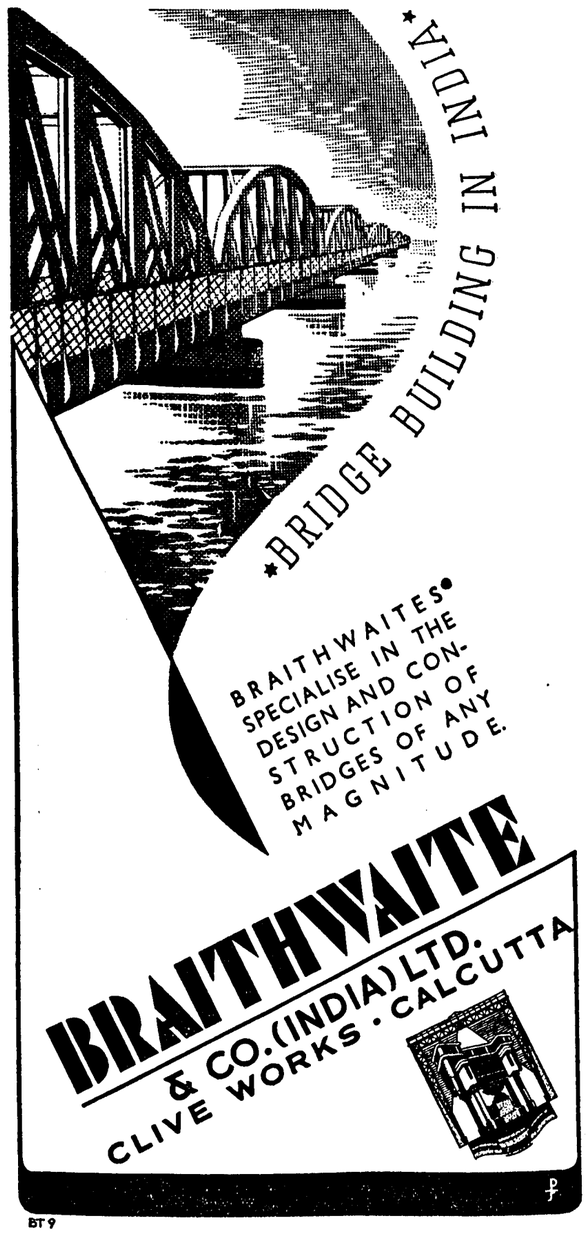
We have pointed out on earlier occasions that the silver policy of the Government of India is not quite in the interests of the country and that what time prices for silver have been rising, stocks of Indian Government silver have been sold on the London market on very cheap terms to Empire consumers. The Federated Chambers of Commerce has taken up the question and addressed a lengthy note to the Government of India asking for a revision of the policy in this connection and advising conservation of stocks of silver for future use. The need for conserving stocks of silver with the large demands for rupee and small coins and preventing further purchases at higher prices is more than ever important. It is also necessary that the authorities should take full advantage of the present position as stocks have not been acquired on any cheap terms, most of the purchases being before 1935 when silver prices were averaging between Rs. 65 and Rs. 100 per 100 tolas. As the Government have sustained losses on their earlier sales, it stands to reason that full advantage should be taken of the present high level of prics, if at all the Government have to sell any of their stocks.

(*Continued from page* 889)



according to her needs in the various fronts. The presence of the American army and Air Force involves our rendering to them various services which cost rupees, annas, pies. All this means that the simplicity of the settlement is now a thing of the past. But what arrangements have been made to cope with this increasing complexity, the public has now no means of knowing. It is indubitable, however, that if, as Sir Jeremy Raisman suggested in the budget debate, the U.S.A. should make the demand for reciprocal Lease-lend facilities, then our problem of inter-allied relations is not confined to those with Britain but extends to our relations with the U.S.A. For my part, I do not see why India should have independent status only in the matter of Lease-lend facilities, and why Lease-lend aid should come to India through the channel of His Majesty's Government. To that extent at least, the position could be simplified.

As for our relations with Britain, I am certain that no settlement, however, equitable it may seem to the Finance Member, would satisfy public opinion, so long as it is not supported by a political settlement as well. For without a political settlement, public interest in the war is bound to be tepid; and there is no price which can be low enough to tempt the purchase of an unwanted thing. That, however, is an extreme position of little practical importance. India's stake in the war is there. Only it needs to have conscious recognition by the people. Given the stake, what should be India's liability? I have no desire to give a definite and cut-and-dried answer to this question. For the present, it is the revision of the settlement that matters; and this will not be known till the next budget. Meanwhile, it is a reasonable guess to make, that in the practical working of the settlement, the authorities should have found it increasingly difficult to maintain the demarcation between Indian war measures and joint war measures; that His Majesty's Government should have felt that the provision for a half-and-half allocation of the latter in the absence of suitable formulas must work to their detriment and that, in as much as war has come near to India, India's aloofness must go and she must bear a large part of the war expenditure. Britain, I think, would be less disposed than formerly, e.g. at the time of the Chatfield Report, to limit India's liability to what she can produce within her own borders.

* * * *

I suspect that in calling for a revision of the settlement, Britain is impelled not only by the changes in the war situation but also by the spectacle of our mounting sterling assets, which in her eyes must seem clear evidence of India's increased capacity to pay. Britain even might argue to herself that not only is India's stake in the war more indubitable with threats of invasion and air raids and the like, but her capacity to pay has also increased. Why, then, should not India pay? —asks Britain. Sir Jeremy should surely be able to say why. But it is time that there was wide and keen appreciation of the sources from which our sterling assets have been derived. India is no miser with hoards of gold tucked away in clumps of tattered rags. On this question of our sterling assets and their relation to our liability for military expenditure. I hope to engage my readers in the next issue of 'Indian Finance'.

"EAVESDROPPER."

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 26th November.

It is satisfactory to learn that the Regional Priorities Committee have tackled the much-discussed Priorities question promptly and in no uncertain manner. That they were satisfied that the issue of certificates had been the subject of abuses is evidenced by their decision to solve the tangle by cutting the Gordian knot and cancelling all existing priorities with the exception of those for pucca bales from upcountry stations required for shipment overseas. In justice to the Mills it ought to be stated that their applications for priorities had been on a very modest scale. But in regard to Balers the position was very much otherwise. Now we are back *in statu quo*, and it is left to Mills and their suppliers to work in co-operation with the shipping companies in deciding if any preferential space within the quota limits is to be granted. By this means it is to be hoped that the backlog of early, cheap sales will be gradually cleared up, by specifying, when space is allotted, that early contracts are to have preference before later ones.

Another decision was arrived at which should facilitate despatches to Mills, for the ratio between Mills and Presshouses so far as the Mymensingh district is concerned has been altered from 25 and 75 per cent respectively to 75 and 25 per cent, which is much more like the normal ratio of shipments from that district.

It appears that there is no prospect of the regulations for revised bale dimensions, due to come into force from 1st December, being relaxed. And upcountry balers who are not furnished with power presses may find some difficulty in complying with the reduced sizes of 13½ cubic feet for 3½ maund bales and 15 cubic feet for 4 maund bales. It seems quite probable that there will be quite a general reversion to 3½ maund bales, partly because the ratio is rather more favourable in that case and the smaller mass makes it easier to attain. Whether the much greater proportion of 3½ maund bales likely to be tendered for shipment will not go a long way to cancel out the advantage of closer pressing, remains to be seen. For it seems axiomatic that a cargo of 3½ maund bales will necessarily occupy more space than the equivalent weight of 4 maund bales. A space is liable to be forfeited if bales do not measure down to the required dimensions, where presses are at all decrepit and liable to break down under extra pressure, it is not beyond the bounds of probability that under-weight bales may be packed to pass the calipers. This would again defeat the object of conserving space though the carrying company would not suffer as it would collect freight for the full nominal weight, and it would be worth the shipper's while to pay this without demur in order to get his jute shipped. But it is the intention at present to give the revised dimensions a run to see how they work out in practice. This aspect may require review after trial.

The more hopeful war news of the past few weeks has had the effect of bringing quite a few of the gambling fraternity back to Calcutta from their fastnesses in Bikanir and such like places and it is reported that the Linseed Fatka market is on the point of being reopened, to be followed in all probability by the Hessian Fatka. There is more than a suspicion that advance scouts are also here to report on the prospects for the re-opening of the Jute Fatka, or, *pace* Professor Todd, the Jute Futures market. We think there has been ample proof in the recent movements of Loose Jute prices, that it does not require a Fatka market to push prices up. In fact one trembles to think to what astronomical levels jute prices might have been forced if a Fatka market had actually been in operation during recent weeks. The Jute market, and even the Hessian market, has got on very well in the absence of our erstwhile Fatka collaborators When there have been price movements, they hav been steady movements, regulated by supply and demand, and not wild and reasonless fluctuations due to the whim of a large operator or the visions of some quasi-religious financial adviser. One can say without fear of contradiction, again *pace* Professor Todd, that no genuine trading interest in the Jute Industry would view with anything but apprehension and alarm the reopening of Fatka markets either in Hessians or in Jute, and concerned efforts should be made to see that any such movement receives no encouragement, official or otherwise.

Rumour in the bazar hath it that some if not all, of the sealed looms may be opened up in the near future. We give report for what it is worth, having been able to get neither confirmation nor denial. As a result of the recent general trend to switch as many looms as possible to Heavy Goods, the bulk of the sealed looms presumably are hessian. While their reopening might be a potent weapon in the hands of the Mills to keep prices within reasonable bounds if they got seriously out of hand, any increase in production would scarcely suit Mills at the moment with their reduced jute stocks and the difficulties in getting shipment from up-country. There is another brake on the price of Hessians, and one which seems to have come into effect within the last few days, and that is the ceiling prices in the U.S.A. For while shipments to that market have been regrettably small in recent months, it still remains the largest potential outlet for Calcutta Hessians and must have consideration. And it is the existence of these ceiling prices which is believed to have caused the set-back in Hessian prices from the recent high of Rs. 24 to the closing level of around Rs. 22-12.

Working from production figures, Mills would appear to have consumed in the first four months of the season, July to October, just over 22 lakhs of bales of jute. As estimated arrivals of jute into Calcutta during that period were only 24,20,000 bales, it seems pretty obvious that Mills are not yet in the position of accumulating any stocks. Last year during the same period Mills had consumed 21½ lakhs of bales while arrivals were nearly 29 lakhs.

In pucca bales for shipment, Daisee has come in for most attention and prices have registered a very sharp advance. From Rs. 67 to Rs. 74 has been paid for Long Group Dundee Daisee 2/3, while for Short Group Rs. 70 to Rs. 76 has been recorded with sellers now holding for Rs. 79. Dundee Tossa 4s sold from Rs. 69 to Rs. 71 with sellers asking Rs. 75 at the close. Transactions with Mills have not been on a large scale but up to Rs. 75 was paid for Firsts, Rs. 69 for Lightnings Rs. 64 for Harts and Rs. 76 for Dundee Daisee. Cuttings sold at Rs. 25 N. C. and Rs. 24 M. C.

Loose Jute has again been in keen demand and with offerings strictly limited a further advance in price has ben recorded. European packing has sold up to Rs. 15-8 and Rs. 12-8 Mids and Bots, Supervised Jat to Rs. 15-4 and Rs. 14-4, Indian Jat to Rs. 14-8 and Rs. 11-8, Indian District to Rs. 14 and Rs. 11 with Northern Bengal and Assam at slightly lower rates. Cross mark has sold at varying

rates from Rs. 9-4 to Rs. 10-8 according to packing and District. Tossa has also been freely taken, Indian district up to Rs. 15 and Rs. 12 Mids and Bots and Jungli up to Rs. 14 and Rs. 11.

Upcountry markets, with imports limited and in keen demand, have followed closely on the heels of Calcutta prices and there is now little trading margin between the two.

In the Fabrics section a large turnover has been done both in Hessians and in Heavy Goods. The former are quoted lower at the close, November/December 9 porters from Rs. 16-8 having touched Rs. 18-2 to finish at Rs. 17-12.

MEN OF STEEL 3.

In India's steel factories, those who formerly tilled the land, today dedicate their lives to producing iron and steel —vitally important in war and peace.

Their thorough training and their application to this task are forming a new generation in India—Men of Steel.

JUTE

Calcutta, Nov. 26.

There have been no fresh developments in the raw jute market during the past week but with the shortage of supplies and continued demand by mills, prices have improved. In view of the sustained improvement in values during the past few weeks, the demand for the raw material has not been confined to the main consumers alone. It is reported that during the past week there has been some investment buying on the part of some financiers in Calcutta and that the upward trend in prices has been accentuated. Efforts are being made to improve supplies as far as possible but it looks as if the present conditions will continue to obtain for some considerable time. The strength of the jute market has also been sustained with the firmer tone of the hessian market where a sudden improvement in prices for near positions has been recorded, with the reports regarding the possibility of a substantial improvement in freight in the near future. It has been pointed out in these columns on more than one occasion that there is every possibility of export facilities improving to a greater extent than internal transport facilities and that this might have an unbalancing effect.

In the Loose jute section mills have been keen buyers but sellers are reserved and are offering sparingly. There was a rise of nearly one and a half points for all qualities. Indian District Middles and Bottoms were done at Rs. 14-8 and Rs. 11-8 per maund while Supervised Jats and District, Fifty-Fifty assortment, were done at Rs. 15 and Rs. 12 per maund respectively. Indian District Tossa varieties were bought at varying rates according to districts.

In the Pucca Bales section balers were selling rather freely at the higher levels, business being done in Firsts, Lightnings and Hearts at Rs. 75, Rs. 65 and Rs. 64 per bale respectively but towards the close they have chosen to adopt a reserved attitude due to the oversold position and the difficulty in getting supplies. Dundee Daisee 2/3 were done at Rs. 73 per bale. The close is slightly easier.

JUTE MANUFACTURES

Calcutta, Nov. 26.

The Jute manufactures market was inclined to be rather irregular towards the close of last week. There was some selling at th higher levels and it was generally believed that there could not be any substantial improvement in values without an actual substantial increase in shipments. The U.S. stock consumption figures for the month of October were also not quite satisfactory from the market point of view. During the past four days, however, a definitely firmer tendency has been noticeable and quotations have been fluctuating around the highest levels for the week, the highest for some months. There are reports that fright will be more easily available and that the authorities are anxious to help as much as possible the export of jute manufactures. Buying, however, has been confined to the nearer positions. There is even a discount for forward positions. 9 porters ready are quoting Rs. 17-12, December Rs. 17-12, Jan/March Rs. 17-12 and April/June Rs. 17-6. 11 porters ready are Rs. 23-6, December Rs. 23-6, Jan/March Rs. 23-2 and April/June Rs.22-4.

There is not much doing in the heavy goods section but sellers are not keen for business. In sympathy with the higher hessian and raw jute markets prices have been marked further higher. "B" twills for November delivery sold on the basis of Rs. 60; Liverpool twills Rs. 65 and Cornsacks Rs.57-8.

GOLD

Calcutta, Nov. 26.

The bullion market has been absolutely uninteresting and quotations have been on the downward trend. There has been a considerable falling off in investment buying. Operators seem to have realised that the recent rise in prices has been overdone. Gold ready were quoted Rs. 65. Sovereigns have been marked lower at Rs. 47-4 against Rs. 48 on the previous occasion.

In the local market the decline in prices is not quite pronounced, the premium available for Bombay being as much as Rs. 1. There is also a difference in the quotation for Sovereigns by as much as 10 annas.

SILVER

Calcutta, Nov. 26.

The silver market has remained more or less steady and no important fluctuation in prices is expected in the near future. Indian mint silver ready is quoting Rs. 108-8 in Bombay and First Settlement Rs. 105-12.

There is no change in trading conditions in the London market and the quotation for both Spot and Forward remains unchanged at 23½d. The undertone is quiet and small buying has been officially satisfied.

PIECEGOODS

Calcutta, Nov. 26.

The piecegoods market has continued strong and a further advance in prices has been reported all round. It is reported that there is a regular famine for dhoties and sarees of the cheaper varieties and that prices have been rising almost daily. In the absence of any large surplus production in the Western Presidency, it is difficult to get any supplies from that chief producing centre. The reports that nearly all the mills in Ahmedabad have resumed work should come as a great relief to dealers and enable the depleted stocks to be replenished. There is also considerable anxiety regarding the scheme of the Government for producing standard cloth.

In the local market, Bengal mills have been naturally busy, all the available production being sold out. Handloom products also are in good favour but there has recently been some falling off in business on account of the steep rise in values and the absence of any advantage in regard to the purchase of these goods.

Business in winter styles has not been quite brisk, present prices being prohibitive. Dealers, however, are not anxious to dispose of their stocks as they are none too plentiful.

(*Continued from page* 873)

deal as partners in the war. The U.S.A. is committed to the Philippines independence and the only question that arises is whether oversea industries and trade will make big profits as in the past. In spite of inconsistencies the Atlantic Charter is going to be applied in part to the Orient, and the spectacular recovery in Colonial shares reported from Amsterdam cannot continue. The Colonies are to be helped, not for the sake of the British investor, but for the sake of the people; and the new leaven has adverse implications for the companies that hope to go back and work as before. The British stake in the colonies will be correspondingly reduced and that is perhaps a calculation behind the persistent support of Home Industrials and Home Rails too. But there is no indication of money conditions having changed because of recent victories.

NOTICE

Non-Ferrous Metals Requirements:—In order to arrange for the import of metals required for essential purposes, a combined estimate of the minimum All-India requirements of non-ferrous metals and their alloys, in virgin form, is necessary. All "essential" consumers should send their quarterly requirements for 1943, giving particulars of their stocks and of the main types of goods for which each metal is required, together with the quantity used against each. It will be impossible to arrange supplies of metals unless estimates are sent before the 30th November, 1942.

Stock Markets to-day and to-morrow

BIRD-HEILGERS JUTE GROUP RESULTS

THE feature of the week is the resumption of normal business on the Bombay Stock Exchange after the lapse of over three months. As it was reported that considerable transactions had taken place unofficially at higher levels, it was not to be expected that the reopening after such a long time would be aggressive. The opening quotations have been around the levels reported in unofficial transactions. There have been no important changes in the quotations during the short period markets have remained open.

In the Calcutta market rather firm conditions were noticeable till Wednesday and business was recorded over a longer list. There was some investment buying without any appreciable change in values. In Thursday's session a slightly easier tendency was noticeable on profit-taking but the upward trend has again asserted itself on Friday on reports that the *Steel Corporation of Bengal* might pay an interim dividend of 8 annas per share, against 6 annas per share, for the year ending December, 1942. The quotation is at the highest level for some time, being Rs. 23-14. *Indian Irons* also have been marked higher in sympathy at Rs. 33.

In view of the reports that there has been a considerable expansion in the capacity of the plants of the Steel Corporation of Bengal, it was expected that a higher dividend would be paid for the current year though, of course, there were fears regarding the possibility of the heavy incidence of the Excess Profits Tax taking away nearly the whole of the increase in earnings. As a matter of fact, it will be remembered that the earnings of Steel Corporation of Bengal are liable for E.P.T. after the statutory percentage of 10 percent. In view of the large proportion of preference capital to the paid-up capital, it may be possible to pay as much as 15% on the ordinary shares. The total distribution during the war period can therefore be as much as 15% per annum in which case there is every reason for the improvement in the quotation to somewhere around Rs. 30. Recently there were reports that it was proposed to expand the output of the Company by a further 300,000 tons per annum which must bring the total capacity to somewhere around 600.000 tons. The increased production of steel will naturally take up the bulk of the production of the Indian Iron and Steel Company's pig-iron. It is this development that many have been looking forward to all these years. The lesser dependence on exports of pig-iron means a greater stability in earnings for the Indian Iron and Steel Company, Limited. In short, in normal times, the fortunes of Steel Corporation of Bengal and Indian Iron are indissolubly bound together. With any improvement in the quotation for Steel Corporations, therefore, there should be an appreciation in the quotation for Indian Irons as well. More so, during the period of emergency as the standard profit of Indian Iron and Steel Company, Limited is high and the incidence of E.P.T. on this company's earnings is not heavy and it is possible for the shareholders to participate to a greater extent in any increase in earnings.

* * * *

It was mistakenly given last week that the interim dividend of *Jessop and Company, Limited* was 6 annas per share instead of Rs. 1 per share. The interim dividend of Rs. 1 per share with the final dividend of 4 annas per share makes 12½ per cent for the whole year. The accounts now available for the year ended October, 1941, show that, having regard to the difficulty of getting the essential products and technical labour, the earnings for the year are quite satisfactory. The works at Dum Dum have been employed on the production of essential products almost entirely for the Government. The net profit, before providing for taxation and depreciation, is Rs. 23,92,709 out of which Rs. 14 lakhs is provided for taxation and Rs. 2,22,697 for depreciation. A sum of Rs. 1 lakh is transferred to General Reserve. After the payment of the ordinary dividend the amount carried forward is Rs. 3,66,182 against Rs. 3,39,766 brought in.

It will be remembered that only in October last year, the Company was converted into a public limited liability company and that the ordinary shares were placed on the market at the very high level of Rs. 16-8 per share and the preference shares at Rs. 105. The accounts now published relate to the first year as a public limited liability company.

The directors are optimistic regarding the prospects for the current year. Given the continuous supply of raw materials it can be expected that there will be further improvement in earnings. The shares at Rs. 19-12 afford the handsome return of 6.25 percent taxfree.

* * * *

It was pointed out last week that the earnings of the Bird-Heilgers group of companies for the half-year ended September, 1942 were not so satisfactory as those of other companies published recently. The directors point out in their report that the efficiency of the mills was considerably below normal chiefly owing to a number of permanent workers leaving the district and their replacement by comparatively inexperienced hands. Technical difficulties also were experienced. The directors express their concern regarding the supply of jute and coal to the mills and point out that the immediate future of the industry depends on adequate transport being available for these commodities as well as for the export of manufactured goods. Nearly all the companies have filed their applications in connection with the Excess Profits Tax for a revision of the profits for the standard period.

* * * *

There is a sharp decline in the earnings of the *Kinnison Jute Company, Limited* for the half-year, the net profit, before providing for taxation and depreciation, being Rs. 7,62,734 against Rs. 13,10,584 for the previous half-year. The amount provided for depreciation is Rs. 60,978 against Rs. 65,269 on the former occasion, while the allocation to Welfare Reserve is the same at Rs. 50,000. War Contingency Reserve receives Rs. 50,000 against Rs. 1 lakh. It has been possible to maintain the dividend with the small provision for taxation, Rs. 2,97,643 against Rs. 7,91,400. The ordinary dividend, as our readers are already aware, has been maintained at Rs. 7-8 per shre. The amount carried forward is Rs. 58,562 against Rs. 31,945 brought in.

* * * *

Another company in the same group to show a sharp decline in earnings is the *Clive Mills Company, Limited*. The net profit, before providing for taxation and depreciation, is Rs. 3,57,574 against Rs. 7,46,629 for the previous year. The charge on account of depreciation is Rs. 60,896 against Rs. 64,876 on the former occasion, while the transfer to Welfare Reserve is Rs. 10,000 (Rs. 15,000).

(*Continued on page* 915)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 27.

THERE are no important developments to be recorded on the Calcutta Stock Exchange during the past week but a generally firmer tone has been in evidence with a larger volume of business passing. Only towards the close an easier feeling has been noticeable. The behaviour of the market is very satisfactory and buying in not quite selective.. Greater attention has been paid to the merits of the regular dividend paying shares. The feature of the week is the strength of the Jute and Tea sctions. The strength of the jute manufactures market has resulted in a broadening of interest in the Jute section while in the Tea section there has been greater demand for the popular shares with the abrupt rise in prices at the tea auctions.

Giltedged securities have been steady though no appreciable improvement in prices is to be recorded. It is reported that there is more enquiry for short-dated stocks. 3½ per cent. Paper has remained unchanged at Rs. 94. Among terminable loans, 3 per cent. 1951/54 were done at par while 4 per cent. 1943 were done at Rs. 102-2. 4 per cent. 1960/70 were noted at Rs. 110-3, and 4½ per cent. 1955/60 at Rs. 113-14. 5 per cent. 1945/55 changed hands at Rs. 109. A larger number of transactions has been recorded in provincial loans, 3 per cent. 1952 issues being noted at Rs. 99-1. 3 per cent. Punjab 1955 were dealt in at Rs. 97-9 and 3 per cent. Assam 1952 at Rs. 96-1.

Among public bodies debentures, 3¼ per cent. *Howrah Bridge* debentures changed hands at Rs. 96, and 6 per cent. *Calcutta Municipal* debentures at Rs. 121. Among industrial debentures 5½ per cent. *Dalmia Cement* debentures were done at Rs. 105-8 and 5½% *Belsund Sugar* debentures at Rs. 100-8. There are not many sellers offering for the first class industrial debentures.

Business in first class preference shares also is restricted on account of the scarcity of offerings. *Basanti* preference were noted at Rs. 11-6, *Bowreah* 'B' preference at Rs. 113 and *New Victoria* at Rs. 12-12. First class jute mills preferences were very much in favour with *Alexandra* Rs. 140,, *Cheviot* Rs. 155, *Birla* Rs. 128 and *Howrah* Rs. 154. *Dalmia Cement* were Rs. 133, *Steel Corporation* Rs. 116-8 and *Titaghur Paper* Second Preferences Rs. 111.

Cotton shares have not been quite active. In fact, a slight decline in quotations has been recorded during the week. *Basanti* changed hands at Rs. 8-15, *Cawnpore Textiles* at Rs. 15-3, *Dunbar* at Rs. 284 and *Kesoram* at Rs. 13-15. *Elgin Mills* after being higher at Rs. 45-12 are lower at Rs. 44-4. It is still our view that compared to Cawnpore Textiles, Elgin are relatively undervalued. A new share has been listed on the Stock Exchange during the past week. Our readers are perhaps aware that the Mahalaxmi Cotton Mills Limited has decided to reissue the forfeited shares at a premium of Rs. 3-8 per share. Initial transactions have been recorded around Rs. 29. In view of the fact that the company is busy on war orders and that the present issue is intended only to increase the working capital of the company it is expected that a good dividend on these shares will be paid before long and a substantial improvement in the quotations recorded. *New Victoria* have been fluctuating around Rs. 9-2.

There is not much of interest in the Coal section. Quotations have been fluctuating in narrow limits. *Amalgamated* were Rs. 30-2. *Bengal* changed hands at Rs. 390, *Burrakar* at Rs. 14-2, *Equitable* at Rs. 33-14, *Raneegunge* at Rs. 27, *Satpukuria and Asansol* at Rs. 1-4 and *West Jamuria* at Rs. 30-10.

The strength of the goods market has resulted in a substantial improvement in prices for jute shares especially for the higher priced shares. *Adamjee* were recorded at Rs. 27-6, and *Agarpara* at Rs. 23-12. *Bally* were Rs. 271, *Howrah* Rs. 57-14 after being higher at Rs. 58-8, *National* Rs. 25, *Nuddea* Rs. 73-4 and *Nellimarla* Rs. 14-4. *Anglo-India* were Rs. 370, *Champdany* Rs. 194, *India* Rs. 454, *Gourepore* Rs. 725 ex-dividend and *Kinnison* Rs. 355. *Megna* is maintaining the dividend for the half-year ended September, 1942 at Rs. 10 per cent. per annum.

The Engineering section was firmer in the early days of the week and the quotation for Indian Irons was recorded as high as Rs. 32-12 and that for Steel Corporation Rs. 22-10. There has been a slight profit-taking at the higher levels and the quotations at the time of writing are around Rs. 32-4 and Rs. 22-4 respectively. *Britannia Engineering* were Rs. 13-6, *Indian Malleable Castings* ordinaries Rs. 3-2 and *Marshalls* Rs. 3-13. *National Iron* were Rs. 13-12 and *Steel Products* Rs. 6-15.

In the Sugar section, *Buland* and *Raza* have been in great favour and there has been a sudden rise in the quotation to Rs. 43-4. The results of the Begg Sutherland group of sugar companies have not been quite encouraging to the market. *Balrampore* were Rs. 12-15, *Cawnpore* Rs. 29-12, *Purtabpore* Rs. 14-6 and *Samastipore Central* Rs. 13-14. *New Savan* were sticky around Rs. 14-2.

Tea shares have been in great demand and a longer list of transactions has been recorded. *Birpara* were Rs. 327, *Bishnauth* Rs. 30-4 and *Dessai Parbuttia* Rs. 279. *Hasimara* were in good request being noted at Rs. 50-12. *Hattikhira* were Rs. 25-10, and *Killcott* Rs. 60-4. *Teliapara* were Rs. 465 ex-dividend and *Tezpore* Rs. 10-3.

In the Miscellaneous section, no important rise in quotations has been recorded. *Burma Corporation* were Rs. 3-6 and *Indian Copper Corporation* Rs. 2-6. *B. I. Corporation* were unchanged at Rs. 6-2. *Aluminium Corporation* were higher at Rs. 14-14, *Britannia Biscuits* were Rs. 12-4. *Indian Cable* Rs. 26, *Publicity Society* Rs. 10-6 and *New India Investment* Rs. 67. Among paper shares, *Titaghur Paper* were Rs. 22-8, *India Paper Pulp* Rs. 170 and *Mysore Paper* Rs. 23-2. *Orient Paper* were further higher at Rs. 27-2.

BUY

DEFENCE LOANS

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Nov. 26.

Normal business was resumed on the Bombay Stock Exchange on the 19th instant, after an interval of more than three months. Business was better in all the sections except Steels due to adverse rumours.

After a couple of days of normal business, Textile were marked lower on the fourth day. As though in sympathy with Textiles, Tatas also showed a decline.

But the news that the Russians have launched simultaneous offensives on the Smolensk, the Moscow and the Stalingrad fronts had its direct effect on the local Stock Exchange and prices resumed their upward trend. *Bombay Dyeing,* which were quoted at Rs. 1,652-8 on the 19th, were quoted at Rs. 1637-8 on the 25th and on the 26th it almost regained the level that prevailed on the first day.

3½ per cent Government Paper was quoted throughout the week at Rs. 94.

The total rout of the Japanese in the South Pacific, the favourable turn the fighting in Russia has taken and the rapid advance of the Allied Forces in North Africa should go a long way to restore confidence and pave the way for normal business. But one cannot ignore the fact that fighting in Tunis is going to be tough and that both sides are preparing for the final battle the outcome of which will either deprive the Axis of their last foothold in Africa or will mean more preparations and another battle for the Allies. It is quite natural, therefore, to expect that the outcome in this theatre of war may have a tremendous influence on the Stock Exchange.

Business in Giltedged was restricted with 3½% Government paper quoting Rs. 94.

Ahmedabad Advance were Rs. 415 and *Bombay Dyeing* Rs. 1,660, *Central India* Rs. 390, *Century* Rs. 606 and *Colaba Land* Rs. 229.

In the Miscellaneous section, *Belapur Sugar* and *Bombay Burmah* have shown marked improvement. The former were quoted at Rs. 218 on the 19th and are now Rs. 225, a rise of 7 points; and the latter quoted at Rs. 337-8 on the 19th and at present at Rs. 387. *Andhra Valley* have gone up by 30 points (19th: Rs. 1740; 26th: Rs. 1770). *Tata Defds.* which were quoted at Rs. 1675 on the 19th are quoting today at Rs. 1680.

"NOTICE TO ALL SHAREHOLDERS OF THE TITAGHUR PAPER MILLS CO., LTD.

NOTICE

Shareholders are reminded that in future Dividend Warrants will be sent direct by post only to those addresses registered with the Company.

In their own interests, shareholders who hold shares on blank transfer, should now register those shares without delay at the Company's registered office :—The Retreat, Kurseong, D. H. Rly."

In carrying forward	3,359	6	3
Total ..	98,359	6	3

Stocks of jute have been taken at or under cost price and manufactured goods at contract rates.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill has since 18th May, 1942, worked 54 hours a week with 10 per cent. of the looms sealed.

The sacking output of the mill was readily disposed of at satisfactory prices but difficulty was experienced in marketing hessians on account of the countered restriction in shipping facilities.

During the half-year the efficiency of the mill was below normal, chiefly owing to a large number of permanent workers leaving the district and their replacement by comparatively inexperienced hands. Technical difficulties were also experienced owing to a curtailment in the supply of oil for processing, and costs were further increased by the heavy premia payable for war insurance, and by the steadily rising prices of machine spares and manufacturing stores.

Owing to shortage of rail and steamer facilities some anxiety is felt regarding the supply of jute and coal to the mills, and the immediate future of the industry must depend on adequate transport being available for these commodities as will as for the export of manufactured goods.

The Company's application in connection with Excess Profits Tax has not yet been decided, and provision has been made in the accounts against the full amount of tax which may be payable if the application is unsuccessful.

Addition to Block represents cost of a welfare shop.

Managing Agents.—Messrs. Bird & Co.

JESSOP & COMPANY, LIMITED

Audited accounts for the year ended 31st October, 1941:—

The results of the Company's trading and manufacturing activities during the year under review have been satisfactory.

The Works at Dum Dum have been employed on the manufacture of essential products, almost entirely for Government. Difficulty was experienced in obtaining adequate supplies of raw materials and necessary components, with the result that the completion of many contracts has been delayed and the total of the Work in Progress greatly increased.

The contracts in hand and in prospect at the end of the period were adequate to ensure a reasonably good output for the following year.

	Rs.	A.	P.
Accounts.—After providing Rs. 2,22,696-8-0 for depreciation, Rs. 14,00,000 for taxation, and also for all other charges, the Accounts show a net profit of Rs. 7,70,012-4-11, to which sum is to be added Rs. 3,39,765-15-11 the balance brought forward from last year's Accounts making a total of ..	11,09,778	4	10
From this sum is to be deducted the amount of Ad Interim Dividend of Re. 1/- per share, paid on 1st May, 1942	5,10,000	0	0
	5,99,778	4	10
Also to be deducted is the Preference Dividend for the broken period between the date of issue on 16th September, 1941, and 31st October, 1941, paid on 1st May 1942	6,096	0	0
Balance available ..	5,93,682	4	10

The Directors recommend that this balance be dealt with as follows:—

	Rs.	A.	P.
Payment of a final Dividend of 4 annas per share, making a total of 12½% free of tax, for the year	1,27,500	0	0
Transfer to General Reserve	1,00,000	0	0
Carry forward to next year's Accounts ..	3,66,182	4	10
Total ..	5,93.682	4	10

Secretary.—Mr. C. C. Matheson.

Authorised Capital—Rs. 1,00,00,000 *in* 8,50,000 *Ordy. of Rs.* 10 *and* 15,000 5% *Cum. Pref. of Rs.* 100 *each. Issued and Subscribed* —*Rs.* 61,00,000 *in* 5,09,950 *Ordy. and* 10,000 *Pref., both fully paid up.*

Synopsis of the balance sheet as at 31st October, 1941:—

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY, LIMITED

Audited accounts for the half-year ended 30th June, 1942:—

After providing Depreciation and reserving Taxation of Rs. 17,374-13-9 and Rs. 48,000, respectively, the profit for the half-year amounts to Rs. 26,191-6-8, leaving a balance of Rs. 6,314-0-9 at credit of the Profit and Loss Account, which it is proposed to carry forward.

The Works have been well employed during the period under review, and new orders received are satisfactory.

Managing Agents.—Messrs. Balmer, Lawrie & Co., Ltd.

KOTHARI TEXTILES, LIMITED

Audited accounts for the year ended 30th June, 1942:—

After making the necessary provision for Depreciation of Rs. 1,04,437-9-10, and for Taxation of Rs. 2,75,000-0-0, the Profit for the year is Rs. 1,71,029-7-3, to which has to be added Rs. 631-3-0 brought forward from the last year's account, making a total of Rs. 1,71,660-10-3 available. The Directors recommend to appropriate the same in the following manner.

	Rs.	A.	P.
To Dividend at the date of 6 per cent, per annum (free of tax) on the Preference Shares for the year ended 30th June, 1942	18,000	0	0
To Dividend at the rate of 10 per cent. per annum (free of tax) on the Ordinary Shares for the year ended 30th June, 1942	50,000	0	0
To Transfer to Reserve Fund	1,00,000	0	0
To Balance to be carried forward to next year	3,660	10	3
Total ..	1,71,660	10	3

The provision for Taxation of Rs. 2,75,000-0-0, is more than sufficient for requirements for the year ended 30th June, 1942. It is expected that there will be sufficient balance available out of this provision for further depreciation to make the depreciation on the Machinery and Buildings on "scale down" basis.

The incidence of taxation specially on new Companies started after 1939 is very heavy. It snaps the very initiative and leaves no room for expansion or Reserves, which are very essential for Industrial undertakings. Except the construction of the Mechanic Shop and purchase of a few Motors no additions have been made to the Buildings and Machinery.

Trading Conditions.—On one side due to the entry of Japan in the war, the price of foreign cotton for finer counts has gone up by about 100 per cent., and on the other hand Labour is now given a bonus of 50 per cent., which have greatly increased the cost of production. In the first six months of the year, namely, from July to January yarn rates were fairly steady, but after the entry of Japan in the war, the rates had a set back till about May 1942 after which the prices began to advance. Further the scare of 10th April disturbed the normal conditions of trading and also the movement of goods by the Railways. In spite of the above, the Directors consider the results very satisfactory.

Since the closing of accounts there was a general strike in August for about a fortnight in almost all the Mills at Coimbatore. The Labour called off the strike after a fortnight. The Sou India Millowners' Association has recommended payment of food allowance in proportion to the rise in the Index number of commodities.

Managing Agents.—Messrs. Kothari & Sons.

Authorised Capital—Rs. 10,00,000 *in* 60,000 *Ordy. and* 40,000 *Cum. Pref., both of Rs.* 10 *each...Issued, Subscribed, Called Paid up*—Rs. 7,99,750 *in* 50,000 *Ordy. and* 30,000 *Pref., both fu paid up, less calls in arrears Rs.* 250.

*Includes Depreciation Fund of Rs. 1,81,721.

KANGRA VALLEY SLATE COMPANY LIMITED

Audited accounts for the year ended 30th June, 1942:—

The accounts show a profit of Rs. 38,373-0-10. To this has be added a sum of Rs. 552-9-4 brought forward from last year accounts making in all Rs. 38,925-10-2.

Had there been no transport difficulties the profits this ye would have been more than those of the last year.

The directors hope that the result of the year's working w be considered satisfactory.

Depreciation on Plant and Machinery, Road and Buildin Furniture, Block Account, Motor Vehicle Account, provision f Income-tax etc., and Bad Debt Reserve Fund has been provid for.

The directors propose the profits be disposed of as follows:

	Rs.	A.
Dividend for the year ended 30th June, 1942, at 15 per cent free of Income-tax ..	23,640	0
Depreciation on Plant and Machinery—		
Kunyara	9 0 0	
Kund	272 6 0	281 6

(Continued from page 907)

Provision for taxation is Rs. 1,99,050 against Rs. 5,02,578. The dividend on the ordinary shares is lower at 4 annas per share against 6 annas per share on the former occasion. The amount carried forward is the very small sum of Rs. 4,109.

* * * *

With the sudden increase in demand for sugar and the higher prices it was naturally expected that sugar companies would be doing very well and that it would be possible to declare substantially higher dividends. The accounts for the Begg Sutherland group of companies for the year ended June 1942, however, do not disclose any substantial improvement in earnings. As a matter of fact, in nearly all cases, there is a decline in profits. The experience of this group, however, cannot be taken as indicating the general experience of the industry as it was not possible for this group to take advantage of the improved conditions existing in the industry.

It was only in August this year that the sugar control order came into force. Only after March, 1942 that there was any indication of a substantial increase in the demand for Indian sugar. It has also to be remembered in this connection that companies in Bihar and the U. P. worked according to the restriction scheme and late in the season it was found that it was not possible to prolong crushing on account of the shortage of cane. *Champaran Sugar Company Limited* has been able to maintain the dividend at 15 percent for the year while the *Ryam* and *Samastipur* Sugar Companies have returned to the dividend list after a long time. Shareholders of the *Balrampur Sugar Company* again receive no dividend. The accounts of *Purtabpore* and *Cawnpore Sugar* companies which have just completed their accounting year may reflect, at least to a certain extent, the improved conditions in the industry.

* * * *

The account of the India Jute and Megna Mills Company Limited, for the half-year ended September, 1942 should be considered very satisfactory, there being a rise in earnings in both cases for the half-year. The net profit,, before providing for taxation and depreciation, of the *India Jute Mills Company, Limited* is Rs. 11,01,110 against Rs.9,72,937 for the previous half-year. The sum set aside to depreciation is higher at Rs. 74,997 against Rs. 48,000. Provision for Taxation is not very much higher at Rs. 4,84,328 against Rs. 4,19,000. The transfer to Contingency Suspense is Rs. 1 lakh against Rs. 70,000. Dividend on the ordinary shares has been maintained at 5 per cent. The amount carried forward is higher at Rs. 41,368 against Rs. 35,478 brought in.

The net profit of the *Megna Mills Company, Limited* for the same half-year is Rs. 13,34,234 against Rs. 10,13,116 and as such the improvement in earnings is more pronounced than in the case of the sister company. The amount set aside to depreciation is Rs. 1,35,302 against Rs. 1,43,295, while the provision for taxation is substantially higher at Rs. 8,34,491 (Rs. 3,43,000). Allocation to Contingency Suspense Account is naturally lower at Rs. 2.25 lakhs (Rs. 4 lakhs). The dividend for the third half-year in succession has been maintained at 5 percent.

WATCH-DOG.

TEZPORE TEA COMPANY

In the Matter of a Debenture Trust Deed dated the 23rd August, 1942.

NOTICE TO DEBENTURE-HOLDERS

In accordance with the provisions of Condition 8 of the Conditions endorsed on the series of 800 Debentures for Rs. 500 each carrying interest at 7 per cent per annum of the abovenamed Company, notice is hereby given that with the approval of the Debenture Holders 200 out of the above debentures will be paid off and redeemed by the Company on the 31st December 1942 at par. ISSUED WEEKLY

Vol. XXX. No. 23 SATURDAY, DECEMBER 5, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

NATIONAL INSURANCE COMPANY, LIMITED.

WORLD OF INDIAN FINANCE

Friday evening.

NOVEMBER has been rung out, and December rung in; but, from the point of view of the monetary features usual to this season of the year, December promises to be as untrue to norm as was its predecessor. Short credits are a glut; and the rates of ½ per cent in Calcutta and ¼ per cent in Bombay for inter-bank call money are as artificial and nominal as is the bank rate of 3 per cent. The returns of the Reserve Bank for the week ended November 20 show an increase in the deposits of member banks from Rs. 64 crores to Rs. 64.58 crores. The Central Government's deposits also have risen from Rs. 10.59 crores to Rs. 13.24 crores, thanks to the excess of treasury bill sales over maturities, and thanks further to the payment received from the British Treasury in respect of inter-governmental transactions. Foreign balances in the banking department show a rise of over Rs. 2 crores to Rs. 84.69 crores, whereas sterling securities held in the issue department are up by Rs. 3 crores. Payments from the British Treasury during the week ended November 20 should, therefore, be of the order of Rs. 5 crores. Of this amount, Rs. 3 crores has been utilised for transfer to the issue department, thereby causing an expansion of currency for a corresponding amount. Rupee coin continues the downward trend and stands at Rs. 16.82 crores compared with Rs. 17.59 crores on November 13. Active note circulation has advanced from Rs. 535.46 crores to Rs. 537.84 crores.

The returns of the Reserve Bank for the week ended November 27 have not reached us at the time of writing; but it is quite on the cards that the developments noticed in the week ended November 20 may be repeated this week also. Further payment by the British Treasury is quite possible; this might have necessitated further expansion of currency; active note circulation must have gone up; and Central Government's ways and means position in India must have received reinforcement. In support of this forecast, we may mention that the deposits of the Imperial Bank in the week ended November 27 have risen to Rs. 157.66 crores as against Rs. 156.37 crores and cash also has improved from Rs. 35.97 crores to Rs. 36.26 crores.

Thus, deposits of banks with the Reserve Bank have risen; deposits of the Imperial Bank keep up the strident rising tendency, while Imperial's cash balances stand at a comfortable level in spite of the substantial investments in treasury bills. In fact, the investments of the Imperial Bank during November in treasury bills are Rs. 8 crores over and above the treasury bill holdings which the Bank already had in its portfolio. That is to say, whereas the market has been asked since the second week of November to put up an extra Rs. 2 crores per week for treasury bills, all this extra money has come from the Imperial Bank. The main support for treasury bills is, therefore, the Imperial Bank. The present floating debt is Rs. 108 crores. A substantial proportion of this is possibly contributed by the Imperial Bank. Tender treasury bills sold this week were sold at an average discount rate of annas 14 and pies 9 per cent per annum as compared with annas 13 and pies 4 on November 24, annas 12 on November 17, annas 10 and pies 4 on November 10, and annas 9 on November 3. That is, in the space of a month, the discount rate has been allowed to rise from annas 9 to annas 14 and pies 9. A considerable part of the benefit from this higher interest goes to the Imperial Bank. May we suggest that, in its position as the Government's bank, the Imperial Bank should not be a party to the present unwarranted rise in the treasury bill discount rate?

This kind of increase in the discount rate is neither in consonance with actual conditions in the Indian money market nor compatible with the cheap money policy which is the avowed policy of the British monetary authorities and which, in correct imitation, the Indian authorities have been following. In pursuance of this cheap money policy, the British Treasury has announced this week the details of the fourth defence loan. As we have again and again pointed out, this is a 2½ per cent war for Britain. The defence loans have been on a 2½ per cent basis. From the first to the second, from the second to the third, and from the third to the fourth, there has been a scientific change-over from a short-term to a medium-term type of loan. The first loan was essentially a short-term loan; the second was a 1946-48 issue; the third a 1949-51 issue; and the present one is a 1951-53 issue. The 1949-51 bonds have been available on tap since October 1941; the tap is now closed as on November 30. Subscriptions for the 1951-53 are receivable from the first of this month. The first Defence Loan fetched £494 millions; the second £444 millions; and the third £700 millions. The fourth Defence Loan starts under propitious circumstances. The first December interest payments will be diverted in large part to this loan; there is also the possibility that most of the holders of the 3½ per cent India sterling stock, who are to be paid off in a month's time, will reinvest the proceeds in the fourth Defence Loan.

Meantime, the London money market circles are heartened to receive this further assurance of the confidence and ability of the monetary authorities to remain steadfast to their policy of cheap money. The Chancellor of the Exchequer was asked whether the lowering of the Bank of England rate was not advisable. And it is significant that his reply was not a categorical no. The rediscount rate of the New York Federal Reserve Bank was recently reduced; and, for our part, we believe that a reduction in the Bank of England rate is imminent. In which view, we believe further that the Reserve Bank of India rate, too, must be reduced and will be reduced.

The present defence loan in India is not making any impressive progress. It is urgent and imperative that measures should be taken to accelerate and strengthen its progress. This is all the more necessary as the rupee finance for the 3½ per cent India sterling stock has to be found early in January. Amongst the measures to be considered in this connection is the reduction

TREASURY BILLS

India

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 1st December, 1942. The total amount offered was Rs. 14,02,00,000 (Rupees fourteen crores two lakhs). Tenders at Rs. 99-12-6 per cent. and above were accepted in full, and those at Rs. 99-12-3 per cent. were allotted approximately 73 per cent. Lower tenders were rejected. The total amount accepted was Rs. 10 crores, the average rate of accepted tenders being Rs. 0-14-9 per cent. (Rupees nil annas fourteen and pies nine per cent.) per annum.

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 8th December, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 7th December, 1942, at other Centres. Successful tenderers should make payment on Friday, the 11th December, 1942. Other conditions are as usual.

During the week ended the 27th November, 1942, Government of India Treasury Bills for Rs. 8,11,00,000 (Rupees eight crores eleven lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

of the Reserve Bank rate to 2 per cent. Equally important is the abandonment of the present policy of allowing treasury bill rate to rise week after week. There is no justification for this rise. The Government are entitled to the services of the Reserve Bank and to the co-operation of the Imperial Bank in such movements of the treasury bill discount rate as will aid and abet Government's cheap money policy.

The exchange market continues to be active in a small way, but the undertone is steady. There were a few dollar bills showing.

Banks are sellers of T.T. at 1s. 5 31|32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9|32d., and four months at 1s. 6 11|32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains unchanged at ½ per cent lenders.

Finance Abroad

WHILE the world knows in advance that the U. S. A. will have a bigger deficit than ever in 1943, it does not know much about the response to the 2½ per cent. loan on offer to private investors in the U. S. A. at present. The budget of 100 billions has been promised; how much will come from loans and how much from taxes is not known though the current year's expenditure is estimated to be 70 billions. These staggering figures lie behind the assumption that straight taxation of unearned incomes is on the way. The millionaire's average income is to be cut down to $25,000 a year. The Republican Senator who spoke of strong opposition came out early with his protest. The U. S. administration is not likely to jib at plans meant to give it more revenue. To take a fifth of the national income by taxation may seem desirable when it is assured that no cost is too high for early victory. Mr. Lyttelton's prediction that the war could be won in 1943 strengthens the Administration's case for higher taxation.

The fall in leading industrials in New York must be related to tax fears rather than war news. After firming up for a week, the U. S. market has shed its optimism. The money conditions may make for investment but a reduction of big incomes will be a deterrent to brokers who must be considering the ways to attain austerity. The conversion of money into material and machines will not make for bigger profits and bigger dividends. Federal taxation is sure to be stepped up because of an increase of 30 billions in expenditure next year. It is not necessary to say how the U. S. A. will get the money. Direct taxation alone is likely to be modified, but new excises are also possible. The States will have less money to spend but the war comes first and new obligations assumed by Mr. Lehman for the relief of West Africa will entail additional spending.

There is, however, the assurance that lease-lend is giving return benefits. Farmers who have given 6,000 million lbs. of food for the Allies must be quite content with the assurance that reciprocal lease-lend procedure has been fully settled. North Africa has to be helped, and a programme has already been drawn up. Darlan's proclamation will not stand in the way of sending supplies. If the U. S. A.'s spending programme and special short-term loans have become familiar since May, the major question is still the way in which 9 billions are to be raised by the new loan in December. Tax-anticipation notes or any other form of anticipatory payment will not help the Treasury much. It is the investor, not the money market which must help. But the right frame of mind must have been secured in advance and Mr. Churchill's broadcast will be of immense help to the U. S. Treasury at present. Since a Congress sub-committee has not yielded to a demand for powers to the President to suspend immigration laws, it is clear that the party majority is not strong enough. Enough is not known about how much saving is attributed to rationing, and anti-inflation measures generally, but the U. S. Congress will be slow to reconcile itself to the autocracy that goes with the newest deal. There is, however, the demand for bigger production. 8 million tons of shipping is not treated as the upper limit of the U. S. building programme, and construction time is being reduced by jerks, notably, by Mr. Kaiser of Oregon. A full year of war has lifted production to a remarkable level. The 60,000 planes and 45,000 tanks are no longer target figures for America. The spur to accelerated expansion is the Allies' need to win in Europe, and Mr. Churchill by emphasising the existence of obstacles, has assisted the President to go on his way. The second visit of Mr. Lyttelton follows the appointment of Colonel Llewelin to a new post in Washington. Since Britain is bent on producing more in the fourth year by re-allocation of manpower and fresh planning, it is Britain which, so to speak, sets the pace. Next month the President will send two important messages to Congress. Until then estimates of what can or will be done must be formless.

The restriction of interest in stocks and shares will secure more support for war bonds, but a billion a month on an average for war bonds is not a big enough response for a nation that has had to raise about 50 billions in a year by borrowing alone. Dis-hoarding of notes may help, but the U. S. Treasury cannot put out new money, even if it has bigger reserves than is necessary. That would run counter to the anti-inflation principle. The U. S. press has carried for months advertisements asking for the curtailment of spending and absolute economy in the use of all goods in the interests of the war effort. That effort has to grow up to new dimensions as an army of 5 millions has to be supplied while a two-ocean navy will be actually in commission. But war news will tell. It was not surprising that applications for treasury bills in London were larger though the weekly offer was for 80 millions instead of 85 millions as before. The stronger tendency developed by giltedged, after the easiness reported last week, must be taken as a favourable factor for the new issue of 2½ per cent war bonds. In comparison with prices a year ago little change is to be noted in giltedged. Big holders have had no worries whatever be the war news. But industrials have appreciated more rapidly than seemed possible. Distillers and P. O. Deferred are not the only shares that are quoting higher than in 1941. Even Woolworth (5 sh.) is higher and big rises are apparent in Courtaulds and Coats (£1) shares.

LLOYDS BANK

LIMITED

(Incorporated in England.)

1677

Strength

Lloyds Bank has attained to the position of being one of the largest and strongest banking institutions in the world by its reputation for efficiency, thoroughness and financial stability.

Subscribed Capital £73,302,076
Paid-up Capital £15,810,252
Reserve Fund £10,000,000

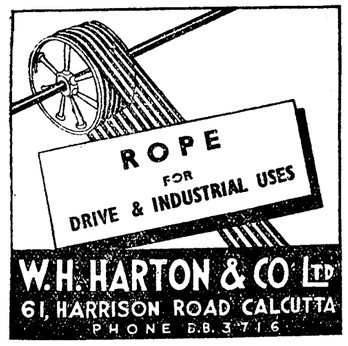
Branches in India:

CALCUTTA, 101-1, Clive Street and 37, Chowringhee, DARJEELING, BOMBAY, Hornby Rd. and Princess St., KARACHI, RAWALPINDI, MURREE, AMRITSAR, LAHORE, DELHI, NEW DELHI, SIMLA, PESHAWAR CANTT., PESHAWAR CITY, SRINAGAR, GULMARG.

The steady rise in tea shares recorded for two weeks in London has its counterpart in Calcutta. It was mentioned that it was due to the general realisation of the removal of the threat to Assam. In view of the dividend it is not unusual for Dooars (£1) shares to stand at 34sh. 6d. The recovery in Eastern mining shares appears to be part of a speculative rise, noticed in India as well of late, but the outstanding improvement in Anglo-Iranian Oil is clearly due to a revision of views. Not Trinidad issues but bigger shares like Shell have a large following at present. In comparison with 1941, Royal Dutch is actually higher, even after the loss of the N. E. I. It may seem surprising, but belief in the early recovery of the colonies by Holland may be an adequate explanation. But it may be the rise on the bourses in Occupied Europe which is the immediate cause, though the quotation fell slightly on Wednesday. In recent weeks, a rise in Foreign Bonds has been reported. It is like the rise in Rio Tinto due to Spanish neutrality. It points to a revival of speculative activity in London that is based on calculations of victory in 1943. If gold shares have not been backed largely, it is noteworthy that Nundydroog is going up. The Kolar group of four shares must have been supported mainly on the strength of gold prices in India rather than the unaltered price of 8 guineas per ounce in London. Since a small amount of silver also is produced by the mines the Mysore excise duty cannot deter the investor from buying the famous old shares. South Indian investors will, doubtless, take heart from the rise in the shares which are to be distinguished from all other mining issues. At present prices the shares offer a fairly large yield and seem the most suitable of sterling shares that can come the way of the Indian investor.

The reduction in Treasury borrowing through bills with deposits at 70 million per week may be due to larger sales of tap bills and also the need to respect the convention that the banks should have plenty of liquid assets at the turn of the year. Two weeks ago, it was said that December-January bills were taken by clearing banks which were not free lenders. The absence of any change in rates does not evidently affect the tradition of keeping large balances. This, in a way, will help the Treasury which usually gets most revenue in and after January. The Premier's broadcast has stimulated optimism; savings must grow as travel has been cut to the bone and spending has been curtailed. The publication of the Beveridge Plan as a White Paper should also help. Even the belief that taxation after the war will be heavy does not upset the stock exchange. If Home Rails have yielded slightly, Heavy Industrials are still firming up. This has its lesson for India where profit-taking causes occasional easiness in the share market though the major trend is upward.

Aspects of an Industry No. 9



SORCERY

THE sorcerer was reputed to have the power of converting human beings into strange animals. As the change was almost always for the worst, his magic powers were greatly feared — and with good reason! The sorcerer of the present day is the organic chemist, but his work is everywhere welcomed, because the changes he makes possible are always for the better. Have you ever seen a piece of cotton cloth coming straight from the loom? A drab and shabby-looking article indeed. But see it later, after it has been cleaned, softened, filled, made creaseless and given a lustre. What a transformation is there, a transformation directly due to the wide range of textile chemicals known as auxiliary products, made by the British dyestuffs industry. There is little that the British organic chemists cannot do with textiles. They have auxiliary products which make cotton as transparent as glass, others which soften it. They can make cotton look like silk or dull the lustre of rayon. They have chemicals known as stripping agents, which take the dye out of a fabric, and wetting agents, which make materials more absorbent. They have even evolved a product which enables the softest fabric to repel water without loss of texture. It is no exaggeration to say that the chemist through these organic auxiliary products makes the modern fabric. It is the chemist who transforms it from a lifeless material into the highly attractive, beautifully finished product you buy in the shops.

Silver Then and Now

The policy of the Indian Government with regard to the maintenance of stocks of silver in London, sale from such stock and the rate at which the sales are effected is shrouded in mystery and has given rise to bitter criticism and grave disquietude. The wisdom of continuing sales of silver in London under present conditions is open to question. The lessons of the last war must provide an impressive warning. The difficulties which the Indian financial and currency system experienced in World War I were largely due to silver. And prudence demands that there must be the utmost conservation in this war of that metal which precipitated a crisis in India's finances in the last war. It is useful to furnish a study in comparison and contrast of silver in the last war and silver in the present war.

In this war as in the last, the demand for silver for coining purposes has been greatly accelerated throughout the world. The coinage of the British Empire absorbed nearly 108 million fine oz. of silver in the years 1915-18 as against 30.5 million fine oz. in the years 1910-13. There were similar increases in the silver coinage of other countries. During the present war, however, this increased demand for coinage, which is usual to all wars, has been brought under some manner of control by resort to such devices as reduction in the fineness of silver in coins, use of more nickel in subsidiary coins, and paper notes for smaller denominations. All the same, the demand considered in itself is vast. For one thing, currency in circulation in the various countries in this war is many times the currency in circulation during the last war. This means a far greater volume of subsidiary coins. Moreover, a good part of the world stocks of silver was immobilised with the American Treasury before the war began. The stocks of silver held by the Indian Government were lower in reference to the total currency in circulation than was the case on the eve of the war of 1914.

While the increased demand for silver incidental to any war has to be taken into account in the present war, there is the additional circumstance that a special use has been found in this war for silver with regard to war industries owing to the necessity for finding substitutes for copper, zinc and lead after the enemy occupation of Malaya, Dutch East Indies and Burma. This has necessitated the adoption of measures by the Canadian and the U.S. Governments for restricting the available American silver for use in the American war industries.

In the last war, India was a buyer of silver in the world markets. The following table shows the amount of silver purchased by the Secretary of State for India between 1915-16 and 1919-20 :—

	In open market (Standard Ounces)
1915-16	8.636.000
1916-17	124.535.000
1917-18	70.923.000
1918-19	106.410.000
1919-20 (to 30th November 1919) ...	14.108.000
Total ...	324.612.000

In spite of such large purchases, the expansion of currency and the necessity for greater and greater rupee coinage led the Government to believe that further purchases of silver should be made. Towards this end, the Government of the United States of America were approached, through His Majesty's Government, on the subject of releasing a portion of the silver dollars held in their Reserve. In pursuance of these representations, the United States Congress passed the Pittman Act in April 1918, whereby the U.S. Government were authorised to sell to other governments silver not exceeding 350 million silver dollars from the holding in the Dollar Reserve. Of this amount, 200 million fine oz. were made available to the Indian Government. Delivery of this silver in India, however, began only a few months before the end of the war. 152⅛ million standard ounces of silver were delivered in 1918; and 61 million ounces in 1919-20.

In the present war, India has not so far figured as a buyer of silver in the world markets. On the other hand, it is known that the Secretary of State has been selling silver on India's account in the London market. It is believed that these sales are being made to the British Government.

In simple terms, India was a buyer of silver in the last war and a small seller of silver in the present. In the Government's assumption of these roles, as buyer in one period and seller in the other, the Indian public as such has had no voice, neither in the policy nor in the operations.

The Government were subjected to severe criticism with respect to their purchases of silver in the last war. The main points of the criticism were that, with greater publicity with regard to financial and coinage operations of the Government, steps could have been taken to lower the silver content in the rupee coin, thereby reducing the quantities of silver that had to be purchased; and that India was obliged to pay exhorbitantly higher prices for all the silver bought at the time. We quote below the relevant paragraphs from the Babington Smith Committee's report, showing the fluctuations in the price of silver in the last war.

> "In 1915 the highest price of silver in the London market was 27¾d. per standard ounce. By April 1916 it had risen to 35 1/8d. and in December had reached 37d. The rise in price continued throughout the first part of 1917 and in August it exceeded 43d. We invite attention to this figure, because it marks the point at which the exchange value of the rupee at 1s. 4d. is equivalent to its bullion value, and it was the rise in the price of silver to this figure and above it that necessitated the alterations in exchange to which we refer in Paragraph 22. In September 1917 the price of silver rose to 55d. Between May 1918 and April 1919, the London price for silver ranged between 47¾d. and 50d. per standard ounce. But when in May 1919 the United States Government and the British Government withdrew control over the silver market, a further rise in price occurred, and in May the London price reached 58d., or more than double the maximum attained in 1915. Since that date, mainly on account of the exceptional demands from China, the price has risen still further and on 17th December stood at 78d. per standard ounce."

So far as the silver acquired under the Pittman Act was concerned, the price paid was 101½ cents per fine oz. It may

be assumed, in general terms, that, for the silver that India bought in the last war, the average price would be over 45d. per oz.

While India was a buyer of silver in the last war, the price of silver was allowed to reach giddy heights both in America and in England. During the present war, however, India is a seller of silver; and the price in London is being maintained at the pegged rate of 23½d. per ounce. This control rate in London is in sharp contrast to the higher prices ruling in India and to the high price in New York. As the party for whom silver is being bought is His Majesty's Government, the question is asked whether this policy of pegging the price at 23½d is devised in the interests of the British Government.

In this connection, suspicion and misunderstanding are greatly intensified because all the London transactions of the Indian Government in silver are being conducted with the utmost secrecy. Both New Delhi and Whitehall seem to think that the public in India have no right to demand the disclosure of full facts about the Government's silver poticy and about the actual sales so far effected by the Government. We may here repeat the questions that we posed in the last issue of "Indian Finance":

> "Is there any agreement between the Indian Government and the British Government with regard to the sale of the Government of India's stocks of silver in London?
>
> What are the terms and conditions of this agreement? How long has this agreement been operating?
>
> Does this agreement envisage sales of silver at the unchanged rate of 23½d. per oz., irrespective of what the price of silver may be in New York or in India?
>
> How much silver has so far been sold and at what price?"

The public are entitled to get full and frank answers for these questions. Over 25 years ago, Sir Stanley Reed, in a memorandum submitted to the Babington Smith Committee, referred to the distress and prejudice to which all the acts of the Government of India were exposed because of the political status of India. He strongly criticised the exercise of final authority and the exercise of that authority in secret, by the Secretary of State "who operates six thousand miles away, remote from Indian thought, feeling and influence, but in living contact with the London market." The following passage from Sir Stanley's evidence is as pertinent to-day as it was in 1919.

> "The Government of India, and to no less a degree the Secretary of State, is suspect in the eyes of a large section of the Indian community. All its actions are jealously regarded, often misunderstood, no less frequently misrepresented. The Secretary of State operates 6,000 miles from the great Indian financial centres. He is surrounded by, and naturally amenable to, interests which are not Indian in their ideas and aims. He acts in secret, and it is frequently impossible to obtain any information in India of the groundwork of measures and are liable to perversion in India itself. The political disadvantages of such complete powers being exercised in secret so far from the people who are vitally affected by them, cannot easily be exaggerated."

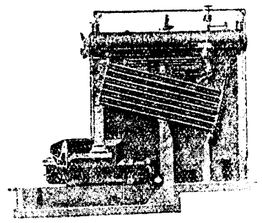
Are these transactions in silver such that the Government of India or the British Government will suffer by publicity being given to the nature of these transactions and their volume? If the Government are desirous of securing confidence from the public, they must realise that suspicion can be dispelled only when truth is told, and it will be suicidal if truth is interred in the archives of the India Office.

ASPECTS OF INVESTORS

In spite of a freer flow of prospectuses into the press, it must be said that capital market trends will remain unchanged for the duration. In expressing a summary judgment, based on limited data, it is necessary to relate the observation by reference to such settled facts as the disinclination of banks and insurance companies in India to depart from previous policy in the matter of investment. Long spells of stagnation are necessarily characteristic of the capital market in all countries. Even the absence of restraint does not make for large-scale offerings of shares and debentures. The capital market in India is not old—the habit of oversea investment, too, is unknown—but the possibility of accelerating the flow of money into industry is frequently canvassed. Planners and programme-makers consider a strong response possible in the case of bonds issued by State-aided or State-financed corporations. Experience suggests that it might be otherwise, and to-day when investment opportunities are limited by the war, there may be no support for suggestions like the flotation of ten-year debentures for new industrial concerns launched under State auspices. A discouraging conclusion like this might seem superficial, but the major consideration must be the yield factor. Even if investments in new Government loans are not large, the investor will not give up old ideas and habits. There is nothing startling in the revelation that out of total funds of Rs. 76.32 crores belonging to insurance companies at the end of 1940 only Rs. 5.97 crores represented the value of shares, exceeding the value of cash balances but below the value of policy loans. The limited proportion is not strange by any means. The tradition of conservative finance has to be upheld, and Mr. Thomas' remark that the allocation of funds to industrial enterprises must be on a strictly limited scale is warranted by the existence of specific obligations to policyholders at all times.

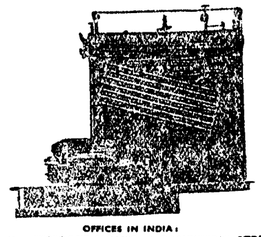
If the very limited proportion of investment in industry to total funds is a mark of most insurance companies' balance-sheets, it will be noted that practice is older than the law which laid down conditions only for those which evinced a desire to be original, if selective. Given this condition, that insurance and banking concerns cannot finance industry, except for very short terms, industry must approach the investor direct. In the case of India, the direct approach has to be the way of the managing agency system. The changes in company law have only revealed the strength of the system, and financial development has to reckon with the agent as

Thompson BOILERS & ACCESSORIES
FAIRLIE HOUSE, FAIRLIE PLACE, CALCUTTA



well. In spite of familiar statements as to the agency houses' ability to finance industry, it is arguable if present conditions will stimulate new issue activity. Most of the agency houses were dependent to some extent on foreign trade. That has been seriously affected by the war, if compensation has been obtained in distribution. Local manufacture is admittedly being developed in various branches, but the demands for new capital are not large, particularly, as the scope for new enterprise has shrunk with the establishment of subsidiary enterprises by big combines. To what extent the conversion of British into Indian enterprise will be facilitated by the Indian investor at present need not be debated. It is highly doubtful if outright purchase and displacement of control can be effected. The conversion of existing concerns into public companies has taken place, with advantage to the average investor, but this must be viewed as exceptional, even in time of peace. The computation of the proportion of Indian to British capital in existing industry or of the managing agent's share of the paid-up capital can have no relevance when the investor is not likely to go outside a chosen field. The rise in stock exchange values only proves the worth of established successful enterprises—it does not enhance the attractions of new propositions. The institutional investor has little to do with the new issues that may come at intervals and would-be stags find that they have no profit but are saddled with permanent investments. The investor's defensive mechanism is always strong. Successful placing and ambitious underwriting go together; but India knows little of either. It might be said that, having regard to the flotations of the past five years, the most successful ones were under the auspices of a special issuing house. But in this case also the exception proves the rule. How managing agents can become merchant bankers of a new type, using private deposits for long-term investment is a problem that baffles investigation. It is indeed doubtful if financial control can be to the permanent benefit of the investor. The mere fact that German banks have added to their interests through loot acquired by the Nazis' conquests in recent years cannot be cited as proof of success. The individual investor is still the pivot of the new issue market, and in India there are strong rivals for investible funds. The hoarding instinct is deep-rooted, and references to investment buying of cotton or oilseeds in Bombay only illustrates the fact that commodities like bullion come first in times of uncertainty. It is, however, possible to speak of changes to come, now that the course of war is taking a new though expected turn. Additions to bank deposits, while making for strength, have limited use. The investor has to consider afresh advantages and opportunities; and the profits made in the war period have to be employed. The main avenues of investment lie through the stock exchange, but successful private enterprise is not always keen on inviting public participation. In the cotton industry, as also the sugar industry, the proprietary concern is not unknown. Public offers of shares in successful enterprises are yet to come, but they will assuredly meet with better support than the most hopeful new venture. The conversion of private enterprise into public jointstock enterprise is a task that calls for expert financial assistance, and the primary importance of the issuing house will be therefore immediately grasped. Before public investment can spread, it is necessary to have special issue houses. The few investment trusts are unfamiliar with the methods of placing shares, and it is this function which must be reckoned important when there is talk of using idle funds for developing industry.

What can be done in this regard when the investment outlook is propitious is best indicated by a suggestion that indigenous bankers and merchant bankers must come together and invite public participation in new issues. If the new issues of recent months have gone well, it is largely because of previous associations rather than on estimate of prospects. But to use the main advantage promised by the managing agency system for the expansion of the new issue market is a task to be undertaken by the specialist issuing house. The success of one house is a guarantee of the merits of prior scrutiny and selected support. Whether other houses can rise and flourish depends, more on the managing agency system than on the Indian investor's probable response to what may be offered.



There are definite signs of a change in the attitude to new issues. Mill shares in the South have come more largely into the hands of the public which knows that what were private concerns are now striking successes. To what extent new money has gone into the mill industry cannot be calculated but the managing agents who have nursed infant companies are in a fortunate position. The same thing cannot be said of other industries, but reference may be made to an offer of shares in a sugar company in the Deccan. Here, too, successful operation for years was a decisive advantage in the investor's eyes. Managing agents who are in a position to obtain public support may well consider if further advantages are not presented by acquiring cash for fresh investment. Such capital may be added to by the offer of shares in new companies. It is increasingly clear that unemployed funds have become a problem for investors as well as others. The best mode of employment is that indicated. The only departure in jointstock enterprise fully justified at present is the conversion of private or individual concerns into public jointstock companies. Fears concerning dividend limitation cannot operate when industrial prospects have brightened. The lack of interest in defence loans indeed suggests that capital may flow strongly in other directions. Additions to reserves made by companies in past years have been large, but there is no disposition in most cases to cut the melon. The issue of bonus shares might stimulate investment and extend the market for most shares. It may be that there is some sort of ban against bonus distributions but it is worth considering if the democratisation of investment through issue of additional share capital is not warranted in the case of many old companies. Old prejudice cannot apply in this case. A further suggestion may be made as regards the conversion of heavy shares of Rs. 100 each into Rs. 10 and Rs. 5 shares. The refund of capital and the issue of no par shares in exchange may also be possible in the case of old and prosperous companies. There are many precedents for companies taking action to extend interest in their shares. At a time when new issues, quite eligible on merits, are scarce, it is worth considering if investment activity cannot be stimulated by various approved methods.

The fresh capital given in exchange for shares in companies, made public for the first time, will naturally seek the banks and the giltedged market ultimately. To that extent, the Government will gain, while the average investor who is not impressed by the 3 per cent offering on giltedged will have an alternative investment. Holding companies have not yet appeared but it is permissible to suggest that in case of unified groups as in the cotton, jute, and sugar industries managing agents might well consider the creation of holding companies. The country has reached a point at which British practice in the field of investment must be adopted in entirety to develop further the investment habit among the many who can judge only the merits of proved old enterprises. Suggestions like these may seem unoriginal, if not unwarranted, but a defence might be provided by reference to the free purchasing power kept in banks. If money is diverted from goods to income-yielding assets, it would be an undeniable benefit, particularly, when the rate of interest on liquid resources is falling and the investor is driven to consider permanent investment. Since a revolution has taken place with the middle class, as keen on investment as the business community, it is well to indicate the lines of future development. It has been noticed that interest in tea shares among Indian investors is growing rapidly. The yield factor is apparently sustaining the continuous buying, but the inflow of Indian capital into what was originally regarded a field offering limited benefits is of some consequence for one who seeks to show that investment in shares is growing at the same time as investible funds are increasing.

The opportunities for profitable investment in industry are naturally limited as industrial expansion is patchy. Old concerns attract greater attention for that reason, and their shares are acquiring a following that makes one infer that it is not speculation but investment which distinguishes the boom of 1942. It is right to speak of the boom as the rise in values has been almost continuous since October. The deadlock has ceased to be a market factor. Impressive rises have been spread through the entire list. It is the extension of investment to all dividend-paying shares that suggests the possibility of making changes calculated to put life into the new issue market. It is certainly possible for those who envisage a post-war boom when imports will cease to matter as against local production of textiles, chemicals, paper and most goods to accept the suggestion that jointstock enterprise must extend and even change in its nature. Tentative suggestions for creating opportunities, when the investor has attuned his mind to the mechanism of investment, have been advanced. The suggestions are inspired not by a view, that watering of capital is convenient or desirable, but by an appreciation of such factors as the present popularity of shares as investments and the health of the stock markets in India.

Power for Industry

The rationing of electric energy in Madras is perhaps the first direct effort made to divert power from private use for industry in India. Licensees have been instructed to reduce the supply of energy. The available statistics for India point to a continuous increase in the number of units generated and sold. The figures exclude energy sold by the P.W.D. and also energy sold in military stations. The total energy generated has risen from 2 million units in 1940-41 to 2.655 million units in 1941-42. The figures indicate a rise of over 400,000 units for industrial power while the black-out has caused a reduction in sales in 1941-42 of energy used for street-lighting. The energy used for railways has increased sharply in 1941-42 while that used for tramways has been more or less constant. Commercial demand for offices, etc., has grown since 1940 and the appeals made to divert consumption of energy for the industry were based in part on the need to speed up and increase war production. Available figures indicate that in April and May the energy sold for private use fell while that used for industry increased. The total for energy generated and sold in May shows an increase in April independent of the additional day. The further increase in the use of energy can only be conjectured as electric companies have been prohibited from publishing details of operation. The increase of 15 per cent recorded in 1941-42 can, however, be cited as proof of considerable industrial expansion.

The increase noted in April and May corresponds to what has taken place in the U. K. where the industries have taken 62 per cent more energy than in the last year of peace. Longer hours in factories make for extraordinary increase in consumption. The National Industrial Lighting Service has played its part in promoting correct lighting in factories. Power companies have helped war industries in other ways and electricity under central control has been clearly a big factor in creating the records of the three years. Power production in Canada has been assisted by further hydro-electric development. Non-essential use has been restricted, but new sources are brought into use for war purposes. More than 20,000 h. p. are to be added. The Saguenay River of Quebec is expected to provide more power for the aluminium industry and the Madawaska River in Ontario is also expected to help a new station of 54,000 h. p. The Shawinigan Falls in Quebec are long known as a source of electricity but the development of the war period will be to the north of the River St. Lawrence in the Saguenay County. The Shipsha scheme for providing 900,000 h. p. is being rushed through and much of the power will be available before the end of the next year. The Shipsha is shown as a tributary of the Saguenay which flows from Lake St. John into the St. Lawrence Estuary. Quebec is said to be co-operating with Ontario in developing these additional hydro-electric resources. A new site on the Ontario River in the far south of Quebec is to be developed for giving 300,000 h. p. The capital cost is put at $40 million and the scheme is expected to take two years at least. Meanwhile Canada has ordered the reduction of non-essential use of electricity. Neon signs have vanished and electric heating has diminished. Street lighting too has been restricted by order. The wartime pattern of development plus restriction is familiar, but in India there are no large projects though the Grid system continues to develop in South India.

Confidence Sustained

Allied operations in Africa, their scope and purpose have been fully explained by Mr. Churchill. As to the outcome he is wholly confident and Monday's rise on the stock exchange is a clear guide to local reactions to Mr. Churchill's broadcast. The Allies may not be in Europe yet but they have cornered the enemy in Africa. The losses sustained along with successful landings have been indicated. Rommel has been knocked out. Germany's U-boat strength is reduced and French ships have replaced losses due to enemy action. Two thousand miles of coastline that confronts Europe are almost entirely under Allied control. The Mediterranean is likely to be opened and air strength is to be applied from Africa against Italy. In what may be the last warning to Italy, Mr. Churchill declared his friendship for Italians and proclaimed the death of Fascism. The fixation of guilt on Mussolini at a time, when the blows on Italian cities have been singularly heavy, must serve the purpose of showing to the people that Fascism is condemned because of the German alliance, and that both are doomed because the Allies will not pause after their victories in North Africa.

As a tonic for markets, Mr. Churchill's broadcast is rightly hailed as supreme. Bombay received the speech by supporting steel shares as of yore, and the rise extended to miscellaneous shares as well. That Mr. Churchill did not predict immediate success in Tunis cannot be treated as a restraining factor. It is as the beginning of the end—with Europe exposed to attack from Africa—that the operations have their importance. The French Empire has been shattered and the Italian Empire is broken. What confidence Mr. Churchill has in British Generals was indicated and the markets have responded bravely. But it is more than a change in market attitude that matters. Italy to-day may read the writing on the wall and the warning, let it be emphasised, has been given after Rommel's defeat in Italy and the start of the Russian counter-offensive. Britain's sobre confidence must frighten Italy. Ships at anchor have been damaged by British bombers and the fleet's inactivity is due to something besides the memory of Taranto and Matapan. Mr. Churchill's broadcast has indicated again the outcome of battles in the second winter in Russia. From the market angle things look so good that every opportunity has to be snatched at once. Selective buying of textiles has reinforced the fevered rush for iron and steel shares. The boom that follows Mr. Churchill's broadcast proves that India shares his faith in utter, final victory.

Shellac and Rubber

In the work of the Indian Lac Research Institute in 1941-42, moulding powders loomed larger than ever. The pilot plant at Namkum could not provide enough and private enterprise has since responded to the demand. A plant for manufacturing one ton of shellac moulding powder per diem is being put up by Mr. Gurusharan Lal of Gaya. The new factory intends to produce also urea and formaldehyde for the shellac moulding industry. Substitutes for these chemicals are being studied, and the Institute reports progress in respect of thiourea which can be produced from the cyanide liquor at the disposal of the Oriental Gas Company of Calcutta. It is believed that 36 tons of thiourea can be had for making 60 tons of shellac powder needed for electro-technical goods in this country. Another process of obtaining thiourea has been examined. Progress in other branches is also reported as a firm managing a jute mill has deputed a chemist to learn the business of manufacturing compressed jute-boards. Weather-resistant board has been tested this year, and the new use for waste jute, discovered by the Lac Institute, is being extended. The report again indicates how important chemicals are in the making of hot and cold mouldings. In the making of gramophone records, electrical goods and stove enamels, the Lac Institute's researches have yielded results. The filler problem has been tackled and sifted sawdust has been found suitable. Waste pulp from paper mills is receiving attention and the Lac Research Committee has arranged with paper manufacturers to find out what by-products can be used in conjunction with lac. Bazar losses found application as a filler though not to the same extent as jute waste varnishes and lacquers devised by the Institute were tested by commercial establishments and compositions for treating paper were approved. Shellac in combination with rubber is useful for other things besides plastics, and quite the most hopeful item in the report is the sentence. A firm in Bombay is investigating the possibilities of the manufacture of renovated tyres out of a rubber-shellac composition prepared at this Institute. Shellac if used for vulcanising increases the age and resistance to hydrocarbon solvents apart from improving the vulcanising process. Low-temperature carbonisation tar in which sulphur is present and all moisture has been removed is described as a medium quality vulcanising agent for rubber-shellac composition. Practical work at the Institute is thus of very high interest for chemical and rubber manufacturers in India. Many firms were assisted by experiments etc., and these included the Burmah Oil Company of Rangoon. The usual entomological work is carried on and demonstration arranged in the interests of cultivators is again a feature of the Institute's work in 1941-42.

Industry and Trade

Textile production in India in June and earlier showed strong recovery. In the first quarter there was a definite increase in Indian cotton mills' output in comparison with the final quarter of 1941-42 as well as the first quarter of the same year. Total imports for the quarter amounted to 4.1 million yards barely 4 per cent. of the imports in the same period last year, and not even half of the re-exports from April to June. It is no wonder that the cloth market turned bullish in June. Cloth exports amounting to 276 million yards certainly sustained the feeling. Further improvement characterised prices in July when double shift working increased as a result of larger sales and bigger orders for mills. Not even the threat of disturbances affected the cloth market's accession of strength, reflected again in the higher prices ruling since March. Mill consumption of cotton in the first quarter naturally showed a notable increase and last year's total of 3,881,500 bales is a record sure to be broken. Imports of raw cotton in the first quarter were considerably lower as also exports from India. The improvement in cotton prices in July did not hold, though prices were higher on June.

The same story of higher output and exports cannot be told of the jute industry. If total output for 1941-42 was better than that of 1940-41 the first quarter witnessed a decrease owing to reduction of hours and the increase in mill stocks. The outstanding feature of the quarter is the fall in exports as compared with last year indicative of the change in fortunes of export industries arising from the war. Prices showed little alteration over July and the index was actually lower in the case of jute manufactures as compared with July last. The decline in raw jute shipments for the first quarter did not help jute prices either. In the field of India's foreign trade the main changes reported are the fall recorded under pig iron exports as well as iron and steel. The decline in imports is equally pronounced and the advance in prices as compared with July last is considerable

only in the case of galvanised sheets while pig-iron was unchanged. Of greater interest is the fall in exports of coal despite the recovery noted in June. The total sea-borne exports of coal in 1941-42 were lower than the 1.94 million tons shipped in 1940-41. The fall in imports is obviously of very limited significance as against the fall in exports. But it is evident that coal prices showed some improvement in the first quarter of 1942-43 and this factor has to be considered in relation to the fall in exports due to the war. That tea exports have shown continual improvement after the increase of 22½ million lbs. recorded in 1941-42 is borne out fully by the trade figures of the year. In this case, the advance in shipments has sustained the higher prices, just as the absence of imports and falling stocks has lifted sugar prices. The fall in imports of paper into India stands out like the decrease in shipments of wheat. Both are of high interest for the industry and for the investor in both paper and flour mills. The decline in Indian paper production as compared with the first quarter will not escape notice when measures to step up paper production are under way. The reversal of the original trend came apparently in March. Of one other industry in which production has fallen in 1941-42 there must be mention here. The output of safety matches was falling after March, 1941. The established shortage and higher prices are, in this case. due to a radical change in volume of production. The decline in imports of liquors after March, 1942 is of some interest for those who have noted the increase in the output of India's breweries and distilleries. The foreign trade figures point to a big fall in oversea supplies while demand in India must have been enlarged by the war and other factors.

Prices and Wages

Prices in August continued to rise and the working class cost of living went up again. The further rise reported in September from Bombay indicates how the general price-level continues to rise. It is noteworthy that local vegetables and meat like all foodstuffs were dearer in September than in August. Fuel and lighting were also dearer than in August. The general index rose by 2 points on August. The same story of rising prices in August came from Ahmedabad where the index rose by 7 points. The prosperity level of 1926-27 has been more than passed this year. A continuous rise in prices distinguishes the usual diagrams in the case of Sholapur, Madras and Nagpur. The working class cost of living index as compared with August shows the largest variation in the case of Jubbulpore; but the general trend in all cities. is unmistakable. The industrial disputes described in the "Labour Gazette" have to be related to the advance in prices. Claims for war bonus and wages have been common this year and the "Labour Gazette" as a guide to recent strikes is of special importance. In June there was a stoppage of work for five days at Kulti and another in the canvas factory of the East India Corporation at Howrah. In July there was a strike in the Basanti Mills in the 24-Parganas and the earlier strike in the Bengal Chemical and Pharmaceutical Works was settled by the Board of Directors' promise to pay a special bonus. There was a brief strike in the Central Ordnance Stores of Cawnpore. Workers of the Inspectorate of General Stores also struck work, and got their demands for revised dearness allowance, cheap food and fuel shops, etc., passed. There was a stoppage of work in July in the Lucknow Railway Workshops involving over 9.000 men. The issue there too was the dearness allowance. The strike was reported to be particularly successful. It is evident that the Government as employer was called upon to face the same situation as other employers. The enhanced dearness allowance for railway workers came only in August because of unrest, and the follow-up action by means of an Ordinance, prohibiting strikes and lockouts, was an acknowledgement of the difficulties created for Government by industrial disputes. The fall in trade disputes that distinguished 1941 has perhaps not continued into the present year and the advance in prices has created a problem as much for the employer as for the worker.

African Supplies

A fall in general building activity is not peculiar to the Union of South Africa. Shortages of materials co-exist everywhere with keener war demand for most materials. Restriction of demand was decided upon and the Union Government extended control to the use of glass containers for goods. The Standard Bank's letter for September speaks of a smart rise in wool prices. At the first sales an increase of 20 per cent on the 1941 prices was recorded. As the export of fruit and other vegetables has suffered, with the exception of oranges, it is proposed to set up dehydration plants. An average output of £10 million worth of gold shows that gold-mining is still the key industry. Production in August was only slightly lower than in July and a lower grade of ore was treated as the yield per ton was only 4.027 dwts. The engineering works and clothing factories continued to benefit from the war, while furniture-makers and motor dealers were feeling the draught. Higher prices for cattle and maize are also referred to in the report which speaks of damage to wheat prospects. The short crop in Northern Rhodesia as well as Southern Rhodesia has naturally made for higher maize prices but the Control Board has intervened. The outlook for Empire tobacco is indicated by the larger sales of South Rhodesian tobacco sales up to September 10. 1942 which constitute a record; and prices also were appreciably higher with the Union taking about 10 per cent of the Rhodesian crop in 1942. Tobacco prospects in Nyasaland are called fair and a bigger tea crop along with better prices likewise is expected there. The report is of definite interest to India where business conditions naturally make for firmness in tea and tobacco prices. The suggestion that the 10,000 tons of Kenya's coffee would meet with better demand is borne out by the report which mentions the strong demand from Australia and South Africa. Of unusual importance at present is the reference to rubber supplies from Tanganiyika. It is said that new plantations are coming into production, and the aim is stated to be an export figure of 1,000 to 1,200 tons per annum. This is clearly the first mention of rubber planting in Tanganiyika, known chiefly as a source of coffee, cotton and sisal. If East African plantations are developed in the war period by the Allies, the acute shortage will possibly end, more so as French Colonial supplies are within the reach of the Allies at present. A new plant being tried out in South Africa is the tung oil tree. The difficulty as regards Chinese imports has resulted in the setting up of experimental plantations with over 60,000 trees and Union farmers are showing interest owing to the higher price of tung oil according to recent reports.

A New Industry

A new industry has grown up in Madras and Travancore in the last two years. The manufacture of shark liver oil began as a direct consequence of the difficulty in getting cod liver oil after Norway was lost. The history of the industry is told in the Madras Industries Department's report for 1941-42. The Fisheries department took up the question first. Samples of oil from different species of shark were sent for assay to the Nutrition Research laboratories. It was found that shark liver oil contains 10,000 international units of vitamin A per gramme, much more than cod liver oil. It was clear that an unequalled opportunity for developing the shark liver oil industry was provided by the failure of imports of cod liver oil. It was indicated in July 1940 by the Director-General of the I.M.S. that army and medical requirements should be met by an adequate substitute for cod liver oil. The Industries Department was asked to secure commercial manufacture at once. Until then the fishermen did not care to take sharks but now that the livers alone had a definite value they were ready to help. When the fisheries department was merged in the Industries Department and fish-curing yards were set up on the west and east coast, the actual production made a fair start. The yards take the shark livers, clean and wash them, and then boil them in open. tin-coated copper pans. The oil that comes up is skimmed off. The crude shark liver oil then goes to the Soap Institute at Calicut. There it is filtered and purified, the stearine is removed, and the oil is blended with sufficient refined groundnut oil to reduce the content to 1,500 international units of vitamin A per gramme or roughly double the potency of ordinary cod liver oil. The Madras brand of shark liver oil is sold in drums of 40 gallons, 4 gallon tins and 16 oz. bottles. The medical authorities have examined the oil and recommended its use. Two big orders for 3,000 gallons each for the D.-G., I.M.S., were satisfied and 1,598 gallons were made available to private persons and institutions in 1940-41. The industry is really older than the beginnings of commercial manufacture in 1940. Surgeon-Major Francis Day reporting in 1873 described the extraction of medicinal liver oil in Calicut. Cod liver oil came in to compete and the local industry was forced out of existence. Its striking revival is due both to the war and the certificate given by the authorities as regards vitamin content. After the war the industry must be in a position to hold its own and lowering of the cost can help greatly. Experiments with malt extracts along with the stearine derived from oil are directed towards popularising shark liver oil. Mr. Green admits his own debt to Dr. Aykroyd who, too, in a sense is the father of the shark liver oil industry.

Without much of preliminary propaganda or other fanfire, Sir William Beveridge's plan for social insurance and other allied services has been published by the British Government as a White Paper. To say that it is a document that will compel the world's attention even in the midst of the distractions and pre-occupations caused by the war is to indulge in the kind of conventional comment that conveys nothing to the reader. The world's attention, it will get, as a matter of right, as a matter of course. It will be commented on all the world over, commended by many and, if the Soviet press could devote time and space to it, probably derided in the U.S.S.R. For the test of practical working, one will have to wait for the end of the war and the necessarily tedious processes of the passage of so momentous a measure through both Houses of Parliament. At the moment, one has to look at it as a vast blue print of a new social order, which the present ruling classes are prepared to contemplate for the masses. Criticism will be focussed on the details of the plan, on its technical and administrative aspects. The popular mind will be aghast at the huge figure of £800 million by which the post-war budget of Britain is now proposed to be raised; while the experts will be working at the financial implications of it. So far as opinion in Britain is concerned, the why and the wherefore of this plan of social reform will fail to worry all but a few confirmed communists.

* * * *

To the world outside Britain, however, the why and wherefore are far more important than the copious stream of benefits with which Sir William Beveridge proposes to inundate the average household in Britain. Sir William himself has said that it is to implement one of the principles embodied in the Atlantic Charter, the principle of freedom from want. The Atlantic Charter, as we all know, was meant to afford an assurance to the working classes in the democracies that the war is not being fought to perpetuate the old order and that the ruling classes will not prove to have exploited the Fascist menace and the patriotism of the people for their own benefit. That promise has to be redeemed; and the redemption of promises made cannot, as in the case of India, wait for the end of the war. There has to be something in earnest of what is to come. It has to be big enough to capture the imagination of the people; and in this context, imagination is a matter of concrete benefits in definite contingencies. At the same time, the scheme must involve no change in the structure of society. The British working classes, trained for long to be sceptical of social panaceas from abroad and to count their gains in term of tangible advantages, could be relied on to turn their faces away from social revolution which is sterile of good but fertile in the sufferings of social discord. The Beveridge plan then, springs from the desire to make good the promise made in the Atlantic Charter to secure freedom from want. Its aim is to damp or dodge the revolutionary zeal of the working classes, which might conceivably manifest itself after the war is over in an effort to change the structure of society.

* * * *

To judge a scheme which has been published so far ahead of the day when it is to be put into effect is by no means easy. The points of view from which it has to be judged are numerous; and each of them is of momentous importance. And nearly all of them require some knowledge of the conditions of the post-war world as a whole and Britain in particular proceeding from the narrower to the broader issues, we have first to ask ourselves, whether the scheme is technically sound. That is, given the general economic and financial conditions presupposed by its authors, will it work smoothly? Secondly, what will be the effect of the working of such a scheme on the economic life of the country? Thirdly, will the scheme on the one hand, soothe the feelings of the working classes, and curb their zeal for revolutionary changes, and on the other, reassure the upper classes that nothing more of their possessions is threatened than a shilling or more in the pound of their current income?

* * *

These three questions are formulated on the supposition that the basic assumption of the author of the scheme will be proved right in the post-war world. But that, no one can contend, is anything more than a supposition. The question has to be considered, unpleasant as it may sound, whether Britain's national income will be sufficient to support such a superstructure of normal annual public expenditure. Even if it should prove sufficient, the mental reactions to a state of affairs in which the bigger part of individual income flows into the Exchequer by way of taxes and flow out again in the shape of interests on bonds and reliefs of various kinds have to be reckoned with. Would not people start wondering whether this elaborate accounting of national and individual income is not better done away with? But that is not a question with which Sir William can bother now. The claim is made in favour of this new order, that it is socialism without nationalisation, that the individual is left with the spur as keen and sharp as ever to make the most of himself and his faculties, while at the same time he is given the utmost security that even an avowedly socialist state can give, that in short, it is giving Britain the best of both worlds. In other words, the Beveridge Plan is the most signal triumph of the British spirit of compromise. Whether this claim will be proved right is at best doubtful. It is, indeed, unfortunate that so big a scheme will have to be worked in a period when the nation will be staggering under a new war debt by the side of which the debts of the last war will almost pale into insignificance. But the success of the scheme might encourage in other nations the same kind of imitation in the economic field which the British system of Parliamentary Government has hitherto evoked in the political sphere.

* * * * *

But to return to the criteria of judgement in this regard, the accuracy of the basic assumption is of paramount importance not only to Britain but to the whole world. For, so far as the outside world can judge, it seems by no means certain

NORTH-WESTERN RAILWAY

Tender No. 210-S/26/1.
Code word "CATTLE."

Tenders are invited on a rupee basis, for purchase by the North-Western Railway of Ice containers or Ice box portable. Tenders must reach office of Controller of Stores not later than 14.00 hours on 14th December, 1942, and will be opened in office of Controller of Stores at 11 A.M. on the following work day. Tender forms and other relative documents can be seen at and obtained from office of Controller of Stores on and from 1st December, 1942. The sale price of the tender with one copy of drawing is local Rs. 1-8 and Muffusil Rs. 2-8.

that Britain's national income would be maintained at the pre-war figure. The chief sources of Britain's national income are, firstly, the income from her overseas investments, secondly, the income from what are called her invisible exports and thirdly her visible export trade. All the three have been threatened by the war. The overseas investments have dwindled fast during the last three years owing to the need to scrape together every cent of foreign currency for the purpose of financing the war. The invisible exports are dependent not only on shipping but also on the handling of a large volume of international trade. Then there is the export trade, the revival of which was difficult enough after the last war. Britain is, no doubt, keenly conscious of the dangers which threaten her national income; and every effort will be made to pull up the export trade and maintain the national income. But it is certain that the scheme cannot be worked with effortless ease, and that the attempt to ensure its smooth working will have its dangers to the rest of the world. Only a few weeks ago, I drew attention to a speech of Lord Keynes at Manchester where he said that it is for others so to determine their relations with the rest of the world as to leave Lancashire a large share of the export trade and a wide margin of profit. The warning to "others" is quite unmistakable. The pressure for development of the export trade will be vastly increased by a measure which adds to the burden of the already over-burdened Exchequer. The problem in the last resort, apart from questions concerning the structure of economic society in the post-war period, is whether the world can have a distribution of productive activity which would satisfy the legitimate claims of every country to a fair standard of living. If, as President Roosevelt has emphasised in more than one context, the Atlantic Charter is neither a pious wish nor of restricted application, more nations than one or two have to sit together to decide, not only the conditions of international trade in the post-war years, but also the lines on which the economic system of each country is to develop. Till there is such an understanding as to what each country is to make for itself and for others, talk of export drives on the part of the great Powers is bound to fill the minds of others with the gravest misgivings.

* * * *

I have perhaps digressed. But my aim is to stress the simple fact that the Beveridge plan has to reckon with such slump, the decline of staple industries as of cotton textiles in the years between the last war and this and the very big hole which the loss of foreign investments will have cut into the pockets of the great rentier nation, Britain.

* * * *

But, given the same high level of national income, there is little reason to doubt the success of the scheme. British economists and British actuaries have a high degree of professional ability which is more than equal to the task of working out carefully the main principles of such a scheme and the technical details of its working. In fact, the technique of this problem of social insurance may be said to be but child's play for British experts. That the scheme is well-conceived and well-directed towards the elimination of the economic hardships of individual life may be seen from the classification adopted for the treatment of individuals. I have always maintained that the mark of a civilised society is its ability to minimise the phenomenon of individual misfortune. I envisage a human society which will one day be able to snap its fingers at the dark supernatural powers which afflict man's life on this earth. The Beveridge Plan has a relief to offer for every mishap in the life of the individual which it is in the power of human society to lighten. When the scheme works, who knows that the world will not hail it as at least as good Parliamentary government in the political?

* * * * *

But will that do? Today, British Parliamentarianism does not pass for good democracy. And it is a question, to which I for one will not attempt an answer, whether the structure of human societies, subject as it is to the multifarious forces that science, industrial technique and the vast, unconscious mental intercourse of different peoples have released and reinforced, will be a sort of geological structure, one stratum of British precedent laid over another. Far more is involved in the mighty social unrest of the last two decades than the reliefs of social insurance, these ingenious variations of the dole with its liability to the repetition of the means test.

* * * *

Of Art's service to industry there is more than one reminder but none so effective as the Exhibition sponsored by Burmah-Shell in recent years. If the venue (the reporter's word) has been changed, it is well that it carries on. For nothing is more necessary than that useful things should be pleasing, and art, in effect, serves to confer additional value today. The wider aspects are described in the new annual that more than chronicles the work of the Exhibition arranged since 1940. Artists and advertisers have been linked and Government too has found a new interest in the pictorial and graphic arts. As the work so far done owes much to the advertising agent, it is but right that Keymer's original enterprise finds adequate recognition in the 1942 annual which at its price of Rs. 2-8-0 is certainly a departure in the field of publishing. In saying that I hope to draw attention to its many merits—merits that bring before the public the old maxim—that it pays to advertise, though one must add, wisely and well. Advertising executives are not by any means reticent about what art can do. The poster, the hoarding and even the package can deliver its message swiftly to the buyer. It is the general public, rather than the advertiser, that now requires to be interested in what artists and their agents are doing for industry. Art editors and directors say things about function, while the footnotes on the post-Impressionists and their methods strike an exceptional note. The most interesting thing for the journalist is, of course, a chapter on copywriting. If Mr. P. de Peterson does not remind one of Lord Peter Wimsey's essay in 'copy' for cigarettes in the last chapter of 'Murder must advertise' he certainly tells one enough to show that the prose of persuasion has its own special points and its special difficulties as well.

The average advertisement demands good, effective writing and journalists who pride themselves on punch, pep and new tricks must yet learn how the text is done for the good ad. The complete adman is often a man of letters, and there have been stories that Gerald Gould, A. P. Herbert and even Miss Sayers have relaxed by doing copy for various houses and products. The pull that Mr. Peterson has is his unusual Continental background. Still the writer for the press can learn much about his own job from Mr. Peterson's account of what experience and knowledge are demanded of aspirants to his own job. The poster is not at all new to India but one does not hear of A.R.A.'s doing designs for anybody. But everything must be done well and 100 per cent co-operation here is needed as regards lettering, layout etc. For the first time Government gave prizes for ideas and designs: so the poster market is enlarged and Mr. Born has again helped young artists by telling something of what a poster stands for and does. All art must secure results. The artist's subjective satisfaction must extend to the common observer and Mr. Born who knows his Art like his Public Relations gives many a tip to those who want to break down sales resistance or mental inhibitions. As we know, the injunction to save does not matter. The way it is given alone matters. The absolute improvement in much press advertising this year is born of clients getting to know something about what the public wants by way of advertisements. No huddled texts, no more poor layouts. The agents, again by co-operation, have shown that intelligent modern advertising alone matters; and the Art in Industry annual certainly rubs that in.

"EAVESDROPPER."

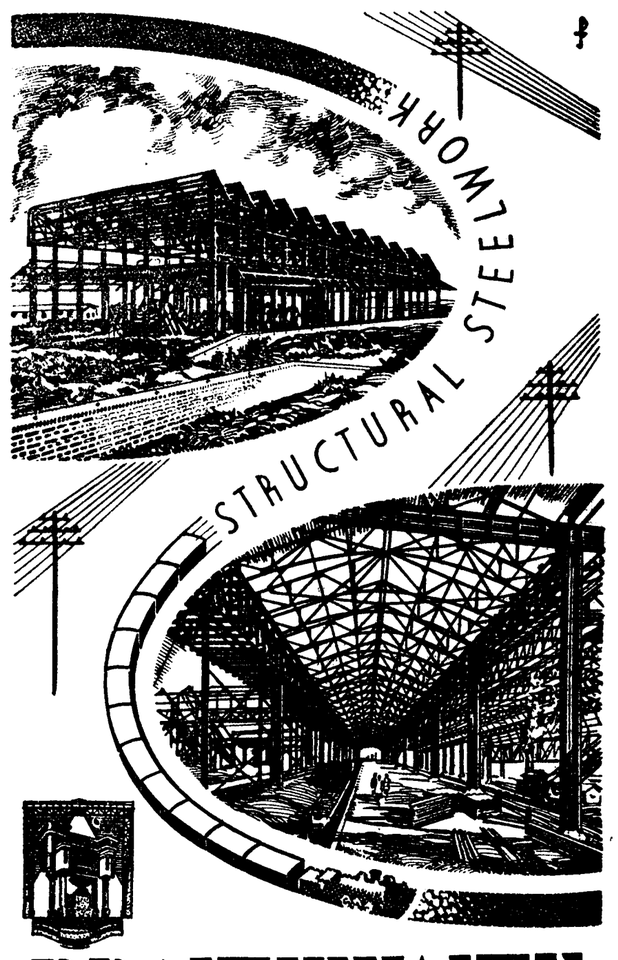
GOVERNMENT OF INDIA
RAILWAY DEPARTMENT
(Railway Board)
NOTICE

TENDER FOR THE SUPPLY OF COAL TO THE NORTH WESTERN, BENGAL & ASSAM, GREAT INDIAN PENINSULA, EAST INDIAN, BOMBAY BARODA & CENTRAL INDIA RAILWAYS AND TO THE BENGAL NAGPUR, BENGAL & NORTH WESTERN, JODHPUR, MADRAS & SOUTHERN MAHRATTA, ROHILKHAND & KUMAON, SOUTH INDIAN, GAEKWARS BARODA STATE RAILWAY AND BOMBAY PORT TRUST RAILWAYS DURING THE PERIOD 1st APRIL, 1943 TO 30th SEPTEMBER, 1943.

Tenders are invited for the supply of the following quantities of coal for the above Railways during the period 1st April 1943 to 30th September, 1943.

		Tons
1.	Steam Coal—to be delivered by rail from Collieries in Bengal, Bihar, Central India,, Orissa, Central Provinces, Singareni and Assam Coalfields ..	31,88,000
2.	Steam Coal—to be stacked during the period January to June 1943 inclusive at Collieries in the Jharia and Raneegunge Coalfields working Low Volatile, Low Moisture quality coal	10,00,000
3.	Coke Breeze	3,250
4.	Soft Smithy Coke for Workshop purposes ..	5,000
5.	Hard Coke	4,500
6.	Screened Rubble Coal (for Power House) ..	4,500
7.	Slack Coal (from Collieries in the Central Provinces and Central India Coalfields) size 1/16 inch to 1 inch—delivery from 1st December 1942 to 31st May, 1943	65,000

Forms of Tender, Specifications and Instructions to Tenderers may be obtained from the Office of the Chief Mining Engineer, Railway Board, No. 1, Council House Street, Calcutta, on payment of Re. 1/- for each set.



Successful Tenderers will be required to execute an Agreement (paying the Stamp Duty thereon) on a Form provided by the Company-Managed Railways, if so desired.

The competent authorities of the Company-managed Railways, of the Railways of Indian States and of the Bombay Port Trust Railway do not bind themselves to accept the lowest or any Tender or to assign any reason for non-acceptance of Tenders; they reserve the right to accept any Tender wholly or in part.

Tenders should be deposited in the Tender Box kept in the Office of the Chief Mining Engineer, Railway Board, before 11-00 A.M. on Friday the 11th December, 1942 and will be opened at 11-15 A.M. in the presence of Tenderers on the same day.

Olympus

(From Our Correspondent).

New Delhi, December 1.

It has been an active week for more than one Department of the Government of India. The new Commerce Member had his first meeting with the Board of Scientific and Industrial Research to examine reports of work already done and sanction schemes for the future. Under the able direction of Sir S. S. Bhatnagar the Board has already established a great reputation, for the researches conducted under its auspices have been of invaluable assistance to war industries. Many new schemes of far-reaching proportions, like the establishment of an All-India Metallurgical Research Institute, have been under the Board's consideration. Naturally war requirements come first. If the Board has been obliged to give the first place to those researches which are directly connected with war needs, no exception can possibly be taken against it. Still the very success which has attended the Board's researches make it necessary that its field of work should be considerably enlarged so as to include also industries of primary national value for the post war future. It is also necessary to widen the Board's functions, for if its work is to develop as it should, it should be in a position to advise the Government on general questions of policy for industrial development—in other words, to lay down the conditions under which it will be possible to make the fullest use of these researches for rapidly industrialising the country.

* * * *

The first meeting of the Standing Committee of the Tripartite Labour Conference held some time ago took place also this week. It consists of Government representatives (Central, Provincial and States) and also representatives of labour and employers. It seems a little incongruous that the number of officials should be so much in excess of the combined strength of labour and employers in the committee, but as it is intended to take joint decisions acceptable to all the interests concerned, this probably does not matter for the present. This is the first experiment of the kind to bring labour, employers and Government together to deal with war problems connected with industrial production. From what I hear the discussions have been friendly and cordial and are bound to lead to useful results. One of the main tasks of the committee is to consider the policy and working of the new Labour Welfare organisation initiated by the new Labour Member, Dr. Ambedkar.

* * * *

The Government of India have done well, it is felt here, in issuing a statement on the small coin situation. As a matter of fact it was overdue, for the problem has been facing the Government and the public for some time now. There has been an undoubted shortage in many parts of the country. As is realised in the Government's statement itself, the problem has a twofold aspect. To some extent the trouble may be due to small-scale hoarding for fear of shortage—in some cases, even hoarding for profit. In order to deal with it the Government have to enlist the co-operation of public organisations and the Press, but it is not clear from the *communique* what the Government of India propose to do to achieve this object. A number of businessmen have been recently in New Delhi. From talks among them one gathers the complaint that the Government of India did not also correctly judge "the phenomenal rate of (coin) absorption" which present economic conditions due to the war and other reasons have brought about. This is the second and more important aspect of the problem to be considered. The Government of India have now come forward with the assurance that steps are being taken to increase the minting capacity still further to meet the public demand. It would appear that the minting capacity has been increased from 16 million pieces a month in the pre-war months to 70 millions already. If further reassuring statements explaining the coin position and the measures taken to prevent or remove shortage, it would help to ease the public mind.

* * * *

The success of the Textile Industries Panel has led the Supply Department to set up three new panels of industrialists. These will be located in Bombay, Calcutta and Madras and will generally as an advisory body to assist the Government in expanding industries. It will also function as co-ordinating machinery between the Government and industries. If, for instance, in regard to any particular matter, the Government state their requirements, the panel will be able to get into touch with the industry concerned and suggest plans for meeting those requirements. At present the main difficulty is that though industrialists are quite willing to finance new industries, they are not in a position to import plants or secure other facilities for carrying out their projects. The creation of the panels presupposes that the Government of India would assist industrialists in getting the necessary priorities and shipping space for importing what they want. The announcements regarding these panels made by Major-General Wood of the Supply Department at a conference of manufacturers last week in New Delhi is reported to have been well received. The Conference has also set up a committee of 11 members including some officials to draw up a scheme for starting basic industries in India.

* * * *

The recommendations of the Sorley committee which was appointed by the Government of India to inquire into the possibilities of developing and the greater use of seagoing country craft on the west coast of India are now under active examination. According to the committee it is necessary to organise country craft owners and also secure a uniform system for the benefit of traders. At a cost of about half a lakh of rupees per year it suggests the creation in Bombay of a Country Craft Organisation office with the necessary intelligence staff for organising country craft on a more efficient basis and maintaining liaison with other authorities interested in the use of country craft.

HILL-BIRD.

15 Points ON SAVING PETROL

5 SPARK ADVANCE

It is a popular belief that the further the ignition can be advanced, the more power will be developed in the engine. This is only a part truth, because actually over-advance will reduce power and spoil the fuel consumption figures almost as much as under-advance. Moreover, over-advance will give a rough engine. This belief in over-advancing the spark has been brought about by the fact that the engine can be "felt" when using an over-advanced spark. This is interpreted as power, whereas in actual fact, in most cases it is the destructive and over-rapid pressure rise in the combustion space which is tending the whole time to damage big-end bearings and produce other complaints. Many cars can have their performance and their consumption improved by bringing the spark back to its correct setting.

FREE Copies of our leaflet "15 Points on Saving Petrol" are available free on application to us at Hongkong House, Calcutta; in English, Hindi, Urdu, Bengali, Marathi, Gujerati and Gurmukhi.

COSSIPUR - - CALCUTTA

(From Our Correspondent)

BOMBAY, December 1.

THE Governor on tour spoke against lawlessness and in favour of firmness. There was nothing fresh in the speech on behalf of the war effort, but the references to Maratha valour in Egypt must have been pleasing. The comparison of the Government to an elephant that can disdain pinpricks was not, however, happy because the businessmen here are only too conscious of difficulties created by the deadlock. In Ahmedabad the mill industry is more or less disorganised, even though open for a week, and the markets here are still hampered by the long closure forced on them. Stray disturbances still mark this Province where the cost of living goes up and up. The stock exchange is brighter after the news that the Allies are more than ever on top in Africa; but there is nothing else to make it happy. Steel shares take a zigzag course, and if smaller engineering shares like Mukund Iron hold the stage, it is because cash scrips command more attention. There is talk of a bonus issue in the case of Wimco. The shares have gone up steadily after the dividend was raised to 9 per cent. In fact, there is no parallel to the climb recorded by Wimco, which is more or less a new share. Equally prominent in the share list is Tomco which for years stood below par, but is now one of the most strongly fancied local shares. It is not the change in sentiment, but the change in oil and soap prices that has put Tomco in the gilt-edged industrial group.

* * * *

The changes in the cost of living have forced the mills to offer another bonus to workers. In spite of suggestions that bonuses should be treated as compulsory savings, textile workers will want to take what can be had when food is dearer and conventional necessaries too are hard to get. Two months' pay has been promised to 200,000 workers by the Millowners' Association. The bonus to be paid in 1943 corresponds to that given in February 1942. The last bonus was ordered like this without any demands from the workers. The sliding scale adjustment of the dearness ensures equal satisfaction perhaps more. But the textile industry here is showing profits and setting an example for mills in other Provinces which also are paying larger dividends. Because there is no all-India organisation, except the new standing committee, created by Dr. Ambedkar, it is not likely that the same bonus will be paid. There is, of course, the example of the Tata Iron & Steel Company which has got a profit-sharing scheme in operation. The mills should have one at least for the war period and Bombay millowners will be ready to act, if assured that taxation will not be suddenly increased to their disadvantage.

The extension of the war risks insurance scheme has been well received. Voluntary insurance at 3 annas per cent per quarter is distinctly helpful. Books etc. can be insured, and the private insurer may lose part of business that formerly came his way. A new committee for examining war claims has been set up. The special officer is a member of the committee which includes Mr. F. I. Rahimtolla and Mr. L. A. Halsall. The reports of assessors of losses will be examined by the committee which will in direct relationship with companies be acting as agents under the Government's insurance scheme. Though no answer has been received as regards losses due to enemy seizure or abandonment under advice, it is believed in Bombay that representations in this regard will not be ignored since the Burma Government has recorded such claims without any declaration of liability.

* * * *

Mr. Laughton's speech at Delhi has attracted more attention than Sir Edward Benthall's because of its reference to locomotive-building. Ajmer must make more engines because America cannot, or won't ship any, and the Indian Railways cannot be always deficient in power, because the war claimed many engines and much rolling stock. If the railways plan for the years after the war, they can have their own locomotive-producing shops. The railways will be jealous of road transport which has suffered more than is imagined. Operating efficiency, as measured by cost, is fairly high but transport has been short, and the public is not enthusiastic about possible development of coastal shipping. The Special Committee finished its work and plans have been drawn up for intelligence and organisation on the west coast. Countrycraft are still common, but there is no chamber of native shipping. It has been urged that the average load can be increased by reducing delay and concentrating traffic. A new office that costs Rs. 42,000 per year is to be set up. It is noted that 681,000 tons of traffic can be or should be diverted to countrycraft. The new estimate of countrycraft on the west coast is of 4,800 vessels with a total tonnage of 200,000. Voyages between Cochin and Karachi are the rule, and the Committee expects efficient organisation to improve the playload by 400,000 tons. It is urged that 20,000 tons should be added to the existing tonnage of countrycraft. If shipbrokers help there will be no shortage of cargo, and as marine insurance rates are falling since August, the carrier and the consignor alike can have few problems.

* * * *

Though millowners have indicated their antagonism to the high prices charged by cloth dealers, there is not any doubt as to the public feeling. The mills do not want unduly high prices; that is why orders for standard cloth are being executed. The general attitude of the consumer was indicated by Sir C. H. Setalvad in a letter to the "Times of India". Sir C. H. Setalvad draws attention to the rise in mills' own quotations for most ordinary varieties. Sir Chimanlal asks why the Government has not intervened in favour of the consumer; and his query demands consideration by millowners first, even when war orders may be large.

* * * *

Producer-gas is the fuel for long runs. The War Transport Department is mindful of what is being done by engines on charcoal gas, for instance, in Madras. On long trips it is as good as petrol, say some people. The test spin to Delhi seems frightening, but it was made in 3½ days. A station-wagon was chosen for the 914 mile journey. The average speed was 25 miles per hour which seems quite fair. The actual running time was 43.7 hours which bears comparison with the Mail train. Charcoal consumption was 1½ lb. per mile and the petrol ration was used only for starting. Quantity used was only 2½ gallons. It has been said that a car driven on petrol usually takes 3 days for the Bombay-Delhi journey by road. Mofussil car-owners naturally should be impressed by the report of the trial. More and more gas-plants are on the market, and charcoal is relatively cheaper than before. Other countries short of oil are doing well with charcoal, and current prejudice really seems to have no justification.

* * * *

Before Sir Baron Jayatilaka can clear up misunderstandings in India he must win goodwill locally. A million Indians out of six million people in Ceylon constitute a depressed minority. They have no rights but those left by a Governor's interference. Mr. D. M. Vora has recently told Bombay that for 15 years anti-Indian agitation is at work, and nobody can pretend the Village Communities Ordinance is a mark of goodwill or meant merely to improve local self-government. Indian traders have been hit hard by control measures. The rice trade is no longer theirs owing to arbitrary fixation of prices and commandeering. Only a threat of non-co-operation helped to save the trade. Politicians are the most to blame. The Ceylon Tamils have no animosity, and the Congress there wants India to help in every way. But Mr. Vora's revelation suggests that it would be an error to export food to Ceylon unless the Colonial Office gives an undertaking as regards temporary emigration to India. More men will soon be wanted as rubber estates are going in for bigger production and will take more Indian labour. Though it may be a duty to help Indians in Ceylon with food, it is noteworthy that there have been protests against exports of rice because India is short of rice, and Bombay as an importer wants rice more than wheat at present.

Resume of Commodity Markets

RATHER uninteresting conditions have been noticeable in commodity markets during the past week. The jute and jute manufactures markets, however, have continued firm though, in these markets too, an easier feeling was noticeable towards the close. Bullion markets were absolutely uninteresting and prices in the Bombay market showed even a downward tendency. The speculative activity in the bullion markets seems to have received a quietus at least for the time being. Closing prices were slightly firmer but lower on balance on the week.

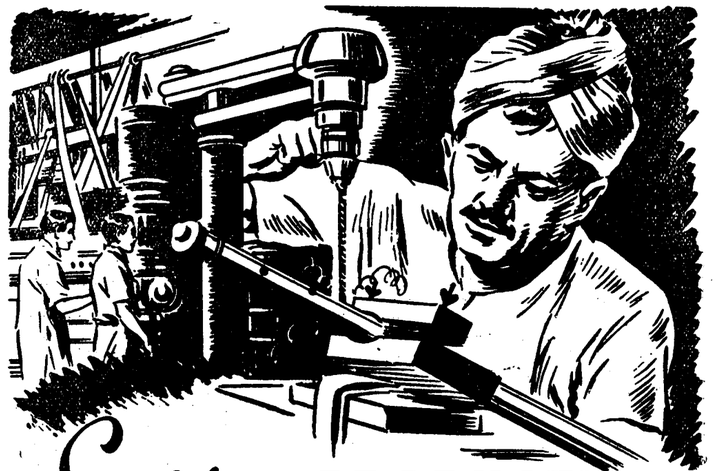
While there is no change in regard to the markets for foodgrains any further improvement in values for the export comodities is dependent upon the volume of shipments during the current month or further developments in the war situation.

As we go to press it is reported that business in the Bombay raw cotton market will be officially resumed from Monday next.

Jute:

The one-sided movement in the raw jute market has continued uninterrupted. With the further strength of the goods markets, sellers have naturally been reserved while mills have been as keen as ever to absorb any stocks offering. Arrivals seem to be coming at a fairly fast rate having regard to the transport difficulties but they are not high enough for this time of the year. And with mill consumption at a high level and shippers active, it can hardly be expected that things would be otherwise. Mofussil markets also have been firm. It can be said, however, that after the recent substantial improvement in values, any further improvement wil be slow and difficult.

Jute Manufactures:



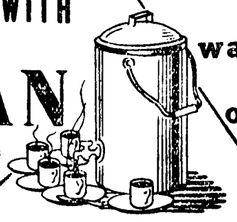
The strength of the jute manufactures market in recent weeks has taken many by surprise. 9 porters ready were done as high as Rs. 19-4. Only a few days back the quotation was Rs. 14-4. Even the most liberal optimist could not perhaps have anticipated such an improvement in values. The strength of the raw jute market has no doubt been responsible to a certain extent for the rise in hessian prices but there has been a sudden change in the general outlook and it is expected that there will be a large increase in shipments. There were rumours regarding an increase in mill working hours but it is not to be expected that the Indian Jute Mills Association will come to a decision immediately without taking into consideration all the facts of the situation. The present pile of stocks has been built up only in the hope that they will some day be removed and unless they are reasonably sure that they will be absorbed within a specified period, there will be no tendency to increase production.

Piecegoods:

The piecegoods market has been rather quiet and for the first time perhaps is disturbed by ideas regarding the possibility of Government control or the possibility of the Government suggestion of the production on a large scale of standard cloth varieties affecting the price structure. There has been agitation for some time past for Government control of prices or production of standard cloth varieties as proposed by the Commerce Member. It will be interesting to watch the developments in the next few weeks. According to the latest announcement, the standard cloth as originally proposed, is to be placed on the market early in January. Whether the industry or the authorities have any excuse remains to be seen. The upset in calculations on account of the prolonged suspension of production in Ahmedabad, however, can always be put forward as an argument.

Tea:

We pointed out last week the need for ensuring that sufficient quantities of teas were available for consumption in India. We put forward the difficulties as pointed out by the Bombay Chamber of Commerce. That is, on the basis of the estimated output figures there was possibly much left on paper which was not in many cases, taken into consideration, that production difficulties or otherwise prevented many from taking full allotment of the export quota and the rights had to be sold to the companies who sold their teas for export out of teas intended for internal consumption. It was for this purpose that a survey of India's crop capacity was advocated. And now it is suggested that the strength of markets at the recent auctions of teas for consumption has been due to the faint hopes of being able to effect private exports of tea. How this is possible is difficult to understand as the entire exportable surplus of the Indian and Ceylon producers has been contracted to be purchased by the British Ministry of Food. It may just be possible that the full export quota allotment in respect of certain companies has not been sold and these might be hopeful of exporting tea on their own accounts. While the advantage on account of the very small export of tea outside the shipments covered by purchases by the British Ministry of Food, the hardship caused to Indian consumers is very great. Some clear policy in this regard is, therefore, needed.

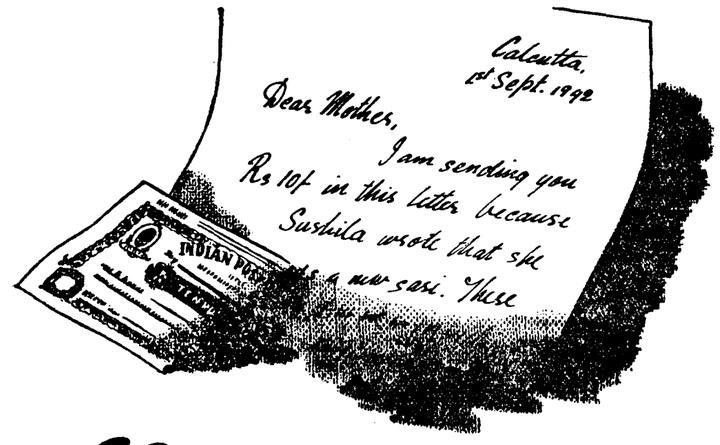


Soaring PRODUCTION

To keep pace with the increased tempo of wartime industry, factory workers in India have to maintain their energy and power of concentration at a pitch that makes war-level output possible. The strain of industrial work today is so great that it tends to increase fatigue and listlessness. Fortunately they have learnt how to overcome fatigue, and when it sets in, they drink good hot tea and feel refreshed and full of energy again. Tea is a true incentive to sustained work. Help your workers to maintain their output at war level by giving them tea during mid-work fatigue spells.

TEA relieves the strain of war-level output

FIGHT FATIGUE WITH INDIAN Tea



INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD IK 167A

Rice:

The first rice forecast for 1942-43, our readers are already aware, showed an increase of 2 per cent over the figures for 1941-42. The detailed figures now available show that while there has been an increase in the area in the provinces of Bihar, U. P., Assam, Bombay and Madras, the decline in the case of Bengal is as much as 800,000 acres, due, of course, to the ill-advised increase in jute acreage.

Sugar:

There was only a small increase in the area under sugarcane and it was not to be expected that with the increase in prices for food crops, production of sugarcane would be stimulated. It is now feared that even the increase in the acreage of sugarcane in U. P. and Bihar will not be of any advantage to mills as it is reported that it is more profitable to sell and produce *gur*. Many are not perhaps aware that gur production is 75 per cent of the total production of sugar in India, the annual production being at times 3 million tons. Mills in certain parts of the U. P. are reported to be suffering from a shortage of sugarcane. There has naturally been some agitation for control of prices of gur. But owing to the difficulties in the way, it is reported that the Government propose to restrict the movement of gur. As gur cannot be preserved it can be expected that restriction on movement will have the desired effect. The increase in production also will act as an automatic brake.

GOONDAS ROB US!

Burning post-offices, mail-bags and railway stations hurts some of our poorest people the most, and hardly effects Government at all. No good nationalist can tolerate this wholesale destruction of the public means of communication. Especially when the *goondas* have murdered people to complete their crimes.

Goondas bring dishonour to Mother India. As long as *goondas* are loose, we cannot expect to win our freedom. Putting down *goondas* with troops and police alone must involve many innocent persons. *Goonda-raj* can be ended most quickly by our people themselves.

OPU. 61

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, December 3.

In comparing the mills' consumption with jute arrivals last week, we inadvertently quoted arrivals up to 15th November as compared with consumption up to 31st October. The correct comparison should be an apparent consumption, calculating from production figures, of just over 22 lakhs of bales during the four months July to October, compared with jute arrivals into Calcutta during the same period of only 20,73,000 bales, which meant a considerable encroachment into stocks when allowance is made for export jute. The arrivals of jute during November are estimated at 7,54,000 bales, which while an improvement, is still a long way short of what is required to restore the balance. In November last year arrivals were nearly a lakh of bales better at 8,45,000. Comparative total arrivals for the five months July-November are 28,27,000 bales this year against 32,76,000 bales last year, a shortage of 4½ lakhs of bales.

Generally speaking, there seems to be a slight improvement in the speed at which the crop is being moved, but it seems to take a long time for instructions regarding cancellation of unfulfilled priorities to percolate to some of the rail stations, whence complaints are still arriving that wagons are not available unless under priority certificates! The enforcement of the revised bale measurements from 1st December is not without its hardships on balers, who have, willy-nilly, been holding stocks for long periods awaiting shipment. It means that everything which has been lying in stock must be pressed again before it will be accepted for shipment, and even then unless shipped immediately, it is open to doubt how long the standard dimensions can be maintained by bales lying in stock. The new dimensions constitute a severe strain on most existing presses, and some discretion might reasonably be exercised if delays are not to be caused, and shipping opportunities missed, by stock bales failing by a small margin to meet the required specification.

U. S. A. cotton interests have at last achieved what they have been agitating for years, the marketing of raw cotton in cotton containers. The main stumbling block in the past has been their own producers, who objected to being deprived of the weight of jute wrapper which was calculated into the weight of the bale of cotton. The standard jute wrapper and ties weighed around 21 lbs. for the standard 500 pound cotton bale while a cotton wrapper and ties weigh only about 14 lbs. It has now been agreed amongst the interests concerned that an allowance of seven pounds per bale will be added to the gross weight of cotton wrapped bales to make up for the difference in weight of the respective wrappers. It is to some extent a pyrrhic victory for the agitators, for not only has this allowance to be granted to the cotton producer, but the manufacture of the cotton wrappers has to be subsidised to the extent of 35 cents per pattern so that they can be sold to producers at approximately the price of jute wrappers. It is expected that some four million bales of the current crop will be cotton-covered, approaching one-third of the crop and the wrappers themselves will consume 45,000 bales of cotton. It is of interest to learn from the latest bulletin of the Indian Central Jute Committee that its opposite number, the Indian Central Cotton Committee has also been experimenting on the same lines and while a cotton fabric has been evolved which is to all intents as good as the standard jute wrapper, it has no marked advantages. On the other hand, experiments in the use of cotton bags for sugar storage showed that, even when specially treated, cotton in some respects fell short of jute in general usefulness.

The same publication records the acute shortage in bag supplies in the Argentine, where the exportation or re-exportation of jute containers has had to be prohibited, while grain and seeds quotations are based on bulk handling, facilities for which are quite inadequate, and 10 per cent has to be added for the cost of bags. Recourse is being had to the prehistoric method of underground storage in bulk on account of the lack of containers. The Argentine cannot even fall back on its near neighbour, Brazil, to augment its stocks of bags, for it is recorded that the U. S. A. have undertaken to purchase all Brazil's surplus burlap production, amounting, up to the end of next year, to perhaps 500 lakhs yards. Meantime it is also reported that the U. S. A. intend to limit their imports of Indian burlaps to 250 lakhs of yards per month.

A point of very considerable interest to the manufacturing industry is contained in a paper which is summarised in the bulletin on experiments in the effect of varying emulsification methods used with batching oil on the characteristics of standard yarns. No significant differences could be detected in the effects of expensive emulsions as compared with those costing only one-tenth as much, and the experiments seemed to prove that simple and cheap methods were as efficacious as much more expensive ones.

There has been more activity to be observed in the Export Jute market, and with balers somewhat oversold in Daisee, prices registered a sharp advance for Dundee Daisee 2|3 from Rs. 74 to Rs. 79 but at the close the tone is quieter with sellers again offering at Rs. 78. While Jute for shipment is offering at a sharp discount from what balers are prepared to sell to Mills. Mills have also taken a considerable quantity of Pucca bales at prices up to Rs. 81 for Dundee Daisee, and up to Rs. 82 for Firsts, Rs. 77 for Lightnings and Rs. 72 for Hearts. The price of Cuttings has also risen to Rs. 30 N.C. and Rs. 29 M.C. Most of these quotations could be shaded at the close.

In Loose Jute also there was keen buying in the earlier part of the reporting period and up to Rs. 16 and Rs. 13 was paid both for European packing and for Supervised Jat. Indian Jat sold at eight annas less and Indian District Tossa up to Rs. 16 and Rs. 13, with Northern at lower rates. Cross grade was in request and up to Rs. 11-8 was paid for European and supervised with Rs. 10-12 for Indian districts. At the close buyers are holding off and a quieter tone prevails, which should be healthy after the recent hectic rise.

Mofussil markets have ruled very firm with imports restricted. Rates have advanced to very nearly Calcutta parity and it remains to be seen if the quieter tone here brings jute more freely into the upcountry markets.

There has been great activity in the Fabrics section, but unfortunately backed up by very little export demand. Shipments of goods during the past month are reported to have been very good and mill stocks ought to show an appreciable reduction when the figures are published. At the same time, while this makes for strength in the gunny market, the position seems to have been fully exploited in the recent price advances and overseas markets show a marked reluctance to trade at current levels. There was a short-lived setback about the middle of the reporting period, and at the close the tone is once more decidedly easier for near goods though the forward positions are not much affected. On balance, all descriptions have been marked up. 9 porters for near and December moved from Rs. 18 to Rs. 19-8 and back to under Rs. 19. For Jan.-March from Rs. 18 to Rs. 19-8 to Rs. 19. April-June from Rs. 17-8 to Rs. 19 and July-September from Rs. 17-8 to Rs. 18-8. Eleven porters moved in unison, ready and December from Rs. 23-2 to over Rs. 25 and back to Rs. 24-2, January-March from Rs. 23 to Rs. 25 to Rs. 24-4, April-June from Rs. 22-4 to Rs. 24-4 and July-September from Rs. 22 to Rs. 23-8. 45|11 oz sold for December at Rs. 25.

Heavy Goods have been similarly responsive, 'B" Twills having sold for November and December at from Rs. 61 to Rs. 63 and down to Rs. 61-8, January-March from Rs. 59 to Rs. 61, and April-June from Rs. 55-8 to Rs. 59. The other favourite counter, Liverpool Twills, moved from Rs. 65-8 November and December to Rs. 66-8 and back to Rs. 66 with January-March done from Rs. 64 to Rs. 65-8 and April-June from Rs. 59-8 to Rs. 61. Other sales recorded include Cuban Sugars at Rs. 68, April-June and at Rs. 65 and Rs. 66 July-September. 6x8 Sugars at Rs. 70 to Rs. 73 December, at Rs. 70 and Rs. 71 January-March and at Rs. 65 and Rs. 66 April-June. D. W. Flours at Rs. 53 April-June and Rs. 49 July-September. Woolpacks at Rs. 2-12 April-June and Heavy Cees at Rs. 60 December.

JUTE

CALCUTTA, Dec. 3.

The raw jute market has been very steady during the past week and a further substantial rise in prices has been recorded. With the continued strength of the jute manufactures market and the anxiety of mills to absorb any quantity of jute offering, it is not surprising that further new high levels for the year has been touched and that sellers continue to adopt a reserved attitude. Arrivals from mofussil markets are also reported to be in small quantities and with the large demand from Calcutta buyers, prices have been firmer in sympathy with the Calcutta market. As is usual in a market with high prices, there have been complaints regarding the presence of jute with excessive moisture, a complaint as old as the jute trade itself. The problem is still one of bringing in adequate supplies. With an improved export outlook and with the unsatisfied demand of mills it is highly problematical that the question will be satisfactorily solved if the present conditions continue to be in evidence for some considerable time.

In the loose jute section business has been limited only by the availability of supplies. Mills have been obliged to concede the advance in prices asked for. European Middles and Bottoms were done at Rs. 16 and Rs. 13 per maund and Supervised Jat Middles and Bottoms at Rs. 15|12 and Rs. 13|12 per maund. Supervised Middles were done at Rs. 16|8 towards the close of last week, Middles and Bottoms were done at Rs. 15 and Rs. 13 respectively.

In the Pucca bales section, shippers have continued to be good buyers and there is a further jump in Dundee Daisee 2|3 to Rs. 79 per bale from Rs. 73 per bale on the last occasion. There is very little of this quality of jute offering. Mills have reported purchases of N. C. and M. C. at Rs. 30 and Rs. 29 per bale. Firsts 2|3 were done at Rs. 80 and Lightnings at Rs. 75 per bale respectively with buyers over.

JUTE MANUFACTURES

CALCUTTA, Dec. 3.

The jute manufactures market has continued firm and closing quotations are only slightly lower than the highest levels for the week. There has not been any appreciable demand from overseas countries and most of the business passing continues to be on account of inter-bazar operators. The strength of the hessian market is not exactly understandable as there is no possibility of the entire production being shipped but operators seem to take a bullish view of the immediate outlook. The strength of the jute market also has been helpful. 9 porters ready quoted Rs. 19|2, December Rs. 19|2, January-March Rs. 19|2 and April-June Rs. 18|12. 11 porters ready were Rs. 24|12, December Rs. 24|12, January-March Rs. 24|12 and April-June Rs. 24. There has not been much doing in the Heavy Goods section but sellers have been reserved. Mills are not free sellers for either near or forward positions. B. twills for December delivery sold on the basis of Rs. 62|4, Liverpool twills Rs. 66|8 and Cornsacks Rs. 60|8.

GOLD

CALCUTTA, Dec. 3.

The gold market has been absolutely uninteresting and prices have been fluctuating in narrow limits. The tendency is rather downward. Speculators are not busy and investment demand appears to be satisfied for the time being. It has been pointed out on earlier occasions that the reopening of the Bombay market has had a sobering effect on speculative-minded operators. Gold ready are quoting Rs. 64|6, against Rs. 65 at the time of last writing and first settlement Rs. 64|6. Sovereigns also are lower at Rs. 57|2. In the local market, the premium for sovereigns continues to obtain, the quotation being Rs. 47|14. Gold ready sold at Rs. 65|6.

The London quotation, however, is unchanged at 168sh. sellers.

SILVER

CALCUTTA, Dec. 3.

The silver market is rather quiet and a further decline in prices is to be recorded, the fall being more pronounced in the quotation for ready. Not much of business has been passing. Indian Mint Silver ready closed at Rs. 106|5 against Rs. 108|8 and First Settlement at Rs. 104|9 against Rs. 105|12. There is no change in the London market the quotations for both Spot and Forward remaining unchanged at 23½d. The market is quiet with small trade demand satisfied by official selling.

PIECEGOODS

CALCUTTA, Dec. 3.

The piecegoods market has been rather dull during the past week and business passing has been on a very small scale. It will be remembered that it was pointed out last week that the resumption of working by Ahmedabad Mills after a long time has had a sobering influence on operators. There is also considerable anxiety regarding the possibility of control of prices or the manufacture of standard cloth on a large scale having a depressing effect on the existing price structure. The Commerce Member is due to visit Bombay shortly and it is reported that the question of increasing production of standard cloth varieties and controlling cloth prices will be taken up with the textile interests. Until such time, operators and dealers will have to adopt a cautious policy. It is not surprising, therefore, that the volume of business has been on a very small scale. Business in cold weather styles has been further restricted owing to limited supplies.

NORTH-WESTERN RAILWAY

Owing to the heavy demand for upper class accommodation on trains, it is essential to make the best use of all available space in 1st and 2nd class compartments. It is, therefore, notified for the information of the public that when compartments or berths are reserved, the occupants must, if required, make room during the day time for other passengers in the compartment up to the marked seating capacity.

Stock Markets to-day and to-morrow

MARKETS EASIER AFTER EARLIER FIRMNESS

THE activity on the Calcutta Stock Exchange in the early days of the week suggested that there might be a return to the conditions of the early months of the war and the second recovery movement of the war period which lasted from January to November, 1942. Even at the end of last week quite a firm tendency was noticeable in several sections. On rumours regarding the possibility of a higher interim dividend being declared by the Steel Corporation of Bengal there was a sudden rise in prices. The aggressive rise in prices was kept up in Monday's session and the highest level since January, 1940 was touched. With the vigorous rise in prices for the two popular speculative counters it was not surprising that there was an improvement in values for other counters as well. Coal shares returned to activity after a long period of neglect. Jute shares were firmer on the strength of the hessian market. Only in the last two days there has been heavy profit-taking, the abrupt decline in prices in the Bombay market having a chilling effect.

* * * *

Bombay operators seem to be anxious regarding the possibility of government interference in the affairs of the Cotton textile industry affecting substantially the level of earnings. With the need for production on a large scale and with a very high level of prices and a relatively low price for the raw material manufacturers have nothing to be worried regarding control of prices affecting earnings. Even if it did, the State will be the loser as with the substantially low level of earnings for the standard period the liability of the industry for Excess Profit Tax is very heavy and the distribution to shareholders will not be affected to any great extent. The production on a large scale of standard cloth varieties at fixed prices might have a detrimental effect on companies' earnings especially as the requirements on account of the Government amount to as much as 40 per cent of total production. How far the new scheme which, it is reported, will be proposed by the Commerce Member will affect the industry remains to be seen. It can be said, however, that with the large amount of production and the margin of profit available on war orders it will be possible to maintain the last dividends. And on the basis of these dividends prices that were prevailing till a few days back cannot be regarded as high.

The accounts of the sugar companies under the management of Messrs. Begg Sutherland & Company Limited for the year ended June, 1942 show that the decline in earnings in the case of the four companies has been mainly due to the difficulty in regard to supplies of cane. The difficulty was felt most in the case of the *Champarun* and *Balrampore Sugar* companies.

* * * *

The net profit before providing for taxation and depreciation of the *Samstipur Central Sugar Company Limited* for the year ended June, 1942 is Rs. 1,82,457 against Rs. 3,07,783 for the previous year. The company has been able to pay a dividend to the shareholders only with the large amount brought in from the last accounts. The amount set aside to depreciation is Rs. 50,000 against Rs. 35,000 on the former occasion. The amount provided for depreciation is the substantial sum of Rs. 1,18,762. The appeal made by the Company to the Central Board of Revenue in connection with Excess Profits Tax having been upheld, the amounts reserved for taxation are considered sufficient to meet all taxation liabilities at current rates upto the date of closing.

The transfer to Debenture Sinking fund is Rs. 1,20,000. All the arrears of Debenture Sinking Fund have thus been made up. The dividend of eight annas per share is the first to be paid since 1933. The amount carried forward is Rs. 23,962 against Rs. 1,90,187 brought in.

* * * *

The *National Iron and Steel Company Limited* has made impressive progress during the past two years. The net profit before providing for taxation and depreciation for the year ended March, 1942 is Rs. 10,37,259 against Rs. 4,88,215 for the previous year. The amount set aside to depreciation is Rs. 2,25,759 against Rs. 2,23,076. The dividend to ordinary shareholders is higher at 10 per cent against 5 per cent. The sum of Rs. 5,78,583 is carried forward subject to provision for taxation.

During the year a machine shop equipped with up-to-date plant has been added and extension and modification of steel foundry have been made. Further extension programme is in hand. The yield on the basis of the last dividend at the present quotation of Rs. 14-12 cum-dividend is over 7.5 per cent tax free.

* * * *

I need make no apology for returning to a discussion of the merits of the shares of the *British Ceylon Corporation Limited.* Two weeks back I pointed out that with the payment of three interim dividends of eight per cent each, making a total distribution of 24 per cent. up-to-date, the shares were rather undervalued and had considerable scope for capital appreciation. The shares were then quoting only around Rs. 10 c.d. They have since appreciated to Rs. 14 x.d. buyers. As the directors have distributed the interim dividends at intervals of three months it can very well be expected that the total distribution for the year will not be less than 32 per cent and the accounts for the year, which has just ended, are due to be published sometime in March next year.

As was pointed out on the last occasion, the shares have been always popular in the Calcutta market and they were relatively neglected only with the depressed conditions in trade from 1938 to 1940. In the early months of this year few would have expected that the shares would appreciate to such a great extent as in April it was generally feared that a Jap invasion of Ceylon was imminent. The quotation even in July was only around Rs. 5 and the directors had already paid interim dividends of 16 per cent.

The payment of large dividends requires some explanation. With the occupation of Malaya, the N. E. I. and Burma there is a boom in the trade in which this corporation is engaged. There were plenty of stocks on hand. The appreciation in the value of stocks and the increase in the value realised on the sale of the Company's products in 1941-42 have enabled the company to earn a phenomenally high level of earnings. The distribution of a dividend of 24 per cent on the ordinary capital of Rs. 22.5 lakhs requires Rs. 5,40,000 and a final dividend of only 8 per cent will require Rs. 1,35,000. The total amount distributed by way of dividends alone will thus be Rs. 6,75,000. Having regard to the need for provision for taxation and depreciation it can be thus estimated that the net profit will be more than Rs. 15 lakhs though on the basis of the present prices for the products sold by the company one is inclined to put the figure higher.

The purpose of this analysis, however, is this. Even if the war lasts for two years and the directors are able to pay the same dividend the investor will get Rs. 5 by way of dividends alone in 1942-43 and 1943-44. And if it is remembered that there are bonus possibi-

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, December 4.

Very active conditions were noticeable on the Calcutta Stock Exchange in the early days of the week under review and in Monday and Tuesday's session quite a large volume of business was reported. There was a sudden rise in prices for Indian Irons and Steel Corporations and the quotations were noted as high as Rs. 36-2 and Rs. 27-2 respectively. Many prominent operators were reported to be buyers. While the reports regarding a higher interim dividend being paid by the Steel Corporation of Bengal were primarily responsible for the sharp rise in prices the developments in the war situation also were helpful. During the past three days a slightly easier feeling is in evidence and quotations have been marked lower but closing quotations are higher on balance. Operators and investors alike are awaiting further developments. The undertone is quietly steady.

The giltedged securities section has been uninteresting and quotations have been fluctuating in narrow limits. In spite of the rise in the treasury bills rate there is no appreciable change in money conditions. 3½ per cent. Paper is unchanged at Rs. 94-2. Business in terminable loans is on a limited scale. 3 per cent. Defence Bonds 1946 were done at Rs. 103 small lot, while 4 per cent. 1960|70 were Rs. 110-4, 4½ per cent. 1955|60 Rs. 114-8 and 5 per cent. 1945|55 Rs. 109. Among provincial loans, 3 per cent. Bombay provincial loans were done at Rs. 99-8.

Business in public bodies debentures has been very small, the only transaction in public bodies debentures being in 3¼ per cent. *Howrah Bridge* debentures at Rs. 96-2. Among industrial debentures, 5½ per cent. *Belsund Sugar* were Rs. 100-8 and *Namburnadi Tea* debentures Rs. 101-8.

Business in preference shares has not been large on account of the diversion of interest to equities but prices have been well held. *Birla* were Rs. 129, *Cheviot* Rs. 155 and *Lansdowne* Rs. 135. Among others, *Jessop* were Rs. 107, *Steel Corporation* Rs. 116-8, *Orient Paper* Rs. 106 and *Carew & Co.* Rs. 151.

Cotton shares have not been quite active with the exception of *Cawnpore Textiles* which were marked upto Rs. 17. The close is easier at Rs. 16-12. *Elgin* are relatively undervalued with the quotation at Rs. 45-14. *Kesoram* are very steady at Rs. 16-4 while *New Victoria* are lower at Rs. 8-9 with the disappointing dividend for the year ended October, 1942. *Bowreah* were Rs. 520 and *Dunbar* Rs. 286.

Coal shares firmed up earlier in the week and quotations for the popular shares were marked higher. *Bengal* were Rs. 410, *Bokaro and Ramgur* Rs. 18-6, *Dhemo Main* Rs. 14-9, *Equitable* Rs. 36-6, *North Damuda* Rs. 6-9, *Raneegunge* Rs. 284, *Seebpore* Rs. 23-4 premium and *Standard* Rs. 21-7. There is a significant rise in the quotation to Rs. 33-12 for *West Jamurias.*

Jute shares have been firm with the strength of the hessian market and other securities. The close is easier only in sympathy with the speculative counters. *Agarpara* were Rs. 24-12, *Anglo-India* Rs. 367, *Champdany* Rs. 193, *Gourepore* Rs. 734, *Howrah* Rs. 57-4, *Nellimarla* Rs. 15-14 and *Nuddea* Rs. 75-14. *Megna* have strengthened on the publication of the report for the half-year ended September, 1942, the quotation being 68 cum-dividend. *Hukumchand* were in good request being done upto Rs. 19-10. *Reliance* were Rs. 57-8 and *Standard* Rs. 235.

In the Engineering section, as pointed out above, rather active conditions have been noticeable. *Indian Irons* and *Steel Corporations* were noted as high as Rs. 36-2 and Rs. 27-2 respectively. In the selling and profit-taking during the last two days some gains have been lost but quotations are considerably higher on balance. A rather quiet feeling is noticeable in to-day's session and it appears as if there will not be any appreciable fluctuation in prices in the immediate future. *Indian Iron* and *Steel Corporation* are now quoting Rs. 34-10 and Rs. 25-10 respectively. *Burn & Co.* were not very much changed at Rs. 355 while *Indian Standard Wagon* were Rs. 61-8, *Jessop & Co.* Rs. 20-6 and *Saran Engineering* Rs. 7-2.

Rather steady conditions have been noticeable in the Sugar section. *Buland* and *Raza* continued to be in favour with the quotations at Rs. 44-8 and Rs. 45-8 respectively. *Ramnugger Cane* and *Sugar* were Rs. 11-4, *Purtabpore* Rs. 14-2 and *U. P. Sugar* Rs. 14-6. *Murree Brewery* were Rs. 20-8.

Tea shares have been firm and quite a large number of transactions has been recorded. *Dimakusi* were Rs. 34-4, *Hantapara* Rs. 35-14, *Namburnadi* Rs. 9-8 and *Patrakola* Rs. 1,018. *Teliapara* were Rs. 490 and *Tezpore* Rs. 11-2.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper* are unchanged at Rs. 3-6 and 2-7 respectively. *B. I. C.* were firmer at Rs. 6-6. The quotation is now Rs. 6-3. *British Ceylon Corporation* have had some enquiry and the quotation was marked as high as Rs. 13-10. *Alkali* and *Chemical* were popular at Rs. 24-4, *Britannia Biscuits* were Rs. 13, *Indian Cable* Rs. 27-12, and *Rohtas Industries* Rs. 26. *National Insulated Cable* were Rs. 12-12 and *National Rolling Mills* Rs. 11-12. Paper shares have been active. *Titaghur Paper* are now quoting Rs. 23 after being higher at Rs. 23-10. *India Paper Pulp* were Rs. 172, *Mysore Paper* Rs. 22-12, and *Star Paper* Rs. 20-12. *India General Navigation* were Rs. 92.

(Continued from previous page)

lities it need hardly be emphasised that the shares should be quoting very much higher. The directors can without any difficulty distribute one share for every two shares held.

* * * *

Very few jute companies have been able to report a higher level of earnings for the half-year ended September, 1942. The *Champdany Jute Company Limited* is able to record a higher level of earnings for the half-year, the net profit before providing for taxation and depreciation being Rs. 15,04,552 against Rs. 13,46,614. The amount set aside to depreciation is Rs. 1,78,147 against Rs. 1,93,552 while the provision for taxation is Rs. 9.5 lakhs against Rs. 7.5 lakhs. The dividend has been maintained at Rs. 6 per share. There is a substantial increase in the amount of stocks held by the company. In view of the appreciable rise in prices since the close of the half-year it can be expected that it will be possible to report a considerably higher level of earnings. Even on the basis of the last dividend the yield is more than 6 per cent tax-free. With the possibility of a higher dividend the shares have good scope for appreciation.

WATCH-DOG.

THE NEW VICTORIA MILLS CO., LIMITED, CAWNPORE

NOTICE is hereby given that the Share Transfer Books of the Company will be closed from the 3rd December, 1942, to 22nd December, 1942, inclusive.

The Balrampur Factory commenced crushing on the 5th January, 1942, and continued until the 5th March, 1942. The Tulsipur Factory commenced crushing on the 19th January, 1942, and continued until the 14th February, 1942. Both Factories suffered from very curtailed supplies of cane, this being a direct consequence of the restrictions imposed by Government during the previous season when a substantial quantity of cane was left in the hands of cultivators through no fault of the Company.

In April, the Central Government assumed control of sugar distribution and prices throughout India, although in the opinion of the majority of manufacturers such a step was not justified by the conditions ruling at the time. There was no adequate machinery in existence to deal with these measures and all offers of the Indian Sugar Syndicate to utilise its organisation being refused indescribable confusion followed and the statutory adjustment of existing contracts only added to the chaos. The original sugar selling prices fixed by Government in April were too low, but these were increased as a result of representations made by the Industry, as also the United Provinces and Bihar Governments, who made it clear that such selling prices should be based on a cane rate of seven annas per maund, which factories in these two Provinces would have to pay under the terms of the deferred payment scheme, as against the original official minimum cane rate of five annas per maund which had been fixed for the season.

At the beginning of last season, the sales position was most unsatisfactory, there still being considerable stocks of the previous season's sugar on hand, but the situation steadily improved and at the present time, the bulk of last season's production as well as that of 1940-41 has been disposed of; deliveries, however, have remained very backward, owing to shortage of railway wagons.

For the coming season all restriction on production has been withdrawn, but whether factories will obtain such cane as is available depends very largely on what facilities the Railway can offer for the carriage of cane. Intimation has already been received that supplies of cane wagons will be on a very restricted scale.

The official minimum cane rate for the ensuing season has been fixed at eight annas per maund, and it is understood that the Central Government intend to make no alteration in the existing prices for sugar.

The Company's factories were unaffected by the recent civil disturbances. The overhaul, which has proceeded satisfactorily, will be completed in time for the commencement of the season.

Stocks of sugar have been valued at Government Control prices.

	1,87,673	3	7

RAJAGIRI RUBBER & PRODUCE COMPANY, LIMITED

Audited accounts for the year ended 30th June, 1942:—

Profit & Loss Account.—The Directors have pleasure in reporting that the profits earned during the year show an appreciable improvement over that of last year. This is due to greater yield and better prices, even though the cost of production had increased out of proportion due to factors already mentioned. The nett profit for the year as will be seen from the Profit & Loss Account, amounts to Rs. 1,66,716-14-0, which together with the balance brought from last year amounts to Rs. 1,68,771-2-6.

Out of this a first interim dividend of 2½% absorbing an amount of Rs. 32,690-8-0 was paid on 27-3-1942 and a second interim dividend of 5% amounting to Rs. 67,378-8-0 was paid on 15-9-1942. After payment of these dividends, there is a balance of Rs. 68,702-2-6 which the Directors recommend to be disposed of as under:

	Rs.	A.	P.
Transfer to Reserve	50,000	0	0
Carry forward to next season ..	18,702	2	6
	68,702	2	6

This has been decided upon by the Directors, in order to build up sufficient reserves to make the position of the Company more substantial. With the better prices now available for rubber and with the possibility of still better yield as the trees grow to maturity, the Directors hope that the profits and the cash position of the Company from time to time, will fully justify their being able to declare or recommend better dividends once or twice a year. Arrangements are also being made by the Government to purchase rubber at Cochin and this will obviate the Company being left with large stocks without the advantage of cashing in immediately.

The Directors do not recommend a final dividend since they believe that they would before long be in a position to recommend the payment of an interim dividend on the results of the first few months' working of the Company in the current year.

Acreage.—The acreage is 1,445.36.

Crop.—Against an estimated crop of 4,50,000 lbs. estimated at 14.26 cents per lb. F.O.B. the actual crop harvested during the year was 4,51,652 lbs. which is less by 28,948 lbs. This is due primarily to adverse weather conditions experienced during the year under report. The short fall in the crop and the increased cost of acid, copper sulphate and labour charges consequent on the rise in cost of living, increased the F. O. B. cost also by 2.52 cents. For the season 1942/43 a crop of 5,00,000 has been estimated at 13.89 cents F.O.B.

Managing Agents.—Messrs A. V. Thomas & Co., Ltd.

ISSUED WEEKLY

Vol. XXX. No. 24 SATURDAY, DECEMBER 12, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Friday evening.

There are no borrowers in the short credits market; and interbank call money rate at ½ per cent in Calcutta and ¼ per cent in Bombay is as nominal to-day as it has been for many months. Funds are so plethoric and new deposits so continuously in a spate, that it is doubtful whether the close of December will witness this year anything like the more zestful demand for money that usually characterises the end of the year owing to window-dressing preparations of banks. Once upon a time, quite a brisk business was put through in the interbank call money market so as to enable banks to show a higher proportion of cash. For a number of years now, this year-end practice has fallen out of vogue as cash resources of banks have been at a high level. This will be particularly true of the current year when cash maintained by all the member banks either in the form of deposits with the Reserve Bank or in their till will be over Rs. 75 crores. From this point of view, 1942 will be rung out in unusually easy money conditions. It is clear that a moiety of the new money that is being created by the Reserve Bank against sterling securities recurrently piling up is finding its way to the banks as deposits. And the banks in their turn are returning to the Government a goodly portion of these moneys in the form of purchases of treasury bills. There is thus a parallelism between the curve of active note circulation, deposits of banks, and outstanding treasury bills in the hands of the public. There is cause for gratification that this parallelism is persistent and more or less uninterrupted. Otherwise, this unending process of expansion of currency must occasion serious misgivings.

Even as it is, an authoritative study of the facts pertaining to this accelerated expansion of currency is overdue. It is, indeed, strange that, apart from the occasional comments on these expansions in "Indian Finance", neither the Government spokesmen nor the economists in the country nor business leaders have realised the necessity of making an exhaustive study of a phenomenon, which, though presumably under control now, may become menacing any moment. The returns of the Reserve Bank for the week ended December 4 show that, in the fortnight since November 20, there has been expansion of currency for Rs. 18 crores. All this expansion of currency is against sterling securities. Simultaneously, there has also been expansion in the circulation of rupee coin. The outgo, in this fortnight, of rupee coin from the issue department is over Rs. 4¼ crores. That is to say, active money circulation in India has been going up, for over three years, by leaps and bounds, firstly with regard to paper notes, secondly with regard to coin and thirdly with regard to subsidiary coin. From the present look of things, it seems as though, so far at any rate as paper money is concerned, the sky is the ceiling.

We shall readily grant that a rough and ready way of dealing with this currency problem has so far been successfully adopted; and that this method has been effective to the extent that the position is not out of control. The present frenzied demand for rupee coin and the absolute famine with regard to quarter anna coin may well threaten a crisis in the near future. In the popular mind, such hydra-headed expansion in currency suggests one thing, and only one thing. And that is inflation. People now talk freely of inflationary influences being in full play in India. If you question them more closely as to what they mean, they refer to the unending expansion of currency. The various aspects of inflation were examined in "Indian Finance"; and it was clearly shown that mere expansion of currency could not mean inflation. It was also our conclusion that financial policy had so far been guided with such skill as to keep inflationary forces under proper check. The lay man, however, is not concerned with the scientific definition of inflation; he just sees currency expanding week after week and briefly concludes that inflation has got out of control. It is of paramount importance that earnest attempts be made to inspire and sustain a correct understanding of the currency and financial position among the general public. We suggest that the Finance Member takes steps to have an authoritative investigation made into the various factors pertaining to the present currency situation; and the result of the investigation should be given the widest publicity in a form that will be intelligible to the lay people.

If this apprehension about inflation is not exorcised in time, there may be complications which might set many other strange problems for the Government to solve. On the other hand, if the public are convinced that the technique of finance has improved so vastly that the usual adverse influences released in the earlier wars of history have been thoroughly eliminated in this war, this re-assurance should help government finances in many ways. There should be more general understanding of the strength and stability of India's finances from the point of view of budgetary equilibrium, credit as exemplified by the borrowing rate of the Government, absence of any increase in the public debt, etc. In the publicity that is thus to inform the public on financial matters, the

TREASURY BILLS

India

Tenders for Rs. 10,00,00,000 (Rs. 10 crores) of 3 months' Government of India Treasury Bills were opened on Tuesday, December, 8, 1942. Total amount offered was Rs. 13,46,00,000 (Rs. 13 crores 46 lakhs). Tenders at Rs. 99-12-0 per cent and above were accepted in full and those at Rs. 99-11-9 per cent were allotted approximately 86 per cent. Lower tenders were rejected. Total amount accepted was Rs. 10 crores, the average rate of accepted tenders being Re. 1-0-5 (Re. 1 and five pies per cent) per annum).

Tenders for Rs. 6,00,00,000 (Rs. 6 crores) of 3 months' Government of India Treasury Bills will be received on Tuesday, December 15, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, December 14, 1942, at other centres. Successful tenderers should make payment on Friday, December 18, 1942, or on Thursday, December 17, 1942, where December 18, is a holiday. Other conditions are as usual.

Three months intermediates will be sold from December 9 to 14, 1942 at Rs. 99-12-0 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

During the week ended December 4, 1942, Government of India Treasury Bills for Rs. 11,78,00,000 (Rs. 11 crores 78 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

THE liquidation of the W. P. A. in the U.S.A. is a sign of adjustments made by the Administration to save money. Relief is rendered unnecessary by the abolition of unemployment this year. On the other hand, the manpower question has called for the creation of a new post for Mr. McNutt, the Social Security Administrator. Critics of the war effort are likely to gain confidence from the report on Pearl Harbour. It is noteworthy that Mr. Justice Roberts' report has not been mentioned in connection with the late but precise estimate of naval losses. The Navy department, perhaps, through the separation of powers, has not referred to Mr. Justice Roberts' enquiry and the action that followed against Admiral Kimmel and General Short. But past losses are of no consequence as against the launching of the *New Jersey* in the Delaware eighteen months ahead of schedule. Now is the true scale of U. S. war production revealed. The main aim, to curtail private spending and increase public spending, is to be achieved by rationing. Sugar and petrol are rationed, but Mr. Henderson talked last week of clothes rationing and food coupons. It is not a bull point for U. S. commodity markets, and further rationing is clearly meant to support the anti-inflation programme. But the slowing down of the rise in the price-level in 1942 augurs well for the programme outlined by Mr. Henderson.

To defeat the prophets of evil it has been announced that production has risen by 85 per cent whereas prices had risen by 19 per cent, and Mr. Henderson claimed that, in the matter of price control, the Government and businessmen had pulled together. Rent control, except in New York, had appeared and the only exceptions to price control are vegetables and fruit. Within a year of war, the U. S. economy has changed completely and radically. The estimate of an increase in production by 85 per cent is related to further price control in view of the fact that prices in 1942 rose, in 1942 only one-third as fast as they rose in 1941. The main point is that the Allies will benefit and Mr. Lyttelton's second visit to the U.S.A. is to draw more supplies. A steel mission visited Britain to know what was required of the U.S.A. Mr. Lyttelton spoke of a further advance in Britain's war production. Individual factories are adopting Stakhananov methods to extend output, and workers, e.g., in shipyards are making a special effort to cut working time. The U.S.A.'s intention to draw off men from civilian work for the war has been announced. Britain also wants to register more young men before the age of 18 for war service. America is going to call up women and add over four and a half million women to the number gainfully occupied in 1941. The idea of putting one out of six women on to war work or agriculture will mean a big change in industry as also farming practice. The social changes must be greater than seemed possible. The addition to family incomes will be greater, and the savings will also grow in the wake of rationing of food and clothes. The women's savings will not go into the home but into war bonds, and the flow of production will continue through 1943. All this augurs well for the Allies who have found U. S. individualism crumbling rapidly.

That controls are pervasive and substitutes are replacing lost sources of supply in all countries is known, but Italy's economic weakness is aggravated by the air attacks. The latest is on Turin again. The ports are irretrievably damaged and the industries are short of fuel. The weaker partner of the Axis has only a slender hope of ground defence with German aid. Reprisals are reckoned impossible. The Senate thinks of peace, according to a report from Morocco, and Italy's dependence is emphasised by the spread of a belief that the game is lost. Croatia may give lignite but little else. Discontent is said to spread in Italy with the realisation of weakness and mistakes. The bank rate at 4½ per cent has forced Italy to borrow at over 5 per cent and lenders have been more or less compelled to help the Government. Though a decline in the average rate for borrowing has been reported in 1942, the irredeemable loans were substantially below par and credit was not better than in 1941. The note circulation staged a sharp rise in 1940. There might have been a further rise as the Duce might have chosen the line of least resistance. Of the increase in public debt, the changes in currency reserves, etc., there is no indication. But Italy has no raw materials. She has to get both iron and coal. The heavy industries in the north have little chance of recovery, and the Allies hope to force Italy out of the war by breaking up the big industries allied to the Fascist party. Maritime commerce must be at an end, and Italy's electric railways are not likely to function well if power stations are out of commission. The legend of invincibility had been wholly destroyed in 1941 but the homeland was not in danger like this year.

The notification that Italian East Africa is not enemy territory and that the assets belonging to people there are out of the control of the Custodian of Enemy Property is of special interest to India as exports increasing. The prospective capture of Jibuti will also help India, but in the growth of trade in the future, silver will be prominent. If silver and gold are saved by the cessation of the Haj this year, there is a need for export of treasure to obtain East Africa produce. Trade in salt and hides can only be developed with advantage if control is relaxed. What has happened to the Ethiopian currency since the Treaty was concluded is hardly known, but the British Treasury's grant must have been accompanied by a payments agreement. It is unlikely that the gold bullion standard has been restored, and the first thing would have been the elimination of the lira by the State bank's notes. For the securing of Africa's economy silver rather than sterling would appear suitable, and it is believed that silver, dethroned in China, would emerge triumphant in Africa. Last year when there was talk of the Maria Theresa dollar coming back into use in Ethiopia it was noted here that it would make for higher prices for silver, especially, as India was encouraged to hope for trade relations above the prewar standard.

The small decline in the Australian Commonwealth Loan from 101½ to 101⅛ this week is not associated with Mr. Curtin's triumph over dissentient Labourites at home. The 1945-75 loan has improved since October as her security has increased and her war effort is growing. The ascent of Home Industrials is more interesting from India's viewpoint than the stability of giltedged. Next month, again revenue will be better and Treasury deposits may be reduced from 80 million last week to 20 or 30 million per week. Australia has adopted the system of treasury deposit receipts and the Commonwealth Government has obtained money at ¾ per cent per annum. Banking regulations of a strict type have helped the Government to borrow without difficulty and commercial banks have reduced their dividends. Such a development is not to be anticipated in India where intermediates are on offer at 1 per cent and the Government clings to the view that the calendar brings with it a change in the rates at which it has to borrow.

The improvement in communications and the growth of traffic will probably explain the steady rise in Cable and Wireless stock. It is still far below par, but some part of the improvement is expected after Sir Edward Wilshaw took up the direction which has been realised. The recovery in another depressed stock, the Sao Paulo Coffee loan is due to the hopes of getting interest regularly as Brazil is an ally. The oil share market looks like rising further but Mexican Eagle is stagnant. The Supreme Court's judgment on the changes made by Mexican Law was enough to put the shares back. The hope of an early offensive in Burma combined with the rises in other shares has lifted Burma Oil (which is paying its stockholders 2½ per cent), while an interim payment has been of material benefit to Shell shares of late.

The most interesting market feature undoubtedly is the rise in rubber shares. Queen Wilhelmina's intended promise of a federal union with the colonies must help Java shares, but last week's rise has been followed by a drop. Rubber Trust which rose to par has gone back to 18s. 3d. The fall in Gula Kalumpong emphasises the speculative character of that share which was more fancied by Paris than London in the past.

The Cotton Mills' Duty

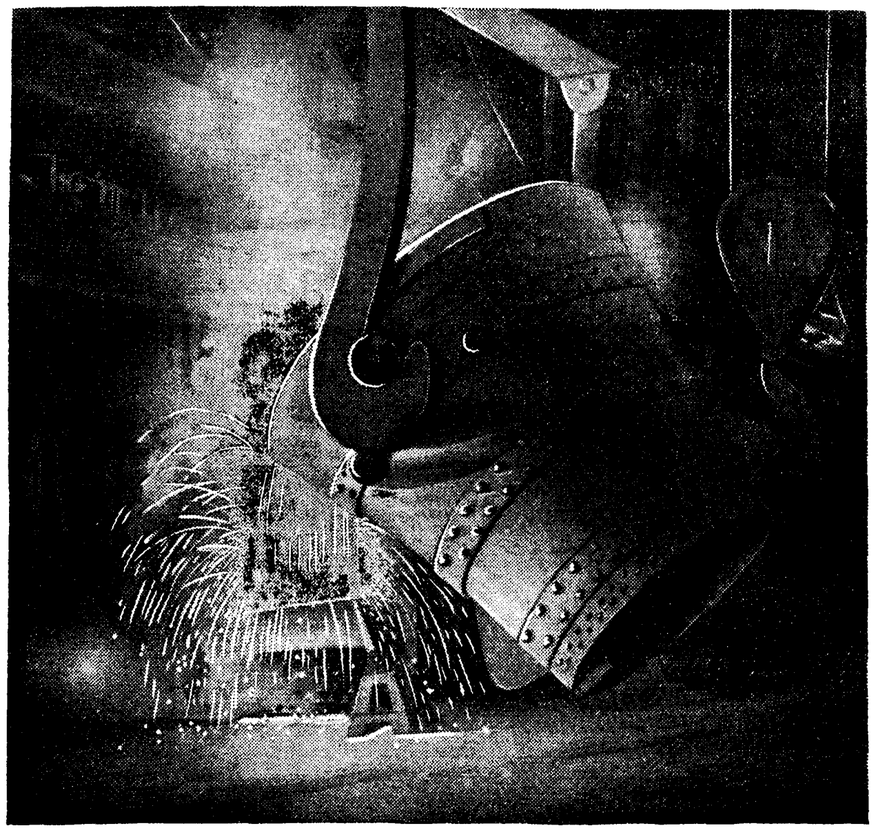
The statement that the Bombay mills are to pay a bonus of 12½ per cent in addition to a year's wages to 200,000 workers in two instalments one in January and the other in March has produced, rightly or wrongly, that the mills are making hay even if the sun does not shine on the consumer. From the time of Mr. G. S. Hardy's enquiry into the customs duties, India has adequately recognised that mills deserve protection. The earlier abolition of the cotton excise was universally approved. To indicate that prosperity is shared as between employers and workers whose wages are said to have risen by 40 per cent since 1937 is no complete answer to the cry that mills are not helping consumers. An experiment in Indore as regards the sale of standard cloth is an isolated example of mills taking cognisance of the people who have paid in the past for most advantages secured by the industry. In spite of export control, and the loss of India's biggest market in Burma, the value of cloth and yarn exports continues to increase. The September trade figures show that cloth is the biggest item in India's export trade in the first half of 1942-43. Opportunities deserve to be exploited but the mills have to respect the Indian consumers' past sacrifices. These sacrifices were not reduced by the lowering of duties on British goods under the Mody-Clare Lees pact. The Indian textile industry's position is still improving. Concentration in Lancashire has stopped Lancashire's exports; and Japan ceased to be a rival after July last. The ability of depressed mills to pay handsome dividends and the willingness of prosperous mills to raise dividends may be adduced as a reason in favour of lower cloth prices. The gesture made by Bombay mills to undertake the production of 10 million yards of standard cloth in response to plaintive protests is, of course, a sign of goodwill, but nothing has occurred to show that it is going to be copied by all mills. The record output of Indian mills in 1941-42 may have helped the cottongrower, but it has not helped the consumer. Sir Chimanlal Setalvad recently described the true extent of the advance in prices. The millowners' fortnightly list was examined in this connection, and it was proved that the mills had raised prices. It was once suggested that dealers were primarily responsible. Sir Chimanlal has since argued that it was the mills which had raised prices. He cited the rise in the case of grey dhoties from Re. 1 on August 1939 to Rs. 2-10 per pair and from Rs. 1-14 to Rs. 5-6 in the case of grey sarees. Sir C. H. Setalvad concluded that, even on the basis of the official price index, cloth prices had risen by over 100 per cent.

It is a conclusion that will command general assent. The remedy lies in the expansion of output. Double shift working is one; rationalisation (in existence even in 1930) is another. A third is the lowering of raw cotton prices. The revival of speculative activity in the cotton market, however, promises little benefit, and so one is driven to assume that the new panels will concentrate supplies but cannot reduce prices. The textile advisory panel has claimed successfully higher prices for goods supplied to the Government. A shortage has been largely produced by the diversion of 35 per cent of capacity for war orders. If the true cause is sought it will be found in the mills producing bigger quantities since May last for the Supply Department. China is a new buyer, and the trade returns may not show the influence of large-scale buying on the part of a new Ally. But the case against high prices is not answered by that. That mills discourage raising of prices and are ready to open their own shops has been referred to in current discussions, as indicating the mills' aversion to follow the rise in the cloth market. But one must wait for a full authoritative statement from the millowners in any event.

The Finance Member's caution against inflation of profits must be acceptable to the mill industry but their own duty to the consumer who asked for quotas, and tariff protection as well, and submitted to limitation of imports from 1934 for the sake of helping an old industry because of the dependence of the Indian cottongrower on the mills when exports were falling, is clear. Raw cotton exports are again falling; and the same duty to the cottongrower exists. But there is a similar duty to the consumer who is clearly reacting to the advance in prices, provoked, may be, by scarcity but none the less indefensible.

Reference has been made to the postwar position of the industry, the need to keep overseas markets, to add to reserves and to extend plant and secure replacements. No precise estimate of additions to costs in the war period have appeared but the impression that it cannot exceed 50 per cent is widespread. If investors enjoy their share of the prosperity in evidence at present the consumers' case stands in need of an answer. For any suggestion that commandeering will provide a remedy the consumer is cleary not responsible. His case is grounded in past sacrifices rather than present. Raw cotton prices under the new contract seem to be rising since November. The danger clearly lies in not adopting price control in the case of raw cotton. If the future of Indian cotton is ensured by an increasing mill consumption, perhaps up to 5000 million bales in a year there must be an assurance that mills can get cotton at reasonable prices. The Indian Central Cotton Committee, which is directly responsible for restricted cotton cultivation and the enhancement of the duty on imported cotton, has yet to indicate that it is aware of the cloth problem. That problem is undeniably complex. There is the war demand, export markets and private speculation. But the mills can adjust all the factors as has been done in regard to yarn for handloom weavers. Given the assumption that U.S. cotton prices for six months have fallen rather than risen, it is manifest that cotton prices must be pegged. Government can direct that maximum prices be fixed at gins and presses, and those mills which have zones of supply, determined under a recent order, can thereafter limit the rise in prices. The improvement in the war situation should not be regarded as a factor in favour of higher prices, even for better types like Jarilla. If the cotton trade passes entirely into the control of the industry, and the futures market fades out, the development will be wholly favourable. To acquire gins and presses, as many mills have done, must be the chief aim of the mills. It is even more important from the long-term point of view than the opening of retail shops. In the U.S.A. the cotton trade at present is dominated by the Government, and if Indian mills are aware of general signs of inflation, with production out of line with the expansion in currency, they cannot cite that as a complete argument in itself, because the threat of inflation is passing, and will, pass, if mills decide to limit profits and avoid taxation at the same time.

Evidence of improved conditions in the Indian mill industry, far from satisfying the consumer, produces the belief that he is a victim, involuntary of course, of a ramp. The fact that victory is still remote rather than near, can be adduced in favour of control of cloth prices. For the present, the Government as a buyer is protected, but the average consumer has no such protection, and it is this rather than the increase in mill dividends that makes for anxiety. Mr. Sarker's visit to Bombay takes place at a time when the mill industry is said to be concerned over cloth prices. If no relief comes from the reopening of the Ahmedabad mills, the case for Government control is established. It is to be expected that the Commerce Member will take note of the demands for standard



cloth but the middle classes, deprived of imports, have an equal claim to consideration. The Indore experiment indeed takes note of the lower middle classes in regard to standard cloth of which Bengal did not get its share during the Puja as expected. It is possible that Provincial governments through the Industries Departments can fix the proportion of equipment needed for the people and limit the Supply Department's requirements. It is certainly desirable that the Government should reduce purchases for the Allies though the continued expansion of the Indian Army has to be considered. The only easy line of improvement is control of cotton prices. The E.I.C.A. should fix maxima for grades and ignore any advance in either Alexandria or New York as irrelevant. The British cotton and woollen industries were under control long before rationing started. Rationing is difficult but control of prices of raw materials is possible even in India. The cotton season has hardly started and it must be indicated immediately that 1942 prices are abnormal. The scale-down must be secured before January, and millowners, if they resist any rise in the cotton market, will have made a gesture of goodwill to buyers of cloth. For two years the mills were ready to back the I.C.C.C.'s argument for an export organisation. To desist from exports even if the Government approves is the course dictated by a cloth shortage which is not alleviated by the recovery in textile production in the first quarter of 1942-43. Imports of cotton manufactures, including yarn, since March have fallen by about 90 per cent in value perhaps more in volume compared with 1941. That the scarcity is due to the limited supply of silk, woollen, and rayon goods is an explanation that may be advanced, but last year when imports of silk etc. were equally short, there was no direct evidence of the shortage of cloth. The shortage is clearly not due to hoarding, of which there has been no mention, but to mills taking up war orders on a bigger scale.

To adjust war demand to civilian requirements may, appear difficult, but the War Resources Committee as a body might consider if Indian textile production cannot be stimulated. If civil disturbances have reduced output in the second quarter, as seems likely, the benefits secured from the recovery output noted since March must be illusory. The licensing of exports must be modified in order to secure a larger share of production for the Indian market. Exports in 1941-42 rose to 779.4 million yards as against 390.1 million yards in 1940-41. Exports as in the case of sugar represent clearly a danger to the consumer, and protection for the consumer as in the case of metals and chemicals must be secured by strict control, not only of prices and shipping, but of all transport. Since September last India's textile imports have been falling steadily. The total for April-June 1942-43 is shown as 4.1 million yards against the home production of 1,063.5 million yards. Imports of course, are impossible, but exports totalling 276.2 million yards for the quarter do not seem to have much justification. A complete ban on re-exports also seems desirable in the interests of the consumer who is told that extensions to plant etc., are rendered difficult. But the industry which has been helped to get baling hoops etc., by the Government should be conscious of the need to extend double shift working to all mills besides working for 60 hours as permitted by notification. Strikes have been all too common in textile establishments in 1941 and the increase of 210 million yards in 1941-42 is viewed by many as an inadequate response to changed conditions. There may be sufficient reasons to show why the output, as compared with 1938-39 was higher by 210 million yards only but cotton was cheaper and more plentiful than in the previous year.

If a tariff board investigates the position today, it may even make out a case for readjustment of the

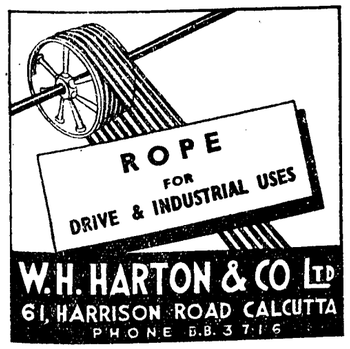
tariff by an excise. But an excise is ruled out. It is however open to many to say that a special rebate on the E.P.T. payments would stimulate textile production. Since figures for recent months are lacking, one must go largely by complaints in the press. Proof of profiteering is not wanting, and the Finance Member's warning, given incidentally through a gathering of accountants, is meant for the industry, which has passed through its boom, and must look forward only to stability. There is no latent threat of post-war competition and the customs duties in addition to the surcharges will remain part of the fiscal system. An old industry, which has obtained a further renewal of protection, has well-defined responsibilities, and the budget session may even produce a scheme for control of cloth manufacture on the lines adopted in Britain where the price index of cloth on September 18 was only 74 per cent above the 1938 average and the rise in the price index for yarn was less than the rise recorded in the case of cloth. In spite of criticism of control in Britain a large, mature industry dependent on imported material is under control though the control is a departure from the Enabling Act passed for the reorganisation of the cotton industry. The lessons learnt by Lancashire in the war period have obviously wide application, and the Commerce Department should be aware of what has been attempted and accomplished by the Lancashire industry which has handicaps not known in India.

Progressive Purity . . .



ALWAYS
EVERYWHERE
STEEL FOR
STRENGTH

Since the conception of crude steel in the dark ages and during its steady growth through the years, progress in purity as well as in strength was and is of paramount importance.

To-day's modern methods of intensive selection produce perfect steel, strong and pure, to meet the most exigeant demands of India's growing industries.

Trends in Production

The figures of production in certain industries for a full quarter leaves the impression that production continued to expand. The only apparent exception was the jute industry, which showed, however, an increase on 1940 in regard to total tonnage manufactured. Production of jute canvas was again larger, and the mills produced more sacking in the three months, September to December. Rope and twine produced also was larger, and this year should necessarily have brought about a further development of rope and twine production as hemp is under control. Figures relating to cement production are not obtainable, but the paper production figures of the quarter deserve special notice. The total for nine months, April to December '41 is known to be 1,421,034 cwt as against 1,320,209 cwt in 1940. The increase is traceable to the increased production of both white and unbleached printing paper. A big fall under blotting paper is more arresting than the sensational increase in the output of packing papers and pulpboard. The reversal of the expansionary trend in 1942 does not reduce the interest of figures which show that the output of writing paper and envelopes continued to decline along with the output of badami paper. Production had clearly been adjusted to home needs in advance of official control measures which promise to be less rigorous than anticipated. The Government will have pre-emptive rights and make sure of its own requirements. Paper as a protected industry must oblige the Government in any case. Total output for the whole quarter was slightly higher than that for the final quarter of 1941 and it is significant that a small decline was reported even in December. The figures relating to sugar possess no interest. The advance in production in the first few weeks of the 1941-42 season does not count against the proved shortage.

The opportunities created for paint manufactures by the war are indicated once again by the striking rise in the output of colours and mixed paints. Total output for nine months of 1941-42 shows an increase of over 40 per cent. If the production of enamels has increased only slightly, the last quarter saw a big increase in the factories' output of oils and mixed paints, though not of dry colours. Essentially, the picture is one of swift progress, proclaiming that secondary, unprotected industries like the chemical, soap and paint industries are deriving greater benefits from the war than currently believed. The marked improvement in share values in the case of flour mills since 1941 is supported by the consistent increase in the quantity of flour milled. A detailed statement is illustrative of the decrease in meal and bran while the output of atta was increasing. As compared with the 1940 figures, the quantity of atta rose in the April-December period by nearly a million maunds. The flour mills were not hampered by wheat shortage or transport difficulties last year, but their production must be still rising as wheat prices are less liable to fluctuations.

Figures suggestive of exceptional prosperity in the brewing industry are once more available. As remarked previously, the noteworthy feature is the big increase in beer. The production of ardent spirits has also increased after 1940 but not to the same extent. The production of rectified spirit and denatured spirit had also risen after 1941, but the fall in imports was certainly more helpful to manufacturers of potable spirits. The increase in production as also consumption in India may be taken as a mark of war prosperity. The steady fall in the production of safety matches is clearly due to difficulties as regards chemicals. The modern Indian industry is efficient and has helped other countries but the fall of 25 per cent in production as against 1940 deserves to be noted here in the light of the acute though temporary shortage and the higher prices established this year. A reduction in supply invariably leads to higher prices, especially, when imports are impossible and home production cannot be stimulated in response to effective demand.

Rubber Production

While not very much has been heard of efforts to stimulate rubber production in Ceylon, the three conferences in India have borne fruit. A new Control Order aiming at larger production was issued in November. The planting industry will be strongly represented on the Board over which the Dewan of Travancore presides. Travancore will have two official members in addition to the present Chairman and manufacturers too may obtain representation like approved dealers. Much of the work will fall on the Production Commissioner, who in this case, has been the licensing authority under the export control scheme since 1934, partly since the control committee is merged in the new Board. The constitution of the Board marks a clear break with the policy of restriction since the Board has been authorised to encourage production by intensified tapping, new planting, improved methods of manuring and spraying, the distribution and maintenance of machinery and estate requisites, propaganda and research. Licenses may be issued for new planting or replanting. Those estates with uncultivated reserves are likely to benefit most under the terms of the Control order. The Board is expected to keep registers and data relating to stocks available for distribution in addition to monthly reports relating to estates' own stocks and dealers' stocks of all grades of rubber.

The most important function assigned is the supervision of dealings. Private speculation in rubber is banned and the Board is empowered to levy a fee of 2½ annas for every 100 lbs. of rubber sold to the Government. The Central Government as buyer is not bound by its own price schedule, but is free to pay more. Manufacturers are called upon to buy only through the Controller by means of permits valid for three months. Manufacturers having their estates are not free to use the rubber without permits and the same rule applies to the use of imported rubber. Planting or replanting is to be done only under license. The cutting trees, even for replanting, is to be done only by special permission. As in the case of all control orders, the power to call for books of estates, manufacturers and others, etc., is vested in the Controller. The schedule of raw rubber prices ranges from Rs. 72¾ to Rs. 57 per 100 lbs. according to grade and description, while the price of shell scrap too is fixed at Rs. 45½. The transit of rubber except to the seven selected centres on the west coast is to take place only under certificate. The latest order supersedes all other orders issued in and after February 1942. The conservation of supplies to be carried out in the familiar manner through regulations. Estates of not less than 100 acres come within the scope of registration as approved estates and areas not below 50 acres as approved holdings. Power to punish estates and dealers either for breach of rules or for breach of contract, is vested in the new Board. The new schedule of prices is in advance of the prices fixed in May, but rates conform to the revised schedule of July. The rubber planting industry has however the assurance that Indian prices are not less than Colombo prices, and its future progress should be rapid as investors have not been long in deciding.

Banking Expansion

Towards the end of November the money position was easier than ever. The contra-seasonal trend is established by the call rate of ¼ per cent obtaining for weeks. The scheduled banks reported throughout November successive additions to deposits though their balances with the Reserve Bank fluctuated. But the fall in Advances through the month

Rate of Interest Allowed on Deposits can be ascertained on application

Collection of Upcountry Bills and Remittances to all important Trade Centre undertaken at very low rates, Advances made against Approved Securities,

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

suggests that trade demand for bank funds had not increased to any extent. A feature of some interest is the growth of time liabilities. In the war period demand liabilities have naturally increased and larger cash ratios have had to be maintained. Any movement away from the original trend makes for cheaper money conditions and this is indicated not by the rate for three months treasury bills, issued every week for Rs. 10 crores, but by the increase of Rs. 5 crores in a week in the total deposits of Scheduled banks in the middle of November. While larger deposits make for larger cash balances as also banks' deposits with the Reserve Bank, it is clear that demand for money had not increased after the coming of the cold weather. Advances in India were lower in a week in which both the cash balances and the deposits with the Reserve Bank were lower. The consistent rise in the treasury bill rate last month receives no support from the available figures. There is, however, a moderate increase in the total value of bills discounted in India to offset the fall shown under advances. The mild improvement noted under Advances towards the end of October has, evidently been arrested though the total at the end of November was higher than the total of Rs. 80.67 crores shown on October 23. But the increase under bills discounted has continued since many markets have come to life and the export outlook is changing with the trend of war.

That bank deposits go up when the note circulation is rising is a commonplace, but the expansionary influences that cannot be measured by clearing house returns alone, which show a rise since October, are generated largely by successive additions to the note issue. If Government deposits with the Reserve Bank had risen in October, to fall again in November, the Scheduled Banks' balances with the Reserve Bank were also lower in November than in October. But in the four weeks as between October 23 and November 20, total deposits rose by over Rs. 15 crores and the increase naturally makes for slacker conditions than anticipated. The steady rise certainly promotes investment in giltedged and makes for stability of prices. If the short-term borrowing rate does not go down, as expected generally the long-term rate is fully stabilised and will remain unchanged as Advances are below the prewar level and Investments, particularly in the case of the Imperial Bank, are equal to roughly two-thirds of the total deposits though there may be changes from week to week as shown in the weekly returns, just as the total under Advances shows changes from week to week in this case. The main trend is still towards higher deposits and lower rates of interest as branch banking continues to extend in India. The balances with the Reserve Bank over the statutory ratio are, in the main, likely to fall, and any increases in Advances, which are considerably below the 1941 level, will be reflected first in the Scheduled Banks' balances with the Reserve Bank rather than in the cash ratio while increases in time deposits will assist greatly in the banks' continued support of giltedged. Disinclination to reinvest in treasury bills except at rates, which seem high in relation to the call rate, is not to be accepted as a proof of banks' unreadiness to accept a cheaper money policy, particularly, as all banks have reduced the rate on deposits and made adjustments for the seasonal demand.

Sugar Scarcity

Not only India but the world is short of sugar. In a memorandum of the U. S. Department of Agriculture, it is stated that the total production of sugar at 33,427,000 tons (of 2,000 lbs) is about 4½ million tons below the visible supply as at September 1, 1941. The carry-over, like the production, has fallen in 1941-42. World supplies are lower by 8.3 percent in consequence. Of the total of 33.4 million tons 22.5 million tons comes from cane and 10.9 million tons from beet. Russian production has fallen sharply, and a moderate decrease is reported by India. It was concluded that the world sugar situation does not indicate a severe shortage but transport difficulties may limit supplies to individual countries or areas. Normal movement is rendered impossible by the war in the Western Hemisphere while direct war demands for sugar cannot be small. Rationing is inevitable in many countries. The U. S. A. alone has nearly 8 million tons of sugar for this year—the same as in 1941—to meet her own needs and certain Allied needs. But shipping has been a problem and rationing was adopted in May. At the end of the 1940-41 season, Cuba and other countries had a reduced carry-over. Stocks in Java, carried over from 1941, were destroyed before the Japanese invasion this year. Corresponding to the decrease in cane sugar production is a fall in beet sugar production. The fall of 1.8 million tons in 1941-42 as compared with the preceding year is due to the great fall in Russian production from 2.7 million tons to 1.8 million tons. Beet sugar production increased outside Russia in Europe and in spite of diversion to other uses and a reduced yield beet sugar production has risen by 350,000 tons. The Axis has 5.14 million tons owing to the increase in beet sugar output particularly in France. North American production like Cuban has risen since 1941. Argentina's production has fallen like Hawaii's this year. Australian production fell this year owing to the loss of export markets. Relief is expected in the U.S.A. in the event of shortage through larger supplies of edible syrup, molasses and honey but it cannot obviously meet the deficiency. From the statistics appended to the note appearing in 'Indian Sugar', it appears that Canadian production at 121,000 tons is stationary. The Great Reich produces 3.2 million tons but Italy's production will be lower like that of Jugoslavia. But sugar production has increased in other occupied countries, especially, France and Denmark. Britain also claims an increase in beet production. A small increase is noted under Eire and Turkey this year whereas Iran's output has clearly fallen away since 1941. Japan's production of beet sugar is placed at 30,000 tons only and Manchukuo's contribution of 7,000 tons makes little difference. The largest increase in the new world is reported by Cuba but the British West Indies are also producing more sugar. The French islands report a small increase in output which should be available to the U.S.A. Central American Republics have surpluses which should be available to the U.S.A. in case of necessity. The figures indicate that the U.S.A. is still very well off in the matter of sugar as Brazilian output has risen appreciably. While the decline in South Africa's output is not great, it must be noted here that the Union will have first call on Mauritius' output of 355,000 tons as also of Reunion's estimated output of 112,000 tons in 1941-42. Japan's sugar supplies from Formosa are expected to increase to 1.42 million tons and the loss of the Philippines and Java, providing an estimated quantity of 2,679,000 tons, makes a vast difference to Asiatic importers as well as the U.S.A. this year. The total Indian supplies for 1941-42 including **gur** are placed at 4.8 million tons as against 6.4 million tons. The sugar situation in 1941-42 has reflected in equal measure the tightness of supplies and retarded movement. Outside Europe and the U.S.A. the fact of scarcity is established. The figures indeed suggest that exports should be governed wholly by the needs of the home market,' and the decline in cane acreage, reported by Bihar and Bengal, is of some consequence for Indian sugar manufacturers who may find that exports are inexpedient in the face of a larger demand from distilleries. Abstention from exports even by land may seem advisable, and Middle Eastern requirements must be provided, not by India but by tropical islands who have surpluses as usual.

NORTH WESTERN RAILWAY

IN YOUR OWN INTEREST

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to them showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to books the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed. Chief Commercial Manager, Lahore.

The War in the Air

Sunday was marked by the heaviest daylight raid ever carried out from Britain. The occupied countries were the objective. The U.S. air force co-operated in the raid on Lille and the airfield at Abbeville. The raids on the Philips Electric Works, etc., were covered by fighters and the sweep from Britainny to Holland was followed by a heavy raid on Karlsruhe in Baden. Opposition is stated to have been slight, and many Focke-Wulf fighters went down. Opposition in the air since October is known to be slight. The R.A.F. is more active than the Luftwaffe which is concerned largely with holding up the Allied campaign in North Africa. The reports of last year mentioning seven German air fleets and their disposition clearly stand in need of revision not merely because the Allies' air strength grows while that of the Germans is falling. The small-scale coastal raids, reported occasionally from Britain, are far removed from the blitz of 1940 and the Allies' answer to it two years later. The winter raids from Britain are not comparable to the smashing raids on Augsburg and Cologne but it is known that the executing aircraft is reinforced by heavy American bombers. Not only Halifaxes but Liberators have raided Italy and only last week when Goering was in Naples the U.S. bombers went over. The possession of airfields in Algeria and Malta confers an undeniable advantage for attacks on Italy which are spread from Lombardy to Sicily. Tripoli, too, has been a target in the war that rages from Morocco to Egypt. The exchanges are uneven though the Axis holds certain advantages in Tunisia.

The Bomber Command which drew up its plans in 1940 is making a thorough job of breaking up Italy's ports. Pantellaria has not escaped the attention of the Allies' aircraft which has hit a destroyer near Sfax. The conference between Hitler and Milch has brought no change in the relative air strength of the two sides. For the present, the Axis has superiority in figures. Arguments in favour of the single-seater fighter are heard, but Lord Winster has asked for torpedo-bombers. Theories in favour of

aircraft-carriers are also aired but surely the loss of the Ark Royal and the Illustrious cannot be ignored. And it will be agreed that a temporary deficiency in in the African theatre as against the Germans is of infinite help for raids on occupied Europe and Germany. If long-range sweeps are out of fashion, the medium bombers like Bostons and even the older Blenheims have field days. The attacks on Germany proper have been apparently given up in favour of attacks on the occupied countries and Italy, and Mussolini's main worry appears to be ground defence. The R.A.F. has picked the more vulnerable enemy and is also exploiting the diversion of German fighter strength to the Mediterranean narrows. Only limited air strength can explain the caution of the Germans in France. The repeated air raids must make the task of occupying power more difficult, but Vichy's territory after the German entry has not been raided. The blow delivered at le Creusot has not been followed up. Inspection of damage at Toulon has not been reported in detail. It is quite possible that the bulk of German fighter strength has been shifted to Southern France to cover Italy and aid the operations in the Mediterranean. If the air fleet in the Balkans has been withdrawn to southern France, it is likely that Rumania would be a better target than Italy. But the Axis is not beaten as yet in the eastern Mediterranean and the winter will not see the development of an air offensive based presumably on Cyprus. The Dodecanese have been raided periodically but no attempt has been made to promote Turkish security by expelling Italy from the Levant. The anticipated opening of the Dardanelles for the British fleet is contingent on the swift expulsion of Italy and Germany from the islands in the Aegean. The promised diplomatic gesture from Turkey will probably come after and not before the event which again is governed by the adjustment of long-range fighter strength and, even more of night-fighters to meet attacks, for an air offensive beyond Egypt and Libya towards Europe.

September Trade Returns

The seaborne trade returns for September show that imports continued to fall, while export trade generally was improving at the same time as reports were lower. The gap between the value of imports and exports was reduced further in favour of British India. Total value of imports at Rs. 10.49 crores was far below the value of exports at Rs. 18.1 crores in September. Improved shipping assists exports rather than imports, it may be concluded; and the export surplus for the first half of 1942-43 is as high as Rs. 39.6 crores against Rs. 12.34 crores in 1941. The radical improvement supports the belief that control is reducing imports, and assisting home production, while war supplies continue to be shipped abroad in larger quantities. The improvement in exports is independent of the fall in shipments of food. A noteworthy feature is the advance in tea shipments in September, though the figures for the first half show a fall in total value. Despite a fall under jute manufactures, leather and woollen goods as compared with September 1941, the total for manufactures is high owing to the increase in exports of textile manufactures even after the loss of Burma. The decline in imports is explained by the fall under grain, liquors, spices and sugar. If September 1941 be treated as a normal or standard period the food position in September 1942 was drastically altered by the fall in the value of grain imports alone by Rs. 9.71 crores. Except for an increase in takings of oil, there is no feature in the import trade between April and September. The increase in trade with Iran supports the growth of oil imports in the war period. The main change of the first half of 1942 is not the fall in rubber or oilseeds or that noted under wool but the fall under raw cotton. The decrease makes for stability in Indian cotton prices since mill consumption is rising at the same rate as textile production keeps growing. The war in the East explains the great fall under gums and resins, timber and silk in the import table while the growing shortage of electrical goods, steel and all metals as also rubber, manufactures is well illustrated by the fall in imports. Imports of raw materials in six months are lower by Rs. 6.33 crores while imports of manufactures are lower by Rs. 25.09 crores as compared with the first half of 1941-42. Steep declines are to be noted under cotton goods, silk and woollen goods. The stimulus to home industry and the strain on available supplies can be described by reference to the fall of over Rs. 1 crores noted under India's imports of paper, paste-board and stationery. India's own exports of paper have fallen away to Rs. 2.68 lakhs only for six months while tyre rationing explains the notable fall in the case of rubber manufactures exported from India. The decrease under jute manufactures is offset by the increase under cotton manufactures. Cotton manufactures, and not raw cotton, must be reckoned the most important item in India's export trade today. It is a change of enormous significance for the future, when Japan may not be a rival even in colonial markets. The trade figures support the view that jute and jute manufactures were affected more than any other article by the war. The fall in exports of hides and skins as also coal is a guide to conditions in different trades, but the increase in exports of silk manufactures indicates what part Indian silk plays in the war effort of the Allies when European and Far Eastern silk is not available. The direction of trade has undergone diverse changes. Trade with Russia has increased but trade with the New World has fallen off. Trade with the Middle East still continues to increase and attention may be drawn again to the increase in trade with Portugese East Africa. India's trade with Turkey has perhaps been developed by the U. K. C. C. like the trade with Iran but the increase in export trade with Arabia follows a fall in imports. The fall in takings from the U. S. A. alongside of the fall in India's exports is a change due to the end of U. S. neutrality. A special entry is made against Hawaii like the Philippines. India's exports to the Territory have fallen since 1941 because Hawaii came into the war definitely on December 7, 1941.

Amendment for Expansion

The amendment of the Australian constitution by a familiar process is not overlooked in India where the re-enactment of the Statute of Westminster is rightly interpreted as a mark of Labour

ascendancy. Dr. Evatt's speeches have been analysed to prove that the Government needs more powers to control prices, to requisition shipping, and generally to extend and accelerate the local war effort. Australia is spending £10 millions per week on the war and in the four months ending October had spent £150.48 millions of which about £30 millions came from revenue and £120 millions by loans. Though the Commonwealth has at present no external borrowing, the success of the Victory loans makes for better terms and higher credit. Film previews are being used to increase public investment in the war bonds. The device produced a collection of £4 millions in £10 bonds and the most interesting feature was the taking up of 100 seats by an anonymous investor, who subscribed £1 million for the Austerity Loan for which Mr. Curtin spoke in a specially-made talking film. With 1½ million people engaged on the war effort, the Commonwealth is all set for bigger production. According to Dr. H. V. Evatt, there were more than 100 times the tanks Australia had eight months before, and also a big fighter force for work in New Guinea. Workers from the shops continue to be diverted to war work. Shops are being concentrated and credit is being abolished. For the presumed absorption of 40 per cent of the national income for the war effort, Australia's Premier openly asked for austerity, asked the people to stop spending, and also to stop hoarding, to buy home-made goods or go without them.

The published figures relating to the Commonwealth's war effort give the true measure of what has followed the economic honeymoon, the population between 11 and 65 is approximately 3.4 millions of which 68 per cent are working full time in the armed forces, war factories or in essential civil occupations, says a recent report. Out of the total male population aged between 14 and 65 the number on full time war work is 1,480,000. Munitions are being made in 22 Government factories and 143 annexes to big private factories making either munitions or bare essentials for civil life. The women's Land Army has emerged, and the call-up has begun. Australia's budget in September provided for £440 millions to be spent on the war and only £79 millions on civil expenditure. The Labour Party is backing the war effort by asking the militia to supplement the Imperial Force in the S.-W. Pacific. A special conference this month will consider the recommendation in order to strengthen the oversea forces of the Commonwealth. Progress in cotton cultivation in Queensland and the manufacture of tool steel are of less interest than the success in power alcohol distillation from grain. Victoria's first distillery is one of the four expected to give 3 million gallons each in a year. The distillery is expected to use 1¼ million bushels of wheat and provide 12,000 tons of stockfeed.

South America's Exports

South America is a Continent with which India's trade was increasing until this year. Reports relating to the crops and trade of neutral Argentina still have a special interest. In the I.C.J.C.'s bulletin for November appears a reference to a small recovery in Argentina's export trade in May. The first four months were marked by a recession in exports, and even the recovery in May did not leave the normal export surplus at the 1941 level. The favourable balance of trade for five months is stated to be 130.5 million pesos as against 185.8 million pesos for the first five months of 1941. The improvement in trade sprang largely from the decline in imports to 376,000 tons, the lowest on record since 1921. The fall in exports and imports alike is characteristic of the war's effects on neutral countries. The trade situation explains in a measure the Federal Government's deficit. The Budget message spoke of the deficit of 1941-42 of 261½ million pesos as the largest on record. A reduction is however looked for by the administration in this year and the next. Lost markets and shrinking trade are not peculiar to Argentina, but the cost of living is rising, and unrest has led to advances in wages, says the report. It may be noted here that the price of foodstuffs started to rise in March, as in December 1941, and the index for the cost of living in Buenos Aires had risen from 99 in September 1941 to 107 in April.

True to my promise I must turn this week to the problem of India's sterling balances. I see signs all round of a new and keen public interest in the problem of our sterling balances, an interest which, though it may well have arisen earlier, is by no means belated. I say that it should have arisen earlier because not only should it be widely known that every major European war gives rise to this problem, but also because "Indian Finance" has from the beginning of the war insisted on the need to watch and direct as well as we can the policy of the Government in regard to those war profits which are realised in the shape of sterling in London. I would not be far wrong, I think, to suppose that till now, public interest has not been very marked mainly because the policy of the authorities in regard to sterling balances has been in consonance with the true interests of the country and the inclinations of public opinion as well. So long as the sterling balances are utilised to pay back sterling loans, there is reason to feel that these war profits have not only been saved from any possible danger that may threaten them in the future, but they have also been put to good use at present. As I hinted in my Gossip in an earlier week, the problem of sterling balances has of late far outgrown the proportion of our sterling debt. Even if the whole of our foreign debt were to be wiped out, there would still remain a large volume of sterling the further utilisation of which is a matter for careful consideration. That is why the public which has so far had little to say on the utilisation of sterling has now begun to bestow some attention on this question.

* * *

Here as in most other matters of far-reaching importance, we should view the problem in a historical perspective. For, when one talks of the problem of sterling balances, the question naturally will be asked, how it is a problem at all, whether sterling is not the most suitable form in which to hold our foreign assets, and how it becomes necessary and desirable to dispose of these sterling balances in some way or other from time to time. These questions I submit, are best answered in the light of the history of India's sterling balances particularly during the last war period and the immediate postwar years. The story is an oft-told one. Even the man in the street who has never taken any interest in the problems of currency, knows in some vague way, thanks to the propaganda which the Currency League conducted on popular lines, that a considerable part of the profits which India made during the last war were altogether lost to the country through the sale of reverse councils. But more precise ideas are clearly necessary for an understanding of the problem as such. It should be remembered in the first place, that ever since India stopped the free coinage of silver in 1893, and adopted an artificial system India has always had to maintain in London a large volume of funds pertaining to her currency reserves. The problem first arose when the adoption of a token silver rupee yielded handsome amounts by way of profits on silver coinage. The natural function of these funds was to help the authorities in the maintenance of the external value of the rupee. Since London was the foremost international financial centre and India had more to do with Britain than with any other country, these profits which constituted the Gold Standard Reserve in those days, were located in London. Indian opinion naturally seized on the advantages which accrued to the London City by the Bank of England's command over India's gold, and the location of the Gold Standard Reserve formed for a long time a subject of keen controversy.

The Gold Standard Reserve was later on transferred in large part to India and ultimately became a part of our currency reserves. The history of the G.S.R. is important for showing how certain features of Indian currency and exchange, not to speak of the political relations between India and Britain, give rise to controversies of this kind. Without being thought to emulate the immortal Sir Roger de Coverly, I must say there is much to be said on both sides. No one can deny that external balances are necessary for the maintenance of the exchange value of an artificial currency; and external balances simply cannot be maintained at home. At the same time, the advantages which London had from the location of the G.S.R. in that city are undeniable.

* * *

The history of the G.S.R. shows, however, how plausible pretexts can turn to valid reasons, in the eyes of those in authority. The adoption of a token silver coin whose internal and external value is to be maintained by manipulation

proved most fertile for yielding such pretexts. It provides in the first place, the permanent problem of the rupee-rate ; and when the rupee-rate is fixed in terms of sterling, the maintenance of the rate even in its routine adds to the volume of business. And when special occasions such as those of a choice of a high rate or a crisis of confidence arise, the requisite secrecy of transactions gives the powers that be a free hand. Since a few years ago, the whole world practically has been on an artificial currency basis. But when the gold exchange standard system was chosen for India, India got the privilege of being a pioneer in a system of currency which the whole world was to follow long after. But the price of such privilege is to be reckoned in crores of rupees.

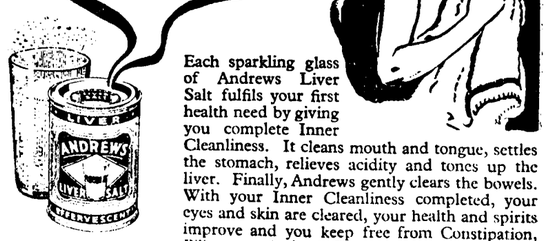
* * * * *

India's war profits on the last occasion were realised in conditions of uniqueness of our currency system, a system which lent itself admirably to the denudation of a large part of these profits when the time came. It might be said that, if all the war profits had been so lost through the sale of the reverse councils, India got nothing out of the war except fantastically high priced silver and high prices through persistent inflation of currency. The gross note circulation in India rose from 66.12 crores in March 1914 to Rs. 161.40 crores in Dec. 1920, while at the same time gold, which rose from 31.59 crores in March 1914 to Rs. 48 crores by March 1920, came down by the end of that year to Rs. 23.89 crores. Sterling securities rose from Rs. 4 crores to over Rs. 82 crores by the beginning of 1920 and came down by December to Rs. 8.35 crores. Rupees securities showed an increase from Rs. 10 crores to Rs. 68 crores, but not as a result of the replacement of sterling by rupee loans as in the present instance. So far as Indian currency is concerned, the war left us not the damnosa hereditas of the rupee rate problem, and only the world crisis of the thirties and the world-wide movement away from gold gave us relief from this problem.

* * * *

What India missed and lost through the official policy and what might have been done through her foreign balances were best presented by Sir Dadiba Dalal in the dissenting minute which he appended to the report of the Babington Smith Committee.

"These revolutionary changes in the Indian money system should not have been possible and much less necessary at a time when immense sums were due to India in exchange for her commodities. They are to be explained by the particular bent of the policy followed—a policy of making India accept payment in India of the balances due to her as far as possible in the form of rupees. A policy less rigidly bent in that direction would have been susceptible to the need for meeting the very special circumstances of the time by other methods, such, for example, as that suggested by the Governor of the Bank of England when he pointed out the desirability of investments abroad in settlement of India's foreign claims. It is a policy which has persistently ignored the essential safeguards of a gold standard, and particularly the safeguard of limiting the issue of token coins. It has by mere executive action changed the legally-established gold standard into a gold exchange standard, making the maintenance of exchange the object to be attained in place of the provision of gold money with a limitation of token money. And while the maintenance of exchange was the main object, the policy has broken away from the normal rate of exchange on the ground that the rise in the price of silver rendered that course necessary, although, as I have endeavoured to show, there was no real necessity for doing so. The fact that the maintenance of exchange was so readily abandoned and the sale of rupee bills continued, combined with the persistent flooding of India with silver token money, gives ground for the theory that fixity of exchange was only the ostensible object of the policy, and that the real object was to compel India to take silver in place of gold money. Further, it is a policy which is settled and managed in London, and which necessarily operates in the markets of London and India. That the interests of the London market have not been without influence in shaping the policy may be gathered from the enormous sums of money or investments belonging to the Indian currency which have been accumulated there. The profits on silver coinage were steadily collected into the gold standard reserves in London, and now that the coinage of silver has ceased to be profitable, a new departure has been made in the issue of currency notes in India on the security of investments in London, which has had the effect of rapidly accumulating an enormously increased store of Indian currency money in London."



It will be seen that a part of what Sir Dadiba said, especially in regard to gold coins, has lost its appeal. But what is important in the context of the present problem has been succinctly stated. Diverse claims on the limited space of these columns compel me to postpone the story to next week.

* * * *

The plan and programme for relief to those afflicted in the mid-October cyclone were belated ; but, so far at any rate as public enthusiasm can be of any avail, there is manifest a definite tendency to make up by present generosity for past dilatoriness. It is beside the point that the responsibility for dilatoriness was not of the public. Quite a number of appeals for funds have been issued ; and all of them are meeting with generous response. What is of special significance to us is the Calcutta Newspapers' Cyclone Relief Fund which has now passed the Rs. ¾ lakh mark. There is every reason to believe that the next Rs. ¾ lakh will be received before the month is out. South Indians put up an amateur dance and song carnival ; and it fetched over Rs. 1,000. The Young Men's Dramatic Association showed both sense of sentiment and sense of business in this enterprise. A Tagore Evening organised for Thursday mainly under the inspiration of Biren Datta and Sudhin Datta proved a great success ; and it will add over Rs. 2,000 to the fund. Neena and her Eastern Ballet are putting up a performance at the New Empire next Thursday ; and, as one who has watched Neena's career since she came to India four years ago, I am sure that the Russian and Javanese, Burmese and Siamese, Chinese and Indo-Chinese, and Indian and general Oriental dances that she has organised will provide a unique opportunity for our American and Chinese friends and foreign visitors to get a treat unique in their experience. An equally unique event for Indian spectators will be the Baseball Game that will be played in the Calcutta Football Club ground on December 27. The game is being played under the auspices of the English Speaking Union. The presence of many American and Canadian officers and men in Calcutta

Olympus

(From Our Correspondent).

New Delhi, Dec. 8.

A NUMBER of Ordinances has been recently issued by the Central Government. This has raised the question whether it is right to legislate on important matters through Ordinances when it was open to the Government to summon the Legislature in November and get these measures passed in the ordinary course. There is the Collective Fines Ordinance which was amended only on Saturday last by a further Ordinance. The imposition and collection of these fines, the disposal of claims by third parties and similar questions arising from them are important enough to merit consultation with the Legislature. Then there is the recent Ordinance allowing certain persons holding war appointments to continue as non-official Members of the Central and Provincial Legislatures. It may be reasonably said in the case of the former that the emergency demanded immediate legislation, but one may ask where was the urgency for the latter. It is believed that the Viceroy consulted his Council before deciding to abandon the usual November session. Whoever was responsible for the decision was not quite fair to the Legislature as subsequent events have shown. As the Budget session is due to begin only in the second week of February, and that session is crowded with Budget discussions and other matters—it gives no opportunity to the elected members to express themselves in time on the issues raised in these several Ordinances.

* * * *

For some days past the air has been thick with rumours regarding discussions going on in New Delhi and London about the proposed financial settlement between India and England on the allocation of war expenditure and similar matters. It does not appear that these discussions have been concluded, but it is far from clear whether the Government of India have any idea of consulting the Central Legislature before finally committing this country. In September last Sir Jeremy Raisman gave the assurance that he would conisder the possibility of announcing the Government's decisions in sufficient time before the Budget so that they could consider them in detail. It is not known whether even that would be possible. It is an open secret that the Indian Members of the Viceroy's Council are not working as a united body. They seem to have fallen into two distinct groups. And as there are four European Members including the Commander-in-Chief, the progressive group among the Indian Members may not always be in a position to command a majority of votes. It is said that even in a matter like the demand for complete Indianisation of the Viceroy's Council, the Indian Members did not find themselves united. The only consolation at the moment is that among the Indian Members the progressive group is in a majority.

* * * *

A recent statement issued from New Delhi showing "how India's revenues are spent" has given rise to certain natural apprehensions in many quarters. It is said here that "India is bearing only a portion of the huge military expenditure now being incurred in the East and brought into account in India's books." Expenditure on defence and supply brought into account in the Government of India's books as chargeable to His Majesty's Government under the financial settlement now in force amounted, it is said, to Rs. 4 crores in 1939-40, Rs. 53 crores in 1940-41, Rs. 185 crores (revised) in 1941-42 and will amount to Rs. 387 crores (Budget estimate) in 1942-43. There is reason to believe that this Budget estimate has been greatly exceeded already. There is also the observation based on the so-called average income of India of Rs. 60 per year that the average per capita central taxation in British India works but to about 6.4 per cent of the per capita national income. Comparing the position in India with that of England, the statement says that taxation in India cannot compare with the very high scale of taxation in England, America and other countries at present. According to the official figures given, India is spending below £500,000 per day on war expenditure as against Britain's £12,750,000 per day.

* * * *

These observations are looked upon as ominous in some quarters, for if they prove to be a prelude to increase taxation and a revised financial settlement which throws greater financial burdens on this country, it is a matter which calls for the closest attention from the members of the Central Legislature. It cannot be forgotten that Defence expenditure is mounting up rapidly as India to-day is for all practical purposes an operational theatre—not only to withstand attacks from the enemy who is close to the frontier but also to launch an offensive as early as possible for retaking Burma. If, owing to the changed military situation it is proposed to revise the existing financial settlement, the financial and economic effect of any such revision has to be carefully considered. With reference to the figures given above, two or three facts have to be borne in mind. Firstly they do not take note of the provincial and local taxation per capita which is by no means an inconsiderable figure. Secondly, there is the much more important question whether with the per capita income so low as Rs. 60 and with the present steep rise in prices which has doubled, if not trebled the cost of living, it is possible to increase taxation without causing serious hardship to the people. And there is the last consideration as to what may be legitimately called India's liability and what may not be. For instance, there is the question as to who should bear, and in what proportion, the cost of an offensive to retake Burma. It is said that all these questions are being carefully examined in the Viceroy's Council.

* * * *

The new Commerce Member, Mr. N. R. Sarker, is understood to be paying special attention to the problem of paper production and supply. The recent announcement that the Government proposed to requisition 90 per cent of the production of Indian paper mills has brought many strong representations from commercial bodies. It is hardly possible to meet the essential needs of the public if only 10 per cent of India's production is released for civil use. The position of paper imports may be seen from the fact that in September last imports were only of the value of Rs. 28½ lakhs which is just about half of what it was two years ago. As imports are decreasing owing to the difficulty of getting import licenses and shipping space, the Indian market has to a large extent to depend upon indigenous production. The fact is that there is still a good deal to be done by way of economy in the use of paper for Government purposes—both of the Civi Departments and of the Defence Services And, secondly, there is no doubt that even a this late stage the Government of India ca come forward with special measures for in creasing the production of paper in thi country. Both these questions are reporte to be engaging the attention of the Commerc Department. It would be a good thing if th various Departments dealing with paper pro duction and supply can be brought unde single control. The Controller of Stationer and Printing is now attached to the Labou Department, while the Defence Services hav also their demands to be met for the supply o paper. The possibility of increasing pape imports to meet a larger proportion of Gov ernment requirements is understood to b receiving attention. In any case there i every reason to hope that the Government would reduce their demands on the Indian paper mills and leave a larger margin for public consumption. If the Government do not come forward with urgent and adequate help, a large number of newspapers depending upon import supplies would find themselves also soon in serious difficulties.

* * * *

The Finance Member, Sir Jeremy Raisman made a striking speech at the second meeting of the Advisory Panel of Accountants. He referred to the measures which the Government had taken to prevent the accrual of excessive profits out of war contracts. The system of settlement by negotiation which the Government had adopted in the place of tenders had proved satisfactory and helped to improve the relations between the Government and Industry.

HILLBIRD

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications are invited from candidates for appointment on N. W. Railway to 33 temporary posts of Journeymen *viz.*, Millwrights 5, Fitters & Erectors 12, Tool-maker 1, Boiler-makers 9, C. & W. Fitters 5, and Carriage Builder 1. Of these 24 are reserved for Muslims and 9 for Anglo-Indians & Domiciled Europeans. In addition a waiting list of suitable candidates of all communities in the said trades will be maintained for a period of one year for consideration against vacancies occurring during the year. Applications must be made on prescribed forms which are obtainable at Re. 1 from Station Masters of large stations on N. W. Railway. Last date for receipt of applications together with attested copies of testimonials:—11-1-1943. Pay:—Rs. 65—5/2—85 plus dearness allowance admissible under the rules. Qualifications:—Candidates must have qualified through a recognized Technical Institute or have received a full course of practical training in Railway Workshops, Arsenals, Dock Yards or in Contractors' Workshops of repute engaged in mechanical work. They must be able to read and write English fluently and read mechanical drawings. Age:—Between 18 to 30 years. *Men in service also eligible provided they fulfil the prescribed conditions.* Full details may be obtained on sending a stamped and addressed envelope to the Chairman.

(From Our Correspondent)

Bombay, Dec. 9.

The Bombay Rotary Club which was established about thirteen years ago has been doing excellent public work, though in such a manner as to avoid the limelight. Public charities and welfare organisations in Bombay have always found in the Rotary Club a sympathetic patron and generous contributor. There is evidence that the Rotary Club has now commenced to act directly for the benefit of the masses. The Bombay Rotary Club has taken in hand a scheme to start a number of libraries for the working classes at different labour centres in Bombay. The first of the projected libraries was opened on Sunday at the Rambilas Anandilal Poddar Labour Recreation Centre in Bombay. Sir V. N. Chandavarkar, President of the Bombay Rotary Club, performed the opening ceremony.

* * * *

The first annual general meeting of the National Savings Bank Ltd. took place on November 27, 1942. The Bank has just passed through one year of working after attaining the status of a Scheduled Bank. The Chairman, Mr. Sankalchand G. Shah, presiding over the meeting, made a general survey of economic affairs and conditions. The lack of precise data in regard to index numbers, price movements, wage-levels and production statistics precluded accuracy in gauging industrial and economic conditions. But it was certain, however, that all branches of industry were more active. Through the year, cheap money conditions continued. Banks were overflowing with deposits and demand for money was comparatively small, which was surprising, considering the increased industrial activity within the country. He referred also to the colossal increase in the total of notes in circulation from Rs. 172 crores in 1939, just before the outbreak of the war, to its present level of Rs. 520 crores. As the accumulation of sterling resources in London to the tune of Rs. 400 crores has now given India the status of a creditor country in the world market, Mr. Sankalchand G. Shah had some suggestions to give. The Government of India was asked to take steps for the disposal of these sterling balances in the most effective manner so as to introduce a healthier tone in the internal currency and monetary position, and as a first step in this direction, to enlist the assistance of prominent bankers and financiers in a consultative capacity.

* * * *

Referring to the Bank's progress in the past year, he pointed out that the Bank had been following an orthodox policy in regard to working expenses and transactions in personal and unsecured loans. The profit of Rs. 1,392-6-1, though small, should be held satisfactory at the end of the first year. He had little doubt that the bank would develop on right and satisfactory lines in years to come.

There was a meeting of the Progressive Group on Monday evening at the Taj Mahal Hotel with Mr. R. K. Karanjia in the chair. Prof. Graham de Martyr, who was tutor to the Emperor of Japan for many years addressed the meeting. The speaker painted a dismal picture of Japanese atrocities in Malaya and other Occupied countries. It was a mistake to treat the Japanese with contempt as they were just as strong as Germans if not stronger. He warned Indians that, once Japan got a foothold in India, life would become unbearable and that the great consideration shown to Indians in Japan had a motive behind it, which was to make a good impression on India. It was not unlikely that, having failed in New Zealand and Australia, the Japanese might attempt to fall upon India just to save face. Though the danger now appeared to be fading, he urged the Indian people to rally as one man to prevent any possible attempt to overrun India.

* * * *

The Commerce Member is no stranger to Bombay. He has come to discuss with businessmen the paper shortage, price control and the possibilities of barter as well. His revelation that paper production in India could be raised by about 10 to 12 per cent must make the shareholders of paper mills quite optimistic. The papers here did not canvass the merits of control, but only took note of Government's intention to increase its takings of paper. If the extra takings of Government are made good by additional production, there is no need for alarm. There have been no protest meetings on this side and the average man does not fear a paper famine even if banana leaves are tried in Assam and does not worry over deputations. If newsprint were to get scarce, it would make things more difficult for the Press but the Government has asked Canada to help.

* * * *

The Indian minesweeper which sank a Jap raider has captured the attention of the City. The ship's company has been entertained by the Sheriff as well as the Governor. The R. I. N. should gain in many ways through Bengal's exploit at sea. The mercantile marine of India, too, should gain, and at the annual prize-giving Mr. Sarker described the Dufferin's help to the young navy. Many India Cadets are in uniform and the mercantile marine has helped in the defence. It is quite likely that the need to buy or build ships will be raised again by people who are acutely aware of the Argentine buying ships and transporting her cargoes so as to avoid trouble. The sea must give both food and employment to youth according to Mr. Sarker but the first line of expansion is that recommended under plans for the development of country craft. Bombay is keen on going ahead. Cutch has shipyards like other Kathiawar ports but good timber is scarce. Hardwoods are not easy to get and the control of the timber trade has begun on the west coast.

* * * *

The U. K. C. C. is emerging as a rival to Indian trade in Zanzibar. The copra monopoly has caused quite a flutter here and there is talk of a monopoly for taking Indian cloth. There are tariff surcharges etc. in African colonies but the monopoly plan must be met by another monopoly or else by the stoppage of exports if it is impossible to set up a rival to the U.K.C.C. under Indian auspices. The Indian Merchants Chamber will probably not stop with a mere promise of vigilance. To cut off Colonial trade when import control is tightening is not hard and a "no export" movement will obtain much support from people annoyed by the jump in prices.

* * * *

The fall in bullion pleases many who hope that hoarding will come to an end. The silver market has been altogether silent over the representations submitted. The brokers in London have said nothing so far. Bullion brokers here keep silent because it is their business to buy or sell and not discuss Governments mistakes. If silver is like tin or copper at present, Government's sales can be defended. If the U.S.A. will not sell silver bought at 71 cents at home India can hope to buy silver from Mexico directly after the war. China sold off her silver in the States and has got on well with foreign aid for her exchange in the war period. If the Government sales abroad have led to a rise in prices, her bullion brokers would decline to join the grumblers who think that hoards may depreciate. But sales abroad reduce supplies and keep up home prices, and imports after the war can have no effect on stocks of silver bought before this war. Anyway, it is assumed that silver operators who have given up buying have made good profits and are turning to cotton and seeds as the markets here are likely to resume normal trading. The U.S.A. is paying more for silver for non-commercial reasons. Mexico has responded by resuming payment on external loans but all that has no bearing on the use of the old paper currency reserve which has no place after the Reserve Bank was created. To get gold is impossible but to take off silver and replace it by treasury bills or pay off debt is advisable. Silver is now an industrial metal, but India's stock built up over centuries must be large enough to meet all future demands. After all the ten million ounces of Government are nothing compared with the amount of coin that can be melted to produce silver. The Government has made sure of its own silver replacements by calling in standard coin. There is not going to be any shortage and a silver slump produced by lease-lend supplies is the last thing anybody wants at present.

Resume of Commodity Markets

There is nothing of interest to be recorded in several commodity markets during the past week. The jute and jute manufactures market have been on the decline, the withdrawal of buyers from the two markets being the signal for the drop in values. A technical reaction, however, was overdue as there was a rather one-sided movement in prices in the jute market. The bullion markets have been absolutely uninteresting and prices have been fluctuating in very narrow limits.

The feature of the week is the sudden upward movement in the rice market. The fears regarding the possibility of a poor yield from the new crop have been mainly responsible for the substantial improvement in values. It is also reported that there is considerable difficulty in regard to supplies from mofussil districts. The Government of Bengal have issued a communique on the subject saying that one of the causes of the recent rise in prices in Calcutta is the fear on the part of small importers that the Food Price Control Order under which all stocks had to be declared, will be used as a means of enforcing control price of rice up to July 1943. It is pointed out that the fears in this regard are absolutely unjustified and that the Government of Bengal will take due consideration of the costs incurred by dealers in buying stocks from mofussil districts who are advised to part with their goods at reasonable prices having regard to their costs. This does not however help the position. Some statement regarding the actual statistical position of the commodity in the province should be made, and if it is actually found that exports to Ceylon are affecting the supply position, some remedial measures will have to be adopted. Retail prices for even coarser varieties are somewhere round Rs. 12 per maund. If present conditions continue to prevail it may be that a further substantial increase in prices will be recorded.

A Food Conference is to be held next week to consider the problems affecting wheat, rice, sugar and other commodities. It is reported that the Commerce Member is trying his best to discourage exports of rice to Ceylon and the Persian Gulf countries as far as possible and improve the statistical position within the country. The co-operation afforded by the railways to effect a speedy movement of the various food stuffs will, it is hoped, considerably ease the position. It is also proposed that the newly-created Department of Food will be the sole purchasing authority in regard to supplies for the Army; but it has not yet taken over charge officially. Co-ordination of purchases in regard to civilian and Army supplies and the efforts to import food supplies, at least for military purposes, in a larger degree, will, it is hoped, result in a considerable decline in values for the primary commodities. It need hardly be mentioned that the present prices in the 'black markets' are very prohibitive and if suitable measures are not adopted in time to prevent any further rise in prices, the lot of the average consumer will be very difficult.

Jute:

Readers will remember that during the past few weeks there was a rather one-sided movement in the jute market and that prices were rising without any setback. As mill stocks were low and as it was not possible to get further supplies, there was a tendency on the part of sellers to push up prices. Mills also continued to pay the advance in prices asked for as their stock position was not quite satisfactory. As there will not be much increase in the volume of arrivals, with the priority granted by railways for transport of foodstuffs, mills thought it fit to withdraw from the market temporarily and prevent any undue rise in prices. Sellers' anxiety to do business even at the lower levels, has pushed down values. It can, however, be said that the lowest levels have been touched at least for the time being.

Jute Manufactures:

The decline in local stock figures for November 1942, hessians especially, has come as a surprise to the market. It was generally expected that with the large increase in shipments during the last month, there would be a reduction in stocks of both hessian and sacking. But it was never believed that it would be possible to effect such a substantial decline in stocks in one month. As the figures reveal, it has been possible to move the whole month's production **plus** 26,000 tons from stocks at the end of October 1942. That there is good demand for jute manufactures need not be unduly emphasised. The difficulties have been mainly on account of lack of transport facilities. With the improvement in the shipping position, it has been possible to report a substantial improvement in exports. If the present conditions continue to prevail it cannot be said that the present stocks are unduly heavy. The American stock and consumption figures for November must make interesting reading.

Tea:

The announcement last week by the Government of India prohibiting private exports of tea has had the desired effect. At this week's auctions of teas for consumption in India quieter conditions were noticeable. The market for black tea registered an irregular decline up to one anna. Leaf teas and fannings were, however, firm. Green teas also shared in the general decline. Dusts were firmer.

Piecegoods:

It has been pointed out in these columns on more than one occasion that the Commerce Member has had under consideration a new scheme for the production of standard cloth, catering to the requirements of the poor and lower middle classes. It was also remarked that the earlier type of standard cloth,

15 Points
ON SAVING PETROL

6 AIR FILTER

A dirty or blocked air filter will give rich mixtures simply because the air cannot pass through it into the engine. The cleaning of filters is a much neglected job, and is responsible for more uneconomic petrol consumption figures than any other cause.

7 CHOKE

Many drivers are prone to use the choke to much too great an extent and certainly to a greater extent than is really necessary, even with a car which is somewhat slow in starting and in pick-up. Over-use of the choke can very quickly reduce any other advantage secured to assist petrol consumption.

FREE Copies of our leaflet "15 Points on Saving Petrol" are available free on application to us at Hongkong House, Calcutta; in English, Hindi, Urdu, Bengali, Marathi, Gujarati and Gurmukhi.

BURMAH-SHELL

SAVE PETROL FOR VICTORY

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, Dec. 10.

As was anticipated, the mill stock position at the end of November makes a very satisfactory showing. The figures issued show an overall reduction of 26,376 tons as compared with the end of the previous month. Of this, by far the greatest proportion is in hessian which is down by 24,000 tons, of which over 22,500 tons is on commercial account and the balance on Government account. The decrease represents 885 lakhs on commercial account out of a total decrease of 914 lakhs yards. In sackings the reduction is not so spectacular but eminently satisfactory, totalling 2,400 tons or 94 lakhs yards. Actually commercial goods are less by 3,777 tons or 110 lakhs yards, but Government holdings show a small increase of 1,362 tons. The aggregate of Government holdings shows almost no change over the month, Sandbags and scrim cloth stocks being practically identical with the October figures, while the small increase in sackings is balanced by a similar reduction in hessian bags and cloth and canvas. These figures predict very extensive shipments, for November was a "long" working month and the production is likely to prove over 100,000 tons of goods of all kinds. Adding the reduction in stocks therefore, total despatches during November cannot have fallen far short of 130,000 tons, a reflection of the improvement in the shipping position which it is believed will be continued during the current month. In the circumstances, naturally, there is no reason to interfere with the working hours of mills.

Inland transport also, it is satisfactory to note, seems to be secured more freely and raw material is coming forward steadily to the mills, though not yet in such volume as would suggest any building up of stocks. Balers in stations which have been starved of freight for months are however only too thankful to see some movement of their stocks.

We have mentioned more than once the apprehensions which were abroad regarding attempts to reopen the Jute Futures market, and it is reported that the Directors of the East India Jute Association have now actually come out into the open with proposals to start up the "Fatka" again. The proposals are accompanied by certain suggested changes in the bye-laws to provide for "emergencies". Now, if the Futures market really served any useful function in the Industry, surely it should continue to function as long as any other branch of the industry continued to work. The fact that it incontinently ceased to function as soon as a state of emergency arose, enough at least to put the wind up the Directors and principal operators, while other branches of the jute trade continued to carry on, is surely sufficient condemnation of its usefulness or desirability as an adjunct to the Industry. The proposed changes in the bye-laws would apparently contemplate providing for another wild rush for safety in the event of a similar state of "emergency" arising in the future, regardless of whether other branches of the industry were affected or not. It is apparent therefore that the East India Jute Association only consider their field of operations as an independent market, unaffected by, and unconcerned with any other branch of the jute trade. If that is their view of the position, the other branches of the industry should lose no time in putting on record with the utmost emphasis that, in these circumstances, a Futures market on these lines can very well be done without. If the "Fatka" had any useful function to perform, it ought to have been open and performing it during the past critical twelve months when all other branches of the trade have continued to function in spite of unusual difficulties. That it chose to shut up shop is, one repeats, its strongest condemnation. And that it should continue to shut up is the only fair recompense for the pusillanimity of its members. In any case, the trade has been getting on very nicely without "Fatka". Much better, we venture to think, that if it had been in action. And no one with the real interests of the Industry at heart has the least desire to see it in operation again. "Thumbs down" should be the emphatic verdict on the proposals to reopen.

A complete and rapid change has come over all branches of the markets in the past week. For some time previously, the upward movement had been kept going by what was, in effect, speculative demand for manufactured goods. Demand from overseas was light, shippers were hampered in trading by the weight of unshipped goods and the purchasing, though well within the capacity of the class of buyer, and largely for so-called "investment" account, meant that the goods would all have to come on the market again sooner or later. The position was therefore intrinsically not very sound and there was bound to come a point where a halt would have to be called. The raw jute position was sustained entirely by the goods market, for so long as mills could continue selling at the steadily advancing prices, they were content to go on paying higher rates for jute provided there was a proper margin of manufacturing profit. About a week ago however it became apparent that overseas markets were not prepared to trade at the high levels of price which had been established here and immediately there was a move towards profit-taking which took the edge off the keenness to buy goods. As soon as mills found no further buyers for their manufactures, they retired from the jute market, with the result that sellers of jute, from being sparing operators, suddenly increased their offers ten-fold. The froth was off the market immediately and during the period under report, trading of any description has been on very restricted lines. The change is probably very salutary. The recent spectacular rise had been much too rapid for safety and a cut in price of several rupees in all directions would bring trading on to a much sounder basis, and without hardship to anyone, not even the cultivator.

In the baled jute market there has been a drop in price of nearly Rs. 10 per bale in most grades. Shippers did not commence to touch Dundee Daisee 2/3 till the price had dropped to Rs. 75 and have bought down to Rs. 70 with sellers at the close at Rs. 69. Dundee Tossa 4s similarly were marked back to Rs. 76 before shippers would touch them and have sold down to Rs. 70-8 with sellers over at Rs. 70. Mills, who had paid up to Rs. 82 for Firsts could now buy the same marks at Rs. 73 and possibly Rs. 72 and Lightnings at Rs. 68. Very few sales have been recorded during the week.

Loose jute suffered an almost complete eclipse after the hectic trading of the previous weeks. European jute is now being offered at Rs. 15, Rs. 12 and Rs. 10-8 for Mids, Bots and Cross, a discount of Rs. 1-8 from top prices, without finding buyers. Supervised Jat is on offer at Rs. 14-8, Rs. 11-8 and Rs. 10, Indian Jat at four annas less, and Indian District at Rs. 13-12, Rs. 10-12 and Rs. 9-8. Large quantities are on offer at these rates with buyers showing no interest. Indian District Tossa is quoted at Rs. 14-8 and Rs. 11-8 for Mids and Bots. It is once more a "Buyers" market except that there are no buyers to speak of.

Mofussil markets have also suffered a sharp reaction, for the most part comparable to the drop recorded in Calcutta, though in some stations there has been little improvement in the quantity of imports, probably due to the paddy harvesting taking up the attention of the cultivators. It is to be hoped that the recession in price will serve to check the moisture which was in some places putting in an ominous appearance.

Fabrics markets have been somewhat fluctuating but the tendency to profit-taking has resulted in a small decline in all descriptions and in all positions. The publication of the stock figures had a short-lived tonic effect, but this feature had been fully discounted in anticipation and scarcely extended to Heavy Goods. The turnover has been confined almost exclusively to the near position, that for 11 porter hessians having been turned more or less into a "Fatka" market. Practically everywhere the opening rates were the top rates of the week and the market can best be indicated by quoting opening, lowest and closing prices, as follows. 9 porters, Ready, December and January/March, Rs. 18-10, Rs. 17-14, Rs. 18-4. April/June, Rs. 18-4, Rs. 17-8, Rs. 18. July/September, Rs. 17-8, Rs. 17-4, Rs. 17-10. Eleven porters, Ready and December, Rs. 24, Rs. 23, Rs. 23-8. January/March, Rs. 23-12, Rs. 22-12, Rs. 23-4. April/June, Rs. 23-4, Rs. 22-4, Rs. 23. July/September, Rs. 23, Rs. 22, Rs. 22-8. The Heavy Goods counters generally speaking were marked down and stayed down. "B" Twills ready and December opened at Rs. 61 and closed at Rs. 59. January/March opened Rs. 60 and closed Rs. 57-8. April/June opened Rs. 57-8, closed Rs. 56.

(Contined from page 980)

as approved by certain mills, was not exactly suitable to the requirement of the poorer classes and that it was proposed to produce only a small quantity to satisfy the initial requirements. The Commerce Member is now in Bombay negotiating with the Cotton Textile Industry to speed up production and begin manufacture of standard cloth of new varieties. Important decisions are expected to be reached shortly. The effect of the new scheme on the market should be rather discouraging though prospects of a reduction in the output of normal styles should encourage some to keep back stocks.

Cotton:

Trading was resumed in the Bombay cotton market, after the lapse of four months, on Monday last. Opening prices were lower than anticipated. The fall in cotton prices was due to the reports regarding the decision of committee of the East Indian Cotton Association to notify upcountry delivery centres if buyers chose to take deliveries upcountry. The proposal of the committee allows for the delivery in every place where a cotton press is located making it possible in all 450 centres. Mills were frightened and the close was very heavy. During the last two days, however, a better tendency has been in evidence and closing quotations show a slight rise over the lowest levels for the week. Jharrila January 1943 closed at Rs. 403 and March 1943 at Rs. 394-8. Four months back the quotations were Rs. 316 and Rs. 308 respectively.

(Continued from page 977).

provides this opportunity to Indians in Calcutta to witness for the first time a baseball game played between two competent teams. Baseball is the national game of America. And sports enthusiasts in this city who have already seen something of it in the films would be attracted to the event of December 27 both by curiosity and by the promise of excellent sport. The match will be between a civilian team and a military team. The military team consists of Canadian and Yankee players; among the latter there are some Negroes, who, I understand, are exceptionally able players. It is up to the Calcutta newspapers to give the fullest publicity to this game; for, their fund can be richer easily by Rs. 15,000. The entire proceeds of the game are to be handed over by the English Speaking Union to the Calcutta Newspapers' Cyclone Relief Fund.

"EAVESDROPPER."

(Continued from page 963).

association of economists of standing and leadership will prove invaluable.

Between November 20 and December 4, while sterling securities in the issue department of the Reserve Bank have risen by Rs. 18 crores to Rs. 372.83 crores, foreign balances in the banking department have declined by Rs. 4 crores to Rs. 80.59 crores. It may, therefore, be inferred that payments received from the British Government during this period are roundabout Rs. 14 crores. Due to this payment, and due also to the substantial excess of new issues of treasury bills over maturities, the deposits of the Central Government with the Reserve Bank are only slightly lower at Rs. 12.27 crores. Rupee coin in the issue department has sunk to the alarmingly low level of Rs. 12.54 crores; and it will be necessary to make an early application to the Government for the delivery of rupee coin.

In spite of every money market index pointing to conditions of glut and superabundance, the average treasury bill discount rate has registered a further rise this week; and it has now crossed the one rupee mark. The average rate of accepted tenders on December 8 was rupee one and pies five per cent per annum as compared with annas fourteen and pies nine last week. Though ours may be a vain protest, we feel it our duty to record our completest disapproval of the present treasury bill policy which seems to be designed to benefit special quarters. It should be the function of the Reserve Bank to fashion the treasury bill policy in a manner which will be most beneficial to the Government. It has been the opposite in the last two months. The offer of tender bills for next week is reduced to Rs. 6 crores; but tap bills have been reintroduced on the usual conditions. The tap rate is Rs. 99-12-0 per cent, a rate not at all warranted by present money conditions.

The exchange market has been very steady during the week under review but business conditions continue to be very dull. Money is easy with interbank call money quoting ½ per cent nominal. Rates for firms' fixed deposits remain unchanged.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks aare sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains unchanged at ½ per cent lenders.

A WAR-TIME ANOMALY

In common with many other industries we find ourselves today in the anomalous position of appealing to our clients to use our products sparingly. Where we once encouraged the broadest use of paper in all walks of life, now we cannot stress too strongly the urgent need for rigid economy in this valuable commodity.

Use paper thoughtfully and thriftily, thereby avoiding the necessity for frequent fresh supplies. If your demands on us are rare, we can supply Government with more paper for the propagation of the war effort.

Be sparing with paper in Government and Military offices, in factories and mills, in commerce, in publishing and printing, and in your own home.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper:—

Use the smallest sheet of paper for any purpose that will do the job.

Write, type and print on both sides of the paper. For short letters, bills and and accounts reduce the size of the paper.

Do not make copies except where absolutely necessary.

Always type single spacing.

In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.

Reduce the size of labels on manufactured goods.

Use the back of the letters received for the carbon copy of your replies.

ISSUED BY THE TITAGHUR PAPER MILLS COMPANY, LIMITED

JUTE

Calcutta, December 10.

RATHER quiet conditions were noticeable in the jute market during the past week. A decline in prices has been recorded in most sections. The main reason for the decline in values in the raw jute market is the absence of any interest by mills either in the loose jute or pucca bales sections. The reaction after the substantial rise in values is quite natural. At the later stages prices were due mostly to speculative rather than intrinsic factors and that has been proved by the sharp setback in values this week. Mills have been anxious to prevent any undue rise in prices as they cannot get delivery before another three or four months; but for the substantial appreciation in prices in the goods market, thanks to the improvement in the freight position, they would certainly have not been in a position to afford the recent increase in prices. Even with the contracts entered into during the last few weeks, it will take two or three months before mills will be able to see the colour of their jute. The reaction in prices in the market is, therefore, to be welcomed. The anxiety of sellers to do business even at the lower levels, shows that the present prices are entirely due to the peculiar circumstances in the trade owing to the difficulty in transport facilities and the low stock position of mills.

In the loose jute section business passing has been on a very small scale in the latter half of the week. Supervised Jat Middles are quoting lower at Rs. 15 against Rs. 16-8 sometime back. Most quotations are nominal but it can be generally said that there is a decline of one point all round.

In the Pucca Bales section, too, business has been on a very small scale. Shippers have been able to buy Dundee Daisee 2/3 at the lower price of Rs. 70 per bale, the short position in this grade having been rectified. Tossa 4's were done at Rs. 71 per bale and Output Tossa 4's at Rs. 76 to Rs. 75 per bale respectively.

There are reports that the futures market will be reopened shortly for business but no definite date has yet been fixed.

JUTE MANUFACTURES

Calcutta, December 10.

THE jute manufactures market has been rather quiet during the past few days and a marked decline in prices has been recorded in spite of the publication of satisfactory local stock figures. It is reported that the freight prospects for the current month also are satisfactory. The fall in rates is, therefore, not in any way due to adverse developments. Interbazar dealers turned out sellers at the higher levels, and as overseas buyers chose to wait, quotations were naturally marked down. At the end of last week 9 porters ready were quoting Rs. 19-2. They are now Rs. 17-14, January-March Rs. 18, April-June Rs. 17-10 and July-September Rs. 17-4. 11 porters ready were quoting Rs. 23-12, January-March Rs. 23-10, April-June Rs. 23 and July-September Rs. 22-6.

The heavy goods section was easier in sympathy with the hessian and jute markets and not much of business has been reported. "B" twills for December delivery sold on the basis of Rs. 59-4, Liverpool twills for the same position Rs. 63 and Cornsacks Rs. 59.

With the reports regarding satisfactory shipments during November, it was generally expected that local stock figures would show a decrease over those for the previous month. The figures now available show that there has been a substantial decline in hessian, cloth and bags, for civilian consumption from 38.91 crore yards to 30.96 crore yards; there is not much change in hessian stocks on military account, the same showing only a decline of 30 lakhs yards at 36.23 crore yards. Sacking stocks, also on civilian account, show a decline from 20.06 crore yards to 18.96 crore yards while, on military account, there is an increase of 2.79 crore yards to 31.6 crore yards.

The deficit for October has thus been more than made up. With the encouraging prospects for the current month, it should be possible to bring down hessian stocks to more normal levels. The total stocks of hessian and sacking at the end of October, expressed in tonnage, were 282,497 tons. At the end of November the total was 256,121 tons. There has thus been a net decline of 26,376 tons.

Total reported stocks of manufactured goods exclusive of Government orders.

Description	31-10-1942	30-11-1942

GOLD

Calcutta, December 10.

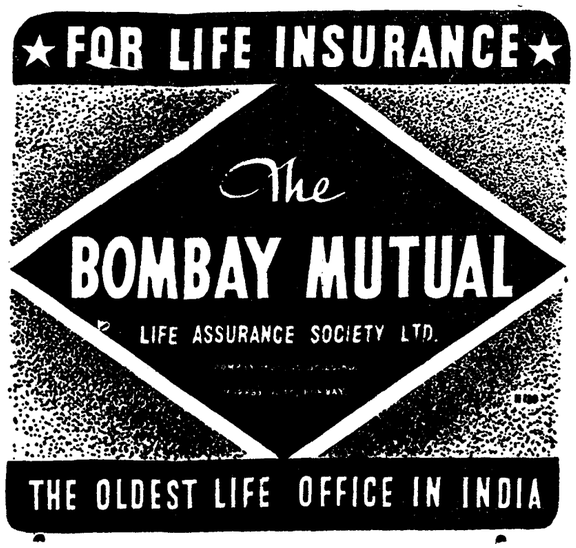
THE gold market has been absolutely uninteresting and quotations have been fluctuating within very narrow limits. The favourable war situation has had a sobering effect and there has not been much of speculative activity. Gold ready was quoting Rs. 64-2 in the Bombay market, and first settlement Rs. 64-8. For the first time there is a decline of 2 annas over ready. Quotation at the end of last week was Rs. 64-6 for gold ready and first settlement. In the Calcutta market, the premium over Bombay prices has vanished and gold ready is now quoting Rs. 64-8 and sovereigns Rs. 47, the Bombay quotation being Rs. 47-14.

The London price remains unchanged at 168sh.

SILVER

Calcutta, December 10.

THE silver market has been rather quiet and quotations were marked down as low as Rs. 103-8 in mid-week. There has been a slight rally towards the close though prices are lower on balance. After being lower at Rs. 103-8, Indian Mint Silver closed at Rs. 104-8, First Settlement were Rs. 103-3. At the end of last week quotations were Rs. 106-5 and Rs. 104-9 respectively.



There is no change in the London market and the quotation for both spot and forward remain unchanged at 23½d. Small demand has been officially satisfied.

PIECEGOODS

Calcutta, December 10.

THE piecegoods market has naturally been easier. Pending the outcome of the present negotiations of the Commerce Member with the Cotton Textile Industry interests in Bombay, it cannot be expected that there will be any further improvement in values. As a matter of fact, it can even be said that the highest levels for the time being have been touched. With the efforts to produce standard cloth on a large scale prices for ordinary varieties will show a tendency to decline, though it may be argued by some that with the production of standard cloth on a very large scale, and with the large war orders, production of popular styles may be affected and dealers might thus benefit by the relative scarcity.

There is not much of business in cold weather styles as stocks are reported to be very small and sellers are not keen to do business. Prices have been fully maintained.

NORTH WESTERN RAILWAY

Tenders (No. 223-S/1/12 Code Word "CHURCH") for chicks and ladders, are invited on a rupee basis for purchase by the N. W. Railway required during 1-8-43 to 31-7-44. Tenders to reach office of Controller of Stores by 14-00 hours on Monday the 1st March, 1943, and will be opened in his office at 11-00 hours the following day. Tender forms can be seen at and obtained from office of Controller of Stores. from 18-12-1942. The sale price of tender is Re. 1/- annas -/8/- for 3 specifications and Rs. 1/8/- for tender with a set of specifications. Annas eight -/8/- will be required for posting and packing of documents to out station.

Stock Markets to-day and to-morrow

TITAGHUR PAPER MAINTAINS DIVIDEND

BEFORE stock markets could hardly recover from the effects of the reports regarding the Japanese bombing in the Chittagong area on Saturday last, news has been received of a fresh attack by the Japanese in the same area on Thursday. The publication of the *communique* on Friday afternoon was followed by the usual marking down of values, as a precautionary measure. It is significant that on both these occasions, the decline in prices was confined only to the speculative counters. In fact, only to the two important speculative counters, Indian Irons and Steel Corporations. Even at the end of last week, there was a definitely easier tendency though prices tended to be firmer towards the close. From Rs. 34-12 Indian Irons came down to Rs. 32-12 but recovered to Rs. 33-12 only to drop again to Rs. 32-12. Steel Corporations declined from Rs. 25-12 to Rs. 24-8, recovered to the former level and relapsed to Rs. 23-12. There is not much change in prices in other sections, though jute shares were inclined to be weaker in sympathy with the easier jute and jute manufactures markets. With the reports of the possibility of an early offensive on Burma by the United Nations one has to be prepared for repeated raids by the enemy on our positions to hinder preparations. So long as these air attacks are confined to the Eastern border of India, it is unnecessary to point out that they will not have much significance from the market point of view.

* * * *

The report that the Commerce Member has been able to reach a satisfactory settlement with the Cotton Textile Industry in regard to the production of standard cloth should have an encouraging effect on the market. The settlement reached is perhaps the best compromise of the various interests involved. That there is to be no control of prices is a great advantage from the point of view of the industry, and that the proposed speeding up in production of standard cloth varieties will take up only about 5 per cent of the total production of the industry is another favourable factor. The production on account of war orders is 35 per cent and that on account of standard cloth 5 per cent. The industry has thus 60 per cent of its total production available for free marketing and it should be possible to make a substantial profit on these sales. Which means that under the new arrangement the earnings of companies will not be affected to any great extent and that shareholders will continue to get good dividends. It is not surprising, therefore, that the Bombay market has staged a recovery towards the close on the announcement of the terms of the settlement.

The publication of satisfactory earnings reports by important members of the cotton textile industry is a reminder of the existence of prosperous conditions in the trade. It will be remembered that sometime back there was heavy buying of *Cawnpore Textiles* and the quotation was marked suddenly higher from Rs. 12-8 to Rs. 16-8. Buying was, as usual, from Cawnpore on the eve of the publication of the accounts and it appears from the accounts now published that the buyers were entirely justified in the confident view they took. The net profit, before providing for taxation and depreciation for the half-year ended September 1942, is Rs. 13,18,689 as against Rs. 9,30,231 for the previous half-year. The amount set aside to depreciation is lower at Rs. 1 lakh against Rs. 1.25 lakhs while the provision for taxation is higher at Rs. 9.6 lakhs against Rs. 5.82 lakhs on the former occasion. The transfer to Debenture Sinking Fund is unchanged at Rs. 6,250 while the allocation to General Reserve is higher at Rs. 99,490 (Rs. 73,776). Even after these substantial allocations it has been possible to increase the dividend to 10 annas per share from 6 annas per share. The amount carried forward is Rs. 28,000 higher at Rs. 94,188.

At Rs. 16-8 cum-dividend, the shares afford the satisfactory return of 7.6 per cent tax-free.

* * * *

The sister company, the *Elgin Mills Company, Limited*, has also done very well in the same half-year. The net profit, before providing for taxation and depreciation, is Rs. 31,48,519 against Rs. 21,04,851 for the previous half-year. The amount set aside to depreciation is Rs. 2 lakhs against Rs. 2.5 lakhs while the transfer to Debenture Sinking Fund is Rs. 25,000 (same). The General Reserve receives Rs. 1,99,787 (Rs. 1,99,902). But for the substantially higher provision for taxation of Rs. 23 lakhs (Rs. 12.5 lakhs) it would have been possible to effect an increase in the dividend to ordinary shareholders in the same degree as Cawnpore Textiles. The Elgin ordinary shareholders receive Re. 1-12 per share against Re. 1-8 per share before. At Rs. 45-8 cum-dividend the shares are relatively undervalued, the return being over 7.7 per cent taxfree.

* * * *

In spite of the strike at No. 1 Mill for a short period the *Titaghur Paper Mills Company, Limited* has been able to report a higher level of earnings for the half-year ended September, 1942. The entire output was sold at the maximum prices fixed in January this year. With the further increase in costs, it is clear, therefore, that there has been a substantial increase in production. The net profit, before providing for taxation and depreciation, is Rs. 47,51,972 against Rs. 46,03,576 for the previous half-year. The net profit for the half-year has been calculated after providing for war risks insurance, amounting to Rs. 3,20,376. The increase in earnings is thus of the order of Rs. 4½ lakhs. The amount provided for taxation is unchanged at Rs. 29.6 lakhs while the provision for depreciation is slightly lower at Rs. 3,86,486 against Rs. 4,36,911. A new reserve has been created, namely, Reserve for Deferred Mill Renovations. The allocation to this reserve is Rs. 2 lakhs. The directors point out that this reserve has been created to preserve moneys which ought to be spent at the present time on capital replacements, but which cannot be spent owing to the difficulties in obtaining supplies and accumulated for immediate use when war is terminated and conditions are again normal.

The reserve for the re-valuation of stocks and stores is unchanged at Rs. 1.5 lakhs while the Debenture Redemption Reserve gets the usual allocation of Rs. 2.5 lakhs; the other funds receive Rs. 1.1 lakhs against Rs. 90,000. The dividend on the 'A' and 'B' ordinary shares has been maintained at 8 annas per share and the bonus also at 4 annas per share.

* * * *

But for the appreciably smaller quantity of cane supplies it would have been possible for the Buland and Razar Sugar companies to report a higher level of earnings for the year ended May, 1942.

Thanks to the higher rate of recovery it has been possible for the *Buland Sugar Company, Limited* to report a higher level of earnings. The net profit for the year is Rs. 8,64,343 against Rs. 7,55,215 for the previous year. The charge on account of depreciation is Rs. 1,10,116 (Rs. 1,09,236), while the allocations to other funds amount

(*Continued on page* 1003).

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Dec., 11.

RATHER quiet conditions have been noticeable on the Calcutta Stock Exchange during the past week. Even at the end of last week a slightly easier feeling was noticeable on profit-taking and some selling at the higher levels but the undertone in the several sections was steady and it was generally expected that with the continuance of the conditions in the market the upward tendency would be resumed. The reports regarding the Japanese raid in the Chittagong area however had a discouraging effect and in Monday's session Indian Irons and Steel Corporations were marked down as low as Rs. 32-12 and Rs. 24-8 respectively. There was no panicky selling and the irregular tendency has shown signs of steadying towards the close. Buyers have not been frightened off the market and the undertone in the several sections is distinctly better towards the close.

In the giltedged securities section there is no change in prices. With the sharp improvement in the treasury bills rate it cannot be expected that there will be any improvement in values for giltedged securities. Prices in most cases are unchanged. The undertone is firm. 3½ per cent. Paper is quoting Rs. 94. Among terminable loans, 2¾ per cent. 1948/52 were done at Rs. 99-4, 3 per cent. Defence Bonds 1946 at Rs. 103, 3 per cent. 1963/65 at Rs. 95-9, 4½ per cent. 1945/55 at Rs. 109. 3 per cent. U. P. 1952 were noted at Rs. 97.

Among Bank shares, *Calcutta National Bank* have been dealt in almost daily and the quotation is around Rs. 12-8. *Reserve Bank* were Rs. 105.

Cotton shares have been rather uninteresting. There was some anxiety regarding the outcome of the conference of textile interests and governement representatives in Bombay. The reports in this morning's papers indicate that the earnings of mills will not be effected to any great extent adversely. The reports of some important companies published during the week make very interesting reading. *Basanti Cotton* are quoting Rs. 9-2, *Benares Cotton* Rs. 9-2, *Bengal-Nagpur* Rs. 27-2, *Cawnpore Textiles* Rs. 16-2 and *Muir Mills* Rs. 251. *Kesoram* were Rs. 15-11 and *New Victoria* Rs. 8-9.

Coal shares have been quietly steady though business passing has been on a smaller scale. The decline in prices has been in sympathy with other sections. *Amalgamated* were Rs. 30-10, *Bengal* Rs. 401, *Burrakur* Rs. 14-6, *Dhemo Main* Rs. 14-2 and *Hurriladih* Rs. 15. *Equitable* were lower at Rs. 35-6. *New Beerbhoom* changed hands at Rs. 18, *Seebpore* at Rs. 23-10 premium and *West Jamuria* at Rs. 32-12.

In sympathy with the weakness of the jute and jute manufactures markets jute shares are slightly easier. One should however, take a more optimistic view of the future as there has been a substantial improvement in the shipping postion and it will be possible to effect more exports in the near future. *Agarpara* were Rs. 23-12, *Bally* Rs. 268, *Howrah* Rs. 55-12, *Kamarhatty* Rs. 412, *National* Rs. 24-12, *Nellimarala* Rs. 15-2 and *Reliance* Rs. 56-12. *Hukumchand Jute* have been the exception being marked sharply higher at Rs. 21. There are reports that with the possibility of the arrears of dividend on the preference shares being paid the ordinary shares will return to the dividend list before long.

In the Enginering section, as remarked above, there was a rather sharp decline in prices early in the week. *Indian Iron* and *Steel Corporation* declined to Rs. 32-12 and Rs. 24-12 respectively but there has since been a recovery to Rs. 33-12 and Rs. 25-10 respectively. Other shares have not been very much affected. *Bhartia Electric Steel* were Rs. 17-12, *Braithwaite & Co.*, Rs. 8-15, *Jessop & Co.*, Rs. 20-6 and *Kumardhubi Engineering* Rs. 6-13. There is a sharp rise in the quotation for *Burn & Co.* to Rs. 166.

Sugar shares were not quite interesting. There was a drop in the quotation for *Carew & Co.* to Rs. 15-2 cum-dividend. *Belsund* were Rs. 7-12, *Cawnpore* Rs. 30-4 and *Champarun* Rs. 26-2. *Dharbhanga* were recorded at Rs. 18-12 and *U. P. Sugar* Rs. 15-6. *Buland* and *Raza* were noted at Rs. 44-12. The dividend for the year ended May, 1942 is 20 per cent. *plus* a bonus of 2½ per cent.

Tea shares have continued firm with *Banarhat* at Rs. 576, *Bishnauth* at Rs. 31 ex-dividend, *Hattikhira* Rs. 25-14, *Patrakola* Rs. 1,040, *Rajgarh* Rs. 14-4, *Tezpore* Rs. 10-10 and *Tukvar* Rs. 14-14.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were Rs. 3-4 and Rs. 2-4 respectively. *B. I. Corporation* were Rs. 6-2 while *British Ceylon Corporation* were firmer earlier in the week at Rs. 16-8. There was a drop in the quotation to Rs. 13-12. There has since been a recovery to Rs. 14-8. *Indian Cable* are firmer at Rs. 29 on the declaration of a bonus of 4 per cent besides the dividend of 10 per cent for the year ended March, 1942. *Indian Rubber Manufacturers* were Rs. 30-12 coum-rights. *Indian National Airways* ordinaries are higher at Rs. 10-8 on the announcement of the dividend of 6 per cent. for the last accounting year. *Alkali and Chemical* were Rs. 24-8, *National Rolling Mills* Rs. 11-6 and *Northern India Oil* Rs. 9-14. Paper shares were slightly easier with *Titaghur Paper* at Rs. 22-5. *Mysore Paper* were Rs. 21-2 and *Shree Gopal Paper* Rs. 22-6.

Dealings in public bodies debentures were limited. 3 per cent. *Calcutta Municipal* debentures were done at Rs. 92-14, 3¼ per cent. *Howrah Bridge* debentures Rs. 94 and 5½ per cent. *Dalmia Cement* debentures 1957 Rs. 117. Among industrial debentures, 5½ per cent. *Dalmia Cement* debentures were Rs. 105 and 5½ per cent. *Dalhousie Properties* Rs. 101-8.

Among preference shares, not much of business has been passing. *Indian Standard Wagon* were Rs. 150-8, and *Steel Corporation* Rs. 117-8. Among jute mills preference shares, *Birla* were done at Rs. 128, *Gourepore* at Rs. 140, *National* at Rs. 151 and *Soorah* at Rs. 122-8. *Reliance* were done at Rs. 160-12. *Hukumchand Jute* perferences were very firm at Rs. 156-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Dec. 10.

Rather irregular conditions were noticeable in the local stock exchange during the period under review. After the setback experienced last week particularly by Textiles and Steels due probably to rumours regarding Standard Cloth manufacture, there was a slight recovery and prices were marked again to the levels ruling at the beginning of last week. It is now felt that the fears regarding the possibility of Government interference in the affairs of the industry were rather exaggerated.

Early this week a downward tendency was in evidence as the news regarding a fresh attack on Chittagong by Japanese bombers was received here; but as the week progressed it became evident that the attackers were routed and a steadier tone was noticeable. Business was restricted at the lower levels. As in the previous week Textiles and Steels were the sections that most reflected this tendency. By now all fears regarding Standard Cloth have been at rest and prices have staged a welcome recovery towards the close.

Textiles.—Almost all the Textile shares exhibited a definite easier tendency but firmed up towards the close, Bombay Dyeing quoting at Rs. 1,690 as against Rs. 1,687. *Central India* are quoted at Rs. 398-8; *Century* at Rs. 618; *Colaba* at Rs. 230; *Gokak* at Rs. 346; *Indian Bleaching* at Rs. 236-8; *Kohinoor* at Rs. 619; *Phoenix* at Rs. 645; *Simplex* at Rs. 276; and *Svadeshi* at Rs. 449.

Steels.—In sympathy with Textiles, Steels were also lower.

Tata Defds. were Rs. 1,732-8 as against Rs. 1,665 at the opening.

SHREE KRISHNA GYANODAY SUGAR LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 8TH GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY will be held at the Registered Office of the Company at Dalmianagar at 4 P.M. on the 22nd December, 1942, to transact the following business:—

(a) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st July, 1942;
(b) To declare dividend;
(c) To elect a Director to fill up the vacancy caused by the retirement of Mr. Kundanlal Agarwal under Article 107 of the Articles of Association of the Company, but he being eligible, offers himself for re-election;
(d) To appoint Auditors for the current year and to fix their remuneration. Messrs. H. P. Khandelwal & Co., retire, but being eligible, offer themselves for re-election;
(e) To transact any other business that under the Articles of Association of the Company may be transacted at an Ordinary General Meeting.

By order of the Board,
SHANTI PRASAD JAIN,
Director.

Dalmianagar,
2nd December, 1942.

*Includes a Bonus of 2½ per cent. per annum.

(*Annual meeting, 15th December, 1942 at 10-50 a.m. at Rampur.*

Dividend is payable on or after 29th December, 1942).

Audited accounts for the year ended 31st May, 1941:—

The Revenue for the year was Rs. 14,19,625-4-1, and after providing Rs. 5,55,282-3-1 for Excise and Rs. 1,10,116-7-0 for Depreciation there remains a balance of Rs. 7,54,226-10-0. The carry forward from last year was Rs. 69,944-12-2 which added to the balance for the current year makes a total of Rs. 8,24,171-6-2 available. From this the Directors have set aside the following:—

	Rs.	A.	P.
To Reserve Fund	2,00,000	0	0
To Dividend Equalisation Fund	1,00,000	0	0
To Labour Bonus Fund	25,000	0	0
To Employees' Welfare Fund	10,000	0	0
To Cultivators' Welfare Fund	5,000	0	0
To Factories' Hospital Fund	7,500	0	0

leaving Rs. 4,76,671-6-2 out of which the Directors recommend a dividend at the rate of 20 per cent per annum plus a bonus of 2½ per cent which will absorb Rs. 4,05,000-0-0. This leaves a balance of Rs. 71,671-6-2 to be carried forward out of which the Directors recommend a donation of Rs. 12,500-0-0 to the Viceroy's War Purposes Fund and Rs. 5,000-0-0 to the War Purposes Fund of Her Highness the Begum Saheba of Rampur.

Crushing operations commenced on 12th December, 1941, and terminated on 26th March, 1942, being 104 days working as against 152 days of last year. The amount of cane crushed was 26.66 lakhs maunds and the average recovery was 10.33 per cent as against 10.115 per cent in 1940-41.

The year's accounts reveal the benefits of the improvements made in the plant which resulted in largely increased proportion of Grade 1 sugar.

Managing Agents.—Messrs. Govan Bros. (Rampur), Ld.

Audited Accounts for the year ended 31st May, 1942:—

The Revenue for the year was Rs. 12,75,849-12-1, and after providing Rs. 5,26,157-7-3 for Excise and Rs. 91,780-2-7 for Depreciation there remains a balance of Rs. 6,57,912-2-3. The carry forward from last year was Rs. 61,377-1-11 which added to the balance for the current year makes a total of Rs. 7,19,289-4-2 available. From this the Directors have set aside the following:—

	Rs.
To Reserve Fund	1,50,000
To Dividend Equalisation Fund	50,000
To Labour Bonus Fund	25,000
To Employees' Welfare Fund	10,000
To Cultivators' Welfare Fund	5,000
To Factories' Hospital Fund	7,500

leaving Rs. 4,71,789-4-2 out of which the Directors recommend a dividend at the rate of 20% per annum plus a bonus of 2½% which will absorb Rs. 3,37,500-0-0. This leaves a balance of Rs. 1,34,289-4-2 to be carried forward out of which the Directors recommend a donation of Rs. 12,500-0-0 to the Viceroy's War Purposes Fund and Rs. 5,000-0-0 to the War Purposes Fund of Her Highness the Begum Saheba of Rampur.

Crushing operations commenced on 7th December, 1941, and terminated on 19th March, 1942, being 103 days against 140 days of last year. The amount of cane crushed was 26.85 lacs maunds. The Factory worked very satisfactorily, the average recovery being 9.695% as against 9.77% in 1940-41.

*Less income-tax.

(*Annual meeting, 17th December, 1942 at 4-30 p.m. at Bombay. Dividend payable on or after 5th January, 1943*).

Audited accounts of the Company for the year ended 30th September, 1942:—

Accounts.—The working of the lines for the year under review, including the sum of Rebate estimated to be due amounting to Rs. 1,12,720-14-0 and after providing for taxation, shows a net profit of Rs. 3,78,036-8-8. To this must be added the sum of Rs. 10,987-8-6 brought forward from last year's Accounts, making Rs. 3,89,024-1-2 in all.

The Directors declared an *ad-interim* dividend at the rate of 3½ per cent per annum, less Income-tax, which absorbed Rs. 1,64,500, leaving a balance of Rs. 2,24,524-1-2 available for disposal, which they recommend should be applied as follows:—

	Rs.	A.	P.
1. Dividend for the Second half-year ended 30th September, 1942, at the rate of 4½ per cent per annum (making 4 per cent for the year) payable less Income-tax ..	2,11,500	0	0
2. Balance to be carried forward	13,024	1	2
Total ..	2,24,524	1	2

Coaching Traffic.—There has been a decrease of over 1.37 lakhs in the number of passengers carried which is due to the cancellation of Train Services owing to coal shortages as a result of war. The Working Administration have, however, been requested to reinstate the previous services immediately coal supplies are available. The small increase in earnings is due to the cancellation of various concessions on this class of traffic.

Goods Traffic.—The decrease in the tonnage carried and earnings derived therefrom are due to less cotton traffic partly as the result of restrictions upon the movement of raw cotton into the city of Bombay imposed by Government and partly to the acute shortage of wagons on the G. I. P. Railway.

Agents.—Messrs. Killick, Nixon & Co., Bombay.

INDIAN NATIONAL AIRWAYS, LIMITED

(*Meeting, 19th December, 1942 at 12 noon*).

Audited accounts of the Company for the year ended 30th June, 1942:—

After providing for obsolescence, the accounts show a profit for the year of Rs. 94,973-10-11 which, together with the "carry forward" from last year and Income-tax rebate, gives a balance in the Appropriation Account of Rs. 1,06,178-13-3. The Board recommend that this amount should be disposed of as follows:—

	Rs.	A.	P.
Allocation to Development Account ..	30,943	7	10
Allocation to Income-tax Reserve	35,000	0	0
Allocation to Preferred Ordinary Share Dividend Account	30,000	0	0
Allocation to Ordinary Share Dividend Account	7,650	12	0
Carry forward	2,584	9	5
Total ..	1,06,178	13	0

From the total Dividend Reserves created by the above allocations the Board recommend payment of the following dividends:—

	Rs.	A.	P.
A dividend of 6 per cent on the Preferred Ordinary shares	30,000	0	0
A dividend of 5 per cent on the Ordinary shares	30,532	8	0

In making these recommendations the Board have not overlooked the rights of the Deferred Shareholders, but would explain that the Company's results for the year ended 30th June, 1941, have not yet been taxed and when this is done the carry forward for 30th June, 1941, will be absorbed.

Operations.—During the first half of the year under review the Company operated its normal services between Delhi and Karachi and Delhi and Calcutta, but at the beginning of January, 1942, an additional contract was entered into with the Government of India whereby the Company's fleet became at the disposal of Government. Immediately thereafter all operations were concentrated on Burma.

These activities continued until the middle of April, 1942, and included, for varying periods, return services between Delhi and Rangoon, Magwe, Chittagong and Calcutta.

In addition to these regular operations the Company's aircraft were actively engaged during February, March and April of 1942 in assisting in the evacuation of women and children from various points in Burma. A total of 126 evacuation flights were undertaken and 411 evacuees were brought into India. This figure includes the evacuation from Magwe of 154 wives and children of members of the staff of the Burma Oil Company under arrangements with Messrs. Indian Air Survey and Transport, Ltd. The remaining evacuation flights were carried out under the Company's contract with the Government of India. In view of the limited capacity of the Company's aircraft the Board regard these operations as a highly creditable performance.

On the cessation of evacuation work the Company maintained regular services between Delhi and Assam, viâ Calcutta, for the carriage of Government passengers and mails, and these services were in continued operation at the close of the year under review

The Company's operations have expanded very considerably during the past year, and this expansion augurs well for the future. The Civil Aviation Directorate of the Government of India has taken the keenest possible interest in the Company's progress, and the Board desire to express their appreciation of the opportunity that has been accorded to the Company by the Government of India to develop its activities. Close co-operation is maintained with the Royal Air Force for whom the Company is now undertaking a considerable amount of repair work.

The organisation has had to be increased very considerably, and the Company now has a staff of highly experienced pilots and engineers. The thanks of the Board are due to all members of the organisation for the manner in which they have carried out their duties in very difficult times. The evacuation operations from Burma were not free from danger, but all pilots worked loyally and well and willingly undertook all tasks allotted to them.

The two Douglas D. C. 2's have only recently been acquired, and the operations which they will perform are at present under discussion.

Empire Air Services.—Under its agreement with British Airways and Indian Trans-Continental Airways the Company continues to act as Principal Agents in India for these two companies and is in charge of the traffic organisation at all stations in India on the Flying-Boat Route. The Company's Traffic Staff at all centres have worked loyally and well throughout the year under trying circumstances, particularly in Calcutta where conditions have been exceptionally difficult.

Calcutta (Alipore) Aerodrome.—The Company's Aerodrome at Alipore has been taken over by the Defence Services for the period of the war.

Managing Agents.—Messrs. Govan Bros. Ld

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

The Twenty-fourth Ordinary General Meeting of the Shareholders of The Indian Iron and Steel Company, Limited, will be held on Tuesday, 29th December, 1942, at 11-0 a.m., at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1942.

(2) To confirm the payment of the ad-interim dividend which was paid on and after 2nd November, 1942.

(3) To elect a Director in place of Sir P. P. Ginwala who retires and is eligible for re-election.

(4) To elect a Director in place of Mr. J. S. Ker who retires and is eligible for re-election.

(5) To elect a Director in place of Dr. N. N. Law who retires and is eligible for re-election.

(6) To appoint Auditors for the current year and to fix their remuneration.

The above Meeting has been convened to enable the Company to comply with the provisions of the Companies Act whereby a General Meeting must be held in every calendar year. Owing to the necessity of publishing the Company's Annual Report and Accounts simultaneously in Calcutta and London, as provided for in the Company's Articles of Association, and to the fact that owing to mail delays the draft Report and Accounts have not yet been received in London, it is not possible to sumbit them to the meeting on the 29th December, 1942. It is proposed that this meeting, should be adjourned to a later date or that a fresh meeting will be convened when the accounts are available for publication. Every effort will be made to expedite this.

By Order of the Board,
BURN & CO.,
Managing Agents.

Calcutta, 11th December, 1942.

BOMBAY SUBURBAN ELECTRIC SUPPLY, LTD.

NOTICE

NOTICE is hereby given that an Ad-interim Dividend at the rate of 6 per annum, free of Income tax (that is Rs. 3/- per share) on the amount called up for the half year ended 30th September, 1942, has been declared and made payable at the Chartered Bank of India, Australia & China, Bombay, on and after the 17th December, 1942, to those Shareholders whose names stand in the Company's Register on the 3rd December, 1942, to whom dividend warrants will be posted.

Intimation of any change of address should be given to the undersigned immediately.

By Order of the Board,
KILLICK, NIXON & CO.,
Agents.

Home Street, Fort,
Bombay, 2nd December, 1942.

BOMBAY TELEPHONE COMPANY, LIMITED

NOTICE

Notice is hereby given that the Debenture Stock Transfer Books and the Register of Debenture Stockholders of the Company will be closed from the 18th day of December, 1942 to the 31st day of December, 1942, both days inclusive, for preparation of Interest Warrants.

P. V. R. IYER,
Joint Secretary.

Bombay, 1st December, 1942.

(*Continued from page 983*).

Rs. 3,65,000 against Rs. 3,42,500. The dividend has been increased to 20 per cent from 15 per cent. The bonus has been maintained at 2½ per cent. The amount carried forward is lower at Rs. 54,171 against Rs. 69,940 brought in.

* * * *

The net profit of the *Razar Sugar Company, Limited* for the same year has been barely maintained, the figure for 1941-42 being Rs. 7,49,692 against Rs. 7,51,298 for 1940-41. The amount set aside to depreciation is Rs. 91,780 against Rs. 93,741 while the allocation to other funds is lower at Rs. 2,65,000 against Rs. 3,92,500. The dividend has been increased to 20 per cent as in the case of the Buland Sugar Company, Limited. A dividend of 2½ per cent as on the former occasion is also to be paid.

The liberal view taken by the directors is perhaps due to the improved prospects for the industry and the hopes of a higher level of earnings for the current season. The financial position of both the companies is very sound. The present earnings amount to nearly 45 per cent of the total paid-up capital. That the earnings of these companies are not subject to excess profits taxation is another important factor to be taken into consideration.

* * * *

Indian Cable Company, Limited has naturally been able to report a higher level of earnings for March 1942 than for the previous year, the net profit, before providing for taxation and depreciation, being Rs. 33,15,184 against Rs. 25,93,250. The amount set aside to depreciation is slightly lower at Rs. 1,00,638 (Rs. 1,09,692). The amount transferred to contingency reserve is Rs. 5 lakhs (Rs. 4,05,000). Nearly the whole of the increase in earnings is taken up by the higher provision for taxation of Rs. 21,93,444 (Rs. 15,80,245). The dividend has been maintained at 10 per cent but there is to be a bonus of 4 per cent in addition. As the preference shares also participate to the same extent in the profits, after an equal dividend has been paid on ordinary shares, they also get the same dividend and bonus of 14 per cent. The amount carried forward is substantially higher at Rs. 4,63,277.

* * * *

The rise in the quotation for *Amalgamated* to Rs. 30, is fully justified by the results of the company for the half-year ended September, 1942. It has been possible to maintain raisings and despatches at the level of the previous half-year. And as higher prices were obtained on sales, the net profit for the half-year is higher at Rs. 2,96,196 against Rs. 2,55,526. The amount set aside for taxation is Rs. 1,02,078 (Rs. 96,532) while the provision for depreciation is Rs. 46,073 (Rs. 45,251). The dividend has been increased to 20 per cent from 17½ per cent. The amount carried forward is Rs. 30,550 (Rs. 27,140). It would perhaps have been possible to report even higher earnings but for the continued shortage and irregular supplies of wagons hampering raisings and despatches throughout the period.

WATCH-DOG.

THE INDIAN CABLE CO., LIMITED

NOTICE

The Twenty-third Ordinary General Meeting of the Shareholders of The Indian Cable Company, Limited, will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, at 4 p.m., on Monday, the 21st December 1942, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1942.

(2) To declare Dividends.

(3) To elect a Director in place of Mr. D. H. Wilmer.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To transact other (if any) competent business.

The Share Transfer Books of the Company will be closed from the 11th December to 21st December, 1942, both days inclusive.

By Order of the Board,
BRITISH INSULATED CABLES, LIMITED,
Managing Agents.

Calcutta, 24th November 1942.

WORLD OF INDIAN FINANCE

Thursday evening.

Easy conditions continue to prevail in the money market and call money is unchanged at ½ per cent. in Calcutta and at ¼ per cent. in Bombay. It is reported that in the Western centre there has been slightly more demand for money for the movement of the cotton crop but the demand for funds has not been such as to result in a change in money rates. As a matter of fact, with the present conditions in the money market, any increase in trade demand cannot possibly have any appreciable effect on rates.

A different impression is, however, conveyed by the results at the treasury bills auctions held this week. In spite of the reduction in the treasury bills offer to Rs. 6 crores from Rs. 10 crores there is an increase in the average discount rate from one rupee five pies per cent per annum to one rupee eleven pies per cent per annum. The anxiety of the Government to resume sales of intermediates immediately the offer was reduced to Rs. 6 crores has given the impression to the market that the Government is a weak borrower. The tap rate at one per cent has fixed the lower limit. And sales of intermediates during the period December 9th to 14, 1942 amounted to only to Rs. 2.12 crores. Thus the Government have paid a higher rate for a smaller sum. Even if the offer had been maintained at Rs. 10 crores, the increase in the rate would perhaps have been only to this extent. Intermediates will be sold next week also at the same rate. The tender has been maintained at Rs. 6 crores.

We have on several occasions pointed out the need for a firm treasury bills policy and if the Government do not give lenders to understand that they will accept money only on their terms it will not be possible to prevent effectively a rise in the discount rate.

There is apparently no limit to currency expansion. The returns of the Reserve Bank for the week ended December 11, 1942 show that notes in circulation have increased from Rs. 550.48 crores to Rs. 558.27 crores. Total notes issued show a rise from Rs. 562.16 crores to Rs. 568.30 crores. Sterling securities on the other side are higher by Rs. 10 crores at Rs. 382.83 crores. Expansion of currency seems to have been effected only for Rs. 5 crores, the other Rs. 5 crores being utilised for the cancellation of rupee securities for a like amount. In the past the authorities have utilised every possible opportunity for reducing the amount of rupee securities and strengthening their position. In view of the proximity of the redemption date for 3½ per cent. Sterling Paper efforts should be made as far as possible to reduce the amount of rupee securities. The amount outstanding in respect of the 3½ per cent. Sterling Paper is £78.7 million. The rupee finance required for the purpose will be therefore of the order of Rs. 105 crores. The assets in sterling both in the issue and banking departments as on December 11, 1942 amount to Rs. 462 crores. After the complete repatriation of the Government's sterling debt, foreign balances will amount to the substantial sum of Rs. 356 crores. If the accretions during the next three weeks are taken into consideration the total will be very much more. At present sterling payments average Rs. 7.5 crores every week. The authorities have, therefore, to devise ways and means for the effective utilisation of the surplus sterling assets.

After the successive decline in recent weeks, rupee coins show a rise to Rs. 13.67 crores from Rs. 12.54 crores.

In the banking department Government balances show a rise of over Rs. 6 crores to Rs. 18.29 crores. That this rise in balances has been possible is perhaps due to heavier tax collections. The improvement would have been much more but for the cancellation of Rs. 5 crores worth rupee securities. Heavier tax payments are perhaps responsible for the decline in bank deposits during the past two weeks from Rs. 64.68 crores to Rs. 54.33 crores. The payments from the British Treasury might have been received too late for the repayment of the ways and means advances which show an increase from Rs. 16 lakhs to Rs. 1.30 crores. Balances held abroad are Rs. 79.16 crores against Rs. 80.57 crores. If the transfer of Rs. 10 crores to the issue department is taken into consideration there has thus been a net receipt of Rs. 3.59 crores during the week on intergovernmental transactions.

The news that the United Nations will be able to get lease-lend supplies of silver from the United States should have come as a great relief to many in this country. It is reported that Britain and Australia have applied to the United States for silver supplies to satisfy their currency requirements. Henceforth, there will be no need for selling Indian Government silver in the London market. The effect of this news has naturally had a bearish effect on the Bombay market and quotations have come down to the lowest level for several weeks.

The exchange market has been very steady during the week under review but business conditions continue to be very dull. Money is easy with interbank call money quoting ½ per cent nominal. Rates for firms' fixed deposits remain unchanged.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months at 1s. 6 11/32d.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills were opened on Tuesday, December 15, 1942. Total amount offered was Rs. 8,84,00,000 (Rupees eight crores eighty-four lakhs). Tenders at Rs. 99-12-0% were accepted in full and those at Rs. 99-11-9% were allotted approximately 76%. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Rs. 1-0-11 (Rupee one annas nil and pies eleven%) p.a.

Tenders for Rs. 6,00,00,000 (Rupees six crores) of three months' Government of India Treasury Bills will be received on Tuesday, December 22, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, December 21, 1942, at other centres. Successful tenderers should make payment on Thursday, December 24, 1942, or on Wednesday, December 23, 1942, where 24th is a holiday. Other conditiohs are as usual.

Three months' Intermediates will be sold from December 16 to 21, 1942, at Rs. 99-12-0%. Subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice, if Government think it necessary).

Three months' Intermediates sold from December 9 to 14, 1942, amounted to Rs. 2,12,25,000 (Rupees two crores twelve lacs and twenty-five thousand only).

During the week ended December 11, 1942, Government of India Treasury Bills for Rs. 29,00,000 (Rupees Twenty-nine lacs) were sold in favour of the Issue Department of the Reserve Bank of India.

A Scheduled Bank's Medium Minimises Your Anxieties

CALCUTTA COMMERCIAL BANK LTD.

15, CLIVE STREET, CALCUTTA

A Progressive Indian Scheduled Bank

Finance Abroad

For about a week giltedged in London has been dull. There was a small decline in quotations last week, and the point was noted as also the improvement in Foreign Bonds. Greek loans have been fancied like Chinese loans and Peruvian stocks have climbed. But the funds are dull, though there has been no change in money conditions. The Treasury bill issue was taken up as usual and banks re-invested in six months' treasury deposits, just as bank in Australia lend at ¾ per cent. Whatever seasonal tightness may emerge when banks want to show a fair cash ratio in year-end balance-sheets the Treasury does not suffer. Bank shares have held their ground fully even Eastern exchange banks' shares after the easiness due to Jap raids on India. Insurance shares slumped when the Beveridge plan appeared as a White Paper. The reason is not far to seek. The big companies will have no industrial branches to look after because the State will provide an all-in plan of its own. The insurance shareholder will find that, with a reduced yield on giltedged and reduced underwriting profits, the income of companies will be smaller. There may be no change in dividends but the superior status of the shares cannot be maintained indefinitely. A *Reuter* message spoke of falls in share prices, both in London and Liverpool, which is a strong supporter of both shipping and insurance shares. The news is of slight interest, but it may happen that institutional support for giltedged may fall away in the future. Insurance companies deprived of workmen's compensation and other business may turn to more paying investments. Insurance companies will not consent to be idle like building societies and fixed trusts. They will perhaps take a leaf out of the books of investment trusts, if the State emerges as the one big insurer, carrying on its business through the G.P.O. and taking off all savings in stamps.

There is however little reason to say that giltedged will suffer in the immediate future. Bank deposits may not be growing fast in the third year of war but then the call-up of India stocks ensures plenty of new money. Tax revenue is still rising and company reserves are naturally going into short-term holdings. There is little or no change in the quotations for the funds as compared with prices a year ago but investors as a class have more faith in British industrials. Courtaulds may have declined to pay a dividend in order to safeguard its position as the greatest name in rayon, but the (£1) shares stand at 45/3. Last week it was again noted that rayon shares were going up. The shortage of natural fibres is certainly satisfactory for makers of rayon in Britain as in Europe and as Mr. Samuel Courtauld indicated at the last annual meeting that his own company is well placed, and will remain so, and other companies are working under an independent agreement. The rayon companies are better off than cotton companies. Time was when Coats shares were rated higher than Courtaulds, but not so now. But the recovery in Fine Spinners is striking enough to merit notice. It is not only in India that textile shares command increasing attention from investors. The old overgrown Lancashire combines, e.g., Calico Printers, Fine Spinners and Bleachers are rising, perhaps even without reconstruction plans in the making. British celanese is another depressed share, still rising, and the experience of Wall Street in regard to industrials after the autumn is not shared by London.

If Home Rails have more or less recovered their status under the Treasury guarantee of revenue under what looks like nationalisation, with Sir Alan Anderson in charge, the giltedged industrials are in better form. The threat of litigation against the Baron family for concentration of voting power has led to a marked decline in Carreras shares since last week. The family control is not disputed in the case of Imperial Tobacco standing at 7 1/8 this week. A brightening in internationals this month is clearly due to cheerful war news. International Nickel has again risen and a feature of interest some time ago was the rise in Brazilian Traction, Hydro-Electric Securities and other old favourites of many markets.

Gold shares have been latterly dull according to report but the West African group must have turned firmer after M. Boisson's statement on Dakar. It is not generally known that Nigerian tin and Gold Coast manganese are as important for the Imperial war effort as the copper of Rhodesian mines. A little while ago it was said that investors were disappointed by the Rhokana statement which led to a quick fall in Rhodesian copper shares generally. Calcutta knows only one finance *cum* mining share but it should be possible for go-ahead investors here to change from local steel shares to R.S.T. or Roan Antelope shares. The position in Africa is vastly better, and war, providing as it does a guaranteed price of £43 per ton for Rhodesian copper is a greater stimulus than it can ever be for a small producer like Indian Copper Corporation. There was a time when Madras bought Rhodesian shares for investment mainly on the advice of London, not merely for arbitrage as in the case of Burma Corporation or some other mining shares.

A change of some interest reported from Lisbon is the appreciation of the pound sterling. Pound notes, denied entry into Britain, are exchanged for escudos. After the Allied entry into North Africa, the rate has gone up. The franc should have depreciated further since M. Laval's pledge of collaboration, and tepid prayer for a German victory. But the pound has rapidly improved, and fugitives with sterling deposits or hoarded notes are better off after the Allies took charge of North Africa and have re-established consulates at Algiers. The escudo is a stronger currency in the war period, and the fall in the Bank Rate in Lisbon in September to 3½ per cent is a measure of the improvement obtaining under cheap money. General Jordana's visit to Lisbon after Franco's frank warning to the Axis should enable the Portuguese currency to get stronger. It was said three months ago that bank deposits were growing as the influx of funk money into Lisbon continued. Before the war Paris was fancied; neutral Lisbon is now deemed safer. Though the note issue is larger and the cost of living has gone up in Portugal, the currency is now getting stronger as oversea trade is increasing, and Colonial products are in demand.

The Republican party has turned down Mr. Willkie in favour of some one else. Its chairman looks for a victory in the Presidential election of 1944. Isolationism has been rejected by a party that stood long by the Middle West, typified by William E. Borah rather than the La Follette dynasty. What it means to the party identified with Big business must remain obscure. But the slackening of war production in October after continuous increase in 1942 proves that in the second year America will act rather than equip. But the Administration will not get more popular by taking over the oil reserves of Standard in California even under an arrangement for compensation. But Mr. Roosevelt, apart from unscrambling the Teapot Dome business has a desire to give the U.S. fleet all the oil it wants, and naval expansion is indicated by the acquisition of the Elk Hills Reserve reported only last week-end.

The U.S.A.'s aid to both Russia and China in the war was reviewed in the President's latest report on lease-lend. Britain too has helped Russia greatly, but China has perforce received little. Lease-lend supplies for the year ended November 30 are estimated to cost 6,526 million dollars. The figure implies that about a tenth of the money spent in the year 1941-42 by the U.S.A. went to others, not for its own war expenditure. The current rate of lease-lend spending at 10,000 millions per year is well above the average of last year. Congress has been told again that expenditure under lease-lend must increase in view of Allied requirements and the U.S. stake in early victory. The report referred to purchases of mica from India under lease-lend and of tungsten from China. Successful convoy work was mentioned indirectly by the statement that 2,500,000 tons of goods have been shipped to Russia, while Russia's shortage of food this winter was described compendiously by the allusion to the shortage of shipping.

Prices of Foodstuffs

With a government that is traditionally lacking in touch with public opinion, not to speak of respect for it, it would need more iteration and more emphasis than the press can command to bring home to the authorities the increasing disquiet that is felt by the public about the food situation in the country. The President of the Indian Merchants' Chamber did well to raise the question in the conference which the Committee had with the Commerce Member while he was at Bombay. And, though the recent constitution of the Food Department enabled the Commerce Member to afford a reply which is not wholly routine in purport, it is reasonable to doubt whether the authorities have adequate recognition of the increasing seriousness of the problem or of the urgency of the action needed. In his reply to Mr. Setalvad in Bombay, the Hon'ble Mr. Sarker said that, though he could not be expected to discuss publicly the scheme which the Food Department were contemplating, he could assure the public that the problems are engaging his most serious consideration. Mr. Sarker also gave a hint of his apprehension of the problem when he said that he was examining the steps which are necessary to induce the cultivators to part with their stocks more freely. Doubtless, the Commerce Member is disinclined to subordinate the claims of mature consideration and adequacy of measures to those of urgency of action.

Much as we would welcome a comprehensive scheme in regard to the supplies of foodstuffs to the Army and the civilian population at home and those abroad who have demonstrably valid claims on our inadequate stocks, we believe that much can and must be done to arrest the rot in the situation throughout the country. It is reasonable to presume that what the Food Department is applying itself to is the supply and allocation of food in the country among the various claimants we referred to earlier. The Food Department, with its close touch with the Supply and the Army Department, would be in a position to estimate beforehand as well as possible the requirements of military and civilian consumption at home and the demands that might be made on India by countries like Ceylon, demands that are backed up by diverse considerations of strategy and the like and, not least of all, of ill-deserved charity. The problem of the Food Department, we take it, is to set their estimate of the demand against the estimate of the available supply at home and try almost literally to make both ends meet. If the two ends do leave, in spite of the best efforts on paper, a wide gulf between them, the decision required would be as to who should go without. But administratively, the problem is, in the main, to determine the means by which supply can be augmented, to get some measure of control over stocks and to ensure their distribution on more or less pre-determined lines. The question of prices is, in this view, a matter of detail rather than a major question of principle, though prices would tend to be fixed when stocks are acquired by the Government for a variety of purposes, for the Army, for storage for despatch to areas suffering from marked shortage.

It will be seen from the above that it will be some time before the Food Department will be in a position to consider the question of prices. Considering the increasing apprehensions of shortage and the natural reactions of the cultivators thereto, the first concern of the Food Department after examining the possible ways of augmenting the supply would be to buy as much of the grain as possible at the next harvest. But between now and the next harvest, the time of which varies from crop to crop and province to province, the distributive mechanism and the psychology of the public might get alarmingly worse.

It is not often realised that it is not alone the basic food position which offers us a problem with its threat of a considerable deficit, but also the vestiges of a few measures of price control which were ill-conceived, hastily formulated and half-heartedly enforced by a multiplicity of authorities acting with little or no co-ordination. The wreckage of this system of price control is there to handicap the best schemes that may be conceived and brought into operation in the future. So far as the Central Government is concerned, we take it that none of its high-placed spokesmen would be concerned to make any claims for the methods of price control that have so far been tried. The proceedings of the last Price Control Conference leave no room for doubt that those who participated in it considered the system as dead and defunct. Nevertheless, the practice of selling grain at special prices to queues that represent an infinitesimal fraction of the total body of consumers in the country, who are thrown back upon what for want of a better term must be called the black market, still continues; and the only purpose it can serve is to emphasise the pitiful inadequacy of government action and to magnify the sense of grievance from which the ordinary consumer will have to suffer.

A plain recital of the history of price control should suffice to help one to imagine its effects on the markets and on the consumer. The Central Government's action on the outbreak of war was the publication of an ordinance which enabled Provincial governments to take action in respect of price control. The actual exercise of these powers was in the direction of prosecution of a number of people, chosen none too discreetly. Then came the publication of schedules of articles which, according to the law, were too sacred for the profanities of profiteering. For real executive action in the direction of enforcement and maintenance of prices, there was nothing more at that stage than the publication of prices which have since come to be known as controlled prices, supplemented, after a long interval, by the opening of government shops for restricted hours in the day for selling restricted amounts of the various commodities.

While these are the leading principles, the manner of application was one suggested by the exigencies of the moment. The measures to be adopted were left to the provincial governments; and there was neither uniformity of methods nor even equality of eagerness in the matter of enforcing price control. In some provinces, an attempt was made to control the distributive system by controlling the activities of wholesalers both in regard to their purchase of stocks and their sales to retailers. In the matter of the latter, a system of permits was introduced. But the volume of work involved in regulating purchases by retailers over a vast country brought about a gradual and virtual abandonment of the scheme. It is not easy to gauge or describe the present position. Sales at rates above the control prices are probably punishable, though the initiative for, and the decision in favour of, prosecution lies with the officials concerned. We have heard instances of reluctance or refusal to give cash memos where sales have been made at the higher rates. But very often the rates which the retailers had been obliged to pay for the stocks which they have mercifully procured for their customers make the consumers feel towards them a sense of gratitude rather than grievance.

In these circumstances, there is no brake on the rise in prices, so far as the consuming public is concerned. In the last few days, it would appear, rice in the city of Calcutta is procured at rates as high as Rs. 18 or Rs. 20 per maund. The effective price of wheat is Rs. 18 against the controlled price of Rs. 6-8. It is true that the government grain shops are continuing to function within their limits. But what they do by way of supplying goods at controlled prices is a drop in the ocean. The relief afforded in lower prices is perhaps given where it is most needed. But that hardly means that in other quarters relief is not due, or that, even apart from questions of social justice, the administrative action is wise and effective. It would be interesting, indeed if the figures of sales at these grain shops were published. But even without such figures, there can be no doubt that by far the bigger part of the demand for foodstuffs in the country is being met, when it is met at all, at rates that have no connection whatsoever either with the official controlled rate, or the costs of production or the price at which the cultivator was persuaded or forced to part with his produce.

The question of price control, we affirm, must be considered quite apart from and independent of the food problem in the form in which the Food Department will have to tackle it. The latter is a matter of adequacy of food supplies or of equitable distribution of inadequate stocks, when adequacy cannot be secured. But the former is a question of ensuring that the available stocks of food reach the consumer at prices, which are socially just in the sense that they are not inflated by profiteering at any stage of the transit from the producer to the consumer. Our purpose in dealing with the question of food supplies this week is not to ask for the impossible feat of producing rice and wheat from nowhere. We do not expect the Food Department or the Commerce Member, who is at the head of it, to produce an additional harvest of grain overnight. But what we ask for is that the consuming public should not be held up to ransom to tradesmen big or small—or even for the matter of that, the cultivators, though that would be less objectionable—or to administrative inertia or incompetence. We do not want to beg the question of the shortage. But as the Commerce Member pointed out in his speech at the Indian Merchants' Chamber, Bombay, the threatened shortage is a fraction of the total production and consumption of the country; and the rise in prices is out of all proportion to the real scarcity of the goods. But even were the shortage more serious, its effect in a social crisis of the present magnitude should be felt, not in prices that move up in slavish obedience to the laws of economics, but in a cut in the ration. The latter is preferable by far to the prices that are being demanded and paid for lack of alternative. For it would be more just socially and more of a material relief to the working and lower middle classes, whose income, despite the politically motivated solicitude of the Government, can never keep pace with the rise in prices. It is no solution of the food or the price problem, if a few government or commercial offices get rice in bulk at controlled rates and dole them out to their staff. There is a country at large and a public in the mass outside government or other offices, outside the poor, underemployed waiting in queues, a public whose needs and interests can be overlooked only at the gravest peril. It is high time that the Commerce Member gave his attention to this crying need instead of waiting for comprehensive schemes to be evolved by the Food Secretariat.

LABOURED DEFENCE

In the infrequent orations of Lord Linlithgow few can derive the satisfaction that comes of enlightenment. A set piece is all that one can expect of His Excellency particularly before an audience of big businessmen. It is no reproach either to His Excellency or his hearers on Thursday that the country will feel disappointed with the wearisome complacency, the dreary commonplaces and the laboured exhortations that go to make up a speech which is too much a defence of past policy to capture the imagination. It is understood that the speech is viewed as disappointing by the intelligent and active men who work in the stock exchange. It was distinctly bearish, we are assured, by a market that can always tell the direction of the wind from the straws.

It is not necessary to endorse that view in order to canvass the controversial aspects of H. E.'s speech of Thursday. By and large, the speech must be described as the stone that has again usurped the place of bread. Some might find the observations on India's unity uniquely satisfying but most will deplore the allusion to an uprising. It is not our purpose to suggest that the deadlock is of the Viceroy's creation alone. But to express complete satisfaction with the results of a sterile policy, and to upbraid, nay condemn, all its critics is not the function of a statesman bent on solution. But politicians will do their best to show up the worst points of a speech that is too much of a manifesto, and too little of an apology. In indicating his own failure to appease India, the Viceroy dwelt more than

IN response to instructions from the Railway Board, all Railways in India are giving high priority to the supply of wagons for movement of foodstuffs generally. If difficulty is experienced in securing the requisite supply of wagons for foodstuffs in any area, traders are advised to communicate at once with the Headquarters of the Railway Administration concerned.

formally on the existence of discord. To seek unity and to find it is a task assigned to India's leaders and the charge to the nation is no more than a pious wish.

In the defence of empire Lord Linlithgow has been anticipated by many, but to counsel compromise, for the sake of compromise, at this late stage is to disclose the weakest features of a policy that has led Sir T. B. Sapru to remark that Lord Linlithgow's tenure of office has been unhappy, in that it has accentuated all divisions.

Lord Linlithgow's only happy allusion was to the duty of workers and employers alike to support the savings drive. The Viceroy confesses to disappointment, just as we expected from the reduced scale of contributions. He has asked for austerity, for increased savings, and for energetic efforts to take off free purchasing power. Industry has been asked to help directly in stimulating the contributions to the Defence loans. Profits have to be sterilised, at least to brake the rise in prices. His Excellency's arguments as addressed to businessmen are impeccable. In the fourth year of war they have greater validity than before. Savings provide the real solution for inflation and if compulsion is ruled out at present, the employer has to persuade labour that it is better to save than to spend. The organisation of savings groups has been openly advised, and the Viceroy expressed only the general view in asking for vigorous propaganda and skilled direction in this case, largely because Government, by itself, has achieved meagre results since the borrowing programme began in June 1940.

His Excellency's description of progress in industry is more persuasive than any part of his speech. The welcome assurance that considerable imports of steel are expected from the U.S.A. will go far to check misgivings as to the outlook for engineering shares. In the bearish mood, precipitated by the Viceroy's speech, the market can hold firmly to the fact that the U.S.A. is actually helping India in many ways, and the scale of war purchases in India is still being enlarged.

Editorial Notes

Revenue and Outlay

Essays similar to Professor Shirras' book on "Poverty & Kindred Problems in India" do not appear at present. But press notes indicating the lightness of taxation in India are still appearing and the education of the public in public finance is undertaken with a view to justify the ways of the Government. It has been made known that in peace much of the Central revenue is devoted to nation-building work and why such items as defence and debt service are not susceptible of reduction. In war it is otherwise, and the suggestion of a contribution for the war has not produced much enthusiasm. But references to Indianisation in the Civil Services and the fall in Home Charges can have no place in the calculation of how the tax burden is adjusted. There is much indirect taxation, and direct taxation has been long criticised as not carrying out fully the principle of equality of sacrifice. The reduction of sterling debt is not going to help the Indian tax-payer when rupee debt is being piled up. The reduction of external capital is a matter that is of no interest to the tax-payer. If the Government adds to its sterling resources, and increases its rupee debt at the same time, the annual debt service provision is unaffected. Even if Indian investors can buy up shares in British enterprises, the money must be theirs, and clearly whatever may be the ultimate strength of the rupee it makes no difference to the tax-payer.

While the Provinces spend more out of the tax revenue owing to the present distribution of revenues the main gain to the tax-payer arises from the sharing of income-tax. As to the proportion of productive debt to the total debt of India, it must be said that past losses must be reckoned important in striking a balance. The railways' present surplus is based on the increase in charges made by the railways twice, and the undeniable fact that taxation has risen can be demonstrated by the increased provision for taxation made by all joint-stock companies. Soothing syrup for the Indian tax-payer is not wanted. If the Provinces get grants for civil defence, it is mainly because the Central Government's revenue has risen owing to the war, while Provincial revenues are stagnant and expenditure has to be curbed always. But one important fact deserves to be underlined. Britain is paying part of India's war expenditure, and to that extent, the tax-payer here has gained. Comparisons as to the tax burden in Britain and India can have no relevance when India's permanent poverty remains. There may be material and moral progress but it may be independent of public expenditure. To show that money is well raised and wisely spent under the present system obviously does not meet the main argument for constitutional advance in India.

Dominions' Example

The Dominions have plans for developing local industries in wartime. In South Africa many arguments for regional planning have been put forth. South Africa's Premier has set up a National Council of Supplies in October for increasing production and promoting austerity at home. The austerity plan includes plans for the manufacture of goods for internal consumption, for reducing imports and saving shipping space. Canada, too, is reconciled to a reduced standard of living in the interests of war efforts. The South African plan to buy ships was sponsored by the Labour Party. New Zealand, apart from a plan to develop phosphate deposits located near Dunedin, is saving shipping space by other means. Anyway, agriculture in the Dominion is expected to prosper through the development of the one hundred million tons of phosphate deposits. As for Australia, the active discouragement of present spending is linked with plans to improve housing after the war. The post-war building programme covers the erection of 200,000 houses as a shortage of houses has been noted. Special committees are at work studying the problems of rehabilitation of local and secondary industries. The Parliamentary Reconstruction Committee is empowered to consider reports under preparation before they are considered by the Cabinet.

The social security plan there is anticipated by a promise of new benefits to Australian seamen who suffer through the war. Australia is spending 40 per cent of her income, but that is not regarded as adequate for the war effort aims at increasing agricultural production. New output figures are expected to reconcile the claims of agriculture and industry with the need for manpower. The Food Council has prepared plans for raising the output of agriculture. The development of agriculture will limit the scope of the post-war reconstruction plans for which the Federal Government is obtaining additional powers. Dr. Evatt in introducing the constitution amending bill spoke of the task of economic rehabilitation. Problems of employment, housing, health, child welfare, vocational training, markets and price stability will call for enterprise and statecraft of the highest order, said the Attorney-General. The demand for wider powers for the Federal Government was justified by a reference to post-war problems. Though Mr. Holloway, the Minister of Health, said Australia could not adopt a scheme of national unemployment insurance in the war period, he approved the housing scheme as a means to promote the employment of demobilised soldiers by Australian industries. Australia hopes also to derive many benefits from the possible transfer of machines and workers from U.S. factories. Commenting on the suggestion, Mr. Makin, the Munitions Minister, remarked that the influx of modern plant and highly skilled men would be beneficial to Australia. Present plans for the rationalisation of industries are latterly linked with the manpower shortage. Industry and commerce have been called upon by the Government to study further restrictions on the range of goods produced, the simplification of both manufacture and distribution, and elimination of cross traffic involving vital transport. These items of recent information from the Dominions have a real bearing on the Indian war effort whose scope and speed alike seem to call for improvement.

Relief Plans in China

China has plans for helping those in distress arising from the war. According to the China Information Bulletin the two-year old Ministry of Social Affairs has completed the system of social relief for the whole nation. Plans have been sent up to the Executive Yuan for approval while provincial and municipal authorities have set 560 organs for helping refugees, the aged and disabled, child welfare, etc. Szechuan and Kiangsi claim the largest number of relief institutions. Chungking has set up a model relief institution, handling cases of disablement, midwifery, providing clinics and the promotion of handicrafts. Civic and technical training is also provided so as to fit those receiving relief for future employment. Instruction in printing, sewing and weaving is provided for the inmates of the model relief centre. Vocational and technical training is also provided at certain centres in Chungking so as to give the unemployed a chance to get work and increase Free China's production. The Ministry of Social Affairs directs the relief centres in various other cities, and the Provinces are planning to set up centres corresponding to the model provided at Chungking by the Ministry.

More interesting than the relief plan is the collection of the land tax in kind in China, largely for feeding China's army.

the Government is taking paddy as tax and also buying grain from landlords. The Szechuan People's Council approved of a plan to collect nine million piculs as tax and to buy 7 million piculs of landlords at $150 per picul. Szechuan contributed last year 13.4 million piculs of paddy. The quota for this year shows an increase of 900,000 piculs and the price offered by the Government also is higher. Actual collections are, in any case, expected to exceed estimates. Collection of paddy in lieu of tax was expected to start in September and end in two months. The land registration system helps the Government to determine the contribution due from each district. Landlords harvesting 150 or more piculs are required to sell a portion of their stock to the Government at 150 Chinese dollars per picul. The greater the holding or the harvest, the larger will be the quantity taken off the landlord's hands by a plan that combines the right of pre-emption with price control. Payment for grain incidentally will be 30 per cent in cash and 70 per cent in food; treasury notes which may be exchanged for Government bonds or savings certificates in U. S. currency if requested. Collection of land tax in grain and State purchase go on together in Szechuan where the Provincial Government's major job this year is to make sure of rations for the Army. That Province supplies about one quarter of the Army's rations. Last year 9 million piculs out of 13.4 million collected and bought were turned over to the Army, and only a small proportion was passed on for civilian consumption

Colonial Policy

Mr. Oliver Stanley's appointment unlike that of Sir George Gater was no innovation. His first speech after taking office indicates that he will be a fixture. Time was when the Colonial Office was more important than the Treasury. It will again become more important, because of the demands of reconstruction and development in the colonies. The Development Fund of five millions was a useful beginning, but great changes have come since 1940 and the dependent empire has to be considered afresh—not as a territory for commercial exploitation or missionary enterprise—but as homes of peoples. The African Survey of Lord Hailey indicated defects in administration in spite of the general acceptance of the theory of the dual mandate. The general presumption that the colonies too must be covered by the undertaking given to free, full-fledged nations has not been dismissed as impossible. Dr. van Mook's suggestion that the restoration of the 'status quo' is desirable in the case of the Dutch colonies is not applicable to British colonies. Whatever be the adverse effects for copper-mining companies the recommendations of Sir Alan Pim in regard to North Rhodesia deserve to be considered. Special schemes of investigation have been proposed by Sir Edward Grigg, M.P., at one time Mr. Lloyd George's private secretary and later Governor of Kenya. Prosperity may be reaching the natives in Africa who may be joining up cheerfully and working harder at all jobs, but there is always the memory of the cocoa-buyers' strike on the Gold Coast. Disinterested co-operation on the part of the Belgian, Portugese and French Governments is desired, but the major problem will be presented by the self-governing territories of South Africa and Southern Rhodesia. The Colonial Office must be in a position to influence policy outside its jurisdiction. If Dominion co-operation is desirable, in the view of the "Times," in the field of colonial policy, the Colonial Office's standard must be accepted by the Dominions. To extend the Commonwealth is among the purposes of the war, but India and the colonies are clearly outside the Commonwealth and the approval of the original suggestion that the United Nations must work together in reviving the territories lost by the war can only be taken to mean that Britain will modify colonial preferential tariffs, abolish quotas and carry out the vague promises of Article Four of the Atlantic Charter. There has been so far no statement of policy from London but the events in Malaya and Borneo have clearly led to a revision of views farther away from the plantation theory than seemed possible. The impact of leases made to the U. S. A. in the Caribbean must be profound. But the British Government can change constitutions and administrations by order-in-council without endless debate as in the case of India. The outlook for joint stock companies cannot suffer through this, but local taxes will be higher, if social services are expanded in the colonies.

Ordnance Men's Help

The North African campaign took planning and preparation in which the Royal Ordnance Corps played its part. Its latest job has been to reduce packing space, and new systems and new containers have been adopted for forwarding consignments. A cabled report received by the Associated Chambers describes how cargo meant for four large ships was taken out and repacked in 36 hours of non-stop work by 60 Ordnance men and others. For landings in North Africa the vehicles provided had to be waterproofed. The U. S. forces also had to get waterproofing material from the Ordnance branch. The amphibious operations called for special material which the R. A. O. C. promptly provided. The same branch loaded tons of

thousands of wagons for General Montgomery's army. In one week alone it got ready 1,124 tons of spare parts for guns and wireless sets. The R. A. O. C.'s work in supplementing the R. M. E. is getting known. Repairs are hustled at the front because the supplies are despatched, and the great reduction in the time, during which arms and damaged equipment have been out of action explains the force of the blow struck in Egypt. The R. A. O. C. is looking after the expeditionary forces in the way it is expected.

Helping the Farmer

Only last week was another official conference. It was concerned with animal husbandry which is under the Imperial Council of Agricultural Research. The improvement of livestock is one aspect of the I. C. A. R.'s work for which a permanent result must come through the Provincial departments. The food supply has to be altered by the addition of milk and provincial differences in regard to milk consumption smoothed out. The handbook on wool showed how quality is deficient in Indian wool and Sir Jogendra Singh expects that a research station will be set up with the collaboration of trade interests. Reference was made to the derris root which is cultivated extensively in Coorg. The derris root is meant to fight the warble-fly that ruins many hides and skins. In indicating why progress is slow in India, Sir Jogendra Singh referred less to the part played by veterinary research in India than to the serious problems which exist today. India has too many cattle of indifferent quality. Fodder shortage is general and the absence of selective breeding goes with high incidence of disease. Though veterinary research has indicated that India with cattle worth 2,000 crores of rupees should fight disease there have been epidemics. The Muktesar Institute has been ready to advise and help. The manufacture of vaccines has followed the investigation of diseases like rinderpest which is now amenable to control. The study of animal nutrition has not been overlooked and recent issues of "Indian Farming" dealt with the quality of paddy-straw, maize-stalks etc. etc. Good feeding improve milch cows and the addition of blood meal to a sheep's diet trebles the wool clipped. Science thus has answered many questions, but India has not known the increase in dairy production that has taken place in the U. S. A. where the farmer is asked to help the Allies by changing his plan of production. The same departure has been noted in Canada which is sending more cheese and butter instead of wheat. Radical changes in livestock have to take place but the means are not wanting. Sir Jogendra Singh struck a hopeful note last week in asking for concerted effort.

Canadian Prosperity

Canadian war effort continued to grow in the summer. The index of industrial activity in the Dominion rose by four points between mid-June and mid-July. Many industries, with the important exception of paper and pulp, reported larger output in the summer. Newsprint production declined according to the monthly letter of the Canadian Bank of Commerce. Manufactures of motor cars and accessories also were less active than in the past, but the metal industries obtained more orders and went ahead. In the first half of 1942, Canadian industrial output, to judge by the usual diagram, rose by 12½ per cent. It is certainly less than the comparable increase in 1941 but it must be remembered that various restrictions are in force and the food and drink industries, in spite of the recovery of canning industries in June-July, are less busy than in the past. Employment remained satisfactory and the composite wages index was fully 18 per cent above that a year ago. Outstanding increases were noted under both manufacturing and construction in the summer. The Bank's letter naturally draws attention to the fact that industrial output is again rising after the reorganisation entailed by restrictions on materials and production as well has been completed.

If the capital market is dull in the war period construction work is increasing, and transportation to judge by the wage and employment indices alone, is prominent. The outputs in heavy industries are rising much more than current capacity allows for, and only in the field of non-ferrous metal products was a decline visible as compared with June-July 1941. Canada was looking forward to a good harvest in the summer though there were patches of depression in the Maritime Provinces. The prairie crop looked like being larger but the weather was not quite what it should be. British Columbia reported excellent field crops after a wet period.

The picture of prosperity makes for better yield in the field of taxation and Canada, spending 71 per cent of the total outlay on the war alone in 1941-42 came close to Britain. Canada's public debt rose to $6,609 million at the end of 1941-42 with the exception of one small issue of $10 million in New York, the Dominion's new debt of $2,457 million, less repayments of $964.33 million, was contracted at home. The average rate of interest on Canada's debt at the end of 1941-42 was only 2.9 per cent as against 3.06 per cent at the end of March 1941. In spite of the addition to Dominion debt, the rate on new borrowing fell. The Provinces got more subventions under the agreement originally recommended by the Rowell-Sirois Commission. Unemployment relief, still in its infancy, caused little trouble and the wheat acreage reduction payments took only 30 millions. The Canadian National Railways again reported better results. The Dominion has raised the excises on spirits and tobacco in the 1942-43 budget to offset the fall in Customs revenue. Direct taxation is expected to produce 87 per cent more revenue and the reports of rising business activity support the favourable forecast made by Canada's Finance Minister. Canada has raised the E. P. T. from 75 per cent to 100 per cent. Taxes on income are to be collected by monthly instalments at source. The Dominion expects to spend 3,900 millions of which 1,000 millions will be a gift to Britain and 2,200 millions will be direct war expenditure. In spite of the buoyancy of revenue, referred to frequently, the Dominion will have to raise 1,000 millions by sale of war bonds, savings certificates, etc., to individuals as distinct from institutions. The small saver in Canada is expected to provide the bulk of the money sought. Since farmers and workers are better off this year. Mr. Ilsley's plans are sure to come right.

Fall in Imports

The big changes in foreign trade in the course of the first half of 1942-43 are not to be measured in terms of money alone. But the trade returns of the montn do not indicate quantities imported or exported, and it is possible to gauge prospects only by reference to the decline in imports. The main changes, as compared with the two previous years, are a big reduction in imports of malt liquor at the same time as imports of wine have gone down. There is, however, a rise in the value of spirits imported. Of greater significance, as showing the effects of import control and the tariff surcharges, is the enormous fall in imports of biscuits and cakes, canned and bottled provisions, farinaceous and patent foods and milk, condensed and preserved. An enormous fall in imports of betel nuts is due directly to the war and explains the rise in the price of a common article. Imports of sugar have naturally fallen away, but a big rise is to be noted under cloves. Of greater interest as illustrative of the supply-price equation in India is the fall in imports of salt. Only a small increase is recorded under tea and cigarettes imported by sea into British India. Except for a small increase under precious stones and pearls, most of the imports of raw materials show a substantial decrease as compared with the first half of 1941-42. Most striking feature is a fall of Rs. 3.77 crores under raw cotton because of the big fall in imports from Kenya.

The fall in timber imports this year is to be attributed to the loss of Burma while the fall under raw silk and cocoons is due to the end of trade with Japan and China. The opportunity for Indian manufacturers seems to extend with the marked decline in the imports of chemicals, drugs and medicines. The limited supply of hardware and electrical instruments at present is clearly due to the big fall in imports indicated in the September trade returns. Of greater interest is the fall recorded under alizarine dyes, other coal tar dyes and paints and colours. A fall under the last head should certainly operate to the advantage of the few Indian manufacturers. The trade returns point also to a big fall in imports of glassware, earthenware and porcelain. Indian manufacturers must enjoy greater opportunities for that reason.

A change of special significance is the fall noted under imports of prime movers and electrical machinery. Outside sources are more or less out of reach. Except for a small rise in the value of pipes and fittings, there has been a pronounced decline in the takings of metals and manufactures thereof, such as steel bars, sheet and plate. A similar decline is visible under India's imports of copper and tin. Of greater consequence is the fall under imports of paper, pasteboard and stationery this year. The level of prices certainly points to limited supplies, due in part to the reduction in imports. The fall recorded in the case of motor cars is due not to petrol rationing alone but to the output limitations adopted by other countries. One might derive special comfort from the big fall in Indian takings of yarns as well as piecegoods, grey, bleached and coloured goods. It is not possible to indicate, as in the past, the periodical change in the average value of articles imported in September, but it should be certainly great. In regard to imports of cotton hosiery, haberdashery and millinery, silk yarn and piecegoods raw wool, woollen shawls, and above all, rayon yarn and piecegoods, the decline is awe-inspiring. Almost exceptional is the small increase noted under cement. Imports of soap this year are again on a reduced scale, and the fall recorded under tea-chests is of some consequence for the Indian industry. The story of reduced imports is completed by a reference to the fall under toys and requisites for games and sports, and umbrellas and umbrella fittings. It has been said that steel ribs must be classed as essential supplies needed by makers of umbrellas in India and therefore eligible for special treatment. Imports of horses have increased considerably. The change may be due to the many restraints imposed on motoring in India. Imports of postal articles not specified may be ascribed conveniently to the presence of foreign soldiers in India in receipt of parcels, etc., from outside.

U. S. Labour and the War

There have been reports that Mr. Roosevelt has given up the New Deal and has asked Labour to sacrifice many things for fighting inflation. The A. F. L. and the C. I. O. may be coming together because of the war and the eclipse of Mr. John L. Lewis. But the attitude of Labour to employers generally will be unchanged and the battle for collective bargaining and the closed shop will go on. If Mr. Ford has changed his opinions, like Mr. Harry Bridges, the attitude of organised Labour is not wholly complaisant. It has to build up trade unionism to the proportions of the older British movement, and the war, by extending conciliation work and holding up strikes, may weaken U. S. labour. But it is undeniable that the Administration which accepted the Wagner Act, which put a ceiling on hours and a floor to wages, has been more popular in 1942 than in 1937, the year of stay-in strikes. Labour certainly has made concessions as regards overtime wages but some unions still stand out for double pay for the seventh working day of the week. If the right to strike has been modified in the past year, there is the Walsh-Healy Act to see that contractors give a square deal. There is the 40-hour week also and all breaches have to be specially permitted. The average working week in the U. S. A. is of 52 hours and the rise in war output makes U. S. labour conscious of what it is doing for the Allies. If the C. I. O. has given a pledge only last month to work resolutely for victory, the consciousness of power is undeniable. Drastic man-power regulations have been promised, and Labour may have strong views on that.

Since the freedom to bargain for wages is maintained and the Government does not act as in 1941 when there is any stoppage of work, there is industrial peace. But neither the release of Mr. Browder nor of Tom Mooney can affect U. S. labour's view as to what it must get hereafter. If the 40-hour work is called an obstacle by some, others maintain that it must be retained, even if labour turnover increases. The U. S. A. is known to be studying with approval the many methods adopted in Britain for diverting workers for essential work. If a recent estimate puts the number of U. S. war workers at 12½ millions and the possible addition in 1942 at 5 million, the C. I. O. and the A. F. L. membership must be rapidly growing, and both will defend the present privileges while being ready to help the war effort. If the proportion of workers to total population has risen in the wake of the abolition of unemployment by May, the U. S. A. needs more men to man the factories. Every achievement in the field of production strengthens U. S. Labour's position and a liberal regime in Washington has to live up to the old promises of the National Recovery Act. The Administration's view is still that of Secretary Perkins who has been in the President's Cabinet longer than any other Secretary. Labour relations will be left alone because the Administration, after the very moderate success in the November elections, cannot compromise with conservative employers, even for the sake of increased war production, or jeopardise co-operation further after the resignation of Mr. Sidney Hillman from the War Production Board. An attitude of 'no change in war' is the best that can be expected at present but labour is paying income-tax and has accepted compulsory savings. The references to 'canny' methods cannot be interpreted as suggestive of U. S. Labour having failed to back the war effort. Its anxiety to retain present advantages is justified by the British parallel. The Emergency Powers Act has not impaired the right to strike. National service has not led to any invasion of the rights acquired in a century.

Not Striking

Subscriptions to the third Defence Loan in September totalled over Rs. 4.51 crores. The major part came from Bombay as in the previous month, and the only other Province with a respectable total was Bengal which provided Rs. 69.85 lakhs. The decisive lead of Bombay in regard to total subscriptions duly noted last month here is retained. The total subscribed up to the end of September was Rs. 111.16 crores of which Bombay's share alone amounts to Rs. 47.38 crores. In the light of many events at home it may be claimed that Rs. 4½ crores put up in September is well up to the average of the years 1940 to 1942. The progressive total for interest-free loans up to the end of September exceeds Rs. 3 crores. Since the total for September was Rs. 191,000 only, it may be concluded that this source has practically dried up. The defence loan statistics make it plain once again the response to the savings certificates is not very good. The total for India so far is Rs. 4.64 crores nearly. The sales for September produced Rs. 4.83 lakhs only in comparison with Rs. 4.51 crores raised by the defence loans. The higher yield evidently does not impress the investor and what is really required to lever up interest is a second Defence and Savings Week in many places. Those who recall the success that attended Calcutta's drive last year at this time will readily accept the view that a further attempt to interest capitalists and savers alike should be made.

The September figures admittedly point to a mild recovery in the matter of subscriptions but Rs. 4½ crores on an average does not bridge the budgetary gap, or reduce the other gap, that between optimum spending and the money actually spent by the public. How far new money can be sterilised by borrowing is a question of great interest at present both for increasing India's war production and passing on part of the burden of the war period to the future. As the total for 28 months of borrowing on tap is Rs. 119 crores the success that has followed regular borrowing is not very great. Further in view of conversions etc. the new money saved cannot be even Rs. 100 crores and the statistics do not as yet suggest that Sir Jeremy Raisman's advice to the public in July, to save and lend rather than spend, has been widely followed. The advantages of saving are obvious, but when the purchasing power of the rupee is falling, there seems no great advantage in saving at present. Commodity-hoarding and the buying of bullion are merely the reflex action following the general calculation of inflationary effects. Since inflation is not denied at present the disinclination to save is pronounced. It is quite likely that in the months after September the public response to the defence loan was not so good. But that suggests at once that the stabilisation measures adopted in America should be adopted to preserve the margin available for investment, and what is more important, assure the investor that he will get full value when his money is returned. The price-control measure in force have not yet created the confidence necessary. The threat of inflation lingers, and the Indian investor looking for 'real' investment in land, jewellery, houses etc. puts defence loans last, instead of first. This scale of preferences might be natural, but it must be altered soon, and the flagging interest in loans revived by an assurance that the rupee is a 'hard' currency at home, and the investor, as such,

A WAR-TIME ANOMALY

In common with many other industries we find ourselves today in the anomalous position of appealing to our clients to use our products sparingly. Where we once encouraged the broadest use of paper in all walks of life, now we cannot stress too strongly the urgent need for rigid economy in this valuable commodity.

Use paper thoughtfully and thriftily, thereby avoiding the necessity for frequent fresh supplies. If your demands on us are rare, we can supply Government with more paper for the propagation of the war effort.

Be sparing with paper in Government and Military offices, in factories and mills, in commerce, in publishing and printing, and in your own home.

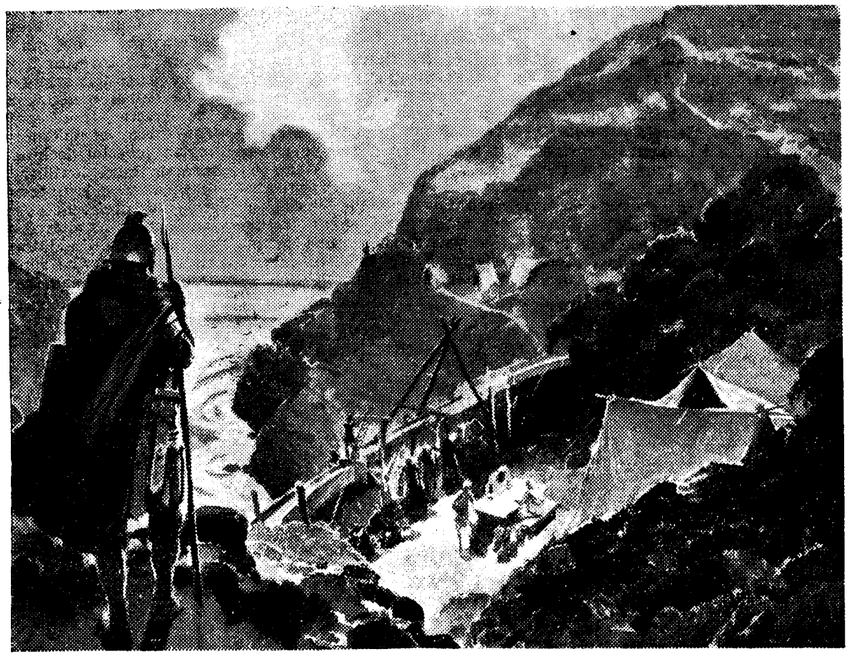
There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper:—

Use the smallest sheet of paper for any purpose that will do the job.

Write, type and print on both sides of the paper. For short letters, bills and accounts reduce the size of the paper.

Do not make copies except where absolutely necessary.

Always type single spacing.



In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.

Reduce the size of labels on manufactured goods.

Use the back of the letters received for the carbon copy of your replies.

Aspects of an Industry No. 10

GOLD IN BRITAIN

BRITAIN is not a recognised gold bearing country, but there is gold in Britain. The Romans knew this, and mined it. The British Empire on the other hand is the greatest producer of gold in the world. Gold mining is no longer an affair of pick and shovel and washing-pan, but a highly developed industry in which chemicals are used extensively. Indeed, gold production on the scale carried on to-day is only possible as a result of British chemical research. In 1890 the position of the great South African industry was critical. The extraction of gold from the Rand reef was becoming impossible, and it was actually thought that the end of the industry was in sight. In the cellar of a Glasgow tenement a young chemist named MacArthur was working on a process of recovery of gold from ores by means of cyanide. MacArthur had noticed that the method then in use for 'toning' photographs used a solution of gold, and he was able to prove that a weak solution of cyanide would dissolve the gold from the ores, leaving the base metals behind. He was sent to demonstrate his method to the Rand mine-owners. For two days and nights he worked on the problem at the Salisbury mine at Johannesburg. Late on the third day he produced a small ingot of gold. It showed 98 per cent. extraction! The Rand gold mining industry was saved. To-day the cyanide method of gold extraction is used in gold mines all over the world. Even gold depends for its production upon the work of the British chemist.

Imperial Chemical Industries (India) Ltd.

must have no doubts about its changing value. Discussions concerning prices and profits have always converged on the stable value of the currency. The naked quantity theory alone may not be in vogue to-day but all urge that the value of the rupee must be anchored to something else than sterling. In neutral territory, the rupee became unacceptable in August and the discount that emerged in Goa was widely interpreted as proof of the further depreciation.

Danger from Nazis

The report that Dr. Schacht is studying the effects of the incomplete new order in Europe is not a tribute to the new order but to its limitations. If German banks control foreign concerns, and trade pacts are invariably settled in Berlin, the non-German countries lose rather than gain. For the New Order is the old swindle and half a dozen important businessmen last year said as much and more. The New Order will not go down with anyone outside Germany because it is fabricated to sustain German dominance, not the economic unity of Europe. Germany calls the tune, while others have to pay the piper. The New World will be called upon to pay as well, and Mr. Geoffrey Heyworth, the Chairman of Levers, in a pamphlet issued by Hodder and Stoughton this year, remarks that Latin America would suffer if she were forced to take Hitler's terms, while the U. S. A. would have to go short of essentials at the same time as her natural export markets fall a prey to Nazi greed and cunning. The export surplus of Latin America is put at $2 billion by Professor Hansen who indicates that there is only the U. S. A. to take care of others' interests at present.

The threat to American cotton-growers and tobacco-growers was not illusory. The U. S. A. would have suffered if Canada or Argentina were impoverished owing to the loss of export markets in Nazi-dominated Europe. The Nazis threatened through their control of Europe to cut at the U. S. standards of living though it is not clear how the U.S.A. would suffer if agricultural exports fell. There is, however, the experience of the depression, and the U.S.A.'s own dependence on imports of rubber, tin and manganese. The New World cannot have its hemisphere economy. The fraudulent prospectus (Sir Charles Lidbury's phrase) drawn up by the Nazis has not been willingly accepted by even the nations forced to send labourers to Germany. The most dangerous aspects of the organised looting of the Nazis have been explained in the past but the implicit threat to America was ignored. The selfish aggrandisement of Germany not co-operative developments was the purpose of the theory given a formal shape in July 1940 but rejected by all those unafraid of German aggression and the German record. Mr. Oscar Hobson has denounced the German plan as a charter of slavery and industrialists like Mr. Quig, who is on the board of the I. C. I. are even more aware of the dangers of German dumping when allied to irresistible might. The danger to democracy is a danger to economic structure and policy alike for the Nazi order is meant to discipline the whole world to serve its own ends. The Nazis who preach against autarchy for others want to create a closed economy where freedom will be reserved, under conditions, for one race and only. Industry and organised labour too through its representatives has looked at the Nazi order and has pronounced it no good.

Protests and Exports

There have been protests in Calcutta against the Paper Control order. It has been urged that if the Government takes away 90 per cent. of Indian mills' production, the public will be starved of paper. The dealers protested first; the public meetings came later. The mills have not as yet indicated their views in the matter of control. Sale by official permission may well seem novel and dangerous. It has been also argued that Government is not economising, but is still prodigal in the use of paper. Curtailment of production in the U. S. A. and Canada accentuates the impression that imports must decline. In parts of the country the older maximum price order does not hold good, and there is a real fear that a black market will grow up soon. The main argument heard is that civilian consumption cannot be reduced drastically. The fall in paper mills' output in the first quarter of 1942-43 raises the further apprehension that the quota available in a year for the public may be below 10,000 tons, a quantity far below the normal consumption of 160,000 tons. Teachers, publishers and students have protested against the order. But the appointment of a Commissioner who intends to stimulate Indian production while regulating consumption must not be ignored. The main duty is to conserve supplies without regard to exports. Reference to an order received for 8,000 tons from the Middle East has produced alarm. In the war period previous exports to Colonial markets were carefully adjusted and the Indian Paper Makers' Association certainly was not keen on exports when demand at home was acute. The Paper Makers' Association must indicate that paper being a protected industry, its first duty is to Indian consumers. What has happened in the case of sugar must not be in any case repeated. The public fears that if supplies are sent off to Turkey or Iran, the paper famine will persist, and as paper from Canada and Newfoundland can be had only by special permission, the situation will be as bad as in the case of newsprint. It has not been indicated how production will be increased or the sales quota distributed as between regions and licensing of dealers is to come before the Control issues orders.

Last week, I pointed out how India's war profits in the last war were frittered away mainly because the question of the utilisation of sterling balances was not thought out in time and the authorities were allowed to mix up in ways convenient to them the two different problems of transfer and currency. That was not, however, the only way the gains of the last war were thrown away. In the matter of industrial development, too, the new industries which the war brought into being were allowed to die out or were crushed out of existence. That is why, when this war broke out, "Indian Finance" thought it necessary to repeat the lessons of the last war and to reiterate them whenever occasion arose. In this matter of our sterling balances, the two dangers to which our war gains in this war are exposed are firstly, that the increase in sterling securities in the currency reserves may lead more or less automatically to an increase in the note issue and in currency circulation; secondly that the accumulation of sterling balances and the freedom which the authorities have in the present constitutional position for utilising them as they choose confront us with dangers not dissimilar to those which overtook our war profits in the last occasion.

* * *

There is, indeed much to say about each of the dangers I have indicated. But the second is more germane to the problem I started on, namely the question of putting our sterling to good use from time to time, instead of allowing it to go on accumulating. The danger of sterling accumulations leading to unbridled inflation must also be noticed here, though for a consideration of other aspects of it, I must await a suitable occasion in the future. For the present, I must content myself with saying that the rate at which our currency circulation has increased during the last one year is ample proof of what I have never tired of contending is a confusion between the transfer problem and the currency problem. If India has supplied goods and rendered services to other countries and has thereby realised large amounts in foreign currency, there is, no doubt, the question of transferring these amounts to those in India to whom the money is due. But that hardly means that for every pound sterling so realised in London, there has to be a corresponding addition to the rupee circulation in India. In the old days of free trade and free gold movements such problems of transfer were automatically solved by the movement of gold towards the country which had the favourable balance of payments. And the turn of that country to lose gold came when through the increase in price levels, it began to import more than it exported and realised an adverse balance of trade. But even in those days gold movements did not take place till other means of transfer had been tried and exhausted, like the sale of foreign securities. In the case of India, too, these means are open to us. And if the authorities do not insist on deciding on other means of transfer, like high-priced silver as in the case of the last war, or inflated currency, these methods could suffice to solve the transfer problem. But as things are, the transfer problem may be said to have been wisely solved only in respect of that portion of our sterling debt which has been paid off. Since the reduction of the sterling debt of the Government of India is to the tune of Rs. 240 crores, the relief that has been secured in respect of the transfer problem is very appreciable indeed.

* * * *

But the accumulation of sterling balances has gone on and the problems and the dangers of delay in solving them continue. Let us realise in the first place, that the sterling securities in the Reserve Bank of India, in both the Issue and the Banking Departments, have gone up from Rs. 274.76 crores at the end of last year (Dec. 26) to Rs. 461.99 crores in the latest statement of the Bank. In the same period, notes in circulation have gone up from Rs. 347.72 crores to Rs. 568.30 crores. Of this increase of Rs. 220.58 crores, Rs. 86 crores is accounted for by the rise in Government of India rupee securities from Rs. 41 crores to Rs. 127 crores. But by far the greater part of the expansion in circulation, namely Rs. 134 crores out of a total increase of Rs. 220½ crores, must be attributed to the rise of Rs. 187 crores in sterling securities. The process of expansion of currency has gone on pari passu the increase in sterling securities. The Reserve Bank authorities felt their conscience clear because expansion is against foreign securities and not domestic, and that, therefore, the reserve ratio is at the very satisfactory level of 75 per cent. But the criterion is not the reserve ratio—though here, too, it is a question whether sterling in the present conditions or in the probable conditions of the post-war years is as good as gold for purposes of the currency reserve—but whether the country has need for such additions to the volume of circulation and whether the country can stand the pressure of such a large volume of the media of exchange.

* * * * *

Since the phenomenon of increasing sterling balances must continue in what remains of the war period, unless of course, India should be presented with a variety of claims on her exchequer by others, the danger of further inflation, while the war lasts, and of loss of sterling when the war is over will increase and not decrease with time.

* * * *

Now it is clear that to treat sterling balances as a pretext for increase in circulation is not to put them to the best use. If the country should stand in need of the growth of the volume of production and of business activity, we should not lack the means of expanding currency. For one thing, the need for increased currency carries with it automatically a partial solution, since the internal bills of exchange and other commercial paper would provide a legitimate backing for additional currency. For another, we have in our gold stocks in the reserve, which are valued at a fraction of their real value, another method of expansion, should it be needed. Whatever may be the extent of the currency expansion we may need, it will never be beyond our legitimate means to effect. And it is idle to suggest that the need for additional currency brought on by the increase in business activity consequent on the war provides a handy solution of the problem of utilising the sterling balances. Just as, from the transfer end, we have other means of transferring our favourable balances from London to India than effecting expansion of currency against sterling balances, we have also, from the currency end, other means of expanding currency when necessary, than the sterling balances obtained in London. It is, therefore, not only wise and desirable but also easy to keep the transfer problem and the currency problem quite separate.

* * * *

It is, however, necessary to consider the possibility—we cannot regard it as anything more at this stage of our examination of the problem—that the motive power of the increase in circulation springs from the ways and means requirements of the Government, ways and means requirements which are to some extent closely connected with the accumulation of sterling in London. If a part of the claims for sterling is due directly to the expenditure incurred by the Government on account of foreign Governments, then it would seem that to get Indian currency against sterling for defraying those expenses is the best way of meeting them. But a little reflection would show that here, too, there is only a problem of transfer; and the problem does not become different, simply because the exporter of the goods or of the service is the Government and not a private agency. If, how-

ever, the ways and means requirements arise from an excess of outgo on Government account over the incomings by way of revenue or loans, then that is a different question, a problem of public finance, which should be considered as such. And it is too late in the day for anyone to argue that war expenditure should be financed by additions to currency, fiduciary or otherwise.

* * * * *

The problem of utilisation of sterling balances should, therefore, be treated as such, and not with preconceived ideas in favour of their being a handy means of effecting increase in circulation. For solving any currency problem that may arise, we have ample resources. For problems of central finance, we ought to have appropriate remedies. And any attempt to side-track the issue must be resisted. What, then, should be done with the sterling balances? It is a national, not an individual problem. There is no difficulty about paying the individuals whose claims on people abroad together make up the large amounts that are realised in sterling from time to time. When Rs. 240 crores worth of sterling were used to pay off the sterling loans and the sterling loans were replaced in large part by rupee loans, the individuals concerned did realise their claims. The same will be the case when other methods of utilising sterling are resorted to. For once let us be done with this incubus of obsession with individuals and with currency.

* * * *

Facing the problem squarely, the continuance of the policy so far pursued is the first step that suggests itself. For our sterling debt is not wiped out and the Government of India's foreign loans outstanding amount to as much as Rs. 105 crores. Only slightly different from the Government loans is the case of the sterling loans of port trusts and public local bodies; and the policy may be profitably and legitimately extended to their case also. It is only for the sterling resources that might still remain can the question of utilisation be considered to offer debatable problems. Much depends, no doubt, on the extent to which more sterling will become available to us. There is no lack of danger to the flow of foreign

balances into the coffers of our Reserve Bank. But it will be clear from my consideration of the problem in the earlier stages that, if the sale of securities is the first step in the natural process of settlement of balance of payments, the sale of equities is the next. And here I would at this stage say no more than that the buying up of British interest in Indian business should be confined to those industries in which it is possible to envisage a degree of nationalisation without ideological, or ordinarily economic, dislocation of the world of Indian business.

* * * *

All the methods so far suggested are what the Economist would agree are natural. They are, nevertheless, helpful to the furthering of the national interest and security. But we have to remember that the total volume of sterling balances that we may have to deal with might far exceed the sterling loans and the equities that may become available for purchase. The occasion must be availed of for strengthening the economic and financial position of India in other ways than wiping out the foreign debt or buying the foreign interest in Indian industries. The place of foreign securities in the currency reserve should not be altogether dismissed out of our mind. It is true that in the earlier stages we had need for a corrective to the exaggerated importance given to it. But when a nation realises a large favourable balance of payments, it would, no doubt, be well-advised to strengthen the position of its currency against possible reversals. In this view, it becomes necessary to consider whether sterling is the only currency in which our foreign securities should be held and, if it is not, what may be the limit that should be placed on the amount of sterling balances. The question, I must admit, does not sum up all that there is in my mind or in that of people who have given thought to this question. There are many who think that, if our foreign balances are held in sterling, they are exposed to the risk of depreciation which, it is hard to believe, Britain can escape in the post-war years. Others there are who argue that, even if depreciation is avoided through various devious ways, our sterling will not be a free foreign balance which we can use as we like; that when we try to get back our dues we shall find ourselves obliged to confine our trading relations to, or at least concentrate them on, Great Britain. These contentions are not easily refuted. Their validity or force can hardly be denied. And from this another question issues, namely, whether sterling so tied down can be an appropriate cover for our note circulation. It is true that we belong to the sterling area. But that means only that the external value of the rupee is related to sterling, and not that all our

(From Our Correspondent)

Bombay, Dec. 14.

DISCUSSIONS concerning standard cloth have not only reduced support by local investors for mill shares but have indicated that the mills are wholly conscious of their duty. It is said that the mill industry has drawn up a plan which has been approved by Mr. Sarker who was concerned largely over the arrangements for distribution of standard cloth. The Provincial Governments have been asked for full support of the new scheme to provide cheap cloth. Zones and Committees are to be created for the purpose. Officials will have a place in the distribution plan which will lead to the opening of special shops. Full requirements at fixed prices, based on careful estimates, are to be provided. The textile advisory panel will, of course, be the chief supervisory authority. It has been indicated already that 20 per cent, not 5 per cent as originally imagined, of current capacity will be assigned for standard cloth. Total output aimed at is 1,000 million yards, to be sold at prices 35 to 40 per cent below the present price. The chief aim is to give cloth at a cost plus 5 per cent basis—the 5 per cent being meant to cover depreciation.

* * * *

The Bombay Government has plans of its own for selling standard cloth. No outside guarantee is to be provided to mills. The mills here have agreed to give 15 million yards of cloth in the first instance. The millowners here are also credited with a plan to limit exports to 500 million yards. An export quota, regulated by careful consideration of home demands, is not deprecated. The Commerce Member was told that the existing license system is defective, and the mills have urged that the millowners must have a say in what quantities should be shipped and what prices should be stated on invoices. The Commerce Member made no promise as regards the limitation of exports. But the millowners have pleaded for curtailment of exports in order to devote 20 per cent of capacity for standard cloth manufacture. One good thing is that cloth prices are no longer rising, and the cloth market will have to scale down prices quite soon.

* * * *

A caution against indiscriminate support to new ventures was given last month by Prof. Davar on behalf of the Shareholders Association. It was not superfluous, and there has been a discussion as to the lack of control over new issues in wartime. The capital market in India may be immature but even foolish investors deserve some protection. Prof. Davar indeed singled out new banks and insurance concerns as those likely to defeat investors' hopes. The Professor may be right, but new banks floated in wartime cannot always be called mushroom concerns, and the only thing the investor has to do is to make careful inquiry before taking up shares. The Reserve Bank probably does not exhibit any concern over new banks etc. being floated. Where the States are concerned in floatations in any way, it has to tread warily, and some may argue that it cannot raise trouble even over the inclusion of any new bank in the Second Schedule. But the stock exchange can, by means of its listing procedure, define, and defend, the interests of the investing public. More than ever the various aspects of investment have to be examined by brokers. Their functions do not end with the execution of buying or selling orders, and the brokers may well have a Capital Issues Committee, and indicate also that brokers as such should not be connected with any promotion or floatations. The serious study of investment as a factor in economic progress must start with the brokers and a committee of consultants may have to be set up to work along with the stock exchange in regard to scrutiny of the placing or introduction of shares of new companies. Present defects are not overlooked by anyone here and prospectuses appearing in recent weeks have apparently made no impression on the average investor here.

* * * *

The long inquiry into the accident in which many Telugu labourers died owing to the collapse of a building under construction has concluded. The owner and contractor have been found guilty by the Coroner's jury. The Corporation has been asked to supervise new construction strictly in order to avoid such accidents in the future. Suffocation by the *debris* was stated to be the cause of death in most cases. The concrete specialist too has been blamed by the jury. It will be remembered that the City Council ordered an inquiry of its own. The Coroner's jury has anticipated the findings, and legal proceedings under Section 358, I. P. C., are expected to follow from the definite verdict.

* * * * *

The freezing of wheat stocks in Bombay is a late step. The food situation is worsening daily. Businessmen in Bombay blame price control as much as inadequate transport. The Advisory Committee has asked for the prohibition of exports from Bombay though Bombay is asking at once for larger imports. The Food Department knows the Bombay view well in advance of its own conference. The direct remedy favoured is the import of Australian wheat. The guaranteed price there should stimulate exports from the Commonwealth but the Government there has no ships of its own. The Commerce Member's statement that exports to Ceylon and the Gulf had been reduced to the minimum has given small satisfaction. Sugar and *gur* are still causing anxiety, and the ban on private tea exports has not eased the tea situation here. Wheat is expected from the Punjab but prices in Karachi do not correspond to control rates in Lyallpur. Bombay wants Australian wheat; and a timely step would be the reduction of the import duty and the grant of the former rebate on the N.W.R. for the carriage of wheat. Both seem unlikely, and the Food Department will therefore have to convince Bombay that both are inexpedient.

Col. Colville's selection as Governor of Bombay is no surprise since Sir John Dill was not coming out after formally resigning. The head of a great Scottish enterprise Col. Colville's knowledge was helpful to the Treasury. He has been more than the average back-bencher like Sir Roger Lumley. Col. Colville's firm has transformed the iron and coal industry of Lanark. How much British steel output in war owes to Colville and John Brown will be revealed later. That a member of the Ministry is coming out is welcomed here. Since Lord Willingdon's time there have been no Governors with knowledge of both Party and Treasury affairs. His appointment is viewed as more satisfactory than the choice of Mr. Spens as the Chief Justice of India. Bombay holds that it was rather surprising that Sir John Beaumont was not promoted after he had acted as puisne judge of the Federal Court. There are no clear views as to the extension of term for the Viceroy. It was never believed that Lord Cranborne would come as Viceroy. Apart from his own health, his father is quite old and he is the heir to the famous Marquisate. Sir Archibald Sinclair's name certainly caught the imagination of some here, and it would have been a popular appointment. Sir Archibald is not in the War Cabinet and his Party is getting smaller with the years. But it seems as though India has to live under a super-Viceroy who holds as many jobs as Mussolini and runs from Committee to Council, reception to levee, and makes fewer speeches because of overwork. It seems as if Lord Willingdon bore his office lightly whereas Lord Linlithgow is always in dead or deadly earnest. Expansion of the Council has actually increased the Viceroy's responsibilities. There is the new Defence Council to add to the list of people whom the Viceroy has to see. The Viceroy is his own Prime Minister—he is his own Cabinet. The Expanded Council, it is presumed, is the Shadow Cabinet ready to spring to life when the deadlock ends or reforms come of their own accord. The aggrandisement of the Viceroy's office at present by every means is calculated to defeat all hopes of Dominion Status. Extension of term makes for further aggrandisement, and a separate secretariat complicates the situation.

Resume of Commodity Markets

THERE are no outstanding features in the commodity markets during the past week. The jute and jute manufactures markets have staged a recovery while the Bombay raw cotton market has been firmer with the conclusion of the arrangement between the cotton textile industry and the Government of India. The bullion markets have been uninteresting and prices have been fluctuating in narrow limits.

While there is nothing of interest to be recorded in the markets for export commodities there has been a further rise in prices for the staple commodities and only during the last two days a slight decline in retail prices has been reported.

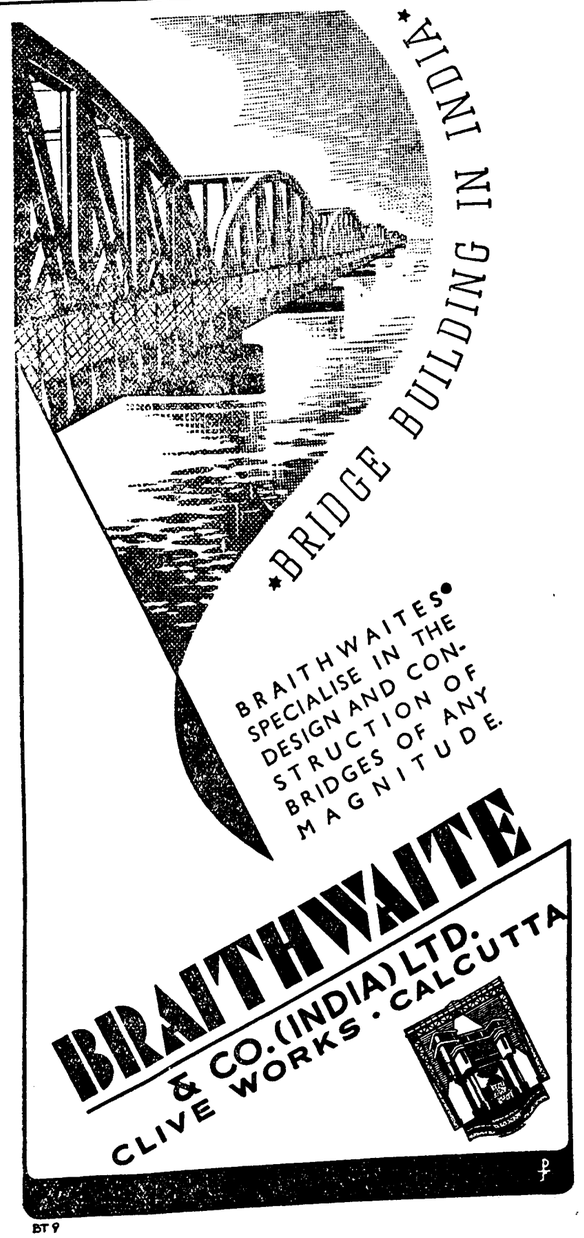
The Food Conference took place early in the week. It is reported that the various problems affecting the various provinces and the commodities have been discussed in detail. Whether the Government propose to effect a freer distribution of supplies and control prices within reasonable limits remains to be seen. The recent sharp increase in prices has been viewed with alarm and unless immediate measures are adopted to put back prices at least to the levels that prevailed two weeks back there will be an economic crisis all over the country.

No specific reason is given for the abrupt increase in values. Naturally the public are inclined to place the blame on unco-ordinated buying by Government bodies and private employers. Surprisingly no effort has been made so far to penalise speculative buying or hoarding. It is no use to explain the rise in prices as being due to speculative factors. If it is recognised that there is a shortage of supplies within the country all exports should be stopped. All these are problems for the Department of Food and we do not know of any decisions that have been reached at the conference. The developments during the next few weeks should provide proof of the Government's sincerity.

Jute:

Sellers had their own way till a few days back. As mills had postponed their buying to a very late date it was very difficult for them to get their requirements of jute in time and it were they who encouraged the movement of jute by special means by paying higher premiums. The difficulties in regard to the transport facilities definitely assisted holders. The sharp rise in prices in jute manufactures markets enabled mills to pay the increase in prices asked for but when it was known that overseas buyers would not be forced into paying fancy prices mills withdrew from the jute market. There was a decline of over two points per maund for loose jute. Since mills are not in a position to keep out of the market for any length of time and they have to cover their requirements of jute for every forward sale of goods, resumption of buying has resulted in a recovery in values. It is not to be expected, however, that there will be any important fluctuation in prices either in the jute or jute manufactures markets.

Cotton:



The cotton market has been rather active. In spite of the fact that the market was open only on two days there has been a rise in the quotation by over 12 points. The rise in prices is attributed to the estimates regarding the possibility of a smaller crop. The deliberations at the recent conference of textile interests in Bombay were regarded as favourable to the trade. The efforts to increase production of cloth should result in an increase in consumption. Only last week, it will be remembered, markets struck a bad patch on the decision of the East India Cotton Association to open mofussil delivery centres for buyers who were prepared to take delivery up-country.

Coal:

Retail and wholesale prices rose sharply last week, the rise in retail prices being more pronounced. The acute shortage of wagon suplies is attributed as the main reason. It is reported that *there has been some improvement in the wagon supply position this week and prices are easier* but the Coal Controller has telegraphed to the Chief Controller of wagon supplies to provide him greater facilities. It is pointed out that the position in the trade is beyond the Controller here.

Silver:

The report that lease-lend silver will be available to the United Nations has had a discouraging effect on the Bombay market and quotations are at the lowest levels for the week. Mr. Cordell Hull has stated that so far only the United Kingdom and Australia have applied to the U. S. A. Government for supplies under the lease-lend arrangement.

Jute and Jute Manufactures

(By Our Jute Correspondent)

CALCUTTA, Dec. 16.

Estimated arrivals of Jute into Calcutta for the first half of December show a healthier complexion, amounting to 3,84,000 bales against 4,05,000 bales during the same period last year. This is the best figure for the first half of a month yet, the totals up to 15th November being 3,47,000 bales and up to 15th October only 3,01,000 bales. For various reasons, the estimates for the second half of the month are invariably heavier than for the first half, so we may reasonably expect the full months' figures for December to total over 8 lakhs of bales. While this is a considerable improvement on recent months, it still does not do much more than provide Mills with the equivalent of their monthly consumption and will merely put an end to the encroachment on stocks. The building up of stocks is still a matter for the future. Total arrivals from the beginning of the season up to mid-December amount to 32,54,000 bales against 36,81,000 bales at the same point last year, and at the present rate of progress it becomes pretty obvious that the available transport is unlikely to be able to handle the whole of the current crop before the next one is upon us. It would appear that most of the improvement in the arrival figures is due to shipments by river. Most rail stations are still being only very sparingly served and with the urgent demand for wagons for the transport of foodstuffs and of coal, it is unlikely that much improvement can be looked for in rail handling of Jute yet a while. And however aggrieved the balers at rail stations may feel at the failure to move their stocks, no one will deny that, for the moment, foodstuffs and coal must be given preference.

While it is not yet officially confirmed, it is understood that the Regional Priorities Committee has accepted the suggestion that the dimensions of jute bales should be relaxed to 14 cubic feet for 3½ maund bales and to 16 cubic feet for 4 maunds bales. This ought to go a long way to remove the grievances of balers who found the previous dimensions difficult or impossible to attain without grave risk of breakdown to their presses, and the consequent loss of shipping opportunities due to the rejection of oversize bales by the Carriers. The relaxation is also justified from another point of view for it has been credibly reported that, when loaded with bales packed to the previous dimensions, flats still had some space available when loaded down to their Plimsoll marks. It is now up to balers to show their appreciation of this concession by ensuring that their bales conform to standard dimensions, and by rapid loading, help in the turn round of the available freight space.

Excessive zeal appears to have been shown by some local steamer agents in the matter of rejecting bales. The original directions laid down that bales should be lashed with machine stretched ropes of not less than 4 strands. Cases have occurred where bales conforming to the correct dimensions have been rejected because the Agent was not satisfied that the ropes had been machine stretched. The directions did not specify what sort of machine should be used for stretching, and the most primitive form of windlass will do the job just about as efficiently as a much more elaborate machine. In any case it may be taken as axiomatic that even the revised dimensions will not be attained or retained unless ropes on the bales have been stretched, and it should be sufficient for the Carriers' agents if the bales come within the required measurements without ascertaining whether the stretching mechanism is locally made or the product of Metropolitan-Vickers.

Reverting to the vexed question of whether the "Futures" market should be permitted to re-open, it has been suggested that those Associations connected with the Industry who disapprove of the re-opening should express their disapproval by declining to send representatives to sit on the Board of Control. Such a purely negative attitude is, we submit, not sufficient. Indeed it has already been foreseen by the Board of Directors of the East India Jute Association, for in their suggested alterations to the byelaws, they propose to assume powers to side-step the Board of Control if necessary, so that the Board of Directors could assume the functions of the Board of Control, in the event of the latter body proving intractable, or refusing to act. If the Industry in general consider the "Fatka" to be an undesirable adjunct to the trade, a much more positive approach to the question is required than merely refusing to serve on the Board of Control. That attitude would merely play into the hands of the purely gambling element which dominates "Fatka" as at present constituted and which would be thoroughly pleased if the small measure of control exercised by the Board were to be removed. The circumstances of the recent closure of "Fatka" and the influence of the genuine trading interests of the Industry are surely sufficiently powerful to bring pressure to bear in the appropriate quarters to ensure that this menace to the trade should be scotched once and for all.

The sharp drop in prices of baled jute referred to in our last report continued into this week and though the market is now somewhat steadier at the lower levels, there is little activity and it would be a bold man who would deny the possibility of some further drop. Shippers operated cautiously down the market till the price of Dundee Daisee 2/3 struck Rs. 63 and of Dundee Tossa 4s Rs. 64. That was the lowest point touched and though there was a recovery of about Rs. 2 thereafter, the closing tone is easy again with sellers at Rs. 64 and Rs. 65. Outport Tossa 4s sold to a Mill at Rs. 60 but there has been little else reported and there are sellers to Mills at the close at Rs. 68 for Firsts, at Rs. 63 for Lightnings and Rs. 59 for Hearts with Daisee offering at Rs. 67.

The marking back of Loose Jute also continued with European packing recorded from Rs. 14-12, Rs. 11-12 and Rs. 10-4 for Mids, Bottoms and Cross, down to Rs. 14, Rs. 11 and Rs. 9-8. Supervised Jat sold at Rs. 13-12, Rs. 10-12 and Rs. 9-4 to four annas less, but only to a limited extent. Indian Jat quotes Rs. 13 and Rs. 10. Small business was done in Indian District Tossa at Rs. 13-8, Rs. 10-8 and Rs. 9 for Mids, Bots and Cross with later Rs. 10-8 and Rs. 9 for Bots and Cross alone. Jungli Tossa Bots sold down to Rs. 9-12. Market closes quiet and inactive with sellers keen for business.

Mofussil markets have generally followed Calcutta with buyers operating with caution and imports in better supply.

The Fabrics market has been subject to fairly sharp fluctuations and has proved responsive to bullish or bearish factors from day to day. On balance Hessians show no great change. December 9 porters were as low as Rs. 17-10, rose to Rs. 18-8 and close around Rs. 18. Similar brackets for Jan./March are Rs. 17-10, Rs. 18-4, Rs. 17-14, for April/June, Rs. 17-4, Rs. 18, Rs. 17-10 and for July/Sep., Rs. 17, Rs. 17-12 and Rs. 17-8. December and Decr./March eleven porters went as low as Rs. 23 rose to Rs. 24 and closed around Rs. 23-4.

In the Heavy Goods section the popular counters, "B" Twills and Liverpools also moved from day to day but within comparatively narrow limits. December "Bs" sold as low as Rs. 57-12 and as high as Rs. 60 to close at Rs. 58. Jan./March was marked down to Rs. 55-12, up to Rs. 58 and closed at Rs. 57-12. April/June was low Rs. 54-8, closing Rs. 56 and July/Sep. low Rs. 53-8, closing Rs. 55. Liverpools moved in similar fashion and close at Rs. 61-8, December, Rs. 60-8 Jan./March, Rs. 57 April/June and Rs. 56 July/Septr. Business generally light, and the closing tone easy. Heavy Cees were dealt in from Rs. 60 to Rs. 62 ready shipment. An order for scrim cloth amounting to about the equivalent of a crore of hessian had a temporary steadying effect as also had a call for tenders for "B" Twills and "Atta" bags for the Supply Department.

(*Continued from page* 1023)

realise the difficulties in the way of securing it. But when I am on this question of the utilisation of sterling, I should mention for the sake of completeness that for sterling balances over and above the requirements of the purposes we have indicated, the import of much needed machinery and other capital equipment immediately needed is the best outlet.

All this would need the consent and co-operation of Britain. And Britain's reactions to this demand can be easily imagined. It would, of course, be said that India is trying to feather her nest while the storms are blowing over others. It would be argued that sterling balances would be much less if Britain had not agreed to the allocation of military expenditure so far in force. It might even be suggested that, when India is made to bear her due share of military expenditure, there would not be much of a problem about sterling balances with which to excite ourselves and worry others. Well, every one of these conditions has a sound answer. But I must stop, for the present.

BRANCHES AT IMPORTANT TRADE CENTRES OF INDIA

JUTE

Calcutta, December 16.

Rather quiet conditions were noticeable in the raw jute market early in the week. With mills keeping out of the market a substantial decline in prices was recorded. The weakness of the goods market also was responsible for the decline in prices. It was pointed out last week that the decline in prices after the sustained rise in the last few weeks was quite natural. Mills were anxious to prevent an undue rise in prices and as it was not possible to get supplies of jute within a specified period it was thought advisable to keep out of the market at least temporarily. The higher rates were quite remunerative for sellers and they were quite anxious to take advantage of the higher prices. With the decline in prices in the mofussil markets and the keenness of sellers to book further orders there was naturally a marked decline in values. At the lower levels however mills have turned out buyers. A substantial volume of business is reported to have been put through on Tuesday. At the close sellers are asking for an advance in rates.

In the loose jute section rather quiet conditions were noticeable early in the week and quotations were marked lower all round. Indian Jat Middles came down to Rs. 13-8 from Rs. 15-8 per maund and are now quoting Rs. 14. On Monday, Supervised Jat Middles were done at Rs. 13-12, Bottoms at Rs. 10-12 and Cross Bottoms at Rs. 9 per maund. On Wednesday Indian District Bottoms were done at Rs. 10-8 per maund. Supervised Jat were eight annas per maund higher.

Similar conditions were noticeable in the pucca bales section. Not much of business was passing and shippers were not taking any interest in the market. Dundee Daisee 2/3 per bale were done as low as Rs. 63 per bale. They were better towards the close at Rs. 65. Dundee Tossa 4's are quoting Rs. 66 per bale after quoting lower at Rs. 64 per bale. Earlier in the week Outport Tossa 4's were done at Rs. 60 per bale.

JUTE MANUFACTURES

Calcutta, December 16.

The jute manufactures market has been rather irregular. A rather sharp decline in prices was recorded early in the week. The reason for the decline in prices was the absence of buying from oversea countries. Second-hand dealers had bought in anticipation of a further rise in prices. It appears that oversea buyers are not prepared to sell above certain levels. Our readers are already aware that ceiling prices have been fixed in the United States and importers cannot buy above these prices. In spite of the improvement in the statistical position and the possibility of an increase in exports prices may not therefore rise above parity levels. After being lower at Rs. 17-9 Porters ready are quoting Rs. 18-8, January/March Rs. 18-8, April/June Rs. 18 and July/September Rs. 17-8. 11 Porters ready are Rs. 23-12 after being lower at Rs. 22-12, January/March Rs. 23-8, April/June Rs. 23 and July/September Rs. 22-8.

In the heavy goods section there was not any appreciable decline in prices. The lost ground has been recovered with the recovery in the jute and hessian markets. B Twills for December sold on the basis of Rs. 60, Liverpool Twills Rs. 63 and Cornsacks Rs. 60.

GOLD

Calcutta, December 16.

Slightly steadier conditions have been noticeable in the Bombay gold market. There has been a revival of investment buying but on a large scale as to cause a runaway rise in prices. The rise in prices has been in sympathy with the general rise in prices for commodities. Gold ready are quoting Rs. 65 against Rs. 64-8 at the end of last week and First Settlement Rs. 64-14 against Rs. 64-6. Sovereigns have risen by eight annas to Rs. 47-8.

The London quotation is unchanged at 158s.

In the local market quotations are lower with gold ready quoting Rs. 64-6 and Sovereigns Rs. 47-8.

SILVER

Calcutta, December 16.

The Bombay silver market has been firmer in sympathy with the gold market. Indian Mint silver ready has improved from Rs. 102-4 to Rs. 104-8. First Settlement are quoting Rs. 102-12. The highest quotations touched during the week were Rs. 105-8 and Rs. 103-8 respectively.

Quotations in the Calcutta market are lower than Bombay rates, silver ready being Rs. 103. The quotation at the time of last writing was Rs. 104-8.

Quiet conditions have prevailed in the London market and the quotation for both spot and forward has remained unchanged at 23½d.

COTTON

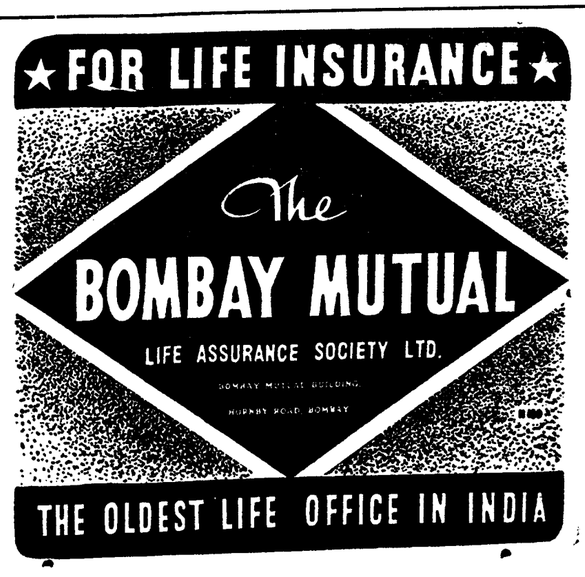
Calcutta, December 16.

The Bombay raw cotton market has been open only on two days during the period under review. But in the short time the market has remained open active trading conditions have been witnessed. The schemes to intensify production of cloth and the reports regarding the possibility of a smaller crop than estimates have been mainly responsible for the firmer tone of the markets. Closing prices are at the highest levels for the week. Intensified production and manufacture of coarser styles should mean larger consumption of Indian cotton. Operators are therefore inclined to adopt an optimistic view. Jharrilla January, 1943 are quoting Rs. 424 against Rs. 412-8 and March Rs. 417 against Rs. 404. It will be noted that a more confident view is taken regarding the future.

PIECEGOODS

Calcutta, December 16.

The news that there is to be no control of cloth prices has come as a great relief to the market. Production of standard cloth cannot also affect demand to any great extent. With the acute shortage of supplies stockists are therefore placed in an enviable position. Business passing is still on a small scale but sellers are firm in their ideas. Bengal Mills have again accounted for the bulk of the turnover. It is still difficult to get supplies from the western presidency and with the recrudescence of trouble in the important producing centres and the arrears on account of Government orders it will not be possible to send supplies on any large scale.



There are reports that the production of handloom cloth will be stimulated but the problem of ensuring adequate supplies of yarn has to be tackled satisfactorily.

INDIAN TEA LICENSING COMMITTEE

EXPORT QUOTA 1943-44.

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, Tea Estates desiring to be allotted an export quota for the year 1st April 1943 to 31st March 1944 are required to submit an application for such which must reach the Indian Tea Licensing Committee not later than the 1st of February 1943. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

J. J. B. SUTHERLAND,
Deputy Secretary.

NORTH WESTERN RAILWAY

IN YOUR OWN INTEREST

When tendering goods or parcels for despatch by rail, ensure that each package is properly addressed in English showing the destination station and the consignee's name, to avoid their loss or misdespatch. All old addresses must be entirely obliterated and old labels removed. Packages which cannot be durably marked, such as bundles of hides and skins, iron bars, tins of oil, ghee, etc., should have leather, metal, wooden or card labels attached to then showing the above particulars.

All packages must be securely packed as per railway rules, otherwise the Railway Administration will decline to books the same unless a Risk Note, Form 'A' is executed absolving the Railway from all liability for loss or damage.

It must be noted that the Railway is not liable for loss of or damage to goods which may be insufficiently, improperly or incorrectly booked, marked or addressed. Chief Commercial Manager, Lahore.

15 Points ON SAVING PETROL

8 CARBURETTORS

In these days most cars are sold with the carburettor set to give an over-rich mixture; this obviously increases consumption. On the other hand, it must be realised that to cut down the mixture strength to too weak a mixture will also give poor consumption. Obviously sticking floats or needle valves will also increase fuel consumption by wastage.

FREE Copies of our leaflet "15 Points on Saving Petrol" are available free on application to us at Hongkong House, Calcutta; in English, Hindi, Urdu, Bengali, Marathi, Gujerati and Gurmukhi.

Stock Markets to-day and to-morrow

IRREGULAR MARKETS

Again the recovery in prices on the Calcutta Stock Exchange has been spoiled by the reports regarding two enemy raids in a day in the Chittagong area on Tuesday. The news about the latest raids was received on Wednesday afternoon, just at the time when prices were quoting at the highest levels for the week. As usual, there was some selling at the higher levels and the quotations for Indian Irons and Steel Corporations came down to Rs. 33-4 from Rs. 34 and to 24 from Rs. 24-12. Rather quiet conditions are noticeable in Thursday's session.

With the reports regarding repeated raids in the Chittagong area the behaviour of the Calcutta market should be considered satisfactory. Beyond a sizeable decline in prices for the speculative counters there has been no important change in values and the undertone continues steady. The general indications are that the upward movement will be resumed any moment. Last week it was pointed out that the raids in the eastern border of India could not have any great significance from the market point of view. So far the raids have been localised and there are no signs of the Japs' ability to come far inland. Even if they did the loss to material property will be negligible. As pointed out above, operators are slowly learning to ignore news regarding raids in Assam. If there are no developments during the next few weeks the New Year will begin under very happy auspices.

* * * *

The Bombay market has been firmer during the last two days. And it can be expected that the strength of the market will continue to be maintained. Two weeks back operators were really upset over the prospect of government interference in the affairs of the cotton textile industry affecting the earnings of companies. There is now no fear in this regard. With the strength of the cotton and piecegoods markets share values must improve further. The activity in textile issues is as important to the Bombay market as activity in jute shares is to the Calcutta market.

* * * *

There is another important factor to be taken into consideration. The reports regarding the possibility of lease-lend supplies of silver being made available to the United Kingdom and Australia, in fact to every one of the United Nations, has definitely killed the silver boom. In recent months there has been a diversion of funds to the bullion market. And this movement has now been arrested. Greater attention should therefore be now paid to equities. Between now and January-end there will not be any adverse developments which will have a disturbing effect on the market. The budget can, however, have some nasty surprises for the market but then, I believe, additional taxation will be more than offset by higher earnings.

* * * *

After the excellent performance of Amalgamated Coalfields in the half-year ended September, 1942 one would have expected that another coal company in the same group and a Central Provinces colliery would have done equally well. *Pench Valley Coal Company Limited* however, experienced mining difficulties during the half-year. Difficult underground conditions were encountered at both collieries which affected output. Steps have been taken to bring raisings back to normal. The net profit, before providing for taxation and depreciation, for the half-year ended August, 1942 is Rs. 98,774. The provision for taxation is Rs. 23,000 and depreciation Rs. 18,934. The dividend has been maintained at 15 per cent. per annum.

Raisings during the half-year were 1,07,225 tons against 1,20,039 tons in the previous half-year and 1,16,314 tons in the corresponding period last year.

* * * * *

While the Pench Valley Coal Company Limited experienced difficulties regarding underground conditions the *Nazira Coal Company Limited* could not get the necessary labour owing to the demand for labour for work in the vicinity adversely affecting output. The colliery was unable to meet current orders to full.

The net profit, before providing for taxation and depreciation, for the half-year ended August, 1942 was Rs. 44,905. The provision for taxation was Rs. 16,259 and depreciation 12,000. The dividend has been maintained at 5 per cent. per annum.

* * * *

I have referred earlier to the possibility of higher taxation being offset by increased earnings. That earnings are on the upgrade will be evident from the spate of satisfactory earnings reports published in recent weeks. Only last week, the Titaghur Paper Company Limited reported reported a further rise in the net profit for the half-year ended September, 1942 in spite of increasing costs. The Indian Cable Company Limited was able to report record earnings for the year ended March, 1942 and increase the distribution to shareholders. Elgin and Cawnpore Textiles paid higher dividends as also Buland and Raza.

The earnings of 244 companies, which have published their reports during the current year, tabulated in the Cumulative Statement published elsewhere in the issue, show that the net profit, before providing for taxation and depreciation is Rs. 23.38 crores against 15.91 crores for the same number of companies publishing their reports in 1941 and Rs. 13.07 crores in 1940. There is a uniform improvement in earnings of companies belonging to the different industries. The cotton textile industry is naturally the most favourably affected in 1941-42. The shareholders have not benefited to any great extent on account of the increase in earnings, the larger transfers to reserves, depreciation and taxation not permitting any appreciable increase in the distribution to shareholders. There are individual cases, however, where substantially higher dividends have been paid to shareholders.

With the increasing tempo of activity it need hardly be mentioned that profits will continue to increase.

State Railway coal tender results have been announced this week. In these days of wagon shortage these results cannot possibly have any great effect on the market. Demand for coal at the present moment is limited only by the availability of wagon supplies. On account of the acute shortage of wagon supplies the country has been divided into various quota areas and buyers have been asked to take their coal requirements from the nearest collieries. Generally, higher rates are to be paid on railway purchases. The acceptance of tenders for the supply of coal might be pointed out as an assurance of wagon supplies for the companies concerned

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

CALCUTTA, Dec. 17.

Rather steady conditions were noticeable on the Calcutta Stock Exchange till Wednesday afternoon. Operators were inclined to ignore the reports regarding the repeated attacks by the enemy in the Chittagong area. The news regarding Rommel's flight westwards also has had an encouraging influence. The highest levels for the week were touched yesterday morning, Indian Irons being noted at Rs. 34 and Steel Corporations at Rs. 24-12 respectively. The reports regarding the Jap air attack on Chittagong twice on Tuesday had a discouraging influence. There was no panicky selling however. The undertone in the several sections is steady. With the spate of encouraging earnings reports and the satisfactory settlement reached with the cotton textile industry it can be expected that markets will continue to be firm.

The giltedged securities section has been steady with quotations more or less unchanged. Easy conditions prevail in the money market even though there has been a further rise in the average discount rate to one rupee and eleven pies per cent per annum from on rupee and five pies per cent per annum last week. 3½ per cent Paper is unchanged at Rs. 94 and 3 per cent. Paper at Rs. 80-8. Among terminable loans, a small lot of 3 per cent 1949-52 Second Defence Loan was done at Rs. 100-1. 3 per cent Defence Bonds were done at Rs. 102-12 and 4 per cent 1960-70 at Rs. 110-5. 3 per cent 1963-65 were Rs. 95-8 and 5 per cent 1945-55 Rs. 109. 4½ per cent 1955-60 were Rs. 114. Among Provincial Bonds 3 per cent U. P. 1952 were Rs. 99-7, 3 per cent Punjab 1948 Rs. 104-8 and 5 per cent 1944 U. P. Rs. 104-8.

Among public bodies' debentures the only transactions recorded were in 6 per cent. *Calcutta Port Trust* debentures at Rs. 121-8 and 3 per cent *Calcutta Municipal* debentures at Rs. 94-8. Among industrial debentures 5½ per cent *Dalmia Cement* debentures were done at Rs. 105 and 5½ per cent *Belsund Sugar* debentures at Rs. 100-8.

Among bank shares, *Calcutta National Bank* were done at Rs. 12-2 and *Reserve Bank* at Rs. 104.

Cotton shares have not been active and quotations are more or less unchanged. *Basanti Cotton* were Rs. 9-2, *Benares Cotton* Rs. 9-1, *Cawnpore Textiles* Rs. 16 and *Kesoram* Rs. 16. *New Victoria* were uninteresting at Rs. 8-7.

Coal shares have been uninteresting with *Bengal* at Rs. 407, *Burrakur* at Rs. 14-1, *Dhemo Main* at Rs. 13-4 and *Equitable* at Rs. 35-14. *Amalgamated* have been marked higher at Rs. 32 on the publication of the report for the half-year ended September, 1942. *Ghusick* and *Muslia* were Rs. 5-11 and *Pure Sitalpur* Rs. 14-8. *Rewa* were Rs. 29-12 and *West Jamuria* Rs. 32-12.

In the jute section, the better class shares have remained steady. *Adamjee* were Rs. 27-10, *Anglo-India* Rs. 354, *Bally* Rs. 265, *Empire* Rs. 29-8 and *Ganges* Rs. 358. *Hukumchand* continued to be in demand, the quotation being around Rs. 20-12. *Kamarhatty* were Rs. 505 and *Kankinarrah* Rs. 409. *Orient* were Rs. 194 and *Shree Luchminarain* Rs. 15-2.

In the Engineering section, *Indian Iron* and *Steel Corporation* recovered to Rs. 34 and Rs. 24-12 respectively. There has been a decline on selling at the higher levels to Rs. 33-4 and Rs. 24-4 respectively. *Burn & Co.*, were Rs. 354 and *Kumardhubi Engineering* Rs. 6-10. *Bhartia Electric Steel* were Rs. 17-12 and *Braithwaite* Rs. 8-15.

There has not been much doing in the sugar section. *Buland* were Rs. 43-10 cum-dividend and *Raz Sugar* Rs. 42 ex-dividend. *Carew & Co.* are lower at Rs. 14-11. *Champarun* were Rs. 25, *Dyer Meakin Breweries* Rs. 11-12 and *U. P. Sugar* Rs. 15-10.

Tea shares have continued firm though the upward trend in prices appears to have been arrested at least for the time being. *Banarhat* were Rs. 590, *East India* Rs. 11-7 and *Rajnagar* Rs. 11-10. *Bishnauth* were Rs. 31 and *Hattikhira* Rs. 26-2. *Patrakola* were Rs. 1,050 and *Tezpore* Rs. 10-12.

In the miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were noted at Rs. 3-2 and Rs. 2-8 respectively. *B. I. Corporation* were done at Rs. 6 and *British Ceylon Corporation* at Rs. 14-4. *Bararee Coke* were Rs. 27-10 and *National Insulated Cable* Rs. 12-10. *Rohtas Industries* were Rs. 25-9. Among Paper shares, *Titaghur Paper* were quiet being quoted around Rs. 22-5 cum-dividend while *Mysore Paper* were Rs. 20-12 and *Orient Paper* Rs. 24-12. *Bengal Paper* were Rs. 173 and *India Paper Pulp* Rs. 167-8.

Among preference shares, *Hooghly* were dealt in at Rs. 20-4 and *Hukumchand* at Rs. 156. *Lansdowne* were Rs. 131 ex-dividend and *Rameshwara* Rs. 160-8. *Kumardhubi Engineering* were higher at Rs. 172 while *Steel Corporation of Bengal* were Rs. 117. *B. I. C.* were Rs. 185 and *Orient Paper* Rs. 109-8.

BOMBAY STOCK EXCHANGE

(From Our Correspondent)

BOMBAY, Dec. 16.

Rather quiet conditions were noticeable in the local market early in the week. Prices were fluctuating in narrow limits in sympathy with the Calcutta market. However, as the week progressed, a firmer tendency has been in evidence and closing quotations are at the highest levels for the week. The encouraging news from North Africa and the fall of Buna were encouraging factors. The strength of the raw cotton market also was helpful.

With the fears regarding government control of industry affecting companies' earnings set at rest textile issues have come into their own. Rises of 30 points for the

†Includes a bonus of 5 per cent.

(Half-yearly meeting, 8th January, 1943 at 12 noon).

Audited accounts for the half-year ended 30th September, 1942:—

After allowing for taxation, including Excess Profits Tax, etc., show a balance of Rs. 17,91,972-3-4. There has been set aside for Depreciation Rs. 3,86,436-9-2.

	Rs.	A.	P.
Transfers have been made to—			
Reserve for Deferred Mill Renovations ..	2,00,000	0	0
Debenture Redemption Reserve ..	2,50,000	0	0
Labour Quarters and Welfare	50,000	0	0
Revaluation of Stores and Stocks ..	1,50,000	0	0
Indian Workers and Staff Pension Funds ..	60,000	0	0

The balance remaining after giving effect to these transfers is Rs. 6,95,485-10-2 which, together with Rs. 1,47,306-3-5 brought forward from last half-year, gives a total of Rs. 8,42,791-13-7.

The directors propose that the balances available for distribution be disposed of as follows:—

	Rs.	A.	P.
In paying a Dividend on 1st Preference Shares at the rate of 8 per cent per annum, without any deduction for Income-tax paid by the Company	46,000	0	0
In paying a Dividend on 2nd Preference Shares at the rate of 5 per cent per annum, without any deduction for Income-tax paid by the Company	37,500	0	0
In paying a Dividend on Preferred Ordinary Shares at the rate of 10 per cent per annum, without any deduction for Income-tax paid by the Company	21,375	0	0
In paying a Dividend on "A" and "B" Ordinary Shares at As. 8 per share, without any deduction for Income-tax paid by the Company	3,50,150	0	0
In paying a Bonus on "A" and "B" Ordinary Shares of As. 4 per share, without any deduction for Income-tax paid by the Company	1,75,075	0	0
In carrying forward	2,12,191	13	7
Total ..	8,42,791	13	7

Except for the strike period at No. 1 Mill, Titaghur, for a part of April, during the period under review the Mills have continued to work at full production in all Departments and the results have been satisfactory.

Manufacturing costs still continue to rise due to the increased costs of all raw materials and coal, machine clothing, machinery spares, etc., and chemicals, both imported and locally produced. It has been found increasingly difficult to obtain an adequate supply of chemicals for pulp production, especially as the Mills are endeavouring to increase their production of pulp and paper. The position is further aggravated by transport difficulties, which are making it harder than ever to ensure regular supplies of the main raw materials, bamboo and sabai grass.

As far as the Mills are concerned, the maximum general market prices arranged in January in conjunction with the Government of India for the main qualities of paper are still being maintained, although the original arrangement was intended to last only for six months.

The Government of India have recently issued an Order under the Defence of India Rules calling upon all Paper Mills to reserve 90 per cent of their production for the Central Government, the Provincial Governments and the Governments of Indian States. It is understood that this demand is mainly due to the large tonnages of paper now required for the Army and for administrative purposes. The balance of paper remaining for the civil demand will not be sufficient to meet the needs of trade and commerce and educational institutions, so that representations are being made to endeavour to obtain a larger proportion of the production for the general paper-consuming public. It is, however, obvious that there is an extremely acute shortage of paper, and that the strictest economy in the use of paper must be carried out by everyone.

A sum of Rs. 2,00,000 has been set aside in a newly created "Reserve for Deferred Mill Renovations." It is considered advisable that this should be done in order that money, which ought to be spent at the present time on Capital replacements, but which cannot be spent owing to the difficulty of obtaining supplies, should be set aside and accumulated for immediate use when the War is terminated and conditions are normal.

A further sum of Rs. 2,50,000 has been set aside against the redemption of the present Debenture issue in 1946, and the equivalent sum is shown invested in the Company's own debentures.

Reserve for Revaluation of Stores and Stocks has been increased by Rs. 1,50,000 against a probable slump in stock values which ultimately may be expected. Rs. 50,000 has been allocated to Reserve for Labour Quarters and Welfare, whilst Rs. 60,000 has been set aside for the Trust Funds for provision of Pensions to Mill employees. The nominal value of investments held by the Trustees on account of the two Funds on 30th September, 1942, was—

(a) Indian Workers' Pension Fund .. Rs. 3,95,500
(b) Indian Clerical Staff Pension Fund .. Rs. 2,03,700

Managing Agents.—Messrs. F. W. Heilgers & Co.

Synopsis of the balance sheet as at 30th September, 1942: —

IMPERIAL BANK OF INDIA

NOTICE is hereby given that the Principal Register and the Branch Registers of the Imperial Bank of India will be closed for transfer of shares from Saturday, the 2nd January, 1943 to Saturday, the 16th January, 1943, both days inclusive.

W. LAMOND,
Managing Director.

Bombay, 18th November, 1942.

(*Continued from page* 1030)

popular counters have been recorded. Steel issues have been marked higher in sympathy with the other sections.

Government Securities.—This section is quite steady with prices maintained. 3½% Government Paper is quoting Rs. 94. Among short and long dated loans 3% 1951-54 improved to Rs. 99-15 from Rs. 99-4. 3 per cent Defence Bonds 1946 were Rs. 102-12 and 3 per cent 1963-65 Rs. 95-8.

Textiles.—The firmer tendency noticeable at the time of last writing in this section has been maintained this week also as all fears regarding Standard Cloth proved to be baseless and as the war situation was encouraging. *Bombay Dyeing* are quoting Rs. 1,706-4 as against Rs. 1,690 last week. *Central India* are quoting at Rs. 397 while *Century* were done at Rs. 622 as against Rs. 616 last week. *Colaba* were at Rs. 229; *Gokak* at Rs. 352; *Indian Bleaching* at Rs. 237; *Kohinoor* at Rs. 625; *Phoneix* at Rs. 641-4; and *Swadeshi* were done at Rs. 453 as against Rs. 447.

Steels.—Steel issues have improved later in the week. *Tata* Deferreds are quoting Rs. 1,732-8 as against Rs. 1,692-8 on the first day. *Tata* Ordinaries changed hands at Rs. 359 as against Rs. 349. *Indian Iron* were done slightly higher at Rs. 33-4.

Miscellaneous.—This section has been better with good inquiry for *Tata Power* which were done at Rs. 1,672-8. *Andhra Valley* were steady at Rs. 1,780. *Belapur Sugar* were marked higher at Rs. 225. *Bombay Burma* Olds were further lower at Rs. 335.

On account of the Christmas Holidays the next issue of "INDIAN FINANCE" will appear on Wednesday, December 23, 1942.

(*Continued from page* 1029)

but these companies would in any case have been in a position to sell their coal. The liberal allotments are in the case of those collieries which have the smallest haulage. Thus the Pench Valley Coal Company will be supplying 213,000 tons in the next financial year. The annual raisings of this company total only about 240,000 tons so that it can be said that the entire output of the collieries is taken up by the Railways.

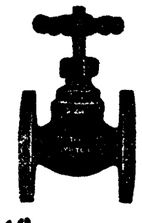
Editorial Comments

World Finance—1941-42

Since the outbreak of war Europe has been to the student of world economy but a dark continent. But Basle is still a window looking out on the whole world; and the latest report of the Bank of International Settlements affords welcome intelligence of economic changes in a world torn by war. The Bank had little to do except to manage its investments, but it did keep an eye on the vast changes produced in all lands by the war. That the Bank has lost deposits and drawn on its reserve for paying a dividend of six per cent is neither surprising nor even, in present conditions, ordinarily interesting. The changes in the world's economic life are far more important. And in a review of the Bank's report one may be content with noting that guesses made as to the stability of the Swiss franc and the depreciation of the dollar in 1941 are shown to be correct. Similarly, the belief that the escudo is an international currency receives special support from the report which indicates that the U.S.A. is helping Latin America in many ways, with the result that the depreciated currencies can look the dollar in the face. Neutrality again causes difficulties as Argentina has found in regard to imports. The republic has been forced to use exchange balances for determining both the quantum and nature of imports.

What is of enormous significance to the future is the emergence of a multilateral clearing system in two centres as far removed as Berlin and New York. Berlin says how and when Europe's trade shall flow while New York determines the channels along which the trade of the new world shall flow. And to these one must add the Japanese bloc, where the Japanese lay down the law for the countries Japan has occupied. But, though foreign trade in present conditions is not strictly an exchange of surpluses for export surpluses, it is well to note the changes that have occurred in the internal economy of the various countries under the stress of a world war. While the war effort in Germany takes off about four-sevenths of the national income and Britain absorbs 60 per cent of the national annual income, little is left by way of saving after mobilisation of resources in both countries. Disinvestment is a familiar process when the national income is not enough for the war. Drafts on capital are made to maximise war effort. Current revenue is inadequate, even in the U.S.A. If earned incomes, particularly wages, have risen, the lift in the price level is universal and pronounced. Foreign loans are viewed as impossible; and indirect taxation has risen, particularly, in Britain, Germany and the U.S.A. That the war effort causes a fall in consumption is widely known. The fact stands out as illustrative of the initial guess in 1939 that Europe's standard of living must fall. In Sweden the supply of goods has shrunk and measures against inflation have been enforced by a slowing down of economic activity. Taxation and borrowing of various kinds have been resorted to for taking off purchasing power. But price policy alongside of rationing is an element in anti-inflationary measures. Monetary measures are not enough by any means. If the Government of each country wants to keep money cheap, and borrow at the lowest rate compatible with regular saving there is no need to labour the point that the volume of investible money, in itself, presents a danger.



For those who look for guidance on price policy and control of profits the report has perennial value. In neutral Sweden the fall in interest rates has been officially checked, but elsewhere the tendency is to exploit cheap money and the increased, involuntary savings. But there is a danger to which the Bank's report invites attention. The President observes in a number of countries the volume of liquid funds has sought an outlet in the purchase of capital assets, particularly shares the prices of which have sometimes risen to such levels that the authorities have seen fit to intervene. Measures then taken are explained by a desire to prevent a flight from the currency. At a time of growing tension between increased supplies of money and reduced supplies of goods, when the public must be induced to buy Government securities or at least to leave its money unspent with banks and other credit institutions, confidence in the currency becomes a question of prime importance. In the final analysis, this confidence can be sustained only if the new money issued to the public will in the future retain its power to purchase goods and services without any too substantial impairment.'

In an earlier report of the B. I. S. there was a warning against inflation. Difficulties of investment e.g. in houses and land and the impaired will to save were mentioned directly. The latest report indicates that inflation has not been wholly avoided or neutralised. More than once it is insisted that any disturbance of the fundamental equilibrium between circulation and turnover of commodities calls for a departure in both price and monetary policy. The drastic supervision of prices to which the Indian Government stands pledged, is latterly viewed as necessary for the maintenance of confidence in the currency. The virtual stability attained in Germany where the price-stop system has been in force since 1936 is distinguished from the changes characteristic of other countries. In the Reich wages are rigidly controlled from 1939 and profits as well from 1940. Changes are permitted only for increasing production and subsidies for keeping down prices to fit in with rationing arrangements are typical of both Germany and Britain. The manufacture of substitutes in place of imports has been helpful, and the overvaluation of the mark, over a long period, made it independent of the changes in purchasing power characteristic of other currencies. That wages should not be adjusted at once to changes in the cost of living may seem harsh doctrine, but Switzerland has decided in August, 1941, that only half of the rise in the cost of living there can be met by an increment to wages. Up to the end of December, 1941, the smallest rise in the cost of living was reported by Germany—5 per cent as against 28 per cent in Britain and 21 per cent in India as compared with the June, 1939, base. It is demonstrated that wages have not risen to the same extent as prices in Britain for the subsidies paid by the Ministry of Food have mitigated the rise in prices, and the memorandum on wage policy issued in July last testified to a resolute desire to curb the cost of living.

Discrimination in respect of dearness allowances has been characteristic of Italy, as also Switzerland, and the principle of family allowances has been accepted to a certain extent under war conditions in many countries. Price policy has to be supported continuously by rationing devised to secure equitable distribution, to counteract the rise in prices by cutting down demand, and to reduce spending and thus increase savings. One cannot ask for a more cogent or succinct defence of a principle that has been accepted by the U.S.A. and has hardly secured attention in India where the black market thrives even without the advent of rationing.

As to the future the report merely points to the difficulties in the way of a post-war boom, based in part, on inflation. Exceptional liquidity still maintained carries little risk with it, and any boom based on reconstruction and public works financing can have little or no effect on private enterprise. The report inclines to the view that budgetary equilibrium can be achieved, if specific war expenditure terminates. The tax

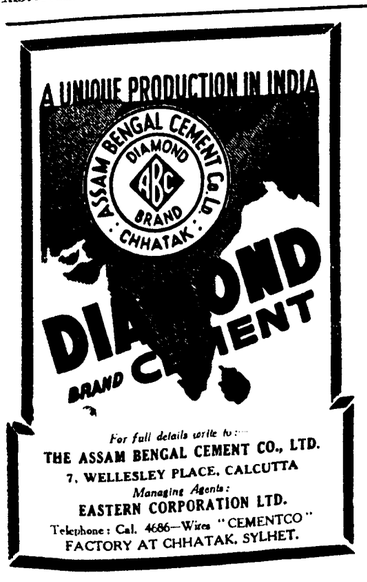
system has been reorganised in most countries and post-war speculation in real estate or the stock market is more remote than seems possible.



From the survey of controls in various countries one broad fact emerges. To prepare for the tasks of reconstruction as early as possible is a duty conditioned as much by the minimum errors as the immensity of the shocks imparted by the war. In adhering to the familiar division of chapters the report is not unusual. But it makes clear that trade has changed in nature. Clearing agreements determine the flow of trade in Europe. Switzerland has made agreements with Spain for subsidising imports. The hardness of her currency and a falling export trade, combined with her own imperative need of imports, influenced the decision to impose equalisation charges. Foreign trade and foreign exchange are not free even in the neutral countries. The Swiss national bank lays down the rules as to the disposal of dollar balances. In Sweden too licensing of transactions involving dollar exchange is in force. Berlin (represented by Dr. Funk on the B. I. S. and Baron Schroder) is the conduit of France and of all Occupied countries. Bulgaria and Roumania adjust balances by reference to Berlin. Only Portugal, Spain and Turkey stand outside the clearing arrangement. Swiss trade with Denmark or Holland has to be settled by the Berlin clearing. Multilateral clearing has its merits, in German eyes, and when Germany is able to export freely in peace, the system is expected to give results up to German anticipations.

The blocking of oversea assets belonging to many nations has reduced the importance of foreign exchange though not of foreign trade. In spite of a free market for dollars, outside the conventional rate of 4.3 Swiss francs to the dollar, the dollar was strengthened by the control of imports of domestic and foreign currency from March, 1942. In the U.S.A. too licensing of trade followed the blocking of assets of many countries. The trade in foreign bank notes at levels below the official rate continued throughout 1941 into 1942. It is noteworthy that the Reichsmark depreciated to a greater extent as repatriation was more difficult. French francs slumped heavily even before the export of notes was forbidden in April, 1942. Depreciation characterised the U. S. dollar as well and in the spring the free market reported a rate of 2 francs to the $ equal to 8 francs to the £ while the £ note itself was exchanged only for a third of the registered rate of 17.35 francs to the £.

The report speaks of the perfection of exchange control by Britain in the course of 1941. Registered accounts and special accounts came into greater vogue. The financial agreement with Russia in July, 1941, covered a payments agreement with a prescribed rate of 21.38 roubles to the £ equal to a rate of roubles 5.03 to the U. S. dollar. The rates have to be remembered in relation to the absence of details concerning trade with Russia. While much trade is covered by lease-lend, there is likely to be more than a vestige of non-official trade. The rouble has depreciated heavily at home, but the subsequent financial agreements render all changes unimportant. A full account of the black market in exchange in Shanghai has only historical interest. The market was knocked out by the freezing order of July 25 passed by the U. S. and British Governments. The Chinese Stabilisation Board was helped to maintain the external value by the licensing of fourteen banks to deal in foreign exchange under the freezing order. Exchange control was enforced from without by new payments agreements. China's troubles ended largely with the U. S. credit of 500 million dollars. The improvement does not correspond to the revised rate fixed by the Nanking regime for the rival currency. It is recorded that the struggle of the dollars continued in North China, but in the blocking of bank deposits there is only a measure of the decay proved by the rate of 2 to 1 as between the Chungking and the Nanking dollar for the conversion of debts and bonds in the older Chungking currency. The independent yen has undergone the same changes, through clearing arrangements and transfer of balances. The stimulation of gold output is an avowed object of the Japanese Ministry of Finance. The military yen is a new-comer among world currencies. It is usually described in the name of the local currency. Thus the Hongkong dollar was rated as equal to yen and the Hongkong dollar's value was fixed at 4.61 Chinese dollars. The note circulation in Japan, as also the occupied territories, has risen, and the yen's value at present in gold is only to be guessed. The yen bloc, however, has been consolidated like the sterling area and the Reichsmark-free currency group. The groups are not interdependent to any extent, but stability has been retained by the sterling-dollar groups through the extension of trade relations.

Changes in economic conditions, except perhaps in the case of Iran, are not reflected in the course of exchange rates. The decline in purchasing power makes for instability as the report argues in its reference to problems that will demand solution sooner or later. Capital movements after the war may produce changes of their own accord, but mal-adjustments exist. The true line of reform is held to be an adaptation of costs to produce a correct monetary policy. Any revival of oversea trade must be largely independent of exchange control, but control must be retained and the familiar trade dilemma for most countries will remain. If that has disappeared for Britain through lease-lend arrangements in force and the trade pact of February, 1941 has eased relations between Italy and Germany, there is little doubt it will appear. For the present Britain has given up her export drive and does not care to defend sterling. The Reich too does not care for exports and limits exports to supplies essential for importers.

The underlying unity of monetary and financial measures in Europe stands out in spite of the abrupt contraction of trade. The German grip on the Balkans has tightened through development of trade; but Turkey like Spain has reduced perceptibly her share in the German market in the war period. The steady fall in the foreign trade of France is independent of the depreciation of the franc; but the reduction in exports to Switzerland to pay for French purchases proves that difficulties, not altogether resolved by the flow of Colonial supplies, must have increased. The fall in Spain's food exports in 1941 will have its own effect on her neighbour, for Spain is on balance an importer.

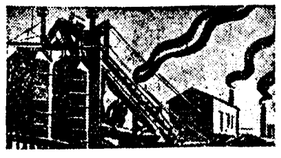
THE OLDEST LIFE OFFICE IN INDIA



In presenting clues to the economic situation in many belligerent countries, the report is distinctive. The growth of Anglo-American trade in the war sheds no light on the situation in Eire. The extension of arable cultivation, caused by a fall in food imports, is not peculiar to Eire, but the contraction of trade, reported by another neutral proves that Sweden is not alone in struggling with shortages for which larger exports to Germany and Italy are no remedy. Regimentation and discipline is the chief result of the war. There is no free economy. In one way or other every economy is closed. Of the existence of restrictive rules in India many are conscious but neutrals too have applied the same rules. But the principle of collaboration for the purposes of the war is generally accepted by both sides. Joint endeavour is loyally promoted even in the encouragement of imports of special types. The concentration and accentuation of effort involves a new alignment of forces. Co-operation has been developed in relation to the needs of others. If the report looks away from autarky as practised under duress, it emphasises that severance of relations with enemies and closer relations with allies create new ties and new obligations. India has just reason to incorporate that notion in the existing stock of ideas on post-war financial conditions and relationships.

KNOWLEDGE GAINED SOME THOUSAND YEARS AGO-

paved the way to present-day achievements.

Some thousands of years ago, the Asuras, ancient enemies of the Gods, brought an end to the stone age in India with their discovery of metal. Historians connect this ancient tribe with the Agaria, who even unto this day are the iron smelters and blacksmiths of the Central Provinces. For centuries their simple ploughs and harrows have raised rich crops in the wild uplands of the Maikal Hills.

At this time when Indian industries are rapidly expanding in the development of which iron and steel play such a vital part, we pay homage to this ancient tribe, whose iron brought the law of plenty to the jungle—so long ago.

Rivals of Jute

The U.S.A. apart from encouraging the use of cotton bagging is interested in growing hemp. The Indian Jute Committee's bulletin for November reproduces an article which states that the search for substitutes for Manila hemp in making cordage continues. Haiti and Cuba have been tapped for sisal and Mexico is to provide henequen. The entire production of Yucatan is to be taken by an arrangement in force till June 1945. Mexico is to provide sisal too. The Board of Economic Warfare contemplates the growing of other fibres in the U.S.A. and adjacent countries. Cuba is asked to grow sansevieria fibre, said to be as strong as sisal. Cuba is considering also production of American hemp, said to be the source of a narcotic. The U.S.A. however, intends to go ahead with the production of American hemp in accordance with the W.P.B.'s plans. A chain of mills of process hemp is to be set up. Subsidies may be given for this purpose. Other fibres are not being overlooked, and the reports as to flax in Oregon fit in with the jump in Canadian flax production. Peru, too, has become a source of flax and the W.P.B. is manifesting much interest in progress there. Yucca, a wild Western fibre, is to be developed by private interests in the U.S.A. The same bulletin speaks of attempts being made to expand fique production in Colombia. Production certainly showed a big increase last year. The fibre more often grows wild in Colombia and the transport difficulty is great at present but the U.S.A. is a promising market while coffee sacks are made of the local fibre for Colombia's chief export, amounting to four million bags at present. Attempts are being made to improve the texture of sacks, and fique is likely to be a serious rival of jute in the future. While the U.S.A. is trying out Central American fibres, Europe has resorted to staple fibre. Production in France rose substantially in 1941 despite many difficulties. Vegetable fibres from Spanish gorse and typia are also being tested in France where substitutes are not enough to meet the shortage caused by the war.

Silica Bricks

A paper dealing with the silica brick was read before the Newcomen Society is summarised in the Martin-Burn Magazine of this autumn. The silica brick is the result of progress in metallurgy. When coal and coke came into use Selborne and Reigate stone ceased to be adequate. Special furnace bricks known as Windsor and Stourbridge bricks were produced for copper smelters in Britain in the 8th century. But it was not until William Young invented the silica brick that a high grade firebrick was available. A small amount of lime was used as a binder for bricks, made of high silica content rock, obtained from South Wales. David Morgan of Neath helped Young to come out with his secret process. The material was clay secured in the Vale of Neath. Iron and aluminium were present along with silica in the powder, moulded into bricks and fired in a closed circular kiln. In a very old account of the method used in Wales, it was stated that seven days of hard firing were required for making high-grade silica brick, and seven days for cooling down of the kiln. By the addition of lime it was ascertained by Young that the bricks came to expand, being vastly different from ordinary bricks made of fireclay. The expansion binds the roof of the furnace into a solid mass. Steel plants and coke ovens have since Dr. Percy wrote on the way of making silica bricks. learnt much about the value of the silica brick for modern furnaces. India is not unacquainted with the use of silica for refractories, and firebricks of various types are made in more than one part of the country at present.

Problems of Scarcity

At this time when food supplies are being widely discussed, figures appearing in the official crop forecasts have special importance. An increase of 52 per cent. under the jute acreage and of 65 per cent in outturn this year has no meaning except where the increase in area has occurred at the expense of rice. An increase of 11 per cent in the area under the groundnut this year is the answer to the demand for vegetable oil caused by high prices at home and no imports of copra. The first rice forecast pointing to a total acreage of 67.64 million acres has not caused much enthusiasm. An increase of 2 per cent in area is of little value. The mistake made in regard to jute cultivation will weigh heavily on the country. Not the promise of relief to jutegrowers made by the Central Government, but the original mistake, calling on Bengal to increase jute cultivation in 1942 stands out. The final rice forecast of 1941-42 indicated a total area of 73.16 million acres with an estimated outturn of 25.56 million tons. Owing to flood and drought, the crop of 1942-43 should be much less. Damage to standing crops has been reported in South Punjab as also Madras and Deccan.

The commercial crops in the Punjab are said to be in fair condition, but locusts have already appeared in the South. If prospects for the rabi-crops in most provinces are summed up as fair, it may be noted that in C. P. kharif crops on light soils were not doing well according to reports.

The usual estimate of outturn is not available in the case of rice or sugarcane at present. The increase of 2 per cent in area does not imply a corresponding increase in yield in either case. If the area under gingelly and groundnut has risen by 11 per cent this year, owing to the contraction of cotton cultivation, the forecasts do not suggest that grains will be plentiful in any Province. The no-export principle is generally endorsed and how Bengal is going to overcome the rice shortage when wheat exports from the U. P., are going to fall, is yet to be shown. The lack of balance between food crops and money crops in India is indeed demonstrated afresh. That Bengal was induced to grow jute, even when Burma was lost, shows where the responsibility, truly lies. It is a more serious mistake than the U. P. Government's order to restrict cane cultivation and sugar output last year. In every country except India, food crops have increased substantially in the war period. The winter wheat crop in the Punjab may be below expectations so that only an assurance regarding seaborne imports in the next year can allay anxiety. If rice can be obtained from Arakan next year many problems will disappear, and the present offensive in Burma is invested with special significance for the rice trade in Bengal. The usual

press note has not arrested the rise in prices. Supplies rather than price control will determine both consumption and prices. Famine is likely in Madras for the monsoon there has been very weak and commandeering, resorted to in exporting districts, is merely proof of the acute scarcity. There has been no official assurance as to exports of grain in the future but the Provinces must insist on an absolute prohibition of all exports or re-exports of grain, pulse and flour. That has been done already, and Chambers of Commerce are less worried over the problem of opening cut-price shops for the working class.

France Turns Back

Interest in the affairs of France has not ebbed after Laval's open prayer for a German victory. The evacuation of the airfields in the Channel Islands reduces the protection afforded to Brittany and Normandy. It also makes re-conquest possible after two and a half years of Nazi occupation. The renewal of the air war and of artillery attacks across the Channel are but incidents in the greater campaign for the liberation of France. The entire overseas Empire is lost to the Nazis who are compelled to hold the Central Mediterranean with increased handicaps. To that extent, France gains, and the advocates of collaboration suffer. Forced drafts of French workers, reported often, are not likely to make Laval popular, and the episode at Toulon illustrated only the strength of anti-Laval feeling. Hitler cannot start a morale campaign in Vichy for the veneer of Fascism has peeled off in France with the abdication of Petain. Laval has little chance of playing Hitler to Petain's Hindenburg, for Laval has no military reputation and no diplomatic successes to show at home. The present anxiety of Laval to make fresh terms for himself is indeed readily explained by the boiling over of patriotic feeling. If nothing is heard at present of strikes in the South, it is certain that the South has not forgotten either the Republic or its great days.

Hitler's failure in Russia has destroyed the simple faith that collaboration was safer. The German air force is weakened by its tasks in the Mediterranean, and Northern France, resolutely raided by the Allies day by day might have formed a different opinion of Allied strength in the air. Defeatism of a new type has set in after the war broke out in the Western Mediterranean. The collaborationist is weakening as doubts grow more acute. If the Allies have not touched Marseilles they have not spared Genoa or Naples, and blows at Italy must convince France that her neighbour may soon be as weak as herself. The winter campaign in Russia again supports the belief that German defence all over Europe is less formidable and active than originally supposed. The retreat of Rommel into Tripoli has added to the immediate anxiety of Italy. Every blow at Fascism must inspire France to get over or round the collaboration programme framed by Laval. Rundstedt's army may have to face a national rising sooner than later. Demonstrations in Italy prove that a third front may soon emerge from which Hitler can hope for no advantages.

Another Story

The output of coal in Western Germany has fallen according to the most recent Swedish press reports. The shortage of labour is attributed to the exodus following the repeated air raids on Western Germany. The German fuel ration has been reduced by 10 per cent as a result of the falling output. The failure to deliver coal on schedule to Sweden and Norway has been frequently attributed to the difficulties at home. The industries of Occupied Norway have suffered like those of Sweden. The larger demands made by Italy will reduce the surplus available for export, and Germany's chief export will decline at the same time as her own requirements increase. Synthet oil will be required in greater quantity the air force is said to be short of fue while it has heavier work to do, especia ly, in the Mediterranean. France ar Belgium can help little as the oil plants a far away and further the Belgian co ration has been cut as punishment f sabotage. Vastly different is the story recovery coming from Russia. The co mines of the Moscow basin have been p into commission. In September, 1942, th output reached its pre-war output, and th

City and Province were well placed in regard to coal. Russia had even then plans for expanding output to make good the loss of the Donetz Basin. The Coal Commissioner urged that the basin should provide fuel for the power stations, railways and the industries of Central Russia, Moscow and of the Volga regions. The erection of a big blast furnace in the Urals proved that the industry after its forced shift made big progress. As for the Eastern occupied territories the Reich can get little out of them as she cannot send out machinery for their agriculture. Germany according to a recent broadcast, is experiencing a shortage of machines as well as men at present.

The Beveridge Plan

Sir William Beveridge has explained his plan in a recent broadcast. The aim is social security as laid down in the Atlantic Charter. According to Sir William, the plan has three sides. It includes a scheme of all-in social insurance for cash benefit. It includes a general scheme of children's allowances, both from the responsible parent, if earning, and when he is not earning. It includes an all-in scheme of medical treatment of every kind for everybody. The benefits are to be secured through social insurance for all citizens, not only workers, though not in the same way. The benefits proposed include pensions in old age, funeral expenses, medical treatment by a single insurance contribution paid through one insurance stamp. A flat rate of benefit for a flat contribution is envisaged. Equality extends to that. The benefit said Sir Wililam, will be high enough to provide subsistence and prevent want, and it will last as long as unemployment or disability lasts, without the Means Test. The only exception to the flat rate of benefit is in cases of disability due to industrial accident or disease, in which case, an industrial pension proportioned to the earnings lost, but not less than disability benefit will accrue.

The insurance scheme of Sir William provides for other needs including maternity and widowhood and also training for new occupation. Industrial pensions, in his view, are only one kind of pension. Assistance pensions are to be provided in other cases and retirement at the age of 65 or (60 for women) is not compulsory. The scheme is meant to encourage men and women to keep on working, while they can. Past contributions are meant to confer something more than a right to pension. The provisional rate of benefit according to Sir William's estimate, is two pounds per man and women in unemployment, disability or as retirement pension, with lower rates if a person is single or a spouse is working. The basic allowance for a child, namely, 8 shillings is to be added thereafter to the benefit. A couple with two children should ordinarily get 56 shillings per week. Sir Wil iam suggested that the contribution necessary for such benefit is 4/3 every week, from the adult beneficiary and 3/4 from the employer with the State paying the remainder. The contributions are to provide for a national minimum. It has been indicated in this case that the national minimum is different from the benefits provided by insurance schemes in force in other lands. It is a British plan, said Sir William, in summing up the features of his scheme which he compared to that adopted in New Zealand. A full health service is also part of the security plan, and the people's health movement should gain from the benefits promised in case of disease. The amplified health insurance plan was left open for further enquiry, said Sir William who said that the national minimum for every citizen included being well.

Food Supplies For Bengal

More than one reference to the short supply of food grains has been made of late. At the last quarterly meeting of the Indian Chamber of Commerce, Mr. R. L. Nopany described both the features and the factors. He stated that the deficit was aggravated by exports to neighbouring countries. He, too, objects to exports to Ceylon. Most Provinces are thinking of discouraging exports, even to other Provinces. Mr. Nopany does not think that the Food Department will by itself provide redress. Mr. Nopany's own solution favours the immediate removal of price control, and the provision of adequate transport facilities. Mr. Nopany's oblique refrence to non-Indian monopolies seems to be beside the mark. The control of rice exports by the Burma Government was accepted readily in the past and no case can be made out against the steps taken in Assam to procure and maintain supplies.

At another meeting last week, the food supply position in Bengal was described in detail. Mr. A. C. Sen declared that the present estimates of the rice crop in Bengal are too liberal. Only half the normal crop is expected, and Mr. Sen envisages a definite shortage of rice. His speech definitely strengthens the cry of 'no export' raised on all sides. The Chief Minister has indicated in advance his own views and Delhi cannot overlook the vehemence of arguments. In the opinion of Mr. Sen price control has to be relaxed so that Calcutta can pass from fear to hope. Mr. Sen also described the difficulty in getting wheat. Flour mills have special difficulties, and many are idle according to Mr. Sen who urged that the Government should either make available wheat to mills or to raise the control prices for wheat and leave the mills to make their own prices for flour. The sugar scarcity is not obviated by the beginning of a new season. Bengal's sugar mills find great difficulty in getting cane and gur makers are certainly cutting out the mills. Clearly the remedy is to raise the controlled price of sugar whereas the Trade Journal published last shows the unchanged prices. Mr. Sen has drawn attention to the fact that the Bengal Sugar mills have been forced to give up working. Even a high price for cane is better than absolute shortage in Mr. Sen's opinion and consumers of all classes will be only too ready to endorse Mr. Sen's criticism of price control in its practical aspects. Mr. Sen expects some relief from the assurance of Sir Edward Benthall that high priority will always be given for foodstuffs by Railways.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

Another Christmas, the fourth of its kind, will soon dawn upon an un-Christian world. And never perhaps was pagan man less Christian in spirit than he will be in the next fortnight, when, by all signs, the world war will reach its most ferocious phase. Peoples, who have never known the stygian smell of powder, will become familiar with it and probably experience something of that dire fate which Mark Antony forecast for Rome over the bleeding wounds of Caesar. Christmas is, to say the least, an inappropriate occasion for dualistic thoughts of self and non-self, not to speak of "enemy." May be, a long and quick succession of Messiahs may fail to kill the pagan spirit in the human race. But there are times when the mind breaks the fetters of the customary and the habitual, the 'vasana', as the Vedantin calls it, and; impelled by the forces of wholesome tradition, dwells, for a while though, in thoughts of the absolute good. In such a spirit, and only incidentally in accordance with convention, may I wish all my readers, and all else besides the compliments of the season?

* * * *

To shut the gates of mercy upon mankind is but a phrase which occurred somewhat glibly to the poet. But as a task, it is a grotesque piece of mental gymnastics which no one with pretensions to culture can be equal to. At the present time, when waging war on the enemy is not less the duty of the ordinary citizen, than Lord Krishna made it out to be Arjuna's—in modern sociology, every individual is a Kshatriya—talk of the Christian spirit has about it an uneasy ring of hollowness. But in every clime and age, the doctrine of duty is a frank denial of the claims of ethical or philosophic doubt. Lord Krishna scoffed at Arjuna's emotionalism and rebuked him for his futile attempt to give it the trappings of wisdom. Christ sought to reconcile the conflict with the idea of war with love. But all religions, though they have failed to taboo war, have laid the ban on hate and on that gross selfishness which makes war literally hateful. That is why there is more room in war time for Christian love than in the piping times of peace.

* * * *

War for unselfish ideals! Has it less of the hollow ring about it than the Christian spirit, one may ask. I am not concerned to say, as things are, that it has not. The rulers of the world are by no means anxious to convince you and me, though they, no doubt, would have us think so, that the war is fought for unselfish ideals. The war for ideals is still an idea. But, as in the case of all ideas, there is a touch with reality which bids us not despair altogether of realising the ideal. The idea, after all, is not very old. It was born during the last war. The talk of "war to end war" or "war for democracy" originated, to some extent, in the needs of propaganda. But the fact that successful propaganda required the inception of this idea shows that it had its roots, however feeble or sickly, in reality.

* * * * *

How far has the world progressed towards the ideal of unselfish war, the war which is waged not in the interest of one or two nations, but in furtherance of some ideal, whether it is perpetual peace or democracy, it is not easy to say. But one thing may be said. Every ideal, as it springs from realities which are remotely and vaguely suggestive of it is seized upon by one and all, though with different motives and with different purposes. We remember the use that the Allied Nations made of this idea. But we forget how President Wilson was impressed by it. Likewise, if there were some who gave free reins to their cynicism, there were others who were fired by new visions of perpetual peace and democracy for all. Every ideal works its way to realisation through devious paths, suffers cruel vicissitudes of fortune; and it is only when one's vision is out of the focus of history, that it becomes wholly blurred and misses all the important trends of human

progress. Twenty-five years is too short for judging the fate of social ideals; and these are times when optimism is not a mood but duty.

* * *

We must recognise that the idea of war for unselfish ideals marks a big step forward from that of war with love. For, war with love is so lacking in substance, that it is for all practical purposes, the kind of mysticism that can appeal to a few individuals, but never win the loyalty of whole communities. In other words, war with love is individualistic, while war for unselfish ideals takes the problem of world peace from the stuffy atmosphere of individual ethics to the open air and rich soil of social life. Individual ethics necessarily dies with the individual and survives, if at all, in succeeding generations in forms determined by the changing circumstances, while social ideals have the continuity that is essential to growth and development. If war with love reconciles the conflict between the need to war and the need to be free from hate, it fails to give to war that unselfish purpose without which war with love is but insufferable cant. How can there be any unselfish purpose, unless it is in terms of social ideals? All peoples and nations may not be able to appreciate or enthuse over them to an equal degree. It is true that there is no nation, as things are to-day, which is wholly unselfish in the pursuit of the war. But that hardly means that we can tar all the belligerents with the same brush. There is a difference, which we can gain nothing by denying, between the menace which Fascism is and the evil that Imperialism has been.

* * * *

What matters to human progress is whether a new social ideal is born and not whether all people are equally sincere in their devotion to it. The growth of that ideal is not a matter of individual taste or choice: for it is conditioned by the circumstances and needs of society at large. Its ultimate fate depends upon the imperativeness of the need for its adoption. Two centuries of half-hearted and imperfect democracy have given us an exaggerated value of individual choice by show of hands. Even were show of hands so great a force, there are more powerful forces behind it than mere electioneering speeches or the prejudices and interests of the average voter. Once a social ideal is born, it has to be reckoned with. Neglect will not make it disappear; nor perverse opposition extinguish it. Perpetual peace, world state, democracy for all—all the big phrases that are often uttered by the powerful with their tongue in the cheek are living social ideals which will one day become active principles.

Stock Markets to-day and to-morrow

MARKETS TAKE IT EASY

THE break in prices on the Calcutta and Bombay markets with the reports regarding two enemy raids on Calcutta in two nights in succession has not been as severe as at first feared. There has certainly been a fall in prices, Indian Irons coming down from Rs. 34-12 during the week-end to Rs. 31-4 on Tuesday's session and Steel Corporations from Rs. 25-8 to Rs. 22-4 in the same period. Tata deferreds are lower by over 130 points at Rs. 1,622-8. It was generally expected that the enemy would be unable to break through the city's defences. The strength of the defences has been proved by the fact that the raids took place in the nights and were on a very small scale. The decline in prices that has occurred is mostly of a precautionary nature. With the long Christmas and New Year holidays there is a tendency to lighten one's holdings. If conditions return to normal it can be expected that the upward trend will be resumed again.

But for the raids the reports regarding the Allied offensive against Burma would have had an encouraging effect. In fact on Saturday last, it was reported that Indian Irons touched a level as high as Rs. 34-12 in unofficial transactions. It has since been reported that the Allied troops are continuing their advance southwards into the Arakan province and are not meeting with any opposition. If the Allies prove to be successful in their offensive, as they must, the whole outlook will be changed. As was pointed out last week the developments in the next few weeks will decide the course of the markets.

The fall in prices in the Bombay market has been in sympathy with the Calcutta market. Also to the fears that Tata Iron and Steel company properties cannot fail to attract the enemy's attention. It will be noticed that the decline in Tata ordinaries and deferreds is more pronounced than in other counters.

* * * * *

But for the slump in prices in the market in the past few days one cannot have possibly any reason for regret regarding the course of prices in 1942. In fact, the year began under very gloomy auspices and with the startling successes of the Japanese in the East in the early months of the year few expected that there would be such a recovery in values. [illegible] shocks. It can be expected that they will survive also the present one. There is, however, this difference. We are threatened with a definite loss to material property. The extent to which the threat materialises will determine the course of markets. Investors are fully covered against loss on account of enemy action under the War Risks Insurance Scheme. Therefore, financially there will not be any loss if there is damage to property. But earning capacity will be affected for the duration. The break-up value of shares will, therefore, have greater consideration in determining the value of shares.

WATCH-DOG.

BURN AND COMPANY, LTD.
