Corporation* were Rs. 111-8, *Kumardhubi Engineering* Rs. 141 and *Midnapore Zemindary* Rs. 120.

Among Bank shares, *Imperial Bank* fully paids were Rs. 1,525 cum-dividend and *Reserve Bank* Rs. 100-8.

Cotton shares have continued firm, Calcutta shares especially receiving attention. *Kesoram* are now quoting Rs. 11 after being higher at Rs. 11-6. *Dunbar* were noted at Rs. 257 and *Bengal-Nagpur* at Rs. 23-8. *Cawnpore Textiles* were Rs. 10-2 and *Elgin Mills* Rs. 34. *Muir Mills* have been rather quiet at Rs. 303 with *New Victoria* at Rs. 6.

Coal shares also have been slightly more active with *Bengal Coal* at Rs. 359. *Amalgamated* were Rs. 26-7. *Burrakur*, Rs. 12-10 and *Equitable* Rs. 34-8. *South Karanpura* were Rs. 4-9 and *Talcher* Rs. 2.

With the anxiety regarding tre rationalisation proposals it cannot be expected that any interest will be shown in jute shares. Unless something definite is known in this regard there cannot be any activity in this section. *Agarpara* were Rs. 19-4, *Hukumchand* Rs. 13-12 *India* Rs. 352, *Reliance* Rs. 51-4 and *National* Rs. 21-10.

In the Engineering section, *Steel Corporation* and *Indian Iron* have been more active. The quotations at one time were as high as Rs. 27-14 and Rs. 18 ex-dividend respectively. There has since been a decline in the quotation to Rs. 27-10 and Rs. 17-10 respectively. *Burn & Co.* have been marked higher at Rs. 353 on expectations of a higher dividend. *Kumardhubi Engineering* were Rs. 5-1, *National Iron and Steel* Rs. 11-6 and *Marshalls* Rs. 2 *Britannia Building and Iron* were Rs. 11-2, *Britannia Engineering* Rs. 11-15 and *Bhartia Electric* Rs. 14-12.

Sugar shares have continued steady with *Balrampore* higher at Rs. 14. *Carew* were Rs. 13-2, *Buland* Rs. 30 and *Purtabpore* Rs. 13-2.

Tea shares have been steadier with *Baghmari* at Rs. 7-15, *Bishnauth* at Rs. 27-8 and *Tezpore* at Rs. 8-4.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were Rs. 2 and Rs. 2-4 respectively. There has been some buying of Indian Copper. *B. I. C.* were Rs. 5-4, *Aluminium Corporation* Rs. 11-5 and *Assam Bengal Cement* Rs. 11-14. *Indian Cable* were marked higher at Rs. 23-4. *Dalmia Cement* were Rs. 15-14 while *Reliance Firebrick* were better at Rs. 12-4. Among Paper shares, *India Paper Pulp* were Rs. 148. *Orient Paper* have registered a sharp rise to Rs. 20-13. *Titaghur Paper* were not very much changed at Rs. 19-4.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 23.

After earlier firmness the Bombay Stock Exchange has been slightly easier towards the close. The deterioration in the Russian situation in the Rostov sector has been mainly responsible for the easier tone of the markets. Also there was some profit-taking after the sustained rise in recent weeks. Giltedged securities have been firmer with the persistence of easy money conditions and some buying by institutions.

In the giltedged securities section, 3½%

Hasimara:—(22nd) 44-15 s.l., c.t.
Murphulani Prefd. Ordy.:—(20th) 12-8; (21st) 12-8.
Naga Hills:—(21st) 14-8.
Nagri Farm:—(21st) 22-8.
Patrakola Pref.:—(21st) 136 s.l., 140.
Teen Ali:—(17th) 14; (22nd) 14.
Tengpani:—(21st) 19-4 c.t.
Tezpore Pref.:—(21st) 13-8, 14.

SUGARS:

Balrampore:—(16th) 13-6, 13-4, 13-5; (20th) 13-10; (22nd) 13-8, 13-14, 14.
Basti:—(21st) 318; (22nd) 316 s.l.
Carew Ordy.:—(17th) 13; (20th) 13; (21st) 13-2, 13-3; (22nd) 13-2.
Carew Pref.:—(16th) 136.
Cawnpore:—(20th) 27-2 c.t.
Champaran:—(16th) 24, 24-2; (20th) 24-4; (21st) 24-2, 24-4.
Murree Brewery:—(16th) 16-12; (20th) 17.
New Savan:—(16th) 14-9, 14-14; (21st) 14-14, 14-12.
Punjab Ordy.:—(20th) 266 s.l., 268.
Ramnugger Cane Ordy.:—(20th) 10-8, 10-9; (21st) 10-8, 10-10, 10-8 c.t.; (22nd) 10-12, 10-13, 10-14, 10-15.
Samastipur:—(21st) 12-7, 12-6.

ENGINEERINGS:

Bhartia Ordy.:—(16th) 14-11, 14-12; (17th) 14-12, 14-14; (20th) 14-12.
Britannia:—(16th) 11-14 c.t.; (22nd) 11-15, 12-1, 12.
Burn & Co., Ordy.:—(16th) 338 s.l.; (20th) 338, 341 s.ls.; (22nd) 349, 350, 353.
Burn & Co., 6 per cent Pref.:—(16th) 124.
Burn & Co., 7 per cent Pref.:—(17th) 141.
Indian Galvanizing:—(16th) 30-6.
Indian Iron:—(16th) 27-4, 27-5; (17th) 27-3, 27-4 (27-4, 27-6 s.ls.), 26-13, 27-1, 27-3; (20th) 27-9, 27-12 (27-6 s.l.), 27-8, 27-10; (22nd) 27-14, 27-13, 27-15.
Indian Malleable Defd.:—(22nd) 2-10.
Indian Steel Products Defd.:—(16th) 35-10
Jessop & Co., Ordy.:—(22nd) 18-12.
Kumardhubi Ordy.:—(17th) 4-14; (20th) 5, 5-1.
Kumardhubi Pref.:—(20th) 144, 143.
Marshalls:—(16th) 2; (17th) 1-15, 2; (22nd) 1-15, 2.
National Iron:—(16th) 10-14; (17th) 11-2, 10-14; (20th) 11-1; (22nd) 11-2, 11-6.
Saran:—(22nd) 6-2.
Steel Corporation Ordy.:—(16th) 18-4, 18-5; (17th) 18-3, 18-4, 18-1, 18, 18-2; (20th) 17-13, 17-12, 17-14 x.d.; (22nd) 17-14, 17-15, 18 x.d.
Steel Corporation Pref.:—(22nd) 111-8.

MININGS:

Burma Corporation:—(22nd) 2-1.
Indian Copper:—(16th) 2-2, 2-3; (17th) 2-2, 2-3; (20th) 2-3, 2-4; (22nd) 2-3, 2-4.

CEMENTS:

Assam Bengal Ordy.:—(22nd) 12-2, 11-14.
Dalmia Ordy.:—(16th) 15-8, 15-9; (20th) 15-4 s.l., 15-10; (22nd) 15-12, 15-13, 15-14.
Reliance Firebricks:—(16th) 11-10, 11-7, 11-8; (17th) 12, 12-1; (22nd) 12-4.

CHEMICALS:

Bengal Aerating Gas:—(17th) 70-8; (20th) 70-12.

PAPER MILLS:

Bengal Ordy.:—(21st) 128-8, 129, 130; (22nd) 131, 130.
India Pulp:—(20th) 145 s.l.; (21st) 147; (22nd) 147, 148.
Mysore:—(21st) 16-12; (22nd) 17, 17-4, 17-5, 17-6.
Orient Ordy.:—(16th) 20 c.t.; (22nd) 20-10, 20-12, 20-13.
Shree Gopal Ordy.:—(22nd) 16-4.
Titaghur Ordy.:—(17th) 18-14; (21st) 19-2, 19-1, 19-2, 19-3; (22nd) 19-4.
Star Ordy.:—(20th) 15.

SAW MILLS:

Assam Saw:—(16th) 3; (17th) 2-15, 3; (20th) 3, 3-1; (21st) 3-1; (22nd) 3-2.

FLOUR MILLS:

United:—(17th) 12-6.
Hooghly:—(20th) 16-4.

REAL PROPERTIES:

Humayan Ordy.:—(16th) 6-12, 6-13; (20th) 6-12, 6-13.
Humayan Defd.:—(17th) 1-8; (20th) 1-8.
Midnapore Zemindary Ordy.:—(17th) 70 s.l.; (22nd) 72, 72-8.
Midnapore Zemindary Pref.:—(20th) 140.

MISCELLANEOUS:

Aluminium Corpn. Ordy.:—(16th) 11-4; (20th) 11-1; (22nd) 11-5.
Associated Hotel Pref.:—(20th) 92.
Barasee Coke:—(22nd) 25-12, 25-10.
B. I. C. Ordy.:—(16th) 5 o.l.; (20th) 5-1; (22nd) 5-3, 5-4.
Britannia Biscuits:—(22nd) 10-12.
Calcutta Ice:—(20th) 6.
Dunlop Rubber 2nd Pref.:—(16th) 98 s.l.
Indian Cables:—(16th) 21-10; (17th) 20 s.o.l., 22-10, 22-12; (20th) 23-4; (22nd) 23, 23-4.
Ivan Jones:—(17th) 2-2.
Macfarlane Ordy.:—(20th) 6-2, 6-1.
National Insulated Cable:—(16th) 10-14.
Rohtas Industries:—(20th) 23-4 c.t.
Walford Transport Ordy.:—(22nd) 1-8.
Walford Transport Prefd. Ordy.:—(22nd) 1-8.

COMPANY REPORTS

GHUSICK AND MUSLIA COLLIERIES, LIMITED

Audited accounts for the half-year ended 31st March, 1942:—

Accounts.—As no contingency expenses are likely to be incurred, the Directors have transferred the Reserve for Contingencies Account to a General Reserve Account.

After providing for all charges including Rs. 7,500 for Depreciation and transferring Rs. 10,000 to Reserve there is a balance of Rs. 67,897-6-2 standing at credit of Profit and Loss Account including Rs. 32,000-8-1 brought forward from last half-year which the Directors recommended should be dealt with as under:—

	Rs.	A.	P.
Payment of Dividend at the rate of As. 3 per share being equivalent of 12½ per cent per annum free of income-tax, absorbing ..	24,375	0	0
Carry forward to next half-year ..	43,522	6	2
Total ..	67,897	6	2

Raisings, Despatches and Colliery Consumption were as follows:—

(Meeting, 31st July, 1942 at 3 p.m.)

KODALA, LIMITED

Audited accounts for the year ended 31st December, 1941:—

Outturn.—Under the terms of the Indian Tea Control Act, 1938, which regulates Exports, and the current internal restriction scheme, the Company was again subjected to restricted output. This amounted to:—

Export Quota	2,781 mds. 34 lbs.
Internal Quota, including 124 mds. 19 lbs. carried forward from 1940 ..	753 " 15 "
Total ..	3,534 mds. 49 lbs.

Sales.—It was again decided to tender teas to the United Kingdom Government under the 1941 Long Term Contract and a total of 2,095 mds. 42 lbs. was delivered to and accepted by the Tea Controller for India representing the Ministry of Food.

In order to take advantage of the very high prices ruling on the Calcutta Export Market an additional quantity of Export Quota amounting to 129 mds. 16 lbs. was purchased and it was thus possible for a total of 815 mds. 55 lbs. to be sold on this market.

The remainder of the crop, after selling 76 mds. 19 lbs. of Internal Quota, was sold on the Internal Market and a balance of 169 mds. 16 lbs. Internal Quota remains in hand to be carried forward to the current season.

The average for the whole season inclusive of teas sold to Government under the Long Term Contract is 11.110 annas per lb. and for ready reference the directors give below statistics of outturn and sales for the past three years' manufacture:—

Year.	Outturn.	Sale average.
1939 ..	2,51,937 lbs.	8.015 annas per lb.
1940 ..	2,56,743 "	8.619 " " "
1941 ..	2,74,115 "	11.110 " " "

Result.—The result of the season's working, after deducting the Manager's commission is a profit of Rs. 91,526-12-11. This, after the adjustments of the accounts for the previous year, and provision for income-tax, brings the amount at credit of Profit and Loss Account to Rs. 90,628-13-5, out of which an interim dividend of 10 per cent absorbing Rs. 12,500-0-0 has already been paid, leaving a balance of Rs. 78,128-13-5 which the directors propose to allocate as follows:—

	Rs.	A.	P.
To Payment of a Final Dividend of 20 per cent (making 30 per cent for the year) ..	25,000	0	0
" General Reserve	30,000	0	0
" Improvement Fund	10,000	0	0
" Subscriptions to War Funds	2,500	0	0
" Retiring Allowance Fund ..	2,288	2	9
" Carry forward	8,340	10	8
Total ..	78,128	13	5

It is proposed to make a further allocation of Rs. 10,000 to this Fund for, although only minor improvements will be carried out during the current year, further expenditure on buildings and machinery will have to be faced as soon after the war as possible.

Estimate.—The estimate for the current season provides for a crop of 3,100 mds.

Managing Agents.—Messrs. Kilburn & Co.

Synopsis of the balance sheet as at 31st December, 1941:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	1,25,000	Fixed Capital Expenditure ..	1,25,000

(Meeting, 31st July, 1942 at 4-0 p.m.)

NEW TERAI ASSOCIATION, LIMITED

Audited accounts for the year ended 31st December, 1941:—

Result.—The result of the Season's working, after deducting Manager's and Assistant Manager's commissions, is a profit of Rs. 1,37,355-7-5. This, with the adjustment of the accounts for the previous year and after making provision for taxation, brings the amount at credit of Profit and Loss Account to Rs. 1,20,574-2-6, out of which an interim dividend of 5 per cent absorbing Rs. 22,500 has already been paid, leaving a balance of Rs. 98,074-2-6 which the directors propose to allocate as follows:—

	Rs.	A.	P.
To Payment a Final Dividend of 10 per cent (making 15 per cent for the year) ..	45,000	0	0
" General Reserve	40,000	0	0
" Subscription to War Funds ..	2,500	0	0
" Retiring Allowance Fund ..	3,433	14	2
" Carry forward	7,140	4	4
Total ..	98,074	2	6

Outturn.—Under the terms of the Indian Tea Control Act, 1938, which regulates exports, and the current internal restriction scheme, the Company was again subjected to restricted output. This amounted to:—

Export Quota	5,007 mds. 76 lbs.
Internal Quota, including 45 mds. 35 lbs. carried forward from 1940 ..	1,177 " 69 "
Total ..	6,185 mds. 65 lbs.

Sales.—It was decided once again to tender teas to the United Kingdom Government under the 1941 Long Term Contract and a total of 3,774 mds. 60 lbs. was delivered to and accepted by the Tea Controller for India representing the Ministry of Food.

Of the remainder of the crop 2,342 mds. 75 lbs. were sold locally with Export Rights at satisfactory prices, 387 mds. 33 lbs. were sold internally, and a balance of 178 mds. 71 lbs. of internal quota remains in hand to be carried forward to the current season.

The average for the whole season inclusive of teas sold to Government under the Long Term Contract is 11.649 annas per lb. and for ready reference the directors give below statistics of outturn and sales for the past three years' manufacture:—

Year.	Outturn.	Sale average.
1939 ..	4,42,828 lbs.	8.823 annas per lb.
1940 ..	5,04,000 "	8.583 " " "
1941 ..	5,20,874 "	11.649 " " "

Estimate.—It has again been decided to tender a certain proportion of the Company's teas to the Tea Controller for India under the 1942 Long Term Contract and the estimate for the current season provides for a crop of 6,500 mds. at a cost of 6.207 annas per lb.

Managing Agents.—Messrs. Kilburn & Co.

Synopsis of the balance sheet as at 31st December, 1941:—

(Annual meeting, 31st July, 1942 at 3-30 p.m.)

PASHOK TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1941:—

Result.—The result of the season's working, after deducting Manager's and Assistant Manager's commissions, is a profit of Rs. 91,307-12-7. This, with the adjustment of the Accounts for the previous year and after making provision for income-tax, brings the amount at credit of Profit and Loss Account to Rs. 94,632-14-5 from which an interim dividend of 5 per cent, absorbing Rs. 16,500 has already been paid, leaving a balance of Rs. 78,132-14-5, which the directors propose to allocate as follows:—

	Rs.	A.	P.
To Payment of a Final Dividend of 7½ per cent (making 12½ per cent for the year) ..	24,750	0	0
„ General Reserve	10,000	0	0
„ Improvement Fund	25,000	0	0
„ Subscription to War Funds	2,500	0	0
„ Retiring Allowance Fund	2,282	11	1
„ Carry forward	13,600	3	4
Total ..	78,132	14	5

Outturn.—Under the terms of the Indian Tea Control Act, 1938, which regulates exports, and the current internal restriction scheme, the Company was again subjected to restricted output. This amounted to:—

Export Quota	2,982 mds.	40	lbs.
Internal Quota including 144 mds. 70 lbs. carried forward from 1940 ..	819 „	24	„
Total ..	3,801 mds.	64	lbs.

Sales.—It was decided to tender a certain proportion of the crop to the United Kingdom Government under the 1941 Long Term Contract and a total of 2,060 mds. 52 lbs. was delivered to and accepted by the Tea Controller for India representing the Ministry of Food.

Of the remainder of the crop 967 mds. 79 lbs. were sold locally with Export Rights, 748 mds. 2 lbs. were sold internally, leaving a balance of 33 mds. 72 lbs. internal quota to be carried forward to the current season.

The average for the whole season inclusive of teas sold to Government under the Long Term Contract is 12.368 annas per lb. and for ready reference the directors give below statistics of outturn and sales for the past three years' manufacture:—

Year.	Outturn.	Sale average.
1939 ..	2,72,466 lbs.	10.691 annas per lb.
1940 ..	2,75,112 „	12.283 „ „ „
1941 ..	3,02,853 „	12.368 „ „ „

Estimate.—The estimate for the current season provides for a crop of 3,500 mds.

Managing Agents.—Messrs. Kilburn & Co.

(*Annual meeting, held 24th July, 1942*).

Audited accounts for the year ended 31st March, 1942:—

Mayurbhanj Forest.—Forest working in general has been satisfactory although labour conditions have at times proved difficult as a result of the increased demand in the district for the carrying out of urgent works in connection with the world war. This has, also, interfered with extraction of timber by lorry and may cause serious difficulties in the forthcoming working season. Apart from this, the conversion and extraction of cubic footage compares favourably with last year and it is hoped that, unless adverse unforeseen circumstances arise, this may be maintained.

Accounts.—After providing for all charges and transfering Rs. 43,000 to General Reserve and Rs. 15,000 to Reserve against Investments and making adequate provision for taxation the amount at the credit of the Profit and Loss Account is Rs. 1,13,602-7-3 including Rs. 16,748-13-10 brought forward from the previous year, which the Directors recommend be disposed of as under:—

	Rs.	A.	P.
Payment of Dividend at the rate of 12 per cent per annum, without deduction of income-tax paid for by the Company	96,000	0	0
Carrying forward to next year	17,602	7	3
Total ..	1,13,602	7	3

Managing Agents.—Messrs. Martin & Co.

(*Annual meeting, 7th August, 1942 at 2 p.m.*)

Audited accounts for the year ended 31st December, 1941:—

Accounts.—The Revenue Account shows a profit of 49,198 7 4

As compared with Rs. 1,25,815-12-8 for the previous year, and after deducting from this:—

	Rs.	A.	P.	Rs.	A.	P.
Reserve for Income and Super-tax (1942-43)	22,000	0	0			
Gratuities to retiring employees	1,700	0	0			
Adjustment of Street Lighting Charges	9,849	7	0	33,549	7	0
				Rs. 15,649	0	4
and adding:—						
Profit on sale of Investments ..	11,763	11	0			
Profit on sale of Machinery ..	43,160	0	0	54,923	11	0
There is a nett profit of				70,572	11	4

After adding to this the credit balance of Rs. 14,158-8-4 brought forward from the previous year there is a balance of Rs. 84,731-3-8 at credit of Profit and Loss Account, which balance the Directors recommend should be disposed of thus:—

	Rs.	A.	P.
Dividend at 6 per cent, free of income-tax on the Preference Share Capital for 1941 (paid in January, 1942)	36,000	0	0
Pay a dividend of 2½ per cent, free of income-tax on the Ordinary Share Capital for the year 1941	22,500	0	0
Place to General Reserve	15,000	0	0
Carry forward	11,231	3	8
Total ..	84,731	3	8

General.—The supply of electricity was satisfactorily maintained during the year.

As mentioned in the last Report, the Company's business was adversely affected by the outbreak of communal rioting in the town. The gradual improvement in the position, which was first reflected in the figures for June, 1941, did not unfortunately continue throughout the year, and further serious trouble occurred in the month of October. As a result of these disturbances there was a greatly reduced demand for energy, and the number of units sold shows a decrease of nearly 13 per cent and in consequence a considerable drop in revenue, as compared to the previous year.

The steady increase in the sales of energy, which had been recorded since the close of the year, recently suffered a setback from a further outbreak of rioting. This appears to have ceased now and it is hoped that the steps being taken by the authorities concerned will prevent a recrudescence of such disturbances.

There has been some correspondence in connection with the proposal for an increased supply to the Dacca Water Works, but no concrete results have so far materialised.

Plant.—The new steam Turbo-Alternator Set, which was put into commission on the 18th January, 1941, has since operated without incident, as also have the new Rotary Substations.

Managing Agents.—Messrs. Octavius Steel & Co., Ld.

Leaving a balance of					1,06,726	0	0

which they propose to carry forward.

A sum of Rs. 15,000 has been reserved against Income-tax on the profits of Pudukad Estate, which is situated in Cochin State.

The amount standing at credit of Amortisation Reserve, Rs. 51,564-4-3, has been transferred to Development Account.

A further sum of Rs. 50,000 has been set aside for the General Reserve Fund bringing this up to Rs 3,00,000. Investments have been increased to Rs. 3 lakhs face value, shown in the Balance Sheet at market value, Rs. 2,89,840.

Acreage.—The acreage of the properties is 6,648.82.

Litigation has been going on for many years between outside parties, the original lessee and the landlords, in which the Company eventually became involved, over a portion of the Kuttiadi Estate reserve land. During the year the Company managed to effect a compromise between the parties concerned which involved the relinquishment by the Company of approximately 195.84 acres of reserve (which is not required by the Company and on which annual rent and assessment is saved) and it is hoped that there will be no further trouble.

Rubber Control Order 1942.—A Rubber Control Order has been issued by the Government of India prohibiting the export of rubber from British India and laying down rules regarding sales by producers and purchases by manufacturers. After considerable delay the Government of India has issued a notification fixing maximum prices. These vary from Rs. 71-8 per 100 lbs. for Ministry quality Sheet to Rs. 20-8 for Earth Scrap.

The estimated crop for 1942-43 is 1,200,000 lbs. at an f.o.b. cost of 22.93 cents (3.67 annas) per lb.

The Company has been granted a provisional export quota allotment for 1942 of 70 per cent—807,302 lbs. The Directors have not been advised so far of the final export quota but this is unimportant as exports are prohibited.

Managing Agents.—Messrs. Peirce, Leslie & Co., Ld.

Synopsis of the balance sheet as at 28th February, 1942:—

Libilities.	Rs.	*Assets.*	Rs.

IMPERIAL BANK OF INDIA

NOTICE

The Annual General Meeting of the Shareholders of the Imperial Bank of India will be held at the Local Head Office of the Bank, No. 3, Strand Road, Calcutta, on Monday, the 24th August, 1942, at 11-30 a.m. (Standard Time) for the transaction of the following business:—

1. To receive the Central Board's Report, the Balance Sheet of the Bank made up to the 30th June, 1942, and the Report of the Auditors.
2. To elect three Auditors and to fix their remuneration.

W. LAMOND,
Managing Director.

Bombay, the 13th July, 1942.

IMPERIAL BANK OF INDIA.

NOTICE is hereby given that the 22nd Local Meeting of the Shareholders of the Imperial Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, 3, Strand Road, Calcutta, on Monday, the 31st day of August, 1942, at 9 a.m. (Standard time), for the purpose of electing two persons to be Members of the Local Board to fill the vacancies caused by the retirement of Rai Bahadur Sir Badridas Goenka, C.I.E., and Mr. T. S. Gladstone who go out of office at such Meeting, but, being eligible, offer themselves for re-election.

By Order,
F. H. MOORHOUSE.
Secretary and Treasurer.

Dated 23rd July, 1942.

THE COCHIN MALABAR ESTATES LIMITED

edged securities section, 3½ per cent. Paper was quoting at the highest level for sometime being quoted at Rs. 93. 3 per cent Paper also were marked higher at Rs. 79-14. Among terminable loans, 3 per cent. 1951/54 were Rs. 99-14, 3¾ per cent. 1948/52 Rs. 98-10, 3½ per cent. 1947/50 Rs. 102-3, 4 per cent. 1960/70 Rs. 108-8 and 5 per cent 1945/55 Rs. 108-10.

Textiles.—The reports that the Government will take up 35 per cent. of the production of Indian mills instead of 20 per cent. as hitherto and the allowances for increased production costs on account of war risk insurance etc., were mainly responsible for the rise in prices early in the week. Towards the close there has been selling and Bombay Dyeings especially have lost all the gains during the week. The quotation is unchanged on balance at Rs. 1,305. *Central India* were Rs. 379 and *Century* Rs. 504. *Kohinoor* were Rs. 505, *Simplex* Rs. 210 and *Gokak* Rs. 270.

Hydro-Electrics.—With the possibility of a further increase in the consumption of power by textile mills there has naturally been a rise in quotations for hydro-electric issues. *Tata Hydro* were Rs. 173, *Andhra Valley* Rs. 1,650 and *Tata Power* Rs. 1,565.

Steels.—Steel issues have closed around last week's levels. There have been no important price fluctuations during the period under review. *Tata* deferreds and ordinaries were Rs. 1517-8 and Rs. 304 respectively.

Miscellaneous.—*Alcock Ashdown* were unchanged Rs. 375 while *Belapur* were lower at Rs. 228. After the sharp rise in the quotation during the last two weeks *Shivrajpur* have been marked back to Rs. 45. *A. C. C.* were Rs. 171-8 after being higher at Rs. 173 while *B.E.S.T.* were Rs. 131-8 and *Scindia Steam* Rs. 20-6.

"HELP THE COUNTRY [illegible] WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

INTERBANK call money continues phenomenally easy, the rate remaining unchanged at ¼ percent and the demand remaining unchanged at zero. Further substantial reduction is recorded in the average discount rate of treasury bills sold at this week's auction. The rate this week is annas 9 as compared with annas 9 and pies 9 per cent. per annum last week. This decline in the average rate has taken place in spite of a decrease in the amount of applications. Against Rs. 8 crores of tender bills on offer on July 28, applications came to Rs. 12.53 crores as against Rs. 15.29 crores on July 21. On the face of it, one might be inclined to draw the conclusion that the relatively poor bidding this week must mean lesser competition. The plain fact of the matter is that no generalisation can be made with respect to the total amount of tenders and the average rate of accepted tenders. The applications may be for a bigger amount, but competition from the point of view of the rate may not be so keen. On the other hand, applications may be on the small side; and yet, there might be, so to say, intensive, if not, extensive competition. Tender bills on the basis of Rs. 8 crores per week have continued for five weeks; and has greatly strengthened the ways and means position of the Central Government. So great is the improvement in this regard that during a week, in which no payment has been received from the British Government on account of war supplies and war commitments, the deposits of the Central Treasury with the Reserve Bank show a rise of Rs. 5.68 crores. This must be principally due to the spate of funds flowing from substantial sales of treasury bills. It is also possible that, though the third defence loan has not so far had any striking progress, fairly satisfactory applications might have been received last week. Be this as it may, the Central Government are now feeling so comfortable about their cash position that it has been decided to reduce the weekly offer of tender bills to Rs. 6 crores from next week. Treasury bill maturities in August amount to Rs. 24 crores. If weekly sales of tender bills are on the basis of Rs. 6 crores per week throughout August, fresh sales of bills will be just about equal to maturities.

An important *communique* has been issued by the Reserve Bank of India whose purpose is to provide a bridge between maturing bills and new tender bills. Both the exact significance and effects of the proposals contained in the Reserve Bank *communique* have not been understood aright by many people in money market circles; and we have received a large number of enquiries as to its purport. The following is the full text of the *communique*.:

"With effect from July 29, 1942, at a Treasury Bill Auction a successful tenderer who has a treasury bill maturing between the day on which the result is published and the day preceding the next publication, both inclusive, may offer such maturing treasury bill against his allotment; the difference between the face value of the old bill and the cost of the new bill will be paid in cash, and the new bill will be dated with the date on which the old bill falls due for repayment. The balance, if any, of his allotment outstanding will be payable by him as before on the date on which cash payment is announced to be made in the weekly *communique*. Particulars of the amounts and maturity dates of bills which it is proposed to offer accordingly should be shown in the tenders presented to the Reserve Bank of India on auction days. Further particulars may be ascertained from the local office of the Reserve Bank of India."

The simplest way of explaining this proposal is by a concrete illustration. August 11 is a Tuesday and will be the second treasury bill tender day for the month. The results of tenders received on August 11 will be published in the morning papers of Wednesday August 12. In the ordinary course, that is to say, according to the arrangement in force up till now, the successful tenderer must make payment on Friday, August 14. Now, there are bills maturing in August on all kinds of dates as a good part of the August maturities is in respect of intermediate treasury bills sold in May. If a bank has a treasury bill maturing on August 12, and if this particular bank is a successful tenderer at the auction of August 11, what happens is that the bank will be paid on August 12 against its maturing treasury bill; and it will be paying out this money on August 14 against the new bill which it has been allotted. That is, the money will lie idle with the bank on August 12 and August 13. The present proposal of the Reserve Bank is to facilitate the bank to keep up its continuity of investment in treasury bill and to earn interest without any break. This is a step which will be greatly appreciated by banks. The money market as such will also be spared unnecessary disturbance such as is involved in government paying out a large sum on August 12 and in the bank paying out a like large sum on August 14. The new proposal renders such disturbance unnecessary. There is also the other case of a bank which may have a bill maturing on August 15. Under the present arrangement, payment of a bill allotted on August 11, must be made on August 14. A greater latitude is now allowed with regard to the date of payment against allotted bills. The bank which has maturing bills on August 15 is thus enabled comfortably to provide for the allotment received in the auction of August 11. We congratulate the Reserve Bank on the provision of a facility which enables banks to maintain continuity of treasury bill investment and which does away with the redundant to and fro movements of funds.

The Reserve Bank returns for the week ended July 24, disclose only one or two changes worth commenting on. Central Government's deposits have risen by Rs. 5.68 crores to the comfortable total of Rs. 20.83 crores. The bank return for July 31 will reveal the effects of payment by the British Government to the Indian Government. It is quite on the cards that the Central Government's deposits may rise to between Rs. 35 crores and Rs. 40 crores—a state of affluence not witnessed for many a day. Banks' deposits show a decline of Rs. 1¼ crores but are still at the high level of Rs. 64½ crores.

The return of the Imperial Bank for the week ended July 14 is equally colourless. There is a small decline in deposits, investments and advances. The bank's cash has

TREASURY BILLS

India

A Press "communique" states:—Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months Government of India Treasury Bills were opened on Tuesday, July 28, 1942. Total amount offered was Rs. 12,53,50,000 (Rupees 12 crores 53 lakhs 50 thousand). Tenders at Rs. 99-14 per cent were accepted in full and those at Rs. 99-13-9 per cent were allotted approximately 93 per cent. Lower tenders were rejected. Total amount accepted was Rs. 8 crores, the average rate of accepted tenders being Rs. 0-9-0 per cent (Rupees nil annas nine per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, August 4, 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday August 3, 1942 at other centres. Successful tenderers should make payment on Friday, August 7, 1942. Other conditions as as usual.

During the week ended July 24, 1942, Government of India Treasury Bills for Rs. 2,32,00,000 (Rupees 2 crores 32 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

THE only definite result of the loss of Rostov appears to be the rise in bullion prices. Gold had risen smartly before Saturday in Bombay and silver kept step. Spot prices were higher than forward despite sales by the Reserve Bank whose silver policy appears to be unchanged as compared with two years ago. Bombay is still bullish about silver and the local stock of 5,000 bars is expected to go off rapidly. The position in London and New York is unchanged. The U. S. Treasury has no plans to sell gold or silver though it can and should help to keep down world prices for the addition to Bank reserves everywhere will not lead to inflation but improve the reserve position and help to take idle money off. But that again means hoarding which nobody is willing to countenance. Anyway, the bullion rates this week in Calcutta and Bombay are more or less equal and the average citizen is likely to seek refuge in the precious metals if there is any internal disturbance in India.

The London money market is going to encounter reduced demand from the Government this week as 15 million only will be taken for treasury deposits this week. The treasury bill results last week showed less keenness for bills on the part of the market to judge from the volume of applications but that meant a better allotment for others than the public departments. The London Stock exchange is unperturbed by Russian developments. The Funds are untouched by the war and the improvement in the textile group holds. Oil shares are not clearly moving backwards and Home Rails have held their ground in spite of reports of agitation and discontent or the big scene in the House of Commons. Mass petitions do not influence the stock exchange which is certainly looking beyond local events. In the last two months, as a result of better company reports, plantation shares have registered some improvement and the biggest change of the week is the drop in Barnagore Jute to par. London jobbers are clearly apprehensive about rationalisation—shelved promptly enough even if it is meant to save power or wagon space. The absence of any change in London rates for foreign currencies implies that no change has taken place in India. The control rates for all currencies remain unchanged. The fact that much of the trade is on Government account helps to keep the rates at all times steady. The only change discernible in the familiar tabulation of exchange rates in the statistical bulletin of the League of Nations is an appreciation in the Turkish currency following improvement in 1941. The Bank rate in Turkey stands at 4 per cent as from July 1938. The Iranian currency too is quite stable since January, it appears, and another Middle Eastern currency, which is latterly steady, is the Iraqi dinar. Among Latin American currencies, the Venezuelan bolivar this year is lower in value, recovering in March rather quickly, but the Cuban peso keeps improving in terms of dollars. The peso is apparently higher than the U. S. dollar as a small premium emerged. The table reveals an interesting detail. When war broke out in December, the Hongkong dollar depreciated to some extent, and the Chinese dollar also fell in terms of U. S. cents. Up to April 8, the Egyptian currency was singularly stable, and the quotation of over $4.13 to the pound Egyptian showed that the Egyptian currency was stronger than sterling. Towards the end of March the Canadian dollar, which is fixed in terms of sterling, weakened in New York. The weakness was attributed to the repartriation of funds from Canada by Americans who were paid off by the Canadian Government for its matured bonds.

The U. S. A. has had another tax bill. Mr. Morganthau has asked the people to pay more cheerfully. The two billion odd to be raised by the latest measure is in addition to the 6 billion odd provided for earlier. There is to be an excess profits tax of 90 per cent in accordance with the House Committee's recommendation. The measure was approved by 392 votes to 2 in the Lower House of Congress last week. The tax bill is perhaps more important than the President's picking Admiral Leahy as Chief of Staff and principal adviser to the U.S. C.-in-C. who is also President. Of less interest is the lease-lend agreement made on Friday last with Yugoslavia. A pledge was given to the young king and the U. S. A. of course does not expect any return.

The fight against inflation has not ended. Various points have been stressed by the Administration which has consulted labour leaders in order to emphasise the advantage of frozen wages and controlled prices. During this week there have been indications of a bigger anti-inflation campaign in America. For six months or so the U. S. A. has battled against rising prices. Saving has not been rapid enough and spending has been an obstruction. War production, in spite of the progress made with Canada's aid, is not deemed enough for an early success in war. The U. S. A. is anxious and troubled by doubts. Petrol rationing started in May. The minimum for A permits was three gallons per week. The range of permits worked up to 8 gallons per week. A lot of people asked for X cards which entitle holders for unlimited petrol. The Senate did not ask for X cards and only later did Senators call themselves essential like Congressmen and ask for X cards. Sugar rationing started earlier as we know. Mr. Henderson hopes to get on with rationing of many commodities by the autumn, and he predicted a fall in the standard of living though there would be no shortage of food. The people of the U. S. A. who have been enjoined to make sacrifices are evidently prepared for a fall in the standard of living to the lowest level of the depression of 1931 and 1932. The war effort in terms of dollars can be measured but not in terms of sacrifice. In a single month like March, the U. S. A. may have collected 3,000 million dollars because of the higher rates of tax in force, but the money alone is not enough. Revenue in 1941-42 was better than expected. Heavy revenue payments reduced the short-term debt of the Federal Government. By March the daily expenditure of the Federal Government topped $100 million and the monthly revenue itself was modified by the receipt of tax anticipation notes. About $500 million came in the form of notes representing prior payment of taxes. The Treasury's balances were known to be falling; and the new tax measures are now understandable in the light of rising expenditure and reduced purchases of savings bonds though the figures for May are better than anticipated. But the Treasury could even then get money on three months bills at a rate below ¼ per cent per annum. The weekly tender in the U. S. A. happens to be as large as $150 million. The March results were definitely reassuring. The giltedged market was rising in spite of war news and the sale of one-year treasury notes began in April. Banks increased holdings of securities as excess reserves declined this year. War had not produced any change in New York money market conditions. Treasury control is as effective as in London and the discount rate of 1 per cent goes with low rates of yield on giltedged. Borrowing has been postponed by the Treasury but the market has been well nursed since the outbreak of war. Prewar prosperity is a material factor. Profits of business enterprises rose in 1941 despite higher taxation and rising costs. Only a few groups like tobacco and gold mining companies reported reduced profits for 1941.

As in the past year, aircraft manufacturers came off best. Oil companies again reported bigger profits for 1941 like railroads. Biggest increase belongs to the iron and steel group while retail stores disclose the smallest of any increase in earnings. In the aggregate U. S. Business profits in 1941 were better than in any period since 1929 and the further rise in U. S. industrial production suggests that a new high will be reached this year. Steel output was estimated in March at 87 million tons per annum and coal and petroleum are major industries likely to do even better than in 1941. War orders boosted textile and chemical output and the automobile industry for its share of defence prosperity in 1941 was swiftly changing over to military production.

The note issue in Britain has risen rapidly of late. The Bank of England's reserve has fallen, but that is of little importance. The increase in the note issue is permitted by law, but it points to a manifestation of influences not held in check. As an index of full employment in Britain, the addition to purchasing power is significant. Anyway nobody worries about that or the rise in Public Deposits or Banks' deposits from week to week. More is earned, more may be spent, but the Treasury is getting more by way of revenue as private consumption is falling as shown by the fall in retail trade in 1942 just as the overseas trade too is dwindling.

January—June—III

Banks & Industrial Profits

Discussing the course of industrial profits in the first quarter of 1942 and the prospects of the various industries in the immediate future, we pointed out that India was in a position to derive considerable benefits from the emergent conditions caused by the war. We stressed that, with the entry of Japan into the war on the side of the Axis powers, this country had assumed great strategic importance; and that, with the loss of N.E.I., Malay States, Burma and other territories, the Empire had to be dependent on India for several commodities. And such a dependence, though unfortunate, as it was created by the enemy occupation of certain important places, had considerably improved the prospects of certain industries. Thus the Tea, Sugar, Cotton, Rubber and other industries are working to capacity and there has been a rise in prices of goods and incidentally of earnings of companies.

Nothing has happened to alter the outlook since we last wrote on this subject; but it appears that certain developments will have an adverse influence on the growth and prospects of industries. The freight position has deteriorated considerably. Internal transport difficulties also have made the problem of distribution incapable of satisfactory solution. The Pacific supply route is apparently not safe enough and imports and exports are mostly effected from Bombay and other west coast ports. It is not possible to get the necessary shipping space. Priorities are naturally given to goods intended for the prosecution of the war.

The exporting industries have, therefore, been badly affected. The Jute industry is the outstanding example. The paralisation of trade with overseas countries has been so complete and the difficulty in providing even the restricted wagon and shipping space so great, that it was proposed to rationalise the industry and by cutting down production to save power and wagon space. Only with the opposition from the industry and the alternative suggestions put forward by them it has been decided that the rationalisation scheme, as originally proposed, should be dropped.

The Cotton Textile industry was not able to export goods freely but the deficiency in this regard has been more than made up by the recent increase in Government orders. It is now feared that it will not be possible to cater freely to Indian demand. The Sugar industry is doing well and in the next season can be expected to do much better. But the problem of transport seems to present great difficulties. At a recent meeting of the Central Sugar Advisory Committee it was proposed that greater use should be made of animal drawn vehicles. The Tea and Rubber industries are thriving well and will continue to thrive well in the absence of alternative sources of supply.

The absence of free transport facilities has given rise to regional importance. Cotton mills in Bengal, sugar mills in South India and Bombay and collieries in Central India and Assam are having an unusually busy time. Earnings for the last six months and for sometime to come may show a large increase over the figures for 1940 but owing to the poor level of profits for standard periods shareholders may not possibly stand to benefit to any great exent.

It is pointed out that as a result of the recommendations of the Grady Mission there will be a thorough reorganisation of transport facilities but with the strain on railways increasing daily no great improvement from the point of view of the general public can possibly be expected.

It was believed that the Grady Mission's recommendations would turn out to be highly advantageous to the country. So far nothing tangible has taken place in spite of the fact that it is now nearly two months since the preliminary report was published. With the present attitude of the Government there will not be any regimentation of industry or development of new industries.

The established industries with the exception of coal and jute can hope to have satisfactory trading conditions but as time goes on the problem of distribution may prove to be more difficult. We have to only comfort ourselves with the thought that we have so far been spared the horrors of war.

Analysis of the results of 144 companies published in the first six months of the current year shows that the aggregate profit, before providing for taxation and depreciation, is considerably higher at Rs. 15.10 crores against Rs. 8.69 crores for the same companies reporting in 1941. The increase in earnings is mostly due to the cotton, engineering, jute, tea companies. The upward trend in earnings has been maintained in respect of the cotton, tea and sugar companies while latest reports of jute companies reveal that the lower prices for goods and the smaller turnover are being reflected in earnings. Provision for taxation, depreciation and other funds eats up most of the increase in earnings, the figure being Rs. 9.88 crores against Rs. 4.70 crores. Against the increase in earnings to the extent of Rs. 6.41 crores shareholders receive only Rs. 57 lakhs, the amount distributed by way of dividends being Rs. 4.50 crores against Rs. 3.93 crores. The liquid position of the companies has been strengthened. Undistributed profits amount to Rs. 1.64 crores against Rs. 1.23 crores.

Coming to particular industries, the cotton textile industry has done very well. The aggregate profit of 18 companies is Rs. 3.45 crores against Rs. 1.09 crores in 1941. 42 jute mills report earnings of Rs. 4.52 crores in 1942 against Rs. 1.90 crores in 1941; 23 coal companies Rs. 31.65 lakhs against Rs. 27.03 lakhs; 23 tea companies Rs. 42.92 lakhs against Rs. 29.13 lakhs and 3 sugar companies Rs. 17.40 lakhs against Rs. 7.14 lakhs. Needless to say, engineering companies and iron and steel companies have been very busy. The Tata Iron and Steel Company Limited was able to report for the year ended March 1942 gross earnings of Rs. 8.96 crores against Rs. 7.85 crores.

It is said that bank profits reflect the course of industrial profits. But in the present circumstances this statement does not hold good. With private exports at a standstill advances have shown a sharp decline. And there has been no need for finance for industrial purposes on any large scale. Crop movements and crop financing also have been on a considearbly reduced scale. With the result there has been a slight reduction in the earnings. An appreciable decline in profits has been prevented only by a large increase in demand liabilities and the payment of interest on a smaller scale. The position in this regard will be clear from the following figures:— Demand liabilities in India on July 10 were Rs. 278.72 crores against Rs. 220.01 crores as on December 25, 1941; Time Liabilities on the same date were Rs. 97.61 crores against Rs. 107.05 crores; Cash Rs. 12.00 crores against Rs. 11.50 crores; Balances with the Reserve Bank Rs. 63.93 crores against Rs. 31.44 crores; Advances Rs. 89.54 crores against Rs. 121.19 crores and Bills Rs. 1.83 crores against Rs. 6.17 crores. It will be noticed that there is a sharp increase in demand liabilities and balances with the Reserve Bank. Time liabilities are lower, while advances and bills discounted show a sharp decline. The Imperial Bank has been able to earn higher profits only with the record increase in the amount of deposits and the larger investments in securities. Other banks have earned a slightly lower level of profits but in all cases dividends have been maintained.

Thus, bank profits have not kept pace with industrial profits. It is satisfactory to note, however, that the banking position is very sound and that the earliar distrust is gradually disappearing. Before long deposits may find a more permanent place in banks who may be encouraged to adopt a more liberal policy. Though with conditions as they are there may not possibly be any great increase in demand for funds. The industries directly affected by the war effort will continue to thrive well though the scope for any further appreciable increase in earnings is strictly limited. Vast adjustments in the internal economy of the country have to be effected and a more scientific view of things adopted.

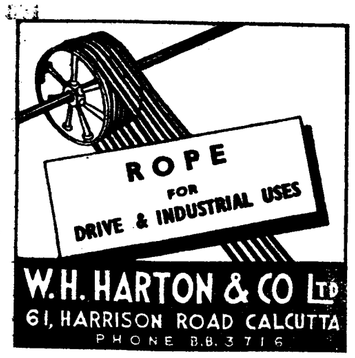
CHANGES IN EMPLOYMENT

While recruiting figures are regularly released in India at present it is difficult to say how much manpower is in reserve. The inclusion of such an unusual item as manpower, in the Defence Member's portfolio, has been explained. The War Department attends to the recruiting and the application of the National Service Act alone concerns the new Defence Department. Since the new Member passes from Labour, in which technical training figures, to Defence minus war the continuity of policy which we must desire will be safeguarded. But what the ways in which labour is to be brought into the war effort by swelling factory production or saving up must remain an open question. It is passing strange that in the third year of war we are content to ask how labour is going to be brought into the war effort. The tripartite conference of officials, employers and unions may properly consider this question which is altogether independent of the ordinances relating to essential services and the like. In its broadest aspects labour's aid is a question of getting men for work but there is also the question of wages. Wages, in a sense are determined by the supply of labour rather than any other factor. Prices also influence wages and the workers are more anxious about price control than compulsory recognition being given to trade unions by employers.

It is noteworthy that the net addition to employment in India must remain the subject of uninformed conjecture. We know that a million more have gone into the Army and that the labour force of Ordnance factories has been greatly expanded in wartime. But the addition to civil employment in the war period is only to be guessed. Deductions must be made for the exodus from cities this year, and the possible effects of future rationalisation before we can get any reliable statistics. How does labour stand in relation to the war effort? We know that British labour backs the National Government and British workers are doing a great job at home. But we know little of the events in the world of labour and the departure of the sixth batch of trainees to Britain conveys little information to the layman as to the adequacy of response. It is realised that labour welfare is now a special job and a labour leader is on tour to tell workers that this is their war. But labour itself knows little or nothing about the changes in employment, wages, and labour conditions in India. Only the new Act can provide information for which we feel impelled to ask. There is no index of employment or pay roll. It is so easy to turn up a Canadian Bank circular and read off the advance in indices in the Dominion but when it comes to India, we know nothing about labour except that the cost of living in some industrial centres is rising alongside of wholesale prices. There is no checking up on vital trade, or workers' saving.

The factory employment statistics for the present period cannot be had for some time, and it is not possible to institute any comparison with the progress in employment last year reported by the U.S.A. The number of workers in the U.S.A. rose by about 19 per cent.; their work hours increased by over 8 per cent. A more limited increase is shown under the salaried employees and wage earners in the U.S.A. By January, 1942, the index of industrial employment was 125 as against 109 at the end of January, 1941. The decline from the October peak of 128 was purely seasonal in the manufacturing industries of the U.S.A. The increase in Canada was more marked, but the continuous rise in defence charges and employment can be more accurately appraised in respect of the U.S.A. The League of Nations statistical bulletin contains many blanks. It does not throw light on Germany, Britain or Russia, and India does not figure at all among the reporting countries. But such figures as are indicative of rising industrial output in wartime deserve to be studied. Employment in South Africa rose in 1940 and rose further in 1941. Conservation of labour had to begin at the same time as control of essential materials. The rise in employment was characteristic of both mining and transport. The Commonwealth of Australia reported regular additions to the numbers engaged in manufacturing industries. We are latterly aware of how far defence has influenced employment in Australia. The emergency regulations have modified both the quantum and nature of employment there but they had no bearing on the normal progress recorded in 1941.

The U.S. progress in employment belongs to the period before she entered the war and excludes the emergency labour force. Employment in Denmark's industries with the exception of building is known to have risen in the summer of 1941. The decline in winter is not unexpected but the index for 1941 is definitely lower than that of 1940 and necessarily below that of 1939. Another country in which employment has fallen is Norway. Hungary's industrial growth has been stimulated by the war—the gain in employment in 1940 and after represents a major trend. It must be remembered that in the great depression industries progressed in Hungary, and she became less dependent on exports. Last year saw a further growth of employment. Industrial progress in Japan cannot be measured by the rise in employment. We know that long hours were causing a strain in 1940 and the national mobilisation law was not wholly effective. At the same time, we are free to infer that preparations for a bigger war were afoot from the rise in the index for industrial employment in the manufacturing industries.



The truest measure of the neutral's difficulty is the irregular variation in employment. The Swedish average for 1941 is lower but recovery was reported after the summer by Switzerland. The progress of secondary industry in Palestine is reflected in the figures presented by the Jewish Agency as regards employment in Paestine. Up to October employment was rapidly increasing, and the hours worked in manufacturing industries were also greater. The decline in employment reported in 1941 by Czechslovakia has its moral. In the second half of 1940 the numbers at work in industry increased; the decline began afterwards. It is a direct result of German ruthlessness and of the scarcity of raw materials for Bohemia's factories.

The international statistics of unemployment are of greater interest in showing how the workless became workers when the call went out. There are various sources including trade union returns. The main changes for the countries for which movements in the employment index are not recorded can be studied in the table furnished in the April bulletin of statistics issued by the League of Nations. More Belgian workers were absorbed as the register of unemployed shrank. Improvement was recorded in Australia as also in Canada. Unemployment in Australia fell by 8 percent in 1940 and the succeeding year witnessed a further fall in unemployment. As Chile reported a gain in employment in 1941 she reported also a fall in the number of applicants for relief. Recovery in Spain is borne out by the fall in the number of unemployed. The depression in Denmark is more clearly indicated by the increase in unemployment during 1941 when more men asked for relief than in 1940. The basis of calculation has been altered since July last but there is enough to suggest that Denmark's depleted resources influenced the numbers out of work.

Greater interest naturally attaches to the official estimates of unemployment in France. Employment exchange returns in 1941 showed a decline in unemployment. In November 1941 the number out of jobs was estimated at 184.000 only. The continuous decline argues a diversion of men to factories producing for the Nazis. The provincial figures indeed point to big changes in employment. As in Belgium industrial recovery in France was facilitated by the demand of the Nazis in relation to their own needs.

The average number of the unemployed in Britain fell in 1941 to 292,000 from 803,000 for 1940. The insurance figures point to a change after the number of unemployed totalled less than half a million in February last. Applications for relief were also falling off last year and the total in February 1942 at 171,000 was the best recorded. The increase in war production underlies the sensational decline in the number of workless.

The fall in unemployment is definitely a sign of the times. It is evidence of a successful diversion of men to industry. And the application of conscription to women in December was a direct result of a dwindling labour reserve. Owing to trade difficulties unemployment was higher in Sweden during the last winter, while Switzerland also experienced indifferent conditions if one may go by the unexpected rise in unemployment in January 1942. The steady fall in unemployment in Britain is proof of rising production. Following the diversion of resources to war work, men under training are not taken into account. The importance of the reorientation of aims and methods effected last year cannot be gainsaid. The Production Minister's statement that peak production has been reached finds support in employment statistics. As we said there is no way of telling how far war production has claimed more men in India for industry. The story of bigger output in 1941 in all industries cannot be checked by reference to the immediate change in unemployment. We know that the Factories Act was relaxed to increase output, and Indian industry was called upon to meet new demands in the Middle and Far West. But all that we can say cannot be expressed succinctly in figures as is done by looking at the British monthly returns. India's war effort cannot be judged by changes in employment. The Army of Indian industry, and its composition or growth, can only be the subject of conjecture, which is perhaps one reason why one must regard the Industrial Statistics Act of 1942 as a definite advance.

Asian Assurance

The reports and meetings of insurance companies go to show that Indian insurance is finding greater support in the second and third years of war. The companies themselves have a better title to support in that their policy continues to improve. It is certainly typical of junior offices that new business has grown more rapidly than anticipated; but older, stronger companies have made headway. For instance, the Asian Insurance Company of Bombay, after the decisive changes in the Board, has been assisted to a large extent by a combination of favourable circumstances. What these are can be learnt from the report issued last month. New business has risen from Rs. 60 lakhs in 1940 to Rs. 70.29 lakhs in 1941. Business in force has risen by Rs. 28.67 lakhs in the past year. The average value of the policy issued in 1941 has been high enough to offset the decrease in the number of policies issued. Premium income again rose from Rs. 20.95 lakhs to Rs. 22.54 lakhs in 1941. Interest and other receipts showed corresponding growth from Rs. 3.87 lakhs to Rs. 4.96 lakhs. In his comments on the brilliant results secured in 1941 Mr. G. N. Rajpal dwelt with pardonable pride on the increase in business secured despite the loss of oversea connections. Even more distinctive is the reduction in expenditure effected under the new regime. A fall of about Rs. 30,000 under total expenses is a clear mark of progress. The usual reduction in expense ratio has been secured without any reduction in revenue. Mr. Rajpal expects a further reduction in 1942 as business is known to be improving consistently; and policyholders will have more reason to feel pleased with results summed up judiciously at the annual meeting. The revenue account shows an outgo of Rs. 6.92 lakhs on account of claims in the year. The Life Fund is shown to have gained to the extent of Rs. 10.91 lakhs from the year's surplus of receipts. It stood at Rs. 96.89 lakhs at the end of 1941; and the Fund is growing at a rate at which finding a use for new money is a problem as shown by the drop in the average rate of interest earned on the funds last year. Even then the rate of 4½ per cent was secured by the retention of many preference and ordinary shares in addition to giltedged which account for about Rs. 38 lakhs nearly while other stock exchange investments take up Rs. 25 lakhs. The Asian's holding of mortgages is fairly high at Rs. 13.6 lakhs and its policy loans account for Rs. 14.37 lakhs out of the balance sheet total of about Rs. 1.13 crores. The Asian has a paid-up capital of Rs. 5 lakhs and a reserve of Rs. 3 lakhs in addition to its special funds. Its outstanding liabilities are amply covered by cash balances totalling over Rs. 4.77 lakhs. The strong position disclosed in the last balance-sheet warrants the confident note struck by Mr. Rajpal in his review of the company's affairs. He told the meeting that the Asian offers the advantages promised by other life offices in wartime to civilians. And the last year's working results justify the assumption that the year 1941 is a turning-point in the Asian's rather subdued career.

China's Banks

The four major banks in China and the kind of assistance vouchsafed by Government to them, after the unification of the note issue, has been explained. The loose federal organisation has left the Provinces with their own banks, and though many have been sadly shaken by the war, as many as 24 have survived with an aggregate capital of $134 million. Their ability to carry on in wartime is based largely on the aid given by the Ministry of Finance. A Chinese financial review states that 587 new branches of the Provincial Banks have been set up. In Szechuan each district or hsien has a branch office of the Provincial Bank. Evacuated branches are no less flourishing than the original offices. Only in Tibet, Mongolia and certain other Provinces are local banks lacking. Three new Provincial Banks were set up after the war with Japan broke out. Amalgamation too is not wanting, and differences in resources and branch offices merely illustrate the vigour and variety of development. The Provincial banks are specially concerned with promoting agriculture and industry, with the development of enterprises and the issue of subsidiary notes for local circulation. The banks also finance the Provincial Governments and make advances to farmers and businessmen. They lend for reconstruction purposes in devastated areas. This year the Hunan Bank is helping to garner stocks of foodstuffs and making loans on mortgages besides developing the production of tea, tung oil, and salt. The Provincial Banks like the co-operatives are interested in new production as well as rural credit. In Chekiang local industry has been developed so much so that the Provincial Bank has a department to handle its investments. The textile industry in Suiyuan has been revived with the help of banking advances. The banks also buy gold and silver on offer and help to place war bonds, and they assist in the removal of enterprises from the theatres of war. Buying of local wool has been undertaken by the Suiynan Bank. The major changes in the Banks' own policy goes back to the financial conference of last June when the link between the National Treasury and the Banks was forged. Small notes are issued by the Banks for local circulation. In the areas near the front, local notes are more common in order to prevent national notes getting into enemy hands. In one province the Provincial Bank has been authorised to issue up to $40 million worth of notes. According to the Chinese Information Bulletin the provincial banks are organising smaller banks in each district of Free China to develop resources.

Governmental Debts

The main changes in the position of the Central Banks of the world correspond to popular anticipations. Governments have been borrowing, and the increase in note issue in many lands is invariably accompanied by a rise in the holding of Government securities. Inflation is not characteristic only of occupied countries. The increase in State debt characterises neutral Turkey as well. Cheap money has emboldened most Governments to borrow and the biggest rise in debt naturally claimed by the U.S.A. where the rate of interest is lower than ever. The special table published in the Geneva bulletin of statistics for March indicates that Germany has borrowed in treasury bills alone over 10,000 millions, and part of the government debt there is simply lodged with the Reichsbank.

The U. S. A. has borrowed little from the Federal Reserve Board but the latter's holding of securities in February 1942 was fairly high at 2,262 million dollars. In the case of India again the Reserve Bank's advances to Government have actually been falling and part of its holding of securities has since been applied to repay foreign debt. Securities held in the banking department have risen though not to the same degree as those in the Issue Department. The immense borrowing programme of Japan's militarists is proved by the steady rise in the Bank of Japan's holding of Government securities during 1941. The German technique of placing treasury bills repeatedly had not been adopted by Japan where the war bonds had to be taken up by the Bank. Right through 1941 the German floating debt was rising as shown by the Reichsbank's ready additions to its bill portfolio. At the end of February the total was 21,458 million marks representing an addition of over 100 percent to the pre-war bill holding of the Reichsbank. The occupation costs in France come out of the Bank of France. A case where the bulk of the advances are taken for payments under the armistice is unusual. It is curious that the Bank of France held only 30,000 million francs worth of securities in 1941 whereas its advances to the Vichy Government were far larger. If the amount of short-term borrowing indulged in is a decisive factor Vichy's insolvency is established. Hungary has reduced its taking of advances but its debt has kept growing from non-belligerency to full alliance with Germany. A neutral whose public debt is not rising and which limits its ways and means borrowing is Switzerland. Portugal can claim the same distinction. The puppet government of Dr. Hacha has clearly been adding to its debt. Turkey too has been making free use of advances taken from the bank of issue. Up to the time of Mr. Curtin's accession to power, Australia restricted borrowing from the Commonwealth Bank. The addition to the holding of government and other securities in the war period up to December was by no means large. Greater success apparently was secured in New Zealand where the advances to the marketing departments have to be excluded from the borrowings of the Government. The United Kingdom figures point to a direct increase in advances from the Bank of England whose security holdings have obviously declined in 1942 after rising steadily in 1941. The most favourable factor is the low bank rate in France where market rates are presumably absent and the yield on giltedged has declined actually after the defeat of 1940.

Australia's Requirements

Australia manifested so much interest in Indian goods that the import restrictions announced in December last may be said to retard the growth of trade from India. The Trade Commissioner in his report for the last quarter of 1941 cites the order banning or curtailing imports from sterling countries save New Zealand and some of the islands in the Pacific. Quota rules were applied to wireless goods, whisky, woollen goods and stationery. The Commissioner states that India is affected by the prohibition of imports of ginger, edible nuts including peanuts, coir manufactures, sweat rags and doormat cloths. Imports of carpets, cotton waste, raw cotton, drugs, hides and skins, jute and hessian goods, shoes, mica were to be cut by half under the plan for import control. Amendments to the main scheme have been made but Australia, busy with war production plans, is not likely to go back to the old system of unregulated imports. The Sydney Office handled many enquiries from Australian buyers. Since prices were relatively unchanged, the chances of trade expanding were brighter in the whole of 1941. Names of Indian export houses were in request in order to get from India buttons, heavy chemicals, cotton goods, bicycles, shellac and spices. The entire range of Indian goods attracted attention and the office helped Indian shippers to get the names of importers in Australia. Shippers of cotton textiles in India were regularly asked for. The names of importers in the chief cities of Australia and New Zealand were made known to merchant houses. A Mysore firm wanted the names of likely buyers of chromite and graphite while a Bombay firm asked for the names of firms in Australia handling manganese ore, chrome ore and calcite. An Amritsar enquirer asked about buyers of dried fruit and Calcutta's enquiry related to crude drugs and another asked about buyers of rice. Information as to buyers of oilseeds, oilcake, spices and other products was furnished through the Indian Trade Commissioner in London to the agent of certain Indian export houses. While India was interested in selling produce most Australian firms wanted to get in touch with Indian exporters to get things like gloves and cord tyre fabrics. The enquiries were transmitted, and the interest shown in cotton and silk yarns, bicycles, celluloid and xylonite goods was a mark of the desire to get many goods previously obtained from Japan. Names of Indian manufacturers of gold and silver tinsel, formaldehyde, musical instruments etc. were obtained in the usual manner. Sydney firms wanted to get in touch with Indian shippers of gum resin and another enquiry was about ivory nuts—an African product. An importing firm wanted to get names of suppliers of oilcakes. From the kind of goods wanted last year one may say that Australia wanted many manufactured goods in addition to things like shellac and myrobalans, which have to be taken from India in any event. Australia wanted unusual goods like fishing-nets and commercial lactic acid, nitro-cellulose compounds and the office of Mr. Saksena apparently dealt with new enquiries for resin, carnauba wax etc.

Cost of Living Changes

The biggest rise so far recorded in the working class cost of living index was reported in June. The Bombay index for June was 152 on the base of 1933-34 being 10 points over May. The rise was mainly due to the rise in the price of rice, dhal, millets and gram though wheat was

slightly cheaper. Prices of things like cocoanut oil, milk, raw sugar, salt and onions rose to the great disadvantage of the buyer, and ghee also was dearer. Commodities which were more expensive in June included chillies, tamarind, tea, vegetables and mutton. Dried fish and refined sugar were less costly than in May, but fuel and kerosene were more expensive; so also a conventional necessary like supari. The average newspaper also cost more for the Bombay worker, and the detailed table reproduced in the Labour Gazette indicates that if rent and tobacco were more or less constant items the price of soap had gone up like the cost of clothing. The Millowners Association offered an allowance of Rs. 11-2 for the 26 working days of June in consequence of the rise in prices. The Association decided to extend the sliding scale up to 163 points. Between the points 144 to 163 the allowance will vary between Rs. 9-4 and Rs. 13-12. The Association's action has been welcomed by those who argue in favour of more effective price control. Many other centres reported a rise in prices and the cost of living in May. The movement should have continued into June. In Ahmedabad as well as Sholapur the May index was above the base which was 1926-27 in the case of the former and 1927-28 in the case of the latter. Everything including local cloth was dearer. Similar rise in the cost of living was reported for May by Madras and Nagpur. The present concern for the working class has been translated into a new project for compiling reliable indices of the cost of living and making wage adjustments. The public regulation of wages is bound to come sooner than expected for the reason that prices have been rising since 1941 in an alarming manner, and on the basis of the usual comparative table, one can see that the advance of 20 points over 1941 in the case of Bombay is not so great as the increase reported by places like Ahmedabad and Jubbulpore. Right through the year labour disputes have originated from demands for dearness allowance or an increment to wages. In May alone, Bombay reported that twelve industrial disputes after the old ones were settled had developed into strikes.

Record Increase

War production has been modified by the demand for quantity. Design and research have taken a new direction. These facts stand out in Mr. Lyttelton's last formal survey of production achievements. Economy in material had been obtained at the same time as accelerated output. Mr. Lyttelton told the Commons that an important machine-gun component which used to take two and a half man-hours for its manufacture was produced in six minutes by ingenious design. The other instance given by him was the redesigning of the Bofors gun-platform which previously took 1,050 man-hours to produce. By redesigning the time was cut to 230 hours. A two-pounder barrel originally took 193 man-hours but a far larger six-pounder now required only 72 man-hours. In the case of the standard airframe material had been reduced by twentyfive percent and time by seventyfive percent. Mr. Lyttelton, according to a cabled report sent to the Associated Chambers, gave an indication of the increase in aircraft by structure weight and the outturn for January 1941 as 100. He declared that the index by July 1, 1941 was up to 152, by January 1, 1942 to 191 and by June 1941 to 244. Production of war stores since January 1941 had been nearly trebled and that of armoured fighting vehicles quadrupled. Peak production has been reached this year. Mr. Lyttelton indeed said that they had now reached the point when they could not look for increased production by building new plants. They could not afford the raw materials or the labour. Production could not be raised by cutting down civilian use. The only way of raising output with existing resources and machines was by better planning and design and greater openness of mind. He added that praise was due to workers and managements in many hundreds of factories where really a prodigious job was being done. Mr. Lyttelton pointed out in the course of his survey that in such matters as the dilution of male and female labour Britain was far ahead of the world and the control of raw materials was carried to a much finer point there. The claim is supported by the report that 13½ percent of the labour needed in the iron and steel industry is provided by women. Imports of iron and steel have been reduced by the maintenance of home output at a high level. Stocks of ore held in Britain are deemed sufficient to permit blast furnaces to continue working for a prolonged period if an emergency arose.

Contrasts in Japan

What contrasts persist in the Japanese business world have been well explained by Mr. E. M. Gull in a broadcast in April. The feudal and the modern are cheek by jowl. At the top is a concentration of economic power which resembles, but is a caricature, of Western capitalism. Japanese capitalism reflects British but distorts it. Four immensely rich families like Mitsui, Mitsubishi, Sumitomo and Yasuda control one-third of Japan's foreign trade. Three of them own half the shipbuilding capacity of the country. Each owns a large bank. Indeed their four banks account for one-third of Japan's total bank deposits. In their trust companies lie as much as 70 percent of the company's total trust deposits. Their insurance concerns dominate Japan's insurance business. These few families and a few others—the **Zaibatsu** or wealth clique as they are called—control nearly all the large engineering, mining, brewing, paper, chemical, sugar, steel, metal, oil-refining, food-canning and electrical apparatus making concerns in the country. Possessed of enormous wealth, they have naturally very great political influence. The State depends on them to carry out its schemes of economic and political development, not only in Japan proper, but in the Japanese Empire. This concentration of power is not the only feature of Japanese capitalism. The average businessman is very much of a despot wielding control over property and human life. Before the Sino-Japanese war about four and a half million people out of a total of eighty million were engaged in industry. Some 70 percent of them worked in concerns employing less than 50 persons. It was from these small concerns that there poured out the cheap goods which have been so characteristic of Japans' foreign trade—knitted goods, lower grade rayon fabrics, rubber shoes, pencils, toys, bicycles, and metal small ware. The hosiery and bicycle-making concerns are typical of Japan's small industries. British industries are also organised on highly specialised lines but resemblance ends there. It is not the dispersal in small apparently disconnected groups that is characteristic of Japan's small scale industries. When all these are organised for war production, something approaching total mobilisation of manpower is achieved. If one links it with the other fact that many of the little concerns get their material and their capital from the **Zaibatsu**, the capitalistic giants, one can see how a totalitarian nation at war works. The reliance of the Government on the **Zaibatsu** and the political influence of the latter have impeded social legislation. Partly owing to anti-capitalistic feeling among young Army officers recruited from peasant families attempts to improve conditions have been made through the encouragement of co-operative societies. It was not hard for Japan to keep aside imports for new Imperial adventures. Living conditions were not improved, and the Allies went on reducing their exports of vital raw materials to Japan until the standard of living fell and strain increased at home.

Falling Revenue

There was a further drop in customs and excise revenue in June. The June returns show that the total for British India was Rs. 2.5 crores as against Rs. 3.91 crores in June 1941. The decline as against May was not due to a fall in import duties alone. The revenue from Central Excises was Rs. 81 lakhs as compared with Rs. 1.03 crores in May. The total revenue for the first quarter of 1942-43 is known to be Rs. 10.95 crores as against Rs. 13.87 crores in the same period of 1941-42. The decline clearly proceeds from the fall in imports noted this year. The revenue from import duties for April-June 1942 is Rs. 7.3 crores while export duties have given Rs. 68 lakhs and Central Excises Rs. 2.71 crores. The yield of export duties shows an increase on the previous year, but the fall in India's imports of cotton goods, silk, metal, dyes, machinery etc. this year accounts for the fall in revenue in spite of the surcharge collected at present. The yield of sugar excise and the duty on raw jute shows a fall as compared with last year; but the excise on matches and the export duty on manufactured jute have provided more revenue than in 1941. The increase in regard to motor spirit is clearly due to the revision of the rate of taxation. The import duties on imported motor spirit and raw cotton again disclose an increase in revenue.

The general decline in imports of foreign manufactures explains the fall in customs revenue. It can be taken to mean that India like the rest of the Empire is reducing non-essential imports. And the present prospects for Indian manufacturers should be deemed brighter on account of the fall in textile imports. The Central Government's anticipation of lower revenue this year has been proved correct by the fall of nearly Rs. 3 crores in a quarter. The only change to be expected is a recovery in the excise duty on sugar in the coming season. The decline in revenue from silver points to reduced supplies from abroad, and explains how the Reserve Bank's sales of silver have not had a great effect on prices in India.

SEVENTY-SECOND REPORT

DIRECTORS' REPORT FOR THE HALF-YEAR ENDED 30TH JUNE, 1942.

The Directors have the pleasure to submit to the Shareholders the Balance Sheet and Profit and Loss Account for the half-year ended 30th June, 1942. The Auditors' report is also annexed.

	Rs.	A.	P.
The transactions of the past six months (after appropriations to contingency accounts out of which provision for bad and doubtful debts has been made) have resulted in a profit of ..	11,70,417	4	3
Less, Provision made for Income-tax and Super-tax	2,00,000	0	0
Leaving a net profit of ..	9,70,417	4	3
The balance brought forward from the last account was	9,41,655	1	0
Making a total of ..	19,12,072	5	3

This sum the Directors have disposed of as follows:—

	Rs.	A.	P.
In payment of an *ad-interim* dividend at the rate of 11 per cent. per annum, free of Income-tax, for the half-year ended 30th June, 1942 ..	5,50,000	0	0

The "Statesman" not long ago suggested that Sir Maurice Gwyer should take the place of Lord Linlithgow as Viceroy, but the problem now is whether the tenure of Sir Maurice (65) should be extended in the Federal Court. Tall, healthy and statuesque, Sir Maurice Gwyer has in him many years of vitality and work; but the general question of overstay by Civil Servants and the riot of jobbery now prevailing in India, can be discussed without any reflection on the Federal Chief Justice. On the plea of war emergency, the Public Services Commissions have been shorn of their pristine authority; but, still, in the bedlamite multiplication of appointments, the Assam Public Services Commission has just come into being. The national dividends furnished by the Federal Court should be assessed by lawyers. The revenue of Assam is about the same as the income of the Calcutta Municipal Corporation, but the perquisites of provincial prestige include projects for a High Court, a University, a Public Services Commission, etc. The University requires a Chancellor, a Vice-Chancellor and a pro-Vice-Chancellor, besides a horde of stipendiary officers to perform the honorary functions shouldered by a High Court Judge a couple of decades ago. I cannot say that the results as such have been commensurate with the payments being made. Members of the Secretary of State's Council have become Executive Councillors and Speakers of Legislatures have been turned on to other jobs.

An Executive Council of fifteen means a bloated scale of establishment inconceivable in the days of Sir Basil Blackett who got on with one British Civilian as Secretary and the rest of the Staff, Indians. Permission given by the Secretary of State for the Government of India to spend Rs. 50,000 per year on any appointment has been abused. Now, there is, in all departments, a spawning of additional secretaries and deputies, with Indian officers in poor request. I am not afraid of spending money, even of lavish expenditure, provided there is a return for the investment in terms of efficiency. Whenever a "deputy" is appointed, you may be sure that the big man has the back of his hand held against a yawning mouth. It is due to the love of authority, without capacity for work. In the pre-Montagu days, provinces had Executive Councils, but the enlargement began so as not to affect vested interests. Ministers came, but their independence was debauched by the Government opening the door to them for promotion to the Executive Council. Their dependence on the Legislature was belittled. It was as good as the previous strain of evil seen in the elevation of the High Court Judge to the Executive Council. The pure springs of independent conduct were fouled and the surreptitious trade of careerism began together with the dodging of the law.

Solemnly to indicate the independence of the Auditor-General, it was laid down that the Auditor-General should never more be eligible for employment in any office under the Crown. Sir Frederic Gauntlett retired; and, in a trice, he became Finance Minister of Patiala. It was not an office under the Crown, but under a bejewelled turban; still, the intention of the law had been defeated in the tally-ho of dissolute careerism. Lord Willingdon appointed, out of kindliness, many superannuated worthies in Indian States; a doctor, to an Indian State as Dewan for instance. The terrain of "Indian India," once deemed a fair and pure reserve for the display of Indian talent, was invaded by the jobocrats who are still on the prowl. By the analytical separation of the Viceroy's functions into different categories, Lord Linlithgow has to-day three Secretariats of great pomp and circumstance as compared with the efficient one-man simplicity of the Curzon regime. Don't tell me that work and utility have correspondingly increased. A few months before he left, Sir Eric Mieville, Viceroy's Secretary, had been appointed to a newly created job, Secretary to the Governor-General-in-Council; but before he could establish his unseen mastery, he became the present King's Secretary. Jobs are multiplied and standards of propriety altered in the stampede. Then there is the practice of accommodation for casual passengers like Sir Edward Cook who, under the prim advice of Lord Reading, had left the Indian Civil Service. Suddenly he becomes "liaison" officer for China, until Sir Robert Reid is superannuated out of his position as Governor of Assam but re-absorbed for juicy service. Why shouldn't it be so when I.C.S. men on the shelf like Sir John Hall are brought out of retirement to preside over Public Service Commissions, bodies which are supposed to select hardworking men when they are themselves in virtually sinecure occupations and their opinion is not deemed indispensable in war-time appointments. The Government maintain telephones for them in their homes so that, at a midnight crisis, the members might confer and make the right recommendation of candidates before dawn! The farce goes on not only at the expense of the tax-payer but for the hallucination of the common people.

All of us know that Reforms are in the frigidaire; and when there is a break like the Cripps Mission, it is a sensation far above the clerical dovecotes. But we have a Reforms Commissioner, Mr. H. V. Hodson. The bureaucracy can never afford to let an obsolete appointment lapse. Mr. Hodson, too, is there, busy about reforms while his predecessor Sir Hawthorne Lewis wrought his way, as an I.C.S. man, to the Orissa "gadi." Was there any necessity for keeping up the job of Political Adviser? It is a job ancillary to Federation which is as dead as the dodo. What I am concerned about is not the breaches of convention but the supposed cultivation of efficiency through nepotism. Great Empires and little minds do not go together, said Campbell-Bannerman; efficiency and nepotism cannot go together either.

In anticipation of the great event, Sir Bertrand Glancy had been made Political Adviser whereas the Political Secretary used to carry on without this redundant ornamentation, quite adequately. Sir Henry Craik had his innings as Home Member and then as Governor of the Punjab, he had earned rest and pension; and, when Sir Bertrand Glancy got the coveted lift to the Punjab, the job should rightly have been left unfilled if only for the reason that it had, far in advance of Federation, been a ghastly case of premature birth and burial. No, Sir Henry Craik, Baronet, had been called up like a very Cincinnatus from retirement, to hold the post of Political Adviser. The Governor-General wanted "advice" on nothing in particular that the Political Secretary could not tender. The job was there and Nature abhors vacuum. Professor Gregory, Economic Adviser, had done nothing sensational to justify his being pitchforked into an office that legitimately belonged to Dr. John Matthai, but he is raised to knighted dignity. He must have been doing good in secret.

In this bean-feast of jobs, little heed is paid to technical qualifications or business experience. When the Superintendentship of the Government of India Printing Press fell vacant, an I.C.S. man innocent of the compositor's duty was appointed. They know everything. When the office of Deputy Controller of Broadcasting fell vacant, Mr. P. C. Chaudhary, I.C.S., was appointed; and, after mature experience to suit his next job, he has been appointed to a controllership of trade in Bombay. The supreme bank-officer in India is an I.C.S. man. The Covenanted Services once recognized as practitioners in Law and Order are now honoured as technicians equal to the control of factories, trade, prices and the National War Front. Into the comic strip of publicity as also the execrable futility known as "press-

D. F. SANDERS, *General Manager.*

advising," the "subjuntawallah" has been thrust. Information Officers who are happily out of professional competition for no mean reward, are increasing as in an ant-heap without visible or audible advantage to the National War Front. The observance of certain chaste principles of Public Service has been undermined and debated by the doctrine of "essential services." Artful dodgers throng in the corridors. The Public Relations Officers cannot explain any more than the Snuff Controller now, after victory, the whole swarming phenomenon round the broken treacle-bottle could be demobilized for the relief of the tax-payer. If we go too fast, we shall go too far; for, there is now an excessive play of scrambling and vulgarity without the idealism of greater days. Without a grand shake-up on this road in the rake's progress, we shall never be able to get out of the present breeding puddle of nepotism which really is corruption and leads to totalitarian inefficiency.

You and I know that Mr. Sarker has been very much more than a new broom in that curious conjunction of departments formerly under Sir G. S. Bajpai who was promoted without effort and who crowned his term by that iniquitous agreement on Indian immigration into Burma. From agriculture to commerce is no hasty transit; and Bengal's representative on the Council will obviously have a portfolio of greater importance than law. It is but right that no mere lawyer represents Bengal in the Viceroy's Council. The servicemen have no ties though they claim to have many regrets when they leave India in due course. Not so with Mr. Sarker who is the only Councillor who has been a Minister under provincial autonomy. He has been Finance Minister. That is a very important advantage. Mr. Sarker held a special place in Bengal's political life. He has been in touch with nationalism from the time of C. R. Das. He has been Mayor; and, in spite of local feuds, he has been known to be unusually public-spirited. He represented for long a mature and politically conscious constituency. I will not labour the point of his vast experience by adding any mention of what Mr. Sarker has achieved for the Hindustan.

But it is Mr. Sarker's future that interests India. As we know, he is a student but not a cloistered one. He is a man of affairs but one who disregards detail and considers plan and policy. It might be said that Commerce is rendered unimportant by the welter of regulations but it is not Commerce alone that will receive his attention. It is an auspicious sign that he comes down to Calcutta immediately after formal assumption of office. Industry is now his province; and it is not only the Supply Department that is to-day interested in industrial advance. New things, big things like research will claim the attention that Mr. Sarker can so competently give. The war will put many more things than export trade out of focus and only the steady vision of a diligent Member will enable the Commerce Department to go ahead.

The problems of procedure are not so many as those of planning. Mr. Sarker is peculiar in his faith in planning; he has a fanatic's speciality for reforming programmes. That is one reason why, when the war ends, India will start with the immense advantage of being guided by one who knows the rules about reconstruction.

There is an inevitability about Mr. Sarker's choice for commerce department that may restrain eulogy at present. After all, he is the businessman and financier "par excellence" in the Council. He knows Commerce as General Wavell knows War. They are the professionals among a scratch lot of amateurs. In saying that, a tribute is paid to the skill and experience of both General Wavell and Mr. Sarker. That is one reason for saying that the Secretariat will not overpower Mr. Sarker. He can be bold and unconventional, where necessary. He may be no revolutionary but he is not the slave of prejudice either. As Commerce Member, he will be no novice anxious to pick up work. He will start his career with a full knowledge of Delhi and its ways, very much the old Delhi hand, as it were. Temperamentally cast for big things, Mr. Sarker will realise his opportunities as they arise and turn them to India's advantage.

Mr. Sarker's predecessor took himself more seriously than any Councillor. Not merely in the extension of controls to new fields, Sir A. Ramaswami Mudaliar's work has borne fruit before our eyes in the creation of a new branch for the Geological Survey, a new research board, a trade marks law and guarantees of security for essential, promising enterprises. He was

always conscious of his responsibilities, and happily corrected very early the impression that he was an upholder of British interests—produced, it may be added, by the report of the special Tariff Board in 1936. In office he displayed a charm of manner that disarmed opposition. His concern for industrial development was keen and real, inspite of the lack of interest in the more ambitious ventures propounded in wartime. He set up advisory boards to give the public a say in many matters, and renewed protection for all industries in wartime, strengthening their ability to hold their own later. No term of any Commerce Member including Sir George Rainy has witnessed such a growth of industry. The Commerce Department under Sir Ramaswami was no silent spectator. The Department oversaw everything, and its chief was indefatigable, being aided by picked men, who appreciated criticism and made amendments—just as the Member did.

Mr. Kapur of the Lakshmi Insurance Company paid me his usual annnual call and asked: "I hope you are satisfied with the progress of your 'infant prodigy'?" It was on the perusal of the second year's balance sheet of Lakshmi that I was impelled to describe it as an infant prodigy. In the annals of Indian Insurance, Lakshmi has, from the very first year, been creating record after record; and, while many infant prodigies tend to become stale and flat and humdrum as they grow old, Lakshmi, now in its 'teens, has preserved and maintained the full measure of precocity. The 1941 accounts provide once again convincing testimony of the record-making speciality of Lakshmi. No other purely Indian Life Company has at the end of eighteen years, built up total funds exceeding the two-crore mark, or disclosed annual addition to life fund of nearly twenty-five lakhs of accounted for annual income of over fortyfive lakhs. In each of these respects, Lakshmi creates new records; and this achievement is the result, not of any sensational plans of business or processes of administration, but by the steady and consistent but, all the time, energetic adherence to all the canons of healthy insurance. In the selection of business, utmost care is exercised; and the Company has never sacrificed quality to the mad but common craze for quantity. The result is a consistently favourable mortality experience. Business-getting is governed by what the business can stand. The result is vigilant control of expenditure; the over-all expense ratio has declined from 25.77 per cent in 1940 to 24.69 per cent in 1941. Investment policy has been scientific and is based on the principle of safety first and of spreading of risks. The result is a well-balanced portfolio of investments which are, in broad terms, shock-proof and which yield a satisfactory return. Above all, the directors have always stressed the great value of a wholesome financial policy. The result is the variety and strength of the reserves. Here is the list of the reserves maintained:

Contingency Reserve Account Rs. 56,148-15-1; Miscellaneous Reserve Account Rs. 1,867-11-9; General Reserve Account Rs. 2,01,539-4-4; Investment Reserve Account Rs. 4,71,340-4-2; Depreciation on Building Reserve Account Rs. 1,43,551-13-4; Depreciation on Furniture, Motor Cars & Medical Instruments Reserve Account Rs. 43,352-7-6.

Pandit Santanam has often told me that my first review of Lakshmi's balance-sheet helped the Company a great deal in securing business in the early years. No such extraneous assistance is now required: the intrinsic merits of Lakshmi are now so obvious and so outstanding that they constitute the best selling point for Lakshmi policies.

Olympus

(From Our Correspondent)

New Delhi, July 28.

Sir A. Ramaswami Mudaliar hands over charge to-day of the Commerce Membership to Mr. N. R. Sarker and will, until his departure for London a fortnight later to join the War Cabinet, be a Member without portfolio in the Viceroy's Council. The Viceroy is reported to have selected Mr. N. R. Sarker after consulting his colleagues. As Mr. N. R. Sarker has been a prominent businessman for nearly three decades and is an ex-President of the Federation of Indian Chambers of Commerce, and Industry, he can claim to have intimate knowledge of economic problems and also the difficulties of the business community in this country. The task facing the Commerce Member today in the Government of India is no light one. In fact there is the urgent question of price control and food supply which has to be tackled effectively without further delay. What has so far been done has proved largely ineffective though for reasons for which in many cases the Government of India cannot be held responsible. But the situation facing the country to-day is so serious that something swift and effective has to be done to bring the situation under control. The success or failure of Mr. N. R. Sarker as Commerce Member will depend on the way in which he tackles the price control question and satisfies the country. There is then the question of starting heavy industries in India like automobile manufacture, construction of locomotives, development of shipbuilding and others. Authorities elsewhere may have been responsible for the Government of India's failure in this respect, but the Commerce Department could not escape unpopularity on this account. If the new Commerce Member has to retrieve the position, he has to show sufficient strength in dealing with the authorities here and elsewhere and see that something is done at once.

This by no means detracts from the value of the work done by Sir Ramaswami Mudaliar as Commerce Member in these three difficult years of war which brought unexpected problems of great complexity. He had always the interests of the country at heart and spared no pains to do what he could. If he could not do more, it was due to the difficulties of the situation at the time and other reasons which are well known. In a way Mr. N. R. Sarker may be said to be in a more fortunate position today owing partly to the increased strength of the Indian element in the Viceroy's Council and partly to the situation created by war developments themselves—and more particularly the Grady Mission's report. Still it can safely be said that nobody could have achieved more than Sir Ramaswami Mudaliar. His main contribution to the Department is the excellent foundation which he has laid for the industrial research organisation. Its success under the direction of Sir S. S. Bhatnagar is already very striking, and it has even a greater future.There is then the wise step taken by Sir Ramaswami Mudaliar in setting up an organisation for postwar reconstruction. If following his own example in selecting a distinguished Indian scientist as head of the industrial research organisation, he had selected an Indian economist as Economic Adviser to the Government of India, it would have been greatly appreciated in the country. In dealing with export and import controls and other war problems connected with trade and industry, Sir Ramaswami Mudaliar laid down the correct policy that existing trade channels should be maintained. This has helped the Indian Commercial community to hold its position to the extent possible under the emergent conditions produced by the war. It was in his time also that a large number of non-official committees was set up to advise the Department on its different activities and problems—a useful means not only for consulting non-official opinion but also for enlisting its co-operation in giving effect to its policies. It was an admirable example, for Sir Ramaswami Mudaliar followed two principles never to deny a hearing to any interest which wanted to place its case before him, and never also to take any important decision without consulting the interests concerned. The departure of Sir Ramaswami Mudaliar is undoubtedly a loss to the Government of India, but the only comfort is that from Mr. N. R. Sarker, his successor as Commerce Member, who is a businessman himself with the unrivalled experience of Finance Ministership in a big province, the public has a right to expect even more.

* * * *

There has been a good deal of Departmental reorganisation in the Government of India in order to lighten the work of heavy Departments and regroup Departments on more rational lines. When Sir Ramaswami Mudaliar took charge of the portfolio, he had to administer also Labour and such miscellaneous Departments as Geological Survey and the P.W.D. It has been a wise decision to make Labour a separate portfolio though why the Labour Member should be saddled with such subjects as the P.W.D. and the Geological Survey is not clear. It would be well also if a separate portfolio is created for industry to which can be added the entire Production side of the Supply Department. The present arrangement is hardly a satisfactory one, for while the Commerce Member is expected to deal with industries, the Supply Department deals also to a large extent with the Production work. The Supply Department has already become far too unwieldy for a single Member. And the Commerce Member has really enough to do without this additional task of "Industries" being thrown on him. There is also the old suggestion that instead of continuing the present haphazard arrangement for scientific research—different Departments having different research organisations—they should all be brought together in one centralised department so that scientific research, industrial, agricultural, irrigation, health, or other can progress on proper lines under single direction. There is still considerable looseness in the Government of India's administrative arrangements which has be rectified.

* * * *

There have been a number of conferences during the last few days. The Jute Conferference called by the Government of India has recommended that for the present there is no need to reduce the output of jute mills in India either by rationalisation or any scheme for shorter hours. A number of decisions were also taken at the conference for conserving coal, reducing the strain on electric supply, and Railway transport, etc. At the conference which Mr. N. R. Sarker, Education Member, had with the representatives of the Federation of Indian Chambers of Commerce and Industry, Mr. N. R. Sarker gave the assurance that the Government of India was employing special measures to increase the production of necessary drugs and chemicals to the fullest extent not merely a shortterm policy for war requirements but also a longterm policy in the interests of the country's future. As regards quinine stocks, he said that Provincial Governments were encouraging cinchona cultivation. A scheme for the economical use of available quinine stocks has also been settled in consultation with Provincial Governments. Among the results of the Sugar Board meeting are that hereafter all sugar bags will contain markings of the quality of sugar contained in them and that also the margin of profit allowed by the Government to sugar merchants between the ex-factory price and the price in the consuming market is likely to be reduced substantially.

* * * *

Of considerable importance is also the conference held by the Overseas Member, Mr. Aney, with representatives of a number of public bodies. It was particularly asked of the Government of India that one single Department should take up the responsibility of dealing with the problems connected with Indian refugees arrangements for employment, satisfaction for claims, provision of relief etc. Strong protests were made against the appointment of a large number of European and Anglo-Burman refugees under the Government of India without any regard to Indian claims. They pointed out that as His Majesty's Government had taken upon themselves the responsibility for giving allowances to these European refugees, it was equally their responsibility to provide employment for them. There is considerable feeling in non-official circles over the way in which appointments of European and Anglo-Burman refugees from Burma and Malaya are carried on in this country.

(From Our Correspondent)

Bombay, July 29.

MR. B. F. BHARUCHA, the indefatigable writer of letters to the Editor in the Bombay press, must look to his laurels because a powerful competitor has entered the arena. The Hon. Mr. R. H. Parker, enjoying leisure after the Bombay Telephone deal, relieves the tedium of existence by inditing letters on the slightest provocation. When Sir Edward Benthall was installed as Transport Member (in the Viceroy's Council), Mr. G. L. Mehta, President of the Federation of Chambers, spoke disapprovingly about "the appointment of a representative of the non-official European community as a member of the Council." Mr. Parker immediately wielded his powerful pen and, quoting Mr. Mehta's simple words, asked archly: "Who is advocating racial discrimination now?" The little epistle of waggish sapiency was also sent to papers outside this presidency.

* * * *

Mr. Mehta was protesting against racial discrimination, not advocating it, because in the selection, competent Indians had been discriminated against, in their own country. The portfolio had been held by Indians, Sir Joseph Bhore and Sir Mahomed Zafrulla Khan, for instance, without any breakdown in traffic. If Mr. Parker has a look down in the right direction, he would find that the boot is on the other leg. The Government practised racial discrimination at the expense of Indian talent; and, when Mr. Mehta pointed out the unfairness of it, Mr. Parker sallies forth without his knowing it as the poacher turned game-keeper. The plea of Sir Edward Benthall, Sir Hubert Carr and Sir Tracy Gavin Jones at the Round Table Conference was that there should be reciprocity in Indo-British relations, the observance of the Golden Rule. If non-discrimination and reciprocity had existed, we should see some Indian as General Manager of the London Railway system, if not as Minister of Transport. Mr. Parker is both artful and playful in his logic. It amuses him and does Mr. Mehta no harm.

* * * *

On the policy and progress of the Reserve Bank I do not feel called upon to dilate because of the mere circumstance that the Central Board happened to hold its periodical meeting in Bombay; I leave it for "headquarters comment." My sense of priority if not also of artistry, requires an independent Chairman to preside, but the Managing Governor, supposedly responsible to the Board and chosen by them, presides over the function, giving rulings on procedure and generally laying down the law. The Chairman-cum-Managing Director in his speech referred to the tendency of Bombay to acquire more of the holdings of the Bank. He said: "The tendency to concentrate shares in fewer hands and to centralise them mainly in Bombay area continued during the year. Out of 500,000 shares, Bombay held 212,823 shares on June 30, 1942, as against 218,649, while the rest of the registers showed a decline. Similarly, the average number of shares held by each shareholder increased from 9.4 to 9.8."

* * * *

The blight of distress and scarcity continues with monotonous groans about sugar, kerosene, matches, rice, wheat, and salt. Even the wealthy are coming within hailing distance of inconveniences. For example, race-specials for Poona will not have restaurant-cars. It has come as a great shock to dandy sportsmen, who used to combine turf-discussions with the three-card trick. No treating on the way henceforth nor dissipation back in the dining-car. Scarcity of petrol has dulled the edge of road-hogging. "Are sport-amenities to be sacrificed at the cost of Civilian morale?" so ask some of the old hard-boiled lovers of a scheme of life that the present war, continued long enough, is bound to blast out.

* * * *

The evacuee problem has grazed against the economic life of Bombay and there is relief organized with success. The Parkers, nosey and noisy, who accuse Indians of wicked racial discrimination, ought to understand the other side of the case. Things are in poor shape to-day owing to bad luck all round. I give without comment the following message sent by the Indian Merchants' Chamber to the Government of India regarding the accommodation of evacuees in Abraham's bosom at Delhi:

"Committee of the Indian Merchants' Chamber have seen reports that appointments under the Government of India, including posts involving high responsibilities and substantial remuneration, are being given to European Evacuees who have returned from Burma and other countries. Such action on the part of Government besides involving great injustice to the sons of the soil also deprives and limits the opportunities available to Indian evacuees. Having regard to the large number of Indian evacuees for whom suitable appointments have to be found and considering the need to preserve the accepted policy of Indianisation of the important services in the country, the Committee request that Government should stop the policy of giving jobs to European evacuees. It is understood that His Majesty's Government have undertaken the obligation of looking after and providing for European evacuees at present in India. No such obligation appears to have been undertaken by that Government in respect of Indian evacuees. In view particlarly of this it is but proper that the Government of India should confine such appointments to Indian evacuees only."

* * * *

The Silk and Art Silk Mills Association Ltd., Bombay, had a tale of woe to give when they held their annual general meeting. Because of shortage of art silk imports, India has to extend her own industry. The problem of short staple cotton could be tackled if we had an art silk yarn industry in India. Mr. Ramdeo A. Podar who is Chairman pleaded that, in post-war India, the art silk industry should be a sister-industry of the cotton industry, but in all this collaboration of cotton, silk, rayon and wool, there is the influence of the expert, the technician and the chemist to determine the future. Rayon, according to Mr. Podar, is "a truly democratic industry; what more do you want when Italian silkworms must be pre-engaged in Fascist activities?

Resume of Commodity Markets

REGARDING the actual developments in the commodity markets during the week, there is perhaps nothing of importance to be recorded. Only in the Bombay Cotton Market has there been any fluctuation in prices. The unfavourable political situation and the discouraging New York advices brought about a substantial fall in prices and the rally in prices towards the close has been rather feeble.

The reaction in prices for gold and silver would seem rather surprising with the continued seriousness of the war situation. It is reported that some selling by the Reserve Bank in Bombay has been responsible for the decline in silver prices. In the gold market, speculative buying has not been sustained to keep up prices.

The Jute market was rather quiet early in the week while the hessian market was inclined to be firmer in anticipation of a reduction in production. The news, however, that the rationalisation scheme as proposed by the Government has been dropped, has come as a relief to balers and dealers in the jute market, while it has had a chilling influence on the hessian market.

Jute

It was generally expected that the Government of Bengal would oppose the scheme of rationalisation of the Central Government for, a drastic reduction in production would result in a huge surplus of the new crop especially with the encouraging prospects for the current season. Against the total consumption of jute of 69 lakhs bales in 1941-42 the rationalisation of production would result in a consumption of about only 40 lakhs bales in 1942-43 which is about 35 per cent. of the estimated yield of the crop for the current season. The balance of 65 per cent., if unsold, will naturally have a disastrous effect on prices and disturb the internal economy of the province. And the importance of the obligation of the Government cannot be strongly emphasised as living costs have gone very high and it is necessary that the cultivator should get a fair price for his crop. The Central Government could not possibly over-look the claims of the Bengal Government, as it was only at their suggestion it was decided to raise a larger crop and the subsequent efforts to reduce the area under the crop were not quite successful. As the alternative proposals put forward by the Indian Jute Mills Association satisfied the requirements of the Central Government, the question has been dropped. The exact details are not known and it will be interesting to study them when they are published.

Jute Manufactures:

The decision of the Government of India to drop the rationalisation proposals after the representation by the I.J.M.A. has resulted in another victory for them. Since the outbreak of war the I.J.M.A. have been successful everytime in impressing on the Government of India the reasonableness of its proposals.

It is now pointed out that the alternative scheme, which it was reported in "Indian Finance" meant a saving of 40 per cent. of wagon supplies to the industry, has completely satisfied the authorities. The main problem is one of saving transport. It was suggested that considerable economy could be effected if coal was brought in rake loads and taken by mills from a central depot in their own boats. The export to Western India is to be done in an orderly manner. As for saving in electric power, the distribution of load and different hours of working for mills is expected to result in a reduction of 12½% in consumption. These proposals in the main suggest that there could not be any appreciable reduction in production.

Sugar

The problem of controlling sugar prices, as has been pointed out in these columns on former occasions, is more one of ensuring proper and regular distribution than of rationing; for, it is said that there are adequate stocks of sugar in this country and that there can be little or no scarcity if proper and adequate means of transport were available. This was the opinion of the Central Sugar Advisory Committee which met recently. It is reported that suggestions have been made to allot wagons to the Sugar Controller or organisations instead of individuals.

The difficulty should be felt more during the next season because a larger quantity would have to be handled. The one point in favour of manufacturers sperhaps the suggestion that the increase in costs as a result of the war risks insurance scheme would be sympathetically considered by the Government.

The Bengal Government has said that stocks of sugar and salt are coming in adequate quantities. In spite of the fresh arrivals of stocks, the scarcity is unrelieved. It has therefore been decided to take over distribution. This is perhaps the first right step in the direction. If the dealers only knew that there would be effective control and regular supplies will be coming in, there will no tendency to hoard stocks.

Salt

The same is the position with regard to salt. We are told that there are ample stocks in the country, stocks enough to last one year. The problem is again one of distribution. The proposals to permit manufacture of salt in the coastal areas has been turned down on the plea that the revenue from the salt duty would be affected and that the manufacture of salt would result in evasion of the salt duty. In Bengal where there is relative scarcity, there is village manufacture of salt. Government agencies will buy up the whole production and reissue it, duty paid.

Bank of India, Ltd.

The war is still a benign influence for Indian jointstock banks. The major trend is still towards an increase in deposits with a lowering of interest rates, produced as much by the addition to resources as the slackness of demand. It is typical of our times that investments in giltedged rise more rapidly than loans or profits. Changes in the cash ratio are, in the main, void of significance at present. In December last, there was a panic; and banks hoarded cash when the public started to draw out. The restoration of pristine ease belongs to the first half of 1942 the period covered by the reports and accounts of the Bank of India published today for general information. The Bank's profits for the first half usually tend to be lower. The net profit for 1941 was Rs. 24.13 lakhs; the profit for the first half of 1942 is over Rs. 11.7 lakhs which is about equal. The maintenance of the dividend at 11 percent tax-free like the transfer of Rs. 2 lakhs for taxation is perhaps a routine matter. What really interests the citizen is not the carry-forward but finding out how banks take the strain. It might fairly be said that the Big Five in India are on easy a wicket as one can expect. The enormous rise in deposits in this period following the progress recorded in the second half of 1941 proves that our anticipations have been correct in every respect. Current deposits have risen between December and June from Rs. 18.51 crores to Rs. 26.15 crores in this case. The decline under fixed deposits etc., by Rs. 1.33 crores is only in the nature of conversion of time into demand liabilities. In the nature of things a rise in advances, in June at the beginning of the monsoon, is improbable but the decline of Rs. 2.7 crores indicates that the Bank of India has been perforce directing attention to Treasury Bills. Readers must be interested to note that the holding of Treasury Bills at Rs. 9 crores nearly exceeds that of securities, namely Rs. 7.94 crores. It is a development determined by the need for a constant inflow of cash, the expansion in Government borrowing as also the irregularity in giltedge prices. The rise in cash balances from Rs. 5.41 crores at the end of December to Rs. 10.15 crores at the end of June puts banking progress in its proper setting. There is more than proportionate growth under investments; and the heavier cash determines the slow movement in profit figures. By comparison with 1941 figures it may be surmised that profits were not much lower in spite of the big fall in Advances.

EAST INDIAN RAILWAY

TENDER NOTICE

Annual Contract item costing over Rs. 10,000/-.

Sealed tenders are invited for the following and will be received in the General Manager's Office, 105, Clive Street, Calcutta, up to 11 a.m. on 26th August, 1942.

Tender No. S/SP/752/Gb10/61 & 68|C for the supply of Basket Cane 21 inches by 10 inches or Jhankar Baskets 21 inches by 10 inches.

Tender form with full particulars can be had from the Office of the Controller of Stores, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta, and on production of his receipt when applying for the same. Firms outside Calcutta may, however remit the amount direct to the Controller of Stores, E. I. Rly., Calcutta by money order. No refund is permissible.

Sealed tender delivered by hand should be presented in the General Manager's Office for registration and then put into the tender box outside the Dy. General Manager's (Works) room by the tenderer or his representative.

R. E. MARRIOTT,
General Manager.

Tit Bits of Industrial Activity

Pumps for Defence

Stirrup pumps are distributed by Government. The House fire parties have to be equipped and the Central Government passes on the pumps to the authorities in Provinces and States. Very large numbers of pumps have been already distributed. A recent consignment of 35,000 was shared thus. Bengal got 20,000 Bombay 10,000, and Madras 5,000. The Local Governments sell the pumps to the public through accredited dealers at the rate of Rs. 25 each. A stirrup pump is good for dealing with incendiary bombs and three people at home can deal with trouble in the bud. Practice with a stirrup pump for domestic purposes is easy enough. The pump is adapted to many uses such as washing motor cars and spraying khas-khas tatties and garden-plants.

* * * *

Help by Government

The Government Test House at Alipore has decided as an experimental measure for one year on reducing the fees payable by individuals and private firms. The announcement made in June was meant to help nascent and undeveloped industries in India which have not research laboratories. The only condition is that the Director has to be satisfied that concession rates are required. Government permits exemption from payment of testing fees in special cases, on recommendations made by the Director of Scientific & Industrial Research. The Alipore laboratory will further help industry in addition to Government departments by reducing the fees payable by private parties as revision of the schedule is known to be under consideration.

* * * * *

Tests On Charcoal

Producer gas plants are in demand and the qualities of proper charcoal have to be learnt. The Dehra Dun Institute has examined the question. More tests are to be made on various types of charcoal and performance in producer gas plants is to be ascertained. Available information as to ash content, moisture, density, hardness etc., in charcoal has been presented in a leaflet. Thorough investigation has been promised. The information obtained should be of interest to the road transport interest who are adapting more and more vehicles to the use of charcoal gas as fuel. The I.R.T.D.A. recommends charcoal gas equipment to hanliers as advantageous.

* * * *

Indian-made Instruments

Russia is taking surgical instruments manufactured in India. The Red Cross Commissioner stated on July 10 that nearly 80,000 instruments have been sent to Russia. The Medical Stores Supply Committee learnt recently that more and more goods and equipment are obtained in India. In the last six months 133 items have been transferred to the list of articles made in India. Progress in the production of atropine sulphate, tannic acid, creosote and ephedrine has been reported recently. As regards instruments and appliances the gross output of the Indian industry has increased tenfold in a single year. A million suture needles were made in the year ended May and the production of six million more is planned over the next twelve months. Savings in the use of quinine were considered. The medical profession has been told that the standard dosage recommended by the League of Nations Malaria Commission should be adopted in order to avoid waste of quinine.

* * * *

Enlarging Teak Supplies

The loss of Burma makes it necessary to produce more teak. India has about 100,000 acres of teak plantations to which 5,000 acres are being added every year. The addition in Madras alone is 1,500 acres every year. This means a regular supply of root and shoot cuttings. More than two million are needed every year. How to get the best results from nurseries has been examined by Mr. A. L. Griffiths who has recommended methods of stump production. A recent volume of the Indian Forest Records deals with storage and transport as also the most economical use of nursery space and the use of undersized plants when seed is scarce. On the West Coast of South India temporary dry nurseries are better than a big central nursery where the soil is likely to get exhausted and there is also the danger of insect pests. The improvement of quality should follow better planting and Madras is anxious to raise quality and reduce costs on Government teak plantations.

* * * * *

Tea Growers' Request

The tea industry's coal requirements must be met according to a letter sent up in July by the All-India Tea Growers' Federation. Restricted booking on the Railways is said to have caused difficulty. *Tea is provided for export to the U.K.* and the Ministry of Food is the sole buyer. The claim for priority is established. Tea Estates have to produce more tea in the 1942 season and the plucked crop has to be dried. Moreover, a bigger internal quota is required. Fuel is vital and their own coal stocks are low. The Tea Controller arranged for wagon supplies, but railway booking restrictions on traffic beyond certain stations on the B. & A. Railway have affected the privilege vouchsafed. The letter also asked that the Testa Ghat ferry should be made available for a short period and coal procured in Assam itself should be made available to estates at a time when ordinary traffic facilities from Bengal are inadequate.

* * * *

Soap for the Punjab

Lahore, Amritsar, Sargodha and Multan contain soap factories which produce 2,000 maunds of washing soap. But the Punjab does not get enough laundry soap as Lahore alone sells 500 maunds of cheap washing soap. Much soap has to be imported though the prices are high. Locally made soap contains fillers like challa flour and sola ash because it is used carelessly. Imported laundry soap is preferred in the Punjab because of its unvarying quality. Punjab factories have been asked to improve and standardise quality. Toilet soap also needs to be improved if imported brands are to be displaced. According to a recent survey, the Lahore shops sell foreign soap to the extent of 50 per cent. It is the same with shaving soap. Better soap from the local factories must be procured before a claim is made for local support, runs the argument. Publicity is also wanted, and the Industries Department's assistance is indicated.

Hope for Indian Silk

Silk is a war material. There is heavy demand for Indian-made silk for parachute cloth and components like thread and tape. The 1942-43 programme for the manufacture of thousands of parachutes entails heavy production of silk. A special factory is making parachutes. A scheme costing Rs. 18½ lakhs is meant to increase the outturn of silk filatures in two Provinces. Consistency in quality is secured by changing over from hand reeling. As Japanese silk cannot be had, India has to provide more silk. Madras, Mysore and Bengal should gain from the State assistance to silk production. The village reeling industry in Mysore should gain most and loans will be given in Bengal when the scheme for a silk conditioning house is part of a plan for bigger silk production in coming years.

* * * * *

More Varied Production

The special lines attempted by Indian jute manufacturers are described in the June bulletin of the Indian Central Jute Committee. Four different types of canvas and jute carpets are being produced by Indian jute mills in addition to A.R.P. blackout materials. Paperlined materials are also produced by some mills and roofing material by a few. Potato bags, onion bags or orange pockets are again specialities made by some makers of hessian. Some mills, it is now known, are prepared to do finishing for mills outside their groups. Certain mills can provide rotproofing and others can undertake waterproofing or fireproofing. The names of mills ready to produce specialities and ready to develop existing special makes are also furnished in order to show how the jute mill industry is making new fabrics. Yarn and twine, dyed or polished, are also made in Indian jute mills and the list published last month shows how many special markets are being developed. Many jute mills are reported to be willing to make over 9 and 11 porter hessian and some are ready to do special sewing. Some mills have facilities for mangling, some for chesting and others for cropping. The list is an index of progress in Indian manufactures.

(*Continued from page* 179)

risen slightly from Rs. 34.09 crores to Rs. 34.51 crores.

The exchange market has been steady with a more favourable showing of export bills. It is too early, however, to draw any conclusions about the freight position.

The closing rates are: Banks buy T.T. London Ready to six months forward at 1s. 5 31/32d., and banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. bills for first and second months at 1s. 6 9/32d., and for the third and fourth months at 1s. 6 5/16d.

Money remains easy at ¼ percent.

Banks buy T.T. New York Ready at Rs. 329 for $100.

Banks sell T.T. New York Ready at Rs. 332¾ for $100.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 30th July.

It was with a good deal of relief that the news was received in Calcutta early this week that, on the representations put forward by the Government of Bengal and the Indian Jute Mills Association, the Government of India had decided to abandon their proposals for the "rationalisation" of the jute industry by the selective closing down of certain alleged uneconomic units. The deputation from Bengal certainly had a strong case to put up and it was doubtless reinforced to some extent by the receipt, simultaneously with the departure of the deputation, of an order from the Supply Department for 50,000 tents for delivery within a month! Full details of the discussions are not yet available, but it would appear that the Government of India has been convinced that in the circumstances, the proposed curtailment in production was not justified. As a *quid pro quo*, it is understood that the mills have put up certain suggestions towards economy in the use of coal and for the quicker turnround of wagons. Mills which draw their power supplies from public power stations will, it is understood, 'stagger' their working hours to some extent to level out the load, while the proposal to establish one or more depots from which mills can draw their coal supplies by their own boats, is to be put into effect. It should be borne in mind also that there are mills which can, and are prepared to, deal with whole rake loads of coal in quick time, and many other cases where neighbouring mills could equally rapidly break up and unload rake loads. All arrangements in such directions would contribute to wagon economy.

The tent order referred to above is rather a large undertaking, considering that the maximum canvas production up to date has been in the region of 13 lakhs of yards per month, while this order calls for something like 50 lakhs of yards. Revised Stock figures as at the end of June, amended to include all members of the I. J. M. A. as well as Gagalbhai, make little difference to the statistical position. 5 lakhs yards is added to the Hessian stocks and 15 lakhs yards to the Sacking stocks.

If he is correctly reported in the public press, the Labour Adviser to the Government of India seriously libelled the Jute Industry of Bengal at a public meeting held in Calcutta to criticize Price Control. He is reported to have said that he was very keen on seeing that industrial workers got enough food so that they might stick to their jobs, and he regretted that employers in Bengal, had not opened cheap grain shops for the employees. It is regettable that the Labour Adviser, should have committed himself to such a misstatement. The jute mills were among the first, if not the very first, employers in India to institute shops at their premises for the sale of foodstuffs at controlled prices, thus protecting their employees from the grasping avarice of the profiteer. Almost without exception these shops are being run at a loss to the employers for the benefit of the employees for, in present weather conditions it is next to impossible to avoid loss on stocks of such commodities as atta, sugar and salt. In many cases the retail prices charged are actually below the Government controlled prices, where the wholesale purchase price permits of this, for profit-making is not envisaged in the scheme. Many others besides the jute mill labour doubtless benefit by these shops in the mill areas and it must also be confessed that advantage is sometimes taken of the cheap sale rates. An instance may be quoted where sugar, retailed by the Mill shop at the controlled rate of 0-5-9 per seer was resold in the bazar to shop-keepers at eight annas per seer, who in turn retailed it to the general public at ten annas per seer. But on the whole we think that the Jute mill labour force appreciate the benefits they derive from establishment of these shops where all essential commodities are obtainable at prices well within their means. And it should be emphasised that these benefits are available to practically the whole of the labour force employed in the Jute industry. So it is all the more unfortunate that this industry should have been specifically maligned by a responsible officer of Government. It is happy to note that he has contradicted his report.

Among other avenues of enquiry sanctioned by the Indian Central Jute Committee at their meeting last week was one to find out to what extent jute could be used to replace such fibres as flax and Italian hemp which are now scarcely available in India; also enquiry into the production of ply threads of the greatest possible strength, regularity and durability. These are matters for the Technological Research Laboratories, for the extension of whose facilities further finance is to be sought. Another line of enquiry sanctioned is the endeavour to "cross" Daisee and Tossa fibres with a view to evolving hardier breeds. Though these types belong to the same family, their "crossing" has, it appears, so far not been successful. This enquiry has been entrusted to the Biological Department of Dacca University.

The total exports of Baled Jute from Calcutta during season 1941-42 (not including Chittagong) was 13½ lakhs of bales. This was about a lakh more than the previous season, but far short of the 39-40 season when 29.30 lakhs were exported, or the last pre-war season, 38-39, when the figure was 38.80 lakhs.

Very little interest has been shown in export jute during the past week and nothing of importance was recorded. Business with Mills was also small, comprising small lots of New Crop Firsts and Lightnings at Rs. 50 and Rs. 42 respectively for August shipment and Old Crop Outport Tossa 4s at Rs. 41 and Rs. 42. It is reported that henceforth the purchase of jute for the U.S.A. is to be under control in the same manner as U. K. requirements.

Turnover in Loose Jute has not been large but there has been a fair demand for ready shipment, whether old or new crop. For quick shipment European packing up to Rs. 9-12 and Rs. 6-12 was paid for Jat and two annas less for District. Supervised Jat sold at Rs. 9-8 and Rs. 6-8 for quick shipment Middles and Bottoms. Indian packing old crop on ready Bills of Lading fetched from Rs. 5-8 District to Rs. 6 Jat Bottoms, while quite a fair quantity of X mark was taken up at from Rs. 4 to Rs. 4-4 for white and at Rs. 5-4 for Tossa. Some new crop District Tossa Bottoms, Indian packing, sold at Rs. 6-12 for August-September shipment.

In the Fabrics section, Hessians have again been neglected but there has been a good demand for Heavy Goods. mainly from South African, Egyptian and Australian markets. Bazar buyers showed some interest in forward hessians while the threat of rationalisation hung over the market, but they soon withdrew when this was removed and quotations dropped to Rs. 14-2 and Rs. 18-4, but have since revived, mainly in sympathy with Heavy Goods, to Rs. 14-5 and Rs. 18-8. Heavy Goods enquiry has extended up to December but Mills are unwilling sellers beyond September and goods this side of that date are getting scarce. "B" Twills have again been a feature, selling at from Rs. 41 to Rs. 42 for ready, at Rs. 41 for August and September and at Rs. 40 for October. Liverpools sold at from Rs. 46-8 to Rs. 47 for ready and up to 15th August and at Rs. 46-8 for all August and Rs. 45 September. Cornsacks were taken at Rs. 42 August and at Rs. 41-12 August-September, and Woolpacks sold at Rs. 1-14 for November-December. Other sales reported include Grainsacks at Rs. 59 and Rs. 60 for August and Salts at Rs. 35 to Rs. 35-8 August and at Rs. 34-8 to Rs. 35 August-September.

Among the few transactions in hessian reported are 45-11 oz at Rs. 20-8 15th August and July Cotton Packs at Rs. 90.

Every Type of Banking Business Transacted

JUTE

Calcutta, July 30.

The raw jute market was absolutely dull and uninteresting early in the week. There was considerable anxiety to know the result of the negotiations of the jute industry with the Government regarding rationalisation proposals. With the encouraging prospects for the new crop there was naturally considerable anxiety that there should not be any appreciable reduction in the consumption of jute. It is now reported that the rationalisation scheme as proposed by the Government has been dropped and that the scheme as proposed by the Indian Jute Mills Association has been accepted. The exact details are not known but it is pointed out that the industry will not be adversely affected.

In the loose jute section, a slightly easier feeling has been noticeable and business concluded has been on a smaller scale. Supervised Jat Middles and Bottoms were done at Rs. 9-4, and Rs. 6-4 per maund.

In the pucca bales section, business has been on a very small scale. There have been no transactions to test prices which are lower. Shippers have been disinterested.

JUTE MANUFACTURES

Calcutta, July 30.

The jute manufactures market was inclined to be firmer earlier in the week on hopes that the rationalisation scheme would be put through and that there would be a substantial reduction in production. Naturally, there was a drop in values when it was known that the Indian Jute Mills Association had been successful in getting the approval for its scheme. 9 porters ready came down to Rs. 14-6 from Rs. 14-10 and 11 porters ready to Rs. 18-6 from Rs. 18-12. There has been a slight recovery in prices towards the close 9 porters ready are now quoting Rs. 14-7, August Rs. 14-8 and September Rs. 14-9. 11 porters ready are Rs. 18-6, August Rs. 18-8 and September Rs. 18-8.

In the heavy goods section, there is a good demand for Liverpool Twills and the quotation for ready delivery has moved up to Rs. 46-8. B. twills for the same position sold on the basis of Rs. 41 and Cornsacks Rs. 41-12.

This statement is supplementary to that of 6th June, 1942, and shows the June 1942, stock figures amended to include all members of the Association as well as Gagalbhai.

GOLD

Calcutta, July 30.

The Bombay gold market was inclined to be firmer early in the week on renewed investment and speculative buying. After being higher at Rs. 52-8 there has been a drop in the quotation to Rs. 51-15-6. First and second settlements closed at the same figure. The quotations at the end of last week were Rs. 51-11, First settlement Rs. 51-11-6 and Rs. 51-9-6 respectively.

SILVER

Calcutta, July 30.

Similar conditions have been noticeable in the silver market. Indian Mint silver ready were quoted as high as Rs. 85-4 early in the week. During the last two days the gains have been lost and quotations are even lower on balance. Indian Mint silver ready were quoting Rs. 84-5, First settlement Rs. 83-11 and Second settlement Rs. 83-13. The quotations at the time of last writing were Rs. 84-10, Rs. 84 and Rs. 84-9 respectively. It is noteworthy that the premium for second settlement over first settlement has narrowed.

The Indian market has been uninteresting and the quotation has remained unchanged at 23½d for both spot and forward.

COTTON

Calcutta, July 30.

There has been a rather sharp decline in prices in the Bombay raw cotton market during the past week. Having regard to the recent strength of the markets, the collapse in prices during the past week is to a certain extent surprising. It is pointed out that the weakness of the seeds markets and the lower advices from New York have been mainly responsible for the fall in prices. The unfavourable political situation also has been adduced as a contributory factor. Broach July/August was very uninteresting and very little interest was taken in this contract. The quotation was Rs. 200-4 against Rs. 212-12. New contract 1943 were quoted Rs. 329-8 against Rs. 363-8 and March Rs. 322-8 against Rs. 357.

There has been a rather sharp drop in prices in New York. October were quoted 18.40 cents against 18.82 cents and December 18.54 cents against 18.96 cents. The decline in prices is due to commission houses' selling and the anxiety regarding President Roosevelt's message to Congress regarding inflation.

PIECEGOODS

Calcutta, July 30.

The piecegoods market has continued firm in spite of the fact that there have been some fresh arrivals of stocks during the past week. Owing to the higher replacement costs dealers are not willing to reduce rates. Bombay mills have done some large business in greys.

Stock Markets to-day and to-morrow

MARKETS EASIER ON WAR DEVELOPMENTS

ABSOLUTELY dull and uninteresting conditions have been noticeable in the stock markets in both Calcutta and Bombay. The volume of business in both centres has naturally been on the small side. The reason for the quieter tone is no doubt the seriousness of the Russian war situation. But it is again satisfactory to note that there has been no panicky selling whatever and that the technical position of the markets is quite sound. The morale of operators in the market is much better. Otherwise, there should have been by now a considerable decline in values. The assured prospects for Indian industries and the absence of any immediate threat to India are mainly responsible for the intrinsic strength of the markets. Given favourable developments values may be expected to recover.

* * * *

The rise in the quotation for Mysore Sugar from Rs. 51-8 to Rs. 57-8 is rather significant. Commenting on the prospects of the sugar industry sometime back I pointed out that the merits of Mysore Sugar were worth attention. Being one of the important sugar producers in South India there is the possibility of a substantial increase in earnings. The probability of a bonus issue should not be overlooked. The accounts for the year ended June 1942 are due to be published in September.

* * * *

Giltedged securities have been rather uninteresting. In spite of the continuance of cheap money conditions quotations have been fluctuating in very narrow limits during the past two weeks. With the present state of the giltedged market it cannot possibly be expected that there will be any large subscriptions to the new loan. The ways and means position of the Government is rather comfortable at the present moment. If only the Government give some support to the giltedged market prices might recover, especially as the treasury bills offer for the next week has been reduced from Rs. 8 crores to Rs. 6 crores.

* * * * *

In spite of the lower level of raisings and despatches during the half-year ended October 1942, it has been possible to report a higher level of earnings by the *New Beerbhom Coal Company Limited*, thanks to the economies in working expenses. But with the large increase in the provision for taxation, including Excess Profits tax, it has been necessary to reduce the dividend to ordinary shareholders.

The incidence of Excess Profis Tax on the company's earnings is rather heavy as the profits for the standard period were rather low. Efforts are being made to obtain relief. The relative application which has been lodged with the Central Board of Revenue has not yet been heard.

The net position, before providing for taxation, for the half-year is Rs. 2,78,829 against Rs. 2,48,567 for the previous half-year. The amount charged to depreciation is slightly lower at Rs. 62,681 (Rs. 70,874) but the provision for taxation is substantially higher at Rs. 1,68,000 (Rs. 1,21,000). The dividend recommended by the directors is lower at 5 percent per annum against 7½ percent per annum previously. The amount carried forward is lower at Rs. 18,275 against Rs. 21,533 brought in.

The total raisings of all classes of coal during the half-year were 245,963 tons against 260,277 tons in the previous half-year. Despatches were 232,640 tons against 275,960 tons.

Raisings and despatches were affected by the greatly restricted wagon supply.

* * * * *

Another instance of a company whose earnings have been adversely affected by the Excess Profits Tax is the *India Paper Pulp Company Limited*. With the acute paper shortage it is not surprising that there has been a further rise in the earnings of the Company. The net profit, before providing taxation, is Rs. 9,36,013 against Rs. 7,73,640 for the previous half-year. The amount set aside to depreciation is unchanged at Rs. 2 lakhs but the provision for taxation is as much as Rs. 5 lakhs against Rs. 3.72 lakhs. The allocation to General Reserve is Rs. 50,000 (Rs. 35,000). The dividend has been only maintained at 4½ per cent. The amount carried forward is Rs. 83,217 against Rs. 82,204 brought in.

* * * * *

Guzerat Railways Company Limited has done very well during the year ended March 1942. The increase in both coaching and goods traffic has resulted in a rise in gross earnings from Rs. 4,90,286 in 1940-41 to Rs. 5,36,116 in 1941-42. As working expenses have been lower, there is a more than proportionate increase in net earnings. The net profit, before providing for taxation, is Rs. 1,64,468. The provision for taxation is Rs. 21,448. The [illegible] dividend of 4½ per cent. per annum, with the interim dividend of 2½ percent per annum already paid, makes 4¼ percent for the whole year, the same as last year.

* * *

The news [illegible] early this week to the effect that the rationalisation proposals had been dropped does not seem to have had any appreciable effect on share values. Operators were perhaps confident that the alternative scheme of the Indian Jute Mills Association would be accepted by the Government of India. The rationalisation scheme, as originally proposed, envisaged the closing down of uncertain uneconomic units and concentration of production in some mills. There was naturally considerable anxiety regarding the future of some companies. These fears have now been set at rest. The new scheme satisfies the Government as the requisite saving in power and wagon space will be effected. Also, production will not be concentrated in any particular mill. In the absence of any official announcement it cannot be definitely said as to what extent production will be affected. But, as I pointed out earlier, one great obstacle has been removed and shareholders need no longer be in fear of any of the mills closing down.

But rationalisation or no the scope for increase in the earnings of companies is strictly limited. Being mainly an industry catering to export markets, the availability of freight is the most important criterion. And with the present circumstances, there is no possibility of any appreciable improvement in the shipping position. That is perhaps the reason there is no jubiliation over the dropping of the rationalisation scheme.

* * *

With the present uncertain conditions there is need for a liberal distribution of dividends to shareholders of companies having a sound financial position. The directors of the *Publicity Society of India, Limited*, recommended the payment of an interim dividend of one rupee per share in spite of the fact there was no provision in the Articles of Association. Arrangements are being made for the early closing of the accounts for the year ended July 1942 and it is expected that in all probability the final dividend will be equal to the interim dividend.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, July 31.

RATHER dull and uninteresting conditions have been noticeable on the Calcutta Stock Exchange during the past week. The undertone in the several sections towards the close has been definitely quieter. The main reason for the dull and idle conditions in the market has of course been the news regarding the rapid progress of the Germans in the Lower Don area. The war situation in Europe is considered very grave. With the uncertainty regarding the internal political situation there is naturally concern regarding the immediate future outlook. It is satisfactory to note, however, that there has been no panicky selling and quotations have been marked down only as a precautionary measure.

The giltedged securities section has been quietly steady with quotations fluctuating in narrow limits. 3½ per cent. Paper is quoting Rs. 92-15 with 3 per cent. Paper unchanged at Rs. 79. 3 per cent. Second Defence Loan was quoted at par with the new loan a nominal market around Rs. 99-14. 3½ per cent. 1947/50 were Rs. 102-6, 4 per cent. 1960/70 Rs. 108-4 and 4½ per cent. 1955/60 Rs. 112-4. 5 per cent. 1945/55 were Rs. 108-6. Among provincial loans, 3 per cent. C.P. 1952 were noted at Rs. 98-8. 3 per cent C.P. 1949 were crossed at Rs. 99-8. Money conditions have continued very easy and there has been a further decline in the treasury bills rate to nine annas per cent per annum from nine annas and nine pies per cent per annum last week. With the reduction in the treasury bills offer there may even be a further decline in the rate.

Bank shares are steady with *Imperial Bank* fully paids at Rs. 1,530. *Reserve Bank* were slightly lower at Rs. 99.

Public bodies debentures have continued in favour with 5 per cent. *Calcutta Port Trust* debentures 1955/85 at Rs. 110, 6 per cent. *Calcutta Port Trust* debentures 1956/86 at Rs. 118-12 and 5½ per cent. *Calcutta Municipal* debentures 1950 at Rs. 110. Among industrial debentures, 5½ per cent. *Dalmia Cement* were crossed at Rs. 100-12 and 5¼ per cent. *Rohtas Industries* at Rs. 104 small lot.

In sympathy with the easier tone of the other sections a slight decline in prices has been recorded in the Cotton section all round. *Cawnpore Textiles* were Rs. 9-14, *Bengal Nagpur* Rs. 22-6, *Elgin* Rs. 34, *Kesoram* Rs. 10-8 and *New Victoria* Rs. 5-14.

In the Coal section, quotations were unchanged with *Amalgamated* at Rs. 26-7, *Bengal* at Rs .358, *Equitable* at Rs. 34-8, *Burrakur* Rs. 12-8 and *Talcher* at Rs. 2-3.

The news regarding the dropping of the rationalisation proposals by the Government of India should have come as a relief to operators and removed the uncertainty regarding the future of individual companies or rather the alleged uneconomic units. However, there has not been any appreciable improvement in values. *Champdany* were Rs. 158, *Hooghly* Rs. 17-4 *Kanknarrah* Rs. 365, *National* Rs. 20-14 ex-dividend and *Sree Lakshmi Narayan* Rs. 13.

In the Engineering Section, *Indian Iron* and *Steel Corporation* have been marked lower with the quotations at Rs. 26-5 and Rs. 16-6 respectively. *Kumardhubi Engineering* seem to be the exception being quoted higher on balance at Rs. 5-7. *Bhartia Electric Steel* were Rs. 14-8, *National Iron and Steel* Rs. 10-14 and *Marshalls* Rs. 2.

Sugar shares have remained steady with *Buland* at Rs. 30-3, *Carew & Co.* at Rs. 13-4 and *Raza* at Rs. 32-4. *Samastipore Central* were Rs. 12-6.

Tea shares have been relatively steady with *Bishnauth* at Rs. 28, *North-Western Cachar* at Rs. 242-8, *Tezpore* at Rs. 9-6 and *Seajuli* at Rs. 25-12.

In the Miscellaneous section, *B. I. Corporation* were unchanged at Rs. 5. *Calcutta Trams* were Rs .14-8, *Indian Cables* Rs. 23-3 and *National Insulated Cables* Rs. 11. *Rohtas Industries* were Rs. 23 and *Midnapore Zemindary* Rs. 74. *Assam Saws* were Rs. 3-3. Among Paper shares, *Mysore Paper* were Rs. 17-2, *Orient Paper* Rs. 20-14, *Shree Gopal Paper* Rs. 16-14 and *Star Paper* Rs. 15-14. *Titaghur Paper* were Rs. 18-14.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, July 31.

Rather quiet conditions have been noticeable on the Bombay Stock Exchange during the past week. No appreciable decline in prices is to be recorded but the business put through has been on a definitely smaller scale. It will be remembered that even at the time of last writing a definitely easier tone was noticeable in the several sections with the German successes in Russia. Giltedged securities have remained steady and towards the close Bank shares have received some support. There is a tendency to await further developments.

In the giltedged securities section, there is no appreciable change in quotations to be recorded. 3½ per cent. Paper was quoting Rs. 92-15, 3 per cent. 1951/54 Rs. 99-14, 3½ per cent. 1947/50 Rs. 102-5, 4 per cent. 1960/70 Rs. 108-12 and 5 per cent. 1945/55 Rs. 108-6.

The weakness of the raw cotton market and the unfavourable international situation have been mainly responsible for the easier tone of this section. Results of companies published at this moment continue to make satisfactory showing. *Bombay Dyeing* were more than 30 points lower at Rs. 1,270. *Ahmedabad Advance* were Rs. 385, *Central India* Rs. 366, *Century* Rs. 493, *Kohinoor* Rs. 490 and *Simplex* Rs. 240.

Hydro-Electrics.—Quotations have been marked lower in this section also. *Tata Hydro* were Rs. 170-8, *Andhra Valley* Rs. 1,625 and *Tata Power* Rs. 1,520.

Steels.—There has been some selling in this section and *Tata* ordinaries and deferreds have been marked lower with the

COMPANY REPORTS

RESERVE BANK OF INDIA

Report for the year ended 30th June, 1942:—

After payment of expenses of administration and provision for sundry liabilities and contingencies the net profit amounts to	Rs. 3,41,53,681-2-0
Of this amount, the sum of will be utilised for payment to shareholders of a dividend at the rate of 3½ per cent. per annum, being the cumulative rate fixed by the Central Government in accordance with section 47 of the Reserve Bank of India Act, 1934,	Rs. 17,50,000-0-0
leaving a surplus of for payment to the Central Government in accordance with the said section.	Rs. 3,24,03,681-2-0

The net profit is higher than in the previous year by Rs. 62.27 lakhs owing primarily to the increase in the interest-bearing assets of the Bank.

The total number of shareholders declined further during the year from 53,468 to 51,171. The number of shares on the Bombay area continued to expand at the expense of other areas as in previous years.

Bank and Currency Notes.—No new denominations of India or Burma bank notes were issued during the year.In order, however, to relieve the growing pressure on rupee coin, which term includes the Government of India one-rupee notes, the Bank has decided to issue two-rupee notes in terms of section 24 of its Act. The design, form and material of the note have been approved by the Government of India and arrangements are in hand for the printing of the note, which, it is hoped, will serve as a convenient unit of currency intervening between the one-rupee note and the five-rupee note.

Indian Securities Market.—Up to the outbreak of war in the Far East, the gilt-edged market in India was quietly steady with 3½ per cent. undated rupee paper standing in the vicinity of Rs. 96. Following the outbreak of war with Japan, rupee paper declined to Rs. 92 by the middle of December but soon recovered to Rs. 92-12-0 as a result of investment support at the lower level. The Government announcement on 24th December that they had taken action to repatriate pratically the whole of their remaining sterling debt amounting to about £158 million had a strengthening effect, and when the market reopened on 27h December, rupee paper was quoted at Rs. 93-4-0. With the reinvestment of their vested loans by insurance companies and other institutional investors, the quotation rose further to Rs. 95-8-0 on 22nd January, but war developments in Burma had an adverse effect, and the rate declined sharply on 2nd March, transactions being recorded as low as Rs. 84. With a view to preventing an unreasonable marking down of values, the Government of India issued an Order under the Defence of India Rules on 2nd March prohibiting dealings in securities below certain minimum prices, the minimum price fixed for rupee paper being Rs. 87. The fixation of minimum prices prevented a further decline in values, and when the market reopened on the 4th, rupee paper was quoted at the minimum. Owing to buying support at the lower level, particularly from institutional investors, it advanced to Rs. 91-8-0 in the first week of June and remained practically unchanged at that level till the third week of the month after which it declined slightly owing to war developments and closed at Rs. 90-14-0 for the year.

Central Government Loans.—The loans floated by the Central Government during the year were the 3 per cent. Second Defence Loan 1949-52, Three-Year Interest-Free Defence Bonds and Ten-Year Defence Savings Certificates, the Second Defence Loan being closed on 14th February, the total subscriptions to the first two loans up to 30th June, 1942 were as follows:

	Rs.
3% Second Defence Loan 1949-52 ..	59,16,07,000
Three-Year Interest-Free Defence Bonds ..	2,73,15,000

No Provincial Government loans were floated during the year.

Bullion Market.—The outbreak of war with Japan led to an outburst of speculation in the bullion market and prices, which had moved within a narrow range during the first five months, underwent violent fluctuations in the remaining part of the year. The price of ready gold which had ranged from Rs. 41-11-0 to Rs. 44-13-0 between July and November rose to the record level of Rs. 58-4-0 on the 12th of March. Thereafter the trend was reversed and the quotation declined sharply to Rs. 44-12-0 on the 18th of April. As a result of buying support at the lower level, it recovered to Rs. 49-8-0 on 25th April, after which it moved within comparatively narrow limits up to 20th June with the quotation fluctuating between Rs. 46-14-0 and Rs. 49-13-0. War developments in the Middle East, however, led to a definitely bullish trend thereafter and the rate rose steadily to Rs. 50-15-0 by the close of the year.

Movements in silver were more or less parallel to those in the gold market. During the first five months of the year, the ready rate moved between Rs. 62-6-0 and Rs. 63-3-0. The outbreak of war with Japan intensified the demand and spot silver touched Rs. 71-11-0 on 20th December. Thereafter it fluctuated between Rs. 68-6-0 and Rs. 71-11-0 till about the middle of Febraury, as the tendency towards a further rise in prices was for the time being checked by sales of standard rupee silver by the Reserve Bank on Government account. The undertone, however, remained firm and with the discontinuance of the sales of silver by the Reserve Bank with effect from 20th February, a renewed outburst of speculation carried the price to Rs. 96-8-0 on 12th March. Thereafter, as in the case of gold, there was a fairly sharp fall in prices, the quotation declining as low as Rs. 75-4-0 on the 18th April. It recovered to Rs. 84-12-0 on 27th April and fluctuated between Rs. 80-4-0 and Rs. 83-14-0 till 11th June after which developments in the Middle East led to increased speculative activity and erratic fluctuations in prices. Ready silver rose to Rs. 85 on 12th June and after comparatively wide fluctuations fell to Rs. 83-3-0 on the 20th. Thereafter, although the offtake was inconsiderable, the undertone of the market remained bullish as a result of war developments and the rate rose to Rs. 85-6-0 on the 29th. The Reserve Bank made some sales of refined silver on a spot basis on 30th June as a result of which the market steadied and closed at Rs. 84-11-0 for the year.

Commodity Prices.—The trend of commodity prices reflected the repercussions of war developments on the economy of the country, amongst which must be recorded transport difficulties resulting in wide fluctuations of prices between the producing and the consuming centres. The prices of the commodities which constituted the greater part of the exports to the Far Eastern countries registered a decline after the outbreak of war with Japan. Foodstuffs, such as rice and sugar, formerly imported from Burma and the Netherlands East Indies, as also manufactured articles which were previously imported from Japan, recorded a sharp rise. As a result, the Calcutta index number of wholesale prices for all commodities (July, 1914—100) rose further from 137 in June, 1941 to 182 in June, 1942.

Among foodgrains, the index number for cereals rose from 114 to 154 during the year while that for pulses advanced from 99 to 151 during the same period. The price of sugar recorded an increase of 71 points to 210, while that of tea fluctuated widely between 169 and 263. The prices of "other food articles" also tended to higher levels, and their index rose by 109 points to 294. Among textiles, large Government Orders for sandbags led to a rise in the indices for raw jute and jute manufactures from 73 and 141 in June, 1941 to 104 and 167 respectively in September, but the dislocation of shipping in the Pacific after the outbreak of war with Japan resulted in a sharp fall and the indices declined to 72 and 126 respectively in June, 1942. Raw cotton, which had improved from 81 in June, 1941 to 88 in July, declined to 70 in March, 1942 as a result of war developments but rose again to 90 in June on expectations of a reduction in the acreage. The index for cotton manufactures rose from 158 in June, 1941 to 237 in November. Thereafter there was a decline as a result of nervous liquidation of stocks following developments in the neighbouring theatres of war and the index fell to 171 in February, 1942 but recovered to 190 in March. Owing to their war-time importance the indices of metals and hides and skins advanced by 66 and 16 points to 263 and 87 respectively.

Balance of Trade.—The total value of India's foreign trade continued to expand during the year. The value of merchandise exported from the country on private account amounted to Rs. 241.91 crores during the eleven months ended May, 1942 as compared with Rs. 169.03 crores in the corresponding period of 1940-41, while that of imports was slightly lower at Rs. 138.01 crores as against Rs. 146.25 crores. As a result, the balance of trade in merchandise in favour of India rose by Rs. 81.12 crores from Rs. 22.78 crores to Rs. 103.90 crores. These figures do not take into account war purchases by His Majesty's and Allied Governments which are paid for in sterling. A part of the increase in the total value of exports is to be attributed to the rise in prices.

Exchange.—The rupee-sterling exchange market was steady throughout the year. The sellers' quotation for telegraphic transfers for merchant business was raised from 1sh. 5-15/16d. on the 25th of September to 1sh. 5-31/32d. in anticipation of an improvement in the supply of sterling in the approaching export season. The buying rates for telegraphic transfers and three months D/A bills were also raised by 1/32d. to 1sh. 6-1/32d. and 1sh. 6¼d. respectively, and as a result of the change in the rupee-sterling exchange rate, the buying and selling rates for telegraphic transfers on New York were reduced by eight annas to Rs. 329½ and Rs. 332¼ respectively. Owing to the improvement in the balance of trade, net sterling purchases of the Bank from the market were higher than in the previous year and amounted to £1,604,025-11-7 as compared with £54,074,993-6-7 in 1940-41. Repayments made by the Secretary of State on account of recoverable war expenditure and purchases made on behalf of His Majesty's and Allied Governments, after deducting the sterling requirements of the Central Government and the Government of Burma, left a net credit in favour of India of £145,360,000 against £25,545,000 in the previous year.

Repatriation of Sterling Debt.—The scheme for the repatriation of India's sterling debt was continued with the Government of India's announcement on 24th December, 1941 that they had taken action to repatriate as far as possible the whole of their remaining sterling debt (other than railway debenture stock and annuities) of the aggregate amount of about £158 million, consisting of the 3½ per cent. and 3 per cent. India Sterling Stocks and the 2½ per cent. Sterling Loan, the outstanding amount in respect of which was about £78 million and £11 million respectively. The Secretary of State gave a year's notice for the redemption of the 3½ per cent. India Sterling Stock on January 5, 1943, and the British Treasury issued an Order on 23rd December, 1941 requiring all residents in the United Kingdom holding the 3 per cent. and 2½ per cent. loans to surrender them to the Treasury. The Government of India issued a corresponding Order under the Defence of India Rules acquiring all such stock held by residents in India at prices equivalent to the amounts fixed in the United Kingdom Order. The securities in question were to be delivered by February 9, 1942 and payments commenced on the 2nd March.

The stock surrendered under the British Order amounted to £72.79 million and that under the Indian Order to £4.27 million involving payments of £64.79 million in England and Rs. 5.12 crores in India. The bulk of the payment in sterling was effected by the transfer of sterling treasury bills from the Issue to the Banking Department, and rupee finance was provided by the Central Government by the creation of *ad hoc* treasury bills in the Issue Department to the amount of Rs. 90 crores. In addition to the above sterling payment of £64.79 million, £2.07 million was paid on account of portions of the residual terminable stock acquired during the course of the year and £16.63 million on account of 3½ per cent. non-terminable stock purchased in the open market.

The total demand and time liabilities in India rose from Rs. 287.29 crores on the 27th June 1941 to Rs. 326.50 crores on the 5th December 1941. Thereafter, owing to the outbreak of war with Japan, banks were subjected to a certain amount of withdrawals and the total demand and time liabilities fell to Rs. 320.48 crores by the 6th March. With the gradual return of confidence deposits resumed their upward trend, the total demand and time liabilities standing at Rs. 364.46 crores on he 26th June 1942.

Average balances maintained by the scheduled banks with the Reserve Bank were higher at Rs. 41.98 crores in 1941-42 against Rs. 38.53 crores last year, the excess over the statutory minimum being Rs. 28.60 crores against Rs. 27.75 crores. The percentage of cash in hand and balances with the Reserve Bank to their total demand and time liabilities was 20.70 per cent. on the 26th June 1942 as compared with 13.79 per cent. at the corresponding time of the previous year. The advances and bills of the scheduled banks during the year were generally on a lower level than in the previous twelve months while their investments in gilt-edged securities as revealed in such of their balance sheets as are available were higher, so that their position on the whole was more liquid than in the previous year. Some of the smaller scheduled banks, however, felt the strain of withdrawals as was evidenced by their defaults in maintaining the statutory deposits with the Reserve Bank. During the year 19 scheduled banks defaulted in maintaining their statutory deposits and paid penal interest aggregating Rs. 4,709-6-2 of which Rs. 2,483-15-10 was at the higher penal rate of 8 per cent. per annum.

The table given below compares the position of scheduled banks as on the 27th June, 1941 and the 26th June, 1942.

	(In thousand rupees)		
	27-6-1941	26-6-1942	Difference
1. Demand Liabilities:			
In India	183,94,30	267,15,50	+83,21,20
In Burma	10,95,58	..	..
2. Time Liabilities:			
In India	103,34,99	97,30,58	— 6,04,41
In Burma	4,05,64	..	..
3. Cash in Hand:			
In India	11,38,07	14,51,76	+ 3,13,69
In Burma	65,03	..	..
4. Balances with Reserve Bank of India	29,65,83	60,92,78	+31,26,95
5. Advances:			
In India	122,15,30	94,30,20	—27,85,10
In Burma	5,64,74	..	..
6. Bills Discounted:			
In India	5,34,96	1,46,98	— 3,87,98
In Burma	7,03	..	..

Operations of the Issue Department.—It will be seen that the form of the balance sheet differs slightly from that of the previous year inasmuch as it omits all references to Burma notes. In view of the occupation of Burma by the enemy, the Government of India decided to relieve the Bank of its liabilities for the Burma note issue and to take over corresponding assets on this account from the Bank. An Ordinance was accordingly issued on 6th June 1942 prohibiting the Bank from making payment for Burma notes except with the authorization of the Government of India. The effect of the Ordinance is that whereas the Bank was till then converting Burma notes in the capacity of a note-issuing authority both for Burma and India, the Bank is now doing so as agent of the Government of India. No reference to Burma notes is therefore made in the balance sheet and the weekly returns which are identical in form.

The total of the balance sheet of the Issue Department rose during the year from Rs. 291.34 crores to Rs. 461.56 crores owing to the increase in the note-sisue as a result of war conditions. On the liabilities side, the total circulaion has risen from Rs. 260.01 crores (Rs. 278.27 crores including Burma notes) to Rs. 447.23 crores. On the assets side, 'Gold Coin and Bullion' has remained unchanged at Rs. 44.41 crores. 'Sterling Securities' have risen from Rs. 118.80 crores to Rs. 266.85 crores notwithstanding the transfer of Rs. 20 crores to the Banking Department for the purpose of making sterling payments to holders of sterling loans repatriated during the year under review, which totalled £83.48 million, *i.e.*, Rs. 111.31 crores during the year. With gold, they now provide a cover of 67.44 per cent against the note issue liabilities.

'Rupee Coin' which includes the one-rupee notes of the Government of India has declined from Rs. 36.81 crores to Rs. 28.00 crores mainly owing to greater demand as a result of increased financial activity. Early in April, the Bank took over from the Government Rs. 5 crores worth of rupee coin in terms of sub-section (2) of section 36 of the Reserve Bank Act as amended on 24th July 1940.

The value of rupee securities has risen from Rs. 91.32 crores to Rs. 122.29 crores. The rupee counterparts which the Bank had taken over from Government in March 1941 in connection with the repatriation of the terminable sterling debt were subsequently returned to Government in exchange for treasury bills which were also gradually cancelled so that by the 27th February 1942 rupee securities had declined to Rs. 41.50 crores. As already mentioned above, the rupee finance required for repatriating the non-terminable loans was provided by Government by the creation of *ad hoc* treasury bills and rupee securities therefore rose to Rs. 149.19 crores on 22nd May, Their value declined, however, again to Rs. 122.29 crores in the week ended 12th June when the assets held as cover for the Burma note issue were transferred to Government.

Operations of the Banking Department.—The total of the balance sheet of the Banking Department has risen from Rs. 67.31 crores to Rs. 104.36 crores mainly as a result of the large increase in the deposits of the scheduled banks with the Bank.

On the liabilities side, the total of Government deposits has declined slightly from Rs. 22.45 crores to Rs. 22.01 crores. Owing to the uneven incidence of Government's war expenditure, these deposits showed large variations during the year, the highest and the lowest being Rs. 31.61 crores and Rs. 10.08 crores respectively.

The deposits of banks have shown a sharp increase of Rs. 34.60 crores to Rs. 64.63 crores. Owing to the prevalence of easy money conditions during the year and the desire of the banks for greater liquidity, these deposits were greatly in excess of the statutory minimum required by the Reserve Bank Act.

'Balances held abroad' have increased from Rs. 47.33 crores to Rs. 80.39 crores. Large amounts of these balances were from time to time transferred to the Issue Department as cover for the note issue.

The low level of 'Bills Purchased and Discounted' and 'Other Loans and Advances' during the year reflects the prevalence of easy money conditions. 'Investments' have risen from Rs. 5.28 crores to Rs. 8.24 crores, while 'Other Assets' are slightly lower at Rs. 1.23 crores as compared with Rs. 1.37 crores.

Sterling Assets.—The related problem of accumulating sterling balances is also of intimate concern to the Reserve Bank and is receiving the continuous attention of the Board. The balances in sterling in the Banking Department at the end of the year are not appreciably in excess of the amount required for the repayment of the undated 3½% Sterling Stock due for redemption next January. Moreover the remaining sterling liabilities of Government, such as railway debenture stocks, present a further field for repatriation which it should be possible to explore towards the utilization of any surplus sterling that may result from the current year's operations.

Governor:—Sir J. B. TAYLOR.

Synopsis of the balance sheet as at 30th June, 1942:—

ISSUE DEPARTMENT.

Liabilities.	Rs.	*Assets.*	Rs.
Notes held in the Banking Dept. ..	14,33,04,705	Gold Coin and Bullion:—	
Notes in circulation ..	447,22,63,765	(a) Held in India	44,41,43,310
		(b) Held outside India	Nil
		Sterling securities	266,85,10,913
		Rupee coin ..	28,00,14,972
		Govt. of India Rupee securities	122,28,99,275
		Internal Bills of Exchange & other Commercial paper	Nil
Total ..	461,55,68,470	Total ..	461,55,68,470

BANKING DEPARTMENT.

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid up ..	5,00,00,000	Notes ..	14,33,04,705
Reserve Fund ..	5,00,00,000	Rupee Coin ..	6,97,884
Deposits:—		Subsidiary Coin	4,55,993
(1) Central Government of India ..	14,11,05,639	Bills purchased & Discounted:—	
(2) Government of Burma ..	33,91,577	(a) Internal ..	Nil
(3) Other Govt. Accounts ..	7,55,93,808	(b) External ..	Nil
(4) Banks ..	64,63,25,922	(c) Govt. Treasury Bills ..	6,23,577

		Investments ..	8,23,88,562
		Other Assets† ..	1,22,84,287
Total ..	104,36,45,797	Total ..	104,36,45,797

*Includes Cash and Short-term securities.

†Included the sum of Rs. 6,80,070 being the book value of Dead Stock now in enemy occupied territory.

(*Annual meeting, 10th August, 1942 at 3 P.M. at Madras*)

NEW BEERBHOOM COAL COMPANY, LIMITED.

Audited accounts for the half-year ended 30th April, 1942:—

After providing Rs. 1,68,000 for Taxation and Rs. 62,681-7-0 for Block Depreciation, there is a balance of Rs. 69,681-2-11 at credit of Profit and Loss Account, which it is proposed be dealt with as follows:—

	Rs.	A.	P.
Dividend on Preference Shares at 7 per cent per annum	7,000	0	0
Dividend on Ordinary Shares at 5 per cent per annum	44,403	13	0
Carry forward	18,275	6	11
Total ..	69,681	2	11

It is regretted that although trading results have been satisfactory, the large provision made for taxation has necessitated a reduction in the dividend.

The Company is unfortunately placed for Excess Profits Tax owing to the low profits earned during the Standard Period but every effort is being made to obtain relief. The relative application which has been lodged with the Central Board of Revenue has not yet been heard.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ltd.

Authorised Capital—Rs. 25,00,000 in 2,00,000 Ordy. and 50,000 7 per cent Cum. Pref., both of Rs. 10 each. Issued and Subscribed—Rs. 19,76,230 in 1,77,623 Ordy. and 20,000 Pref., both fully paid-up.

Synopsis of the balance sheet as at 30th April, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital Paid-up ..	19,76,230	Gross Block ..	81,51,205
Reserves ..	14,49,655	Depreciation ..	64,81,205
Current debts ..	3,00,489		
Carry forward ..	18,275	Block (net) ..	16,70,000
		Stores and Spares ..	5,83,167
		Stocks ..	1,22,587
		Outstandings ..	6,47,446
		Investments ..	3,82,700
		Cash balances ..	3,38,749
Total ..	37,44,649	Total ..	37,44,649
		Total Liquid Assets ..	20,74,649

GUZERAT RAILWAYS COMPANY, LIMITED

Accounts for the year ended 31st March, 1942:—

The results of working the three Sections of the Company's Railways, including Rebate estimated to be due from Government and after making provision for Taxation, show a credit balance of Rs. 1,43,019-15-11. To this must be added the sum of Rs. 33,985-4-0 brought forward from last year's Accounts, making Rs. 1,79,005-3-11 in all.

The Directors declared an ad-interim dividend at the rate of 4% per annum, less Income Tax, which absorbed a sum of Rs. 69,000-0-0, leaving a balance of Rs. 1,10,005-3-11 available for disposal, which they recommend should be applied as follows:—

Dividend for the Second half-year ended 31st March, 1942, at the rate of 4% per annum (making 4¼% for the year) payable less Income-Tax	77,625	0	0
Balance to be carried forward	32,380	3	11
Total ..	1,10,005	3	11

The following statement shows the traffic statistics of the Railways during the past 3 years:—

Year ended 31st March ..	1939-40	1940-41	1941-42*
Number of Passengers ..	700,430	797,449	925,300
Gross Earnings ..	1,72,694	1,92,053	2,17,300
Merchandise (in Tons) ..	147,109	140,880	150,435
Gross Earnings ..	2,48,966	2,91,205	3,15,800
Total Gross Earnings ..	4,29,459	4,90,286	5,36,116
Total Net Earnings ..	17,980	78,575	1,38,085
Percentage of Working Expenses to Gross Earnings ..	95.81	83.97	74.24

*The figures for 1941-42 will require adjustment as the audited returns for March, 1942, have not been received.

Coaching Traffic.—There has been an increase of over 1.25 lakhs in the number of passengers carried and of Rs. 25,000 in Coaching Receipts, which accords with the general improvement in Railway business throughout India.

Goods Traffic.—The tonnage of merchandise carried and the earnings derived therefrom also show an increase over last year's figures.

Working Expenses.—The total improvement in the gross earnings this year is more than Rs. 45,000 and, as a result of a reduction in the working expenses, the ratio of working expenses to gross earnings has declined by approximately 10%.

Agents.—Messrs.. Killick, Nixon & Co.

Authorised Capital—Rs. 50,00,000 in 50,000 shares of Rs. 100 each.. Issued and Subscribed Rs.—Rs. 34,50,000 in 34,500 shares, fully paid-up.

Synopsis of the balance sheet as at 31st March, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital Paid-up ..	34,50,000	Fixed Capital Expenditure ..	51,57,141
4¾% Debentures ..	9,00,000	Outstandings ..	1,29,154
7% Debentures ..	9,00,000	Investments ..	1,75,692
Current liabilities ..	1,84,831	Cash ..	5,314
Carry forward ..	83,380		
Total ..	54,67,211	Total ..	54,67,211
		Total Liquid Assets ..	3,10,076

Meeting held, 29th July, 1942 at Bombay. Dividend is payable on or after 11th August, 1942).

BANK OF MYSORE, LIMITED

The result of the working of the Bank for the half-year ending 30th June, 1942 is a surplus of	2,24,209	0	4
Which, added to the balance brought forward from 31st December, 1941, viz. ..	1,26,050	14	5
Amounts to	3,50,259	14	9
As the sum available for distribution and which the Directors have disposed of as follows:—			
In payment of an interim Dividend at the rate of 12 per cent per annum, free of income-tax, on the Paid-up Capital absorbing ..	1,20,000	0	0
Transferred to Depreciation on Bank Property	20,000	0	0
Transferred to Reserve for Contingencies ..	50,000	0	0
Carried forward to next account	1,60,259	14	9
Total ..	3,50,259	14	9

FORTHCOMING MEETINGS

Reserve Bank of India.—Meeting, 10th August, 1942 at 3 p.m. at Madras.

Imperial Bank of India.—Meeting, 24th August, 1942 at 11-30 p.m.

New Beerbhoom Coal Co., Ld.—Meeting, 7th August, 1942 at 11-15 a.m. Transfer Books closed from 30th July to 7th August, 1942. *Dividends proposed 5 and 7 per cent. per annum on the Ordinary and Preference Shares respectively.*

Dacca Electric Supply Co., Ld.—Meeting, 7th August, 1942 at 2 p.m. Transfer Books closed from 30th July to 7th August, 1942. *Dividend proposed As. 4 per share.*

India Paper Pulp Co., Ld.—Meeting, 6th August, 1942 at noon. Transfer Books closed from 24th July to 6th August, 1942. *Dividend proposed Rs. 4½ per share.*

Britannia Engineering Co., Ld.—Meeting, 5th August, 1942 at noon. Transfer Books closed from 21st July to 5th August, 1942. *Dividend proposed As. 12 per share.*

Murphulani (Assam) Tea Co., Ld.—Meeting, 4th August, 1942 at 3 p.m. Transfer Books closed from the 20th July to 4th August, 1942. *Dividends proposed As. 12 per Ordinary Shares and Rs. 1¼ per Preferred Ordinary Share.*

Rajgarh Tea Co., Ld.—*Meeting, 4th August, 1942 at 3-20 p.m. Dividend proposed Rs. 1½ per share. Singtom Tea Co., Ld.*, Meeting, 4th August at 3-35 p.m. *Dividend proposed Rs. 10 per share.* Transfer Books closed (both companies) between 20th July to 4th August, 1942.

Cochin Malabar Estates, Ld.—Meeting, 1st August, 1942 at 11 a.m. at Calicut. *Final dividend proposed 35 per cent. making 50 per cent. on the whole, payable on or after 1st August, 1942.*

DIVIDENDS DECLARED

Phoenix Mills, Ld.—20 per cent., for year ended 31st December, 1941, payable on or after the 3rd August, 1942.

Nagpur Electric Light and Power Co., Ld.—7 per cent. for year ended 31st December, 1941, payable on or after the 13th August, 1942 to those shareholders whose names are registered on the 13th July, 1942.

Rohtas Industries, Ld.,—12½ per cent. for year ended 31st December, 1941, payable on or after the 15th September, 1942.

Guzerat Railways Co., Ld.—4½ per cent., for the second half-year, making 4¼ per cent. for the year, payable on or after the 11th August, 1942 to those shareholders whose names stand on the Register on the 23rd July, 1942.

THE JUPITER GENERAL INSURANCE COMPANY, LIMITED

NOTICE is hereby given that the 24th Ordinary General Meeting of the Shareholders of the above Company, will be held at the Registered Office, Ewart House, Tamarind Lane, Fort, Bombay, on Thursday, the 20th August, 1942, at 4 p.m. (Standard Time), for the transaction of the following business:

1. To adopt the Directors' Report, the Audited Revenue Accounts, Profit and Loss Account and Balance Sheet for the year ended 31st December, 1941.

*2. To sanction Dividends on Preference and Ordinary shares.

3. (a) To appoint a Director in place of the Director retiring from Office under Article 87 of the Articles of Association, but is eligible for re-election.

   (b) To appoint Directors in place of those who retire from Office under Article 96 of the Articles of Association, but are eligible for re-election.

4. To appoint Auditors for the year ending 31st December, 1942, and to fix their remuneration.

5. To transact such other business as may be brought forward by the Chairman.

By Order of the Board,
MATHURADAS DWARKADAS,
Director.

Bombay, 16th July, 1942.

Notice is also given that the Transfer Books of the Company will be closed from the 6th August to the 20th August, 1942, both days inclusive.

*Preference and Ordinary Shares dividends, if sanctioned, will be payable on and after 1st September, 1942, to those shareholders whose names stand on the Register of the Company on 5th August, 1942.

TEZPORE TEA COMPANY, LIMITED

NOTICE

The Twenty-fourth Ordinary General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Monday, the 17th August, 1942, at 12-5 p.m. for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the year ended 31st December, 1941.

(2) To declare Dividends.

(3) To elect a Director. Mr. H. Rowan Hodge retires by rotation from the Board, and being eligible, offers himself for re-election.

(4) To elect Auditors for the current year.

The Transfer Register will be closed from the 3rd August to 17th August, 1942, both days inclusive.

By Order of the Board,
SHAW WALLACE & CO.
Managing Agents.

Calcutta, 25th July, 1942.

THE JUPITER GENERAL INSURANCE COMPANY, LIMITED

NOTICE.

Notice is hereby given that an Extraordinary General Meeting of The Jupiter General Insurance Co., Ltd., will be held at the Registered Office of the Company, at Ewart House, Tamarind Lane, Fort, Bombay, on the 20th day of August, 1942, at 3-30 p.m. (Standard Time), to consider and, if thought fit, approve the draft new Articles which will be submitted to the Meeting and in the event of the approval thereof with or without modification to consider and, if thought fit, to pass a resolution to the following effect as a Special Resolution:—

"That the regulations contained in the printed document submited to this Meeting and for the purpose of identification subscribed by the Chairman thereof be approved and adopted as the Articles of Association of the Company in substitution for and to exclusion of all the existing Articles thereof."

A printed draft of the proposed new Articles of Association and a copy of the existing Articles of Association of the Company may be inspected at the Registered Office of the Company at any time between the hours of 11 a.m. and 5 p.m. on any day except Saturdays and Sundays.

By Order of the Board,
MATHURADAS DWARKADAS,
Director.

Dated this 17th day of July, 1942.

NAMBURNADI TEA COMPANY, LIMITED

NOTICE.

The Twenty-eighth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Monday, the 17th August, 1942, at 12 noon, for the following purposes:—

(1) To receive the Directors' Report and the Audited Accounts for the year ended 31st December, 1941.

(2) To declare a Dividend.

(3) To elect a Director. Mr. H. Rowan Hodge retires by rotation from the Board, and being eligible, offers himself for re-election.

(4) To elect Auditors for the current year.

The Transfer Register will be closed from the 3rd August to 17th August, 1942, both days inclusive.

By Order of the Board,
SHAW WALLACE & CO.
Managing Agents.

Calcutta, 25th July, 1942.

EAGLE CORPS — E. O. THOMPSON

THE AMERICAN VOLUNTEER CORPS. (A. V. C.) FIRE BRIGADE SECTION Calcutta 17-7-42

Armed with a Stirrup Pump and the knowledge concerning its proper use, citizens of Calcutta can greatly assist in fire defence. A properly equipped army of preventive firemen will greatly reduce the chances of widespread fires in the event of an air raid. The Stirrup Pump is a first line defence against incendiaries.

SENIOR STATION OFFICER AMERICAN VOLUNTEER CORPS.

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The same glut in the short loan market; the same nominal rate of ¼ per cent for inter-bank call money; the same plethoric funds in the hands of banks; the same avid demand for treasury bills—such is the description of another week which has in no way varied from the earlier weeks. This is the first week of the reduced offer of tender bills at Rs. 6 crores. There was keen bidding as is shown by the total applications being more than double the offer. The average rate of accepted tenders has declined from annas 9 per cent per annum last week to annas 8 and pies 6 this week. The offer of tender bills for next week remains at Rs. 6 crores. Continued sales of treasury bills for large amounts over a long period have not succeeded in causing any reduction in the surplus cash balances of banks. Deposits are swelling and advances are dwindling. The banks are, therefore, obliged to turn to gilt-edged securities or treasury bills for investment. Though the Government securities' market has been maintaining a firm undertone and prices are ruling high, there is still considerable reserve on the part of investment institutions to buy giltedged on any considerable scale. The political situation within the country and the war situation outside are ominous in the extreme; and there is a desire, on all hands, to let August pass before any large commitments can be undertaken. In such circumstances, treasury bills are almost the only available avenue for the increasing idle funds. At the same time, maturities during this month are on the large side. It should, therefore, be no matter for surprise if bidding at the weekly auction of treasury bills becomes keener and keener, pushing the rate lower and lower.

The month-end payment by the British to the Indian Government is revealed in the returns of the Reserve Bank. Sterling securities in the issue department have risen by nearly Rs. 20 crores from Rs. 266.85 crores to Rs. 286.79 crores. On the other hand, foreign balances held in the banking department show a decline of about Rs. 4 crores from Rs. 84.56 crores to Rs. 80.64 crores. That is to say, the net increase in the sterling assets of the Reserve Bank in the week ended July 31 is Rs. 16 crores: and this may be taken to be the amount received in respect of inter-governmental transactions. In spite of this addition to the Government's cash balances, the Central Treasury's deposits with the Reserve Bank show a decline of Rs. 7.88 crores. We have thus to account for an outgo of Rs. 24 crores. Rs. 20 crores out of this Rs. 24 crores represents the shrinkage in cash balances caused by the cancellation of ad hoc treasury bills for Rs. 20 crores. While sterling securities in the issue department have risen by Rs. 20 crores, rupee securities have declined by the same amount from Rs. 122.31 crores to Rs. 102.37 crores. In other words, the Government were so satisfied with regard to their comfortable ways and means position that they allowed a cut of Rs. 20 crores in their cash through the withdrawal of securities from the issue department of the Reserve Bank.

It will be remembered that rupee securities in the issue department suffered a similar big cut in the second week of June as a result of the Government taking over the responsibility for the Burma notes. On June 5, 1942, rupee securities stood at Rs. 149.15 crores; and they came down to Rs. 122.29 crores by June 12. Thus, of the rupee securities that were created in connection with the repayment of the 2½ per cent and 3 per cent India sterling stocks, as much as Rs. 47 crores has already been cancelled. This greatly strengthens the Government's ways and means position in the sense and to the extent that, should any need arise in the future, the Government can replenish their cash position by issuing ad hoc bills at least up to the limit of the bills now extinguished. As rupee securities have been cancelled to the extent that sterling securities have expanded in the issue department, there is, in the result, no currency expansion.

The other noteworthy features of the Reserve Bank returns are an increase in the deposits of member banks from Rs. 64.46 crores to Rs. 65.20 crores; and a drastic decline in the Banks' investments from Rs. 8.39 crores to Rs. 6.40 crores. We are inclined to the view that such a sharp fall in investments must be connected with some special operation or other. In this connection, the sharp and smart rise in the investments of the Imperial Bank from Rs. 85.26 crores to

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 4th August, 1942. Total amount offered was Rs. 12,29,75,000 (Rupees 12 crores 29 lakhs 75 thousand). Tenders at Rs. 99-14-0 per cent and above were accepted in full, and those at Rs. 99-13-9 per cent were allotted approximately 35 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-8-6 per cent (Rupee nil annas eight and pies six per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 11th August, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 10th August, 1942 at other centres. Successful tenderers should make payment on Friday, the 14th August, 1942. Other conditions are as usual.

During the week ended the 31st July, 1942, Government of India Treasury Bills for Rs. 2,43,00,000 (Rupees 2 crores 43 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Thursday, Evening.

THE changes and chances of the war seem to have no bearing on fundamental developments. Control is pervasive and apparently effective all the time. The London stock exchange, for instance, is singularly steady. Fractional falls in the Funds after the Bank holiday are of little consequence as compared with the spell of easiness that has overtaken Wall Street latterly. A small payment on Transport "C" stock is enough to keep the quotation up, though, investors are never likely to get the 5 per cent originally promised. The quotation for the 5 per cent 'A' stock is still high enough at 123. The marginal railway stocks do not evidently get much support as compared with ordinary stocks. But all this pales into insignificance beside the rise in Home Industrials. Not trans-Atlantic interest but local support has sent up 'Emmies' to 17/3. Time was when the shares were below par. They are now rising like Courtaulds after the settlement of the American Viscose dispute. In spite of the fall in retail trade Stores shares are going up, and the motor group is increasingly firm. The August boom has materialised early this time., Permanently depressed shares like Fine Cotton Spinners and Bradford Dyers are rising of late. A giltedged industrial like Coats is moving up along with tobacco shares. The investor in Britain has real reason to feel pleased at present even more than the holder of gold-mining shares which might be conceivably affected by manpower regulations in the Dominions. The oil group is again in the limelight though the drop in Burma oil stock seems hard to understand on the calculation that the Treasury will pay compensation: any more than the fall in Royal Dutch and Shell after the recent improvement in values. In point of fact, the threat to the Russian oilfields is a bull point for Anglo-Iranian and Iraq Petroleum. But nobody would care to reason in that way in these times.

The absence of any change in discount or exchange rates in London over a long period proves that the financial mechanism is thoroughly lubricated. Nothing seems to change. Not so in India where bullion prices keep rising in spite of the note that the gold market in Bombay was quiet and featureless on most days. Internal developments like war news keeps the attention of the moneyed men on the precious metals. Intervention in the silver market by the Reserve Bank is apparently fitful and ineffective. But it looks as if there will not be anything like the silver boom of 1935. The Calcutta price for silver is lower than that in Bombay, but gold quotations are almost equal, proving that operations in gold are extending as between the markets like Calcutta, Bombay and Amritsar. This rise, of course, does not touch foreign markets. New York and London quote the old, familiar rates though it is clear that the supply of gold in 1942 after the loss of the Philippines and Papua, will not be the same as in 1940 and 1941. The past two years have seen production expand. War must inevitably check the production of Russian gold as also that of Western Australia. The gold market should turn firmer in the fourth year of war. but the U.S. Treasury is not likely to revise the price of gold in order to help home producers. The U.S. Treasury has no real interest in either gold or silver at present. Its main job to-day is to get funds by taxation or the war bonds so that the country might get on with war production. The Indian markets should note that any symptom of extra nervousness would prejudice regular Governmental borrowing by making all investors panicky. Defence expenditure must be met, and the duty to save cannot be reconciled with any mania for hoarding precious metals. One hopes that this principle would be understood constantly. After all, the war is going on, and Russia's anxiety is not ours.

The financial developments of the first quarter in Britain include an expansion of the fiduciary issue. That does not imply any addition to the Government obligations held by the Bank of England but the bigger note issue means an addition to clearing banks' resources. This in turn means easy borrowing for short periods. The bigger note issue is decidedly a factor in the maintenance of cheap money. The note issue is about 300 millions larger than at the outbreak of war. Inflation engendered by this expansion has been checked by rationing and various controls. Moreover, full employment postulates a bigger circulation, in the opinion of all including Douglasites. It is hardly necessary to examine last Thursday's Bank return to expatiate on the rise in Public Deposits or the rise in discounts and advances. The rise in the ratio of reserve to liabilities is a more arresting feature due to the additions to the Banks' holding of securities.

The London money market clearly gets more money if the Bank takes up more giltedged. That underlies the easiness mentioned in a recent cable which also stated that Banks were not ready takers of bills on Friday just before the holiday. Their more liquid position explains the bigger volume of applications for the Treasury Bill issue of 75 million and the reduction in the market quota to 28 per cent last week. Since revenue is coming in well, the Government has reduced its weekly takings of six months' deposits to 15 millions. The payments on old deposits must exceed recent borrowing, and there is now one more factor to keep the banks with more money than can be employed. Rising deposits and falling advances have long characterised the war period and the fourth year is likely to witness no important change in this sphere. The more important consideration is that Government can keep on borrowing at an average rate of 2 per cent. The doubling of the national debt by the end of 1941-42 before the Finance Bill was discussed in the Commons represents no great burden since interest is paid to the holders and becomes part of the national income and is liable to taxation. At the end of March the national debt of Britain exceeded £14,000 millions representing two years' annual income for the nation. In two full years of war, the debt had jumped by over £5,000 million. The short-term debt also has risen during the war years but there is a tendency to rely on the public instead of the banks. In the first two years of war, the short-term debt rose sharply. The public departments like the Banks were ready takers of bills but since then more money is taken in the form of war bonds. The change means an alteration of the borrowing rate from one per cent to two per cent but is really better in making the citizen realise that he has to cut his spending and save more for the war. Interest rates are frozen for the duration and 2½ per cent bonds issued since May 1st represent the most familiar type of new security. They have netted over 500 millions in three months. Lord Keynes has said that there is nothing to worry over the increase in debt service. Post-war work will mean full production and this year saw the B.B.C. arrange for a discussion of problems of reconstruction of Britain's industrial regions. Even without war damage to make good there is a real need to re-design industrial regions. It is felt that the war has actually created opportunities for planners and architects in the years after the war and finance cannot be an obstacle. After-war problems in the U.S.A. will be probably different. For the present, the President is fighting inflation. British policy is being studied to advantage. In the past few days little has been heard of the President's views on price control and wage policy. Big business wants wages limitation alongside of 'ceiling' for manufactured goods. And the U.S. labour leaders are now being brought round to the view that it does not pay to ask for bigger wages if that is followed by a jump in prices, entailing higher taxes and larger borrowing. For many months Mr. Roosevelt's views have been clear and firm. His seven-point programme against inflation compelled respect and the concentration of spending owing to the short supply of goods is a consequence different from those envisaged previously.

Stocks and Shares

A new chapter has been written in the history of stock exchanges in India. The entry of Japan into the war towards the close of 1941, brought to an end the recovery period since November, 1940 and the tone in the several sections on the stock exchanges in Bombay and Calcutta towards the close of last year, suggested that worse days were ahead and notions regarding values would have to be changed. The year 1942 did not, therefore, begin under none too happy circumstances. The startling successes of the Japanese in Malaya, N.E.I., and Burma created considerable nervousness and but for the experience gained on the earlier occasion in May-July, 1940, the stock exchange authorities would perhaps have not been able to allay the panic in the markets.

The developments in the war situation were quite unexpected and with the war drawing nearer the country there was naturally considerable anxiety regarding the safety of industrial properties. Calmness on the part of investors and the promulgation of control measures in time prevented undue panicky selling. The latter half of February and the whole of March proved to be dogdays for the markets and the worst phase was got over only by the middle of April. In the month of May there were comparatively quiet trading conditions. and the peak for the first recovery period after the debacle in prices in the three months, February, March and April, was touched in the first week of June. The close in June was quietly steady and there was a general inclination to await further developments.

Thus the fortitude of London operators and investors is visible in this country only now. The War Risk Insurance Ordinance and a greater appreciation regarding the stability of values, with the survival of the existing order, have been mainly responsible for the more sober outlook. It should not be, however, forgotten that the absence of any activity on the part of the enemy on the Eastern border has been a very helpful influence.

It has been pointed out earlier that the prompt action on the part of the stock exchange authorities has greatly facilitated matters. The promptness on this occasion has been in evidence in a greater degree on the part of the Calcutta Stock Exchange authorities. Minimum prices had been fixed in both the centres even by the end of 1941. On the Calcutta Stock Exchange trading was allowed freely only in giltedged securities, debentures, preference and banks and railways. In the middle of March, however, minimum prices were fixed for all counters except debentures. Following the slump in prices after the fall of Singapore the Government of India, by the promulgation of an ordinance, first fixed minimum prices for Government securities. A week after, similar action was taken in regard to provincial securities also.

With the restriction on forward trading and the existence of black markets, the authorities of the Bombay Stock Exchange thought it advisable to remove prices for all securities in the last week of March. It was in the revision of values in April that the lowest level was touched by the "Indian Finance" All Share Index. There was no change in trading conditions on the Calcutta Stock Exchange till the first week of June. With the slight improvement in the war situation, it was decided that there should be no restrictions on trading with the exception of Jute, Coal, Tea and Engineering shares. On the Bombay Stock Exchange there is no difficulty regarding business in cash. No fresh commitments can be entered into on the forward list and existing contracts are to be settled before October.

The most significant feature of the period covered by this review is that, unlike in the crisis of 1940, there has been no need for closing the markets even for a single day. One important observation, however, has to be made here. Fixation of minimum prices and restrictions on trading have been quite helpful in preventing hasty and distressed selling but the position would have been helped to a greater extent if there were co-ordinated action on the part of the stock exchange authorities. Thus, business in inter-market dealers was permissible in one centre when it was forbidden in another centre below a certain level. The bear raid on one centre thus nullified the effect of control. There is need, therefore, for control on an All-India basis, at least so far as the inter-market dealers are concerned.

The table below giving the "Indian Finance" Index figures for certain groups indicates clearly the progress of the markets during the six months ending June, 1942. It will be noted that the first three and a half months have been a very difficult period. The All-Shares Index shows a drop of more than 12.5 points. More than half the lost ground had been recovered by the first week of June. If the All-Share Index was lower at 119.03 on June 30, 1942, it was because of the exaggerated decline in Tata Iron and Steel shares on the announcement of the Managing Agents that a deferred payment of part of the dividends would be made.

"INDIAN FINANCE" DAILY INDEX OF STOCKS & SHARES

Date 1942	Giltedged	Pref.	Jute	Coal	Cotton Calcutta	Cotton Bombay
January 2	98·77	129·58	88·52	124·98	148·27	160·56
March 18	95·55	112·90	79·27	120·99	148·24	1 6·12
April 15	95·81	106·99	79·23	120·99	148·24	127·18
June 15	97·94	106·22	80·06	119·70	148·81	159·27
June 30	97·94	106-22	80 44	119·70	149·98	154·50

Date 1942	Engineering Calcutta	Engineering Bombay	Sugar	Paper	All-Shares
January 2	168 90	276·71	84·85	114·74	125·89
March 18	152·12	255·54	87·89	112·80	117·02
April 15	152·46	185·10	87·89	112·80	112·87
June 15	159·98	250·30	101·68	111·01	120·05
June 30	157·88	229·31	101·29	118·65	119·05

Giltedged securities slightly recovered early in the year but confidence could not be sustained as the war situation worsened. From Rs. 95-1, 3½ per cent. Paper dropped to Rs. 84. The minimum price was fixed at Rs. 87-8. It was only after considerable open market purchases and institutional buying that there was a recovery to Rs. 91-14. The quotation of 4½ discount for the tap loan, 3 per cent. Second Defence loan, led to the closing of the subscription list early in March. There were no maturing loans during the year. Only the outstanding amount of 5 per cent. 1942/47 (rupee counterpart) loan was paid.

Fixed interest securities were fluctuating in sympathy with giltedged. Jute and coal shares were depressed throughout and for the major portion of the period there were no buyers for most of the scrips around minimum prices. Cotton and sugar shares have been the exception. The lost ground has been more than gained by cotton shares, thanks to the large war orders and the favourable outlook for the industry. Sugar shares were in great favour owing to the good demand for Indian sugar. Paper shares were not very much affected.

The first half of 1942 perhaps marks the end of a dismal period. In fact, there is every reason to believe that we have seen the worst days as there is considerable resistance to selling pressure around 120.0 for the All-Share Index. Our hope are, however, based on the assumption that there will be no further major disasters. The events during the next few weeks will bear out the truth of this statement.

A RECORD OF PROGRESS

The report, which the shareholders of the Reserve Bank will consider at the annual general meeting in Madras on Monday, is something more than a formal review of the Bank's working added to the profit and loss statement. It is a brief economic history of India in 1941-42 (year ends in June) and supplements the information contained in the annual report on currency and finance. The main changes of the year are discussed and docketed. But since most of the details have been presented in these columns in the form of periodical surveys, it might well be said that the financial details are lacking in interest for our readers who might more properly be expected to evince interest in the contribution of Rs. 3,24,03,681-2-0 made from the Bank's profits to the Central Revenues. The contribution incidentally exceeds that of the previous year by Rs. 62.67 lakhs and is of high interest to the citizen as taxpayer who will discover that interest paid to the Bank returns as contribution made under section 47 of the Reserve Bank Act. Like all non-tax revenue and the profits on currency and coinage the Bank's contribution in the war period tends to rise. The additions to securities made in the wake of additions to note issue are, therefore, remunerative to the Government rather than the Bank, and this year's contribution is likely to surpass that of the year ended June 1942.

The rise in administrative expenditure in 1941-42 must be put down to circumstances like the opening of two emergency offices at Akola and Allahabad. The report indicates that the shares on the Rangoon register will be added to those in India, but it does not indicate what proportion of shares have been left behind in enemy-occupied territory and what proportion had been actually taken over to other registers when the Rangoon branch was evacuated. The exact proportion of Burman holdings is not known, and so far as we are aware, there has been no notification against the bringing in of shares into India. Overt mention of enemy agents in Assam and the announcement of rewards for their arrest confers importance on such matters as the entry of bank shares into India. The prohibition issued in Britain against the import of bearer shares dealt in on Continental bourses might well occur to the minds of those who would argue that alongside of the end of all commercial intercourse with enemy-occupied territory, there must be erected a barrier against surreptitious transfer to India of shares for which proper consideration might not have been paid in Burma. Such entry would tend to depress the price of shares and would naturally militate against the holders of shares in India. There can be no certitude in discussing such a contingency, and we are open to correction.

The Reserve Bank's report makes no extended reference to the vicissitudes of the Rangoon office. The increased concentration of shares on the Bombay side might well be due to the arrival of evacuees with shares but the report itself states that the number of shareholders on the Rangoon register at the end of June 1942 was only 1205 and if the average holding was five per individual shareholder, those left on the Rangoon register, without being brought to India, might be smaller than ever. The report informs us that "owing to the extension of the war to Burma and the consequent influx of evacuees from that country to India special arrangements are made for the transfer of shares held by evacuees on the Burma register to other registers in India."

The mention of Burma also makes every one think of the second schedule in the Act. The appendix states that there were three Burma scheduled banks in addition to 59 scheduled in India. The two Chinese banks, included in India after opening offices here, were excluded from the Burma schedule. The three Japanese banks were put out of the schedule after hostilities broke out. The report tells us that the total number of banks in the second schedule to the Reserve Bank Act remained unchanged at 59 whereas that in the Burma schedule declined from 5 to 3. The schedule finds a place for the National City Bank of New York which is known to have closed its offices in India. The schedule also lists Thomas Cook (Bankers) separately though it is known that the latter had lost its identity in another institution before the end of June. This is a small point on which complete accuracy need not be insisted upon. As the schedule stands, there are two Chinese, only one American, one French and one Portuguese bank in a list which has lost its international character. But many more Indian banks find a place in the schedule and it is noteworthy that the majority are previously established institutions which have qualified for admission to the schedule in recent years.

A very important development of the year was the issue of notice to certain banks by Government to determine the real value of paid-up capital and reserves. The Reserve Bank was instructed to inspect the bank's books. 'Before however the programme of inspection could be completed war developments and the consequent dislocation of prices made it temporarily difficult accurately to evacuate the banks' assets and necessitated its partial postponement.' This extract from the report is enough to satisfy those who wonder how the Reserve Bank advises the Government or helps depositors.

The banks with Burma branches were freed from the obligations to furnish returns as to their business in that country. After February 6, 1942, the scheduled banks' usual weekly statement omits Burma. Towards the end of June 1941 the total deposits of scheduled banks in Burma were about Rs. 15 crores and the cash balances totalled Rs. 65 lakhs. The advances in Burma at that time totalled Rs. 5.65 crores nearly and the bills discounted amounted to Rs. 7.03 lakhs. The balances with the Reserve Bank of Burma scheduled banks are not known, but the banking figures could be cited to show that Burma's banking system was ancillary to that of India and the actual loss sustained by Burma banks through Japanese conquest must be small.

The Reserve Bank's report sums up the banking developments by pointing to the steady rise in scheduled banks' balances together with the increase in cash. The decline in advances and bills during the year was not wholly attributable to the rise in investments but to reduced trade demand. The report expresses the view that 'their position on the whole was more liquid than in the previous year.' But the report also testifies to the strain engendered by the Anglo-Japanese war. During the year nineteen scheduled banks defaulted in maintaining their statutory deposits and paid penal interest aggregating Rs. 4,709-6-2 of which Rs. 2,483-15-10 was at the higher penal rate of 8 per cent per annum, states the report. The war again influenced the request of certain scheduled banks for accommodation, partly to meet sudden withdrawals of cash and partly to strengthen their cash position; and suitable credit limits were fixed. The total amount of loans granted to scheduled banks and provincial cooperative banks during the year under review amounted to Rs. 99.9 lakhs. This passage from the report indicates how the Reserve Bank discharged its obligations as the lender of last resort. We might well remark that two of the semi-official provincial co-operative banks were also obliged to take loans owing to the emergency.

The ultimate test of all banking progress is branch extension. In this respect, the last year was unusual, in that there was an addition of fifty branches in the first half of 1941-42 and in the second half certain banks closed down a number of branches. Burma offices were also closed and the number of offices at the end of June 1942, was 1,405 as against 1,404 at the end of June 1941. The figures might suggest uneven progress, belied in this instance, by the increase during a single year of over Rs. 77 crores in the total deposits held in India by scheduled banks.

The increase is symptomatic of the inflation following the increase in prices. The Reserve Bank disclaims responsibility for checking inflation. for its only function is to make supplies

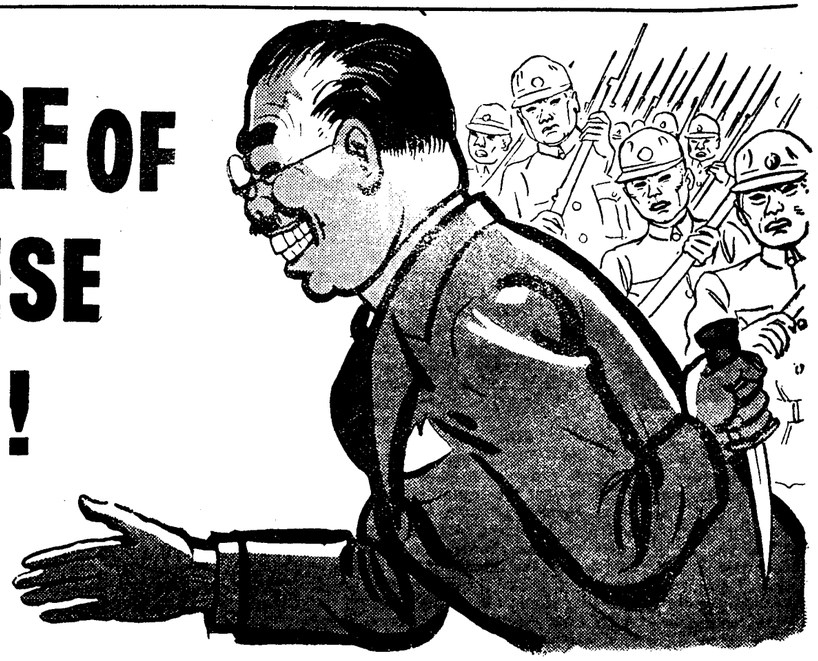
MOTOR AND GENERAL ACCIDENT



Head Office : No. 9, CLIVE STREET, CALCUTTA

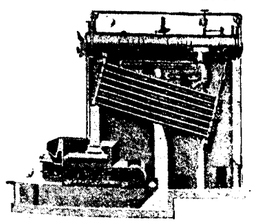
Branch Offices at LONDON, BOMBAY LAHORE, HYDERABAD (DECCAN) AND AHMEDABAD

of additional currency available as the need for them appears from time to time. But the Reserve Bank's report states in this contest that although most of the recognised elements of inflation are present, there is no evidence that inflation is present in the country in any serious form. In its view the orthodox remedies of price control, taxation, borrowing and increased food production are being applied. The judgement is both final and precise. The promise of more effective price control made by Mr. Sarker this week must remove apprehensions in the this regard. More extended support to the banking system by increased savings, effected through curtailment of private expenditure would reduce the effective demand for goods in short supply. Rationing has to be practised at some time, and if it is voluntary, it may curb the rise in prices and aid the Government's borrowing programme at the same time.

(*Continued on page* 248).

BEWARE OF JAPANESE WORDS!

THEY CLEAR THE WAY FOR JAPANESE BAYONETS



BEWARE of the soft words of your enemy! Beware of his attempts to make you think he is invincible! Japanese soldiers do not want to be killed when they come to India, so they broadcast that they are our friends. They spread false news to alarm and confuse and weaken us. It is a new method of warfare. Japanese soldiers do not want to die when they attack India. They want to *live*—in our homes.

But die the Japanese invaders will, under the shock of our soldiers and bombs and guns, with you in the rear standing firm and giving all your help. This great country of 390,000,000 people CAN NEVER BE CONQUERED if we decide so!

Australia's Plans

Australia's war production is soaring. The output of training planes is now one thousand in addition to other aircraft. Production is turning to fighters and bombers and less to light trainers. A high standard of manufacture has been maintained in all aircraft produced in Australia. This explains why Allied losses over New Guinea in June have been far below the Japanese losses. The fundamental changes produced by the Pacific war have been described more than once. Import control and export control have been extended. From July 8th the licenses for imports of copra, linseed oil, various classes of paper and board, insulating material, timber, drugs and medicines, surgical instruments, dressings etc. were withheld and export prohibitions were applied to boot polish, silver, organic fertilisers and vegetable seeds. The Commonwealth was credited with a plan to limit dividends of companies with a capital of £25,000 and more to four per cent. free of tax. It is held that four per cent. is enough to encourage maximum production. The dividend limitation plan has been given up but excess profits will not arise. The excess profits tax provides for an equalisation allowance to enable companies to average out of good and bad years. Most interesting from the Indian view is the Australian Government's promise that a twenty per cent. rebate on the profits tax will be made later in the year. Progress in Australian steel production is expected to make the Dominion independent of imports. After the war, Australia will have the capacity to produce all articles made of steel. She will have steel made from some of the richest iron ore in the world to sell at prices as low as any other country can achieve. The diversification of industry in Australia has a firm basis in steel. Though Australia's new manufactures such as the production of paper pulp from native hardwoods, the home production of newsprint and all other types of paper, the manufacture of aluminium from Australian bauxite and the distilling of oil from shale, are independent of steel, the new heavy industries look to cheap abundant first-class steel as the firm foundation. The extension of the war programme for this year by the War Cabinet is dependent on steel. Mr. Curtin expected that 318,000 more men and women would be required for war work. He therefore forecast a great increase in the employment of women and a drastic reduction in the production of goods and services for civilians in order to secure a large diversion of labour to priority works. Besides aluminium, another light metal is to be produced in Australia. It has been decided to make at a new plant both magnesium and its alloys. The Broken Hill Company is again the backer of a new industry which protects Australia from the difficulty of procuring imports, and enables war production to expand to the limit of £2,000 million set up in the Five-Year Plan for war production drawn up by the planning authorities. Vast new plants for aircraft and heavy armaments are projected. New factories will be inaugurated to ensure a continuous flow of components to undertakings already functioning. It is expected that 60,000 men and 40,000 women will be needed for the factories. Australia is to have another aluminium fabricating plant which is to be set up at a cost of £750,000. Significant of progress in industry is the export of agricultural machinery and tools to the United Kingdom. These are meant for the food production plans in the U. K. which aims to take £1,250,000 worth of implements in the current year alone.

Sugar for Bengal

In an account of Bengal's sugar mills is found the statement that the young industry is unable to keep pace with the sturdy growth in Bihar and the U. P. Seven vacuum pan factories are known to be working at present, but much of the cane grown in Bengal is for the manufacture of gur. In the year 1939-40 Bengal had 316,000 acres of cane under cultivation, equal to 8.7 per cent. of the total cane acreage in India, but produced only 10,000 tons of sugar, representing 1½ per cent. of the total Indian production. The Punjab with a larger area under cane in 1939-40 produced less sugar than Bengal. In the same year the U. P. produced about half the sugar made in India but the area under cane in the U. P. was also 52.9 per cent. of the total. The U. P. makes also 45 per cent. of the gur made in India while Bengal makes over 12 per cent. Many are apt to deplore Bengal's dependence on the U. P. and Bihar for sugar supplies. It is said that she needs about 175,000 tons of sugar in a year while her own production is barely a tithe of what is required. Bengal is a large taker of both sugar and gur every year. Sugar consumption in Bengal is rising like that of gur, and it is freely assumed that prospects for many more sugar mills in Bengal must be good. The report of the industrial survey committee can be cited to show that Bengal possesses many advantages. The trouble in regard to cane supply in regard to some mills arises from the short crushing season, the absence of late and early varieties, and lack of confidence in regard to disposal of cane, among growers. The proposed Provincial Sugar Board will have to settle cane prices in addition to advising the Government. The report does not go beyond saying that Bengal can have more sugar mills. The agricultural improvement indicated like the enhancement of manufacturing efficiency in Bengal's sugar mills is formally listed among the problems requiring solution. It is singular that no special effort has been made to extend cane cultivation this year. The present price of sugar should prove a great stimulus but Bengal mills have found price control no unmixed advantage as far as sales of sugar are concerned. The absence of minimum price legally payable for cane may be regarded in Bengal as a drawback at present. If prices were regulated and weighing supervised properly in the growers' interest, the cultivator would grow more cane in the assurance that cane is a paying crop. The Bengal mills do not indicate to the public as yet that sugar mills pay their way. The only way of interesting enterprise and the investor is neglected. And Bengal cannot set up more mills in order to satisfy her desire to get less sugar from other Provinces. There is a deficiency of sugar which justified the demand for more mills. More mills mean more power alcohol and the Bengal mills might even more successfully concentrate on distillery work. The Indian sugar industry's future seems bright, and Bengal is asked to make fuller and better use of the cane grown in the interests of the cultivators who grow a food crop like sugar in the place of jute.

New Issues in India

In the account furnished by Mr. M. A. Mulky of the developments in the new issue market in India there is a separate account of new issue houses. The managing agency house does much of the usual company promotion at present. New managing agents have appeared in recent years, suggesting that there is a place for new men in new enterprises. Yet the biggest flotations of recent years have been conducted by Tatas, Burn and one or two others, long established and hence assured of success. But issues and underwriting are separate functions, and managing agents alone do not carry on the work. Besides well-known stock-broking firms in Bombay and Calcutta, new issues are placed by specialist houses and, banks have been known to join others in underwriting. Investment trusts, if few in number, have been known to help in underwriting new issues, and Mr. Mulky makes mention of insurance companies assisting in underwriting or placing shares by making firm applications for a portion of the new issue. Now that

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

the shareholders' interests are adequately protected by law the average prospectus obtains more attention on the part of the public. The methods of the offer of sale of shares by those who buy up shares in advance in a new company and of private placing of shares are virtually unknown. The offer of new shares to shareholders only by circular is however quite familiar to Indian markets. Mr. Mulky has incidentally noted that the prejudice against debentures is dying. Investors know more about Company Law and the working of companies. Redeemable preference shares are not unknown in India. They are getting popular, especially if they carry participating rights. Convertible debentures too have appeared in order to create more interest among investors. The deferred share as such is not prominent, according to Mr. Mulky who expresses the view that the new issue market here has made some progress. But there are not as yet financial houses to pick and back the right ventures; to bring investors and opportunities together, as Mr. Mulky observes in the Journal of the Indian Merchants Chamber. A well-developed capital market is taken as one of the essentials of economic development. A further measure in this regard would be the improvement of agencies for gathering and pooling savings in India. But the mechanism of investment cannot be altogether independent of banking Progress in banking appears to be solid and far-reaching but openings for new investment are limited by existing opportunities. A boom of the ordinary type being uncertain, the slow progress of the past few years is not without its advantages.

U. S. Production in 1941

U. S. Production in 1941 may well form the subject of many analyses. Mr. D. Nelson who regards it as no cause for pure optimism asks his country-men to go on aiming at bigger totals.

The figures for 1941 show a continued growth of the minerals and manufacturing industries. The Geneva bulletin of statistics shows that the general monthly average index for 1941 was 142 as against 112 for 1940. By the beginning of the current year the index had risen further to 155. The only disconcerting feature was the rise in the output of non-durable goods. The production of steel was stabilised by September, and activity in the transport and textile industries was clearly due to the demans of the war industries. The average monthly output of the petroleum industry in 1941 was over one million tons more than in 1940. In December the output was estimated at 16,790,000 metric tons proving that the U.S.A. is supreme in one field for ever. Stocks were relatively stable after the fall recorded in summer. Coal output in October exceeded 50 million metric tons, and the stocks exceeded a full month's production. The stocks of copper were rising alongside of expanding output. Average monthly output in 1940 was 75,000 metric tons; the average for 1941 was distinctly higher. In November the output of steel reached a new high, while in the next month the output of pig-iron and ferro-alloys attained an unusual level. Production of zinc and lead alike went up sharply in December and the stocks were larger than in the summer cement production in the U.S.A. kept on increasing up to August, and declined only in November; stocks in October exceeded three million tons. Bauxite output was irregularly tending upward in 1941. The increase in U. S. industrial production is to be measured also in the growth of U. S. exports until the outbreak of war. U. S. imports in 1941 were also increasing, and the average turnover per month in foreign trade for 1941 is known to be much higher than that of previous years. The U. S. production of fertilisers increased in 1941. Taken alongside of the rise in Chilean nitrate production, it may be assumed that the reduction in exports augurs the ability to make and keep more fertilisers at home for U.S. farmers. The average monthly cost of living rose by four points to judge by the advance in the composite index for the year of the National Industrial Conference Board. But the main movement was upwards as the December index at 94 was fully 8 points above that for January, 1941.

Jute and its Rivals

Jute has to compete with other fibres since substitutes are being encouraged in many foreign countries. Latin America is definitely keen on using local fibres and the Indian Central Jute Committee's bulletin quotes an articles in "Foreign Commerce Weekly" to show that the menace of substitutes is not acute. The South American countries naturally want jute manufactures for their crops. In 1940 Chile imported six million sacks and produced three million on her own from imported fibre. Argentina uses 378 million sacks in a year. She took 142 million new sacks equal to 29 million lbs of jute in the year 1940. Brazil took 48 million lbs of jute and Peru took about 25 million lbs while Cuba alone is expected to take 24 million sacks in 1942. Difficulties have stimulated interest in local fibres as also in jute-growing. The problem of finding a substitute is two-fold; it must be adapted to existing jute mill machinery in most countries and the fibre must be as cheap and suitable as jute. Cuba and Peru may try to grow jute which is produced in small quantities in Argentina and Brazil of late. It is recorded that protection for local industry has reduced the takings of baks in many countries and local fibres are often being used along with jute for making bags. Brazil has discovered that native fibres blend with jute and a 10 percent admixture is now compulsory. Wild fibres are not as good as cultivated fibres and caroa is being chiefly used as a war-time product. The cabuya of Ecuador is being used for bags in certain districts. Cotton and cocoa are shipped in locally made bags. Pita and fique are being encouraged in Columbia as hard fibres fit for bags. Peru is experimenting with hemp like Argentina which is anxious to make hemp as cheap as jute. The scarcity of bags has made both Argentina and Chile produce much hemp which is a soft fibre and far more dear than jute. The loss of export trade again may stimulate the use of hemp in Chile. Panama is said to produce sisal as local experiments are said to be successful.

American supplies for a time are safe and are regarded as adequate. Henequen and sisal come from Cuba and Haiti. Sisal supplies are sure to be reduced through the loss of the East Indies but demand for sisal has shrunk and the U.S.A. can get as much as she wants. The general view appears to be in favour of extending the use of local fibres by improving methods of decortication. Hemispheric self-sufficiency is clearly desired and the war is sure to help the substitutes for jute. The Latin American fibres are likely to prove rivals after the war, if one may go by the tariff protection given to fibres. The article may be taken to mean that foreign demand for jute goods will depend on the prices asked.

Europe's Trade

Europe's trade has passed through another year of war. It has certainly experienced violent changes—changes utterly different from those reported by Canada or the U.S.A. which are distinguished by a big rise in both imports and exports. It is noteworthy that the graphs available indicate an increase in the trade of Brazil and Peru last year when the trade of most Latin American countries are reduced by the loss of more and more markets. Though figures as to the trade of Greece and Finland cannot be had, there is evidence of impoverishment in the fall in trade prior to the German occupation. The expansion in Bulgaria's trade last year is merely a case of bloated values. In the case of Denmark the decline in both imports and exports is indicative of a remarkable scarcity of goods entailed by German looting. The exports of Eire increased exceptionally, while the imports of Portugal showed an increase. Finland's difficulties are reflected in the serious fall in her imports and she is to be distinguished from Hungary whose trade rose last year. In Rumania general poverty contributed to the shrinkage of trade. The decline in Britain's overseas trade is merely a phase in the war developments, brought on by a new policy, whereas the fall in Swedish trade is due to many causes, of which the European blockade is only one. The foreign trade of Australia took a downward plunge about the end of the year. Among the neutrals, the only country to report a mild recovery in exports is Switzerland. The trade of Iran was subject to peculiar fluctuations in 1941 while the trade of Turkey was evidently shrinking last year making Germany all the keener for Turkish exports. The statistics relating to special trade show that Bulgaria's imports in January showed a big fall. It was rising after July last for obvious reasons. The import trade of Finland was naturally diminished by the war. A big fall in imports was recorded in January 1942 by Portugal and two other neutrals. Sweden and Switzerland reported a fall in imports in the month. The war is responsible directly for a reduction in trade and a scarcity of goods. Those who want to compare the conditions in India with those in Europe might note that Sweden's exports have fallen since 1941 and Portugal too reports a decline in exports for January. The Axis satellite, Bulgaria, has suffered a big change in prospects after January which saw a big fall in imports and exports alike. A neutral like Portugal evidently was handicapped as much as Sweden in keeping up her foreign trade while the growth of Swiss exports in the first quarter of 1942 is merely an admission of larger trade with Germany at present. The general export trade of Eire after the recovery noticed in 1941 has since declined. The consistent increase claimed by Iceland is the result of Allied occupation while the irregularity in production and trade produced by Nazi supremacy is demonstrated by the rise and fall in trade of the Netherlands.

Trade In May

A marked contraction in foreign trade in May can only be ascribed to the international situation. Export trade suffered while the decline in imports is typical of the whole year. Reduced shipments of jute and jute manufactures, cotton, oilseeds and rice are responsible for the fall of Rs. 4½ crores nearly in the value of exports as compared with April. The fall in the value of imports is explained by the reduction in imports of oils. A small rise in the value of imports from the U.K. does not obscure the fact that value of imports in April and May 1942 was just about half the value of imports in 1941. The war has cut the export trade as well though the figures for 1942 point to a small increase. India, however, retains the original advantage of a substantial balance of trade, and trade with the Middle East and the Colonies keeps improving. The tightening of import control has led to a steady fall in imports and a simultaneous fall in customs revenue. Trade with the Far East is at an end, and it is only the advance in prices that suggests there has been a rise in exports as compared with 1941. Imports of raw cotton and raw wool are known to have gone up in May while imports of manufactures, metals etc. have also gone up. The end of all trade with Burma accounts for the halving of India's import trade. The shipping position hampered trade with Empire countries like Australia and Canada. India is exporting sugar, as was pointed out in a review of the April returns. The depression in the jute export trade is readily explained by the fall in trade with the U.S.A. The exports of jute manufactures registered a fall of Rs. 3.66 crores in value as compared with May 1941. The fall in raw jute proceeds from the same reason. The only reassuring feature is the rise in other textile exports and the recovery in hides and skins. No importance attaches to the variations by groups. The fall under Indian exports of manufactures is of no more account than the fall under raw materials. May was a bad month for foreign trade because the enemy's maritime activity in April was extensive.

The direction of trade in the month showed many changes. Trade with Egypt, Arabia and Iraq was lower, and a fall in exports to South America stands out alongside of the fall in exports to the U.S.A. in May. The Empire took more than half the exports and imports from the U.K. advanced. Imports from America tended to rise and the only neutral to report larger takings was Switzerland. The figures for April and May can be interpreted as decisive, but prices paid by oversea buyers are being revised: and the need for India's raw materials abroad remains great. The rise in re-exports this year reduced the actual volume of imports. The export surplus is hence larger than expected, and the rise in sterling assets is clearly conditioned by the developments in trade. A year ago, there was ill-disguised anxiety about Home charges; today there is discussion of what should be done with mounting oversea assets.

Cochin Budget.

After his first year as Dewan, Mr. Dixon is able to report a solid improvement in the finances of Cochin. The revised estimates for the year ending August 16, 1942 show revenue reaching Rs. 127.56 lakhs while expenditure also will be larger at Rs. 119.62 lakhs. The revenue surplus of Rs. 7.94 lakhs against Rs. 4.25 lakhs budgetted for makes it unnecessary to enhance taxation in Cochin where the Income-tax and Excess Profits-tax are apparently producing more revenue than

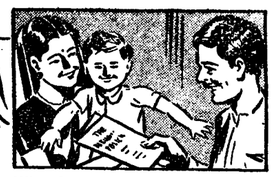
anticipated. In the last four years, the annual surpluses have been put into the Revenue Reserve Fund. This Fund is now applied for meeting special charges for rural development including minor irrigation. In spite of the fall in trade, and Cochin's need to import food at present, the State is flourishing. Railway traffic is better. State revenue is rising, so much so that Rs. 10 lakhs went to the Reserve Fund in the current year. The port finances remain satisfactory. The State has assets far in excess of the debt. The 5 per cent loan is likely to be paid off or converted next year.

The 1942-43 budget looks for a total revenue of Rs. 124.36 lakhs and expenditure of Rs. 121.16 lakhs. The increase in expenditure is due to provision for A.R.P., Special Guards and dearness allowance to State servants. Cochin's readiness to better the condition of the people may be inferred from the efforts to extend education, increase cultivation and create employment. The rice supply question having been settled, the State is concentrating on local food production by going ahead with the Chalakudi project. It will help to convert 6,000 to 12,000 acres of dry into wet cutivation besides helping the hot weather rice-crop. Cocoanut-growers are expected to do better than rice sowers. Mr. Dixon declared that a rise in prices of agricultural commodities is not an unmixed evil. There are many rice growers in the State and they benefit. Further, the rise in the price of rice has been accompanied by an even steeper rise in the prices of cocoanuts which has in recent months mitigated the evil effects of the cyclone and promised to bring long-awaited prosperity to cocoanut growers in the months that lie ahead. The Chalakudi scheme's success depends on the co-operation of Travancore. The Cochin Durbar has secured a promise of active assistance. A new road project to complete the link between the Anamalais with Chalakudi will add in turn to the cultivable area and increase the timber supply. The sum of Rs. 4 lakhs has been allocated for that purpose. Cochin has donated a new vessel to the R.I.N. and invested Rs. 12.5 lakhs in Defence Loans. The recruiting figures are deemed satisfactory and the local war front organised by the Minister is already a popular movement.



Compulsory Recognition

The Millowners' Associatio nin a recent memorandum deprecated the proposal for compulsory recognition of trade unions. Employers have generally agreed with this view expressed on the draft bill circulated this year.

The Labour Ministers at their two conferences examined the subject. Two points received special attention; one dealt with the desirability of compulsory recognition of registered unions, the other sought to ascertain conditions requisite to such recognition. The conferences' views were embodied in the draft bill which has been made available for opinion. The bill itself seeks to amend the Indian Trade Unions Act of 1926 by adding the word recognised to registered in connection with the preamble. The second section is to be amended by the draft bill which seeks to interpolate after appropriate government

Thanks to father's plan,
TODAY MY LIFE INSURANCE COST IS NEGLIGIBLE

When I was two years old my father took out a 45-year Children's Deferred Assurance Policy* for me. The premiums he paid every month were less than even Rs. 1/8/- per thousand rupees.

When I became financially independent at 26, I started paying premiums for this policy myself. I found their cost amazingly easy to meet. I have never submitted to any medical examination.

When I reach the age of 47 the entire amount insured for will be paid to me. In the event of my death before then my wife will benefit in full—and yet my premiums are only about one third of those paid by my friends.

New India's Children's Deferred Assurance Policy provides life assurance at the lowest possible cost. *Full particulars are available to parents in return for the coupon included in this advertisement.

The large assets of this company guarantee maximum protection to its policy-holders and their beneficiaries. Since its establishment in 1919, New India has paid claims over Rs. 8 crores.

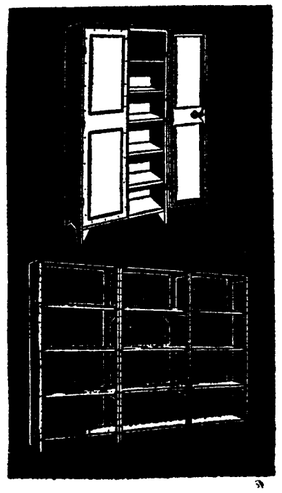
the words subject to the provisions of section 28A. The major change contemplated is the addition of a new chapter IIIA to the Act dealing with the rights and liabilities of recognised trade unions. Section 28A of the draft bill, referred to already, merely states that Provincial governments will have nothing to do with railway unions or with unions of the Central Government's employees. A trade union of which not less than 70 percent of the members are employees of government or a Federal railway will be deemed an excepted union. Other unions are in the jurisdiction of the Provincial Government. Recognition is to be procured by application; other conditions are that it must exclude members on communal or religious grounds; that its executive meets at least once a quarter. The other condition suggested to Local governments, which can lay down further conditions for recognition, is that the union should have at least 30 per cent of the total number of men eligible for admission as ordinary members of the Union. The Registrar can ask for details and then forward the application for recognition are thus functions discharged by the appropriate Government. Withdrawal demands the issue of notice to show cause. The same section lays down that a trade union recognised in one Province shall be a recognised union in any other Province to which its operations extend. The executive of a recognised union are empowered to negotiate with the employer except when a conclusion had been reached by previous discussion before beginning correspondence. In case of dispute, the matter should be referred to the Registrar.

A Correction

In the editorial note of June 20 on the 1941 results of the Eastern Federal Union Insurance Company many errors appear. The subjoined figures provide the essential corrections which must indicate how great the progress in 1941 has been. The new life branch fund received an addition of over Rs. 50,000 to stand at Rs. 131,556-4-8 at the end of 1941. Accident premiums totalling Rs. 145,221-1-6 showed an increase on 1940. Net claims paid and outstanding came to Rs. 46,953-0-8. Marine premiums in 1941 amounted to Rs. 5,62,352-9-3 as against Rs. 3,48,112-2-11 in the previous year. Premium receipts in the life branch were supplemented by the yield of Rs. 5,815-0-3 on the Life Fund as shown in the revenue account. According to the latest balance sheet the Life Fund amounted to Rs. 1,31,556-4-8. The corrections are intended to show the true rate of progress recorded in regard to revenue, which rose in all branches, and the parallel improvement in the various funds of the Company.



The Navy's Work

The U.S.A. alone is not putting up records in the way of building ships. The shipyards of Britain have also been busy. The navy has got more and more vessels. An average of one warship every two days since the start of the war gives a measure of the yards' output. An official survey has shown that at least four hundred and eightyfour new ships not in the fighting line in September, 1939 are now on active service. British yards must have contributed to the Admiralty more than 500 ships in about thirty months of war. About 80 percent of the new vessels came from yards in Britain said a recent cabled report from London to the Associated Chambers. Naval building tonnage cannot be easily guessed, but new tonnage must certainly exceed that sunk by enemy action. Added to the fleet are the Free Navies commanded by Vice-Admirals of various nationalities. The fifty destroyers procured from the U.S.A. must also be added to show that the Navy which keeps the lines to Britain open is bigger and better than ever. Last week the Labourite, Mr. A. V. Alexander, as the First Lord of the Admiralty, paid a tribute to the fleet which has removed the biggest menaces to shipping and has not stopped with hitting on water. The Fleet Air Arm is even busier, and in the Middle East has been as active as the R.A.F. is disrupting Axis communications. The Royal Navy which Mr. Alexander honoured by his tribute has not been inactive on any ocean. Compared with the amount of escort work and mine-sweeping carried out in the present war, the last war seems tamer. There is also the maintenance of a watch on the Vichy Navy and the keeping clear of the approaches to Britain. The other side of the Channel is full of enemy bases, and the Navy's job is much harder than covering occasional raids on the French Coast. The western coast of Africa requires policing on account of Vichy's hold on Dakar. Whatever be the Pan-American patrolling done at present, the integrity of Brazil like that of Portugal is largely determined by the activity of the Royal Navy. The Navy is said to be always on its job, and the

REPORT OF THE AUDITORS

TO THE SHAREHOLDERS
OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act 1920, do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 30th June 1942.

We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Mr. W. J. Younie, Sir Shapurji Billimoria and Mr. James Orr respectively.

W. J. YOUNIE,
S. B. BILLIMORIA,
JAMES ORR, } *Auditors.*

British yards have provided the many vessels needed for work from the St. Lawrence to the Red Sea. The work has been well done, according to Mr. Alexander, whose message last week proves that in his two years he has learnt to regard the Navy with greater respect than ever. The real threat to Hitler's empire must lie in Britain's mastery of the Narrow Seas, and what is even more vital, for the receipt of essential imports for Britain. Convoys by way of the North to Russia have gone despite difficulties caused by the weather and enemy attacks. Mr. Lyttelton recently said that Britain was shipping tanks to Russia at the rate of fifty a week and by the end of May, Britain had actually shipped eleven percent more aircraft than had been promised up to the end of June.

U. K. C. C.'s Operations Explained

The increasing agitation against the U. K. C. C. has led to the issue of a statement calculated to dispel all doubts. The agitation was not disinterested but it was not unjustified as the U. K. C. C. was said to have got an increasing share of India's export trade. The British Treasury has provided the capital of the new Corporation which is not a chartered enterprise but has been called an agency for the conduct of operations that are not possible for normal commercial enterprise. Taking off surpluses and providing essential imports for friendly neutrals is largely the job of the Corporation which uses the customary trade channels. The supply of essential goods from India to Russia is undertaken by the Corporation. It is stated that trade with Russia in present conditions calls for careful and elaborate planning in regard to the provision of special transport arrangements, the distribution of available carrying capacity between commodities with competitive priority claims and the regulation of traffic in order to prevent congestion on important lines of communication. It is emphasised in this connection that there was no trade with Russia worth the name and a special agency had to be set up when the Anglo-Russian alliance was operative. In the matter of many of its purchases on the open market, or as in the case of shellac through a centralised agency, unconnected with the Supply Department, the U. K. C. C. distributes its buying fairly and takes from Indian concerns as well as British. The purchases are paid for on an f.o.b. or f.o.r. basis, with the result that Indian exporters, besides being given an opportunity in Russia for business, do not incur risks and uncertainties attending arrangements for finance and credits, freight, insurance etc. There is no monopoly in regard to trade with Iran. The U. K. C. C.'s trade in hides, tanning materials and lorry tyres and tubes is retained for the advantage of prompt despatch of supplies and also for keeping a check at this end on volume and quality.

The Commerce Department has also indicated that trade in the goods specified above is less than 10 per cent. of the total trade with Iran; and there are no Indian interests engaged in the manufacture of lorry tyres or tubes. The Ministry of Food asked the U. K. C. C. to attend to food supplies in the Middle East last year. There was no trade with Iran in wheat at any time and the new line had to be developed to satisfy Iran's needs and prevent famine on the borders of India last year. Since November last, the Corporation has not bought wheat. The U. K. C. C. holds no monopoly of sugar. India is free to sell sugar to His Majesty's Government, and the only development is that landward exports have been diverted by sea, so that all supplies for Iran may be so handled by a single agency. The real responsibility for sending sugar to Iran is that of the Ministry of Food whose agent in India is the U. K. C. C. No exports under this procedure have been noted. Persia is one of several countries which have taken sugar bought on the British Government's account in India; and part of the exports represented stocks of Java sugar built up on the Iranian Government's own account. It has been long known that the gap between the price in India and Iran is made up of a number of items like freight, the high taxation in Iran, profits etc. There is no profiteering by the U. K. C. C. Shipments of rice to Saudi Arabia were made by the U. K. C. C. at the instance of the Saudi Government. Rice was taken from shippers who held export licenses and sold to the U. K. C. C. in their own names. In regard to oils and oilseeds it is known that the Middle East does not want them, and the British Government does not want to use the shipping space for non-essentials. The U. K. C. C. however held an exemption in regard to shipments of seeds and oils made in its name. The privileges have been withdrawn. Governments in Syria and Palestine asked for yarn. Total shipments of yarn by the U. K. C. C. do not come to ½ per cent. of the total Indian exports and there is clearly no ground for animadversion.

Only in regard to war materials consigned for Russia has the U. K. C. C. been able or willing to claim special transport priorities. Exporters of similar supplies to other countries are eligible for the same priorities at present. The official statement puts an end to misapprehensions as to relations between the Corporation and the Supply Department. Purchase through the Department is limited to commodities which are controlled and therefore in short supply or in procuring which the Department is interested, the object in either case being avoidance of competitive buying. Where purchases are for the purpose of ordinary trade, the Corporation is not granted any price concession not available to commercial houses. The special rates obtained, in some cases, by the Supply Department do not apply. The Corporation, it has been explained, is not cutting the Indian middlemen out. It takes from the open market, from exports. The Corporation is constantly mindful of Viscount Simon's assurance that 'it is intended not that the Company should supplant existing channels of trade but on the contrary, that it should make use of them to the fullest possible extent.'

Impressive Progress

In inviting the attention of readers to the report and balance sheet of the Imperial Bank as on June 30, 1942, it is necessary to emphasise that the figures are vastly more interesting than the conventional language of the report. On one point the report is definitely reassuring. It makes light of the setback in giltedged prices in the early months of the year. The same period witnessed a sharp increase in the yield on Treasury Bills—one of the most important outlets for the Bank's funds. The average yield was Rs. 1-0-9 per cent. per annum as compared with As. 0-12-2 per cent. in the first half of 1941. Precautions have been adopted before and after the invasion of Burma, thus the Bank's dead stock in Burma has been temporarily written off out of reserves previously provided. It is almost exceptional to report an increase in profits; but the Imperial Bank has found that the demand for money over the half-year has not been unsatisfactory. The profit for the first half of 1942 is Rs. 51.02 lakhs against Rs. 42.11 lakhs for the first half of 1941. This increase is immediately responsible for the transfer of Rs. 7.5 lakhs to the Reserve Fund which stands at Rs. 5.7 crores in the latest balance-sheet. More arresting than the advance in earnings is the growth of Deposits. A year ago total deposits stood at Rs. 105 crores; the total on June 30, 1942, was over Rs. 137 crores. The increase in investments to Rs. 75.54 crores and the drop in advances to Rs. 33.29 crores are to be described as part of the financial history of the year ended June.

The recovery in profits must be characterised as unusual but welcome. The first half of 1942 has accounted for a big rise in Deposits as also under Investments of Indian banks. Advances in the balance-sheet of the Imperial Bank are down to Rs. 33.29 crores. The swollen cash balances, standing at over Rs. 38.15 crores in the balance-sheet published to-day, are again a mark of still rising resources. The cash ratio is inordinately high and the corresponding degree of security for the

Ever since it came to be known that the United Kingdom Commercial Corporation was actively and extensively engaged in the markets of this country, the Indian commercial bodies and, under their lead, the Indian press have evinced a healthy curiosity and taken a vigorous interest in the activities of the Corporation. The Federation of Indian Chambers of Commerce, as the custodian of Indian commercial and industrial interests, was naturally concerned how far the privileged position, which the United Kingdom Commercial Corporation might secure for itself by virtue of its intimate association with the British Government, would result in its being able to develop business to the detriment of Indian enterprises. The Federation and other commercial bodies are to be congratulated on the enterprise and alertness they showed in forcibly drawing the public attention to the menace which would have confronted Indian business if the United Kingdom Commercial Corporation were allowed to carry on its activities without proper assurance being given that it will in no way harm national trade interests. Attention has been drawn to various aspects of the working of the Corporation; and, as a result of the publicity given to this revelation, not a little suspicion has been engendered about the entry of the Corporation into the Indian markets.

The Government of India have, therefore, done well in issuing a statement dealing exhaustively with the various issues that have been posed by the commercial bodies; and we are gratified to be able to record that the frank and full explanation now vouchsafed by the Government must go a long way to allay suspicion and disquietude. We may also add that fairness requires the Indian press giving to the Government's version the same attention and thought which they did to the original case of the Indian commercial bodies. From this point of view, it is regrettable that, though the Commerce Department issued this important press note from New Delhi on July 30, it has not so far been noticed in any of the important dailies in India.

The case which the Indian commercial bodies made against the United Kingdom Commercial Corporation is that it is a semi-governmental institution; that, thereby, the Corporation is put in a position to secure exclusive privileges and concessions; that, by virtue of this special position, the Corporation has acquired a monopoly of India's export trade to particular countries or in particular commodities; that this monopoly has worked to the detriment of Indian exporters; that the Corporation is normally accorded railway and shipping priorities; that it is able to purchase goods for export at special low prices through the agency of the purchasing organisation of the Supply Department; and, finally, that, with its unlimited resources, the Corporation conducts its operations on a scale and in a manner which creates for the private exporter unfair conditions of competition. This is a weighty and grave indictment; but the Government communique carefully sets about to answer every one of the charges.

It is admitted that the United Kingdom Commercial Corporation is a semi-governmental organisation. Its capital has been subscribed by the British Treasury; and, in matters of broad policy, it is subject to consultation with His Majesty's Government. If the Corporation owes its origin to Government initiative and operates generally under Government auspices, it is not meant that it has been brought into being with any ulterior motive of economic exploitation or economic domination or even profit-making. The Corporation's creation is connected with the exigencies of war. One of the big responsibilities which the British Government has had to assume in this war is in connection with the continued maintenance of various kinds of supplies to her allies and associates. It is for the discharge of this important responsibility that the organisation of the Corporation was devised and its operations designed. The Corporation has been established for the purpose of undertaking, in connection with the conduct of trade in war conditions, certain operations which cannot be performed adequately by normal commercial enterprises or which lie beyond the scope of private trading concerns. These operations are thus described in the press note:

> "Broadly speaking, these operations consist in establishing trade links with countries with which the contact maintained through the medium of the normal machinery of import and export has shaped under strain of war conditions; in satisfying the import requirements of Allied and friendly countries mainly from Empire sources; and in assisting in the disposal of the commodity surpluses which have accumulated in those countries owing to their normal export markets being no longer accessible. In these operations the Corporation uses the customary trade channels to the fullest possible extent."

So far as India is concerned, the main activity of the Corporation has been in connection with the supply of essential commodities to Russia. It must be admitted that, until Russia's entry in this war, there hardly existed any established trade channel by which supplies from India could enter that country. Nor were there any exporters in this country who could claim that they had developed any large export trade with Russia. Export trade to Rusiia was a new development; and new routes had to be discovered and organised by which this export trade could be carried on. Moreover, trade with Russia in present conditions calls for successful and elaborate planning whether it be in regard to the provision of special transport facilities or whether it be in regard to the distribution of the available carrying capacity between commodities with competing priority claims or in regard to the regulation of traffic in order to prevent congestion on important lines of communication. Operations of this character are admittedly remote from the normal activities of a private trade concern. By undertaking this business, the United Kingdom Commercial Corporation could not be accused of setting up rival shops to any existing Indian concerns.

The allegation that the Corporation enjoys a monopoly as regards trade with Persia is denied. The only privilege it possesses is that of trading in a limited number of commodities of essential war importance, the commodities in question being hides, tanning materials, and lorry tyres and tubes. These are required for military purposes; and canalisation of trade through the Corporation not only ensures speed and promptitude in the matter of supply, but makes it possible for control to be efficiently exercised in India over the volume and quality of goods exported with reference to India's own supply position. As regards export of wheat to Persia, it is pointed out that there had been no previous exports of wheat from this country to Iran; there was, consequently, no organised machinery to deal with such exports. The Corporation, however, has made no purchases of wheat in India since last November. Nor has the Corporation been profiteering in its trade in sugar. It was alleged that the Corporation was buying sugar at Rs. 12 per maund in India and selling it at Rs. 37 per maund in Persia. The high price at which sugar is reported to be sold in Persia is the result of a number of local factors, such as customs duty, internal taxes, middlemen's profits, etc. In the case of all commodities which are handled by the Corporation, no more than a reasonable margin of profit is retained to cover expense and payment for service. It may be stated that the explanation given by the Government with regard to

CURRENT DEPOSIT ACCOUNTS--Interest on daily balances from Rs. 500 to Rs. 1,00,000 will be allowed at quarter per cent. per annum, and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

FIXED DEPOSITS--Received for long or short periods. Terms on application.

LOANS, OVERDRAFTS AND CASH CREDITS--The Bank grants accommodation and undertakes on behalf of its constituents the Safe Custody of Shares and Securities and the collection of dividends and interest thereon; it also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

SAVINGS BANK--Deposits received and interest allowed at 1 per cent. per annum.

SAVINGS BANK DEPOSIT ACCOUNTS--Sums of Rs. 300 and over accepted at 1 per cent. per annum by transfers from Savings Bank accounts, subject to three months' Notice of withdrawal. Rules on application.

W. G. GROUNDWATER, General Manager.

the Corporation enjoying special facilities on the purchases through the Supply Department seems quite convincing.

There is no reason why we should not take, at full value, the assurance given that it is not the intention of the Corporation to conduct its business in a way that will appear like unfair advantage over private exporters. When the Corporation was founded two years ago, Lord Simon made it clear that it was not the intention of the Government to supplant existing channels of trade: on the contrary, it should make use of them to the fullest possible extent. We are assured that the Corporation officials in India are scrupulously carrying out the intention as made out by Lord Simon. When the Corporation buys in the open market, it does so not from producers or middlemen but through exporters normally engaged in the trade. And it is claimed that one of the special objectives of the Corporation is to ensure that the benefit of all export business handled by it is passed on, in the fullest possible measure, to established exporters.

At the last annual meeting of the Indian Insurance Companies Association in Bombay, Mr. J. C. Setalvad discussed problems raised by the war, and referred to the difficulties created by the loss of oversea connections this year. He declared that the premium income of the Indian Insurance Companies continues to be steady in view of the increased prices of commodities, resulting in higher insurable value of goods and commodities. It was only natural that the Insurance Act and its working should take up much of the review. Limitation of commission, freedom of investment, reciprocity in States—these were some of the points examined by Mr. Setalvad as the spokesman of Indian insurance. Mr. Setalvad urged that the cost of acquisition had not been lowered, and the Act should reduce the remuneration of employers of insurance agents. The Commerce Member has helped the Insurance Advisory Committee to interpose its views whenever necessary. Amendments to Rules required previous consideration, and the Government of India had an opportunity to suggest decision by a court on Section 27. The Bombay High Court is to hear a test case, so that the right proportion of the Life Fund investible in approved securities will be determined. As Mr. Setalvad confessed, in the business of life insurance, interest yield is a factor of vital importance. The actual valuation results are based on a reasonable rate of interest and any diminution in the yield assured or anticipated is likely to upset considerably the whole business. Mr. Setalvad made mention of the effect of depreciation of investments. He argued in favour of relaxation of statutory restrictions by reference also to the need for developing Indian industries. The need for greater industrialisation has now been recognised and it should be a matter of policy to allow the capital resources available with insurance companies being invested in such industrial undertakings. Insurance companies besides helping themselves to a better rate of return would, in the long run, also be discharging a national duty of great importance. The falling yield on the funds was cited as the reason for the non-distribution of bonus in wartime. That the distribution by registered insurers should be deferred by statute is the opinion of Mr. Setalvad. This is in line with the Advisory Committee's recommendations but is in conflict with that of others who argue that the 'no bonus' rule would interfere with the natural growth of life assurance business in India.

"EAVESDROPPER."

UNITED INDUSTRIAL BANK LTD.

7, WELLESLEY PLACE, CALCUTTA.
A SCHEDULED BANK.

The Share Subscription List will remain open until further notice, but this advertisement must not be treated as an invitation to the public to subscribe to shares. Persons desiring to obtain copies of the prospectus should communicate with the Head Office or any Branch of the Bank.

Current Accounts: Interest allowed at ½ per cent per annum, on daily balances of Rs. 300|- to Rupees 1 lakh provided interest amounts to at least Rs. 2|- half-yearly.

Saving Bank Accounts: Interest allowed at 1½ per cent per annum. Withdrawals by cheque permitted and transfers to Savings Bank Deposits allowed on favourable terms.

Fixed Deposits received for one year or less.

Loans, Cash Credits and Overdrafts allowed against approved securities.

Securities, Shares, etc., purchased, sold and received for safe custody and collection of interest and dividends. Packages, Boxes, etc., received for safe custody.

Silk Yarn for Parachutes

The biggest order yet for silk yarn for parachute cloth has recently been successfully negotiated, as also orders for other components, such as tape and light and heavy threads. Several thousands of parachutes are involved, and the recent orders for components placed with the trade in India will meet requirements for the full 1942-43 programme.

A special factory for the fabrication of parachutes is already in production, and India's filature silk reeling capacity in two provinces is to be multiplied by a Rs. 18,50,000 scheme at the cost of His Majesty's Government, effecting a change-over from hand-reeling to machine-reeling methods. Filature reeling, as opposed to the prevalent hand-reeling of silk, ensures uniformity of texture which is indispensable in parachute making. An available source of filature silk was Japan, which supplied considerable quantities, and Japan's loss is India's gain.

Madras, including Mysore, and Bengal are two provinces which will benefit by this impetus to filature silk. In Madras the scheme will be primarily Government-worked and controlled; in Mysore, where it is in large part a village industry, the scheme will be partly State-controlled and partly in the hands of private enterprise; while in Bengal private parties will be helped by loans.

The installation of a test house and a silk conditioning house are part of the scheme for increased production in future years.

U. S. Bag Shortage

The U.S.A. is experiencing a shortage of bags. Acute shortage according to the July bulletin of the I.C.J.C. has been dealt with by new control orders. All users have been asked to conserve and salvage burlap. Orders were also issued for the return of used bags. Farmers were asked to reduce the use of burlap as much as possible. As the price of paper bags has gone up, along with increased demand, the W. P. B. is anxious to get more cotton bags made of specified sheeting and osnaburg. The U.S.A. is concerned with producing more flax for fibre in order to make up for former European imports. Prices of burlap have been raised in order to defray the higher shipping and insurance charges from India. A schedule of revised prices was prepared by the O.P.A.

(*Continued from page 227*)

Rs. 91.72 crores is highly significant. The increase is nearly Rs. 6¼ crores. We do not think it possible that all this increase represents new subscription for treasury bills. It is not unlikely that the shrinkage shown in the Reserve Bank's investments means the purchase of securities for a corresponding amount by the Imperial Bank. The Imperial Bank's advances are Rs. 2 crores down to Rs. 26.48 crores. Bills discounted and purchased are Rs. 1 crore down to Rs. 2 crores. This is presumably due to the maturing of discounted treasury bills. In the result, the cash balance of the Imperial Bank has declined from Rs. 34.51 crores to Rs. 29.49 crores.

The exchange market has been steady. Export bills which made a fair showing in the early part of the week were less conspicuous in the latter part.

The closing rates are: Banks buy T.T. London Ready to six months forward at 1s. 5 31/32d., and banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. bills for first and second months at 1s. 6 9/32d., and for the third and fourth months at 1s. 6 5/16d.

Money remains easy at ¾ per cent.

Banks buy T.T. New York Ready at Rs. 329 for $100.

Banks sell T.T. New York Ready at Rs. 332¾ for $100.

BRAITHWAITE
BOMBAY PIPELINE

THE TANSA PIPE LINE.

Running over a distance of 110 miles, the Tansa Pipe Line conveys 90 million gallons of water per day for the city of Bombay. Designed and laid out by Messrs Braithwaite & Co., (India) Ltd. a total of 90,000 tons of steel were required for the completion of the work and due to the very high pressure that the line can bear it has been known as "the Longest Boiler Barrel on Earth"

(*From Our Correspondent*)

New Delhi, August 5.

To-day the last of the new Members of Government arrived in New Delhi—Sir C. P. Ramaswami Iyer, the Information Member. There was also an important meeting of the Viceroy's Council at which urgent matters in connection with the forthcoming meeting of the A.I.C.C. were considered. Present indications show that the authorities in New Delhi are in no mood to be hustled—they prefer to wait and see the results of the peace efforts that are going on. It may be a week or more before the A.I.C.C. is able to conclude its discussions and frame its final resolution, but if Sir T. B. Sapru's proposal for a Round Table Conference takes shape in the meantime, it may provide a chance for at least bringing the parties together. At the other end discussions appear to be going on between London and Washington to decide as to how far it will be possible to go to facilitate the formation of Coalition War Governments at the Centre and in the provinces. The attitude of Whitehall appears still uncertain, but so far as the majority of Indian Members in the Viceroy's Council are concerned, they are reported to be urging strongly that immediate effect should be given to the Cripps scheme for securing an improved political atmosphere in the country. So far they have not succeeded in their attempt to persuade the British Prime Minister to make a new declartaion in Parliament on the Indian question.

* * * *

There are at the moment two proposals in connection with the suggested plan of a Round Table Conference. One is that the Viceroy himself should take the initiative and call the conference. There is no doubt that, if the Viceroy convenes a conference of party leaders, the response would be fairly unanimous. It is considered significant that in his reply to Sir T. B. Sapru, Mahatma Gandhi has agreed to attend any Round Table Conference. Th· point, however, to be considered is that unless the Viceroy is in a position to make certain definite proposals as an acceptable basis for discussion, any conference called oy the Viceroy may prove worse than useless. On the other hand, there is also the proposal that Sir T. B. Sapru should take the lead and call a conference in order to see whether a joint all-party demand cannot be put forward to force the hands of the British Government. Reports have reached New Delhi that there is a possibility of Mahatma Gandhi meeting Mr. Jinnah during his stay in Bombay. If this materialises, it may really prove useful at this juncture. All that can be said at the moment is that the proposal for holding a Round Table Conference has undoubtedly had a satisfactory reception in the country, and cannot therefore be ruled out as impossible or unlikely in the near future.

* * * *

The Government of India has a reputation for waking up rather late to realities. Things which should have been done months ago, have only now been taken into consideration. And the measures taken are still far from complete. The fact that if the Congress starts a mass movement, economic discontent in the country may prove to be fruitful ground for spreading agitation had some effect. As a result of continued discussions in the Viceroy's Council, two or three statements of policy have been issued by the Government of India. It has now been promised that special transport arrangements will be made for the distribution of essential commodities in order to obviate the danger of local shortages—if necessary, by even giving priority over military traffic. The new Transport Member, Sir Edward Benthall, has taken up the question—as he is himself a businessman, he knows what the business community feels over the way in which the Railways have been working. If drastic methods of reorganisation are adopted, not only on the Railway side, but also on the side of the military Departments in a combined effort to prevent waste and delay, a good deal can be done to improve the present position. What Sir Edward Benthall can easily do is to call a conference, fully representative of the business community and other interests concerned, and take their advice for reorganising and co-ordinating transport arrangements. It is also up to Sir Edward Benthall to persuade the authorities in the U.S.A. to send a big consignment of locomotives and boilers for replenishing stocks. And if he can go further and arrange to start now at least a locomotive-factory in this country, it would be even more welcome.

* * * *

There is some complaint that the Government of India has not been sufficiently liberal in dealing with the salt question. The suggestion made by the Congress is that owing to the threatened scarcity of salt in some parts of the country the Government should now freely permit the manufacture, transport and distribution of salt in coastal areas. The Government's Press Note takes the stand that there are enough salt stocks for meeting the needs of the country. The inadequacy of transport arrangements may be partly responsible for the scarcity complained of, but if the Government of India had taken a more generous view of the problem and tried to give greater relief to the poorer sections of the public by extending the concessions for the free manufacture of salt, the Government's action would have been greatly appreciated.

* * * *

Another long Press Note has been issued by the Government of India to explain to the public the instructions given for giving compensation and other relief to those whose houses, lands or other property have been requisitioned by military or civil authorities. So many have been the complaints in the past that villagers and others have been summarily dispossessed of their homes and lands without immediate payment of compensation and provision of alternative arrangements for their living that the issue of these detailed instructions is helpful. If these instructions are followed in the right spirit, it would go a long way to remove the present complaints and create better relations between the civil population and the authorities responsible for these evacuation and other orders. The main question for the Government's consideration is the need for taking up full responsibility for meeting the requirements of the civil population. If any villagers are asked to vacate their lands and homes, they should not be turned into the streets to shift for themselves but should be provided with sufficient assistance for taking up residence and carrying on their work elsewhere. Similarly it should be the duty of the Government, both Central and Provincial, to provide for the adequate supply of foodstuffs and other essential commodities to the civil population at fixed prices. It is admitted that both the available stocks in the country and the progress of production are quite satisfactory. What is needed is a more effective policy for co-ordination and distribution. It is evident that the authorities are realising the danger of allowing conditions to drift as they have been doing—high prices which weigh heavily on the poor man, scarcity in many places and lack of a concerted production policy. Some months ago Sir Ramaswami Mudaliar, even hinted that the Government of India would not hesitate if necessary to take over the distribution of essential commodities themselves. That stage has not yet been reached, but the present suggestion, which has emanated from certain leaders of the business community, is that a network of public grain shops should be set up everywhere for the sale of food grains and other essential commodities at cost price in order to prevent unnecessary hardship to the poor. The Government of India has appealed to the public for co-operation to put down hoarding and other malpractices. The whole question is expected to be considered in detail at the forthcoming Price Control Conference in New Delhi under the Presidentship of Mr. N. R. Sarker. It has been suggested that prominent non-official representatives should be invited to this conference.

* * * *

The Tripartite Conference of representatives—of the Government, Labour and Employers—is meeting on Friday to consider the need for setting up a Central collaborative machinery. It is proposed to set up a Standing Advisory Committee consisting of Government representatives and an equal number of labour and employers' representatives. The conference will also discuss plans for labour welfare and labour's morale in wartime.

HILL BIRD.

INDIAN TEA LICENSING COMMITTEE

Notice is hereby given that the Licensing Committee have ordered the issue of a further interim allotment of Export quota [amounting to 10 per cent of tea estates' crop basis. In order to facilitate the adjustment of estates' accounts the transfer register has been closed and will re-open for the registration of transfers of Export Quota on 12th August, 1942.

(From Our Correspondent)

Bombay, August 5.

Great events are on the gale and each hour brings a varying tale. History is to be made in the huge pavilion at Madhav Bagh. The last session of the All-India Congress Committee held at Bombay found the members as guests of the Cotton Exchange and the hall was crowded with front-row visitors paying Rs. 500/- per seat. Now the Reception Committee has chosen an independent venue and there is the atmosphere of a sensational "break" with American correspondents mustering strong to flash the news at triple-rates. All are on tenter hooks, and countries abroad have been notified that all is not well with India, the big war-base, whether as the arsenal or the granary or the grocery of the Democratic Front. The Stock Exchange which quickly reacts to political developments is full of conjectures about the one-week struggle, sharp and swift, predicted by Sardar Vallabhai Patel.

* * * *

The theory that well-paid workers would be still, if a crash comes, is being carried too far by people like Mr. Jamnadas Mehta and Mr. R. S. Nimbkar. Wads of currency-notes are of little value when there is acute maldistribution of supplies. Mr. Punjabi, the I.C.S. Director of Supplies, had a complacent explanation to give last week; on paper the statistics look correct, but interminable queues are found in front of Kerosene-shops. It is admitted that only 60 per cent of the normal supply is available, but people are asked to shelve their kerosene-stores and burn charcoal. As a relief-measure, preference should be given to those who require kerosene for lighting purposes. Propaganda with the slogan "Early to bed" may shortly be launched by Mr. R. P. Masani who directs the National War Front. When Sir Basil Blackett was Finance Member he related an anecdote about the economy of a miser. To save the cost of candles in the house he made it a habit to go to bed early; he reared a large and expensive family.

* * * *

Economic deterioration in the last war had never come with the momentum of the present crisis when things are going out of hand. Is there going to be a rice-war in Bombay? The Grain Dealers' Association have taken a decision that no retail-dealer shall buy rice from a whole-saler unless rice is made available to him (retailer) at the prices controlled by Government. The Association also insisted that the rice supply to retailers should be expeditious. A "War Committee" composed of 24 members was appointed by the Grain Dealers' Association to suggest a way of giving effect to the resolution. The "rice market crisis" has been hanging over the city since July when the Grain Dealers' Association started picketing the wholesale market. Picketing was given up only when the Government assured the Association that the main grievances of the retailers would be redressed. According to the Secretary of the Association the grievances remain unredressed.

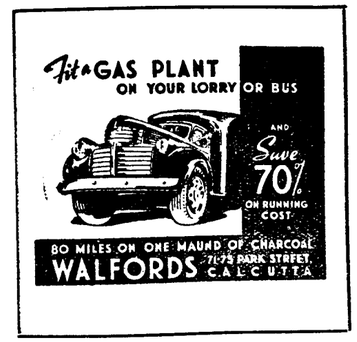
* * * *

In a circular letter calling a special meeting of the Association, the Secretary observes:—"It is 10 days since those assurances were given, but I am sorry to inform you that practically nothing had been done. Their assurances of speedy redress of our grievances remain unfulfilled and our position in general remains the same as before. The question of supply of rice and issue of permits have taken so grave a turn that if nothing is done to overhaul the entire system of supply and permits of rice the scenes that we see on the kerosene depots will be staged in rice supply also. We are contemplating how to fight with this unbending attitude of the Black market in rice. The order by which control on stock and sale of rice has been placed does not touch the wholesale rice merchants and for this reason wholesale rice merchants are not prepared to sell rice at controlled rates as they have not fear of legal action against them for withholding the sale of commodity kept for sale."

* * * *

We have a Portuguese Bank (periodically a lottery too), and Lisbon is an ancient ally; Goa is Bombay's next-door neighbour supplying telegraphists, musicians and cooks of superb efficiency. Goans at home seem to be in a mood to draw out money to Goa through the Bank; the release to Vasco de Gama's little colony of one crore of rupees on this account has been found inadequate to stand the strain. The Bank has decided not to serve as conduit-pipe for the transmission of funds to Goa. A maximum limit for remittance by money-order from British India would also be necessary to curb the spurious misapprehensions that Goa could remain a fort even if Bombay falls as a citadel. There are many crazy forms of hoarding besides tucking currency notes round the waist-line or buying a huge stock of postal-stamps for fear that Sir Mahomed Usman might raise postal charges.

* * * *



The annual meeting of the Tata Iron & Steel Company was held last Thursday. A net profit of Rs. 367 lakhs for 1941—1942, a payment of Rs. 267 lakhs as tax to the Government and three months' salary as bonus to the staff constitute a comfortable state of affairs. In the course of his speech, Mr. J. R. D. Tata dwelt on the hazards of the war in the following words:—"Japan's entry into the war last December and the subsequent developments have created a grave situation for the Tata Iron & Steel Company by bringing it well within the zone of danger. To some of you on this side of India war may appear to be remote, but to those in Jamshedpur, who are situated within easy bombing range of the enemy and to those of us here, who are directly concerned with the operations of the company, the safety of its plant and the welfare of its employees, the situation is one of constant and acute anxiety."

* * * * *

Mr. J. C. Setalvad, Chairman of the Indian Insurance Companies' Association had a few words to say about Calcutta as he presided over the 14th annual general meeting. Is there no control over the Commisson earned by employers of agents. Mr. Setalvad said:—

"The Calcutta Insurance Association has recently put forward a proposal which seeks to create two classes of agents on different terms of remuneration. This proposal is opposed to the principle laid down by this Association that there should be one class of agents with uniform terms of remuneration.

The type of classification now sought under the proposal of the Calcutta Association goes further than even this, as some agents are to get concessions. Some agents are to have uncontrolled agents and others controlled and/or uncontrolled agents. This differentiation of insurance companies vitiates the fundamental principle that all member companies of an Association should compete with each other on equal terms. The proposals are, therefore, purely discriminatory in nature and detrimental to the interests of all Indian insurance companies. So long as the class of uncontrolled agents will continue, it would not result in reduction in acquisition costs which is absolutely necessary in the interests of all insurance companies operating in India. I, therefore, appeal to the member companies to oppose these proposals which are purely discriminatory in their very nature."

Resume of Commodity Markets

RATHER weak conditions have been noticeable in the several commodity markets during the past week. There has been a slump in prices in the hessian and cotton markets while jute prices also have shown a downward tendency with the troubled internal situation and the anxious war situation. There has naturally been a tendency to await further developments.

Gold prices have registered a rise as well as those for piecegoods. There has not been any appreciable change in silver prices, thanks to official selling in recent weeks.

The struggle for primary commodities continues. The new Commerce Member, who assumed charge only a few days back, has assured the public that the Government of India will do everything in its power to bring about an effective control of prices, though he admits that in the absence of any rationing, which meets with special difficulties in this country, it would be difficult to ensure perfect control. The provincial governments also, after the recent accusations, seem to be more busy. Meanwhile, the grant of additional dearness allowances in the Western Presidency clearly brings forth the distress of the workers as a result of the rise in prices.

Jute

Some problem or other seems to be cropping up so far as the industry is concerned. Sometime back, it was the anxiety regarding the likelihood of a large decline in consumption if there was any restriction in production as a result of rationalisation. The apprehensions in this regard were to a certain extent overcome when it was known that the Government of India had dropped its scheme and decided to accept the scheme of the I.J.M.A. The exact proposals are not yet available. But the problem of transport has been given prominence this week. August, September and October are the most busy months as far as the movement of the crop is concerned. The flood of arrivals usually begins late in August. Even early in the season it is reported that considerable difficulty is being felt in getting transport facilities and the monsoon weather conditions have been none too helpful even for road transport by animal drawn vehicles.

There is a congestion of jute stocks in up-country centres. The problem of transporting more than a million tons of jute in the next seven or eight months mostly by the rail route should indeed prove to be very difficult.

Jute Manufactures

The disappointment over the dropping of the rationalisation proposals seems to be very keen for market operators. In the absence of any appreciable amount of business there has been a regular slump in values and quotations towards the close are at the lowest levels for sometime. It was generally believed that with the abandonment of the scheme for "rationalisation" there was no possibility of a reduction in production at least for the time being. This morning's report in the press, however, points out that a further reduction in production is being contemplated by the I.J.M.A. and that the Trade Union leaders are perturbed over this possibility. One would like to know the truth regarding this report.

Cotton

We held the view that a rather high premium had been offered for Jarilla Cotton. There has been very heavy selling for new contracts in recent weeks and the decline in the quotations for January and March during the last ten days is rather very pronounced. There is no anxiety on the part of the mills to go in for fresh stocks. The erratic tone of the New York market and the weakness of the stock exchanges have, therefore, had an unsettling influence. The reports that there would be large scale manufacture of standard cloth of 25 counts, samples of which seem to have been approved by the Government of India, perhaps might cut down the consumption of fine cotton. The fears in this regard have been one of the reasons for the recent decline in values.

Rice

The Bengal Government is proposing to take a census of the *Aush* and the *Aman* rice crops so that they can estimate the yield and precisely know where they stand in regard to rice. Any census is necessary in this economically backward country, but of what help can the latest census be is not clear. It is patent that there is need for the cultivation of more rice and with the crisis in the jute industry there is every case for a drastic reduction in the area under jute and an increase in the area under rice.

Salt

The gravity of the salt problem is being appreciated to a greater extent. We were relieved to a certain extent when we were told last week that there were adequate stocks of salt in this country and that the problem was a little difficult only so far as this part of the country was concerned. It is now reported that the Government of India have telegraphed some proposals to the Bengal Government in this connection and that the latter are considering them. If they are satisfied, it is added, a representative will go to New Delhi to conduct further negotiations.

(*Continued from page 241*).

depositor is exceptional. It is somewhat hard to ascertain the proportion of the Treasury Bills holding to total investments, shown at Rs. 75.54 crores in the June, 1942 balance sheet. It must naturally be substantial. The profit and loss-statement indicates that as before the dividend claims only a part of disposable profits. The carry-forward is in excess of the sum brought down, but slightly below that recorded in the balance-sheet as on June 30, 1941. The exceptionally liquid position and the high proportion of gilt-edged among the Bank's present assets may be taken as proof of a firm and consistent policy. The fall in Advances in the first half of 1942 is not unexpected; neither is the rise in Deposits nor the rise in Investments. Week after week the same features were discernible in the Imperial Bank's returns. It is clear that they are not separable from the major trends in the banking field which are discussed in the editorial comments this week. The concentration of a large portion of the increase in deposits in gilt-edged shows the way in which the Imperial Bank furthers the war effort. With a Reserve Fund in excess of its paid-up capital, the Imperial Bank stands as the broadening base of a still rising pyramid —a phrase that serves to indicate the progress of the Indian banking system as well as that of its most important member.

(*Continued from page 232*).

The Reserve Bank's helping hand has been stretched towards the non-scheduled banks in India. These numbered 601 at the end of 1941 and their returns showed that total deposits had risen in a year from Rs. 16.74 crores to Rs. 19.54 crores. A significant rise in the cash ratio to 8.4 percent from 7.8 percent indicates that the non-scheduled banks as a class are improving. The Reserve Bank's inclusion of twenty more non-scheduled banks for concessions under remittance facilities is proof of its willingness to help these as also the provincial co-operative banks and co-operative central banks. Provincial co-operative banks in Bombay, Madras, Sind and the Punjab as also the Ajmer Central Co-operative Bank have taken advantage of the remittance facilities.

To counter the old impression that the Reserve Bank has no real or permanent interest in rural credit, reference may be made to the scheme prepared by the Reserve Bank for extending accommodation at special rates to co-operative central banks through the provincial cooperative banks for the purpose of financing seasonal agricultural operations or the marketing of crops under a scheme prepared and issued in January. It is proposed to grant a rebate up to one per cent to provincial co-operative banks rediscounting bills with the Reserve Bank, provided the benefit of such rebate is passed on to agriculturists. Loans were made to two provincial cooperative banks against Government securities and appropriate credit limits were sanctioned, says the report.

The jointstock banks in India enjoyed unusually favourable conditions except for an interval of jitters. That has been promptly deduced from the recovery in the scheduled banks' deposits towards the end of the first quarter. The exceptional growth of deposits, to which recent bank statements bear witness, is proof of the vigour and independence that marks the Indian banking system at present. The Reserve Bank's own testimony in this regard has been forthcoming, as also to the recovery in the giltedged market which releases banks from anxiety. The wisdom of investment in giltedged during a period of slack trade has never been questioned, and the additions to deposits, translated into terms of treasury bills outstandings, have struck all observers as the best type of assistance that the banking system can give to the war effort. The Reserve Bank provides more profits: the jointstock banks lend more; and this division of labour is not unfair in the light of changing conditions.

SHORTER NOTES

Munitions Factories

Wartime progress may be measured by the advance in the output of both munitions and machine tools in India. A beginning in regard to highspeed tool steel on a large scale has been recently reported. Four projects for munitions factory expansion have been completed according to a recent press note. These include a new rod mill at a metal and steel factory and modernisation of a high explosive factory, a cordite factory and an ammunition filling factory. At another factory work on a shell machining plant is said to be practically complete. A plan for an additional toluene plant involving Rs. 14 lakhs has been sanctioned. H.M.G. provide the funds in the case.

* * * *

War Risks Insurance

The factories insurance scheme has been extended to French India and certain States by amendments to the Ordinance of April. The insurance of commodity stocks has also become possible for holders of goods in Indian States and French India. Formerly only the port of Cochin along with Mattancheri and Ernakulam was treated as coming within the purview of the Ordinance. The commodity insurance scheme is essentially an adaptation of the British scheme of 1939. Under the amended Ordinance all goods in transit, within the boundaries of India, are covered by the policies in force, like cargoes carried in territorial waters. War risks insurance in regard to immovable property may, however, be slow in coming despite local investigations as to its feasibility in Bengal and Bombay.

* * * * *

Value Of Charcoal Gas

Tighter rationing of petrol was envisaged by Mr. R. H. Parker in his address last week to the Indian Roads and Transport Development Association. Alternative fuels must claim more attention and producer gas, particularly, must be approved.

There is no longer any dearth of locally made generators, and Mr. Parker asked operators of transport services, who could make fuller use of their vehicles by fitting plants and have not yet done it, to do so. By not turning to gas-plant, they are not only doing a disservice to the community, they are neglecting their own interests because producer gas, not being subject to the huge excise and import duties or sales taxes that are levied on petrol, is so much chaper at present that a saving of roughly Rs. 200 per month can easily be effected in running costs where a vehicle operates two thousand miles in a month.

* * * *

Power Alcohol

Power alcohol and rectified spirit are equally necessary for supplementing fuel. This would appear to be the opinion of the recent special conference under official auspices. The committee which is likely to be set up to help manufacturers to get plant from abroad or prepare it at home should however bestow more attention on the possibility of setting up more distilleries. The conference pronounced on the need for legislation for compulsory admixture of alcohol with petrol in all provinces and guarantee minimum prices as well so that those who put up plants will not be affected after the war. As the supply of molasses in the U. P. alone in a year is estimated at 220.000 tons she can produce far more spirit than is needed in that Province and send it to adjacent Provinces.

* * * *

Rubber Economy

Tyre rationing is part of a policy for conservation of rubber. Reclamation of scrap is meant to supplement rubber. The diversion of supplies from non-essential factories has been decided upon. The War Resources committee is said to favour re-organisation of production as also regulation of consumption in order to increase the output of rubber goods urgently wanted for the war. Substitutes for rubber are also being sought. Waterproof fabrics in place of rubber ground sheets and coir soles for shoes are being tested. All nations are concerned to make the most of rubber in the present Tyre rationing is strict in all countries. The U. S. A. which can hope to provide quantities of synthetic rubber finds an imitator in Canada. Plants other than **hevea** are also receiving close attention, especially, in Australia.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 6th August.

It will be remembered that a controversy recently arose between Mills and Jute Sellers, primarily on the question of who was responsible for war risk insurance on jute in transit to mills. As the matter was examined, it assumed a much wider significance in respect to sellers' liabilities under the contract, and it was ultimately agreed to submit the question to Counsel for opinion. That opinion has now been delivered and proves to be entirely in sellers' favour. The mills had already given up their first contention and conceded that property in jute shipments passed when the jute, properly marked according to the contract, was handed over to the carrier. What they continued to contend was that, although property in the goods had passed, the risk had not passed. As normally the risk passes with the property, any variation of this course has to be clearly provided for in a contract, and on this point mills relied on the clause in the jute contract which provides for transit insurance being cared for by the seller. The limitations imposed by the terms of this clause, however, make it clear that the seller is only acting as the agent of the buyer in the matter and that the risk does not remain with the Seller. Any other interpretation of the contract would have introduced a situation never before contemplated by sellers, nor we believe by a very large number of the mills, a situation in which indeed very few sellers would have been prepared to continue business. By carrying the contentions of the mills to their logical conclusion, a hypothetical case could be constructed which, on the *reductio ad absurdum* principle, would show the mills' case to be untenable.

Suppose a seller has contracted to sell certain jute to a mill at Rs. 10. By the time the shipping date comes round, the market rate for that jute is Rs. 20. The seller duly ships the jute according to contract and invoices it at Rs. 10 and in terms of the contract effects insurance at Rs. 10 *plus* 10 per cent. The mill, if prudent, will increase that insurance on its own account to the market rate of Rs. 20. If that jute is lost or destroyed in transit *from any cause whatever*, according to the theory propounded by the mills, it would be perfectly in order for the mill to collect the insurance value at Rs. 20 and then turn round on the seller and demand replacement of the jute at contract rate of Rs. 10 because, in their view, the seller had failed to implement his contract until he had actually placed the jute contracted for alongside the mill jetty. We do not suggest that it was in the minds of mills to make any such demand, but the possibility of such a situation arising was implicit in the contentions put forward in the mills' case, and it is well that the situation should have been cleared up, and the liabilities of the respective parties clearly defined. The opinion, it is believed, will be accepted without demur by most mills as it is no different from what most believed it to be. There are some recalcitrants, however, who may talk of altering the contract to suit their views. That is, of course, a matter which can only be successfully done by mutual agreement between buyers and sellers. It is, of course, always open to a buyer to purchase his jute on terms "Cash against Mill Receipt," that is, he does not pay against documents as the contract provides, but only after the actual arrival of the jute at the mill. This system already subsists in regard to purchases of pucca bales and purchases from the local bazar. How much jute from mofussil shipping stations a mill would be able to secure on these terms is a very open question. We imagine, not very much. The payment against documents for jute shipped from mofussil stations to mills is a most important factor in the financing of the jute crop as it enables the seller to turn over his capital quickly and send money back to the mofussil for further purchases. The withdrawal of this facility would not only cramp the style of most sellers, but it would have very serious repercussions on the marketing of the crop, and also almost inevitably on prices in mofussil markets, a point which would not be likely to escape the notice of the Bengal Government in their well-known watchfulness for the welfare of the cultivator.

There will be, as far as one can judge, quite sufficient difficulties to be overcome in the matter of financing this year's crop, owing to the scarcity of freight space for transporting jute to mills. Wagons are virtually unobtainable on the broad gauge system of the railways, and while they are still to be procured to a limited extent on sections of the narrow gauge, these are only useful for taking the cargo part of the way, to a riparian station, where again space by flats is by no means always obtainable. The position is already somewhat acute, before the full weight of the crop has commenced to move and it does not seem likely to improve as the season progresses. Consequently, it appears likely that mills will be only too pleased to see jute which they have purchased, actually shipped approximately to time, and are less likely to cavil at paying against documents when presented. From the seller's point of view, he is likely to be hampered not only in the matter of turning over his finance owing to delays in shipment, but he is also likely to be hampered by the physical incapacity of his godowns to hold more than a limited quantity of jute. It is not improbable that the activities of sellers will be curtailed by either or both of these factors before long and mills may find that offerings on the Calcutta market are not being made on the scale which, in normal circumstances, would be expected with a crop the size of the current one in sight.

The only item of note in the Export Jute market was the placing of an order for Dundee to the extent of about 25,000 bales for August shipment, option being given for delivery of either old or new crop. As most of the order was for Daisee and Tossa, it follows that old crop will be shipped, as very little new Daisee or Tossa will be available in the market before September. The prices paid are reported to have been on the basis of Rs. 54 for Daisee Assortment, Rs. 56 for Tossa Fours and Rs. 65 for Tossa assortment. Mills have bought some ready shipment New crop Firsts at Rs. 50 and ready Old crop was also reported at Rs. 51 with Lightnings at Rs. 40. Balers are keen sellers for the forward positions and would break the price of Firsts to Rs. 48 for September.

There has been a moderate business only in Loose jute. In the early part of the reporting period there was some demand for ready and quick shipment lots for which a small premium was paid. But the quantities were small and the demand apears to have been satisfied for the time being. For shipment jute the tone of the market is quieter. After Rs. 9-8 and Rs. 6-8 had been paid for shipment up to 15th September, Europeans accepted Rs. 9-4 and Rs. 6-4 for August shipment Middles and Bottoms. Indications are that even money would be accepted for all September shipment now. Supervised Jat was sold at Rs. 9-4 basis Middles down to Rs. 9 and a sale was reported of Indian District Tossa for September at Rs. 9-8 and Rs. 6-8 for Middles and Bottoms. Mofussil reports are not quite

JUTE

Calcutta, August 6.

The raw jute market has continued quiet during the week though a larger amount of business has been passing. As the long-term outlook continues bearish there is no enthusiasm regarding the reports that the rationalisation proposals are to be dropped. However, if the rationalisation proposals of the Government of India had been accepted, the outlook for the industry would have been badly affected. The effect of the decision has, therefore, been mainly negative. The problem at the present moment is one of providing transport facilities. There is plenty of jute waiting to be shipped or railed and the congestion of stocks in the mofussil centres has brought trade to a standstill. That is the reason why there is disparity between Calcutta and mofussil prices.

In the loose jute section, as pointed out above, business has been passing on a larger scale though there has not been any appreciable change in prices. Mills are reported to have done European Middles at Rs. 9-8 for August-September shipment. Old crop Indian Jat Bottoms were done at Rs. 6 per maund for immediate delivery.

In the pucca bales section, Dundee Daisee 2/3 and Tossa 4's were done at Rs. 54 and Rs. 56 per bale. Shippers have been interested in Dundee Daisee 2/3.

JUTE MANUFACTURES

Calcutta, August 6.

The jute manufactures market has been very weak. In the absence of any enquiry from oversea countries and with the difficulty in getting freight, there is naturally considerable anxiety regarding the future of values. The demand for hessian goods is very poor and there has been a sharp drop in prices for 9 porters and 11 porters. The stock figures for the month of July are not yet available. Nine porters ready are quoting Rs. 14, August Rs. 14-1 and September Rs. 14-2 against Rs. 14-7, Rs. 14-8 and Rs. 14-9 respectively. Eleven porters ready are Rs. 17-10, August Rs. 17-12, and September Rs. 17-14 against Rs. 18-6, Rs. 18-8, and Rs. 18-8. Is is significant to note that the decline in 11 porters is pronounced.

In the heavy goods section, there has been no change in prices. Earlier in the week there was good demand for Liverpool twills. The quotation was higher at Rs. 47-4. There has been a slight drop towards the close to Rs. 47. "B" Twills for ready delivery were Rs. 41 and Cornsacks for the same position Rs. 39-12.

GOLD

Calcutta, August 6.

The deterioration in the Russian war situation has been responsible for a smart rise in prices in the gold market. There has been considerable investment and speculative buying. Quotations are more than one point higher on balance. Gold ready are quoting Rs. 53-4 and second settlement Rs. 53-4.

Sovereigns have improved from Rs. 39-2 to Rs. 39-8.

SILVER

Calcutta, August 6.

The silver market has remained unaffected. Quotations are only slightly higher on balance. With the appearance of the Reserve Bank as an effective seller at Rs. 85 for ready, the quotation has naturally been around that level. Indian Mint Silver ready closed at Rs. 84-14 and Second Settlement at Rs. 84-4. The quotations at the end of last week were Rs. 84-5 and Rs. 83-13 respectively.

The London market has remained idle with very little of business passing. The quotation for both spot and forward has remained unchanged at 23½d.

COTTON

Calcutta, August 6.

The Bombay raw cotton market has been rather weak. There has been a further decline in prices especially for new contracts during the past few days. Mills have adequate stocks of old crop cotton and are not in a hurry to buy fresh stocks. Broach July-August are quoting Rs. 193, new contract January 1943 Rs. 312-8 and March 1943 to Rs. 305. The quotations at the end of last week were Rs. 200-4, Rs. 329-8 and Rs. 322-8 respectively.

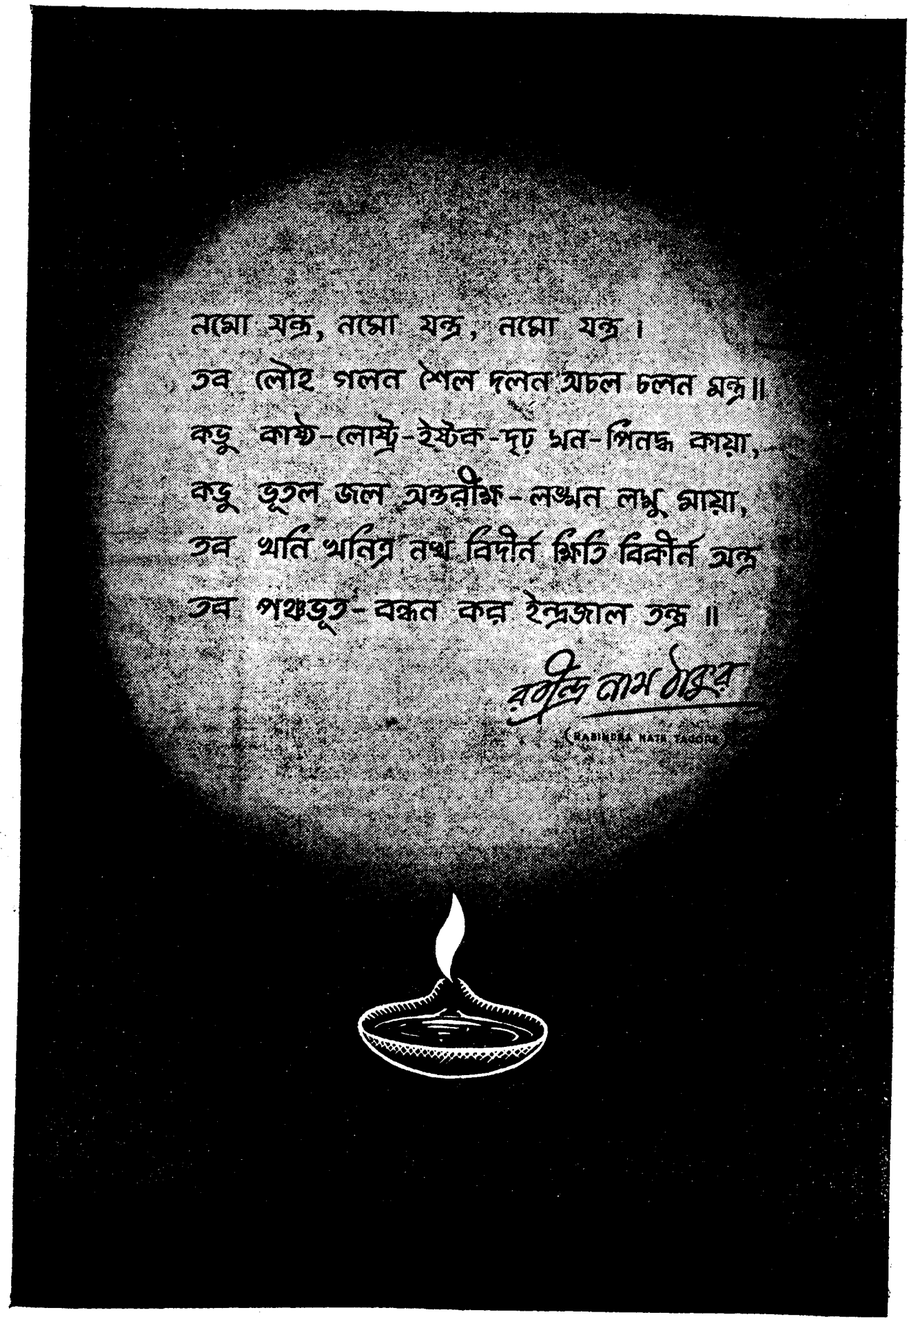
The New York market also was easier for the major portion of the week. Only towards the close there has been a slight rally. October were quoted 18.32 cents and December 18.51 cents.

PIECEGOODS

Calcutta, August 6.

The piecegoods market has continued firm though business passing has been on a small scale. The shortage of stocks and the difficulty in getting the supplies for the Puja season have been mainly responsible for keeping up prices. A larger amount of business has been reported in coarser lines with Bengal mills. Mills in Western India are reported to have made sales from ready stocks. But not much of forward business has been concluded owing to the higher replacement costs.

It is understood that samples of standard cloth have been submitted for approval and that production will begin on a large scale shortly.



(*Continued from page* 250).

satisfactory. Lack of sufficient rain and consequent shortage of steeping water is militating against the good quality which was expected. Much of the current imports is samla in colour and the proportion of the higher grades has fallen away markedly. Estimated arrivals of jute into Calcutta during July are 2,48,000 bales against 4,80,000 last year.

Uncertainty about shipping has had a depressing effect on the Fabrics section of the market and prices have tended easier, with demand considerably curtailed. Heavy Goods have again been the mainstay of the market, hessian transactions being few and far between, except for inter-bazar sales, rates for which have declined to the levels of Rs. 14 for nine porters and Rs. 17-8 for elevens. Nine porter widths have fetched Rs. 15 up to 15th September and a sale of Cotton Packs was reported at Rs. 91 August. "B" Twills have again been the feature in the Heavy Goods section though not to the extent of recent weeks. Prices paid are Rs. 41-8 for ready, Rs. 41-8 to Rs. 40-12 to Rs. 41 for August, Rs. 41 for August-September, Rs. 40 to Rs. 39-12 for September and Rs. 39 for October-December. Covering business in Cornsacks was reported at Rs. 41-12 August and sales of Woolpacks were recorded at Re. 1-14 August and Re. 1-14-6 for September and November-December. Liverpools sold at Rs. 47-8 to Rs. 47 ready and at Rs. 47 to Rs. 46-8 August, while Union Sewn "A" Twills fetched Rs. 48-8 November-December. Other sales reported include D. W. Flours at Rs. 52-8 August and Rs. 51-4 November and 3¼ lbs. Grains at Rs. 61 August. Mill stock figures as at the end of July are remarkably satisfactory reading. Commercial Hessians show an increase of some 26 lakhs yards, but commercial Sacking goods show a reduction by four and a half crores yards. Government stocks show some variation but in the agregate, little change. Combined figures of commercial and Government moldings show a slight reduction of 100 tons of Hessians and a very substantial reduction of 18,000 tons of Sackings. As production during July must have been in the region of 95,000 tons, this decrease in stocks indicates that despatches of goods from mills during the month must have been well over 110,000 tons. The fabrics market closes rather more buoyant in tone.

TATA OIL MILLS PAYS A HIGHER DIVIDEND

Stock markets have been absolutely uninteresting during the past few days. With the difficult internal political situation and the deterioration in the war situation it can hardly be expected that there will be any broadening of interest in the markets. Indeed, the steady undertone of the markets under the present circumstances should be surprising to many. The volume of business has tended to be on a small scale and there is a general tendency to mark time.

Money has been in plentiful supply. Under ordinary circumstances giltedged prices would have been forced up very much higher. At the moment, however, considerable interest is shown in the weekly auctions of treasury bills in spite of the very low yield now available. By reducing the treasury bills offer and offering facilities to tenderers to submit maturing bills against allotment the Government is trying to force money into different channels of investment. With the comfortable ways and means position the present policy would prove to be successful if only the political situation were better.

* * * *

As the most important Indian producer of soaps in India, the *Tata Oil Mills Company, Limited,* has naturally been able to record a sharp rise in earnings for the year ended March, 1942. The higher average price realised on the sale of products and the increase in sales, the figure for 1941-42 being Rs. 1.03 crores against Rs. 93.85 lakhs for 1940-41, have been mainly responsible for the substantially higher level of earnings. Having regard to the turnover, however, the level of profits still seems to be on the small side.

The net profit for the year, before providing for taxation and depreciation, is Rs. 7,40,691 against Rs. 4,41,938 for the previous year. The real increase in earnings will be known only if the amount of Rs. 85,000 paid by way of bonus to employees is taken into consideration. The payment of bonus to employees is for the first time in the history of the company.

The shareholders of the Company have been able to take advantage of the higher level of earnings as it is not necessary to provide for Income-tax and Excess Profits-tax on last year's earnings.

* * * * *

The sum of Rs. 3,13,333 against Rs. 2,10,000 has been set aside to depreciation while Rs. 41,476 has been written off in respect of other expenditure. There is a transfer of Rs. 47,070 to the General Reserve Fund to make it up to Rs. 1 lakh. The dividend on the ordinary shares has been increased to Re. 1-8 per share from Re. 1 per share on the previous occasion.

A large portion of the glycerine produced by the Company is taken up by the Government. Due to delay in the construction of the building, the new toilet soap plant at Bombay could not be started during the year. But this plant has now been completed and recently put into operation. With the possibility of the new hydro-generation plant at Cochin also coming into production shortly the prospects for the current year should be considered rather bright. It is doubtful, however, whether it will be possible for the shareholders to derive any great advantage out of the higher level of earnings as when the earnings become liable for taxation the incidence will be very heavy.

* * * * *

With the unsatisfactory trading conditions in the jute industry it is not surprising that there has been a reduction in the earnings of the jute companies for the half-year ended June, 1942. There has naturally been a reduction in dividends also.

The net profit of the *Kamarhatty Company, Limited,* before providing for taxation and depreciation, for the half-year ended June, 1942, is Rs. 12,91,146 against Rs. 20,92,647 for the previous half-year. The amount set aside to depreciation is Rs. 1 lakh (same) while the provision for taxation is appreciably lower at Rs. 8.5 lakhs against Rs. 15.5 lakhs. On account of the smaller provision for taxation there has been no proportionate decline in the dividend on the ordinary shares which is Rs. 15 per share against Rs. 17-8 per share. The amount carried forward is lower at Rs. 1,88,381 against Rs. 2,52,235 brought in.

Kanknarrah Company, Limited, for the same half-year, reports a decline in earnings, but it is not equally pronounced. The net profit, before providing for taxation and depreciation, is Rs. 13,31,160 against Rs. 19,50,617 for the previous half-year. The amount set aside to depreciation is Rs. 1 lakh (same) while the provision for taxation is Rs. 8.5 lakhs (Rs. 14 lakhs). The dividend on the ordinary shares is lower at Rs. 12-8 per share against Rs. 15 per share. The amount carried forward is lower at Rs. 1,41,976 against Rs. 1,65,816 brought in.

* * *

As the accounts of the *Bengal Jute Company, Limited,* relate to the latter half of 1941, the decline in earnings is not quite marked. The net profit, before providing for taxation and depreciation, is Rs. 5,62,768 against Rs. 6,06,426 for the previous half-year. The amount set aside to depreciation is Rs. 92,975 against Rs. 1,01,520 on the previous occasion. The amount set aside to taxation is Rs. 2.5 lakhs (same). The dividend has been maintained at 12 annas per share. The sum of Rs. 1 lakh against Rs. 50,000 has been transferred to General Reserve.

* * * *

At the annual general meeting of the shareholders of the *Tata Iron and Steel Company, Limited,* held on Friday last week, Mr. J. R. D. Tata clearly explained the policy of the directors in regard to the distribution of dividends and pointed out that the shareholders would prove to be the beneficiaries in the end. He referred also to the noteworthy part played by the Company in the country's war effort. With the losses to the company's properties as the result of the policy of "denial" completely covered by the war risks insurance scheme and with the production of new lines the shareholders have, therefore, nothing to regret.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 7.

THERE has been no appreciable change in prices on the Calcutta Stock Exchange during the past week though business passing has been on a considerably smaller scale. One would have expected that with the further deterioration in the Russian war situation and the anxiety regarding the internal political situation prices would have given way. This speaks again highly of the confidence of operators and investors alike in the future of values and the healthy technical position of the markets. Giltedged securities have remained quietly steady with the continuance of easy money conditions. Engineering shares have been rather quiet.

Business has been on a restricted scale in the giltedged securities section, but there has been very little change in values. Money is in plentiful supply and there has been a further decline in the average discount rate from nine annas per cent per annum to eight annas and six pies per cent per annum this week. 3½ per cent Paper is quoting Rs. 92-15 and 3 per cent Paper Rs. 80. Among terminable loans, 3 per cent 1963-65 were Rs. 93-11 and 3 per cent 1949-52 Rs. 100. 3½ per cent 1947-50 were crossed at Rs. 102-7, 4 per cent 1960-70 were dealt in at Rs. 108-9 and 4½ per cent 1955-60 at Rs. 112-4. Provincial loans are higher with 3 per cent 1952 issues at Rs. 98-8.

Fixed interest securities have remained steady with public bodies' debentures marked even slightly higher. 3¼ per cent *Howrah Bridge* loan were noted at Rs. 89-12, 4 per cent 1915-75 *Calcutta Port Trust* debentures at Rs. 96-8 and 5½ per cent *Calcutta Port Trust* debentures 1956-86 at Rs. 109-4. Among industrial debentures, 5¼ per cent *Rohtas Industries* were crossed at Rs. 104-8 and 5½ per cent *Dalmia Cement* debentures at Rs. 105.

First class preference shares also have been steady with *Anglo-India* at Rs. 150-8, *Bally* at Rs. 141, *Howrah "A"* preferences at Rs. 140 and *Reliance* at Rs. 151-8. *B. I. Corporation* were Rs. 178, *Steel Corporation* Rs. 113 and *Kumardhubi Engineering* Rs. 145.

Cotton shares have been listless with *Bengal-Nagpur* at Rs. 22-12, *Bowreah* at Rs. 309, *Kesoram* at Rs. 108 and *New Victoria* at Rs. 5-14. *Elgin* were Rs. 34-3 and *Cawnpore Textiles* Rs. 10-1 small lot.

The Coal section also has been uninteresting with *Burrakur* at Rs. 12-6, *Ghusick* and *Muslia* at Rs. 4-12 and *Talcher* at Rs. 2-6. *Amalgamated* were Rs. 25-6 ex-dividend.

In the Jute section, *Alexandra* were crossed at Rs. 182-8, *Auckland* at Rs. 157-8, *Gourepore* at Rs. 645, *India* at Rs. 340, *Kamarhatty* at Rs. 447-8. The fact that there have been so many cross transactions suggests that here is a pacuity of buyers and that sellers are attracting buyers by offering lower rates.

In the Engineering section, quotations have been fluctuating around last levels. Business is at a minimum. Both *Indian Iron* and *Steel Corporation* were quoted at Rs. 26-4 and Rs. 16-10 respectively. There was a slight rise in the quotation for *Indian Irons* to Rs. 26-10, but it has been only short-lived. *Britannia Engineering* were Rs. 11-9 cum-dividend and *Bhartia Electric Steel* Rs. 14-2. *Marshalls* were Rs. 2 and *Steel Products* Rs. 6.

Sugar shares have continued firm with *Balrampore* at Rs. 13-5, *Basti* at Rs. 325, *Murree Brewery* at Rs. 17-4, *New Savan* at Rs. 14-6 and *Ramnugger Cane* and *Sugar* at Rs. 10-12. *Samastipore Central* were Rs. 12-4.

Among Tea shares, there has been some enquiry for *Barduar Tea and Timber* with the quotation being marked upto Rs. 5-4. *Dimakusi* were Rs. 28, *Hansqua* Rs. 11, *Hasimara* Rs. 45-4, *Patrakola* Rs. 937-8 and *Tezpore* Rs. 98 cum-dividend.

In the Miscellaneous section, *B. I. Corporation* were Rs. 5-2, *British Ceylon Corporation* Rs. 5-13 and *Indian Cable* Rs. 23-1. *Walford Transport* were Re. 1-12 and *B. B. Petroleum* Re. 1-2. Paper shares were unchanged with *Orient Paper* at Rs. 21-3, *Shree Gopal Paper* at Rs. 16-14 and *Star Paper* at Rs. 15-14. *Titaghur Paper* were Rs. 19. After long a time *Dunlop Rubber* were recorded at Rs. 37. *New India Investment Corporation* were Rs. 54 and *Ruby General Insurance* Rs. 9-6. *United Flour* were Rs. 13-12.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, August 7.

THE Bombay Stock Exchange has been rather irregular during the past week. Earlier in the week, a slightly weaker tendency was noticeable and losses were recorded in almost all sections. Towards the close there was a rally and most of the losses had been regained.

The late recovery in prices is not quite understandable as there has been no change either in the internal political situation or the war situation. The strength of the markets is to be ascribed, perhaps, to the beginning of the new account and the encouraging remarks made by the Chairman at the annual general meeting of the Tata Iron and Steel Company, Limited.

Giltedged securities have been more or less unchanged with 3½ per cent Paper quoting Rs. 92-14. 2¾ per cent 1948-52 were Rs. 98-13, 3 per cent 1951-54 Rs. 100, 3½ per cent 1947-50 Rs. 102-6 and 4½ per cent 1955-60 Rs. 112-4.

Textile issues were irregular till Tuesday. On Wednesday there was a brighter sentiment and almost all the popular shares were quoted higher. It was at first feared that the manufacture of standard cloth on a large scale would cut into the profits of companies *Bombay Dyeing* were Rs. 1,302-8, *Central India* Rs. 370, *Century* Rs. 312-8, *Kohinoor* Rs. 503 and *Simplex* Rs. 203.

Steel issues are slightly better with deferreds quoting Rs. 1,510 and ordinaries Rs. 302. The quotations at the end of last week were Rs. 1,495 and Rs. 299 respectively. Mr. J. R. D. Tata, presiding at the annual general meeting of the shareholders held last week, was enthusiastic regarding the progress achieved by the Company in the last year and referred to the notable contribution to the war effort.

With the exception of *Tata Hydro* which are higher at Rs. 174, hydro-electric issues have been rather quiet. *Andhra Valley* were Rs. 1,612-8 and *Tata Power* Rs. 1,510.

In the Miscellaneous section, *Belapur* were Rs. 217, *Bombay Steam* Rs. 342-8, *Bombay Tramways* Rs. 131-12, *Scindia Steam* Rs. 20-14 and *Shivrajpur Syndicate* Rs. 46-8. *A.-C.-C.* were Rs. 168, *New India Insurance* Rs. 47-8 and *Tata Oil* Rs. 60. The Tata Oil Mills Company, Limited has increased the dividend for the year ended March, 1942 from one rupee per share to one rupee and annas eight per share.

KANKNARRAH COMPANY., LIMITED.

NOTICE is hereby given that the One Hundred and Nineteenth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 12 noon on Friday, 28th August, 1942 for the following purposes :—

(1) To receive the Directors' and the Managing Agents' Report and the Auditors' Report and to pass the Accounts for the half-year ended 30th June, 1942.

(2) To declare Dividends.

(3) To elect Auditors and to fix their remuneration.

(4) To transact any other business that may be brought before the meeting.

The Share Transfer Books of the Company will be closed from 14th August to 28th August, 1942, both days inclusive, and it is notified that dividend warrants will be issued and posted to registered shareholders only. Persons holding shares under blank transfer are advised to effect registration of scrip to their name as soon as possible, but not later than 13th August, 1942.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

4, Clive Row,
Calcutta,
31st July, 1942.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION, LTD.

Audited accounts for the year ended 31st March, 1942:—

In the year that has passed, the Company connected up 736, 829 and 416 new consumers respectively in the Trichy-Srirangam, East Tanjore and East Ramnad undertakings, bringing the total consumers connected to the mains to 9,137, 8,135 and 2,010, respectively, at the end of the year. It constructed 10 miles of H.T. and nearly 13 miles of L.T. lines during the period and now have a total H.T. line mileage of 633 and L.T. line mileage of 549. During the period under review supply was extended to the following places:—Melakalkkandarkottai, Arantangi, Ullikottai, Sembanur, Ayikudi, and Singampuneri. Supply of energy to a textile mill in the Pudukotah State is expected to be given in the coming year.

The directors add that there has been some serious curtailment of the revenues of electricity companies as a consequence of black-out regulations imposed in recent months. The actual effect of these on the Company's revenue has yet to be ascertained but there is no doubt that the effect will be marked. The Company is trying its best in these unsettled conditions, to adopt all possible measures for minimising the effect of his extraordinary situation. The directors have asked Government for no more and no less than the protection which every essential service and public utility is entitled to demand and receive from the State, and it is hoped that the Government will act expeditiously and give them some measure of relief to stave off the above-mentioned difficulties.

Intangible items amounting to Rs. 49,078 were completely written off, partly utilising Rs. 40,593 appropriated from last year's profits. No depreciation was allowed on the assets of the East Ramnad Electric licensed undertaking. In pursuance of a policy accepted by the Government of Madras and based on the views of authorities on public utility practice, the directors have not written off depreciation during the first three years of the working of the East Ramnad licence but propose to provide the usual depreciation from the coming year. They, therefore, deemed it prudent to augment the depreciation reserves by the addition of a sum of Rs. 25,000 from the profits available for distribution.

The accounts disclosed a balance of Rs. 2,37,798 available for appropriation, which was allocated as under:—To 2¾ per cent. tax-free final dividend on, the first preference shares for the half-year ended 31st March, 1942 Rs. 16,500, to 2¾ per cent. tax-free final dividend on the second preference shares for the half-year ended 31st March, 1942 Rs. 22,000, to 3¼ per cent. tax-free final dividend on the ordinary shares for the year ended 31st March, 1942 Rs. 84,503, to 5 per cent. remuneration to the managing agents Rs. 9,237, to reserve for charities Rs. 615, to general reserve fund bringing it up to Rs. 20,000, Rs. 1,204, to extra provision for depreciation Rs. 25,000, and to balance carried forward including reserve for income-tax Rs. 78,739.

Managing Agents.—Messrs. Seshasayee Bros., Ltd.

Synopsis of the balance sheet as at 31st March, 1942:—

KRISHNABEHARI TEA CO., LTD.

Audited accounts for the year ended 31st December, 1941:—

	Rs.	A.	P.
The accounts show a net profit on the year's working of .. .. .. after deducting all expenses including depreciation, income-tax, etc. To which has to be added the amount brought forward from last year	30,585	8	10
	1,066	8	5
Making a total of	31,652	1	3
Which is recommended to be dealt with as follows:—			
In payment of a dividend of 8 per cent per annum, free of income-tax on the paid-up capital of the company namely, 25,000 fully paid-up Ordinary shares of Rs. 10 each for the period from 1st January, 1941 to 31st December, 1941	20,000	0	0
Appropriation to General Reserve Account ..	10,000	0	0
To carry forward	1,652	1	3
Total ..	31,652	1	3

Area.—The planted area as at 31st December, 1941 was 185.64 acres.

Labour.—The total settled and busty labour force in the tea estate as at 31st December, 1941 was 497.

Building and Machineries.—A general and seasonal repairs with necessary alterations to all the buildings and houses were done during the year.

The machinery which was thoroughly overhauled early in the season ran excellently.

Estimates for the year 1942.—The estimated crop this year is 1,84,000 lbs. against 1,73,577 lbs. being the actual production in the year 1941.

The Regulation of Exports Scheme is in currency and it has been decided to continue the present scheme as it is for the duration of the war and two years after that. The Export Quota Release for the year 1942-43 has been declared to 125 per cent of the standard exports against 110 per cent during the year 1941-42. The Ministry of Food, London, has, as usual and on the same lines as last year, called for tenders through the Tea Controller for India, for a quantity up to or above 56.3 per cent of the best crop basis of the gardens willing to join the Government tender. The total requirement of the Ministry is about 260 million lbs. from North India leaving about 135 million pounds for outmarket.

The Export market this year chiefly depends upon the present war situation and freight position.

The internal market is expected to be very strong this year as the figures of standard exports have been declared to be 125 per cent and further it also depends upon the situation in India and crop of the year.

Managing Director.—Mr. Biharilal Lahoty.

Authorised Capital—Rs. 3,00,000 *in* 30,000 *shares of Rs.* 10 *each. Issued and Subscribed—Rs.* 2,50,000 *in* 25,000 *shares, fully paid up.*

61, Harrison Road,
Calcutta, the 21st July, 1942.

BENGAL JUTE MILL COMPANY, LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

For the half-year ended 31st December, 1941

Gentlemen,

	Rs	A.	P.
We beg to submit herewith the Balance Sheet and the Audited Statement of Accounts of your Company for the half-year ended 31st December, 1941, showing a Gross Profit of Rs. 6,79,068-7-6. After providing Rs. 92,974-11-2 for depreciation and Rs. 1,16,299-13-3 for Interest, Commission and allowance, there is an available balance at Credit of Profit and Loss Account of	4,69,793	15	1
To this should be added the amount brought forward from the previous half-year	37,914	12	6
Making a total of	5,07,708	11	7
It is proposed to set aside as Reserve for taxation (Income, Super and Excess Profit Taxes)	2,25,000	0	0
Leaving an available Balance of	2,82,708	11	7
We recommend that this should be dealt with as follows:—			
In paying a Dividend of 5½ per cent per annum, on Cumulative Preference Shares for the half-year ended 31st December, 1941 (free of Income-tax)	27,500	0	0
In paying a Dividend on the Ordinary Shares of As. 12 per share (i.e., 15 per cent per annum), free of Income-tax ..	1,12,500	0	0
Transfer to Reserve	1,00,000	0	0
To be carried forward to next half-year	42,708	11	7
Total ..	2,82,708	11	7

Mr. Jugmohan Prasad Goenka and Mr. S. N. Banerji Directors in terms of the Articles of Association of the Company retire this year from their Office on the Board of Directors and being eligible offer themselves for re-election.

Messrs. S. R. Batliboi & Co., Auditors of the Company retire this time and being eligible offer themselves for re-appointment.

During the period under Review, your Mills have worked in accordance with the working agreement of the Indian Jute Mills Association.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

All money market indices and indications stress and confirm continued plethoric conditions. Against Rs. 6 crores of tender treasury bills offered on August 11, application amounted to Rs. 11.12 crores. Though applications on this occasion were somewhat lower than in the last week, the average rate of accepted tenders records what must be considered a substantial decline from annas 8 and pies 6 percent per annum on August 11. We deliberately suggested that this decline must be considered substantial. For, last week's level of annas 8½ was already so low that a kind of natural resistance is set against any further setback. But the rate has been established this week below annas 8. All current omens presage the maintenance of the discount rate below annas 8 for some time to come.

The potential capacity of banks to subscribe for treasury bills remains exceptionally high in spite of total treasury bills outstanding in the hands of the public being nearly Rs. 85 crores. The deposits of member banks with the Reserve Bank were over Rs. 65 crores on August 7. The position of the Imperial Bank from this point of view is particularly interesting. There is a marked acceleration in the process of Imperial Bank's increasing deposits. In the week euded August 7, a high altitude of Rs. 141 crores was touched. Bank's investments show a decline of approximately Rs. 50 lakhs. In the result, the Bank's cash has expanded from Rs. 29.49 crores to Rs. 32.34 crores. With the deposits of scheduled banks at an unprecedently high level, and with the Imperial Bank commanding ample surplus cash resources, there is no fresh outlet for investment. For, the fact of the matter is that treasury bill maturities in August are about equal to sales of fresh bills on he basis of Rs. 6 crores per week. The Government should, therefore, be able to secure their three months' accommodation without any strain whatsoever and on the cheapest terms. Considering that the deposits of the Central Government with the Reserve Bank have declined rather sharply from Rs. 12.95 crores to Rs. 8.63 crores, it may be suggested that there is a strong case either for raising the weekly offer of tender bills to Rs. 8 crores or for commencing sales of tap bills.

The decline in the Central Treasury's deposits with the Reserve Bank has taken place in spite of a further instalment of payment by the British Government. While foreign balances held in the banking department have gone down from Rs. 80.64 crores to Rs. 76.06 crores, sterling securities in the issue department record a rise of Rs. 10 crores from Rs. 286.79 crores to Rs. 296.79 crores. The increase in the total sterling assets of the Reserve Bank is, therefore, Rs. 5½ crores. This is the amount that must have accrued to the Indian Government in the first week of August in respect of war orders and war commitments on the account of Britain. It will be recalled that a payment of Rs. 16 crores by the British Government was recorded in the week ended July 31. This means that payment with respect to the July settlement is of the order of Rs. 21½ crores. The Government of India's cash balance has, from this source, been reimbursed to the extent of Rs. 5½ crores. In spite of this, the deposits of the Central Government with the Reserve Bank have declined by Rs. 4¼ crores. This confirms the estimate that weekly disbursements by New Delhi are now over Rs. 10 crores.

Since July 10, and up to the end of the month, active note circulation in India remained more or less unchanged roundabout Rs. 450 crores. The week ended August 7 records a sharp jump to over Rs. 460 crores from Rs. 451 crores. This is due to currency expansion for Rs. 10 crores effected against sterling securities. Sterling securities in the issue department have risen from Rs. 286.79 crores to Rs. 296.79 crores. The other heads on the assets side show no material change.

The exchange market has been dull and quiet. Not much business passing.

The closing rates are: Banks buy T.T. London ready to six months forward at 1s. 5 31/32d.; and banks sell T.T. London ready to six months forward at 1s. 6 1/32d.

Banks sell three month D.A. bills at 1s. 6 9/32d., for the first and second months and at 1s. 6 5/16., for the third and fourth. months.

Money remains unchanged at ¼ percent, no borrowers.

Banks buy T.T. New York Ready at Rs. 329 for $100.

Banks sell T.T. New York Ready at Rs. 332¾ for $100.

Annual Contract Items Costing Over Rs. 5000 - & Below Rs. 8000 - Class I Co.

TENDER NOTICE

Sealed tenders are invited for the following and will be received in the Controller of Stores' Office, East Indian Railway, 105, Clive Street, Calcutta up to 11 A.M. on 1st Sept., 1942.

Tender No. S/SP/721 Gb8/Furn/C for the supply of Teakwood Benches, Sommodes and Table

Tender forms with full particulars can be had from the office of the Controller of Stores, East Indian Railway, Calcutta on payment of Rs. 2/- per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta may however remit the amount to the Controller of Stores direct by money order. No refund is permissible after payment.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 11th August, 1942. Total amount offered was Rs. 11,12,25,000 (Rupees 11 crores 12 lakhs 25 thousand). Tenders at Rs. 99-14-3 per cent were accepted in full, and those at Rs. 99-14-0 per cent were allotted approximately 61 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-7-11 per cent (Rupees nil annas seven and pies eleven per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 18th August, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 17th August, 1942 at other centres. Successful tenderers should make payment on Friday, the 21st August, 1942. Other conditions are as usual.

During the week ended the 7th August, 1942, Government of India Treasury Bills for Rs. 60,00,000 (Rupees 60 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday, Evening.

To the interpretation of events abroad, the London markets bestow little time. Everything is unchanged or nearly so. A good dividend announced by a big brewery is of more moment than one degree of longitude lost by the Russians. The Government takes its money week by week; the banks invest, and savings grow up. Quite recently there was a real orgy of saving in London alone and the wins on the financial front are bigger than any in the field. The clearest proof of confidence in the stability of gilt-edged, at the same time as Industrials and Rails have eased slightly in London, is suggestive. In terms of continued success of the 2½ percent bonds on sale it must be great. The volume of saving is sustained by a bigger income and very limited damage through enemy air action. The present tendency is to underrate the contribution of institutional or private or even the army of small savers. They have nothing to do with their money and idle money goes into giltedged. After the beginning of August clearing banks have reduced to some extent their deposits with the Bank of England. That was one reason why applications for £75 million in treasury bills last Friday exceeded £150 million. The Bank return of the 6th instant shows a small increase in bullion and a gain under public deposits. There is nothing else to claim notice.

The outflow of money to banks may lead to slacker money conditions. Last week again it was noted that call money could be had without difficulty and threefourths of the demand was satisfied. The suggestion that nothing can shake the money market for lending as usual finds support in experience. There is only good money and heavy overseas balances will be kept up. Short-term borrowing is simpler than ever for the Treasury and the easiest way to say that popular discontent or the Recess do not influence the market is to show that Government reduced takings of deposits from banks accentuate slack conditions. The difference as between Britain and India where the bullion market has behaved in an excited manner on anticipations of a political crisis should be significant. The swift closing of markets in Bombay is a sign of poor nerves. The silver market went up and cotton went down. The reason is not hard to find. The upper limit for silver remains at Rs. 85 per 100 tolas and Bombay has not pushed up the price of gold any more than Calcutta. Yet the majority of observers hope and trust that gold prices would go up as the offtake must increase in the wake of extensive disturbances. The best thing so far noticed is the absence of any panicky flight from the cities by men going off with gold or silver. No heavy withdrawals of cash from banks have coincided with the small rise in bullion and the market men are not impressed by the daily offtake until the last week. The present premium on gold coin is not unusual and the last four days have not produced any striking changes in bullion prices. The stoppage of gold mining or silver export in Australia by Government's deliberate action will not be overlooked in India where the advance in commodity prices must stimulate investment in precious metals. The outlook for bullion has definitely brightened this week after cotton prices etc., have dropped off. The biggest factor is the uncertainty produced by the disturbances in Bombay.

Certain facts about U. S. war production should be considered along with the story that a staggering total of over 215 billion dollars has been set aside for the war. In 25 months over 39 billions has been disbursed and of this 18.4 billions went for lease-lend supplies. Up to the end of June the disbursements, as distinct from appropriations for lease-lend, came to 4,098 millions; war plant expansion absorbed over 18½ billions and private enterprise for a variety of purposes put up 2,996 million dollars. Unemployment had dropped by 53 per cent in a previous year. The "labour reserve" at the end of June was 2.8 millions as against 5.61 millions in June a year ago and the cost of living had gone up by 15.8 per cent in two years. The picture of bigger production and bigger wages makes the rise in living costs unimportant. Early this year shopping was brisk and prices were rising. Controls were extended to check spending and keep down prices. Rationing came later. There is no shortage of goods except strategic materials. In the Middle West there is a big glut of wheat and this year's cotton crop promises to be bigger than expected. Wheat and cotton prices in the U.S.A. are bound to go down. The U.S.A. expects 900 million bushels in addition to the balance of 630 million bushels. Any reduction in Canada's crop seems unimportant. Export markets are mostly gone and the U.S.A. has plenty of wheat for a couple of years. America may not be ankle deep in the war, but she is getting together the resources and waits for victory. The swing from optimism to pessimism is characteristic of the States. The changes of sentiment there should not encourage doubts elsewhere. Ship and plane construction is still jumping. Giant flying-boats to take big loads are projected and U.S.A. has no manpower difficulty, once they stop being over-considerate to civilian industries. The total of women at work must be small compared with the 6½ million women called up for service in Britain during the war.

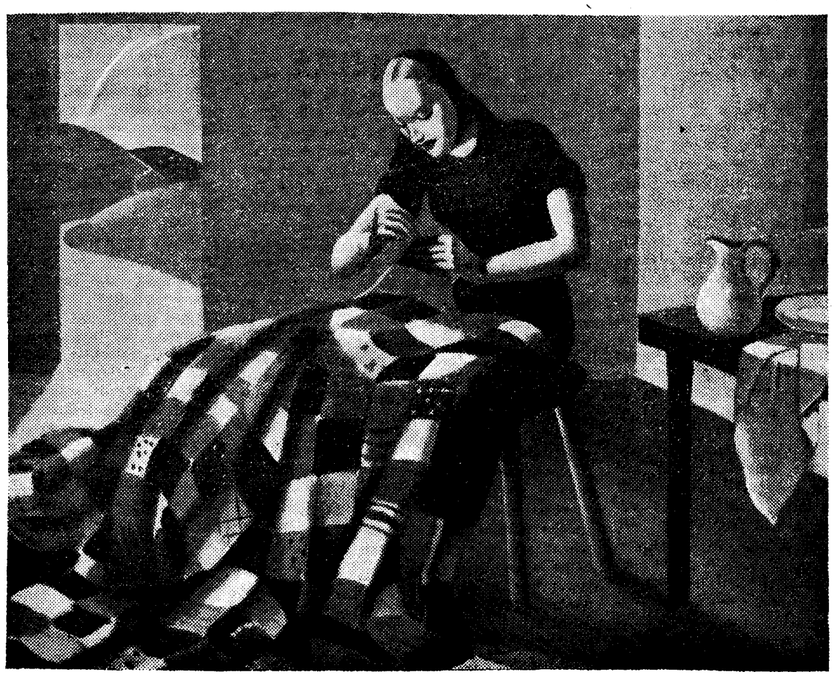
LLOYDS BANK LIMITED

(Incorporated in England.)

1677

For every class of Banking Business

The most interesting of recent developments is an assurance by the British Government that interest on Hongkong and Malayan debt would be met. For some months there was palpable anxiety. There has been a decision to make an *ex gratia* payment in respect of both Government and municipal securities. The interest is payable in respect of dollar securities. There has been no question as to the sterling stocks but only as to the dollar stocks. The assets of the Colonial Governments in Britain would be used for the purpose and payment of interest in sterling has been promised. Those in enemy-occupied territory naturally cannot obtain interest payable by the British Government in this case. The position of Chinese holders is improved. The Chinese will get a little more sterling and then dollar should be steady around 3d. It was recently stated that the dollar's value has been fixed at 5 U.S. cents or 3d. There is the usual position for exchange; but the quotation fixed indicates that in the last eight months, the Chinese dollar has not fallen. There cannot be any place for doubts as to the value of the dollar after the big loans given by the Allies. China's exchange is independent of oversea trade and nobody need make any calculations as to her silver stocks.



The latest agreement negotiated with the Belgian colony is in line with that of January 1941. Mr. Lyttelton has got a promise of Congo rubber. Cotton, coffee, tin and other materials are part of the wealth of the Congo which is also a producer of copper. The world's big copper belt lies on the fringe of the Congo and Rhodesia, and Katanga is its centre. Gold is not unimportant and the Congo takes sterling for its surplus of exports. In reality it is a loan not a payments agreement that has been made by the Belgian ministers. The Congo's Governor-General has visited Cape Town and established a connection with Colonies and protectorates including the Free French territories.

The return of British stars from the States is likely to reduce dollar receipts but Hollywood, after the war broke out, has shed its prosperity and the stars may be really eager to return. Sir A. Korda and his wife have been among the first to announce a desire to get back. The film stars were encouraged to stay on in wartime, earn and save, run relief committees and help to produce American pictures. As the film industry in California declines, the contracts are not renewed, and immigrant talent goes back. The press reports lay the accent on glamour, but the plain fact is that the picture business is not doing well and home-grown talent is plentiful. Native stars have gone off for national service, though each star might easily think he will never get rich, with the draft at work.

Towards the end of July appeared notificaions designed to tighten exchange control so that proceeds of goods sold came to India in time and were not diverted. The Defence Rules have been amended further to prohibit transfers of securities to persons outside the sterling area in return for a security registered outside the sterling area. Exception is made where a British Indian resident has

(*Continued on page* 291)

Aspects of an Industry No. 1

ALL THE COLOURS OF THE RAINBOW

A *PHRASE* used every day. Yet if you study the rainbow, you will find in it only seven colours, the colours of the spectrum — violet, indigo, blue, green, yellow, orange and red. The British dyestuffs chemist provides a far greater number. Colour, in the form of dyestuffs, enters into almost everything we wear, use or even eat in the course of our daily lives. The dyestuffs industry — purely British in origin, since it owes its birth to the discoveries of W. H. Perkin and A. G. Green between 1856 and 1897 — to-day produces an enormous range of colours. By judicious blending the modern dyer multiplies these a thousandfold. This astonishing array of colours is necessary because fashion demands an infinite variety of shades, and each class of material its peculiar type of dyestuff. To-day the British dyestuffs industry is the most modern and up-to-date in the world. Its swiftest and most spectacular development took place between 1919 and 1939. During this period a high percentage of the major discoveries in dyestuffs were made by British chemists. Chief among these successes are Caledon Jade Green, a vat dyestuff of excellent fastness; Monastral Fast Blue, the first new blue pigment to be developed for 100 years; the Duranol and Dispersol dyestuffs, developed specially for the dyeing of acetate rayon; and the Solacet range. In peacetime the British dyestuffs industry employed as many as 130 full-time research chemists. Since the War, it has been working flat-out to meet expanding demand at home and abroad. To-day, it is being rapidly and greatly developed so as to be able to supply the peculiar needs of dyers and finishers all over the world.

Wholesale Prices and Costs of Living

Rising prices and increasing costs of living were not perhaps much of a problem till November, 1941. Since the outbreak of the war the trend has been rather upward as it should be, and as it has been in other countries. But till May, 1941 the movement was rather gradual and it were possible for the industrial worker and ryot to adjust the family budget and not grudge to meet the higher level of expenditure, on account of the larger income, thanks to the increase in wages on the part of the worker and the increased income of the ryot with the higher prices for his produce and larger demand.

During the last one year and more particularly during the last six months, prices and costs have increased abruptly. Various factors have been responsible for the rise in wholesale prices but the measure of increase in prices and incidentally the rise in cost of living, have come in for a good deal of criticism. Developments in the war situation are, of course, to be wholly blamed but the duty of the Government is to keep the situation as far as possible under control and prevent an inflationary rise in prices and costs of living as it will do ultimately great harm to the country.

Whether the rise in prices has been due to inflation or whether the measures regarding price control have been ineffective or whether the difficulties have been due to ineffective distribution and the lack of proper transport facilities or due to a combination of all factors, it is not our purpose here to examine the question, which should form the subject of a separate article. We only point out here that there has been an uneven rise in prices in recent months and that if the present conditions are allowed to continue, considerable difficulties will be experienced. Another important aspect of the question is the rather pronounced difference in wholesale prices and costs of living between different centres within the country and the difficulties in administration and control on account of such a divergence.

Thus, for instance, between Calcutta and Bombay the difference in wholesale prices is as much as 35 points. Till September 1941, the index for wholesale prices in Bombay was rather behind the index for wholesale prices in Calcutta. In that month the Index figure for Bombay was 145 and Calcutta 149. Even during the three months May, June and July, there was a sharp rise with the activity in the commodity markets and the freezing of Japanese assets in India. The fears regarding Japanese entry into the war pushed up prices in November and since then the Index figure for Bombay has been recording a jump every month. From 152 in October 1941 the index for wholesale prices in Bombay has improved to 204 in May 1942 or an increase of 52 points or 34.2 per cent. In the same period, the index for Calcutta has improved from 151 to 169 or an increase of 18 points or 11.9 per cent. The absence of any sharp increase in prices in Calcutta is perhaps due to the fact that the index is more broadly based, 72 items being included against 40 in Bombay, the base years being the same. However, such a great discrepancy cannot be satisfactorily explained.

Working class costs of living index naturally reveals a pronounced increase in the eight months ending May, 1942. In Bombay, costs were getting stabilised in September 1941. There was even a slight decrease but since October 1941 there is a rise of 17 points to 142 in May 1942 or 12 per cent. Unfortunately, there is no cost of living index for Calcutta and as such, it is not possible to effect a comparison between the cost of living in the two centres. It can, however, be said that having regard to the lower level of wholesale prices in Calcutta costs must be lower and for that reason workers are entitled to a smaller amount of dearness allowance than in Bombay and elsewhere. But in the absence of any reliable basis for comparison there should naturally be discontent with the attitude of employers towards labour in this part of the country. Millowners in Bombay have been rather liberal in this respect.

From the table given below it will be seen that the increase in the costs of living is most pronounced in the cities in the interior. The arguments against the framing of an All-India working class cost of living index are the relative cheapness of particular commodities in particular places, the different standards of living and the difficulty in allowing for differences in costs on account of transport charges, etc. Reliable indices of wholesale prices and costs of living should, therefore, be prepared for the important centres and a sliding scale of allowances granted to workers. Otherwise, any increase in basic salaries and any sharp difference in allowances between the respective centres are bound to have a degenerating effect on labour.

WORKING CLASS COST OF LIVING INDEX

*Base: July, 1934: 100.

For the remaining centres index numbers are expressed as percentages of the corresponding averages for 1935.

Apart from the need for avoiding any great discrepancy between different centres and proper adjustment in the costs of living, the more important aspect of the question is to prevent any further sharp rise in living costs. Since the beginning of the war, the increase in the costs of living is 43.4 per cent while in the United Kingdom it is only 20.6 per cent. It has to be remembered in this connection that the latter country is more dependent for raw materials and foodstuffs on other countries.

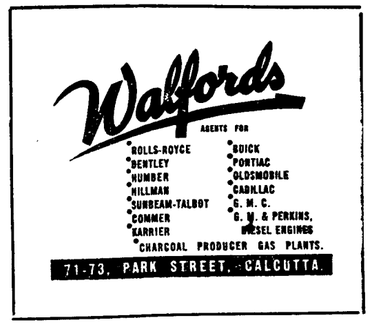
CO-OPERATIVE BANKS IN INDIA

To the existing publications of the Reserve Bank has been added the statistical abstract of the co-operative movement in India. The tables were formerly compiled by the Department of Commercial Intelligence and Statistics, but it is the Agricultural Credit Department which reviews the work of the co-operative movement in India—the first review appeared in December last—so that it is only appropriate that the statistics are also being collected by the same agency and issued in the former way. The tabular statements are moulded to a familiar pattern but the year covered is 1940-41. As the co-operative department's year ends on June 30, the report is just a year old.

The statistical progress of the co-operative movement as a whole is impressive. In the year 1939-40 there were 118,744 agricultural societies; in the next year the total was 123,723. Membership in the aggregate went up from 4,098,000 to 4,341,000 and the working capital was slightly larger. The usual cartogram which shows that there was no such thing as co-operation in 1906-07 also shows that the movement has grown despite difficulties in recent years. The total number of societies in 1940-41 is known to be 142,512 as against an average of 116.960 in the quinquennium 1935-39. The largest number of societies in relation to population is claimed by Coorg with Ajmer-Merwara second. This must not blind one to the fact that the Provinces of Bengal and the Punjab had most societies, and in respect of societies per 100.000 inhabitants, the Punjab reporting 91.8 societies makes a better showing than any other Province.

British India with its total of 124.237 societies is a long way ahead of the nine Indian States which reported 18,275 societies though the average number of societies in them per lakh of population might suggest that there is something like equality. One must study the tables in detail to grasp the essential fact that cooperation is more or less a hot-house growth in the States. The working capital like the share capital etc., was much smaller, according to the returns for 1940-41, and of the total of Rs. 1,09,326.000 held by cooperative banks as reported in 1940-41 the share of the states of Mysore, Baroda, Hyderabad, Bhopal, Gwalior, Indore, Kashmir, Travancore and Cochin was Rs. 10,84,86.000. The limited progress in the States is indicated also by the fact that the total membership in the nine states with a population of 41.2 million was 771.410 while the total for British India with 289 million was over 5.6 million.

The preface to the statistical tables states that no figures are furnished for Baluchistan since the movement has not made any headway there. Perhaps the Co-operative Societies Act like so many enactments does not apply to Baluchistan. Since the note mentions it, one is prepared for the absence of figures relating to the Commissioner's province of Baluchistan. But there is no mention at all of what sort of progress has been made in the Chief Commissioner's province of the Andaman and Nicobar Islands. The maps prepared in order to show the distribution of banks and societies find no place for the Province though figures are available as to the number of societies, funds etc., in Hyderabad Administered Areas. One may be content to believe that the figures are withheld in order to prevent the enemy knowing anything special about the only British Indian Province (conquered in March) but the public would have been greatly interested to know whether co-operation had taken root in the soil of the Andamans. In the matters such as control of accounts and collection of dues, conditions must be presumed to be exceptionally favourable in a penal settlement at all times and one might be tempted to ask whether any attempt was made to interest the aborigines in co-operation. The co-operative map referred to, indicates, that banks with capital and reserve of Rs. 1,00,000 and over are unevenly distributed; Bombay and Bengal appear to have many more than other Provinces. The U.P. still lacks an apex bank of the type recommended by the Maclagan Committee. There seems to be no central bank development in Assam, where the total was only nineteen nor in Orissa where the total was only fifteen.



The statistical abstract might well be employed to demonstrate that the co-operative movement does not exist outside Madras, Bengal and the Punjab. The last two claimed 121 central banks each in addition to the apex banks. In regard to finances, the Bombay Provincial Co-operative Bank is apparently the most flourishing receiving over Rs. 9.4 crores in loans and deposits from others than co-operative banks or societies. The statement relating to the operations of provincial and central banks may be said to illustrate the somewhat uneven progress made by the movement in regard to loans, deposits and recoveries. The total number of banks during the year 1940-41 was 611 against 610 and the working capital was Rs. 43.22 crores against Rs. 42.63 crores in the preceding year. In a year in which the joint-stock banks in India made striking progress, the co-operative banks made little headway. The explanation is provided in the statistical tables. Apart from the fact that co-operative banks seem to be most thickly strewn in Bengal and the Punjab, while land mortgage banks appear to be most numerous in Madras, there is no fusion of inter-provincial interests. Ajmer-Merwara appears from the map to be an oasis in the desert of Rajputana and, singularly, little progress appears to have been made in the Punjab in regard to mortgage banks. Something must be said here of the expansion in capital and reserves reported by provincial and central banks in 1940-41. As compared with 1939-40, there was a limited increase in the deposits held by provincial banks, and hardly any increase in the deposits over a year lodged with the central banks the aggregate profits of both groups are lower in comparison with 1939-40. At least three provincial banks passed their dividend. Some of the central banks in C.P. and Berar were in a bad way, which is why a loss is shown in respect of the banks as a class.

The rates of interest paid and charged by co-operative banks invite special examination. In an era of cheap money, they could not extend credit except on onerous terms. That is a handicap at all lines. Even in Bengal, the provincial bank lent usually on 5 percent while its depositors received 3¼ percent on an average. The central banks in Bihar lent out at 10½ percent and in the U. P. at 9 percent. Most significant is the spread between the rates paid on deposits. The central banks in Bihar took money on an average at 5 percent and advanced at 10½ percent. In the U.P. loans were taken at 4 percent and made at 9 percent; in Assam loans were usually taken at 4 to 6 percent and made at 9 3/8 percent. Only in Madras was the spread reasonable, as the average rate for deposits was 3½ percent and that for loans was 5½ percent. In the Punjab again, central banks usually charged 7½ percent and in Bombay where deposits were attracted at 1½ percent, these banks charged as much as 5½ percent. These variations may have little consequence for the general structure of interest rates in this country, but one seems justified in pointing out here that the cooperative movement has attracted little fresh capital. Even though its institutions might have added to reserves, its working capital hardly grew at the same rate as that of commercial banks. And the usurious rates of interest charged clearly limited their usefulness. Of the provincial banks, all except the Assam Bank would at present fall within the definition of scheduled banks. Working capital was largest in the case of Bengal, where it may be mentioned in passing the Provincial Cooperative Bank has the largest capital and reserves of any provincial cooperative bank. The Bengal Cooperative Bank was able to get over Rs. 1.4 crores in deposits from individuals and other sources. The variations in interest rates obtaining in 1940-41 in the States are of little interest except perhaps to prove that high rates of interest go with limited credit facilities rather than singular productivity of capital. It is noteworthy that high rates do not produce bigger profits for the banks concerned. In Bombay, the profit for 1940-41 was less than in Sind though the average rate on loans in Bombay was 6 percent as compared with 3 to 8 percent charged in Sind.

No striking conclusions can be reached. That is the difficulty occasioned by a study of the tables. It is, however, possible to state that, compared with the scheduled banks, the co-operative banks in India have not as yet been able to stimulate saving or promote investment in war loans. Their scope and character are still influenced by the errors of past policy. Since the tables do not indicate the proportion of cash to liabilities or the ratio of advances to total deposits or of investments to deposits or even how much of the assets are frozen, little can be said as to the way the cooperative banks were pulling out in 1940-41. The preceding years were not exactly kind and plans for reform and reorganisation were common as leaves in the autumn. The position appears to have undergone little change in 1940-41. Such a conclusion would not reflect on their age and standing but merely indicate that their chances of progressing at the same rate as the commercial banks are too few to merit attention. The fall of Rs. 10 crores shown in the aggregate deposits received from individuals and others by the eight provincial banks in 1940-41 is scarcely offset by the increase in deposits from central banks and societies as also the higher total of loans returned in the year. While the increase may argue a more liquid position in the case of the latter the provincial banks' resources were clearly reduced by the reduction in loans and deposits. The decline is partly attributable to the critical circumstances of 1940 and partly to the banks' connection with the Government. A similar, if smaller reduction, in the loans taken from individuals and others indicates how the banks have lost funds in the war period. The tendency seems to operate in the States as well and the Reserve Bank's own comments on the developments of 1940-41 will therefore be awaited with interest.

Editorial Notes

Strikes In India

The last available statement as to trade disputes relates to the quarter ended September 30, 1941. The trade disputes of the period include the Coimbatore Mills strike in which 11,012 workers were involved and 179,725 days were lost. The textile strike in Cawnpore entailed the loss of 206,321 days since 23,550 workers were involved. In spite of these two big disputes, and the Ajmer workshop strike, the largest number of days lost was reported by Bengal where 22 disputes were reported and 281,705 days were lost. The statistics of the quarter show that the largest number of days lost was in Madras while the largest number of men involved was in Bengal. In Ajmer again 7,983 men were involved and 124.303 days were lost but in Delhi the two disputes involving 2,200 people did not lead to the loss of more than 10,600. Though Bombay alone reported 24 disputes out of 78 in the quarter the number of people involved was much lower than in Bengal. The majority of disputes turned on wages. Only five arose out of the differences connected with bonus and four in respect of leave and hours.

The analysis of disputes indicates that the biggest sufferer was the textile industry because 34 disputes involving 61,443 workers were reported by cotton, silk and woollen mills while three trade disputes arose in the jute industry. The engineering industry had a quiet period as three disputes involving 309 workers and resulting in the loss of 1.449 days were reported. The mining industry also reported a peaceful quarter and the single strike was an unsuccessful one. As many as 72 out of 78 strikes were settled within the quarter. Workers gained their ends in 17 cases and failed in as many as 31 strikes. The statistics of the past year have no meaning except to indicate that no troublous period lies ahead of organised industry since a standing advisory committee to discuss labour questions has been promised by the new Member for Labour. The Bombay mill industry has suggested the name of Sir V.N. Chandavarkar for the advisory panel. The process of continuous adjustment, envisaged by the recent conference promises a reduction in friction. though the most important factor will be an effective check on the cost of living.

In the succeeding quarter the number of disputes rose as 106 disputes involving the loss of 734.838 days were reported. The total number of men involved was 102,825 so that in regard to days lost and workers affected, the final quarter was better. As many as 33 disputes arose in cotton and other mills, and ten in jute mills. The majority of disputes were due to differences over wages, but only 18 were successful. and 29 were partially successful. Of the disputes reported five had not terminated at the turn of the year, but 101 had been settled.

Reciprocity And Relief

In the annual report of the Indian insurance companies in regard to deposits etc. under the Baroda Insurance Act, companies domiciled elsewhere and registered in British India are exempt from Sections 7 and 98 which refer to the payment of deposits. British Indian Companies are required to keep fortyfive percent of the amount of their liabilities to holders of policies in Baroda State on account of matured claims and the amount required to meet the liabilities on policies of life insurance maturing for payment in the State and within their surrender value in the manner following. Twentyfive percent of the said sum in Government securities, and a further sum equal to not less than 25 percent of the said sum in Government or other approved securities or in securities guaranteed as to principal and interest by the Government of the U.K. The Act also provides that deposits lodged by companies already working in Baroda should be taken into account (in the same way as loans on policies) towards the amount of assets to be invested in the State. The Mysore Government issued last year two notifications granting concessions to British Indian Companies. Securities issued by the Government of India are accepted as approved securities under the Mysore Insurance Act and insurers not incorporated in Mysore have been exempted from the provisions of Sections 7 and 98 which refer to deposits. Concessions have also been secured in regard to Section 27 of the Act. The Travancore State requires a registration certificate from every company which carries on business in the State. The Government has reduced the deposit for every class of insurance business by virtue of its powers under Section 116 of the local Act and insurers can pay the deposits by four instalments. Indian companies have to pay Rs. 50.000 as deposits for carrying on life business; Rs. 10,000 for fire; Rs. 10.000 for marine; Rs. 10,000 for accident and for life and any other branch the deposit is Rs. 60,000 while the deposit for life and any other two branches is Rs. 70.000. The deposit required for all classes of insurers other than life is Rs. 20.000. The Act has been amended to extend reciprocity in respect of half a dozen sections besides Sections 7 and 98. The Kashmir State is said to have informed the Association that negotiations concerning the grant of reciprocity are going on. British Indian companies are likely get relief as regards payment of deposits under the Insurance Act passed by the Jammu and Kashmir States. The companies were informed by the Holkar's Government that the legislation proposed in Indore would take note of amendments effected in India. There is a likelihood of British Indian offices getting the relief obtained in other States. The report makes reference to legislation in Goa. The Portugese Indian Government demands as from 1941 an annual fee of Rs. 200 from foreign companies and the agents have to pay Rs. 6 every year. Companies must be authorised to do business by the Portugese Indian Government which declined to modify its regulations. Reference is made to the Ordinance in Kenya meant to control insurance business in Native Areas. The Ordinance defines Native Areas as including temporary reserves and leasehold areas. It requires that companies doing life business should deposit £10.000 in cash or securities. Permits have to be obtained by all insurance agents from the Commissioner, and no proposal from any native can be taken unless it is attested by the District Commissioner.

Comforting Contrast

The cuts in rations makes the British Government rely to an increasing extent on the farmer at home. This year imports have been deliberately reduced to save shipping space but the decision to cut imports was largely based on the ability of British agriculture to produce more. Mr. R. S. Hudson declined to make any crop forecast, but announced that British agriculture was helping in the situation caused by acute shortage of shipping. According to a recent report received by the Associated Chambers the Minister for Agriculture and Fisheries declared that Britain is producing more than two-thirds of the food consumed in Britain. That is most encouraging from the point of the authoritative estimate that Britain by herself can produce only 60 percent of her food supplies. Mr. Hudson also revealed that milk production keeps rising. In the first half of 1942 in spite of an unfavourable spring the milk output was 10 million gallons more than that secured in the first half of 1941 and 13 million gallons more than that obtained in 1940. The total output of British agriculture in the last two years was above the scheduled figures. Our agriculture, said Mr. Hudson, had attained and exceeded the goal set, in spite of definite limitations in our resources. Mr. Hudson felt confident that there are still large fields for further increases in production. Flax-growing has spread. It is described as an important contribution to war effort. In addition to the foods

farmers are producing fibre, and a recent report spoke of the development of the self-propelled mechanised puller in mechanising this reviving industry. Compared with this promising position Germany's crop prospects look alarming. Last month Herr Backe called the harvest of 1942 the most crucial one for 25 years. In the winter six million acres under crops had been destroyed. Peasants have been ordered to deliver up hidden stocks. The farmers are now under the eye of the Gestapo. Fruit trees in Germany have been killed off by the serve winter of 1941-42. In adjacent Denmark, the wheat crop has been reduced by 16 percent and the rye crop by 15 percent. A correspondent in a London paper quoted last month a Norwegian writer to indicate that there would be a famine in Norway in the coming winter as that country will be short of herrings and potatoes which have been taken away by the Nazis. In France too farm labour is scarce though crops are good.

Government as Buyer

The answer to much anxious propaganda as regards civil supplies in Bombay has been provided by the Rice Merchants Association in a recent statement detailing the defects in the system of fixed prices and conditions of inadequate transport. There is no conflict of interest, claims the Association, which further states that the schedule of prices ber bag should be revised. Both Burma and Bengal rice, particularly of superior types, should be sold at much higher rates in view of enhanced transport charges. The higher valuation placed elsewhere may support arguments in Bengal in favour of higher prices. The system of price fixation is incomplete in Bombay as in Bengal. No rates have been determined for higher grades of rice. Stocks cannot be disposed of or added to, and the Bombay merchants have urged that after the freezing order relating to stocks, their own stocks have diminished. In the course of July over one lakh of bags have been sold, and Government rather than the trade is benefiting by imports from Madras. The Government's independent purchase and holding of stocks is now viewed as a big factor in the rise in prices and the delayed movement of supplies. There may be no intention to profiteer, but the immediate result is the same in Bombay as in Bengal.

The distribution of local surpluses by purchase and sale through Government agency is not ancillary to price control. Promise of relief has come, but the trade itself in Bombay has no chance to add to its reduced stocks, and Government's policy of building up stocks for an emergency has created a misunderstanding about the wholesale merchants' attitude. The retail trader felt aggrieved like the consumer. The real source of trouble is wagon shortage; and until outside supplies come, the Bombay Government must assume the role of main supplier. The recent disturbances and the looting of grain shops will throw on the Government the responsibility not only for provisioning the city but for providing permits to retailers to take supplies from merchants. The amount of paper control imposed seems excessive to the trade which finds that Government is a competitive buyer elsewhere and is taking advantage of its position to procure wagons and deny wagons to the trade. The tangle in Bombay again suggests that the less the Provincial governments interfere with distribution, and the more they use recognised trade channels, there will be less ground for complaint. Since Bombay depends on imports, largely from Madras, the natural effect must be to take up Madras prices to the Bombay level at some time or other. The West Coast of Madras has also got to import rice, the pressure on exporting centres and railway transport as well in Madras must be great. The Bombay Merchants Association has put up the arguments that quality must be paid for, that Government cannot keep its reserve back when trade stocks have fallen, and that help must be given to retailers by a simple procedure. The arguments and appeals used in this connection must be treated as having wider application. They can be held to apply to sugar, fuel oil or any article of which the Government is a buyer for stock. If the latter process leads to a rise in prices, stocks must be broken up, and price control made easier. Price control cannot succeed when ordinary supplies cannot be made available largely because the Government has started to buy and left the trade no chance to take up its own supplies.

Canada's Production

Canada's production has risen to the point that five millions are in employment. According to a survey of Canada's contribution made by Mr. C. D. Howe recenty Canada has taken great strides. The total of five millions at work is significant of the remarkable effort made in the Dominion. Mr. Howe called the manpower position tight for a country with a population of less than 12 millions. He declared that 1,300,000 persons were already in the armed services or war industry and 1,350,000 persons were engaged in agriculture. As many as two million persons were employed in civilian industries and 300,000 were engaged in essential utility services and mining. Mr. Howe's estimate of those engaged in war production alone was 800,000. This implies that the armed forces claim fully half a million. Mr. Howe expressed a hope that half a million could be taken out of civilian industry to the defence forces and in order to increase war-production. Mr. Howe expected that by the end of the year, there would be an increase in the number of munitions workers, and the total of war workers when the expansion programme had been completed would be nearly a million.

Women in Canada have already been diverted to industry. In war plants alone, 120,000 women were employed and the aircraft industry had taken 50,000 women as compared with an average of 1,000 in pre-war years. The number of women in the ship-building, chemical and explosives and tank and mechanical transport industries was already large according to Mr. Howe. The "free" reserve of labour consisted of married women, retired persons and people not working but living at home. The reserve was small, and Canada has had to draw out men for essential work from civilian industry. A selective programme by which non-essential industries would be closed down to release employees was announced by Mr. Eliot Little. Another method adopted to increase war workers is the national registration of unemployed females. The two combined will add thousands and make Canadian war output, particularly, in the aircraft and ship-building field reach new records.

Turkish Neutrality

To the statement of neutrality made last week by M. Sarojoglu, one must invite special attention since war is creeping towards the Russo-Turkish frontier. Turkey may have no desire to acquire Kars on any terms but the enemy is establishing himself in Ciscaucasia and Turkey's fuel problem will necessarily become acute. One might imagine that the present emphasis on independence arose rather from the attempts of Bulgaria to magnify a local incident than from any pressure on the part of Berlin. Turkey is bound by pacts; she is going to adhere to all of them by the simplest method—of sticking to neutrality. The belligerents have been told that nothing more than neutrality can be expected. The Allies clearly have no reason to doubt Turkey's goodwill but the Germans are dominant in the Black Sea. Should Galatz on the Danube become a big submarine base, the Turks will not feel less anxious than now. The Turks may be, on quite good terms with Russia and not at all partial to the Nazis but the Soviet fleet, except for a stray attack on a German occupied port, seems unable to do anything in the Black Sea.

Turkey's firm declaration of neutrality imports a desire to make nothing out of others' difficulties. Since the southern campaign of the Nazis will be on the other side of the Caucasus, the Turks have a chance to recover lost territories of the Ottoman Empire including Armenia. But Turkey has no ambitions, only principles, and M. Sarajoglu upheld the Kemalist faith in disclaiming an adventurous policy. Turkey is friendly to every friendly power. The Cabinet clings to Dr. Saydam's policy of no commitments, but is at the same time ready to extend defence preparations. Since the Allies may have their own views as to the control of the Straits, Turkey's attitude is of great interest. If the whole of Southern Russia is conquered as seems likely the Germans may attempt to pass out of the Black Sea. If the Allies are anxious to ease the position in as Caucasia naval action in the Black Sea may be viewed as likely. In either event, Turkey's consent is required. But a declaration of complete and strict neutrality implies that Turkey will not consent and M. Sarajoglu's appeal to his people to stand by the Government was in a measure, designed to allay local alarm produced by the German advance in Russia and possible counter-attack. Since Turkey controls the southern coast of the Black Sea, the German descent from Rostov can provoke no anxiety, except as to oil, but Turkey has every chance of getting more out of the Middle East as Anglo-Turkish trade is expanding. The Turks have few anxieties as regards supplies and the new port of Alexandretta gives them a link with the Mediterranean. So far German advance has made no impression on Turkey's Government which remains watchful, though not hopeful. Should Iran be menaced by an advance to the Caspian as seems likely, the Turks may find it less easy to draw supplies by way of Basra as in the past, but a shrinkage of trade is no real threat to neutrality; and it might be argued that Nazi successes in South Russia actually promote Turkish security. If the Nazis can reach Astrakhan along the Rostov-Petrovsk route, and take a quick turn in the middle towards Stavropol before or after taking Stalingrad, Turkey would have no reason to apprehend German action through Turkish territory against oilfields. Turkey has ceased to be an extension of the Balkans. She is now part of Asia and hence out of the European struggle. That fact must strengthen present faith in her ability to maintain neutrality.

Essential Services

The maintenance of essential services in an emergency has been the subject of an Ordinance issued last year. Its enforcement has not been immediate or uniform this year, and there has been recently an amendment of the Ordinance. The main chage is an addition in subsection 1 of Section 4 of the words "In respect of any employment under the Crown the Government under which the person or persons concerned are employed or an officer authorised in this behalf by that Government." Two explanations have been added to Section 5. One runs thus: "The fact that a person apprehends that by his continuing in his employment, he will be exposed to increased physical danger is not a reasonable excuse within the meaning of clause b." The other states: "A person abandons his employment within the meaning of clause b who, notwithstading that it is an express or implied term of his contract of employment that he may terminate his employment on giving notice to his employer of his intention to do so terminates his employment without the previous consent of his employer. The other amendments are the omission in subsection 1 of Section 6 of the words "with the previous sanction of

Organisations: All over India and the East.

the Central Government and the addition to Section 1 of a new subsection making an offence under the Ordinance cognisable.

The ordinance was intended to secure continuous and adequate discharge of certain services. The amendments strengthen the position of the authorities. The Goverment of Bengal under the Rules made in connection with the Ordinance apply the Ordinance to the whole of Bengal. The Labour Commissioner is empowered to issue directions as regards wages or service conditions of people who fall within the scope of the Ordinance. The only conditions laid down are that directions issued by the Labour Commissioner regulating wages etc. shall not be given save after a summary enquiry in which the views of both employers and workers are considered; also that a direction raising or lowering wages or allowances by more than 20 per cent shall not be issued without the previous sanction of the Provincial Government. The last proviso applies also to any direction specifying conditions under which service of men in essential services may be terminated. The Labour Commissioner is also authorised to act as a court and examine on oath any person, compel the production of documents and issue commissions to examine witnesses. The Rules issued not long ago make it possible for the Labour Commissioner to arrest any withdrawal from employment by enquiry at any stage and ensure the continuance of services essential for the public safety; the maintenance of public order or the maintenance of services and supplies necessary for the life of the community or the efficient prosecution of the war. The word essential is to be interpreted widely, and the Bengal Government has independently provided against stoppage in industry while employers through their associations have indicated last week again that they are ready to defend the workers' interests in a time of public disturbance in many ways.

A WAR-TIME DIAMOND JUBILEE

Sixty years have elapsed since our first paper mill was opened in India.

The anxious times we live in prohibit celebrating this Diamond jubilee in a manner which would have been befitting the occasion in peacetime. Nevertheless, we of the Titaghur Paper Mills are justly proud to-day of our achievement.

The production of pulp and paper in this country has established an indigenous industry of paramount vaule in our present hour of need.

We are conscious of a deep sense of gratitude to the loyal customers whose co-operation through difficult years made it possible for us to realize our ambition.

Just now our main resources are engaged in war-work, and whereas we appreciate our loyal customers, we regret we cannot supply their requirements in full nor can we increase their number at present.

We dedicate this Diamond Jubilee to the future of both India and the Titaghur Paper Mills.

SIXTY YEARS A PAPER MILL COMPANY
1882—1942.

ISSUED BY THE TITAGHUR PAPER MILLS CO., LTD.

Prices in the War Period.

The study of prices in the war perio should receive added encouragemen from the latest decision to extend an strengthen price control. To this stud the most direct and helpful contributio has been already made by the construc tion of a special series of index number which will hereafter be published in th Monthly survey of business condition The index referred to starts with the wee ended August 19, 1939. The prewar bas helps one to determine how much comm dity prices were influenced by the wa until December 31, 1941. The exclusion o most manufactured goods is understanc able, but hessian properly finds a plac along with cotton piecegoods (for whic articles fall into four groups). Copra an tobacco are taken along with other agri cultural products. The monthly inde shows a rise of 29 points in regard to copr at Cochin. The peak as in many case was touched in December, 1939. The ris in the case of tea was severely limited u to December, 1941. And in the case o groundnuts the rise is hardly discernible The movement from week to week ca be followed. No longer need one turn t haphazard narratives in market reports o take the evidence of any dealer. There i available a source comparable to th Board of Trade Journal. The first issu of official index numbers does not omit reference to the average of pre-war years and the actual rise in prices can nearl always be ascertained by reference to th quotations as on August 19, 1939. In th case of coal, the average price had rise by 15 percent for coal of two grades b the end of December, 1941. As the F.O.R price of Selected Grade was Rs. 4-6-0 pe ton it is not hard to guess how much a ris of 20 percent means. The increase in th case of Deshergarh was less than tha noted under Selected which explains wh the price had risen by 15 per cent.

In the case of all foodstuffs in the perio covered the rise was far more pronounced The percentage rise in the case of ric during twenty-eight and odd months wa 72 and in the case of wheat it was as muc as 112 percent. The publication makes i easy to understand how much discontent follows the advance in wholesale prices The main movements are readily grasped by reference to two other tables. One in dicates that export goods as a class ros in price by 42.5 per cent by the end o December, 1941, while primary commodi ties had risen in the same period by 39.5 per cent. The disparity in movements is not great, and whatever be the trend in 1942, it may be said that there was not the same rise under foodstuffs, as has been noted under manufactures which again cannot be dissociated from the rise recorded by the raw materials group in the war period.

Evidence as to prices was hard to secure a year ago and let it be added the first effective statement of the main changes—illustrated by bold graphs—follows the general pattern of all investigations. The general average for the four main groups covering 28 articles shows a rise of 43.3 per cent in the war period. The study of wholesale prices immediately makes one think of changes in the supply of currency in the same period but this must be discussed separately. The study indicates

that only in the case of wool has the rise been continuous and appreciable. A rise of 70 per cent had been recorded by the end of 1941 and this rise was essentially in line with world developments. If the Carnegie Endowment were to undertake the writing of the economic history of India in the war period one of the most important sources will be the thin official volume priced at Rs. 4 which alone makes it altogether easy to judge how the movements in prices have been spread out.

Varied Production

The last available analysis of cotton mills' output shows that the output in 1941-42—the cotton year ends in August—will surpass all previous estimates. Yarn production has risen appreciably every month, and the figures for the first quarter deserve special attention, as they relate to a period when fresh Japanese imports were barred, though war in the East had not broken out. Cloth and yarn output rose in response to the larger demand, not merely because the supply of cotton was larger. Production in September-November was marked by an increase under coarse yarns as also of medium and fine yarns, but the larger production of coarse yarn was clearly due to the expansion in cotton canvas, union fabrics, etc. These special fabrics are in demand for war purposes and require quality cotton. The Indian mills have produced more bleached and grey cloth in the first quarter of 1941-42 than ever before but the output of coloured goods shows a limited increase, probably on account of the difficulty of getting dyestuffs.

The increase in output over the first quarter of 1940-41 extends to yarn as well as piecegoods, but the output of dhoties was lower as also of mill khadi. The changes in output are clearly related to the increase in demand produced by the fall in India's imports of yarns and fabrics, and the increase in exports as also re-exports in the war period. The influence of rising prices can also be discerned in the production changes as from dhoties to fabrics wanted for the war. Since 20 per cent of the mills' equipment and output was assigned to the war (it has been raised since to 35 per cent), the quantity taken up by the Government in any period can be computed. The fall in imports has naturally occasioned difficulty. The cry for standard cloth was raised last year because mills turned away to war work, having omitted to book large orders from merchants for civilian goods. It is evident that the advance in mill production was not enough to make good the fall in imports. Since then textile imports have shrunk and exports have risen alongside of bigger orders from the Government. In spite of the 1941 figures being in advance of the previous year's totals, the Indian mills had to face a growing demand and the reduction of yarn supplies for handloom weavers raised difficult questions.

Export Plans

A call to raise exports after the war to larger proportions was made by Sir William Jowitt. The advocacy of a bigger export trade in the interests of reconstruction, by the Minister directly concerned, shows that Britain after victory will not reduce her imports, but take more materials for her manufactures, and win back markets. The standard of living over the whole world must be raised, runs the argument, and the fall in oversea income must be countered by an increase in visible exports to pay for imports on the pre-war scale. Paying for the import surplus after the war does not seem a big problem, but a way must be found even now, and the expansion of industry in many lands does not limit Britain's opportunities. It might be vital to get back markets for coal but Poland may be equally eager, and some jealousies are bound to develop among the Allies. It might be easy to share Germany's trade but the question of method will arise. British opinion adheres to the view that by cooperation with the U.S.A. new markets can be developed in Asia. The Atlantic Charter's benefit of open access to markets will be passed on to all countries in order to sustain British industry in a difficult period. It is believed that the value of imports will normally exceed that of exports by £200 millions.
