From the unbending nature of the statements issued for some time from New Delhi and Whitehall, it was a foregone conclusion that Mahatma Gandhi and other Congress leaders would be arrested sooner rather than later; and that, simultaneously, the Congress organisations would be declared unlawful bodies. The point I seek to stress is that it cannot be pretended that the public in India were not expecting the arrest of the leaders and the launching of firm action against the national organisations. All the same, India through its length and breadth experienced a shock not unmixed with surprise when it learnt, on Sunday morning, that Gandhiji and his associates had been arrested in Bombay; and that a round-up of Congressmen had been ordered practically all over the country. How is it, then, that the materialisation of an expected development caused not only a shock but surprise? The answer to this question is to be found firstly in the preamble of the resolution as it was passed at the Bombay session of the All-India Congress Committee; and, secondly, in the speeches with which the President as well as Gandhiji brought the proceedings to a conclusion.

Even the severest critics of the Congress are now prepared to concede that, while the concluding portion of the Bombay resolution is most objectionable from their point of view, the statement of the Congress demand is one to which no serious exception could be taken. We are also led to infer that, if the Congress resolution had not closed on a note of threat or ultimatum, the course of action which the Government would have taken might have been different. The authorities conveniently forget that such threat as the resolution contained was to be given effect to only when every attempt at finding a solution had been found to end in failure. This brings me to the second point. Maulana Abul Kalam Azad specifically mentioned that he was, as president of the Congress, appealing to President Roosevelt, Marshal Chiang Kai-shek and to Stalin through M. Maisky, requesting them to intervene and use their good offices for a peaceful solution of the Indian problem. The significance of this statement has not been duly appreciated. The communications to the three chiefs among the United Nations would have taken some time to reach them; and some more time would elapse before their replies, if any, were received. It was clear that the intention of the Congress was that no movement would be launched during this interval. This interrugnum might have been anything like a month. In simple terms, the Congress threat was to be executed, if at all, only a month or so after the passing of the resolution in Bombay. Gandhiji also announced that he was addressing Lord Linlithgow personally; that he would seek an interview with him; and that he would explore every avenue for a peaceful settlement. In fine, mass civil disobedience would be launched only as a last resort.

These gestures on the part of the President of the Congress and the elected leader of the campaign did not appear to have carried any weight with the authorities. Or may it be that the action against the Congress leaders had already been decided upon; and it was too late to call back such action? The Bombay session of the All-India Congress Committee concluded its sitting long after sunset; and the leaders were arrested much earlier than sunbreak. It seems to me that New Delhi could not have had a chance, between 9 p.m. on Saturday and 3 a.m. on Sunday, to give careful thought to the question of any revision of the action already decided upon, in relation to the significant pronouncements of the Congress President and the Satyagraha leader. My case is that the orders to the various provincial governments must have been issued in the course of Saturday; and that the few hours of Saturday night should have been all too short for countermanding the All-India action already planned to the littlest detail.

If my hypothesis be correct, it follows that the best interests of Britain and India demand a retracing of steps. Such retracing of steps is not, however, to be looked for so long as Mr. Amery is the presiding genius in Whitehall. Broadcasting on Sunday night, Mr. Amery claimed that "by their prompt and resolute action, the Government of India have saved India and the Allied cause from grave disaster." Again, on Wednesday night, the India Office issued a statement which expresses the complacent satisfaction of Mr. Amery with his own performance. The following extract is taken from a communique issued in London for the edification of the British public:

"Disturbances in other parts of India are in a few cities such as Bombay and Ahmedabad which are Congress strong-

holds and contain hooligan elements easily provoked and hot-headed students.

The latest official information from India leaves no room for doubt as to the sporadic and limited character of the demonstrations that have so far occurred."

We hope that the excuse for this perversion of facts on the part of Mr. Amery is that he has not been kept fully informed of developments in India. On any other plea, he should be said to be deliberately misleading the public in Britain. Mr. Amery emphasises the sporadic and limited character of the demonstration. That is not the impression created on one who reads his daily paper in India since last Monday. Taking at random the headlines appearing in a Calcutta daily this morning, the following represents the picture of arrests and assaults and disturbances :

Lathi charges on Calcutta Demonstrators
Firing at Dacca
Crowds raid Munsiff's Court and set fire to Records
Tramcar Set Ablaze
Railway Communications Dislocated in Madras
Mrs. Vijay Lakshmi Pundit Arrested
Tram Service in Girgaum Area Remains Suspended
No Information at Lucknow about Up-Punjab Mail and Express
32 Killed : 300 Wounded
Military Patrol at Ahmedabad
Military Called Out at Poona
Firing Opened
Students' Procession Dispersed
Curfew Order Extended
Another Student Dead in Allahabad
Nagpur Firing
Records Set on Fire in Cawnpore
Police Use Tear Gas in Dacca
40 Demonstrators and 50 Policemen Injured in Calcutta
Shops and Cinemas Closed

It is true that there are also claims that Bombay, for example, is otherwise reported to be quiet. As Nym would say, "otherwise" is the humour of it. The first headline to this message is : "Two Firings in Bombay." Another claim is that Surat was quieter on Thursday than in the past two days. This quieter state of affairs in the city is thus elaborated : "There was a slight disturbance in Gopipura area this morning and in the evening a disturbance occurred in Nawapura area and the police dispersed the crowds. Some street lights and signposts were smashed. Police parties have been posted at strategic points. Some more arrests are reported."

The fact of the matter is that, to Mr. Amery and men of his kind, prestige is the first and last principle in Colonial administration. From the time Mr. Amery has been at the helm of affairs in the India Office, he has been responsible for actions and statements which have driven a sober politician like Sir Tej Bahadur Sapru to demand that Mr. Amery must go. The British Cabinet is equally a devotee of the cult of prestige. And prestige demands the retention of Mr. Amery in the India Office, however unpopular he be with the people of a country with whom the Britons profess that they are most anxious to have friendly relations. One can, therefore, understand my point that, so long as Mr. Amery has the shaping of India's destiny in his hands, there will be no retracing of the steps taken on Sunday. Mr. Amery is confident that the situation that might develop after the arrests of Congress leaders "could be dealt with by the Government of India through the police and the courts." Mr. Amery might have added "the Military." The "Evening Standard" of London has done well to emphasise that "this is not a private quarrel between the Imperial Government and the Congress." Nor is this a private quarrel between Mr. Amery and Mahatma Gandhi.

Mr. Amery may be content with a state of affairs in which the police and the military and the courts are allowed to deal with the situation as they think best. But a wise government, as the "Manchester Guardian" wisely remarks, will be looking beyond its police and troops to the

possibilities of restoring real peace to India. "It is ridiculous to speak as though we should never again negotiate with the Congress. Wrong and misguided as its recent policy, we cannot ignore a political body which represents a large part of Hindu India and whose co-operation is essential to the carrying out of our own plan for India's future. A sensible and practical course is first to seek out the elements of common ground which exist between us and the various strains of India's opinion including the Congress and Muslim League and secondly so far as we possibly can put into the hands of Indians

MEN OF STEEL 3.

In India's steel factories, those who formerly tilled the land, today dedicate their lives to producing iron and steel —vitally important in war and peace.

Their thorough training and their application to this task are forming a new generation in India—Men of Steel.

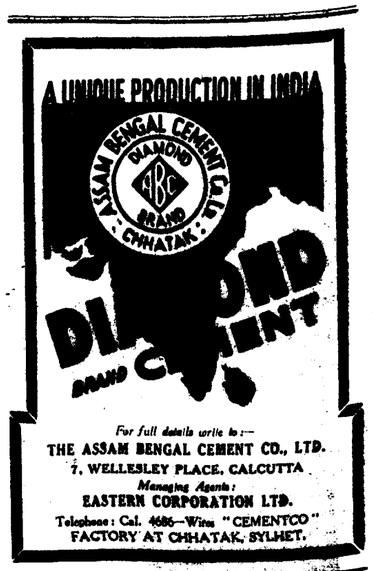
the whole business of dealing with their difficult fellow-countrymen."

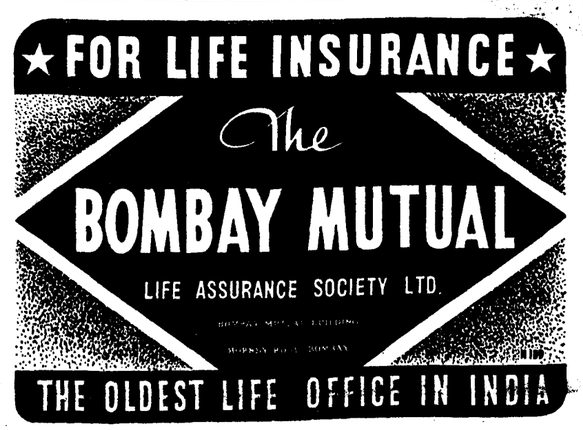
That way lies statesmanship and the genuine interest not only of India but of Britain and of the United Nations.

In suggesting that something more is needed today than the maintenance of public order one lays stress on the importance of retaining the confidence of businessmen. The comprehensive protection of the Defence Rules does not seem enough to the Indian Chambers of Commerce which ask Government to ignore three months' old records and look at present-day facts. The British rightly claim to be realists. Disorder also is distasteful to them, and the application of the counter-challenge, by generating disorder instead of loyalist demonstrations, is seen as the reverse of a realistic policy. There was no threat of C.D. What has been precipitated is local, spontaneous disobedience through which public utility undertakings and private enterprise suffer most. Somebody in a public department should compute the loss of manpower in industrial establishments and the casual destruction of property. Leaving aside the question of contributory violence one must examine probable reactions in the world of business. It is the peculiar defect of Delhi that it cannot stop to judge the immediate effects on markets. The closure of the Bombay markets and the moribund condition of the Calcutta markets might help to check any boom in the making on the stock exchange, but the suspension of much essential commerce accentuates scarcity, hampers transport and produces delay—the unforgivable offence in wartime. Moderates advocate a settlement on political grounds. And Indian merchants, who deprecate repression and ask for a fresh approach, are impressed most by the difficulty of reconciling present acts with past professions. They do not always emphasise the loss of hours and profits or the ultimate effect on revenue. Any prolonged disturbance will have serious effects on both currency and credit. The railways' rising surplus might shrink. Non-tax revenue and tax revenue alike might fall and the cost of borrowing might suddenly go up. Any suspension of business by banks temporarily as in Delhi might produce unintended effects and be something more than a dress rehearsal for the panic noticed towards the end of last year.

Not all will agree that profits or calculations of dividends have a place in political controversy but strikes unconnected with the employer's own discharge of his responsibilities can only be put down to other things than the workings of a malignant destiny. Even losses covered by insurance are not exactly welcome and I would only rub in the point that anything which puts up the back of Indian business is bad policy. Businessmen incidentally are not in the habit of discussing either recent or contingent losses but they are certainly agreed that by forcing dormant issues the Government has added to their difficulties. Should a flight into the precious metals come about as a result of waning confidence and growing insecurity the financial system will develop unusual strain. There is no harm in indicating the remoter effects of the steps taken in reply to the A.I.C.C. resolution. What might not have come from C. D. have been procured. The investor who finds brokers unwilling to carry on must take a loss independent of business factors. By the introduction of a super-normal element the revenue of both private persons and public authorities must suffer. It will not be hard to envisage a swift exodus of the well-to-do along with a 'strike' on the part of dealers in cloth and many goods and a general retreat from the prudence that sustains insurance and other business.



Politicians and their opponents seldom reckon with the repercussions in the world of business. It might be that in the seats of authority profits and wages have no place, but the world runs itself by minding its business assiduously, and if business were withdrawn from them by an unfavourable conjuncture the businessmen would be compelled to protest. It is not hard to understand why Indian business is perturbed and even the grant of enhanced allowance on the eve of disturbances by an employer in the country was in reality taken out of the profits of private business. The cost of repression may be readily shared between Centre and Province but the prospects of rising revenue must be irretrievably damaged. On the other hand a conciliatory move would nourish confidence and aid Government's financial operations. The third Defence loan must be made to succeed substantially and swiftly. Treasury deposits and tax receipts must be introduced, and the financial side of the war effort organised properly, with saving displacing hoarding. All this seems trite but the essential soundness will not be questioned. Indian business is justified in pleading for a departure from law enforcement towards a positive policy.



"EAVESDROPPER."

(*Continued from page* 285)

The reduction in invisible exports will justify attempts to increase Britain's exports of goods and Sir William Jowitt's recent remarks furnish a clue to Britain's plans. An alternative to cutting down our imports after the war to the barest necessities, said Sir William Jowitt, would be to increase our exports, but this problem need not involve once more an unregulated scramble for exports, cutting prices, reducing wages, lowering the standard of living in one country after another to try to steal the advantage in the export market. Sir William urged that Britain's aim must be to raise the standard of living throughout the world, and as a first step, to raise the nutritional standard. Industry could not be properly planned and full employment maintained if prices of primary commodities were allowed to rocket about as they did before the war. The average plan covers price control in the interests of export trade and the needs of Britain will determine the fate of other plans for restricted output of wheat, rubber or any product which she has to import. Exports are usually treated as being independent of reconstruction and public works at home, but Britain has to treat the former as equally important and urgent because of her balance of payments and the disappearance of overseas assets.

(From Our Correspondent)

Bombay, August

When young writers are at a loss for words, they are accustomed to say that the situation is "better imagined than described." Such is the situation here. Mahatma Gandhi was to have addressed a public meeting last Sunday to explain the implications of the A.I.C.C. resolution and discuss the nature of his letter to Lord Linlithgow, but the wheels of law and order were moving the previous evening, making night jointlabourer with the day. The police appeared at Birla House before dawn with Mr. H. E. Butler, Commissioner, at the head of the posse. His friends refer to his initials and describe him as His Excellency just as a former member of the Bombay Government, Mr. G. A. Thomas had been known as God Almighty Thomas. Mahatma Gandhi was arrested with all the ceremonials of godliness and cleanliness; the morning prayers were said with the whole household in attendance and the womenfolk in the traditional style applied vermillion on Mahatmaji's forehead. Mr. Butler himself drove the car in which the illustrious prisoner sat, and near about the time when the mammoth meeting in Bombay was to have been held on the sands, Mahatma Gandhi found himself jailed in Poona.

* * * *

Business came to a standstill and the ordinance against *hartals* looked like a dead letter. People were not prepared for so sudden a start with the initiative being so vigorously exercised by the Government. A good deal of the dislocation that followed was inevitable, and casualties have occurred; but there is nothing so ghastly as on the occasion of the *Satyagraha* launched at the time of the Prince of Wales' visit. He is now the Duke of Windsor and Britain has no Prince of Wales. Unpredictable changes are enveloping the world; if Mahatma Gandhi had been free and if disorder had come, all the responsibility would have been fathered on him. In this drama, the Government have by striking the first blow relieved him of all responsibility about the control of the masses.

* * * *

The general feeling is that the possibility of negotiation had not been fully explored and exhausted, and artificial devices to stimulate enthusiasm for the National War Front are likely to be undermined by the creeping influence of bewilderment beneath the surface of events. Whipping has been revived and the burden of peaceful existence which statesmanship should have borne, has been cast upon the shoulders of the police and the quasi-military units called out to straighten the situation. For the failure of Foreign Office diplomacy, the fighting forces of the Empire have had to suffer, and a parallel ordeal has become the portion of the Executive in India in this battle against the dreaded quest of *Satyagraha* long before it had been called out of the deep. The heavy embargo in the rationing of news and views laid upon the press renders detailed report-hazardous, and all I can say is that from the standpoint of trade and industry, things are in poor shape because of the wrench in the political wing. The Government think that the people are tremendously enthusiastic about their policy.

* * * *

The Kerosene problem remains as acute as ever and the rice question has been flavoured with scandal about the rates at which the Ceylon Agent obtained foodstuffs from the Bombay market. An accountant from Colombo is here with the inscrutable air of an Edgar Wallace detective, who is of course, a trifle short of the Conan Doyle model. The wholesale merchants in the grain trade blame the retailers while the dealers throw the guilt of profiteering far away from their own altruistic ranks. The authorities have, in a jumpy mood, swerved from the economic angle to the political crisis, bothering themselves over the possibilities of *hartals* in the presidency. In order to maintain supplies essential to the life of the community, the District Magistrate is empowered to require the proprietor of a shop or restaurant to keep it open during a "hartal". If a shop or restaurant is closed in contravention of a District Magistrate's order, he may cause it to be opened and cause business to be carried on through such agency as he may think fit and at prices specified in the order.

The District Magistrate is authorised to use or cause to be used all such force as may be necessary for the enforcement of the order. A shop will be regarded as closed if the proprietor refuses to carry on business except on terms in excess of the normal. Contravention of this order will be punishable with imprisonment for a term which may extend to three years or with fine, or with both.

Supplies essential to the life of the community defined in the schedule of the Rule include grains, pulses and flour and any foodstuffs made thereof; sugar and gur; milk and milk products including ghee; eggs; vegetables oils; vegetables and fruits; meat fish and poultry; spices and salt; kerosene oil, charcoal, steam coal, firewood and matches; medicines and household soap, fodder, bran pollard and oil cakes.

It is tremendous order, a comprehensive order, a tall order; for it is not political effects but hoarding that is at the root of the trouble. All the evils of uneconomic planning are likely to be laid at the door of Indian politics when it is the business of British statesmen to clean their own doorstep in India in the fight for democracy. The loss of a few lives more or less in 1920, 1929, and 1931 looked prodigious in a world luxuriating in peace; but now rioting casualties as against the background of Russians suffering in thousands (pending the Second Front), the old sensitiveness has become case-hardening among Indians—including Congress men. Political calamity has eclipsed the vision of sound business.

(*Continued from page* 277)

been outside India from September 3, 1939 and the Reserve Bank has ruled in his favour; but, at the same time, the non-resident's bank account will be frozen unless the Reserve Bank directs otherwise. The more important change relates to payments obtained for exports. If it is suspected that excessive delay is deliberately created or that payment is made in favour of a person outside the sterling area or that it is below full value the Reserve Bank can order the sale of goods unsold or not paid for or transfer the title in goods to any other person or to Government which has to make payment. The main idea is that connected with getting full dollar value for jute goods, whisky and other Empire exports. That order was the first of many to limit sterling receipts and stimulate dollar and hard currency receipts. The closing of all vents and loopholes has been carried out for the purpose of enlarging all receipts on account of exports. Another new rule relates to the export of gold and silver thread or articles made thereof from British India. Gold thread is treated as equivalent to bullion and the export of high class fabrics to non-Empire territory and even to certain Colonies, will become illegal. Since there is a familiar prohibition as to gold and silver the latest prohibition is logical but it has come late. Much stripped lace and thread must have been shipped when the export of coin became impossible. The buying of torn silk clothes for the sake of the gold thread was quite a trade in Indian cities in the past. And such countries as Afghanistan, which cannot get gold or silver in return for goods sold, have latterly turned to import control to curtail the intake of Indian goods. Backward countries naturally prefer bullion to goods, and if bullion cannot be had in return are not unwilling to reduce non-essential trade. The Afghan rupee (worth about four annas) should be a stronger currency as the result of import control though the export of furs in wartime must fall.

Resume of Commodity Markets

THE present conditions in the internal political situation can hardly be considered as encouraging to commodity markets. With the exception of the primary commodities, which continue to be as scarce as ever, cotton, jute and jute manufactures have been adversely affected. The Bombay raw cotton market has remained closed since the beginning of the week. The difficulty in carrying on business obliged the East India Cotton Association to close the market for three days from Tuesday. The jute market is easier with smaller buying by mills and the accumulation of stocks in upcountry centres while the jute manufactures market has been weak in the absence of any demand and the fears regarding the availability of transport facilities.

As the Bombay market is closed no bullion prices are available but locally there has been a sharp rise in prices during the past two days.

Jute

A crisis so far as jute is concerned may be expected before long. We referred at length last week to the difficulty of transporting jute and the difficulty of mills to enter into contracts to purchase jute in the absence of any assurances regarding delivery. Arrivals into Calcutta are on a very reduced scale. With the advent of the busy season it remains to be seen as to how the situation is met.

Jute Manufactures

The stock figures for July 1942 would ordinarily have had an encouraging effect on the market. The announcement of the order for sandbags also would have been a helpful influence. But the absence of any demand for hessian and the recent decline in values seem to have had a disturbing effect on operators. With the offtake in recent months, there is no particular reason for worry but the absence of any large forward contracts and the inability to sell at below minimum prices must trouble mills.

The new order for 175 million sandbags is to be delivered in equal monthly instalments between November, 1942 and December, 1943, both months inclusive. The price to be paid is Rs. 11 per 100 bags f.a.s. The bags are not to be rot-proofed.

Piecegoods

Prices have been rising in recent weeks without any interruption and there is an increasing tendency on the part of mills to sell goods in small quantities. As there is considerable disparity between sellers and buyers ideas, no forward business is possible. Also, there is the difficulty in ensuring delivery.

It is announced by the Director of Public Information, Bengal that indents have been placed for Standard Cloth with the Government of India with a request that the goods be delivered in time for the *Pujahs* so that it may be convenient for the poorer sections of the people. The importers whose names have been communicated to the Government of India will obtain this cloth direct from mills according to the indents submitted by them on payment of actual cost. This will be distributed to the people through wholesalers and retailers scattered throughout the Province at prices fixed by the Government.

Bullion

There has naturally been a revival of demand for the precious metal, especially gold. In the absence of any dealings in the Bombay market, no correct prices can be given but in the local market there is a rise of nearly 3 points on balance for gold ready at Rs. 55-3. Sovereigns are quoted at Rs. 40-4.

Silver prices have not recorded any appreciable rise.

Wheat

The Government of India seem to be earnest about relieving the shortage of wheat in particular centres by issuing permits from the wheat growing provinces for export more quickly. They have failed, however, in their duty to grow more of the commodity.

It is understood that two assistant wheat commissioners have been appointed, one for the U.P. and another for the Punjab and Sind, to help the Wheat Commissioner of India in his duties. This is also a step towards decentralisation of functions. The assistant wheat commissioners will dispose of applications for wheat purchases and wagon allotments on the spot without referring to the Wheat Commissioner for India.

Meanwhile, it would have been encouraging if the All-India forecast figures showed a satisfactory increase in the yield for 1941-1942. It was not perhaps possible for the Government of India to anticipate such a serious shortage at the time of sowing of the crop. Weather conditions also were very unsatisfactory at the time of the sowings for the last crop. The All-India Final Wheat forecast for the season 1941-42 estimates the area under the crop at 33,979,000 acres against 34,849,000 acres or a decrease of 2.5 percent. The yield, however, is 0.4 percent higher at 10,070,000 tons against 10,027,00 tons in 1940-41.

The shortage of wheat in Calcutta is so acute that it has been necessary for the Government of Bengal to control supplies. An order has accordingly been issued directing that no consignment of wheat arriving at any of the Railway and Steamer Stations in Calcutta and Howrah shall be delivered to the consignee except upon a permit issued by the Chief Controller of Prices, Bengal or by any officer authorised by him, and that no such consignee shall dispose of such wheat except under and in accordance with the conditions of another permit issued by an officer authorised by the Chief Controller of Prices, Bengal.

The Order comes into force immediately and consignees of wheat should henceforth approach the office of the Chief Controller of Prices, Bengal together with the Railway or Steamer receipts as the case may be for the necessary permits.

Cotton

No business has been reported in the Bombay Cotton market during the past few days. The market has remained closed for three days with the East India Cotton Association passing a resolution to the effect. It is reported that production in the mills in Ahmedabad and Bombay has been affected. With the possibility of a further spread of trouble it is unlikely that mills will buy cotton on a large scale. Even last week there was no anxiety on the part of mills to lay in additional stocks as they had plenty of the old crop on hand. The market was rather weak with prices for Jarilla marked down considerably lower. When the market reopens for business it may well be that a further substantial decline in prices is recorded.

Sugar

The efforts to distribute sugar to the areas where there was acute shortage seem to have met with some success. The provincial governments also are making arrangements to distribute sugar through retail shops at controlled rates. If the next three or four months are satisfactorily got over there will be plenty of new-season sugar. The problem of sugar is more one of distribution than of production but the psychological effect of the presence of large stocks of sugar should, we believe, discourage extent speculative activity.

116, LOWER CIRCULAR ROAD CALCUTTA

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 13th August.

There was only time to refer very briefly to the Mill Stock position last week, but the improvement which the figures show merits careful analysis. Hessian cloth and bags on commercial account still showed an increase by 26½ lakhs yards or 2,661 tons. 8oz/40 actually registered a small decline. It is in the Heavy Goods section that much improvement has occurred. Stocks show a decline of no less than 4.64 crores yards, or 19,775 tons. Sandbags on Government account show a sharp increase by 4,700 tons and Sacking on Government account is also higher by 1,700 tons. On the other hand, Government stocks of scrim are down by 1200 tons and of hessian bags and cloth and canvas by 6,260 tons. Altogether the Military stocks of different types of hessian are down by nearly 3,000 tons. The aggregate reduction in stocks is 18,000 tons which is a very satisfactory reflection of the state of demand for jute goods and also of the improvement in shipping facilities.

Figures for mill production in July are not yet available, but as July had one more working day than had June, when 95,000 tons were produced, it may be safely calculated that July production was very little short of 100,000 tons. Adding to this the reduction of 18,000 tons in stocks, it is apparent that despatches of jute goods from Mills during July must have been around 118,000 tons, well over twice the quantity which Government professed to estimate as the monthly world requirements of Jute Goods.

A further order for sandbags has been placed by Government with the Mills Association, this time for far forward delivery. The quantity is 175 million bags, deliveries to be spread over 14 months from November 1942 to December 1943. The total weight of the order represents some 1,80,000 bales of Jute, or around 13,000 bales per month. It is understood that the bags are not required to be rot-proofed.

The movement of the jute crop is becoming a serious problem. Wagon supply cannot be relied on at all though it is reported on reliable authority that wagons are being returned empty from broad gauge discharge points like Serajganj and Goalundo, when there is a keen demand for downward space for jute from these points. "Keep wagons moving" may be a good slogan, but if the wagons are empty when freight is offering it does not seem the most economic use to which they can be put.

So far as the river service is concerned, while the position in some stations is not so bad, in others it seems quite impossible to get space to accommodate all the jute offering. It is noticeable that stations where there is competition seem to be better served than stations where there is a monopoly of the carrying trade. This factor is being reflected in the prices ruling in the different districts up-country. Where freight is available, prices are steady. Where freight is scarce the price tends to fall from pressure on the part of cultivators and *beparies* to sell to buyers whose hands are already as full of unshipped jute as they can hold. This inequality bears unfairly on the different districts. It has already been suggested that all possible shipping facilities should be pooled in the abnormal circumstances at present subsisting. But an essential corollary of such pooling would be the appointment of some unbiassed controlling authority to decide where and in what proportion the available freight should be allotted.

It is reported that the Jute Mills Committee have taken notice of a recent attempt on the part of an important group to purchase a very low assortment of jute in the proportion of 50/50 Bottoms and Cross mark. According to the official specification, the Cross mark should contain nothing but tangled or "habi-jabi" jute. The proportion of true habi-jabi which should be made in any reasonably conducted assorting shed should not exceed 2% of the total turnover. It is therefore obvious that no large quantity of genuine "Cross" should yet be available for sale and certainly not for early shipment. What the Association wish to prevent is the establishment of another straight morahed mark below the "Bottom" and thus interfere with the schedule of standard grades at present laid down. It is, in fact, suspected that verbal guarantees have been demanded by some mills and granted by some sellers, that there should only be a very small proportion of real habi-jabi in Cross sales, and it is believed that enquiry is to be made in certain quarters to ascertain the truth of the allegations. Presumably what the Association fear is intervention by Government if it is found that prices are being detrimentally affected by any contravention of the existing understanding as to grades and standards.

Business has not been active in the Export Jute market during the past week. Some transactions with shippers have been reported, mainly in Dundee Daisee assortment at Rs. 54/- to Rs. 53/8 and in Dundee Tossa 4s at Rs. 55/8 to Rs. 55/-. Demand for white jute is very meagre and sellers at Rs. 48/- for Firsts cannot get on. Mills would pay that rate for Firsts for August shipment but so far Sellers have not come into line, though it looks as if it would only be a matter of a day or two with the pressure there is to sell. Mills paid up to Rs. 57/- for Dundee Tossa 4s and Rs. 27/8 for Hearts. Some Cuttings business is also reported at Rs. 10/8 for N.C. and Rs. 9/8 for M.C. and Tossa Cuttings at Rs. 13/8.

In Loose Jute there has been a small but steady business going on at unchanged rates, Rs. 9/4 and Rs. 6/4 for European packing Middles and Bottoms for shipment up to 15th September. Supervised Jute sold at Rs.9/- and Rs. 6/- Mids and Bots and some Indian packed Jat at Rs. 8/12 and Rs. 5/12 with "Semi-Jat" at four annas less. Mills are beginning to be rather concerned about the prospects of receiving their jute after it has been bought. This is the more understandable when we find that during the season 1941-42, mills reduced their stocks of raw material by practically half. They are recorded as having carried into that season around 40 lakhs of bales of jute, whereas the recorded figure for stocks of jute held by mills in the Association, with the addition of Gagalbhai, at 30th June 1942 is under 104 lakhs of maunds or roughly 20,80,000 bales. It certainly should be in the interest of mills that pressure should be brought to bear on all transport companies for the most efficient use of the transport available.

The Fabrics section of the market has ruled quieter, with Hessians, as for some time back, meeting with no enquiry except for specialities. Standard goods are totally neglected and we can merely quote them nominally at Rs. 13/12 for nine porters and at Rs. 17/8 for elevens. There has been a fair turnover in Heavy goods though at rather easier rates. "B" Twills which have been the feature of the market for a long time, declined from Rs. 40/- August to Rs. 39/8 but later recovered to Rs. 40/- again, possibly on the news of tenders having been called for 6000 bales for Septr./Decr. shipment. Rs. 39/- was paid for September "Bs". Liverpools sold at Rs. 47/- ready, at Rs. 46/- August and at Rs. 45/- Septr. while Cornsacks were recorded at Rs. 41/- August and Rs. 40/8 Septr. Other sales reported include Cape Woolpacks at Rs. 1/14/6 Aug/Sep., 6X8 Sugars at Rs. 47/- August, 3¼lb Grains at Rs. 60/- August and 5 lb Grains at Rs. 90/- Septr. Closing quotations are:—

D. F. SANDERS, *General Manager.*

JUTE

Calcutta, Aug. 13.

The raw jute market has been rather quiet and values are slightly lower. Mills are buying only on a small scale. There is no tendency to accumulate large stocks as there has been a regular slump in hessian prices and there is no sign of an early increase in values. The stock figures for the month of July are rather encouraging and it was generally felt that, in the absence of any rationalisation which resulted in a big reduction, there could not be any very early slump in values. It now appears, however, that with the glut of jute in the mofussil centres and the slow buying by mills, prices will be. marked down. Upcountry, business has been possible only in centres where transport facilities are available.

In the loose jute section mills are reported to have bought Indian Jat Middles and Bottoms at Rs. 8-8 and Rs. 5-8 per maund. European Middles and Bottoms were done at Rs. 9-4 and Rs. 6-4 per maund for August-September delivery.

In the pucca bales section, not much of business has been passing. Cuttings, N. C. and M. C. were bought by mills at Rs. 10-8 and Rs. 9-8 per bale. Dundee Daisee and Tossa 4's were Rs. 53 and Rs. 55 per bale.

JUTE MANUFACTURES

Calcutta, August 13.

The absence of any demand for hessian has resulted in a sharp decline in values during the past few days. The demand from the United States in particular has been absent for sometime and it is felt that demand might not be forthcoming from that quarter as before, owing to the strict Government control. With bazar prices considerably below minimum prices, mills are very much worried. 9 Porters ready are quoting Rs. 13-10. September Rs. 13-12 and October-December Rs. 14. The quotations at the end of last week were Rs. 14, Rs. 14-1 and Rs. 14-2 respectively. 11 Porters ready were Rs. 17-10, Rs. 17-12 and Rs. 17-14. There is no appreciable change in the quotations for 11 Porters ready.

In the heavy goods section, quotations are easier in sympathy with the hessian section. 'B' Twills for August delivery were Rs. 40/-, Liverpool Twills Rs. 46/- and Cornsacks Rs. 41.

The stocks of manufactured goods at the end of July, 1942 show that there is a slight decline in hessian goods from 60.13 crores yards to 59.53 crores yards. Sacking cloth and bags again show a decline over of 4 crores yards to 20.45 crores yards.

The figures are given below:—

Total reported stocks of manufactured goods held on Government account.

Description.	30-6-1942.	31-7-1942.
Sandbags—

The July figures include the returns of Gagalbhai in addition to those of members, but the returns of Kedarnath, Katihar, Naskarpara and Maheshwari Devi have not been received and are excluded.

GOLD

Calcutta, August 13.

The Bombay market has remained closed this week on account of the disturbances in the city. The rates in the local market, however, suggest that there has not been any appreciable change in rates. Only it is reported that it is very difficult to get sovereigns. Gold ready was quoting Rs. 53-12 and sovereigns Rs. 40-1.

Insurance is a Means to Financial Security

THE JUPITER GENERAL INSURANCE COMPANY, LIMITED

(Incorporated in India)

TRANSACTS

LIFE, FIRE, MARINE, ACCIDENT AND OTHER PROGRESSIVE TYPES OF INSURANCE BUSINESS

Authorised Capital . . .	Rs.	2,00,00,000
Issued and Subscribed Capital .	,,	1,50,00,000
Paid-up Capital	,,	23,74,800

Total Life Assurance Fund Exceeds	,,	24,40,000

The above figures speak convincingly about the Popularity and Confidence of the Public enjoyed by the Company.

HEAD OFFICE:—FORT, BOMBAY

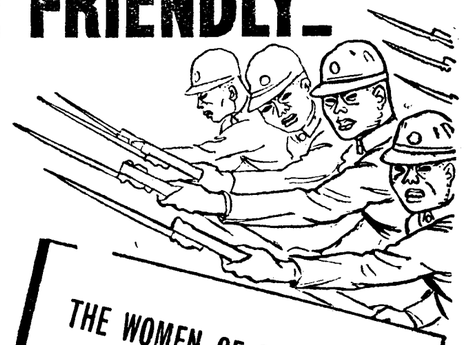
SILVER

The Bombay silver market also has remained closed since Monday this week, However, it is reported that interest in silver has subsided. In spite of the fact that the Reserve Bank has stopped selling for sometime there has been no improvement in rates. Silver ready was quoted at Rs. 83-12.

The London market has continued featureless with the quotation both for spot and forward at 23½d. Small trade demand has been satisfied officially.

COTTON

The Bombay raw cotton market has remained closed since Monday. The East India Cotton Association has passed a resolution that markets will remain closed from Tuesday for three days, the maximum permissible under the Association's bye-laws. No quotations are, therefore, available.



PIECEGOODS

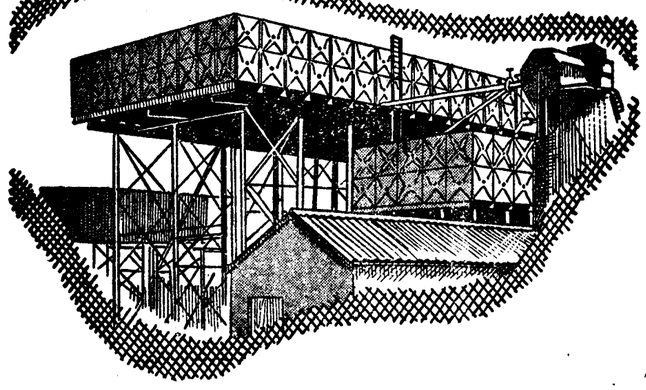
The local piecegoods market has continued firm. The fears regarding the possibility of a large decline in production with labour troubles has naturally imparted a steadier tone to the market. Business has been confined mainly to ready lots. Mills are increasing their rates. But for the difficulty in getting transport facilities and the shortage of goods, business would have been possible more freely.

JAPANESE WORDS ARE FRIENDLY—

—THEIR AMBITIONS ARE GREAT

IN the old days, men came to battle with hatred on their lips. Not so the Japanese today! It pays today to send words ahead of armies—soft words, words that deceive, words that confuse, words that weaken. This is a new technique of warfare, very effective against the unwary. But behind those friendly words over the Radio, behind those alarming rumours that are sent like a pestilence through town and village by Japanese agents in our midst, are Japanese bayonets and Japanese ambitions thirsting for India to lower her defences. Then—well, your property is valuable, isn't it? The soil of India is rich, isn't it? There are many spoils here for a new conqueror . . . Who would not be a Japanese soldier if he could get into India without a fight!

THE WOMEN OF CHINA KNOW



The women of China can tell you what the Japanese soldiers are like! "They will say, 'we come to liberate you'— but it is a lie," Madame Chiang Kai-Shek has told us. India's striking force is waiting to deal death to the enemy if he attacks our homeland. Are you offering all the help you can?

Stock Markets to-day and to-morrow

MARKETS QUIET ON POLITICAL DEVELOPMENTS

THERE is very little doing on the Calcutta Stock Exchange while in Bombay, the Stock Exchange has remained closed from Monday this week. With the anxiety regarding the internal political situation, it can hardly be expected that there will be activity on a large scale. Prices have been moving irregularly downward and the undertone is quiet in all sections.

Giltedged securities have not been affected very much though 3½ per cent Paper is eight annas lower on balance. Terminable loans are only a shade easier. There is plenty of money seeking investment but private investors and public institutions seem to be waiting for the outlook to get clearer.

* * * *

The Government has been able to get in recent weeks large sums of money in treasury bills. In spite of the high level of the offer, the treasury bills rate has recorded a substantial decline. There has been a consistent rise in demand liabilities. With the sales and maturities of treasury bills almost equal during the current month, banks will be unable to invest even in treasury bills. Subscriptions to the new loan would have, possibly, been forthcoming on a large scale but for the uncertainty regarding the present situation in the country.

* * * *

The beer shortage seems to be exercising no small anxiety. In the absence of any imports, the few breweries in India have been asked to supply the whole of the requirements of this country which have considerably increased with the presence of a large number of foreign troops. It is reported that the breweries in India are working at maximum capacity. It is not surprising therefore that the shares of the Murree Brewery Company Limited are in great favour and the quotation is now higher at Rs. 17-4. The Company has a good past earnings record and a very sound financial position.

* * * * *

The market seems to be disappointed with the results of the *Mysore Fertilisers and Chemicals Limited* for the year ended June 1942. It was generally expected that with the improved prospects for chemical companies a higher dividend would be declared. The same has, however, been only maintained at six percent Mysore tax-free.

* * * * *

In spite of the strike in the Company's workshops, lasting about a month, shortage of wagons and the trouble in getting spare parts, the *Rohtas Industries Limited* appears to have done well during the year ended October, 1942. The net profit, before providing for taxation and depreciation, for the year is Rs. 21,74,156 against Rs. 18,75,345 for 1939/1940. The amount set aside to depreciation is Rs. 8,71,978 against Rs. 8,67,411 while the provision for taxation is Rs. 3,20,000 against Rs. 1,00,000. The transfer to Reserve for Contingency is the same at Rs. 10,000. The sum of Rs. 4.5 lakhs (same), is placed to General Reserve. The dividend on ordinary shares has been increased to 12½ per cent from 10 percent.

The directors seem to be optimistic regarding the results for the current year.

* * * *

The slight decline in the earnings of the *Vellamalai Tea Company Limited* is to a certain extent surprising. For, there is an increase in the yield of the crop. But the results for 1940/41 were exceptionally good. The net profit, before providing for taxation, is Rs. 1,14,077 against Rs. 1,21,934 for 1940/41. After providing Rs. 26,700 (Rs. 16,000) for taxation the total dividend for the year is 7½ per cent against 6 per cent. The Company has done well in the past four years and the dividend has been increased from 2½ percent to 7½ per cent. The final dividend is to be 5 percent. An interim dividend of 2½ percent has been already paid.

* * * * *

Reliance Firebrick and Pottery Company, Limited has again done well during the half-year ended February 1942. The net profit, before providing for taxation and depreciation, is Rs. 82,375 against Rs. 89,466. The amount set aside to depreciation is Rs. 25,000 (Rs. 31,000). The provision for taxation is lower at Rs. 12,000 (Rs. 20,000). The sum of Rs. 12,500 has been placed to Reserve for Bad debts. It is feared that the enemy occupation of Burma and Malaya will result in some loss to the Company and the possible loss has been shown in the balance-sheet against "book debts unsecured and considered doubtful."

* * * *

Brunton & Company Engineers Limited has been able to report satisfactory trading conditions during the year ended December 1941. The net profit for the year amounted to Rs. 77,184. After allocating Rs. 5,000 to Reserve for Maintenance, the final dividend of 7½ percent, which, with the interim dividend of 5 per cent already declared makes 12½ percent for the year,, is to be paid. The balance carried forward is higher at Rs. 28,063 against Rs. 22,129 brought in. The new shares issued during the year do not rank for dividend.

The directors are optimistic regarding the prospects for the current year. The Company is busy on Government contracts and it is pointed out that with the saisfactory position in regard to timber and the recent extensions to plant the earnings for the current year should show a satisfactory increase.

* * *

The new order for 175 million sandbags does not seem to have had any effect on the market. The new order is to be delivered in fourteen equaly monthly instalments beginning from November 1942. The absence of any large demand for hessian and the difficulty in getting transport facilities have had a depressing influence on market values. With the present level of prices for hessian, which are below the minima fixed by the Indian Jute Mills Association, mills are not in a position to do new business. Even with the dropping of the rationalisation scheme, the outlook has not, therefore, improved in any way.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 14.

RATHER quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. On account of the disturbances in the political situation all over the country there is a tendency to await further developments. Attendance on the floor has been very poor and only a very small amount of business has been put through. There is no appreciable decline in quotations, however. Giltedged securities have been quietly steady with the continuance of easy money conditions and the steady decline in the treasury bills rate. Among other sections, Jute shares have been quiet as also Cotton shares. Sugar shares have remained firm.

In the giltedged securities section, 3½ per cent. Paper is half a point lower at Rs. 92-8. 3 per cent. Paper also is lower at Rs. 79-8. Among terminable loans, there is practically no change in quotations, 3 per cent. Defence Bonds 1946 being noted at Rs. 102 and 3 per cent. 1963/65 at Rs. 93-6. 5 per cent. 1945/55 were Rs. 108-14. Among provincial loans, 3 per cent. U.P. 1952 were noted at Rs. 98-10 and 3 per cent. 1961/66 at Rs. 92-12. Easy conditions continue to prevail in the money market and there has been a decline in the treasury bills rate to seven annas and eleven pies per cent per annum from eight annas and six pies per cent per annum last week.

Among fixed-interest securities, 5 per cent. Calcutta Port Trust debentures 1956/86 were noted at Rs. 110. 5½ per cent. *Calcutta Improvement Trust* debentures were crossed at Rs. 116-6. *Steel Corporation* preferences were Rs. 111, *B. I. Corporation* Rs. 180, *Carew & Co.*, Rs. 136 and *Patrakola* Rs. 140. Among jute mills preferences, *Adamjee* were done at Rs. 128, *Anglo-India* at Rs. 150-8 and *Bally* at Rs. 141-8.

The only transactions in the Coal section were in *North Damuda* at Rs. 4-15 and *Talcher* at Rs. 2-3.

In the Cotton section, *Bally* were crossed at Rs., 213, *Chitavalsah* at Rs. 14/14 and *India* at Rs. 337. *Orient* were Rs. 166 and *Shree Luchminarain* at Rs. 13.

In the Engineering section, *Indian Iron* and *Steel Corporation* were noted lower at Rs. 25-10 and Rs. 16-2 respectively. There has been a slight recovery towards the close at Rs. 26-4 and Rs. 16-7 respectively. *Indian Malleable Castings* ordinaries were Rs. 8-1 and *Marshalls* Rs. 1-14. *Britannia Building and Iron* were Rs. 11. An interim dividend of 5 per cent has been declared.

Sugar shares have continued steady with *Carew & Co.* at 12-12 and *Champarun* at Rs. 23-12. *Murree Brewery* were higher at Rs. 17-4 and *Punjab* at Rs. 306.

In the Miscellaneous section, *Dalmia Cement* were Rs. 15-9. *Midnapore Zemindary* were Rs. 72-4 and *Bararee Coke* Rs. 25-10 and *British Ceylon Corporation* Rs. 5-14. *B.I.C.* were Rs. 4-15 and *Calcutta Trams* Rs. 15-1. *Indian Cable* were Rs. 22-12 and *Rohtas Industries* Rs. 22-8 ex-dividend. Among paper shares, *Orient Paper* were Rs. 21-4. *Titaghur Paper* were Rs. 4-13 and *Shree Gopal Paper* Rs. 16-10.

The Bombay Stock Exchange Report does not appear in this issue as markets have remained closed throughout the week.

Dividend per cent ..	6	†	4	Nil
Carry forward ..	7,915	2,992	9,988	4,195

*Includes Capital Loss, etc., written off.

†Re. 1 per share on the Old shares and annas 2½ per share on the New Shares.

(*Annual meeting, 18th August, 1942 at 4-30 p.m. at Bombay. Dividend is payable on and after 19th August, 1942*).

Audited accounts for the year ended 31st March, 1942:—

	Rs.
During the year under report, the Company has made a profit of	8,25,199
Add amount brought forward from last year's accounts	2,992
making a total of	8,28,191

Out of this sum, the Directors have decided to make the following appropriations:—

	Rs.
(*a*) For writing off dismantled old chimney at Tatapuram	3,870
(*b*) For writing off Furniture, Fixture and Equipment	15,000
(*c*) For writing off dismantled old Meter-gauge siding at Tatapuram	22,606
(*d*) For transfer to Depreciation Fund	3,13,333
(*e*) Provision for Bonus to employees	85,000
(*f*) For transfer to Bad and Doubtful Debts reserve	2,500
(*g*) For transfer to General Reserve Fund ..	47,070
Total ..	4,89,379
leaving a balance of	3,38,812

which the Directors recommend be disposed of as follows:—

A dividend at the rate of Re. 1-8-0 per share, free of Income-tax, on 2,20,598 Shares	3,30,897
Balance to be carried forward	7,915
Total Rs. ..	3,38,812

The depreciation provided for in the past years was inadequate in view of the age of the Company's plant and machinery, and in view of the improvement in the Company's profits, the Directors have decided to make a somewhat larger allocation to the Depreciation Fund, which will stand as on 31st March, 1942 at Rs. 11.50 lacs. This figure is still considerably less than it should be and it is hoped that, with continuing good results, it will be possible to add substantially to it in the coming years.

A beginning has been made with a General Reserve Fund by transferring to it an amount of Rs. 52,930-7-3 which was received in the previous year from the sale of shares on which the Company exercised its lien in accordance with Articles 31 and 32 of the Articles of Association and adding to it an amount of Rs. 47,069-8-9 from the current year's porfits, to bring the total to Rs. 1 lac.

As the results of the year's working show considerable improvement over that of last year, the Directors decided to grant a bonus equivalent to one month's salary to all the employees of the Company. *This is the first time in the Company's history that it has been possible to grant a bonus, and this action of the Directors will no doubt meet with the approval of the shareholders.*

The Directors are advised that the Company is not liable for any Income-tax or Excess Profit Tax on the year's profits, and no provision is, therefore, made for this taxation.

In accordance with the terms of issue, the Directors made during the year a Final Call of Rs. 10 per share on the New Issue Shares.. The call was met in full and all the New Issue Shares are now fully paid up.

Operations.—The improvement in the year's working was due to increase in sales. The Company's total sales for the year have exceeded a crore of rupees—and a lessening of internal competition, which enabled the Company to realise more remunerative prices for its products. The market prices of soaps, glycerine and other products were increased during the year to meet the incerase in the manufacturing cost resulting from higher prices of raw materials and stores, and larger dearness allowance given to lower paid employees of the Company.

About 22,600 tons of copra, groundnut, mowrah and other seeds were crushed during the year at the Cochin and Bombay factories; this quantity is about the same as in the previous year. The Company was able to realise better prices for cocoanut as well as groundnut cake due to a better demand from the local markets. The foreign markets for cakes continued to be unavailable throughout the year due to lack of shipping space.

The sales of laundry and toilet soaps, glycerine and minor products, showed satisfactory progress during the year. The sales of laundry soap increased by 20% over the previous year, whilst the toilet soap plant at Cochin continued to work at full capacity throughout the year. The Company received good orders from the Government of India for soaps and glycerine. The glycerine refinery at Bombay was operating, towards the end of the year, at nearly full capacity, a large portion of the product now being supplied to Government. The sale of vegetable product was maintained at the previous year's level. Owing to want of tin plates, the Company had to curtail considerably the production of refined groundnut oil and packed cocoanut oil, and had also to stop its business in empty tins during the latter half of the year. The Company's toilet articles, amongst the minor products, continued to enjoy popularity in all the markets, which was evidenced by an increase of about 75% in their sales during the year.

Capital Expenditure.—Due to delay in the construction of the building, the new toilet soap plant at Bombay could not be started during the year, but this plant has now been completed and has been very recently put into operation. A semi-industrial laboratory for the distillation and fractionation of indigenous essential oils has been also set up at the Bombay factory. Its preliminary operation shows promise of developing new products of importance to the perfumery and pharmaceutical industries. The additional equipment for the hydrogenation plant at the Cochin facory was received from England only towards the end of the year, and its erection is expected to be completed shortly. The construction of the saw mill at Cochin is also nearing completion.

General.—Except for a short strike at the Bombay factory in the beginning of the year under report, the Company's relations with labour have been satisfactory.

Managing Agents.—Messrs. Tata Sons, Ltd.

Authorised Capital—Rs. 75,00,000 in 3,00,000 shares of Rs. 25 each. .Issued—Rs.. 56,00,000. in .2,24,000 .shares.. .Subscribed—Rs. 55,14,950 in 2,24,000 shares fully paid-up including 15 shares forfeiture of which was remitted during this year.

*Includes a Bonus of 2 per cent.

(*Half-yearly meeting, held 31st July, 1942*).

Audited accounts for the half year ended 30th April, 1942:—

After providing Rs. 3,00,000 for Depreciation and Rs. 5,50,000 for Taxation including Excess Profits Tax, there is a balance at the credit of Profit and Loss Account of Rs. 6,17,754-4-5 from which they recommend:—

	Rs.	A.	P.
Dividend of Rs. 10 per share	4,00,000	0	0
Provision for Commission to Directors and Staff	7,000	0	0
Carry forward	2,10,754	4	5

The wagon position showed no improvement during the half-year and accounts for the slight falling off in despatches.

The export market in which the Company is largely interested has been greatly curtailed since the advent of Japan into the War. There was some loss of stocks at outports due to enemy action, the value of which has been written off in these accounts.

The immediate prosperity of the Company is largely dependent upon transport facilities, but provided wagons are available there is every likelihood of the present despatches being maintained.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised, Issued and Subscribed Capital—Rs. 40,00,000 in 40,000 shares of Rs. 100 each, fully paid-up.

(*Half-yearly meeting, held 6th August, 1942*).

Audited accounts for the half-year ended 31st March, 1942:—

After providing Rs. 5,00,000 for Taxation, Rs. 2,00,000 for Depreciation and placing Rs. 50,000 to Reserve, there is a balance of Rs. 2,18,216-14-7 at the credit of Profit and Loss Account out of which the Directors recommend payment of a dividend of Rs. 4-8-0 per share absorbing Rs. 1,35,000 and leaving a balance of Rs. 83,216-14-7 to be carried forward.

The production of the Mill has been maintained at a satisfactory level. In January the Government of India fixed maximum prices for the principal qualities of paper. Manufacturing costs continued to rise throughout the half-year.

ISSUED WEEKLY

Vol. XXX. No. 8 SATURDAY, AUGUST 22, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Friday evening.

As is to be expected, evidence of continuing easy money conditions is to be found in the treasury bill results. At the time of writing, we are not in a position to cite further evidence as, owing to telegraphic delays, the figures for this week's returns have not so far been received from Bombay. This week's treasury bills results, however, provide emphatic evidence of further accentuation in easy monetary conditions. As against Rs. 6 crores of tender bills on offer, applications came to Rs. 11.74 crores, comparing with Rs. 11.12 crores on August 11. Though the percentage of increase in tenders is only small, the decline in the average discount rate must be considered quite marked. The average rate of accepted tenders this week is seven annas per cent per annum as compared with annas seven and pies eleven per cent last week. We may again emphasise that a decline of eleven pies must be deemed quite substantial, particularly as there is inherent resistance to any decline once the average discount rate comes to the level of eight annas. The offer of tender bills for next week continues unchanged at Rs. 6 crores.

It is, indeed, a most noteworthy transformation of the Indian short loan market that, while the total of treasury bill outstandings in the hands of the public is at the high altitude of Rs. 85 crores, a weekly offer of Rs. 6 crores does not suffice to satisfy the hunger of banks for bills. It is a great step forward from a total floating debt of roundabout Rs. 25 crores to one of Rs. 85 crores; from the offer of weekly tender bills for Rs. 1½ or Rs. 2 crores to the offer of Rs. 6 crores or even Rs. 8 crores per week. For the metamorphosis that has thus taken place in the attitude of banks towards treasury bills and in the digestive capacity of the Indian bill market, the main contributory cause is the swelling deposits of banks. At the same time, bank advances have also shown a progressive decline. Thus have banks been piling up cash in embarrassing glut. We have examined this development on previous occasions; but it is useful and instructive, in this context, to draw attention to the analysis of scheduled banks' position as well as of the position of non-scheduled banks, as furnished in the report of the Central Board of Directors of the Reserve Bank. The total demand and time liabilities of scheduled banks in India rose from Rs. 287.29 crores on June 27, 1941 to Rs. 334.46 crores on June 26, 1942. The increase is thus of the order of Rs. 87¼ crores. On the other hand, advances and loans have decreased by Rs. 27.85 crores while bills discounted are down by Rs. 3.88 crores. The shrinkage in trade loan advances is, therefore, Rs. 32¾ crores. What with swelling deposits and ebbing advances, the cash resources of banks are higher by Rs. 120 crores. Of this, Rs. 34½ crores have been kept to maintain the cash ratio at a higher level. It follows that nearly Rs. 85½ crores had, of necessity to be invested in government securities and treasury bills. Even so, there is still considerable margin for investment in treasury bills. The percentage of cash in hand and balances with the Reserve Bank to the total demand and time liabilities of scheduled banks was 20.70 per cent on June 26, 1942, as compared with 13.79 per cent at the corresponding time of the previous year. Even in respect of the non-scheduled banks, the Reserve Bank reports that their total demand and time liabilities showed an increase from Rs. 16.74 crores to Rs. 19.54 crores; and that the ratio of cash to deposits also was higher at 8.5 per cent as against 7.8 per cent.

As is well-known, the position as thus disclosed at the end of June has steadily improved right up to the present moment alike with regard to deposits, surplus cash resources and cash ratio. It may, therefore, be concluded that, in the present temper and mood of the Treasury bill market, increased offerings of three months bills will be greedily taken up; and that it should be no difficult matter to work up to a total floating debt of Rs. 100 crores. Even a higher total can be aimed without any great strain on the capacity of the market. We have a special purpose in putting forward this suggestion.

Thanks to the reverses in Caucasas and thanks to the political complications in India, the Indian giltedged market has developed definite symptoms of weakness. The third defence loan has fetched during the week ended August 8, 1942 Rs. 2¾ crores; and this cannot in any way be considered satisfactory. Prices in the giltedged market are generally marked down; and, what is more discouraging, there is hardly any buying interest. The authorities will, however, do well to remember that the earlier critical periods of this war have fully proved that giltedged, in the context of present world monetary technique, is more or less immune to political shocks. There is, we believe, every case for the application of the correct technique towards the revival of giltedged prices in India. Our case is that, in this war, technique has proved more important than sentiment so far as giltedged is concerned. The higher total of floating debt which we have suggested is for the purpose of providing the funds which could be utilised for effective and thorough-going open market operations, designed to restore confidence in the giltedged outlook.

The exchange market has been dull and quiet. Not much business is passing.

The closing rates are: Banks buy T.T. London ready to six months forward at 1s.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Tuesday the 18th August, 1942. Total amount offered was Rs. 11,74,25,000 (Rupees 11 crores, 74 lakhs, 25 thousand). Tenders at Rs. 99-14-3 per cent. were allotted approximately 62 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-7-0% (Rupees nil annas seven per cent.) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Wednesday the 26th August, 1942 in Bombay up to 1 a.m. (Standard Time) and up to the close of business on Tuesday, the 25th August, 1942 at other centres. Successful tenderers should make payment on Friday, the 28th August, 1942. Other conditions are as usual.

During the week ended the 14th August, 1942, Government of India Treasury Bills for Rs. 12,72,00,000 (Rupees 12 crores 72 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Thursday Evening.

Except for a brief note suggesting that the U. S. Budget for 1942-43 is being prepared there has been little to break the curious sterility referred to on previous occasions. Advice to holders of Indian 3½ per cent sterling stock to surrender stock certificates in October to make sure of payment in January can hardly be described as anything more than local intelligence. The Bank of England's agent has been merely instructed to notify holders in India about the need to forward essential papers as early as possible. The American message said that budget figures suggested that war outlay might exceed 77 billions up to 1943 and that 53 billions will have to be borrowed. There was thrown in a trifle about the biggest deficit ever and the welcome rise in sales of savings bonds to 909 millions in July. The bonds have been on sale for a year: but the monthly totals have always fallen short of a full thousand millions. The savings drive in the States has been no more successful than price control but that does not imply Mr. Roosevelt's policy at home is questioned. Until the November elections are over there is likely to be some trace of half-hearted criticism but one must add that always the Navy's vigorous work and Brazil's relations with the Axis are much bigger news than the estimates of the Budget Director.

The increase in U. S. expenditure might be readily treated as a reason for curtailing civilian expenditure. The only outside suggestions made are for curtailing some part of civilian expenditure and enhancing taxation. The Association of Manufacturers asks for increased taxes. It is not likely that any tax bill will appear before the elections. Wall Street's recent irregularity cannot be ascribed to tax fears but to a belief that an E.P.T. will skim off profits and nothing will be left for men holding common stock. The 1941-42 figures as to the Federal deficit are not known yet and it is that which will determine the Treasury's final proposals. Income-tax has been modified greatly since a constitutional amendment gave the U. S. Government the power to tax private incomes and to limit exemptions. The fall in commodity markets like cotton will help the Government and Mr. Harold Ickes' warning as to the need to save up oil for the war when known reserves are shrinking is part of the Administration's pep talk. The main fact at present is that the Administration thinks of tangible materials like copper and iron and the need to ration them. It does not worry about costs or profit margins. All nations have discovered that war effort must be measured by actual output and not by appropriations. Thus the entire world knows that shipbuilding success is far more important than the silver programme or lack of a programme. The building of giant Mars flying-boats to carry cargo is more sensational than the next instalment of Lease-lend. The U.S.A. is out to spend for victory and comparisons with Wilson's regime are seen to be pointless. What the Capital Issues Committee did then can be done as a routine job by the S.E.C. at present. The U. S. stock market is naturally dull for emphatically there is not being the Coolidge era when everybody was playing the market and prepared the biggest boom and the biggest crash ever known. To-day war production, manpower assignment and factory construction like the addition of magnesium plants on the Gulf are bigger news than Treasury estimates. The interest rates are moored for the duration. Moscow where Mr. Churchill stayed for some days is bigger in the average man's view than any financial centre, for the only thing that matters is checking the German offensive. The release of tanks for the Russian Army is naturally called bigger than any bill to extend aid. Lease-lend has changed all past policy and practice. The financial game is played with new rules and that is why one finds that the rates never vary. Money, discount and exchange rates never seem to change and such things as a new French Bank in Syria are independent of financial policy.

The London Stock Exchange has shown consistent improvement in the past week or two. Home Industrials have as usual held the stage. There has been a really noteworthy rise in leading issues like Imperial Tobacco and P. O. Defd. In spite of the war in the East P. & O. defd. has gone ahead for the Government's promise to replace tonnage is a big factor and shipping issues are now treated by the investor as better than stores shares. It is not suggested that stores shares have lost ground. A recent cable spoke of renewed interest in Woolworth 5 shilling shares. The interest in oils has flagged but interest in giltedged industrials like Distillers units and Courtaulds has been increasing. A week ago it was indeed noted that the peak for the war period was touched by industrial issues. The future of giant concerns like Levers is taken as assured in spite of fears of a real coal shortage.

The Funds have been firm right through and war news does not seem to make any impression on giltedged. The general view taken after the Moscow talks is hopeful than otherwise since the few changes this week have favoured holders. The most helpful factor still is the abundance of idle money. Treasury deposits are not called for this week. The S. E. can look for more credit. Last week the market got a bigger share of 75 million in treasury bills offered but that is not unusual. The volume of applications was lower; yet the rate was hardly three farthings above one per cent. The same thing may be seen in India. Banks here are ready takers of treasury bills: giltedged is firm and if one goes by financial indicators alone there might be no trouble whatever in Indian cities. There is the telltale rise in gold to contradict such a view. Reverses in the field for the Allies are offset by the naval victory in the Solomons. And civil commotion in India is offset by approbatory comment in the American Press so far. The exchange rates published in the press show no change. All foreign trade is controlled, and recent amendments to control orders and schedules about fabricated silver or gold do not interest the public. The European currencies are standing at the old levels. Sterling is no longer 'free' in any place, and if one knew rates ruling in a place like Lisbon one may say what currencies are changing in value. Since all that one knows about stolen notes being hawked in Lisbon does not amount to much it is just as well that one refrains from saying anything about financial signs abroad. From the League's May bulletin of statistics it may be deduced that Portugal's holding of gold, silver and foreign assets had increased since November, 1941 along with the rise in note issue. The result was a lift in industrial shares. Bank deposits did not show signs of having risen but savings bank deposits were larger after the end of 1941. Money was not particularly cheap in Portugal during 1941 but the escudo was distinctly stronger compared with 1940. The average value was about 4 cents (the U. S. cent is meant) which gives an equivalent of 100 escudos or so to the pound sterling. Portugal's public debt included a special issue for Timor. Since Timor is occupied by the Japanese at present the Portugese Government must have become liable to the bondholders at home. Portugal is a country in which British gold coins were legal tender in the past just as sterling was current in Portugese East Africa.

The agreement concluded between Koweit and Saudi Arabia is of some importance to Indian traders. This small state on the Persian Gulf is ruled by a local dynasty subsidised by the British Government. Indian currency circulates freely in Koweit but the postal service is run by the Iraq postal department using Indian stamps however. The State like so many in the Middle East was familiar with Maria Theresa dollars. The treaty of amity made with the Sultan of Saudi Arabia guarantees the survival of the State which is admitted to treaty relations like Yemen and Iraq. The Sultan of Saudi Arabia is in treaty relations with Britain since 1926. The Saudi Sultan controls both Nejd and the Hedjaz. At one time the gold sovereign was the only currency known to Arabia where Indian pilgrims still have to pay out real gold for food and water. The independence of the Sultan is attested fully by the introduction in 1928 of he Saudi riyal, a silver coin in place of the old Turkish currency. The former value of the riyal was about shillings, that is to say 10 riyals were taken as equal to one gold sovereign. The riyal is divided into qarsh muri and qarsh darji. These are nickel coins, Saudi Arabia's main road connects the old capital of Riyadh with Koweit. The only port, Jeddah, is familiar with British Indian currency since the Haj is an established feature of life in Arabia, but apparently the only foreign bank with a branch at Jeddah is the Netherlands Trading Society.

India's Wartime Trade

Just a little over two years ago one of the important allies of Britain surrendered to Germany, and there was then general anxiety regarding the future of India's overseas trade. Our peacetime trade with the Continental markets was over Rs. 30 crores, the principal customers being Germany, France, Holland, Belgium and others. As such a large proportion of the trade, 20 per cent of the total in pre-war years, was wiped out it naturally gave rise to considerable anxiety. There was no suggestion of improvement in trade in other directions in the earlier months of the war and with the difficult shipping position the immediate solution that was put forward was only restriction of the affected commodities, oil-seeds and jute. The Gregory-Meek mission went to the United States to explore the possibilities in overseas markets and came back without any tangible results. It was only pointed out that there were good potentialities in the North and South American markets.

But the fall of France has far from damaging India's overseas trade really helped the country to build it up again. The geographical and natural advantages compelled the countries within the British Empire and other Allied countries to take more goods from this country. In the earlier months of the war period the increase in exports was mainly confined to jute, jute manufactures, cotton, oilseeds, etc., in the lines in which India has been carrying on trade for years. During the last two years the increase has been due not only to the takings of the commodities which this country possesses in large quantities but also to manufactured articles like piece-goods, tanned or dressed hides, iron and steel, etc. The increase has, of course, been mainly due to the jump in exports under cotton textiles.

With the statistics as at present supplied, it is difficult to form any definite conclusion. Only values are given and we know only the total of trade between the different countries. The rise in the value of exports is also to a considerable extent due to the rise in prices. For our purposes, however, it is very easy to point that the leeway with the loss of the European markets has been more than made up and that, at the present moment, by virtue of the unique position occupied by India within the British Empire in the East, her trade must continue to be on a high level, affected only by the availability of shipping space. With the restrictions on exchange and other wartime measures few could have possibly anticipated that the position would improve so much in our favour.

An analysis of the course of the trade during the twelve months ended June 1942, reveals that exporters have been very busy. The largest volume and value of trade in the last three years has been achieved during this period. With a decline in imports in the same period there has been a big increase in the favourable balance of trade. Exports of Indian merchandise during the twelve months ended June, 1942 were Rs. 240.10 crores against Rs. 173.08 crores in the corresponding period in 1940-41. Total exports in 1941-42 were Rs. 256.00 crores against Rs. 185.48 crores in 1940-41. Imports were lower at Rs. 147.09 crores in 1941-42 against Rs. 164.24 crores in 1940-41. Against the increase in total exports by Rs. 70.52 crores there has thus been a decline in imports by Rs. 17.15 crores. The balance of trade has, therefore, increased by Rs. 87.67 crores to Rs. 108.91 crores. The decrease in imports into this country is on account of the United Kingdom, Burma and the U.S.A. With the United Kingdom, of course, the difficulty has been one of not being able to produce enough while with the United States it is one of freight. Burma has gone out of the picture for the time being. During the quarter ended June, 1942 imports from that country totalled Rs. 81.79 lakhs against Rs. 9.58 crores in the corresponding quarter of 1941. With the complete enemy occupation of the country no trade can be expected. Normally, we have an adverse balance of trade with Burma, amounting to as much as Rs. 17.74 crores in 1941-42. In 1940-41 the figure was Rs. 12.39 crores. If the total volume of trade is kept up one can, therefore, expect a further increase in the balance of trade though not proportionate. For, in recent months, one can notice that if our trade with Iran and Iraq has increased considerably there has been an increase in imports at the same time from these countries. In 1941-42 exports to Iraq were Rs. 3.25 crores and Iran Rs. 1.34 crores. In the same year imports were Rs. 1.03 crores and Rs. 6.04 crores from the two countries respectively. The increase is significant particularly in the case of Iran as the figure for 1940-41 was only Rs. 3.40 crores.

The only country outside the British Empire with whom we have a very large favourable balance of trade is the United States. Total imports in 1941-42 from that country into India were Rs. 34.60 crores while exports from India to U.S.A. were Rs. 46.39 crores.

The proportion of trade within the Empire to the total trade has increased to 62.8 per cent from about 52 per cent. Trade with Ceylon, Australia, the Union of South Africa, Kenya and Canada shows a big increase. In 1941-42 exports to countries within the Empire increased from Rs. 116.61 crores to Rs. 148.84 crores. The figures for the three months ending June, 1942 perhaps do not compare quite favourably but taking out Burma the rate of increase has been kept up. Only there is a shrinkage in the volume of trade with the lack of shipping space.

We have hitherto examined the direction of trade and come to the conclusion that there has been a definite increase in the trade with other countries and the loss on account of certain export markets has been made up by the exploitation of new. But whether the new markets will continue to be served by us after the war is a very important consideration to be borne in mind. For, then only will the problem of post-war reconstruction and the drive for the recapture of lost markets be easy. One cannot be sure, however, in this regard. The increase has been mainly under tea, grains, pulses and flour, cotton yarns and manufactures and jute manufactures. In the three months ended June, 1942 there is a decline in exports of jute manufactures. Grains and flour show only a small increase and with the present conditions in the country any rise cannot be expected under this head in the coming months. Tea is, of course, a seasonal export commodity and with the loss of the N.E.I. a further increase can be expected in 1942-43. Textiles will continue to play a prominent part. But whether the increased trade in these commodities after the war, when N.E.I. becomes once again an important competitor, will be sustained and Britain will try to serve Middle East and the East African markets remains to be seen.

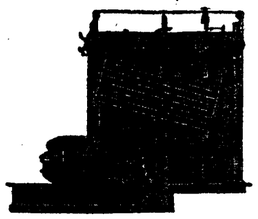
In conclusion, we are unable to notice any definite trends of trade. Only we have been able to take advantage of the existing conditions and effect a large increase in the exports of manufactured articles.

The immediate problem is the necessity of keeping up the level of exports. During the last three months a sharp decline in the volume of trade has been noticeable and if due allowance is given to the increase in prices the volume of trade is perhaps at the lowest ebb for the war period. The decline in imports is not quite pronounced for they have been at a low level since the outbreak of the Japanese war. So far as exports are concerned, they were at a high level till March this year. Only in May and June, 1942 has there been a sudden decline. As regards the necessity of exports from this country to the United Nations there is no doubt, but any calculation of a large accretion to sterling balances on the basis of last year's trading would perhaps prove to be on the wrong side if the improvement in the shipping position does not allow of the former trade.

AID TO RUSSIA

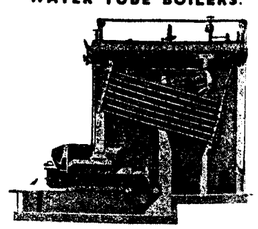
Nothing serves to show more clearly the constant, co-operative vigilance of the leaders of the United Nations than the sudden meeting arranged at Moscow on and after Saturday. The meeting is of a nature utterly removed from the visit to Moscow by Mr. Eden in December. There have been since then such important developments as M. Molotov's visit to Allied capitals and the Anglo-Soviet treaty of May 26. Yet Mr. Churchill's visit could not be described as the return of a courtesy. Since M. Stalin has been Premier for over a year, the concentration of authority in Russia corresponds to previous reality. Mr. Churchill's anxiety to retain the parliamentary Recess was hardly explained a fortnight ago. It is now obvious that he had made a plan to visit Cairo, Moscow and other cities. The visit comes happily enough, after the visit paid to Washington in June. Associated with Mr. Churchill was Mr. Averill Harriman. No longer regarded as the member of a railroad dynasty or as a recent President of Union Pacific, Mr. Harriman is now a real bridge between the major partners in the alliance. Mr. Harriman visited Moscow in the company of Lord Beaverbrook last year, and the continuity of inter-Allied discussions was ensured by his presence.

Since there has been no direct reference in the press reports to the opening of a second front on the direct insistence of Russia, no purpose will be served by speculating as to what may follow from the identity of conclusions reached by Allied statesmen. Russia has expressed nothing like dissatisfaction with the scale or pace of Allied assistance. Yet the presence of Sir Alan Brooke and other high officers suggests that the conversations had other than diplomatic aims. The Russian chief of staff was there, and General Wavell from India too was present. Implementing the promise of assistance contained in the pact is primarily a job for the Allied staffs. The U.S. Ambassador in Moscow was associated with the discussions and it must be remembered that Admiral Standley was a delegate to the last London naval conference and was like the Japanese naval chief, Admiral Yamamato, something more than a technical adviser. The shipping and other issues might have been fully discussed at the same time as the means of obstructing the German advance in southern Russia. Not the general situation, but only local developmentes in the direction of Stalingrad and in Caucasia, provoke anxiety as to the way the war is going. On this point satisfaction will be ensured by a brief reference to the view obtaining in Stockholm. Rumours as to a separate peace between Russia and Germany have been killed at the same time as views have been reversed as to the ability of Russia to engage the enemy successfully. It is of the highest importance for us to note what intelligent people in a neutral capital think. The Swedish view must be intelligent and unbiassed, for Swedes have a reputation of being well above the European average in intelligence. The Swedes cannot be called pro-Russian by any manner of reckoning, and they have been induced to change earlier views, it is now learnt.



The neutral view coincides with the conclusions indicated by the Moscow Conference. The actual scope of discussions is not known, but no doubt has been left as to their cordiality. This change of view in many places coincides happily with the outstanding improvement in Home Industrials. The index was the highest for the war period only a week ago, and this improvement was clearly determined by the visit of Mr. Churchill to Moscow, then impending. Progress in the Kuban valley is still regarded as unimportant as compared with the resistance put up near Voronezh and Stalingrad. The Russian defence resources must be regarded as considerable as Timoshenko's continuous retreat from Kharkov has helped to save men and material. The danger to Moscow has hardly emerged, and the possible danger to Astrakhan must have been evaluated in the light of any decision to open up a line of defence along the Volga. It would, on any showing, be possible to link Allied forces in Iran with any threat to Baku or to the great riverport of Astrakhan. The line from India to Syria on the Mediterranean is well held. It should be possible to advance towards Russia, and no difficulty should be experienced in guessing that the chief factor in any plan to move across the Caspian to hold the Nazis in the South-East must be a Russo-British army, equipped and provisioned by the United Nations.

M. Stalin's request to see the representatives of the Allies at a particular stage in the summer campaign can be readily related to the threat developing towards the three Caucasian republics. That threat is not acute since the Black Sea ports have not yet been taken and the march from the south on Stalingrad meets with ever-increasing resistance. The Allies have to plan for an offensive in the fourth year. What direction it will take can be safely left out of consideration, but the decision as such will be conditioned by the successful efforts in the Solomons and in the Aleutians. Once the line to Russia and Australia from the U.S.A. is kept open by warships and aircraft, the two-ocean navy can act for the benefit of the Allies, and the most potent factor in all warfare at present is Admiral Nimitz's fleet. If the Japanese fleet takes a bad knock near Australia, not merely is invasion averted, but ambitious plans to push into the maritime provinces of Siberia frustrated long before going into execution.



Since confidence in Russia's ability to resist has been re-established by the Moscow conference, it is clearly of the highest importance that one looks at all the fronts. Progress beyond Armavir has been small and the evacuation of Maikop has no more than accidental significance. There has been no advance beyond Kletskaya; and Stalingrad is nowhere near a siege. Westward, the Russian attacks near Voronezh have succeeded and the slow march only indicates that the entire Don basin is not in German possession while the capture of Stalingrad alone can bring the Germans near the Volga. It is idle to speculate on how much oil is in danger and to what extent Russian resistance will suffer. Granted that the oilfields up to the Caspian are in danger, one must take note of the Caucasus as a barrier to easy advance. War in the mountains would certainly be different from war in the steppes, and it is for us to note that Baku lies to the south-east of the mountains and the refineries of Krasnodar are insignificant as compared with Baku's.

While shallow, unreasoning optimism is not warranted, it must certainly be urged that every advance reduces the advantages of the invader, and great as Nazi skill may be, to hold a line from the Baltic to Baku in winter must be viewed as impossible. One other point needs consideration. Russia is the one country that has fought Germany for more than a year and has met panzer warfare with tanks, artillery and aircraft, of not inferior quality. To suggest that a few German cantonments could hold down the entire conquered territory would be to misread history since 1917. The visit of Mr. Churchill to Moscow was in the nature of amends for his own mistakes in the past. To carry through our parallel, one may refer to the success of White Russians, backed by Mr. Churchill for peculiar reasons, in the South, and their ultimate failure to beat the Bolsheviks. It is necessary to go back so far in order to indicate that the British Premier who went to Moscow went because he is convinced the Russian Government has the means and the will to resist. The visit has more than temporary significance for the alliance is actually working in the second year of war, and it was for Mr. Churchill to show how Russia can be put in a position to inflict a decisive defeat. The visit will have the incidental advantage of reducing talk of a second front at home. While Europe is garrisoned by powerful forces and victory is more or less distant, though certain, the chances of opening up a front even in the Peninsula cannot be regarded as very bright. From Narvik to Bayonne the entire coast is held by the enemy, and invasion across the Channel may prove as difficult as it did for Hitler in 1940. The success of commando operations cannot be said to show an offensive can be launched in the West. If the Nazis are known to be perturbed, it does not imply that they are unprepared. The shuffling and

No Limit to Greed.

There is no longer any illusion as to Japan's desire to get the most out of her conquests. She hopes to get sugar from Java, tobacco from Sumatra and rice from Thailand. The era of colonial exploitation is not ended, for the Japanese are anxious to make all their conquests pay for themselves. The fair promises made to the Filipinos are forgotten in an anxiety to get sugar, copra, hemp and all possible produce for a country starved of raw materials. The voluntary damage done to mines and oilwells makes Japan all the keener to get at available wealth. The record in Indo-China, and China too, is forbidding in the extreme. There has been a warning to occupied countries in the middle of May as to their duty. The warning was meant to kill hopes of liberation, and to make them remember that in South-East Asia the hopes of economic advancement would be small as the Japs at home had been promised loot and jobs on the strength of a succession of victories. The comprehensive warning issued in May was meant to terminate local resistance and to indicate that the occupied countries would have to pay for Japanese protection. The co-prosperity myth has been shattered by the May programme emphasising that Japan's leadership entails the submission of the occupied countries which have to provide men and money for the protecting power. There was also an indication that Japan's allies can hope for nothing except what Japan allowed them. More sinister was the twofold warning first to the nationals of Allied countries that they would be given freedom, if they agreed to give complete co-operation to Japan and that to the new subjects, that no interference would be tolerated in respect of the Japanese development programme, followed by a threat of ruthless punishment for such interference. The Japanese press has gone wholly imperialist after May, and has asked for the incorporation of the Philippines in the Japanese Empire. Evidence as to looting in Hongkong and Singapore has been forthcoming at the same time as evidence of reasonably good treatment of prisoners of war. The reports from Burmese territory received in May pointed to much looting and wanton destruction of property. The Burmese woman leader in Chungking has been the first to claim that her people will be undeceived and help in the recovery of Burma for the United Nations. Recently Indian evacuees from Burma have complained of being deprived of gold and silver carried by them and the example set by the Indian village watchman, who took a Jap airman captive, is now rightly valued as the just demonstration of courage and wisdom on the part of a humble patriot.

Crops and Prices

Since the monsoon is coming to an end the crop forecasts of the current year will appear one by one. The effects of the grow more food campaign will have to be judged only on the basis of the forecasts, yet to appear. But those for 1941-42 have all appeared. The last was the final wheat forecast pointing to a small reduction in total acreage and a small increase in outturn. The summary of the 1941-42 crop forecasts must be studied in relation to the advance in prices this year as also the export prospects for crops like wheat. In comparison with 1941 there was a reduction in the acreage under oil-seeds, sugarcane and wheat. The area under cotton was slightly lower and that under rice was more or less the same as in 1940-41. The largest area is naturally under rice. In 1941-42 rice accounted for over 73.1 million acres of the total cultivated area while the area under wheat was 33.8 million acres. Cotton was obviously the chief commercial crop in 1941-42 as in the past. In regard to estimated outturn the outstanding feature was an increase of 15 per cent over 1940-41 in regard to rice. The final forecast put the outturn at 25.57 million tons. The increase is due to largely to the extension of the area under rice in Bengal. An increase of over 3.4 million tons makes imports from Burma unimportant but local surpluses and local shortages have become so common that rice is controlled in Bombay, Bengal and other Provinces. The comparison of the probable outturn in 1941-42 with that of 1940-41 reveals a sharp fall under sugarcane as also groundnut. Smaller falls were recorded under linseed and castorseed as also sesamum. The supply situation accounts for the extreme firmness noticed in the Indian oilseeds market for over three months. An increase of one half per cent under rape and mustard is unimportant. Since Argentine linseed and Chinese groundnuts are not likely to be very serious competitors with Indian products in available markets one must look for further firmness. An increase of one per cent in the Indian wheat crop is of little importance when imports are ruled out and exports are probable. Except for rice the outturn of every major crop in 1941-42 was below that for the preceding year. Readjustments were called for by March last when it was apparent that there would be a shortage of food grains, sugar and oilseeds. The crop forecasts in nearly all cases cover the entire cultivated area in India and there is no surplus except under cotton. There is no convenient source of imports for wheat, sugar and rice whereas cotton can be had from Egypt, Iraq or Kenya. The first jute forecast pointing to an increase in area suggests that the area under rice in Bengal may be less than that recorded in the past year. The dislocation of all economic activity in East Bengal will have to be reckoned with as an adverse factor and the 1941-42 surplus can be ignored in evacuating prospects for rice-growers. The revision of prices as from August 1st was an implicit admission that the major trend was upward, and what the Central Government had done in respect of wheat in May could not be ignored. The crop prospects will naturally vary from district to district, but reports of damage to crops in C. P. and parts of Bombay will have a greater bearing on supply and demand than any broad statement such as prospects and outturn of crops in Assam are fair. One cannot deduce anything from the weekly cable to London as to crop prospects in Bengal or Madras. But it is altogether evident that prices of cereals will stay up. The progress of agricultural operations will have less influence than the limited destruction caused by civil commotion. That is why the price of wheat is unchanged over weeks, whatever happens to cotton or jute in the interval.

Argentine Crops

Crop conditions in Argentina until April appeared favourable but in May there was a spell of cold weather which interfered with ploughing. The sowing of the wheat crop was evidently delayed. A report received in June from a correspondent of the Imperial Economic Committee stated: "In Buenos Aires ploughing for the new crop continues, insufficient rain during May having made the work difficult. In the southwest this has practically paralysed the task. In Santa Fe the preparation of the land has not been undertaken with the enthusiasm of other years on account of the uncertain situation of tenant-farmers who do not know whether their leases will be renewed. Nevertheless, it can be estimated that 70 per cent of the area normally sown for wheat is now ready for seeding. Planting of slow-growing varieties has commenced here and there, and in the first half of June the work will be intensified."

The report stated that planting has begun in parts of Cordoba but that sowing would start in Entre Rios in mid-June. The most important point in the report is that with the exception of Cordoba all States are likely to reduce the area under wheat although it is thought that in the Pampa the area will approximate to that of the last season. The condition of the sown areas was stated to be good. The wheat crop was not being prepared for with enthusiasm and delay in sowing the area was noticed in Santa Fe while rains interfered with cultivation in Entre Rios. The lack of enthusiasm for sowing wheat might be due to the fall in shipments of wheat in May. The 1941-42 crop was enhanced by a huge carry-over. Available supplies at the end of May were known to be over 5.4 million metric tons. In spite of price stabilisation measures the Argentine outlook must be called bearish. The lack of enthusiasm to maintain the same area under wheat is due to poor sales. Except for Brtain there was no buyer in Europe. The wheat business, it was noted, remains under control through the Official Grain Board. And the grain of the new crop having been released for sale it is monopolising the attention of buyers. Prices for exports to Europe and Brazil were raised alongside of abolition of minimum prices for the previous year's crop. A previous report dealt with the growth of trade with Brazil and Chile. This is a new aspect of inter-American trade in the war period. In order to deal with the carry-over Argentine millers are compelled to use only a limited portion of new crop wheat. Negotiations with Spain for the sale of 100,000 tons of wheat in return for iron and other minerals were said to be going in Buenos Aires during May. The possible reduction of wheat crop will be of little interest to wheat-growers elsewhere but will affect certainly prospects for shippers of jute manufacturers. The grain trade was not brisk and the Argentine farmer was not anxious to grow wheat on the usual scale. There may be no shortage of bags next year and any lift in Argentine prices due to enhanced freight rates may be without influence on Indian prices. The Argentine surplus will encounter stronger competition, and prices may drop. The general effect will be to help the U. S. Administration in carrying out its price control measures in the same way as a bigger crop in Canada will help the U. S. A. to build up a wheat reserve for post-war relief operations.

Ancient And Modern

The 100th anniversary of the Treaty of Nanking falls this year and it must be admitted that between the Opium Wars and the alliance subsisting between Britain and China falls the most momentous period in China's history. Sir John Pratt summarises in an Oxford pamphlet skilfully the story of Britain's dealings with China. It is however strange that not a word is found about the Taiping Rebellion or about General Gordon in a pamphlet that deals largely with generalities or basic factors as one may call it. The decline of the Manchus was more rapid than that of the Mings because the aggressive European was on the scene. Since relations with Britain alone are reviewed by Sir John there is not much about John Hay who is the real creator of Chinese independence. The Open Door in the U.S. view. is something more than an invitation to exploit. In a word, Imperialism was softened by a new Power that was established in the Philippines and engaged itself in trade and missionary enterprise in China with equal fervour. The way in which the Boxer indemnity has been applied to help China marks the latest phase in Sino-British relations—a phase that came before Japanese hostility was evident.

The complete contrast to China in some ways is presented by Greece. Mr. Stanley Casson harmonises ancient Greek with modern Greek history. Historical continuity, he emphasises, gives a singular value to nationality. There is, on this view, a happy choice of Thucydides by M. Venizelos for translation. Under her Danish kings, Greece has made unusual progress. The only items of information which are hitherto little known are the existence of Greek colonies in the Caucasian ports. If the Greeks have left Turkey voluntarily

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

they have not left Russia and the German threat to the Caucasus is a threat to the enterprising freemen beside the Black Sea. The economic difficulties of Greece under occupation are fully indicated. Greece, strange to say, is cut off from the Mediterranean. Except for American charity, there is nothing to keep her people going. Mr. Casson indicates that chromite is found in Greece and the Germans have been able to acquire some ore. The Germans of course take olive oil, wine, fruit and tobacco, but farming in Boeotia must have decayed. As to the future of Greece and the Balkans little is said but one must assume that the Macedonian atrocities of the Italians will not be forgotten, and Greece will get her share of Albania when that state is carved up.

European Neutrals

The note in this journal on Europe's trade in wartime described the shrinkage in volume noticed in the case of Occupied countries and the recovery characteristic of the few neutrals left. Allowing for the changes in prices, it is inferred that in the period 1938-41, there have been vast changes in the trade of Denmark and many other countries. In the year 1938, the Kingdom's trade with U.K. greatly exceeded that with Germany. The bulk of her exports was agricultural. The subsequent years have witnessed a steady fall in exports and a rise in imports. Her foreign trade is now about half of what it was because industrial and agricultural production alike have fallen. The 1940-41 figures indicate a big fall in agricultural production. The export of pigs and bacon has been greatly reduced under the occupation. The export of butter has suffered less than the trade in eggs, and the change in volume cannot be wholly due to the end of trade with Britain as from April 1940. The trade of Finland, to judge from 1941 figures, has recovered to a striking extent. The setback recorded in 1940 has no relevance. Imports of raw materials, food etc. increased in 1941 to judge from figures furnished in the League bulletin of statistics. Total imports amounted in value to over 8818 million finnmarks while exports amounted to 9251 million finnmarks. The true measure of Finland's difficulties is the abnormal excess of imports in 1941. In a normal year the imports almost balanced with exports. As compared with 1938 the imports continued in 1941 but exports were about half those in 1938. The chief item was wood, pulp and paper; and exports of food fell away rapidly after 1939. The import surplus is in part due to the advance in prices but the percentage fall under exports is as great as 70 per cent; and the recovery in 1941 is not very great. Compared with Finland a country like Slovakia was well off. Trade with Germany was increasing in 1940 and 1941 but the largest proportion of her trade as before was with Bohemia and Moravia. Trade with Germany's allies, Hungary and Italy, increased in the same manner as trade with Switzerland. At the same time, her trade with the Low Countries fell off surprisingly. Similar influences helped to lift the foreign trade of Hungary far above its 1938 level. Germany's share of her foreign trade, imports and exports, advanced through the war period. Trade with the Occupied countries and Italy increased. Trade with Turkey also rose, but trade with Britain disappeared in 1941. The provisional figures for 1941 point to a sharp fall in trade with Russia since Hungary's trade is the result of politics.

Limited Recovery

The export trade of Eire suffered to a lesser extent than her import trade. Imports of foodstuffs declined substantially and exports rose in spite of the fall in shipments of live cattle last year. Available figures suggest a moderate increase in Irish exports on account of the war, with prices also favouring the Irish farmer. But the advance in prices as between 1938 and 1941 suggests that trade has shrunk and difficulties have multiplied. The recovery in Switzerland's foreign trade belongs to 1941. Imports rose at the same time as exports, partly on account of the rise in prices. The decline in volume as compared with 1938 cannot be ignored and the higher prices paid for imports in 1942 (first quarter) suggests that difficulties persist as indicated by a surplus of imports.

Neutrality accounts for the stability of Portugal's trade in raw materials. Except for maize and sugar her imports of food have gone down since 1938. Imports of fibres and piecegoods have declined at the same time as imports of mineral oil and coal have declined. The chief feature of her import trade in 1941 was the fall in imports of iron and steel, tinplate, copper and all metals. Imports of vehicles, ships, tyres etc. declined. The big increase in Portugal's exports in the war period is due to the large exports of foodstuffs. The exports of fisheries showed a great increase in 1941 though exports of wines fell off. A peculiar feature of the neutral's trade is the increased export of piecegoods. The export of cork showed a big increase but far more substantial was the rise in exports of tungsten ore. Portugal produces a little tin and pyrites but her real importance lies in her possession of tungsten, far more valuable to Europe in view of the cessation of supplies of supplies of Burma and China ores. Even more pronounced was the increase in exports of gums and resins. Portugal's transit trade grew even more rapidly than her trade with her colonies, which, measured by volume, fell slightly in 1941 whereas the entrepot trade rose. Neutrality governs the decline in Sweden's imports last year. Imports of all categories declined since her trade with countries outside Europe was diminished substantially by war. Exports were again hit by the war though the value of ores shipped showed an increase in 1941. Over nine-tenths of Swedish trade is with Europe and that in spite of the heavy reduction in trade with Britain—the chief buyer in 1938 taking about a quarter of total exports.

Rerolling Mills' Demand

Last week was held a conference of rerolling mills in India. Some years ago the rerolling industry developed a consciousness of its separate interests in regard to its essential raw materials. That consciousness persists for the rerolling industry is largely dependent on domestic scrap, and scrap is now jealously conserved and distributed carefully. The Indian rerolling mills, according to Mr. S. K. Bhatter, number about 125 but only 23 of them are eligible for scrap under Government control. The majority of mills, it was complained, are deprived of scrap which they cannot buy in the market without authority. Complaint against the iron and steel control was the feature of the speech which dealt with the need to discover new sources of scrap

since the rerolling mills were producing essential materials. It was urged that Government should hold a conference to consider the problems of rerolling mills. Resolutions adopted last week asked for the recognition of the new association and for equitable distribution of supplies of scrap and Government orders. A new advisory committee has been suggested in this regard. Another resolution asked for relaxation or modification of control in respect of authorisation orders for obtaining scrap and for the issue of licenses for sale of finished products. The existence of two associations within the industry at present makes it necessary for Government to get in touch with the point of view of new entrants in the industry. The major point of complaint relates to scrap. The pressure on supplies will persist, and the exact allocation of supplies among various provinces where the re-rolling industry is established will require careful adjustment. The post-war position of the industry was hardly broached but it is clear that it will require careful consideration since the revival of imports after the war will create unusual problems. For the present every Indian concern appears to have a strong case, and if a permanent Tariff Board were in existence, such grievances as were described and discussed last week could be examined without prejudice to the ultimate interests of the consumer.

Transport Shortage

Businessmen are not unconcerned with politics and over and above the appeals to negotiate one must refer to the perfervid pleas to Government to avoid repression. The usual reminder that the war effort demands a firm policy has not been treated as of any great importance. That Indian commerce still stands for a settlement may be inferred from a reading of Mr. J. C. Setalvad's speech on August 4 at the quarterly meeting of the Indian Merchants Chamber in Bombay. Like the speeches on earlier occasions a survey of political developments came before the analysis of the food problem in Bombay and the criticism of the inadequacy of price control measures. Not for the first time was the deficiency of transport blamed as the reason for scarcity and high prices. Speculation by wholesale merchants was admitted to be an element in the situation. In the case of rice Bombay has to depend on Madras. Seaborne imports of kerosene are a factor in the difficulties of life. Mr. Setalvad dwelt on the food position to make it clear that it is not failure of crops but shortage of transport that makes it impossible for the consumer to reap the benefits of price control. Mr. Setalvad declared that the wagon position was deteriorating. Both on account of increased military movements and increased demands from trade and industry the railways were in difficulties as regards wagons and locomotives. To divert grain traffic to coastal shipping routes seems feasible in his opinion and the recent reductions in war risk premium for voyages in Indian waters should make it possible for greater use being made of coastal shipping. Mr. Setalvad suggested that Government should undertake to bear extra charges on account of war risk premium so as to facilitate movement of grains. In the main, Mr. Setalvad's major plea was one for reducing the inconveniences and hardships arising from the war by providing additional transport facilities. The suggestions have borne fruit in that the War Transport Member has felt it necessary to examine the freight situation in relation to prices. A special committee has been set up in Bombay to examine coastal traffic problems and the priorities system is likely to be modified. The sugar and other shortages have been repeatedly explained in terms of a shortage of transport, and in Bengal most of the rice merchants are agreed in ascribing the price differences and the differences in local stocks to their inability to secure wagon space. When the situation will be eased can hardly be predicted, but the dislocation of transport, already caused by internal disturbances, makes it hard for traders to be hopeful.

Banks and Savings

The statement relating to the scheduled banks in India emphasises once again the fact that the greater part of the increase in note issue has gone into the banks as deposits. The position as on July 31 showed that in a year the demand liabilities of scheduled banks had risen by Rs. 103.88 crores while time liabilities had fallen by Rs. 7.17 crores only in the same period. The increase in deposits accounts for the unparalleled ease of money conditions, attested by successive falls in the Treasury bill rate and by the rise in balances held with the Reserve Bank. The balances exceed the statutory proportion; that is quite common. The last statement as on July 31 showed a total of

Rs. 63.27 crores as compared with Rs. 29.14 crores a year ago. The reason for the great expansion is to be found in the fall under Advances. The statement as on August 1, 1941 showed an aggregate of Rs. 110.01 crores under Advances in India. The statement of July 31, 1942 showed a total of Rs. 85.61 crores. The increase in deposits has not led to any extension of borrowing. The dissimilarity between the U.S.A., where commercial banks' advances have been rising since 1941, and India is indicated by the fall shown under Advances as well as Bills. The total for the latter has shrunk in a year from Rs. 4.61 crores to Rs. 1.44 crores.

The increase in cash held by the banks is a minor symptom of the progressive increase in Deposits. Since current accounts are mostly active, larger deposits cannot be without an effect on the price level. There is, however, reason to think that the improvement in subscriptions to the Third Defence Loan after the beginning of August springs mainly from the further increase in deposits. The Imperial Bank return showed that Deposits in the case of a single bank exceeded Rs. 141 crores, and as 60 per cent or more of the assets are in giltedged, the direct gain to the securities market is apparent. It may be claimed that the fall in bank advances by itself would justify fresh departures in short-term borrowing. Sir Jeremy Raisman's visit to London would probably result in attempts to introduce such novelties as treasury deposits in India. The time has come for the banking system as a whole to devote its attention to financing the war instead of financing clients. The ebb of new issue activity is a favourable factor. The only new investment available to the investor to-day is the third defence loan at par. If it is urged that the rate of interest is apparently not enough to tempt private subscription it is enough to tempt the banks. A reduction in balances held with the Reserve Bank is to be welcomed if it leads to the outflow of banks' funds into the loan. The last statement points to an over-all cash rate of over 22 per cent. The ratio might be lowered substantially without prejudice to depositors. Since banks have virtually lost interest in bullion, the easiest way of encouraging investment is to help depositors buy the defence loan. Banks will have to start and guide a savings movement soon. That is a conclusion for which general support should be forthcoming.

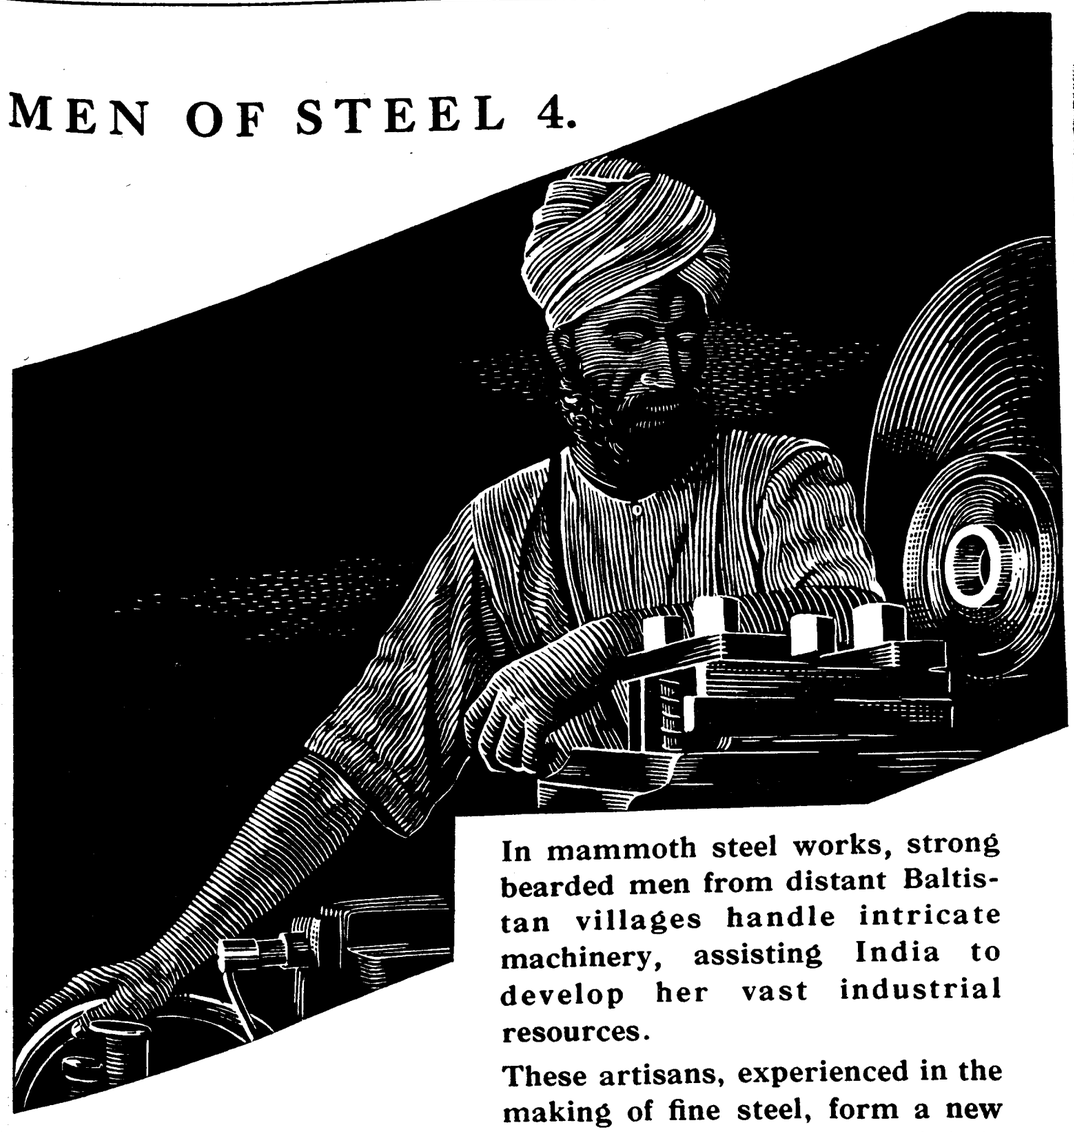
Amazing Addition to Hindusthan's Funds

The somewhat late appearance of the Hindusthan report and accounts cannot obscure the brilliant results obtained in the 35th year of its career. In regard to new business alone Hindusthan surpassed all but one life office and even in a difficult year like 1941 the Company obtained nearly as much as in 1940. The report and accounts illustrate not only the strengthening of resources in the case of Hindusthan but the fact that the Society has actually improved its position in the war period. No achievement can be more heartening, and the Board is certainly entitled to the plaudits of the public and the thanks of the shareholders. The total new business for 1941 amounted to 13,953 policies assuring in the aggregate Rs. 2.72 crores as against 15,929 policies for Rs. 2.83 crores in 1940. The average value of the policy in the case of Hindusthan remains higher than in the past. The mild setback in new business explains why the premium on new business for 1941 is Rs. 12.79 lakhs as against Rs. 13.89 lakhs in the preceding year. The best method of evaluating Hindusthan's record for 1941 would be to look at the revenue figures in the life branch. They certainly conform to general anticipations as the total premium revenue has advanced to Rs. 89.36 lakhs as against Rs. 84.59 lakhs in 1940. The more pronounced improvement in regard to investment receipts for the year, viz., Rs. 20.76 lakhs as against Rs. 12.13 lakhs is a reminder of the catholic and enterprising policy for which Hindusthan is renowned. The vigorous expansion in revenue more than neutralises the slipback in new business, which it may be recalled usefully, followed a striking increase in business.

The growth of revenue is paralleled by a similar growth of the funds. Exclusive of the transfer of excess reserve for depreciation of investments there has been a rise of nearly Rs. 57 lakhs in the Life Fund as compared with Rs. 46.22 lakhs after 1940. The striking record of preceding years has been bettered. This vast addition is independent of a favourable claim experience and a lower expense ratio in 1941. It may be taken as proof of Hindusthan's leadership, as much as the relatively small proportion of claims to annual premium revenue. Claims and surrenders together took less than Rs. 27 lakhs out of a total revenue of Rs. 1.1 crores. This is as striking a feature of the annual report as the increase in total business in force to Rs. 18.99 crores. The further drop in the expense ratio is to be interpreted as proof of successful management. The most irrefragable proof, however, is provided in this case by the addition of over Rs. 66 lakhs to the Life Fund to raise it to Rs. 4.24 crores nearly. The annual meeting when it considers the results cannot but record its satisfaction with the realisation of previous anticipations. The outlook may be summed up as more than favourable. And policyholders who read the report should examine the balancesheet and classified summary as well. It will be learnt with great satisfaction that the holding of approved securities has increased further substantially in conformity with recent policy. This increase is far more significant than the increase shown under mortgages and policy loans (Rs. 33.89 lakhs and Rs. 44.5 lakhs respectively) on the basis of a comparison with the balancesheet as at the end of December 1940.

The Life Fund of the Hindusthan is distributed among assets such as debentures and railway shares chosen for security and yield. The increase under house and landed property in a whole year is barely Rs. 6 lakhs while the increase under revenue items augurs well for the coming year. The liability under outstanding claims, Rs. 13.1 lakhs and sundry creditors Rs. 8.71 lakhs nearly, is almost covered by revenue items; and the cash balances totalling over Rs. 21.69 lakhs at the end of 1941 point to a state of exceptional liquidity, suggesting arresting prevision on the part of the management. The report naturally contains a felicitous reference to the severance of the Hon. Mr. N. R. Sarker's connection with the Hindusthan, for the public in India has for a long while associated Mr. Sarker with the Hindusthan. The last year of the association is in many ways the most remarkable in a remarkable career, and the Society is fortunate in retaining at present as its chief executive, Mr. N. Datta whose own record is supported by Hindusthan's last five annual reports, in fact ever since Mr. Sarker passed on to the wider stage of public affairs.

U. S. Compulsory Service



Permanent, regular military service for the youth of the nation is the object of a new bill sponsored by Mr. Wadsworth, already known to fame as the author of the bill which introduced the draft again to the U.S.A., and that before the outlook of war. National service, however, will not be limited to service in the army. The citizen will be called upon to place himself at the disposal of the State. Details are now available of the manpower mobilisation scheme prepared by Mr. McNutt, the social security administrator who studied the subject. The U. S. manpower bill will take men out of industry into new jobs. It will also lead to an expansion in war production. According to Mr. Stephen Early the bill is being drafted on the basis of Mr. McNutt's study as U.S. manpower commissioner. The bill will have the widest scope, and will be concerned with 60 million labour units, their assignment and essential service in factories, on farms and in laboratories. The manpower legislation will accomplish for the U.S.A. what has been done by the Essential Works Order in Britain, its basis being the belief that there is a place for every man or woman in the total war effort. The goal of 60 million in employment is ambitious. It means full employment in 48 States and even more an addition to income. The 1942-43 budget estimates will not appear frightening if employment expands at the same rate. The N.A.M. has advocated increases in taxation in order to finance the war. Since munitions output in April-June was four times that noted in the corresponding period of 1941 the U.S.A. can break all records. The manpower bill may lead to a definite shift of industry. The depressed South may be helped to recover, and if mineral production grows rapidly, the West may share in the revival. The redistribution of industrial population, but not of resources may come in the wake of the manpower bill. Under the New Deal various labour corps of the young and old were formed. Experience gained with the C.C.C. etc. must help in the taking out of men for essential work. The Governors have endorsed in April and after the Federal Government's policy and the manpower law will not require any amendment of the consititution. Shipbuilding with a target of 25 million tons will absorb probably a million or two.

South African Steel

The Dominions are making rapid progress as steel producers. Canada's output of all metals and manufactures has increased to a notable extent. Australia where the first home-made tanks have come off the belt is credited with a desire to develop steel production further to make herself independent of imports. The Union of South Africa has a young steel industry, but its growth in the war period has been amazing. According to the latest reports the South African Iron and Steel Corporation is building its second plant. Work has started on the Vanderbijle works, named after the chairman of 'Iscor' who is also Director-General of War Supplies in the Union. The new works is expected to be in operation next year. It is located near Veereninging on the banks of the Vaal River. The steel industry has rapidly grown in importance. The S.A. Minister of Commerce recently declared that he did not know how the war effort could have been carried on without that corporation, the

My friend Pothan Joseph insists that this week there should be no "Gossip"; he wants an Elegy and I make way for him for his tribute to Mahadev Desai. Let Joseph speak.

* * * * *

MAHADEV DESAI

By
POTHAN JOSEPH

Nothing can be more moving than the circumstance that the Mahatma is not able to publish in "Harijan" a tribute to Mahadev Desai who has missed it by a fortnight. He will be remembered in all the sagas of the Gandhian epoch. Mahadev preceded me by four years through the Bombay Law School when D. F. Mulla was Principal and M. R. Jayakar Professor of Hindu Law. What struck one on first acquaintance was his affectionate nature verging almost on the feminine, because deep love and adoration were for Mahadev Desai inseparable. Coupled with it was the trait of intenseness. Had he been a patriot of pre-Gandhian politics, he might have taken to orthodox revolutionism, tired of the prolix resolutions and patient vigils of the Bombay Presidency Association; had the lure of sordid wealth gripped him, he might have been an invincible crook exploiting all the loopholes of the Indian Companies Act and trading on national Swadeshi slogans to become what is called a "captain of industry". For, he had a very ingenious and resourceful intellect. But the personality of Mahatma Gandhi drew him out of the rut of a silly Government Department where he had been ill at ease, and Mahadev Desai became a transfigured character.

* * * *

Before him the secretarial work of Gandhiji had been in charge of Indulal Yajnik, who, with his questioning and stormy disposition, drifted to uncharted course ending, through an Irish interrugnum, into Kisan leadership. Mahadev Desai had the equality of utter submission, like C. F. Andrews, to Mahatma Gandhi. If anything was incomprehensible they would wait patiently for events to prove what they could not believe. Andrews and Mahadev were both exuberant personalities, but Mahadev with his Gujerati ballast could control his emotions infinitely better than Andrews who had found his spiritual home in Bengal. Two remarks of Mahadev I remember when we last held a disputation in New Delhi at the time of the Editors' Conference; he let fall two remarks. I contended that Gandhiji was a trifle autocratic. He said: "He is an autocrat, but within his autocracy there is perfect freedom and kindliness." I asked what was the good of people living in jail as part of politics. With that smile of guileless blandishment so characteristic of him, Mahadev cried: "And what do you say about dying in jail?" Well, he died in jail, before living not long enough for us all, but after having lived much for our sake. He was only 53.

* * * *

While Gandhiji carried in his right-hand a bamboo-stick like a pastoral staff, Mahadev Desai had been his real crutch, the man who knew all the moods and nuances of the peripatetic **ashram**, the pulse of events, the necessities of orderliness imposed by world-fame. He was busy as a beaver and he had cultivated his literary tastes to a high degree; and he was a great force in maintaining the austere elegance of the Gandhian background at a time when the doctrine of simplicity was hovering on the precipice of ignorance and uncouth living. No, everything was spick and span; there would never be a proof-reader's mistake in "Harijan", there would never be a letter lying unanswered, there would never be a guest left neglected. He was active, head and hand, all the time, in the service of Gandhiji in whom he lived, and moved and had his being. In all his fasts and mud-plaster experiments of health which Gandhiji would adopt, Mahadev Desai was there as loyal attendant. In the whole drama, there has always been the nurse-mind.

* * * *

Mahatma Gandhi is a master of pellucid English, but Mahadev had the excelling quality of objectiveness in addition to chaste language. When Gandhiji writes or speaks, you are in the atmosphere of argument and advice without delineations of circumstance, colour, quotation, thus making his very simplicity overawing and sometimes complicated. Mahadev Desai always made up for it, and the fine way he recorded Gandhiji's talks with American correspondents and negotiated awkward curves with brakes on, over the implications of the "Quit India" slogan, constitutes a masterpiece of commentatorship. How he found time to read so much with so many trumpery-affairs besieging him was a marvel, for he was well-versed

Terms on application.

SAVINGS BANK--Deposits received and interest allowed at 1 per cent. per annum.

SAVINGS BANK DEPOSIT ACCOUNTS--Sums of Rs. 300 and over accepted at 1 per cent. per annum by transfers from Savings Bank accounts, subject to three months' Notice of withdrawal. Rules on application.

W. G. GROUNDWATER, General Manager.

in the writings of great men, and he could also re-capture the egregious contrary sentiments. I used to have an occasional spar with him; he told me that he hated my invectives, while I, on my part, dreaded his subtleties, but there was not a trace of venom in his razor-edged reasoning even in a frenzy of partisanship.

* * * *

Mahadev took the chair of my late brother (George Joseph) who had been sentenced to jail as editor, the "Independent", but the family was not left unbefriended and among the silent mourners today I cannot think of the grief of any one exceeding the sorrow of Mrs. George Joseph. The recollections of his personal kindness will be treasured by many who bow their heads remembering Mahadev Desai. For. Mahadev was profoundly human; and to be human requires more of the soul than to be merely humane and give donations to Dog Hospitals out of illicit riches. Ashram life round Mahatma Gandhi is not all tranquillity. There are problems, there are conflicts not all of which could be submitted to Gandhiji for pacification. Mahadev Desai used to untie many a knot. As an accomplished writer, he was capable of subtle special pleading and of the art of telling a story that can turn the tables in the logic-chopper. His book on "Two Servants of God" (the Khan Brothers of N.W.F.P.) was propaganda in my eyes, since they are no better than other politicians. And politics in India can be like nothing on earth nor by any means anything heavenly. His monograph on Maulana Abul Kalam Azad published in England for circulation there, contains blatant exaggerations in my opinion, a case of enthusiasm on the part of a born hero-worshipper. There was an air of intimacy about him and, in many a Gandhian controversy, he was the shock-absorber. But in the normal presentation of a case, Mahadev had the rare gift of marshalling all the facts. He was the very embodiment of Sweetness and Light. That he is no more is world-news with black border, and it must cause a wrench in the hearts of thousands of friends in India and beyond. His body was cremated with Mahatma Gandhi present at the jail-ceremony—a great theme for a painter. All his mortal remains went as ashes, but there still survive his immortal remains as he passes in the wake of my brother whom he dearly loved, far into the Elysian Fields where the Immortals to Immortals speak.

capacity of which originally set at 180,000 tons of raw steel per year would soon be increased to 420,000 tons. Additional machinery to be acquired would be consigned to the production of war materials as the first essential. Iron and steam-coal, minerals essential for industry are plentiful in the Union and South Africa ranks with the limited number of countries in which the essential minerals for the heavy industries are present in large quantities. The S.A. steel industry is scarcely eight years old but it is now formidably placed. The consequences for South Africa will lie in the absorption of European skilled labour and the reduction of oversea imports. The State-sponsored plant has more than made good the fall in imports and South Africa's ability to carry on would be proved in other ways than the victualling of convoys calling at the Cape.

Corporation And Capital

The best way of indicating progress in the co-operative movement in 1940-41 is to refer to the increase in the paid-up share capital of the movement. Loans and deposits from members showed an increase over the average of the preceding five years. The recent decline in deposits of banks and Governments held by the co-operative institutions is offset by the increase in deposits made by societies. The increased borrowings of land mortgage banks in 1940-41 also point to an inflow of capital which is indicated by the fact that the five-year average was exceeded by over Rs. 4.65 crores. It is not without interest to examine the share of the Provinces. Madras leads in regard to share capital though the average capital per member is higher in the case of Bombay. The total working capital of the co-operative movement in Madras in 1940-41 is known to be Rs. 24.93 crores which is roughly one-fourth of the working capital for British India as a whole. The working capital for Bengal is shown as Rs. 21.2 crores nearly and that for Bombay is Rs. 16.95 crores. There is only one other Province where the movement has attracted sufficient capital. In the Punjab the average per member and society is relatively high, but funds from outside the movement appear to be rather large. Whether the success in getting deposits from non-members is based on the rate of interest offered or any other factor, the movement's growth is obviously limited by its dependence on funds from banks and non-members alike. Of the total working capital of Rs. 98.48 crores for British India over Rs. 10.82 crores lay in reserve funds. As against a paid-up capital of Rs. 12.55 crores the reserve funds were reasonably large, but it must be said that only in Bengal did the reserve funds exceed capital. The major sources of deposits were the central and provincial banks and non-members. From within the movement the inflow of new money, to judge by the 1940-41 figures alone, was not large though there was an increase over the average of the years 1935 to 1940. There were only three Provinces in which total membership in 1940-41 exceeded one million. The number of members in non-agricultural societies was largest in Madras whereas Bengal accounted for the largest number of members in agricultural societies. There were more members in supervising unions in Madras but the C. P. also, as the pioneer in the field, had a large membership. The average capital per society cannot be computed, but the average will probably be higher than suspected as total working capital is known to be Rs. 109.32 crores for 142,512 societies in the year 1940-41.

Doubts Vanquished

The Moscow Conference opened and continued in an atmosphere of mystery rather than gloom. At the end of Tuesday appeared a brief communique indicative of complete accord. That the meeting constitutes an answer to the demand in Britain for a second front will be realised. But the Second Fronters would do well to note the results of a poll conducted by the U. S. war publicity people. The immediate prospects for any army undertaking regular invasion of any part of German Europe are by no means bright. Improvement since July in the shipping position, as a result of fewer sinkings, cannot be deemed a conclusive factor. Since the best way to meet the demand was to go and see Russia's leaders, the journey was undertaken. It was in reality a tour of the theatres of war, for Mr. Churchill, after notifying Dominion governments, went to the Middle East, and passed on to Moscow. Semi-political and semi-military discus-

sions were conducted efficiently and secretly, but the situation in Ciscaucasia was worsening at the same time. Russia's needs have to be determined without reference to the shipping position; and the talks with the military attaches in Cairo may be regarded as even more important than the talks with Russia's Premier and her Foreign Minister. Since there is a regular alliance with Russia as from May 26 there was need for consultation as to strategy. The mere fact that the consultations have been followed by transfer of high officers in the Middle East suggests there may be a new front along the Volga based on the Caspian which links Iran with Russia. The many possibilities latent in any plan for extended assistance are of little consequence as against the firm assurance that a negotiated peace is ruled out once for all. The Moscow meeting puts an end to rather free speculation as to what Russia might do to avoid another winter of warfare. It is now settled she will fight on, in the company of the Allies. For no other reason is the Moscow conference so important as in checking the impression that the German advance from Rostov has determined Russia's fate. Recent repulses indeed suggest that the Germans are not likely to take Stalingrad and it is essential to note here that the Allied plaans have been settled in advance of any stroke across the Volga which leads to Astrakhan and the Caspian.

Trade In June

The June trade returns in disclosing a reduction in imports support conclusions drawn already from the fall in customs revenue. The improvement in the shipping position underlies the advance shown in regard to merchandise exports, more particularly of Indian jute manufactures. Total imports valued at Rs. 8.82 crores were far below total exports of Rs. 13.09 crores. As pointed out on an earlier occasion the trade with Britain shows curiously little fluctuation. Britain is still India's foremost supplier and the increase of Rs. 70 lakhs noted in June over May cannot wholly be due to the higher tariff values. The most surprising feature is the increase in imports from Canada. Since then steps have been taken to reduce imports from Canada and Newfoundland in various ways. The decline in imports from the U.S.A. as compared with May is not without significance. In view of the adoption of special measures to restrict imports generally, it is altogether difficult to predict the maintenance of the quantum of trade. It may be that shellac, mica and manganese may be strategic materials always in demand but there is not likely to be any interest in cashewnuts, goatskins and tea. The decline in import trade during recent months is not wholly due to import control. Trade with Japan, Burma and other countries is at an end. The Middle East alone looks promising from the point of view of export as shown by the fall in exports in June to all countries except the U.S.A. But markets and prices are unimportant as compared with the stimulus to domestic industries given by the war and the resulting fall in imports. June was distinguished by a fall in India's imports of cotton and cotton manufactures. There was a further increase in Indian exports of cotton manufactures while exports of raw cotton were in a bad way. The figures for the first quarter point to a successful reduction in imports and a saving of shipping space. Demand for Indian raw materials is fairly keen as shown by the large additions every month to sterling assets. The radical improvement as compared with the unfavourable balance of trade noted last year is not independent of the war. Trade with the Empire is not generally affected by the war and India has found some compensation in the New World and the Middle East. There is a reduction in retained imports which leads one to suppose that the price structure in India is largely the result of the contraction in essential oversea supplies.

Calcutta Commercial Bank

The complete banking service of the Calcutta Commercial Bank in the provinces of Bengal and Assam, is largely the result of a bold policy of branch expansion. The development has been materially assisted by an increase in working funds. In the past year deposits rose to Rs. 44.46 lakhs, recording an increase of Rs. 18.11 lakhs nearly on the previous year. To the increasing influence of the Bank testimony is forthcoming in the addition to paid-up capital of the Bank. A recent folder issued by the Bank describes the progress of the Bank and the advantages of an investment in its shares. As a scheduled bank, the Calcutta Commercial Bank already enjoys a measure of public esteem which will be strengthened since the shareholders obtained a dividend of 4 per cent taxfree in respect of 1941. The sum of Rs. 15,000 was appropriated to the Reserve Fund. Shareholders and others will be duly impressed by the balance-sheet which shows cash balances of Rs. 15.82 lakhs out of total assets of Rs. 58.77 lakhs. The report and accounts issued this month indicate that the Calcutta Commercial Bank with total advances and bills of Rs. 22.73 lakhs scrupulously preserved the familiar proportion between Advances and Deposits. What is more, it kept down bad and doubtful debts to an absolute minimum. The audited accounts show that the earning power behind the shares is unquestionable. This fact should be given due weight in evaluating prospects after seven years of successful work in which deposits have risen consistently, to add greatly to the working capital.

(*Continued from page* 332).

to come forward with a suggestion that coarse and medium varieties of rice should be sold in the several shops in the city for the benefit of the poorer classes.

Bullion:

Speculative and investment buying pushed up the price for ready gold as high as Rs. 55-5. Sovereigns also were noted higher at Rs. 40-12. The rise of over three points during the past two weeks has been mainly due to the deterioration in the Russian war situation and violent disturbances within the country. That the rise in prices was to a certain extent due to speculative activity is borne out by the fall in prices towards the close by over a point to Rs. 54-1.

The silver market has not been affected to any great extent. Prices are only a shade higher on balance. The availability of ready silver from the Mint at Rs. 85 per hundred tolas has been the main deterrent influence.

(From Our Correspondent)

Bombay, August

"THERE were brave men before Agamemnon" wrote a poet. There were many great leaders in Bombay who at the time of their death drew weeping multitudes behind the bier, but never was there such a spasm of grief as in the passing away of Mahadev Desai or over his unseen obsequies. Every person in Bombay was a mourner and the news came when all that was mortal of Mahadev had already been consumed in the funeral pyre. The atmosphere was too solemn for a formal *hartal*, the blinds were drawn, so to speak, spontaneously by hands that trembled with emotion at the thought of the Mahatma watching the flames in grounds reserved for felons. But such coincidences have occurred in history as in the case of the story summarized in the words: "He was crucified with two malefactors."

* * * *

Mahadev Desai was both a personality and an influence. He did not carry the militarist mien of the Sardar or the scornful air of the Acharya who is Secretary to the Congress. Through his very passion for self-effacement and of worshipful service to his master, Mahadev Desai unwittingly accomplished eminence. He knew the Mahatma better than he knew himself. He was a blend of simplicity and subtlety, and his keen, assiduous way of living at high tension with effortless ease, had included a wide range of reading as well which made his writings into literature. Mahadev was the caretaker and steward of the whole phenomenon known as Mahatma Gandhi, and public sentiment reacted to the event probably in inverse proportion to his own attitude of unobtrusiveness. In the Gospel written in the name of St. John, the author described himself more than once as the "disciple whom Jesus loved." Though Mahadev did not claim a similar distinction, he certainly was the disciple whom the Mahatma loved. They are all going, the old, old familiar faces.

* * * *

Everything in Bombay seems to be a stupefied state of stand-still. The East India Cotton Association stopped dead, the Committee announcing a three days' recess, the longest they could order under the statute; the other markets are moribund both in Bombay and Ahmedabad. His Excellency the Governor has given a broadcast that all is well and that the Government have "ample powers," but the man whom both Lord Brabourne and Sir Roger Lumley most trusted, namely, B. G. Kher, former Premier, is in jail. I am sorry I am unable to discuss economics with company affairs now, because it is here all an atmosphere of politics; people even in the loyal precincts of the High Court wonder how the Government could digest all that the jails are swallowing. The Muslim League leaders are now in conference in Mount Pleasant Road and many wonder if it would end in an anti-Gandhi counterblast. The signs are different and Sir Frederick Whyte's description of Mr. C. Rajagopalachari as "the ideal bridge" might still materialize provided too many self-constituted Bridge Commissioners do not put forward conflicting hours of traffic. The Indian Merchants Chamber and other associations have keyed their appeals to the Viceroy on the basis that the Amery-Maxwell *blitz* had been premature and that the Mahatma should not have been clapped in jail as he was on the road for a talk with Lord Linlithgow.

* * * *

The Bajpai-Hennessy combination cannot throttle opinion about America, and I want your readers to observe the tone of American sentiment (on the part of Indians) as filtered through a hundred censorships. I know the President of the India League of America personally; he was out in India at the time of the Indo-Japanese trade talks conducted from our side by Sir Joseph Bhore in Maiden's Hotel. Now let me quote the cable in question:

The President of the India League of America, Sirdar J. J. Singh, Former Member of the All India Congress Committee, told Reuter today that even at this late hour the Viceroy could intervene and settle the Indian upheaval..."I would like to appeal to the Viceroy because I am very much afraid that while the Civil Disobedience movement and rioting may stop, the movement will not die but will go on underground." he said.—REUTER.

* * * * *

I have not the slightest doubt that all this muddle will affect the war effort; I don't like using expressions like "crippling the war effort" and "paralysing the war effort." A Congressman in Sholapur has been arrested for saying much less. It is an ugly juncture in world-history where all seem to argue without sense of proportion, but Mahadev Desai has passed to the realms—

"Where the wicked cease from troubling
And the weary are at rest."

* * * *

The allegations made by the President of the Bombay Grain Dealers' Association about inadequate supplies of rice to the retail trade were refuted by Mr. H. F. Knight, Adviser to the Governor, at the weekly Press conference at the Secretariat, Bombay, on Friday. Mr. Knight said that 5,200 bags were supplied to the retailers between August 3 and August 5; 1,000 bags were issued on August 7; and 5,000 bags were kept ready on the following day but these were not taken delivery of. He declared that there were ample supplies of rice in the city, which was getting 6,000 tons every month from Madras in accordance with the quota allotted by the Government of Madras to Bombay. Referring to the increase in prices of charcoal, he stated that large quantities of charcoal were arriving in the city, and would see that the prices did not soar. He also hoped that the increase of one anna in the price would be only temporary. Mr. Knight said that about 20 Government grain shops were closed in the city owing to the disturbances. In spite of all this, prices seem to escape the hold of Price Controllers.

* * * *

Considerable interest is being evinced by the property owners in the scheme published by the Government of Bombay outlining their plans for insuring non-factory houses against war damage. The scheme is proposed to be enforced in Bombay City and suburbs, Poona, including Kirkee, and Ahmedabad and covers property valued at Rs. 325 crores.

While the scheme has been drawn on the model of the British War Damage Act and is proposed to be improved upon in the light of the reaction of the public to its publication, the general opinion is that the suggestion to contribute 12½ per cent of the building as insurance premium is too much to be accepted. It is also felt that the payment of compensation and dealing with the various interests involved may present complications.

Apart from these details, the view is being emphatically expressed that the proper authority for undertaking such risks is the Government of India, who, by introducing a scheme on an all-India basis, can spread the risk over a fairly wide area and thus minimise the chances of loss. The direct result will be reflected in the reduction of premium. Moreover, the resources of the Central Government can alone ensure the prompt payment of compensation and those of the provincial Governments may prove inadequate if by ill-luck that particular province becomes the target of enemy attack.

Resume of Commodity Markets

WITH the Bombay markets closed there has naturally been very little doing in the various commodity markets during the past week. The Bombay raw cotton market was due to reopen for business last Friday but with the pressure from members to close down for business until further notice, markets have continued to remain closed up till now. In the jute and jute manufactures market rather uninteresting conditions have been noticeable. There was even a sharp decline in values in the hessian market earlier in the week in view of the dislocation in the transport facilities and the continued absence of demand from overseas markets. The fall in prices on Wednesday was rather unexpected and it is satisfactory to note that there has been a slight rally towards the close. In the absence of any lead from the Bombay market local bullion dealers have been having their own way. Gold ready was at one time as high as Rs. 55-5 but with profit-taking and the reported improvement in the internal situation some of the gains have been lost.

Staple commodities, such as rice and wheat, continue to be as scarce as ever and the closing down of shops for fear of looting has added to the difficulties of consumers, especially the poorer classes. The wheat situation seems to be regarded as more hopeful as normally this country has an export surplus of 400,000 tons and it is believed that with the suspension of exports and more effective control, it will be possible to solve the problem satisfactorily. Regarding rice, however, the position is more complicated. It was never at any time anticipated that there would be such a rapid collapse in Burma. For, otherwise, efforts would have been made to bring to this country adequate stocks of rice.

It was expected that with the relaxation of restrictions regarding the movement of grains from the chief producing centres to other provinces, the position would improve but with the recent dislocation in transport facilities one cannot be very hopeful.

Jute

The sharp increase in demand for sacking and the resultant increase in production with the switching over to hessian looms to sacking augurs well for the jute market but, as has been pointed out in these columns on earlier occasions, any favourable developments so far as the jute industry is concerned, can only have a negative effect on the jute market Owing to the large surplus of the raw material and the difficulty in transport it cannot possibly be expected that at any time there would be any substantial increase in the values for jute. If only the market avoids any further sharp decline between now and November, it would have achieved a great task.

Jute Manufactures

Absolutely uninteresting conditions have been noticeable in the hessian market and the heavy goods section too. There has, however, been no appreciable decline in values of heavy goods, what time there has been a slump in hessian prices. Only a late rally has been helpful in recovering to a certain extent the lost ground. Operators in the hessian market do not seem to be influenced by any favourable developments as in their opinion the long-term outlook is discouraging and any immediate slight improvement in the position cannot be of any great help.

The stock and consumption figures for the United States for the month of July are again disappointing. The position regarding freight is as acute as ever. Stocks afloat were only 32 million yards against 30 million yards. Consumption is lower at 16 million yards against 27 million yards. Even with a lower level of consumption the decline in spot stock from 89 million yards to 86 million yards is not quite understandable.

The figure for consumption in July compares very unfavourably with 64 million yards for the corresponding month last year. Consumption is the lowest on record since figures were first issued.

Wheat

At a conference held this week in New Delhi to consider the wheat problem it is reported that agreement had been reached on the point that there should be no increase in the control price. It is reported that the question of providing adequate storage and transport facilities was also considered.

Rice:

There has been deterioration in the situation so far as this commodity is concerned and it is reported that in the 'black market' the price for the coarse and medium varieties is as high as Rs. 12 as against the control rate of Rs. 7-12. There have been suggestions for importing rice from other provinces to relieve the shortage. The source from which indents could be effected is not indicated. As a matter of fact, as has been pointed out in these columns on earlier occasions, it is difficult to say whether there are any other alternatives from where we can get supplies for this part of the country. The Bengal Government has been kind enough

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, August 20.

WE erred on the side of conservatism when we estimated Mill production during July at close on one hundred thousand tons. The actual figure now published is 102,694 tons, which is an increase of practically 7000 tons over the previous month—more than the extra working day would normally account for. It is probable that the strong demand for heavy goods coupled with the light demand for Hessians has resulted in some switching of narrow looms which had been on hessians back to heavy goods with a consequent proportionate increase in weight of cloth produced. The production on Government account was some 500 tons less than in the previous month, and at 19,427 tons, represents just under 19 per cent of the total against 21 per cent in June. The important feature is that despite this heavy production, the goods are going away, as is evidenced by the reduction in stocks of some 18,000 tons. With the complete figures now before us it is apparent that despatches of goods from Mills during July amounted to no less than, in round figures, 120,000 tons. This makes it still more incomprehensible how Government could recently have arrived at a figure of 55,000 tons per month as the total world requirements of Jute goods.

Various estimates have been made as to the quantity of jute which Mills actually purchased out of the last crop, or more strictly speaking, out of the last crop and the carry-over from the previous one. These estimates vary very widely according to the manner in which they are calculated, from 42 lakhs of bales to 57 lakhs of bales. But there are now sufficient official figures available to arrive at a fairly accurate estimate. The stocks of jute held by Mills were officially returned as, in round figures, 42,71,000 bales at 30-6-41 and as 21,12,000 bales at 30-6-42. That is to say that, in the course of the 1941-42 season, Mills reduced their stocks by consumption to the extent of 21,59,000 bales. The total production of goods for the period 1-7-41 to 30-6-42 is returned as 1,225,106 tons. For purposes of conversion, we take the figure of 28 maunds to the ton, by reason of the fact that Mills, on account of their reduced ration of batching oil, are nowadays using a greater weight of raw jute per ton of goods produced. But 28 maunds per ton should be a fairly average figure. At this calculation then the seasonal year's production of goods represents a consumption of 69,70,000 bales of jute. But as 21,59,500 bales of that had been drawn from stock, it follows that the balance of 48,11,000 bales must have been purchased during the season. Figures for jute purchased but not delivered at the close of the season are ignored, as they are very difficult to arrive at and in any case are not likely to vary very greatly from one season to another. Mills render returns of the quantity of jute they purchase and the quantity they consume, and if these figures are later available, it will be interesting to see how they compare with the estimates arrived at above. Total mill purchases out of the previous crop were returned at 76,50,000 bales. The figure for July production quoted earlier represents a jute consumption of 5,88,500 bales.

The American returns of burlap consumed during July cast a lurid light on the extent to which cotton fabrics are being substituted for jute goods. The consumption is returned at only 16 million yards which is exactly one fourth of the quantity consumed in July of last year. Last month the figure was 27 million yards, so the decline is pretty drastic. Freight difficulties no doubt account to some extent for the serious reduction, but if the U.S.A. is to be able to carry on without undue inconvenience on such a reduced supply of hessians, the prospects of Calcutta recovering the trade when conditions once more become normal cannot be considered too bright. For it must be remembered that the cotton interests in the States are very powerful and they will not give up without a tough struggle any foothold they may have been able to gain in directions previously regarded as the prerogative of burlap.

Any observer of market conditions over the last few months could scarcely fail to have been impressed by the absence of violent price fluctuations in spite of not a few vicissitudes of a military or political nature through which we have been passing. And one is inevitably driven to the conclusion that the reason for the comparatively even tenor of the markets has been the absence of the disturbing factor of "Fatka". Had this egregious institution been functioning in recent weeks, one trembles to think what fantastic prices gyrations one might have witnessed. In the circumstances it is little less than providential that most of the erstwhile operators in that sphere have retired to what they consider safer climes, and after an experience of trading conditions, however difficult, but undisturbed at least by their influence, there can be few indeed interested in the industry who would not strongly resist any attempt to reconstitute such an irresponsible insitution as "Fatka", as we knew it until lately.

Transport of jute from the mofussil to the Mills looks like becoming a most serious problem unless something is done, not only to co-ordinate the means available but also see that the means are utilised to the best advantage. While no one will dispute that the War effort must have priority, at the same time that can scarcely excuse the fact, which we have on reliable authority, of not less than thirty jute flats requisitioned by the military authorities which are not being put to any use whatever. With such a large proportion of world trade now concentrated on war effort of one sort or another, the continued demand for and despatch of such enormous quantities of containers manufactured from jute, as we have commented on above, is sufficient evidence of the importance of the jute industry to the general war effort, quite apart from their direct contribution to Government requirements. It is consequently essential that every possible facility should be afforded the industry to secure its necessary raw material, and to this end, no means of transport which is not immediately required for military purposes should be unnecessarily detained. The regular lines of transport flats in commercial use are in constant movement and if an urgent emergency arose could be quickly released for military purposes. But when no state of immediate emergency exists, their continued use for commercial purposes should be permitted. The anomaly of flats lying idle when the trade is clamouring for space to move jute to the mills should not be allowed to continue.

A little more activity has been noted in the Export Jute market during the past week. Old Crop Dundee Daisee 2/3 sold for shipment at Rs. 52 as also Old Crop Dundee Tossa 4s at Rs. 54. Some "Outport" Firsts, option Old or New crop, was reported at Rs. 43 for 15th September shipment. Mills have also shown some interest and bought New crop Firsts at varying prices for varying shipments, the rates reported being from Rs. 50 to Rs. 46 and the shipments from August through various dates up to all September. Lightnings were also done at Rs. 40.

Only a moderate turnover is reported in Loose Jute. European packing sold at Rs. 9-4 and Rs. 6-4 for Mids and Bots, August shipment, and at Rs. 9 and Rs. 6 for September. Supervised District Bottoms sold at Rs. 5-12 September and "X" at Rs. 4. Supervised Jat was also reported at Rs. 8-12 and Rs. 5-12 with Mymensingh Jat at four annas less. Indian District packing sold at Rs. 8-4 and Rs. 5-4 Mids and Bots. The tone of the market is quiet and tending easier. This is also true of the Mofussil markets in most cases. Imports have not been excessive on account of rather stormy weather, but shipping difficulties hamper the free operation of dealers who tend to become tucked up both for finance and storing space in the absence of sufficient freight. The rain however has done good in providing fresh steeping water in many places where it was badly wanted, so shat an improvement in quality next month may be looked forward to. Arrivals of jute into Calcutta for the first half of August are estimated at 1,96,000

When you bury the "TALENT" you only allow it to rust and lose its value. Same is the case with your money. So do not let your money remain idle. Keep your money in a safe custody where it will multiply.

bales against 2,30,000 bales during the same period last year. Comparative arrival figures since the beginning of the season are, 1942, 4,51,000 B/s. 1941, 7,10,000 B/s.

In the Fabrics market, Hessians have again attracted very little interest. Prices sagged back somewhat but have since recovered to about former levels, but the turnover has been immaterial. Ready nine porters were quoted down to Rs. 13-8 but are now Rs. 13-12, while elevens were as low as Rs. 17 but recovered to Rs. 17-6. Heavy Goods also registered a decline but subsequently recovered. Ready "B" Twills from Rs. 40 again. September "Bs" sold at Rs. 39-8 and Rs. 39-12. Liverpools were dealt in at Rs. 46-8 and Rs. 46-12 for August up to 15th September, at Rs. 45-8 and Rs. 46 September and at Rs. 45 and Rs. 45-4 Octo ber. Cuban Sugars sold at Rs. 53 7th September, at Rs. 51 September and at Rs. 49-8 October/December.

Nazi Economy in Europe.

An analysis of the Nazis long-term plans for permanent economic domination of Europe after the war is contained in a report of the Foreign Policy Association published recently.

These plans, according to this non-Government research organisation are first, to maintain Germany's position as the main producer of highly industrialized goods with a complete monopoly of all transactions in foreign resources, raw materials, foodstuffs and manpower.

The Association says that under this programme workers have been shuttled from one end of Europe to another like cattle and whole industries competing with German plants eliminated or reorganised to work for the Nazis.

The report adds that Nazi economists are apparently planning to concentrate all the heavy industries of Europe in two areas. The first is the Ruhr-Rhine basin. The second is the Upper Silesian basin, together with the neighbouring industrial territories incorporated in Greater Germany after the occupation of Poland.

Other territories incorporated in Greater Germany would be either entirely agricultural or possess only such industries as cannot endanger Germany's military supremacy. "France for instance," the report states, "would become a predominantly peasant State with a relatively small number of its people concentrating on handicrafts. Poland and Eastern Europe would become a vast colony, where armed German overseers would force helpless slave peoples to till the soil for a pittance."

This grim prospect can be avoided only by a military victory of the United Nations.

British Coinage in 1941.

A heavy demand for coinage in Britain continued throughout 1941. This was caused largely by the vast quantities of coin required to pay weekly wages, not only to the fighting forces and A.R.P. workers, but to he millions of munition workers, who for the first time are being paid cash wages.

The output of silver coins, for the first time for many years was headed by the fiorin with a total of 24,451,079. This pride of place is usually held by the sixpence or the shilling, but ossibly these two coins are relatively in less demand because of the decline in the use of coin-operated machines for the sale of cigarettes and other articles.

No pennies were struck in 1941, as in June 1940, the Mint had discontinued striking pennies in order to save some 800 tons of copper annually for munition purposes. The issue of farthings and halfpence continued, however, the respective strikings being 27,312,000 and 45,120,000, instead of pennies, very large numbers of the new nickel-brass threepenny bit were issued—60,239,489 in 1941, against 12,636,018 in 1940 and 5,603,021 in 1939. Mintings of the silver threepenny bit were heavy at 7,979,411.

The total number of Imperial coins struck in 1941 was 223,445,690 (value £6,943,157), against 180,541,916 (value £6,158,010) in 1940. Inclusive of foreign and colonial coinages the Mint's output was:—1041—360,434,524; 1940—328,076,836.

supplementing of the army in France was not unrelated to open discussion of a second front.

Since Egypt is not taken to be the second front and Italy's invasion is not considered likely, the second front can only be in the West. The Allies' desire to make full use of the Occupied Countries is not in question. But the popular demand in Britain for a second front ignores not only the local resources, but Hitler's own ability to fight on two fronts. The war of movement for over two years has conferred many important advantages on the Nazis. They have avoided the stalemate that foiled the German army in 1918, when a delayed offensive misfired and brought retribution. Since the Nazis have avoided that, surely it is the best policy to use Russian manpower for the job of defeating the Nazis at the same time as the R.A.F. keeps on pounding Germany's industrial centres. When we read of Dusseldorf or Osnabruck as the target for any night, it is manifest that the war potential is being reduced by steady interference. Manpower shortage has been reported at the same time as the Gestapo's interference in air raid precautions work. The two are related to a failure of nerve in Germany that may mean much in the future.

What Mr. Churchill has achieved swiftly through his visit is not only to show that British war policy is attuned to Russia's immediate requirements but that the Anglo-American entente is not engrossed in the Pacific or the Atlantic. It might be that victory might come from the simultaneously successful work of the U.S. Navy, the R.A.F. and the Russian Army in the coming year. It might be a fair territorial division of labour that will answer the demands of the war. What is most readily deduced from the meeting arranged at Moscow is that the Allies are not any more alarmed by reverses in South Russia than by the reverses in Libya. There can be no place for easy dejection or ready elation when the Russians are always showing an astounding ability to surprise both friends and foes. Mr Eden was known to be Russophobe: so his visit to Moscow did not produce the effect that Mr. Churchill's visit has produced. That can be measured most readily by the diversion of interest from disturbances in Indian towns to the happenings in Moscow, indicative of faith and hope among the Allied statesmen, reflected in the message broadcast over the Moscow radio on Tuesday.

JUTE

Calcutta, August 20.

The raw jute market has continued uninteresting during the past week. Business has been rather poor. The slump in the hessian market earlier in the week had a discouraging influence. The main difficulty still continues to be transport. It is, however, reported that larger arrivals of jute have been noted in mofussil centres in spite of the weather conditions. Quotations are slightly easier. Mills have been buying sparingly. The production figures for the month of July should be considered encouraging as the increase over June has been rather unexpected.

The new crop has not so far been promising from the point of view of quality. It is expected, however, that with the recent rise in river levels there will be sufficiency of steeping water and that quality will improve.

In the loose jute section, mills have been buying in small quantities. Indian Jat Middles and Bottoms were done at Rs. 8-8 and Rs. 5-8 per maund for August/September shipment. Supervised Jat and District combined sold at Rs. 8-8 and Rs. 5-8 per maund respectively. Districts alone were sold at four annas less.

In the pucca bales section, shippers have bought small quantities of Dundee Daisee and Tossa 4's. Dundee Tossa 4's were done at Rs. 54 per bale. Mills bought new crop Firsts 2/3 at Rs. 48 per bale. Short Group Dundee Tossa sold at Rs. 73 per bale.

JUTE MANUFACTURES

Calcutta, August 20.

The jute manufactures market has been rather irregular during the past few days. After earlier weakness there was a slight recovery in mid-week but there has again been a recession in prices towards the close. The sharp drop in prices on Thursday is not quite explainable. The fears regarding wagon allotment have perhaps been responsible. After recovering to Rs. 13-14, 9 porters ready are now quoting Rs. 13-6, September Rs. 13-8 and October/December Rs. 13-12. 11 porters ready are Rs. 17-4, September Rs. 17-6 and October/December Rs. 17-10.

The heavy goods section has not been affected. 'B' Twills for August delivery are Rs. 40, Liverpool Twills Rs. 46-8 and Cornsacks Rs. 41-4.

The increase in production for July is more than market expectation. The figures are given below.

Total Reported Prodction of Manufactured Goods*

(By the mills in the membership of the Association and also by Gagalbhai Mills).

Description.	Quantity.
1. TWIST AND YARN—	
(a) for sale ..	2,070 tons

COTTON

Calcutta, August 20.

The Bombay raw cotton market has remained closed throughout the week. It would be remembered that last week the East India Cotton Association passed a resolution authorising the closing of the market for three days. In view of the present situation it is pointed out that markets should be closed *Sine Die*. It appears that no decision to this effect has been taken at yesterday's meeting of the members.

PIECEGOODS

Calcutta, August 20.

The piecegoods market has been rather quiet. The dislocation to trade on account of the recent disturbances has resulted in a fall in prices. Business passing has been on a considerably smaller scale. Forward business has been limited in spite of the slight reduction in replacement costs. Buyers are inclined to await further developments.

GOLD

The Bombay market has remained closed. But locally there has been a further sharp rise in prices. There is a shortage of supplies and both speculators and investors have been busy. Gold ready were quoting Rs. 55-5 and Sovereigns Rs. 40-8.

SILVER

Calcutta, August 20.

The Bombay silver market has remained closed. In Calcutta, prices are only slightly higher in sympathy with the Gold market. Silver ready quoted Rs. 84-4.

In the London market, there has again been no change in the quotations, both spot and forward being 23 ½d. Idle conditions have continued to prevail.

Stock Markets to-day and to-morrow

INDIAN COPPER CORPORATION'S RESULTS FOR 1941

THE Bombay Stock Exchange has continued to remain closed. It is now nearly two weeks since. It cannot be expected, therefore, that with the present conditions in the country the Calcutta Stock Exchange will keep up its appearance. Business has been very restricted and almost all the popular counters have been neglected. With the exception of jute shares, which are weak, other shares have not been appreciably marked down. Markets are closed on Friday following the arrest of the President of the Association. It looks as if there will not be any early return to activity.

* * * *

Cotton shares, especially those of the well-established companies are good from the investor's point of view. As was pointed out in these columns on earlier occasion, the industry has now agreed to devote 35 per cent of its production, as against 20 per cent, on war orders. The problem of the industry at the present moment is only to produce enough and it is unfortunate that the strikes on account of the unrest in the political situation should interfere with production. There is acute shortage of cloth and the recent rise in prices for the popular styles has been such that it has been necessary to produce standard cloth on a large scale. There has been such a great boom in exports that it has been necessary to curtail exports for other than government purposes.

* * * *

The disturbed conditions in the piecegoods market following the outbreak of the Japanese have resulted in a slight decrease in the earnings of cotton mills companies in this part of the country. The general outlook, however, has not been in any way effected and the scramble for Bengal mill products, in recent weeks, should enable the companies to report a considerably higher level of earnings.

The accounts of the Bowreah and Dunbar mills for the half-year ended June, 1942 make interesting reading.

The net profit of the *Dunbar Mills Limited* for the half-year before providing for taxation and depreciation, is Rs. 6,93,861 against Rs. 7,66,667 for the six months ended December, 1941.

* * * *

The provision for taxation is unchanged at Rs. 5 lakhs as also the figure for depreciation at Rs. 75,000. The dividend recommended to ordinary shareholders is slightly lower at Rs. 6 per share against Rs. 8 per share formerly. The amount carried is Rs. 56,097 against Rs. 51,236 brought in.

* * * * *

Bowreah Cotton Mills Company Limited has been able to report a considerably higher level of earnings for the same half-year. The net profit, before providing for taxation and depreciation is Rs. 6,93,861 against Rs. 4,32,527. The increase in sales and the lower level of working expenses have been responsible for the substantial increase in earnings.

Almost the whole of the increase in earnings is taken up by the larger provision for taxation, Rs. 4 lakhs against Rs. 2 lakhs. The amount set aside to depreciation is Rs. 75,000 (same). The arrears of dividend for four half-years on the 'A' preference shares are to be paid as also the dividend for the half-year covered by the report. The dividend on the 'B' preference shares is to be paid for the first time in several years. The 'B' preference shares are entitled to a non-cumulative divdiend of 7 per cent. per annum tax-free. The ordinary shares also receive a dividend of 10 per cent. per annum. Readers will perhaps remember that I drew their attention to the merits of the 'B' preference shares on the last occasion. The shares are sure to earn their dividend for some time. At Rs. 109 cum-dividend they should be considered rather cheap.

* * * *

The declaration of a dividend of 10 per cent. (taxable) by the directors of the *Indian Copper Corporation Limited* for the year ended December, 1941 should have come as a disappointment to the market. For, with the refining operations and the intensive working of the mines, an increase in the earnings for the year was looked for. The net figure after providing for taxation has been given at £86,382. The figure for 1940 was £84,067. Pending the receipt of the full accounts no comment can, however, be made. The report and accounts of the Company will be issued in the U. K. on September 7, 1942 and will be distributed to shareholders on the Indian Register as soon as possible after a copy is received here for printing. The divident of 10 per cent. taxable. (equivalent to 1.7477d. net per share) compares unfavourably with the dividend of 12½ per cent. (taxable) for 1940.

* * * * *

Thanks to a large increase in the crop made and the higher average price realised, the *Banarhat Tea Company Limited* has been able to report a substantially higher level of earnings for the year ended December, 1941. The net profit, before providing for taxation and depreciation, for the year is Rs. 4,71,696 against Rs. 2,85,076 for 1940. The amount set aside to depreciation is Rs. 29,565 (Rs. 50,369). The allocation to Equalisation Dividend Fund is Rs. 60,000 (Rs. 20,000) while the provision for taxation is Rs. 1,40,000 (Rs. 41,000). The dividend on the ordinary shares has been increased to Rs. 40 per share from Rs. 30 per share. The amount carried forward is Rs. 60,949 against Rs. 40,818 brought in.

A total crop of 21,698 maunds was secured and the average price realised was 11 annas 5 pies per lb. against 9 annas 1 pie in 1940.

The Managing Agents have agreed, in negotiation with the Company's directors, to allow the present agreement to terminate at the end of this year and be replaced by a fresh agreement in which the remuneration will consist of an office allowance and a commission on net profits. This is the form of remuneration for which the amended Companies Act makes provision and the proposed change is, therefore, in accordance with the spirit of the Act.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, August 21.

WITH the Western centre closed for business throughout the week business in the local market has naturally been on a very small scale. Besides, the period under review is short of one working day as, on Monday, markets were closed on account of the death of Sjt. Mahadeva Desai. The uncertainty regarding the internal political situation and the possibility of widespread labour strikes have naturally been responsible for the smaller volume of business. But it is again satisfactory to note that there has been no suggestion of weakness in the several sections and quotations have not been marked down appreciably lower. Sugar and Engineering shares have remained relatively steady while jute shares have been rather weak with sellers predominating the market. Coal and Cotton shares were uninteresting.

In yesterday's session there has been very little activity. No business was recorded in coal, jute, engineering and sugar shares. Markets are closed to-day on account of the arrest of the President of the Stock Exchange Association.

In the giltedged securities section a smaller amount of business has been passing though latterly greater interest has been taken in the market by Bombay operators. 3½ per cent. Paper is now quoting at Rs. 92-9 after being lower at Rs. 92-4. Terminable loans are unchanged with 3 per cent. Defence Loan 1949/52 at Rs. 99-14, 3½ per cent. 1947/50 at Rs. 102-6, 4½ per cent. 1955/60 at Rs. 112-8 and 5 per cent. 1945/55 at Rs. 108-11. A small lot of 5 per cent. U. P. bonds changed hands at Rs. 104-2. Cheap money conditions continue to prevail in the market and there has been a further decline in the treasury bills rate during the week to seven annas per cent. per annum from seven annas and eleven pies per cent. per annum last week.

Among public bodies' debentures, 3¼ per cent. *Howrah Bridge* debentures were crossed at Rs. 91-14 as also 5½ per cent. *Calcutta Improvement Trust* debentures at Rs. 115-12. Among industrial debentures, 5½ per cent. *Dalmia Cement* debentures were Rs. 105 and 5¼ per cent. *Rohtas Industries* Rs. 104-8.

Even business in first class jute mills preferences has been on a very small scale. A small lot of *Adamjee* preferences was noted at Rs. 128. *Empire* were Rs. 134. *Bowreah* 'B' preferences were Rs. 109 and *Shree Gopal Paper* preferences Rs. 134. *Carew & Co.* were Rs. 136-8 and *Tezpore* Rs. 16. No transactions have been recorded in *Steel Corporation* preference shares.

In the Jute section, as remarked above, there has been very little doing and the only transactions recorded have been in *India* at Rs. 338, *Naskarpara* at Rs. 16-4.

In the Coal section, *Bengal* were Rs. 348 ex-dividend and *Burrakur* Rs. 12-6.

In the Engineering section, *Indian Iron* and *Steel Corporation* were inclined to be firmer at Rs. 27-4 and Rs. 17-4 respectively. *Hooghly Docking and Engineering* were in request at Rs. 50. Earlier in the week *Indian Iron* were quoted Rs. 26-4.

Sugar shares have remained steady though only a few number of transactions has been recorded. *Buland* were Rs. 23-8 and *Raza* Rs. 30.

In the Tea section, *Amluckie* were Rs. 80, *Barduar Tea and Timber* Rs. 5-9 and *Longview* Rs. 17-12.

In the Miscelleaneous section, *Indian Copper* have been listless around Rs. 1-15. Operators are not satisfied with the results of the Corporation for the year ended December, 1941. *Burma Corporation* were steady ta Rs. 2. There are rumours that a capital distribution may be made by the directors. *B. I. Corporation* were Rs. 5, *Alkali and Chemical* Rs. 18, *Calcutta Trams* Rs. 14-8 and *Indian Cable* Rs. 22-11. Among Paper shares, *Titaghur Paper* were not very much changed at Rs. 19-4. *Star Paper* were Rs. 15-4 and *India Paper Pulp* Rs. 140 ex-dividend.

TRANSACTIONS DURING THE WEEK

CALCUTTA STOCK EXCHANGE

(From 13th Aug., to 19th Aug., 1942 both days inclusive)

GOVERNMENT SECURITIES :

3 per cent 1946 Defence Bonds:—(18th) 101-10 s.l.

(Half-yearly meeting, 3rd September, 1942 at 11-25 a.m.)

Audited accounts for the half-year ended 31st May, 1942:—

After transferring Rs. 3,372 to Insurance Fund, providing Rs. 50,000 for Depreciation, Rs. 2,29,616-2-0 for taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 1,39,056-11-9. After bringing forward the balance from the last account and transferring Rs. 28,000 to War Risk Insurance Reserve, there is a balance at the credit of the Profit and Loss Account of Rs. 1,95,416-1-2. From this the directors recommend payment as follows:—

	Rs	A.	P.
Dividends on Preference shares at Rs. 3-8 per share	35,000	0	0
and on Ordinary shares at Rs. 10 per share ..	90,000	0	0

thus absorbing Rs. 1,25,000 leaving a balance of Rs. 70,416-1-2 to be carried forward.

In accordance with the Indian Jute Mills Association agreement the mills have worked 60 hours per week up to 16th May, 1942, and thereafter 54 hours per week with 10 per cent of the total looms silent. The half-yearly results were affected by a strike resulting in a loss of 258½ working hours of which 36 hours were made up.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 19,00,000 in 9,000 Ordy. and 10,000 7 per cent Cum. Pref. both of Rs. 100, fully paid-up.

*Accounts shown for 13 months from September, 1937 to October, 1938.

(Annual meeting, held 31st July, 1942 at Dalmianagar).

Audited accounts for the year ended 31st October, 1941:—

After paying all overhead charges and interest charges the revenue profit amounts to Rs. 21,64,156-0-2½. After making provision for depreciation there remains a sum of Rs. 12,92,177-14-5½ to which is added Rs. 51,517-14-8½ being the last year's balance making Rs. 13,43,695-13-2 available for distribution, for which the Directors make the following proposals:—

	Rs.	A.	P.	Rs.	A.	P.
Payment of final dividend on or after the 15th September, 1942, to those shareholders whose name appear in the books on the 31st July, 1942:						
On 20,000 Preference shares at Rs. 9 per share ..	1,80,000	0	0			
On 3,00,000 Ordinary shares at Re. 1-4 per share ..	3,75,000	0	0	5,55,000	0	0
Transfer to Reserve for Income-tax and Super-tax				3,20,000	0	0
Transfer to General Reserve				4,50.000	0	0
Total ..				13,25,000	0	0

The balance of Rs. 18,695-13-2 is to be carried forward.

In the year under report the directors had to face a number of difficulties the foremost amongst which was a strike lasting about a month, shortage of wagons, trouble in getting spare parts and the internment of those of their experts who were of enemy domicile. All these stood in the way of their running the factories to their full capacity. There has been a rise in the manufacturing cost of cement, but the directors have not appreciably raised selling prices. Despite all these adverse circumstances, the working of the year in reassuring and the directors may well expect to make further progress in the coming year though the difficulties may increase.

Managing Agents.—Messrs. Dalmia Sabharwal Jain & Co.

Out of which the Directors recommend the payment of a final dividend of 5 per cent, free of income-tax				49,500	0	0
Leaving a balance of				22,280	10	1

which they propose to carry forward.

It will be observed that the investments have been written down by Rs. 3,750 as at 31st March, 1942. The recent recovery in prices has brought the market value up to their cost price.

Tea.—The crop of 7,07,100 lbs. was harvested at a cost of 5.08 annas per lb. f.o.b. and realised an average net price (after deducting cost of quota purchased) of 9.11 annas per lb. as compared with 9.25 annas per lb. last year.

The unsold tea has been valued at 9 annas per lb. for export and 5 annas per lb. for local sales.

The Company was allotted the following quotas for 1941-42:—

Export ..	.. 75.18%	4,61,477 lbs.
Internal ..	.. 17%	1,04,351 „

Allotments for 1942-43 are as under:—

Export	.. 65% (Provisional)	3,98,990 lbs.
Internal	.. 17%	1,04,351 „

It is understood that the final Export allotment will be in the neighbourhood of 85 per cent.

The estimated crop for 1942-43 is 7,00,000 lbs. to be harvested at an f.o.b. cost of 5.33 annas per lb.

Managing Agents.—Messrs. Peirce Leslie & Co., Ld.

Manager's Commission	2,890	2	9
Fire Protection Expenditure	274	9	3
Loss on Howrah Depot	782	10	0
Total ..	31,692	6	0

and adding Rs. 37,318-9-0, being the amount brought forward from the previous half-year, there remains an available balance of Rs. 85,551-7-5 which it is proposed to deal with as follows:—

Place to Reserve for Income and Super-taxes ..	16,000	0	0
Pay a dividend at the rate of 20 per cent per annum, for the 6 months ended 31st March, 1942	30,000	0	0
Carry forward to next half-year	39,551	7	5
Total ..	85,551	7	5

Development.—The development of 14 seam in the area South of the B.-N. Railway is still proceeding satisfactorily. In the same area No. 11 seam has been reached by drift and is in course of development. Output from No. 7 Pit has been maintained at a satisfactory level. Output from depillaring in dry stowing areas is gradually increasing.

Raisings.—The raisings during the half-year amounted to 81,961 tons and despatches to 73,793 tons.

For about six weeks during December and January there was an unprecedented shortage of labour which affected the Company's raisings.

Managing Agents.—Messrs. Octavius Steel & Co., Ld.

Synopsis of the balance sheet as at 31st March, 1942:—

BRUNTON AND COMPANY ENGINEERS, LIMITED

Audited accounts of the Company for the year ended 31st December, 1941:—

The profits of the Company, after meeting the working expnses, amounted to Rs. 77,184-3-10. Out of this, the directors have made the following provisions:—

	Rs.
Reserve for maintenance during the year that could not be undertaken because of pressure of work and had to be postponed ..	5,000
Income-tax	24,000
Excess Profits-tax	12,000

leaving a net balance of Rs. 36,184-3-10 which, together with the sum of Rs. 23,129-4-11 carried forward from 1940, leaves a sum of Rs. 59,313-8-9.

An Interim dividend of 5% absorbing Rs. 12,500 has already been paid to the shareholders on account of the year under review. The Directors now recommend that a final dividend of 7½% amounting to Rs. 18,750, making the total for the year 12½% be paid to the shareholders, who are registered in the Books of the Company as on the date of the closure of the transfer books and to carry forward the balance of Rs. 28,063-8-9 to account of 1942. *The 1942 issue of Ordinary and Preference shares will not rank for this dividend.*

General.—The contracts as received towards the end of 1940 from Government of India are practically completed, but several supplementary works thereon have been since entrusted to the Company during the year. These are being attended to and so ar progress made has been satisfactory. A further contract of a similar character was also placed with the Company during the year and necessary materials have been indented for, under respective priorities. The directors are happy to say that, timber, for such portion to which they are committed, is secured and this augers well for the successful performance of the Company's undertaking in this

Optionto holders at anytimeupto 1st January, 1947 to convert £80 worth debenturesinto 40 Ordinary Shares of Rs. 10/- each. (l) Entitled to a non-cumulative dividend of 6 per cent, persanum, after the dividend on preference shares (m) Repayab after 1944 with the option of redemption after 1940. (n) Includes 1 per cent being arrears for 1931-32.

(*Continued from page 342*)

respect. During the year the need for larger area, more machinery and more working capital had been growing and pressing. The directors were alive to these circumstances and had during the year modified the articles under extraordinary general meeting to permit the expansions. At the time of this report results in respect of endeavours for additional capital, whilst they may not have been as satisfactory as they would have been, but for the Far Eastern situation, the directors feel the difficulties have been mitigated. The increasing amount of work coming to them both for ship-building, ship-repairs and other fabrications, have fully justified these expansions.

The small endeavours they made during 1941 to get into Civil Contracts for buildings and maintenance, have not been happy in the results. These are entirely due to abnormal conditions and control of building materials by Government in a manner that could not be foreseen.

Managing Agents.—Messrs. A. V. Thomas & Co., Ltd.

Synopsis of the balance sheet as at 31st December, 1941:—

EAGLE CORPS
R.O. THOMPSON

THE AMERICAN VOLUNTEER CORPS. (A.V.C.) FIRE BRIGADE SECTION
Calcutta 17-7-42

Armed with a Stirrup Pump and the knowledge concerning its proper use, citizens of Calcutta can greatly assist in fire defence. A properly equipped army of preventive firemen will greatly reduce the chances of widespread fires in the event of an air raid. The Stirrup Pump is a first line defence against incendiaries.

SENIOR STATION OFFICER
AMERICAN VOLUNTEER CORPS.

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Not only interbank call money at ¼ percent but three to six months deposits at ½ percent have been going abegging; and none so poor as to want any more. The spell of plethoric conditions looks like lasting a considerable time; and there is every sign of further accentuation of present tendencies. Applications for tender treasury bills flow in a spate; and the discount rate persists in the downward trend. The Imperial Bank has again built a record for the highest deposits in its career; and, despite further substantial investment in treasury bills, the bank's cash runs at a high level. The deposits of scheduled banks with the Reserve Bank show a further rise. The movement of increasing deposits with banks has, if anything, gathered more momentum. So far as we can see, there seems little prospect for the reversal of any of these tendencies.

Against Rs. 6 crores of tender treasury bills offered on August 26, applications came to Rs. 11.95 crores. The average rate of accepted tenders was annas 6 and pies 7 percent per annum as compared with annas 7 in the previous week. The offer for next week is again to be Rs. 6 crores.

There has been expansion of currency for five crores in the week ended August 21. Sterling securities held in the issue department of the Reserve Bank have risen from Rs. 301.79 crores on August 14 to Rs. 306.79 crores on August 21. As a result, active note circulation sets a new record at Rs. 470.77 crores, comparing with Rs. 466.41 crores on August 14. In spite of the transfer of sterling securities for Rs. 5 crores to the issue department, foreign balances held in the banking department show only a small decline from Rs. 77.64 crores to Rs. 76.89 crores. This means that the Reserve Bank has had an addition to its sterling balances of Rs. 4 crores to Rs. 5 crores in that week. This may, probably, be a belated instalment of payment by the British Government in respect of July settlement. There is some justification for this view as the Central Government's cash balance with the Reserve Bank has gone down from Rs. 9.81 crores to only Rs. 6.21 crores. It is also noteworthy that the Central Treasury does not appear to have taken a ways and means advances during the week under review. The Government's expenditure during the third week of August should have been helped by the sterling payment received from the British Government. The deposits of member banks with the central banking institution have risen from Rs. 66.30 crores to Rs. 66.96 crores.

The statement of the Imperial Bank for the week ended August 21 shows a spurt in deposits from Rs. 142.69 crores to Rs. 144.14 crores. The additional investment in treasury bills must have been quite considerable as investments show a rise from Rs. 92.25 crores to Rs. 94.08 crores. Advances at Rs. 25.47 crores are more or less unchanged. Cash at Rs. 34.28 crores shows a small decline. The annual meeting of the Imperial Bank of India was held in Calcutta early this week ; and Sir George Morton was the Chairman at the meeting. As was to be expected, Sir George dealt at length with the repercussions felt by the Imperial Bank on account of the enemy occupation of Burma. The account given by Sir George in this regard must be most reassuring to shareholders of the bank. All essential records in Burma had been duplicated sometime before Japan declared war ; these records as well as the valuables pledged in Burma branches had been brought over to India for safe custody. So far as advances outstanding in the books of evacuated offices were concerned, full provision had been made where the safety of such advances had been jeopardised or obscured as a result of the Japanese invasion. Buildings and furniture and fittings in Burma had been written off from the reserves previously provided. Thus, so far as assets are concerned, every provision has been more than adequately made. With respect to liabilities, the bank's policy has been throughout to meet Burma deposits on proof in India in all cases where to do so does not contravene Government regulations At the same time, it cannot be gainsaid that the depositors left in Burma would not be able to put in any claims for the funds belonging to them. To the extent that there are amounts held by the bank in respect of such accounts, the bank may be said to be a complete gainer. It is not unlikely that the gain in this regard may run into several lakhs. This is definitely an important inner reserve for the bank. In spite of the fullest provision made for Burma properties and for advances in Burma, the gross profit of the bank has risen by about Rs. 17 lakhs The expenses are higher by Rs. 7 lakhs, the main increase being accounted for by establishment and miscellaneous expenses. The result is an increase of over Rs. 10 lakhs in the net profit. For the excellent showing of the 1941-42 balance sheet and accounts of the Imperial Bank, the rising tide of deposits may be considered one of the main contributory causes. The deposits still continue to swell; and it follows that the results for 1942-43 should make even better showing.

The exchange market has been featureless though a few export bills made their appearance.

The closing rates are: Banks buy T.T. London ready to six months forward at 1s. 5 31/32d., and banks sell T.T. London ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. bills at 1s. 6 9/32d., and for the first and second months at 1s 6 5/16d., for the third and fourth months .

Money is unchanged at ¼ per cent., all lenders.

Banks buy T.T. New York Ready at Rs. 329 for $100.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Wednesday, August 26, 1942. Total amount offered was Rs. 11,95,00,000 (Rupees 11 crores 95 lakhs). Tenders at Rs. 99-14-6 per cent and above were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 37 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 0-6-7% (Rupees nil, annas six and pies seven per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, September 1, 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, August 31, 1942 at other centres. Successful tenderers should make payment on Friday, September 4, 1942 or on Wednesday, September 2, 1942, at centres where Friday is a holiday. Other conditions are as usual.

During the week ended August 21, 1942, Government of India Treasury Bills for Rs. 5,46,00,000 (Rupees 5 crores 46 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

THE current strength of the funds and the successful borrowing by the Treasury are admittedly permanent features of the London money market. Any minor change in the holding of bullion by the Bank or any rise in the active note circulation is of limited interest. What is obvious now is that the Treasury has little need to rely on the Bank. The open market provides every week what is wanted. Treasury deposits are not wanted. That means tap sales of war bonds are going on well. Saving and lending are persistent factors, but the City does more. In spite of a recent demand that the City has not added to manpower, the existence of a securities market in London—but not in Denham—demands the countenance of the City. Since the market is slowly rising investors gain in all cases, and those people who have heard of questions being asked by M.P's about redundant clerks and unwanted brokers will change their opinion as to the work done in the war period by the City. About two or three months ago, it was hinted that high finance should make a contribution in the form of workers, but nothing has been heard since. It is known that both male and female staffs have been depleted by the war.

The political developments of the week have exerted little influence on markets. Brazilian issues were firming up before war was declared, said London reports. Argentine rails were going up last week, according to some reports. Perhaps the Republic is bent on buying out British investors. Traffic figures must be good even if Senor Castillo stands firm by neutrality. The status of Brazilian issues would naturally be higher. Investors would exhibit great faith in Tractions—one of the leading trans-Atlantic issues, and even greater faith in the few mining shares like St. John del Rey. By comparison with Chilian issues, Brazilian issues come out very well. The British investor would note that Venezuela's oil and Brazil's minerals put them in a class by themselves. There has been a rise in Sao Paulo issues, but that may be due to the improving outlook for coffee. Only experts can venture on a discussion of how the milreis would behave in wartime. Whether Brazil would ask for lease-lend supplies is doubtful. But Brazil's bondholders may lose to some extent if the Government stops payment of interest. Railway shareholders might do well out of military traffic, but they, too, may be exposed to transfer difficulties. The general outlook for Brazilian bondholders can only be assessed in New York, and present discussions in Washington on joint defence may have a bearing. The British investor perhaps will stick to Home Industrials. The reduced yield on giltedged certainly enhances the value of equities. If the '45-75 Australian loan is just 101 in spite of the 5 per cent yield, the case is different with War Loan at 106⅛. The Funds are definitely firmer because money is as cheap as ever, and there are fewer eligible investments now that tin, rubber and tea shares are all condemned by events in the East.

The fact that the yield on Home Rails is over 7 per cent merely indicates that the investor there fights shy of investments whose postwar status is indeterminate. Only 2⅞ per cent was paid for 1941 on Transport "C" stock and the price of 46½ seems rather high. Not so with gilts. Falling advances mean bigger investments in gilts by banks. Rising deposits mean firmer conditions in the giltedged market and one must record over again that London retains full confidence in giltedged. Russian retreat and German advance alike mean nothing to the Consols market. Owing to the special profits tax Kaffirs have not got many attractions left, and the recovery in the case of Nundydroog must be due to better news from the field in Mysore. The 10-shilling shares standing at 16/3 have a following of sorts in India, but there is the Mysore excise duty, deep-level costs and labour disturbances to upset the investor. In spite of current belief oil shares appear to be recovering more rapidly than even gold mines. Oil is the big opportunity for the investor to-day, and the 13/4 shares of Venezuelian Oil Concessions represent a better proposition for the investor than Burmah or Shell shares. Oil in the New World is safe. Consumption must go up; so will production. The bolivar is a sounder currency, and this year's big favourite in London is apparently Ultramar, not Trinidad Petroleum Development. Shares like British Borneo and British Burma Petrol have obviously a hypothetical value, but Trinidad and V. O. C. are better. At present Trinidad Leaseholds stand higher than Iranian or Shell. The reason is simple. The American oilfields are safe from air attack at any time, and sinking of tankers in fact supplements the demand for oil.

The U. S. Treasury is taking out a bigger share of the nation's income. A cable this week says that war outlay in the second quarter comes to 31 per cent as against 15 per cent in the last quarter of 1941. The production programme has taken off more money. The U. S. Treasury borrowed more in May than in April as is described elsewhere. For June and July the war bond target was 800 and 1,000 million dollars. From June, it was intended that the savings campaign should be stimulated. Volunteers were prepared to visit every home to secure a voluntary signed pledge that 10 per cent of each person's income would go towards the systematic purchase of war savings bonds. It was realised that U. S. savings bonds which are sold from March 1, 1935, are not enough. The tap sales since May 1, 1941, brought 6 billions out of the gross total of 10 billion dollars. Investors were given in May the opportunity to subscribe up to 100,000 dollars in savings bonds. It should be possible to surpass the billion mark this month as civilian consumption has been reduced through the war. Import control has been adopted and the U.S.A. contemplates reduction of supplies of rum and bananas that can be had from nearby countries.

A small item of news appearing on Monday is of great significance to India. The price of silver has been raised in the U.S.A. from 35 to 45 cents per ounce. The cable said that the change in price was due to a desire to help Mexico. There is a loan to Mexico, a highway agreement, etc., a compensation arrangement as regards oil properties, all negotiated by Senor Padilla. It is a bull point for silver at any time. Home-mined new silver is taken at a fancy price, but the U. S. Treasury is out to subsidise foreign silver. Chinese stocks will perhaps be taken again. Of course, Bombay prices are out of tune with New York, but London rates so far have not moved up. It is strange, to say the least. Since the Reserve Bank is a permanent depressant there is no chance for Bombay to go up but the revision of the U. S. price will put heart into Indian holders. The U. S. Treasury can help without pressure from the silver bloc. Instead of selling silver for the war, the Treasury will buy Mexico's silver at a bigger price. The Indian market will interpret the brief cable hopefully though there has been so far no change in bullion here. The gold market has gone down as compared with last week; sovereigns are still higher than bar gold, and the silver market is quietly steady. Whether Swiss francs appreciate in terms of dollars in the "free" market in New York or not, the price of U. S. gold stands at 35 dollars an ounce. If the price of gold in India goes up, it means the Indian rupee has depreciated. That is the opinion of the man in the street and Portuguese India as well. Recent notes in the Bombay press made it clear that native Goans had a decided aversion to British Indian currency. The Portuguese Bank declined to change rupees freely into escudos for obvious reasons, and the rule as to money orders from India to Goa created special difficulties for Goans anxious to remit money. There was also trouble about payment of money orders, and Goans who had to make payments in Goa found that a special commission of 10 to 15 per cent had to be paid. That is just a general summary of what has been happening. There is nothing, of course, in the Anglo-Portuguese payments agreement, and as far as the Reserve Bank is concerned, the Banca Ultramarino need not take cognisance of it as the Lisbon office would be normally ignorant of anything except the British Embassy in Lisbon. The situation cannot be remedied since local disturbances in India must lower the value of the rupee in foreign territory. Portuguese India is neutral unlike French India. The neutral always has the privilege of putting his own value on a token currency, and if the Goans took due note of the half and half composition of the rupee, there might be further depreciation. That, of course, would not be lost on the Bombay gold market. The certainty

Overcoming Rubber Shortage

Four important commodities to be affected by the fall of Malaya, Borneo and N. E. I. are sugar, tea, tin and rubber. Of these, sugar and tea we have in plenty and it will be possible to supply the United Nations their much needed requirements. But tin and rubber are not available elsewhere in the world in such large quantities. In the case of tin, perhaps, the problem is not so acute as the quantity involved from the point of view of laying in stocks is not very large and it is known that large quantities of tin ore were exported from Malaya before the Japanese war. The production outside Asia is 75,000 tons out of a total world production of 240,000 tons. It is expected that a large quantity can be had from intensive working in Bolivia.

The position, however, is very different as regards the fourth commodity, rubber. It is unnecessary to emphasise that rubber is one of the important strategic materials and is utilized in the manufacture of every war weapon. The boast of the British Empire before the Japanese war was that it had the world's prominent sources of supply under its control and that it had in plenty what the enemy, Germany, was sorely lacking. In 1940, Malaya produced 86,800 tons of tin ore and N. E. I. 43,900 tons. In the same year Malaya produced 549,000 tons of rubber, N. E. I. 545,000 tons, N. Borneo and Sarawak 54,000 tons, Ceylon 90,000 tons, India 12,000 tons and Burma 10,000 tons. Total world rubber production was 1,411,000 tons. It will thus be seen that the loss of N. E. I. and Malaya has given rise to several difficult problems.

Outside Malaya and N. E. I. the production of rubber is 141,000 tons, 90,000 tons on account of Ceylon, 10,000 tons India, 17,000 tons Africa, 4,000 tons Mexico and 18,000 tons S. America. That is, against the total allied consumption of 800,000 tons, the available supply on the basis of 1940 estimates is only 141,000 tons. It is now reported that with the intensive tapping of the rubber trees, production in Ceylon has been stepped up to 110,000 tons. Indian production has increased from 12,000 tons to 18,000 tons. Collection of wild rubber in Africa and South America should add to production while the growing of the wild shrub in Mexico should also help to relieve the shortage. But having regard to the difficulties of intensive tapping and the impossibility of immediate production, for a plantation takes five to seven years before it comes to the yield stage, the requirements of rubber have necessarily to be made up by the production of synthetic rubber. Production of synthetic rubber in the United states was reported to be 20,000 tons in 1941 and only recently we heard a lot of criticism regarding the policy adopted by the leading oil companies in the United States in furthering the production of synthetic rubber. By the end of this year synthetic rubber production is expected to increase to 80,000 tons and by the end of 1943 to 600,000 tons. Several factories are under construction. In the interregnum it is hoped to get over the problem by drawing on reserves and by the intensive use of reclaimed rubber.

The United States seem to mean business. In order to save wear and tear it has decided to curtail drastically the production of automobiles and to ration petrol for civilian purposes. The automobile industry accounts for three-fifths of the rubber consumption. So that it can be said that with the increase in war production there will be no great increase in the consumption of rubber.

As regards the stock position, it is well known that the United States have been buying in large quantities from Malaya and N. E. I. According to the November, 1941 number of the Statistical Bulletin of the International Rubber Regulation Committee, stocks in the U.S.A. including Government's reserve and barter stocks were 454,711 tons against 235,353 tons in the corresponding month in 1940 or an increase of 219,358 tons. We do not know what has happened since then for it was possible to get supplies in November and December, 1941; and how far advantage was taken of the situation we are not in a position to say. Any way, it is possible to hazard the statement that the rubber problem is not so serious as it appears, though the cost involved to overcome the shortage will be great, and if the programme for the production of synthetic rubber materialises, optimistic as it looks, there will be no insuperable obstacle that will impede the war effort.

Japan has not gained to any great extent by the occupation of Malaya and N. E. I. so far as rubber is concerned. The production of Indo-China and Thailand is more than sufficient to meet her requirements. Germany has not gained hitherto by the abundance of rubber supplies at the disposal of her partner and it is expected that it will not be possible to reach supplies to Germany with the British and U. S. navies in being.

The position in regard to India should be examined here. Planters in Southern India, where the greater part of India's production is grown, are having their time. The criticism in the past has been that the I.R.C.C. has been unnecessarily harsh on this country and that the basic quota of 17,750 tons was fixed at an unduly low level. Even with good facilities, by reason of the policy pursued in the last decade, India is able to produce only about 18,000 tons while Ceylon produces six times more. There has naturally been considerable agitation to remove the ban on new planting and it is satisfactory to note that the Government have lifted the ban in this regard. The lesson this war has taught is that a country should be self-sufficient in regard to the strategic materials though in the future world order we are told that there will be an equitable distribution of raw materials. But then we are not sure about even the future of rubber plantations as with the increase in synthetic rubber production it is not possible to make any precise statement.

Government policy towards Indian planters cannot be considered anything generous. The planters have had to cite the example of Ceylon every time and it was only after representation that the increase in the maximum price of rubber to Re. 1 per lb. was effected. One erroneous impression has to be removed in this connection. While Re. 1 per lb. is the maximum price in this country the same figure is the minimum price in Ceylon. Also, it appears that it has been decided there should be no export of this commodity from this country, the production of Ceylon being mainly used for this purpose. It is said that shipping problems and the expanding production of the Indian rubber industry have necessitated the retention of stocks within the country. Again, only after representation from planters it has been decided to buy over stocks and keep them against production. There is at the present moment, paradoxically enough, a surplus of stocks and as they were not bought over from the small planters, of which there are many in this country, the condition of rubber was getting deteriorated. Also, owing to the lack of finance intensive production could not be successfully carried on. It is pointed out that when the new factories are in full operation the present small surplus will be more than fully absorbed. The problem then will be to find enough rubber for essential requirements, and every possible source of additional supply is being investigated—including the stimulation of production on plantations, collection of wild rubber from various areas, the early production of reclaimed and the possibilities of various substitutes.

Thanks to the enterprising energy of South Indian Planters production of dry rubber has increased from 11,670,715 lbs in 1931 to 35,530,399 lbs in 1940. As the increase in the area from

74,669 acres to 138,207 acres is not appreciable, the improvement has been possible only with the increase in yield. The experiments with regard to budded rubber must be bearing greater fruit now.

The number of reporting plantations in 1940 was 14,621 covering an area of 223,353 acres, as against 14,080 (revised) with an area of 220,178 (revised) acres in the preceding year. The area of old cultivation abandoned during the year amounted to 157 acres, while the new extensions (including replanting in areas abandoned in previous years) are reported to have been 4,068 acres. The area actually under rubber in these estates amounted to 138,207 acres, showing an increase of 3,911 acres on the area (revised) reported in the previous year, and of this area 120,100 acres were tapped. Of the total area under cultivation, 76 per cent was in Travancore, 11 per cent in Madras, 10 per cent in Cochin, 2 per cent in Coorg and 1 per cent in Mysore.

It will thus be seen that the part played by India in solving the rubber problem is not anything important as even the increased production of 20,000 tons is only about 2½ per cent of the total allied requirements. It has only served to provide this country's requirements and helped the Indian planters who have had a very chequered career in the last decade.

CHANGES IN AUGUST

There may be no direct connection between the Dieppe raid and the conference between Hitler and Rundstedt somewhere in Russia. But it is hard to believe that Hitler is not forced to take account of the meeting between Mr. Churchill and the Russian leaders. Hitler's problem is not only one of guarding the West to prepare for a big effort in 1943 but one of forcing Russia out of the war. To the main task of breaking up the Russian war effort, the southern armies have latterly been directed, and every day the reports from the Russian front, if inconclusive, point to the anxiety of the Nazis to reach the Caspian before they can start any movement against Leningrad.

Since the principles governing the immediate assistance to Russia have been settled, Hitler's main task has increased in difficulty. The long-drawn-out operations against the Caucasus have been eclipsed by the fierce drive against Stalingrad. The legions of von Bock continue to struggle onward but the decisive moment has passed. A recent report from Ankara to the "Daily Telegraph and Morning Post" indicated that the Nazis were distinctly nervous. Turkey, of course, had no direct interest in the Moscow conversations apart from feeling assured that a Russo-German peace is out of the question. Last week special reference was made here to the fact that Stockholm had given the quietus to suspicious rumours. It is now even more reassuring to know that speculation in Turkey has died out. What Turkey feels about the new strategical dispositions, announced this week, may be known a little late, but it is certain that she is going to feel more convinced that Russia is going to get help across the Caspian.

Whether Turkey can help in forwarding supplies across the Caucasus does not enter into present calculations, but the creation of a new command with General Wilson in charge, makes it certain that Turkey's real guarantee of security lies not in the Saadabad pact but in the Iran-Iraq command. The announcement that appeared on Tuesday made it clear that a German march towards the gateway to Asia was a threat to the Middle East but not to countries beyond India. It is essential, in our opinion, to realise that a danger to Northern Iran does not imply similar danger to India. General Wavell's command has been reduced in area like that of General Alexander, for the 9th and 10th Armies are apparently meant for independent operations.

To create a deadlock in South-eastern Russia is a major purpose of Allied strategy. Hitler's gains will be reduced in importance and Marshal Timoshenko can continue to receive Allied supplies through Iran, and possibly through the North. The new Nazi offensive against Orel seems to be a half-hearted affair, and any future Russian withdrawal beyond Stalingrad will have the merit of creating a new defensive line opposed to the plan for a German line, meant to pin the Soviet armies to the East, when Hitler is able to maximise his advantages in the Eastern Occupied Territories. The mere fact that Hitler is said to be preparing for defensive warfare in the winter suggests that Russia also is getting ready for a second winter. It may be that the Volga valley will be held, but the Allies will have to help. The details of winter warfare must have been settled by Rundstedt who might have insisted on reinforcements being sent to the West before Hitler could start any move against Leningrad. As we emphasised, Hitler's main obstacle is Russia's size. Defence can be conducted from Orenburg or Omsk as the case may be, whereas he has to match reduced forces against the enormous forces being built up in Britain. If Laval became a dictator at Vichy, the position would be simplified, but Laval has a rival in Darlan, and the Allies hve a further advantage in the survival of Iberian neutrality. The cardinal difference between the war in 1917 and the war in 1942 lies in the fact that the Germans have to fight on in Russia. They have, as the "Liverpool Post" emphasised recently, to build up stronger opposition against raids or invasion by Anglo-American forces. But Hitler has to prepare at the same time for defensive warfare in the Russian winter. According to recent reports engineers, pioneers and labour battalions are hard at work fortifying the long Russian front. If Russia were like Waziristan, the Germans could stay on, and make good their occupation. But the Russians are joined by their present alliance with America and Britain, and the isolation of Russia before the October Revolution is just the thing that eludes Hitler's grasp.

The successes in the Caucasus can even be neutralised by a late offensive in the winter on the part of the Russians, and the kind of thing that took place between Smolensk and Sebastopol will only be bad for Hitler's armies. To make sure that airplane supplies or even troops go through, the command of General Wilson has been created. There can be no danger to the oil of Iran or Iraq when a strong army ready for action mounts guard. While the Allies' decision reduces the two kingdoms to mere protectorates, one must associate it with the clear guarantee of security. The League of Nations is dead; the two small Kingdoms need and deserve adequate portection. Extended interference is dictated by circumstances across the Caucasus, and those, who are in a position to judge, would link cabinet changes in Iran with the many, though mysterious, decisions taken at Moscow. What emerges clearly is that Germany must fight in the West at some time. Major Fielding Eliot recently expressed the view that the Japanese and German Hig Commands hereafter must deal with all the vexatious problems of war on two or more fronts.

The organisation of a whole continent for war does not promote security. In this again, many will detect the inherent difference between North America and Europe. German military hegemony in Europe is utterly removed from the supremacy established under the Monroe Doctrine. The countries of North America are united, by war, and not for war, it will be said, but it must be premised at the same time that the U.S.A. in Major Eliot's words, is developing fighting strength and sending it to distant places. If that is conceded, the Russian problem of resistance is simplified. Russia will and can fight, and the direct contribution made by the U.S.A. in the Pacific will be appreciated at once. The Japanese have been virtually deprived of the means for any future offensive. They are entangled as before in China, and confronted with growing armed strength in the British Empire.

The adjustments required in March have been effected and activity reported at Vladivostok this week, must be gall and wormwood to any Power that sought a diversion in Siberia. Since Japan is said to have lost already in eight months of war one-seventh of her merchant navy, the problem of sea communictions must impair the ambition to keep attacking. No surprise attack can succeed, and the naval losses in the second Battle of the Solomons compromise chances of any move in Germany's favour. What has been ultimately secured by the intervention of the U. S. Navy at Tulagi is the safety of the maritime provinces of Siberia. The reduced strength of the Japanese fleet is in reality a problem for Hitler. He cannot get Japan to assist even if Stalingrad were to fall and the way to the Caspian should be open. Operating always against any possible move from Manchuria is the continued fighting in

China. Part of the vital Canton-Hankow railway is still held by the Chinese and the coastal Provinces have not been taken according to plan by the Japanese who have found that Marshal Chiang's regime has not crumbled, and have also discovered early that an advance from Burma is impossible. It is essential to remember that China too is giving help to Russia in one way at least, as essential as the maintenance of a route by way of the Persian Gulf.

The remarkable changes in the war situation witnessed during August should be considered against certain other facts like the increase in U.S. war production. Bigger and better ships are being built. Aircraft carriers and dive-bombers for their decks as well. According to a recent report, merchantmen can be converted in two months into aircraft-carriers. This fact deserves to be considered alongside of the loss of eleven carriers by the Japanese navy. More impressive, according to current reckoning, is the addition to the liberty fleet. At a single yard on the Atlantic coast five freighters were launched in single succession. On the previous day two destroyers launched at a nearby shipyard and on the same day the 55th 10,000-ton Liberty type freighter hit the water on the Pacific coast 200 days ahead of schedule. But diversion of U.S. resources to war production alone can make little difference to the immediate course of the war. That is readily realised, and the most obvious feature on a fluid situation to grasp at present is that the U.S. airforce is at work in Europe. The great range of Consolidated and Boeing bombers makes for an easy approach to the Baltic States which are being turned to account against Russia. Any break in the Egyptian desert lull will be of limited advantage to the Nazis whose air borne supplies have been reduced by the R.A.F. It is not without interest to record that the Soviet press has little to say about a second front. Having got into the war the Russians have recognised of late that it is inexpedient to make demands for exceptional treatment. The importance of Russian claims being subordinated to those of the war as a whole will not be lost on Hitler. It would be possible to exploit Russian grievances or Russian pique, as was imagined. That is not the least of the advantages following a frank exchange of views. The week, which has brought the largest republic of South America into the war, is of manifest importance to the Battle of the Atlantic. To take the initiative commands have been re-grouped and naval warfare may have decisive effect on Russian supplies. It is well that we should recognise the value of President Rios' visit to Washington at the same time as Brazil declared war. The dictatorial regime in Brazil is allied to Soviet Russia. The value of an extended alliance bridging the Straits of Dakar (the phrase is the present Lord Halifax's) will be borne home to a nation that has declared war on neutral shipping.

While Russia's limitations have been freely exposed by fourteen months of war, it is definite importance to grasp that new factories have shaped well. The shift of industry has not reduced war output; and definite claims have been made. Supplies through Murmansk have been rushed to the front because dockers worked with a will despite the annoyance of air raids. Plane output from Aviagrad has gone up. An evacuated factory set up on the steppes is getting off new planes rapidly. Many other towns have sprung up this year where every evacuated plant has made good. Of greater importance is the harnessing of science to Soviet industry. Scientists will help to develop iron and steel in the Urals, enlarge industrial base by adding to the output of non-ferrous and rare metals. The Vice-President of the Ukrainian academy of sciences referred to a big programme before scientists such as developing fuel supplies for new industries in Bashkiria and questions connected with development of new oilfields. Replacement of lost resources is the first preoccupation and vigorous prospecting is apparently going on. The big questions about war effort are answered by reference to achievements and plans. If Russia is going to surprise her friend in the second year, surely the friends have to prepare to second her plans, and it is within their capacity to do so. Assurances to that effect are superfluous, and it is not hard to see in the announcements this week something more promising than any communique could be.

NORTH WESTERN RAILWAY

Ex. employees of this Railway who have retired from service within the last five years, and who wish to serve on this Railway, may apply for re-employment to the Divisional Superintendents concerned. They will be considered for re-employment as a temporary measure if they are found to be physically and otherwise fit.

Re-employment is open in the following categories only:—

1. STATION MASTERS, Grades I and II
2. SIGNALLERS, Grades I and II
3. COMMERCIAL CLERKS, Grades I and II
4. TRAIN EXAMINERS.

India's Markets

India's customers this year are fewer in number. Their supplies and takings have also changed, and one must follow carefully all variations in the direction of trade. Imports have fallen, that is widely known, but one must check the takings to find out which supplies are scantier as compared with last year. Imports from Britain in the first quarter of 1942 are lower by Rs. 1.54 crores as compared with a year ago. The main reason must be the advance in British war production and the change in export policy following industrial concentration. Imports from the British Empire as a whole have been halved by the war. The most arresting fact is that at a time when imports of all vegetable and mineral oils are known to have gone up in the first quarter India's imports from the Bahrein Islands have fallen. It is noteworthy that Bahrein under its Khalifa is grouped in the British Empire like Zanzibar. The reduction in mineral oil supplies this year accounts for the decrease just as the reduced imports of raw cotton explain the fall in trade with Kenya. The biggest change, however, is an increase in supplies from Canada and a decline in imports from Australia. A year ago, trade with Australia was much more important for India than trade with Canada because Australia's mineral exports were essential. Total imports from New Zealand for the three months were valued Rs. 2 lakhs, and the only inexplicable feature is the fall in imports from Zanzibar and Mauritius when India's imports from Tanganyika have risen substantially. It is much more easy to explain the drastic reduction in imports from the Anglo-Egyptian Sudan this year. Imports from Egypt have also declined as compared with 1941. It is now apparent that Rommel's campaign has influenced the foreign trade of India like the Japanese advance to Akyab. Proof is certainly forthcoming in the British Indian trade returns which disclose that imports from Sweden and Switzerland have been greatly reduced by the war while imports from Portuguese East Africa have grown. Attention was drawn to the development after the successful operations in Madagascar under Admiral Syfret.

Imports from China and Japan have fallen to the same extent, though it is clear that overland trade does not come in to the available trade statistics. A limited increase in exports to Portuguese East Africa is as interesting as the regular increase in Indian exports to the Nigeria. This increase is apparently independent of import control practised in the African colonies. Indian exports to Tanganyika territory have increased obviously at the same rate as Indian exports to Kenya and Ceylon. Exports to Australia have also increased greatly as compared with last year. After Britain she is the biggest buyer of Indian exports but South Africa also is buying largely. Inter-imperial trade has developed curious features. The West Indies are taking more; presumably the U.S.A. is too busy to sell them certain goods; only Nigeria is shown as a rising buyer but that may be due to cargoes generally being consigned to Lagos. There are only four foreign countries whose total takings for the quarter exceed Rs. 1 crore. Some surprise will be occasioned by the fact that Iran, Iraq and Egypt take more than the ten republics of South America. Since imports from Iran in the three months were valued over Rs. 3.28 crores and made her third among Indian customers it is now clear that the Middle East, particularly Syria, Arabia, and Asiatic Turkey offer unusual prospects to Indian exporters though the bulk of the trade will be retained by the U.K.C.C. The tariff concessions for Indian rice, etc., in Iraq have evidently stimulated Indian exports to the Kingdom this year as much as the disappearance of Japan as a rival and the waiver of rules as to certificates of origin.

Falling Imports

The import trade of British India in the first quarter of 1942-43 reveals a certain degree of stability. As compared with the past year there might be a striking reduction brought on by the war, import control and the twenty per cent surcharge. The total value for the three months, April to June, are Rs. 8.76 crores, Rs. 8.56 crores and Rs. 8.82 crores respectively. The figures suggest immediately that import control has succeeded in reducing imports to bare essentials. Fluctuations in re-exports suggest that there has been no great change as between this year and the last, but it must be noted here that the re-exports this year constitute a larger proportion of supplies previously imported. Total re-exports valued Rs. 2.97 crores nearly went out in the first quarter and showed an increase of Rs. 20.5 lakhs on the corresponding period of 1941. It is noteworthy that the greater part of the improvement of Rs. 87.41 lakhs noted under re-exports of food and drink springs from the shipment of sugar. Re-exports in the quarter were valued Rs. 86.5 lakhs as against Rs. 3.19 lakhs in the same period of 1941. The great change noted under raw wool in which case re-exports have fallen steeply, is merely an indication of high activity in the woollen industry, and also testimony to the big decrease in arrivals of imported wool. Imports of raw wool in the first quarter of 1942-43 were valued Rs. 24.66 lakhs as against Rs. 124 lakhs in the same period of 1941-42. The increase in re-exports of woollen goods makes the decrease under re-exports understandable. Re-exports of textiles which showed a big increase in 1941 do not show any such increase this year. In this case the reduction in oversea supplies, actual and probable, provides the explanation, and the simultaneous increase in shipments of cotton goods is an indication of what has happened since Japan lost her export trade in West Asia.

The increase shown under silk, woollen and other yarns and textile fabrics shipped from India indicates that in spite of certain restrictions, the export trade in textiles is flourishing. The fall under exports of paper, chemicals, etc., is indicative only of keener demand at home for limited supplies whereas India's present chance is to provide cotton goods for many countries. But it is the import trade as influencing supplies and prices that has special interest today not only as having a bearing on industrial activity. The main changes of this first quarter are the decreases under rice, raw cotton, sugar and wool. Imports of all manufactured goods have fallen from Rs. 29.87 crores in the first quarter of 1941 to the total of Rs. 14.76 crores in the first quarter of 1942. The decrease is spread over a wide range. Chemicals, drugs, arms and ammunition, leather and footwear, apparel and slops are subject to the same influence as the major imports like cotton goods, machinery and vehicles. The biggest changes are, however, to be found under paper and rubber goods. The decline in imports augurs well for the

Indian manufacturer. The bigger opportunity available to the maker of woollen goods in India is to be measured by the decline recorded under imports of woollen yarns and fabrics. Exports and re-exports have increased in comparison with the previous year, though part of the increase must be attributed to the increase in exports of carpets and rugs. The advantages conferred by the war on the glass, electrical equipment and other industries can be discerned from an examination of import statistics. Imports of jute manufacture have gone down like the rest, and increased imports of raw rubber in 1942 show that augmentation of supplies came alongside of conservation.

Inside Germany

The coming harvest is the big question-mark in German politics. Pigs and potatoes are still enormous factors in general morale. The chances of looting have been reduced by the diversion of troops to the East. The R.A.F.'s regular assaults have been naturally reducing war-mindedness after Augsburg. The last statement attributed to Goebbels pointed to the feeling among Nazis that Germany was faced with a dilemma. In spite of progress towards the Volga and the Caucasus, the temper of the German people is not all that it should be. The Generals may be idols, and Himmler may be planning new moves in the Party-State, but war-weariness has appeared. A recent Washington report dealt with the advent of pessimism in Germany. The original source was a Swedish businessman of Stockholm who made a tour of Germany and formed the idea that Germany's civilians are pessimistic; and the general situation is similar to that obtaining at the end of the last year. The report deserves to be reproduced. Conversations with friends (the Swedish businessman had many friends and acquaintances in Germany) though a bit cautious are generally rather free and open. The increasing tempo of British bombing raids against German cities was a general topic. The Swede declared that evacuation from places destroyed by raid had been the rule, but evacuees from Lubeck and Rostock had spread panic, and evacuation had been therefore forbidden. The efforts to smother their knowledge have failed, he added. The civil population knows the extent of damage due to British raids and the casualties. The Swede also said that secret listening-in had made the Germans nervous. They were becoming acutely aware of the large members of the American air force now reaching England. They know that intensified raids are imminent. The Swedish observer remarked that the German nation's spirit is low. The belief in German invincibility has lessened. There is general fear concerning the food situation during the coming winter. The businessman added that he was able to verify that price control is almost nothing but an illusion, as there are no commodities to be had, at least not in the shops. The German food industry was operating at minimum capacity. Supply stores were exhausted, and there was nothing left. Champagne could be had by the very rich who could afford it. But the mass of the population was tired of the war.

The observer's impressions should be compared with those recorded by Mr. Garrison Villard in the first winter of the war. Gone is the belief that Germany must win, and everything would be all right for the Germans in a Nazi-ordered world. Scepticism has raised its head to judge by a hint dropped by a Swiss paper which has referred to the Germans' chances of victory in the East in relation to the decision that must be obtained against America and England. The Veltwoche's comment is revealing. Says that paper: The struggle against the Anglo-Saxons is something that up to now people have not been inclined to take seriously. This is not right, for England showed in the summer of 1940 what she was capable of and America will develop into an opponent whose capacities must not be under-estimated, if she is given time, and it seems as though she will be given time. The doubt that reigns in place of confidence must not be taken as lack of confidence in Hitler but as the result of grave and prolonged privation. Trouble must start in the armed forces of the Reich before the civilians can break the Nazis. There is no Social Democratic party as there was in 1918 and Herr Hitler, of course, has no Prince Max to advise surrender.

U. S. Borrowing Plans

The U. S. Treasury's programme is not confined to the series of defence bonds that are on sale from May last. The rise in Federal expenditure has encouraged borrowing. In May 1942 it was noted that daily expenditure on the war amounted to $120 million. Naturally borrowing had to increase and it is now possible to say something about the Treasury's borrowing achievements. The U. S. Treasury came out with two new issues in May. It raised $880 millions by way of 2½ per cent registered bonds repayable 1962-67 and $1,290 millions in the form of 2 per cent bonds repayable 1949-51. The difference between the short-term and medium terms is not conspicuous. The 2½ per cent bonds were of a new type available to investors other than commercial banks. That is to say, they were merely a variant of the war savings bonds which brought over $600 millions in May. The 2½ bonds largely correspond to the National War bonds sold in Britain as the subscription list was open for ten days. It was a tap issue only to the extent that bonds could be bought at any time without any condition as to the amount available for eligible subscribers including insurance companies and savings banks The 2 per cent. 1949-51 bonds were different and the issue was meant as much for the money market as the private investor. There was, in addition, the issue of treasury bills for $300 million and the acceptance of tax deposits in advance to the extent of $300 million. What is now clear is that, in the sixth month of war, the U. S. Treasury could not rely on the expansion of short-term debt by conventional methods but had to begin regular borrowing operations. The 2 percent bonds were readily taken up by banks who also helped clients to open accounts for buying war loan, without paying cash at once. The Treasury usually calls on banks to pay money into the Federal Reserve Banks. This is clearly the method that seems desirable in India when banks are obviously in a position to encourage saving specifically for the war, at least to divert part of the swollen current accounts. The money market of course gets back fairly soon nearly all the money advanced to the Treasury. In spite of regular outflow of funds into new

issues, the banks in New York are said to have acquired funds, and maintained balances in May at the high level of the preceding month. War expenditure does not reduce either the active circulation or the total volume of bank deposits. That is familiar enough to everyone conversant with developments in recent years but in the U.S.A. the Treasury borrowing has the original effect of reducing excess reserves in banks belonging to the Federal Reserve system. As from May 13th the Treasury started to borrow every week $250 millions by way of treasury bills. In a single month the treasury bills outstandings were raised by $300 millions. The increase led to a rise in the rate; the average for May was .36 per cent, the rise being partly due to the appearance in April of treasury certificates bearing interest at ½ percent. The amount raised was $1,500 millions. Treasury bills have been made more acceptable by new regulations. Bills presented before maturity are readily converted into cash. The F.R.B. is now a a potent factor in the borrowing programme. That is one reason why, in spite of the rise in the rate for short-term borrowing, the average yield on Government bonds dropped in May. The new 2 percent bonds stood at a higher premium at the end of the month.

European Populations

In the middle of a great war in Europe the demographic changes are likely to be great and swift, yet the vital statistics of some European countries for the year 1939-41 do not lead to any startling conclusions. The Geneva bulletin of statistics for May in a special table describes the variations under the birth rate, the death rate and the marriage rate. The variations as between 1939 and 1941 are void of significance in respect of Bohemia and Moravia. As compared with 1938 the marriage rate has gone down; the death rate has gone up to some extent and the birth rate is as low as 17.3 per mille. From the vital satistics one cannot speak of decay, but compared with figures for the U.S.A. the contrast is clear. The birth rate in the U.S.A. in 1941 was 19 per mille and the death rate was 10.7 per mille. The natural increase was clearly greater than that of any European country. The birth rate continued to fall in France after the war broke out. Almost in conflict with general anticipations is the fall in marriage rate in France exclusive of Alsace-Lorraine. In Hungary the marriage rate recovered in 1941 apparently after the outbreak of war. The birth rate there was lower at 18.4 per mille, and the death rate was slightly lower at 13.2 per mille. The greatest variations are found in neutral Portugal. The marriage rate naturally went up in the wake of prosperity. The birth rate fell as the standard of living rose. In Catholic Portugal the rate is obviously higher than in Lutheran Sweden or mixed Switzerland. The birth rate in Portugal in 1941 was 23.8 per mille but the death rate was rather high at 17.6 per mille. The death rate has risen since 1939 and in this respect she differs again from Sweden. A country with a limited population enjoying a higher standard of living than the majority of European countries has a smaller spread between births and deaths. One therefore finds that in the case of Sweden, there is little or no change as between 1939 and 1941. The marriage rate is slightly lower but it has not fallen as in the case of the Netherlands where German rule has not failed to raise the death rate to some extent. Seasonal variations are common. The last quarter of the year is clearly favoured as in Portugal for marriages in Bohemia and births are more numerous in the summer as in Hungary and Holland. In Sweden also weddings appear to be more common in the final quarter, and births are most common in the spring and summer. This accounts for the largest number of marriages in Switzerland taking place in the winter's beginning. As between 1939 and 1941 there has been a remarkable rise in marriages in Switzerland but not in births. The number of deaths has gone down, to judge by the figures compiled, and the rate of normal growth in regard to population is greatest in Switzerland, though of the six countries whose figures have been analysed, Switzerland is the smallest in regard to area and population. The benefits of neutrality extend to the field of vital statistics since the Swiss alone can report an increase in births and a fall in deaths in the three years chosen for examination. Death is certainly busier in Bohemia and Holland after the German conquest and the transportation of adult males for work in German factories is not calculated to promote additions to population.

Food Plans

The Food Advisory Council will certainly have got through a big agenda. Last week due reference was made to available supplies and present prices. The Advisory Council will have to look in advance at probable requirements, the transport facilities available and the immediate results

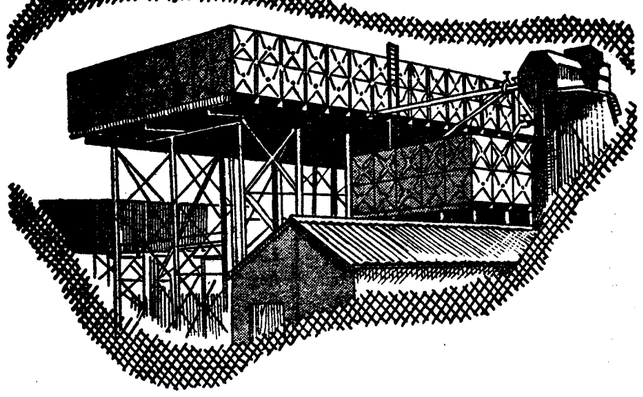
THE SUCCESSFUL MAN DOES TO-DAY WHAT THE FAILURE INTENDS TO DO TOMORROW

The successful man is he who does the right thing at the right moment. He knows that the right thing to do is to obtain protection by an insurance policy. He also knows that the right moment is to-day—now, and the right choice is a Hindusthan Policy. It gives him a complete circle of protection at usual rates for civilian lives.



Let Hindusthan Bear Your Burden and Let Peace of Mind be Yours.

A COMPANY THAT SPEAKS IN TERMS OF CRORES

of the 'grow more food' campaign launched in April. Sir Jogendra Singh's main task will be to consider Provincial reports; the centrally administered areas can provide little food. The Council was expected to discuss possibilities of coastal traffic by country craft and of giving advance information to the War Transport Department about traffic in food supplies. Hints on practical agriculture are ruled out, but the main problem, of increasing the area under the plough, is admitted, and that too calls for special investigation. The Council is examining waste of food in cities and also the suggestion that planters should grow food crops on the estates. Market gardening on plantations has very definite limits, though Ceylon has ordered estates over 35 acres in extent to grow crops. An enormous number of questions are raised by the manifestation of the food hoarding tendency. Larger production is a distant remedy, but the addition to manure that appears desirable requires special attention. It is only in the third year of war that the food situation in India has deteriorated perceptively. The Food Advisory Council has a lot of ground to cover in its enquiries. District advisory Council has a lot of ground to cover in its enquiries. District Advisory cmmittees to help in extending the arable area are not without possibilities. The cultivation of waste and fallow land has been advocated frequently, and revenue concessions, as in Madras have been among the first measures adopted to increase food supplies by extending cultivation. Though it is not advisable to be dogmatic, immediate changes in diet are ruled out. It is not likely that people will desert rice for millet. Caste and religious prejudice largely determine diet, and extended cultivation of grains and vegetables is clearly a matter for a quiet and orderly existence. Since conditions, political and other, look unpromising, those not engaged in agriculture as a wholetime occupation are not likely to help much in extending the benefits of agriculture. One imagines that gardening talks would be started to interest listeners in growing vegetables but the A.I.R. has not apparently started its 'dig for victory' campaign. This is, of course, a small gap in the war effort since press advertisements discussing the merits of vegetables and the right season for planting them have appeared, at least to sustain the impression that the National War Front is not political.

Ilaco's Jubilee Year

The Indian Life Assurance Company of Karachi founded in 1892 has had a long and honourable career. The year of jubilee has produced other things besides a handsome souvenir. It has resulted in a modest addition to the Life Fund and the maintenance in a difficult year, of ancient and well-respected traditions. Identified with the Goan community of Karachi, it is only in recent years that its name is widely known. The chief agency at Calcutta has definitely contributed to the fame and esteem enjoyed by the Ilaco. Concentrating always on quality, the Ilaco's total business in force at the end of 1941 was Rs. 269.33 lakhs but the Company's outstanding achievements in regard to economical management and absolute safety of investments must command general respect. The fiftieth report is, by no means, a humdrum document that speaks merely of a fall in new business. The year produced new business resulting in 1,654 policies assuring over Rs. 37.1 lakhs with total new premiums exceeding Rs. 1.85 lakhs. Total premium revenue for the year amounted to Rs. 10.44 lakhs. Interest and dividends amounted to Rs. 4.75 lakhs. Total claims amounted to Rs. 8.65 lakhs and surrenders took Rs. 31,040-12. The usual provision for expenses, taxes and depreciation having been made, the Company was able to report an increase in the Life Fund from Rs. 97.33 lakhs to Rs. 100.19 lakhs. The figures are not breath-taking. But Ilaco's policy remains consistent by cautious, and the proportion of claims to revenue is merely a sign of the age of the company. It must be known that from the year 1902, the Company's valuations have shown increasing surpluses and every claim made in the past for economical management is warranted by the growth of assets.

It is perhaps the balance-sheet rather than the revenue account that fully sustains the reputation of the Company. Total expenses amounted to Rs. 2,86,952 in 1941 but the changed proportion to premium income must not obscure the fact that the policyholders still benefit from the secure, steady yield on the funds. Total giltedged assets held by the Company at the end of 1941 amounted to Rs. 103.96 lakhs. Since a large part of the fund is held in the form of the 1960-70 loan the market value of the portfolio of securities was much higher at Rs. 115.12 lakhs. The strong position held now as in the past justifies the investment policy which by itself has contributed much to the achievements of the year. The shareholders got a Jubilee bonus in addition to a dividend of 30 per cent. But that is not so impressive as the Company's limited holding of mortgages. The balance sheet shows house property valued at Rs. 11.31 lakhs and policy loans totalling Rs. 9.05 lakhs. The cash at Rs. 7.99 lakhs is far larger than outstanding liabilities under claims etc. With total investments of Rs. 105.9 lakhs in addition to the mortgages, policy loans and house property, the Company has total assets far larger than the liability to policyholders. The share holders' reserve of Rs. 8 lakhs must be compared with the capital of Rs. 1.45 lakhs. In spite of the large appreciation in investments (to which the classified summary bears witness) there is an investment reserve of Rs. 7.04 lakhs. Proof of a sound and conservative policy is again provided by the total of Rs. 83,057 shown under agents' balances and outstanding premiums. That policyholders and others continue to demonstrate their confidence may be inferred from the sum of Rs. 24.34 lakhs shown against Sundry Deposits.

Iron and Steel Supplies

Prior to the introduction of control the imports of iron and steel into India were falling. The control emerged as the result of reduced supplies. The decline originated in July last, and its extent may be gauged by a glance at the figures relating to the imports of iron and steel which declined from 182,700 tons to 129,100 tons. Taking protected iron and steel only the total imports for 1941-42 were 58.100 tons as compared with 77,900 tons in the preceding year and 161,900 tons in the pre-war year 1938-39. It might even be said that the decline in imports really began in June 1940 when France and Belgium were knocked out and Continental supplies became impossible. Nothing is known about Indian steel production in India but certain estimates last year put production at 150,000 tons per month. This was only an estimate and cited in connection with a guess that Indian steel output was growing more rapidly than anticipated. Total imports of iron and steel in the twelve months ended March 1942, amounted to 129,000 tons as against 183,000 tons in the preceding year. The decline naturally represents an extension of the market for Indian steel. Indication of bigger steel production in the war period is the slight fall in pigiron exports. India's pigiron exports totalled 521,200 tons in 1941-42 as compared with 595,500 tons in 1940-41. The state of demand at home can be judged readily by the rapid decline in exports of iron and steel excluding pigiron and ore. The total for the year 1941-42 is known to be 35,300 tons as against 104,000 tons in the preceding year. Even more important as a guide to the supply position is the advance in the prices of galvanised sheets. The price rose more than once in the course of the year. The fall in imports influenced an expansion in the steel output, and the reports and accounts of the two steel companies are clearly a guide to the position of the makers and the market at present.

A Stalwart Infant

The advent of the Habib Bank last year was without the usual reclame. But facts and figures available will speak for themselves. This week makes the Bank complete a full year, as it was incorporated on August 25 and authorised to commence business on August 30. The Bank certainly started with the big advantage of adequate share capital. The share capital of Rs. 25 lakhs was got within a week and after a year the shares of Rs. 50 paid up (with Rs. 50 to be called up) stand at a premium. That is not at all surprising as the Bank was listed as a scheduled bank in November, and elected a direct member of the Bombay clearing house in February. Progress in this case can be measured in other ways. The statutory report presented in February recorded the fact that 50,000 shares of Rs. 100 each on which Rs. 50 was called up had been allotted, and the paid-up capital was, therefore, Rs. 25 lakhs. It also drew attention to the fact that in four months the Habib Bank attracted over Rs. 33.5 lakhs in deposits. Having a large paid-up capital, the Advances were as high as Rs. 27.76 lakhs. The liquid position at the end of 1941 is readily indicated by reference to the cash balances totalling over Rs. 10.1 lakhs at the end of the year. Even more impressive is the quantum of preliminary expenses in the case of the Habib Bank. There was no commission; there was no discount; and the entire total of Rs. 5,078-11 should have been a small part of profits made in the initial period. Progress since then has been striking, for the Bank reports that total deposits at the end of June had mounted to Rs. 1.11 crores and the working capital was as high as Rs. 1.39 crores as the paid-up capital stands at Rs. 25 lakhs. The total resources add to the reputation of the bank of which Mr. Dawood Habib and Mr. Mahomedali Habib are Managing Directors at present. The first year has been marked by vigorous growth, though branch expansion has yet to come. The Habib Bank's career therefore is sure to attract much attention, for no Indian joint-stock bank has made such a notable beginning.

A WAR-TIME DIAMOND JUBILEE

Under happier conditions we would have wished to celebrate more elaborately the sixtieth anniversary of the Titaghur Paper Mills, which occurs this year.

Circumstances make this both undesirable and impracticable.

We are proud, however, to be able to look back to-day upon an achievement, which has established for all time, the manufacture of pulp and paper as an Indian Industry.

We are grateful to those who have contributed to this achievement, by word and by deed, by expressing confidence in the ultimate success of the Titaghur Paper Mills, and last but not least, by buying our products in those days when imported paper constituted a serious menace to a young indigenous industry.

To-day our main resources are engaged upon war work, and whereas we appreciate our loyal customers, we regret we cannot supply their requirements in full nor can we increase the number of our customers at present.

We dedicate this Diamond Jubilee to the future of both India and the Titaghur Paper Mills.

At the end of three years of war, it is pertinent to indulge in the reflection that, if, on the military front, plans and programmes had been devised and executed with the efficiency and thoroughness which have marked the operations on the financial front, we should be very near the date of the celebration of the Allied victory. Everything in this war is characterised by a stupendousness which is unparalleled in the history of wars. The daily war bill of the United Kingdom is approximately £15 million. That of the United States is heading towards £50 million a day. Expenditure of this description could not have been dreamt of in pre-war days by a treasury custodian endowed with the liveliest imagination and the most penetrating insight. What is even more remarkable than the incurring of such vast expenses, is the ease with which the requisite war finance is being raised. In ordinary circumstances—that is to say, in circumstances which we could have visualised with the ideas and preconceptions in vogue in earlier times—one would have thought that defence loans which run into astronomical figures would have caused extreme stringency of money and obliged governments to pay onerous rates. This has not been the case. For all practical purposes, it is a 2½ per cent war so far as Britain is concerned. Treasury bills continue to be raised at no more than 1 per cent per annum. In America, the treasury bill rate is even now a fraction of 1 per cent; and defence loan campaigns are being executed with aplomb and smoothness.

* * * *

All the same, the public debt of the United Kingdom as well as of the United States is piling up at terrific pace. On the eve of World War II, Britain had a total public debt of £7.500 million. Three years of war have brought the debt to £15,000 million. Though America has been actually in the war only for nine months, her public debt has also nearly been doubled. Another parallelism in British and American finances is the yawning gap between revenue and expenditure. In these two respects, India presents an exactly opposite picture. Let me first deal with the budgetary position of this country. The actuals for 1940-41 disclosed a budgetary deficit of Rs. 6.53 crores. Whereof Rs. 3 crores is covered by the provision made for the reduction or avoidance of debt. The uncovered deficit was, therefore, only Rs. 3.53 crores. The revised estimates for 1941-42 provided for a deficit of Rs. 17.27 crores which is reduced to Rs. 14.27 crores on taking into account the sinking fund allocation. The budget estimates for 1942-43 envisaged a deficit of Rs. 35.07 crores less Rs. 3 crores or Rs. 32.07 crores. On the estimates and figures furnished by the Finance Member last February, the deficit in the three-year period is, thus, Rs. 49.87 crores.

* * * *

At this point, I have to draw attention to two factors, the one having the opposite effect of the other. The deficit disclosed in 1942-43 estimates was arrived at after providing for lease-lend payments on a cash basis. It is obvious that no cash payment is contemplated either now or in the near or reasonably remote future. This precaution may, therefore, be described as an overcaution—as unjustified caution. If we set aside this contention, it is arguable that there is really no deficit in 1942-43 on the basis of expenditure and revenue contemplated in February last. But both expenditure and revenue, as the year has progressed, have not remained in touch with the February expectations. Revenue has certainly shown increases under various heads; but expenditure due to India's direct involvement in the war has gone up by leaps and bounds. It is very much in the nature of a blind guess to suggest any figure as representing the likely excess of military expenditure in the current year over the budget estimate. In broad terms, it seems reasonable to suggest that the reserve up the sleeve in the form of provision for cash payment of lease-lend facilities may about be equal to the additional military budget. In sum, the deficit of these three years may be roughly estimated at round-about Rs. 50 crores. This may be said to be the figure by which the public debt of India must be increased.

* * * *

A close scrutiny and a comparative study of the public debt figures, however, does not disclose any addition to India's debt. Far from it. Official figures are available up to the end of March, 1942. For bringing these figures uptodate, we have to rely upon the figures compiled in our office. I shall, therefore, first deal with the position as at March 31, 1942 and compare it with the position on March 31, 1939. Rupee debt on the latter date was Rs. 709.96 crores; and sterling debt Rs. 469.10 crores. India's total public debt was, thus, Rs. 1,179.06 crores. The corresponding figures for March 31, 1942 are Rs. 942.29 crores for rupee debt; Rs. 180.00 crores for sterling debt; or Rs. 1,122.29 crores for total public debt. That is, India's public debt has gone down from Rs. 1,179.06 crores to Rs. 1,122.29 crores or by Rs. 56.77 crores between March, 1939 and March, 1942. We can say, without hesitation and without any fear of contradiction, that India is the only country in the world whose public debt has actually shown a reduction at the end of thirty-two months of war.

* * * *

If we, however, take the position as at the end of the present month, there may be no such decrease in our public debt. For, since the close of the last financial year, treasury bills sold to the public have shown a very big bulge. Treasury bills issued to the public and to the currency reserve amounted to Rs. 136.98 crores on March 31, 1942. The latest figure is approximately Rs. 187.38 crores. Treasury bills have thus gone up by Rs. 51 crores in the current financial year. It may also be added that the third defence loan might have fetched about Rs. 4 crores uptodate. Thus, while the position on March 31, 1942 showed that India's public debt has increased by Rs. 56.77 crores, there has been an increase since then of almost a like amount in our debt, thanks to a bigger floating debt and subscriptions to the third defence loan. It will, therefore, be correct to say that India stands at the threshold of the fourth year of war with her public debt remaining at the same figure as on the eve of the war.

There are other aspects of the public debt question which I dare not examine in detail in this column, lest the editor should complain that I seek to steal his thunder. I shall, therefore, content myself with the briefest reference to those features, an examination of which is essential for the completeness of my to-day's story. I had said that this was a 2½ per cent war for Britain. On many an occasion in the past, I had also stressed that this was a 3 per cent war for India. The latter statement needs considerable revision in the light of recent developments. While our sterling debt has gone down by Rs. 289.10 crores since March 31, 1939, our rupee debt has gone up only by Rs. 232.33 crores. In other words, the rupee finance for Rs. 56.77 crores of our sterling debt has been found from the various resources available to the central government like realisations from silver sales, accumulations in the reserve created out of surplus profits in subsidiary coinage, etc. While rupee debt has increased by Rs. 232.33 crores, as much as Rs. 141.08 crores of this is accounted for by the expansion in the floating debt. For, treasury bills issued to the Reserve Bank and to the public as on March 31, 1939 stood at Rs. 46.30 crores; the corresponding figure at the end of this month will be about Rs. 187.38 crores. So, only Rs. 90 crores or thereabouts is the actual addition to the funded debt. In simple terms, on the repatriated sterling debt for Rs. 289.10 crores, we were paying, say, approximately 3½ per cent. We are now paying 3 per cent on about Rs. 90 crores; less

than ½ per cent on Rs. 141 crores; and nothing at all on Rs. 56.77 crores. The conclusion is irresistible that this looks more like a half per cent war for India than a 3 per cent war.

• • • •

In what is probably the biggest air disaster of the flying world since the R101 disaster the H.R.H. the Duke of Kent is a casualty. It was a Short Sunderland boat which was involved. Known as the largest and safest flying boat in service, it has accomplished remarkable work for the Coastal Command. It was duty that took the Duke towards Scotland. Only after Flt Sergeant Jack speaks can the full story of the mishap be known, but meanwhile an Empire's sympathy will go out to the Duchess and her bereaved children. The Duke of Kent has not been as notable an ambassador of Empire as his eldest brother. But he was to have gone fairly early in life to Australia as Governor-General. The Australians evidently asked for a Royal Duke as Governor-General. In Mr. Lyons' time the Australian sentiment was pro-Kent; in Mr. Curtins' time too it is clearly pro-Kent as the first press messages have indicated. Since the Indo-British connection embraces a proper regard for the Royal family regret in India has been general and sincere. The Royal family, as everyone realises, is outside politics, just as the Civil List is outside the regular Budget estimates. The duration of Court mourning is apparently a subject of some concern even when the cause of death is yet to be established by enquiry. The proper significance of ceremony will not fail to be appreciated in wartime, but one imagined that in wartime entertaining and all that had gone out in that the King's representative abroad, except perhaps in a few Embassies in neutral capitals, had in general dropped the conventions. In India the droves of guests herded together for garden-parties have become a memory, but an extended period of mourning, coinciding with the third anniversary of war, next week, will not fail to have an effect. Mourning need not promote slackness in other than social things. If it leads to an austere outlook the war effort would be a definite gainer, and regret may be a keener spur to action than the occasional galas still associated with War Funds.

• • • • •

Nothing as to the succession or service to the State need be said in relation to the Duke's demise. The sad event, made known on Thursday, stills doubt and silences questions. The Duke's connection with the Danish dynasty of Greece was an earlier reminder of the present alliance with the Kingdom of the Hellenes. The Princess Marina like her young children will be a nation's wards but the duty to cherish the memory of a Prince who went out to death in the service of the nation remains. Britain will probably raise many memorials to the Duke but the R.A.F. by itself should raise one for the Duke as he was in the youngest service while his older brothers are connected with the Navy and Army. Additions to the R.A.F. Benevolent Fund would serve the purpose, and those who did not respond immediately to appeals issued last year might well realise that an opportunity to rectify the omission has arisen, for the Duke would have loved such an extension of the Fund's work as might come through a special fund bearing his name. The Empire which sees in the Crown a symbol of unity, and in the R.A.F. the guarantee of that unity, will not hesitate to further objects associated with the R. A. F.'s main charity. Greenwich and Chelsea exist as of yore, but the R.A.F. might well have its own hospital, and perpetuate incidentally the Duke's name.

• • • •

For Indian bankers as a class I fancy Sir George Morton has provided on Monday the only acceptable pattern to which Chairmen's speeches must conform. No tedious drivel about U. S. commodity prices or other Nations' budgets was allowed to stand in the way of Sir George telling the Imperial Bank's shareholders about what was earned in India and what was lost in Burma. Sir George clearly believes in getting on with it when it comes to speech-making. When we have no trade figures, and control is rigid everywhere, there cannot be a satisfactory review of general conditions. Moreover, Sir James Taylor had anticipated any general survey by his speech at Madras, and there is hardly any place for fresh remarks on inflation or sterling assets held abroad. The simplest and best course was to discuss the accounts and balance-sheet, and I rightly wonder what points were missed by Sir George. Succinct and comprehensive—it was that, and more. There was a carefree confidence in the future that should be reassuring to the outer world. There was an assurance as regards evacuated branches. There was a further assurance about records in India. The Imperial Bank is prepared—other banks must learn how it is done.

• • • •

The comment on the balance-sheet figures was more than formal. The rise in the cash ratio and the fall in advances was explained and fully, but one wishes he had indicated how much of investments is held in the form of treasury bills. It is, however, something to know that the greater part of the Imperial Bank has obviously been the first to carry out in full the readjustments

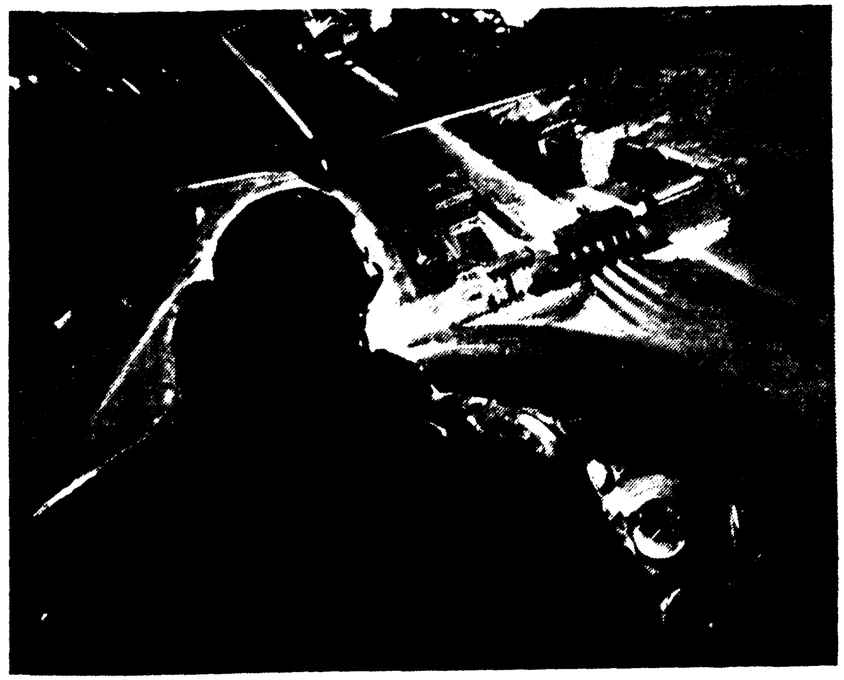
NORTH WESTERN RAILWAY



N.-W. R. SUBORDINATE SERVICE COMMISSION.

Applications are invited upto 16th September, 1942 for a permanent post of Draughtsman Class II, Grade I, Rs. 100-10-12, years—120 (or such pay as may be prescribed from time to time by the rules of the service applicable to his position and appointment) reserved for a Muslim and to maintain a waiting list of all communities. Age not to exceed 30 years on 5th October, 1942. Candidates should possess an Engineering Diploma or degree granted by a recognised Engineering School, College or University. Full details will be furnished if stamped and addressed envelope is submitted to the Chairman, N.-W. Railway Subordinate Service Commission, 34, Lawrence Road, Lahore, superscribed in the left hand corner "Vacancy of Draughtsman."

CHAIRMAN.

15th August, 1942.

Aspects of an Industry No. 2

BIRD'S-EYE VIEW

As the R.A.F. bomber pilot swings his plane round on Berlin, he sees clearly the detail of the city below him through his plastic windscreen. There in front is the Brandenburger Tor, and beyond it stretching into the distance the length of Unter den Linden. The plane's windscreen is made of a new plastic material, "Perspex", all-British alike in its discovery and its production, transparent as crystal but only half the weight of glass. It is the ideal material for use in aeroplane construction. This has been called an age of plastics. The natural plastic material, bitumen, was known to Man as long ago as 2000 B.C., but it was not until 1864 that the first artificial plastic, xylonite, was invented by Alexander Parkes of Birmingham. In 1908 the phenolic resins were discovered, but real development had to wait until the war of 1914-18. Then the necessity to find substitutes for wood and metal turned the minds of research chemists to the field of plastics. Since then the industry has developed hugely and swiftly. Each year sees an increase in the number and types of plastic materials, each with its own peculiar properties. Every month almost sees one or other of these materials finding fresh applications in the chemical, electrical, mechanical and motor-engineering, ship-building, and other industries . . in articles varying from grinding wheels to cutlery, from vacuum cleaners to containers for cosmetics, from telephones to toothbrushes. The British chemist is continually adding to the range of these plastic materials which are as vital to the war effort as steel or high explosive.

(From Our Correspondent)

New Delhi, August 25.

THE majestic calm here after the local disturbances is hardly broken by the tepid discussions of pressmen. They may start talking till they are blue in the face about the future Information Member or even the next C-in-C. But Delhi is more distant than ever, and Delhi has ceased to be news. The only thing to shake it up would be a resounding declaration, whereas all that Delhi can get is Cripps' commentary on Cripps' own doings. The Indian campaign of Sir Stafford seems to have produced as much literature as Julius Caesar's Gallic campaign with the very important difference that schoolboys will not be set to read them either in the present or the future. There is little grist for the poor news-gatherer. The announcement that a joint session is going to be held which may be taken to mean that the Government is going to be strictly on the defensive. It is doubted by some if there would be a quorum, but the more hardy optimists think that the legislators would turn out at least to greet the new Members.

* * * *

The desert that is called peace excites little but aversion. Even Dr. Ambedkar's call to the depressed classes to seize power and proclaim equality has caused as little comment as the declaration on behalf of Indian India. The attempt to put up the D.C. as a separate element in Indian politics has not caused as much surprise as Dr. Ambedkar's hint that he would leave office if he could not improve the lot of the Depressed Classes. He has removed the label—Scheduled—put in by Sir Samuel Hoare.

* * * *

The Provinces are allowed to take the initiative, and experiments in Assam are viewed as bigger than the spontaneous movement. Yet the more cautious and smoother men have decided to wait for Mr. Churchill's review and the impending siege of Stalingrad. There is not going to be any pourparlers of any sort. Well-meant suggestions are repulsed by the promulgation of new Ordinances which are editorially defended in the Anglo-Indian press alone Our Long Parliament will demonstrate its ineptitude by keeping itself alive but if the Muslim League were to veer round to Dr. Latiff's views, one may see a walk-out in place of an emergency budget. The food plans are not striking enough, and a brief grant of priority is not going to transform shortage into plenty anywhere. Conferences are of little consequence, as compared with the impending visit of Mr. A. K. Fazlul Huq. His letters have not evidently produced the impression they ought to have, and he is sure to say something about the difficulty of keeping up autonomy in the first province of India. He will probably be reinforced by Dr. S. P. Mookerjea who too will be up. He has got the Party's approval in advance for whatever he might say, and this visit will be different from the polite call usually paid by the members of the National Defence Council.

* * * *

Scarcity is rampant everywhere, and New Delhi's inhabitants find that sugar and flour can be problems like the succession to Sir C. P. The local press has had its fling at the latter, and can only publish details of unsatisfactory arrangements concerning the supply of wheat and sugar. It does not matter much to learn that Iraq has a good harvest. The local authorities have not yet satisfied local consumers. The municipality by itself can do little. Its World quotas do not procure supplies for the shops, and private holders of stocks having a high time selling on the side what they may have. Licensing of dealers in flour has not pleased consumers any more than shopkeepers, and the latest suggestion is to delegate powers to the Muncipality.

* * * *

The end of August finds Delhi impervious to appeals to be patient and ponder over the Food Advisory Council's findings. Railway services are being reduced all over the country. The N. W. Railway puts it down to coal shortage and, of course, cancelled its services on many lines a little ahead of other railways to prove it is the biggest railway system. Many trains in Baluchistan and Sind will run only twice or thrice a week. The discomforts of life will be multiplied in the more populous South Punjab. The cold weather will bring no tourists when there are no trains to carry them. Every Indian railway now is actively discouraging travel and the holiday at home will become a problem for those fortunate enough to get holidays.

* * * * *

The industrial legislation of these times takes the form of ordinances. The Viceroy is the busiest legislator known. Not even Daladier's decrees were so varied. Strikes without notice were made illegal. Employers, too, are not now permitted to stop work. But a strike or lock-out can take place if 14 days notice is given on either side or after two months from the date of any conciliators award. When a strike takes place an employer should notify a lock-out after informing the authorities within three days. This is not going to check the tide of unrest which rolls on. Little is known but much is guessed. People here, too, are getting clever in reading between the lines. The impression persists that unrest in States due to events in British India require the Viceroy's special care. Something will be soon said about Treaty rights or to the Paramount Power's duty to prevent the results of mis-government from overflowing into the States. The States will certainly be able to put up a formidable case and it will not surprise Delhi to learn that the Jam Saheb will start telling the War Cabinet things about misrule in British India, and trouble caused thereby in the States. That would be more biting than Sir A.R.'s pabulum on Indian war effort. That effort must be weakening. Industrial output in August will be greatly below that of previous months and the scantier production, *e.g.*, of cloth will become an element in the ascending spiral of prices and wages.

* * * *

The Public Accounts Committee did no more than murmur about the enhanced contribution to the League. What the report will say about it is obscure, but the League took more money, because it had fewer members in 1940-41. New Delhi may not know whether Russia is going to be put back into the League and asked to pay M. Litvinov his saved money by forcing resignation but Mr. Eden might get his own back by forcing re-entry. It is a wonder that Russia having gone out, poor India sticks to her title of original member. It is not a great privilege to pay one-tenth of the League's total bill. The League is divided by the neutrals, and the League is not allowed to do anything between the belligerents. For that the Swiss Government thinks about the League at present, will perhaps remain unknown. It is not hard to get an even bigger sum out of India for the years after 1940-41, when Rs. 9,41,000 had to be forked out. It is not a tithe of what our new fancy departments cost. Every day brings imported experts into Delhi and deputation go to Bombay to bring them here. Perhaps there is safety in numbers though the C.D. Member could not make the trip and secure a full muster at Ballard Pier for the new fire-watchers, who have come to teach India the latest fire-fighting methods. Conscription being ruled out, importation at big salaries is viewed as desirable, and the Public Accounts Committee may have disappeared by the time the usual report on public expenditure is up for review.

* * * *

The Standing Emigration Committee appears to be the proper authority to discuss the relations with Ceylon. There may be jobless evacuees in India but Ceylon is not a home from home. Nothing should persuade India to send workers to an island that lives on imported food. They may want all-out tapping of rubber, but the same labour is wanted in India. Rubber planters here need all the men, and tea planters too need more men for a bigger quota. Ceylon's planters have no specific claims, and the temporary release of workers will not be approved of, when there is so much anti-Indian prejudice. Had autonomy disappeared in Ceylon the situation would be different, and India having agreed to sell food, must not export men to an island that is in danger of invasion. The horrors of concentration camps may have to be faced again by many Indians who have discovered that our Overseas Department does not have the diplomatic status that secures the fulfilment of demands. Ceylon's Council may promise better wages but there is bother about franchise, etc. After all, Malaya's planters prospering greatly before the invasion, had no compunction in refusing an increase of wages, and Ceylon's planters are not likely to be better. The Sinhalese still looking on the Indian as a tolerated evil are certainly not entitled to any sympathy. Reports from Ceylon suggest that they are anxious to reopen the emigration issue but unless the Council goes back to the Jackson report and take back all said and done between 1937 and 1942, there cannot be a *modus vivendi*. One or two Ceylon papers have not been anti-Indian of late, and have gone so far as to recognise that the Congress has a case to put up. But that is of little account from the domiciled India's point of view. A complete reversal of their own policy is demanded, particularly, as Ceylon seems anxious to keep out Indian goods.

* * *

There is no information available in New Delhi about the activities of the Finance Member, Sir Jeremy Raisman, in London, I understand that as soon as Sir Jeremy is back in this country he will submit a full report to the Council and that no final decisions will be taken before discussion in the Council. The latest revenue and expenditure statement of the Government of India shows slight improvement in the revenue position. Except Customs receipts which have fallen by about Rs. 1¼ crores, every major head of revenue shows an increase in June. The total revenue collections were over Rs. 9½

(From Our Correspondent)

Bombay, August 25.

I REGRET to report that in the course of his literary ebullitions, the Hon. R. H. Parker has taken to writing poetry as a supplementary quota to Letters to the Editor. The initial excursions cannot be prefaced with Milton's cry "Sing Heavenly Muse!" He is treading the lower heights of Mount Parnassus as the late Sir Montagu Webb of Karachi tried in the twilight—hours of a successful commercial career. Many men in trade admire mind, and wonder how journalists could exercise it on the cheap, but here is an effort mysteriously put to the account of Mr. Parker by a local daily:—

Hear the words of Adviser Knight,
Who seeks to end the people's plight.
There's food in plenty and cheap at the price
But you'll be lucky to get just one grain of rice.

* * * *

The situation thus immortalized in verse is due to the circumstance that the Governor's Adviser, Mr. H. F. Knight (Hail Fellow Knight) returned from New Delhi last week and announced that there was no dearth of foods in Bombay, but still the popular superstition to the contrary prevails with sights of long queues to corroborate the facts. In everything evil, there is something good, wrote some poet of Stratford-on-Avon in the spacious days of Queen Elizabeth and in language of richer felicity than Mr. R. H. Parker's verse-effort. People are being tutored in discipline. They patiently stand single-file, in steady order, to get their turn of kerosene and rice. Things are in a restless and tottering condition despite His Excellency's assurance that everything is stable. The pivotal thing according to officialdom is contained in Mr. Amery's periodical statement: "The August Offer Stands." The shortest sentence in the Holy Bible consists of two words: "Jesus Wept." The most piquissant contribution of Mr. Amery in the world-crisis consists of four words: "The August Offer Stands" Mr. Parker should write a poem about this wonderful perpendicular phenomenon, not on the Leaning Tower of Pisa.

* * * *

The Government of Bombay has further revised the rates of dearness allowance paid to low-paid Government servants. If the average of the figures of the Bombay City cost of living index for any three consecutive months is 156 or above then in regard to the month following and that month only, the rates and pay limits mentioned below would apply instead of those specified in the earlier orders: An allowance at the flat rate of of Rs. 7-8 a month will be granted to Government servants employed in Bombay City whose emoluments do not exceed Rs. 100 a month. An allowance at the flat rate of Rs. 6 a month will be granted to Government servants employed in the mofussil whose emoluments do not exceed Rs. 75 a month. Government servants in Bombay City whose emoluments exceed Rs. 100/- but not Rs. 107-8 a month and Government servants in the mofussil whose emoluments exceed Rs. 75/- but not Rs. 81/- a month will be granted such allowance as is necessary to make their emoluments equal to Rs. 107-8 and Rs. 81 a month respectively. As the average of the cost of living index figures for the three months ending August 15 exceeds 156, the above will be given effect to in regard to pay for September to be drawn in October.

* * * *

In reply to the letter of the Bombay Tenants' Association regarding supply of essential commodities to the chawls, the Director of Civil Supplies, General Department states that Government has no objection to the formation of Chawl Association for the supply of necessary articles of food to the residents of the chawls. The Tenants in the city are therefore requested to form themselves into Chawl Associations and get a permit from Government for the monthly necessary requirements at control rates. Any more information can be had at the Head Office of the Bombay Tenants' Association. To relieve the inconvenience caused to the civil population by difficulties in transporting foodgrains from the producing centres to the consuming areas, the Government of India has instructed the Railways to give a very high degree of priority to the movement of foodstuffs, including sugar and salt, required for consumption within the country. This preference will operate till August 29. As it will not be possible to extend this period merchants and dealers are advised to take full advantage of the preference and book all consignments of foodstuffs awaiting transport.

* * * * *

The Government of Bombay has exempted hand-pounded rice sold by shops organised by the All India Village Industries Association from the operation of the Order regarding maximum prices for the sale of rice in Bombay City and Suburbs. This exemption has been granted because the cost of hand-pounded rice is higher than rice processed in mills and in view of the fact that the sale of hand-pounded rice is very limited.

* * * *

The Committee of the Indian Merchants' Chamber, Bombay, have addressed a letter to the Government of Bombay, requesting them to let the public know the present condition of the health of Mahatma Gandhi. "His health," the Committee say, "is naturally causing anxiety, looking to his age, the recent blow in the form of the death of Mr. Mahadev Desai and the strain and stress of the present times." The Committee will, therefore, be much obliged if a statement can be issued every week by Government about his physical condition, after being examined by his doctors and the Government doctors. The Committee realise that Government appreciate the importance of his health as much as the general public. They would, however, like to stress that, looking to his position, his status and his saintly character, he should be provided with what to a man of his character will appear to be the necessities of life like newspapers and books. They trust and hope that this is being done, and they are inquiring only with a view to getting an assurance which will satisfy the public.

* * * *

On behalf of the Indian National Steamship Owners Association, Mr. Walchand Hirachand in a telegram to His Excellency the Viceroy and the Members of his Executive Council, says that the Association feels grave concern at the immense unrest prevailing in India today as a result of arrests of Mahatma Gandhi, Maulana Abul Kalam Azad, the Congress President and members of the Working Committee of the Indian National Congress, "when they were straining every nerve to help to intensify India's war effort by securing freedom for India for the purpose of drawing forth and mobilising the greatest moral and material support of the country in her fight against foreign aggression as an equal and co-operating member of the United Nations which, it is hoped, will duly emerge as a world federation." The telegram adds: "In order, therefore, to mobilize the fullest war effort befitting the strategic position and the national interests of India and to produce in the country the necessary atmosphere and psychology to that end the Government should free the leaders who have been arrested. The Association hopes that wiser counsels will prevail and every step will be taken by the Government to make the people fight the aggressor as a free people for the safety and protection of their motherland. The Association would, therefore, most earnestly appeal to the Viceroy and the Government of India that they should open negotiations without delay with Mahatma Gandhi, Maulana Saheb and his colleagues for such a solution of the present deadlock as will satisfy the legitimate demands of India and enable her to put forth the most effective and united effort to defeat the plans of the aggressor countries. The Association, therefore, fervently hopes that its appeal will receive the earnest consideration and helpful response of the Viceroy and the Government of India.

The Changing Rouble

In addition to Mr. L. E. Hubbard's study of Soviet trade and finance there have been books on banking in Soviet Russia. One might imagine that the banker was functionless in Russia like the investor but the bank fulfils many purposes. An article by Mr. Paul Bareau indicates certain things of which the world might be probably ignorant. For about two years Soviet Russia had a dual paper standard with a form of currency reasonably under control and the other depreciating to ever lower depths until the paper rouble was devalued and stabilised at the rate of 50,000 millions to one old rouble of the pre-war parity. The currency which circulated in Soviet Russia consists of bank notes expressed in chernovitzy (equal to ten roubles) of treasury notes and small subsidiary coins. The rouble was stabilised in 1924 at its pre-war gold parity. Up to November 1931 the par of exchange with the pound sterling was officially fixed at 9.458 roubles. Owing to England going off gold, the rate was fixed at 7r. 30 kopecks to 7r. 40k. Russia got a nickel coinage only in 1932 but she was already familiar with the half-silver, half-copper coinage, made available to India lately in the reign of George VI. The rouble was devalued in 1935 to get the rate of three French francs to a rouble but when France went off gold, the rate was altered to 5.30 roubles to the U. S. dollar. As exchange control was rigid and tourists got special rates, as in Italy, nobody knew what the rouble was worth in the exchanges; and its purchasing power at home was determined by the available quantity of goods. Unearned wealth having no significance the nationalisation of banking was easy. There are different banks but foreign trade was financed by special agencies subject to the Ministry of Finance. Exchange clearing has been common for years but it is done mainly by the bank for foreign trade. One remarkable difference between Russian banks and other banks is that the way in which credits are utilised is checked by the banks. Such interference is tolerated, for obvious reasons. The currency confusion referred to would have presumably encouraged Soviet citizens to rely on banks. The devaluation and stabilisation mentioned indicate that invasion has produced vast financial consequences for Russia, and the rouble is, perhaps like an old-time South American currency issued by a dictator. Russia's gold production does not apparently help her to keep a stable standard of value, and it is clear that she is like China in many respects at present.

Supplementing Shipyards

British yards have added largely to the Royal Navy in the war period. Their achievements were described here, and it was pointed out that a bigger tonnage was launched in spite of the blitz and difficulties in regard to skill and labour. Shipbuilding company reports may not suggest as much, but there is little doubt that the situation in the shipbuilding trade is radically different from that ten years ago. The tramp subsidy did not cure shipbuilding's ills and the peculiar misfortunes of Jarrow only illustrated what happened to an old and unsheltered industry. It has been recently indicated by the Admiralty that idle yards have resumed work. Additional shipbuilding capacity has been secured by reopening 23 establishments. In some case, a site has been developed as a separate ship repairing establishment, or it has been incorporated in an existing unit, but in twelve cases old sites are in use for building various types of craft including vessels exceeding 10,000 tons deadweight. Further yards are now being prepared for building these larger vessels. According to cabled information, the policy of the Admiralty has been to provide additional berths and plant in ample time ahead of the likely labour supply; in fact, because of the difficult labour situation, the reopening of old yards has, in most cases, been necessarily associated with the prefabrication of a good part of the steelwork, spread over a large number of units of the structural steel industry. According to the same report a good number of other old shipyard sites are being used to-day by other industries engaged on important war work including manufactures applied to shipbuilding.

Resume of Commodity Markets

For the weekly chronicler of developments in the commodity markets it is very difficult to avoid repetition especially as the present unsettled conditions in the country, and the lack of transport facilities do not permit of any active trading. The difficulty so far as export commodities are concerned is the same as ever, that is, one of getting enough wagon space and shipping freight. So far as the staple commodities are concerned, there is no manner of relation between demand and supply as with the increasing military requirements and the complete cessation of imports from neighbouring countries, the gap between supply and actual consumption tends to grow larger daily.

The position in this regard was borne out very clearly by Sir Jogendra Singh, Member, Education, Health and Lands, presiding over the first meeting of the Central Food Advisory Council this week. He pointed out that there was great need for increasing the production of food-stuffs to make up the short fall on account of imports from Australia, Burma and other countries and to meet the increase in demand from Govt. He revealed that the Government was financing the ryots to turn over land from cotton, jute and other commodities to food or fodder crops. By this means it is expected that five million acres of land, described as culturable cotton and raw jute would be used for rising food crops. There was also 10.5 million acres of land, described as considerable waste, which can be put to profitable use. The problem of relieving shortage of food supplies is difficult if an attempt is made to make up the short fall in respect to the supplies of any one particular commodity. With the exception of rice any undue scarcity need not be felt as, if wheat is not available, millet can be used in its place. The larger 'Jowar' and 'Bhajra' crops also should prove to be helpful. Only in regard to rice as was pointed out above, the position is difficult. The requirements of rice over and above what is grown in the country were imported from Burma. It need not be pointed out here that this source of supply has been entirely cut off now. The position has become more complicated on account of bad harvest in some areas in this country. The shortage is anticipated to be around 2.2 million tons. As a result of the "grow more food campaign" it can possibly be expected that 850,000 tons of rice will be produced and for the balance of 1.1 million tons in 1943-44 we will have to turn to other food crops or sources of supply. Sir Jogindra Singh naturally laid emphasis on the need for the proper use of food supplies and more effective distribution.

Jute

Our readers will perhaps remember that we referred on more than one occasion to the difficulty in finding adequate transport facilities for moving the jute crop and gave a warning that unless suitable measures were adopted in time, it would not be possible for the crop to be handled satisfactorily during the busy season. It now appears that considerable difficulty will be experienced in this regard by mills and that if they are not able to replenish their stocks adequately in the coming months, they will be obliged to reduce production. The rationing of jute, while there is a plentiful supply, seems rather paradoxical, apart from the fact that something should be done to market such a huge crop to safeguard the interests of the ryot. The Government of India would be glad if there is a reduction in production but the reaction of the Bengal Government cannot possibly be the same: and they owe it to the cultivators to give them a fair price for their crop what time there has been a flare-up in values for other commodities.

Jute Manufactures

There was a rather sharp break in values in the hessian market in the middle of last week. The setback in prices, however, has proved only temporary as with some buying and the reports regarding the possibility of a reduction in production, with interference in work, there has been a substantial rise in values. Demand for hessian continues to be on the small side. Sacking goods seem to be in short supply and mills are not in a position to sell for early delivery. Production of this class of goods cannot possibly be on a larger scale under existing conditions as already a large number of narrow hessian looms has been turned over to the production of sacking.

Cotton

The Bombay raw cotton market reopened for business on Saturday last at the request of members to enable them to adjust their commitments. The situation created by the political deadlock was discussed at an informal meeting of the East India Cotton Association on Wednesday and the difficulties, which were likely to arise on the resumption of trading, were discussed. The Chairman of the Association reassured the members at the meeting that the Board would consider the view taken at the meeting and decide the question. During the short time when the market was open on Saturday, active trading conditions were witnessed and a substantial rise in prices was recorded.

Bullion:

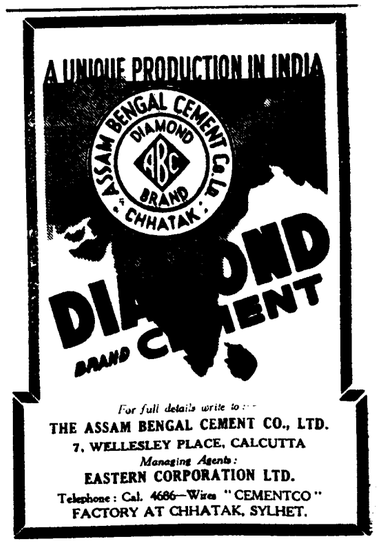
The gold market has been featureless though sovereigns have continued to be in greater request with the quotation at Rs. 40-10. The silver market has been firm with the price for Indian Mint silver ready at the selling price of the Reserve Bank of India at Rs. 85. The reason for the strength of the silver market has obviously been the decision of the U. S. to raise the price of imported silver from a little over 35 cents to 45 cents from August 31. The decision to raise the price was reached after the discussion between the Governments of the U. S. and Mexico, the latter country being the largest exporter of silver to the U.S.A. The increase in price of imported silver has evidently been made to increase the purchasing power of Mexico.

So far as this country is concerned the decision to increase the imported price cannot have any effect on values as with the restrictions on exchange and the difficulty in importing silver from other countries, there is no manner of relation between the Indian price and those ruling in other free markets. The present price for silver is the equivalent of over 60 cents so that even with the increase in the U. S. price there is considerable disparity.

Salt and Sugar

It was a good attempt on the part of the Bengal Government to make an effective distribution of salt and sugar to consumers at controlled rates. Apparently, the work involved in this connection has been much more than the existing machinery could possibly handle. It has, therefore, been decided that the retailing in respect of these commodities should be done in the ordinary way. The wholesalers may perhaps be honest in releasing their stocks from their godowns at controlled rates but it cannot be expected that the retailers will do likewise when there is such an acute shortage and consumers are also prepared to pay a slightly higher price if they can only get the commodities and avoid standing in the queue. The more important aspect of the question is the bringing in of adequate supplies from the chief producing centres.

(*Continued from page* 369)



entailed by the loss of Burma. South Indian banks might well take a leaf from its book. The time has come when revaluation of earning power and salvaged assets will have to be carried out. Sir George in reviewing the Imperial Bank's affairs has laid down inflexible but wholly admirable principles for India's banks. The rise of Rs. 10 lakhs in profits explains the Board's generosity to the staff of the Imperial Bank in regard to a bonus of one month's pay. The Imperial Bank's distinction lies in being different from the rest, and the staff's present gain is the reward of merit to which Sir George generously bore witness.

"EAVESDROPPER."

(*Continued from page* 370).

crores nearly Rs. 3 crores more than in June last year. Expenditure has, however, mounted up to Rs. 23 crores in June—nearly Rs. 10 crores more than in June last year. Taking the first three months of the financial year one finds that while revenue collections have only been Rs. 24 crores, expenditure has gone up to nearly Rs. 54 crores. Defence expenditure is now well over half a crore per day, even civil expenditure has nearly doubled itself. It may be noted in this connection that though the Finance Member budgetted for a revenue of Rs. 136 crores for the whole year, the first three months have only brought Rs. 24 crores. Though Railway earnings continue to be favourable, the deficit this year is bound to be much larger than anticipated owing to the heavy increase in Defence expenditure and fall in revenue collections.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, August 27.

MOISTURE in Jute and the methods of assessing excessive moisture have for many years been vexed questions in the Jute trade. The acuteness of the trouble varies from season to season as the controlling factor in the presence of excess moisture in jute is almost invariably one of price. When the general price level is moderate or low, excess moisture is seldom found, but when the price is high, moisture immediately makes its appearance. The reason for this is that moderate or low price levels predicate an ample supply of jute when buyers can discriminate in their purchases, and unduly damp parcels stand little chance of being taken up. Whereas when prices are high, it usually means that demand is keen and buyers are prepared to take up almost anything offering regardless of its condition. So long as the primary trading conditions in the raw material remain as they are, it seems likely that the factors controlling moisture as detailed above will also remain. And to induce a "change of heart" in the average cultivator and in the army of beparies and furriahs is a problem for the millenium. So we may take it that the problem of moisture in jute will always be with us, in a more or less acute form according to market conditions. But the question of fair assessment of the moisture content of damp parcels is one that can and ought to be tackled by the trade.

The Contract lays down that, during the monsoon months of June, July, August and September, moisture to the extent of 12 per cent is permissible, while for the rest of the year, the dry months, only 10 per cent is permissible. Any moisture in excess of these figures can be made the basis of a claim. In the first place it is freely admitted that the figures quoted above are purely arbitrary and are merely taken as the basis of what is dry, and what is not. And generally speaking the system may be said to have worked fairly satisfactorily, though Mills claim that they are invariably the losers on moisture settlements. The system of assessment of moisture in vogue has been mainly based on the question of "feel" by presumed experts, though on occasion the system of sun-drying has been resorted to to ascertain the loss in weight by drying, and from that the excess moisture content. The sun-drying system can never be considered satisfactory. There are too many chances of errors creeping in and besides weather conditions during the period when a large proportion of the crop is delivered at Mills render that system physically impossible.

The problem of evolving a satisfactory assessment test has been engaging the attention of a sub-committee of the Mills in conjunction with their expert advisers for many months and there is no doubt that a scientific system of test and assessment can be and has been worked out. But it must be borne in mind that many of those engaged in the trade have no scientific attainments whatsoever, and to appeal to them, any proposed system ought to be as simple and straightforward as humanly possible. Unfortunately the proposed scientific system starts with an arbitrary basis figure of "regain", which is at once admitted by its advocates to be a misnomer, and which is difficult enough to explain in simple English, let alone having to translate it into Bengali or Hindi. Again, the calculation necessary to arrive at the moisture content of jute after test, when based on this arbitrary, so-called "regain" figure is a complicated one which would inevitably be viewed with suspicion and doubt by any but a fairly skilled mathematician. It appears doubtful therefore if the proposals so far officially evolved will meet with general acceptance by a very large section of those engaged in the trade.

Another rather grave objection to the proposed official method of test is that the quantity or proportion of the jute in dispute which it is proposed should be made the basis of the test is inadequate. The minimum quantity of jute which is recognised as a "parcel" for purposes of delivery to a Mill is 250 bales, of an invoice weight of 1,000 maunds. When an arbitration is called, or a claim is made, the accepted number of bales which should be inspected is generally 2 per cent of the parcel, or in the case of a 250 bale lot, 6 bales. In ordinary practice three of these bales are selected by the Buyer and the other three by the Seller. In the proposed method of testing for moisture content, it is suggested that one pound samples should be drawn from six different points in each bale, that is, 6 pounds of jute from each bale, or 36 pounds in all. Each 6 pound lot is to be placed in a suitable air-tight container and the six containers placed in the drying oven for test. Now the total nominal weight of the 250 bales is 1,000 maunds or 82,290 pounds so that the proportion which the 36 pounds of jute for test bears to the total weight of the parcel in dispute is .044 per cent. It may be claimed, and not without reason, that this proportion is entirely insufficient to provide the basis of a fair test of the moisture content of the whole parcel. It might even be claimed that the method of drawing the samples from the individual bales is not such as to give a fair representation of the condition of the single bale.

It is apparent therefore that the proposed system of scientific testing for excessive moisture content in jute which is at present being officially considered, is open to grave objections on several counts. First, the confusing and inaccurate nomenclature employed, second, the complicated, and to the less sophisticated section of those engaged in the trade, unconvincing method of calculation employed, and finally the inadequacy of the test samples as compared with the bulk of the parcel. On the whole it is very doubtful whether this scientific system would inspire any more confidence in the majority than the old empirical method of test by "feel". What then is the alternative? Unfortunately we have come to the limit of our space for this week and this revelation will have to be held over.

In Export jute there has been some demand for American markets mainly for high quality jute. Short Group Dundee Tossa 2/3 sold at Rs. 73 to Rs. 75 and White Daccas from Rs. 95 upwards. Balers are finding some difficulty in securing jute for their early commitments and Rs. 55 is reported paid for cover of August Dundee Daisee 2/3 sold at Rs. 52. Dundee Tossa 4s sold at Rs. 54 to Rs. 55-8 for shipment. For the same grade Mills have paid Rs. 55-8 to Rs. 56-8, also Rs. 40 to Rs. 41 for Outport Tossa 4s. Mills have also paid up to Rs. 50 again for early shipment Firsts, Rs. 40 and Rs. 41 for Lightnings and Rs. 30 to Rs. 33 for Old Crop Hearts according to quality.

There has been a fairly steady demand for Loose Jute at unchanged rates, European packing selling at Rs. 9 and Rs. 6 for Mids and Bots September shipment with Supervised Jat and District at four and eight annas less respectively. Supervised Tossa fetched Rs. 10 Mids and Rs. 7 Bots while Indian District Tossa sold at Rs. 9-4 and Rs. 6-4. Ready and spot lots still find a ready sale and Mills are becoming somewhat concerned regarding the shipping position. The space available upcountry still lags far behind the quantity of jute offering for shipment.

Hessians continue neglected and only a few inter-bazar sales have been reported at Rs. 13-12 to Rs. 14-2 for ready nine porters and at Rs. 17-10 to Rs. 17-14 for ready elevens. Quite a fair business continues to be transacted in Heavy Goods and sellers for the nearer positions are now becoming difficult to find. Demand has extended up to January/March for the popular descriptions. "B" Twills came to business at Rs. 40-4 to Rs. 40-8 ready, at Rs. 40-4 Septr., at Rs. 40 Octr./Decr., at Rs. 39 to Rs. 40 Nov./Decr., and at Rs. 39 Jan./March. Liverpools fetched Rs. 46-8 to Rs. 47 Aug./Septr., Rs. 46-8 for Septr., Rs. 44 to Rs. 44-8 Nov./Decr., Rs. 43-8 Decr., and Rs. 43 Jan./March. Cornsacks sold at Rs. 41-8 to Rs. 42 Aug./Septr., and at Rs. 41 Octr./Decr. and Nov./Decr. Cape Woolpacks were reported at Re. 1-15 Octr. and Flour Bags at Rs. 50 Septr. Closing rates on a steady market are as follows:—

	Ready	Septr.	Oct./Decr.
	Rs. a.	Rs. a.	Rs. a.
9 porters ..	14 0	14 2	14 4
11 porters ..	17 12	17 14	18 2
"B" Twills ..	40 8	40 4	39 8
Cornsacks ..	42 0	42 0	41 4
Liverpools ..	47 0	46 12	45 0
Heavy Cees ..	38 0	38 0	38 0

(*Continued from page 357*)

of a longer war must in any event hearten the gold market. Everything may drop, but gold will stay up, more so, because it is extremely hard to get a safe currency like the Swiss franc.

There has hardly been any reference to what has been happening in Portuguese India as regards transfer and exchange into local money. The reference books might say that the British Indian currency circulates freely in Goa, but the emergence of a discount proves that its value in Goa is not the same as in Bombay. In the absence of clear and full information, little by way of comment can be added, but bankers in Bombay might be able to supplement information as to the rupee-escudo exchange. The change may be due to various extraordinary things like riots in India, the exchange restrictions, and bad news from Russia. The banker in Goa may even reject rupees as relatively worthless since the currency of any nation at war is of little account as against a neutral's and what might have been done on instructions from Lisbon cannot be questioned by any non-sovereign Government in India.

JUTE

Calcutta, August 27.

THE jute market has been slightly more active with mills showing greater interest in higher grades. But, as in the heavy goods section, most of the demand is for early shipment and business has been difficult on account of the lack of transport facilities. The volume of business reported has not been on a very large scale. It appears that the problem of transport will prove to be very difficult, and that before long mills will find it very difficult to get their requirements of the raw material and reduce production. In the mofussil, prices are lower in certain districts. Imports have been coming in larger quantities with the improvement in weather conditions.

In the loose jute section, mills have taken greater interest in the market. Demand has been mostly for early shipment. Picked marks Indian District Middles and Bottoms were done at Rs. 9-8 and Rs. 5-8 per maund. Indian Tossa Bottom were done at Rs. 6-4 for October 15 shipment.

In the pucca bales section, a slight improvement in the rate has been recorded. Firsts 2/3, new crop, for ready shipment are Rs. 2 per bale higher at Rs. 50 per bale. Lightnings 2/3 were done at Rs. 40 per bale. Dundee Daisee 2/3 for August shipment sold at Rs. 53 per bale. There is a definite shortage of the higher grades of jute and old crop Dundee and Tossa grades are difficult to obtain.

MONTHLY STATEMENT.

For the Month of July 1942.

	July 1942 Bales	July 1941 Bales
Estimated stock in Calcutta on 1st July, carried over from previous crop ..	4,50,000	14,00,000
Calcutta Imports ..	2,54,000	4,72,000
	7,04,000	18,72,000
Export from Chittagong ..	*	*
	*	*
	July 1940 Bales	July 1939 Bales
Estimated stock in Calcutta on 1st July, carried over from previous crop ..	3,50,000	1,50,000
Calcutta Imports ..	2,47,000	3,01,000
	5,97,000	4,51,000
Export from Chittagong ..	*	3,000
	*	4,54,000
Distributed as follows:—	July 1942 Bales	July 1941 Bales
Exported ..	...	...
Stocks.—Bazaar, Presshouses and Ships' holds ..	4,50,000	14,00,000
Received by mills ..	*	*
	*	*
	July 1940 Bales	July 1939 Bales
Exported ..	...	1,16.000
Stocks.—Bazaar, Presshouses and Ships' holds ..	2,00,000	1,50,000
Received by mills .	*	1,88,000
	*	4,54,000

Calculated at 82 2/7 lbs. to the maund and 405 lbs. to the bale.

*These figures can no longer be calculated as Government have ceased to issue their monthly Export Return for Jute shipped from both Calcutta and Chittagong.

JUTE MANUFACTURES

Calcutta, August 27.

The jute manufactures market was inclined to be easier earlier in the week. The continued absence of demand for hessian had a depressing influence. During the last three days, a firmer tone has been noticeable. Thanks to the reports regarding the possibility of strikes and the hopes regarding improvement in the freight situation, 9 porters ready are now quoting Rs. 14, September Rs. 14-2 and October/December Rs. 14-4. The quotations at the end of last week were Rs. 13-6, Rs. 13-8, and Rs. 13-12 respectively. 11 porters ready also are higher at Rs. 17-12, September Rs. 17-14, and October/December Rs. 18-2.

The heavy goods section has been slightly steadier with B twills sold on the basis of Rs. 40-8, Liverpool twills at Rs. 47 and Cornsacks at Rs. 42. There is good business for deliveries but sellers have not much to offer. Business has been reported for positions as far ahead as June.

Total reported stocks of manufactured goods exclusive of Government orders.

COTTON

Calcutta, August 27.

Except for a single session on Saturday, the Bombay raw cotton market has remained closed. But in the one day's session, active trading conditions were noticeable. Prices registered a good rise on firms buying and short covering. Broach July/August were done at Rs. 190-12, Jharilla January at Rs. 317 and March at Rs. 308.

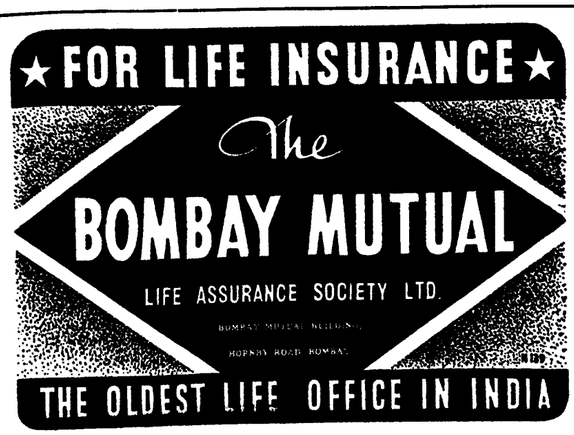
PIECEGOODS

Calcutta, August 27.

The piecegoods market has been active and with a scarcity of supplies prices have been marked considerably higher. Owing to the dislocation of communications and the slowdown in production, it is feared that considerable difficulty will be experienced in getting future supplies.

GOLD

Calcutta, August 27.



The Bombay gold market has been slightly easier on profit-taking at the higher levels. There has not been much of speculative activity Gold ready were quoting Rs. 54-2 and second settlement Rs. 54-1. Owing to the shortage of sovereigns there is no change in the quotation which is even higher at Rs. 40-10.

SILVER

Calcutta, August 27.

The silver market, on the other hand, has been firmer. The strength of the market has, of course, been due to the decision of the United States to raise the purchase price for imported silver. The decision to increase the U. S. price for silver cannot, however, have any great influence on Indian silver as already there is considerable disparity, the level of prices being artificially high. The improvement in values has, therefore, been mainly psychological. Indian Mint silver ready are quoting Rs. 85 and second settlement Rs. 84-5.

There has been no change in the conditions in the London market and the quotation for spot and forward is unchanged at 23½d. Small demand has been officially satisfied.

THE LOVED NAMES WILL BE CHANGED

IMMEDIATELY the Japanese took Singapore, that great city was given a Japanese name. If the Japanese should capture our towns and holy places the same will happen here. Places with deep historic and religious associations will be desecrated and given Japanese labels — by law. The Japanese are not going to respect Indian sentiments. Are we of this great land going to allow such treatment without a blow? Never! Let us resist these barbarians with our combined might.

Stock Markets to-day and to-morrow

INDIAN STANDARD WAGON TO PAY A LOWER DIVIDEND

THE Bombay Stock Exchange continues to remain closed. The Calcutta Stock Exchange also has had a short working week. With the political situation and the fears regarding the possibility of labour unrest affecting companies' earnings the volume of business has naturally been on the small side. As pointed out last week, it cannot be expected that, with the existing conditions, there will be any early return to activity.

* * * *

The strength of the giltedged market, with the apathetic tone of other sections, is rather significant. It may be ascribed to the prevalence of easy conditions in the money market. There has been a persistent decline in the treasury bills rate in recent weeks. Even with the offer at the high level of Rs. 6 crores the average discount rate is as low as six annas and seven pies per cent per annum. The prevalence of easy money conditions has been almost chronic and the revival of activity in the giltedged market at the present time, when conditions are none too helpful, is rather significant.

* * * *

The reduction in the ordinary dividend of the *Indian Standard Wagon Company, Limited* for the year ended March, 1942 will perhaps come as a surprise to investors. Owing to the scarcity of steel, wagon building has perhaps been slowed down and the smaller volume of government orders might have been responsible for the reduction in earnings. The accounts are not yet available. It has only been announced that the dividend on the ordinary shares is to be Rs. 3-2 per share against Rs. 3-12 per share for 1940-41.

* * * * *

The lower level of production has evidently been responsible for the sharp decline in earnings of the *Buckingham and Carnatic Company, Limited*, for the half-year ended June, 1942. The disturbed conditions in the piecegoods market as a result of the Japanese entry into the war, have also been responsible to a certain extent.

The net profit for the half-year, before providing for taxation and depreciation, is Rs. 36,71,571 against Rs. 61,26,615 for the previous half-year. The amount set aside to depreciation is Rs. 4,81,309 (Rs. 5,36,125) while nothing against Rs. 4.6 lakhs has been placed to Raw Materials Fluctuation Reserve. The provision for taxation is naturally lower at Rs. 26 lakhs (Rs. 45 lakhs). The dividend has been reduced to Rs. 5 per share from Rs. 6¼ per share on the former occasion. The amount placed to Superannuation Fund is Rs. 21,363 (Rs. 26,834). The amount carried forward is lower at Rs. 1,91,074 against Rs. 2,38,788 brought in.

* * * *

The earnings of the *Bangalore Woollen, Cotton and Silk Mills Company, Limited*, for the same half-year are also lower though the decline in earnings is not equally pronounced. The net profit, before providing for taxation and depreciation, is Rs. 12,38,828 against Rs. 16,99,734 for the previous half-year. The amount set aside to depreciation is Rs. 4,53,121 against Rs. 4,71,880 on the former occasion. The provision for taxation is lower at Rs. 3 lakhs (Rs. 5.8 lakhs). The amount transferred to Raw Materials Fluctuations Reserve is Rs. 1 lakh against Rs. 3 lakhs. The allocation to General Reserve is unchanged, being Rs. 1 lakh, Dividend Equalisation Fund Rs. 50,000, Workpeople's Housing Fund Rs. 20,000, Officers' Retiring Fund Rs. 20,000 and Fire, Accident and Insurance Fund Rs. 15,000. The dividend has been maintained at Rs. 6-4 per share.

* * * * *

But for the strikes in the Company's mills, which lasted for a period of nearly two months, the earnings of the *Mysore Spinning and Manufacturing Company, Limited*, would perhaps have made a better showing. Even then, the net profit before providing for taxation and depreciation for the year ended February, 1942, is substantially higher at Rs. 11,61,469 against Rs. 3,87,582 for 1940-41. The charge on account of depreciation is naturally higher at Rs. 2,30,000 (Rs. 1,40,000). The transfer to Investment Reserve is Rs. 70,000 (Rs. 10,000) and General Reserve Rs. 2,00,000 (nil). The dividend has been maintained at 10 per cent, but the bonus has been increased to 6 per cent from 1 per cent, on the former occasion. The amount carried forward is the large sum of Rs. 4,45,720 which includes the provision for taxation.

* * * * *

Great Eastern Hotel, Limited has done very well during the year ended March, 1942. The highest level of earnings for sometime has been reported for this accounting period. The dividend has been increased from 9 per cent to 10 per cent. The provision for taxation is Rs. 90,000 (Rs. 62,000). The transfer to other funds is Rs. 62,000 against Rs. 50,000. Depreciation accounts for Rs. 95,393 (Rs. 81,716).

* * * *

The payment of the interim dividend of Rs. 5 per share on the ordinary shares and Re. 1-8 per share on the preference shares cannot be taken as any indication of the level of earnings of the Muir *Mills Company, Limited*, for the year ended 1942. Provided there is no major disturbance to work on account of strikes it can be expected that there will be a substantial rise in earnings for the current year.

* * * *

In a leading article in the main issue the prospects of the Indian rubber plantation industry are discussed in detail. About the improvement in the earning capacity of the South Indian companies and the need for intensive tapping to bring about a substantial increase in production there is no doubt but whether the rubber industry can ever have sustained prosperity is doubtful. The removal of the ban on new planting should also be a helpful factor. For the duration of the war Indian rubber will be in great demand and for that duration earnings can be expected to be at a high level. The better class shares are, therefore, a good proposition for the liberal investor.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Aug. 28.

THE period under report is short of two working days. Even during the short period markets have remained open there has been very little activity. The unsettled internal political situation and the absence of any support from Bombay and other important centres have been mainly responsible for the small volume of business. The various reports regarding the possibility of companies' earnings being affected by the interruption in work have not discouraged operators from entering into fresh commitments. The feature of the week is perhaps the strength of the giltedged securities section. Other section have been neglected.

In the giltedged securities section, as mentioned above, firmer conditions have been noticeable. With the continuance of easy money conditions and the decline in the treasury bills rate, 3½ per cent. Paper has improved to Rs. 93. Among terminable loans, 3 per cent. Defence Bonds 1946 were noted at Rs. 102, 3 per cent 1949/52 at Rs. 100 3 per cent. 1963/65 at Rs. 93-10, 4 per cent. 1960/70 at Rs. 108-10 and 4½ per cent. 1955/60 at Rs. 112-9. 5 per cent 1945/55 were noted at Rs. 108-11. The sudden return to activity on Thursday is rather significant.

Among fixed interest securities, 5 per cent. 1956/86 *Calcutta Port Trust* debentures were noted at Rs. 110 and 3¼ per cent. *Howrah Bridge* debentures at Rs. 93-9. Among preference shares, *Hooghly* were noted at Rs. 17-12, *Basanti* at Rs. 7-6, *Kesoram* at Rs. 126-8 and *Kumardhubi* at Rs. 144. *Steel Corporation* were Rs. 111. *Bowreah 'B'* preferences are higher at Rs. 112 cum. dividend on the declaration of the dividend.

Cotton shares have continued uninteresting with *Bengal-Nagpur* at Rs. 22-8, *Bowreah* at Rs. 438, *Dunbar* at Rs. 242 and *Kesoram* at Rs. 10--4. *Elegin* were Rs. 33-12.

In the jute section, *Naskarpara* were unchanged at Rs. 16-4, *Lawrence* at Rs. 231 *Shree Luchminarain* at Rs. 13-8 and *Waverley* at Rs. 2-15.

In the Engineering section, *Indian Iron* were unchanged at Rs. 26-12 and *Steel Corporation* at Rs. 16-11. *Bhartia Electric Steel* were Rs. 13-12, *Burn & Co.* Rs. 336, *Indian Malleable Castings deferreds* Rs. 2-8 and *Kumardhubi Engineering* Rs. 5.

Sugar shares have continued steady with *Cawnpore* at Rs. 27-2, *Champarun* at Rs. 23-4, and *Punjab Sugar* at Rs. 308. *Dyer Meakin Breweries* were Rs. 10-3 and *Murree Brewery* Rs. 17-4.

No interest has been taken in Tea shares.

In the Miscellaneous section, *B. I. C.* were Rs. 5-1. *Calcutta Trams* were lower at Rs. 14-12. *British Ceylon Corporation* were Rs. 6-6 and *Indian Cable* Rs. 22-12. *Rohtas Industries* were Rs. 22-12 ex-dividend and *Walford Transport* at Re. 1-12. *Titaghur Paper* were Rs. 19-6, *Humayan Properties* Rs. 6-14 c.t. and *Assam Saws* Rs. 3-1.

*Provision has been made by a transfer from Renewals and Extensions Account.
†Dividend for seven half-years ended 30th June, 1937.
‡Dividend for the half-year ended 31st December, 1933.
**Dividend for five half-years ended 31st December, 1939.
§Dividend for five half-years ended 30th June, 1942.

(Half-yearly meeting, 7th September, 1942 at 3 P.M.)

Audited accounts of the half-year ended 30th June, 1942:—

	Rs.	A.	P.
After writing off for Depreciation Rs. 75,000, show a profit of	5,90,155	9	7
To which has to be added the balance brought forward from the last account, namely ..	45,581	14	7
Giving a total of	6,35,737	8	2
From this is deducted the amount set aside as a Reserve for Taxation	4,00,000	0	0
Leaving a balance for disposal of	2,35,737	8	2

We recommend that this should be dealt with as follows:—

To paying the dividend on the 'A' Preference Shares for the five half-years ended 30th June, 1942 at 8 per cent per annum, free of income-tax	1,20,000	0	0
To paying the dividend on the 'B' Preference Shares for the half-year ended 30th June, 1942 at Rs. 3-8 per share (*i.e.*, 7 per cent per annum), free of income-tax ..	21,000	0	0
To paying a dividend on the Ordinary Shares at Rs. 5 per share (*i.e.*, 10 per cent per annum), free of income-tax	30,000	0	0
To carry forward	64,737	8	2
Total ..	2,35,737	8	2

Conditions during the half-year under review have naturally been difficult. The loss of Rangoon and the rapid deterioration of the situation in Burma not only resulted in the cancellation of large outstanding contracts for that market but also caused renewed uneasiness amongst the labour force; the Company's mills were, however, not so badly affected as those in certain other districts and although outturn suffered to some extent a fairly high standard of efficiency was maintained.

After a period of complete stagnation both the cloth and yarn markets became extremely active in the latter part of the half-year. A keen and sustained demand was witnessed for all available stocks and prices appreciated rapidly. The disturbed political situation has since depressed the bazar and it is at present impossible to form an opinion as to future prospects.

*Includes Rs. 2,00,000 transferred from Reserve Fund.

†Includes Rs. 80,000 transferred from Reserve Fund.

‡Includes provision for Taxation.

(Meeting already held on 17th July, 1942. Dividend paid on 3rd August, 1942).

Audited accounts for the year ended 31st December, 1941:—

The result of the year's working shows a profit of Rs. 9,37,518-7-0, to which has to be added a sum of Rs. 30,356-13-8, being the amount brought forward from last year's account, making a total of Rs. 9,67,875-4-8, which, the Directors recommend, may be dealt with as under:—

	Rs.	A.	P.
To Dividend at the rate of Rs. 20 per share, free of income-tax, for the year	1,60,000	0	0
To Depreciation:—			
On Buildings	40,000	0	0
On Machinery	1,40,000	0	0
On Electric Equimpent	10,000	0	0
On Electric Light Installation ..	2,000	0	0
On Motor Car and Lorry	1,000	0	0
To Amount carried forward to next year's account to meet taxes, etc.	6,14,875	4	8
Total ..	9,67,875	4	8

The Directors hope that the shareholders will consider the above result satisfactory.

During the year under report two Electrolysers, six Universal Pirn Winding and six Tubular Winding Machines and one Bowl Mangle were purchased and erected, and a new godown was built.

The Directors have contributed a sum of Rs. 4,000 to the Bombay War Gifts Fund.

The shareholders are requested to appoint auditors for the current year and fix their remuneration.

The Mill Buildings with Machinery and Stocks of Cotton, Yarn and Cloth, etc., are insured against fire to the extent of Rs. 83,94,700 and against Riot and Civil Commotion Risks to the extent of Rs. 68,04,700. Stocks have been insured against war risk for Rs. 40,00,000. The Mill Buildings and Machinery have also been insured against war risk under the Factories Insurance Scheme for Rs. 11,00,000 and Rs. 24,96,000 respectively.

The Profit and Standing Charges of the Company have been insured for Rs. 20,00,000.

Managing Agents.—Messrs. Ramnarain Harnandrai & Sons.

Authorised, Issued and Subscribed Capital—Rs. 8,00,000 in 8,000 shares of Rs. 100 each, fully paid-up.

Synopsis of the balance sheet as at 31st December, 1941:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	80,00,000	Fixed Capital Expenditure ..	55,68,865
Reserves ..	57,78,647*	Stores and Spares ..	4,77,608

*Includes depreciation fund of Rs. 26,24,820.

THE BENGAL FLOUR MILLS COMPANY, LIMITED.

Audited accounts for the half-year ended 30th June, 1942:—

	Rs.	A.	P.
The Profit for the half-year was	73,838	6	1
To which is added the balance brought forward of	15,971	11	10
Total ..	89,810	1	11
Out of the total of Rs. 89,810-1-11 the Directors have set aside the following amounts:—			
Depreciation	2,880	6	0
Provision for Taxation	26,988	2	0
Total ..	29,868	8	0
This leaves a balance of Rs. 59,941-9-11 available for distribution, which the Directors recommend be dealt with as follows:—			
Dividend at the rate of 10 per cent per annum ..	36,000	0	0
Carry forward	23,941	9	11
Total ..	59,941	9	11

Conditions have been difficult during the half-year under review owing to the Mill's inability to obtain regular supplies of wheat. A purchase of Australian Wheat which arrived early in the year enabled production to be maintained for a period, but latterly the Mill was obliged to work short time. The uncertainty of wheat supplies which has been caused largely by the scarcity of transport from grain centres makes the outlook obscure.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ld.

Authorised Capital—Rs. 12,00,000 in 1,20,000 shares of Rs. 10 each. Issued and Subscribed—Rs. 7,20,000 in 72,000 shares, fully paid-up.

Synopsis of the balance sheet as at 30th June, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	7,20,000	Gross Block ..	27,18,349
Reserves ..	3,00,000	Depreciation ..	25,48,649
Current debts ..	1,32,621		
Carry forward ..	23,942	Block (net) ..	1,69,700

BANARHAT TEA COMPANY, LIMITED.

Audited accounts for the year ended 31st December, 1941:—

After providing Rs. 29,564-12-10 for depreciation the season's working resulted in a profit of Rs. 4,58,371-0-8 and after providing for taxation, making sundry adjustments and transferring Rs. 60,000 to equalisation of Dividend Fund there is a balance of Rs. 2,92,949-0-5 at credit of Profit and Loss Account which the Directors recommend be dealt with as follows:—

	Rs.	A.	P.
Preference Dividend for 1941 at Rs. 8 per share	32,000	0	0
Ordinary Dividend for 1941 at Rs. 40 per share	2,00,000	0	0
Leaving to be carried forward	60,949	0	5

A total crop of 21,698 maunds was secured.

Included with the export sales for 1941 are 4,304 maunds from Banarhat and 5,937 maunds from Karballa sold to the Ministry of Food in the United Kingdom.

Apart from early drought climatic conditions were generally favourable and a record crop was produced by the Company as a whole.

Estimates for the current season have been framed for a total crop of 20,000 maunds to cost Rs. 4,46,893 at the gardens and Rs. 2,01,356 in Calcutta.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

Authorised Capital—Rs. 10,00,000 in 5,000 Ordy. and 5,000 8 per cent Cum. Pref., both of Rs. 100 each, fully paid-up.

Synopsis of the balance sheet as at 31st December, 1941:—

Liabilities.	Rs.	*Assets.*	Rs.

Reserves ..	6,46,081	Depreciation ..	6,85,605
Current debts ..	2,96,437		
Carry forward ..	60,949	Block (net) ..	8,73,626
		Outstandings ..	2,60,928
		Investments ..	6,74,734
		Cash balances ..	94,179
Total ..	19,03,467	Total ..	19,03,467
		Total Liquid Assets ..	10,29,841

THE SOUTH ARCOT ELECTRICITY DISTRIBUTION COMPANY, LIMITED.

Audited accounts for the year ended 31st December, 1941:—

During the year, 9 Substations, 8.5 miles of High Tension and 12.55 miles of Low Tension lines were put up as a result of which the connected load came up to about 3,000 K.W. as against 2,300 K.W. at the beginning of the year. The effect of this will be that our revenue during 1942, will be at least Rs. 30,000 more than that of the year under review.

The agreements with the Annamalai University and a number of Municipalities and Panchayat Boards were renewed during the year. The East India Distilleries and Sugar Factories, Limited, Nellikuppam, have entered into an agreement for a period of 5 years for a seasonal supply to their factory and this will bring in an additional revenue of about Rs. 10,000 per year. According to our arrangement with the Government, the inter-connecting line between Cuddalore and Chidambaram should be done in 1942. But the Government have permitted us to carry out the interconnection until about a year after the termination of the War. We have therefore arranged with the South Madras Electric Supply Corporation Ltd., Trichinopoly, to continue their bulk supply to Chidambaram.

We had unusual rains and cyclone in December as a result of which the Government bulk supply was not available for 9 days. The cyclone caused a lot of damage to our transmission and distribution lines and as such, renewals were very heavy during the year.

During the year, the balance of 665—6 per cent Preference shares of Rs. 100 each were issued at a premium of Rs. 25 per share and this was fully subscribed.

The net profit as per the Balance Sheet is Rs. 53,861-6-9 including Rs. 9,534-2-2 the balance brought forward from the previous year. The interim dividend of 3 per cent paid in January last on Rs. 1,33,500, 6 per cent Preference shares absorbed Rs. 4,005-0-0. The balance of Rs. 49,856-6-9, the Directors propose to appropriate as follows:—

	Rs.	A.	P.
For paying the balance dividend of 3 per cent on the above Preference shares	4,005	0	0
For paying a dividend at 4½ per cent (free of tax) on Ordinary shares	35,916	0	0
Leaving a balance to be carried forward to the next year	9,935	6	9
	49,856	6	9

Managing Director.—Mr. P. Natesan.

Authorised Capital—Rs. 10,00,000 in 8,000 Ordy. and 2,000 6 per cent Pref., both of Rs. 100 each. Subscribed and Paid-up—Rs. 9,54,685 in 8,000 Ordy., fully paid-up; 1,335 Pref., fully paid-up and 665 Pref., Rs. 50 called-up. Less calls in arrears Rs. 12,065.

Synopsis of the balance sheet as at 31st December, 1941:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	9,54,685	Fixed Capital Expenditure ..	12,68,068
4½% Mort. Debentures ..	85,072	Stores and Spares ..	1,19,111

Vol. XXX. No. 10 SATURDAY, SEPTEMBER 5, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

WITH interbank call money continuing unlendable at the quoted rate of ¼ per cent, treasury bill sales this week again made a good showing. Against Rs. 6 crores on offer, applications came to Rs. 9.99 crores. The average rate of accepted tenders is 1 pie lower at annas 6 and pies 6 per cent per annum. The offer for next week remains unchanged at Rs. 6 crores. Treasury bill maturities in September amount only to Rs. 21 crores, October being the heaviest month. On the basis of Rs. 6 crores per week, realisations from tender bills in September would amount to Rs. 24 crores. That is to say, sales of fresh bills will exceed maturities by Rs. 3 crores. From this point of view, there is a likelihood of a small reduction in the weekly tender offer. On the other hand, there is a case for increasing the offer as, with the third defence loan meeting only with poor response, the Central Government are more or less entirely dependent upon treasury bills for ways and means adjustments. That is to say, the planning of treasury bills sales is now determined not only by the amount of maturities that have to be paid, but by the need from time to time for replenishment of the Central Treasury.

It is obvious that New Delhi proposes the launching of a strong drive for stimulating a more considerable flow of applications for the defence loan. Announcement was made before this week-end of an all-round stepping-up in the minimum price of Government securities, both Central and provincial. Compared to the minima in force hitherto, the new price levels fixed by the Government *communique* suggest a definitely confident outlook for the future of giltedged on the part of Sir Jeremy Raisman. We fully share his confidence in the future of rupee securities. While the raising of the minimum prices is a step in the right direction, and while open market operations will, undoubtedly, be effectively carried out to implement the policy in this regard, we may suggest the considering of how far powerful aid would be lent to the psychological background of the giltedged market by the lowering of the Reserve Bank rate. The Bank rate has remained at 3 per cent for years now. With the call money rate at ¼ per cent all lenders and no borrowers, with banks reluctant to take three months deposits even at ½ per cent, and with treasury bill average discount rate roundabout 6½ annas, a 3 per cent bank rate is very much in the nature of a discord in the money rate symphony. For our part, we believe that a drastic reduction in the official minimum of the Reserve Bank from 3 per cent to 1½ per cent will greatly help in confirming and accentuating cheap money sentiment and readiness of the authorities to pursue and keep pursuing a cheap money policy.

While commending this suggestion to the careful attention of the Finance Member, we should like to keep an open mind as the time when this reduction in the bank rate should be given effect to. At the present moment, the concomitant conditions for giltedged are not exactly propitious. The situation round Stalingrad has been described as dangerous. The outcome of the Battle of Egypt hangs in the balance. India lives in daily anticipation of Japanese raids. The domestic political situation is far from reassuring, notwithstanding the complacent declaration of New Delhi and Whitehall that quiet is being restored on every front. The lowering of the Reserve Bank rate is in the nature of a master stroke; and the appropriate time for such a master-stroke will be when the clouds in the domestic horizon have disappeared and when we can feel more reassured about Russia and Egypt and the threat of Japan.

Meantime, we note that the provincial Governors are in requisition for lending a helping hand for quickening sales of the defence loan. Sir John Herbert, Governor of Bengal, has addressed a letter to the public of his province. A letter addressed to anybody and everybody may not have any appreciable effect. Better results might be expected from the efforts of His Excellency in connection with a Defence Loan Week. As a matter of fact, we would suggest the inauguration of such a Week, once the political conditions, internal and international, get considerably more favourable. The Savings Week observed by Calcutta last year did produce good results. A Defence Loan Week under congenial conditions in the future will produce even better results. Banks are now groaning under piles and piles of unlendable cash. On the other hand, in their own interests and as a duty to a call made by the Head of the Province, bankers may be expected to subscribe at least twice as much in the next defence loan week.

From the point of view of the money and giltedged markets, there is no need to fear development of any adverse factors. We are still in the midst of the slack season; and money has been as slack in this season as it has never been in any past year. The official busy season will be ushered in another two months. But there is no reason to believe that the busy season will differ from the slack season so far as money market conditions are concerned. The present superabundance of credits seems likely to persist right through the coming busy season. India has now learnt to finance, without recourse to banks, a considerable production drive. This is largely due to industrial concerns retaining a goodly proportion of the profits on pretexts like some kind of war reserve. Though industrial concerns have made greatly increased profits, the distribution in the form of dividend shows only a poor rise. The allocations to various funds have been made on an extravagantly generous scale. Reserves for taxation err on the over-cautious side. Let us not forget that the sums reserved for taxes will not become payable for another year. It thus happens that the cash resources of industrial concerns in India are now plethoric. This accounts for the poor demand which banks are experiencing for trade advance. This state of affairs may well persist during the coming busy season also. There is, therefore, no need to apprehend any monetary stringency acting as an adverse factor to the successful progress of a defence loan. Nor will the

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills were opened on Tuesday, the 1st September, 1942. The total amount offered was Rs. 9,99,00,000. Tenders at Rs. 99-14-6 per cent and above were accepted in full and those at Rs. 99-14-3 per cent were allotted approximately 46 per cent. Lower tenders were rejected. The total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-6-6 per cent per annum.

Tenders for Rs. 6,00,00,000 of three months' Government of India Treasury Bills will be received on Tuesday, the 8th September, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 7th September, 1942, at other centres. Successful tenderers should make payment on Friday, the 11th September, 1942. Other conditions are as usual.

During the week ended the 28th August, 1942, Government of India Treasury Bills for Rs. 4,95,75,000 were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

FROM a decline in a majority for Mr. Roosevelt nothing can be deduced. A straw vote showed that the President's war policy is not overwhelmingly popular as being a huge success. Some months ago the U. S. President was absolutely popular and Mr. J. A. Farley was on good terms because he had been allowed to pick the next Governor of New York State. At present the President is not so popular because of rationing and price control. But the President is strong against Congress which has to provide the taxes. Savings have grown but borrowing remains vital, and taxation too. The U. S. President's anti-inflation programme is not complete nor is it a big success, but there is no doubt as to the intention to dock travel, cut luxury spending and every activity outside the war. Taxies are to be taken off the streets practically in order to save on oil and rubber. Meatless days for millions are meant to help to produce more meat for the Army. The U. S. war effort can only be judged by reading U. S. papers. In recent months winning college athletes got paper replicas of bronze medals. By June the U.S.A. had solved the aluminium problem and was in a fair way to solve the rubber problem. The tin smelter at Texas City was nearly ready and tin had ceased to be a problem. There was worry about price control, but the President still wants to hold back the rise in prices. Freezing of wages and price control are the main planks in the Government programme, and this week, too, there has been reference to provisional freezing of wages. The President wanted to check inflation by cutting at the supply of goods. No cars, lawnmowers, typewriters or iceboxes are being made, and the auto-industry has gone over wholly to war work. By June the war production march had begun. Ideas were poured in and the U.S.A. had settled down to the collar. Export and import control besides priorities, etc., had been settled and it was hinted that the F.R.B. was going to relax bank reserve requirements in order to encourage war production. Firms doing war work were to be helped by banks freely. Abundant credit is meant to help the Treasury. The Treasury increased its short-term debt and got 91 days bills at ¼ per cent or so. New issues were fewer than ever and when 13 million workers had by June promised to save every week out of wages, it was clear that the war bond campaign had gone over big. The shipbuilding feats of the Oregon companies amaze the world, but not so much as the fall in stock exchange activity after war broke out. America is no longer individualist. Hitler has made America accept control for its own good. Price control will be easier after the fall in prices in August. Tax fears depress stocks and the blue chips are friendless. Profit control too is threatened by New Dealers who delight in the new job of keeping inflationary tendencies in check. Mr. George Merrill told India recently about what is going on in the States. Without any of Mr. Churchill's spellbinding Mr. Nelson has put the nation to work. Mr. Lyttelton went out to see what was going on, and went back impressed.

Finance does not seem to cause any trouble. This year's budget was practically settled by a Presidential message much earlier. The only thing that matters is to work hard and save more. Sales taxes are not enough to stop spending. So the Federal Government has put in rationing. If Yellow Cab stockholders are hit there are heaps of others who benefit, though it was argued fairly early this year that 61 per cent of corporate profits went out in taxes. Discipline in spending and saving was accepted by June and that was due to co-operation between capital and labour along with the decline of Mr. John L. Lewis.

The rates recorded in the papers have not moved for weeks. Sir Kingsley Wood in assuring small savers that they would be repaid as promised showed that the small saver had put up £1,500 millions in three years. Heavy taxation means a reduced return, but the limit of taxation clearly has been reached in the U. K. There is no point in enhancing taxes and it is the masses who have to block expenditure and put money into the banks to be lent when wanted. The State is the only borrower. Private trade is almost dead and the decay of the discount houses is far more pronounced in the war period. The City is strong but idle, it will be agreed. Every week sees borrowing go on as usual, and the Government takes its money in any way it likes. The essential similarity between Britain and America is proved by the ready acceptance of control.

Sir Kingsley Wood's confidence is borne out by such things as the higher price of old Consols which after the quarterly interest payment stands at 83. The London Stock Exchange is still firming up and Industrials are still the attraction. South American issues have been latterly prominent, and the attention paid to heavy industrials proves that whatever was the sentiment six months ago, it is now definitely brighter. If Home Rails offer an over-all yield of 7 per cent, half of it goes in taxation. It is felt that 3½ per cent is high enough when the net yield on trustee stocks is 1½ per cent or so. The fourth year promises an abundance of money as private spending is choked and money incomes keep rising. Oil issues are likely to acquire previous importance as their specific merits are emphasised by the payment of a dividend by the Burmah Oil Company, proving that for an old company with big reserves and interests in other oil companies, the events in Burma make little difference.

The brighter aspect of the stock exchange in recent weeks contradicts the belief that investors would be upset by the progress of the enemy in Russia. The admirable behaviour has its lessons for investors in India who must learn to ignore a day's news now and then look ahead.

The change in the price of silver has led to an embargo on Mexican exports of silver. It corresponds to the earlier Canadian ban.

It is meant to make all Mexican sales go in one direction only, to the U. S. Treasury which is going to help Mexico by raising the price. The Treasury is seeking Congressional approval for sending out silver under lease-lend. The shortage of tin etc. forces the Treasury to seek opportunities of using huge silver reserves built up since 1934. One thing is certain. The revision of price in New York will not lead to any rise in rates elsewhere. Silver may have been used more widely than ever since 1941 in industry, but U. S. silver policy is a domestic matter and London's four bullion brokers will have little interest in silver supplies if they come in as lease-lend material. If demand is larger, supply will be enlarged and the price may drop rather than rise, particularly as the Indian Government is always ready to sell.

The silver bloc in the Senate may yet lay down fresh conditions for the Treasury proposals in regard to silver and ask for bigger purchases at home. If labour is diverted to the base metals, as some may infer, the Treasury can do what it likes about silver, but the trouble will come about control of commodity prices. Mr. Henderson has not given in to any lobby so far and the President is bent on beating the rise in the cost of living before beating the enemy. For a year or so, inflation has been dreaded and fought not without success. The U.S.A. is reconciled to control and price stabilisation. The indictment of nine cable companies on a charge of profiteering signifies that the taxpayer's sacrifices for the war will be limited by the Administration in its own interests. There may be a boom in Cuba but the U.S.A. does not want one. The U.S.A. has acquired what may be called the new frugality and it was remarked that the only prosperous industry this summer was the tobacco manufacturing business. Everything else had to give place to war work. The stores would be hurt by the checks on instalment selling in force since May. But Big Steel and Little Steel are making hay and bigger crops on U. S. farms mean better times for many industries save those which have been turned off to the war effort. There is not likely to be any shortage of electricity or coal; so U. S. industrial enterprise will have only to reckon with a new tax bill and the enhanced profits tax.

NATIONAL INDIAN LIFE INSURANCE CO., LTD.

REPORT BY THE DIRECTORS

FOR THE YEAR FROM 1st JANUARY TO 31st DECEMBER, 1941

The Directors have pleasure in submitting herewith the audited accounts of the Company for the year ended 31st December, 1941.

During the year under review 3,614 proposals for the assurance of Rs. 72,87,400 were received and 2,976 policies for Rs. 60,79,950 were issued of which Rs. 7,42,000 under 37 policies were reassured. The rest were either declined or accepted on modified terms or not proceeded with or are awaiting completion. This shows an increase of Rs. 11,38,400 over the previous year and constitutes a record for the Company.

The total income from all sources amounted to Rs. 17,49,207-2-1 and shows an increase of Rs. 79,910-8-6 over the previous year. The Life Fund increased by Rs. 5,26,936-6-4 and now stands at Rs. 77,85,259-6-9.

The net rate of interest earned came to 4.52 per cent.

It will be noticed that a sum of Rs. 18,635-2-0 was written off as depreciation of securities. At the close of the year the market value of the securities exceed the book value by Rs. 3,84,850-2-0.

During the year 1941 claims arose by death on 133 lives under 139 policies securing the sum of Rs. 2,20,072-2-1 while 289 policies on 288 lives matured by survivance involving the sum of Rs. 4,40,828 only. The longest duration at death was 28 years and the shortest two months. The average duration of policies which became claim by death is 9.9 years.

During the year a property containing two commodious Buildings at the junction of Forbes Street and Rampart Row, Fort, Bombay, was purchased, in which the Bombay Office has been removed. This has proved a profitable investment and will no doubt give a fillip to our Bombay business.

By the end of December, the Japanese menace came too near India and we had to evacuate our Rangoon and Akyab Offices. The staff remained at their post till the last and had to come back with office records by land. Every possible help has been given to our Policyholders who had to evacuate to India from Burma under trying circumstances.

Since the close of the year, Messrs. Martin & Co., relinquished the Managing Agency of the Company. Through good days and bad they nursed the Company and the present position of the Company is due to the sound foundation laid by them. The Directors regret that this was necessitated by the New Insurance Act and they tender their thanks for all they have done for the Company.

The Directors have pleasure in recording their appreciation of the services of the officers and staff and the representatives of the Company for the continued successful working of the Company.

The Directors recommend the payment of dividend at the rate of 8 per cent, free of income-tax on the paid-up Capital of the Company.

Messrs. R. P. Singh Katharia, M. N. Mitter and S. P. Bose retire from the Board of Directors but being eligible offer themselves for re-election.

The Auditors Messrs. Lovelock & Lewes also retire but offer themselves for re-election.

CALCUTTA,
The 11th August, 1942.

AUDITORS' REPORT TO THE SHAREHOLDERS

We beg to report that we have audited the foregoing Balance Sheet of THE NATIONAL INDIAN LIFE INSURANCE CO., LTD., as at 31st December, 1941, and Revenue and Profit and Loss Accounts for the year ended 31st December, 1941, in which have been incorporated the certified returns from Agencies.

We have obtained al the information and explanations we have required, and in our opinion such Balance Sheet and Revenue and Profit and Loss Accounts are drawn up in conformity with the Insurance Act, 1938, and the Balance Sheet exhibits a true and correct view of the state of the affairs of the Company according to the best of our information and the explanations given to us, and as shown by the books of the Company. In our opinion, books of account have been kept by the Company as required by law.

We have verified the cash balances and the whole of the investments by reference to certificates and relative securities.

We have not seen Loan Bonds to the value of Rs. 400 in respect of Loans on the Company's policies.

We certify that no parts of the Assets of the Life Insurance Fund has been directly or indirectly applied in contravention of the provisions of the Insurance Act, 1938, relative to the application and investment of Life Insurance Funds.

Editorial Comments

Three years of War Finance

On the completion of three years of World War II, a study of India's economic gains and losses through the war and its repercussions will be found useful not only from the point of view of the simple and ever-present need to know where we stand, but also from the point of view of the compelling importance of regulating the future of war finance and war economy in the light of the lessons furnished by the experience of these three years. Immediately on the opening of hostilities in September 1939, "Indian Finance" ran two series, one devoted to India's War Finance and the other to India's War Economy. To forecast the likely developments, it was necessary to make certain assumptions. In the field of finance, we assumed that the determining factor would be colossal accumulation of sterling balances to the credit of the country; and with respect to India's economy, we anticipated that this country would have to assume the role, not only of the reservoir of manpower, but of the arsenal and granary of this part of the world. These assumptions have proved correct, and the various developments, as arising from these assumptions, have also followed more or less on the lines indicated in the forecast made in 1939-40.

While we propose to deal, in the subsequent articles of this series, with the various aspects of the three-year developments, we shall deal, in this number, with what may be called the main outline.

This war has established many unique records. This is, perhaps, the only war in history in which the bank rate in India was not raised at all after the war and has continued to remain at the prewar level all through. The Reserve Bank rate was 3 percent for many years before September 1939; and it has remained at 3 percent for these thirtysix months of war. In this respect, India has gone even one better than Britain. Soon after the war began, the Bank of England raised the rate from 2 to 4 percent in quick succession though, soon thereafter, the rate was restored to 2 percent. In India, on the other hand, the authorities did not resort to any panicky interference with the bank rate. In the subsequent months, even the rate of 3 percent has proved to be out of touch with other money rates. Interbank call money, during most of the period, was ¼ percent; and three months deposit rate of banks has been nearer ½ per cent than 1 percent. In spite of occasional spurts, treasury bill discount rates have been below, and very much below, 1 percent. In the bazar, the hundi rate has established an all-time low. In such circumstances, the Reserve Bank rate has been left high and dry; and "Indian Finance" has, on more than one occasion, suggested that the official minimum must be brought down so as to keep it in line with the structure of money market rates.

This war is also unique for the continued maintenance of cheap money conditions. This is due, in large part, to the colossal increase in currency effected against the piling-up of sterling assets. In fact, there has been enormous expansion of currency not only with respect to paper notes, but also with respect to rupee coin. Not less significant is the phenomenal demand for subsidiary coinage. In all these ways, the currency in the hands of the public has, all the time, been increasing. Apart from this fact contributing to monetary ease, mention must be made of the highly improved technique which the currency and financial authorities have now learnt to employ with respect to their dealings with the money market. Technique in this sense is more than the rigidity of control. World monetary technique has been fashioned, in the years between the last war and the present, into an instrument conducive to efficiency, resilience and effectiveness. The Indian authorities have shown the practicability and appositeness of the application of world monetary technique to Indian conditions.

In no field perhaps is this war so remarkable as in the sphere of gilteged. Popular prewar notions envisaged collapse in the confidence about the giltedged outlook, and headlong disruption of giltedged values. Without a trace of immodesty, "Indian Finance" can claim that it was almost alone in India in forecasting a consistently and persistently firm giltedged outlook throughout the war. "Indian Finance" went to the length of prophesying that this would be a 3 per cent war for India, in the sense that the maximum interest that need be paid for raising defence loans would be 3 percent. The events have proved even better than our optimistic forecast. As Eavesdropper showed in last week's Gossip, so far as India is concerned, this is a ½ percent war rather than a 3 percent war.

Thanks to the accumulation of sterling balances on an increasing scale, India will be able to clear, by next January, the entire load of sterling loans raised in the London market. More. She will have such affluence of sterling that, if only she was allowed, she could pay off all sterling obligations and, in addition, buy back a considerable proportion of the business interests held in India by Britons. For the first time in her relations with Britain, India will be occupying the status of a creditor, abandoning the stigma of a debtor which had clung to her all these decades.

Amongst the other remarkable developments in the financial sphere, we may mention the smallness of the deficits in India's war budgets; the absence of any addition in the Public Debt of the country; and the enhanced credit that she enjoys both at home and in the London market.

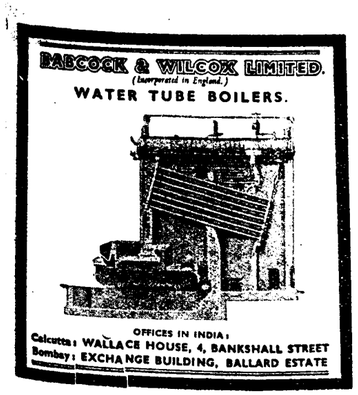
A final word must be added about the successful control which has been maintained in the field of exchange. There have been only minor changes in the rupee-sterling rate. And, in the change-over from an absolutely free exchange market to a completely controlled market, the authorities have so shaped policy and so guided operations as to cause the minimum of friction.

While, in the sphere of finance, there has been a kind of homogeneity in the various developments, the effects of the war on India's economy have been in the nature of a see-saw. At one stage, there was a big boom in exports; at another, shipping difficulties had seriously affected exports. On occasions, prices have tended to shoot up; at others, special measures had to be taken to arrest heavy landslides in prices. The jute industry seemed to be the luckiest in the early months of the war; it is now receiving stern lectures as to how it could rationalise itself. For the first many months, our gods in Simla and New Delhi hardly woke up to the urgency and imperativeness of stimulating and harnessing India's resources for purposes of war. Then they seemed to wake up suddenly and created a tremendous amount of fuss and furore. We are still in the stage of accomplishing more in terms of paper and personnel than of production of the right articles in the right quantities and in the right time.

The War Supply Department has grown enormously somehow, anyhow. Much more could have been accomplished—this must be admitted even by the supporters and apologists of the Government. The Supply Department had technical advice provided in the form of two important investigations. The Eastern Group Conference may be said to be the starting point of an intensified identification of the Supply Department with the varied problems of production of war materials. Then came the American Technical Mission whose recommendations, if accepted, would have had the effect of the filling the various gaps in the production structure, rationalising the production programmes, and generally accelerating production drives. For all the use that the Government of India have made of their advice and offer of cooperation, Dr. Grady and his distinguished colleagues need not have visited India at all.

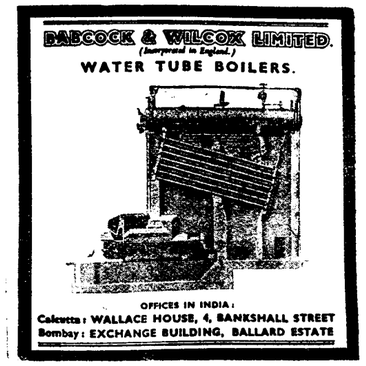
In sum, there are undoubtedly many bright patches in India's war economy and industry. But the many ugly patches constitute a serious charge against the Government of lack of foresight and of lack of genuine concern to help India play her full part.

REASSURING CONDITIONS



Never has routine market analysis fallen so short of expectations as in the last month. The behaviour of markets was ignored when Chambers of Commerce plunged gleefully into politics and despatched vehement telegrams advising a change in policy. The closure of Bombay markets up to the present does not warrant the belief that market morale is non-existent for there is ample reason to believe that it has never been higher. Emotion is now without influence on market movements. It is only necessary for those seriously interested to consider over again the developments in India and price in such markets as are open to conclude that markets are content to ignore politics. It is indeed right to conclude that a healthy situation subsisted right through August and the operator's nerves have never been stronger than in the period that saw rioting in India coincide with fighting in Ciscaucasia. It might indeed be suggested by the unwary that there is one of the paradoxes in which India abounds. Civil commotion and striking stability in prices on the stock exchange are not incompatible for the disposition to realise is checked when the perils of hoarding become more obvious. Moreover, long-term industrial prospects are not compromised by the confusion precipitated by the Congress Working Committee's decision. There has been a little precautionary marking down, but the share list in Calcutta and Madras alike supports our view that immunity to bad news—be it of strikes, a lost battle in Russia or a Jap naval excursion in the S. W. Pacific—is the outstanding feature of India's markets. The investor has gained doubly by the stability demonstrated over weeks. He can wait for dividends of the usual sort in the hope that reduced profits would mean reduced provision for taxation and he would not suffer over-much. There is also the belief that the Moscow decisions enhance India's industrial importance and reports of dockyard activity have indeed lifted a perpetually depressed share like Hooghly Docking to par. August has witnessed such a rise in at least one engineering scrip that pessimism appears shallow and superfluous.

From the present state of prices and trading, one may well conclude that the money market finds the stock exchange as plentitude of funds in the monsoon has had a welcome effect in checking banks' desire to call back advances. There is the further consideration that the closure of the market makes it difficult to sell out. The necessitous holder is forced to hold back and the absence of any slump, besides reassuring the lender induces the holder to stick to it by saving up. The result is altogether impressive. Indian Iron has gone ahead in the last few days. Hope of a better final dividend is apparently enough to keep the price up and Bengal Steel offers such a generous yield that it is destined to go higher. When the general belief is to the effect that bank advances will be less than usual in the cold weather it is naturally to look for exceptional firmness in giltedged. In this respect August has been eminently reassuring. There was no hint of a tremor in the giltedged market. Securities were firm right from August 10 and we were compelled to dismiss summarily all fears of a break in giltedged, a race for cash and a general slump in share prices. The contrast between December 1941 and August 1942 is complete but for the fact that shares of companies in Burma when their interests are eclipsed are depressed. There is no reason for the investor to fight shy of giltedged when money is superabundant and the yield of 3 percent on most issues is definitely higher than that obtainable on term deposits. It is widely known that new deposits cannot be placed and firms with surplus cash are faced with the problem of employing them at a time when exports are dwindling or else taken up by authorities for war purposes. It is not surprising to learn that bank deposits rose higher than ever in August or that the Imperial Bank's deposits attained a new record. Cash balances have been uniformly ample and there has been absolutely no symptom of strain when stories of arson, theft and many crimes in the calendar were current. The rise in bullion was both mild and temporary; a strong revival is apparently ruled out. It might indeed be suggested on the basis of market behaviour alone that the BBC announcement on August 12 that except for some large towns, which were disturbed, India was quiet.



The smallness of business on the exchanges is after all a characteristic of wartime and August has never been what they call a busy month. Every successive drop in the Treasury bill rate has gone to keep up faith in giletdged. The Government can take six crores every week without effort. Its still-growing monthly deficit does not cause alarm and for a week at least in August defence loan contributions were up to expectations being over Rs. 2 crores. The unconfirmed reports of strikes and savagery did not produce a fall in any but a few scrips. Interest in paper brewery and chemical shares did not wane in the least. The Madras market exhibited usual partiality for both sugar and rubber shares. The market was not buoyant but there was no sign of panic such as might be engendered by rumour. It might indeed be claimed that financial indications alone suffice to prove the strength and popularity of the Government. It might be plausibly imagined that obstacles to war effort have been eliminated swiftly and surely, and the interests of property-owners have been secured. But such an inference would be wholly obnoxious to general sentiment and it is only our purpose to draw attention to the fact that extrinsic considerations have not weighed with the market of late. Some would explain stability on the ground that speculation has shrunk; others would argue that investors stick to shares because no proposal for dividend limitation is likely to appear, and profits are stabilised at the wartime level in nearly all cases. A few might express the view that as a hedge against inflation, there is much to be said for industrial and commodity shares at present. Whatever be the determining factor, there is no aversion to keep money in investments. Whether this is preferable to hoarding or keeping cash in the form of bank deposits is not an issue for examination. It is only with the effects of the present desire to retain investments and maintain values that we are concerned. When there are somewhat depressing influences as in the case of coal and jute at present, as recent company statements go to suggest that prospects are none too good, the tendency in the share market might be downward. But elsewhere stability is the distinguishing feature. There may be no eager rush of buyers but neither is there any hurry to sell sound shares. Reports of local unrest have scarcely influenced Cawnpore shares. Apart from the fact that an exchange from sound scrips into bank deposits would be unremunerative, if not unwise, there is the argument that war risks are covered. In the result, the ordinary shareholder is well placed.

The influence of firm giltedged prices on senior stocks and bank and insurance shares alike will not be overlooked. The rate of interest, it must be stressed, is the ultimate factor in determining share values. The level of taxation is still moderate and the rate of return in giltedged is around 3 per cent. What happens in England finds a parallel here but it may at the same time be suggested that Indian concerns are enjoying a degree of security denied to Britain's factories. To sum up, there is plenty of money in banks and in these times borrowers are restrained by many considerations excluding the rate of interest. The rate of growth in industrial profits must improve if only because of import control. For the majority of industrial concerns in India, the liabilities arising from E.P.T. and war risk insurance are not very heavy. The advantage of keeping sound shares, if not adding to them, appear manifest, and the behaviour of investors in the past month has been, by every reckoning, commendable.

The long-term outlook for most Indian industries remains good. This is a view that does not invite contradiction, for India is a belligerent allowed to prosper like South Africa. There has been a definite bulge in profits as a result of the ascent of all prices between 1941 and 1942. Changes in dividends may not suggest that, and individual concerns may have had a disturbing experience, but generally speaking, the average enterprise can face the fourth year of war without apprehension. This has a very definite implication from the market angle. Basing our view on recent experience we deliberately incline to the view that the state of markets will remain wholly satisfactory. It requires no prophet to say that higher commodity prices make for better purchasing power and naturally for power to hold securities. This optimistic view might seem to lack foundation, but given the kind of military situation existing, it is not possible to take any other view. Any proposition as to changes in the value of money is hardly to be ventured but there is the palpable fact that costs of manufactured goods like cloth is still rising. Soap and a variety of manufactured products are dearer. The margin of profit must have changed in most cases owing to the shortage of outside supplies. If generalisation is not warranted, it is still open to urge that the level of earnings for the year will not be affected greatly by the exodus of labour, suspension of night shifts or even by the changes in the prices of raw materials. While it is dangerous to be dogmatic on any such point we can only point to the major influence—the war which is still a stimulant to industrial activity in India.

Editorial Notes

Hitler Explained

Few in India know fully the range and depth of Hitlerite aims. It is well that India should know the mainsprings of aggression, and Prof. N. Gangulee, formerly Professor of Agriculture in Calcutta University, has prepared in the Mind and Face of Nazi Germany a most convincing exposure of the crudest and most horrible features of National Socialism. While the title of the five-shilling book published by John Murray recently may impel one to look for something like Rene Fulop-Miller's account of Soviet Russia it is really something like "Sound and Fuehrer" prepared by Rolf Tell. It is, of course, arrangement that matters most in this kind of record, and Prof. Gangulee's selection is skilled enough to evoke the admiration of Dr. Benes. The new religion founded by the Nazis is a dreadful compound of paganism and Nietzchean philosophy. In the desultory uncovering of roots of Hitlerism, one must not miss the more sombre aspect of anti-Semitism. The Nazis have never been mealy-mouthed, and in the ferocious organisation of perverse prejudice, they have surpassed the Russians long ago. The mind and face of Nazi Germany is hardly inviting, and if Indians are inspired by its efficiency alone they must also reckon up the cost of such dreadful success as has been achieved by tank and dive-bomber. Others might have done the same work for other publishers but Prof. Gangulee's work has distinctive features. It never seeks to raise a laugh when one is not needed. It does not seek to blur anything deliberately, and it certainly tells all that it can of the wrecking crew that has gathered round Hitler. The result is altogether impressive and it will not be beside the mark to say that something more profound and original than the 'Black Record' is the result of Mr. Gangulee's research into the Nazis' own literature. There is certainly a new faith put out by Hitler and Rosenberg for the big, blond beast that fights for the mastery of the European soul. There is much pseudo-science and false religion packed into the Nazis' new philosophy of right and wrong. How 85 millions have been deluded by passion and prejudice must be accounted for, but only Hitler can give the answer, for the Austrian could exploit the habit of obedience, orderliness and other traits of the Prussian better than any Hohenzollern. What the world is up against is a false creed and a false prophet not merely a fascist who sticks to brown-shirts against black. It is a sobering thought that only in the third year of war the charge-sheet against German aims in war and peace has been prepared. But the author and Sir John Murray deserve the thanks of the Engish-speaking world today for letting it know what are the evil things to which Mr. Chamberlain referred more than once.

Aircraft Carrier From India

The B.W.S. has a laudable goal. It has raised £2.6 millions and intends to raise the total further to £3.3 millions. The Secretary has recently had a cable from Lord Kindersley to say that the war savings movement in India should seek to add within the year the money wanted for an aircraft-carrier. The Admiralty proposes to give in adoption H.M.S. Victorious and sterling collections will help to give savers the satisfaction that they have done something to replace the "Ark Royal". India cannot build a carrier, but she can get the money together before the end of the year. The B.W.S. will have a certain satisfaction in seeing that the proposal approved of by the savings movement at Home will go through.

Quality in Sugar

More factories sent samples for examination of quality says a report issued by the Director of the Institute of the Sugar Technology, Cawnpore. The total number of samples received in 1941-42 amounted to 433 against 245 in the previous year. The entire range of production was sent by samples, in most cases sent to the Museum. Data available to the Institute was fuller and more representative than in previous years. Different names were employed—as many as 124 are cited but only six factories had adopted Indian sugar standards numbers for the names of their commercial production. Details as to the four main commercial types have been given. As much as 80.8 percent of the samples were rated as First crystal and 3.46 percent of the samples was grouped as Special crystal in which class No. 26 was the most common type. The largest number of First crystals between 24 and 28 had grain of D and E grades. A certain improvement in the size of grain during 1941 may be taken as a mark of progress, illustrated also by the fact that of samples of colour standard 28 were submitted. Superior types of sugar are being manufactured in India. The majority of second crystals were of colour 23 and 22 and grain size E.. F. though 3 of G type were received. The crushed grades, which control has made familiar latterly, were numbered for 13 to 10. The 34 samples had obviously no distinctive grain. In the case of crystals an improvement in grain size was noted. A large number of factories produced various grades but as in the previous year, the general tendency was to produce up to four grades at the maximum. Two or three grades being most common in 1941-42 as against one and two grades in the previous year. No foreign sugars came to the Institute as they were not on the market. A few factories made fancy types like castor sugar, cube sugar, icing sugar, Demerara sugar, cane sugar and coffee crystal. Those samples received compared favourably with brands of foreign manufacture. There was no material alteration if the season was shorter. Factories obviously could pay more attention to quality than could be inferred from the slight improvement in grain referred to. Standardisation of main grades so that sales at fixed prices could be easier made hardly any progress. The present situation is not likely to promote the kind of thing recommended by the Director in regard to fixed prices and substantial differences in favour of quality groups only.

Wheat Supplies

The total exports of wheat in the eleven months ended February came to 174,400 tons according to the final general memorandum on India's wheat crop of 1941-42. Total imports in the same period came to 18,300 tons only. The figures enhance the interest of the final production figures. The average yield was again lower except in the Punjab. Total yield in 1941-42 for all areas including Madras, Kashmir and certain states is put at 10,291,000 tons. The exports were apparently largest in October and December 1941 and have fallen since January. The area and yield of India's wheat crop has been singularly stable. Big increases in the wheat crop of Canada and Australia have been reported this year but Argentina's crop is smaller though the 1941 carry over is large. But exportable surpluses elsewhere have little interest for India since seaborne supplies cannot be had. The Punjab alone, has a sufficiency of wheat; other provinces of India are dependent on outside supplies.

Among the States, Hyderabad is apparently best-placed as an increase in area under wheat alongside of a fall in yield was reported. The Rajputana States with a fall of 12 per cent in supplies are in a difficult position as compared with Rampur where the area under wheat has shown a substantial increase since 1935 with the result that supplies have risen by 58.1 per cent. There are only three Provinces where wheat cultivation has extended since 1935 namely the Punjab, Sind and Bihar. In the C. P. and Bombay, the average area has been reduced, and the diversion of cotton area to food crops this year will only be a reversal of a trend previously operative. Both Orissa and Mysore produce inconsiderable quantities and any big increase in outturn can come only from the U. P. and C. P. The progress of the monsoon can be studied in the weekly weather report and the crop reports which indicate that Kharif sowings were complete in the C. P. by the first week of August while preparations were going on in the U. P.

Jute's Diverse Uses

How varied are the uses of jute in the world is described by Mr. C. R. Nodder in the I.C.J.C. bulletin for August. Jute finds widening application in both agriculture and horticulture. Jute cloth is used for protecting crops like tobacco and fruits from sun and frost. It is also used for reducing diffusion of vapours during fumigation. Jute cloth is used for checking soil-erosion on cinchona plantations etc. Cloth is used also for windbreaks and again for lining irrigation channels along with bitumen, cement and other materials. Jute fabrics are used for withering tea as also for protection of fruit or bushes from predatory birds. Hop twine, tomato twine, vine-nets and hop-pockets are types of goods indicative of jute's use in the garden. More unusual are rick-covers and seaming twine for woolpacks etc. Horseblankets and fish-nets alike require jute as cattle bedding does. The domestic uses are not restricted to linoleum and jute rugs and carpets. Many decorative fabrics demand the use of jute which is also wanted for wallboards, partitions, tabletops, (laminated products with natural or synthetic plastics). Other articles calling for the use of jute are deck-chairs, awnings, tennis-screens and cricket nets. Book covers, satchels and fire-escape chutes are articles of everyday use. Mattresses' underlays and laundry bags call for jute like oven-cloths. Leather cloth for cushions. Webbing, scrim and stuffing are among the materials that are made from jute. Black-out cloth is perhaps the most recent departure. In the fine arts jute is used for artists' canvas. For paper and cardboard manufacture as well jute cuttings are used, and jute dust is at present used for moulded articles.

Modified Diet

The reduction in Britain's food supplies this year is due largely to cuts in rations, effected mainly to save shipping space. There is a new import policy as well as a new export policy directed towards the economical use of shipping. Lord Woolton's recent statement that tonnage demands for the import of food have been reduced, apart from showing the acute need to keep space for vital needs shows that the policy of relying on home-grown food has been successful in a high degree. Reduction in imports involves smaller rations and more extensive replacement of bread etc.. by home-grown potatoes. British agriculture is making an immense contribution to the war effort by producing more milk and meat. Moreover, imports have altered in nature. According to a recent message received by the Associated Chambers, imports like boned beef, telescoped sheep and lamb carcasses and dried eggs and milk effect a saving in shipping space. Lord Woolton declared that 80,000 tons of dried eggs would be imported in order to avoid the import of 2,000,000 tons of foodstuffs by sea. Dehydration of food is also expected to lead to important economies, thanks to the work done already by British scientists. Drying, besides saving weight and space, leads to further economy in refrigerated space. British-American co-operation in handling food supplies has been advocated in order to gain in quality and space. It has been remarked that cereals are bulky imports and the bread consumption in Britain has gone up mainly because of reduction in meat and cheese. If Americans ate more bread and less cheese and meat, the British would get meat and cheese, and save on bread. There would be a gain in shipping space as well. The recent increase in the cheese ration is said to be inspired by a desire to modify British diet. In this connection it has been observed by the "Times" that considerable economies in the use of space are also being achieved by pooling tonnage and consultation between combined administration boards has helped to secure the most effective balance between the heavy deadweight material required by the British Ministry of Food and the bulkier goods which American authorities must send over for their forces here.

Rubber Shortage

Our readers will remember that we discussed at length the problems connected with rubber in a leading article in the last week's issue. It now appears that in spite of the demand by the Rubber Growers Associaion for an increase in the price to Re. 1 per lb., the Government of India have not raised the price in regard to their purchases. The quotation for First Grade Sheet Rubber at the moment is Rs. 71-8 per 100 lbs. Arrangements have not also been made for the purchase of surplus rubber. Perhaps, it will be too early to pronounce any definite opinion regarding the purchase of surplus stocks as it was only last week that the Government of India announced their decision towards this end. The need for making arrangements immediately to buy over surplus stocks cannot be over-emphasised as in the absence of adequate storage facilities monsoon conditions might result in a further deterioration in the quality of the rubber. Also, the immediate purchases of surplus stocks will help the small consumer considerably and release funds for further intensified production.

State Insurance In China

Assistance to life insurance by the Chinese Government is mainly through the Central Trust that is also connected with the war risks insurance scheme. According to the "China Information Bulletin, in the year ended February 1942, the Central Trust wrote life business for 55 million dollars against 11 millions in the previous year. The Central Trust is associated with the Central Bank of China in banking and other business. As the first State insurance concern in China, the Trust has progressed rapidly after the life department came into being. The Central Trust has become the most important in the insurance field. Business in the first year itself shows an impressive gain, and the Central Trust took the first place having written the largest aggregate life insurance in 1941. It surpassed the China United Assurance Society, founded in 1912, which claimed a total business of 30 million dollars. When compared with foreign companies' totals for funds and revenue alike, the Chinese figures are not at all large. It will be conceded that Life Insurance has made limited progress in China but the vast territory and large population promise a larger development after the war. The Central Trust instituted several reforms which helped greatly to popularise life insurance in China. The first was the abolition of the agent. Formerly life offices used the agent to sell insurance policies to the public. This system entailed payment of high commission to the agent. It was not deemed sound and practical. The insurance department of the Trust started to train its own staff with fixed pay and better security. This helped to increase the efficiency and loyalty of the staff and enhanced the prestige of the staff. The thorough physical examination of proponents has not been an advantage. Insurance proposals could go through easily only in the large cities where medical men and other facilities, were to be had. Since life business could not extend beyond the cities, the department dropped the condition governing thorough examination of would-be policyholders. Life insurance has been sold in small towns by the department which has done much to popularise life insurance through education and publicity. One of the most important features of the departments work is the promotion of group life insurance for Government employees and workers.

Stability In South Africa

The Governor of South Africa's Reserve Bank Mr. J. Postmus reviewed the financial situation in the Union not long ago at the annual meeting. He dealt naturally with the future of gold and urged that the future of gold is more assured than ever. In regard to gold, Mr. Postmus said: the main sources of South Africa's national income are gold production and agricultural activity. The future of gold, still doubted by some, is in my opinion better assured than ever before. Some newly developed industries may have to face difficulties but many more will yield permanent additions to our national income. Our financial institutions are in a position to meet any emergency, and seem determined to remain in that position. Should there be at any time a sudden shock to public confidence, let it be said once more very modestly, but very emphatically nevertheless, that the lending power of the country's central institution is equal to fulfilling every and any demand upon it. For all these reasons, we can face the future with confidence, without becoming overconfident. I do not agree with those people who predict an easier life after this war nor do I subscribe to the pessimistic opinions which now and again disturb the peace of mind of many."

In October last South Africa's sterling securities were called up to the end of March over £32 milion of securities had been repatriated while the Treasury had redeemed more than £22 million worth of stock. In commenting on these operations the Governor of the Reserve Bank said the Union had made of an opportunity not likely to recur of utilising its gold production and idle money for the repatriation of oversea gold shares. Measures like exchange control had become effective and familiar in South Africa as in other countries. Mr. Postmus threw new light on the Union's debt position. The Union's external debt amounted to £64 million and the internal debt to £317 million. Any increasee in internal debt would be accompanied by a reduction in external debt in the future. The debt is represented by assets 80 percent of which are interest-bearing, according to Mr. Postmus. The points of resemblance between India and South Africa will be noted. Another point lies in the growth of trade with the U.S.A. which is taking more and more South African goods. Minerals and ores are in demand. Skins and furs have been asked for by American importers. Jams and wines too have attracted interest in America while British firms are also keen on taking more South African foodstuffs. Since South Africa hopes for a record crop of nuts and wall fruit, this year, while home demand particularly for raisins is likely to be larger than in the previous year. South Africa's prosperity is based not only on gold-mining, but on the development of manufactures. Fertiliser production has made a start and post-war plans for industrial development in the union include the promotion of shipbuilding and motorcar manufacture as also the production or more rolling stock for railways. South African banking is healthy as bank reserves grow large in proportion to deposits. Balances with the Reserve Bank are far in excess of the statutory minimum, says the S.A. Newsletter of July 5.

Saving or Lending

Financial conditions in the war period seem to be the same all over the world. The new issue market is automatically inactive. There is the same emphasis saving and lending for the year. The war savings movement apparently gathers momentum slowly. The U.S.A. turned in April and May readily to new issues. The original bond programme, however, has been retained and over 10 billions of bonds have been sold. Money has been forthcoming for defence and war expenditure since May 1941 when the series of savings bonds was extended. Describing the methods employed to interest savers a recent report of the F.R.B. of New York says that payroll savings plans set up by business firms have helped. In part the bonds have been purchased by the sacrifice by subscribers of some of their current income i.e., the setting aside of a definite part of salaries, wages or other income. Purchases of war bonds out of current income constitute the most important contribution of his character to the war effort, both from the viewpoint of financing of the war and from the viewpoint of economic effects which flow from the purchase. Funds taken out of income add to the total amount available for investment in Government securities. Money taken out of previous deposits in banks simply mean the substitution of the private investor for the bank. But investment of funds withdrawn from trust accounts and certain other deposits against which banks have held cash instead of making investment constitute an exception. In some cases there is really an addition to funds devoted to buying new issues. The economic advantages of using current income for buying defence bonds cannot

ANNUAL REPORT OF THE DIRECTORS

To

THE SHAREHOLDERS,
CALCUTTA COMMERCIAL BANK, LIMITED.
15, CLIVE STREET, CALCUTTA.

GENTLEMEN,

Your Directors beg to submit the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1941. The Auditor's Report is also annexed.

The trend of business in the year under review should be considered against the background of events which mark it out as distinct from other years. Inspite of sweeping changes in the international situation, the unfortunate reverses in the Far East, the year 1941 witnessed relatively steady trend of business in the country in both stock and commodity markets. The hesitations, doubts and fears with which people faced the initial stage of the war melted away and business during this year was settling down to comparative normality. The Company was successful in harmonising its activities with this new tone, and in keeping pace with the general progress of business. During this period a few of the branches were included in places of direct action and are now in occupied lands. But far from this having any unfavourable bearing on the business, the cautious handling of the situations strengthened the public confidence in the Company, as will be evident from a comparison of the figures of 1941 with those of 1940.

During the year there was a steady increase in our deposit liabilities which rose from Rs. 26,35,067-11-0 to Rs. 44,46,197-3-2½ recording a rise of Rs. 18,10,589-8-2½ over the last Balance Sheet figures. The Paid-up Capital of the Company has also improved from Rs. 6,16,653 to Rs. 7,79,345.

During this period the management have successfully tried to rationalise its activities by amalgamating some of its branches with others in their neighbourhood. This policy is being further followed with uniform success in 1942. At the moment the total number of branches stands reduced by 13.

We are pleased to state that the profits amount to Rs. 49,659-4-½ (including Rs. 12,770-8-9 brought forward from last year), and out of this amount we have the pleasure to recommend a dividend at 4 per cent per annum, free of income-tax on all shares, fully or partly paid, involving a sum of Rs. 30,630 approximately, after leaving aside an amount of Rs. 15,000 to be carried over to the Reserve Fund. Dividend Warrants will be issued on application only. Though the improved business should warrant enhanced dividends, it has been decided to reduce the Dividend this year so that the Reserve Fund may be increased by Rs. 15,000 mere and Company's position further consolidated during these days.

The Managing Director deserves your thanks for foregoing the major portion of his remuneration for the year under review. The improved Reserve Fund may be attributed mostly to the amount foregone by him.

The Directors are also availing this opportunity to record their appreciation of the work of the management in piloting the Company to its present stage and thank all the members of the staff who have co-operated with the management in this difficult task.

The Directors Messrs. J. Chowdhuri and S. R. Roy Chowdhuri retire according to the articles, and being eligible offer themselves for re-election. Mr. J. Choudhuri, being absent from Calcutta, could not sign the Report.

The Auditor Mr. D. N. Chakravarti, G.D.A., R.A., M.A., B.L., retires, but being eligible, offers himself for re-appointment.

The 1st August, 1942. / 15, Clive Street, Calcutta.

(*Continued from page 395*).

be gainsaid. Its effect on civilian consumption will be vastly different from that in which savings are realised and used for buying defence bonds. In order to curb inflationary tendencies in wartime it is imperative that large sums should be saved out of current income to be lent, not spent. Regular saving is to be regarded as more important than regular investment. Hoarding was noted early in the war period in the States. It is clear that investment in war issues is preferable to hoarding. Hoarding is common but bank deposits or security purchases seem far more sensible. Hoarding in reality affords no protection against inflation, and both deposits and savings bonds can be turned into cash if necessary. Moreover, a defence bond produces a return while cash held in reserve does not.

Joint Production Plans.

The mention of reciprocity by Mr. Lyttelton in regard to lease-lend supplies leads to the conclusion that the agreements referred to recently provide for a new type of co-operation rather than fresh appropriations by Congress. The U.S.A., has a great interest in reducing her own exports by stimulating British war production as much for the maintenance of local supplies to U.S. troops striving abroad as of saving shipping space. An American steel mission was sent to examine what kind of help Britain required. The two countries intend to exchange missions. for a mission will go out to the U.S.A. after the Americans go over to Britain. Not purchase, but coordination of production is the chief aim. The entire British steel output may be only a quarter of the U.S. steel output but present demand are large. Total steel production must increase rapidly, if only on account of the U.S. shipbuilding programme. The American steel mission probably would resemble the Grady Mission but its objects will be more circumscribed. The American steel mission, it was noted last month, would study methods of raising output in Britain and the U.S.A. also the iron and steel control in its working and examine ways of bringing into better balance the two nations' supply of steel so that plates, shapes and structural steel etc. will all be produced in the proper ratio. It was also the purpose of the Mission to determine what steel products can be best made in the U.S.A., and what can be made in Britain. The mission aimed to study scrap collection methods and methods adopted to save steel in actual consumption. The U.S. and British steel industries will be closely allied through the war when it is established what percentage of output goes for war production and what is taken up for essential civilian purposes. The shortage of special alloys will demand economy of another nature. The W.P.B. delegates to Britain in August should obviously have had the advantage of knowing how maximum joint production can be attained in the field of steel by an interchange of missions.

Brazil's Resources

Recent reports indicated that Latin America was far from co-operating with the Axis. There has been no disapproval of Brazil's declaration of war and the conservative coalition in Argentine led by Senor Castillo is not at all going to treat Brazil on the same way footing as a European nation at war. While the strategic implications have been made plain, it is Brazil's amazing natural wealth that rivets attention. From diamonds to rubber, Brazil produces everything needed for war. The latest ally is, after Argentina, the most considerable of Latin American countries. Endowed with a magnificent river system, the republic has certainy developed inland navigation. The main plateau stretches to the Andes, but Brazil is essentially made up of the Amazon Valley. Timber is about the least important of her natural resources. Cocoa, cotton, coffee and tobacco remind us that Brazil is tropical. Natural rubber is identified still with Para. The vegetable fibres grown include Brazilian hemp known also as canhano. Many vegetable drugs are produced by Brazil which produces also sugar in large quantities, often up to one million tons in a year. Coffee is still the chief crop and Brazil still claims 80 percent of the world's coffee output. Stockraising makes Brazil a rival of Argentina, and canning is well-established. The minerals produced include the gold deposits of Minas Geraes and diamonds in Central Bahia. Coal, agate, amethysts, asbestos, beryls, copper and iron make Brazil important, but her chief contribution to-day would be monazite, manganese and lead. Petroleum also has been noted. The mineral deposits have attracted British enterprise and 15 years ago the total paid-up capital of British mining companies was put at £10 million. Lost resources can be replaced and Latin America's function to-day is to supply the extra materials wanted for victory. The twenty states of Brazil are organised in a Federal republic and the constitution bears a resemblance to the U.S. constitution, at least in regard to the President's vast powers. President Vargas came to office in November 1930 so that he has had three terms after the forced resignation of President de Sousa.

Wholly Successful Year

In the erport of the National Indian Life Insurance Co., Ltd. for 1941, reference is made to the many changes in the Board. The former managing agents have severed their connection and Mr. Leslie Martin was succeeded as Chairman by the late Maharaja Sir Prodyotkumar Tagore. The Natio-

When, six months ago, mostly everyone was expecting a Japanese air raid on Calcutta on the morrow, I suggested that their most likely immediate objective was Australia. Next in importance was Colombo as the prospective target. Raid on Calcutta was most improbable, I argued.

Fears of imminent attack on Calcutta in particular and on India generally have been revived in recent days for various reasons. Enemy radios appear to have proclaimed in advance that India might expect their visitation on September 3.

September 3 has come and gone. The Japanese raiders have neither come nor gone. The radio promise must, therefore, be set down as conclusive testimony of the tactics of bluff in which the enemy is a specialist.

The public in India, however, are not so easily reassured. They may be prone to reason that September 3 was an exceptionally rainy day; that this circumstance accounts for the non-fulfilment of the threat; that, as was proved in the case of Burma, the Japanese never give an idle threat; and that the danger of enemy attack is stilll as grave.

* * * *

On a careful appreciation of the strategy and happenings of the last few days, I cannot share these apprehensions. On the other hand, I have a hunch that the danger to India has almost disappeared for the time being.

This view is, I know, not the official conception of the future plans of the enemy. I must also add that "Reuter" cabled recently a message about U. S. opinion which seemed to suggest impending danger to India.

For the persistence in such a view on the part of official quarters in India and for the prevalence of such a view in America, the main cause is that there has not been sufficient time to gauge the significance of the colossal reverse which Japan has suffered in China in the past week or two. By far the most significant development at the threshold of the fourth year of war is the sudden and unexpected and, threfore all the more gratifying success of Chinese troops in winning back strategic centre after centre from Japanese possession.

To appreciate the full measure of this triumph, we must take our mind back to the end of May, when the enemy started a new campaign to crush China. It was a campaign which had far better chance of success than the lesser drives of the past five years—not only because of the fall of Burma but also because of all the far-eastern catastrophies since December 7, 1941.

An American estimate provides the information that the battle for China began with more troops than Japan used in Malaya, the Philippines and Burma combined. And Japan had new and compelling reasons for seeing it through to a finish. In the words of the same U. S. authority, since Doolittle's bombing of Tokyo and other cities on April 18, the Japanese had been obsessed by fear that the United Nations would use China as a base for large-scale bombing attacks on Japan as well as on Formosa, Hainan, Indo-China and other Japanese outpost-bases.

Here, then, was an opportunity to finish the China Incident and to cut China off from all external sources of supply. To this end, many divisions supported by hundreds of planes were employed in the new attack on China. For ten weeks, the fortunes of war were all on the side of the enemy. The Chinese forces put up stubborn resistance and inflicted heavy losses. But they were obliged to yield ground in every sector. Those places which were considered all-important from the point of view of "Bomb Tokyo" objectives fell into the hands of the Japs.

The prospect was most gloomy. All observers in China and outside were more or less convinced that not many days would elapse before the China Incident would be closed. There was only one optimist in this crowd of Jeremiahs. That was Generalissimo Chiang Kai-shek.

Even while China's news seemed to be all bad to one and all, the Marshal declared: "We have passed our most dangerous crisis"; and he added that "there is decidedly no danger of our being subjugated by the enemy."

The Generalissimo, surely, is not one who will indulge in easy optimism. One may be sure that he had valid reasons for making the confident statement that he made. Marshal Chiang Kai-shek had frankly more confidence in the ability and willingness of the United States to render help than the leader of any other nation had.

It is also significant that, just at that time, three of the highest U. S. generals, Brereton of the U. S. air force in India, Chennault of the A.V.G., and Stilwell of Burma, were in consultation with the Generalissimo in Chungking. It is also highly singnificant that two of them had long been pro-Chinese; and two of them were airmen. It may be presumed that their topic of discussion was U. S. air aid to China. Soon after this conference, informed circles in Chungking predicted that "swarms of American bomber and fighter planes are coming to China's aid."

For the marvellous transformation that has taken place in the battle of China, credit is definitely due to these swarms of American bombers and fighters. The land route from India to China is closed; but the air route has been open all the time and, we may be sure, much traffic has passed in recent weeks over this route.

If the Japanese had suddenly to abandon a campaign which, only three months ago, was started with a more or less complete

assurance that it could be carried to success in the sense of finishing the China Incident, only one of two reasons could explain such a course. Either the Japanese must have realised that they had to deal with a stronger foe than they had anticipated, or later developments might have suggested some other campaign as more profitable from the point of view of Japanese strategy.

In this connection, it has been suggested that the enemy divisions engaged in China had been diverted to the South-West Pacific. Another suggestion is that the Japanese are concentrating their forces in Singapore and Malaya with a view to launching an attack on India.

This is a most fantastic suggestion. Is it conceivable that Japan will abandon a campaign in the "Bomb Tokyo" province of Chekiang in favour of one designed against India? The reverse in Chekiang is calculated to have the gravest consequences for Japan. Read the following extract from "Time":

"From fields in Chekiang, Nagasaki is only a three-hour flight and could be bombed every day. From these fields, Formosa is only one hour across the water. From these fields, flights of transports could have made nightly flights to Bataan and Corregidor, dropping supplies for friend and bombs for foe. From these fields, the U. S. planes could smash the new drives upon China. From these fields, most important of all, bombers and fighters with cannon could have a field day riddling the steady stream of Japanese ships that now moves through the China seas supplying the Japanese in Malaya, Burma, the Indies and the Philippines—forcing the Japanese to draw their navy and their air force back to protect their communications, relieving India and Ausralia from danger."

We may now conclude that, like Winston Churchill, Chiang Kai-shek appealed to America. "Give us the tools and we will finish the job"; and that, having received the tools, he has finished the job. "Bomb Tokyo" bases are again in Chinese hands.

Before Japan can threaten India, she has to protect herself against the threat from the reinforced U. S. planes that may statrt operating from the dozens of aerodromes which the Generalissimo had built in the hope that U. S. air aid would arrive in time.

* * * *

At no time have the ramifications of the managing agency system failed to cover the banking business. Both the indigenous and jointstock banks have flourished on and through the managing agency houses. Indian managing agents have in the past, and in the present, exhibited what I may term a lively appreciation of the benefits of banking. That go-ahead house, H. Datta & Sons of Clive Street is perhaps not the last of agency houses that have nourished banking, and today the progress of the Calcutta Commercial Bank is rightly deemed an achievement of that firm. Any progressive enterprise encounters in the first stage the difficulties created by conservatism, but the Calcutta Commercial Bank has got over all those, and done more. It has set before itself the goal of serving business and created the conditions of progress by a thorough devotion to detail. The extension of branch banking into Assam from East Bengal is no inconsiderable achievement. The six or seven years of association with a firm with diversified interests has enabled the bank to lay down the finest foundations for more rapid advance in the future. In such circumstances as have enabled Indian joint-stock banks to develop services and extend facilities on a limited scale, the Calcutta Commercial Bank has found, and used its opportunities well. The 1941 report and accounts, if they have attracted only brief notice, deserve special attention on the part of shareholders who should be aware that the era of consolidation has come. The proof of that statement is found in the remarkable increase in deposits during 1941. Total deposits increased very substantially indeed from Rs. 26.36 lakhs to Rs. 44.46 lakhs. It may be inferred that the increase in paid-up capital during the same period is a tribute to the efficient direction of the Bank's affairs. The dividend of four per cent free of tax is not to be interpreted as the only mark of sound, prudent management. The addition of Rs. 15,000 to the Reserve Fund indicates that the business of creating additional resources has begun. The capital called up is larger than usual for a bank of its size, but the Bank is scheduled to the Reserve Bank, and it has to-day new chances for employing capital by lending against supply bills and arranging for remittance at reduced rates. The peculiar capital structure of the Bank is sure to attract attention but not more than

NORTH WESTERN RAILWAY

SPECIAL NOTICE

Restrictions on booking parcels and luggage traffic

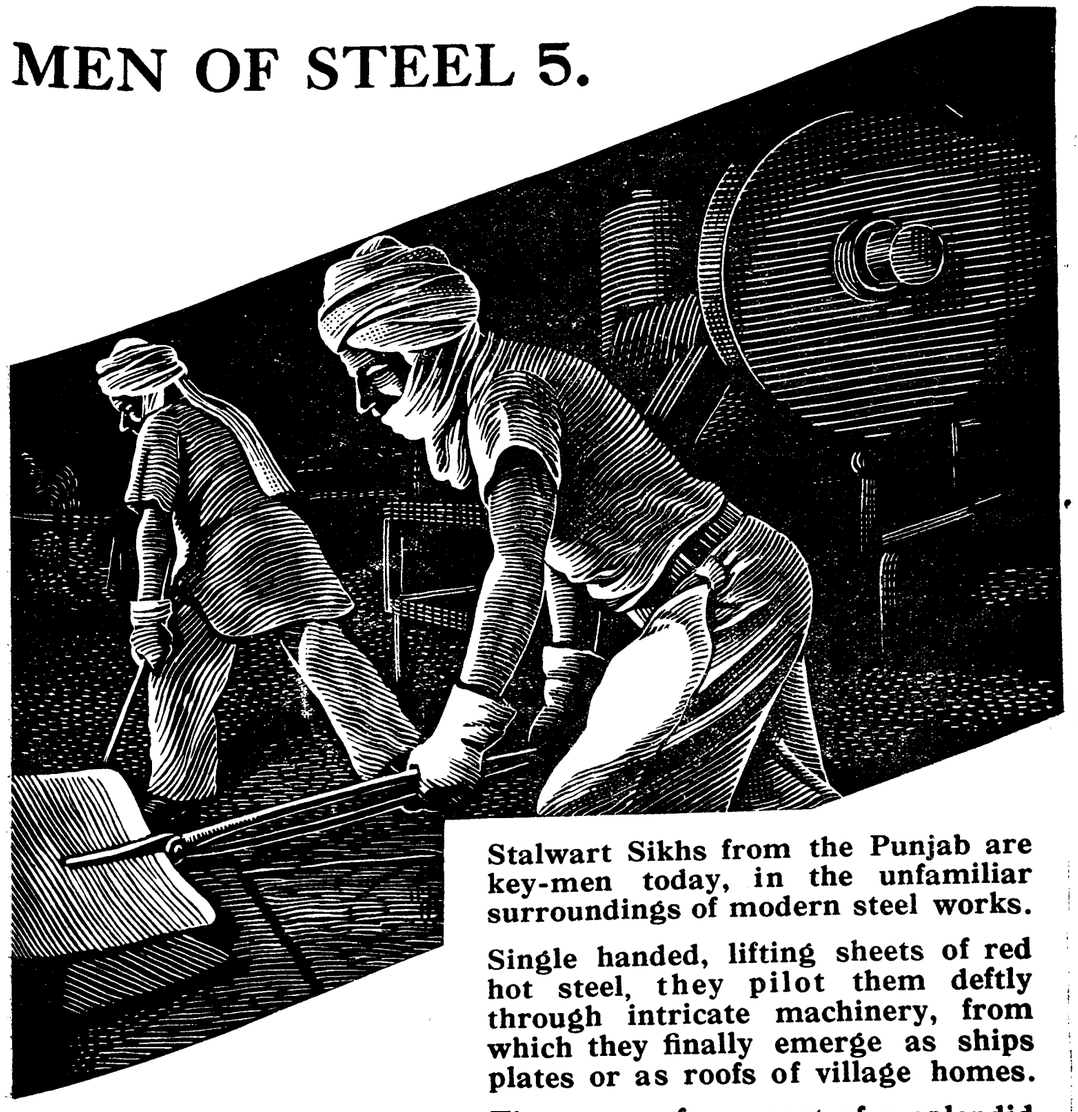
With effect from 1st September, 1942, the following restrictions will be imposed on the booking of parcels and luggage traffic in local, as well as in through booking, from stations on this railway. These restrictions will not apply to military and government traffic, nor to traffic booked under special sanction of the despatching railway:—

I. Commodities such as piece-goods: sugar, ghee, gain, furniture, oils, charpoys, etc., which are ordinarily carried by goods train will not be carried as parcels.

II. No package exceeding three maunds in weight will be accepted as parcels or luggage.

III. The maximum aggregate weight of luggage, including free allowance (whether in owner's charge or in the brakevan) per passenger will be as follows:—

1st	Class ..	5 mds.
2nd	„ ..	4 „
Inter	„ ..	3 „
3rd	„ ..	2½ „



Passengers offering packages for booking as luggage, the total weight of which exceeds the prescribed limit, will have to tender the excess portion separately for transport as parcels, provided they do not contain goods which are prohibited from being carried as parcels.

Further details can be obtained from Station Masters.

General Manager.

the successive additions to capital made up by conveniently spaced calls. It was intended to bring home to the small man that bank shares need not be heavy in any sense. The advantage of paying in instalments will be recognised by present and potential investors as no inconsiderable one. An assured return of 4 per cent. indeed lifts them into the giltedged class, and I really think that the Bank will gather capital in proportion to deposits that are piling up after the accumulation reported in 1941 in regard to capital and deposits alike. The Calcutta Commercial Bank is wholly free from the blame of working with insufficient capital, and its policy of expanding capital at the same time as other assets grow is in line with

MEN OF STEEL 5.

Stalwart Sikhs from the Punjab are key-men today, in the unfamiliar surroundings of modern steel works.

Single handed, lifting sheets of red hot steel, they pilot them deftly through intricate machinery, from which they finally emerge as ships plates or as roofs of village homes.

These men form part of a splendid new generation in India—Men of Steel.

policy officially recommended. The balance-sheet published today may well claim attention as illustrating how the small bank should limit investment in giltedged and turn to other eligible investments. A higher cash ratio than usual is a mark of inherent soundness but organisation expenses might take some time to write off on present reckoning. I should not be surprised if bigger provision is made as from 1942. The annual meeting last week must have recorded warm approval of measurable progress and it must also have recorded its tribute to the Board which has placed the Bank in a position to make more rapid progress on the strength of its 1941 record. To lift deposits and to add to the bill portfolio are by no means easy for a bank when money seems to flow only to the biggest banks. But the Board has been helped by the Bank's supporters, impressed as they have been by judicious publicity which has assuredly made the Calcutta Commercial Bank known while old-fashioned banks are still content to sit back and watch. The Calcutta Commercial Bank does not believe in that and its shareholders have to-day real cause to feel pleased that the young bank is now so familiar to all literate men that a vast fund of goodwill has been created without much effort. That must be regarded as wholly satisfactory, for the imponderables count today as never in the past.

"EAVESDROPPER."

(*Continued from page* 397).

nal Indian as one of the oldest life offices in India has a firm hold. It is exceptional in reporting an increase in life business for 1941. Total business rose by Rs. 11.38 lakhs to Rs. 60.8 lakhs of which Rs. 7.42 lakhs was reassured. The last year is distinguished not only by an expansion in new business but also by an increase in premium and other revenue. Premia for the year provided Rs. 14.17 lakhs nearly, and investment receipts averaging 4.52 per cent last year, amounted to over Rs. 3.32 lakhs. After the increase recorded in premium revenue the total annual revenue in the case of the company rose by Rs. 70,910-8-6 to over Rs. 6.61 lakhs nearly and surrenders took Rs. 73,733-10. It will appear from the revenue account the provision for depreciation in investments is almost cancelled out by the profit on realisation of securities. Total outgo for the year shows hardly any increase on 1940 and this accounts for the addition of Rs. 5.27 lakhs nearly to the Life Fund which stood at over Rs. 77.85 lakhs at the end of 1941. The net addition to the Life Fund is greater than that reported last year and is a significant feature of the period in which Mr. S. P. Bose has continued as Manager and has striven successfully to lower the expense ratio. The shareholders' dividend has been raised to 8 per cent tax-free and this is not the least of the achievements of 1941. Since then two Burma branches have been closed. But that is of little interest to the policyholders of the company who can judge from the figures advertised in this issue how well the Company's assets are held, and how skilfully they are distributed. It is hardly necessary to review the accounts in detail. It will again be seen that ample cash balances are held against claims admitted or intimated. The balance at credit of profit and loss account is to be regarded as the reserve that supports the paid-up capital of Rs. 1 lakh and it must be noted here that investments to the extent of Rs. 1,24,510-14 were held outside the life fund. Outstanding liabilities are covered by premia due etc. The reports for previous years invited commendation for the skilled and prudent distribution of assets. This time interest must converge on the growth of business in a year when so many Indian companies have met with a setback mainly on account of the war. The National Indian has in the past two years more than shown recovery. It has added about Rs. 10 lakhs to its life fund and enhanced the prestige of its past association by extension of its business.

Discussing the results of the National Indian Life, it will be relevant to point out that Mr. Raghaviah has contributed to a great extent to the growth of business of the Company in recent years. Mr. Raghaviah is at present in charge of the whole of the Madras Presidency, the State of Hyderabad, Dayalbagh and Delhi.

(*Continued from page* 387).

giltedged market develop any sinister symptoms. The Indian giltedged market is intrinsically far healthier than its compeers in any other country.

The main tendencies stressed in the above description are reflected in the Imperial Bank's return for the week ended August 28. Deposits established an all-time high at Rs. 145.41 crores. The Bank's advances have again declined from Rs. 25.47 crores to Rs. 24.64 crores. Cash shows a sharp spurt from Rs. 34.28 crores to Rs. 37.15 crores.

The exchange market has been dull and uninteresting, with a shade of better showing in export activities.

The closing rates are: Banks buy T.T. London ready to six months forward at 1s. 5 31/32d., and banks sell T.T. London ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. bills at 1s. 6 9/32d., for the first and second months at 1s. 6 5/16d. for the third and fourth months.

Money continues unchanged at ¼ per cent all lenders.

Banks buy T.T. New York Ready at Rs. 329 for $100.

SPECIAL ITEM COSTING OVER Rs. 5,000, CLASS I CONTRACT.

Sealed Tenders are invited for the following and will be received in the Controller of Stores' Office, East Indian Railway, 105, Clive Street, Calcutta, up to 11 a.m. on 25th September, 1942.

Tender No. S/Gb2/374/B for supply Lamp Brake Van Tail with Burner and Reservoirs complete Lamps Oil wick burning (b) Kerosene.

Tender forms with full particulars can be had from the office of the Controller of Stores', East Indian Railway, Calcutta, on payment of Rs. 2 per copy to the Treasurer, East Indian Railway, Calcutta and on production of his receipt when applying for the same.

Firms outside Calcutta, may however remit the amount to the Controller of Stores, direct by money order. No refund is permissible after payment.

Drawing Nos. I.R.S.(C)CA-1601 together with its component drawing I.R.S.(C) C-1602 to C-1617, CA-1618, C-1619 to C-1623, CA-1624, C-1625 to C-1635, CA-1636, C-1637 to C-1643, CA-1644, C-1645 to C-1649 with the latest alteration may be seen in this office.

Firms may purchase the copies of these Drawings on payment and on application being made to the Chief Controller of Standardization, Central Standards Office for Railways, New Delhi.

Gateway of India

(From Our Correspondent)

Bombay, September 3.

"A market set in a desert of hartals" is the apt description given by the *Times of India* about Bombay. To simplify the account let me draw on the same authority. There has been very little Bombay market. The market has mostly been officially open, with no transactions taking place. And at a time when the U. S. Administration is devising ways and means to break the natural price up thrust, the Indian cotton trade is suffering the pains and penalties of shaken confidence. There cannot be confidence in a market which is open one day and close the next and the next and many more after that. Continuity of trading is an essential factor in the maintenance of security. One reports that objectively as an elementary fact. Who, for instance, is going to take up commitments in a market from which he cannot get out—in these days when a price trend might be reversed in a second by the latest news flash? "And why, by way of political protest, should the cotton trade close its own market and by so doing hurt, most of all, itself? Possibly the majority of cotton traders find life easier than one does oneself."

* * * *

Nobody finds life easier because no one in high places seems to endeavour towards any straightening out of the situation. Mr. J. R. D. Tata, head of Tatas, has proceeded to New Delhi to discuss certain matters vitally affecing the mobilization of war resources and the conditions necessary for the uninterrupted outturn of steel from Jamshedpur. A large number of fire-fighting experts have arrived from England but the political situation continues smouldering. Mahatma Gandhi's health is of particular concern to the Bombay Government, and I learn he spends a considerable time making up for arrears of sleep. The following Government *Communique*, though brief, has been reassuring.

Mr. Gandhi is in a private house, where he is supplied with everything necessary to secure his comforts and the kind of food he requires. His wife is with him, and also certain companions, including his own medical adviser.

The members of the Working Committee are also accommodated in suitable quarters and are supplied with all the necessary conveniences. They are in the charge of an officer of the Indian Medical Service.

All these persons are permitted to correspond with members of their families on personal matters and are provided with newspapers. The health of all is good.

* * * *

The small hosiery factories started throughout India under the impetus of protection are now experiencing great hardship in getting supplies of cotton hosiery yarn, the output of which has been regulated by Government. Most of the small factories have been forced either to shut down or reduce their activity owing to shortage of supply of the raw material. In this connection, Mr. G. N. Kapoor who is associated with the industry, states that the object of this control is to ensure supplies of hosiery yarn for factories engaged in war work. But, in his opinion, hardly 15 per cent of the knitting machines in India can make vests according to the specifications of Government. Moreover, he thinks that it is easier for the major factories to enroll themselves as Government supplies and to reap the double advantage of catering for Government and civilian demand by securing supplies of yarn. He also apprehends that Government have contracted with the United Kingdom Commercial Corporation for exporting cotton yarn from India to foreign countries.

* * * *

The Government of Bombay have revised the rates of dearness allowance granted to the whole-time daily rated staff with effect from July 1. If the average cost of living index in Bombay City for three consecutive months is 143 or above, they will be paid an allowance of 3 annas 3 pies a working day, subject to a maximum of Rs. 5 a month, in Bombay City and of 2 annas 9 pies a working day, subject to a maximum of Rs. 4 a month, in the mofussil. Only those whose wages calculated for a full month do not exceed Rs. 69 a month in Bombay City and Rs. 49 a month in the mofussil, are eligible for the concession. The daily rated staff in Bombay City whose earnings exceed Rs. 69 but not Rs. 74 a month and those in the mofussil whose earnings exceed Rs. 49 but not Rs. 53 a month, however, will be granted such allowance as is necessary to make their total earnings equal to Rs. 74 and Rs. 53 a month respectively. The allowance will not be admissible to those whose rates of pay have been increased since the war on account of rise in prices.

* * * * *

Do all businessmen know what business is and what it is not? An interesting point as to the meaning of the word "business" arose for decision before Mr. Justice Kania in an originating summons taken out by Hirjibhoy Muncherji Muncherji Kavarana against Shavakshaw Muncherji Kavarana and another for the construction of a clause in the will of the deceased Muncherji Kavarana. In clause 9 of the will the deceased, after saying that he desired to close his business for various reasons, provided that in the case the business was not closed, "I hereby give to this sons Ratanshaw and Shavakshaw my said business, inclusive of the goodwill, the outstandings and the stock-in-trade thereof, but subject to the liability for payment of its debts." On behalf of the plaintiff, it was contended that what was intended to be given was the goodwill, outstanding and the stock-in-trade, but not the cash balances of the business.

* * * *

In giving judgment, His Lordship said that the correct way was to gather the intention of the deceased from the testamentary documents for which probate had been issued. From these documents and admitted facts, it seemed that the deceased had kept his business cash separate from his private cash, and dealt with it separately during his life-time. In His Lordship's opinion, the natural and proper construction of the clause in question was that the testator wanted to give to his two sons all that was understood and known to be his business. In Halsbury Vol. 34, Article 298, the principle was stated thus: "A bequest of a testator's business or of his share in a business "prima facie" includes his interest in all the assets. . . ." His Lordship also referred to Easton *vs. Boyd* (1938) 1 Ch. 828, where the bequest was of "the business of a solicitor and the office, furniture, law books and other articles in the office," and it was held that all the assets and monies employed in the business, including undrawn profits and plans made to clients passed to the legatee. His lordship therefore held that the bequest of the business covered the whole business, including the banking account and the cash balances shown in the firm's books.

Resume of Commodity Markets

THERE are no important developments to be recorded in the commodity markets during the past week, markets in Bombay continuing to remain closed. In Calcutta the jute and sacking sections have been definitely firmer with good demand for the early positions. Bullion markets have been absolutely uninteresting while in the grain markets it is difficult to do business on account of the scarcity of supplies.

Interest naturally centres around the forthcoming Sixth Price Control Conference to be held in New Delhi early next week. Several suggestions have been put forward by interested circles for a more successful solution of the various problems regarding the distribution, supply and production. While it is appreciated that the campaign for "growing more food crops" has been vigorous and may prove to be successful, there is still considerable criticism regarding the manner in which the authorities have chosen to look after distribution and supply in the absence of any firm method of control. It is expected that these and other problems will be given adequate consideration at the forthcoming Conference and that more effective control will come about.

Jute

It has been pointed out in these columns, on more than one occasion, that inspite of the plentiful supplies of jute, mills will be obliged to pay higher prices for their requirements of early jute if they were to postpone buying till the last date. The deterioration in transport facilities have been mainly responsible for the difficulties of mills in getting their requirements of jute adequately. It is feared that there will be a further deterioration in these facilities in the coming months. Until mills are able to replenish their stocks to a comfortable level, premiums will continue to be offered for early deliveries. The ultimate outlook continues as gloomy as ever and the ryot should, therefore, be thankful for the present rise in prices. It will be of no great benefit to him if he is not able to dispose of any sizeable quantities.

In this connection, there has been some criticism regarding the procedure adopted by the authorities in alloting wagons or flats for the transport of jute and it appears that the more influential balers have been able to get their requirements of wagons or flats to transport jute from upcountry to Calcutta. As the premiums offered by mills afford the payment of higher transport charges, balers have been successful to a certain extent. But in view of the fact that the stock position is difficult in the case of several mills and transport facilities are very difficult to obtain, some procedure should be adopted in this regard so that every mill is enabled to get its immediate requirements without being obliged to pay through the nose.

Jute Manufactures

The hessian market continues to be as uninteresting as ever, and after the rise in prices noted last week, no further improvement in values has been recorded during the past few days. It appears that with the demand at the present level it will not be possible for any further improvement in values to be recorded. As the United States is our main consumer and the shipments to this country continue to be at a very low level, it cannot be expected that the short fall on account of exports to this country will be made up by the increased takings by other countries. For, being mainly a commodity consumed by export countries, the problem is essentially one of freight; and if freight can be found for countries within the Empire, it can be found for the U. S. as well, as lease and lend ships come in large numbers from America and call at ports in the Middle East. Without any appreciable improvement in the freight position it will be useless to look forward to any increase in the demand for hessian. Until such time it will also be impossible to prevent an increase in hessian stocks for civilian consumption. The local stock figures for the month of August should make interesting reading. It is reported that there has been a further switching over of hessian looms to the production of sacking for which there is great demand at the moment and mills are not in a position to supply requirements for early delivery. A large amount of business has been reported in "B" twills and Liverpool twills for early shipment during the past few days at considerably higher prices.

Cotton

No business has been passing through the Bombay market and the only item of interest to be noted is the cotton forecast figures for 1942-43. As expected, there is a reduction in the area to 11.08 million acres, a decrease of 11 per cent as compared with the corresponding forecast of last year. It will be remembered that with the entry of Japan into the war on the side of the Axis Powers, considerable concern was expressed regarding the future of short staples. The Government advised ryots to grow less of the short staples in the 1942-43 season and said that the ryot who was willing to change over to the production of food crop from cotton will be compensated in cash to a certain extent.

It is possible that the decline in the area under the crop in the 1942-43 season is mainly on account of the "grow more food" campaign.

Rice

The position in regard to this commodity is deteriorating daily and it is reported that prices for all qualities are soaring daily in the "black" markets. To add to the difficulties of the country the Home Minister from Ceylon has come here all the way to negotiate with the Government of India to purchase stocks of rice to the extent of 38,000 tons per month. The position in the Island seems to be alarming. Rice rationing has been already resorted to and people are getting only one-third of their usual requirements.

It will be remembered that it was pointed out in these columns last week that the deficiency in regard to this commodity was as much as 2.2 million tons and that as a result of the "grow more food" campaign, it was expected to raise an additional quantity of 800,000 tons. There would still be a deficit of 1.1 million tons to be made up. While we are discussing the ways and means of overcoming this shortage by switching over to other food crops in greater quantities, it is difficult to see how we can possibly provide Ceylon as much as 450,000 tons in a year, not to speak of the difficulty in getting the necessary freight. Being our neighbour Ceylon should be provided with her requirements if we can help it though her attitude towards Indian labour in the past has been none too satisfactory and does not excite any manner of sympathy from the Indians.

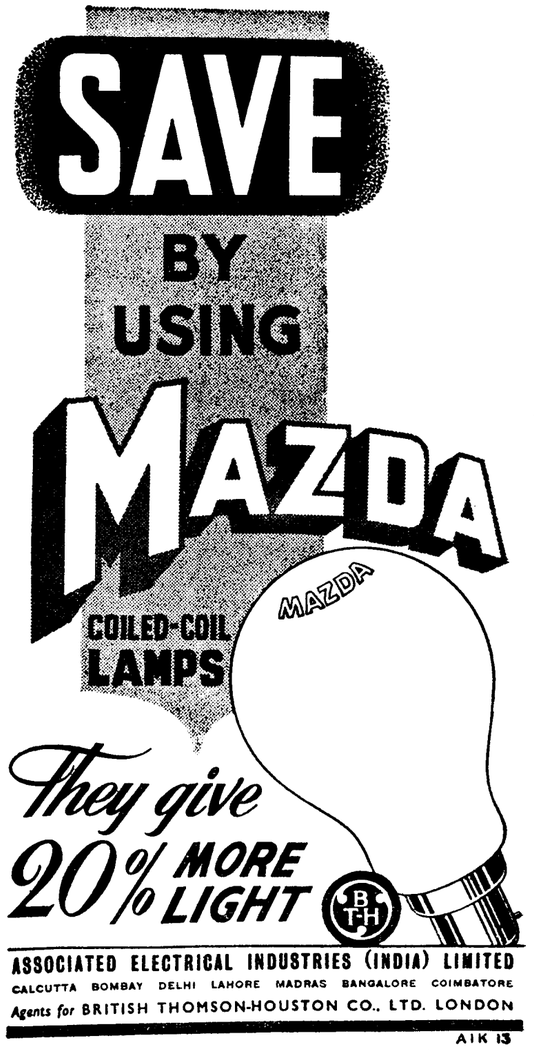
There are reports that rice also will be controlled on an All-India basis. The measures taken by Bengal, the chief producing province in this country, have not been considered very satisfactory and in view of the acute scarcity in certain places and the need for proper distribution and control, it is understood, that the question will be taken up at the Conference next week.

Sugar

It is announced that after consulting the sugar industry the Provincial Governments and other interests concerned and the Central Sugar Advisory Board, a body composed entirely of representatives of Central, Provincial and State Governments, the Government of India have decided not to join in the proposed extension of the International Sugar Agreement. India's obligations under the agreement will thus terminate from September 1, 1942.

India was a party to the International Sugar Agreement which was concluded in 1937 to establish and maintain an orderly relationship between supply and demand of sugar and to regulate the world prices of sugar. Under this agreement, India undertook to prohibit exports of Indian sugar by sea elsewhere than to Burma.

The term of the agreement expired on August 31, 1942, and the International Sugar Council recommended to the contracting Governments the continuance of the agreement either for the duration of the war and one quota year after the end of hostilities or for two years from August 31, 1942, whichever is less.



Silver

Last week we remarked that the decision of the U. S. to increase the purchase price for silver from 35⅜ cents to 45 cents per ounce should not have any effect on the Indian market as, being isolated, the Indian price was considerably higher than the U. S. parity price. Whereas the equivalent of the new U. S. price is 25d. per ounce the equivalent of the Indian price is as much as 33d. per ounce. Private exports of silver from Mexico have also been banned and it is pointed out that the decision of the U. S. to increase the silver price has been done only to help Mexico and stimulate production of lead and zinc, which are the main by-products of silver.

It was expected that the London price also would be raised to the level of the U. S. price but it now appears that the British Treasury will continue to be a seller at 23½d. It is feared on this account that there will be a diversion of silver from London to New York to take advantage of the higher prices. This country, however, is only interested as a holder of stocks as the production of the white metal is very small.

It is, however, relevant to point out in this connection that while the authorities in India are selling silver for delivery at the mint at the level of Rs. 85 per 100 tolas, they have been selling at 23½d. per ounce Indian stocks in the London market for other than Indian consumption. As the Indian stocks have been acquired at very low levels there is naturally a considerable profit at 23½d. but if the U. S. can increase their purchase price to oblige other countries, surely there is no reason to oblige countries within the Empire with cheap silver at the expense of India. The position in this regard, however, is not clear. If the words "small demand has been officially satisfied," do not denote that any Indian silver has been sold at the selling price we cannot, however, have any grudge. But the weekly offtake is estimated at about 80,000 oz. and reports indicate that London stocks are about 10 million oz. on account of the Government of India.

The reports regarding the intention of the British Treasury to keep the selling price at 23½d. are perhaps due to the fact that negotiations are going on at the present moment for getting silver under the lease and lend agreement. If substantial stocks are secured in this way it may not perhaps be necessary to sell from Indian stocks. The need for conserving Indian stocks of silver is more than ever important.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, September 3.

LAST week when discussing the vexed question of excess moisture in jute and the methods of assessing the same, it may have appeared that our attitude was one of purely destructive criticism of certain official proposals for the scientific testing for excess moisture, at present before the Industry for consideration. Our objections were not only to the admittedly inaccurate term "regain" which we considered that a very large number of those engaged in the trade would fail to comprehend, and to the unnecessarily complicated and obscure calculation to which this term led, but also to the inadequacy of the weight of the proposed test samples as giving a fair representation of the general condition of a parcel. Limitations of space prevented us at the time from concluding our observations on the subject, but we shall now proceed to give some account of a method which has not only the merits of greater simplicity than the official proposals, but a method which has actually been in continuous use for over two years and which has so gained the confidence of Sellers that its results are seldom if ever contested.

For quite a number of years now, one Mill has applied quite a lot of brains and inventive imagination to the problem of evolving a satisfactory method of "oven-test" for the purpose of ascertaining accurately the moisture content of jute, and after numerous experiments, those concerned have produced a thoroughly practical testing oven, which will not only accommodate a sufficient quantity of jute to represent a fair average of a parcel, but also produce results which, for all practical purposes, will equal in accuracy the most scientific test methods against which they have been checked.

We do not propose to give any detailed description of this oven. It is for anyone interested to go there and see, probably in actual operation. There is nothing complicated about it and its principles can be grasped by the least mechanically minded. It is of a size to accommodate about three maunds of jute, which on a parcel of 250 bales represents .3 per cent as compared with the 36 pounds of jute, or .044 per cent of 250 bales envisaged heretofore in the official proposals. The method of drawing samples is as follows. The end of a bale selected for test is divided across the middle by vertical and horizontal lines. Then all the morahs or heads which constitute one of the quarters so defined are withdrawn and used for test. That is to say, one-eighth of the bale is tested and that eighth contains morahs from the outside right into the centre of the bale, constituting as far as possible a representation of the condition of the whole bale. Six bales from the parcel to be tested are so treated and these samples are immediately weighed and spread on the racks and placed in the oven. After drying, the weight is taken again and the difference represents the loss in moisture. This particular Mill has adopted 13 per cent as the standard of "natural moisture" in jute as a result of their own experiments in evolving their system. Therefore any loss in weight in excess of 13 per cent represents excess moisture, for which the Mill can claim. But this Mill is fair-minded. The system works both ways. If the loss in weight after drying is less than 13 per cent, the mill refunds the difference to the seller. While this principle cuts right across the normal canons of armed neutrality and suspicion which generally subsist between buyer and seller in the jute trade, it certainly appeals to the Sellers as a rare example of the "fair deal" which, possibly combined with the apparent generosity of the 13 per cent standard as compared with the contract figures of 12 per cent and 10 per cent according to the season, has resulted in this particular method of oven test becoming entirely acceptable to sellers. That the system is based on sound fundamentals is also evidenced by the fact that when jute is arriving in a generally dry condition, the oven test figures tend to vary only very slightly on either side of the 13 per cent basis.

Here then is a thoroughly practical system already in actual use, dealing with a quantity sufficient to represent a fair average of the condition of a parcel. It is of a simplicity both in action and in the method of arriving at results as to be easily comprehensible to the least sophisticated. Its results are already accepted by the trade as being so fair that they are seldom contested. The re-duplication of this system either at an official Test-house or at individual mills would be a comparatively simple matter, and being already established, recognised and understood, it has a ready-made confidence in the minds of the trade which must of necessity be lacking in the case of any new and untried system. Why the Industry in general should worry to go further than this already tried and proved method for the accurate assessment of moisture content in jute it is difficult to understand. Is it possible that it is the principle of "give and take" which the test system involves that is the stumbling-block? The problem of excessively damp jute is such a bane to the trade at frequently recurring periods that it is surely desirable that every encouragement should be given to dealers to deliver jute in as nearly as possible its natural dry state. If a seller knows that he will get credit if his jute is drier than standard the chances of getting dry jute delivered are surely greater than if the seller knows he will get no such credit. So any such cheese-paring inhibition to refunding on jute proved by test to contain less than the accepted standard of moisture content is surely of the penny wise pound foolish variety.

The Final Review of the 1941-42 Jute Crop has now been published and the only feature of interest which it conveys is a statement of the Supply and Distribution of the crop. This statement places mill consumption at 72¼ lakhs of bales and Exports at 15,42,400 bales and puts the carry-over into season 1942-43, including Mill stocks at 39,30,000 bales. As these figures are presumably based on official returns, they ought to be reliable.

Very little business for shipment has been reported from the Export Jute market. Dundee Daisee assortment at Rs. 57, Dundee Tossa assortment at Rs. 68 and Dundee Tossa 4's. at Rs. 58 have been recorded. Quite a considerable turnover has been put through with mills, however, for delivery during September mainly, buyers doubtless being anxious to be sure of getting delivery while the shipping position from upcountry is so doubtful. Sales are reported in Old and New crop Firsts at from Rs. 50 to Rs. 52 for near and at from Rs. 49 to Rs. 51 for September. Lightnings for quick shipment sold at from Rs. 37 to Rs. 42 and for September at Rs. 38 to Rs. 41. Old Crop Hearts for ready shipment fetched from Rs. 32 to Rs. 35 and New Crop for September from Rs. 34 to Rs. 35. Balers are now very fully sold for September and are already falling behind with their nearer commitments. They are, therefore, cautious sellers and quote for September Firsts, Rs. 51, Lightnings, Rs. 42 and Hearts Rs. 35. October shipment quotes one rupee less.

In loose jute the turnover has not been large but ready Bills of Lading and anything for quick shipment finds a ready sale, at a premium over shipment rates. The local Bazar rates are relatively high, particularly for common quality. European packing was again done at Rs. 9 and Rs. 6 for Middles and Bottoms for shipment by 15th October. Supervised packing sold at four annas less. Indian District Tossa was in demand at Rs. 9-4 and Rs. 6-4, Middles and Bottoms and some district Bottoms alone were reported at Rs. 6. More waggons have been available at stations served by the Railway and this has had the effect of raising prices in these stations owing to the high rates obtainable in the Bazar for quick shipment lots. For the first time, for many months, the figures for jute arrivals are higher than last year. Estimated arrivals for August are 4,97,000 bales against 4,92,000 for August last year. That brings the total arrivals for the season to date to 7,52,000 bales against 9,72,000 at the end of August 1941.

In the Fabrics section Hessian demand still hangs fire despite reports of more freight likely to be available for the U.S.A. The usual inter-bazar transactions have been reported around Rs. 14 and Rs. 18 for nines and elevens respectively. 45/11 oz. for cash fetched Rs. 19-10. Heavy Goods have again been a fairly active market, but mills are now reserved sellers for any position this year. Rates have consequently hardened and business has been done in "B" Twills at from Rs. 41-8 to Rs. 41-12 September, at Rs. 41 October-December and at Rs. 40 January-March. Liverpools have been dealt in at Rs. 48-4 to Rs. 49 September, at Rs. 48 October, at Rs. 47 November-December and at Rs. 44 January-March. Cornsacks have sold at from Rs. 42-8 to Rs. 43-12 September, at Rs. 42 October and October-December and at Rs. 41 November-December and January-March. Woolpacks fetched Rs. 2 for September-December, Re. 1-15-6 for October and Re. 1-15 January-March. Other sales reported include 3¼ lb. Grains at Rs. 61 October, D. W. Flours at Rs. 43 October-November and Cuban Sugars at Rs. 51 October-December and at Rs. 50 January-March.

JUTE

Calcutta, September 3.

THE jute market has been rather brisk during the past week with mills very keen on buying for early deliveries. With transport difficulties there is naturally considerable difficulty in getting supplies and the weather conditions have been none too favourable. It has been pointed out in these columns on more than one occasion, that mill stocks are very low and that it would be necessary to replenish stocks at an early date. With the present stocks it will not be possible to carry on for more than five months if production is to be maintained at the present level. Mills seem to be anxious regarding contract jute and it appears that they will not be able to get it in time. Balers who are in a position to get transport facilities have been able to do good business and with the premiums offered for immediate delivery it is possible to pay high rates for transport.

The quality of arrivals is still poor. The sharp rise in prices in Calcutta has resulted in a firming up in values in the mofussil centres where business is possible. In certain centres there is still congestion of jute.

In the loose jute section, business has been on a fairly large scale. The recent large buying of bottom grades for sacking production has resulted in a rise in prices for the lower qualities. Here again, most of the demand is for early delivery. Indian Assam District Tossa Bottoms were done at Rs. 6 per maund. Indian District Middles and Bottoms were done at Rs. 9-4 and Rs. 6-4 per maund.

In the pucca bales section, balers have been busy. Mills bought Lightnings, Hearts 2/3 and Firsts at Rs. 40, Rs. 30 and Rs. 50 per bale respectively. Old crop Dundee Daisee 2/3 are in short supply and the quotation is further higher at Rs. 57 per bale.

JUTE MANUFACTURES

Calcutta, September 3.

THE jute manufactures market has been uninteresting. Hessian prices are more or less unchanged. The volume of business passing in the market at the moment is very small and at the present rate hessian stocks should continue to show an increase. The reports regarding the possibility of an improvement in freight to the United States have not materialised so far. Demand for heavy goods continues to be brisk and it is reported that local stocks at the end of August 1942 would make a good showing.

Nine porters ready are quoting Rs. 14, September Rs. 14-2 and October-December Rs. 14-6. 11 porters ready Rs. 17-14, September Rs. 18 and October-December Rs. 18-4.

In the heavy goods section, as remarked above, firm conditions have been noticeable. "B" twills for ready shipment sold on the basis of Rs. 41-8, Liverpool twills Rs. 48 and Cornsacks Rs. 43. Demand for early delivery is unsatisfied and mills do not have any production to sell for the earlier positions.

GOLD

Calcutta, September 3.

THE Bombay market has remained closed and most of the business has been passing through Calcutta. Operators have naturally got busy but with the arrival of large gold stocks prices have been marked down. Gold Bar per tola quoted Rs. 54-10. Sovereigns were unchanged at Rs. 40-12.

SILVER

Calcutta, September 3.

THE silver market has not been in any way affected by the decision of the United States to increase the purchase price for silver. So far no change has been made in the London price. As all markets are independent of one another, the prices in one particular place do not affect the other. Silver ready is quoting Rs. 83-14.

In the London market, the quotation for both spot and forward has remained unchanged at 23½d. Small demand has been officially satisfied. Private exports of silver from Mexico have been banned.

COTTON

Calcutta, September 3.

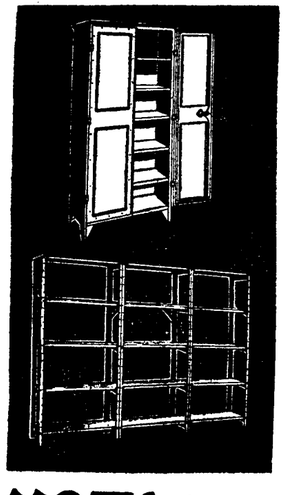
No business has been reported in the Bombay raw cotton market. The New York market has been steadier with October at 18.18 cents and December at 18.32 cents.

The first cotton forecast for 1942-43 should not come as a surprise to operators. As a result of the campaign for growing more food, there has been a reduction in the area by 11 per cent as compared with the corresponding forecast of last year. The figures are given below:

	Thousand Acres.
All-India	11,089
Trade Descriptions:	
Bengal	1,922
Americans	2,523
Oomras	4,129
Others	2,515

The decrease of 11 per cent as compared with the corresponding forecast of last year is due to "Grow more food crops" campaign.

PIECEGOODS



Calcutta, September 3.

THE piecegoods market has continued firm and a further improvement in values has been recorded. Stocks with dealers are rather small and it is very difficult to get fresh supplies. Buying for the Poojah season has begun in right earnest and if demand has to be fully met considerable replenishment to stocks will have to be made.

It is expected that production in August will be badly affected on account of the strikes. The situation in Ahmedabad is reported to be slightly better and most of the workers are reported to have returned to work.

IT'S A FACT—
that more than 90% of India's teeming millions never save a rupee of their earnings. Money borrowed at fantastic interest cripples them financially for life. An account with the Palai Central Bank safeguards you from debt and worry—it puts success within your grasp.

ENDURANCE

The IRON PILLAR

The famous Iron Pillar of Delhi, which bears a Sanskrit inscription dating back to A. D. 300, has successfully withstood the ravages of time. Likewise, we claim that our STEEL Equipment, even if it may not last for centuries, does definitely last for much more than a life time.
Important, too, are other advantages . . . Steel Equipment is insect, fire and burglar-proof. It will not warp. Each unit remains for years in the same condition as when originally purchased. The first installation cost is the last. May we quote for your individual requirements?

THE GOLDEN CROPS OF IND...

IN German-occupied Europe and Japanese-occupied China, the rich golden crops are harvested by the enemy while the rightful owners starve and die. Are you going to let this happen to India, where our mainstay is agriculture? India with her huge resources is the most tempting prize of all to the enemy. Japan uses soft words to woo us into submission! But beware of those words. Resist Japan with all your combined might, for Japan's coming will mean starvation for your women and children.

Stock Markets to-day and to-morrow

REVISED MINIMUM PRICES FOR GOVERNMENT SECURITIES

STEADIER conditions have been noticeable on the Calcutta Stock Exchange during the short period it has remained open. There is still no trading on the Bombay market. There is no special reason for the improved tone of the market during the past few days. The quieter political situation and the successes in South-west Pacific have perhaps had an encouraging influence.

* * * *

The feature of the week is the fixation of revised minimum prices for Central and Provincial Government securities by the Government of India. It is pointed out that the minimum prices that were fixed in March this year are inappropriate having regard to the state of the money and securities markets.

The revised minimum prices should impart greater strength to the market though it cannot be said that they will have any encouraging effect on prices as present quotations are considerably higher. For sometime past, operators have been rather hesitant to enter into new commitments. The knowledge that there cannot be any violent break in values with any unfavourable developments can, perhaps, help the investor to take a more definite view. There is plenty of money seeking investment and the yield on treasury bills is very low. Any favourable development may, therefore, result in an appreciable rise in values. The revised minimum prices are given below:—

Description of Security	Minimum Price Rs. A.
4% Loan, 1943	101 0
5% Income-tax Free Loan, 1945-55	107 0
3% Defence Bonds, 1946 ..	101 0
3½% Loan, 1947-50 ..	101 8
2¾% Loan, 1948-52 ..	97 0
4% Loan, 1948-53 ..	104 8
3% Loan, 1949-52 ..	98 8
4½% Loan, 1950-55 ..	107 8
3% Loan, 1951-54 ..	97 8
3½% Loan, 1954-59 ..	100 0
4½% Loan, 1955-60 ..	109 8
4% Loan, 1958-68 ..	109 8
3% Loan, 1960-70 ..	106 8
3% Loan, 1963-65 ..	91 0
3½% Non-terminable Loan ..	77 0
5% Non-terminable Loan ..	90 0
4% U. P. Loan, 1944 ..	104 0
3% Punjab Loan, 1948 ..	103 8
3% Punjab Loan, 1949 ..	98 0
3% C. P. and Berar Loan, 1949	98 0
3% Punjab Loan, 1952 ..	96 0
3% U. P. Loan, 1952 ..	96 0
3% C. P. and Berar Loan, 1952	96 0
3% Madras Loan, 1952 ..	96 0
3% Assam Loan, 1952 ..	96 0
3% Madras Loan, 1953 ..	96 0
3% N.W.F.P. Loan, 1952 ..	96 0
3% Punjab Loan, 1958 ..	92 0
3% Madras Loan, 1959 ..	92 0
3% U. P. Loan, 1961-66 ..	88 0

* * * * *

The results of the McLeod group of jute mills for the half-year ended June, 1942 should be considered rather satisfactory if it is taken into consideration that difficult conditions were prevalent in the jute trade in the first half of 1942. The fairly well sold forward position has possibly been helpful for these companies to report even higher earnings for the last half-year. The aggregate earnings of six companies in the group is Rs. 27,78,464 against Rs. 25,98,451 for the half-year ended December 1941. The results of the Nellimarla and Chitavalsah Jute Mills in particular make very good showing. The dividends have been maintained in the case of four companies. The ordinary shares of the Chitavalsah Jute Mills return to the dividend list after a long time.

With the present uncertain outlook for the industry it cannot be expected that it would be possible to maintain earnings at the level for the last half-year.

* * * * *

The net profit of the *Soorah Jute Mills Company, Limited,* for the half-year ended June, 1942 is Rs. 2,96,355 against Rs. 3,50,929 in the previous half-year. The provision for taxation is Rs. 1,20,000 (Rs. 1,60,000). The amount set aside to depreciation is lower at Rs. 75,000 (Rs. 1,00,000). Arrears of dividends for two half-years ending June 1941 are to be paid. It is unfortunate that just when there was a possibility of the ordinary shareholders getting a dividend the outlook for the industry should be so confused.

* * * *

The earnings of the *Nellimarla Jute Mills Company, Limited,* for the same half-year are appreciably higher, being Rs. 3,35,154 against Rs. 2,78,558. The amount set aside for depreciation is unchanged at Rs. 1.25 lakhs, while the provision for taxation is higher at Rs. 1,10,000 (Rs. 50,000). The dividend has been maintained at 5 per cent.

* * * *

Chitavalsah Jute Mills, Limited has at last been able to pay a dividend on the ordinary shares. Out of the earnings for the half-year ended December 1941, it was possible to pay off the arrears of dividend in full. The improvement in earnings in the half-year ended June, 1942 has not been in any way helpful to shareholders for the provision for taxation has been as much as Rs. 3,20,000 (Rs. 25,000).

The net profit for the half-year is Rs. 5,73,696 against Rs. 3,97,921 for the previous six months. The amount set aside to depreciation is unchanged at Rs. 2 lakhs. The ordinary dividend of four annas per share is the first to be paid since December, 1936.

* * * * *

The accounts of the *Bombay Telephone Company, Limited* for the year 1941 are not of any interest to shareholders for two reasons. The dividend in respect of the year has already been paid and at the end of the current year the Company will be taken over by the Government. It is, however, interesting to note that the company has been very busy in 1941 and there has been a very substantial improvement in earnings. The net profit for the year shows a rise of Rs. 10 lakhs, the net profit being Rs. 39,18,083 against Rs. 30,46,573 for 1940. After providing Rs. 15,53,444 for depreciation and allocating Rs. 11,50,000 to Reserve for Income-tax, Super-tax and Excess Profits Tax the dividend of 13 per cent against the total distribution of 11 per cent for 1940 was paid on March 28, 1942. The amount carried forward is substantially higher at Rs. 25,38,818 against Rs. 13,24,179 brought in.

* * * * *

It is satisfactory to note that the *Orient Paper Mills, Limited* has been able to report a further increase in earnings in the half-year ended March, 1942. The net profit, before providing for taxation and depreciation, for the half-year is Rs. 10,79,230 against Rs. 8,42,290 for the corresponding six months in 1940—1941. The provision for depreciation is again Rs. 3 lakhs while the transfer to General Reserve is Rs. 2 lakhs (same). It would have been possible to pay a higher dividend but for the large provision of Rs. 3.5 lakhs in respect of taxation. Dividend on the ordinary shares at twelve annas per share is the same as was paid out of the earnings for the previous half-year.

* * * *

The directors point out in the report that considerable difficulty was experienced during the half-year in getting imported supplies.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 4.

THE week under review is again short of two working days, markets being closed on Wednesday and Thursday on account of *Janmashtami*. But during the short period markets have remained open a definitely firmer tone has been noticeable and business passing has been on a larger scale. The improved tone of the markets has been mainly due to the reported improvement in the internal political situation and the successes in the South-west Pacific. With the reports that efforts are being made to provide additional wagon space there has been greater enquiry for Coal shares. In the Engineering section Indian Irons and Steel Corporations have been marked higher appreciably. The undertone in the several sections is quietly steady.

The giltedged securities section has continued firm and a larger amount of business has been reported. Easy money conditions continue to prevail and there has been a further slight decline in the treasury bills rate to six annas and six pies per cent per annum from six annas and seven pies per cent per annum last week. 3½ per cent Paper is quoting Rs. 93 with 3 per cent Paper at Rs. 79-14. Among terminable loans, 2¾ per cent 1948-52 were Rs. 98-13. 3 per cent Defence Bonds 1946 Rs. 102 and 3 per cent 1963-65 Rs. 93-9. 3½ per cent 1947-50 were Rs. 102-7, 4½ per cent 1955-60 Rs. 112-11 and 5 per cent 1945-55 Rs. 109. Among provincial loans, 5 per cent U. P. bonds 1944 were Rs. 104-4 and 3 per cent U. P. 1961-66 Rs. 93.

The feature of the week is the fixation of revised minimum prices by the Government of India for Central and provincial government securities. The *communique* on the subject was issued by the Government on Thursday. The present minimum price are intended mainly as a precautionary measure and afford further security to the investor.

Among fixed interest securities some transactions have been recorded at higher prices. 3¼ per cent *Howrah Bridge* debentures 1961-66 were Rs. 93-8, 3 per cent *Calcutta Port Trust* debentures 1951 Rs. 95-4 and 4 per cent *Calcutta Municipal* debentures 1915-45 Rs. 100-12. Among industrial debentures, 5½ per cent *Dalmia Cement* debentures were noted at Rs. 105.

First class preference shares have been steady with *Adamjee* at Rs. 128-8, *Bally* at Rs. 140-8, *Fort Gloster* at Rs. 150-8 and *Lansdowne* at Rs. 124. *Alkali and Chemical* were Rs. 115, *B. I. C.* Rs. 182, *Dunlop Rubber* Rs. 135 and *Dalmia Cement* Rs. 126. *Steel Corporation* were Rs. 112 and *Burn & Co.* Rs. 125.

Cotton shares have not been active with *Bengal-Nagpur* at Rs. 22-2, *Bowreah* at Rs. 430, *Cawnpore Textiles* at Rs. 10 and *Kesoram* at Rs. 10-8. *Elgin* were Rs. 33-12 and *New Victoria* Rs. 5-12.

Coal shares have not been very much in favour but with the improved wagon supplies it is expected that greater attention will be paid to the popular counters. *Bengal* were Rs. 348 ex-dividend, *North Damuda* Rs. 5-4 and *Talcher* Rs 2.

In the jute section, *Bengal* were Rs. 15-10 ex-dividend, *Hukumchand* Rs. 12-12, *Kanknarrah* Rs. 352-8 ex-dividend and *National* Rs. 20-4.

Engineering shares have been more active with *Indian Iron* and *Steel Corporation* higher at Rs. 27-8 and Rs. 17-8 respectively. *Indian Malleable Castings* ordinaries were Rs. 7-8 and deferreds Rs. 2-9. *Burn & Co.* were Rs. 335.

Sugar shares have not come in for any great attention and *New Savan* was the only counter to be traded in, the quotation being Rs. 14-6.

Tea shares have been steady with *Chamong* at Rs. 11-12, *Dimakusi* at Rs. 28 and *Namburnadi* at Rs. 7-2.

In the Miscellaneous section, *Burma Corporation* were Re. 1-12 and *Indian Copper Corporation* Rs. 2 ex-dividend. *B. I. C.* were Rs. 5, *Borooah Timber* Rs. 15-12 and *Britannia Biscuit* Rs. 11-4. *Midnapore Zemindary* were Rs. 68-8 and *Walford Transport* Re. 1-12. Among Paper shares, *Titaghur Paper* were steady at Rs. 19-4 and *India Paper Pulp* at Rs. 141. *Orient Paper* were Rs. 21-4 and *Shree Gopal Paper* Rs. 16-4.

MUTTRA ELECTRIC SUPPLY COMPANY, LIMITED

NOTICE

is hereby given that the Thirty-first Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday the 17th September, 1942 at 3-10 p.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 31st March, 1942 and to transact any other ordinary business of the Company.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED

NOTICE

is hereby given that the Twenty-fourth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday the 17th September, 1942 at 3-5 p.m. for the purposes of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st March, 1942, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 11th to the 17th September, 1942 both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Calcutta, the 31st August, 1942.

THE SURAT ELECTRICITY COMPANY, LTD.

NOTICE

NOTICE is hereby given that an adinterim dividend for the half-year ended 30th June, 1942, on the Preference Shares at the prescribed rate of interest free of Income Tax, and on the Ordinary Shares at Rs. 2-8-0 per share, free of Income Tax, proportionate to the amount called up, has been made payable at the Chartered Bank of India, Australia & China, Bombay, on and after the 22nd September, 1942, to those Shareholders whose names stand on the Company's Register on the 9th September, 1942, to whom dividend warrants will be posted.

Intimation of any change of address should be given to the undersigned immediately.

The Transfer Books of the Company will be closed from Friday the 11th September, 1942, both days inclusive.

By Order of the Board,
KILLICK, NIXON & CO.,
Agents.

Home Street, Fort,
Bombay, 28th August, 1942.

ORIENT PAPER MILLS, LIMITED.

To

THE SHARE-HOLDERS

NOTICE is hereby given that an Extra-Ordinary General Meeting of the Shareholders of the above Company will be held on Friday the 25th day of September, 1942, at the registered office of the Company at No. 8, Royal Exchange Place, Calcutta, at 3-15 p.m. when the following Resolution will be considered and if thought fit, passed as a "Special Resolution" with or without modification:—

"The Articles of Association of the Company be altered by adding the following at the end of existing Article 82:—

"The Directors shall be further paid in each half-year a Commission at such rate not exceeding two per cent on the net profits of the Company (before allowing for depreciation, reserves, and taxations) as may be determined by Board. Such Commission shall be divided amongst the Directors in such proportion as may be decided by the Board."

By Order of the Directors,
BIRLA BROTHERS, LTD.
Managing Agents.

(Annual meeting, 25th September, 1942 at 5 p.m. at Bombay).

Audited accounts for the year ended 31st December, 1941:—

	Rs.	A.	P.
The net profit for the year after payment of the Debenture Stock Interest amounted to	40,36,033	3	4
To this has to be added the balance brought forward from the previous year ..	13,24,179	5	1
Making a total of	53,60,262	8	5
Out of which the Directors have made the following appropriations:—			
To Depreciation Fund ..	15,53,444	0	0
" Bonus to Staff ..	1,18,000	0	0
" Reserve for Income-tax, Super-tax and Excess Profits-tax	11,50,000	0	0
	28,21,444	0	0
Leaving balance to be carried forward of ..	25,38,818	8	5

Out of which an Interim Dividend of Rs. 15,62,021-8-0 was paid on 28th March, 1942.

Chairman.—The Hon'ble Mr. R. H. Parker.

Authorised Capital—Rs. 2,00,00,000 *in* 4,00,000 *shares of* Rs. 50 *each. Issued, Subscribed and Paid-up*—Rs. 1,20,15,550 *in* 2,40,311 *shares, fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	1,20,15,500	Gross Block ..	3,50,50,892
4% Mort. Debentures Stock ..	75,00,000	Stores, etc. ..	15,87,431
Reserves ..	1,48,23,190*	Outstandings ..	3,31,803
Current debts ..	43,09,374	Investments ..	14,55,545
Carry forward ..	9,76,797	Cash balances ..	11,99,240
		Total ..	3,96,24,911
Total ..	3,96,24,911	Total Liquid Assets	45,74,019

*Incluades Depreciation Fund of Rs. 1,21,80,860.

MANGALORE ELECTRIC SUPPLY COMPANY, LIMITED

	Year ended March. 1941	1940	1939	1938
Units Sold ..	1,382,061	1,051,042	889,348	..
Total Number of Consumers	1,841	1,790	..	..
	Rs.	Rs.	Rs.	Rs.
Net profit ..	60,323	50,434	46,323	46,725
Allocation to funds including depreciation ..	38,031	37,455	36,536	34,672
Dividend amount ..	Nil	Nil	Nil	Nil
Carry forward ..	—94,276	—1,16,568	—1,29,547	—1,39,334

(Meeting, 15th September, 1942 at 2 p.m.)

Audited accounts for the year ended 31st March, 1942:—

Accounts.—The Revenue Account for the twelve months shows a surplus of Rs. 36,342-4-10 and after deducting:—

	Rs.	A.	P.
Debenture Interest	13,750	0	0
Debenture Trustees' Fees	300	0	0
Total ..	14,050	0	0

there is a nett profit of Rs. 22,292-4-10 (compared with Rs. 12,979-0-1 for the previous year) which reduces the balance to be carried forward at debit of Profit and Loss Account to Rs. 94,276-1-9.

Progress.—An increase in the number of units sold has again been recorded. This is almost entirely due to the greater demand from the Tile Industry, which continues to benefit from orders arising out of war conditions.

The Jeppoo Tile Factory, owned by Messrs. The Commonwealth Trust, Ld., was connected to the Company's mains during the year, and the operation with electric drive having proved satisfactory, the consumer has requested the Company to enter into an Agreement similar to the one covering supply to the Kudroli Factory.

The plant has run satisfactorily throughout the year, and is in good condition. The advisability of installing an additional Generating Unit was mentioned in the last Report, but under present conditions it has proved impossible to secure suitable plant. As restrictions regarding the connection of fresh load have been imposed on the Company by Government, the question is in any case not now of such importance.

Certain measures for the protection of the Company's property in the event of air raids have been completed in accordance with instructions issued by Government.

The supply of electricity has been satisfactorily maintained.

Managing Agents.—Messrs. Octavius Steel & Co., Ld.

Synopsis of the balance sheet as at 31st March, 1942:—

(Half-yearly meeting, 17th September, 1942 at 3 p.m.)

Audited accounts for the half-year ended 31st March, 1942:—

Plant.—The plant has run satisfactorily and is being maintained in good condition.

During the half-year the maximum load was 2,060 k.w. which represents an increase of 60 k.w. when compared with the corresponding period of 1941.

Distribution System.—The distribution system was added to in several roads, streets and lanes for the purpose of affording a supply to new Consumers and Street Lighting.

The Consumers totalled 2,781 at the end of the half-year as compared with 2,514 at 31st March, 1941, which indicates an increase of 267.

The Street Lamps installed totalled 1,553 at the end of the half-year.

Sales.—The units sold during the six months under review totalled 4,158,135. This represents an increase of 839,416 units when compared with the total for the corresponding half-year of 1941.

Costs and Revenue.—The Revenue totalled Rs. 3,89,861, an increase of Rs. 70,425 over the corresponding period.

Accounts.—After providing for all charges including Rs. 66,326 on account of Depreciation and placing Rs. 25,000 to General Reserve and Rs. 25,000 to Reserve for Contingencies, a balance of Rs. 53,587-6-2, including Rs. 11,279-10-2 brought forward from the previous half-year, remains available, and this the Directors recommend be disposed of as follows:—

	Rs.	A.	P.
Payment of a Dividend at the rate of 6 per cent per annum, free of income-tax	44,991	0	0
Carry forward to next half-year	8,596	6	2
Total ..	53,587	6	2

Managing Agents.—Messrs. Martin & Co.

Authorised Capital—Rs. 15,00,000 in 1,50,000 shares of Rs. 10 each. Issued and Subscribed—Rs. 14,99,700 in 1,49,970 shares, fully paid-up.

Synopsis of the balance sheet as at 31st March, 1942:—

*Includes arrears of dividends for two years and 3 months.

**Arrears of dividend at 5½ per cent per annum, from the date of allotment to 31st December, 1937.

(Half-yearly meeting, 25th September, 1942 at 3 p.m.)

Audited accounts for the half-year ended 31st March, 1942:—

After payment of interest, Debenture interest, Managing Agents' remuneration and commission, setting aside depreciation on Block, providing for taxation and taking into account the balance of the previous half-year, the combined Revenue and Profit and Loss Account shows a net surplus of Rs. 6,13,329-13-6, which the Directors propose to dispose of as under:—

	Rs.	A.	P.
General Reserve	2,00,000	0	0
Dividend on 20,000 Preference shares at 5½ per cent per annum, free of income-tax ..	55 000	0	0
Dividend on 2,09,450 Ordinary shares each fully paid at Re. 0-12-0 per share, free of income-tax	1,57,087	8	0
Balance to be carried forward	2,01,242	5	6

In spite of the difficulties with regard to the supply of materials due to the war conditions the Directors are glad to be able to report a satisfactory working of the mills so far, though it is difficult to visualize the future.

Managing Agents.—Messrs. Birla Brothers, Ld.

Authorised Capital—Rs. 1,00,00,000 in 5,00.000 Ordy. of Rs. 10 and 50,000 5½ per cent Cum. Pref. of Rs 100 each. Issued, Subscribed and Paid-up—Rs. 40,94,500 in 2,09,450 Ordy. and 20 000 Pref., both fully paid-up. Debenture Capital—Rs. 10.00,000 in 2,000 5 per cent Debentures of Rs. 500 each, repayable at par on 31st December, 1945 with the option of redemption at par, in whole or part, at any time after 30th June, 1943.

Synopsis of the balance sheet as at 31st March, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	40,94,500	Gross Block ..	46,83,950

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

TANNAN'S BANKING LAW AND PRACTICE IN INDIA

BY

M. L. TANNAN, M.Com. (Birm.), BARRISTER-AT-LAW, I.E.S. (RETD.),

Member, Council of the Indian Institute of Bankers, General Manager, Punjab National Bank Ltd. (1937-39).

In a foreword to the 4th edition, the Rt. Hon'ble Mr. M. R. Jayakar, M.A., LL.D., D.C.L., P.C., Judicial Committe of the Privy Council—London, says:—"Mr. Tannan is to be congratulated on keeping it up-to-date . . . . . to the lawyer it will prove a mine of useful information . . . . the book will prove extremely useful not only to the student and the businessman, but to all those who deal with banks in the ordinary course of their life. . . . . ."

Thoroughly revised—it is the most up-to-date and comprehensive book on Banking Law and Practice published—a copy should be in the possession of every Bank Official, Companies Secretary and Legal Practitioner.

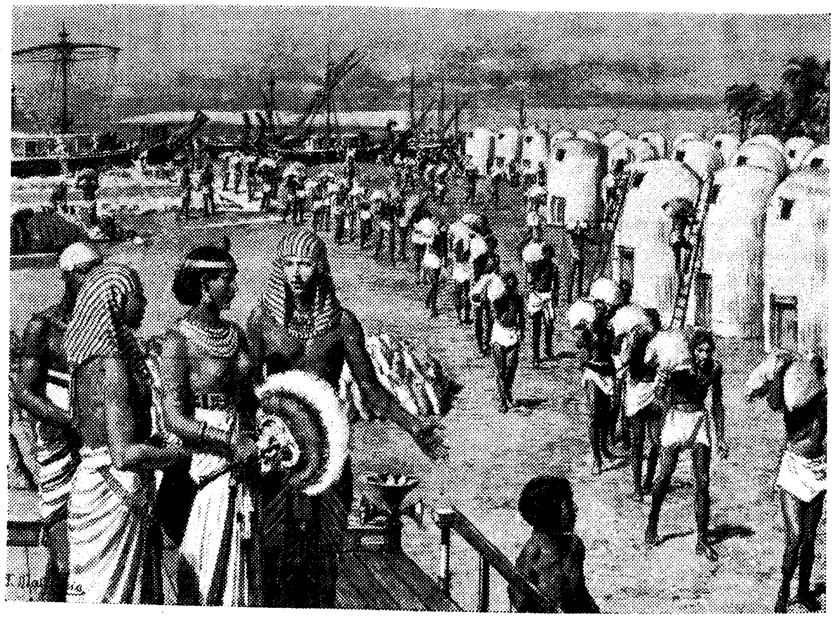
WORLD OF INDIAN FINANCE

Friday evening.

Contrary to the import of every sign and symbol of the money market, all testifying to super-plethoric conditions, the treasury bill rate this week records what must, in the present circumstances, be considered a sharp rise from annas six and pies six to annas seven and pies nine per cent per annum. Against Rs. 6 crores of tender bills on offer, applications amounted to Rs. 9.12 crores; and compared with applications for Rs. 9.99 crores last week, bidding on September 8 could not be considered slack. Why the Reserve Bank authorities allowed such a sharp increase in the discount rate to take place in the current week, is difficult to understand. In the absence of the latest Reserve Bank statements which, owing to the telegraphic delays, are being made available to us only on Saturdays instead of Thursdays, our analysis of the money market situation has to be on figures which are rather old. In the week ended August 28, deposits of member banks with the Reserve Bank showed an appreciable advance from Rs. 66.96 crores to Rs. 69.84 crores. The statement of the Imperial Bank for the week ended September 4 shows cash balances at the definitely high level of Rs. 37.34 crores. There can, therefore, be no doubt that the scheduled banks in general and the Imperial Bank in particular were certainly so flush of cash as to be eager for investment. In these conditions, if the Reserve Bank had made it clear that they were not particular about securing the full quota of Rs. 6 crores unless at suitable rates, the banks were bound to show more reason in the next auction. It is quite possible that, owing to poor maturities in the current week, banks were not willing to quote competitive rates. But starve them for a week; and they are bound to come down in their rate. The present week was typically one in which, by rejection of unsuitable tenders and by being satisfied with the procuring of only a portion of the total of Rs. 6 crores, the Reserve Bank could have emphasised and underlined a firm treasury bill policy. They have failed to take advantage of the opportunity and, on the other hand, given the impression that they follow the market rather than lead the market. This is unfortunate. Particularly from the point of the defence loan and other impending provincial loans, there must be impressive indication to the market that the official monetary and financial policy is firm and self-confident.

"Commerce" is to be congratulated on its enterprise in disclosing full details of the impending provincial loan and on its sound judgment in its comments on the significance and the implications of the loans. At the very outset, it came to us somewhat as a surprise that, in this instance, the Central Government were contemplating to break away from the wholesome principle of reserving the new issue market entirely for defence loan purposes. The third defence loan was made available to the public only a few weeks ago; and its progress has been none too satisfactory. Even the recent official measures such as the stepping-up of minimum prices for the whole range of government securities, central and provincial, do not seem to have stimulated any great flow of subscriptions to the defence loan. At the moment, it is the favourable showing of Treasury Bill sales that is solving the 'ways and means' conundrums. This week, the high altitude of Rs. 94 crores was touched with regard to the treasury bill outstandings in the hands of the public. To the extent that the Government have been able to raise from treasury bills anything like Rs. 65 crores in excess of the amount that used to be the normal floating debt till recently, they have not been greatly upset in their ways and means plans by the failure of the defence loan to make any impressive headway.

All the same, the present dependence upon short term borrowing cannot be made a permanent feature of war financing. Moreover, the expenditure on the defence services continues to be very much in excess of original estimates. The additional expenses thus being incurred will have to be provided from the defence loan. It must not also be forgotten that, in less than four months, arrangements have to be made for the rupee finance in connection with the redemption of 3½ per cent India sterling stock. Taking all these circumstances into account, it is both urgent and imperative to devise ways by which response to the third defence loan could be on an adequate scale. From this point of view, it is seriously to be considered whether the entry of several provinces in the capital market would not be an unnecessary diversion. This might prove an unfavourable diversion not so much because of the amounts involved, as because of the effects which the planning of these loans with regard to issue prices etc., may have on the tenor and outlook of the giltedged circles.



The raising of the minimum prices was deliberately designed to hearten the investors in giltedged securities. On the other hand, listening to the interested advice of the prospective underwriters, there is the risk of the issue prices of the provincial loans being fixed too low; and, should this happen, it will undo all the good that the earlier step of higher minimum prices has wrought.

We must also say that we cannot understand why any body of private underwriters must be engaged and remunerated with respect to loans of governments. It is besides the point to argue that this had been done before. The answer to this line of argument is that it should not have been done at all. What exactly are the functions discharged by the Reserve Bank and the Imperial Bank towards the provincial governments for whom they are bankers? Surely, one of the functions which they are expected to fulfil in their role as bankers to the provincial governments is themselves to underwrite the provincial loans. Apart from the standpoint of prestige involved in the underwriting of government loans by private firms, there are likely to be two disadvantages: (1) the underwriter is interested in getting the loan issued at as low a price as possible, and (2) the underwriter is going to get a whack of a commission. It should be possible certainly for the Reserve Bank or the Imperial Bank to take up such portions of the provincial loans as are not subscribed for by the public and to dispose of them slowly as conditions become more favourable.

In this context, we may recall the circumstances in the early 'twenties' when local bodies like the Bombay Improvement Trust

Aspects of an Industry No. 3

CORN IN EGYPT

EVER since Joseph stored corn in Egypt against the seven lean years, Man has had to face the problem of conserving food for himself and his livestock. Throughout the centuries this problem has steadily assumed greater importance. To-day it is vital. War has enormously increased the need for food conservation for man and beast alike. Millions of tons of produce of all kinds must be stored, preserved during transit and delivered to the consumer in a fresh and palatable condition. In the solution of this great problem the chemist plays a vital part. First he has developed an armoury of powerful weapons against the arch enemy — the bacteria which cause decay. Non-poisonous germicides ensure the sterile handling of meat and fish and the cleanliness of shop and store. Scientific detergents help to keep milk and other bottles free of bacteria. Refrigerants make long-term storage possible and facilitate the transport of fruit and other perishable foods. Secondly the chemist has come to the help of the farmer by developing processes which enable him to conserve grass either by drying it artificially or by making it into silage. At both ends of the scale British chemists are to be found helping in the work of conserving the food of Man and of the animals on which he depends.

Finance Abroad

Thursday Morning.

THE *piece de resistance* of the week for the whole financial world is the anti-inflation message of President Roosevelt. He has told Congress plainly that war in 1943 will take a hundred billion dollars. A big increase in war expenditure entails at once bigger savings and higher taxation. The national income is rising owing to enlarged production and higher prices. But prices are still the problem. Advocacy of price control was combined with a demand for extraordinary powers. Congress is to meet next week to concede the powers asked for. The President is in no mood to wait for the elections in November. He has asked his people to note again that only freezing of wages and prices will do. Limited or partial control is attended with unusual results. The Farm Bloc may rebel, but there is little doubt that Mr. Roosevelt will have his way. Since April he has been bothered by rising prices. He wants to avoid a crisis due to inflation. Inflation may not be portrayed in a situation of rising retail sales accompanied by a stagnant stock market and limited profits.

From May there have been many reports to show that prices of all goods are rising. The cost of living troubles workers, and the promise of full Labour co-operation has evidently been given in return for one of effective price control. In Canada the Government has dealt easily with it. After full control was imposed in December 1941 after a gentle but steady rise in 1941, the rise has been well broken. Canadian example has often been cited by students of international economics. Rising exports and limited consumption at home have been familiar features. The U.S.A. wants to cut exports and consumption alike in order to take out the money for taxes.

The President spoke after the Secretary to the Treasury unfolded his plans for a new tax bill meant to take out 8,200 millions. But a bigger tax bill implies sacrifice and it is as a call for sacrifice by all when profits are swollen by high prices, that the President's message must be interpreted. The Democrats are sure to support the President who has asked for immediate freezing of all costs and wages. Even when there was a large labour reserve the problem was acute. It is clear that aid to the Allies will entail a great burden on all future generations of U.S. taxpayers and Mr. Roosevelt wants to limit it. The Federal debt is already large though moderate in proportion to the national income. The outcome of the discussions in Congress should be known next week. Its effect on the markets can hardly be gauged for Wall Street has been flat for a long time and a threat of a bigger deficit will not influence the money market in New York or in any of the cities where there are Federal Reserve Banks. What is now obvious is that a billion a month in savings bonds or even larger advance payments of taxes and enlarged short-term borrowing are not enough to meet the war bill, particularly when materials are dear and scarce.

A frontal attack began when the sale of many luxury goods stopped but money hoarding began and farm prices soared. In regard to cotton and wheat the larger supplies in the New World are likely to keep prices down but meat, milk etc. have been rising so fast that the President is alarmed. The U.S. experiment will be watched for it is not deflation that is the object but curtailment of consumption. How Germany has curtailed consumption and diverted money and goods for the war effort is now being studied. For three years the German effort has been relatively bigger and the results too have been impressive. The public in America is now being taught that the only answer to total war is total sacrifice, of income and enjoyment alike. Mr. Roosevelt has only outlined plans which Mr. Henderson will have to work out. Unless the Republicans are very strong and Labour wholly averse to stable wages, the President must win. That will help all the Allies to check rising prices.

By comparison with the U.S. broadcast the British vote of credit for 1,000 millions seems tame. Parliament cannot but readily approve and the Chancellor has a strong card in the growth of small savings. In this year such savings have averaged sometimes 20 millions a week, and that is enough to keep the Treasury unworried by fears of having to refund E.P.T. paid by companies in the East. It is still getting money at 1 per cent for 3 months. Last week the Treasury also got 35 millions in Treasury deposits and this must have been a relief to banks.

The major feature on the London stock exchange is still the strength of industrials. Last week the pre-war index was passed and Home Industrials were in keen demand. The bright features were not confined to South American issues at all. The British investor retains strong faith in leading industrials despite the fact that 1941 reports were not very good and Associated Portland Cement for instance reduced its dividend despite a bigger output. Present prices in most cases indeed suggest that the rise in note circulation has lifted industrials to high levels. Textiles have gone up, not because of war demand but on account of 'concentration' and post-war prospects. The gold mining section appears depressed by comparison, and it is worth nothing that unit trusts which specialised in S. A. gold shares have suffered more than others in the war period. Though the unit trust movement is dormant it is but right to dwell on the fact that unit trusts which kept only bank and insurance shares have actually gained something. Their distributions have hardly suffered, for the great British financial interests are unaffected by the war and investors therein have come out very well indeed. Holders of the units sold formerly by the Trust of Insurance shares would note that at the end of May the yield on the units was much better than the 3 per cent offered by the Trust or Insurance Shares would note has been retained, fully, compared with other trusts whose performance has been less than mediocre this particular trust has done very well.

The fourth year of war has brought about further firmness on the stock exchange. Bullion in India is going up. Nervous people are all said to be buying gold but few care to note what lies beyond the war. The withdrawal of Russian gold output will not make much difference to the supply of gold which is still increasing in the Transvaal where the old speculative mines are all gold-producing properties at present, crushing lower grades because it pays to do so.

were told by the Government themselves. We do not see any reason why, in the case of the provinces, the Central Government could not have adopted a similar procedure. The likely answer to this is that the provincial governments are borrowing from the open market with a view to take advantage of the gracious offer made by the Central Government to allow them to liquidate part of their indebtedness to the Centre even before the due date, this operation resulting in a considerable saving to the provinces on account of the difference in the rate now being paid to the Centre and the rate at which the new loans could be raised. But it is simple enough for the Central Government to tell the provinces that, though the rate of interest was originally fixed at 4½ per cent, the Centre is now pleased to reduce the interest payable to 3 per cent. This is a simple enough solution which will be eminently satisfactory to the provinces and which will show the Central Government in a magnanimous light. We wonder if it is too late to reconsider the decision as regards the issue of provincial loans. We are convinced that all present and immediate attention must be devoted to making the third defence loan a roaring success; and anything that will in way hamper the progress of the defence loan must be put out of the way. We strongly suggest a revision of plans even at this eleventh hour.

Three years of War Finance II

As we remarked in our first article in this series, the main determining factor so far as the financial aspect of the three years of World War II is concerned, is the unprecedentedly large and rapid accumulation of sterling assets to the credit of India. This factor has had repercussions with regard to exchange, money rates, composition of currency reserves, currency in circulation, India's status as a debtor country, giltedge values and working of banks. In the last war also, India was piling up sterling balances on a large scale; but no one—not even "Indian Finance" which had clearly forecast this development—could have, at the threshold of the war, imagined the stupendous nature of the bulging sterling assets. At the end of thirty-six months of war, India holds a colossal amount of sterling securities; and every current indication is that this process of acquisition of sterling will be very much more accelerated in the fourth year.

Sterling securities held in the issue department of the Reserve Bank on September 1, 1939, amounted to Rs. 103.92 crores. At the end of three years, that is, on August 28, 1942, sterling securities in the issue department had risen to Rs. 311.79 crores. Thus, so far as the issue department is concerned, the expansion in sterling securities is as much as Rs. 207.87 crores.

Equally striking is the increase in foreign securities held in the banking department, which had risen by Rs. 67.13 crores from Rs. 10.08 crores on September 1. 1939 to Rs. 77.21 crores on August 28, 1942.

Taking the banking and issue departments together, sterling securities owned by the Reserve Bank on Sptember 1, 1939, came to Rs. 114.00 crores; and these had advanced to Rs. 389.00 crores on August 28, 1942. Sterling balances held by the Reserve Bank have thus increased by Rs. 275 crores between September, 1939 and August 1942.

Sterling securities held by the Reserve Bank would have shown much larger increase than this figure of Rs. 275 crores if it were not for the fact that considerable parcels of sterling assets were being used, during this period, for reducing India's sterling debt.

It is not possible to give the figures of India's sterling debt as at the beginning of the war and as at the end of three years. The figures that are available to us are as at the end of each financial year. That is to say, the analysis with respect to sterling debt has to cover the three-year period between April 1939 and March 1942. It may, however, be added that the position of sterling debt at the end of August 1939 could not have been materially different from that on March 31, 1939. On the other hand, it is not unlikely that the Reserve Bank has, as in the past, continued to buy 3½ per cent India sterling stock from the open market in London in the months of the current financial year. It may, therefore, be necessary to make some manner of adjustment to allow for the contingency of such open market purchases.

Bearing these facts in mind, we may now proceed to a comparison of our sterling debt as in 1939 and as in 1942. India's sterling debt which was the equivalent of Rs. 469.10 crores on March 31, 1939 had declined to Rs. 180.00 crores on March 31, 1942, thanks to the repayment of all dated loans and of 2½ per cent and 3 per cent non-terminable loans. The decrease in sterling debt for the three financial years, 1939-40, 1940-41 and 1941-42, was thus Rs. 289.10 crores. Assuming that open market purchases of 3½ per cent sterling paper have been made between April and August 1942, we may estimate the net decrease in India's sterling debt at the round figure of Rs. 300.00 crores.

In other words, while sterling securities held by the Reserve Bank have increased by Rs. 275 crores, sterling balances utilised during this period for sterling debt redemption amount to Rs. 300 crores. Surplus sterling thus acquired in three years is, therefore, of the order of Rs. 575 crores.

The piling up of sterling resources has been helped both by oridnary and extraordinary factors. Taking India and Burma together, this being necessary from the point of view of balance of trade resulting in sterling purchases by the Reserve Bank, the growing balance of trade in merchandise during the twenty-eight months of the war was in favour of India by Rs. 204 crores against Rs. 100 crores which was the favourable balance in the twenty-eight months preceding September 1939. While imports show only a slight reduction from Rs. 348 crores to Rs. 344 crores, exports are substantially higher at Rs. 552 crores against Rs. 444 crores. A more important factor in the accumulation of sterling balances is the increasing sterling payments being made by the British Government to the Indian Government in respect of Britain's war commitments in, and Britain's war supplies from, this country.

As already pointed out, out of the Rs. 275 crores representing the increase in the total sterling holdings of the Reserve Bank, Rs. 207.87 crores are held in the issue department. That is, as against sterling securities, there has been currency expansion for Rs. 207.87 crores.

There has also been expansion against rupee securities for Rs. 65 crores, rupee securities having risen from Rs. 37.39 crores on September 1, 1939 to Rs. 102.39 crores on August 28, 1942. On the other hand, there has been currency contraction to the extent that rupee coin in the issue department has declined by Rs. 47.13 crores from Rs. 75.87 crores on September 1. 1939 and Rs. 28.74 crores on August 28. 1942.

To sum up, there has been currency expansion against sterling securities for Rs. 301.89 crores and against rupee securities for Rs. 65 crores, which is slightly offset by contraction against rupee coin for Rs. 47.13 crores. Due to factors and developments such as these, active note circulation in India has risen by Rs. 301.89 crores from Rs. 172.37 crores on September 1, 1939 to Rs. 474.26 crores on August 28, 1942. In this connection, we have to mention that, while this figure represents the increase in paper note circulation, the decrease of Rs. 47.13 crores in rupee coin held in the issue department represents the increase in what may be called silver note circulation. To this figure of Rs. 47.13 crores must be added approximately Rs. 23 crores being rupee coin delivered by the Government to the Reserve Bank during this period. Rupee coin in circulation has, therefore, expanded by Rs. 70 crores.

Taking paper notes and silver notes together, increase in circulation in India is of the order of Rs. 371.89 crores.

PROSPECTUS

(A copy of this prospectus has been filed with the Registrar of Joint Stock Companies, Bengal)

The subscription list is now open and will close on the 10th October, 1942, or earlier, if the issue is subscribed in full before the date.

CALCUTTA NATIONAL BANK, LIMITED

(Scheduled under the Reserve Bank of India Act)

AUTHORISED CAPITAL - - - Rs. 20,00,000

Divided into 2,00,000 shares of Rs. 10 each.

Subscribed Capital - - - - Rs. 12,45,350

Paid-up Capital - - - - Rs. 12,29,980

No share has so far been issued to any one for any consideration other than cash, and no share will be issued to anyone for any consideration other than cash.

The remaining 75,465 shares of Rs. 10 each are now offered to the public at a premium of Re. 1 per share and are payable as follows:—

Rs. 6 per share on application and Rs. 5 per share on allotment.

Directors:
MR. S. M. BHATTACHARJEE, B.A., *Managing Director.*
MR. RAJENDRA SINGH SINGHI, B.Com.
MR. T. C. CHATTERJEE, B.A.
MR. R. K. CHOUDHURI, *Secretary.*

Auditors:
MESSRS. *H. C. DAS & CO.,* Incorporated Accountants, 9A, Dalhousie Square, East, Calcutta.

Solicitors:
MESSRS. DUTT & SEN, 6, Old Post Office Street, Calcutta.

Head Office:
CALCUTTA NATIONAL BANK BUILDINGS, Mission Row, Calcutta.

Branch Offices:
Bombay—Sir Pherozshah Mehta Road, Fort, Bombay.
Cawnpore—Lala Matadin Street, Sakkarpatti, Cawnpore.
Lucknow—Hazratganj, Lucknow.
Patna-Bankipore. Gaya, Benares, Benares-Chowk, Allahabad, Allahabad-Katra, Nagpur, Nagpur-City, Jubbulpore, Raipur, Amraoti, Burrabazar (Calcutta), Bhowanipur (Calcutta), Shambazar (Calcutta), Ballygunge (Calcutta), Dacca, Narayanganj, Kishoreganj, Mymensingh, Sylhet, Sheoraphuli and Chittagong.

Calcutta National Bank was established in the year 1935. Since the inception of the Bank it is making steady progress. In the year 1938 the Bank was declared to be a Scheduled Bank. The following table will clearly indicate the rate at which the Bank is growing:—

	Working Capital.	Dividend.
June 30th, 1940	.. 30,38,075 1 0	5% Free of Income Tax.
June 30th, 1941	.. 53,33,635 9 0	5% Free of Income Tax.
June 30th, 1942	.. 84,71,749 14 10	5% Free of Income Tax.

The following are extracts from the report of the Chairman of the Bank, incorporated in the last Balance Sheet (1942):—

"In spite of the unusual circumstances, I am glad to report to you that our Bank has made very substantial progress. During this period of stress and strain, our Bank's strength and soundness became quite apparent, and as a result, the confidence of the public in our Bank increased remarkably. During this period, the working capital of our Bank has increased by 32 lakhs and the working capital now stands to about 85 lakhs.

"The Reserve Fund of the Bank is now Rs. 3,65,000. Including the contingency Fund, the total Reserves amount to about 4 lakhs.

"The cash position of your Bank is also exceptionally strong. The total of cash alone amounts to nearly one-third of the total deposits. No portion of the assets of the Bank is any way encumbered."

The Bank is transacting all sorts of Banking business. The rate at which dividends are being paid is 5% (Free of Income Tax).

AUDITOR'S REPORT UNDER SEC. 93 (1A) (1B)
OF
The Indian Companies Act, 1913-36.

We beg to report that Calcutta National Bank Ltd., made profit during the three years ending 30th June, 1940, 1941 and 1942 and paid dividend at the rate of 5% free of Income tax each year out of profit of those years.

The statement showing trading results for the above mentioned three years is as follows:—

INCOME.

Source of Income	Year ending 30th June, 1940. Rs. A. P.	Year ending 30th June, 1941. Rs. A. P.	Year ending 30th June, 1942. Rs. A. P.
Interest, Dividend & Discount ..	73,727 5 9	1,32,089 9 4	4,50,201 6 11 (including Bank charges, commission & rent.)
Bank Charges, Commission & Profit on realisation of Investments ..	1,81,099 13 7	1,66,735 1 11	....
Sundry Receipts ..	515 0 0	....	....

Dated the 7th September, 1942.

INDO-AFGHAN TRADE.

After the outbreak of the Russo-German war Afghanistan was in difficulties. The Indian Trade Agent's report has shed some light on the problems raised by a shortage of imported goods. Afghanistan was asking for medical and electrical supplies from India last year according to many reports. The situation last year was abnormal. The prices of imported cotton goods rose in the Afghan bazars and many people started buying and hoarding Japanese cloth. Price control was introduced by King Zahir Shah's government; and profits of cloth dealers were strictly regulated. This drove stocks into hiding, and the rise in Indian prices, became a factor. And the position was not altered or eased by the end of the Indo-Japanese trade. Afghans became keener on Japanese than on Indian goods, and imports across the frontier fell, partly owing to the limited advance in Afghan prices. The Afghan Ministry tendered advice to cloth dealers. Cloth imports fell; so did customs revenue. But at the sametime Afghanistan's foreign assets grew and the Shirkat-i-Marsst emerged. Its capital was one crore of Afghanis; and it was meant to deal in piecegoods. The Shirkat bought cloth in Bombay and Karachi in the third quarter of 1941. Owing to the war petrol from Russia was hard to get and India also reduced her sendings. The Afghan Government imposed restrictions on the use of petrol. The Trade Agent observes that a considerable curtailment of lorry traffic was the result. On the main trade routes trade was dislocated, and transport charges also went up. The issue of petrol to private cars other than those belonging to members of the diplomatic corps was stopped altogether from September 1 and special arrangements were made for the export of fresh fruits to Peshawar and Chaman. Transport vehicles which got petrol were asked to carry back Government goods and those of the State trusts in preference to those belonging to private importers. On account of the fall in lorry traffic, the packhorse soon reappeared on the overland routes.

One of the direct results of the war was the closure of German firms in Kabul because they could not get goods through Russia as before. Afghanistan's exports include raw cotton, but wool and furs are still the chief exports. The Karakul is the main source of furs. An increase in direct imports from India was noted after June last.

Foreign Co-operation

The recent fixation of the external value of the Chinese dollar at 5 U. S. cents, equal to 3d., was largely meant to promote confidence in its stability. The currency of the Nationalist Government has depreciated during the war period but not more than the Russian currency. Efforts to develop the overland export trade have been made in the present year by concentrating on silk, tung oil and tea, but the problem of keeping up production and keeping down prices has been acute. Foreign co-operation certainly was desired for the purpose of bringing currency into the new gold dollar loans. It was also needed for strengthening the economic structure at home. According to the "China Information Bulletin" the merchants and industrialists of Allied and neutral nations were asked by the Chinese Government to observe laws and regulations governing anti-hoarding and profiteering in the period of war. Although the Chinese Government had justification to enforce the regulations without exception, they did not apply to foreigners. The Chinese Government wants to encourage foreign investment and co-operation in reconstruction. For seventeen months after the issue of the emergency regulations, the Government did not apply them to foreigners. A request was made for co-operation against hoarding etc. only in the middle of May. Diplomatic representatives were notified of the Government's intentions. Foreign firms were asked to register their holdings with the Ministry of Economic Affairs by May 31. The date was later extended to July 15 after which date the law was to be applied to foreigners as well. It has been reported that Embassies and Legations have afforded co-operation asked for and there should be no secretive activity. Since the big question as to the rice harvest has been answered, it might be said that the immediate problems are military. The "hundred days" in Chekiang and Kiangsi have proved that the dragon is more than awake.

To-day's Prospectus

Any addition to the share capital of the secondary Scheduled Banks is wholly warranted by the progress made by Indian banks in the war period. It is, therefore, a duty and privilege to commend to all readers the prospectus published in this issue. It is enough if one makes mention of the full and clear report of the auditors on the bank's position. Well before the Pujas our investors should be able to make up their minds as to the many and obvious merits of the shares offered, it is true, at a small premium. But in view of the fact that such premiums usually go into the reserve, the terms can be approved without reservation. The Calcutta National Bank has been a Scheduled Bank for four years and more. It can show a consistent increase in deposits, a regular augmentation of reserves, a highly liquid position and can also claim that its dividend of 5 percent free of tax amply covered by earnings of over 7½ percent in 1941-42 puts the share-holder in a very strong position as interest rates are grounded for years. At the end of June 1942 the working capital of Rs. 84.72 lakhs was Rs. 30.6 lakhs over that a year ago. Its policy of bold branch expansion was illustrated by a decision last year to have its own office in Bombay. It is essential to consider the progress made in the year ended June to estimate prospects.

An assured, taxfree return of 5 percent on new shares will certainly induce investors to evince more than ordinary interest. There is no reason to think that political or other circumstances can obscure the intrinsic merits of the new shares of the Calcutta National Bank. The latest balance-sheet shows a paid-up capital of Rs. 12.17 lakhs and shares in place of the unissued capital will put at the command of the Bank the resources needed to fortify an extensive and growing connection and will create opportunities in regard to the financing of trade and industry. The balance-sheet will probably claim less attention than the offer for sale, but the steady increase in profits in the last three years is of direct importance to all prospective shareholders. The jump of over 50 percent in profits shows that slacker demand for funds did not interfere with the progress of the Calcutta National Bank. Commendably brief, the prospectus lays emphasis on promise as much as performance, and the ten-rupee shares offered at Rs. 11 are undoubtedly an advantageous purchase of the semi-giltedged class that the conservative investor desires. In that sentence is summed up the market's rating of the new shares which can be had of eleven branches of the Bank or through recognised channels of application. It is only necessary to add here that the increase in Deposits by over Rs. 24 lakhs in a single year ended June 1942 is reflected in a parallel increase in Advances and Acceptances explaining how profits have responded to a forward policy for which the Board deserves the thanks of shareholders and constituents alike.

Australia's Example

Australia's security has been assured by recent operations in the S. W. Pacific. Only last week Dr. H. V. Evatt referred to the notable improvement on the damaging position revealed in February. The price of continuous improvement is always sacrifice as the Budget of the Commonwealth proves. If the dividend limitation proposal has gone by the board, there is much to suggest that Mr. Curtin is making Australia realise her duty. The budget figures published last Friday do not suggest that total outlay would come up to the previously anticipated total of £600 millions but there is much else to suggest that record expenditure is provided for. The Treasurer, Mr. Chifley expects war outlay to go up to £400 millions. Only a small part of the increase can be due to the advance in the Australian soldier's pay and allowances. The collection to the Liberty loan floated at home has been more than up to hopes at £36 millions; yet is only a fraction of the proposed war expenditure. Details published last week indicated that the similarity between Britain and Australia is complete to the extension of indirect taxation. Restraint of private spending clearly is the object of enhanced duties on beer, tobacco and spirits. The only new taxation is an excise on matches, and matches have been selected for taxation by many countries on the advice of Kreuger in the past. Total Australian revenue for £249 millions will leave a deficit of £300 millions to be raised by borrowing. Whether the Commonwealth of 7 millions with an estimated total income of £700 millions can raise £300 millions in loans is a moot question. Foreign trade has shrunk, and many secondary industries are almost extinct. The Labour Cabinet, however, stands by all-out war effort. Since the special com-

mittee dissuaded the Federal Cabinet from clapping a 100 per cent tax on all profits above four per cent, the majority of businessmen in Australia will find the budget acceptable but extension of income-tax by adjustment of reliefs etc. is proposed. Australia goes the way of Britain and America in taxing wages as well as salaries. The working classes are to pay income-tax and are expected to like paying it. The Cabinet would, of course, rely on borrowing from the Commonwealth Bank but that can be only temporary. The commercial banks have not prospered greatly and the brunt of lending will fall on the individual hereafter. A savings drive may be expected as Australia has provided a Bill of Rights to be added to the written Constitution. The rights are meant to produce sacrifice in the sphere of spending and saving. In the coming year the ordinary mechanism of investment may not be enough, though Australia is familiar with minimum prices for gilt-edged and low interest rates. How the Labour Cabinet stimulates saving, necessarily by lowering the standard of living at home, will have lessons for India where subscriptions to the Defence loans for over two years up to the end of August do not seem to have produced more than Rs. 121 crores.

Lease-Lend Arrangements

More inter-Allied agreements were concluded at Washington last week. The processes of lease-lend are being multiplied. The working of reciprocity has been revealed to the American public to reconcile it to the President's declaration that the loans made under the Act of 1941 are loans only in form, and the U.S.A. is not a creditor but gets at present a due return though not the full equivalent. The business of lending without expectation of return has assumed vast importance but in the past too it has been common. According to a recent cable Mr. Walter Elliot discussed in the "Times" the illusion of book debts. The countries which had lent to the Tsarist Government would have no need to go over the history of repudiation of loans which ordinarily took the form of goods. Britain as a creditor has certainly suffered in the past. Many exports have not been paid for at all, and it is better to recognise that lease-lend was at work in the nineteenth century. Pitt's subsidies to the European coalitions were really anticipations of lease-lend, and the difference merely lies in the U.S.A. starting lease-lend before an alliance materialised. The Indian chambers of commerce which are still suspicious of lease-lend should accept lease-lend as an extension of international lending. The return of unused goods and their being used for ordinary exports after the war still seems to haunt Indian industrialists who may not be aware of the heavy demands for reconstruction in Europe. President Roosevelt and members of his cabinet have emphasised repeatedly that the U.S.A. is not making any claims in advance and has merely settled the procedure of international exchange. The fact that goods alone count, and Congressional appropriations do not, is indeed proved by the gap between despatches and grants. Unexhausted appropriations will naturally go back to the U. S. Treasury even if the Act is renewed or modified in 1943 by Congress.

The fact that lease-lend is largely conditioned by needs and ability to pay at present has been frequently ignored by non-official critics in India who have asked why particular industries have not been assigned lease-lend supplies. The answer that any form of subsidy would be unwarranted should have convinced all who demanded that benefits from lease-lend should be extended to private industry without any obligation to pay. The U.S.A. knows only the Allied Governments and the present procedure was, in effect, settled by an agreement as to economic co-operation under the Atlantic Charter a year ago. The return of leased equipment to the U.S.A. would not hurt British industry but it might create difficulties for the export trades. If there has been so far no mention of how the Allies intend to share post-war markets it is worth pointing out that all have voluntarily cut exports to the bone and India is about the only country (Canada excepted) whose exports to countries at war seem to keep growing. U. S. supplies to Britain under lease-lend cannot be classed as exports. They are book entries and hardly assets to the U. S. A. President Roosevelt's contribution to international economy, says Col. Elliott, lies in discarding the notion of book debts as an asset. What the U. S. A. spends on the war for herself and her Allies, should put an end to the view that she is in the war for possible gains in world markets after the war. The U. S. taxpayer has certain safeguards; yet lease-lend agreements with the U. K, and the Dominions are meant not to secure proportionate benefits afterwards but the effective diversion of goods wanted at once for the war.

Strain In Germany

To supplement information recently issued as to the damage done in Germany by the R.A.F. night raids there, appeared a statement by an official of the M.E.W. Heavy armament production is known to have suffered greatly in 1942 despite the increased demands on the Russian front. The transfer of establishments to Bohemia has not saved war production. The Ministry's spokesman spoke of the effects on the everyday life of the German. He pointed out that every available reserve had been thrown in by the Germans to win the war in 1942 with the result that Germany's economy is very finely balanced. R.A.F. bombing has had a considerable dislocating effect, he remarked. If the German effort is not to suffer, the people who have experienced a severe raid in one of the industrial centres must be housed, fed and clothed in order that factory workers should continue to fill their benches. But there are practically no reserves of any description such as were available in Britain in similar circumstances. Moreover, the very fact that heavy raids are likely means that defences must be strengthened and A.R.P. services improved, setting before Germany the problem of fire-fighters or factory workers. Proof of this is found in the long holiday given to workers in Essen. It is no boon of the Labour Front but merely a proof of the damage done to the Krupp and other factories. Reconditioning must come before regular work is possible and last week appeared another welcome proof of the official declaration as to a considerable dislocating effect. The Reuter correspondent on the German frontier wrote only last week on the crisis in German war production. There is acute shortage. Foreign workers are a great disappointment. An official of Goering's Ministry confessed that half a million men are needed for war industries. There is acute shortage of fuel. More oil from coal is needed and this means that 41 million tons of coal and

32 million tons of bituminous coal must be got. This will again entail a demand for men. Present high production of coal has been achieved through intensive rationing and Sunday work. Hitler's appeal for further sacrifices must fall flat when the report confesses that the health of workers is dropping alarmingly. The peak in war production was passed early in 1942 wrote the "Times" correspondent on the Frontier. He referred to the reduction in tank output and the reduction in the production of heavy guns. The heavy losses in Russia can hardly be made good by Occupied France's factories. The ports have been smashed successively and the week-end excursion of the R. A. F. to Bremen should have increased anxiety as to the future assembly of submarines' parts. It is now clear that the blow at the M.A.N. plant at Augsburg led to an unexpected diffusion of war effort as it was intended. Italy is not getting enough coal and there has been default in shipments to Sweden. Germany's coal-mining—the basis of most synthetic industries—is in the depths, and a revolt in the mines may shake even the Gestapo.

Basis Of Co-operation

Political grievances have a knack of finding their way into all public utterances, and it was only to be expected that Mr. R.L. Nopany would support the demand for far-reaching constitutional changes. Reference may be made to the resolution adopted at a recent conference in Calcutta of important organisations asking for a swift settlement of the constitutional issue. The long resolution sent out at the end of August marked the depth of public feeling on the question of the arrest of the Congress leaders. The principal trade organisations are still anxious over repression and the distrust it breeds. Naturally the Indian Chamber's spokesman dwelt on the need for quick appeasement and asked the British Government to take the initiative. It is not only the British Left-wing papers that advise Britain to get a move away from the deadlock but the conservative, moneyed men in India. Most of them wear no party labels and they are as loyal and acceptable co-operators as the European business community. The Federation of Indian Chambers is to examine the situation in the light of events and one may hope that the work begun at Calcutta would be followed up. An organisation parallel to the Non-party Leaders' Conference would admittedly help to convey an idea of the agitation consequent on the abrupt arrest of Gandhiji.

The calm produced by repression is largely artificial. Public setiment has to be reckoned with, and the Mahasabha's resolution on the political situation underlines the view that nobody is for full co-operation on the basis of the Cripps offer. If Mr. Jinnah insists on Pakistan to the exclusion of everything else, Muslim business interests find no difficulty in ranging themselves behind a unanimous demand for change of policy. The obliteration of communal differences within the Indian business community should not be overlooked when speculating on the chances of India's unity surviving the scheme for Five Dominions. The Defence Member's plan is worse than addled and a Congress Muslim spokesman from Peshawar has found no difficulty in saying that it will not work. Indian businessmen, as was noticed in the Bombay correspondence of this journal, are more than perturbed by the present phase in Indo-British warfare. At a time when agreement is essential, there is discord. The statement as to Gandhiji's health has not satisfied those who ask for his immediate release in the interests of a speedy settlement. The request is supported by many convincing arguments against delay and inaction. Drift has produced bitterness, and the danger to the India's war effort appears very real. Mr. R. L. Nopany discussed many familiar questions but the real interest of his speech lies in the full support given to the Congress claim for a transfer of power. The problem is not one of abdication under duress but one of stimulating India to free co-operation. Mr. Nopany's views were almost anticipated by Mr. G. L. Mehta in a statement to the United Press of America concerning the means of resolving the deadlock. That statement, issued last month, indicated that the Federation of Indian Chambers would endorse the views propounded last Thursday in regard to the political situation in India.

War Purchases

The big increase in India's war production in the third year of war has been often mentioned in connection with the inflation due to enlarged purchases of the Supply Department in India at present. The present monthly value is put at Rs. 20 crores, and this may be contrasted with the total of Rs. 56 crores reported for 1939-40. The present scale of purchases is fourfold, and the progress made in regard to war industry in 1941-42 suggests that the value of purchases from Indian industry is likely to grow rather than decline. There appeared last week an official survey of achievements in regard to war production. Parachutes are not by means the only new departure in Indian war production. Many

BURMAH-SHELL

B.S.G.R.30

new goods are being made in response to war demand, and industries like woollen and leather goods manufacture are devoted wholly to war work. The third year of war certainly saw India's trade with Russia grow up very rapidly. Main reason was the break-up of the Ukrainian industries and the Allied occupation of Iran. Surgical instruments for Soviet Russia are being sought in India and this may be taken as a measure of Russia's dependence on the Allies. What India has provided by way of shipyards and dockyards can be judged from the report that 30,000 men are employed in a particular branch of the engineering industry.

There is still an inclination to assume that India's success in developing war supplies ensures rapid industrial advance. What the civilian industries have achieved in regard to output can only be guessed but present prices undoubtedly point to a shortage of goods. The war effort has lowered the standard of living. That is as true of India as of any other country at war. But some will question the wisdom of developing a constantly-growing part of the country's production for the war. If food exports are encouraged for the sake of the Allies, there will be great distress. A complete embargo on food exports is freely recommended and this implies that the Supply Department's purchases of certain goods must decline. The freedom conferred on India to export sugar should not impel manufacturers to divert supplies meant for the Indian consumer. It will not be difficult to convince the protected industries that the home market must receive first consideration. Any large increase in the Supply Department's purchases of textiles will only stabilise cloth prices at an inordinately high level and strengthen those inflationary influences which are generally deprecated. The stronger demand for timber, metals etc. may be reflected in the adoption of Control but the civilian consumer will feel bound to protest that the war has forced on him economy in the use of materials wanted for industry. It is becoming clear that industrial development may be limited by the lack of machinery and materials. Minor industries which should have benefited from the disappearance of Japanese competition are hampered by lack of materials. Cotton knitting factories find yarn control an obstacle to their development, and the war demand for hosiery is making it more difficult for the poor to get cheap and essential goods. Scepticism as to the value of the war effort may not be universal, but there is a distinct feeling that large, indiscriminate purchases have forced up prices and created labour and other difficulties.

The Changing War

Desert warfare and tank warfare have become almost synonymous in the war, but before Stalingrad, too, it is again tank warfare. The fourth year of war is marked by no swift changes but Soviet raids on Budapest mark a change in technique and target that must be welcome. General Zhukov's efforts in the north have not ceased, and the Nazi advance on Novorossisk has been evidently checked. The Egyptian battles of the past week were evidently conclusive but Rommel is moving in reverse gear, and that is something for the majority of optimists. There is again talk of an Allied advance to Tripoli, of blows at Italy, of revolt in French North Africa, and of fresh hope for the Serbs. All the intelligent speculation of Commander King-Hall, M.P., does not obscure the fact that South-eastern Europe is held by the German army, and Turkey's neutrality to-day is of no advantage to anybody except herself. Comparison with the events of 1917 may even provoke fears as to the collapse of the present Russian Government. Many are apt to forget that the war has undone the work of three revolutions and created a defeatist regime in France. There is a real danger in pointing to historical parallels, and Senator Lodge speaking as a voice from the past (of Wilson to be sure) has warned the United State that the war demands a bigger effort than has been put forth to avoid defeat as much as to secure victory.

Vague but hearty assurances appeared last week as to the strength of the Allies to inflict defeat. The current calculations as to Russia's reserves and Germany's losses can have no bearing on the fate of Stalingrad. It is generally assumed that the German effort in the direction of Caucasia and the Volga valley will bear fruit though the Russian defence will be long and fierce. The Volga is something more than a big river. It has to be remembered that there is no large town below Stalingrad. The Volga is Russia's greatest trade route. About 30 million tons of goods were carried every year by the river. In wartime, said the "Economist" the traffic by rivercraft has grown because of the strained railway position. The Volga alone has been carrying at least 75 percent of Russian waterborne freight as against 50 percent before the war. The principal goods shipped by the Volga in peacetime were oil, about seven million tons, timber, about fourteen million tons and grain, more than three million tons. Since the outbreak of war, the Volga has been extensively used for military traffic. The Volga besides being a main link with the route through the Persian gulf is important for bringing oil from the Caucasus by way of Astrakhan. Stalingrad was known to possess important iron and steel works in addition to factories making agricultural machinery. Among the recent losses of the Soviet has been Voroshilovgrad where locomotives were being made and Rostov where much agricultural machinery was produced. Collective farming with tractors demands machinery and oil. The change from peasant farming may prove a big handicap, as was once feared. According to a cabled report there are perhaps more than half a million tractors using up more than half the motor fuel produced in the Soviet Union. There may be no danger to cotton or timber produced in Georgia but the isolation of the three Republics will be achieved by Nazi control of the Black Sea. Moreover, the German advance represents a danger to manganese supplies to the Urals from the Caucasus, shipped generally from Baku to Chapayev.

Defence Loans

The usual monthly statements as to the progress of the Indian defence loans and certificates continue to appear. In June it would appear that the response from investors showed improvement. Sales of savings certificates increased, and the encashments, too, were lower than in May as also March when encashment took Rs. 18.38 lakhs from the total subscribed. Up to the end of June the total sales of savings certificates amounted to Rs. 448.67 lakhs and the defence savings bank set up in connection with incometax reliefs attracted Rs. 14.34 lakhs. The subscriptions to interest-free loans accounted for a total of Rs. 2.77 crores; and the 3 percent Defence Loans provided Rs. 98.71 crores nearly. Statistical analysis is not needed to show that Bengal which held its own Defence Savings Week is still ahead of Bombay which has yet to put up something corresponding to the Bengal Savings Week. Total money collected up to the end of June is known to be Rs. 106.1 crores. The total announced in August covering subscriptions up to the 15th August was Rs. 118.01 crores. It might be claimed that at a time when the treasury bill issue was much larger than before the response to defence loans was encouraging. But it has to be noted that the third defence loan appeared in July and the subscriptions thereto up to the middle of August were about Rs. 2.98 lakhs. The total seems disappointing in view of the slacker money conditions which created the belief that the third loan at par in a rising giltedged market would impress the investor. It appears as if politics had influenced the success of the issue to some extent.

The very limited response from Indian India still stands out as a feature of the statement. Indian States have provided hardly 3½ percent of the total raised, but it must be said here that interest-free loans etc. made by the Princes might have been made either through Bombay or Calcutta for convenience sake. The total from British Baluchistan appears to be larger than that from Assam which has saved up only Rs. 21.43 lakhs for a little over two years. To go by the statistics alone one might say that only Bengal and Bombay are making a decent contribution. Provinces of great landlords like Bihar and U.P. make an indifferent showing as compared with the Punjab which prides itself on sending men rather than money for the war. Yet one must allow for the concentration of finance in Bombay and Calcutta, and it will be found that a considerable part of the contribution comes from other areas including the States. The most recent statement gives the total for all defence issues up to June as Rs. 106.1 crores. The total up to August 15 is known to be Rs. 118.01 crores, and the next week raised it to over Rs. 120 crores. It might naturally be inferred that subscriptions came in at a satisfactory pace in July and August though subscriptions to the third defence loan in three weeks ended August 15th were Rs. 44 lakhs. Rs. 221 and 81.38 lakhs respectively. The 3 percent loans in about 26 months have provided in all Rs. 109.27 crores.

Fewer And Shorter Strikes

The record of 1941 in regard to industrial disputes is better than that of 1940. According to a recent press note in spite of an increase in the number of disputes in British India there were fewer workpeople involved and fewer days were lost in comparison with 1940. During the year there were 359 strikes affecting 291.054 workers in British India. The total number of working days lost through strikes was 3,330,503 as against 7,577,281 in 1940 the year of the big textile strike in Bombay. Cotton and jute mills accounted for 44 percent of the strikes; 70.3 percent of the workers; and 66.6 percent of the working days lost. The majority of disputes in the year in most industries turned on wages or bonuses. The workers were successful in obtaining concessions and 186 of the disputes which began and ended within 1941 are to be regarded as victories for the strikers. The C. P. Textile Labour Enquiry and the examination of issues between the Government and workers in the Northern India salt mines by Mr. S. R. Deshpande were admittedly events of importance in as much as the enquiries were meant to avert unrest. The biggest textile strikes of the year were reported by mills in Nagpur, and Cawnpore comes out well in comparison with other places. Among the major strikes of the year was that affecting 9,495 workers in the Hukumchand Jute mills in the 24-Parganas and that in the Ajmer Railway workshops. The G.I.P. workshop strike was less serious and the Kurla mills strike was quite brief. In view of the ascent of prices and the many difficulties of workers it may be fairly said that adjustments were rapid and smooth: managements were not unyielding, and the intervention of Government, whether early or late, had its intended effect. The fall in the number of working days lost, particularly, in the Bombay mill industry is directly responsible for the rise in textile output. It is doubtful if the present year will witness any such improvement as was noticed in 1941. The conditions are different, largely owing to the spread of the war. Industrial unrest in Madras is apparently extending, and the difficulty of picking reasons for particular strikes is likely to hamper the statistical investigator in the future. Recent amendments to

Ordinances are aimed at the strike habit. The improvement noticed in 1941 was not due to any changes in the Trade Disputes Act or any other reason. The strike statistics for British India may be said to illustrate the relatively peaceful and unambitious character of the trade union movement in India. The war with its effect on prices did not induce strikes on a large scale. Efforts latterly made to promote industrial peace by tripartite discussions should contribute in a decisive measure to the elimination of unrest that will necessarily prejudice war production.

Cost of Occupation

The misfortunes of Jap-occupied territories have seldom received notice. The cry from Bangkok that Siam is at the end of her tether is by no means proof of Jap altruism. Cold-blooded Imperialists, they have always believed in making war pay for itself. Even before the Anglo-Japanese war Jap penetration in China was by no means peaceful, and the less pleasant side of Japanese overlordship was noted at Tientsin and Tsingtao by neutral observers watching the currency war and the manoeuvres of puppet regimes. Since then war has spread and intensified. Recent reports go to suggest that in Burma, too, spoliation has been the rule, and the vision of co-prosperity no longer pleases the people of any occupied territory. In the original laboratory of military misrule, namely, North China, the Japanese have not always had their way. Chinese organisations handling economic warfare are busily fighting the Japanese to keep foodstuffs produced in occupied areas from falling into the enemy's hands. In addition to this statement the "China Information Bulletin" cites reports from various parts of the country to the effect that over 80 per cent of the rations for the Japanese armed forces in China are ransacked from the people in occupied areas. The Commander-in-Chief of the invading army has fixed 80 per cent of the Army rations to be 'collected' in North China; 100 per cent in Central China and 70 per cent in South China beginning in April 1941. The fact that the Japs fed their soldiers in North China in 1940 with nearly 50 per cent of rations provided by seized foodstuffs and 80 per cent in Central China proves that there is shortage of food both in the islands and the conquered territories. She must now depend upon the so-called policy of sustaining the war with war fruit. Japan has other aims in looting the painfully harvested crops of Chinese peasants. She is transfusing some blood to the moribund puppet regimes by giving them broken victuals and by forcing the people to follow the puppet's orders and requisitioning measures as a means of getting more food. The puppets also are practising the collection of land tax in kind and measures of food control.

Japan is using the food seized in China for purposes of barter. It has been stated that in 1940 alone the Japs took at fixed prices 400,000 piculs of rice from Central China to send Germany through Siberia along with soya beans from Manchuria mainly in exchange for munitions. Part was swindled by business sharks, colluding with Army and Navy officers, for sale in Shanghai and other places, but some of the food taken from China went to Japan. Japanese foraging expeditions have been known to cut standing crops and take off the grain, as in Northern Hupeh. Similar spoliation has been noted in the Yangtse Valley. Reports say that contributions in rice have been collected from villages in Chekiang and refusal is followed invariably by punishment. In most cases the paper money of puppet regimes has been planted on the sellers of rice; and methods have varied from place to place though the aim has been identical. All taxes and levies are demanded in kind. Paddy for instance procures a certificate of good citizenship and imported salt is given in inland Provinces only in return for paddy. Merchants have been known to play the Japanese game, and private loans made before harvest are always demanded in

the form of foodstuffs. But crops are removed by Chinese guerillas as much in the interests of the grower as to beat the enemy so that the Chinese peasant has his fill of excitement. The Japs are not above using Chungking dollars to get food from Chinese farmers. Attempts to buy foodstuffs through obliging Chinese are not unoften foiled by the guerillas who employ strict control measures.

Brazil's Exports

That the U.S.A. is sending out a technical mission to report and advise on Brazil's resources was made known last week. A recent B.O.W. message mentioned Brazil's rubber and oil as essential war materials. What is described in reference books as South American rubber output must clearly be Brazil's as the figures relating to stocks are shown as Brazil's. The average monthly production in 1941 was less than that of Sarawak or Thailand but Brazil was outside the restriction agreement, and her climate should certainly support rapid expansion of output for Allied war requirements. Brazil's stocks in 1941 were a small part of stocks held in the U.S.A. last year but the draft on supplies has been immense and the additions to natural rubber from Brazil should help the producers of buna in the U.S.A. who may well urge that oil is needed for other purposes. The annual Brazilian oil production is unknown and Brazil's output of various minerals can only be guessed. What has been said as to bauxite, manganese, chrome and iron cannot be illustrated by reference to any statistical year-book. But ten years ago the exports of manganese from Minas Geraes were the chief mineral export of Brazil. The principal customer then as now was the U.S.A. Brazil's coal deposits are scattered over four States but total yearly output has seldom exceeded a million tons. Known reserves, however, were put at 5,000 million tons. Iron is not confined to Minas Geraes but the deposits at Itabira, opened up by foreign enterprise, are believed to be among the richest in the world. Brazil is perhaps distinctive in forbidding the export of home-mined gold. The gold output since 1918 is used to guarantee the inconvertible treasury and banknotes. It is well-known that a great part of the world's monazite comes from Brazil, chiefly Bahie and Espirito Santo. The Republic's cotton textile industry may be unimportant for the war, but sugar will certainly be useful, Hydro-electric development in Brazil has made a notable contribution in her industrial progress and cement, paper, silk and woollen mills as also tobacco factories and flour mills were noted long before the war. Coffee, cocoa, tobacco and sugar were the chief exports in the past but Brazil found in the depression that she could not pay interest on all but three of her external loans. The principal creditors then were Britain, the U.S.A., France and Holland. The municipalities also owed money. What she did to her creditors then is unimportant as compared with the two refitted cruisers and the destroyers she can provide. Brazil besides has three naval arsenals. Brazil is famed for her nuts, and bananas and wine were more or less important items in the export trade. The U. K. was in the past a big buyer of Brazil's oranges and bananas in return for coal and cotton goods. The reservation for Brazilian vessels of all coastal and river trade led to the growth of a merchant navy. The Federal Government owns the greater part of Brazilian railways. It may be added here that Brazil is on the bullion standard like India and the value of the milreis was fixed at 6.75 milreis as equal to 4d. That gave place to a gold exchange standard in 1930 when Vargas came to power.

Jupiter Results for 1941

Reorganisation is clearly responsible for the Jupiter General Insurance Company's report for 1941. Mr. Dharamsey Khatau explained at the annual meeting on August 20 that loss of business in Burma has been more than made good by Indian branches. These two facts will go far to justify the generally optimistic tenor of the speech. Total life business written in 1941 amounted to Rs. 44.83 lakhs (as against Rs. 20.86 lakhs in 1940) with a premium income of Rs. 2,43,737-13-0. Total business in force is over Rs. 1.28 crores and the life branch premium income shows a satisfactory in-

crease, by over Rs. 3.75 lakhs in fact, on 1940. Expenses have risen as also claims and the need for economy was dwelt upon by the Chairman in reviewing the report and accounts which indicate that the Life Fund has been strengthened by Rs. 3½ lakhs nearly. The Jupiter does not concentrate on life business. It is doing a large fire business in India and is extending it. The net premium income in the fire branch last year came to Rs. 12.63 lakhs nearly and the losses absorbed Rs. 4.01.089-15-8. The loss ratio was 31.76 percent. The Fund stands at Rs. 7.80.000 and there is due provision for commission, taxes etc. besides the usual transfer to profit and loss account. The marine branch revenue for 1941 came to Rs. 6.45.601-8-3. Claims took Rs. 1.80.081-0-4. The Fund for unexpired risks is large at Rs. 6 lakhs as against Rs. 4 lakhs previously. As in the fire branch revenue rather than business has risen as the limited increase in accident insurance indicates. The miscellaneous branch fund is maintained at Rs. 1,20,000 after the transfer of Rs. 47,170-7-4 to the Profit and Loss account. More successful than most other companies in regard to new business, the Jupiter can also lay claim to a rise in the rate of interest earned on the Funds through higher taxation reduced the net yield to 3.86 per cent. The Jupiter's funds have latterly been strengthened through the addition of over Rs. 2½ lakhs realised on exchange and assigned as General Reserve. The Jupiter's latest balance-sheet shows that the funds have risen from Rs. 58.1 lakhs to Rs. 67.8 lakhs nearly. The other mark of progressive management is the internal reserve amounting to nearly Rs. 90,000 owing to appreciation in securities held by the company. There have been changes in the Board and as the new, livelier Jupiter reports improved business it has held out a promise of full protection to its civilian policyholders in wartime and also to its own staff. The life branch valuation has been conducted by Mr. C. D. Sharp, F.I.A. and adjustments have been made after examination. Dividends for both the preference and ordinary shareholders have been made available as before and the company's success in more than maintaining its position should not surprise those who remarked the extensive changes made last year.

KEEP OUT THE JAP!

Mr. Nopany's Speech

Speaking at the second quarterly general meeting of the Indian Chamber of Commerce, Calcutta, Mr. R. L. Nopany, the President, referred at length to the many important problems that confront the country at the present moment.

The burning topic of the day is, of course, the proper utilisation of sterling resources that have been accumulating at a rapid rate. With 3½ per cent sterling paper due for repayment only in January 1942, and with the possibility of accumulated sterling resources totalling about Rs. 800 crores by the end of next year, there is naturally considerable anxiety regarding the proper utilisation of the sterling resources. Steps also should be taken to prevent any depreciation in the value of sterling assets. Among the suggestions put forward for the utilisation of sterling resources were of course the purchase of the three company-managed railways, the repatriation of the public bodies debentures and the purchase of the British commercial interests in this country.

The news regarding the departure to London of Sir Jeremy Raisman on a brief visit gave rise to considerable speculation. It was said that he went there to work out certain details regarding financial adjustments between the U.K. and the Indian Government. It is now more than a fortnight since Sir Jeremy returned to India but no statement has been issued so far and it appears that none will be issued till February next year. This is very unfortunate as there is considerable nervousness that the British Government might try to use sterling resources to their advantage especially as the position is confused and it is possible to debit a greater proportion of expenditure in respect of military operations. Mr. Nopany rightly referred to the need for allocating expenditure in this regard to India on the formula based on the Chatfield Committee's recommendations followed at present and which requires India "to bear inter alia the cost of such war measures as can be regarded as purely Indian liabilities by reason of their having been undertaken by India in her own interests."

Another important problem referred to in the speech was the liability of this country under the Lease-Lend arrangement. It will be remembered that there was considerable criticism at the time the budget for 1942-43 was announced when Sir Jeremy pointed out that the sum of Rs. 45 crores had been set apart for payment of materials got by this country under the lease-lend arrangement.

It was pointed out that the allocation of a certain amount for payment on a cash basis was unnecessary and against the spirit of the agreement. The position of this country in this regard is not clear as there is no separate arrangement with the U.S.

The problems connected with food supply and post-war reconstruction were also discussed at length. The need for safeguarding against the perpetuation of the position of this country as a producer of primary commodities and a retardation in the policy of progressive industrialisation cannot be over-emphasised.

THE BOY ON THE HILL . . .

UNDER the sun that brings the rains and raises the crops and turns the Wheel of the Year, an Indian day is in progress. A boy dries his *dhoti* in the wind. Shadows are cast in holy places by ancient walls and trees. Cattle laze by the river while the farmer works in his fields. The sounds of the nearby towns can be heard from afar. How beautiful is India to those who love her!

The calm of her vast countryside has formed the non-violent way of life through centuries. Even those of us whose work binds us to the great cities of India draw from this great well of peace.

Forty million Chinese, whose life was a settled order based on family and friendship, have been uprooted by Japanese armies.

To stop this happening in India, all of us must unite to support our fighting men and to resist the invader by every means in our power.

In an article that appeared in the "Sunday Statesman" under the heading "Democratic England has arrived," J. B. Priestley refers to certain ladies and gentlemen, who are not yet attuned to the spirit of the age and says:

"They are not quite as bad as they sound. In their own little circle, they may be quite decent, kind-hearted persons, anxious to help the people around them. Their trouble is that they haven't any imagination, and they simply don't know what is happening in the world. Strictly speaking they are not living in this world at all, their minds never having caught up with the terrific march of events. They probably stopped thinking for themselves somewhere about 1910. They still regard this war as a kind of brief interruption in a quiet, settled existence. They haven't the least notion that the world has really been in a state of wild revolution for years and years. They have never taken a proper look at anything. They are living in a dream. They are like the last of the dinosaurs, still crashing and blundering about the place, but really on their way to extinction. None of the people who are in this war and not merely dreaming on the edge of it, talk this sort of nonsense."

* * * *

As I read it, it struck me forcibly that every word in this quotation was true of the British in India, official and non-official. It is true that a few Britons have joined the Army; but many more have not joined up on some grounds or other.

I have, on more than one occasion, referred to the gallant men who are fighting Hitler from Esplanade. There are many such Esplanades, for instance, in New Delhi. You have merely to look at the large army of young men, who have high-sounding prefixes as if in regular military service but who are supposed to be specialists in publicity and public relations.

Of such men, it may surely be said that they are the people who ought to have been in the war but who have contrived to secure a comfortable place on the edge of it.

* * * *

India has a goodly number of such people. They live and move in a world of their own. That world came into being decades and decades ago. It may be described as an unchanging world. It is a world completely isolated from the outside world.

* * * *

The denizens of this world are devotees of the creed of Leibnitz. They are satisfied that their world is the best of all worlds and they themselves the best of all human beings. Whatever they do must be right. And whatever is done by people with whom they disagree must be wrong.

By temperament and through opportunities, I have had ample contacts with various types of Europeans. They like me for my good breeding and generally good understanding and tolerate my independence of views up to a point. My good understanding is questioned the moment I suggest to them that their own understanding of India cannot be considered sound till and unless they understand that Gandhiji is India. They tolerate my independence and frank speaking until I stress the need for them to make an effort to understand what Gandhiji is and what he stands for.

* * * *

At one stage, Gandhiji is dismissed as a crank; at another, he is represented as a wily, cunning and diabolical politician. While a few believe that he is an impractical visionary, most of them are convinced that his heart is filled with hatred of Britain and the Briton.

To my reply that, if Gandhiji's way of life and thought is appreciated in its fundamentals, there should be no difficulty for anyone to realise that there can be no place in his philosophy for any kind of hatred, the reaction is an unbelieving shrug of shoulders; and I run the risk of being classed as another crank or, worse still as they believe, as another Congressite.

I am sorry to have to record that even the American friends I have met are more or less obtuse so far as understanding of Mahatma Gandhi is concerned.

Let us now analyse the developments of the last few weeks. When Gandhiji demanded the complete transfer of power by Britain to Indian hands, it produced all the effect of a shock. By the time the All-India Congress Committee met in Bombay, it came to be said that the demand was quite reasonable; but most serious exception should be taken to the threat contained in the epilogue of the resolution.

* * * *

Our British friends in India and their inspired apologists all over the world fastened their gaze on the threat and never bothered to understand the propriety and logic of the demand. It thus happened that the arrest of Gandhiji and the other Congress leaders received universal blessing in British circles in India, in the United Kingdom and in the United States.

The first outburst has convinced our gods in New Delhi that what they have done has been the correct and proper thing.

It is now clear that the first outburst of what looks like pre-arranged approbation is yielding place to some manner of self-introspection on the part of the more thoughtful elements; and a more widespread realisation that it is easy to create a desert but farcical to call it peace.

* * * *

Evidence of the sanity of second thoughts is furnished by the resolution passed at a meeting held in Calcutta of a group of Europeans drawn from most sections of the community in this city. The resolution reads:

"That this meeting is of the opinion that the British Government should forthwith announce its readiness to transfer full powers to a National Government of India, and provide immediate facilities for its formation."

* * * *

Let me sum up the position:

(a) At the time of the Bombay meeting of the All-India Congress Committee, there was general agreement even among the critics of the Congress that the demand contained in the resolution was reasonable.

(b) The demand for National Government has now the full backing of the Hindu Mahasabha.

(c) Even a group of Europeans drawn from most sections of the community in

Calcutta urge the importance of the transfer of full powers to a National Government of India.

Is it not time that the mistake is admitted of having exaggerated the threat portion and belittled the demand portion of the Congress resolution?

* * *

Mr. Winston Churchill has answered this question in the negative. His own estimate of the situation in India at this moment is that it gives no occasion for undue despondency or alarm. He has reiterated the intention of his Government "to give all necessary support to the Viceroy and his executive in the firm but tempered measures by which they are protecting the life of the Indian communities and leaving the British and Indian armies free to defend the soil of India against the Japanese".

So far as India's freedom is concerned, the Churchill of the early 40's is not different from the Churchill of the early thirties. This need be no matter for wonder. But it is really surprising that the House of Commons, which has recently shown itself critical of Mr. Churchill in various respects, seems to be hilariously enthusiastic of government policy as outlined by the Premier. I give below a passage which is profusely studded with "cheers" though it is difficult to see what exactly was the wonderful point made out by Mr. Churchill that deserved this gleeful approbation.

> "The Indian Congress Party does not represent all India (*cheers*). It does not represent the majority of the people of India (*cheers*). It does not even represent the Hindu masses (*cheers*). It is a political organisation built around a party machine and sustained by certain manufacturing and financial interests (*cheers and laughter*)."

* * *

When Sir Samuel Hoare was the Secretary of State and Lord Willingdon had declared bitter war on the Congress, the Viceroy confidently assured the India Office that the Congress had been crushed and its influence eradicated; and that it was safe to hold the Assembly elections as Congress would nowhere be in the picture. It was Lord Willingdon's turn to be disillusioned, but it was Sir Samuel's to be grievously disappointed. The new assembly that was returned was in no way to the liking of either Simla or Whitehall. Mr. Churchill may be pursuaded by his advisers at home and in India that everything is as it should be in India; and that government action is evoking appreciation and support on every hand. But there can be no doubt that disillusionment awaits him.

* * *

The trouble with Mr. Churchill and the other British officials who guide the destiny of India is that they have not yet understood the real aims and purposes of this war; much less do they realise that this war would have been fought in vain if it did not lead to a new kind of world and to a new way of living. Lip service is no doubt paid to high-sounding aims; but, in their heart of hearts, all that they hope for is that the world after the war will revert to what it was in 1939.

The British Cabinet and even the British Parliament (the Parliament as it is to-day has outgrown the claim to be representative of to-day's Britain) must still be described as the representatives and protectors of the old order of things.

Yet, in Britain itself, a kind of moral awakening has dawned on the general mass of the population. They are the men and women who find their ideas better expressed by Mr. J. B. Priestley to-day than by anybody else. On the part of these people, there is a positive and passionate longing that they should not go back to the miserable world which they knew in 1939. All of them will be most disappointed with the end of this war if it does not lead to a new way of living.

An expression of this urge is "The Forward March", a movement whose objectives were dealt with in a speech by Sir Richard Acland on November 12. One must presume that Sir Richard's speech, which must be considered as a classic, left Mr. Churchill untouched.

If Mr. Churchill continues to represent not the New World, nor the new way of living, but the old world and its vested interests, he would no doubt go down to history as the one solid rock on which the Nazi ambition has been wrecked; but he will not go down to history as the greatest democratic leader of all time.

* * *

Investors in the tea industry and tea-drinkers of all classes in India will do well to take note of the remarks of Mr. J.S. Graham at the Indian Tea Market Expansion Board's budgetary meeting last week. The war has certainly imposed a strain through the 125 per cent quota on the producer in India. Demand, is in any event, enlarged by the loss of the East Indies. There is, however, no reason to apprehend any shortage within India. The industry is not interested in letting tea prices shoot up, and it is not unwilling to let Government take over private exports of tea. It may be freely assumed that the Indian Tea Association's views are similar. The Indian Tea Market Expansion Board, to judge by Mr. Graham's remarks, is not prepared to countenance any pronounced rise in prices because consumption would suffer and ultimately the Indian industry would lose. Because a shortage of tea need not be seriously anticipated, there is no cause to permit prices to go up. The organisation interested in extending the market for tea is clearly against profiteering, and is anxious to extend further the market for tea in India by every means.

The decision is understandable in the light of the good results that have followed good work for many years. Favourable conditions still exist for stimulating tea consumption in the Fighting Forces, in civil defence and in industry, as Mr. Graham noticed. It is anyway good to know that the Board is not unduly impressed by the International Board's decisions, and thinks of India as presenting special opportunities. Propaganda will not be curtailed, even if it is not developed further. That is a decision made in the interests of the industry which will note that India can and does take over a hundred million lbs. of tea in a year and can increase the quantity used at home so that if post-war demand shrinks, the home market will make good any fall in oversea exports. Mr. Graham rightly dwelt on the danger of allowing prices to interfere with consumption. He admitted that local difficulties relating to transport might exist but the Board was watching the situation and was ready to help distributors and others. Mention was made of adulterants. The I.T.M.E.B. is known to be quite vigilant in reporting admixture of waste tea, black-gram husk and other deleterious things in tea. It is as anxious to protect the consumer as to safeguard the good name of Indian tea. It is quite likely that high prices encourage adulteration, and the Board is both forewarned and forearmed. Tea companies, on any showing, have had a good year in 1941 and if you care to look at Mr. Graham's speech from the investment angle only, you will find that he is a stout nourisher of optimism. The tea outlook is more than encouraging for the market is big, and is being nursed well, thanks to a Board which will not let the passing effects of war influence policy to more than a limited extent.

MEN OF STEEL 6.

Many have exchanged the green fields of Bengal for responsible positions in modern steel factories, where they have speedily adapted themselves to this new form of work.

The ingenuity and the keenness of these men are contributing towards the development of Indian industries.

They rank among those who are forming a new generation in India—Men of Steel.

(From Our Correspondent)

New Delhi, Sept. 10.

New Delhi has entered the fourth year of war—one may say, with a feeling of increased satisfaction that progress has been made but undoubtedly also with a feeling that there is no room for complacency. So far as the Defence forces are concerned, the fact is that the one million mark has already been reached—a big achievement compared to the small standing army of less than 200,000 before the war. The magnitude of Defence measures may be judged from the fact that the daily war bill is to-day well over half a crore per day. As regards production, a statement now available shows that in the munitions field, we have now six times the pre-war output of rifles, eight times that of machine-guns, ten times of bayonets, 24 times of gun ammunition and nine times of guns and gun carriages. The cost of the new munition production schemes is said to be over Rs. 23 crores. According to an official estimate the Munitions Production Department is now using 1,500 engineering workshops—840 for general engineering items, over 300 for small tools, and 345 (together with 23 railway workshops) for munitions components. It is also announced that the value of textiles purchased by the army up to June 1942 was Rs. 120 crores and that in the coming year it will be nearly Rs. 70 crores. With reference to indigenous production of medical instruments it is claimed that since the war not only has the indigenous industry practically kept pace with the Defence Services demand but has enabled India to supply Russia with approximately 80,000 instruments of indigenous production.

* * * *

These are impressive figures which undoubtedly show big and continuous progress in certain directions. But the old complaint still remains. Many of the heavy industries which are essential for wartime self-sufficiency, have still to be tackled. It is known that the American Technical Mission have recently sponsored several new plants and machine tools and have agreed to send special supervisory staff, but the details of these are not yet known. There are lines in which considerable progress can be made—particularly ship-building, locomotive construction, automobile manufacture etc.—but the success of these undertakings depends upon the assistance in the shape of machinery and personnel received from America. It is said that at present well over 30,000 men are employed in the various ship-building and repairing yards in India, but ten times this number can be easily employed to develop this industry. Non-official circles still urge the need for a separate Production portfolio which will be charged with the responsibility of developing heavy industries necessary for war production. Mr. Wendell Willkie's visit to India may be helpful from this point of view.

* * * *

There has been considerable political activity in New Delhi this week. Today Dr. S. P. Mukherji, who on behalf of the Hindu Mahasabha has assumed the difficult role of a political peacemaker, had an hour's talk with the Viceroy. All that the Press has been guarddly told is that there was a full and frank talk—with the usual cryptic observation that His Excellency was noncommittal in his attitude. As, however, Dr. S. P. Mukherji is energetically pursuing his efforts to bring the various party leaders together and has urgently requested Mr. C. Rajagopalachar to come up to New Delhi, it is legitimate to assume that he has not lost hope altogether. The present talks of which the moving spirit is undoubtedly Dr. S. P. Mukerji, have a twofold motive behind it—firstly to bring the various party leaders together on the basis of the simple formula that they are prepared to leave aside for the present all controversial issues and agree to join a National Government for winning the war, and secondly, to urge upon the British Government to take the initiative and do what is necessary for establishing a National Government, in other words, agree to transfer power fully. A fairly representative gathering of leaders is now in New Delhi including some Provincial Premiers and party leaders of the Central Legislature. If they decide upon a common formula, it will be greatly helpful at the present juncture—and it will also serve as a lead to the Central Legislature when it meets next week.

* * * *

The sixth Price Control Conference which concluded today has initiated certain new proposals which may have a salutary effect in the future. Generally speaking the conference agreed that the time has come to employ greater stringency in enforcing the Defence of India Rules for controlling prices and preventing profiteering. One of the complaints against the Government's price control policy has for some time been that there is no proper machinery for associating non-official opinion with it. The new Commerce Member, Mr. N. R. Sarker, has tried to remedy this deficiency by the proposed creation of a Civil Supplies Advisory Council—a body which will consist mainly of the represenattives of trade and industry to advise the Central Government on all matters connected with prices, supplies and commodities. This Council, if immediately set up, can play a great part in securing public co-operation in the working of price control measures and in ensuring co-ordination. It would be necessary to provide adequate representation for consumers' interests and agriculturists so that all points of view may be fully considered. Mr. N. R. Sarker has also taken the commendable step of inviting a number of non-official representatives to a conference on Thursday in order that the recommendations of the Price Control Conference may be fully discussed before the Government of India pass final orders.

* * * *

Another body which is proposed to be set up as a result of the Conference recommendations is the Central Price and Supply Board. It will be largely an official body which is intended to assist the Wheat Commissioner and the Civil Supplies Commissioner, but its functions will cover wide ground. It is expected to advise the Central Government in regard to the formulation of a programme of movement of supplies and also help the Provincial Governments to determine the principles governing the fixation of secondary prices in relation to basic prices—both of the highest importance for the success of the price control scheme. Another of its important functions will be to scrutinise the data received from Regional Price and Supply Boards and from Provinces and States in regard to the surpluses and deficits in different areas and coordinate requirements in respect of foodgrains. It would be unwise to deny adequate non-official representation in so important a body as this. Though it may be necessary to treat it as an Executive body, its usefulness will be greatly enhanced if representatives of commercial and other interests can be added to it.

* * * *

Not much information is available on the recommendation of the conference that Fair Price Shops should be opened in poorer localities by the Government themselves or with Government assistance to steady retail prices. This is no new suggestion, but unfortunately the Central Government has not given it sufficient attention. The Government of India Departments are themselves large employers of labour for instance, the Railway Departments and the Posts and Telegraph Departments. Still the suggestion made that in Railway Workshops and similar establishments, the Government authorities themselves should open grain shops for selling foodstuffs at fixed prices which are fair and reasonable has not yet been accepted as an official policy. Such grain shops will only help Government employees, but in the present circumstances of the country it is the duty of the Governments, Central and Provincial, to go ahead and see that throughout the country such shops are opened in the interests of the poor. I understand that some well-known business magnates have themselves offered to open grain shops for selling foodstuffs at cost price to the poor if necessary facilities are offered by the Government. As a definite recommendation has now been made by the Price Control Conference, a detailed scheme has now to be formulated for giving effect to the proposal.

* * * *

A fairly long list of resolutions has already been tabled by non-official Members for the coming session of the Central Legislature. Two Members of the Muslim Group urge the creation of a Department of Production as an independent—a proposal which the Grady Mission has approvingly mentioned in its report. Another resolution suggests rationing of foodstuffs—equitable and economic distribution among the people, rich and poor, by fixing the consumption quota for each person and the economic price. The only official resolution so far tabled is Mr. Aney's suggestion that the present concession granted to Members of the Central Legislature allowing them the right to draw free haulage of their motor cars from their places to Delhi for the sessions should be suspended for the period of the emergency. At a time like this when sufficient transport is not available even for foodstuffs and other necessaries, there can be no justification for continuing this wasteful practice of free haulage of motor cars—in fact, it should have been given up years ago. The question is bound to be put to Government Members and other high officials as to whether they should not also give up the right of using their saloons when they go on tour. If Provincial Premiers and Ministers can do their work without the luxury of saloons why should not the Members of the Government of India try to do the same?

* * * *

It appears to have been pointed out to the National Defence Council at its meeting yesterday that though recruitment for the Defence Services is progressing very favourably, a certain leeway has yet to be made up in the technical branches—particularly the Medical Services. There are still persistent rumours that if the recruitment of doctors of the Army does not improve it might become necessary to conscript medical men for the Defence Services and A. R. P. work.

(From Our Correspondent)

A queer week of rumours we have had when we are not supposed to listen to rumours. There has been a sleepy resumption of business with spasms of disorder. An evening journal published the rumour that Sir Purshottamdas Thakurdas had been asked by the Viceroy to fill the breach caused by Sir C. P. Ramaswami's dramatic exit. Then somebody worked up the rumour that Mr. Churchill was in Delhi for a chat with Mahatma Gandhi who had been conveyed thither by a special plane. Another canard was that the price of kerosene might come down when really there was a stampede for a few thimblefuls of the precious liquid. Arrests and detentions are in full swing while the Indian Merchants Chamber and allied associations are increasing the revenue of the Telegraph Department by voluminous appeals to the Viceroy for a re-tracing of steps. Dr. Jivaraj Mehta has been arrested and it is hoped that he along with Dr. Gilder would be lodged in the same premises as Mahatma Gandhi as they are his principal doctors.

* * * *

An element of nastiness is entering the mind of the authorities, for while newspapers are allowed, no honey can be forwarded to prisoners. Mr. S. R. Narayana Aiyar Vakil, writes from Coonoor as follows:—

> "Now and then I used to send to Gandhiji pure cultured honey extracted from my hives, as it is well-known that honey brings down high blood pressure. On August 22, I sent by registered parcel care of H. E. the Governor of Bombay a bottle of honey to be delivered to Gandhiji. I assured the authorities that I had not enclosed in the parcel any news or message except my name pasted on the bottle. But I received yesterday a letter dated 29th August No. S. D. V./519 signed by some one for the Secretary to the Government of Bombay that "I am directed to return herewith (?) the parcel of honey sent by you to Mr. M. K. Gandhi as it cannot be delivered."

* * * *

According to knowledgeable circles, four Provincial Governments propose to float three per cent loans payable at par in September 1955. The Government of India have asked Bombay, Madras, Punjab and the Central Provinces to repay portion of the debts due to them and consolidated at the time of the introduction of Provincial autonomy. Under the Niemeyer Award, these Provincial Governments have been discharging their debts by annual instalments to be completed within a period of 45 years. These debts were carrying a very high rate of interest, about 4½ per cent. There is also a provision in the Niemeyer Award that Provincial Governments can pay 50 per cent of outstanding debts any time between April 1945 and October 1946 Evidently, the failure of the Third Defence Loan and also the urgent need for funds have forced the Central Government to call upon the Provincial Governments to return at least part of the amount due to them, taking full advantage of the prevailing easy money market conditions. Financial circles expect that the issue price will be between Rs. 97 and Rs. 98. It is learnt that the Bombay Government will raise Rs. 3½ crores, Punjab Rs. 2½ crores, and Madras Rs. 125 lakhs and Central Provinces Rs. 50 lakhs. If these loans prove successful, they will go a long way in reducing the high interest charges which Provincial Governments have been paying. The Madras Government has been paying 4½ per cent. The new loans at 3 per cent will certainly prove advantageous to the Provincial Governments. The official announcement regarding these loans is expected on September 18. when the list will be open to the public

* * * * *

A Press Note issued by the Government of Bombay says: 'The Government of Bombay appreciates that, during the past few days, the public in Bombay City and elsewhere has suffered much inconvenience owing to the shortage of sugar. The production of sugar in Bombay and the Deccan is only enough to provide sugar in normal quantities for the Deccan districts, and Bombay City and the rest of the province have to get their supplies of sugar from factories in other provinces as allotted by the Sugar Controller Government of India. The recent disturbances of communications in certain parts of India have dislocated transport between those areas and Bombay, and consequently supplies of sugar have inevitably fallen short The position has been further disturbed by the dislocation of normal distribution owing to the dealers in sugar restricting normal trading to a few days in the week The Government is obtaining some sugar from the Deccan factories for Bombay, and will see as far as possible that supplies for the city are maintained. But, if further inconvenience to the public should be unavoidable, the Government would ask all citizens to co-operate in meeting the difficulty which has been considerably aggravated by the action of those who have attempted to interrupt normal trading and communications by restricting their consumption of sugar till ample supplies be once more available."

* * * * *

Two appeals filed by two brothers named Jamnadas Brijlal Pastakia and Maganlal Brijlal Pastakia against the Great Eastern Life Assurance Co., Ltd., claiming to recover from the company two sums of Rs. 15,000 and Rs. 10,000 respectively under two policies taken out by their deceased brother Nagindas on his life and which the deceased had assigned to each of the appellants were dismissed with costs by Mr. Justice Broomfield and Mr. Justice Macklin at the Bombay High Court. The first policy of Rs. 15,000 was issued on August 18 1937 while the second for Rs. 10,000 was issued on November 1, 1937. The first policy was assigned to Jamnadas on November 7, 1937, and the second to Maganlal on December 1 1937. Nagindas died on January 26, 1938 at the age of 44 years. The Insurance Company repudiated liability on both the policies on the ground that there was wilful misrepresentation by the assured at the time of the proposal inasmuch as he had concealed from the Company the fact that he had been under treatment for a certain serious disease.

* * * *

In giving judgment Mr. Justice Broomfield said that the premiums on the two policies taken up by the deceased amounted to over Rs. 1,300 which appeared to have been rather more than half his total income. In his Lordship's opinion the question whether Nagindas suffered from any disease in 1936 and the beginning of 1937 depended entirely in the evidence of Dr. Vaishnan who deposed to having treated the deceased in 1936 and 1937, and His Lordship had no doubt that his evidence was honest. Whether Nagindas had that particular disease or not, there was no doubt that whatever it was from which Nagindas suffered it was undoubtedly serious and he was bound to disclose it in his answer to the questions on the proposal forms. Their Lordships had, therefore, no hesitation in holding that Nagindas's statement that he had never suffered from an illness of any kind amounted to wilful misrepresentation. Their Lordships also held that it amounted to fraud as defined by Lord Herchell in Derby rs. Peek 14 A.C. 337. The appeals and the suits were accordingly dismissed with costs.

Resume of Commodity Markets

Except for the strength of the jute market throughout the week, and the hessian market in the earlier part of the period under review, there is nothing of importance to be recorded in the several markets. Gold prices tended to be firmer with greater buying by both speculators and investors and the closing quotations are only slightly lower than the highest levels for the week. As yet it cannot be said that the highest prices have been obtained and given the continuance of the present conditions, gold prices may perhaps continue to be on the upward trend. In this connection it is interesting to point out that Calcutta quotation at Rs. 58-8 is the highest ever touched and compares with Rs. 58-4 which was the highest touched in the Bombay market early this year. The silver market, on the other hand, has not been affected. There was a temporary rise in values but prices have again receded with selling by the Reserve Bank.

The important event of the week, however, has just concluded. The Commerce Member gave a new approach to the several problems and it has been quite appropriately remarked that successful price controls in this country and elsewhere must largely depend upon organised schemes of supply and distribution. It is essential to extend control over competitive food grains so that the producer and seller had no incentive to sell these in preference to controlled commodities. It appears that several important decisions have been taken at the Conference and that as a result of the creation of a more comprehensive price control machinery, a more effective control of prices will be instituted and adequate supplies of the essential quantities will be supplied to consumers. The Conference of commercial interests on Friday should to a great extent help the Commerce Member in solving the price control problem. In this connection it is very satisfactory to note that there is no fear of an absolute shortage in this country and that by co-operation and help from all sections of the population, the question of feeding the nation in wartime could be successfully tackled and the food front of the nation safeguarded.

Jute

As remarked above, the jute market has continued very firm with mills buying in large quantities for near shipments and sellers not in a position to offer much for early deliveries. There is plenty of jute available in mofussil centres but as has been remarked on earlier occasions the only difficulty is in moving the jute from the mofussil centres to Calcutta. Arrangements for transport facilities are being made and it is also expected to make more effective use of the available transport space. In accordance with the orders issued by the Chairman Regional Priorities Committee, the River Navigation Companies have notified that with effect from the 15th instant, all jute bales will not be accepted for transport to Calcutta and jute mills in Bengal which exceed in cubic measurement 15 cubic feet for 3½ maund bales and 16 cubic feet for 4 maund bales. It is pointed out in the notification that the purposes of this order is to ensure that under the existing abnormal conditions the best possible use will be secured from the transport space available.

Jute Manufactures

The improvement in hessian prices in the early days of the period under review seems to have been rather overdone. With month-end covering and the publication of local stock figures for August, there was a sharp decline in the quotation and all the gains that were made earlier in the week were lost. A slight rally towards the close has succeeded in putting back prices to the levels prevailing at the end of last week. The stock figures published elsewhere in this issue reveal a sharp increase in hessian stocks, cloth and bags both on military and Government account. Figures for July showed an increase of only 15 lakhs yds. on civil account so far as hessian stocks were concerned. Sackings were lower by four crores yards at 20.6 crores yards. Such a big increase in stocks of hessian is, perhaps, due to the serious dislocation in transport facilities during the last month and it can be expected that given normal conditions it will be possible to prevent any further increase in stocks at the end of the current month. It cannot be expected that it will be possible to make good the deficit on account of August.

Groundnut

Another evidence of the failure of the "grow more food campaign" is furnished by the forecast for the groundnut crop for 1942-43. The area under the crop according to the first forecast for 1942-43 season is estimated at 2,809,000 against 2,662,000 acres or an increase of 2 percent. The figures for 1942-43 include the acreage on account of Baroda State which has been incorporated for the first time in the forecast. The condition of the crop is reported to be good on the whole. With the increasing need for groundnut oil in place of lubricants, it should be possible to utilise to a greater effect any surplus groundnut crop that will be left over.

Sugar

One would have expected that with the large increase in demand for sugar, it would have been possible to expect a greater increase in the area under the sugarcane crop. It was not possible perhaps for any immediate increase in the acreage to be effected especially as the food problem was more important at the time when the Allies lost Java. The First All-India Sugarcane Forecast for 1942-43 estimates the area at 3,642,000 acres against 3,565,000 acres (revised) for 1941-42 or an increase of 2 percent. The present condition of the crop is reported to be good on the whole.

With no appreciable increase in the acreage under the crop, there is therefore no possibility of any big increase in the production of cane sugar. This is perhaps the reason why the Govt. of Madras has banned the export of jaggery both cocoanut and palm from outside the province. In view of the large increase in export demand and the shortage of sugar within the country itself, greater efforts should be made to refine sugar from gur and also produce sugar from date palm, cocoanut palm and palmyra.

(Continued from page 450)

October shipment Mills have bought Supervised Jat at Rs. 6 and Rs. 4 Mids and Bots, with District at four annas less. Later Rs. 6 has been paid for supervised district Bots and Rs. 5-12 for Indian District. Indian District Tossa Bots have sold at Rs. 6-4.

Where freight is available, Mofussil markets tend firmer, but in many other stations, when dealers activities tend to slow down on acount of shortage of godown space and/or finance, imports merely tend to dry up and prices have not reacted to lower levels as might have been expected.

In the Fabrics market, Hessians continue to be neglected and only the usual inter-Bazar sales are reported around Rs. 13-12 to Rs. 13-14 for nine porters and Rs. 17-10 to Rs. 17-14 for elevens ready. Octr/Decr elevens were recorded at Rs. 18-4. In Heavy Goods anything for near shipment is difficult to secure and prices have consequently firmed. But export enquiry does not seem to be extensive, and only the fact of Mills being very well sold for this year keeps the market steady. "A" Twills sold at Rs. 51 Octr/Decr. Liverpools at Rs. 50 ready, at Rs. 49 to Rs. 49-8 Septr at Rs. 48-8 and Octr and at Rs. 47 Novr/Decr. "B" Twills sold at Rs. 42 to Rs. 44 for ready and Septr and at Rs. 41-4 for Octr/Decr. Cornsacks fetched Rs. 43-8 for Septr and Octr and Rs. 43 for Octr/Decr. Woolpacks sold at Rs. 2-2 ready and at Rs. 2-1 Octr/Decr.

(Continued from page 446)

Still nothing definite is known of the attempt made by the Indian Members of the Viceroy's Council to get the British Government to take a move on. If this attempt succeeds it will not be long before both the Finance Membership and the Home Membership are transferred to Indian hands. So far as is known the memorandum which Mr. N. R. Sarker and other progressive members have prepared has not yet finally emerged from the Governor-General's council, but as Sir Ramaswami Mudaliar is well aware of the views of his Indian colleagues, he is expected to raise the matter in the War Cabinet as an urgent issue at the earliest opportunity. The future course of the Indian Members will probably depend upon the report received from Sir Ramaswami Mudaliar regarding the views of Mr. Churchill and his other colleagues in the War Cabinet. Sir Ramaswami Mudaliar made it clear in the course of his talks in New Delhi that he not only proposed to raise the Indian political question in the War Cabinet but considered himself to put forward the views of himself and his fellow Indian Members in the Viceroy's Council irrespective of the opinions of Mr. Amery. Within the next few days it will be known how far Sir Ramaswami Mudaliar is able to succeed in securing a new approach to the Indian problem.

LABELS

Owing to a heavy rush of traffic on Railways, luggage is being lost or misdespatched mainly on account of the owners not labelling their luggage in a proper manner. Passengers are, therefore, urged in their own interests, to tie or paste labels on to each package before despatched by rail.

General Manager, Lahore.

A WAR-TIME DIAMOND JUBILEE

Under happier conditions we would have wished to celebrate more elaborately the sixtieth anniversary of the Titaghur Paper Mills, which occurs this year.

Circumstances make this both undesirable and impracticable.

We are proud, however, to be able to look back to-day upon an achievement, which has established for all time, the manufacture of pulp and paper as an Indian Industry.

We are grateful to those who have contributed to this achievement, by word and by deed, by expressing confidence in the ultimate success of the Titaghur Paper Mills, and last but not least, by buying our products in those days when imported paper constituted a serious menace to a young indigenous industry.

To-day our main resources are engaged upon war work, and whereas we appreciate our loyal customers, we regret we cannot supply their requirements in full nor can we increase the number of our customers at present.

We dedicate this Diamond Jubilee to the future of both India and the Titaghur Paper Mills.

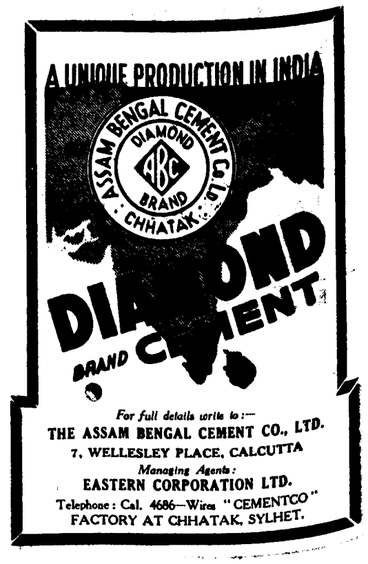
(By Our Jute Correspondent)

Calcutta, 10th September.

After the substantial reduction in stocks which was recorded in July, the figures which have just been published for August are disappointing. In July Hessian stocks were practically stable while Sackings showed a reduction of some 18,000 tons. The August figures show that the aggregate Sacking figures are practically unchanged while Hessians show an increase of over 20,000 tons, or 7,78 lakhs yards. Actually the Sacking yardage is higher by 57 lakhs yards, but the tonnage is practically level. The major portion of the increase is in commercial hessians which are up by 474 lakhs yards and 12,873 tons. Commercial Sackings are actually down by 41¼ lakhs yards and 3,215 tons. Stocks held on Government account are all higher with the exception of Hessian bags, cloth and canvas which are 1,000 tons down. Other descriptions are in the aggregate 12,000 tons higher. Considering that there were fewer working hours in August than in July, it is apparent that despatches have not kept up to their previous high level. It is estimated that August production will not exceed 94,000 tons. Therefore taking into consideration this increase in stocks of 20,500 tons, despatches during the month must have dropped to the region of 75,000 tons as compared with the high point of 120,000 tons reached in July. However, too much need not be made of such variations as the loading and clearing of steamers around the end of a month frequently makes quite a substantial difference. The fact remains however that the expected improvement in the offtake of Hessian cloth for the U.S.A. has not yet materialised and it is this factor which is worrying mills not a little. There can be little doubt that the cloth is badly wanted in the States for War purposes as well as for domestic uses and it has been suggested that approaches should be made on official lines, indicating the quantities Calcutta Mills are capable of producing and supplying over a year and also indicating prices, not necessarily market rates, at which they are prepared to supply, with a view to ascertaining whether this important section of the trade cannot be re-established on more normal lines.

Some weeks ago we ventured estimates of the quantity of Jute consumed by Mills during the seasonal year, July 1941 to June 1942, also of the quantity of Jute which they had purchased out of that crop. Official returns of these figures are now available and it appears that our estimates were not very far out and were only vitiated by the fact that we allowed a rather more generous amount of jute consumed per ton of production than in actual fact was consumed. Making alowance for reduced ration of batching oil and a consequent higher wastage figure, which conditions did not in fact influence the whole year, we allowed 28 maunds of jute per ton of production. Mills actually produced a ton of goods from 27.15 maunds of jute, that is to say, their wastage was more than counterbalanced by the percentage of batching materials applied to the jute in course of manufacture. It is doubtful if this high economic level still subsists and rather more than ton for ton will now be the rule since the ration of batching oil has been cut down. In round figures, the returns now issued show that between 1-7-41 and 30-6-42 Mills consumed 67,60,000 bales of jute, while out of the last crop they purchased 46,38,000 bales. Naturally Mill stocks of Jute were reduced by the difference between these figures, or by 21,22,000 bales. It is of interest that in the recent official Government review of the 1941-42 Jute Crop, Mill consumption for the seasonal year was put down at 72,25,000 bales.



Transport continues to be an acute problem in the Jute trade, as no doubt in all branches of activity. But it is causing the greater anxiety to Mills in view of the fact indicated above that they have allowed their stocks of raw material to drop by half in the last working year and are not now able to replenish at a rate to keep pace with their consumption. Roughly speaking Mills would require to receive monthly not less than 6 lakhs of bales to keep them comfortably situated. Last month's total arrivals, which included imports into Press houses and the Bazar as well as to Mills, amounted only to 4,97,000 bales, and for the two months, July and August, only 7,52,000 bales. It is obvious therefore that Mill stocks have been further reduced during the past two months and with the shipping situation as it is up-country, their hopes of their requirements being fully met in the near future are not bright. It is true that in normal times the Steamer companies have, during the busy jute season, lifted as much as 16 lakhs of bales in the course of a month, without, to all appearance, having their resource unduly strained. Even with the demands which they have had to meet from the Military authorities, it would not therefore seem to be beyond their capacity to carry 6 lakhs of bales per month for the Mills. The crux of the difficulty seems to lie in shortage of towing capacity. Numerous loaded flats are at present lying at various up-country stations waiting to be towed down to Calcutta, and for the time being all this is so much waste space. Not only that, but delay in turning these flats round will render the shortage still more acute at some future date when they would normally be back to receive another load. There are proposals afoot to pool all transport resources and to distribute them equitably to different industries. But the amount of preparatory work to be undertaken before such a pool can start to function must be very considerable and meantime chaos is likely to become worse confounded. Keep Flats Moving is as important a slogan as Keep Wagons Moving. And if, as appears to be the case, it is shortage of towing capacity that is at the root of the matter, then passenger services should be ruthlessly cut or reduced so that Flats can be kept moving. Nor does it seem that the most economic use is always made of the space available. In an endeavour to placate a small army of clamouring customers, the space on a flat is being farmed out in 250 bale lots. This means that a flat may have to carry small lots for as many as 15 or more destinations. All this not only means delay in loading, but also delay in discharging, whereas if a roster were prepared, and flats allotted to load for only one mill, or for two neighbouring mills, movement and delay would be minimised and a quicker turnround achieved. The trouble there would doubtless be—who is to come at the head of the roster! In the meantime, as a further measure to conserve space, it has been decreed that from 15th September, 3½ maund and 4 maund kutcha jute bales must not exceed 15 and 16 cubic feet respectively in measurement. As until comparatively recently 13½ cubic feet was the official limit, this can hardly be treated as any hardship; it is mainly a matter of seeing that the bales are properly lashed before the press is released.

Rather more activity has to be recorded in the Export Jute market. In fact there occasionally appears to be more freight available than balers are able to fill, and near at hand goods have moved to a sharp premium. Demand has been mainly for Daisee and Tossa grades. Old Crop Dundee Daisee 2/3 has sold at Rs. 57 for ready shipment and sellers now ask Rs. 59. New crop Dundee Daisee 2/3 has sold at from Rs. 53 to Rs. 56 for October shipment. Old Crop Dundee Tossa 4s sold at Rs. 59 with sellers now asking Rs. 60. Old Crop Out-port Tossa 2/3 has sold at from Rs. 56 to Rs. 58 for September. Mills have also taken a fair interest and have brought Firsts at Rs. 54 ready, at Rs. 53 September and at Rs. 51 and Rs. 52 October. Lightnings have sold at from Rs. 40 to Rs. 43 September, and Heart marks have been in rather keen demand at up to Rs. 35 for Old Crop ready and up to Rs. 36 for New Crop September.

In Loose Jute the turnover has been moderate. Full prices continue to be paid for spot and ready Bill of Lading lots. For

JUTE

Calcutta, Sept. 10.

The raw jute market has continued to be firm with mills interested in early deliveries and sellers handicapped by transport facilities. It was clearly pointed out in these columns, on more than one occasion, that the postponement of buying by mills till the last minutes has resulted in a congestion in the several centres and it is not possible to provide for the transport of all the requirements all of a sudden, not to speak of the provision even for the normal movement. Good premiums therefore, continue to be offered by mills and balers are keen to supply the producers if they can possibly help it. The seriousness of the situation in this regard will be evident from the fact that the Indian Central Jute Committee has decided to send some of its marketing staff to the mofussil centres to examine the position. The Bengal Premier also is visiting some of the important centres to study the problem firsthand. Meanwhile, it has been announced that in order to make the maximum possible use of the available transport space, it has been decided that henceforth bales which exceed 16 cubic feet for 4 maunds bales and 15 cubic feet for 3½ maunds bales will not be accepted for transport. This is a step in the right direction but it is not, however, sure whether mofussil dealers will take care to press the bales into the proper size. It is also not clear whether full facilities for this purpose exist.. It is hoped that co-operation with the shipping companies and the mofussil dealers it will be possible to transport a greater volume of jute in the few months, greater in relation to the space available.

In the loose jute section, mills have been keen buyers with sellers reserved for early deliveries. Early in the period under report sellers showed some interest in forward shipments but towards the close they preferred to adopt a reserved attitude for distant positions as well. Though it is generally agreed that prices will tend to decline, especially as the season passes by, the complications in regard to the transport situation cannot be anticipated. Premiums may continue to be offered for near positions but the general tendency should be downward. Supervised Jat Bottoms and Cross Bottoms were done at Rs. 6-4 and Rs. 3-12 per maund with District jute at 4 annas less per maund. Balers have been buying Tossa varieties at different rates.

In the pucca bales section sellers have been very reserved. There is practically no quantity of old crop Dundee Daisee 2/3 and Tossa 4's available. Some business has been reported in new crop Dundee Daisee 2/3 at Rs. 54 to Rs. 55 per bale with buyers over. Old crop Hearts 2/3 were done at Rs. 35 for September delivery and new crop Hearts at Rs. 36 for September/15th October. N.C.'s and M.C.'s were done at Rs. 12 and Rs. 11 per bale respectively.

JUTE MANUFACTURES

Calcutta, Sept. 10.

The jute manufactures market was inclined to be firm in sympathy with the jute market. There were also reports of an early improvement in the freight position. It is reported that the last sandbag order has been increased by 75 million bags to be delivered in equal quantities during the same period. It will be recalled in this connection that there was an order for sandbags some weeks back for delivery in equal instalments from November 1942 to December 1943.

With the publication of the local stock figures for August and the covering for month-end adjustments over a slightly easier tendency has been noticeable in the hessian market during the last two days and the closing quotations are only slightly higher than the lowest for the week on some late buying. 9 porters ready were Rs. 14 after being higher at Rs. 14-4, October/December Rs. 14-2 and January/March Rs. 14-6. 11 porters ready are Rs. 17-14, October/December Rs. 18-2 and January/March Rs. 18-6.

The heavy goods section has continued firm and if the closing quotations are slightly lower it is only in sympathy with the hessian market. There is practically no stocks to be sold for early deliveries. B. twills for September delivery sold on the basis of Rs. 42-4, Liverpool Twills for the same position Rs. 49-8 and Cornsacks for Rs. 43-8. The demand for B. Twills and Liverpool Twills, in particular, is unsatisfied.

It has been remarked earlier that the local stock figures for August have been disappointing to the market. Hessian, cloth and bags, on civil account are nearly 4.7 crore yards higher at 37.49 crore yards. Stocks on military account also show an increase, being 3 crore yards higher at 30.63 crore yards. Total increase in respect of this account for July figures is thus as much as 7.78 crore yards. Sacking, cloth and bags, on civil account show a decline of 42 lakh yards but there is an increase on military account by 34 lakh yards. So that total stocks on balance are 43 lakh yards higher at 21.03 crore yards. The increase in hessian stocks for so many months in succession has naturally been causing great anxiety to mills. There is practically no demand from overseas consumers and with the existing freight position and the need for transporting the more essential raw materials, it is very unlikely that there will be any appreciable increase in exports to other countries in the next few months. It, therefore, remains to be seen whether the Indian Jute Mills Association decides to keep up production, at least so far as hessian is concerned at the present rate.

GOLD

The Bombay market still continues to remain closed and business has most naturally been passing through Calcutta. In spite of the arrival of stocks in large quantities into this city, the upward trend in prices has not been affected. There has, however, been some selling at the higher levels and closing quotations are slightly lower than the highest levels for the week. Gold ready closed at Rs. 56 after being higher at Rs. 58-8. Sovereigns were quoted Rs. 41-12 against the highest quotation of Rs. 42-8.

SILVER

There is nothing interesting to be reported in the silver market and prices were kept down by the selling by the Reserve Bank at Rs. 85 per 100 tolas. The quotation in the early part of the week was fluctuating round Rs. 84-8. In mid-week there were reports regarding decision of the Reserve Bank to suspend the sale of silver at the official rate and this resulted in the Calcutta quotation improving to Rs. 87-8. At the close, however, it has come down to Rs. 84-8 the level at which the market closed last week.

There has been no change in the London market and, as was pointed out in these columns last week, the British Treasury has not changed the selling rate which remains unchanged at 23½d. Some trade demand has been satisfied officially.

PIECEGOODS

With the Puja buying in full swing the piecegoods market has naturally been active but the difficulty in transport facilities and the slow-down in production in the Western Presidency has resulted in a considerable reduction in supplies. Dealers have, therefore, been obliged to mark prices higher. With the difficulty in making up the lost time on account of strikes and the slow-down in production, mills are not inclined to enter into any new commitments even on attractive terms. If the present condition continues to prevail in the market, it looks as if it will not be possible to prevent a further improvement in values.

The orders for Standard Cloth which were placed recently by the respective Provincial Governments with the Central Government are expected to be executed shortly and it is hoped to retain standard cloth for the poorer classes at controlled rates.

Stock Markets to-day and to-morrow

STEEL CORPORATION ACCOUNTS FOR 1941-42

MARKETS were active till Thursday this week. Only in to-day's session a slightly easier tendency is noticeable. Operators seem to take a more confident view of the future. There has been some large-scale buying by prominent operators. For the first time in several weeks it is satisfactory to note that interest has been taken in almost all sections. Jute and Coal shares have been dealt in on a larger scale while Cotton shares have returned to favour. In the Engineering section Indian Irons and Steel Corporations have of course, been prominent. There is no doubt that the final dividend for the year ended March, 1942 will be maintained at Rs. 1-8 per share but market circles seems to await a higher dividend.

The giltedged securities section has been very firm and a rise in prices for both Central and Provincial Government loans has been recorded. It is given out that the provincial government loans will be on a 3 per cent basis having a maturity date in 1955. The terms of the loans have not been announced till the time of going to press.

In the first year of uninterrupted operations, the Steel Corporation of Bengal Limited has been able to report a very high level of earnings. The accounts of the Corporation for the year ended December, 1941 are not of very great interest from the market point of view as investors and shareholders have already derived the benefit out of the earnings for that year. It will be remembered that sometime back the final dividend of ten annas per share was paid which with the interim dividend paid earlier made one rupee per share for the whole year.

The net profit, before providing for depreciation, is slightly over Rs. 1 crore if allowance is made for the share of profits payable to the Indian Iron and Steel Company Limited under the agreement with the Steel Corporation. The Indian Iron and Steel Company supplies gas, power, hot iron etc., at cost price *plus* 5 percent in return for a share in the Corporation's earnings.

Against the prospectus estimate of Rs. 62 lakhs, before providing for debenture interest, depreciation etc., it has been possible to earn over Rs. 1 crore in 1941. The higher level of earnings has been done to the higher level of prices for the company's products. Also, there has been considerable expansion in the productive capacity of the plants.

The net profit, before providing for taxation and depreciation, for the year 1941 is Rs. 1,14,10,145 against Rs. 22,28,911 for 1940. The share of profit payable to the Indian Iron and Steel Company Limited is Rs. 13,40,405. The amount set aside to depreciation is the substantial sum of Rs. 35,00,000. Having regard to the level of earnings the provision for taxation at Rs. 23 lakhs seems to be rather on the low side. There is no mention regarding the provision for E.P.T. also being included.

The sum of Rs. 4,57,347 has been written off expenditure incurred in ligting up furnaces. The arrears of dividend on the preference shares were paid off in full. It will be remembered that up to May 1940, only 4 percent was paid on the preference shares out of capital. The balance of one percent per annum from May 1937 to May 1940 has been paid off in 1940 and 1941. After the payment of the preference and ordinary dividends the amount carried forward is Rs. 4,29,447.

Production figures cannot be published in wartime but the directors point out that the progress achieved by all departments has been satisfactory. The furnaces have given satisfactory outputs and the Rolling mills continued the steady progress made last year and had no difficulty in disposing of the ingot tonnage available for rolling.

To provide finance for the possibility of further capital extensions necessitated by larger output demands by the Government the directors arranged with the Imperial Bank of India to deposit with them £1,000,000 "B" Debentures as collateral Security against cash credit facilities if and when required by the Corporation. The amount drawn on the date of the report against this cash credit facility was nil. The "B" Debentures carry no conversion rights and are not guaranteed by the Indian Iron & Steel Co., Ltd., in respect of principal and interest.

The shares at Rs. 19-4 can be considered a good investment proposition.

* * * * *

The reduction in the earnings of the *Indian Standard Wagon Company Limited* for the year ended March, 1942 has been due to the difficulty in getting the necessary raw materials. The difficulties were felt most in the first part of the year. The directors point out that the prospects for the current year are not unfavourable provided reasonable delivery of materials can be obtained. The net profit is Rs. 3,46,380 (Rs. 4,50,372). The amount set aside to depreciation is Rs. 58,787 against Rs. 1,00,000. The provision for taxation and other contingencies is Rs. 70,000 (Rs. 80,000). The payment of even the lower dividend of Rs. 3-2 per share against Rs. 3-12 per share has been possible only with the transfer of Rs. 35,000 from the Dividend Adjustment Account. The amount carried forward is Rs. 20,796 against Rs. 27,686 brought in.

* * * *

The net profit of the *Chembra Peak Estates Limited* for the year ended March, 1942 shows an improvement over the figure for 1940-41. The higher average price realised and the larger crop have been responsible for the higher level of earnings. The next profit before providing for taxation and depreciation, for the year is Rs. 1,89,942 against Rs. 1,42,318 for 1940-41. The amount set aside to depreciation is Rs. 9,968 (Rs. 8,012) while Rs. 6,250 (nil) is provided for depreciation on investments. The amount placed to reserve for Income-tax is Rs. 42,000 (Rs. 27,000). The General Reserve again receives Rs. 50,000. The dividend has been doubled at 30 percent. For 1939-40 a dividend of only 5 per cent was paid. It is not surprising that the quotation for the shares has improved from Rs. 4-12 last year to Rs. 8 cum dividend. The paid-up value is Rs. 2 per share. The yield is, therefore, over 7.5 per cent tax free. The financial position of the Company is very sound.

The earnings if the *Alexandra Jute Mills Company Limited* for the half year ended June 1942 show an appreciable decline over those for the previous half-year. The net profit, before providing for taxation and depreciation for the half-year is Rs. 3,61,516 against Rs. 6,05,881 for the six months ended December, 1942. The amount set aside to depreciation is Rs. 50,000 (Rs. 1 lakh). The provision for taxation is Rs. 1,67,245 (Rs. 6,05,581). The amount transferred to General Reserve is Rs. 75,000 (Rs. 1 lakh). The dividend is lower at Rs. 5 per share against Rs. 7-8 per share.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Septtember 11.

THE Calcutta Stock Exchange has been exceptionally active during the past week and a substantial rise in quotations has been recorded in all the sections. Even at the time of last writing it will be remembered that a definitely firmer tone was noticeable, and that operators were not inclined to enter into any commitments on a larger scale. There was no special reason for the improvement in values. After the continued rise in the quotations, it will be assumed that the improvement in the quotations during the last days is really due to the more confident attitude shown by operators regarding the immediate future outlook. Towards the close, however, a slightly easier tone has been noticeable with profit-taking and the disappointing statement made by the British Premier regarding the Indian situation. There are unconfirmed reports regarding a virtual Japanese ultimatum to Russia and if this proves to be correct, the upward movement might be arrested. However, in view of the recent assertions by the Japanese Prime Minister that there has been no change in relations between Japan and Russia, it cannot be expected that there will be a break between the two countries so early after the re-statement of the Japanese foreign policy.

Giltedged securities have been firm with the rumours regarding the possibility of an early flotation of loans by the Provincial Governments. The strength of the giltedged securities section is perhaps due to a certain extent to the support given by the Reserve Bank of India to the market. Money conditions continue to be easy though the improvement in the average discount rate for treasury bills from 6 annas 6 pies percent per annum to 7 annas 9 pies might possibly suggest a slight tightening in money conditions. This is not however the case. 3½ percent paper is quoting 8 annas higher at Rs. 93-8 with 3 percent paper at Rs. 80. 3 percent defence bonds 1946 are quoting Rs. 102 while the third defence loan is quoted 2 annas over par. There were buyers of 3 per cent 1963-65 at Rs. 94 while 3½ percent 1947-50 were around Rs. 102-10. 4 percent 1960-70 were quoted at Rs. 109 with 5 percent 1945-55 at the same level. With the announcement regarding the possibility of Provincial loans sellers have been naturally reserved and the only transaction recorded in this connection is in 5 percent 1944 at Rs. 104-8.

Banks.—This section however has not shared in the recent improvement in prices. *Imperial Bank* fully paids quoted Rs. 1,510 and *Reserve Bank* Rs. 102.

Cotton.—These shares have been firm with *Bengal Nagpur* at Rs. 24-12, *Cawnpore Textiles* Rs. 10-6, *Equitable* Rs. 24-6, *Kesoram* Rs. 10-12 and *New Victoria* at Rs. 6-8. It is surprising that *Muir Mills* should be sticky around Rs. 312, in spite of the fact that it is one of the best companies in the industry and is busily engaged in war orders.

Coal.—The return to activity in the coal section after a long time should be welcomed. It will be remembered that it was remarked last week that efforts were being made to allot wagon space for the coal industry and that it was hoped that there would be a large increase in despatches from pitheads. The rise in quotation to Rs. 370 for *Bengal Coal* is significant. *Amalgamated* were Rs. 26-8, *Burrakar* Rs. 13-4, *Equitable* Rs. 34-8, *Nazira* Rs. 8-4 and *Talcher* Rs. 2-10.

Jute.—Activity in the jute section is likewise welcome. *Howrah* have been traded in after a long time at Rs. 50-12, *Bally* Rs. 230, *Hukumchand* Rs. 13-8, *Kanknarrah* Rs. 441, *Kamarhatty* Rs. 350-8, *National* Rs. 22-2, *Nuddea* Rs. 67, *Reliance* Rs. 53-8 and *Union* Rs. 301. It is noteworthy that the rise in the quotation for *National* and *Nuddea* is substantial.

Engineerings.—In the engineering section interest has, of course, been centred round *Indian Iron* and *Steel Corporation.* From Rs. 27-8 at the end of last week *Indian Iron* were quoted as high as Rs. 30 and the quotation at the time of writing is around Rs. 29-8. *Steel Corporation* also after being marked higher at Rs. 19-4 are now quoting Rs. 18-12. It will be noticed that the rise in the quotation for *Steel Corporation* is more pronounced and the accounts for the year ended December 1941 which were published a few days back, were well received by the market. *Burn & Company* also were higher at Rs. 352 on the expectation of a higher dividend. *Bhartia Electric Steel* were Rs. 14-12, *Indian Malleable Castings* preferred Rs. 2-8. *Kumardhubi Engineering* Rs. 5-7, *National Iron and Steel* Rs. 11-8. *Jessop and Company* had good buyers and business was done up to Rs. 19-8.

Sugar.—Sugar shares have not been quite active and it should be said that quotations are on balance even lower. *Carew & Company* were Rs. 12-12, *Cawnpore* Rs. 27-4, *New Savan* Rs. 14-7 and *Samastipore* Rs. 14-2.

Tea.—Tea shares have also been neglected, only a few transactions being recorded. *Bishnauths* were Rs. 26, Sarugaon Rs. 12-8 and *Tilakah* Rs. 9-4.

Miscellaneous.—In the miscellaneous section *Burma Corporation* and *Indian Copper* did not show any change but *B. I. C.* were higher at Rs. 5-6. *Indian Cables* were Rs. 24-8 and *Indian Wood Products* Rs. 29. *Alkali and Chemical* were Rs. 19-10, *Assam Bengal Cement* Rs. 12, and *Dalmia Cement* ordinary Rs. 16-12.

Paper.—Among paper shares *Bengal paper* quoted Rs. 130, *India Paper Pulp* Rs. 161 and *Titaghur Paper* Rs. 19-12. *Orient Paper* has forged ahead again further with the quotation at Rs. 22-2.

Not much of business has been possible in public bodies' debentures, sellers being further reserved. *4 percent 1974 Calcutta Port Trust* were quoted Rs. 97 and *3¼ percent Howrah Bridge debentures* Rs. 93-12. Among industrial debentures, *Bengal Paper* were quoted Rs. 102-8 and *4¾ percent Hukumchand* about Rs. 100.

Business in preference shares also has not been passing freely, sellers being reserved. *Clive 6 percent preferences* were Rs. 125, *Naihati* Rs. 146, *Nellimarla* Rs. 115 and *Reliance* Rs. 152. *Banarhat* were marked higher at Rs. 161 cum dividend, a small lot of *Cawnpore sugar preference* were dealt with at Rs. 172, and *Steel Corporation preferences* at Rs. 112. *B.I.C. preferences* were higher at Rs. 182, as also *Dunlop first preference* at Rs. 137. *Second preference* shares were done at par.

COMPANY REPORTS

STEEL CORPORATION OF BENGAL, LIMITED

Audited accounts for the year ended 31st December, 1941:—

The reasons for the lateness in the presentation of the Report and Accounts are the same as mentioned in last year's report to the Shareholders,, viz., uncertainties and delays in communications with England and the Corporation's obligation to publish the Report and Accounts simultaneously in India and the United Kingdom.

While the Directors are precluded from publishing any production figures, they desire to record their satisfaction with the progress achieved by all Departments. All the Plant and Machinery installed has come up to the guaranteed standard and the many initial difficulties, inseparable from the starting up of a new Works, have been overcome. Improvements, necessitated by local conditions, have, where required, been undertaken with success.

The net profit for the year amounted to Rs. 28,57,511/- to which has to be added Rs. 3,77,656/ brought forward from last year, making a total available for distribution of Rs. 32,35,167/-. The net profit has been arrived at after providing Rs. 35,00,000/- for depreciation, Rs. 23,00,000/- for taxation, writing off expenditure incurred in lighting up furnaces Rs. 4,51,347/- and the share of profit payable to the Indian Iron & Steel Co., Ltd. under the supply agreement Rs. 13,40,405/-.

Provision has also been made in the account for Debenture Interest and Preference Dividends and for a further sum of Rs. 3,61,112/- being the arrears of interest on the Preference Shares for the period ended 31st May, 1940.

	Rs.	A.	P.
From the amount available to the Ordinary Shareholders of .. .. .. there has had to be deducted the amount of interim Dividend of six annas per share declared on the 8th January, 1942	32,35,167	0	0
	10,52,134	0	0
and as already advised, the Directors have declared a further Interim Dividend of ten annas per share amounting to	21,83,033	0	0
	17,53,556	0	0
Leaving a balance of	4.29,477	0	0

which amount the Directors recommend to be carried forward.

As the Report and Accounts have to be published simultaneously in India and England, in order to enable Shareholders to obtain payment of their Dividends as soon as possible, it was decided to distribute what would have been the Directors' recommendation of a Final Dividend in the form of the above Interim Dividend of ten annas per share payable on and after 31st July, 1942.

During the year holders of £7,000 Guaranteed Convertible Mortgage Debenture Liability at the end of the year was £615,050.

To provide finance for the possibility of further capital extensions necessitated by larger output demands by the Government as was indicated in last year's report to the Shareholders, the Directors arranged with the Imperial Bank of India to deposit with them £1,000,000 "B" Debentures as Collateral Security against Cash Credit facilities if and when required by the Corporation. The amount drawn at date against this Cash Credit facility was nil. The "B" Debentures carry no conversion rights and are not guaranteed by the Indian Iron & Steel Co., Ltd., in respect of Principal and Interest.

The furnaces have given satisfactory outputs and the Rolling Mills continued the steady progress made last year and had no difficulty in disposing of the ingot tonnage available for rolling. Double Shifts have been worked most of the year and the time lost due to mechanical and electrical trouble was very low. Apart from the Galvanising Section which worked on a reduced output consequent on the shortage of, and Government instructions on, the use of spelter all departments of the Sheet Mills were practically in full operation during the year, Treble Shifts being worked on the Roughing and Finishing Mills.

Certain capital expenditure was completed during the year but in some cases work has been held up due to the loss of materials ordered from Home by enemy action. Labour has continued to work satisfactorily although some inconvenience has been caused by men leaving the district on account of the international situation. Other workers have, however, kept coming forward and although they have to be trained, there was no interruption to production. Every effort is being made to keep labour content and to appreciate their difficulties, and to this extent the payment of a Dearness Allowance and a Production Bonus has been brought into effect.

Sales:

Since the publication of the last report Statutory Control of the Steel Industry has been introduced. Under the control of distribution the whole of the Corporation's products are disposed of to license holders. Licences are issued by various Government Departments which have been allotted Steel quotas. As a result the Corporation is precluded from making any sales of Steel for domestic purposes other than those which are deemed essential for the economic life of the country.

(Annual meeting, 29th September, 1942 at 3 p.m.)

Audited accounts for the year ended 31st December, 1941:—

After providing Rs. 10,446 for depreciation the season's working resulted in a profit of Rs. 90,059-4-11. After providing for taxation, making sundry adjustments and deducting Rs. 18,000 in respect of the 5 per cent ad-interim dividend declared on 7th January, 1942, there remains a balance of Rs. 63,919-4-3 at credit of Profit and Loss Account from which the Directors recommend the payment of a final dividend of 10 per cent (making 15 per cent for the season), leaving a balance of Rs. 27,919-4-3 to be carried forward.

The rainfall for the year amounted to 102.43 inches compared with an average of 105.37 inches for the previous 8 years. A record crop of 4,569 maunds was secured and the property continues in excellent condition.

Both strains of Tea Seed again met with a ready demand and a total of 159½ maunds was sold at satisfactory prices.

Estimates for the current season have been framed for a crop of 4,732 maunds to cost Rs. 1,61,641 on the garden and Rs. 48,759 in Calcutta. These figures are inclusive of seed garden charges.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

(Annual meeting, 28th September, 1942 at 3-10 P.M.)

Audited accounts for the year ended 31st December, 1941:—

After providing for depreciation, the season's working resulted in a profit of Rs. 3,31,740-15-5 and after making sundry adjustments, providing for taxation, placing Rs. 25,000 to Equalisation of Dividend Fund and Rs. 1,500 to Hail Insurance Reserve there remains a balance of Rs. 2,21,782-6-2 at the credit of Profit and Loss Account.

From this the Directors recommend:—

	Rs.	A.	P.
Preference Dividend for 1941 at Rs. 8 per share	16,000	0	0
Ordinary Dividend for 1941 at Rs. 90 per share	1,80,000	0	0
Leaving to be carried forward	25,782	6	2

A crop of 11,637 maunds was secured.

Climatic conditions were generally favourable throughout the year. Rainfall amounted to 162.27 inches compared with an average of 153.45 inches for the previous six years.

Estimates for the current season have been framed for a crop of 11,500 maunds to cost Rs. 2,37,435 at the garden and Rs. 1,09,717 in Calcutta.

(Annual meeting, 29th September, 1942 at 3-10 P.M.)

Audited accounts for the year ended 31st December, 1941:—

After providing for depreciation the season's working resulted in a profit of Rs. 1,82,103-7-4. After making sundry adjustments, providing Rs. 60,000 for taxation and placing Rs. 20,000 to Equalisation of Dividend Fund, there remains a balance of Rs. 1,26,107-4-3 at credit of Profit and Loss Account. The Directors recommend that this balance be treated as follows:—

	Rs.	A.	P.
Preference Dividend for 1941 at Rs. 8 per share	16,000	0	0
Ordinary Dividend for 1941 at Rs. 35 per share	70,000	0	0
Leaving to be carried forward	40,107	4	3

A crop of 8,217 maunds was secured.

After opening with an early drought, climatic conditions improved later in the season and rainfall for the year amounted to 166.31 inches compared with an average of 149.88 inches for the previous seven years.

Estimates for the current season have been framed for a crop of 8,000 maunds to cost Rs. 1,83,240 at the garden and Rs. 82,864 at Calcutta.

(Annual meeting, 28th September, 1942 at 3-20 P.M.)

Audited accounts for the year ended 31st December, 1941:—

After providing Rs. 5,504-7-0 for depreciation, the season's working resulted in a profit of Rs. 79,855-3-11 and after providing for taxation, making sundry adjustments and placing Rs. 25,000/- to a Special Reserve Fund, there remains a balance of Rs. 50,199-6-0 at credit of Profit and Loss Account, from which the directors recommend the payment of a dividend of Re. 1-8-0 per share absorb-

ing Rs. 30,000 and leaving a balance of Rs. 20,199-6-0 to be carried forward.

The infilling of vacancies was continued and plants equivalent to approximately 5 acres of tea were planted out during the year.

Estimates for the current season have been framed for a crop of 3,500 maunds to cost Rs. 92,557/- at the garden and Rs. 33,662/- in Calcutta.

*Includes Rs. 35,000 transferred from Reserve Fund.

(Annual meeting, 28th September, 1942 at 3 p.m.)

Audited accounts for the year ended 31st December, 1941:—

After providing for depreciation, the season's working resulted in a profit of Rs. 1,57,006-9-1 and after providing for taxation, making sundry adjustments and placing Rs. 30,000/- to Equalisation of Dividend Fund there remains a balance of Rs. 94,557-0-9 at credit of Profit and Loss Account, from which the directors recommend a dividend of Rs. 15 per share absorbing Rs. 65,250 leaving a balance of Rs. 29,307-0-9 to be carried forward.

Uprooting and Replanting of old and unremunerative tea was again carried out on both Divisions. At Hoolungooree 11.58 acres were uprooted and replanted whilst at Konikar Dallim 22 acres were uprooted and 25.4 acres replanted. The replanted areas are progressing well; the sections which were first replanted are reaching maturity and may be expected to give a large outturn.

Estimates for the current season have been framed for a total crop of 9,000 maunds to cost Rs. 2,64,225/- at the garden and Rs. 1,04,872/- in Calcutta.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

ANANDA (ASSAM) TEA COMPANY, LIMITED

Audited accounts for the year ended 31st December, 1941:—

After providing for depreciation the season's working resulted in a profit of Rs. 70,374-10-10 and after providing for taxation, making sundry adjustments and placing Rs. 45,000 to Garden Development Reserve there remains a balance of Rs. 10,251-5-3 at credit of Profit and Loss Account to be carried forward.

A crop of 3,524 maunds was secured.

Although climatic conditions were far from favourable during the major portion of the season the crop proved to be a record one. Rainfall amounted to 133.65 inches compared with an average of 149 47 inches for the previous seven years.

A 26-acre extension was planted out during the course of the year and the total area under tea is now 300 acres. So long as the Indian Tea Control Act 1938 remains in force it cannot be expected to increase the tea area beyond 300 acres.

Estimates for the current season have been framed for a crop of 5,200 maunds to cost Rs. 73,529 at the garden and Rs. 28,619 in Calcutta.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

The Directors now recommend the payment of a Final Dividend of 10% for season 1941/42 free of Income-tax, absorbing ..				1,24,346	4	0
leaving a balance of				1,52,644	11	6

which they propose to carry forward to season 1942/43.

A sum of Rs. 58,300 has been reserved against Income-tax and Excess Profits Tax.

Investments have been increased to Rs. 3,90,822 face value, shown in the Balance Sheet at market value Rs. 3,87,340. The recent recovery in gilt-edged securities has brought the market value up to the cost price.

Acreage.—The acreage of the properties is 2,396.

Tea.—The crop of 12,83,878 lbs. was harvested at a cost of 5.90 annas per lb. f.o.b. and realised an average nett price (after deducting cost of quota purchased) of 10.28 annas per lb. as compared with 9.21 annas per lb. in the previous year.

The directors understand that the final Export will be in the neighbourhood of 85 per cent.

The estimated crop for 1942/43 is 12,62,000 lbs. to be harvested at an f.o.b. cost of 6.16 annas per lb.

Cinchona.—A crop of 6,651 lbs. Cinchona was harvested during the year and has since realised Rs. 4,363-10-0.

Agents & Secretaries.—Messrs. Peirce, Leslie & Co., Ltd.

ISSUED WEEKLY

Vol. XXX. No. 12 SATURDAY, SEPTEMBER 19, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Friday evening.

ANOTHER week of extremely easy monetary conditions and extremely unjustified rise in the treasury bill discount. The inter-bank call money rate continues to be quoted nominally at ½ per cent in Calcutta, with no borrowers at all. Yet this is the second week in which has occurred what should be considered, in present circumstances, a steep rise in the average rate at which treasury bills have been allotted. Treasury bill maturities in the current month are on the large side, and fresh issues on the present scale of Rs. 6 crores per week will be about equal to the maturities during the month. Deposits maintained by member banks with the Reserve Bank are still at the high altitude of Rs. 69¼ crores. The Imperial Bank continues to build a weekly record for deposits. The cash position of the Imperial Bank is likewise exceptionally comfortable. Banks are reluctant to pay anything more than ½ per cent for deposits up to six months. In relation to all these factors, it is difficult to see any justification for the rise in the treasury bill discount from annas 6 and pies 6 per cent per annum to annas 7 and pies 9 last week and to annas 9 and pies 10 this week. We may be told that bidding was poor and the rates quoted were not competitive; and that the only way for the Government to secure the full quota of Rs. 6 crores was to agree to pay higher rates demands. An argument of this kind can mean only one thing, namely, that the official treasury bill policy is tame acceptance of market dictation. Such a tame policy does not require any elaborate machinery like the Reserve Bank to execute.

As we have asked on former occasions, we may ask again whether the ways and means budget presented such a critical state of affairs that there would be a collapse if the full quota of Rs. 6 crores or so was not secured from treasury bills. A careful review of the ways and means position leads us to exactly the opposite conclusion. The week during which the rise in discount rate occurred would be the week which records a substantial payment by the British Government and a substantial rise in deposits of the Central Government with the Reserve Bank. So far as the week ended September 4 is concerned, there was surely no urgent need for replenishment of the cash position of the Central Treasury. The Government were certainly in a position to reject unsuitable tenders. Such rejection would have clearly warned the banks that the Government were not prepared to be bullied into demanding onerous rates. Had such a firm policy been made clear to the market, they would have realised by next week the wisdom of quoting competitive rates.

We have also to draw attention to the rise of nearly Rs. 3 crores in the investments held by the Imperial Bank in the week ended September 11. It follows that at least half of the treasury bill issue of the last week was taken up by the Imperial Bank. That is to say, this bank is equally a party to the unwarranted stepping up of the treasury bill discount. In the position the Imperial Bank occupies in relation to the Government, it is expected of it to play an important part in the execution of a strong and determined treasury bill policy.

The Reserve Bank returns for the week ended September 11 have not reached us at the time of going to press; and this is the fourth week in which we are not able to provide our usual up-to-date analysis of the Reserve Bank returns. For the week ended September 4, there was currency expansion for Rs. 5 crores against sterling securities which have risen from Rs. 311.79 crores to Rs. 316.79 crores. As a result, active note circulation has expanded from Rs. 474.26 crores to 480.11 crores. In the banking department foreign balances have risen by nearly Rs. 6 crores to Rs. 83.14 crores. That is to say, sterling payments received from the British Treasury in the first week of September amounted to Rs. 11 crores. In the previous week was recorded a payment of Rs. 5 crores or thereabouts. It looks as though inter-governmental settlement between Britain and India is now spread over two or three weeks, instead of one single monthly payment. The deposits of the Central Government with the Reserve Bank have risen from Rs. 5.08 crores to Rs. 10.18 crores. The rise would have been more marked except for the usual month-early disbursements. The balances of the Provincial Governments have declined sharply from Rs. 6.94 crores to Rs. 4.82 crores.

Announcement was made this week of the issue of the Provincial Government loans, a discussion of which was furnished in these columns last week. The type of loans is the same in the case of all the Provincial Loans, namely 3 per cent 1955 loan. But the issue price has been fixed at different levels, presumably as a reflection, though gratuitous, on the relative credit of the borrowing provinces. The Government of Bombay are raising a loan for Rs. 3½ crores at an issue price of Rs. 98½; the Madras Government Rs. 1¼ crores at Rs. 97-8; the Punjab Government, Rs. 2½ crores at Rs. 97; the C. P. Government, Rs. 50 lakhs at Rs. 97. The loan was open for one day only, namely, September 18. As we go to press we learn that the Bombay Government's loan was closed within fifteen minutes. The success of this loan might have given a favourable support for the other loans. The Reserve Bank is to be congratulated both on the planning of the loan and on the fixation of the issue prices. The Government of Madras loan for Rs. 1¼ crores was issued at Rs. 97½ per cent. How correctly the rates have been fixed is shown by a comparison with the 3 per cent 1952 Madras loan which is quoting Rs. 99½; the 3 per cent 1953 loan quoting Rs. 98½; and the 3 per cent. 1959 loan quoting at Rs. 95½. Similarly, the issue price of Rs. 97 for the Punjab loan compares with Rs. 99¼ being the market rate of 3 per cent 1952 Punjab loan and Rs. 94⅜ for the 3 per cent 1958 Punjab loan. In our advance comment on the Provincial loans last week, we have given expression to our misgivings that, if the issue price of the loans were fixed unduly low, this might have an unsettling effect on the giltedged market. These misgivings have, fortunately, proved unjustified. We are therefore all the readier to acknowledge the judgment shown by the Reserve Bank authorities in planning the loans, timing the issue, and piloting them to success.

The exchange market remains unchanged.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Tuesday, September 15, 1942. Total amount offered was Rs. 7,12,000 (Rupees 7 crores 12 lakhs). Tenders at Rs. 99-13-9 per cent and above were accepted in full and those at Rs. 99-13-6 per cent were allotted approximately 82 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-9-10 (Rupee nil annas nine and pies ten per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, September 22, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Mondav, September 21, 1942, at other centres. Successful tenderers should make payment on Friday, September 25, 1942. Other conditions are as usual.

During the week ended September 11, 1942, Government of India Treasury Bills for Rs. 21,00,000 (Rupees 21 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

THAT London has plenty of funds and is supporting giltedged all the time is a commonplace. That Britain is spending about £16 million a day on the war is so well-known that the vote of credit for £1,000 million given once in six months is taken by the Commons as a routine motion. The sacrifices of wartime do not concern the public; the cost of victory does not interest most. Whether the U.S.A. is to spend 50 or 100 million is not at all regarded as a controversial issue. An assurance that Congress is to meet before October 1st and empower the President to fight inflation in his own way is proved by a Gallup poll as to the likely majority in the Congressional elections in November. The President wants to stabilise wages and prices alike, to make sure of war costs according with estimates. The limitation of supplies came along with the prices of goods orders in the U.S.A. but so many things are not covered and revised price schedules have left contractors many loopholes. The President is averse to compromise with capitalism and the 1942 version of the New Deal is deflationary in aim and method alike.

The cost of living has gone up; instead of straightforward taxation and saving, the public is paying indirectly to middlemen. Retail trade might suffer, but the U.S.A. has to keep down its debt. If it is easy to borrow 10 billions in a year through saving bonds and take another 10 billions in treasury certificates or bills, the major aim, that of lowering the cost of living in order to secure a bigger share of the national income for the war effort, is not achieved. The Nebraskans, to judge from Mr. Norris' statement, may have doubts, but Texans are apparently in agreement with the Speaker and the President. All the new Boards are interested in price-stops and reducing private incomes. That Britain has got along with a limited rise in the cost of living and is netting more and more money from savers, great and small, proves that the pattern of victory is being studied. To take away from the civilian and give to the soldier is one way of emulating the Nazis' remarkable achievements in economic control. Turkish journalists may be impressed by the strain of life and the shortage of cigarettes but Hitler is able to ask for fresh sacrifices in the interests of the Russian campaign. The U.S. President is aware that taxation cannot give more than 20 billions in a year and an army of 4½ million in 1943 has to be provided for betimes. In the sixth quarter again Britain has helped the U.S. with warlike supplies and provided bases in Ulster that may offend Irish nationalists but are highly useful in guarding the Western approaches to Britain. Since the U.S.A. has only got past the basic training stage according to Mr. Donald M. Nelson (war production is still only 50 per cent of rated capacity) who has spoken further of the rich experience of the U.S. workers.

The Senate has already got before it proposals for freezing wages and salaries at the levels ruling on September 15 and legislation for adding to the President's powers seems certain before October 1. Senator Wagner is backing the President's proposals though the farm *bloc* is bound to stand out for parity prices. Authority to freeze prices *is soon to be given to Mr. Roosevelt who is* credited with a desire to appoint a new czar to decide on war economy.

This is a less exciting development than hoped for. The U.S. President has made his sixth report on lease-lend. Russia is getting as much as Britain out of lease-lend for the U.K. which has given bases does not fare better than Russia which has given nothing.

Britain is also giving war supplies wanted by America and the principle of reciprocity bars payments after the war. Lease-lend is an accounting method as the world well realises at present. Since the common goal is victory it does not matter much how or where the supplies go. The latest report stresses that China is getting little because the Burma Road has been cut though the U.S.A. is trying to increase aid to China by every means.

Details of war production like the completion of 56 Liberty ships in August are of little importance at present. They will excite as little attention as the appeal to the British Government for the scorched earth policy adopted in the Far East. A former Malayan Civil Servant, Mr. L. D. Gammans, wrote about the need to reimburse both Britons and natives. How Indians will fare as regards lost assets must remain obscure, but there is a request to the Cabinet to assume responsibility for losses not covered by insurance. An extension of the U.K. war damage scheme has been advocated in this connection, and the most interesting point raised in the joint representation relates to the guarantee for any Government insurance scheme. Indians who have not been paid by the Burma Government for losses covered by war risks insurance stand a chance of faring better if a guarantee is obtained.

The London market is apparently ignoring the war in Russia. Home Rails are going ahead though travel restrictions will be far more severe in Britain. The Banks have a lot of money and were ready lenders at ¾ per cent right through last week, applied more readily for treasury bills last week and expect to get some relief as £45 millions will be taken in six months' deposits this week. That brief cable throws no fresh light on what is happening but Sir Kingsley Wood's speech last week showed that financial control leaves the Treasury in its supreme position. The Treasury has been able to borrow more than £10,000 million in three years and make wage-earners save regularly. The Stock Exchange is attracting money and old favourites like Rio Tinto have obviously strengthened after the departure of Serrano Suner from the Spanish Cabinet. The lift in Nundydroog will impress South Indian investors most.

The ascent of Home industrials continues and reports that Brazilian issues are more eagerly sought is a sign of changing times and temper. Giltedged were temporarily a shade off but Home Rails have held their own with Great Western Ordinary moving up. The recovery in tea shares is a pronounced feature of the week, being largely due to the new contracts at higher prices announced by the Ministry of Food. For the investor in the East, things are not altogether bad though it is hard to see why Barnagore Jute is pegged to par in spite of the maintenance of the dividend. Savings are increasing, and the stock exchange is getting its share like the Treasury, will be the conclusion of any one who follows the market, still distinguishable in its main features from Wall Street which is still a depressed area. In the last few days reference was made to a smart rise in International Nickel so that one scrip in New York must have risen though the quotation there might be different from the London price as the stock exchange generally calculates that five dollars make a pound sterling.

The maintenance of dividends for the first half of 1942 by most of the Eastern exchange banks will come as no surprise to those who estimated the chances of banks being able to carry on despite losses in the Orient. The weakness of the shares may be said to belong to the past since few can afford to ignore the strong position shown in the 1941 balance-sheets. The Chairmen were justifiably cautious but none can overlook the fact that the earning power behind the shares is still considerable. The Eastern Bank has unusual opportunities in Iraq and the National Bank will find vast scope in the African colonies. The extension of British authority in Africa this year makes for a growth of influence and income that will safeguard the interests of the Bank in the future. In spite of losses in Malaya and many countries, the Chartered Bank, the largest of the Exchange banks, has paid 6¼ per cent for the half-year. It is gratifying to record that the shares stand at a premium, and there is no possibility of any slipback. For the present, the Eastern exchange banks are well protected in regard to investments and cash alike and for those, who studied the Chairmen's speeches this year, there is much more than comfort to be drawn from the announcements made in the week.

Editorial Comments

Three years of War Finance—III

Central Government Budget

At the end of three years of war, the most outstanding feature of India's finances is the unimpaired integrity, the impregnable strength and proven resiliency of the central and railway budgets as well as of most provincial budgets. As has been often stressed by INDIAN FINANCE, this country has a unique status in the world in this regard. This uniqueness is particularly noteworthy in three important respects. Firstly, the budgetary deficits, in spite of colossal increases in expenditure in defence services, are definitely on the small side; so much so the deficit in the case of India is only a small fraction of the total budget whereas, in most other countries, the deficit is very much more than the budget itself. Secondly, there has hardly been any addition to ths public debt of India; and this stands in pleasant contrast to the experience of countries like Britain and the United States in whose cases the public debt has been piling up at a fast pace. Thirdly, the Government of India, which was in the position of a debtor to Britain with respect to loans raised in London, is now being transformed into a creditor, with millions of pounds to its credit. These favourable developments are no doubt due to the inherently healthy factors of India's finances; but it is only fair to acknowledge that they have been greatly helped by the able and conscientious stewardship of Sir Jeremy Raisman.

When the budget estimates for 1939-40 were announced on the last day of February 1939, the Finance Member based his plans on the assumption that there would be no war. The revenue and expenditure estimates at Rs. 82.15 crores and Rs. 82.65 crores respectively envisaged a deficit of Rs. 50 lakhs, to meet which an increase in the import duty on raw cotton from six pies to one anna per lb. was given effect to. This was expected to provide an additional revenue of Rs. 53 lakhs. The prospective gap was, thus, reduced to Rs. 3 lakhs. The war broke out in September of that year; and, when Sir Jeremy Raisman outlined, in the following February, his revised estimates for 1939-40, he had to take into account a twelve-month period of which seven were marked by war conditions. Due to this cause, the budgetary position underwent a striking change; but the change was, surprisingly enough, for the better. Against an anticipated surplus of Rs. 3 lakhs, the revised estimates for 1939-40 disclosed a surplus of Rs. 91 lakhs. The final accounts for 1939-40, revealed by the Finance Member in February 1941, sprung an even more pleasant surprise. The surplus of Rs. 91 lakhs in the revised estimates increased to Rs. 7.71 crores in the final accounts for 1939-40. Thus, the first seven months of war, far from adversely affecting the budget, gave a good kick-off by providing a surplus of Rs. 7¾ crores.

The budget estimates for 1940-41 had to be framed on the assumption of continuance of war throughout the year. On the basis of the taxes in force in 1939-40, the revenue and expenditure estimates for 1940-41 disclosed a deficit of Rs. 7.16 crores. This deficit was proposed to be met by drawing mainly on the additional taxable capacity created by the war. New taxation proposaals included:

(1) a levy of a 50 per cent excess profits tax;

(2) an increase from Rs. 2 to Rs. 3 per cwt. in the excise duty on sugar with a corresponding rise in the import duty; and

(3) an increase in duty from ten annas to twelve annas a gallon on motor spirit. It was expected to realise Rs. 3 crores from the excess profits tax; Rs. 1.90 crores from the enhanced duty on sugar; and Rs. 1.40 crores from the enhanced duty on petrol. With the sum available from the Revenue Reserve Fund, it was expected to close the year with a small surplus of Rs. 5 lakhs. The 1940-41 budgetary position was, however, affected by the war more adversely than was originally anticipated. In spite of a much larger sum available from the Revenue Reserve Fund, the revised estimates for 1940-41 disclosed a deficit of Rs. 8.42 crores as against an estimated surplus of Rs. 5 lakhs in the original budget proposals. The actuals for 1940-41, which were made known in February 1942, reduced the deficit from Rs. 8.42 crores to Rs. 6.53 crores.

While the deficit was thus Rs. 6.53 crores, the net addition to debt was only Rs. 3.53 crores after making allowance for the provision of Rs. 3 crores towards the reduction or avoidance of debt during the year. It may here be recalled that a similar provision of Rs. 3 crores was made in 1939-40 accounts for the sinking fund. Taking 1939-40 and 1940-41 together, the net addition to debt was only Rs. 53 lakhs. That is to say, the first nineteen months of war accounted for an uncovered deficit of only Rs. 53 lakhs in the budget of the Central Government.

The Central Government budget estimates for 1941-42, on the basis of taxation in force in 1940-41, were a total revenue of Rs. 106.39 crores, an expenditure of Rs. 126.85 crores and a deficit of Rs. 20.46 crores. Out of the prospective deficit of Rs. 20.46 crores, it was proposed to meet Rs. 6.61 crores by additional taxation and the rest by borrowing. The taxation measures and the extra-receipts expected from them were as follows:

	Estimated additional revenue (Rs. lakhs)
1. An increase in the rate of E.P.T. from 50% to 66 2/3%	2.50
2. An increase in the rate of Central surcharge on income-tax and super-tax from 25% to 33 1/3%	1.90
3. A 100% increase in the Excise duty on matches	1.50
4. An increase in the alternative specific duty on artificial silk yarn and thread from 3 annas to 5 annas per lb.	36
5. A levy of a 10% 'ad valorem' Excise duty on pneumatic tubes and tyres	35
Total ...	6.61

In the result, the deficit for 1941-42 was estimated at Rs. 13.85 crores. The revised estimates for this year, as announced in February, 1942, turned out to be Rs. 17.27 crores. There is no reason to suppose that the actuals would prove worse than the revised figure. As the provision for reduction or avoidance of debt in 1941-42 is on the usual scale of Rs. 3 crores, the uncovered deficit in that year may be reckoned at Rs. 14.27 crores. It may, therefore, be said that, during the first thirty-one months of war, the uncovered deficit of the Central Government was only Rs. 53 lakhs plus Rs. 14.27 crores or Rs. 14.80 crores.

The budget estimate for 1942-43 places the total expenditure at Rs. 187.07 crores and the total receipts at Rs. 140.00 crores, the prospective deficit of Rs. 47.07 crores being intended to be met by additional direct and indirect taxation to the extent of Rs. 12 crores and by borrowing of Rs. 35.07 crores.

The proposals for additional direct taxation, as modified by the Finance Act of March, 1942 which are expected to yield an extra revenue of Rs. 5.30 crores, include:

(a) a tax on incomes from Rs. 1,500 to Rs. 2,000 at the rate of 6 pies in the rupee on the excess over the first Rs 750;

(b) a central surcharge on incomes exceeding Rs. 2,000, less progressive in incidence than the old flat percentage surcharge, but raising the rate on the whole from 33⅓ per cent to a minimum of 50 per cent; and

(c) an increase in the Corporation Tax to 1½ annas in the rupee. The indirect taxation proposals, estimated to result in an additional revenue of Rs. 6.70 crores, comprise enhanced postal, telegraph and telephone rates, an overall surcharge of 20 per cent on the import tariff except on raw cotton, salt and petrol, an increase of 3 annas per gallon in the excise and import duty on motor spirit and an increase in the excise duty on kerosene and silver equivalent to the higher Customs duties.

The budget of this year contains new features in the nature of savings schemes designed to alleviate the pressure of the enhanced volume of purchasing power on the inevitably limited supplies of goods and services available for private consumption under war conditions. Thus, an option is given to new assessees for income-tax under the lowered exemption limit, to escape the liability by depositing an amount approximately 1¼ times the amount of tax assessed, in the Post Office Defence Savings Bank, such deposits not being ordinarily withdrawable till one year after the end of the war. Besides, to mitigate the incidence of the enhanced surcharge on incomes bteween Rs. 2,000 and Rs. 6,000, which works out at more than 50 per cent., a provision has been made to refund a portion of the tax equal to ½ per cent. of the assessees' total income, after the end of the war. Again, Government have announced their readiness to contribute an amount up to one-tenth of the net excess profits tax, provided that the assessee deposits a sum equal to double this amount, to a reserve to be used for the object of assisting industrial rehabilitation after the war.

From this prospective deficit of Rs. 35.07 crores has to be deducted Rs. 3 crores, being the appropriation towards the sinking fund. The uncovered deficit is, therefore, Rs. 32.07 crores. In this context, there is a significant qualifying factor. The budget estimates have been framed on the assumption that the lease-lend supplies from America are to be paid for on a cash basis. It is obvious that no pressing cash payment is contemplated with regard to lease-lend supplies. One wonders whether repayment in this respect is anything more than a hypothetical contingency. The provision for such cash payment is Rs. 45 crores. If this provision is reversed, the result is that the anticipated uncovered deficit of Rs. 32.07 crores is converted into a surplus of Rs. 12.93 crores. It may be added, however, that the developments in the budgetary position since last February have been such as to result in a much larger deficit than the figure envisaged in the original budget estimates. At the same time, revenue receipts have also been making an excellent showing. And it may be justifiable to hazard the guess that, subject to the reversal of the proposal for cash payment of lease-lend supplies, the revised estimates for 1942-43 may disclose neither a deficit nor a surplus.

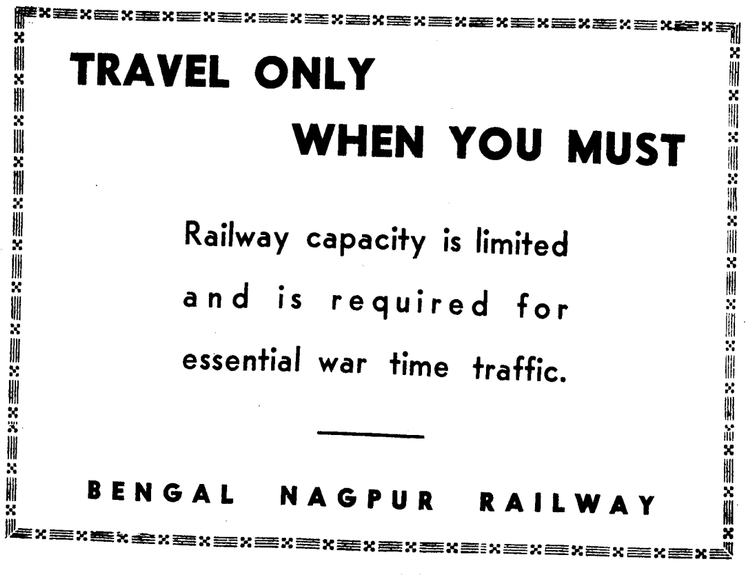
CONFIDENCE RESTORED

In their attempts to set before the United Nations the goal of total victory, their accredited leaders have made plain this week, that there is a definite policy to gain definite ends. It is no longer possible to say that Allied strategy is confused in method or objective. President Roosevelt's message to his nation is naturally wider in scope than his message to Congress. But the former alone is of direct interest to the man in the street. There is now a strategy of direct attack for which the Allies are equipped, and the essential pre-requisite, the offence-mentality is in existence. No summing up of fourth year prospects can compare with the estimate of possibilities given by Mr. Roosevelt on Tuesday. The main battles must be fought in Europe, but for the present, there are other fronts to consider. Decisions of great importance have been made as regards the use of the armed might of the nations and it is well to consider that the address to the Nation followed Mr. Willkie's visit to Cairo.

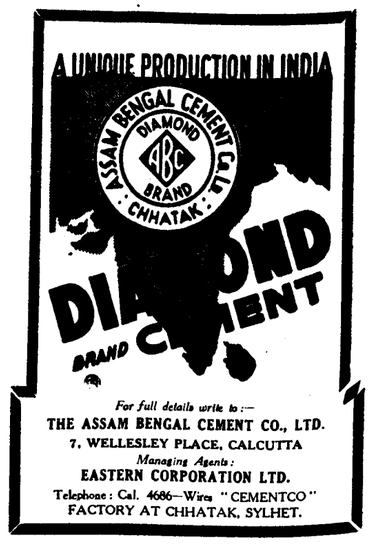
The interest of Mr. Roosevelt's speech lies not in the assurance that preparations are being made but in the calculation of results of recent battles in Russia and the Pacific. On one point, Mr. Roosevelt must have shocked optimists. He said that one Japanese offensive had been stopped, but the enemy still possessed great strength and sought to regain the initiative and would strike hard again. If Hawaii has been saved by the Midway battle and prospects in China are changing rapidly for the better, it is not hard to see that the enemy might consolidate his positions in the occupied areas and use the method of invasion against India perhaps. Mr. Roosevelt was necessarily brief but it is possible to detect a trace of Mr. J. C. Grew's comments on the war spirit in Japan. The best method of estimating possibilities is to look again at the map and check distances. While vulnerability may not exist, the Indian coastal cities are obviously within range of naval and air attack. If the President made no reference to Australia as a possible base, it must be for the best of reasons—not to encourage foolish or excessive optimism.

But in reviewing the changes of five weeks only recently we were impelled to discuss the influence of naval victories on the war in East Asia and South Russia. The Japs have been weakened by naval and shipping losses; but there is no reason as yet to presume that Japan is a spent force. Practically every conclusion reached on the basis of events in August finds support in Mr. Roosevelt's war survey. There was, doubtless, a reference to the challenge to liberty but nothing more was said of war aims than was said at the youth rally on Friday last. There was no mention of war production achievements but only a call to pay more for the war. The omissions in the speech are at once novel and significant. They are directly related to the warning given by that veteran Republican, Henry Cabot Lodge, who saw the last war and the lost peace as well. The President has seldom ignored the fact that this war will be long and grim, and the main feature of the speech was the forecast of an offensive against Germany. The forecast is not, by any test, the answer to the demand for a Second Front. It is a statement of aim essentially in line with inter-Allied discussions since June, but important in that dispersion of effort is still commended. The President is, therefore, a supporter of Mr. Churchill's policy. There is no longer room to suppose that the U.S.A. has different ideas or plans about the war. There is perfect accord and complete agreement as to the place and time for European operations.

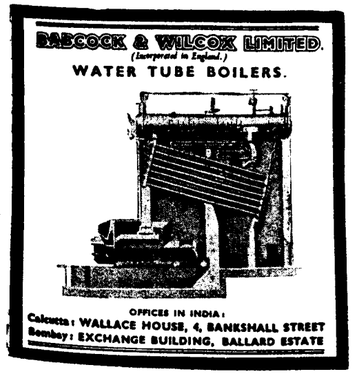
No secret has been disclosed but there is no doubt as to the present importance of holding Egypt against the Axis. The first speech of Mr. Churchill after his visit to Moscow in the Recess supplements in important particulars the President's speech in details. Most welcome is the assurance given after fourteen months of no information that the Battle of the Atlantic is taking a new turn. Definite improvement has taken place in July, August and September, according to the Prime Minister who stated that the production of new merchant ships had definitely crossed and maintained itself above the line of sinkings. The intensification of the air attack on Germany is no incosiderable achievement, and M. Maisky's recent admission that air attack is helpful to Russia is a sign of the unity produced by the continuous consultation before and after the Moscow meeting.



Events have clearly had no direct effect on either of the utterances quoted. The failure of the German drive against Stalingrad cannot be yet treated as a certainty, and local improvement on the Black Sea side cannot be regarded as a con-

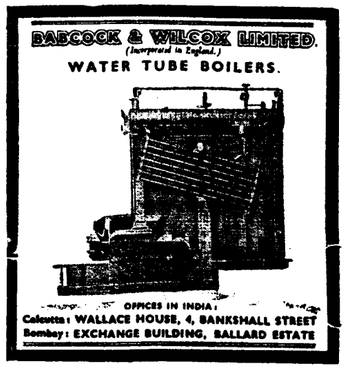


tribution to the defeat of the German offensive in South-east Russia. In reporting on his tour, Mr. Churchill dealt largely with the battles in Egypt. Mr. Roosevelt has declared in this connection that he is hopeful of the outcome. Mr. Churchill has said that he is confident of the defence of Egypt for months to come. There is one more point to which India should pay attention. The opening of a front in Europe is contingent on an effective mastery of the Atlantic. Shipping must be safe before an army can pass to its tasks and continuous improvement such as that recorded since July alone can create conditions favourable for an offensive in Europe. Mr. Churchill indicated that 'Allied warfare on U-boats has become more successful than in any period of the war. Very few days passed when one or more U-boats were not sunk or damaged.' Even if the improvement in the shipping position sprigs from U-boat casualties it certainly runs counter to a German Admiral's boast in July that U-boat packs would stop supplies to Russia. They have not stopped since the Russians are still fighting, and the Prime Minister's open claim that the German spring offensive on the Atlantic is weakening is the answer to the assumption that U-boats by themselves could prevent an attack on the Occupied countries for striking through to Germany.



The text of both speeches, as cabled by **Reuter,** seems unduly brief in comparison with the past surveys but the points which emerge are assuredly more reassuring than any formal promise of victory in a year or two. There have been occasions on which Service spokesmen and statesmen alike have been wild and wholly but this week there is no ambiguity. The battles in Egypt are not treated as final, compelling victories but are treated as evidence of the enhanced strength of the Eighth Army. Mr. Churchill has incidentally corrected many Military Correspondents, and if he has not discussed Allied ability to pursue Rommel to Tripoli, it is open to question if any formal review of possibilities will improve the chances of operations, meant to impress Italy and the Vichy Government. It is still possible to argue that after getting fresh supplies brought by well-guarded convoys, Rommel may march back towards el Alamein and the only thing worth knowing now is that he will not be allowed to reach the Royal Navy's base at Alexandria. The British will hold Malta, Egypt and much else. The Germans in the Aegean cannot overpower British seapower, and Italy's claim, advanced through Gayda, for control of both Suez and Gibraltar has been met by insistence on Britain's ability to keep her fleet in the Mediterranean. The motto still is to keep the Axis guessing, and that is perhaps one reason why we should refrain from discussing what a Secont Front demands by way of resources and skill. The skill undoubtedly is there, while the resources are being built up, as Mr. Churchill pointed to activity at British ports and rapid arrivals of U. S. divisions.

The task of restoring confidence has been completed by deputing Mr. Willkie to Europe and Asia. It is generally known that it is not the British Government alone which is interested in China; the Middle East, too, has received close attention from Washington. Mr. Willkie has summed up the prospects in Egypt in a quick manner and has inspected Turkey also. The U.S.A. is looking ahead in the Balkans and 'the policeman of the Balkans' has a special role in American (and need it be added, in British) eyes. The desert fighting after Rommel's flight may seem desultory, but a quite decisive move has been made in Madagascar. If one learns to link events to speeches it will be understood that difficulties with Vichy are not ignored by the Allies. Since the U.S.A. turned down a protest made by Laval in regard to air raids in regard to France, it is certain that Admiral Leahy is not going back, and Anglo-American policy is now identical. That diplomacy and war are merged is a sign of the newest phase of the war as also is Mr. Willkie's visit to Baghdad and Teheran. Since the U.S.A. entered the war all British engagements in the Middle East are virtually endorsed by a high emissary and this again will be regarded as a most hopeful feature. American policy in the Near and Middle East may be taken as settled for the duration and after. There can be no divergence in regard to Palestine or Syria, and the closer the interest the U.S.A. develops in Europe, the more secure will the post-war settlement be. It is not at all surprising that neutral capitals have been avoided since Mr. Willkie's mission is altogether different from Mr. Sumner Welles' visit to Europe in 1940.



The U.S.A. has a foreign policy similar to Britain's and its military objects are the same as may be inferred from General MacArthur's efforts to ward off the threat to Port Moseby There may be no radical improvement in south-east Russia but both nations through their statesmen stand committed. Mr. Roosevelt has indicated very recently that 35 per cent of U. S. supplies under lease-lend are assigned to Russia, and it is certain that China's own efforts to beat back Japan have influenced Mr. Roosevelt in sending Mr. Willkie. The visit is an integral feature of the work of building up confidence among the United Nations. Co-operation is not limited to air activity over France or Crete. The fighting by the Americans and others in the South-west Pacific and the growing air superiority have far greater significance than mere local successes. The success in the Battle of the Solomons should avert a major move on the part of Japan and in time keep her on the defensive. The completion of the operations in Madagascar should also prevent Nippon from meeting his Axis partner in Iran. Anglo-American co-operation is pervasive complete and the way in which the speeches of last week agree in details, must be taken as an earnest of a policy by which the factitious resemblance of Axis aims with Japan's will be broken to leave the Allies masters of the situation.

Editorial Notes

Colonial Production

Colonial development must go on because some Colonies are lost. If the West African Colonies provide cocoa, the East African Colonies send coffee, the U. K. is willing and ready to take more from Kenya. According to a cable received by the Associated Chambers last week, Kenya has become a big supplier of the Middle East. Vegetables, dairy produce, coffee, wheat and maize have all been increased and are taken for the armies in the Middle East. The area under wheat has risen and 131,000 acres outside the Native Reserves were under wheat by July 1942. It has been announced recently that the Kenya Government has begun to develop the great Athe plains for wheat-growing for the Middle East. In the great plains, which stretch for many miles east of Nairobi, it is hoped to develop at least 100,000 acres for wheat-growing. Late in August Kenya obtained a consignment of American machinery including tractors for this purpose. The swing from commercial crops to food crops is a development familiar in the war period. Cotton, coffee and sisal are not reckoned as vital as wheat and vegetables, and the new drive may help the African smallholder more than the European planter.

The fall in imports and a probable rise in exports will help Kenya to develop rapidly. The depressed West Indies are receiving attention. In view of the need to save shipping space, the colonies are encouraged to produce more food and export it. Essential products like rice cannot be imported, and the West Indies are told to grow rice. Rice from the West Indies is wanted to make good the former imports from Burma. British Guiana which has been little developed except for sugar, is to grow more rice. The sum of 400,000 dollars has been allotted for drainage and irrigation works meant for extending rice cultivation. The U.S.A. is expected to help with the necessary machinery. British Guiana expects to ship more rice and steps have been taken to supply Trinidad with its total rice requirements which amount this year to nearly 21,000 tons and a further 3,500 tons will be sent to Barbados. At one time the West Indies took rice from India but India can sell little and there have been already protests against any proposed agreement with Ceylon for the shipment of rice. The West Indies which used to live by sugar have a still better chance with sugar and rum, but they cannot import food as usual, and Trinidad which produces oil, is treated as exceptional. Jamaica would certainly be expected to grow its own food. If agriculture develops, but not on the plantation lines, the gain will be great for the slums of the Empire can be cleared.

Canadian Agriculture

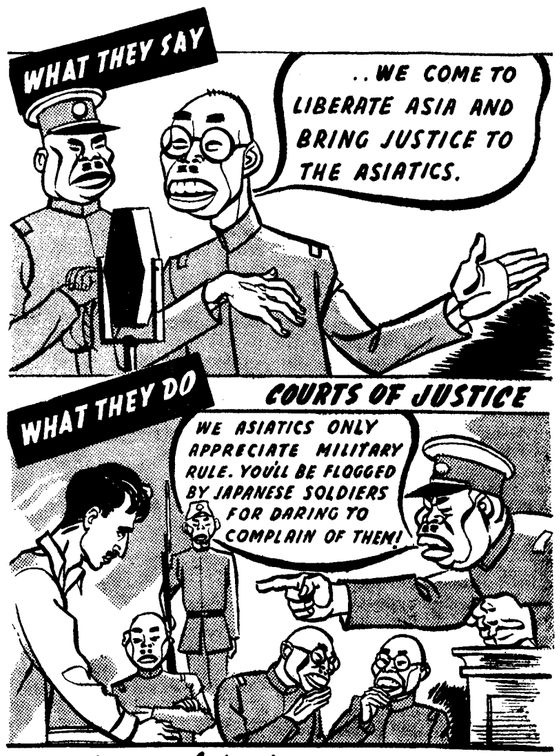
Canada is not only the airfield and arsenal of the Empire; she is also the larder. Recovery from the depression was almost complete by 1939 and Canadian farming in the war period has been equal to the many demands placed on it. In spite of lost markets, farming has progressed and the farmers' aggregate income last year rose by 12 per cent on 1940. It is true that most external markets were lost by apple-growers in Nova Scotia and British Columbia and by tobacco planters in Ontario. But the Government subsidies had a cushioning effect and such trouble as was experienced by farmers in 1940 has proved to be temporary. In a recent survey of Canadian agriculture in the war it has been emphasised that the reduction in the wheat crop at the instance of the Dominion Government has been accompanied by a marked increase in meat, poultry and dairy exports. From the summer of 1940 Canada has provided more bacon and cheese, formerly drawn by Britain from Denmark and Holland. All the wheat that Britain wants has been got from Canada and the huge carry-over in Argentina is a result of the expansion in Canadian wheat shipments in 1941-42. Livestock production has increased and it is only in the prairie that wheat remains all-important.

The guaranteed price of 90 cents a bushel is not meant to subsidise production but to offset higher costs. Higher meat and dairy production has been encouraged while wheat production has been discouraged since 1940. Wheat is no longer the chief source of the farmer's income. It is livestock, which has also broken the effect of crop damage in 1941 in two provinces. In the Maritime Provinces excepting Prince Edward Island farm income rose by 17 per cent in 1941. The increase would have been greater but for the reduction in manpower on farms. Yet the increase in mechanical equipment reported last year indicates how one difficulty was met. As compared with 1931 the cropped area in Canada in 1941 was smaller, but productivity was maintained and the increase in livestock promises considerable benefits for the future. Sugar beet has acquired importance in Manitoba and what has been reported in the U.S.A. may find a close parallel in Canada. Flax-seed production has increased and vegetables are grown in B.C. to a greater extent for the British market. Canada exported in the past two years of war 300 million bushels of wheat to the U.K. She provided also bacon and other pork products, cheese, eggs and honey in considerable quantities. Home consumption of foodstuffs has increased, but Canada's larger exports to the U.K. have had a direct result in reducing Britain's purchases from the U.S.A. in the war period. This was no inconsiderable benefit to Britain before lease-lend was adopted.

It has been noted that this year will see a big increase in pork production in response to larger orders from Britain totalling 600 million lbs. besides 125 million lbs. of cheese, 130 million dozen eggs and 675,000 cases of evaporated milk as well as large quantities of fresh and processed fruit, honey and canned vegetables. Moreover, agriculture has to provide edible fats and oils because of the Allied losses in the Pacific; and flax and soya bean are getting more important for Canadian agriculture which is largely turning to livestock production. But for the labour shortage in Canada conditions in the spring could be called promising. If grain has been used as feed by Eastern farmers, the meat supply is larger and assured. But damage was reported in the prairie, and the Government assistance, apart from a guarantee of fertiliser, has been limited to a promise not to take more workers away from the farm. Stabilised prices are not an encouragement to farmers, and prices for grains and flax seed were revised by the Government which indicated again that an increase in the wheat acreage was not desirable because of the stocks held by the Wheat Board. Britain is, however, a big buyer of wheat, getting Canadian wheat alone and helping Canada to cut her carry-over. Last year there was a glut of wheat. Since the world demand has shrunk further, the carry-over threatens to be large. The world wheat position (not the Indian) this year is unusually comfortable, and the diversion of agricultural activity is likely to continue particularly as estimates of the grain crop indicate no reduction in outturn. Any reduction under wheat supplies in Canada would be in consonance with the U.S. decision to reduce its spring wheat crop in 1942. There is not likely to be any additional inducement, even if Australia is not a likely seller of wheat this year.

East African Markets

Kenya's progress as a market for Indian goods is not without its interest. In the months March, April and May the Indian Trade Commissioner forwarded many trade enquiries despite restrictions on shipping which held up the flow of trade. Because other sources are not available, Kenya has asked India for things like motorhood cloth. Names of firms were supplied in response to a Nairobi enquiry. A bacon factory in the Uplands asked for ground white pepper which could not be obtained from the U.K. as before. Names of principal exporters of spices were fur-



nished. Names of manufacturing chemists in India were also furnished after a Nairobi firm asked about ammonia and other chemicals. A Kampala concern asked about pith helmets. The Trade Commissioner has remarked that India can capture the trade. Indian pith hats are in the East African markets and are gaining popularity. Uganda firms asked for knitting wool, and the Indian wool that has entered the market is making headway. It is noted that finer quality woois suited to European taste are wanted. Mosquito netting is in demand, and Indian samples were sent up to the Government Entomologist for determining suitability. Indigenous drugs e.g., datuva stramonium attracted enquiries from the Director of Agriculture in Tanganyika. Since Indian matches sold in London over a year ago, the Colonies, too, look to India for matches. Quotations were obtained for the benefit of trade enquirers. Large consignments have sold well as South African supplies are limited, though the splints are of better quality. Most promising in the Trade Commissioner's opinion is the market for footwear. In East Africa there is wide scope. The local manufacture of footwear is yet on too small a scale to cope with the demand. In previous reports, the openings for Indian manufacturers were listed carefully, but this year import control has become general and customs surcharges have also appeared. The Colonies are doing what India has done, but certain imports are essential, and alternative sources being few, India is offered fresh chances to develop trade in the war period with most African colonies. Nigeria is a new and growing market, as was noted recently, and on the eastern side, Kenya, like the Middle East, has to get goods previously imported from Japan.

"Japan should subjugate the nations of the East and conquer the world at the point of bayonet".

Oasta Nainichi — in the "Times of Japan"

"What Japan means by Asia for the Asiatics is no more and no less than Asia for the Japanese".

Dr. C. J. Pao — Chinese Consul-General, Calcutta.

KEEP OUT THE JAP!

Export Control

In the "Indian Trade Journal" of September 10th are reproduced the schedules appended to a notification modifying export trade control. The amendments secure India against the export of essential articles like agar-agar, arms and ammunition as also various chemicals and drugs. Horse-hair and manufactures thereof as also horses and mules figure among the exports for which no licenses will be issued. That shipment of cameras, optical glass and thermometers is a disadvantage will be realised, but the addition of all chrome-tanned upper leather produced from cow or buffalo hides having a minimum substance of 1.5 mm. and a minimum area of 9 square feet for half hide (side) or 19 square feet per full hide is rather hard to understand. There are in all 17 export prohibitions, applying in this case also to metals and alloys which are subject to Control. There is apparently the same objection to flax and flax manufactures as to inland navigation vessels and their sale abroad. Compounds for wood preservation e.g., creosote and coal tar are among the articles for which no license will be issued. The Export Trade Controller is vested with power to issue licenses for many articles like photographic films and seed potatoes, bakelite and moulding powders as also condiments, not canned or bottled. The third class is made up of goods for which the approval of the Supply Department is specially wanted. Exporters would do well to note what a wide range of goods comes within the purview of control exercised by the Supply Department. It is now clear that in regard to many exports the Commerce Department is functus officio. Belting, bristles, buttons and cement require licenses from the Central Government in the Department of Supply or an officer authorised by that Department in this behalf. Chemicals, drugs and glass as well as leather and liquor come like machine tools within Schedule C described as requiring the Supply Department's approval for exports. All metals and ores and scrap also enter into the Schedule like instruments and appliances which are covered by Schedule C. In the textile group cotton, canvas, sewing thread and tape are covered by the conditional prohibition referred to. Woollen yarn and hosiery also fall within the scope of the rules and all hemp and manufactures thereof are covered by the licensing rules. The demands of the war on Indian production clearly limit the possibilities of developing export trade in most lines. This is not without its advantages and the licensing procedure might be described as the complement of various Control orders applying to wool or steel, rubber manufactures etc. The rules, it may be added, apply to sera, paints, varnishes and enamels and provisions, canned or bottled. On all domestic production Government has a prior claim and exports are discouraged by making licenses compulsory. Even where the Government demands may not be large as for fibres for brushes and brooms, the usual license has to be taken out from the Export Trade Controller. It is interesting to note that tea and sugar alike require licenses under Part D and soaps, washing powders and toilet requisites cannot be despatched any more than paper, pasteboard and stationery or raw rubber and mica.

Rise in Coffee

Estimates of the Indian coffee outlook in recent weeks have been distinctly optimistic; and hardening prices only reflect the enlargement of demand at home. The Middle East is considered a safe and certain market as Java is not a competitor at present. The Arabs of the Hadhramaut who have lost touch with the N. E. I. will have to turn to India. Prices have certainly risen. Last week the "Trade Journal" stated that rates on August 31 at Bangalore for Nilgiri peaberry was Rs. 92 per cwt.; for Native Rs. 83; for Nilgiri Flat Rs. 89 per cwt. and for Native Flat Rs. 82 per cwt. The rise in prices this year is substantial and consistent. The Ordinance governing restriction of crop on all estates over 10 acres is in favour of the grower and the pool, too, continues in existence. Whether the Government will cancel the Ordinance is doubtful at present, and the rise in coffee prices may be defended on various grounds. African coffee prices do not appear to have gone up to any extent, and the quotation in New York for Fair Rio is still around 9 cents per lb. Indian prices appear to be extraordinarily high compared with New York rates, but Britain is said to be keener than ever on Indian coffee, and the prices paid for South or Central American or West Indian coffee can have little effect on Indian prices. Kenya is expected to produce 10,000 tons, and if part of it goes to the Middle East, the pressure on the smaller Indian crop may be less and prices may ease. It is to be hoped that the Central Legislature will look at the working of the Coffee Ordinance carefully in order to secure for India a permanent position in the U. K. market and also protect the Indian consumer as has been done in regard to tea by cutting out private exports of tea.

A Progressive Indian Scheduled Bank

On the Agenda

The few official bills coming up for consideration may attract little interest. But one at least deserves considerable notice. The Central Government, at the instance of the Reserve Bank, intend to amend the Indian Companies Act. The purpose of such amendment is to bring the affairs of non-scheduled banks under the regular scrutiny of the Reserve Bank. The words "bank" and "banking company" will be strictly defined, and any Company taking deposits will be treated as a bank and called upon to furnish information as to working. Non-scheduled banks in recent years have not been altogether stationary. Many of them provide regular returns and for the group as a whole, it is possible to speak of cash ratio and the proportion of investments to assets. The amendment when incorporated in the statute will provide protection to depositors, for publicity will give the Reserve Bank the authority or influence to guide non-scheduled banks along right lines. Depositors, therefore, will receive more protection than they enjoy, and the postponement of a Banking Bill need not stand in the way of legislation in the interests of depositors in small banks. In Australia and South Africa alike, there have been extensive changes in law restraining credit and determining investments. Such legislation being ruled out in India, amendments empowering the Reserve Bank to extract information as to working, will appear desirable. It has been noticed that non-scheduled banks' methods of business and financial position alike are improving. Further progress in the right direction will be ensured by the coming into force after the year of small changes conferring on the Reserve Bank the power to obtain information. The statistical tables incidentally will be better, and this consideration, too, should weigh with legislators in according support to the short Bill that is to be considered during the Delhi session.

The Railways' Work

That the railways are doing their work in spite of many difficulties will be inferred from Sir Edward Benthall's address to the Transport Advisory Council last week. It was the first public utterance of the new Member. He referred to the growth of traffic and the gain in operating efficiency. The growth of traffic cannot be measured by the usual wagon loading statistics alone. Changes in routing have to be taken note of and also the disappearance of what was called the slack season. There is no rest for men or engines in the hot weather. The growth in military traffic carried generally by the railways at short notice, is a sign of strain,

caused also by the diversion of men and workshops to war work. In the year 1941-42 goods traffic measured in ton-miles on the broad gauge rose by 25 per cent. In the year ended March passenger traffic attained a new record. Discomfort has become the price of service and the new restrictions on railway travel in Britain this year will perhaps have to be adopted in India in the light of changes to come. The Railways, if they have failed to make ample civilian supplies available as before, have put up with shortage of locomotives, coal and spares. But the country has been well served for years. To quote Sir Edward "the demands of the Army have been fulfilled, every important industry has been kept in operation; the increased production of munitions has been maintained. Civil requirements of the country have been met, although at times with great difficulty! This has been done almost entirely by attention to operating efficiency. The main warning given by Sir Edward relates to a deterioration. As production increases, the transport position is likely to grow worse and not better. Locomotives are not to be had easily nor can repairs be carried out as desired, even if part of the workshop capacity is recovered for railway repairs. Economy and speed are twin watchwords for railwaymen. By making the most of wagon space they can help all consumers including the Government. The grow more food plans and stable prices promise in turn to increase traffic this year. No doubt unessential traffic can be made to wait, but civilian morale has to be considered, as also problems of employment. If there is voluntary idleness the railways do not gain since rush jobs will increase later. No single remedy was recommended but the main claim for consideration by users rests on the higher efficiency of India's railways. No increase in revenue from the public is evidently desired at present, and the strain which has led to the curtailment of services in August is clearly bound up with the movement of military supplies in advance of operations. The expert enquiry two years ago has not eased the wagon position. The winter will raise the demand for coal. The fuel and locomotive position have not been altered by the closing of many lines, but the public will note that rolling stock has been sent to Iran and Egypt; and cannot be replaced immediately as steel and timber are wanted for the war. The expected relief can come only when the U.S.A. sends locomotives under lease-lend or helps to promote efficiency by other means, at least to see that Dr. Grady's recommendations are carried out betimes. Whether canal or road transport can help, to any extent, was not discussed by the War Transport Member.

Ambitious Geographers

Mr. H. W. Weigert provides in a recent Oxford pamphlet information as to Karl Haushofer and his influence on Hitler. Geopolitics will seem a new German science to all the world including America, but Buckle knew something about that and the main arguments were indeed outlined by the Rt. Hon. Sir Halford Mackinder, Chairman of the Empire Marketing Board of glorious memory. Geopolitics is not the 20th century version of necromancy. The regional craving and the new racial urge are not far removed. Research forced Haushofer and his son to talk with Hess, and Hess meant Hitler at one time, particularly, when Ludendorff was backing the Austrian adventurer. Geopolitics is dangerous because it discards the rules of private and public morality. The Municheers are apparently mild, but they have favoured much earlier than known the rape of Czechoslovakia and the forced union of Austria. The Haushofer school has been influential to the point of creating the alliance with Japan; but on the issue of war with Russia, the school has been silent.

The pamphlet hardly breaks new ground but it tells the American public that the military men who sat down to read history and geography or rather helped to make it created catalogues for the Staff. The German army went intellectual and its successes are not a little due to the elaborate statistical accounts of the occupied regions put arbitrarily into the German lebensraum. In the war period Geopolitics is under a cloud, but in the U.S.A. a professor called Renner made new maps on the Munich principle and shocked the respectable this year by tacitly approving Axis plans that have been grounded in the politico-geographical arguments of ex-soldiers to whom war means more than isobars. There has been no suggestion that the new world is excluded from the Nazi's dreams and Tunis, Corsica and Nice cry has been a geopolitical cry. They would give Italy both Dalmatia and Trieste in addition to the share in the Suez Canal wanted by Ciano. Interesting but unethical as its claims are, geopolitics is something more than a mere doctrinal tool of the Nazis. Power politics in this age moves in a geographical groove and everything from the taking of Eupen-Malmedy to the Allied occupation of Madagascar can be defended in the cartograms that the Munich school draws up. Without exaggerating its power Mr. Weigert shows that the German army is well-grounded in theory. The higher Staff men are real professionals, aristocrats who are as cruel as Walleinstein and as reckless as Casanova.

The Horse in India

Horse-breeding is neglected in India: this is a conclusion forced by a reading of Mr. H. B. Shahi's account of indigenous breeds in "Indian Farming" last month. The Army, however, retains a strong interest through its Remount Depots, but there is little sign of India's landowners doing enough for the native breeds. It is known that India ranks ninth in regard to equine population and the number of horses increased as usual between 1930 and 1935. It is only in the Punjab that systematic breeding has been attempted through the encouragement given by the Army. Parts of the U. P. are also associated with horse-breeding but mechanisation has removed the Army from the scene; in most cases the Civil Veterinary Department at present attends to the work of improving local

(*Continued on page* 493).

do we want to give up our livings to Japanese?

Our present economic burdens are hard enough to bear. But if we were to come within Japan's "Economic Co-Prosperity Sphere" our burden would become a load which would crush us. From actual records in the rest of Asia, this is what the Japanese intend:

Colonisation of Land.

Dr. Ching-Chun Wang, Chinese lecturer in Oriental History, tells us that in Korea, occupied by the Japanese thirty years ago, their ownership of land has increased by 750%. Today, 20,40,000 acres, including the best rice and cotton soil is in the possession of Japanese. The Koreans have no longer any inalienable rights in their own land.

The land-settlements and the revenue system in our country are by no means perfect, but they cannot match the situation in Korea.

The Japanese Army will send for their lakhs of settlers to take over the best lands if they get a secure foothold in India, just as they have done in Korea—and China.

Business Expropriation.

The Tokyo Radio told us on 7th July, 1942, that there are half a million Japanese civilians now earning their livings in China, where there were less than one lakh before the war (or about the same as the total British in India, including troops). Besides taking over the best lands, the Japanese settlers have been given thousands of Chinese businesses which were either confiscated or "taken into protection" by the Japanese Army.

This means outright expropriation of all sorts of businesses, from banks and factories down to street-hawkers.

The Japanese invasion of India, if it comes, will be followed by a system of licensing all businesses, arranged so that their owners have to give them up in favour of Japanese adventurers.

If you want to keep your livelihood, help all those who support the fight to keep out the Japanese, even if this means temporarily sacrificing your own principles.

..think for yourself and act together!

While, in this section, my choice of theme has been generally designed to cater for varied tastes and preferences, I have all the more reason to note that, for a long while, I have not written aught to provide interest for the large body of readers who belong to the category of investors or share market operators. This is not an omission through any oversight. My main difficulty has been that developments, both at home and abroad, for the past many months have not been favourable to the forming of definite conclusions with regard to the course of stock markets. It is true, in a large sense, that stock exchanges have developed a kind of shock-proof brazenness. Political news of the most adverse nature have only a temporary effect. The inherent buoyancy of markets and market operators has asserted itself after a short-lived phase of panic. To this general statement, however, it is necessary to add one or two qualifying remarks. The description of complete immunity to critical political news is true principally of the London market. During all the three years of war, it is remarkable how prices of British stocks have been fully maintained; and how the nerves of investors and operators have been fully sustained. Wall Street presents a more or less opposite state of affairs. The market has suffered from a persistent malady of nerves.

* * * *

India may be said to come betwixt and between. When the stock exchanges here get jittery, they get very jittery, but the process of recovery has been pretty quick and, in many cases, the losses due to panic have been more than made good in the later wave of confidence. Since Japan's entry into the war, however, a longer interregnum of depression than usual has persisted. This is mostly due to Japan's entry bringing the war directly to the Indian frontier. The fall of Burma has been a further un-nerving factor. On all this has been superimposed the disturbance and disquiet following the arrests of Mahatma Gandhi and the Congress leaders. Thus have the stock exchanges in this country suffered from a nine-months spell of poor business and disappointing outlook. Since the beginning of this month, however, there has materialised a sudden return of confidence in most sections of the Calcutta and Madras stock exchanges. A marked expansion in activity, greater interest in a greater number of shares on behalf of a greater number of operators, all-round marking up of prices—these in sum are the developments of the first fortnight of September. The political disturbances are responsible for the Bombay share bazar remaining closed; and no business has been transacted in the last five weeks. It is not possible yet to say how far operators in the Western capital are prepared to respond to the definitely bullish activities of the Southern and Eastern capitals; but it seems safe to take it for granted that, when all cotton mills resume work, investors in textile shares as well as those in engineering companies in Bombay will take as confident a view of the future as do their compeers in Calcutta.

* * * *

That Calcutta has, on its own initiative, taken the lead in staging a strident market recovery, is rather unusual. Calcutta has mostly been content, in the past, with following the lead provided by the Bombay operators. On the present occasion, not much of business on this market has been reported as emanating from the Western Presidency. One has, therefore to consider whether the present brighter market in Calcutta is to be connected with the seasonal recovery movement which usually begins just before the Pujas, say, by the end of August every year and lasts till the end of November. A careful analysis of the nature and extent of the present stimulated activity in the several sections in Calcutta Stock Exchange suggests that it is more than the seasonal recovery movement, especially as the bright markets in Calcutta have coincided with brighter markets in Madras.

The definitely optimistic outlook of Calcutta seems strange as operators in this city are more prone to be upset by political developments and have now reasons to be wondering as to whether the threat of enemy invasion will materialise after the monsoon.

Those who are competent to speak with authority on this question, have called upon the public not to minimise the possibilities of enemy attack. Reports from Chungking seem to emphasise that the Japanese might be planning an attack on Siberia; and that this attack would be timed to coincide with the fall of Stalingrad. On the other hand, Americans consider that India is the more likely target. In these circumstances, I cannot claim to speak the voice of a military strategist though, only recently, I expressed the view that the threats put out by Japan on the radio were very much in

D. F. SANDERS, *General Manager.*

the nature of bluff and bluster. Stock exchange circles in Calcutta possibly share this view. I need only draw pointed attention to the general observation that the market is always miles ahead of the others in anticipating developments. The prominent operators in the Calcutta Stock Exchange are known for their conservative outlook; and, if even they, even in the face of the likelihood of India becoming a direct theatre of war, have been persuaded to take a cheery view of the future, investors cannot go far wrong by taking more interest in the lead that is given. From this point of view, the subsequent developments in the Calcutta stock exchange deserve to be carefully followed and shrewdly studied.

* * * *

It is useful to note the background of the present upward movement. It must be admitted that, apart from the political situation and the bogey of enemy invasion, the present movement is opportune for the staging of an impressive advance in stock exchange prices. Operators and investors have, so to say, become callous and hardened to developments in the war situation; and they know what exactly is the importance to be attached to the happenings which will not directly affect the interests and imperil the security of this country. It was for this reason that Indian market circles have been following with much anxiety the developments in the Middle East. They have now the assurance of Mr. Churchill that Rommel cannot effect a break-through to Iraq or Iran. Though the fate of Stalingrad is still in the balance, the Germans have received a most serious rebuff. Whether Stalingrad falls or not, it is undeniable that the approach of winter makes it impossible for Hitler to launch any new major offensive. If Hitler is kept at bay for another six or seven weeks, he cannot do much harm till the next spring. By which time the skies in the Middle East and the Far East will be full of giant bombers that America is turning out ever ahead of the schedules.

* * * *

Given the immunity of stock markets to shocks in the war situation, the current factors are favourable for a general marking-up in values all round. Questions connected with war risks insurance, scorched earth policy or denial policy have all been satisfactorily settled to a large extent. Thanks to recurrent and hydra-headed expansion of currency, banks are groaning with idle funds. The bigger and medium-class investors are in a like predicament. In the absence of any new issues, except for defence loans, the bulk of the surplus funds seeking investment has ultimately to find its way to the stock markets. The present yield on giltedged securities is roundabout 3 per cent subject to tax. Deducting the tax, the yield is about 2 per cent. Banks are not prepared to pay more than 1/2 per cent for deposits up to six months. All interest rates are at unprecedently low levels. It follows that great and greater attention would inevitably be paid to equities.

* * *

In this connection, I may draw attention to the improved prospects for most of the Indian industries. Cotton, sugar, tea, engineering, iron and steel, rubber and miscellaneous industries are kept extremely busy with war orders. The needs of the Government are going up by leaps and bounds. As the main industrial country in the Eastern Group, India is being called upon to cater for the requirements of most of the countries in this area. The domestic market has greatly extended, thanks to greater purchasing power and thanks to more or less complete cessation of imports from foreign sources. Over 35 per cent of the production of the cotton textile industry has now to be reserved for the Government; and the mills are finding it extremely difficult to supply the demands of the home and export markets. The engineering industry has marched from strength to strength; and the apt aid provided by America in the supply of machine parts and machine tools should contribute greatly not only to the efficiency but the enlargement of the industry. The iron and steel industry has progressed in all ways. Several kinds of alloy steel, never before attempted in this country, are now being successfully produced. The productive capacities of the plants have been vastly increased; and there are plans for further extension of plant capacity.

* * *

Following the fall of Java and the Philippines, which were the most important sugar producers in the East, India has now to provide the entire requirements of the domestic market as well as to cater for Ceylon, the Persian Gulf ports and the Middle East generally. Only three years ago, the sugar industry in India had a crisis because of overproduction and accumulating stocks. The crisis today is caused by sugar shortage.

The whole of the exportable surplus of tea from India and Ceylon is being bought by the British Ministry of Food. Thus are the prospects of the tea companies in India of the rosiest description.

* * * *

The United Nations are suddenly confronted with an acute rubber shortage. The few rubber plantations in South India are thus faced with exceptionally brilliant prospects.

* * * *

The coal and jute industries, too, would have had similar good fortune except for difficulties with regard to wagon and shipping space. There have been more reassuring reports recently in regard to additional wagons for the coal industry; and this has already resulted in an improving enquiry for the popular coal shares. The prosperity of the jute industry depends largely on the improvement in sea communications. The future in this regard is difficult to foretell. All that we can say about jute shares is that any rise in these shares can only be by way of sympathetic reaction to the general improvement in the stock exchanges.

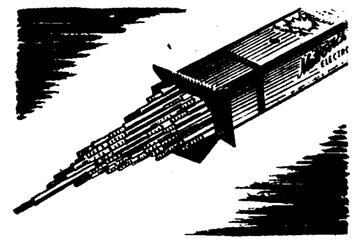
* * * *

Now that I have delineated the background of the present rise in stock exchanges, what should surprise us is not that this rise has taken place, but that the broadening interest has been delayed so long. There are only two future developments which can stem the tide of optimism. One is the materialisation of the threat of Japanese invasion; and the other is the intensification of the internal unrest. The validity of even these two factors cannot last beyond November. For, if Japan does not do anything before November, she cannot do anything at all thereafter. She will have enough on her hands to counter the powerful blows that will be launched by America. As regards the Indian political situation, I refuse to believe that, poor as has been the character of British statesmanship so far shown, it is not so bankrupt as to let India remain a land seething with discontent and bitterness while, for her safety as well as for the safety of the United Nations, it is urgent and imperative that the goodwill of her vast population is actively secured and intelligently mobilised.

* * * *

INDIAN FINANCE has, throughout its career, stood for progressive reduction in the borrowing rate of the Government. It has always proclaimed its faith that a strong borrower can dictate terms to the lender; and that the Indian Government are in the position of a strong borower. Thus viewed, the materialisation of a 3 per cent borrowing rate for the Government is a development that INDIAN FINANCE had forecast well in advance, and for which INDIAN FINANCE has worked ceaselessly and often against impediments thrown by the Government. In connection with investors and investments, it is necessary to appreciate correctly the significance of this development to the future of equities. In simple terms, if all that the Government loans may be expected to yield now and hereafter is 2 per cent free of tax, the public expectation of yield on equity shares will be correspondingly lower. Thus, if a six per cent taxfree return was the general expectation a few years ago, the investor should now feel extremely lucky if he gets 4 per cent taxfree on equities.

Thus are the benefits of Government's skilful and cheap borrowing spread over the entire capital market.



"EAVESDROPPER."

(*Continued from page* 491)

Delhi but he is not distant. He was quite jovial and thinks well of his young navy. Engineering progress underlines naval expansion in the past year but the Princes have paid, and new ships are rapidly coming off because the money has rolled in. Bombay has done itself real good by putting up the issue price of its first loan. Sind—the permanent deficit area—is cut off and Bombay as the home of big money expects local support in the matter of the loan. Bombay is asking for 3½ crores to pay off an old loan and to save on interest. Not the further development of Back Bay or any beauty spot—but just plain conversion is the object. The Province has assets in excess of a debt of Rs. 21 crores. There have been regular surpluses and revenue is likely to be better as Prohibition has been given the go-by. For five years there has been no borrowing, and no talking of Treasury Bills even. Even if rioting has been bad the Province is well-placed in regard to regular payment of interest. One way of stabilising the 3 per cent rate of interest is to let the Provinces get their teeth into the capital market. That does not occur to many who object to the encouragement of borrowing at a time when the third Defence loan is almost hanging fire. Underwriting is deemed a timely precaution for the Governments dare not face the risk of failure. Anyway, those who let the news out have few doubts about the way the subscriptions will flow. Anyway, the Corporation is to get a loan for its food plans from Government quite soon and borrowing is favoured for various other reasons besides the lightening of bank balances and the quick damping of the bullion market fever.

(From Our Correspondent)

THE controversy about the message-rate system for Bombay telephones continues, but I put off comment until I am on good terms with the Honourable Mr. R. H. Parker whom I had accused of writing poetry. The Editor has asked for an explanation in view of Mr. Parker's denial forwarded to me which runs as follows:—

Your Bombay man is quite mistaken,
My name he has most vainly taken,
I'm not the author of the verse
He quotes, and criticises; worse—
I have but one doggerel written (in vain)
No answer I got or I wouldn't complain,
The anonymous sender of a humorous p.c.
Won't give me his name and address, do you see?

R. H. P.

Mr. Parker who is genial and popular in business circles has gone the way of Young Isaak Walton whose father wanted to whip the instinct for verse out of his son's system. Bringing out the birch, Walton, *pere*, began operations, and demanded a promise that he would no longer perpetrate poetry. The delinquent cried:—

Father, father, pity take
Poetry will I never make.

The old man perceived there was a repetition of the offence in the recantation itself and resumed flogging. The youngster gave another pledge:—

Father, father, spare my back from pain
Nor a line shall I write again.

* * *

Isaak Walton lived to write the "Compleat Angler" (not the complete wangler), and Mr. Parker who is a good sport has given his contradiction in smart style which, infecting me, has caused the following precipitation of verse from my pen:—

With hat in hand I apologize,
Then raise the same for happy cheers
To know Mr. Parker does recognize
That he and I are not Milton's peers;
His is to prose on message rates, on "Hello Girls",
Mine to write beside one with lovely curls.

* * * *

But undoubtedly there is an eruption of poetry in Bombay. More "poetry" comes from (Mrs.) Violet Joachim Alva (M.A., LL.B., Advocate). Here is a sample extract:

FOUNTAIN PEN!

Yesterday at half past ten,
Lost a lovely Fountainpen,
While walking in the corridor
Of the Small Causes second floor.

From another "poet", M. Dadgich, LL.B.:

"Dear cigarette, ornament of human lips,
A source of novel inspiration providing tips . . . . ."

* * *

Dr. Johnson, once tired of the wooden versification of a certain contemporary of his, mimicked him giving a sample of his enemy's performance:—

I put my hat on my head
And walked up to the Strand
There, O, I met another dud
Whose hat was in his hand.

* * * *

A draft Bill to amend the Cotton Ginning and Pressing Factories Act, 1925, is published in the *Bombay Government Gazette* of August 31, the Bill provides for the establishment of rate-fixing committees in local areas and for punishment with fine extending to Rs. 500 for charging rates for ginning and pressing cotton in excess of those fixed by the rate-fixing committee, which, according to the draft Bill, will consist of the Collector, two representatives each of the cotton growers and factory owners, a non-official expert.

* * * * *

India, Bombay in particular, is threatened with an oil and copra famine in the near future, due to the deal that has been carried out by the British, according to news from the Commerce Department, New Delhi. The British Government has purchased the whole output of copra from Ceylon and only a small share will be reserved for India which is almost wholly dependent on Ceylon for its supplies. The situation is so menacing that the oil mills in Bombay are threatened with starvation. There are eight to ten oil mills in Bombay and they have stocks for only about a week. If no copra is forthcoming, they will have to close down and their labour will be thrown on the street. This is leaving out of account the soap industry and the many bye-products industries which are threatened with paralysis if they cannot get supplies of the essential commodity necessary to their production. Without oil in sufficient quantities, these industries will be paralysed. Meanwhile, Ceylon draws lavishly on India for the supply of her own requirements and India is generously helping her despite the ingratitude displayed in the churlish attitude of the Ceylonese towards India.

* * * *

There is scarcity of milk in the island and the Ceylon Government is so hard put to it to convert supplies for essential requirements that the manufacture of ice-cream for domestic use has been prohibited. Condensed and powdered milk have also been placed under control. To help the Ceylon Government out of its troubles a demand has been made on India for one thousand milch cows, which this country can ill-afford to spare. Thus Ceylon enjoys the full advantage of India's generous supplies of rice, wheat, cows and coolies; and, at the same time, India is to be deprived of her quota of supplies of copra and coconut oil, so essential for a host of Indian industries.

This deal with the U.K. Government has been carried out by the Ceylon Government without particular reference apparently to the Indian Government, whose share has been settled by outside authority—perhaps to suit the needs of the United Kingdom Commercial Corporation which must have its greedy finger in this pie. Whatever that may be, it seems that little concern has been shown for India in carrying out this transaction; and, as already stated, Bombay oil mills and the industries that rely on them for the supply of their essential requirements are left in the lurch.

* * * * *

Pressmen are talking vigorously about the duty to suspend. The stockbrokers here are on holiday but the great question for pressmen cannot be removed by the projected Congress. The newspaper is a daily need and production is a big business. It cannot be forced out, as and when desired, because the editors of 50 papers have strong views on press restrictions. The Standing Committee's action has drawn fire but the ultras have been beaten on their own ground by Mr. K. Srinivasan who has told the country that the press is not above standing up for its rights at any time. There has been no more talk about pre-censorship and leader-writers are not deterred from saying things about Col. Amery. There is not much moderation left and the *C. & M. Gazette* has been quite severe on Winnie last week to draw praise from the *Chronicle's* subs here. There is something as encouraging now as Sir C. H. Sitalvad's criticism of the Premier's statement last week and his cry for transfer of power.

Sir Chimanlal is coming out of his shell. Not trouble with the Byculla Club but the Commonwealth angers the Liberal in him and he has anticipated the Sapru-Jayakar effort this time.

Admiral Fitzherbert came down to see the Dock and the Navy. Both are expanding and changing too. Every month a new ship is added to the R. I. N. and recruiting is good. But pay has gone up and the training facilities are getting better. Local pressmen covering the visit have said enough and to spare about the Admiral's visit. The dockyard is busy and the troubles of April are clearly forgotten. The workers' union is receiving attention as the men are said to be doing good work. The Admiral is in distant

(*Continued on page* 489)

Resume of Commodity Markets

THE outstanding features of the week in the commodity markets are, of course, the decision of the British Ministry of Food in regard to the complete purchase of the exportable surplus of tea from India and Ceylon and the decision of the Reserve Bank to suspend sales of silver with a resultant improvement in values. The jute and jute manufactures market have continued steady. The problem with the jute market is still the difficulty of getting adequate transport facilities. The Bombay markets remain closed and no business has been reported for several weeks in succession.

There seems to be general satisfaction with the decisions taken at the last Price Control Conference and also at the meeting of non-official interests a few days back. With the stupendous task of reorganisation and redistribution, nothing can be definitely said before the machinery is in operation and some tangible results have been achieved. The record of the Government in this regard has not been such as to encourage large hopes. But it is expected that with the new Commerce Member at the head of affairs and a somewhat realistic approach to the problems involved, it would be possible to find a better solution and allay to a great extent at least the difficulties of the poorer classes.

Jute

Efforts are being made to expedite as far as possible exports of jute from the mofussil centres to Calcutta and the jute mills in Bengal and it is hoped that with the more effective use of transport space a larger proportion of the crop will be moved this year. As pointed out last week, however, shipments for near positions will continue to fetch substantial premiums. The Indian Central Jute Committee is obviously perturbed over the decline in exports of the raw material and the manufactured goods. Efforts are being made to induce Indian consumers to take up in greater quantities. It is expected that investigations will reveal tangible results.

Jute Manufactures

The hessian market has been absolutely uninteresting. The heavy goods section has continued firm with a fairly large amount of business done in B. twills and Liverpool twills. The production figures available for the month of August 1942 show that there has been a decline in the production of hessian and canvas for civil consumption from 12.07 crores yards to 10.85 crores yards; military production also is lower at 5.11 crores yards against 5.73 crores yards. Sacking production, on the other hand, is higher at 11.1 crores yards against 11 crores yards, on civil account, though on military account there is a reduction from 1.44 crores yards to 1.25 crores yards. Reduction in the total production from 102,694 tons for July to 99,356 tons for August is mainly due to hessian. The figures in this regard are 43,013 tons for August and 46.644 tons for July.

Tea

It was announced early this week that the British Ministry of Food will purchase the whole export surplus of tea from India and Ceylon for the 1942-43 season. There is to be an increase in the price by 2½d. for India and 4d., for Ceylon per lb. over basic averages. This new agreement by the British Ministry of Food with Indian producers is due to the representations made by Empire countries, which are dependent on Indian tea after the loss of the N.E.I., that their requirements also should be included in the arrangement made by the British Ministry of Food with the Indian and Ceylon producers. Their efforts for getting supplies through private channels seemed to be costly. There was some opposition on the part of interests concerned to the pooling arrangements by the British Ministry of Food but it is expected that the increase in the basic price will to a certain extent make up the loss in profit on private exports. As a result of the arrangements, it is reported that the British Ministry of Food have agreed to forgo a certain proportion of its requirements though it is pointed out that the reduced takings of tea from India and Ceylon will not in any way go against the tea rationing in the U.K. so long as supplies continue to be available.

Private exports of tea from India have been banned by the Government of India and it has been decided to regulate exports of tea from this country to ensure equitable distribution of tea to the consuming countries who rely on Indian tea. All private exports of tea have been prohibited from September 15 subject to the relaxation that exports against licenses granted already by the Export Trade Controllers before September 15 will be allowed up to September 30 after which date there will be complete prohibition of private exports even in respect of the unexpired rights. The question of the disposal of any private consignments which are purchased by export rights for shipment but are held up due to the imposition of export prohibition, referred to above, is receiving the consideration of the Government of India.

Silver

There is considerable resentment against the policy of the Reserve Bank to suspend sales of silver until further notice. It is pointed out that this decision has been taken to discourage speculative selling and relieve the pressure on the Royal Mint as it was found that it was not possible to effect deliveries on the same date. Another reason for the decision is reported to be the anxiety of the authorities to discourage bear raids if speculators happen to accumulate any large quantities of silver. Many appreciate fully the anxiety of the Reserve Bank to stabilise Indian prices in spite of the fact that they are quoting now at highly artificial levels. But under circumstances when the Reserve Bank ceases to be a prominent seller in the market bull activity will be encouraged and even a temporary rise in prices will prove to be harmful. The Reserve Bank is confident of being able to check any undue rise in values but what is needed is the discouragement of any buying for hoarding purposes on the part of the ryot at the present levels. For, if there is to be any depreciation in values for the white metal he would lose a substantial portion of his savings. A clear statement of policy in this regard should be made and the people made to understand that there is no meaning in accumulating stocks of silver at rising prices which will eventually tumble down. The Federation of Indian Chambers is reported to have taken the question up with the Government of India.

(*Continued from page* 485)

breeds. There are still areas which supply India with horses. The Kathiawar breed is widely distributed, and Provinces like Madras, where stallions are few and breeds hardly worth any notice, depend on imported horseflesh. The Central India States, particularly, Gwalior and Indore, encourage horse-breeding. In Indore the Durbar maintains Kathiawar stallions and brood mares have been distributed in Gwalior. The services of thoroughbred stallions are made available in Gwalior in order to encourage blood stock. It is strange that Mr. Shahi does not mention the Kunigal stud of Mysore which has done much for the countrybred horse. Like Renala its main interest lies in racing and is perhaps ignored on that account. Horse-breeding as suggested is peculiar to the South Punjab where the Unmol or priceless breed obtains. Both bays and greys are common and the animals run mostly to 15 hands. The breed is virtually extinct now and few pure strains are known. The Kathiawar and Marwar breeds are more persistent. The Princes have nursed the breeds and in Palitana the stud dating back to 1860. owes much to the Thakur Saheb's interest. Arab blood has been noticed in Kathiawar and the hardy, enduring animal called Kathiawar pony has made itself famous at Gymkhana races in Rajkot and even distant Meerut. The Nawab of Junagadh also maintains a stud. Another Prince interested in horse-breeding is the Maharaja of Jodhpur. The Marwar breed is old and famous, but admixture with Arab and Turcoman strains is common. In Marwar the veterinary hospitals keep stallions, and the local breed has improved as a result. The Waziri and Baluchis breeds are not confined to the two Provinces. Best known is the Hirzai breed which is derived from Arab stock. The Kulu valley is reputed for the Spiti pony which is used as a packhorse on Himalayan trails. Farmers keep a few mares and sell them to traders from Ladakh and Kashmir. The animal is very hardy and accustomed to cold heights. Small in appearance, it seldom exceeds 13½ hands and it is breeding well, as a good mare drops a dozen or more foals in her life. Breaking follows gelding in this case and the limitation of stallions perhaps accounts for the efficiency of breeding. Another mountain breed is the Bhutia pony. The Tat is a stocky animal used for hard work from the Punjab to Bengal: it is certainly favoured for good reasons. The Manipuri breed is associated with polo and racing in Assam. It is not holding its own and deserves attention. Mr. Shahi's account dwells on the lack of interest among Indian aristocrats, but one suspects that the smaller size of the average Indian horse militates against its adoption for hacking. Animals of 13 hands can hardly suit either the soldier or the rider to hounds, and the interest in the waler will probably survive the lorry-car stage in the Police and the Army. Suggestions that India should start breeding seriously as a rival to Argentina or Eire have been advanced and it is urged that present lines of improvement cannot be restricted to racing stock. Horse-breeding will at all times be a standby for the farmer, and in this period of petrol rationing, there is still likely to be a revival in draught ponies. The hardier the animal the better it will be, and concentration on the mere sprinter is therefore deprecated.

Australia's Constitution

The Australian war effort continues to extend, in scope and intensity. The Austral newsletter of this month reports the coming of U.S. reinforcements, equal to the number of Australians serving abroad, and also the despatch of airmen to India. Mr. Drakeford stated that Australians in India were Empire Air trainees who had been posted to Britain and attached to the R.A.F. squadrons. Of more interest is the adoption of priorities for inter-State railway travel in order to conserve space. Members of the fighting forces in uniform travelling on official duty get No. 1 priority without restriction, but all civilian travel is subject to a priority permit to travel which is issued by priority officers at the capital cities. Clothes mean coupons in Australia which introduced in July new rules for simplified clothing. Rationing covers the continent and available supplies determine the value of coupons. An overcoat means 30 points and shoes require 12. The individual can get only 112 coupons in the year. Even babies' clothes need coupons to be presented by the parent. Producer-gas is gaining greater vogue, and the output of substitute fuels like methylated spirit and shale oil is increasing. Mr. Beasley claimed that following the policy of enforcement of the use of producer-gas on essential service vehicles about 36,000 vehicles had been fitted with producer-gas equipment. He added that about 3,000 new units are being added each month.

More striking is the erection of a huge aerodrome costing £3 millions for the Allied S.-W. Command. There will be workshops for the largest aircraft assembly and repair depots in Australia. The job was rushed through only in four months. The drome is almost a town in itself, and Americans who were associated in the plan were astounded by the speed at which the work was done. Similar progress is reported by the town of Whyalla in South Australia. The B.H.P.'s work of three years has converted a town of 1,400 to one of 7,000. Blast furnaces, shipyards and munitions annexes have made all the difference to a growing industrial area. It is bound to expand since 40,000 men have been trained as skilled technicians under the Commonwealth scheme. More than 2,500 men are being trained each month. Plans are in hand to raise the number of trainees and 60 special courses are offered at some 50 technical colleges and schools. Scientific research is helping to make the utmost use of Australia's resources. Industrial organisations make grants to the Research Council which is helping the war effort by finding substitutes. An extension of munitions output through the use of garages is not peculiar to Britain. Victoria reports that more than 3,000 men are at work in 500 garages making parts of gun-carriers and parts of bombers, etc. The work turned out is of a high standard and the plan is being operated by the Automobile Chamber of Commerce. Flax-scutching machines are to be produced in garage workshops showing that the larger flax crop is encouraging the local machinery-maker. Canning factories in West Australia and Queensland in order to avert the threat of food shortage are busier. Cattle on the hoof have been ordered south by the Supply Minister who said that both crop and stock production were being adjusted to immediate needs. Australia's interest is synthetic rubber springs from a desire to get all essential supplies at home. Planting of hevea in Northern Queensland has possibilities. A proposal to secure seed for the purpose is to be examined. The Russian dandelion as a source of rubber is also attracting attention. The plant is to be imported but there is a greater chance of the Mexican guayule taking its place. Conservation, synthetics and cognate problems were discussed at a recent conference. By the issue of new regulations 53,000 men will be put out of old civilian jobs into new war jobs. The manpower organisation is taking 53,000 men out by the end of December. Part of this diversion of employment will be the army of land girls. The drive started in Sydney and the Government approves of farm labour of certain kinds for women. Stimulated by the example of Britain, referred to as staggering by Dr. H. V. Evatt. Australia is making a bigger contribution than ever.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, Sept. 17.

Mill production of all sorts during August amounted to the surprisingly high total of 99,356 tons, 81,613 tons being on commercial account and 17,743 on Government account. That is to say the proportion on Government account dropped to just under 18 per cent as compared with 19 per cent in July and 21 per cent in June. The heavy level of production is accounted for by further switching of looms from Hessian to Sacking owing to the keen demand for the latter. Hessian production was 120 lakhs yards less than in the previous month while Sacking actually showed an increase of 10 lakhs yards. Canvas production continues to increase, amounting last month on commercial account to over 11 lakhs yards apart from production on Government account. Revised Stock figures now show at the end of August an increase, in round figures, of 21,500 tons, consisting of eight crores yards of Hessians and 59½ lakhs yards of Sackings. With the production figures of over 99,000 tons now before us, it is evident that despatches of goods from Mills during the month amounted to almost 78,000 tons, by no means an unsatisfactory total of goods disposed of, though considerably behind the high total of 120,000 tons achieved in the previous month.

Mill production in July and August, amounting to 202,000 tons, represents a consumption of jute in round figures of 11½ lakhs of bales. Total arrivals of jute into Calcutta during these two months amounted only to 7½ lakhs of bales. Say that Mills secured 90 per cent of these arrivals, that is 6,75,000 bales. Their consumption must have exceeded this quantity by 4,75,000 bales. Consequently the stocks of jute amounting to 21,12,000 bales which they carried into this season at 30th June, were reduced by the end of August to some 16,40,000 bales, an uncomfortably low figure. Jute arrivals which, in the second half of August, showed some sign of catching up with last year's figures, are again falling behind, the estimate for the first half of September being 3,04,000 bales against 3,29,000 bales in the same period last year. Total arrivals from the beginning of the season till mid-September are 10,31,000 bales against 13,01,000 for the same period last year.

With Mill requirements alone in the neighbourhood of 6 lakhs of bales per month, it must be obvious that their stock position must be one of much anxiety. And the question of shipping space from up-country shows no improvement. In fact everything points to its being worse before it is better. What steps the Regional Priorities Committee, which has taken, or has the power to take, complete control of all transport facilities in the Province, propose to adopt is not yet known. It is rumoured that instructions have been issued that all rail despatches to the Bazar should be stopped and shipments confined to Agreement Mills. This might relieve the situation from one point of view, but on the other hand it would place Pucca Balers, who are heavily committed with sales to Mills, in difficulties, for it is from the Bazar that they draw the bulk of their loose jute requirements. There has certainly been a much better supply of wagons available of late, but this means of transport serves mainly the softer districts of jute production, a type which is not generally popular with Mills, and where they place few if any contracts. Nevertheless, with the situation as it is, Mills may yet be glad enough to get jute from these softer districts if the wagon supply continues. After all this is exactly the type of jute which they get when they buy white jute in pucca bales.

American Stock and Consumption figures for August show no improvement over the previous month. Consumption is unchanged at the very low level of 16 million yards. In August 1941 it was 60 million yards. Stocks show still further shrinkage to a total of 107 million yards, of which 69 million was on spot and 38 million afloat. At the same time last year visible stocks were 198 million yards and that was considered a low figure. Stocks have steadily declined since February of this year when they stood at 280 million yards.

It is surprising and not a little disquieting that the demand for Hessians for the United States hangs fire so badly. It might reasonably have been expected that the more active tempo in production in almost all branches of industry, would have been reflected in a keener demand for burlaps. Unfortunately for Calcutta the opposite seems to be happening, and while every endeavour is being made to conserve second hand hessian bags, the switch for excess requirements seems to be most markedly in the direction of cotton and paper containers. Many shippers are reported to be using multi-wall paper bags for the first time and the demand for such bags this year is expected to increase by one-third. Prices are controlled by ceiling rates which may render them an attractive proposition as compared with the almost unprocurable burlap bags. Again, the War Production Board, earlier this year, directed the Cotton industry to convert a large percentage, in some cases up to 100 per cent, of its looms to the production of Osnaburgs and Bag Sheetings. The aim was nearly to treble the output of Osnaburgs and to double the output of Sheetings in order to provide a sufficiency for agricultural as well as for Military requirements in place of burlap bags. And all this in spite of the fact that the U.S.A. is apparently facing a shortage of raw cotton. The production of cotton in the 1941-42 season was returned at nearly two million bales less than the previous season, whereas consumption was expected to exceed production by nearly one million bales. There is still, it would appear, a margin of some five million bales held by the Government, but under the existing law this cannot be disposed of at a higher rate than one and a half million bales per annum, and the quota for this year is already disposed of. Doubtless if it were considered desirable, there would be little hesitation about amending the law in present circumstances, but it would almost seem that the authorities in the States were working on the theory that Hessians for the bag trade were not an actual necessity so long as alternative fabrics could be produced within the country, and that their exclusion meant saving of freight space which might be devoted to more essential imports. The fact that freight is being made available for the shipment of raw jute to the U.S.A. from Calcutta may lend colour to this view. Or perhaps the U.S.A. are waiting for proposals that Hessians should be shipped to them on a "Lease and Lend" basis!

The issue of the Final Jute Forecast figures has commenced. Outside of Bengal proper, decreases are registered, in Assam by as much as 30 per cent. All Bengal districts however show substantial increases, ranging up to over 90 per cent in Dacca, Bogra and Dinajpur, 110 per cent in Tipperah, and as much as 188 per cent in Backerganj. In the last mentioned district, however, much of the area sown last year never came to maturity owing to flood damage.

In the Export Jute market there has been enquiry both for Dundee and for America. Demand for Daisee and Tossa grades continues keen and prices have again registered a sharp advance. Dundee Daisee 2/3 have sold up to Rs. 60 for 15th November and November shipment. Dundee Tossa 4s have sold at Rs. 58. Outport Daisee is reported at Rs. 46 for assortment and at Rs. 38 for 4s. Mills have also taken some interest and have paid up to Rs. 53 and Rs. 54 for New crop September Firsts, Rs. 43 for September new Lightnings and Rs. 36 and Rs. 37 for Hearts for 15th October. Old Crop Firsts and Lightnings sold at Rs. 52 and Rs. 42 respectively for ready.

In Loose Jute there has been a fair turnover in European packing at Rs. 9 to Rs. 9-4 for Mids and at Rs. 6 to Rs. 6-8 for Bottoms for October shipment. Anything for earlier shipment commands a premium and there has been a fairly keen demand for ready Bills of Lading and quick shipment lots, at prices up to Rs. 6-8 for Indian District Bots. Tossa is in keen request by Balers who have paid up to Rs. 12 and Rs. 9 for ready Mids and Bots and Rs. 10 and Rs. 7 for 15th October shipment.

In the Fabrics section, hessians continue neglected and few transactions have been reported though prices remain nominally steady. Heavy Goods continue to rule firm with few sellers in evidence for the earlier positions. "B" Twills have sold up to Rs. 43-8 for ready, Rs. 42 to Rs. 43 Septr., Rs. 41-8 Octr./Decr. and Rs. 40 Jan./Mar. Liverpool Twills fetched Rs. 50 and Rs. 50-8 Septr., Rs. 50 15th Octr., Rs. 49 to Rs. 49-8 Octr., Rs. 48-8 Octr./Decr., Rs. 48 Novr., Rs. 47 Decr. and Rs. 46 Jan./March. Cornsacks have been recorded at Rs. 43-8 Septr. and at Rs. 41 Jan./March, while Heavy Cees sold at Rs. 39 ready and at Rs. 38-4 forward.

JUTE

Calcutta, Sept. 17.

THE raw jute market has continued steady with sellers reserved and mill demand confined to early positions. The difficulty is, however, in getting adequate transport facilities and it appears that buyers will be obliged to concede the demand of sellers further if the present conditions in the market continue to be in evidence for any length of time. There has been an improvement in rates for September-October shipments in all sections. Mills are reported to have been good buyers of picked qualities and Tossa varieties at varying rates.

The first two instalments of the final forecast figures for the jute crop for 1942-43 season, for twelve districts, have been published. It was expected that there will be an increase both in the area and yield of the crop. In Tippera especially the conditions for the growth of the crop seem to be very favourable. The area under the crop in the current season is estimated to be 226,695 acres against 127,260 acres for the last season while the yield is very much higher at 793,420 bales against 381,780 bales for the previous season. In Bihar there is a slight reduction in the area under the crop and yield as well. Figures in respect of the several districts are given below.

In the loose jute section sellers have continued reserved with mills as keen buyers. Some business in picked Indian Jat Middles and Bottoms were reported done as high as Rs. 9-4 per maund for September-October shipments. Supervised District Bottoms and Cross Bottoms were done at Rs. 5-12 and Rs. 3-12 per maund.

In the Pucca bales section firm conditions continue to prevail with further business in new crop. Dundee Daisee 2/3 new crop has improved further from Rs. 56 per bale to Rs. 60 per bale for October|15th November shipment. New crop Firsts and Lightnings were done at Rs. 55 and Rs. 47 per bale and old crop Lightnings Re. 1 per bale lower. It will be clear that there is a good demand for the finer varieties of jute and there has been a substantial increase in prices in recent weeks. New crop Dundee Daisee 2/3 alone has improved from Rs. 52 per bale to Rs. 60 per bale at the moment.

Final Jute Forecast

Estimated & Licensed Area under Jute in Acres

	Last Year	This year
Bihar	2,42,500†	2,32,900†

JUTE MANUFACTURES

Calcutta, Sept. 17.

The jute manufactures market, on the other hand, has been completely uninteresting though the heavy goods section has continued firm and a further slight increase in prices is reported. There is virtually no demand for hessian and the difficulty in this regard will be evident from the fact that the Indian Central Jute Committee has found it necessary to explore the possibilities of hessian consumption within the country. If hessian prices are a shade higher on balance it is because of the strength of the jute market and the heavy goods section. 9 porters ready are quoting Rs. 14, October/December Rs. 14-4, and January/March Rs. 14-8. 11 porters ready are quoting Rs. 17-14, October/January Rs. 18-2 and January/March Rs. 18-6.

In the heavy goods section there is good demand for near positions but having no surplus production to sell there has been a further firming up in the rates. The strength of the jute market also has been helpful. B. twills for September shipment sold on the basis of Rs. 42-10. Liverpool twills are quoting Rs. 50 and Cornsacks Rs. 43-8. The rise is again pronounced in the case of Liverpool twills and B. twills.

Production figures for the month of August now available show that total production on both civil and military account was 99,360 tons against 102,694 tons for July 1942. It was generally expected that with labour troubles during the last month production of the jute mills under the membership of the Association would be only 95,000 tons. With the large increase in local stocks, however, it could not have been anticipated that there would be any big reduction though the increase in the stocks as much as 20,000 tons was mostly due to the difficulty in getting transport facilities and the dislocation in railway facilities. The figures are given below:

Total Reported Production of Manufactured Goods*

(By the mills in the membership of the Association and also by Gagalbhai Mills).

Description.	Quantity.
1. TWIST AND YARN—	
(a) for sale ..	3,010 tons
(b) all other, including that used in sewing bags ..	1,612 tons
2. CANVAS—	580 tons
	11,18,241 yards
3. GUNNY BAG (Tonnages exclude sewing twist) ..	
(a) Hessian ..	2,295 tons
	84,10,463 yards
	68,33,638 number
(b) Sacking ..	42,587 tons
	10,12,78,313 yards
	4,24,67,152 number
4. GUNNY CLOTH—	27,633 tons
(a) Hessian ..	9,89,79,072 yards
(b) Sacking ..	3,733 tons
	97,14,774 yards
5. OTHER MANUFACTURES (including ropes) ..	163 tons
6. TOTAL PRODUCTION (above figures combined)—	
(i) All kinds ..	81,613 tons
(ii) Hessian (both as bags & cloth)	10,73,89,535 yards
(iii) Sacking (both as bags & cloth)	11,09,93,087 yards
(iv) Canvas (both as bags & cloth)	11,18,241 yards

*Exclusive of all Government orders.

Total Reported Production of Goods Manufactured on Government Account

(By the Mills in the membership of the Association and also by Gagalbhai Mills).

Grand Total (Tons)		99,356

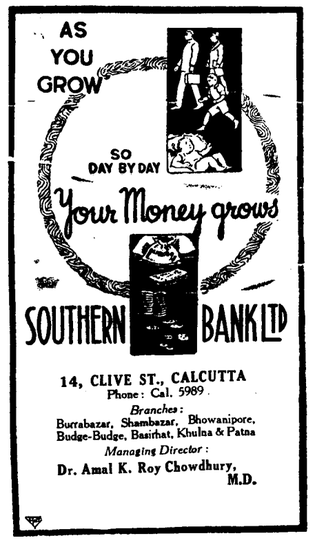
GOLD

Calcutta, Sept. 17.

In sympathy with the silver market the gold market has been firm during the week and the Bombay market continues to be closed. No business has been reported. Gold ready was quoting Rs. 57-10. Sovereigns also are higher at Rs. 42-4 against Rs. 41-12 at the end of last week. There is no change in the London rate which is still at 168s.

SILVER

Calcutta, Sept. 17.



The reports regarding the suspension of sales by the Reserve Bank until further notice has, no doubt, been responsible for the sharp rise in prices during the past few days. A quotation as high as Rs. 91 was touched and only on profit-taking at the higher levels there was a recession to Rs. 87-4. The close has been steady at Rs. 88. Considerable criticism has been made regarding the policy of the Government of India and it is feared that the bulls will take up the market if there is a change for the worse in the war situation.

There is no change in the rates in the London market and the quotation for both spot and forward remains at 23½d. Small trade demand has been satisfied officially.

PIECEGOODS

Calcutta, Sept. 17.

The Puja season is now in full swing and with the continued disturbances in the internal situation and the difficulty in re-starting full production in the Western Presidency values have, no doubt, been marked further higher. It is feared that in the absence of any large replenishment in stocks before long prices will be pushed further higher. Standard cloth has not been received up to this time and it is feared that if they are not received in time it will not enable the poorer classes to purchase their requirements for the Puja season. With the switching over to the production to a greater degree of the coarser varieties, there has naturally been an appreciation in values for the finer varieties. Given the continuance of existing conditions it may well be that prices for luxury articles will rise to fantastic levels.

Merchant Service

With the advent of war Civil Aviation has been called upon to redouble its efforts in order to meet its many new responsibilities.

British Airways has, in fact become the Merchant Service of the Air, auxiliary to the Royal Air Force in the same way as the Merchant Marine is auxiliary to the Royal Navy.

Our particular responsibility is that of maintaining communications with all parts of the Empire, a service even more vital during war-time than in peace.

Government and war needs must of necessity take priority, but despite this, limited accommodation is available for private travel. You will still find the same reliability and courtesy to which you were accustomed in peace time with

BRITISH AIRWAYS

Stock Markets to-day and to-morrow

MYSORE SUGAR MAINTAINS DIVIDEND

After remaining quietly steady for the most part of the week the Calcutta Stock Exchange presented a lively appearance on Thursday this week. Business has been on a considerably larger scale and there are good buyers for the popular shares. The strength of the markets, in spite of the discouraging news from Stalingrad, would seem rather surprising. But it is a long time now since markets ceased to be jittery over adverse developments in the war situation. Burn & Co. have good buyers and the quotation has been marked up to Rs. 366. It is expected that a higher dividend will be paid for the year ended April, 1942.

* * * *

The feature of the week is the announcement of the terms of the provincial loans. The terms of the loans have not come as a surprise to the market.

The loans sought to be raised are: Rs. 3.5 crores for Bombay; Rs. 2.5 crores for the Punjab; Rs. 1.25 crores for Madras; and Rs. 50 lakhs for the Central Provinces and Berar. All the loans carry interest at 3 per cent per annum and are repayable at par in 1955.

The issue price in respect of the Bombay loan is Rs. 98-8; Madras Rs. 97-8 and the Punjab and the C. P. and Berar Rs. 97.

The higher issue price for Bombay is due to the fact that the Bombay Government has come into the money market for the first time since 1935. The success of the loans are assured for the market seems to have developed a liking for the new issues.

The gilt-edged market is very firm and 3½ per cent paper is quoting at the highest level for some time. Terminable loans also are firmer.

* * * * *

It has been announced during the week that the British Ministry of Food has decided to purchase the entire exportable surplus of the Indian and Ceylon tea crops. Private exports of tea after September 15, 1942 have been prohibited. This decision of the British Ministry of Food is the result of negotiations with Indian and Ceylon producers. India is getting 2½d. per lb. and Ceylon 4d. per lb. above the basic average prices.

It will be remembered that some time back there was a large demand for tea for export and the rise in prices on account of shortage of supplies was out of all proportion to the basic average prices. The purchasing countries approached the British Ministry of Food with a request that their quota should be included in the Ministry's contracts. The new arrangement deprives tea producers of a profitable source of income but the increase over the basic price would, it is expected, compensate to a certain extent the loss of income from this source.

* * * *

Periakaramalai Tea and Produce Company, Limited, would have been able to report a higher level of earnings for the year ended March, 1942. The net profit, after providing for depreciation but before taxation, for 1941-42 is Rs. 3,13,821 against Rs. 3,05,981 for 1940-41. The provision for taxation is Rs. 58,300 (Rs. 60,000). The final dividend of 10 per cent with the *interim* dividend of 10 per cent already paid makes 20 per cent for the whole year against 17½ per cent for 1940-41.

* * * *

Thanks to the larger quantity of cane crushed and the higher prices available on sales of sugar, the *Mysore Sugar Company, Limited*, has been able to report a higher level of earnings for the year ended June, 1942. Contrary to market expectations the directors have again chosen to maintain the dividend and bonus at 20 per cent for the year. Shareholders and investors had greater justification for expecting a larger dividend distribution as the debentures were due for redemption during the year and there was complete provision in the balance-sheet for the purpose.

It appears from the balance-sheet that the debentures have been fully redeemed during the year.

The net profit, before providing for taxation and depreciation, for the year is Rs. 17,24,496 against Rs. 15,29,854 for 1940-41. The amount set aside to depreciation is Rs. 3,83,276 against Rs. 3,70,176 while the provision for taxation is Rs. 3,15,000 against Rs. 2,05,000. Against the transfer to the Dividend Equalisation Fund and Cane Stabilisation Fund of Rs. 2.5 lakhs each, the latter fund gets as much as Rs. 6 lakhs on the present occasion. The amount carried forward is slightly lower at Rs. 73,684 against Rs. 83,319 brought in.

3,32,710 tons of cane were crushed during the year. Almost the entire quantity of sugar produced had been sold during the year.

The distillery at Mandya continued to work steadily and satisfactorily. The question of extending the power alcohol plant is being actively pursued.

The excellent financial position of the company will be evident from the following: The paid up capital is Rs. 21.79 lakhs. The general reserve is as much as Rs. 37.71 lakhs. Dividend Equalisation Fund and Stabilisation Fund were Rs. 10 lakhs as on June 30, 1941. If the latest allocation is included they are as much as Rs. 16 lakhs. Sundry liabilities including dividend amount to Rs. 20,09,963 and are covered many times by liquid assets of Rs. 70.20 lakhs. The dividend amount is only 40 per cent of the profit after providing for taxation and depreciation. Financial purism cannot perhaps be overdone.

* * * * *

The higher level of earnings of the *Britannia Biscuit Company, Limited*, for the half-year ended March, 1942 has not been helpful to shareholders. The directors would have possibly decided on an increase in the distribution to ordinary shareholders but for the need for provision on account of bad debts in Burma.

The net profit for the six months ended March, 1942, is Rs. 4,62,885 against Rs. 3,37,612 for the previous six months. The amount set aside to depreciation is Rs. 76,001 (64,587) while Rs. 50,000 (same) has been placed to Contingency Reserve. The provision for taxation is Rs. 2,72,557 (Rs. 1,78,033). The dividend has been maintained at 2½ per cent and the bonus at 1¼ per cent. The amount carried forward is Rs. 66,803 against Rs. 53,139 brought in. The company's Bombay factory worked to full capacity throughout the half-year but production in Calcutta was restricted during the latter half of the period covered by the accounts on account of the shortage of labour and certain essential ingredients.

* * * * *

There is an increase in the gross earnings of the *Shahdara (Delhi) Saharanpur Light Railway Company, Limited*, for the half-year ended March, 1942. As a result of the higher amounts provided for depreciation, as a result of the arrangement with Government, the share of profits paid to Government is lower. After providing Rs. 30,000 for Excess Profits tax and Rs. 80,000 to Depreciation Fund the dividend is higher at 5 per cent against 4 per cent, less Income-tax. The net profit for the half-year was Rs. 1,69,070 (Rs. 1,36,325).

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Sept. 18.

MARKETS were inclined to be quietly steady on the Calcutta Stock Exchange till Wednesday this week. In yesterday's session, however, there has been a return to activity and a larger volume of business has been put through with a further rise in prices. Greater attention has been paid to Cotton and Sugar shares and quotations are at the highest levels for some time. The giltedged securities section also has remained firm and 3½ per cent Paper is higher at Rs. 94-2. Investment buying has been very satisfactory and the present indications are that there will be a further broadening of interest in the several sections. The general undertone is steady.

With the announcement of the terms of the provincial loans and the support to the market by the Reserve Bank firm conditions have continued to prevail in the giltedged securities section. The rise in the treasury bills rate is not any indication of a tightening in money conditions. Only the anxiety of the public institutions to take advantage of the present offer have resulted in the rise in the rates. 3½ per cent Paper is now quoting around Rs. 94-2. 3 per cent Paper was last recorded at Rs. 80. Among terminable loans, 3 per cent Defence Bonds 1946 were noted at Rs. 102-2, 3 per cent 1949/52 at Rs. 100-2 and 3 per cent 1963/65 at Rs. 94-1. 3½ per cent 1947/50 were Rs. 102-10, 4 per cent 1960/70 Rs. 109-4 and 4½ per cent 1955/60 Rs. 113. Among provincial loans, 3 per cent 1952 issues were higher at Rs. 99-4. A small lot of 5 per cent U. P. 1944 was done at Rs. 104-4.

Among fixed-interest securities, 3 per cent *Calcutta Port Trust* debentures were noted at Rs. 95-12, 3¼ per cent. *Howrah Bridge* debentures Rs. 94. 5½ per cent. *Dalmia Cement* debentures at Rs. 105 and 6 per cent *Associated Hotel* debentures at Rs. 102-12 were among the other transactions recorded.

Preference issues have been in greater request with *Anglo-India* at Rs. 151, *Budge-Budge* at Rs. 148, *Hastings* at Rs. 226 and *Reliance* Rs. 152. *Basanti Cotton* were Rs. 7, *Burn & Co.* 6 per cent preferences Rs. 129 and *Indian Standard Wagon* Rs. 141 ex-dividend. *B. I. C.* Rs. 182 and *Dalmia Cement* Rs. 126.

Bank shares have been steady with *Imperial Bank* fully paids at Rs. 1,515 and *Contributories* at Rs. 367. *Reserve Bank* were Rs. 101.

Cotton shares have been very much in favour in yesterday's session. There are reports that *Bengal-Nagpur Cotton* will be ble to declare a dividend of as much as 10 per cent for the half-year ended June, 1942. The quotation for the shares has improved further to Rs. 25-4. *Bowreah Cotton* have been bought freely and the quotation is now Rs. 441. *Cawnpore Textiles* were Rs. 10-8 and *Elgin Mills* Rs. 36-9. *Kesoram* were Rs. 10-10 and *New Victoria* Rs. 6-8.

Coal shares were firmer with *Amalgamated* at Rs. 26, *Burrakur* at Rs. 13, *Equitable* Rs. 35-12, *New Beerbhoom* Rs. 16-3, *Samla* Rs. 2-9 and *West Jamuria* Rs. 29-10. The rise in the quotation for *Bengal* to Rs. 370 and Central India collieries is significant.

In sympathy with the strength of the other sections a larger number of transactions has been recorded in the Jute section. *Agarpara* were Rs. 19-2, *Anglo-India* Rs. 328 and *India* Rs. 372. *Megna* were Rs. 59-8 and *National* Rs. 21-12. *Reliance* were Rs. 52-12 and *Sree Luchminarain* Rs. 15-4.

In the Engineering section, *Indian Iron* and *Steel Corporation* are not very much higher, the quotations being noted at Rs. 29-12 and Rs. 19 respectively. *Bhartia Electric Steel* were Rs. 15, *Braithwaite* Rs. 8-8 and *Indian Malleable Castings* deferred Rs. 2-8. *Kumardhubi Engineering* were Rs. 5-5 and *National Iron and Steel* Rs. 11-10.

Suguar shares have been in very good demand especially those belonging to the Begg Sutherland group. *Balrampore* were Rs. 13-9 and *Buland* Rs. 30-9. *Carew & Co.* show a significant rise to Rs. 14-8. The

*Excludes the amount of Rs. 35,000 transferred from Dividend Adjustment Account.

(*Annual meeting, 23rd September, 1942 at 11 a.m.*)

Audited accounts for the year ended 31st March, 1942:—

Difficulties in obtaining supply of raw materials, particularly in the first part of the year, resulted in the Works being unable to obtain maximum capacity output in any of the Manufacturing Sections. The difficulties of obtaining adequate supplies of raw materials are not confined to the Works alone, but are common to all Engineering concerns and are the consequence of conditions resultant from the War.

Conditions in the latter part of the year improved but not sufficiently so to compensate for the loss in output of earlier months.

The results are reflected in the attached Accounts when, to enable a reduced Dividend of 12½ per cent to be paid to the Ordinary Shareholders, the Directors have had to transfer Rs. 35,000 to this year's Profit and Loss Account from the Dividend Adjustment Account.

Provided reasonable deliveries of materials can be obtained, the current year's prospects are not unfavourable.

Labour conditions continued satisfactory throughout the year.

	Rs.	A.	P.
Accounts.—After providing for Income-tax and Super-tax and Rs. 58,786-13-6 for Depreciation, the Profit on the year's Trading amounted to	2,17,593	6	10
To which have to be added the following:—			
Balance carried forward from last year ..	27,685	15	4
Amount transferred from Dividend Adjustment Account	35,000	0	0
Resulting in a balance at credit of Profit and Loss Account of	2,80,279	6	2
This sum, the Directors recommend, be disposed of as follows:—			
Payment of interest at 7 per cent per annum, on Preference shares for the year ended 31st March, 1942	1,37,655	0	0
Payment of dividend at 12½ per cent on Ordinary shares for the year ended 31st March, 1942	1,21,828	2	0
To be carried forward to next year	20,796	4	2
Total ..	2,80,279	6	2

Managing Agents.—Messrs. Burn & Co.

(*Half-yearly meeting, 24th September, 1942 at 12-20 p.m.*)

Audited accounts for the half-year ending 30th June, 1942:—

After transferring Rs. 4,456 to Insurance Fund, providing Rs. 25,000 for Depreciation and Rs. 5,25,000 for taxation and making sundry adjustments, the results for the half-year show a profit of Rs. 3,09,789-12-9. After bringing forward the balance from the last account and transferring Rs. 75,000 to Dividend Equalization Reserve, there is a balance at the credit of the Profit and Loss Account of Rs. 3,69,953-5-10. From this the Directors recommend payment as follows:—

Dividends on Preference shares at Rs. 3-8 per share	24,500	0	0
And on Ordinary shares at Rs. 15 per share ..	2,10,000	0	0

thus absorbing Rs. 2,34,500, leaving a balance of Rs. 1,35,453-5-10 to be carried forward.

Managing Agents.—Messrs. Andrew Yule & Co., Ld.

(*Half-yearly meeting, held 18th September, 1942*).

Audited accounts for the half-year ending 31st March, 1942:—

	Rs.	A.	P.
After providing Rs. 76,001-2-0 for depreciation, eliminating old machinery to the value of Rs. 11,832-8-6, writing off bad debts in Burma, Rs. 47,794-9-9, and reserving Rs. 2,72,557-0-0 for Income-tax and Excess Profits Tax, the Profit and Loss Account shows a nett profit for the half-year of ..	1,14,327	7	7
To this must be added the amount brought forward from the last half-year	53,138	14	7
Making a total of	1,67,466	6	2
which it is proposed to deal with as follows:—			
To payment of Dividend on Preference shares	618	0	0
To payment of Dividend at 5 per cent per annum on Ordinary shares	33,363	12	0
To payment of Bonus at 2½ per cent per annum on Ordinary shares	16,681	14	0
To Contingent Reserve	50,000	0	0
To carry forward the balance of	66,802	12	2
Total ..	1,67,466	6	2

The Company's Bombay Factory worked to capacity throughout this half-year but production in Calcutta was restricted during the last three months by shortage of labour and certain essential ingredients.

Prospects for the current half-year are satisfactory and the Company is assured of being able to sell all biscuits that can be produced.

Secretary.—Mr. A. P. Chanda.

*Less income-tax.

(*Half-yearly meeting, held 17th September, 1942*).

Audited accounts for the half-year ended 31st March, 1942:—

1. *Gross Earnings.*—Gross Earnings for the half-year were Rs. 2,49,776 which is Rs. 30,709 more than the earnings of the corresponding period ended 31st March, 1941. There is an increase of Rs. 13,576 or 9.17 per cent under Coaching and Rs. 15,414 or 22.12 per cent under goods. The increase in Coaching is due to 30,916 more passengers travelling, and in Goods to the movement of larger quantities of District Board Ballast.

2. *Working Expenses.*—The Working Expenses for the half-year were Rs. 1,43,523 *plus* Rs. 25,000 set aside to Renewal Reserve, making a total of Rs. 1,68,523 which is Rs. 26,501 more than the figure for the corresponding period ended 31st March, 1941.

3. *Nett Earnings.*—The Nett Earnings for the half-year were Rs. 81,253 an increase on the figure for the corresponding period ended 31st March, 1941, of Rs. 4,208.

5. *Development Reserve Account.*—A sum of Rs. 5,000 has been transferred in these accounts and the balance of the Reserve now stands at Rs. 2,15,000.

6. *Available Balance.*—The balance available for distribution is:—

	Rs.	A.	P.
Net Profit for the half-year	38,131	0	0
Balance brought forward	29,307	0	0
Total ..	62,438	0	0
Less—Transferred to Development Reserve A/c.	5,000	0	0
Total ..	67,438	0	0

7. *Dividend.*—The Directors recommend that the available balance be disposed of as follows:—

	Rs.	A.	P.
Payment of a dividend for the half-year ended 31st March, 1942 at the rate of 4 per cent per annum, less income-tax costing ..	33,217	0	0
Balance to be carried forward	29,221	0	0
Total ..	62,438	0	0

		Total Liquid Assets ..	88,443

CHAPARMUKH-SILGHAT RAILWAY COMPANY, LIMITED

Audited accounts for the half-year ended 31st March, 1942:—

1. *Length of Line.*—The route mileage of line open for traffic at the end of the half-year was 50.81 miles.

Mileage opened for traffic during the half-year	*Nil*
Gauge	3 ft. 3⅜ in.
Date of first opening for traffic	30th March, 1920

2. *Capital Expenditure.*—The total Capital Expenditure to the close of the half-year was Rs. 33,84,401.

3. EARNINGS:—

(*a*) *Gross Earnings.*—The Gross Earnings during the half-year were Rs. 1,25,390. During the corresponding period in 1941 they were Rs. 1,04,454.

The increase was Rs. 20,936 or 20.04 per cent.

4. *Expenditure.*—The Working Expenses are as usual, 50 per cent of the Gross Earnings.

5. *Net earnings.*—The Net Earnings were therefore Rs. 62,695 against Rs. 52,227 in 1941 exclusive of interest on loans.

6. As in previous years the guaranteed profits of the Company are reduced by the amount of Super-tax paid and thus do not permit of payment in full of a dividend at the rate of 3½ per cent per annum.

7. *Dividend and Balance.*—The Directors recommend that the available balance be disposed of as follows:—

	Rs.	A.	P.
Payment of a net dividend of Rs. 38,427 as under:—			
3½ per cent on Share Capital Rs. 31,00,000 for the half-year	54,250	0	0
Less—Company Super-tax .. Rs. 4,521 0 0			
Company Income-tax .. 11,302 0 0	15,823	0	0
Net amount for distribution	38,427	0	0
Balance to be carried forward	17,652	0	0
Total ..	56,079	0	0

The dividend, if sanctioned at the General Meeting, will be paid on receipt of the amount due from the Bengal and Assam Railway.

The dividends paid for the two preceding half-years were at the rate of 3½ per cent per annum, *less tax.*

Managing Agents.—Messrs. Martin & Co.

Synopsis of the balance sheet as at 31st March, 1942:—

Liabilities.	Rs.	*Assets.*	Rs.
Capital paid-up ..	31,00,000	Fixed Assets ..	33,84,401
Current debts ..	3,47,853	Outstandings ..	39,519
Carry forward ..	17,652	Cash balances ..	41,585
Total ..	34,65,505	Total ..	34,65,505
		Total Liquid Assets ..	81,104

FUTWAH-ISLAMPUR LIGHT RAILWAY COMPANY, LIMITED

	Half-year ended.			
	31.3.1942	30.9.1941	31.3.1941	30.9.1940

Dividend per cent ..	1¾*	1¾*	1¾*	1¾*
Carry forward ..	6,441	6,195	6,195	6,175

*Dividend on receipt of amount from guarantor, less income-tax.

†Includes the amount of Rs. 33,537, Rs. 37,562, Rs. 43,333 and Rs. 32,489 received from the guarantor in respect of the half-years ended 31st March, 1942, 30th September, 1941, 31st March, 1941 and 30th September, 1940 respectively.

(*Half-yearly meeting, held 17th September,* 1942).

Audited accounts for the half-year ended 31st March, 1942:—

1. *Gross Earnings.*—Gross Earnings for the half-year were Rs. 60,393 which is Rs. 8,941 more than the earnings of the corresponding period ended 31st March, 1941. There are increases of Rs. 7,960 or 19.85 per cent under Coaching and Rs. 775 or 7.27 per cent under Goods.

2. *Working Expenses.*—The Working Expenses for the half-year were Rs. 53,659 which is Rs. 879 less than the figure for the corresponding period ended 31st March, 1941.

3. *Net Earnings.*—The Net Earnings for the half-year were Rs. 6,734.

4. As in previous half-years the guaranteed profits of the Company are reduced by the amount of Super-tax paid and thus do not permit of payment in full of a dividend at the rate of 3½ per cent per annum.

5. *Dividend and Balance.*—The Directors recommend that the available balance be disposed of as follows:—

	Rs.	A.	P.
Payment of a net dividend of Rs. 14,251 as under:—			
3½ per cent on Share Capital Rs. 11,49,700 for the half-year	20,120	0	0
Less—Company Super-tax .. Rs. 1,677 0 0			
Company Income-tax .. 4,192 0 0	5,869	0	0
Net amount for distribution	14,251	0	0
Balance to be carried forward	6,441	0	0
Total ..	20,692	0	0

The dividend, if sanctioned at the General Meeting, will be paid on receipt of the amount due from the Government of India.

Managing Agents.—Messrs. Martin & Co.

Net profit	32,110	53,154	54,750	44,852
Allocation to funds including depreciation ..	30,000	30,000	25,000	40,000
Dividend amount ..	Nil	Nil	Nil	Nil
Carry forward ..	64,316	70,206	66,052	31,621

*Includes Rs. 19,000, Rs. 19,000, Rs. 19,000 and Rs. 19,000 provisionally due from District Board for the half-year ended 31st March, 1942, 30th September, 1941, 31st March, 1941 and 30th September, 1940 respectively.

(*Half-yearly meeting, held 17th September,* 1942).

Audited accounts for the half-year ended 31st *March,* 1942:—

1. *Gross Earnings.*—Gross Earnings for the half-year were Rs. 2,47,360, which is Rs. 8,299 more than the earnings of the corresponding period ended 31st March, 1941. There are increases of Rs. 14,963, under Coaching, *less* decrease of Rs. 6,361 and Rs. 303 under Goods and Miscellaneous respectively.

2. *Working Expenses.*—The Working Expenses for the half-year were Rs. 1,85,240 *plus* Rs. 30,000 set aside to Renewal Reserve, making a total of Rs. 2,15,240 which is Rs. 3,031 more than the figure for the corresponding period ended 31st March, 1941.

3. *Net Earnings.*—The Net Earnings for the half-year were Rs. 32,120 or Rs. 5,268 more than the corresponding period ended 31st March, 1941.

4. *District Board.*—On the results for the year ended 31st March, 1942, the District Board of 24-Parganas is liable under its guarantee to the Company for a sum of Rs. 38,000 being the maximum liability of the Board in any one year. Credit was taken for Rs. 19,000 of this amount in the accounts for the half-year ended 30th September, 1941, and the balance of Rs. 19,000 is shown in these accounts. The full amount has been suspended pending realisation.

5. *Available Balance.*—The balance available for distribution is:—

	Rs.	A.	P.
Net Profit for the half-year ended 31st March, 1942	32,110	0	0
Balance brought forward	70,206	0	0
Total ..	1,02,316	0	0
Less—Transferred to Suspense	38,000	0	0
Total ..	64,316	0	0

6. *Dividend and Balance.*—The profit for the full year ended 31st March, 1942, amounts to Rs. 36,265 which is entirely represented by the amount due from the District Board for the year. Steps are being taken to enforce the Company's claim against the District Board but, pending realisation of the amount outstanding, the Dirrecotrs regret that the financial position of the Company does not permit of payment of a dividend. They, therefore, recommend that the balance of Rs. 64,316 be carried forward.

Managing Agents.—Messrs. Martin & Co.

Synopsis of the balance sheet as at 31st March, 1942:—

THE MYSORE SUGAR COMPANY, LIMITED

NOTICE is hereby given that the Ninth Ordinary General Meeting of The Mysore Sugar Company, Limited, will be held at the new Office premises of the Company, in Sri Jayachamarajendra Road, Bangalore, on Saturday, the 3rd October, 1942, at 4 p.m., to transact the following business:—

1. **To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th June, 1942.**
2. **To declare a Dividend.**
3. **To elect a Director in place of A. S. Ismail, Esq., who retires by rotation but, being eligible, offers himself for re-election.**
4. **To appoint Auditors and fix their remuneration.**

The Share Transfer Register of the Company will be closed from the 16th September to the 7th October, 1942 (both days inclusive).

By Order of the Board,
H. N. PALLEGAR,
Secretary,

THE MYSORE SUGAR COMPANY, LTD.
Bangalore, 7th September, 1942.

N.B.—The Dividend, when declared, will be made payable at the Bank of Mysore, Ltd., Bangalore, on and after the 10th October, 1942. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 15th September, 1942.

(Continued from page 498)

accounts for the year ended June, 1942, are expected to make a good showing. *Buland* and *Raza* were higher at Rs. 30 and Rs. 31 respectively with scrips in short supply. *Champarun* are not very much changed at Rs. 23-14 but *Samastipore* were higher by more than one point at Rs. 14. *New Savan* were Rs. 15-1 and *Ramnugger Cane and Sugar* Rs. 11-4.

Tea shares have not been very much in favour with *Barduar Tea and Timber* at Rs. 6, *Dimakusi* at Rs. 28, *Hantspara* at Rs. 410, *Hattikhira* at Rs. 20-8 and *Huldibari* at Rs. 25-4.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* are unchanged with the quotations at Re. 1-15 and Rs. 2 respectively. *B.I.C.* are further higher at Rs. 5-7. The jump in the quotation for *British Ceylon Corporation* is rather significant. The boom in the Copra trade is perhaps responsible for the sharp rise in values. *Britannia Biscuit* were Rs. 12, *Dalmia Cement* deferreds Rs. 3-14 and *Indian Cable* Rs. 23-15. Among Paper shares, *Titaghur Paper* were firm. *Bengal Paper* were Rs. 132 and *India Paper Pulp* Rs. 149. *Shree Gopal Paper* are higher at Rs. 19-2. *Star Paper* were Rs. 17-2 and *Orient Paper* Rs. 22-8. *Rohtas Industries* were Rs. 23-12 and *Midnapore Zemindary* Rs. 70-8.

THE BOMBAY PROVINCIAL CO-OPERATIVE BANK LIMITED

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Easy money conditions have again made their influence felt in the treasury bill discount rate. The average rate at which tender bills were accepted on September 1, was annas 6 and pies 6 per cent per annum. There was a sharp rise to annas 7 and pies 9 on September 8, and again to annas 9 and pies 10 on September 15. With respect to these two increases, "Indian Finance" felt bound to take the role of a critic and suggested that the Reserve Bank authorities had no justification in allowing the rise in discount to take place; and that the policy of following the market instead of leading the market was not an expression of a correct and firm treasury bill policy. We, therefore, welcome the reduction in treasury bill rate this week. Applications, too, have shown a gratifying increase. Tenders on September 22, came to Rs. 13.88 crores against Rs. 6 crores on offer. The average rate at which tenders were allotted shows a decline of 8 pies to annas 9 and pies 2 per cent per annum. The offer for next week remains unchanged at Rs. 6 crores.

Last week, we suggested that the Imperial Bank should have taken a substantial portion of treasury bills in the week ended September 11. The Bank return for September 18, shows a further rise of Rs. 4¼ crores in investments to Rs. 100.36 crores. This means, that the Bank has taken further large parcels of treasury bills. As we have repeatedly stressed in these columns, the Imperial Bank is in a position to take larger and larger interest in treasury bills; for, the increase in the bank's deposits seems to be gathering momentum. The latest figure is Rs. 148.43 crores, as compared with Rs. 109.61 crores on January 2. Even with investments standing at over Rs. 100 crores, the cash balances of the Imperial Bank are nearly Rs. 33½ crores.

After several weeks of delayed receipt of Reserve Bank returns, we received the latest statement in time for comment in this week's issue. These returns cover the week ended September 18. The most important features are the considerable rises in foreign balances in the banking department, sterling securities in the issue department, and deposits maintained by the Central Government. These point to further substantial payments by the British Government. In fact, as we pointed out last week, it now looks as though payment in respect of inter-governmental transactions is being made, not in one monthly settlement, but in instalments. It were best, therefore, to study the position as a whole as from August 21.

In the week ended August 21, foreign balances in the banking department stood at Rs. 76.89 crores and sterling securities in the issue department at Rs. 306.79 crores. The sterling assets of the Reserve Bank are, therefore, Rs. 338.68 crores at the end of the third week of August. By September 18, foreign securities in the banking department have risen to Rs. 81.11 crores and sterling securities in the issue department to Rs. 329.79 crores. Total sterling assets are Rs. 410.90 crores. Between August 21, and September 18, there has thus been an increase in sterling assets to the extent of Rs. 27.22 crores. This may be said to represent sterling payments made by the British Government. As much as Rs. 23 crores of these additional sterling resources has been used for expansion of currency by transfer to the issue department. Active note circulation has therefore risen from Rs. 470.77 crores on August 21, to Rs. 490.93 crores on September 18. It is remarkable that, during this period, the Central Government did not find it necessary to have recourse to any large advances from the Reserve Bank on ways and means account. Ways and means advances appear in the Reserve Bank returns as between Rs. 1 crore and Rs. 2 crores during this period. In earlier months, the Government were obliged to borrow substantial sums from the Reserve Bank in the latter half of the month, these loans being liquidated early in the following month. That the Government are able to plan their ways and means adjustments without having to borrow temporarily from the Reserve Bank any large sums, is a measure of the improvement which has taken place in the ways and means budget of the government. This is all the more remarkable as the second defence loan was discontinued a good while ago and the third defence loan, made available recently, did not show much satisfactory progress in the early weeks. The treasury bill market has provided apt and timely support to the Government.

That a floating debt of nearly Rs. 100 crores is contributed by the Indian short loan market at a rate which costs ½ per cent to the treasury, is a sign and symbol of the improvement in the monetary technique and bill market functioning. As at September 18, the deposits of the Central Government with the Reserve Bank were Rs. 12.43 crores. It is quite likely that the next Reserve Bank return may show further sterling payments in respect of war supplies and war commitments. There is, therefore, every reason to believe that the deposits of the Central Government will continue to be at a fairly satisfactory level. In any case, the month-end account of a substantial sterling payment goes to the credit of the Indian Government. The deposits of the member banks with the Reserve Bank have declined from Rs. 69.25 crores on September 4, to Rs. 64.99 crores on September 11 and Rs. 61.76 crores on September 18. Most of this decline is accounted for by the Imperial Bank whose cash balances have fallen from Rs. 37.34 crores on September 4, to Rs. 33.36 crores on September 18.

With reference to the Provincial loans, we are now informed that, while the Bombay loan was subscribed within fifteen minutes, the other three loans did not

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months Government of India Treasury Bills were opened on Tuesday, September 22, 1942. Total amount offered was Rs. 13,88,25,000 (Rupees 13 crores 88 lakhs 25 thousand). Tenders at Rs. 99-13-9 per cent and above were accepted in full and those at Rs. 99-13-6 per cent were allotted approximately 81 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 0-9-2% (Rupees nil annas nine and pies 2 per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, September 29, 1942, in Bombay up to 11 a.m. (Standard time) and up to the close of business on Monday, September 28, 1942, at other centres. Successful tenderers should make payment on Friday, October 2, 1942. Other conditions are as usual.

During the week ended September 18, 1942 Government of India Treasury Bills for Rs. 1,95,50,000 (Rupees 1 crore 95 lakhs 50 thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

Thursday Morning.

THERE being no changes of moment in the financial world, the week abroad must be called barren. If London rates are unchanged, New York rates, too, must be the same though the Canadian dollar or the Cuban peso may be strengthening as before. There are few changes to merit attention. If the Administration aims to issue 15 billions in war bonds in a year, it is realised it will be as part of a scheme for compulsory saving by which every inhabitant of the U.S.A. will be forced to save $120 in a year for war bonds. How the plan will be worked out is not known, but the plan goes with the anti-inflation proposals of the Administration. There are reports of Labour's present opposition to wage-freezing plans. Mr. Phillip Murray is hardly enthusiastic. But congressional leaders have taken the cue from Senator Barkley and Senator Hull is said to be sponsoring a bill to give the President all the powers he wants for harnessing resources to the war. A hint dropped by Mr. McNutt is said to foreshadow industrial conscription in the U.S.A. The pattern of U. S. industry should change, more so as that stern individualist Mr. Henry Ford is producing bombers for the U. S. air corps. The many extensive changes promised in regard to taxation have not been set out, but the inertia of Wall Street is significant. The market leaders are still drooping and it is certain that U. S. Steel will never touch the peak touched when bellhops were playing the market. The Coolidge era was one of peace—the Third Term sees the U.S.A. at war with many countries, though not Finland. The U.S.A. knows enough about German war effort to realise that full production alone can bring victory. Missions to Allied countries like Brazil have only one purpose and the interest in Brazil's resources (described for India's benefit by Mr. Norman Crump at length) is reflected by the grant of priority of tonnage. This has been done to ensure adequate coal supplies for Brazil's industries. Brazil is expected to ship more manganese, iron ore, rubber and other commodities. After the U.S.A. entered the war she made agreements for taking more Brazilian supplies. Now that Brazil is at war, the republic is expected to aid the Allies with her varied resources. The republic has gone into action since she broke off relations with Japan, and nothing has occurred to show that the recovery in Brazilian issues reported after August will not continue.

The London money market remains the same-stolid if sound. A slight rise in the Treasury Bill rate is attributed to the Banks' reduced keenness for bills last week. The total applications for £75 million last Friday came to £145 million. The market quota was lower than in the previous week. The Treasury's borrowing programme covers the taking up of deposits for six months and £35 million has been asked for again. The volume and regularity of applications are not threatened in the least by external developments, and finance may be said to move in a groove of its own.

The exchange market is fully amenable to control and a variety of payments agreements protect sterling. All foreign currencies are firm and an expansion in Iran's note issue (reported recently) will secure to Britain the advantages of a stable exchange, for more rials can be had in return for sterling.

All such things are unimportant as compared with the firmness of the London stock exchange. The confidence of investors in the fourth year of war is sustained by the impressive firmness of giltedged and the advance in Home Industrials. A good feature has been the marking up of the leading oil issues in the last few days. Trinidad issues naturally have risen and many will not overlook the rise in Royal Dutch. The only share that, seems heavy in a still rising market, is Mexican Eagle, though Mexican Eagle with its interests in Canadian Eagle and its tanker fleet. cannot be called more speculative than in the past. The most brilliant form has been shown by Home Industrials. Courtaulds' shares are double the paid-up values and British Celanese is rising. Tobacco issues have hardened perhaps on reports of the cigarette shortage, and the hardening in Distillers units points to the hope of an expanding trade with the U.S.A. Successes in Madagascar do not account for it. If Brazilian Traction and Fairey Aviation were prominent last week, it was due to widely different reasons, though Courtaulds is said to have firmed up on the Chairman's statement. Giltedged were a shade off at the close of last week, but quotations this week suggest that the whole list is quite steady. The most important thing to remember is that full war production has diverted market interest to Home Industrials. If tins and rubbers ease now and again, there is no lack of support for motor and aircraft issues. Cement shares appear to be rising with the general trend, and the London trend is clearly reflected on India where industrials hold the stage at present.

DIRECTORATE GENERAL OF MUNITIONS PRODUCTION DEPARTMENT OF SUPPLY, CALCUTTA.

GRINDING WHEELS AND SEGMENTS AND ABRASIVES.

His Majesty's Government in the United Kingdom have informed the Government of India that they are allotting quotas for the quantities of the above classes of "consumers' goods" which they are prepared to allow to be exported to India. The Government of India have, in consultation with His Majesty's Government, arranged for the distribution of these quotas to importers in India through the Advisory Panel of Importers from the United Kingdom. This Panel was set up in February, 1942, for the purpose of advising the Government of India as to the quantities of stockholders' engineering goods of various descriptions which it is necessary should be imported from the United Kingdom to meet the essential needs of Government Departments, public utility services, war industries and civil requirements essential to the war effort.

The specification of the two classes of goods now incorporated in the Panel Scheme is given below. It will be necessary for all importers for stock of these classes of goods to submit, in duplicate, to the Director General, Munitions Production, Licensing Section, 6, Esplanade East, Calcutta, a questionnaire in form W.S.B.—Import/Pan, copies of which will be supplied on application. This questionnaire must be completed and returned, in duplicate, within three weeks of the date of appearance of this notice in the Press.

Class 8—Grinding Wheels and Segments.

(a) *Grinding Wheels Comprising—*
- (i) Straight sided.
- (ii) Taper sided.
- (iii) Cylindrical Shaped.
- (iv) Straight Cup Shaped.
- (v) Taper Cup Shaped.
- (vi) Saucer shaped.
- (vii) Dish shaped.

(b) *Grinding Segments Used on the Following Machines—*
- (i) Snow
- (ii) Tasker
- (iii) Hulse
- (iv) Churchill
- (v) Rowland
- (vi) Blanchard
- (vii) Lumsden
- (viii) Lund
- (ix) Pratt & Whitney
- (x) Naxas Union

Class 9—Abrasives.

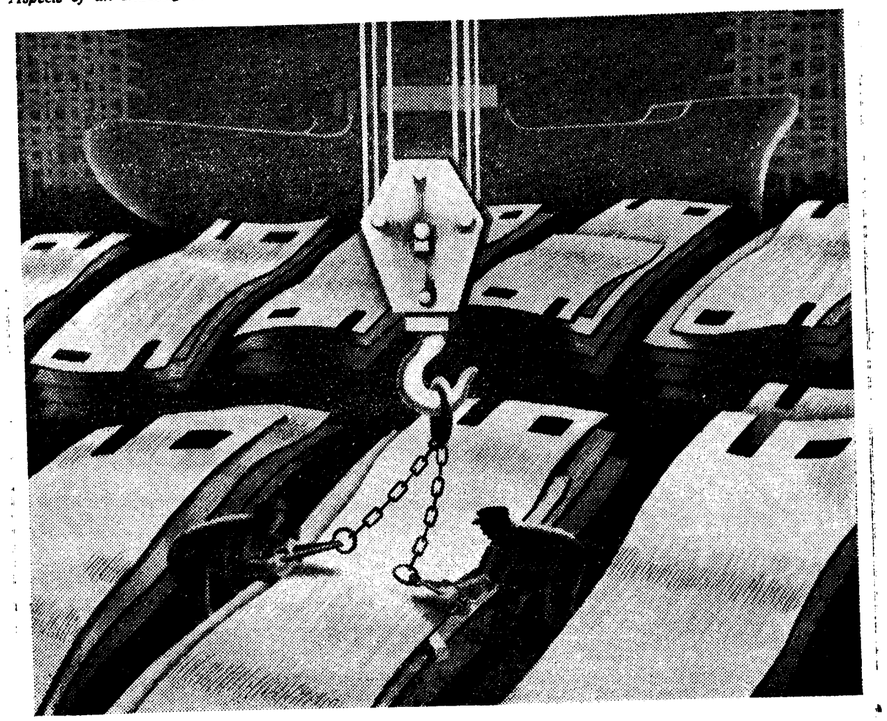
(a) *Valve Grinding Compounds—*
- (i) In Tins
- (ii) In Tubes

(b) *Carborundum Files Including—*
- (i) Scythe Stones
- (ii) Slip or Gouge Stones
- (iii) Honing Stones
- (iv) Abrasive Sticks (Round, Square, Three-Square and Half Round).

(c) *Abrasive Bricks Including—*
- (i) Plain Hand Rubbing Bricks
- (ii) Roll Scouring Blocks
- (iii) Special Shaped Blocks. (For use in Stone, Leather & Allied Trades).
- (iii) Special Shaped Blocks

(d) Abrasive Grinding Belts, Rolls and Discs. (For Power or Hand Driven Machines).

(e) Emery Powders. (Grain).



(f) Glass Paper in sheet form including Emery paper and cloth, Silican Carbide and Aluminium Oxide Abrasives.

(g) Sand Paper in sheet form including Emery paper and cloth, Silican Carbide and Aluminium Oxide Abrasives.

Separate questionnaires must be submitted, in duplicate, in respect of each class. In the case of abrasives, separate figures, as called for by the questionnaire, must be shewn for each sub-class mentioned in the Schedule above.

Dated, Calcutta, 26th September, 1942.

Aspects of an Industry No. 4

COLD STEEL

STEEL. The skeleton which supports the structure of modern civilization : the material without which modern war could not be fought. The metal in the production of which Great Britain was the pioneer and is still pre-eminent — witness the world-wide fame of the name Sheffield, and such modern British triumphs as the development of manganese and stainless steels. This pre-eminence is in large part owed to the work of the British chemist, for steel more than any other metal is the result of close liaison between the foundry and the laboratory. Its manufacture is a matter as precise as the dispensing of a medicine prescription. It is the chemist who evolves the formula, analyses the product during the making and tests the finished article. No more than a dozen years ago British research perfected a method of improving the quality of steel by purifying pig-iron. Alike for needle and anchor, for the myriad uses of the parent metal and its countless family of alloys, steel is compounded by the chemist. Nor is the chemistry of iron and steel limited to the metal itself, but extends to its by-products and to the by-products of these by-products. In a sense the output of the blast-furnace is pig-iron. By virtue of the chemist the blast-furnace also yields fertilizers, cement, valuable oils and tar : and from tar, eventually organic chemicals, including dyes and medicinal products. It is the chemist's privilege to ensure that the transmutation of the raw material shall at every stage render its full quota for the common good.

one reason why fighting at points between Leningrad and Voronesh is more significant than street battles in Stalingrad. As the Germans are said to have lost 1,300,000 men their offensive must soon weaken while the Russian reserves available for the central campaign must be larger than hoped. It is certain that defensive warfare will be the fate of the German armies and they cannot strike soon against Moscow because counter-attacks have begun. The battle for Stalingrad has been prolonged with results favourable to the defence. The danger to Moscow has been reduced and the first blow at Rzhev by General Zhokov has been struck successfully. It is hopeful in that it has indicated that Russia could put through another offensive.

(*Continued from page* 540).

Shellac :

Maximum prices for shellac have been revised. Price of shellac, grade T.N., was originally fixed at Rs. 64 per maund. There were no specific prices for other grades as it was pointed out that such prices had to be fixed at "usual differentials." The present notification, however, specifies maximum prices for each and every grade. Prices are as follows:

Name of Article	*Maximum price per Md. Calcutta.* Rs. A. P.
Standard 1	66 0 0
Superfine	68 0 0
Lemon & Buttonlac ..	70 0 0
Angelo's A. C. Garnet ..	66 0 0
Angelo's A.B.T.N. ..	76 0 0

(*Continued from page* 519).

meet with adequate response from the public. It was found necessary in their case to call upon the underwriters to make up the shortfall. In our discussion with some of the bankers, we came across a curious line of reasoning. In ordinary circumstances, it is the Madras Government's loan that would have been rated highest by investors among provincial loans. It appears, however, that a circumstance which affected the judgment of the investors was the relative danger in case of enemy attack. From this point of view, Madras has had to suffer on the ground that South India is close to the Andamans where the Japanese have established a base. The proximity to the Punjab in the Frontier has likewise contributed to lesser interest in the loan of a government which, till recently, was thought of highly for investment purposes. Bombay has gained as being the least liable to attack. We understand that the Central Provinces loan went off well on the reasoning that this province could not be attacked either from the west or from the east or the north. To investors who are prone to reason on these lines all that we need say is that, while the Central Government have come readily forward to back up the securities of local bodies like the Calcutta Port Trust and the Calcutta Corporation, they should be considered as equally interested in the stability of the securities of the Provincial Governments. There is no getting away from the fact that all giltedged and semi-giltedged securities, whether of Provincial Governments or of public bodies, derive their sense of security and confidence-inspiring quality from the stability of the Central Government and from the known readiness of the Central Government to lend their support and weight to preserve the integrity of giltedged values and sustain the confidence of such investors in giltedged.

The exchange market has been steady with some export bills showing. There is less stress and strain with regard to shipping ; and present indications are that more export bills are due to make their appearance.

Banks sell T.T. London ready to six months forward at 1s. 5 31/32d.

Banks buy three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks buy T. T. New York Ready at Rs. 325.

Banks sell T.T. New York Ready at Rs. 332½.

Money remains easy with interbank call quoting ½ per cent.

PRICES AND POLICY

A cautious endorsement of Sir James Taylor's statement that the symptoms of inflation alone are present in India, if none of the major effects can yet be seen was forthcoming recently from the Finance Member in reply to a question. Against the background of rising defence expenditure, the rise in prices seems ominous to every citizen. Whether a bulge in profits—the residuary legatee of distribution—propels prices upward or the expansion of purchasing power to which money market commentators refer relentlessly leads to big buying or whether there is a plain shortage of consumable goods in the war period, can be decided according to taste. Not many can afford to forget the effects of any of the three factors mentioned on the cost of living. We are compelled to admit that inflation is the arch-enemy, and discussions on the efficacy and scope of price control can only indicate the warmth of feeling on a subject that is apt to move the most stoical. Political disquisitions have not ignored the existence of economic discontent as a contributory factor in political unrest. Here is a recognisable element, wholly distinct from the interested activity of manufacturing and financial interests adverted to by the Prime Minister a fortnight ago.

Few of us are concerned either with belated assurances or forthcoming remedial measures. As a recent official publication indicated, Indian commodity prices to-day are distinctly higher on August 1941. The reimposition of maximum prices for shellac is only an admission of difficulties of which cognisance has to be taken. The movement of prices in 1942 broadly supports the conclusion that in the first half of 1942 prices have been rising. The adjustments in wages reported from Bombay and elsewhere are only the reflex action of a lift in demand that can be explained as due to various influences but is essentially a mark of the war period. Comparisons with the last war or British experience have no special relevance and are made to point out the cushioning effects of higher taxation and increased savings in a period of full employment. It is hardly necessary to ask if inflation can exist without full employment. In the U.S.A. there was inflation when the labour reserve was as large as three millions in May. By and large, the rise in industrial shares in Nazi-occupied Europe, as in British India, is interpreted as due to monetary factors. In neutral countries like Sweden the ascent of share values has been reported while in the case of occupied Holland, the boom on the stock exchange is attributed to feverish buying by Germans alongside of an actual shortage of suitable stocks for people, compelled to keep money because goods cannot be had.

Whether the recent revival on the stock exchanges in India is due to such unusual factors need not be considered here. It is only necessary to look at the world trends in regard to prices to ascertain that India is caught up in a universal secular movement for which there are precedents. From July last in America the price of cotton and silk was going up. The price of shellac too was going up in New York at the same rate as it was rising in India; and the price of copra was rising even in August 1941. The price of timber rose in September 1941 and the price of wool in October last. All these facts are readily established by a reference to the League of Nations bulletin which indicates that sugar also was rising from May last. The unbalancing of the U.S. budget was a material factor. The Administration was keeping certain things in check as is proved by the virtual absence of any change in the price of rubber up to April in New York but other things without any bearing on defence, for instance, cotton and oil were rising. The price of hides in Buenos Aires started to rise in October last and the flatness of prices of hides and skins in India in 1942 stands out sharply in relief. Of greater interest is the advance in wheat. The rise in maize was sympathetic. The most arresting feature is not the advance in pork prices in Chicago during and after 1941, but the utter absence of any swing in base metal prices. Prices of nitrate, soda and sulphate of ammonia did not register any rise, any more than of crude oil but Gulf prices for gasoline tended upward. It is hardly necessary to say that defence spending accounts for the advance in U. S. production and prices during and after 1941. The O.P.A. intervened often, and with effect, but it could not hold down cocoa, any more than coffee or sugar. There may be an explanation for the very limited rise in woodpulp and the stability of anthracite, but articles of general consumption e.g. lard and beef were going up at the main centres of production.

The advance in prices in India through 1941 is, therefore, to be viewed as part of a general forward movement which explains why the index for wholesale prices has been rising continuously since August 1941 in India as in Iraq. The upswing in prices was to be noticed in neutral Argentina as in war-worn China; in Peru as in Palestine. If it was slow and mild in Sweden, it must be due to a policy that was conscious of the dangers. The Canadian price index rose in 1941 by seven points to 94 (the mean for 1941) the Australian price index rose by eight points to 98; the Calcutta index rose by fourteen points to 92. Except for a mild fall in December, the tendency has been continuously upward. The importance of ascertaining the nature and causes of the movement in the prices of primary goods need not be stressed. That the prices of manufactures have risen simultaneously is a commonplace, and the general character of price-changes since February supports the view that the brighter prospects for industries are, in part, based on additions to purchasing power almost co-extensive with a reduction in the supply of goods. The usual charts appended to the "Indian Trade Journal" illustrate the conclusion. Since we are not concerned with fluctuations in business activity, it is possible to sum up changes as due mainly to conditions of demand. The working class cost of living has risen in the wake of higher prices. But prices are stationary at present in a few cases. Cement was quoting Rs. 44 per ton in August as at the end of February. While cotton fell abruptly towards the end of July, the price of cloth has risen in a marked degree, and the only goods whose prices have fallen as compared with the price level in February are goatskins and raw jute. The dominant tendency does not obviously extend to jute manufactures though rates for heavy goods have held up well. The most remarkable changes are to be seen under oilseeds when the price of copra rose in April, it was only in recognition of the loss of the Philippines. The setback recorded in the Cochin price of copra is too slight to merit attention, as slight as the fall in groundnuts reported towards the end of August. It may be urged that food prices have risen in line with the prices of commercial crops like linseed. If the price of rapeseed has fallen since July like that of linseed, the price of both castor oil and cocoanut oil has leapt up like that of groundnut oil. The largest percentage increase is to be noted under salt and only shellac appears to be under the peak reached in March. That statistics can be misleading sometimes is proved by the drop in Cawnpore sugar prices. Whatever be its significance in the light of the April ordinances the fall recorded in June cannot be due to ample supplies. That tea prices have fallen away since June may seem surprising, but the average price realised in 1949 for teas sold for export and internal consumption was higher in February. Though the Lyallpur price of wheat appears to be unchanged for months, after rising from Rs. 4-8 to Rs. 5 per maund, the Karachi price at Rs. 47-8 per candy is sharply higher on February.

The price situation may be readily summed up by pointing to the fact that the Calcutta index for food and manufactured articles rose from 153 in February to 192 in August. The rise in the single month of August was ten points. The index at 192 points to a rise of 92 per cent on the July 1914 base, and the coincidence of the index for August 1939 with the base, selected is by no means accidental. The rise of 92 per cent in the three years of war indicates that the advance is largest and most alarming in 1942 as the Calcutta index has risen from 153 in February to 192 in August. Since the forced restriction of general consumption has not inhibited the rise in prices it is clear that inflation has not produced its own remedy. A shortage of imported goods makes demand converge on home-produced goods, and forced saving or steeply enhanced taxation are the measures indicated. Even more important is the attraction of 'free' purchasing power into new loans. But primary importance must be attached at all times to mustering up all productive forces of the nation in conjunction with the most effective utilisation of those forces. Professor Cassel who has suggested that has argued also that dilettantish attempts to combat inflation through price control may be ignored. Inflation is existent and its extent has been indicated. That a cheap money policy is an ingredient in the situation and that deflationary measures are necessary are forgotten dogmas of the orthodox. No alteration in exchange value can be expected but the further depreciation of the rupee's value must be avoided in the interests of propertied classes who pay taxes and subscribe to loans. The mere fact that industry does not languish and the State has few enterprises in hand dissociated from the war and is at present pursuing a policy of paying out crores every week shows that a rigid or correct monetary policy will not be adopted merely on academic advice. Yet to suggest that large liquid resources are kept mainly because of a fear that repayment of loans in a greatly depreciated currency would be unprofitable for the investors is not improper. That appears to be as vital a consideration as any at present, and the implicit acceptance of the conventional view by the Finance Member is more hopeful than it seems.

Editorial Notes

Progress In Indian Industry

It is unusual to discuss the production figures of a past year but so little information is available as to output in most industries in the war period that the figures relating to certain selected industries like paper and paint need to go on record. The period covered by a recently issued official publication is April-September 1941. The iron and steel, cement, heavy chemicals and other industries are excluded; but figures relating to sugar and matches are available. In the case of jute, paints, and wheat flour, the figures are not quite complete but 98 percent of the workers in the jute industry were employed in establishments whose production figures have been compiled. The figures, in the case of jute and sugar, show a fall as compared with 1940 but progress is evident in the case of paper. Total production for the six months ended September 1941, amounted to 950,868 cwt. It is evident that total production for 1941-42 must amount to 100,000 tons, a quantity almost double the pre-war output. Though the total quantity produced in the first half of 1941 was larger there were considerable variations in output. If the output of packing paper has risen substantially, like that of pulp board, the quantity of printing and writing paper production was lower than in the first half of 1940-41. The output of blotting paper was also much reduced and the increase in production from 873.242 cwt in April-September 1940 to 950.868 cwt in the same period of 1941 was due largely to increased production of unprotected varieties. New lines of production have increased as suggested in the report of the last Tariff Board.

There have been no conspicuous variations in monthly output of paper to judge by available statistics, and the figures must be taken as showing that the Indian paper industry's growing capacity is unequal to the enlarged demands of the war; provide justification of the economy advocated in the use of paper. Progress is definitely more pronounced in the paint industry. Figures indicate that production, except in the case of enamels, rose appreciably and the production of mixed paints was much larger than in 1940 while the production of oils, excluding raw linseed oil, was also greater. The total quantity produced in the first half of 1941 was 553,149 cwt as against 324.377 cwt in the first half of 1940. The production of varnishes showed a great increase; and progress recorded is perhaps due to the cessation of trade with Japan in the second quarter of 1941-42 as the Indian production figures point to a marked advance in output of mixed paints and pastes alike. The war accounts for the increase in flour milled in India. Output for six months exceeded 9.6 million maunds as against 8.1 million maunds in the same period of 1940. Production in all months was ahead of the 1940 output though the increase in high-grade atta and flour may be due wholly to war demand.

The most interesting figures undoubtedly are those of India's breweries and distilleries. The production figures for the six months referred to show that reduction in imports has been made good by larger home production. The increase in country spirit may be explained by the recoil from Prohibition in several Provinces but the noteworthy increase in Indian-made foreign spirits is clearly due to the reduced imports and higher prices ruling. The increase is not confined to brandy, whisky etc. There was a large increase in production of rectified spirit though the production of denatured spirit increased only slightly. The biggest change is to be seen under beer. As is generally known India's breweries enjoy unusual opportunities owing to the war and the shares of the rather small brewery group have been going ahead of late. The figures of 1941 point to a 100 percent increase in respect of Indian beer and beer brewed on English principles. Since India wants light stuff only, no porter was made by breweries which, however, increased substantially their output of stout, widely appreciated for its health-giving properties. Production difficulties apparently did not interfere with breweries and distilleries. Since brewery shares are quite hard to beat from the investment point of view, the figures cited may compel unusual attention on the part of intending investors who have been told of the pressure on supplies and the 'rationing' of civilian consumers.

Sweet As Ever

The season 1941-42 for the production of sugar directly from cane was short and cane shortage was also acute in the provinces of U. P. and Bihar and, to a lesser extent, in the rest of the provinces in India. Out of a total of 161 factories in India, 150 worked during the season. Of these, 70 factories were accounted for by U. P. and 31 by Bihar. As is usual, the U. P. and Bihar factories commenced crushing later in the season when the canes were ripe for crushing and conducive to maximum recovery of sugar from cane.

The mean number of days worked by all factories in U. P. and Bihar during the season were 78 and 54 respectively as against 100 in the case of either province in the previous season. The mean number of working days for the rest of the provinces in India has suffered a similar fall, being 117 in the season 1941-42 against 144 in the previous season.

The short season was not, however, the only misfortune of the industry. Cane shortage was acute in U. P. and Bihar and the drastic restriction of output enforced by the governments of U. P. and Bihar contributed not a little to the reduced output of sugar directly from cane.

It must be remembered that at the time the Bihar and U. P. governments enforced restriction, there was ample justification for the measure. The season 1939-40 left the factories in U. P. and Bihar with huge surplus stocks of sugar and the respective provincial governments embarked on a scheme of compulsory restriction of output to help clear the surplus stocks in the hands of the factories. The restriction quota for the 1940-41 season proved inadequate and was helpful only to the extent of preventing further accumulation in stocks. This decided the governments of U. P. and Bihar in their having recourse to a more drastic restriction of quota for the season 1941-42. The total output was accordingly limited to 5.75 lakhs tons. As the season advanced, it was found that the low minimum price announced at the commencement of the season was not taken well by the factories. And the general failure of the cane crop gave rise to the fear that even the limited production anticipated will not be realised. The provincial governments attempted to meet the situation by abandoning all quota restrictions on output. Towards the close of the season, the factories also offered much higher prices to the cane grower in consideration of the anticipated shortage in production. But this helpful attitude of the provincial governments and the producers came rather late in the day and did not prove wholly successful. The result was that the production in these two provinces fell short by .75 lakhs tons, amounting to 5.00 lakhs tons.

The production in the rest of India was a further disappointment. Cane shortage was experienced all over the country in more or less degree. Against the earlier estimates of 3.50 lakhs tons of sugar from all the provinces excluding U. P. and Bihar, the actual output turned out to be only 2.78 lakhs tons. Thus, the total output of sugar in India fell short of estimates at the commencement of the season by about 1½ lakhs tons, amounting to 7.78 lakhs tons, a reduction of 29 per cent on the 1940-41 figure and 29 per cent on the 1939-40 figures. The production was less than in the two previous seasons in all provinces, the solitary exception being Bombay. Bihar has suffered the greatest fall in output, the output for the 1941-42 season being less than half of the 1940-41 season.

The total output of 1941-42 season of 7.78 lakhs tons will not meet by itself the consumption requirements of the country. Foreign imports are out of the question.

Java is in enemy hands and Formosa is enemy territory. But the considerable stocks of sugar carried over from previous seasons and the production of sugar refined from 'gur' and 'khandsari' though they do not offer any prospect of plethoric conditions in the supply of sugar, will yet considerably ease the shortage and the consumer need not be unduly alarmed. It is rather the existence of the Black Market and the questionable success of price control measures that must be disturbing to the consumer. Another great snag is transport from the centres of production to the consuming areas. If the transport problem is suitably solved, it may yet be possible to say that sugar will prove to be sweet as ever.

Welcome Assurances

Questions in the Assembly on Monday and the answers thereto illuminate the last statement of central expenditure and revenue. The monthly deficit and the rising railway receipts are familiar features. If the Finance Member said little about his mission to London on Monday he said enough to show that the war will make a great hole in the revenue. Though there was a reference to general discussions in London of the ways of utilising sterling assets in the future nothing was said to indicate if any decision had been reached. The other answers to questions support the view that India's war expenditure is rising. Sir Jeremy Raisman's replies to Mr. Neogy show that expenditure from April to August runs to Rs. 174.2 crores, that the greater part of military expenditure is charged to His Majesty's Government and the usual allocation is made at the end of the financial year. It cannot be said if the revised estimates in February will indicate the extent of India's liabilities. On various other grounds the replies are assuring. The alliance with China entails financial liabilities. The British Government pays for the goods and services provided for Chinese forces in India. Dr. Banerjea's question brought an answer as to the cost of the war and the share payable by Britain. In 1939-40 it was Rs. 4 crores, in 1940-41 it was Rs. 53 crores, for 1941-42 the revised estimate was Rs. 185 crores and in the current year it is estimated that the British share of the war costs would be Rs. 387 crores in addition to Rs. 60 crores worth of military supplies made available to India. The general presumption is that Government safeguards India's interests in a way and there has been an assurance given in the Assembly that no part of the cost of Indian troops in the Far East and Burma, was debited to Indian revenues. The question of Mr. A. N. Chattapadhyaya brought a reply that external debt has been raised and will be further reduced by the repayment of sterling 3½ percent stock. From £276 million sterling debt (exclusive of railway debentures etc.) had been reduced by £199 millions and £60 millions more would be paid off in January. The financial position can be gauged from the questions and answers and in the absence of a normal busy season, the borrowing programme must go through smoothly.

Women For War Work

More men and women are being taken off for the war work. The approach to the maximum war effort in Britain entails the adoption of methods to increase the number of war workers. Concentration of industry cannot yield results as it did in 1941. To quote Dr. Hugh Dalton "we are reaching the stage when further cuts in civilian supplies are becoming less and less possible". The coal industry has to be strengthened in regard to labour, but transport has to be cut again this winter in the interests of essential traffic. Lord Leathers' appeal not to travel is based on an appreciation of difficulties. According to a cabled report from the Federation of British Chambers, the restrictions on travel in Britain are made necessary by the constantly growing volume of military and other essential traffic restrictions on road transport are intended to save petrol, rubber, wear and tear and labour. The whole of the Green Line Coaches, system of express services radiating from London to the Home Counties, are being withdrawn, the saving being 111 million miles annually. The Board of Trade has cut the suppy of all consumers' goods and proposals for standardisation of output have appeared. Many industries have been covered by the concentration scheme applied since May last, and such is the

demand for labour that women are being into industries like shipbuilding. Substitution of women for men is favoured by employers and unions in a pamphlet that states 'except for jobs requiring sheer physical strength, women can do almost everything men can do.' An impressive list, of more than 170 jobs in shipyards apart from office jobs, has been furnished in the pamphlet. Sacrifice and industry go together and harder work is the distinctive feature of the fourth year. A Clydeside shipbuilder stated recently that the output of British yards is far in excess of what was accomplished in the final months of the last world war and production is still mounting. Shipbuilding executives insist that amazing improvements have been made since the beginning in standardising design and use of mass production methods, while workers have responded to working hours that would never have been tolerated before the war and are showing hundred percent co-operation in readiness to relax trade union rules.

Home-Produced Food

Covering much the same ground as the Oxford pamphlet, an article in "Indian Farming" by Sir John Russell describes the food production drive in Britain. In the past Britain was in a high degree dependent on imports. Out of a total population of 46 million in 1937, only a million or so lived by agriculture and produced just about 40 percent of the food wanted. Milk and meat were largely provided by British agriculture which concentrated on livestock, and Britain therefore ate more meat than any country. The war has changed all that, and Britain has sought to produce more grain, potatoes and all vegetables. The latter were extolled by dietitians before rationing of meat was under way. Sir John argues that in April 1942 in spite of the changes of war, the citizen had really nothing to complain about: the weekly ration for an adult includes about 1 to 1½ lbs. of meat including bacon, 8 oz of fat including 2 oz of butter 3 oz of cheese (but agricultural workers, vegetarians etc. get 12 oz.) 8 oz. of sugar, 2 oz. of tea, 4 oz. of preserves not counting honey, 3 pints of milk per week (with extra allowance for children, invalids etc). It is only in regard to eggs that the average ration is deficient; and tinned foods too are allowed sparingly. Fish is not rationed, and is available in moderate quantity; so also are so-called meat offals and game. Moreover, meals in canteens and restaurants do not count, and most men have a meal a day out as do children at schools. Further, home-produced food does not count. May people, says Sir John, are now growing potatoes, vegetables and fruit: they keep poultry for eggs, bees to produce honey and rabbits to increase the meat supply: some also keep goats to furnish more milk. All this, as Sir John notes, is an addition to old supplies. The additional home production of food has proved a very great advantage. It has saved a great deal of transport which under conditions is extremely important, and it has ensured that a large number of households have some at least of their food always in good fresh condition.

The extension of part-time cultivation is indicated in Mr. R. S. Hudson's statement in mid-March that Britain has nearly 1,750,000 allotments, practically double the pre-war figure, in addition to two million private gardens, and also that the allotment holders and private gardeners between them were producing some £10 million to £15 million worth of vegetables. Sir John declares that 'the movement is still spreading, for we have been warned that next winter will be a trying time and each man must do what he can to grow a reserve of food for himself.' change is the extension of arable cultivation. Mr. Hudson estimated in March that Britain has 19 million acres of arable land as against 13 million acres before the war. The additional 6 million acres are under oats, wheat, potatoes and many other crops. The area under potatoes has risen by over 40 million: that under wheat by over 30 percent. The output of vegetables is said to have risen from 2.5 million tons in 1938 to 4 million tons; the output of sugarbeet has been raised by 60,000 acres to 405,000 acres which was all the existing factories could cope with. The extension of cultivation has been accompanied by an increased use of tractors. Sir John Russell urges that here the young countryman's machine-mindedness has been a great advantage. There are now said to be 100,000 tractors in use in Britain, and it is further said that British farms are the most heavily mechanised in Europe. Sir John adds that young women have taken remarkably well to tractor driving 'and the reserves of women power in the country are still considerable'. Dairy farming has suffered many changes, but this year an increase in sheep, swine and poultry has been recorded. Administrative organisation has become close and farms like crops are at present graded. The War Agricultural Committees' work has been praised, and among the many changes is the conversion of rough grazing to good grassland.

Caucasian Wealth

In view of the general interest in the Caucasus a note on its resources would be appropriate. Long associated with oil, the Caucasus region is probably the backbone of Russia war economy. Though reports speak of a second Baku and oil output in August on the oilfields other than those in Caucasia, the economic importance of the region remains great. According to Mr. Stembridge's Atlas of the U.S.S.R. (O.U.P. 4 annas) the Soviet Union produces 10 percent of the world's oil. No less than 75 percent of its output comes from the Baku wells and about 10 percent from those at Grozny and Maikop. From Baku the oil is piped to Batum on the Black Sea. From the Caspian port of Makhachkala oil is piped through Grozny to the refining centre of Armavir, and thence to Tuapse on the Black Sea, also a refining centre, and through Rostov to Trudovaya in the Donetz Basin. Oil is also transported to the heart of Russia up the Volga to Saratov and Kuibyshev, both centrally placed for refining, and to Moscow, and by other inland waterways to Leningrad and by way of the Black Sea to Kherson on the Dnieper, and in normal times by river and canal, as far as Brest-Litovsk in Poland. But the wealth of the Caucasus is not confined to oil. The mountains contain deposits of iron, coal, nickel, copper, lead and zinc. Especially important is manganese, an essential component of steel used for making tank armour and guns. There is much valuable timber, notably, in Georgia 40 percent of which is forest, while crops grown includes sub-tropical fruits, cotton, grown mainly in the south of Trans-Caucasia and rice, sown by aeroplane in some areas. The rivers are the source of electric power and Tiflis houses a large hydro-electric plant. Tiflis being connected with Tabriz in Iran by rail is in a position to receive supplies from the Persian Gulf. Since the week's news have made no direct mention of any Soviet losses after the loss of Maikop and Krasnodar, it must be surmised that only a small part of the natural wealth of Caucasia has been lost. Baku, the capital of Azerbaijan, with its refineries seems as yet far removed from Stalingrad, while the danger to the pipeline that runs south of the mountains does not seem acute. The refineries near Armavir must be obviously written off like the Maikop wells, but the refinery at Tuapse is about 100 miles away from Novorosisk. Krasnodar's refineries, linked with the main pipelines to Rostov must have been affected by the battle of August, and the general belief to-day is that Emba, to the northeast of the Caspian, will become more important than Ufa on the Bashkirian field which lies to the northwest of Kuibyshev. The map shows that Magnitogorsk and Orsk are connected with Chapyev on the river Ural by pipeline while many railway lines serve the Urals and unite at Kuibyshev, the junction of the Trans-Siberian railway with that from Central Asia by way of Chkalov.

South Africa's Progress

Throughout the first half of 1942 trade and financial conditions in South Africa were stable. Though export licensing has been modified and restriction on shopping imposed the supply of goods has been relatively large. It is only from August 3, that priority rating will influence the license for goods exported to the Union. The progress of industry is as yet not limited by the obstacles to factory or plant expansion. The coal industry is said to be booming and steel production is expected to rise sharply. All secondary industries are expected to increase their output. The increase in note issue and bank deposits alike have supported the Union's borrowing programme. On July 17, the Union Government opened the list for subscriptions for the 3 percent 1957-64 stock issued at par and holders of 4 percent savings stock 1943-53 Union 4 percent registered stock 1943-63 and 3 percent Cape of Good Hope 1942-44 loan were offered conversion terms. A short-term loan at a rate below 3 percent has been foreshadowed. It has been said repeatedly that money is abundant and investors are not forgetful of the advantages of investing in defence issues. The sale proceeds of Union Loan Certificates, says a recent Newsletter, are climbing to £1 million a month. Steady progress has marked the sales of certificates since June 1940. At the end of June 1942 bank deposits topped £163 millions, and to quote the Standard Bank's July Review in this connection, 'the ready supplies of money for investment have been a marked feature of wartime economy.' The upward movement in prices has been firmly held and the Union's financial position is better as the Reserve Bank and all banks have retained more cash. The Union's defence expenditure is still going up, and civil expenditure is not being cut down in order to pay for the war for instance, it is known that the Union is spending more on public health as compared with 1941. The Union's revenue is supplemented by the issue of tax redemption certificates. In four months the total sales of new certificates amounted to over £31 million. This shows how a large monthly outlay—£7.8 million in July—on defence is being met by the Union Government which has obtained £2½ millions more in revenue during April-July 1942 than in the same period of previous year. Of greater interest to the Empire is the reported arrival of an Economic Mission from the U.S.A. to report and advise on the Union's resources. South African war effort is to be co-ordinated and the Union's needs are to be satisfied by the U.S.A. Secondary industries in the Union, which enjoy opportunities in East Africa and the Congo, are likely to benefit from the development of supplies of chemicals and paper pulp from wattle timber in the Union. A local company supported by Wattlegrowers has put up a plant for producing paper pulp on a commercial scale for paper mills in the Union

Banking Law

A work of high value naturally runs into many editions and Professor M. L. Tannan's work on 'Banking Law & Practice', first issued in 1926, having received high judicial approval in the past has deservedly gone into a fourth edition published again by Butterworth at Rs. 8-12. Being meant for others besides lawyers the arrangement in the book is different and all the more welcome for the banker is as much interested in this branch of mercantile law as the Courts. It is not only the law relating to negotiable instruments (cited as Appendix B) that interests banks but various new statutes have to be taken into account. The Carilaw cited is as may be expected copious and the bibliography runs from Byles on Bills to the League of Nations publication relating to Commercial Banks. Of the history of banking in India, there are many glimpses, and the many marks of progress in the war period justify the author's plea for codification in the interests of banking. Since Section 277F of the Indian Companies Act is to be amended soon by a bill introduced by the Commerce Member in this session. Indian banking law may undergo some change in the war period. Banks have various rights and obligations. They are compendiously stated and one curious case is cited. There is evidently no limitation. A person deposited a large sum in a bank in 1866. He died and 61 years later his descendant made a claim on the basis of the deposit receipt. The court dismissed the claim largely on the ground that the bank's records did not support the claim, and there was nothing to prevent an inference of repayment. Banks have to give greater publicity to their affairs than other companies under the law, and it is in the banks, which seek to maintain the confidence of their depositers, that accounts and balance-sheets are published twice a year, while their balance-sheets also have to satisfy certain conditions laid down by the law. The work is full of interesting details as the Rt. Hon. Dr. Jayakar has remarked of a textbook is at once business-like and comprehensive.

Bank Of Bihar

The maintenance of dividends for the half-year ended June 1942 at the former rate is no inconsiderable achievement for the Bank of Behar, Limited. The Directors express the view that war conditions have affected the normal growth of profits, caused in part by the retention of larger cash balances than usual. The opening of a branch at Madhubani in Darbhanga District shows that the Board pursues a policy of cautious expansion as in 1941. The gross profit for the first half

THIS IS NOT A PROSPECTUS, BUT ONLY AN ANNOUNCEMENT. COPY OF THE MEMORANDUM AND ARTICLES OF ASSOCIATION CAN BE INSPECTED AT THE REGISTERED OFFICE OF THE COMPANY AT "STEPHEN HOUSE", DALHOUSIE SQUARE EAST, CALCUTTA.

THE NATIONAL INSULATED CABLE CO. OF INDIA LIMITED

(Incorporated under the Indian Companies Act, 1913-36.)

REGISTERED AT CALCUTTA ON 24TH DAY OF MARCH, 1942

AUTHORISED CAPITAL - - Rs. 50,00,000/-

DIVIDED INTO

3,00,000 Ordinary Shares of Rs. 10/- each Rs. 30,00,000/-
20,000 Preference Shares of Rs. 100/- each Rs. 20,00,000/-

ISSUED

1,00,000 Ordinary Shares at Rs. 10/- each Rs. 10,00,000/-

Objects.

The Company has been formed for the purposes fully set forth in the Memorandum of Association and, in particular, to undertake the manufacture of Electric Wires and Cables of types and qualities in popular or considerable demand in India and adjacent countries.

Prospects.

The Cable manufacturing industries of England, U.S.A. and Continental countries have a high standing amongst the most prosperous industries and English Cable Companies have traded most successfully for upwards of twenty years. The following tabulation of three prominent British Cable Companies vividly illustrates the prosperity of this industry throughout the periods reviewed. A small country like England of approximately fifty million people, boasts of about fifty Cable Manufacturing Companies of various sizes.

W. T. HENLEY'S TELEGRAPH WORKS CO., LTD.

AUTHORISED CAPITAL—£1,500,000.

£1,300,000 of Ordinary Shares and £200,000 of 1st Preference Shares.

YEARS:	DIVIDENDS:
1937	15 and 5%
1938	15 and 5%
1939	15 and 5%

BRITISH INSULATED CABLES LTD.

AUTHORISED CAPITAL—£3,000,000

£500,000 of 1st Preference Shares and £2,000,000 of Ordinary Shares

YEARS:	DIVIDENDS:
1937	15+5% Bonus and Capitalised Bonus 20%
1938	15 and Bonus 5%
1939	15 and Bonus 5%

CALLENDERS CABLE AND CONSTRUCTION CO., LTD.

AUTHORISED CAPITAL—£2,300,000.

YEARS:	DIVIDENDS:
1937	15% and Bonus 5%
1938	15%
1939	15%

Subsequent to the outbreak of War, dividends of English Cable Companies have been maintained and, in some cases, stepped despite the demands of heavy taxation.

Some considerable portion of the prosperity enjoyed by a number of these English Companies is derived from Export Trade with India.

The aggregate value of Electric Cables, Copper Conductors and Telegraph Wires, imported into India based on Shippers' Invoice values for customs purposes, are as follows for the last three years for which figures are available:—

1937	.. Rs. 113 lakhs.
1938	.. Rs. 129 lakhs.
1939	.. Rs. 112 lakhs.

These are not selling prices and the figures do not include trade which is done by manufacturers already in existence in India.

The prosperity of the industry in India is evidenced by The Indian Cable Co.'s results as shown below:—

YEAR ENDING.	GROSS PROFITS.
March 31st, 1940 ..	.. Rs. 10,29,978/-
March 31st, 1941 ..	.. Rs. 28,30,184/-

Taking all factors into account the potential in India expressed in terms of selling prices for the years shown above can be assumed to average approximately Rs. 220 lakhs per annum.

Such is the outline of India's capacity to consume cables in the three years which immediately preceded the War.

From figures available it is perfectly clear that cables produced in India prior to this War were only sufficient to satisfy a small percentage of the country's requirement.

War has caused a shrinkage of cable imports to such an extent that there is a wide gap between Civil and Military demands and available supplies. In fact cables are practically unprocurable. Prices of both imported and indigenous cables have risen between 30 per cent and 50 per cent. Owing to war conditions the demand for cables in India is unprecedented and extreme difficulty is being experienced in even partially satisfying this demand.

The Eastern Group Supply Council reported some months ago that the existing and planned capacity of South Africa, Australia and the existing capacity within India itself were quite inadequate to meet present and potential demands of the Eastern Group Countries.

This Company will undertake the manufacture of the standard types of electric cables which are in popular demand within India including wires and conductors required for Electric Power transmission, telephone and telegraph purposes.

This scheme has the support of the Government of India, Commerce and Supply Departments, who approve of it as being essential for both war and peace conditions in this country.

Acquisition Of Plant.

The Company has been able to acquire valuable and essential machinery for the main section of the Factory and the majority of the balance of Plant required is being arranged for, and it is hoped that some production will be achieved before the end of 1942.

Managing Agents' Terms.

The firm of Managing Agents is comprised of men who have long and intimate experience in the business and their appointment is for a period of 20 years from date of incorporation of the Company subject to usual provisos and terms and conditions fully set out in the Articles of Association.

Manufacturing Technique.

The Company has secured the services of a highly qualified and specialised Cable Engineer, who has had many years' experience in the technique and manufacture of all types of cables in Europe.

Management.

The general management of the Company is vested in Mr. G. B. Page, who is the Managing Director. Mr. Page has had many years' experience in the Cable Industry in Europe and in the East and until recently was Manager in India of British Insulated Cables Ltd., and Managing Director of The Indian Cable Co., Ltd.

Consulting Engineers.

Messrs. Merz & McLellan of 32 Victoria Street London, one of the most reputable firms of Consulting Engineers in Europe, have been appointed Consulting Engineers to the Company.

Factory Site.

Suitable land had been acquired within thirty miles of Calcutta and preliminary arrangements were under way for the establishment of the Factory in this area, but in deference to the wishes of the Government of India the Factory has been shifted to Mehgaon, Jubbulpur District, Central Provinces, where all facilities such as Electric Power, Railway siding, etc., have been arranged through the kind assistance of the Government of India. The Government authorities have continued to render the most valuable assistance in the development of the Factory at this new site. A preliminary agreement for the supply of the amenities above mentioned has been concluded with Messrs. Associated Cement Company, Limited, who are owners of the property.

Members' Liability.

The Liability of the Members is Limited.

The Capital of the Company is Rs. 50,00,000/- divided into 3,00,000 Ordinary Shares of Rs. 10/- each and 20,000 5½% Cumulative redeemable Preference Shares of Rs. 100/- each.

(a) The holders of the said redeemable Preference Shares shall be entitled to be paid out of the profits which the Directors shall determine to distribute by way of dividend a fixed cumulative preferential dividend at the rate of 5½% (per cent) per annum, free of income-tax and to the right on a winding up to be paid all arrears of preferential dividend whether earned or declared or not down to the commencement of the winding up and also to be repaid the amount of capital paid up or credited as paid up in respect of such redeemable preference shares held by them respectively in priority to any payment in respect of the Ordinary Shares but shall not be entitled to any other rights in the profits or assets of the Company.

(b) The Company shall (subject to the Indian Companies Act, 1913) be entitled to redeem out of its profits at any time or times but not earlier than the 1st day of January, 1945, the whole or any part of the said 5½% cumulative redeemable preference shares at a premium of Rs. 15/- per share on giving not less than one calendar month's previous notice and such notices shall be given by advertisement in a Calcutta daily newspaper specifying the date of redemption and in the case of a partial redemption the number of the shares to be redeemed and the date of the drawing hereinafter referred to. The particular 5½ per cent cumulative redeemable preference shares to be redeemed shall be determined by means of a drawing and all such drawings shall be conducted by the Directors at the office of the Company in the presence of a Notary Public and also such of the holders of the 5½ per cent cumulative redeemable preference shares who care to attend.

of 1942 is returned as Rs. 3,82,912-13-7 and the net profit as Rs. 64,053-12-4. The Bank's reserve is to receive Rs. 10,000 and the maintenance of the dividends paid on September 1 implies only a moderate decline in the sum carried forward. Though the possibilities of improvement are limited by many adverse developments in Upper India the Board are justified in hoping that the Bank will cope with all the difficulties. The balance-sheet certainly supports the view. The paid-up capital of Rs. 14.84 lakhs is flanked by reserves exceeding Rs. 7.2 lakhs. The total deposits of Rs. 1.27 crores point to an expansion in resources. It is noteworthy that out of total assets of Rs. 1.58 crores at the end of June as much as Rs. 56½ lakhs represented cash, bullion and balances with other Banks. The high ratio of advances, amounting to Rs. 62.64 lakhs to total deposits, stands out as a feature of the latest balance-sheet. The Bank's investments in gilt-edged have shrunk while cash has increased. This is not unusual, and the main point calling for notice is the extraordinary degree of liquidity, already referred to. The Bank's 18 branches are not confined to Bihar as there are branches at Benares, Calcutta and Jaunpur ni addition to agencies in eight cities of Northern India. A year ago particular reference was made to the useful addition to funds reported by one of India's oldest joint-stock banks. In the report and accounts now available evidence of further expansion is certainly forthcoming.

FOR EVERY MODERN INDUSTRY

FROM 400 GALLS UPWARDS

BRAITHWAITE & CO. (INDIA), LTD.

CALCUTTA

Comilla Union Bank Ltd.

The very strong local connections do not account wholly for the high position acquired by the Comilla Union Bank quite early in its career. If its age is not great, its position remains, and will remain high, for sufficient and universally accepted reasons. The report on the nineteenth year of its working indeed justifies the observations made often as to the progress of what is familiarly described as the biggest Bangalee-managed bank of the day. The more obvious signs of progress are not lacking in the balance-sheet as on April 13. Sticking to the Bengalee year for preparing its report and accounts the Comilla Union Bank shows it is conservative, yet progressive in every way. Remarkable as banking progress in the war period in India has been, not many can claim to have achieved the same satisfactory results for 1941-42. It will be generally agreed that the document provided for information is by no means formal. The Directors have recorded their satisfaction and the increase in deposits assuredly supports their claim that confidence has been fully maintained despite uncertainties. An increase of Rs. 34 lakhs in Deposits in a year leaves the working funds at the new high level of Rs. 287 lakhs. The other striking changes are the increase in paid-up capital to Rs. 14.09 lakhs and in the Reserve Funds to Rs. 7.91 lakhs. A further appropriation of 25,000 made out of 1941-42 profits raises the Reserve Funds to over Rs. 8 lakhs. Total deposits in the balance-sheet (published in INDIAN FINANCE) are shown as Rs. 241.65 lakhs and cash balances etc. amount to Rs. 53.38 lakhs. The degree of liquidity preserved is more than commendable. The high ratio of Advances to total funds naturally claims attention for reasons other than slack money conditions ruling for a long while. The Comilla Union Bank's service to customers is still extending and the present distribution of Advances conforms to approved practice. The high ratio of advances further explains the growth of net profits in 1941-42. If the dividend has been reduced from 12½ to 10 per cent. for 1941-42 the proprietors have the satisfaction of finding a greater part retained in the books and the casual profits applied to strengthen reserves. The 10 per cent dividend is thus justified by the Bank's decision to strengthen the Reserve Funds. Representing as it does the sum of achievements in a year characterised by uncertainties, the report and accounts stand out as a landmark in the career of a bank which in twenty years has forged ahead of its fellows. That the same measure of success will continue, and support greater success in the future, may be taken as certain. The remarkable changes during the past year in capital and resources alike warrant the hope that the Bank in its new premises, in the year of its attaining full majority, will add to its achievements not only in the field of branch extension but of adequate modern banking service including foreign exchange, for the Comilla Union Bank is already authorised to deal in U. S. dollars and may get license for Latin American currencies.

Before The Winter

The battles in Russia take on a new meaning as the prelude to a short autumn campaign for which both sides are preparing. Russian reserves are still being thrown into the southern and central front, while both sides are clearly averse to fighting in the Caucasus. The general presumption now is that Marshal Voroshilov is sending through his reserves to prevent a German advance north of Stalingrad through the Don Basin. For both sides the winter is an insuperable and inescapable factor. The German aim is to reach the frontier by crossing the Caucasus before November, and to consolidate their position before trying to advance on Iran. Operations down the Black Sea Coast are largely conditioned by a desire to use the Danube and the Black Sea for the transport of troops instead of placing new burdens on the sorely-strained Eastern European railway system. There have been operations beyond Novorossisk but Batum has not been reached. Though the Russians are expected to blow up the Caucasus oilfields as and when the enemy comes they are likely to lose as much as the invaders who may have to wait for months before they can expect to get even a part of the oil. The Germans are known to have the materials for exploiting the oilfields because they assumed before the war that they would take the oilfields. Whether the operations on the Volga basin are meant to cut off supplies from the Persian Gulf or the oil shipped by the Caspian, the major aim is to cut off the south-east so that a campaign could be started against Moscow before the winter with the right flank secured.

If Russian armies could intervene with effect against such a move at present the German plans would go wrong and that is

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

In the analysis, I furnished last week, of the present and prospective position of stocks and shares in India, the picture was necessarily incomplete as the Bombay stock exchange had been, and remained closed for a number of days and as I had, consequently, to rely on assumptions as to what would have been the trend of prices if the share market of the Western Capital had been open for business. It is now possible to add the remaining touches to the picture as the Bombay stock exchange was thrown open for transactions since the beginning of this week. The price movements in the last few days confirm the correctness of the assumptions I made. Cotton shares have advanced in impressive style; steel and engineering issues have been keenly bought at rising prices; and Associated Cement is now installed as leader. From friends who returned from Bombay this week, I learn that, over there, people seem to be of the view that the Eastern rather than the Western Capital is likely to be the danger zone. Eastern India appears to be fairly immune to this sense of danger. If the news of the next two months reinforce the growing faith that American planes will be the infallible weapon for crushing the Axis powers, the recent rise in exchange prices will be in the nature of the beginning of a major upward movement.

* * * *

In another sense, a review of stock exchange prospects is still only an unfinished picture. The picture may be said to be complete if to it were added a retrospect and prospect of commodities. While the ups and downs of shares concern primarily the three or four big business centres in India, the fortunes befalling commodities determine the well-being or otherwise of millions of agriculturists. It is my purpose to assay a brief outline of the behaviour of commodities in the last three years. With the outbreak of hostilities, export commodities in India experienced booming conditions. The first stimulus to this hectic rise was given by the large sandbag orders. Jute went up to Rs. 126; hessian 9 porters to Rs. 27-8; and cotton to Rs. 333. Oilseeds and wheat were also marked higher. By January, however, there was a rather sharp slump, mostly due to the postponement of the delivery dates of sandbags orders. Fixation of freight was becoming increasingly difficult. In anticipation of continued sandbag orders of big dimensions, the area under jute had been greatly increased. When the news of encouraging prospects for new crop came, it served to depress the price of jute further. The next adverse development was the capitulation of France. Soon thereafter, nearly all Continental markets were shut to Indian exports. The boom of autumn and winter in 1939 gave place to the slump of the summer of 1940.

* * * *

In such circumstances, it became necessary to devise measures for control of crops, fixation of minimum prices, and even subsidies. In the case of jute, the Government accepted, for the first time, the principle of compulsory restriction and minimum prices. Similarly restrictions were also accepted with regard to jute manufactures. The position of groundnuts was considered particularly bad; and it was decided, at a conference of representatives of trade and the Government, that some compensation should be given to the agriculturists as an inducement for a change-over to other crops. The problem was not so difficult with regard to cotton though the price of this staple fell in sympathy with the other commodity prices. Indian cotton mills were headily expanding production; and the consumption of Indian cotton by Indian mills went up by leaps and bounds. Till July 1941 Japan could still be counted as a considerable buyer of Indian cotton. Exports of oilseeds were regulated by the Government; and exporters had to abide by these regulations even where shipping was procurable. They had, therefore, to depend upon buyers who had a monopolist position. Scheduled prices were fixed and Indian produce was saleable only at prices so fixed. Representations were made that the scheduled price must be increased owing to the increased cost of production. Till recently, the British Government were able to secure all their requirements at conttrolled price.

* * * *

Meantime, the position in regard to jute improved, and it was thought that the higher demand thus envisaged justified a larger crop in 1942-43 season. The area under the crop, it was decided, should be 10 annas of the 1940 crop. The entry of Japan into the war and the sudden restrictions in shipping space, have entirely altered the outlook. While it was time, suggestions were made for a reduced crop; but they were not accepted at the time. The Premier of Bengal has, therefore, issued an appeal to jute-growers to treat the licences as though they had been issued on the basis of an 8 annas crop. Similarly, the early months of the Japanese war saw a steep fall in the price of cotton. But Indian mills have been making rapid headway. War requirements can be met only if a third of the cotton mill capacity in the country is reserved for the Government. Besides, the Indian ttextile industry has now to cater for adjacent territories. 1942 must record anything like 25 percent increase in the total production of Indian cotton mills. This means that the gap left by Japan ceasing to be a buyer of Indian cotton is being filled to some extent by Indian mills. There has been more confidence in the cotton market; and most of the loss caused by Japan's entry into the war has now been recovered. The oilseeds market has presented a firm front. I have already indicated that the entire exportable surplus of tea is now being taken up by the British Ministry of Food. Till recently, the British Ministry of Food was concerned with the requirements of tea for the population in the United Kingdom. After the loss of the Netherlands East Indies, the British Ministry of Food has also to provide supplies for other Empire countries and other allied nations. From being a drug, sugar has now become a dainty. The glut of 1940-41 is replaced by the 1942-43 scarcity. The total stoppage of imports from Java throws on the Indian sugar mills the responsibility not only for catering to Indian consumers, but to the adjacent areas. In the cataclysmic changes which have occurred in the realm of commodities through the spread of war to all corners of the globe, Indian rubber has secured a unique strategic status.

* * * *

So far as food grains are concerned, the only commodity which recorded any appreciable rise in the early years of the war was wheat. In fact, it was necessary, with regard to this commodity, to fix maximum prices. This was due to the large-scale buying made for export to Iran. Various kinds of control have had to be introduced. We have had various price control conferences; and these conferences have had to tackle more and more baffling problems as, especially within the last nine months, many of the commodities which are in the nature of essentials for the masses have suddenly shot up in price and become difficult to get in many parts of the country. Price Control Conferences and Price Control schemes have not brought much relief. Scarcity and high prices seem to be connected more with transport difficulties and distribution plans than with available stocks in the country. There is much anxiety over regular supplies being available at reasonable prices for sugar, rice, kerosene and salt. Rice has emerged as the major problem since supplies from Burma were cut off. While India is faced with difficulties in securing adequate supplies of this essential foodstuff for herself, Ceylon is asking for immediate assistance from India. The "Grow More Food" campaign has been devised to afford relief; and reports so far received provide heartening news that some measure of success is assured for the increased production drive.

Such of the new issues as are promoted by managing agency firms of standing and repute, and as are placed in apt market conditions, become available to the generality of investors only at premium. This is particularly true of capital issues with respect to concerns which make their debut to the public only when the earning stage has already been reached or is shortly to be reached. As recent illustrations in this regard, I may mention Jessop and Company and United Provinces Sugar. This week provides another instance. The National Insulated Cable Company of India have, in this issued, published particulars about their capital plan and nature and scope of business. This pubication is an announcement—an announcement, mark you; not an invitation to the public for subscription of shares. The issued capital of Rs. 15 lakhs—1 lakh ordinary shares of Rs. 10 each and 5,000 redeemable preference shares (5½ percent tax-free) of Rs. 100 each—has been taken up by directors, managing agents and their friends. And these shares are now quoting at Rs. 11 for ordinary shares and Rs. 104 for preference shares. Why they are quoting at a premium, I have already explained at the outset. Behind the Company are Mr. Narsingdas Agarwala whose Tatanagar Foundry is over 20 years old, whose National Iron and Steel Company is over ten years old, and who has many other allied businesses under his control; Mr. N. N. Rakshit who is the nimblest negotiator and neatest salesman, especially where the other party is the Government; Mr. G. K. Khemka who has to his credit some of the shrewdest financial and industrial deals of recent times; Mr. G. B. Page who comes to this company with the experience of Indian Cable and British Insulated Cables, of both of which he was for years the head; and Mr. Susil Sen whose name is synonymous with all that is latest and best in Company Law.

* * *

Apart from the association with men who know all that is to be known about this business, the new issue is interesting as making its appearance on the market just a few months before the Company hopes to start some sections of production. There is no question of long waiting as happens in the case of new floatations where land is to be bought, buildings put up and machinery to be enquired for, purchased and installed. The Company has been able to acquire valuable and essential machinery for the main section of the Factory and the majority of the balance of plant required is being arranged. This is a rare achievement in days when, for one thing, it is difficult to buy foreign machinery and, for another, it is difficult to transport it across the dangerous seas. The prospects of earnings for the Company are exceptionally good. For, the war has accelerated the demand for, and forced up the prices of, wires and cables while the same cause has reduced the available supply. By all tokens, National Insulated Cable is assured of its place among the lively engineering counters in the stock exchange.

* * *

Mr. Pothan Joseph is shortly transferring his affections and activities from Calcutta to Delhi; and I, for one, shall sorely miss the early morning feast of reason and treat of wit to which his almost daily visit has made me look forward keenly as to my morning cup of South Indian coffee and evening cup of Joseph's tea. His "Over a Cup of Tea" created confirmed addicts in Bombay and Madras whom he heartlessly forsook. Now is the turn for the Calcutta addicts to be let down. His association with the "Star of India" is memorable in other ways too. Where ranting was the vogue and style, Joseph has installed reason and argument; communal bickerings are anathema to one whose sense of proportion is sensitive; abuse of Hindus and boosting whatever is Moslem is too cheap a plan for finished journalist; and, in sum, the Moslem case has been, during Joseph's regime, stated with precision and elaborated with dignity. These are the features which he brings to the "Dawn" whose editorship he will be taking up next week. The "Dawn" is the materialisation of the old dream of Mr. Jinnah for a first-rate daily to espouse the Moslem cause. And Mr. Jinnah is fortunate in securing Joseph to plan the paper and guide the policy from the beginning. For my part, I cannot but feel that what is an outstanding gain to Moslem journalism has been a distinct loss to the Nationalist press.

one reason why fighting at points between Leningrad and Voronesh is more significant than street battles in Stalingrad. As the Germans are said to have lost 1,300,000 men their offensive must soon weaken while the Russian reserves available for the central campaign must be larger than hoped. It is certain that defensive warfare will be the fate of the German armies and they cannot strike soon against Moscow because counter-attacks have begun. The battle for Stalingrad has been prolonged with results favourable to the defence. The danger to Moscow has been reduced and the first blow at Rzhev by General Zhokov has been struck successfully. It is hopeful in that it has indicated that Russia could put through another offensive.

(*Continued from page* 540).

Shellac :

Maximum prices for shellac have been revised. Price of shellac, grade T.N., was originally fixed at Rs. 64 per maund. There were no specific prices for other grades as it was pointed out that such prices had to be fixed at "usual differentials." The present notification, however, specifies maximum prices for each and every grade. Prices are as follows:

Name of Article	*Maximum price per Md. Calcutta.* Rs.	A.	P.
Standard 1 ..	.. 66	0	0
Superfine ..	.. 68	0	0
Lemon & Buttonlac	.. 70	0	0
Angelo's A. C. Garnet	.. 66	0	0
Angelo's A.B.T.N.	.. 76	0	0

meet with adequate response from the public. It was found necessary in their case to call upon the underwriters to make up the shortfall. In our discussion with some of the bankers, we came across a curious line of reasoning. In ordinary circumstances, it is the Madras Government's loan that would have been rated highest by investors among provincial loans. It appears, however, that a circumstance which affected the judgment of the investors was the relative danger in case of enemy attack. From this point of view, Madras has had to suffer on the ground that South India is close to the Andamans where the Japanese have established a base. The proximity to the Punjab in the Frontier has likewise contributed to lesser interest in the loan of a government which, till recently, was thought of highly for investment purposes. Bombay has gained as being the least liable to attack. We understand that the Central Provinces loan went off well on the reasoning that this province could not be attacked either from the west or from the east or the north. To investors who are prone to reason on these lines all that we need say is that, while the Central Government have come readily forward to back up the securities of local bodies like the Calcutta Port Trust and the Calcutta Corporation, they should be considered as equally interested in the stability of the securities of the Provincial Governments. There is no getting away from the fact that all giltedged and semi-giltedged securities, whether of Provincial Governments or of public bodies, derive their sense of security and confidence-inspiring quality from the stability of the Central Government and from the known readiness of the Central Government to lend their support and weight to preserve the integrity of giltedged values and sustain the confidence of such investors in giltedged.

The exchange market has been steady with some export bills showing. There is less stress and strain with regard to shipping; and present indications are that more export bills are due to make their appearance.

Banks sell T.T. London ready to six months forward at 1s. 5 31/32d.

PRICES AND POLICY

A cautious endorsement of Sir James Taylor's statement that the symptoms of inflation alone are present in India, if none of the major effects can yet be seen was forthcoming recently from the Finance Member in reply to a question. Against the background of rising defence expenditure, the rise in prices seems ominous to every citizen. Whether a bulge in profits—the residuary legatee of distribution—propels prices upward or the expansion of purchasing power to which money market commentators refer relentlessly leads to big buying or whether there is a plain shortage of consumable goods in the war period, can be decided according to taste. Not many can afford to forget the effects of any of the three factors mentioned on the cost of living. We are compelled to admit that inflation is the arch-enemy, and discussions on the efficacy and scope of price control can only indicate the warmth of feeling on a subject that is apt to move the most stoical. Political disquisitions have not ignored the existence of economic discontent as a contributory factor in political unrest. Here is a recognisable element, wholly distinct from the interested activity of manufacturing and financial interests adverted to by the Prime Minister a fortnight ago.

Few of us are concerned either with belated assurances or forthcoming remedial measures. As a recent official publication indicated, Indian commodity prices to-day are distinctly higher on August 1941. The reimposition of maximum prices for shellac is only an admission of difficulties of which cognisance has to be taken. The movement of prices in 1942 broadly supports the conclusion that in the first half of 1942 prices have been rising. The adjustments in wages reported from Bombay and elsewhere are only the reflex action of a lift in demand that can be explained as due to various influences but is essentially a mark of the war period. Comparisons with the last war or British experience have no special relevance and are made to point out the cushioning effects of higher taxation and increased savings in a period of full employment. It is hardly necessary to ask if inflation can exist without full employment. In the U.S.A. there was inflation when the labour reserve was as large as three millions in May. By and large, the rise in industrial shares in Nazi-occupied Europe, as in British India, is interpreted as due to monetary factors. In neutral countries like Sweden the ascent of share values has been reported while in the case of occupied Holland, the boom on the stock exchange is attributed to feverish buying by Germans alongside of an actual shortage of suitable stocks for people, compelled to keep money because goods cannot be had.

Whether the recent revival on the stock exchanges in India is due to such unusual factors need not be considered here. It is only necessary to look at the world trends in regard to prices to ascertain that India is caught up in a universal secular movement for which there are precedents. From July last in America the price of cotton and silk was going up. The price of shellac too was going up in New York at the same rate as it was rising in India; and the price of copra was rising even in August 1941. The price of timber rose in September 1941 and the price of wool in October last. All these facts are readily established by a reference to the League of Nations bulletin which indicates that sugar also was rising from May last. The unbalancing of the U.S. budget was a material factor. The Administration was keeping certain things in check as is proved by the virtual absence of any change in the price of rubber up to April in New York but other things without any bearing on defence, for instance, cotton and oil were rising. The price of hides in Buenos Aires started to rise in October last and the flatness of prices of hides and skins in India in 1942 stands out sharply in relief. Of greater interest is the advance in wheat. The rise in maize was sympathetic. The most arresting feature is not the advance in pork prices in Chicago during and after 1941, but the utter absence of any swing in base metal prices. Prices of nitrate, soda and sulphate of ammonia did not register any rise, any more than of crude oil but Gulf prices for gasoline tended upward. It is hardly necessary to say that defence spending accounts for the advance in U. S. production and prices during and after 1941. The O.P.A. intervened often, and with effect, but it could not hold down cocoa, any more than coffee or sugar. There may be an explanation for the very limited rise in woodpulp and the stability of anthracite, but articles of general consumption e.g. lard and beef were going up at the main centres of production.

The advance in prices in India through 1941 is, therefore, to be viewed as part of a general forward movement which explains why the index for wholesale prices has been rising continuously since August 1941 in India as in Iraq. The upswing in prices was to be noticed in neutral Argentina as in war-worn China; in Peru as in Palestine. If it was slow and mild in Sweden, it must be due to a policy that was conscious of the dangers. The Canadian price index rose in 1941 by seven points to 94 (the mean for 1941) the Australian price index rose by eight points to 98; the Calcutta index rose by fourteen points to 92. Except for a mild fall in December, the tendency has been continuously upward. The importance of ascertaining the nature and causes of the movement in the prices of primary goods need not be stressed. That the prices of manufactures have risen simultaneously is a commonplace, and the general character of price-changes since February supports the view that the brighter prospects for industries are, in part, based on additions to purchasing power almost co-extensive with a reduction in the supply of goods. The usual charts appended to the "Indian Trade Journal" illustrate the conclusion. Since we are not concerned with fluctuations in business activity, it is possible to sum up changes as due mainly to conditions of demand. The working class cost of living has risen in the wake of higher prices. But prices are stationary at present in a few cases. Cement was quoting Rs. 44 per ton in August as at the end of February. While cotton fell abruptly towards the end of July, the price of cloth has risen in a marked degree, and the only goods whose prices have fallen as compared with the price level in February are goatskins and raw jute. The dominant tendency does not obviously extend to jute manufactures though rates for heavy goods have held up well. The most remarkable changes are to be seen under oilseeds when the price of copra rose in April, it was only in recognition of the loss of the Philippines. The setback recorded in the Cochin price of copra is too slight to merit attention, as slight as the fall in groundnuts reported towards the end of August. It may be urged that food prices have risen in line with the prices of commercial crops like linseed. If the price of rapeseed has fallen since July like that of linseed, the price of both castor oil and cocoanut oil has leapt up like that of groundnut oil. The largest percentage increase is to be noted under salt and only shellac appears to be under the peak reached in March. That statistics can be misleading sometimes is proved by the drop in Cawnpore sugar prices. Whatever be its significance in the light of the April ordinances the fall recorded in June cannot be due to ample supplies. That tea prices have fallen away since June may seem surprising, but the average price realised in 1949 for teas sold for export and internal consumption was higher in February. Though the Lyallpur price of wheat appears to be unchanged for months, after rising from Rs. 4-8 to Rs. 5 per maund, the Karachi price at Rs. 47-8 per candy is sharply higher on February.

The price situation may be readily summed up by pointing to the fact that the Calcutta index for food and manufactured articles rose from 153 in February to 192 in August. The rise in the single month of August was ten points. The index at 192 points to a rise of 92 per cent on the July 1914 base, and the coincidence of the index for August 1939 with the base, selected is by no means accidental. The rise of 92 per cent in the three years of war indicates that the advance is largest and most alarming in 1942 as the Calcutta index has risen from 153 in February to 192 in August. Since the forced restriction of general consumption has not inhibited the rise in prices it is clear that inflation has not produced its own remedy. A shortage of imported goods makes demand converge on home-produced goods, and forced saving or steeply enhanced taxation are the measures indicated. Even more important is the attraction of 'free' purchasing power into new loans. But primary importance must be attached at all times to mustering up all productive forces of the nation in conjunction with the most effective utilisation of those forces. Professor Cassel who has suggested that has argued also that dilettantish attempts to combat inflation through price control may be ignored. Inflation is existent and its extent has been indicated. That a cheap money policy is an ingredient in the situation and that deflationary measures are necessary are forgotten dogmas of the orthodox. No alteration in exchange value can be expected but the further depreciation of the rupee's value must be avoided in the interests of propertied classes who pay taxes and subscribe to loans. The mere fact that industry does not languish and the State has few enterprises in hand dissociated from the war and is at present pursuing a policy of paying out crores every week shows that a rigid or correct monetary policy will not be adopted merely on academic advice. Yet to suggest that large liquid resources are kept mainly because of a fear that repayment of loans in a greatly depreciated currency would be unprofitable for the investors is not improper. That appears to be as vital a consideration as any at present, and the implicit acceptance of the conventional view by the Finance Member is more hopeful than it seems.

(From Our Correspondent)

THE Bombay Loan (3 per cent) was oversubscribed in fifteen minutes; those minutes belong to the era of the New Standard Time which dislocates business in *Urbs Indis Primus* because in tampering with the clock by a turn on the dial, Bombay suffers most in meridian accounts. Calcutta may be improving in efficiency but not Bombay at her longitude, particularly the banks and the counting-houses. A few days ago, the clearing hours were put forward by 30 minutes; then came the new-fangled offer cheating us of one hour with the result that business activity suffers from a deficit of one-and-a-half hours neat, without soda. The cashing of clearing-house cheques has been affected by the innovation. And Bombay has an incorrigible blister called Bombay Time which the Corporation religiously maintains behindhand as a token of its independence.

* * * *

The so-called reform is bound to be a dead letter in Bombay. In Mosaic Law, he that altereth the landmark of his neighbour, is accursed. The great law-giver thought only of alluvial space, not of everlasting time, but interference with the clock and calendar can cause trouble. Bank-clerks regard the change as a heavy imposition and Indian banks sent up a memorandum that the clearing-house hours should be revised. There was a conference between the Indian Banks and the Exchange Banks, but the Exchange Managers stood by the Government decision with the tenacity of Clive Street standing by Mr. Churchill's sentiments about India as against the Arthur Moore school of thought. The Indian Banks were outvoted, but really the reform is a hardship for Bombay in her latitude. The sun here rises at 7-30 but by the time Hitler is caught in the grip of winter, the sun under which the British Empire never sets, shows up on the horizon only at 8-25 a.m. in Bombay. The Exchange Banks have the rule that they should open at 9-30 which, according to an authority, means "early morning sharp." My presentiment is that the Exchange Banks would give way, putting efficiency above prestige, since the difficulty is real in Bombay. The question is likely to be raised at the next meeting of the Reserve Bank Board. Popular convenience in such matters should be the sole criterion.

* * * *

The accounts of Pandit Jawaharlal Nehru in the firm of the late Jamnalal Bajaj have been examined by the C.I.D.; three motor-cars belonging to Bharatiben, Giraben, and Gitaben, daughters of Seth Ambalal Sarabhai, have been attached by the police in lieu of Rs. 200, the fines imposed. An appeal to share brokers to call off the strike and resume trading was made by Mr. K. R. P. Shroff presiding over the informal general meeting of the Native Share and Stock Brokers' Association (Bombay Stock Exchange). He said that the prolonged closure of the market would defeat its own purpose and injure the interests of the members themselves. He also reminded the brokers that business was being done privately and suggested that it was better to do that business by throwing the market open as usual. Some of the members thought that trading might be done on the last three days of the current settlement in order to enable the members to liquidate their outstanding business on forward accounts; but felt that there was no need to resume trading immediately.

* * * *

Business is dull and there is a sort of aimlessness in market operations. Still there is no lack of benevolence in Bombay. Sir Cusrow Wadia has given a donation of Rs. 7 lakhs for a land-development trust, accompanied by annual Government contributions. The problem of food and kerosene still remains unsolved. The idea of mixing kerosene with vegetable oil for lighting purposes is a fad of Adviser H. F. Knight, but it has proved to be a difficult blend. Our Governor has just presided over a meeting in Poona held under the auspices of the Rural Development Board to which Sir Chunilal Mehta had been recruited. As a result of the Grow-More-Food Campaign, the Director of Agriculture expects a spurt of 30 per cent increase this year in the out-turn of the harvest. The designer of the new lamp to illuminate kerosene-starved households is an officer of the Bombay Port Trust and the name of the contraption is "Noorindad," an Islamic name to pair off with the Madras invention dubbed "Ramdip," meanwhile oil is nearly gone for the Deepavali season when damp squibs are hardly any good.

* * * *

A suggestion that the Administrative Board for control of sugar should have in it a large proportion of representative men of the business community, has been made by the Indian Merchants' Chamber, Bombay, in the course of a representation to the Government of Bombay on the problem of sugar scarcity in the City. The Chamber has drawn the attention of the Government to the difficulties created or the lower middle class, and the poor people, by the scarcity of sugar, and suggested that the supply of transport could be increased if no wagon, which is not a full complement wagon, is allowed to be carried. The Chamber has further suggested that attention should be paid more to the motor transport, and since petrol is scarce, motor transport can be utilised with the help of coalgas plants. The Chamber has also drawn the attention of the Government to the great difficulties which are being experienced in getting rice, and requested the Government for immediate solution of this pressing problem in the interests of the public at large.

* * * *

Hitherto Bombay's A.R.P. has relied exclusively on volunteers to run its first aid service. As this has not proved completely satisfactory the Joint Civil Defence Committee has decided on a scheme for paid casualty services, and this has been accepted by the Government. There are 41 first-aid posts in Bombay, plus ten more in the casualty wards of hospitals. The hospitals staff own posts, and for the other 41 it has been decided to have a fully paid staff, with two part-time doctors, one nurse and five first aiders say as you play.

* * * *

The Central Committee of the All-India Manufacturers' Association was held last Sunday, Sir M. Viveswarayya presiding. He spoke of retarded developments, but the passage that struck one most was the following:—"The British Prime Minister in his speech on India the other day stated that the Indian National Congress which is fighting for the freedom of the country was sustained by certain manufacturing and financial interests.' I am not personally aware that any funds have been given to this cause by the interests named, but even if they have been given, there can be no moral turpitude in such an act. Do not English business men contribute to party funds and get protection and help in their worldwide economic enterprises? In India too it should be recognised that for developing Industries we want economic freedom without political freedom. The struggle in India to-day is to seek amelioration or relief from conditions which threaten to stabilise poverty and make it difficult for the vast masses of our population to keep themselves alive."

Resume of Commodity Markets

There are no outstanding features in the several commodity markets to be recorded during the week. Only the jute and jute manufactures markets have continued firm. The strength of the jute market especially has been very pronounced. The bullion markets have not been active while the piece-goods market has been firmer. The Bombay raw cotton market still remains closed and it is expected that business will be resumed shortly with the activity on the stock exchange and the restoration of normal conditions in the City.

With regard to primary commodities the position is as difficult as ever and it has been recognised on all hands that controlled prices have been ineffective. If the measures proposed by the Sixth Price Control Conference are to have any effect, the authorities should ensure a more effective distribution and production of the necessary commodities. In spite of the reports that efforts have been made to relieve the position in regard to sugar needed by Bengal prices for the commodity are quoting considerably higher than the controlled rates. In the black market too it is not possible to get one's requirements adequately. The preference given to Bengal in the allotment for sugar should, it is expected, go a long way to relieve the shortage but as yet no large supplies have been received. With the approach of a new season, and the possibility of large wagon supplies, it is believed that it will be possible to bring down rates to normal levels.

Jute

As pointed out above, the jute market has continued very firm with sellers showing a reserved attitude and offering very little. Mills are buyers of any quantity offered and are prepared to pay substantial premiums. The report of the Indian Central Jute Committee points out that supplies of raw jute for 1942-43 season are sufficient to meet the total demand during the season and also build up stocks to a moderate size at the end of the season. It reveals that investigations during the year under review under agriculture, technological, marketing and economic problems of jute have reached an important stage and experiments in the improvement in the jute forecast figures have proved successful.

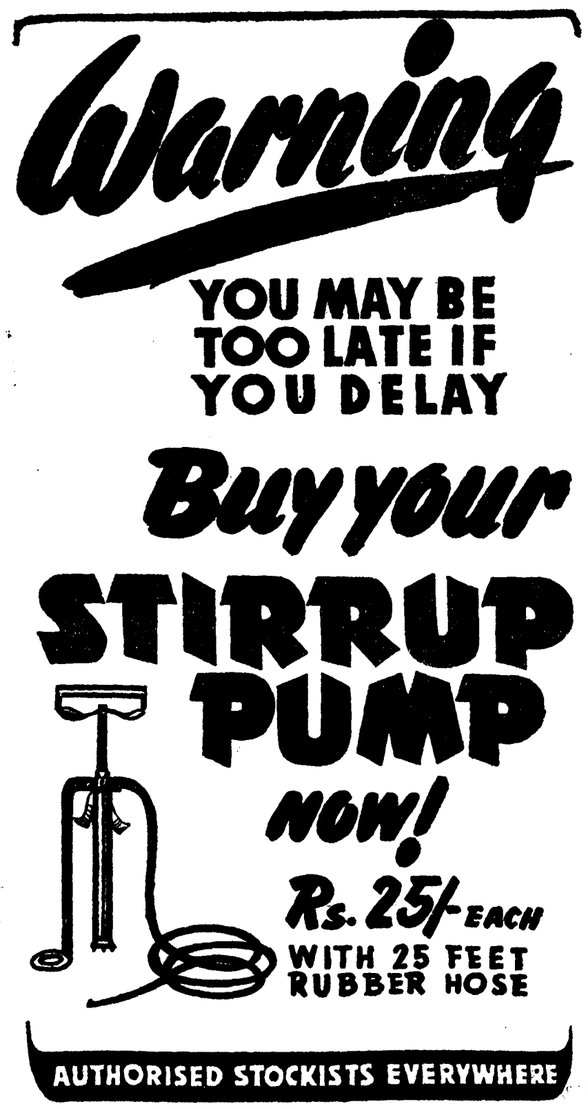
Reference has been made elsewhere to the possibility of a collapse in prices once the present demand by mills is satisfied and supplies of new crop become easily available. It is generally expected that the yield of the crop for the current season will be much more than is indicated by the final forecast figures and as such, the surplus carried over to the next season would have a depressing influence on jute prices. The necessity for the stabilisation of jute prices over a period cannot be over-emphasised if it is borne in mind that the quotations for other commodities are considerably higher and that the producer of primary commodities stands to benefit considerably. There has naturally been some agitation for the declaration of policy by the Bengal Government in this regard and an enforcement of the assurance by the Central Government to afford financial relief in case of a depreciation in jute values.

Jute Manufactures

Heavy goods continue to be in good demand. Mills have not much of surplus production to sell for early positions. If hessian prices are a shade better it is only because of the jute and heavy goods sections. The stock consumption figures for the U. S. again make discouraging reading. Though the Indian Central Jute Committee is of the opinion that the market for Indian jute manufactures in the U. S. can be further expanded provided the Indian mills take the initiative in taking up new lines of manufacture, the difficulties in regard to shipping are insuperable and if there is an improvement in the position, it cannot be expected that preference will be given to non-essential materials.

Tea

In this week's auctions for teas for internal consumption 10,915 packages of black and green teas were offered for sale. Though there was a very substantial demand the tendency was irregular. Broken grades advanced by 6 pies, leaf grades by 1 anna, fanny and tippy sorts by 1 anna to 2 annas. Dusts also met with a very strong demand.



Bullion :

Thanks to the improvement in the war situation the silver market has not been very active though the undertone is very firm and the general trend is still upward. There seems to be no apprehension regarding any major upward movement in prices for stocks of silver are reported to be large.

Sugar

The difficult position in regard to sugar is indicated by the latest notification by the Sugar Controller for India, which directs that no sugar in consignments of more than one bag shall, with effect from the date of this notification, be offered for transport by rail by a consignor or accepted by a railway for transport from any railway station in a province specified in the first column of the schedule except under a permit issued by the Sugar Controller for India or any other person authorised by him in this behalf.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, September 24.

ALL the figures in connection with the Final Jute Forecast have now been published and although the event elicited the very minimum of interest as compared with days gone by, few will regret the passing of the Fatka and its wild gyrations engendered by the issue of the Forecast. Nevertheless there are certain features of the figures which warrant comment. In the first place, no changes have been made in the Final figures for last year with the exception of the case of Assam, which was revised in the Review recently published by increasing last year's acreage by 28,300 and the yield by 51,500 bales. Very considerable revision of the preliminary acreage figures for the season's crop has however taken place mainly in a downward direction. Assam acreage has been raised by 36,000 from the preliminary estimate and Orissa by 11,000. But Bihar has been reduced by 6,000 acres and Bengal by no less than 4,77,500 acres. In fact the only Bengal district which has been revised in an upward direction is Rajshahi, where the area has been increased by 26,000 acres. We remarked at the time of the preliminary Forecast on the apparent backwardness of this district as compared with its neighbours in increasing its acreage. With this exception, almost every Bengal district shows a substantial reduction on the acreage recorded in the preliminary Forecast. Rungpur has been reduced by as much as 72,000 acres, Faridpur by 62,000, Mymensing by 58,000, Tippera by 51,000, Dacca by 48,000 and other districts by smaller areas. Overhead therefore, the area under Jute in Bengal, Assam, Bihar and Orissa is now recorded as 32,91,720 acres, a reduction of roughly 4,36,000 acres as compared with the Preliminary Forecast, but an increase, as compared with last year's revised figures, of 11,31,000 acres.

The yield is returned as estimated at 90,14,130 bales as against the revised figure for last season of 54,74,015, an increase of 35,40,000 bales or almost 65 per cent. This yield shows an out-turn of 2.43 bales per acre, which rather low estimate is mainly accounted for by very pessimistic estimates of the out-turn in Bihar and Assam which are returned at no more than 1.52 and 1.73 bales per acre respectively. The yield for Bengal itself is an average one of 2.94 bales per acre, not far removed from the time honoured rough and ready ratio of three bales per acre. Taken all over, the Forecast may be accepted as reasonably accurate though probably still an underestimate of the jute which will ultimately prove to be available out of the current crop.

The usual periodic uninstructed agitation has arisen in the Bengal Legislature for the fixation of a minimum price on Jute and the restriction of the next crop to 33 per cent of the 1940 crop. Exactly why this question should be raised just now is not clear for it cannot be claimed that the cultivator is not getting a reasonable price for his produce. Presumably it is because an idea is prevalent that there is much more jute visible than can be absorbed by world requirements. But is this really the case? Let us examine it in the light of all the figures now before us. It is an open secret that those in authority in the Mill Industry will be very loth to see any further reduction in working hours if it can possibly be avoided. And if any solution can be found to overcome the seeming reluctance of the U.S.A. to purchase Hessians, and the demand for Sacking goods continues on anything like the present level, there should be no occasion for hours to be reduced. The shipping position for export is reported to be pretty satisfactory and there is no reason to anticipate that the off-take of manufactured goods will not be maintained, if not improved. At the moment, with the heavy proportion of Sackings being manufactured, Mill's production is averaging very nearly 100,000 tons of goods per month. This rate of production predicates a consumption of roughly 70 lakhs of bales of jute in the season. Moreover, it is notorious that Mills have allowed their stocks to drop to an uncomfortably low level and will in all probability wish to reinstate them to the region of 30 lakhs of bales by the end of this season. It is quite on the cards, therefore, that Mills may purchase up to 75 lakhs of bales at the very least out of the current crop. Added to that an Export demand of not less than 15 lakhs of bale between Dundee and America and the 90 lakhs of bales forecast as the outturn of the current crop is completely absorbed. It seems scarcely the time to begin talking of any drastic restriction of the crop to be sown early next year.

Then as to the proposal for a minimum price of Rs. 8 per maund for what is described by its advocates as a "Rejection Bottom," which is not a grade recognised by the Industry, but presumably refers to the "Cross" mark or throw-out tangled jute. It is not made clear whether this represents the price landed in Calcutta or the price to be paid for the lowest grade of jute to the cultivator, for it must be remembered that even the rate paid in mofussil markets does not reach the cultivator intact. If the cultivator is to get Rs. 8 for his lowest grade of jute, he will be so well off that there will be no inducement for him to prepare the fibre decently, as the sketchiest attention to the preparation will net him 100 per cent profit and the more root and bark he can leave in the fibre, the more weight he will have to dispose of. This is no method to improve either the interests of the cultivator or of the main industry of Bengal. Further, the fixation of an unduly high rate on the lowest quality will inevitably result in a contraction of the margin between grades, again minimising the inducement to produce decent quality fibre by proper careful handling.

In essence therefore, the proposals amount to nothing more or less than a scheme for subsidising the payment of a premium for the production of rubbish. There is also another aspect of the situation to be considered. Mills are already under contract to Government for the production of very considerable quantities of goods at prices well under the open market rates. If any attempt is made to raise the price of raw material by the fixation of minimum prices, Mills could justly claim a revision of the prices of their Government contracts.

At the present moment, no aspect of the jute situation can be considered without reference to the transport position. We have pointed out above that there is every reason to anticipate that the Indusry, here and abroad, will be able to absorb all the jute in sight this season. But the question still remains whether the inland transport facilities will be able to bring the total quantity to market. This matter is at present being studied by the Regional Priorities Committee and it is to be hoped that the somewhat chaotic conditions prevailing at present will be improved as a result. But the proposals of the Minimum price advocates apparently envisage the purchase of jute by Government with a view to maintaining prices at a high level. Where and how is it proposed that such purchases will be dealt with? It has been shown that every maund of jute which can be brought down to Calcutta for many months to come will be hungrily taken up by Mills and for Export. In fact considerable improvement must be effected in the transport facilities at present available if the whole of this year's crop can be brought to market within the limits of the season. Dealers' godowns up-country are jammed with jute awaiting shipment. Where then could any Government purchases of jute be stored? It is obvious that this part of the scheme is impracticable and not worth a moment's consideration. Previous experiments in minimum price control in the Industry have neither been too happily conceived, nor shown any tangible benefits and no repetition appears to be called for in present circumstances, and consideration of the question of restriction of the next crop is, to say the least, premature.

In the Pucca Bale market the main business has been with Mills though there has been some export demand for Dundee Daisee assortment at Rs. 62 for shipment up to 15th November, and for Dundee Tossa 4s at Rs. 63 to Rs. 64. Mills have bought a large quantity of Firsts at from Rs. 52 to Rs. 54 for shipment up to November and at Rs. 55 for early shipment. Lightnings sold at Rs. 42 Old Crop and at Rs. 43 and Rs. 44 New Crop, Hearts at Rs. 38-8 and Mixing Cuttings at Rs. 11 to Rs. 12 with N. C. at Rs. 12 ot Rs. 13.

Offerings of Loose jute have been restricted owing to sellers' shipping difficulties. European packing has been taken up at Rs. 9-4 to Rs. 9-8 for Mids and Rs. 6-4 to Rs. 6-8 for Bots. Supervised Jat has fetched up to Rs. 9-4 and Rs. 6-4 while Indian District Bots have sold up to Rs. 5-12. X mark has also been in demand but little offering. Balers continue to pay high rates for ready lots and for Tossa.

In the Fabrics section, while Hessians continue to hang fire with little reported done beyond some Bazar exchanges around Rs. 13-10 for nine porters and Rs. 18-4 for elevens, with 45-11 at Rs. 19-14, Heavy Goods continue very firm with any lots offering for this year readily taken up. "B" Twills have sold at Rs. 43 and Rs. 44 for ready, at Rs. 42-8 to Rs. 43 September and at Rs. 42-8 October|December. Liverpools have been taken at Rs. 51 ready, at Rs. 50-8 September, at Rs. 49-8 to Rs. 50-4 October, and at Rs. 48-8 October|December. "A" Twills sold at Rs. 51 October|December and Cornsacks at Rs. 44 September, and Rs. 42 January|March. Cape Woolpacks fetched Rs. 2-2-3 November and Rs. 2-1 January|March.

JUTE

Calcutta, Sept. 24.

THE raw jute market has been very firm for the past two weeks and sellers are more reserved with mills prepared to pay larger premiums for early shipments. In spite of the fact that plentiful supplies of jute are available in the current season, it appears that the problem of transport will prove to be a very great obstacle and that mills will not be getting their requirements in full for sometime to come. Even with the increased wagon supplies during the past few weeks, it appears that mills have been obliged to eat into their old stocks which at the present rate will be used up during the next three or four months. Production difficulties, mainly technical, sometimes crop up as large quantities of jute now brought by the railways are not quite suitable for the production of certain kinds of jute manufactures. With the continuance of the present conditions, it cannot be possible therefore to prevent the widening disparity between Calcutta and the mofussil prices.

Difficulty in transport facilities has to a certain extent benefited the ryot insofar as he has been able to realise a higher value for a portion of his crop for the current season but it is feared that a greater portion of the premiums offered for early shipments is swallowed up by the middlemen and balers who are more influentially placed. The progressive coalition party has, therefore, been anxious to stabilise jute prices and it is reported that it has appointed a committee for the purpose. At a meeting of the sub-committee early this week it was decided that minimum prices should be fixed for the new crop. It has also been recommended that a declaration should be made to the effect that sowings for jute for 1942-43 should not exceed 33 percent of the total recorded acreage in 1940 as amended in 1941.

The Loose jute section, as explained above, remained firm. Sellers are reserved and offering very little. Indian District Cross Bottoms were done at Rs. 4-6 to Rs. 4-8 per maund. Indian Jat Middles and Bottoms were done at Rs. 9-4 and Rs. 6-8 respectively for September/October shipment. Balers were reported to be interested in District and Tossa varieties at varying rates.

The pucca bales section also has been very firm and a further rise in prices for all varieties has been reported. New crop Dundee Daisee 2/3 are two points higher at Rs. 62 per bale and old crop Tossa 4's at Rs. 64 per bale. Firsts 2/3 were done at Rs. 54 per bale for ready shipment and Rs. 57 per bale for October. Lightnings 2/3 for October-November deliveries were done at Rs. 44 per bale. Some business has been reported in N.C.'s at Rs. 13 per bale.

JUTE MANUFACTURES

Calcutta, Sept. 24.

The jute manufactures market has not been very interesting but quotations are higher in sympathy with the strength of the jute market. Some near covering has been reported by secondhand dealers. 9 porters ready are quoting Rs. 14-5, October Rs. 14-6, November/December Rs. 14-8 and January/March Rs. 14-12. 11 porters ready are Rs. 18-5, October Rs. 18-6, November/December Rs. 18-8 and January/March Rs. 18-12. It will be noted that quotations are higher by 4 annas over the week. Enquiry from oversea markets is still very poor and it is feared that with the existing freight position and the control regarding consumption in the important oversea markets it will not be possible to expect any substantial increase in exports in the near future.

In the heavy goods section firm conditions continue to prevail. Business has not been possible freely owing to the reserve on the part of sellers. Liverpool twills are Rs. 50-8 for September delivery, B. twills Rs. 42-8 and Cornsacks Rs. 44.

The U. S. stock and consumption figures for the month of August are again disappointing, consumption being still low at 16 million yards, the same as in the preceding month. The consumption for the corresponding month last year was 60 million yards. The shipping position appears to have slightly improved. Stocks afloat are shown at 38 million yards against 32 million yards in the previous month. Stocks spot are lower by 17 milion yards at 69 million yards.

JUTE SEASON 1942—1943.
MONTHLY STATEMENT.
For the two months ending 31st August, 1942.

	July|Aug. 1942 Bales.	July|Aug. 1941 Bales.
Estimated Stock in Calcutta on 1st July, carried over from previous crop ..	4,50,000	14,00,000
Calcutta Imports ..	7,24,000	9,42,000
	11,74,000	23,42,000
Exported from Chittagong	*	*
	*	*

	July|Aug. 1940 Bales.	July|Aug. 1939 Bales.
Estimated Stock in Calcutta on 1st July, carried over from previous crop ..	3,50,000	1,50,000
Calcutta Imports ..	9,32,000	11,55,000

Received by mills ..	*	6,89,000
	*	13,12,000

Government Forecast	July|Aug. 1942 Bales.	July|Aug. 1941 Bales.
	90,14,000	Not yet issued.
Received	*	*
Balance to come forward	*	*

Government Forecast	July|Aug. 1940 Bales.	July|Aug. 1939 Bales.
	Not yet issued.	Not yet issued.
Received	*	11,62,000
Balance to come forward	*	..

Calculated at 82 2/7 lbs. to the maund and 405 lbs. to the bale.

*These figures can no longer be calculated as Government have ceased to issue their monthly Export return for Jute shipped from both Calcutta and Chittagong.

GOLD

Calcutta, Sept. 24.

The gold market has not been very active and quotations are fluctuating more or less around last limits. Speculative business has been on very small scale, due possibly to the improvement in the position in the Pacific and the advance of the Russians at Stalingrad. Sovereigns, however, are slightly higher at Rs. 42-7.

SILVER

Calcutta, Sept. 24.

The silver market also has been firm during the week and quotations are even slightly higher on balance. Early in the week under report a slightly easier tendency was noticeable on small selling by speculators on receipt of supplies of silver from the mint. The close, however, has been firm and the lost ground has been completely regained. In the Bombay market business has not been resumed. Locally, silver is quoting at Rs. 90 against Rs. 88 at the end of last week.

There is no change in the quotation in the London silver market, both forward and spot quoting 23½d. The market is quiet but steady.

PIECEGOODS

Calcutta, Sept. 24.

The piecegoods market has continued active with buying for the Puja season on a grater scale. Supplies from Bombay and Ahmedabad continue to be in small quantities and enquiry for standard lines remains unsatisfied. It is reported that mills in this presidency have been able to do large business in the inferior varieties. There is as yet no report regarding the arrival of supplies of 'standard cloth'. With the Puja festivities due to begin in the first week of October it is not necessary to point out that there is only a very short time left for the poorer classes to buy up their requirements. If supplies are received earlier it will avoid unnecessary rush for buying.

Stock Markets to-day and to-morrow

ALL ROUND RISE IN PRICES

AFTER the Japanese entry into the war, stock markets in this country have been for the first time active. The upward movement which started in the Calcutta market two weeks back has gained momentum and in Friday's session the highest levels, in several cases, for the current year have been touched. The activity in the Bombay market, which resumed business after nearly six weeks on Wednesday this week, has had a stimulating effect on the Calcutta market. The position in this regard was discussed at length by *Eavesdropper* in *Clive Street Gossip* in the issue of *Indian Finance* last week and it was concluded that the time was quite appropriate for a new major upward movement though one would like to wait till the end of November to take a definitely optimistic view.

The behaviour of the markets in the last two days suggests that there has been forced bear covering and that there was a heavily over sold position in some of the important counters. It is reported that there is a shortage of scrips in Indian Irons and that deliveries are considerably delayed. In Friday's session Indian Irons touched a level as high as Rs. 33 and are at the time of writing only slightly lower at Rs. 32-10. The final dividend is expected in a few days and kuowledgeable circles seem to be confident of even a higher dividend. Even otherwise, at Rs. 33 cum. dividend, the return on the shares is more than 6.5 per cent tax-free, much higher than the yield on Steel Corporations. Burn & Co., have registered a further rise of 25 points during the week. In recent weeks the shares have improved from Rs. 330 to Rs. 390.

It is quite natural that textile issues have been active. *Bengal-Nagpur* are quoting at the high level of Rs. 27-8.

In the Bombay market also a substantial rise in prices has been recorded all round. With accumulation of orders there has been forced bear covering. The technical position is very sound. After the end of the current month there will be no forward trading and outstanding business will have to be squared up before the end of the month.

* * * *

It was generally expected that with the enthusiastic reception accorded to the Bombay Government loan, the lists being closed fifteen minutes after reopening, the other loans also will meet with success. Unfortunately, the loans of the Governments of the Central Provinces and Bearer, Madras and the Punjab were fully subscribed only after the transfer of options from the Bombay loan and a call on the underwriters. With the attractive terms of the loan it was generally expected that there will be no difficulty in finding the money but it appears that investors are now appreciating to a greater extent the prospects of equities. This diversion of interest to industrials is perhaps one of the reasons for the recent upward movement. If, such is the case, the present upward trend in prices may not prove to be short-lived. We have always to take into consideration, however, the developments in the war situation. At the moment the position appears to be favourable.

* * * *

The coal industry apparently has not been able to make any appreciable progress during the half-year ended June, 1942. The dividends of Equitable, West Jamuria, Dhemo Main and Mundulpoor are to be maintained at As. 12, Re. 1, As. 2 and As. 4 per share respectively. The accounts are not yet available. Recently there have been reports that increased wagon supplies have been made available to the industry and that it will be possible to transport a larger amount of coal.

* * * *

The accounts of the *Alliance Jute Mills Company, Limited* for the half-year ended July, 1942, shows a substantial decline in the earnings over those for the previous half-year. This is not surprising as conditions in the industry have been anything but favourable for trading. The net profit before providing for taxation, for the half-year is Rs. 8,92,768 against Rs. 15,06,446 for the previous six months. The amount set aside to depreciation is lower at Rs. 50,000 (Rs. 1 lakh) while the provision for taxation is Rs. 5.75 lakhs (Rs. 10,23,363). The amount transferred to Reserve is Rs. 1,05,000 (Rs. 1,74,340). The dividend on the ordinary shares is lower at Rs. 7-8 per share against Rs. 12-8 per share.

There has been a substantial increase in the earnings of *Port Shipping Company, Limited* for the half-year ended June, 1942. There is a great demand for transport facilities and it is pointed out that it has not been possible to complete the annual overhaul of the fleet this year. The net profit before providing for taxation is Rs. 2,09,875 against Rs. 1,12,777 in the corresponding period in 1941. With the substantial allocation to reserves, however, the dividend has been only maintained at eight annas per share.

* * * *

According to the *Indian Finance* Daily Index of Stock and Shares the present upward movement is to be traced back to September 4, 1942. The index for All-shares has risen from 120.89 on September 4, 1942 to 124.35 on September 23, 1942, a rise of more than three and a half points on balance. This is the first pronounced rise in the index in several months. The recent rise in the index is mainly due to the strength of Cotton, Engineering and Sugar shares.

* * * *

According to the Government of India Defence Department notification No. 1564-OR/4, dated 7th September, 1942, the accounts of public utility companies cannot be published. Only the dividends for the half-year ended March, 1942, of the Agra and U. P. Electric Companies have, therefore, been published. They are to be maintained at six and eight per cent per annum respectively.

* * * *

There is a significant rise in the quotation for A.-C.-C. For a long time it was stagnant around Rs. 164. The present quotation is Rs. 184. There is now great demand for cement and sales for civil consumption are controlled. The company has a very high level of earnings for the standard period. It is, therefore, expected that it will be possible to declare a higher dividend with an increase in earnings. The highest dividend declared by the company hitherto is 7½ per cent. It will be remembered that the dividend for the year ended July, 1941, was increased to 6 per cent from 5 per cent for 1939-40.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, September 25.

THE Calcutta Stock Exchange has been rather brisk during the past week and a considerably larger volume of business has been put through in the Engineering, Cotton, Sugar and Miscellaneous sections. The successes of the United Nations in the South-west Pacific and the stubborn resistance offered by the Russians at Stalingrad have had an encouraging influence on the market. The general opinion seems to be that there is no immediate danger to this country. This view cannot perhaps be justified but operators are often ahead of others in anticipating developments. The firm reopening on the Bombay Stock Exchange after a long time has also been helpful. The important feature of the week is the sharp rise in Burn & Co., shares to Rs. 393 in anticipation of a higher dividend. Indian Irons and Steel Corporations also have been marked further higher. The undertone in the several sections is firm and it is expected that, if the present conditions to prevail, it will be possible to stage a further improvement in values.

The giltedged securities section has continued steady and quotations are more or less unchanged. There has been a diversion of attention to other sections. 3½ per cent Paper is quoting Rs. 94-1. Among terminable loans, 3 per cent 1963-65 were Rs. 94-12, 3 per cent Defence Loan 1949-52 Rs. 100-4, 3 per cent 1946 Defence Bonds Rs. 102-4, 3½ per cent 1947-50 Rs. 102-15, 4 per cent 1960-70 Rs. 109-8, 4½ per cent 1955-60 Rs. 113-8 and 5 per cent 1945-55 Rs. 109-2. Among provincial loans, only one transaction has been recorded in 5 per cent U. P. 1944 at Rs. 104-4. The prevalence of easy money conditions is borne out by this week's results at the treasury bills auctions. The average discount rate shows a decline from nine annas and ten pies per cent per annum to nine annas and two pies per cent per annum this week.

Coal shares have not been quite active but quotations are higher with *Amalgamated* at Rs. 26-8, *Nazira* at Rs. 8-1, *Raneegunge* at Rs. 26-4, *Standard* at Rs. 20-8 and *Talcher* Rs. 2-9.

Cotton shares have been in great favour. *Bengal-Nagpur* have been marked further higher and the quotation is now Rs. 27-4. The accounts for the last half-year are eagerly awaited. *Cawnpore Textiles* were Rs. 11 and *Muir Mills* Rs. 335. *Kesoram* were Rs. 12 and *Dunbar* at Rs. 262. *New Victoria* were Rs. 6-15.

Jute shares also have been slightly higher in sympathy with the strength of the other sections. *Anglo-India* were Rs. 333, *Bally* Rs. 237, *Hukumchand* Rs. 15, *National* Rs. 22-5, *Nuddea* Rs. 66-8, *Naskarpara* Rs. 18 and *Union* Rs. 303.

In the Engineering section, *Indian Iron* have been active and it is reported that the largest business in this counter for several months has been put through. The final dividend for the year ended March, 1942 is eagerly awaited. The quotation is three points higher on balance at Rs. 32-10, the highest quotation for the week being Rs. 33. The rise in the quotation for *Steel Corporation* is not quite pronounced. It has to be remembered that even at the higher level Indian Irons afford a greater yield on the basis of last year's dividend distribution. There has been a jump in the quotation for *Burn & Co.* by over thirty points. The dividend is due to be announced any moment. *Bhartia Electric Steel* were Rs. 15, *Braithwaite & Co.,* Rs. 9-4. *National Iron and Steel* were Rs. 12-4 and *Kumardhubi Engineering* Rs. 5-8. *Jessop & Co.* were Rs. 19-14.

Sugar shares have been steady with *Buland* at Rs. 30-14, *Carew & Co.* at Rs. 14-2, *Champarun* at Rs. 25-1. *Ryam* were Rs. 28-5 and *Samastipore* Rs. 14-5.

In the Miscellaneous section, *Indian Copper Corporation* and *Burma Corporation* were noted at Rs. 2-2 and Rs. 2-3 respectively. *B. I. C.* were firm at Rs. 5-8. *British Ceylon Corporation* were crossed at Rs. 9. *Calcutta Safe Deposit* were Rs. 6-12 and *Walford Transport* Re. 1-12. Paper shares have been firmer with *India Paper Pulp* ten points higher at Rs. 157. *Titaghur Paper* were Rs. 20-6, *Shree Gopal Paper* Rs. 19-6 and *Orient Paper* Rs. 23-8. *Assam Saws* are sharply higher at Rs. 4-4. *Tide Water Oil* were Rs. 13 and *Humayan Properties* ordinaries Rs. 7-10.

Business in public bodies debentures has been rather limited. 3¼ per cent *Howrah Bridge* debentures were Rs. 94-8. 3 per cent *Calcutta Municipal* debentures were Rs. 90-4. 5½ per cent *Calcutta Improvement Trust* debentures were Rs. 116.

A larger amount of business has been put through in first class jute mills preference shares. *Anglo-India* are nearly four points higher at Rs. 155. *Clive "A"* preferences were Rs. 145, *Hukumchand* Rs. 134-8, *Kamarhatty* Rs. 139 and *Lansdowne* Rs. 136-8. *Kumardhubi Engineering* were crossed at Rs. 150. *Steel Corporation* are sharply higher at Rs. 123-8. *B. I. C.* were Rs. 182 and *Northern India Oil* Rs. 118.

BOMBAY STOCK EXCHANGE

Bombay, September 25.

REOPENING after the lapse of one and a half months the Bombay Stock Exchange has been very firm during the past two days. The strength of the Calcutta and Madras markets has had an encouraging influence. Wednesday's session was rather active with textile issues in the forefront but in Thursday's session Steel issues have been more prominent and a substantial rise in quotations has been recorded. The general outlook is regarded as satisfactory. It appears that investors have got tired of waiting. In their opinion the war situation has definitely improved.

Giltedged securities have been steady with 3½% Paper quoting Rs. 94-1. Among terminable loans, 2¾ per cent 1948-52 were Rs. 98-15, 3 per cent 1949-52 Rs. 100-4, 3 per cent 1951-54 Rs. 98-14 and 3 per cent 1963-65 Rs. 94-8. 4 per cent 1960-70 were Rs. 109-8 and 5 per cent 1945-55 Rs. 109-2.

Textiles issues have been very firm with the favourites in good demand and marked substantially higher. *Bombay Dyeing* are two hundred points higher at Rs. 1,452-8. *Central India* were Rs. 407, *Century* Rs. 507, *Kohinoor* Rs. 545, *Sholapur* Rs. 7,000 and *Simplex* Rs. 242-8. It is unnecessary to emphasise that the outlook for the industry is very bright and that the problem at the present moment is that of producing enough.

Hydro-electric issues have been firm with *Tata Power* at Rs. 1,620, *Tata-Hydro* at

(Continued on page 564).

THE MYSORE CHEMICALS AND FERTILISERS, LTD., MYSORE

*Accounts shown for nine months ended 30.6.1939.

(*Annual meeting, 3rd October, 1942 at 4 p.m. at Bangalore. Dividend is payable on or after 10th October, 1942*).

Audited accounts for the year ended 30th June, 1942:—

The accounts show a net profit of Rs. 10,26,220-7-2 after setting apart the sums needed for Depreciation, and provision for Income and Super-Tax, and also allotting Rs. 5,000 to Workmen's Compensation Fund, created last year with a view to meet claims arising under the Workmen's Compensation Act. This net profit together with the balance of Rs. 83,319-3-5 brought forward from the last year's Profit and Loss Account, makes a total of Rs. 11,09,539-10-7. The Directors propose to dispose of this amount as follows:—

	Rs.	A.	P.
To declare a Dividend of 10% together with a Bonus of 10% free of Income-tax	4,35,856	0	0
To Cane Price Stabilisation Fund ..	6,00,000	0	0
To carry forward	73,683	10	7
Total ..	11,09,539	10	7

The Factory commenced crushing of cane on the 1st August, 1941 and continued milling till the 24th May, 1942, when it was closed down for the annual overhaul.

3,32,710 tons of cane were crushed during the year. Almost the entire quantity of sugar produced had ben sold during the year.

The Distillery at Mandya continued to work steadily and satisfactorily. The question of extending the Power Alcohol Plant is being actively pursued.

Secretary.—Mr. H. N. Pallegar.

(*Meeting, 30th September, 1942 at 12 noon*)

Audited accounts for the half-year ended 30th June, 1942:—

	Rs.	A.	P.
The Profit for the half-year after providing for Depreciation was	50.055	14	11
To which is added the balance brought forward of	12.285	4	9
Total ..	62.341	3	8

The Directors recommend that the balance of Rs. 62,341-3-8, available for distribution, be dealt with as follows:—

	Rs.	A.	P.
Dividend at the rate of 10 per cent. per annum	30,000	0	0
Balance carried forward	32,341	3	8
Total ..	62,341	3	8

During the early months of the period the demand was poor but subsequently improved to such an exient that the Factory was able for a time to work to full capacity at remunerative rates which accounts for the improved results shown. Under present conditions, however, it is impossible to forecast future prospects.

Under the Agreement between the Company and the Lightfoot Refrigeration Company, Limited, their Factory did not produce Ice until March 1st, and they sold them theih requirements at a fixed rate over that period.

BASMATIA TEA COMPANY, LIMITED.

Audited accounts for year ended 31st December, 1941:—

After providing for depreciation the season's working resulted in a profit of Rs. 99,256-13-9 and after providing for taxation, making sundry adjustments and placing Rs. 25,000|- to Reserve there remains a balance of Rs. 66,173-8-11 at credit of Profit and Loss Account. From this the directors recommend the payment of a dividend of Re. 1-4-0 per share absorbing Rs. 42,500 leaving a balance of Rs. 23,673-8-11 to be carried forward.

A crop of 3,816 maunds was secured as compared with 3,253 maunds in the previous season. The average price realised was 13 annas 2 pies per lb. as compared with 9 annas 5 pies per lb.

Both the seed garden and plucking areas remained in excellent condition and the crop of Tea Seed was sold at satisfactory prices.

Rainfall for the year amounted to 96.47 inches compared with an average of 98.15 inches for the previous seven years.

Estimates for the current season have been framed for a crop of 3,000 maunds to cost Rs. 83,260|- at the garden and Rs. 36,478|- in Calcutta.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

Authorised Capital—Rs. 5,00,000 *in* 50,000 *shares of Rs.* 10 *each. Issued and Subscribed—Rs.* 3,40,000 *in* 34,000 *shares, fully paid up.*

Synopsis of the balance sheet as at 31st December, 1941:—

JAYBIRPARA (DOOARS) TEA COMPANY, LIMITED.

Audited accounts for the year ended 31st December, 1941:—

After providing for depreciation the season's working resulted in a profit of Rs. 1,06,825-6-4 and after providing for taxation, making sundry adjustments and placing Rs. 15,000|- to Equalisation of Dividend Fund there remains a balance of Rs. 90,770-7-10 at credit of Profit and Loss Account, from which we recommend the payment of a dividend of Rs. 1-12-0 per share absorbing Rs. 61-250|- and leaving Rs. 29,520-7-10 to be carried forward.

The season opened with a severe drought and climatic conditions remained unfavourable until mid-August. Thereafter, the bushes flushed freely and the largest crop since 1929 was secured. Rainfall for the year amounted to 102.82 inches compared with an average of 121.21 inches for the previous six years.

Estimates for the current season have been framed for a crop of 4,612 maunds to cost Rs. 1,09,845|- at the garden and Rs. 50,954|- in Calcutta.

Managing Agents.—Messrs. Andrew Yule & Co., Ltd.

(Continued from page 546).

Rs. 174 and *Andhra Valley* at Rs. 1,637-8. It is noteworthy that there has been a substantial improvement in the quotation for Tata Power in recent months. On account of the new ordinance, promulgated recently, the accounts of the three companies for the year ended June, 1942, will not be published.

Steel issues were not quite firm in Wednesday's session though quotations were higher. But, yesterday, on bear-covering there has been a sharp rise in prices for both Tata deferreds and ordinaries to Rs. 1,460 ex-dividend and Rs. 293 ex-dividend respectively. When markets were closed early in August quotations were around the same levels cum-the-dividend.

In the miscellaneous section, *Alcok Ashdown* were Rs. 510, *Belapur Sugar* Rs. 228, *Bombay Steam* Rs. 375, *B. E. S. T.* Rs. 137-8 and *Scindia Steam* Rs. 22-6. *Shivrajpur Syndicate* were very firm at Rs. 49 as also A.-C.-C. at Rs. 184. With the great demand for cement it is expected that the earnings of the company for the current year will show a substantial increase.

No forward business will take place after September 30. For final adjustment of the outstanding October settlement there will be trading on the market on September 24, 28, 29 and 30.

CALCUTTA STEAM NAVIGATION COMPANY, LIMITED

NOTICE is hereby given that the One hundred and twentieth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 5, Fairlie Place, Calcutta, on the 7th October, 1942, at 12 noon to transact the following business:—

To receive and pass the Direcors' Report.
To pass the Accounts for the half-year ended 30th June, 1942.
To declare a Dividend.
To elect Directors in place of those retiring by rotation.

Notice is further given that the Share Transfer Books of the Company will be closed from the 28th September to 7th October, 1942, inclusive.

By Order of the Board,

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

INTERBANK call money continues to be quoted nominally at ½ percent in Calcutta and ¼ percent in Bombay. The rate for firms' money for call and short is ¼ percent. There is every indication that transactions in the treasury bill market during October will be on a far bigger scale than usual. Treasury bill maturities in October are Rs. 40 crores. The Madras Government are coming on the market next week for Rs. 50 lakhs of three months' bills. The C. P. Government are also tapping the market for Rs. 50 lakhs of treasury bills. In such circumstances, the stepping up in the treasury bill discount rate in the next week is not unlikely. It is also quite on the cards that the Central Government increase the weekly offer of tender bills from the present level of Rs. 6 crores or resume sales of intermediate treasury bills or adopt both these two courses. Realisations from sales of treasury bills will have to be on the basis of Rs. 10 crores per week in order that fresh issues may be equivalent to maturities. Moreover, the Government have taken steps to provide considerable rupee finance against sterling assets withdrawn from the Reserve Bank in connection with sterling railway annuities. Rupee finance in connection with this transaction is the equivalent of £30 million, that is, Rs. 40 crores. For this purpose, a re-issue of 3 percent 1963-65 loan is being made; but the total amount of the new issue is only Rs. 15 crores. In other words, as much as Rs. 25 crores of the rupee finance now being provided is being adjusted by temporary makeshifts. These makeshifts are in the form of ways and means loans from the Reserve Bank and *ad hoc* treasury bills issued to the bank. So far as ways and means advances are concerned, it is obvious that they should be liquidated as early as practicable. The Government will, therefore, like to secure as much as possible from the current sales of treasury bills. There is no reason why the Govt. cannot get more than Rs. 10 crores per week from treasury bills. Banks have now an extremely comfortable cash position, particularly the Imperial Bank. It may be taken for granted that the funds released from treasury bills maturities will be reinvested in fresh bills. It should be certainly possible for the market to put up something like an extra amount of Rs. 2 crores to Rs. 3 crores per week.

On the treasury bills tender day this week, applications came to Rs. 11.72 crores against an offer of Rs. 6 crores. The average rate of accepted tenders was annas 9 and pies 8 per cent per annum as against annas 9 and pies 2 last week. In the next week, Tuesday is the tender day for Central treasury bills; Wednesday for C.P. bills; Thursday for Madras bills. It is also quite likely that the Central treasury bills communique of next week contains the announcement about the increased offer of tender bills and/or resumption of tap bills. Such an announcement should have the effect of making the treasury bills dearer for the C. P. and Madras Governments.

As anticipated, the policy of progressive repatriation of sterling debt has now been extended to sterling railway annuities. The aggregate amount of annuity payments which remain to be made after October 1, 1942, is £34.11 millions. The arrangement now made by the Indian Government is that, for an immediate lump capital payment of £30.05 million, His Majesty's Government have undertaken to make available sums equal to the instalments of the annuities as and when they fall due. The Government of India will thus continue to be liable for the legal obligations with respect to railway annuities. The effect of this transaction is, therefore, that the Government of India have lent £30.05 million to the British Government. We understand that the transaction in effect represents an investment of 2½ percent realisable by varying instalments over a period. If the good offices of the British Treasury have been requisitioned in this matter, a more satisfactory arrangement will have been for His Majesty's Government to take over the legal obligations connected with the railway annuities and to relieve the Indian Government of such obligations. That would have been a simple and straightforward arrangement. All that could be claimed for the present scheme is that no provision need be made in future from Indian revenues in connection with railway annuities.

As we have said, the amount now payable to the British Treasury is £30.05 million. For this purpose, sterling securities equivalent to Rs. 40 crores are being withdrawn from the Reserve Bank. The payment for these securities is to be financed by ways and means advances and the issue of *ad hoc* bills. It is also proposed to make a re-issue of 3 percent 1963-65 loan for Rs. 15 crores. The issue price is 95 percent excluive of accruing interest. The list will open on October 3, and will be closed as soon as total subscriptions amount to Rs. 15 crores or, in any case, not later than the close of business on October 15. The present market quotation of 1963-65 loan is Rs. 94-8. The issue price is, therefore, fixed at ½ percent higher than the market rate. This provides further gra-

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Tuesday, September 29, 1942. Total amount offered was Rs. 11,72,25,000 (Rupees 11 crores 72 lakhs 25 thousand). Tenders at Rs. 99-13-9 per cent and above were accepted in full and those at Rs. 99-13-6 per cent were allotted approximately 45 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-9-8 per cent (Rupees nil annas nine and pies eight per cent) per annum.

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills will be received on Tuesday, October 6, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, October 5, 1942, at other centres. Successful tenderers should make payment on Friday, October 9, 1942, or on Thursday, October 8, 1942, at centres where Friday is a holiday. Other conditions are as usual.

During the week ended September 25, 1942, Government of India Treasury Bills for Rs. 5,01,00,000 (Rupees 5 crores 1 lakh) were sold in favour of the Issue Department of the Reserve Bank of India.

Madras

Tenders for Rs. 50,00,000 of three months' Government of Madras Treasury Bills will be received on Friday, October 9, 1942, in Bombay up to 11 a.m. and up to the close of business on Thursday, October 8, 1942 at the Calcutta and Madras offices of the Reserve Bank of India.

Bills will be of the following denominations, viz. 25,000, Rs. 50,000, Rs. 1,00,000, Rs. 5,00,000 and Rs. 10,00,000.

Each tender should specify clearly the term of the bills applied for, the nominal value of the bills required and the price per cent which the tender is prepared to pay expressed in rupees, annas and quarter annas only.

Successful tenderers will be required to make payment and take up their bills on Wednesday, October 14, 1942.

A tender may be for the whole of the amount offered for tender or for any portion thereof which is a multiple of Rs. 25,000. The minimum amount for which a tender can be made is Rs. 25,000. The amount of tender or tenders submitted by any Bank, individual, etc., must not in the aggregate exceed the amount offered for tender.

If the total of tenders received is in excess of the amount offered, a proportionate allotment will be made. These allotments will, in all cases, be in multiples of Rs. 25,000, the minimum being Rs. 25,000 and in order to effect this the Reserve Bank of India reserve to themselves full discretion to allot a higher or lower percentage, or to make no allotment, to individual tenderers as may be appropriate.

The Reserve Bank of India reserve the right to reject the whole or any part, of any tender without assigning any reason.

A Treasury Bill will be paid on maturity only at the office of the Reserve Bank of India at which it was issued.

C. P. and Berar

Tenders for Rs. 50,00,000 of three months' Government of the Central Provinces and Berar Treasury Bills will be received on Wednesday, October 7, 1942, in Bombay up to 11 A.M. and up to the close of business on Tuesday, October 6, 1942, at the Calcutta and Madras offices of the Reserve Bank of India.

Bills will be of the following denomination, viz., Rs. 25,000, Rs. 50,000, Rs. 1,00,000, Rs. 5,00,000 and Rs. 10,00,000.

Each tender should specify clearly the term of the bills applied for, the nominal value of the bills required and the price per cent which the tenderer is prepared to pay expressed in rupees, annas and quarter annas only.

Successful tenderers will be required to make payment and take up their bills on Friday, October 9, 1942 in Bombay and on Saturday, October 10,1942 at Calcutta and Madras.

A tender may be for the whole of the amount offered for tender. or for any portion thereof which is a multiple of Rs. 25,000. The minimum amount for which a tender can be made is Rs. 25,000.

The amount of tender or tenders submitted by any Bank, individual, etc., must not in the aggregate exceed the amount offered for tender.

If the total of tenders received is in excess of the amount offered, a proportionate allotment will be made. These allotments will, in all cases, be in multiples of Rs. 25,000, the minimum being Rs. 25,000 and, in order to effect this the Reserve Bank of India reserve to themselves full discretion to allot a higher or lower percentage, or to make no allotment, to individual tenderers as may be appropriate.

The Reserve Bank of India reserve the right to reject the whole, or any part, of any tender without assigning any reason.

A Treasury Bill will be paid on maturity only at the office of the Reserve Bank of India at which it was issued.

BUY
DEFENCE LOANS

Finance Abroad

Thursday Morning.

THE growth of the public debt of the United States is admittedly a pointer to big changes still in progress. The anti-inflation bill has not yet gone through, but a debt of 92 billions will make the people there worry about the next increase. The increase since July 1st is put at 13 billions, and it will tax the Treasury's ingenuity to borrow $50 billions in a single year as expenditure is bound to increase hereafter. The threatened conflict between Congress and the Administration has not appeared as yet but Senator Barkley's call to the Southern Democrats not to worry overmuch about higher prices for farm products, is a sign of division in the President's party. The U.S. Administration's tax plans are hardly known as yet, but they will exert some influence on the elections next month. The industrial production trend is favourable and prices of wheat and cotton are going down but the debt is going up; and how each man, woman and child is to save $10 a month for war bonds has not been settled though compulsion has been mentioned openly.

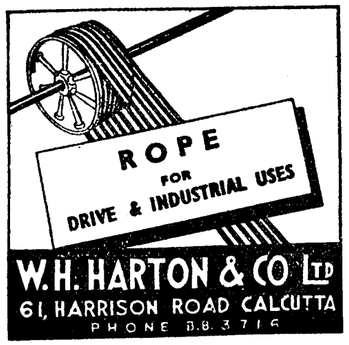
The President's anti-inflation programme remains to be realised. That Britain has no need to copy the drastic procedure proposed has been already indicated by Sir Kingsley Wood who was able to point to the White Paper of July last. The increase in the Purchase Tax and the increased excises on tobacco, beer etc. have had the desired effect on civilian consumption. The Government, if it is confronted with a change in the cost of living after 1941, is getting as much as it wants from taxes, savings certificate and war bonds. The rise in the note issue is not a big problem and the Chancellor has not therefore made proposals for curbing any advance in British prices whatever the U. S. Administration might think.

The anti-inflation bill is not yet law though the Democrats' leaders asked that it should be ready by October 1. One of the most arresting feature in U. S. economy to-day is that corporate earnings in 1942 are lower than in 1941. The physical increase brings no financial benefits. There has been no increase in earnings or dividends and the stock exchange attracts little attention. A small recovery has been noticed latterly in Wall Street but the general impression that the market is heavy since May appears correct. War news is not exactly a stimulus to U. S. investors, and that means that there is no class anxious to see prices in general go up. The war has brought no relief to wage-earners who want that differences in hourly earnings should be rectified before stabilisation is attempted. Paying for the war must be secured largely through other methods is the opinion of the labour leaders who are asking the President to try all other methods before asking wage-earners to consent to waive their rights. American unity is not endangered by the emergence of such differences. The danger from inflation has been mentioned indirectly by Mr. Nelson who has said that the cost of war production in 1942 will go up over 45 billions. Original estimate for a year's war expenditure was 56 billions. The Senate may have taken up the farm *bloc* amendment which would cost the Treasury 1½ billions; but the Administration will soon ask the Lower House or the Finance Committee to reject the Senate's view as to the necessity for permitting higher prices for farm products.

The continuous rise in U. S. prices since August 1941 justifies the kind of control proposed, and the increase in federal debt means that, in spite of reduced civil expenditure, the U.S.A. is short of revenue which must come only through the diversion of free purchasing power to the Treasury. If prices were steadily held there would be no rush for goods and the six-month-old dilemma would soon disappear. The President's difficulties are not dispelled by additions to the Liberty fleet (the 500th ship has been launched) or expansion of munitions production. Production so far has not resulted in any change in strategy and the U.S.A. is still told that nothing can come out of propaganda if reference is made only to time and treasure being on the side of the Allies. The President's victory over Congress may come late but within that time quite big changes might take place in Russia. Hitler may be more than ever in the red but his war goes on.

The U.S.A.'s fight against spending engendered by the rise in all prices is not the only development calling for notice. Japan's efforts to make use of Java's resources have been referred to by Dutchmen who recently escaped. There was no general hardship and the Japs were not quite keen on taking away other people's property say the reporters. What the real plans for Java are can only be guessed but the needs of war industries at home are being met by the removal of iron scrap, rubber, and other vital materials by the Japanese. The reported removal of Java's wealth is not likely to help the shareholder in sterling rubber companies.

The most impressive change in London of late is not the hardening of credit conditions reported last week. Anyway, the Treasury paid less than 1 percent for its usual 75 million offer of treasury bills. If the market syndicate got a better quota than usual it means that the Public Departments were not competing vigorously, as was also shown by the fall in the total volume of applications. But the Treasury is not going to take treasury deposits this week from the Bank and has evidently got at present enough funds to meet maturities. The reduced demand from Banks for bills may be due to demand for money from the stock exchange which is still livening up. There may have been better demand for 'sennight' loans. The majority of price changes have favoured holders and industrials have been outstanding as before. Less interest has been shown in gold minings despite mention of support for Kaffirs last week mainly because Dominion and Colonial taxation does not help producers. Reference has been made in a recent call to a notable improvement in Hawker Aircraft; and Courtaulds as anticipated have turned firmer than ever. Among the oil shares, Shell has made perceptible headway and the former improvement in International Nickel has been supplemented by another jump in the quotation, perhaps due to the quarterly earnings statement from Canada. Anyway, the no par shares stand at over $43 and in point of security and yield can be compared only with Consols.



The slow rise in Industrials recorded week after week has been again helpful to Home Rails. If there has been no rise in giltedged through the last month, the Funds have not lost at all ground. The chief feature mentioned on Saturday last, in a Reuter cable, was a hardening in Mawchi shares and Australian base metal issues, presumably Zinc Corp. and Sulphide Corp. shares. The improvement cannot be due to any changes in metal prices, and in the case of Mawchi Mines the property in the Shan States is in the hands of the enemy. The outlook for Australian shares generally is better in view of the U. S. gains in the Pacific. Any increase of trade with America by sea will help the mining companies which are not hampered by the dividend limitation proposal either. Indian investors, who are distressed by the flatness of Burma mining shares, are not likely to feel happy over any reported improvement in Mawchi four-shilling shares; they are likely to be glad on account of the recovery in Nundydroog (10 sh.) shares which quote 17/6.

The Irish Currency Commission's practice of keeping Eire's currency with sterling has been defended only last week by Mr. Sean Lemass who has been a Minister for over ten years under De Valera. The very brief cable throws little light on the position of the Irish currency but the general position is clear. Eire's trade despite her neutrality is mainly with the U. K. and circumstances demand that the Irish currency should be linked to sterling. Eire's foreign trade has shrunk, and the outlook for agricultural exports is by no means bright. The difficulty as regards imports is well-known. Eire has reason to stick to sterling in view of the agreement of 1938 commuting the Land Annuities. Besides the small external debt in existence, after the Irish Free State was relieved of her liability for a share of the National Debt in 1925, Eire has also to remember that her trade and shipping is largely with Britain and Northern Ireland. The decision to stick to sterling as the best possible link for Eire should have an effect on Guinness and certain other shares.

Three years of War Finance—V

Provincial Budgets

War conditions have effected a change for the better in respect of provincial budgets too, in spite of additional financial burden entailed by police and civil defence measures, dearness allowances, the remission of land revenue, grants to assist cultivators of commercial crops to change over to food grains (in Bombay, Bengal and Madras) and provision made in Bombay and the United Provinces for post-war rehabilitation. The better showing of provincial finances is partly due to fresh taxation imposed by most of the provinces in 1939-40, and largely due to rapid and progressive increase in the share of income-tax accruing to provinces. The improvement in provincial finances may, in part, be also attributed to the stimulating effects of war on receipts under land revenue, excise and forests.

1938-39 showed a combined revenue for provinces of Rs. 84.74 crores and combined expenditure of Rs. 85.76 crores, resulting in a deficit of Rs. 1.02 crores. The budget estimates for the provinces as a whole for 1939-40 were expected to show a deficit of Rs. 1.85 crores. Fresh taxation was resorted to by most of the provinces to meet (1) increasing expenditure as a result of their spending policies, particularly with regard to nation-building departments and (2) the losses in receipts due to the abandonment of revenue on account of the introduction of Prohibition, remission of land revenue, etc. Important among the new provincial taxes were (1) taxes on sales, (2) taxes on property, (3) taxes both graduated and ungraduated on professions or employment and (4) taxes on entertainments, prize competitions, betting, etc. In the revised estimates for 1939-40, however, the deficit was reduced from Rs. 1.85 crores to Rs. 1.13 crores. The final accounts for the year provided a welcome surprise in the shape of a surplus of Rs. 1.61 crores.

Equally gratifying was the experience with regard to 1940-41. The original estimates showed a prospective deficit of Rs. 77 lakhs, combined revised estimates, however, reduced the deficit to Rs. 25 lakhs. The final accounts provided an even more gratifying surplus than in the previous year, the figure being Rs. 2.30 crores. This was due to higher surpluses in Madras, Bombay and the Punjab, the conversion of Assam's deficit into a surplus and a smaller deficit in Bengal.

The original budget estimates for 1941-42 placed revenue at Rs. 95.30 crores, expenditure at Rs. 96.17 crores, and deficit at Rs. 87 lakhs. In the case of Bengal which expected a deficit of Rs. 1.34 crores, the estimates for 1941-42 did not take into account the estimated receipts from new taxation measures such as the General Sales Tax which was passed after the introduction of the budget. The Punjab budget included a small amount of taxation on account of a General Sales Tax and an Urban Immovable Property Tax. The Governments of Madras and Bombay were, on the other hand, able to effect some reductions in taxation. Madras reduced the sales tax from ¼ per cent to ¼ per cent and Bombay lowered the Urban Immovable Property Tax by 20 per cent. The revised estimates for 1941-42, however, show a substantial increase in revenue to Rs. 105.65 crores and in expenditure to Rs. 105.23 crores, the original deficit of Rs. 87 lakhs being converted into a surplus of Rs. 42 lakhs. All the provinces excepting Sind share in the improvement. In the case of most provinces, there were larger increases in expenditure than in revenue.

The budget estimates for 1942-43 are framed on the basis of a combined revenue of Rs. 104.15 crores, expenditure of Rs. 104.67 crores and a deficit of Rs. 52 lakhs. Bengal expects an additional revenue of Rs. 1 crore from the Sales Tax Act, 1941, and Rs. 37 lakhs from the new Bengal Raw Jute Taxation Act, 1941. Bombay has reduced the Urban Immovable Property Tax to 3 5/6 per cent from the 1st April, 1942 despite an appreciable drop in revenue on account of the restricted scope for export of cotton and ground-nuts. In the Punjab, the rate of the new Urban Immovable Property Tax Act, 1940, is raised from 3¾ per cent in 1941-42 to 7½ per cent from 1942-43, with an estimated revenue of Rs. 17 lakhs for the year, while the General Sales Tax Act, 1941, another new taxation measure, is expected to bring in Rs. 7 lakhs. Under the refunding arrangements effective from 1942-43 in respect of the Lloyd Barrage Debt, the Sind budget includes a payment of Rs. 75 lakhs, the first of 15 equal annual payments.

As we have stated, there has been a rapid and progressive increase in the share of income-tax accruing to provinces. In the first year of provincial autonomy, the share of the provinces in income-tax receipts was Rs. 1.25 crores; in 1938-39, it increased to Rs. 1.50 crores; 1939-40 witnessed a sharp rise to Rs. 2.79 crores; thereafter, the provincial share has risen by leaps and bounds to Rs. 4.16 crores in 1940-41, Rs. 7.39 crores in 1941-42 and Rs. 8.37 crores in 1942-43.

On the other hand, the share of the jute export duty assigned to the jute-producing provinces has continually declined during the war, and is estimated at Rs. 1.75 crores in 1942-43 as against Rs. 2.65 crores in 1937-38. There is also a reduction in subventions from Rs. 3.12 crores in 1937-38 to Rs. 2.75 crores in 1942-43 as, under the terms of the Niemeyer Award, the annual grant of Rs. 25 lakhs to the United Provinces must be discontinued from 1942-43 and that to Orissa to be reduced from Rs. 43 lakhs to Rs. 40 lakhs. The following table shows subventions and other payments made by the Centre to the provinces since 1937-38 in terms of the Government of India (Distribution of Revenue) Order as amended in February, 1940.

(In crores of Rupees)

	Income Tax	Jute Duty	Subventions	Total
1937-38 ...	1.25	2.65	3.12	7.02
1938-39 ...	1.50	2.51	3.03	7.04

(Budget Estimate)				

*Excluding a grant of Rs. 53,000 to Coorg.

‡Excluding a grant of Rs. 1 lakh to Coorg.

The total permanent debt for the provinces as a whole increased from Rs. 15.07 crores at the end of 1938-1939 to Rs. 23.02 crores at the end of 1941-42 while floating debt declined from Rs. 1.50 crores to Rs. 1 crore in the same period. The total of 'Loans from the Central Government' declined from Rs. 123.24 crores at the end of 1938-39 to Rs. 119.02 crores at the end of 1941-42.

The budget figures for all provinces with regard to 1939-40 accounts, 1940-41 accounts, 1941-42 revised estimates and 1942-43 budget estimates are given on the next page:—

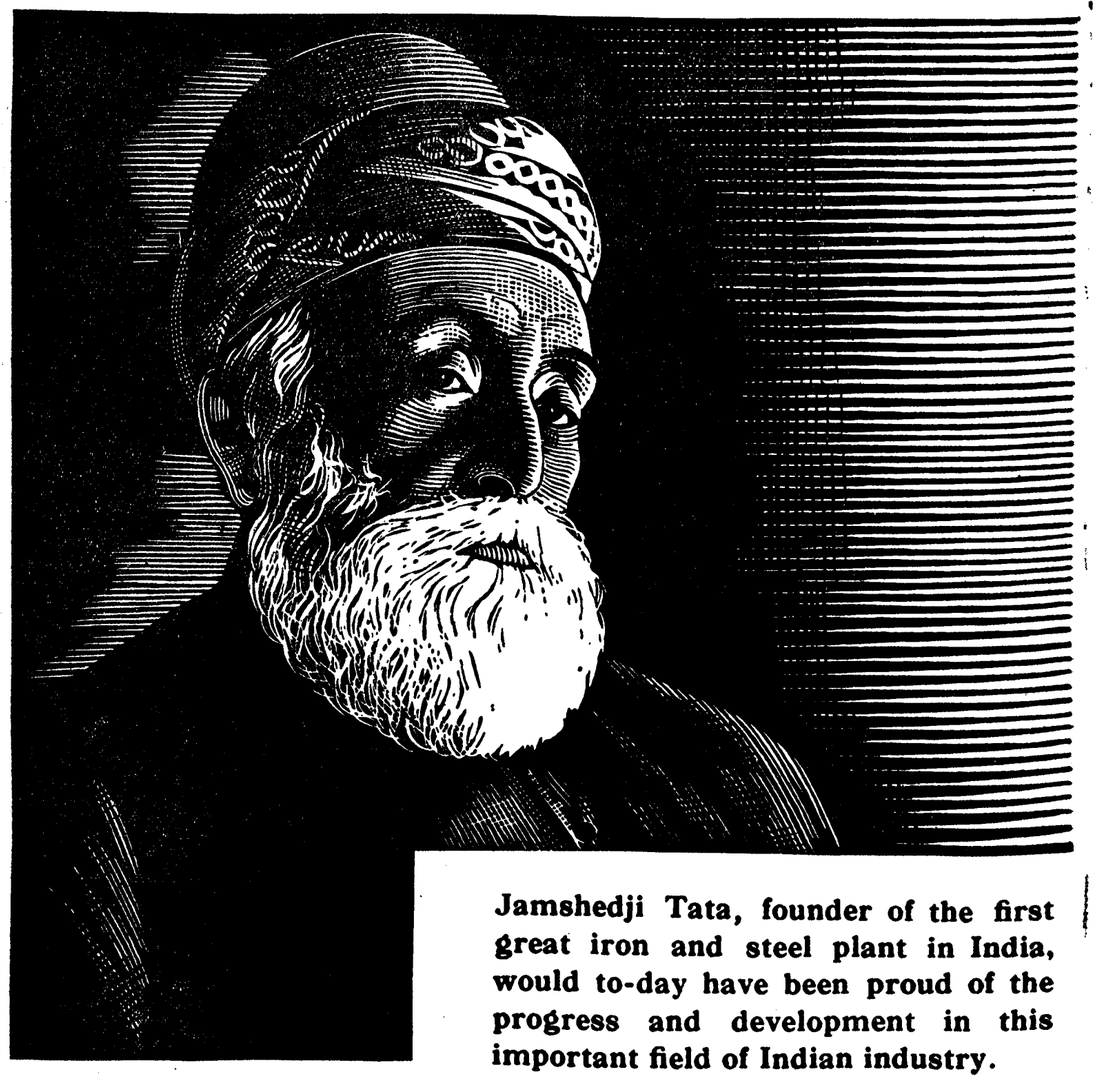
LAND OF PARADOXES



In an article written just after the outbreak of the Anglo-Japanese war serious doubt was expressed as to the Allies' ability to hold down the Japanese after the initial surprise. Reference was then made to the difficulties imposed by the distances, the island bases held by Japan, and the secret reserves of materials known to be in her possession. Events have certainly given strong support to the original conclusions as to the difficulties thrown up by Nature and the war in Europe. It is generally said that Herr Hitler made sure of U. S. intervention in the war coming at a time when it would be of least effect; and events almost suggest that he succeeded. It is, therefore, events in the South Seas that give the clue to Japan's strength. There are no illusions after Mr. Joseph Grew's warnings to his people in America to understand that Japan is a National Defence State. The phrase occurs more than once in a remarkable little book published this year. It is called The Japanese Enemy and the author is Mr. Hugh Byas, long the "Times" correspondent in Tokyo. There is little of emotion or prejudice in a work that seeks to expose the mainsprings of Japan action. The present war is an adventure planned by the Navy, according to Mr. Byas. The Navy kept its eye on the South Seas and merged its plans in the China war without compunction or hesitation.

From December to May, the tide of war flowed just as the Japanese wished. Mr. Byas, who lists the advantages, never reckoned that the Japanese would push off the A. B. D. front with the cunning and the skill that compels admiration. But he certainly was not optimistic in his diary which details the bewilderment and anxiety caused by Pearl Harbour in the U.S.A. There is one surprising judgment. The Japanese moved against the Allies not because they were sure of a German victory, but because they were not sure about it. Even a draw in Europe would make it almost impossible to interfere in East Asia, and the Japanese were compelled to force the pace, mainly because American isolationism had weakened rapidly. That the Axis and Japan have divergent aims is known, but Japan's peculiar advantages in the war were not recognised by Allied propaganda. The complete disaster in Malaya induced Sir Keith Murdoch to say many things in many papers, but Mr. Hugh Byas had indicated them earlier in lectures to U. S. audiences. It cannot be said that U. S. Admirals since the victory in the Coral Sea have under-rated the enemy in the Pacific and the restraint of popular hopes has indeed become the chief task of Admiral King.

The Japanese are a peculiar people. The European labels cannot be stuck either to the nation or its institutions. Militarism is blended with Marxism in a Party-state without a real party. If Japan has put the clock back as events demonstrate, it is in a less dramatic fashion than Germany. The Army runs Japan, as is generally known, but there are always four civilians round the hereditary C.-in-C., the Emperor. Mr. Byas has compared Japan to an angry hive and has spoken of the Queen-bee being forced to join the swarm. What Admiral Suzuki and Baron Matsudaira said to the Emperor when he got Mr. Roosevelt's letter on December 6, 1941, is not known but Japan had changed greatly from the the Prussian monarchy which the Elder Statesmen had created. Mr. Byas told America his views about Japan before the book was issued by Hodder and Stoughton. He remarked that the Japanese were ever cautious opportunists and they did not go to war for the sake of Ribbentrop's trumpery pact. The Navy went off on its own because it wanted to support the Army to get its plans through for a bigger Empire. The acquisition of German islands destroyed the value of the Washington naval ratios. The Pescadores became air bases against China, when Formosa was put under the rule of senior Admirals. Mr. Byas was impelled to say "the Naval staff in Tokyo is no battle-drunk group with romantic ideas of a glorious doom; it is not inspired by any concern for Germany's fate. It seeks one thing only; success for Japan, and it would not act until it had convinced itself that it had much more than a fifty chance of success." Japan is an open box of paradoxes and it is all exposed to the public view by Mr. Byas. It is not only intelligent anticipation but a knowledge of Tokyo's involved mental processes that led Mr. Byas to say that "with American air-power temporarily weakened, American bases occupied, and Singapore captured or muzzled, and with the Dutch East Indies in their hands, the Japanese are calculating that they can fight a defensive war for an indefinite time. They might capture Rangoon, cutting the Burma Road at its base." Mr. Byas indeed supports the minority view that the Japanese have made their plans for a long war and they have not left out the possibility of a German defeat in Europe. That the work of exploiting colonial wealth has begun has been referred to in stories from lucky Dutch fugitives. The Japanese meant war and admittedly wanted war. When Mr. Roosevelt was applying sanctions the Jap navy was buckling to its future job. Japan had bigger armaments than the whole of Asia put together. There was nothing illogical about a war even if it was deprecated by Admiral Nomura. The South Seas policy became possible when the navy had got big appropriations and the China War gave its opportunities for naval fliers. Propaganda used the story of Japan's poverty to mislead others, not the Japanese themselves. When the Spratley islands—96 and little-known—were taken, the invasion plans for the Philippines were indeed held ready. But Japan has her disadvantages in spite of the capture of the Philippines, Singapore and the Indies. Armies are scattered in China and Manchuria. Equipment and air support have to be retained in potential theatres of war. Japan does not, and cannot, clamp down a continent like Germany. Moreover, Japan is up against American skill, resources and inventiveness. Midway has demonstrated that surprise is impossible; and General Wavell's recent estimate of the Japanese air force can be supported by reference to the long-drawn-out struggle for New Guinea. If Japan can keep up a clandestine traffic in colonial raw materials with Germany by way of Cape Horn and French West Africa, the Emperor's consultants must be worried by the lack of German aid in a war nominally against Communism. The Mitsui boss, the former Finance Minister, Mr. Ikeda might indeed know like Tojo what Japan has and

Contacts with the Congo

South Africa has sent a mission to the Congo. The Union hopes to link up her war effort with the Congo's resources. Rubber and tin are two things which the Congo can give, and the renewal of an agreement with the U.K. has secured for the Allies real advantages. South Africa too hopes to get the same benefits, as the Congo and East Africa are in close contact. A South African paper has referred to the valuable commercial contacts of the Union with the East African territories, while the territories have sold large quantities of produce to South Africa. But South Africa's trade with the ports on the Atlantic has been less than its trade with ports on the Indian Ocean. This is one reason why the trade with the Congo did not develop up to expectations. As the "Rand Daily Mail" has remarked, much of the trade with the Congo was carried over the Rhodesian and Congo railways and on account of the long haul from the Union the railway rates are high. The absence of regular shipping facilities between Matadi 95 miles from the mouth of the Congo (navigable for over 1,000 miles despite rapids) and South African ports, has, to a large degree, militated against the development of trade between the Union and those portions of the Belgian Congo which lie to the north and west of the Katanga province.

The Union looks for a big market in the Congo for foodstuffs, chemicals, clothing and footwear. The Union also hopes to import more from the Congo. As the Baltic countries cannot ship timber, the Congo is an obvious source. The Congo forests can give what is wanted, and if freight rates drop when shipping facilities are better, the Union will gain like the Congo. More important than timber are rubber and tin. As the Union took in the first year of war crude rubber valued at £515,957 and tin worth £86,845 she has to look to the Congo. Though the rubber is reserved for Britain the Union hopes for a share. The South African mission includes the shipping manager of the Union Railways and he is expected to examine transport and questions connected with ports on the western side. As South Africa hopes to build food reserves at home the Congo can count on assistance. Near Matadi (connected by pipe-line with Leopoldville) to which reference has been made, the Belgian Congo has acquired a small concession to link it with the estuary. Territory was ceded by the Congo in return and a railway was constructed to connect Lobito Bay with Katanga. As the Congo's population is largely Bantu, there is more than one meeting-point between the Belgian Empire and the Union which produces the same minerals as the Congo, which, in the past, had a larger trade with Angola and Rhodesia than with South Africa.

Assurance Repeated

Discussions in both Houses last week brought assurances as to the nature and purpose of the Indo-British financial relations. The adjournment motions were lost; but enough was said to indicate that a proper share of India's war expenditure is falling on Britain. The Finance Member's speech certainly supplements the assurances conveyed in answers to questions in the Central Assembly as to the burdens imposed by the war. The cost of defence, other than local defence, will not fall on India. There is no vagueness at all about India's liability, and there is the Auditor-General to check any irregularity. The Finance Member supplied the information that His Majesty's Government is defraying half the cost of General Headquarters in India in connection with the way in which the cost of joint measures is being met. Most welcome is the statement that it was not the intention of the Central Government to present a supplementary budget in the course of this year and the war expenditure would consequently have to be reviewed at the time of the next budget. There is little doubt that the Legislature will get much information as to the financial position before the budget is considered. No departure from principle is contemplated and any interim decisions would not modify the character of the financial settlement under which the bulk of the war expenditure in India falls on Britain. As sterling assets in London continue to increase, and little sterling has to be bought in India, the average citizen of India has an idea of the way in which the settlement is working. No donation of the Canadian type is probable or possible, and the feverish guesswork as to the results of the Finance Member's visit to London is now seen as uncalled for.

Food Production Drive

In a broadcast last week Sir Jogendra Singh dwelt on the problems and prospects of agriculture. Agriculture, he recognises to be the primary source. The 'grow more food' campaign has been assured of continuous direction, as is known, but the shift of emphasis to minimum prices in a future depression has led many to forget that the immediate need is increased production as much to push down prices as to render the country self-sufficient. Sir Jogendra Singh has given practical advice in this connection. The need of the moment in his opinion is that we must definitely concentrate on increasing production which depends on conserving farmyard manure and composting all the rubbish which is now thrown away. Composting promises a definite increase in manure and consequently an increased yield. Other practical hints relate to proper ploughing and sowing with good seed. On the eve of a new rabi season Sardar Sir Jogendra Singh has spoken of the urgency of increasing the area under wheat, grain, barley etc. Essentially the food position in India is not discouraging, but the demands of war abroad are many. On an average, it is calculated that India produces ten million tons of wheat every year, consumes 9.9 million tons and has a small surplus to satisfy local deficiencies etc. In regard to rice, the average production of 26.4 million tons falls short of requirements by 1.4 million tons. Burma's loss furnishes an opportunity for bringing in even marginal land into cultivation. The average annual production of millets is equal to 9.2 million tons and the grain outturn is put at 3.55 million tons. But food statistics cannot be cited freely when transport is inadequate. The target figures for the 'grow more food' campaign were made known by the new Member. It is hoped, as a result of combined effort, that 9.6 million acres more would come under food crops and total outturn of food grains would rise by 2.2 million tons, provided the season is favourable and the monsoon does not fail. Sir Jogendra Singh mentioned that rains have been plentiful and a number of Governments are holding Food Production Weeks for increasing the rabi crops. Improved seed is offered free or at concession rates, water is provided at reduced rates or reserved for food crops; these are among concessions made available to encourage the farmer. The major incentive will, however, be the rise in prices. Oilcake has been recommended as manure and Governments have been asked to arrange for its supply. The U. P. C. P., and Bombay are expected to reach up to past standards in the matter of wheat. To save transport wide use is to be made of small plots for growing vegetables and chillies. But the main point of the broadcast is in the other bit of advice tendered to agriculturists in India. There is the argument that "for the first time now the prices of food grains have touched levels which are generally regarded as remunerative; the prices may rise still further. I would, therefore, urge all producers to make hay while the sun shines and take advantage of the present situation by increasing the total output and thus raising their total money income." The further advantages were indicated in the

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

Sardar's remark that the real wealth of man lies in recovering from the earth all that he needs for nourishment. By providing a balanced diet for all, we can increase the health of body and mind and promote correct and constructive thinking, peace, power, progress and happiness.

Banking Trends

The points of resemblance and difference between banking trends in Britain and in India have been examined by Mr. S. P. Virmani in a careful and long analysis of wartime developments. Deposits have increased in Britain. The cash ratio is around 10 percent as before but call loans have fallen and bills discounted are fewer. The treasury deposit system has given some relief in the period of falling advances. Major change is the bulge in Investments. At the end of 1941 advances constituted only 25.2 percent of Deposits and Investments came up to 31.1 percent of Deposits. The reduced proportion of advances to Deposits is not so marked a feature of Indian banking as the increase in the investments. The increase in Deposits has converged on the giltedged market but the cash ratio at any rate was lower in 1941 than in 1940 and loans and advances showed a measure of recovery to judge by movements in the gross totals. The scheduled banks have stood the strain, says Mr. Virmani, in discussing the growth of bank deposits since 1938. The increase in demand liabilities as against time liabilities has occasioned greater support for treasury bills. The broadening of short-term borrowing is viewed as a consequence of low interest rates and slack trade demand alongside of rising deposits. But as demand liabilities have risen, banks' cash balances and deposits with the Reserve Bank have increased more than proportionately. The further result, to which attention is drawn, is the reduction in the rates of interest offered by banks. Mr. Virmani has not failed to comment on the fact that the rate of increase in deposits is far greater than the increase in advances. The result is an increase in investments; and the measures taken to strengthen the giltedged market this year command his approval. Higher taxation and the limited increase in earnings are definite factors in the dividend policy of banks in India. That profits in the first half of 1942 were determined by various extraneous factors may be inferred from the reduction in the number of branches. Mr. Virmani records the fact that certain banks have also to face claims of overseas evacuees who have deposited money there and claim the same from the Banks' head offices in India. A legal question also arises as to whether claims payable at places under enemy occupation can be effectively enforced on the head offices in India. Legal decisions so far made are not quite clear on the point.

Textile Industry's Progress

The monthly survey of business conditions in India for May indicates that the total production of cotton piecegoods in British India rose from 4,269.4 million yards in 1940-41 to 4,456.2 million yards in spite of the setback recorded by the Indian mill industry in February and March. The record expansion in textile output owes much to the war, but it is, in a sense, a consequence of the reduction in imports. Total imports in 1941-42 amounted to 181.5 million yards as against 447 million yards in the previous year. The marked expansion in re-exports to 85.2 million yards in 1941-42 is an indirect result of reduced imports. Trade figures also show that prosperity in the mill industry was sustained by the growth of exports from 390.1 million yards to 779.4 million yards. The decline from the high level reached in January was reversed in April and the rise in the index for cotton manufactures obviously belongs to the first quarter of 1942-43. The most important result of the increase in cotton mill output is the increase in home consumption of Indian cotton. The total for 1941-42 is known to be larger at 3,872,500 bales as against 3,338,100 bales in 1940-41. The small increase in the cotton crop of 1941-42 should, however, be regarded as discouraging because of the fall in raw cotton exports in 1941-42. Total shipped was 1,494,200 bales as compared with 2,167,500 bales in 1940-41. Chief feature of the war period has been the fall in raw cotton exports which explains the restriction plans adopted since January, 1941. The extension and improvement of cotton manufacture underlies the increase in raw cotton imports into India. Trade with East Africa has grown in consequence of the rise in imports in 1941-42 to 770,100 bales, the highest for any year, as compared with 498,100 bales in the preceding year. The trade statistics however suggest that the sharp increase in the duty on raw cotton has had the effect of checking Indian imports of cotton this year. The textile production figures would be even better, were it not for the labour exodus early this year. The Indian mill industry is reaching out to its opportunities and the oldest appears the best of industries for the majority of Indian investors.

Strained Resources

That economic conditions in Germany in the fourth year of war are worsening is proof of the effectiveness of bombing. Germany is short of iron and steel, and the shortage is having an adverse effect on Swedish industries and the Nazi shipbuilding programme. The Cologne raid put an effective stop to the production of marine engines. The effects extend to Sweden as the Swedish paper 'Nydag' has said recently the Donnarvet ironworks has been forced to close down owing to the shortage of coal which is due to the great discrepancy between the actual German coal deliveries and the quantities she had agreed to deliver. German iron supplies are just as unsatisfactory as coal supplies; even Swedish shipyards building ships for Germany on condition that Germany supplies certain quantities of iron and steel have not received the necessary amount. The shortage of materials interferes with German plans in Norway. From Oslo came a report to a Swedish paper that a large German concern, Nordag which is responsible for starting numeorus industries in Norway has not been compelled to stop work in many branches owing to the shortage of materials. Evidence of the increasing strain is provided by the timber shortage. Transport and labour difficulties are at the bottom of a difficulty, due to excessive destruction of forests in the past two years. The short fall in imports last year has led to increased felling of trees in German forests. In order to get the wood as near as the point, where it was wanted, forests have been cut regardless of the age or quality of timber. But a good deal of timber had to be left owing to lack of transport with the removal of workers to German factories in France which are faced with the threat of having to close down. In Denmark the destruction of agriculture has been followed by the destruction of industry. The industrial situation, according to the Politiken, is catastrophic. Many enterprises have considerably reduced their activities. Denmark's largest metal works have been obliged to extinguish their smelting ovens because their stocks of smelting coke have been completely exhausted. The Kastrup glass factory is said to have given notice to all its workers. Italy is not better off than the Occupied countries. Labour shortage is still acute and civil mobilisation decrees are not effectual. The fact of under-employment in the consumption industries, notably textiles, is ascribed to shortage of materials and labour. War industries, particularly, mining are in no better case than agriculture which is short of workers. Rationing has been extended to Rumania as Germany's demands have increased. The quantity of maize asked for is 400,000 tons, four times the quantity taken last year. Rumania's own consumption is to be cut drastically as more wheat, oilseeds and livestock have to be provided for Germany this year. It is not hard to connect the Iron Guard's revival with economic discontent. Antonescu's year-old regime has only produced famine as German demands for eggs, vegetable, milk and meat have been increased. There is now little to distinguish between the Occupied countries and the allies of Germany in this war. But none is so badly off Greece as which has to depend largely on Allied charity through Swedish channels. Greek workers have been taken by force to Germany which has removed all available metals, especially, copper.

Scorched Earth Policy

An assurance that scorched earth policy 'a la Russe' will not be resorted to has been given by the Government recently. Sir Alan Hartley's statement last week in the Council of State certainly goes much farther than the previous statement occa-

sioned by representations of Indian business men. The assurance will be deemed essential in the light of explanation made as regards the war risks insurance scheme. The most recent amendments have indicated that compensation for destruction of Indian owned property by the enemy is not contemplated. The war risks scheme is not an all-in scheme and factory-owners in India have been informed also that destruction on ground of military necessity would not be deemed officially as coming within risks. Whatever is accidental damage can be provided for but not the deliberate relinquishment of assets to the enemy, in condition or otherwise. Capture of assets intact by the enemy would not justify any payment to the insured. The application of the various amendments and rules will modify the public's view of the scope of the insurance scheme. But it is satisfactory to have the early assurance that preliminary destruction at the instance of the defenders of India is likely to be severely limited. If the benefits of the war scheme in India appear limited, particularly as urban immovable property is excluded, there is little doubt that relief promised as regards taxation has satisfied many. The Government of India by extending the scheme to many States has met criticism as regards lack of protection for many would-be proponents. The material assistance derived by the stock exchange from the insurance scheme in force will be more than proportionate to the addition to Government's receipts. That point merits notice in any review of the effects of the factories war risks ordinance.

Europe's Agriculture

The vast changes in Europe's agriculture can hardly be indicated by frequent reports of famine in Greece or the decay of dairying in Denmark. The belligerents have modified both objectives and methods; and progress in one country or other is affected by the Nazis' exigent demands. An authoritative though unofficial Canadian report has described the mechanisation of German farming and the draft of foreign labour for German farms. Before the war mechanisation was quite extensive and farming costs were cut while labour was supplemented even then by soldiers on leave. The entire agricultural system says the report, is under the direction of a Government organisation which surveys all arable land to determine its value and possible uses. A Government commission determines the crops to be grown and local committees advise the farmers on crops and methods. The main effort is to increase the outturn of comodities in which there is greatest deficiency as oils and fats, forage crops for the production of meat and dairy production, fibres and cereals. Considerable emphasis is still placed on sugar beet which can be converted into industrial alcohol as well as sugar, oilseeds, notably rape and soya bean, and dairy products. Quotas are established for milk suppliers and grain growers on the basis of averages for several years. Where quotas are not attained and an inspection reveals that producers are at fault, the officials are authorised to engage managers for farms at the farmers' expense. In some sections, officials have gone so far as to increase egg production as to fix rigid marketing requirements, establishing a minimum delivery of eggs for each laying hen in the farmers' possession. Rural education also has been modified to subserve the demands of war economy and farm inhabitants have to take professional courses to improve livestock and enlarge milk production.

The Nazis' agricultural policy not been drawn up for the Occupied countries over a year ago. Poland has to raise her grain yield by 50 per cent or more and to grow more industrial crops. The exportable surplus of grains in Central Europe and the Balkans are shared between Germany and Italy while the Netherlands and Denmark were enjoined to reduce their livestock and grow more grain and root crops. France was told to grow more oilseeds and olives. German aims began to dominate the agriculture of Central and Eastern Europe. Livestock was transferred from Germany and Denmark to Poland not only because there was difficulty about feed, but because it was felt advantageous to send cattle where the grain lay. Nevertheless, Germany has experienced difficulties. Last winter a shortage of rye and potatoes was noticed and the Occupied Countries can yield little after two years of looting. Permanent changes have been effected by German conquest in the agriculture of Russia where the Volga Basin is of greater importance than ever and the spring wheat crop in the Eastern territory despite the semi-arid soil is of greater importance after the loss of the Ukraine.

Developing Tele-Communications

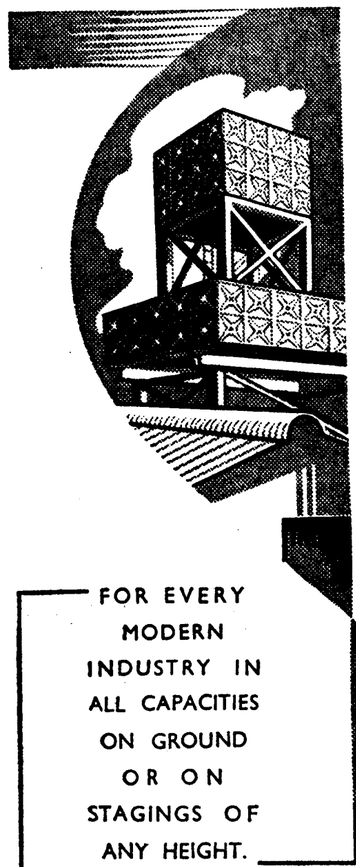
In the first week of September appeared a report that the Posts and Telegraphs Department has big schemes for extending telephone lines. Reference was made to the plans estimated to cost Rs. 8 crores and the creation of a new Board with Mr. Shoobert as Chairman. The Board will look after the big development promised after the war. Like irrigation it will be scientifically guided. Present pressure on the system does not militate against its post-war development. In the last two years telegraph revenue has risen as smartly as telephone revenue. There was real reason to extend and improve telecommunication. Annual allocation for expansion usually was up to Rs. 1 crore; but in spite of all the new industrial work taken up by the Department it remains doubtful if the expansion can continue. Normal replacements having been rendered difficult, the getting of materials for big expansion projects is doubtful. But many things can be made, and Government can get what it wants. It is hoped to develop trunk telephones just by linking all major towns by 300 telephone channels after the war as will appear from the press note issued sometime ago. Telephone development will be vigorous after the war, but for the present, everything is hard to get, though the telegraph branch can largely rely on locally manufactured goods. The staff wanted is being got together from various sources including evacuated Burma.

The Bombay Telephone Company's workshop is being extended so that it can produce the flexible cord wanted for telephone connection. New staff for the Rs. 8 crore scheme is being trained and the Post and Telegraph Department is thus getting ready for the tasks of peace. Present delays and inconvenience underline the importance of telegraphic communications. In other countries, larger but not so well populated, the telegraph and telephone are vital. In the Middle West the immigrant farmer who has no car owing to the war can yet command the phone. The rural community in England is also served by telephone, and in this context, the average district town is badly off. In Western India new carriers were added to meet supplementary traffic. Phonograms have helped to increase telegraph messages and that kind of mutual assistance will certainly extend. The annual report of the Posts and Telegraphs department will cerainly throw more light on the telephone development in progress and let India know how the new carriers have stimulated traffic so that development will be justified on financial grounds.

NORTH WESTERN RAILWAY

Tender No. 212-S/2/4.

Code word "CONFUSE"



Tenders are invited on a rupee basis for the purchase by the North Western Rly. of Beaters Steel for Plate layers. Tenders must reach office of the General Manager, N.W.R., Lahore, not later than 14 hours on Monday, the 19th October, 1942, and will be opened in the office of the General Manager, N.W.R., Lahore, at 11 a.m. on the following working day. Tender forms and other relative documents can be seen at and obtained from the office of the Controller of Stores, on and from 28th September, 1942. The sale price of the tender is Re. 1 local and Rs. 1-8 Muffusil excluding the cost of specification and drawing.

Paper Industry of China

Free China has as many paper mills as India. China invented both paper and printing, but the industry's progress there belongs to the war period. Before the war, says the China Information Bulletin, there were only three machine paper mills. They were located in Szechwan, Kweichau and Hunan Provinces and had a total output of 80 reels a day. They worked irregularly and two were on short time now and then, but there are fourteen mills working at present because many mills have been removed to the interior and new plants were added. Half the paper mills are in Szechwan. Total production of

Seven weeks have passed since the Government took the cue from the resolution of the A.I.C.C. meeting at Bombay and arrested the Congress leaders. Thus was the present nationalist movement inaugurated. It is distinctive, not only for its setting against the background of a world war, but also for the fact that the suddenness of the Government's action has imparted an element of spontaneity to the movement. The elaborate preliminaries with which Gandhiji had invested the non-co-operation and the civil disobedience movements of the past were on this occasion totally lacking. It is true that the Mahatma had intended to write to the Viceroy before launching the movement. But the reply came before the question could be addressed. In spite of the fact that large numbers of Congressmen were familiar with the programme when it was being discussed, there seems to be little room for doubt that the news of the arrest was the signal for an orgy of unplanned demonstrations. Such a movement has, in the nature of things, its vicissitudes. At one moment, it seems capable of carrying everything before it. At another, it seems but a spent force. And then from some corner of the country comes the story of mob-rioting and police-firing. The debate in the Assembly and the statements of the Government spokesmen give us a new sense of the proportions of the movement. From sedition to civil disobedience, and from civil disobedience to insurrection —of a sort of course—that would seem to be the line on which Indian nationalism of the active and impatient kind has moved during the last thirty or forty years. Seven weeks gone, in these times when every week is an age, and the fog that shrouds the future is still as thick as ever!

* * * *

Is the nationalist movement but a small factor among those that must shape the future of this country? It is hard to say, it is not. And yet movements like these, even when they are misguided and ineffectual have a place in the building up of national character. They alter it for the better or for the worse. And the curse of the Indian people is that the content of their internal history is so, so poor. The events that shape the character of the people, lend strength and direction to the social forces, energy to the people and purpose to the leaders, such events are conspicuous by their absence. We have lived snugly under Pax Britannica for nearly two hundred years; and the problem of attaining freedom for a disarmed and nervelees people was a problem of lifting oneself by pulling the bootlaces. For a time, it seemed as though this problem could be solved by the magic of Gandhian non-violence. It was magical, in a sense. We pulled at the bootlace and felt exalted, if not lifted. The vicious circle seemed to have been broken in at some point. But the problem became at the same time more complicated. It had ceased to be merely Britain vs. India. We had prepared meterological reports by reading the barometer in a closed room; a wild wind comes anon and batters the doors and blows away the roof; and worse storms are perhaps gathering in distant corners of the world. Inclement weather, no doubt. But we need to get weather-beaten.

* * * *

In this process of a whole people getting weather-beaten, the present movement, too, has, perhaps, a place. But let us be sure how much it can do for the people. I have said, that in comparison with the world situation, it is almost a storm in a tea-cup. But it has a place in so far as it indicates the presence in the country of people who are prepared to act and who may be trusted to act when, as is not unlikely, the faults of the Government cannot be laid at the door of any group of foreign officials. And to the extent that these activities are not got up by prominent Congressmen, they are a sign of energy in the social organism. And it is here that it differs most from the movements that have gone before. In the past, Gandhiji had on every occasion mapped out the movement, both in its principal features, and in its details. If it was non-co-operation, men were chosen both from the leaders and the rank and file to defy Government's orders and went imprisonment. Pickets for foreign cloth shops were carefully organised. Processions in which the first ten rows at least would stand up to a severe lathi charge were got up with meticulous attention to the personnel of the demonstration. Or, if it was the salt satyagraha, the places at which illicit salt was to be manufactured were clearly indicated. There seems to be no paralled for these in the in the present movement. The leaders had not the time to draw up a programme. The utmost they could have done was to emphasise the importance of cutting up communications. They were mopped up before they could overcome the fatigue of the A.I.C.C. session in one night's sleep. But there were large numbers of people who may be said to have heard the call for, let us call it, a rising. And they hearkened to it. Life in the cities was upset. Tramcars and buses were burnt. Public offices were invaded by unruly mobs. Curfew orders had to be imposed. In the mofussil, the movement would appear to have taken even more menacing forms. Communications were interfered with more drastically. The danger to officials was more serious. I have cited these only to show that in its progress; as in its origin, the present movement is unlike its predecessors. The ideal of non-violence has visibly lost ground. And except for the

FURTHER ISSUE OF 3% LOAN, 1963-65.

REDEEMABLE AT PAR NOT EARLIER THAN 1963 & NOT LATER THAN 1965

Available in Cash from 3rd October, 1942 at the offices of the Reserve Bank of India, Bombay, Calcutta, Delhi, Madras and Cawnpore. Applications will only be received through a Scheduled Bank or a recognised broker.

Issue Price Rs. 95/- per Rs. 100 (nominal) exclusive of accrued interest.

The amount of the issue is Rs. 15 crores (nominal) and the lists will be closed as soon as total subscriptions amount to Rs. 15 crores or, in any case, not later than the close of business on 15th October 1942.

Copies of Notification and Application Forms will be available at the above mentioned offices of the Reserve Bank of India.

prominent Congressmen who obeyed the police officers' instructions as they were marched off to jail, there is little that is non-violent about the movement. It is, not, therefore, the leaders alone that have been spirited away, but also the spirit that has all along animated them.

* * *

The first point to note about the present movement is its break with the old Congress tradition of non-violence. And this, let us remember, comes on the top of changes within the Congress which more than once threatened to deprive Gandhiji of effective leadership of the Congress. The ill-starred Poona resolution of two years ago went a long way towards it; and there is no doubt that, if Sir Stafford Cripps had succeeded in forming a National Government, Gandhiji could have counted for little so far as India's attitude to the war is concerned. The breach between the Congress and Mr. C. Rajagopalachari is another pointer in the same direction. And now there is hardly a single Congress leader who would like India to employ non-violence in relation to an invader.

* * *

One feels almost like writing the epitaph on non-violence. It has ceased to apply internal and external affairs alike. The conclusion that this suggests is far from comforting. On the one hand, it means that the nationalists in India find themselves deprived of effective leadership and are left to their own resources. It means also that we are farther than ever from the prospect of having our defence entrusted to a truly nationalist government. Such a government is impossible when the Congress has its leaders in jail and its followers are straying from its principal tenets: There is no party which can bring the requisite pressure to bear on the Government to induce them to solve the present problem by installing a popular government.

* * * *

The resulting picture of conditions in the country is of the most disheartening kind. With an unplanned nationalist movement in progress, a movement that inevitably puts up the Government's back, with the Muslim League holding aloof, with the other leaders either sulking behind because of repeated rebuffs, or fussing about on patently futile errands with the Government refusing to see the value of popular enthusiasm for winning the war, one wonders what the next development can be. For my part, I look, not to the ripples on the surface, but to the deeper undercurrents. I scan, not the speeches of the leaders, but the unspoken impulses and passions of the masses. The Indian political problem is unique not so much because of the disarmed state of the people as because the masses have no mind, not to speak of a will. They have remained what western observers characterise as pathetic contentment, but which in reality is a peculiarity of ideeological out-look, a vestige of an incredibly perfect civilisation of long, long ago. That vestige is a biological monstrosity; and just because it is a biological vestige, only the slow processes of evolution can do away with it.

* * * *

Now for the first time in our long history, we have the two problems of internal freedom and unity and of attaining the capacity to resist external aggression telescoped into one. The problem of internal freedom is, both in the unctuous language of British politicians and in the realities of our national life, a problem of internal unity. But the trouble with this problem of unity is that it is thought to be a matter of suavity and give-and-take between the leaders of the principal parties. And in this view, we can only weep over the views of Mr. Jinnah or Gandhiji as a perverse misfortune for the country. No, the differences among the leaders are only a sympton of what is wrong with the community. National unity is never obtained as a return for prayers. If a homogeneous nation is as much a biological growth as a highly developed species, it has to develop the requisite organ which can dominate the whole body. Whether it is the Congress or the Muslim League that is to be dominant, it is certain that the body politic has to be a homogeneous whole. An organism in which the brain is not a dominant factor is no organism at all. And those who think that India can be unified by mere pourparlers between leaders of of transient importance miss the essential conditions of social development. Unity is achieved only by accretions of general support round a dominant party.

* * * *

It is such a dominant party that is lacking in India. The Congress bade fair at one stage to become one such. But the Congress outlook served, not to weaken, but strengthen the dissentient groups. The Congress made no effort even to rally round itself the Muslims who are outside the fold of the Muslim League. The result was that when the moment came when the policy of non-embarrassment could not be continued without loss of face, the movement had to be launched, but there was no means of securing results.

* * * * *

The country, then, is in the position in which popular leadership is shown to be either unwise or ineffective. The stage is set, not for a purposive, well-directed popular movement, but for spasmodic popular ebullitions. And if it is true that a well-organised movement is easier to quell than disturbances of this kind, then the present unrest is bound to continue. I doubt if, even Gandhiji were out of prison, he could restore peace by a statement like what he made after Chauri Chara.

NORTH WESTERN RAILWAY

Rail Motors on Kalka-Simla Section

From 1st Octobtr, 1942, an extra charge of Rs. 3-3-0 for an adult and Rs. 1-10-0 for a child will be levied in addition to the first class fares, from all passengers desiring to travel by rail motor on the Kalka-Simla Section. No refund of this extra charge will be allowed unless at least 24 hours' notice is given for any postponement or cancellation of the journey.

Those who criticise the Congress attitude as the principal obstacle to concentration on war effort overlook the popular reactions to the present policy of the British Government. It is these reactions that will act as a drag on the war effort and they can be removed only by the installation of a popular government. American opinion is slowly waking up to the importance of the Indian problem. The stirrings are there, in newspaper articles, in petitions to the President. Mr. Louis Fischer has taken Gandhiji's letter to Mr. Roosevelt; and we cannot help thinking of its historical parallel in Dr. Subramaniyer's letter to President Wilson. India is a world problem the same as Germany is a world problem, the latter because of her proneness to cause world wars, the former because she cannot pull her weight in the cause of peace. Some day this feature of the Indian problem will become the dominant feature. And the process of welding India into a strong and united nation will start. The first sign of change is the readiness of mobs in the mofussil to take the initiative in the political sphere. Another sign is the eagarness of men like Rajagopalachariar to get on the task of defence. The most important, of course, is the growing conciousness of the United Nations that they are not so strong that they can scorn the help of Free India. From below, from above, from all sides, the creative forces may emerge and work ruthlessly. Therein lies the hope which a too cold analysis of the present would seem to stifle without remorse.

tifying confirmation of the adoption of a correct new loan policy by Sir Jeremy Raisman. The total amount outstanding in respect of this loan is Rs. 60.96 crores. Unless the political situation suffers a sudden turn for the worse, the Government should be able to secure the full quota of Rs. 15 crores from the re-issue of 1963-65 loan.

While Rs. 15 crores will thus be found, there will be yet Rs. 25 crores for which a plan other than a temporary makeshift has to be made. From this point of view, as well as from the point of view of the impending repayment of 3½ percent India sterling stock next January, there is the utmost need to coax and cajole the giltedged market into a more responsive mood than it has shown for some time. Once the suspense for Stalingrad is out of the way, it will be worth while to consider how far the promotion of defence loan weeks particularly in Bombay and Calcutta will serve as an impetus and stimulus to greater interest for war loan programmes.

The exchange market has been dull during the week with banks sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

how long the fuel reserves will last. No civilian outside will ever know the facts and the dictum of Mr. Byas that "the naval staff did not go to war with the U.S.A. with a short supply" must be set against the estimate made in April, 1941 that the Japs could not fight for five weeks in the Pacific because they just did not have the oil. In the economic sphere the Japanese have made astonishing progress between 1904 and 1941. Their rising standard of living was the highest in Asia and their trade was growing. Food as ordinarily reckoned was cheap and plentiful. But the parliamentary regime that nourished itself on these glories was overpowered by the young pro-Nazi Army men to whom the bureaucrats were easy meat. The Manchurian adventure increased the anxiety of others and whetted the appetite. The political slogans of the Army belongs to the Shogunate. Japan, for all its modernism is a pagan state and the ambition of military was due to jealousy of the Business Families. There are formidable defects including the Army's fads and fancis alongside of formidable strength. Japan is not weak and she prepared for years. If Mr. Byas discounts the story of over-population, land-hunger and scarcity of raw materials, Japan was not like the other have-nots. She has just resorted to banditry on a big scale to fulfil the Army's expectations. Yet Japan's economy in Asia is extremely strong to-day. Her capitalists are energetic and her labour is intelligent; but Japan's military budget has weighed her down consistently for ten years. The rise in the debt is ominous. Duly impressed by the achievements of the Meiji era, as the world is, it cannot but pay attention to the damage done to tht empire by military ambition. The importation of Nazism, however, explains all the contradictions of Japanese policy. Japan was in a dangerous mood in 1936 and the anti-Comintern Pact, renewed in November 1941, was the signal for a policy of self-destruction. Treaty-breaking had gone too far to let the world tolerate further Japanese aggrandisement. Japan's mistakes appear too glaring to be forgiven and an era of seclusion enforced by defeat on land and sea may well follow. It will be a more rigorous seclusion than that of the 19th century before Commodore Peary made Japan aware of two continents because the Pacific War will be tedious, as Mr Byas justly remarks. But the irresistible pressure of superior power will overpower Japan —a country of which Mr. Byas does not despair, because everything is fluid and unfinished.

(*Continued from page 577*)

printing paper, newsprint etc., was 500 tons in a month. Half the industry is run by private enterprise. The paper mills of China produced in 1941 wrapping, tobacco and match papers in addition to drawing paper, cardboard etc. The industry has an aggregate capital of $12 million and the output of individual mills varies from half to four tons per diem. The total output in 1941 is stated to be 68,206 reels of paper valued at $12,788,740. Besides the fourteen mills referred to, there is the old handmade paper industry. Before the war, the cottage industry was well-established in Kiangsi, Anhwei, Kansu, Szechwan and Shensi. Handmade paper was largely used in China for writing. Printing paper and newsprint had to be imported. The fall in foreign trade has led to the big increase in native paper produced for printing purposes. Szechwan is apparently the biggest producer of handmade paper. The Government has encouraged the growth of the handmade industry like that of the mill industry. The great difficulty in securing paper from abroad has stimulated paper production in Kiangsi because of its large bamboo production and the transfer of many printing and publishing houses to that Province. Expansion of the industry has been reported from Shensi, Yunnan and other Provinces. Though statistics available suggest that the paper industry in China is small and immature as compared with India; there is at least one point of resemblance; bamboo pulp is evidently the raw material for China's paper mills. No other material seems to be in favour though jungle grass also may be turned to account. Shortage of imports has stimulated paper production in India in the war period but the value of the total output of 14 mills in China seems small compared with the sales and earnings of any big mill in India.

Openings in East Africa

The Kenya Supply Board has co-opted the Indian Trade Commissioner at Mombasa and many matters of direct interest to Indian exporters are made known to the Indian Government's representative. The exchange of samples has been stimulated, and in the report for 1940-41 published only recently, a reference is made to Colonial trade regulations. Import control is general and customs surcharges are in force. Certificates of origin are demanded but none of these can limit the opportunities for Indian exporters. Umbrellas, biscuits, paints, soaps etc. are wanted. Former sources cannot be tapped, and Mr. Sangat Singh declares that there are unusual openings for Empire goods. Indian manufacturers who have been put in touch with local enquiries have been advised to take advantage of the war situation and establish themselves firmly in East Africa by complying with importers' specifications. Exporters have also been advised to send travellers and appoint selling agents in Kenya. The most important advice to Indian manufacturers is to send cheap but reliable articles in view of the low purchasing power of the population in general. Though licensing has affected trade generally conditions were promising in East Africa in 1940-41 and Indian goods were moving freely into markets where rivals had disappeared owing to the war. The bazar trade, as it is called, was good and the enactment of various regulations did not affect custom. The report is interesting for its note on the customs union in force. Duty-paid stocks can go from Kenya to Uganda or Tanganyika and the freedom of trade is in favour of Indian traders. The present position of coffee confers importance on the note on Kenya's coffee industry. Owing to the loss of European markets and restriction of U. K. imports owing to the war, a pool was formed. The whole coffee crop was bought up by a Supply Board appointed by the Government. Under this arrangement the producers sold to the Board, and all purchases were made from the Board. The crop was sold through the regular exporting firms and initial payments and final proceeds from the pool were paid to planters through regular commission agents. It was said that one effect of the control scheme was that traders did not need to carry large stocks. The local coffee market was well supplied, and sales had been made at satisfactory rates. Unfortunately, the year reviewed is 1940-41 and the situation today might be altogether different as in India where the Coffee Ordinance seems superfluous. The dependence of Kenya on coffee is not excessive. In the case of Tanganyika sisal is as important as cotton in Uganda. In both these territories business conditions were improving. As regards Zanzibar import trade was affected by control and the fall in copra prices. It should be quite different now. Cloves commanded a good market in 1940-41 when exports were heavy. In tht appendix the special increases in excises in the three Colonies are mentioned as due to the imposition of customs surcharges as from August 6, 1940. That importers are asking for electrical goods, beer, hosiery and matches is proved by the classified list of enquiries to which Mr. Singh's report refers.

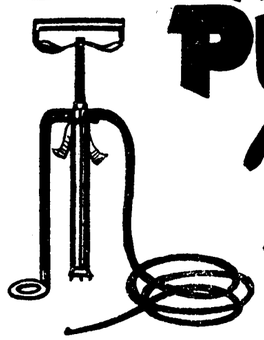
Resume of Commodity Markets

For
FIRST CLASS JOB
AND
COLOURED PRINTING
CONSULT
DORCHESTER PRINTING WORKS
116. LOWER CIRCULAR ROAD
CALCUTTA

THERE is nothing of great interest in the several commodity markets during the past week. The jute market has continued firm while the jute manufactures market has been steadier in sympathy with the raw jute market. There is nothing of interest in the bullion market, quotations fluctuating within very narrow limits. The Bombay raw cotton market still remains closed and it does not look as if there will be any early resumption of business.



It is generally felt that with the new efforts made by the Government of India in co-ordination with the Provincial Governments, there will be a considerable improvement in regard to the supply and distribution of the various staple commodities to centres where there is acute shortage. The Bombay Government has been able to get over to a certain extent the shortage of sugar and it is reported that it has made arrangements for the distribution of the commodity from thirty shops in the City in two pound bags.

The position in regard to wheat also has improved recently. The Punjab Government has been releasing wheat in greater quantities from that Province for export to other centres. The effective control exercised by the Government authorities and the prompt issue of licenses for the movement of the crop have been very helpful. It is reported that the statistical position is very sound and that it will be possible to satisfy the requirements for both civil and military purposes.

Jute

There is no change in conditions in the jute market and it is difficult as ever before to get the various grades of jute for early shipment. The main difficulty is still transport. In spite of the greater allotment of wagons during the past few weeks, it is feared that it will not be possible to move the necessary quantity from the jute districts to the mills in Calcutta and the surrounding areas. With the approach of the Pujah season and the difficulty in marketing supplies on account of the lack of freight facilities, there has been a considerable decline in prices in particular districts. With the rise in prices for other commodities, there has naturally been considerable anxiety to improve the condition of the ryot and increase the purchasing power by enabling him to get higher prices for his crop. That the Bengal Government is aware of the crisis in the jute trade is clearly evident from the statement made by the Premier in the Assembly during the past few days. It was stated that a scheme would be prepared in consultation with the representatives of the jute trade for submitting to the Central Government to seek financial aid in pursuance of the undertaking given by them on an earlier occasion. The Premier and the Finance Minister were due to have left for Delhi in this connection on Wednesday, but their departure has been delayed on account of some special difficulties.

No one, can be blamed for the present situation in the jute trade. Before any efforts would be made for bringing about a definite decrease in the area under the crop, the season had fairly advanced and there was no suggestion of such a deterioration in transport facilities even three months back. If it were possible to move all the jute that is now available there will not perhaps be much surplus jute left but the difficulty is in regard to ensuring wagon and shipping space. There is also the fear regarding the export of manufactures to the U. S. being affected by the lack of shipping space

which means, that any estimate of consumption by mills on the basis of existing production may prove to be out of the mark. There are still nine more months left for the present season to be completed.

That there is great demand for jute is evident from the fact that the Government of the U.S.A. is in urgent need of raw jute for the manufacture of rope for shipping purposes and have therefore, decided to allocate a greater portion of the available space in ships leaving India for the shipment of this commodity.

The September bulletin of the Central Jute Committee has stated that stocks of raw jute with Indian mills at the end of June this year were 23,83,000 bales as compared with 46,53,000 bales and 19,92,000 bales at the end of June 1941 and 1940 respectively. Owing to the smaller arrivals during the past three months mills have been obliged to eat into their old stocks amounting to six lakhs bales so that the stock position at the present moment is rather serious and not sufficient for more than four months at the present rate of production.

Silver

It has been now announced that George V & VI standard rupees and half-rupees will cease to be legal tender from May 1, 1943. It will be remembered that Edward VII coins ceased to be legal tender some months back. This new announcement regarding the demonitisation of standard silver rupees is in pursuance of the policy of the Government of India progressively to replace the standard silver coin by the new coin with the security edge in order to minimise the use of silver for coinage purposes and to check counterfeiting. With the present price for silver, in the absence of notification regarding the demonetisation of the standard silver rupees, it cannot be possible to expect that the old coins, that is the coin having a greater content of silver, will come into circulation as the Gresham Law will come into operation. The Government are evidently trying to replenish their stocks of silver which have been depleteed by sales in the London and Bombay markets. The return of George V and George VI coins, especially those of George V, will considerably add to the stocks of the Government.

The silver market in the meanwhile continues firm and the premium available in the Bombay market over Calcutta prices has disappeared only with the large influx of the white metal from the Calcutta market to the Bombay market. Trading in the Bombay bullion market still continues suspended.

Wheat:

The position in regard to wheat has been discussed at the beginning and we have only to point out here that with the greater control exercised by the authorities, and the decentralisation of the functions of the Wheat Commissioner for India by the appointment of two assistant commissioners for the Punjab and the U.P. work has been greatly facilitated.

Sugar

We have pointed out in these columns on more than one occasion that the difficulty as regards sugar is more one of distribution than of production. For regulating sugar exports from the producing to the consuming provinces and import quota in the latter areas, the Sugar Controller for India has divided the consuming regions into major importing, medium importing and minor importing areas. Import quota to the first category amounts to 71.4 percent, to the second 18.8 percent and to the third 9.8 percent of the total export. Bombay, Punjab, Bengal and Madras comprise the first C.P., Rajputana, Central Indian States and Sind the second, and Assam, Delhi, N.W.F.P., Orissa, Baluchistan, Jammu and Kashmir and Hyderabad State comprise the third group of import areas.

For the period 1st June to 30th November 1942, total import quota allocated to Bombay amounted to 75,034 tons; to Punjab 55,994 tons (excluding 9,000 tons allotted from Raza and Buland factories), to Bengal 50,292 tons and to Madras 25,770 tons (excluding 3496 tons allotted from Mandya factory, Mysore), The allotment for the rest of the areas (medium importing and minor importing areas) amounted to 32,699 tons; and the total for all the importing provinces came to 2,89,789 tons.

Despatches during 1st June and 5th September 1942 amounted to 25,893 tons to Bombay, 34,688 tons to Punjab, 15,290 tons to Bengal, 6,500 tons to Madras, 28,530 tons to medium and minor importing areas and 110,901 tons to all the importing areas.

It will be noted that despatches to Bombay are only 25,893 tons against the allotted quota of 75,034 tons. With only seven weeks more for the next season to begin, it cannot possibly be expected that, with the commencement of the busy season, it will be possible to rail the quota to the Western Presidency. The position in regard to the Punjab is not so bad. Madras is the worst sufferer as the total quantity received by that Province from June to September 5, 1942 is only 6,500 tons against the quota of 25,770 tons for five months.

Tea

At the auctions of tea for consumption in India held this week there was a strong demand for leaf grades, tippy sorts and fannings early in the session. Towards the end of the catalogue, there was a slight easing in the demand for broken grades. Green teas sold at very satisfactory rates. Dust met with brisk demand and it was only towards the close of the sale that there was a slight recession in prices by 6 pies to one anna.

At this time of national stress it is essential that every effort is made to conserve the supplies of paper in India. We urge all business houses and consumers of paper everywhere to observe the strictest economy in the use of paper.

In India's hour of peril it is essensial that one and all be kept informed of the steps to be taken for her protection.

Posters, pamphlets and leaflets guide the nation to strength and victory, as surely as battle orders issued in the field.

These messages are carried on paper manufactured from Indian pulp.

ISSUED BY THE TITAGHUR PAPER MILLS COMPANY, LIMITED

TP. 2675

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, October 1.

IT is reported that the Chief Minister of Bengal along with the Finance Minister is proceeding to Delhi with the avowed object of extracting from the Central Government some 12 crores of rupees for the purpose of maintaining a fair and reasonable price of jute for the cultivator. It might be surmised that the Central Government would require to have a sound and concrete scheme put before it, and a scheme which would actually achieve the purpose in view, before it will be inclined to loosen the purse strings. And, so far as can be ascertained, that is just what is lacking, for at a meeting with the manufacturing interests this week, it would appear that no workable proposals were revealed. Everyone is sympathetic with the cultivator in his present difficult position as regards the high price of foodstuffs. Nor is the price of jute in Calcutta unduly low by any manner or means. It has gone higher since we wrote last week, and as we pointed out then, mills are only too eager to purchase an almost unlimited quantity of jute if they could see a prospect of getting it shipped. The transport problem is the crux of the whole situation. Raw jute only has a real value when it reaches the place where it can be manufactured. Immobilised in the upcountry districts where it is grown, it is more or less a drug. For the local Government to come in as a competitive buyer in the Calcutta market would merely create chaos, while if it came into the upcountry markets as a buyer, one might enquire where it proposed to store its purchases, when every available godown is already jammed with jute awaiting transport to Calcutta. The obvious difficulty facing Government in any scheme it may evolve is to get a reasonable price back to the cultivator, and unless by a subvention to enable the cultivator to hold on to his crop until such time as the transport companies can handle it, one cannot see how this is to be done. Nor do we see how much a subvention could be distributed with any hope of its value being recovered. No artificial fixing of prices in the markets is going to do any good. The number of cultivators in direct touch with the markets is infinitesimal. It is notorious that the last effort at minimum prices merely resulted in dealers pocketing profits up to four rupees a maund while the actual cultivator benefited little, if at all. In circumstances such as obtain at present the only way in which the cultivator could be really helped would be by making available to him foodstuffs at reasonable prices. Money invested in this way *could* be made to reach and help the cultivator in a far more effective and practical manner than any fixation of jute prices or any attempt at official purchasing with a view to maintain prices. Admittedly this idea is merely a palliative and on a short view of the situation. In the longer view, the organisation of co-operative selling societies in all districts is the soundest means of saving the cultivator from becoming the victim of circumstances. This has long been advocated by those having the interests of the cultivator really at heart, but what steps have been taken by a grandpaternal Government to put the idea into effect?

Reverting to the transport question, ways and means of improving the situation are being studied by the Regional Priorities Authority with the assistance of advisory committees nominated by the interested industries. One recommendation which is causing upcountry balers to lose some sleep is the proposed reduction of the maximum dimensions of jute bales. To go back a good many years, when power presses were not so numerous, the nominal dimensions of a 3½ maund bale, then the accepted standard, was 13½ cubic feet. Then a special discount was introduced for those who could pack a 4 maund bale down to the same dimensions in a power press. It was not long, however, before it became the custom to pack 4 maund bales even in hand presses, and, transport competition being keen, little notice was taken of the fact that neither power-pressed bales nor handpressed bales came anywhere near within the nominal dimensions. This was ultimately recognised when the official dimensions were raised to 16 cubic feet for 3½ maund bales and 18 cubic feet for 4 maund bales. Even these very lenient maxima were by no means always adhered to. Recently, in order to make the best use of the available transport space, the official dimensions were reduced to 15 and 16 cubic feet respectively for 3½ and 4 maund bales, and any bales exceeding these maxima are being refused by the transport companies. Now it is proposed still further to tighten up not only the position but the bale, by making a further reduction in the official dimension to 15 cubic feet for the 4 maund bale and back to the old 13½ cubic feet for the 3½ maund bale. Balers have been finding it none too easy to get down to the current dimensions in their rather ancient presses, and experiments in pressing down to the proposed new maxima have resulted in not a few presses giving up the ghost. It has to be remembered too that replacements in the matter of chains and wire rope are practically unobtainable. In the Western and Northern districts where the jute is of a softer fibre, the required dimensions can probably be achieved. But with Eastern jute, with its harder and more springy fibre, it is found practically impossible to get down to the proposed maxima. The relative difference to a 13½ cubic feet 3½ maund bale should be 15½ cubic feet for a 4 maund bale, so there is a possibility of a general reversion to 3½ maund bales if the new dimensions are rigidly enforced. In actual practice, however, it is questionable if such rigid compression is really required. It is known that a flat loaded with pucca pressed bales is down to her plimsoll marks long before the capacity of the flat is full. A fair balance might be struck between the weight-carrying and the cubic capacity of the average flat without imposing too severe restrictions on the capacity of the presses. For it is going to do nobody any good if presses are to be put out of action. A good deal can undoubtedly be done by more careful practice in the pressshouse, the use of better ropes, stretching of the ropes before use, and proper lashing of the bales before the press is released, all of which measures tend to prevent undue expansion of the bale after it comes out of the press, and neglect of which points is the main cause of oversize bales.

In the Export Jute market there has been a small demand, mainly for Daisee. Early in the week the price of Dundee Daisee 2/3 declined to Rs. 61, but it has recovered again to Rs. 63. Quite a considerable turnover was effected with mills in white jute at prices up to Rs. 56, Rs. 46 and Rs. 41 for New Crop Firsts, Lightnings and Hearts respectively, with Old Crop Firsts and Lightnings reported at Rs. 54 and Rs. 44. At the close sellers are scarce and holding out for higher rates. Cuttings were done up to Rs. 14-8 for N.C. grade and Rs. 13-8 for M.C.

In Loose Jute business has been restricted by paucity of offerings and practically everything on offer has been wiped off the market. Up to Rs. 10 and Rs. 7 was paid for European Middles and Bottoms, while Supervised and picked Bengali Jat fetched four annas less. Supervised District sold at Rs. 9-8 and Rs. 6-8 with Indian district packing done up to Rs. 9 and Rs. 6-4. Rs. 5 was reported for Indian District X grade. Indian District Tossa sold at Rs. 11 for Middles and Rs. 8 for Bottoms with Balers paying still higher rates for picked marks and European packing. At the close there is virtually no jute on offer and nominal quotations are at least four annas above the highest rates detailed above.

Mofussil markets have generally advanced during the week, not from any excessive demand, for buyers are hampered by the lack of space, but probably on the rumours of Government's intentions to fix minimum rates.
