JUTE

Calcutta, October 1.

THE crisis in the jute trade has naturally raised considerable interest and the discussions in the Bengal Assembly go to show that the blame for the present position of the trade is not entirely on the Bengal Government. There was indeed considerable opposition to the decision of the Bengal Government at the time they decided to increase the acreage under the jute crop for the current season in November 1941. But with the assurance given by the Central Government, it was never at any time anticipated that there would be such difficulty in disposing of the crop. The position has since been aggravated by the difficulty in regard to transport facilities. While, according to the Government forecast figures, there will not be much of surplus stock left, if it is assumed that mills will continue to produce as at present, the difficulty will be in ensuring uniform prices in the several jute districts and in helping the ryot in keeping back his crop so that he may take advantage of the higher price when it is offered to him. The Bengal Premier assured the Assembly that the question will be taken up immediately and a scheme prepared in consultation with the jute interests and the Central Government approached for the purpose. The Premier and the Finance Minister were due to leave for Delhi on Wednesday but for some urgent reasons their departure has been delayed.

The jute market has continued to be active with mills keen buyers for near positions. Sellers are extremely reserved and are not willing to commit themselves to any further extent as they fear that with the tendency for prices to move upwards it will not be possible for them to cover their requirements when they are wanted.

In the loose jute section, a fairly large amount of business has been passing. European Middles and Bottoms were done at Rs. 9-12 and Rs. 7 per maund with Indian Districts Middles and Bottoms at Rs. 8-12 and Rs. 6 per maund. Supervised Jat Middles were done at Rs. 9-8 per maund for October-November shipment. Assam District Bottoms were done at Rs. 5-12 per maund.

In the Pucca bales section, Firsts 2/3 for ready shipment have improved to Rs. 57 per bale. Some business also was reported in Hearts 2/3 and Lightnings at Rs. 41 and Rs. 46 respectively. Dundee Daisee 2/3 old crop was slightly lower at Rs. 62-8 per bale. Mills bought N.C.'s at Rs. 14-9.

JUTE MANUFACTURES

Calcutta, October 1.

THE jute manufactures market was inclined to be firm in sympathy with the jute market but business continues to be on a very restricted scale. Closing quotations are slightly lower than the highest levels for the week. The problem is still one of providing the necessary shipping space. It is feared that in the absence of any appreciable improvement in the freight position it will not be possible to expect any substantial improvement in U. S. consumption. 9 porters ready are quoting Rs. 14-8 after being higher at Rs. 14-10; October Rs. 14-10; November-December Rs. 14-12 and January-March Rs. 14-14. 11 porters ready are Rs. 18-8; October Rs. 18-10; November-December Rs. 18-12 and January-March Rs. 18-14.

The heavy goods section has continued firm, and business for near position is as difficult as ever before. The reports regarding the cancellation of some shipments early in the week caused a slightly easier tendency but the recession in prices has been only temporary and the rally towards the close has marked prices to higher levels. "B" twills for ready delivery were done at Rs. 45-8 and Rs. 44-8 for October; Liverpool twills were Rs. 51-8 for October and Rs. 47 for January-March; Cornsacks were Rs. 45-8.

Total Reported Production of Manufactured Goods*

(By the mills in the membership of the Association and also by Gagalbhai Mills).

GOLD

Calcutta, October 1.

THE gold market has been absolutely uninteresting and quotations have been fluctuating rather irregularly. Bombay markets still remain closed. Gold ready is quoting Rs. 57-8 with sovereigns at Rs. 42-9; quotations at the end of last week were Rs. 58-4 and Rs. 42-7 respectively.

SILVER

Calcutta, October 1.

THE silver market has continued firm. Owing to the higher levels of prices in Bombay local sellers were rather reserved. During the last two days a slightly easier tendency has been noticeable and on balance quotations are not very much changed. The premium available in Bombay is now nonexistent. Silver ready is quoting Rs. 89-4 in Calcutta.

The Government have announced that George V and George VI standard silver rupees and half-rupees will cease to be legal tender from May 1, 1943, although they will be accepted at all the Government Treasuries, Post Offices and Railway Stations till October 31, 1943. This marks the final stage in pursuance of the policy of the Government of India progressively to replace the standard silver coins by new coins. It is reported that there are ample stocks of the new coin.

There is nothing of importance to be recorded in the London market. The quotation for both spot and forward is unchanged at 23½d. Small demand has been officially satisfied.

PIECEGOODS

Calcutta, October 1.

THE piecegoods market has been very active. In the absence of any supplies from the Western Presidency, dealers have been forced to mark prices further higher and it is unfortunate that at this time of the year the public have been obliged to pay higher prices in respect of their purchases for the Puja festivities. There is barely a week more for the Puja festivities. Supplies of standard cloth have not yet been received. Mills in Bengal have done very good business. Handloom products have been in great favour especially those of medium counts.

Stock Markets to-day and to-morrow

INDIAN IRON FINAL DIVIDEND FOR 1941-42 MAINTAINED

AT the end of last week there was considerable activity on the Calcutta Stock Exchange in all the sections. With an appreciable increase in the volume of business prices were marked higher all round. The firm tone of the Bombay market also was a helpful factor. There was considerable speculation regarding the final dividend of the Indian Iron and Steel Company Limited for the year ended March, 1942. It was expected by a certain section of the market that even a higher dividend could be paid. As there was a heavily oversold position and it was difficult to obtain deliveries, fresh buying and bear covering caused a sharp rise in prices. And with the improvement in the quotation for Indian Irons, the chief speculative counter, other counters also were active.

The highest quotation for Indian Irons was touched early this week at Rs. 33-10. But at the higher levels there was some profit-taking and it was felt that after all the directors might decide against any increase in the dividend as expenses, on account of A.R.P. and war risks insurance, had considerably increased.

When the final dividend was actually announced there was no surprise. The quotation has been fluctuating in narrow limits since Tuesday around Rs. 32-8.

The final dividend of the *Indian Iron and Steel Company Limited* for the year ended March, 1942 is Rs. 1-8 per share, the same as on the former occasion. This dividend, with the interim dividend of As. 12 per share already paid, makes Rs. 2-4 per share, the same as for 1940-41. The accounts will not be available before November. They should, no doubt, make a good showing.

* * * *

The difficulties in regard to wagon supplies should handicap the coal industry more than ever especially as the strain on transfacilities has increased further. The decrease in the earnings of the Macneill group of coal companies for the half-year ended June, 1942 is mainly due to the lower level of despatches. The decline in despatches is pronounced in the case of two companies, Hurriladih and Mundulpoor. Only one company has been able to report a nominal increase in despatches.

The aggregate profit for the group for the half-year, before providing for taxation and depreciation, is Rs. 10,04,247 against Rs. 11,26,107 for the previous half-year. The dividends have been reduced in the case of the Equitable Coal Company, Limited from 7½ per cent to 5 per cent and in the case of the Hurriladih Coal Company Limited from 3¾ percent to 2½ per cent. (Last week it was mistakenly given that the dividend of the Equitable Company Limited was to be maintained As. 12 per share).

* * * *

The net profit of the *Equitable Coal Company Limited* for the half-year ended June, 1942 is Rs. 6,55,176 against Rs. 7,56,505 for the previous half-year. It should have been possible to maintain the dividend at twelve annas per share. But with the rapid progress with development work the directors have thought it necessary to allocate the same amount (Rs. 1.5 lakhs) to development Reserve. The provision for taxation is Rs. 1.8 lakhs (Rs. 2.25 lakhs). The amount set aside to depreciation is higher at Rs. 1,61,231 against Rs. 1,31,852. After the payment of the usual preference dividend and the lower dividend of As. 8 per ordinary share, the amount carried forward to the next accounts will be Rs. 1,94,493 against Rs. 1,90,735 brought in.

The directors mention in the report that serious mining difficulties are being encountered in the Disheragarh Seam pits owing to the great depth at which depillaring operations have now to be carried on.

The sandstowing scheme, which is designed to mitigate these difficulties is nearing completion, but is subject to disappointing, though unavoidable, delays owing to war conditions.

The new Shafts at Bhanora have reached the Koithee Seam. Sinking and development are proceeding as rapidly as possible.

* * * *

The slight decline in the amount of despatches has not affected the earnings for the same half-year of the *West Jammia Coal Company Limited*. The net profit, before providing for taxation and depreciation, is Rs. 1,81,710 against Rs. 1,65,043 for the previous half-year. The higher provision for taxation takes up nearly the whole of the increase in earnings, the actual figures being Rs. 70,000, against Rs. 55,000. The amount transferred to General Reserve is higher at Rs. 30,000 (Rs. 20,000) while the charge on account of depreciation is unchanged at Rs. 12,647. The dividend has been maintained at 10 per cent. The amount carried forward is Rs. 18,225 against Rs. 19,163 brought in.

* * * *

As regards the general outlook for the Coal industry the directors are inclined to take a confident view but at the same time recommend that an extremely conservative view should be taken of prospects for some time to come.

* * * *

The prosperous conditions in the cotton textile industry are evident from the earnings of the *Khatau Makanji Spinning & Weaving Company Limited* for the year ended June, 1942. The net profit, before providing for depreciation and taxation is Rs. 24,56,790 against Rs. 10,30,282 for the previous year. The amount set aside to depreciation is lower at Rs. 4 lakhs (Rs. 5.8 lakhs). The sum of Rs. 2 lakhs (nil) is placed to the Fire Insurance Fund. The dividend on the ordinary shares has been increased to Rs. 17 per share from Rs. 10 per share. The amount carried forward is the large sum Rs. 16,48,587 and includes the provision for Income-tax and Excess Profit Tax.

* * * *

Bengal Paper Mills Company, Limited has done very well in the six months ended June, 1942 and has been able to report a higher level of earnings. The dividend has been maintained at 25 per cent per annum but the bonus has been increased from Rs. 1-8 per share to Rs. 2-8 per share. The yield on the shares on the basis of the latest dividend is nearly 8 per cent tax-free. In view of the sound position of the Company the shares of the Company afford good scope for appreciation.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, October 2.

THE Calcutta Stock Exchange has continued quietly steady during the past few days. The announcement of the final dividend by the Indian Iron and Steel Company for the year ended March, 1942, has had no effect on the market. It was generally expected that the directors would decide on the payment of a higher dividend. Also, after the recent sharp rise in prices there was need for consolidation. The undertone in the several sections continues steady. The feature of the week is the strength of Sugar shares. Those belonging to the Begg Sutherland group in particular have been marked higher.

The giltedged securities section has not been steady round last levels. 3½ per cent Paper was quoted at Rs. 94. Among terminable loans, 3 per cent Defence Bonds were Rs. 102-6, 3 per cent 1963-65 Rs. 94-8 and 3 per cent 1951-54 Rs. 99-8. 3½ per cent 1947-50 were Rs. 102-14, 4 per cent 1960-70 Rs. 109-9 and 5 per cent 1945-55 Rs. 109-2. 4½ per cent 1955-60 were Rs. 113-8. Among provincial loans, 3 per cent Punjab 1952 were Rs. 99-4 and 3 per cent C. P. 1955 Rs. 97-12. It will be remembered that the last mentioned loan was issued recently at Rs. 97 and the quotation is, therefore, at a premium of twelve annas. There is no appreciable change in money conditions though the rise in the discount rate from nine annas and two pies per cent per annum to nine annas and eight pies per cent per annum would suggest that there has been a slight hardening in money rates.

Not many transactions could be recorded in public bodies' debentures owing to the scarcity of sellers. 3¼ per cent Howrah Bridge loan were quoted higher at Rs. 95. 3 per cent *Calcutta Port Trust* debentures were Rs. 95-5 and 6 per cent 1955-85 *Calcutta Port Trust* debentures Rs. 119-4. Among industrial debentures, 5½ per cent *Dalmia Cement* debentures were crossed at Rs. 105.

Preference shares have remained firm. *Anglo-India* were Rs. 156, *Bally* Rs. 150-8, *North Brook* Rs. 138 and *Reliance* Rs. 158. *Burn & Co.* first preferences were Rs. 155-8. *Steel Corporation* were not very much changed at Rs. 110. *Northern India Oil* were Rs. 122-8, and *Carew & Co.* Rs. 142-8. The sharp rise in *Carew* preferences is perhaps due to the expectations that the arrears of dividend on the shares would be paid.

Cotton shares have remained firm. *Benares Cotton and Silk* were Rs. 6-10, *Cawnpore Textiles* Rs. 11-2 and *Bowreah* Rs. 465. *Elgin* after being sharply higher at Rs. 38-12 are slightly lower at Rs. 37-12. *Kesoram* were Rs. 12-8, *Muir Mills* Rs. 345 and *New Victoria* Rs. 7-3.

Coal shares have been quiet and very few transactions have been recorded. *Amalgamated* were Rs. 26-12. *Bengal* were Rs. 375, *Bokaro and Ramgur* Rs. 17-2, *Burrakur* Rs. 34-2, *Equitable* Rs. 34-2 and *Raneegunge* Rs. 26-6. *North Damuda* were Rs. 5-7 and *Rewa* Rs. 28-5.

A larger number of transactions was recorded in jute shares at higher rates. *Adamjee* were Rs. 26-6, *Agarpara* Rs. 20-4, *Anglo-India* Rs. 330, *Bally* Rs. 240, *National* Rs. 23, *Naskarpara* Rs. 19 and *Northbrook* Rs. 28-6. *Empire* were Rs. 27-12 ex-dividend and *Gondalpara* Rs. 1,206-8.

In the Engineering section, there was considerable activity prior to the declaration of the final dividend for the year ended March, 1942 by the Indian Iron and Steel Company, Limited. Indian Irons were marked as high as Rs. 33-9 in Monday's session but the realisation that there may not be any increase in the dividend led to some profit-taking. It was announced on Tuesday that the dividend was to be only Re. 1-8 per share. The quotation has been fluctuating around that level since. *Steel Corporation* were Rs. 20-4, *Indian Standard Wagon* Rs. 60, *Kumardhubi Engineering* Rs. 5-13 and *National Iron and Steel* Rs. 12-2.

As pointed out above, Sugar shares have been very firm. *Buland* and *Raza* have been in good request with the quotations further higher at Rs. 34-2 and Rs. 36 respectively. *Cawnpore* were higher at Rs. 281-4, *New Savan* at Rs. 13-8, *Ryam* at Rs. 28-15 and *Samastipore* at Rs. 14-6. *Ramnugger Cane and Sugar* were Rs. 11-3.

Tea shares have been in greater request with *Bishnauth* at Rs. 26-12, *Dessai and Parbuttia* at Rs. 250 and *Dimakusi* at Rs. 29-8. *Tengpani* were Rs. 19-8.

In the Miscellaneous section, *Burma Corporation* have been marked higher with the quotation at Rs. 2-7. *Indian Copper* were Rs. 2-4. *B. I. Corporation* were unchanged at Rs. 5-8. *Assam Bengal Cement* were Rs. 12-12, *Dalmia Cement* Rs. 17-12 and *Assam Saws* Rs. 4. Among Paper shares *Orient Paper* were Rs. 22-12 ex-dividend, *Midnapore Zemindary* Rs. 75 and *Sree Gopal Paper* Rs. 19.

BOMBAY STOCK EXCHANGE

Bombay, October 2.

THE Bombay market has remained firm during the past few days and a further substantial rise in prices has been recorded. Early in the week there was slight profit-taking but it has been fully absorbed and closing quotations are at the highest levels for sometime.

Giltedged securities are not very much changed with 3½ per cent Paper at Rs. 93-14. 3 per cent 1963-65 were Rs. 94-8, 3½ per cent 1947-50 Rs. 103 and 4 per cent 1960-70 Rs. 109-9. 5 per cent 1945-55 were Rs. 109-2 and 4½ per cent 1955-60 Rs. 113-8.

Textile issues have continued in favour in spite of the reports regarding the strikes in certain places and the slow down in production in certain mills. With the bright prospects for the industry it is felt that the difficulties in this regard can be only temporary. The declaration of an interim dividend by the Gokak Mills Limited of Rs. 8 per share has had an encouraging effect. *Ahmedabad Advance* were Rs. 400, *Bombay Dyeing* Rs. 1,500, *Central India* Rs. 395, *Century* Rs. 572, *Kohinoor* Rs. 575 and *Simplex* Rs. 256. Gokak improved suddenly to Rs. 313 last week. There has been a further rise in the quotation to Rs. 333.

Hydro-electric issues are not very much changed, *Tata Hydro* being Rs. 178-8, *Tata Power* Rs. 1,610 and *Andhra Valley* Rs. 1,637-8.

Steel issues have been very active. *Tata* deferreds are nearly sixty points higher on balance. *Tata* deferreds were Rs. 1,557-8, and ordinaries Rs. 316. The quotations at the end of last week were Rs. 1,460 and Rs. 293 respectively.

In the miscellaneous section, *Belapur Sugar* were not very much changed at Rs. 227. *Bombay-Burmah* were Rs. 250 and *Bombay Steam* Rs. 370. *Scindia Steam* were a point higher at Rs. 23-6. *Shivrajpur Syndicate* have improved from Rs. 49 to Rs. 51-8. The highest level touched during the week was Rs. 52. *A.-C.-C.* were Rs. 184 and *New India Assurance* Rs. 53-5.

THE NELLIMARLA JUTE MILLS CO., LTD.

NOTICE is hereby given that dividends at the rate of 6 per cent per annum on the Preference Shares and of 10 per cent per annum on the Ordinary Shares for the half-year ended 30th June 1942, have been declared payable at once to the Registered Shareholders. Where standing instructions as to the disposal of dividends have already been registered, Warrants will be sent accordingly.

INDIAN IRON & STEEL CO., LTD.

NOTICE

In view of the uncertainty of mails from and to the United Kingdom the publication of the Directors' Report and the Accounts of the Indian Iron and Steel Company, Limited, for the year ended 31st March, 1942, which are to be published simultaneously in India and England, will be delayed. All possible steps are, however, being taken to have matters expedited. In order to enable shareholders to obtain payment of their dividends as soon as possible, however, the Directors have sanctioned the payment by way of an ad-interim dividend of Rs. 1-8-0 per share on the Ordinary shares of the Company ranking for dividend for the year ended 31st March, 1942, which, shareholders must understand, will be the final dividend for the year. The Transfer Books of the Company will be closed from 12th to 26th October, 1942, both days inclusive. Payment will be made on and after 2nd November, 1942, to those members or their mandates whose names appear in the registers on the 12th October, 1942.

By order of the Board,
BURN & CO.
Managing Agents.

Calcutta, 30th September, 1942.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN that the Fifth Ordinary General Meeting of the Company will be held at the Registered Office, 18, Strand Road, Calcutta, on Tuesday, the 27th October, 1942, at 3-15 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th June, 1942.

(2) To declare a dividend on the Preference Shares.

(3) To elect Directors.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) As special business; to consider the following resolution, namely:

"That the draft agreement submitted to this meeting, and for the purposes of identification subscribed by the Chairman, being an agreement for the reappointment of Imperial Chemical Industries (India) Limited as on and from the 8th day of December, 1942, as Secretaries of the Company on the terms and conditions therein contained be and the same is hereby approved and that the Directors be authorised to complete and carry such agreement into effect."

The Share Registers of the Company will be closed from the 2nd November to the 9th November, 1942, both days inclusive.

By Order of the Board,

IMPERIAL CHEMICAL INDUSTRIES (INDIA), LTD.,
Secretaries.

Calcutta,
28th September, 1942.

Note:—If Resolution 2 is passed at the Meeting, dividends on Preference Shares for the half-year ended 30th June, 1942, will be paid on and after the 9th November, 1942, to those Shareholders whose names are on the Company's Register on the 2nd November, 1942.

To

The Shareholders of The Alkali & Chemical Corporation of India, Limited, and in particular to:—

The profit for the half-year, after providing for Debenture Interest, Depreciation and Taxation was	4,27,770	8	1
To which is added the balance brought forward of	1,01,219	9	7
Total ..	5,28,990	1	8
Out of the total of Rs. 5,28,990-1-8 the Directors have set aside the following amounts:—			
General Reserve	50,000	0	0
Raw Materials and Stores Reserve	1,00,000	0	0
Reserve for Indian Workers' Pensions and Gratuities	32,000	0	0
Total ..	1,82,200	0	0
This leaves a balance of Rs. 3,46,790-1-8 available for distribution, which the Directors recommend be dealt with as follows:—			
Dividend on Cumulative Preference Shares at 7 per cent per annum, free of income-tax ..	7,000	0	0
Dividend on "A" Cumulative Preference Shares at 7 per cent per annum, free of incometax	14,000	0	0
Dividend on Ordinary Shares at 25 per cent per annum, free of income-tax	1,12,500	0	0
Bonus of Rs. 2-8 per share on Ordinary Shares, free of income-tax	90,000	0	0
Balance carried forward	1,23,290	1	8
Total ..	3,46,790	1	8

The output for the half-year was satisfactorily maintained and the Central and Provincial Governments and the Defence Services again received the bulk of the manufacture.

Costs of manufacture continue to rise steadily as the price of all Raw Materials, Chemicals, Dyes, and Mill Furnishings is still increasing. It is with difficulty the Company is able to secure supplies of essential chemicals and stores from Home, owing to the acute shipping position.

The extension to the Engineering Workshop mentioned in the last report was completed during the half-year, and a considerable number of nominees are now receiving training under the Government Technical Training Scheme, all of whom are showing satisfactory progress.

Managing Agents.—Messrs. Balmer Lawrie & Co., Ld.

ISSUED WEEKLY

XXX. No. 15 SATURDAY, OCTOBER 10, 1942 Price Re. 1

LP THE COUNTRY

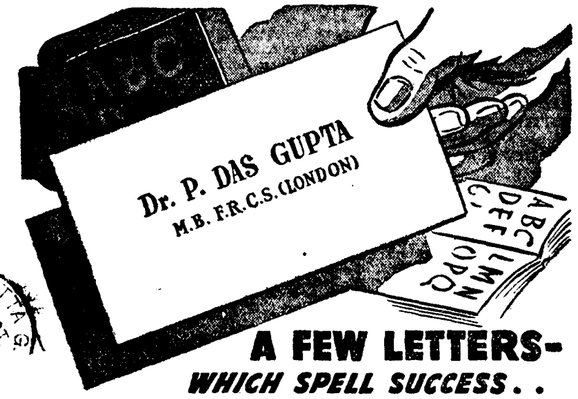
POI WHILE

LPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.



NATIONAL INSURANCE COMPANY, LIMITED.

7, COUNCIL HOUSE STREET, CALCUTTA.

Branch and Agency Offices throughout

INDIA, BURMA, CEYLON, BRITISH EAST AFRICA & FEDERATED MALAY STATES

A FEW LETTERS—

WHICH SPELL SUCCESS . .

Success in life these days depends on higher specialised education. A Children's Educational Policy will assure your son adequate money for his higher studies, even if your demise occurs after paying only the *first premium*. The large assets of New India guarantee maximum protection to its policy-holders and their beneficiaries.

The New India Assurance Co. Ltd.
9, Clive Street, Calcutta.

Please send me, free of cost and obligation, full particulars about your "Children's Educational Annuity Policy".

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Inter-bank call money is quoting ½ per cent in Calcutta and ¼ per cent in Bombay —rates being nominal at both centres—and with banks willing to pay no more than ½ per cent for term deposits up to five months, there is no change to report in money conditions. In spite of the Central Government as well as the C. P. and Madras Governments calling for treasury bill tenders this week, the Government of India bills are being sold at the same rate as last week, namely, annas nine and pies eight per cent per annum. The discount on C. P. bills also rose only slightly higher. The Madras Government also has been able to sell treasury bills at the same as the Central Province Government. As suggested in this column last week, treasury bill tenders for October 14 are being raised to Rs. 8 crores.

Transactions in respect of the arrangement concluded with the British Government regarding sterling railway annuities are reflected in the returns of the Reserve Bank for the week ended October 2. Sterling securities held in the issue department have decreased by Rs. 25 crores to Rs. 304.83 crores. On the other hand, rupee securities have risen by Rs. 30 crores to Rs. 132.39 crores. That is to say, "ad hoc" treasury bills have been issued to the Reserve Bank not only against sterling railway annuities, but also for replenishment of cash to the extent of Rs. 5 crores. Turning to the statement of the banking department, there is evidence that the balance of sterling required for the railway annuities was found from the payments made by the British Treasury to the Indian Government during the week. The lump sum payable to the British Government with respect to railway annuities is the equivalent of £30 million, or Rs. 40 crores. Of this amount, Rs. 25 crores has been provided for by withdrawal of securities from the issue department. The balance is presumably made up from the sterling payments received in respect of inter-governmental transactions. Even after utilising Rs. 15 crores for this purpose, there has been a surplus sterling balance available which goes to raise foreign balances in the banking department from Rs. 86.27 crores to Rs. 88.60 crores. In other words, sterling payments received from the British Government in the week ended October 2, must be of the order of Rs. 17½ crores. As for the rupee finance for this transaction, Rs. 30 crores has been adjusted by issue of "ad hoc" treasury bills for that amount to the Reserve Bank. As for the balance of Rs. 10 crores, part of it has been found from the sterling securities handed over to the banking department of the Reserve Bank. As a result of these transactions, the deposits of the Central Government with the Reserve Bank have risen from Rs. 17.12 crores to Rs. 21.77 crores.

In the press "communique" announcing the proposals connected with the sterling railway annuities, it was stated that the rupee finance would be found partly by issue of "ad hoc" treasury bills to the Reserve Bank and partly by ways and means advances. It is also to be noted that the Central Government start in the month of October with a comfortable cash position at over Rs. 21¾ crores. There is, therefore, no likelihood of any ways and means advance for some weeks. Deposits maintained by member banks with the Reserve Bank which rose from Rs. 61.76 crores to Rs. 64.58 crores in the week ended September 25, have shown a further small rise to Rs. 64.83 crores in the week ended October 2.

The statement of the Imperial Bank for the week ended October 2 establishes another record for deposits at 149.64 crores. The cash balance, however, is nearly Rs. 2 crores down at Rs. 33.20 crores. This is due to an increase of Rs. 1½ crores in investments and of nearly Rs. 2 crores in advances. The rise in advances is due to bills increasing from Rs. 2.15 crores to Rs. 4.23 crores. This increase must be due to rediscounting of treasury bills. We may, therefore, see restoration of bills to the original level in the course of a week or two.

The exchange market has been slightly better with bills showing. Rates are unchanged. The coming holidays for the Puja are already casting their shadow on markets.

The exchange market has been dull during the week with banks sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains at ½ per cent, all lenders.

TREASURY BILLS

India

Tenders for Rs. 6,00,00,000 (Rupees 6 crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 6th October, 1942. Total amount offered was Rs. 12,15,00,000 (Rupees 12 crores 15 lakhs). Tenders at Rs. 99-13-9 per cent were accepted in full and those at Rs. 99-13-6 per cent were allotted approximately 43 per cent. Lower tenders were rejected. Total amount accepted was Rs. 6 crores, the average rate of accepted tenders being Re. 0-9-8 per cent (Rupee nil annas nine and pies eight per cent) per annum.

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills will be received on Wednesday, the 14th October, 1942 in Bombay up to 11 a.m. (Standard Time) and up to 3 p.m. on Tuesday, the 13th October, 1942 at other centres. Successful tenderers should make payment on Friday, the 16th October, 1942 or on Thursday, the 15th October, 1942 at centres where Friday is a holiday. Other conditions are as usual.

During the week ended the 2nd October, 1942, Government of India Treasury Bills for Rs. 31,82,50,000 (Rupees 31 crores 82 lakhs 50 thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

C. P. and Berar

Tenders for Rs. 50,00,000 (Rupees fifty lakhs) of three months' Central Provinces and Berar Government Treasury Bills were opened on Wednesday, October 7, 1942. Total amount offered was Rs. 1,31,00,000 (Rupees 1 crore and 31 lakhs). Tenders at Rs. 99-13-6 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs. 50,00,000 (Rupees fifty lakhs), the average rate of accepted tenders being Re. 0-10-0 per cent (Rupee nil and annas ten per cent) per annum.

Madras

Tenders for Rs. 50,00,000 (Rupees fifty lakhs) of three months Madras Government Treasury Bills were opened on Friday, the 9th October, 1942. Total amount offered was Rs. 1,78,00,000 (Rupees 1 crore and 78 lakhs). Tenders at Rs. 99-13-6 per cent were allotted approximately sixty per cent. Lower tenders were rejected. Total amount accepted was Rs. 50,00,000 (Rupees fifty lakhs), the average rate of accepted tenders being 0-10-0% (Rupees nil and annas ten) per cent per annum.

Thursday Morning.

WITH markets holding their own against orations dealing with the failure to develop a second front, one might say that stability still remains the keynote. There is not much to go upon except the President's big victory in Congress. The Senate dropped its amendment, sent the Bill back to the lower house and the anti-inflation Bill is law. At the same time, another proposal for raising tax revenue to 8 billions has appeared. The Victory tax plan is supported by a Democrat who aims to pick up new revenue. Prices are likely to fall after the enactment of the anti-inflation law and the notification of Mr. Byrne's appointment as Director of economic stabilisation. Sustaining factor is the big better harvest to which Mr. Secretary Wickard referred on Tuesday. The Allies should gain from the increase in harvests. 1942 has been called wonderful for its yield of food crops, cotton and every farm product. The U.S.A. has got double the usual crop of peanuts and soyabeans and four million lbs. more of milk. It is not only self-sufficiency that is the U.S.A.'s goal: the Government has a plan to help other countries and lease-lend covers food at present. From April to August the U.S.A. has shipped 800 million lbs. of foodstuffs in addition to meat and dairy products. Mr. Wickard does not expect others to help the U.S.A. but to help others.

The complete contrast to German looting is provided by American charity at present. Bigger shipments for others entail restrictions on home consumption. The Secretary wants serving soldiers to get more meat. Civilian consumption is to be cut in order to build up stocks against lean years. The Administration has made up its mind, according to Mr. Wickard, who told a Chicago audience so. Restricted supplies, accompanied by rationing, can have no influence on prices, and the President is secured against that, well in advance: prices have been anchored and wages cannot go up. There are ceilings for potatoes, flour, cheese and butter. There can be no rise in prices hereafter, and rents too are to be controlled, to judge from instructions issued to Mr. Henderson. The control of profits is part of the price-fixing plan, and frozen prices for two months will give the time for adjustments.

Most important change ordered by the President on Saturday last is the prohibition of increases in salaries of over $5,000 per annum. The President is against salaries exceeding $25,000 a year after paying taxes. Control may or may not bring about equality, but some exemption clauses are kept and wages may rise in certain cases above the January-September level chosen as the datum line. The President's message to his people reveals that he is against inflation because of the danger of a post-war slump following what looks like a boom. For five months the fight was on and the victory has gone to the President. It is to the credit of the Congress that it backed the Executive at the right moment and wage-freezing is not criticised by Mr. William Green who has promised A. F. L. support to the anti-inflation law. The political sense that led him to back Mr. Farley's candidate for the Governorship of New York State has helped Mr. Roosevelt to get his plan through. The cost of living will be unchanged for the duration. There will be no unusual profits because of taxation, and all costs can fit into estimates. The Farmers' lobby has been beaten this time, and the party truce has helped Mr. Roosevelt to persuade Southern Democrats to forget election promises. Before a new Congress comes price-ceilings and wage-stops will be in working. War production can go ahead in physical volume rather than the financial estimates. The U. S. experiment has parallels but is interesting because the President in his aim to put 17 million workers on the war effort has produced scarcity in many fields. If the motor car industry has devoted 95.1 of capacity for its war effort and taken on over half a million men for its conversion programme, the result is impressive to judge from a quite recent announcement. The diversion of resources and skill give the Allies the lead against the Axis for the first time. There will be no strikes, and conciliation is established well ahead of stabilisation of wages. There will be no need to use the National Guard for protecting plants against picketers this year and the idea of American unity has grown rapidly this year to allow of the cessation of protests over wages or hours. For the usual recovery after the war stability is viewed as essential, and that is one reason why British practice has illuminated U. S. policy. A slow and limited rise in wages and cost of living does no harm, but after May the U. S. problem was different for a shoppers' scramble started, and ready cash became a foe to all who criticised purchases.

If the measures adopted of late in the U.S.A. promise stability, it is good for the exchanges. If purchasing power remains unaltered, there can be no change in rates. Cheap money cannot be the forcing-house for any war boom and as bullion prices stand still, the U. S. citizen need not ask if his dollar is hard or soft. The President has passed long from the stage of Professor Warren's pupil. The O.P.M. does better than the Brains Trust and this year's successful war against inflation is as important as the triumph over neutrality. As compared with this big victory at home, stories of German collection of war costs seem tame. But the German plan for a confederate state including Norway, and providing for Denmark's entry, is more sinister than superficial. The pristine economic unity of Scandinavia would be destroyed and new protectorates would lie outside Sweden which faces a real danger of German economic conquest owing to the blockade. The plan may be part of the new order, but it proves that Dr. Funk is still working out the map of a bigger *lebensraum*. The real importance of the plan lies in forcing the northern countries away from the Anglo-Saxon powers. Quisling's new Cabinet will certainly bless the proposal calculated to shatter Norway's industry. Fortunately, the fleet escaped and the biggest asset did not get into the wrong hands. The experience of Hungary or Belgium suggests that mere alliance or occupation does not satisfy the Nazis who ask for fusion.

Dr. van Mook's report on conditions in Java indicates that the South Seas have provided little loot for Japan; only a very small oilfield near Sourabaya is likely to get started and local confusion was such as to compromise the development plans of the conqueror. Colonial development on old lines is ruled out. Free access will be the rule, and Dr. van Mook has spoken well of what the future holds for the colonies. If foreign competition can be controlled, the colonies, can and should, recover. He declared that in the N. E. I. the problem would be solved by re-imposition of old controls and reversion to old prices. External aid in any event be limited, and he indicated that the Dutch Indies would co-operate in international restriction agreements for tea, tin and rubber. The very plain hint must support faith in Java rubber shares. The rise in Anglo-Dutch should continue and popular scrips like United Serdang may soon clamber to par.

In a week void of surprise the strength of giltedged in London merits attention. Home Industrials found a greater measure of support and last week's best feature was the rise in Imps. Good tobacco shares are held in great esteem and fresh views as to raw material supplies and resumption of home production justify the rise. Last week special mention was made of the rise in Int. Nickel. It appears to continue and regular quarterly payments in war and peace give Nickels their investment status to-day. One of the world's greatest enterprises Nickel's production and profit records are little short of amazing. It is unfortunate that Indian investors are debarred from buying a supremely sound share which cannot be touched by any vesting order as it is a Canadian, not an American, share.

Dr. van Mook's speech has apparently stimulated Royal Dutch. Like other oil shares, Royal Dutch shares dragged for a long time. Enemy occupation has not affected their worth and the rise in Shell certainly explains the advance. The advance in Industrials hardly belies the stringency reported in the money market last Saturday. It cannot be due to the bigger volume of applications for bills, and anyway, the stringency cannot be longlived as the Treasury expects to take £50 million in the usual six-month deposits though Public Deposits with the Bank are up again. The reduced

Three years of War Finance—VI

Indian's War Bill and India's Public Debt

Various aspects of Government finances were examined in the earlier articles of this series; and this section of the study can be fittingly concluded by an analysis of India's war bill and its effect on her public debt. Though the war began in the second half of 1939-40, the budget of that year was not affected to any great extent by expenditure on the defence services as serious attempts to expand and extend India's military machine did not start till the summer of 1940. It may, therefore, be said that, for all practical purposes, that of 1940-41 is the first war budget of India.

Defence expenditure borne by India in 1940-41 was Rs. 73.61 crores, made up of Rs. 36.77 crores being what is described as basic normal budget, Rs. 2.57 crores on account of rise in prices, Rs. 25.90 crores on account of war measures, and Rs. 8.38 crores in respect of non-effective charges. The original budget estimates for 1941-42 placed the defence expenditure at Rs. 84.13 crores, India's share of the enlarged war bill being Rs. 35.40 crores. This amount of Rs. 35.60 crores represents the net amount debitable to India on account of war measures, a very considerable amount being borne by Britain. The revised estimates for 1941-42 show an increase in defence expenditure to Rs. 102.45 crores, India's share of the war bill being Rs. 53.03 crores.

The gross expenditure in 1941-42 on account of war measures is, however, expected to be Rs. 300 crores, of which Rs. 102½ crores is thus found from the Indian budget and the balance of nearly Rs. 200 crores is borne by His Majesty's Government.

In the same way, the gross defence expenditure to be brought into account in India's books during 1942-43 is expected to be Rs. 533 crores. Rs. 400 crores will be recovered from His Majesty's Government under the financial settlement arrived at between this country and Britain. The amount debitable to the Indian budget is, therefore, Rs. 133 crores, of which war measures account for Rs. 81.30 crores. It may be added, in this context, that the British Government have also undertaken the supply to India, without charge, of large quantities of aeroplanes, vehicles, guns and other equipment; and that the total value of such free supplies expected to be received to the end of 1942-43 is roughly Rs. 60 crores. His Majesty's Government will thus be contributing over Rs. 660 crores in three years towards the defence expenditure entered in the books of the Indian Government.

Compared to pre-war military budget, India's expenditure on defence services from 1940-41 to 1942-43 shows a total increase of approximately Rs. 150 crores. To provide for this increased expenditure, various new or additional taxes have been imposed during these three years; and it has been also found that various other heads of revenue have made larger contributions than in pre-war years.

New taxation proposals contained in 1940-41 budget were expected to yield about Rs. 7 crores; those of 1941-42 were to provide Rs. 6.61 crores; and estimates from new taxes in 1942-43 are Rs. 12 crores. Actually, the revenue secured from new taxes has, almost in all cases, considerably exceeded the original estimates. Equally satisfactory has been the expansion in revenue from commercial departments like Railways and Posts and Telegraphs. While, before the war, the Railways' contribution was nothing or only negligible, and while in 1940-41 the amount was Rs. 12.16 crores, Railways are expected to contribute as much as Rs. 20.13 crores towards central revenues in 1942-43. Posts and Telegraphs yielded only Rs. 1.25 crores in 1940-41, but will be paying Rs. 4½ crores in 1942-43. Currency has improved from Rs. 1.94 crores in 1940-41 to Rs. 3.26 crores in 1942-43, while profits of the Reserve Bank have expanded from a bare Rs. 19 lakhs in the earlier year to Rs. 2½ crores in the latter year. Further, a saving of over Rs. 3 crores accrued during 1941-42 under Interest as a result of repatriation operations. The saving in 1942-43 will be even larger.

While military expenditure has gone up steeply, this has been largely offset by the extremely favourable showing of some of the old heads of revenue and by the more than gratifying results from the new taxes imposed during the war. In the result, there has hardly been any increase in the public debt of this country. An analysis of India's position with regard to her indebtedness during the war was furnished sometime ago in the columns of "Indian Finance"; and the relevant facts and figures may now be recited so as to set the picture of this country's public debt alongside that of its war bill.

As we have pointed out, the widening gap between revenue and expenditure on account of the swollen war budget was greatly narrowed by higher yields on old taxes and satisfactory yields on new taxes. As a result, the budget position of India has been exceptionally satisfactory. The actuals for 1940-41 disclosed a budgetary deficit of Rs. 6.53 crores which was reduced to Rs. 3.53 crores after taking into account the sum of Rs. 3 crores provided in the budget for the reduction or avoidance of debt. The revised estimates for 1941-42 provided for a deficit of Rs. 17.27 crores which is similarly reduced to Rs. 14.27 crores on taking into account the sinking fund appropriation. The budget estimates for 1942-43 envisage a deficit of Rs. 35.07 crores less Rs. 3 crores or Rs 32.07 crores. On the estimates and figures furnished by the Finance Member last February, the deficit in the three-year period, 1940-41, 1941-42 and 1942-43, is thus Rs. 49.87 crores.

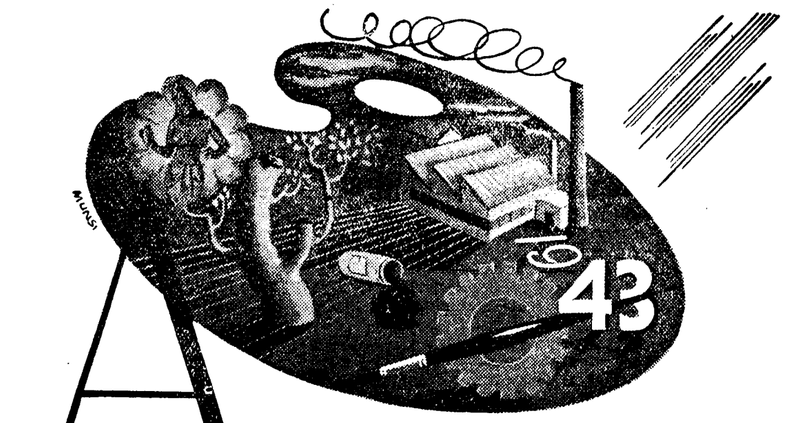
At this point, we have to draw attention to two facts, the one having the opposite effect of the other. The deficit disclosed in 1942-43 estimates was arrived at after providing for lease-lend payments on a cash basis. It is obvious that no cash payment is contemplated either now or in the near or reasonably remote future. If we set aside this provision, it is arguable that there is really no deficit in 1942-43 on the basis of revenue and expenditure contemplated in February last. But both revenue and expenditure, as the year has progressed, have not remained in touch with the February expectations. Revenue has certainly shown increases under various heads; but expenditure, due to India's direct involvement in the war, has gone up by leaps and bounds. It is very much in the nature of a blind guess to suggest any figure as the likely excess of military expenditure in the current year over the budget estimate. In broad terms, it seems reasonable to suggest that the reserve up the sleeve in the form of provision for cash payment of lease-lend facilities may about be equal to the additional military budget. In sum, the deficit of these three years may be roughly estimated roundabout Rs. 50 crores. This may be said to be the figure by which the public debt of India must be increased by March 1943.

A close scrutiny and a comparative study of the public debt figures, however, does not disclose any addition so far to India's debt. Official figures are available up to the end of March 1942. For bringing these figures up to date, we have to rely on the figures compiled in our office. We shall first study the position as at March 31, 1942, and compare it with the position as at March 31, 1939. Rupee debt on the latter date was Rs. 709.96 crores; and sterling debt Rs. 469.10 crores. India's total public debt was, thus, Rs. 1,179.66 crores. The corresponding figures for March 31, 1942 are Rs. 942.29 crores for rupee debt; Rs. 180.00 crores for sterling debt; or total debt of Rs. 1,122.29 crores. That is, India's public debt has gone down from Rs. 1,179.66 crores to Rs. 1,122.29 crores or by Rs. 56.77 crores between March 1939 and March 1942. We can say, without hesitation and without any fear of contradiction, that India is the only country in the world whose public debt has actually shown a reduction at the end of thirtytwo months of war.

If we, however, take the position as at the end of August 1942, thert may be no such decrease in our public debt. For, since the close of the last financial year, treasury bills sold to the public have shown a very big bulge. Treasury bills issued to the public and to the currency reserves amounted to Rs. 136.98 crores on March 31, 1942. The figure is over Rs. 187 crores at the end of three years of war. Treasury bills have thus gone up by Rs. 50 crores in the current financial year. It may also be added that the third defence loan might have fetched about Rs. 4 crores by the end of August 1942. Thus, while the position on March 31, 1942 showed that India's public debt has decreased by Rs. 56.77 crores, as compared with three years ago, there has been an increase since last April of almost a like amount in our debt, thanks to a bigger floating debt and subscriptions to the defence loan. It will, therefore, be correct to say that India completes three years of war with her public debt remaining almost at the same figure as on the eve of the war.

REASON AND RELIEF

No confident estimate as to jute prospects this year has appeared as yet. Argument has been general, so far, and conclusions are hardly ever divergent. That the situation affords a basis for reasoned pessimism is not surprising to those who can pick the salient inter-connected facts and leave the statistics to do the rest. The beginning of a new jute season has found very few in the trade or industry in a position to offer consolation to the jute-growers. A reduced carry-over is accompanied by an expansion in the current crop. The mild revival in the jute and jute manufactures market, noticed since the third week of September, does not affect the general argument that the jute outlook is uncertain. To support such a view one may well turn to the review of the jute position in 1941-42 contained in the latest annual report of the Indian Central Jute Committee. Not the least of the services performed by a Committee, whose services to the industry and the cultivator alike meet with increasing appreciation, is the timely provision of statistics which indicate how much jute is taken by the Indian mills, how much by the export trade, and what is left over every year. Last year's short crop was a consequence of the decision to curtail acreage. The decision was enforced by a carry-over, in July, 1942, of 82.2 lakhs of bales more than half of which was represented by mill stocks. The advance in Indian mill production owing to warbag orders gave much-needed relief and the carry-over was reduced by 41 lakhs of bales. Essentially, the jute problem at present is one of a glut. That glut is as much a consequence of loss of markets abroad as of a decision to increase the crop. It will not be overlooked that the estimated supply of 136.6 lakhs of bales approximates closely to the supply available in 1941-42. But a radical change has been produced by the war in the Pacific and the task of adjustment is no light one. Transport, seaborne and inland alike, remains difficult, and the mills' requirements, in spite of an anticipated offtake of 2 lakhs of tons for war requirements, must be restricted by the changes in U. S. demand. One need not dwell here on the changes caused by the ascent of prices or the adoption of control, in the direction of minimum prices, but it seems essential to state that the Indian jute industry in one way or another exports over half the production and it cannot be denied that it has striven consistently since 1938 to regulate its own requirements to an unstable jute situation. What is constant is the mills' demand and the mills' readiness to pay reasonable prices. What is variable is the policy of Government and the quantum of export demand. It has been indicated only recently in the Bengal Assembly that the mills are not altogether unaware of the jute-growers' present difficulties, and mills, faced by falling profits from 1941 are not in a position to be unduly generous. If the present be viewed as a legacy of developments in 1941-42 attested again by a marked fall in shipments of raw jute, it will be understood that the original cause of the situation is the mistaken decision of the Central Government which overrated the ability of the A.B.C.D. powers and hardly even grasped the fact that Japan had given a knock-out blow in December, 1941.



A commendable reversal of policy followed the accumulation of mills' own stocks of goods, and the 'grow more food' campaign too was linked to the new modified restriction plan. That the campaign has brought no important results must be attributed to the late start and the innate conservatism of the Bengal cultivator who should, however, note that present prices for jute are about the average of the 1914-18 period. To those who blame the Coalition Ministry, the most conclusive answer is furnished by a table illustrative of the changes in prices. Since mills worked longer hours nearly half the year and paid well last year for the raw jute taken, the anticipated fall in prices can be viewed as a mere swing of the pendulum.

If a citation of price-changes can be always countered by reference to the relatively milder fall in prices of manufactures it will be remarked that the position since December last has been unstable, and the price of raw jute is hardly determined by mill demand which accounts for not more than 13 per cent of the total world consumption of jute. The fall in India's exports of jute manufactures from 924,000 tons to 839,000 tons is no true measure of the state of export demand. Rival fibres are acquiring a greater hold on markets in the U.S.A. and Argentina and the mills have to keep their prices in line with the stock position and ceiling prices in the U.S.A. Few will miss the purpose and significance of the anti-inflation law in the United States. The Bill is no indirect answer to those who urge that the war should benefit all, forgetting that the jutegrower is also a ricegrower and he gets his compensation at present in a quite tangible form.

It is no part of our argument to indicate the limitations of any governmental scheme for price stabilisation. Pool plans are not always perfect as we know. But we are content to emphasise the well-understood fact that about 20 per cent of the effective demand for jute had disappeared in 1939 and price changes in this field, as of cotton, are part of the fortunes of war. If this were understood, much confusion of mind would disappear. As to the state of foreign demand for jute very important conclusions emerge from the analysis of U. S. developments. Improvement there is compromised by the shipping situation. Price control is at any time subordinate to the freight position, and the challenge of cotton bagging in the Argentine as in the U.S.A. represents no remote danger. With the judgment that the immediate future is bound up with the war few will quarrel, and the further conclusion that a glut co-existing with a famine across the seas is a necessary consequence of the war will command approval. If the report emphasises familiar troubles, it is not less important for the light it throws on policy. Crop regulation has been vindicated, and the planned advance of prices, after the war, is no longer viewed as impossible. The search for new uses is extending, and only two months ago, information was furnished as to the new uses. The part jute plays in many industries besides the textile was indicated clearly by Mr. Nodder's note in the Committee's bulletin. In this field at any rate, the usefulness of the Jute Committee's work keeps growing, and research into quality has established that better retting technique will produce much improvement while line-sowing and harvest at the pod-stage are known to give better outturn. Effects of manures on stem-rot disease are more marked than an increase in yield. As the results are soon to extend to the cultivator, the Committee's work cannot be praised too highly, and if projected laboratory expansion cannot take place owing to the war, it will be seen that every test on jute samples was guided by practical aims.

If the report says little on the futures market, it is an admission of the changes in the trade. But the introduction of grading at Jalpaiguri has established that the marketing branch can help jutegrowers to get 12 annas per maund in addition to the normal or expected price. Improvement of

the crop forecast is directly related to the Committee's work and statistical research takes precedence of economic research which reveals that trade in jute generally follows world trade trends, and the U.S. consumption of hessian influences prices in Calcutta. More significant from the view of the Grady Mission's recommendations, as regards rationalisation in the mills is the investigation concerning excess capacity of the mill industry. It has been found that the present loomage strength of the industry as a whole is about one-third more than the normal requirements. Jute supplies in 1942-43 may give work for all mills but the redundant capacity may call for a drastic change even before the war conditions alter. If, the report contains no dogmatic suggestions, the Committee's interest in foreign markets in Argentina and New Zealand is attested by the report which speaks also of improvements in Indian mill production which enable India to provide certain new types of goods for the U.S.A.

ART in Industry Exhibition

The third "Art in Industry" Exhibition will take place at the Sir J. J. School of Art, Bombay, next February.

Artists are cordially invited to compete for prizes and scholarships totalling Rs. 12,000/-, of which the best entry in the Exhibition will get Rs. 750/-.

Artists, through the Exhibition, are not merely able to sell their entries, but can bring their talent to the notice of Government and leading industrialists.

A prospectus containing full details, which should be read carefully, can be obtained from any of the prise donors or from the sponsors.

The last date for receiving entries is 2nd January, 1943, at the Sir J. J. School of Art, Bombay, or 5th December, 1942, at Burmah-Shell offices at Karachi, Lahore, Delhi, Lucknow, Calcutta, Madras and Secunderabad.

Supplies and Prices

Last week appeared another estimate of the working of price control. Mr. A. C. Sen told the quarterly meeting of the Bengal National Chamber on Wednesday last, that the policy is not cognisant of the changes in supply caused by inadequate transport control is freely blamed and large purchases for the military leave the civilian consumers unable to meet the argument that exports, higher wages and transport shortage are an element in the rise in prices. Mr. Sen added a reference to a sudden increase in the cash resources of a certain section of the people resulting from their participation in the war effort, reflected in a corresponding increase in the demand for the limited supply of goods. The emergence of black markets is a guide to the position created by new war wealth. The licensing of dealers which appears to be the remedy officially approved does not find support. Mr. Sen is induced to attribute the shortage of foodstuffs, etc., noticed last month to the deficiency of transport. The present difficulties are largely due to mistakes in policy, according to Mr. Sen, who referred to the adoption of a "denial" policy in East Bengal and its effects. Three months earlier, Mr. Sen discussed the problem of supply and prices. If his views have not changed, the problem remains broadly the same as before. Transport is viewed as the key to improvement, to be translated into lower prices, but into higher prices for jute alone because the shortage of transport has produced different effects in the case of jute as crop movement has been retarded.

Oil from India

The attention paid to the invention of new lamps meant to take groundnut or other oil is largely due to the shortage of kerosene. A direct result of the war, the kerosene shortage is to be ascribed to the fact that India's oil production is equal to 0.1 per cent of the world production. The abundance of supplies in the New World or the immeasurable superiority of the Allies in regard to fuel generally cannot give much satisfaction. Whatever be the extent of fields or the developments of oil production in Iran or Iraq, the loss of Burma assuredly, has made a great difference. Thrown largely on her own resources, India has only Attock and Digboi as local oil centres. The known producing centres are confined to the sites of two ancient gulfs, the Assam Gulf occupying the middle portion of the present Brahmaputra basis and debouching into the Bay of Bengal via the Megna basis and the Punjab-Baluchistan Gulf. India's oil production is fairly old as the borings were made in the Punjab and Assam in the last century. But success did not follow and Assam began to give a steady yield only after 1890. For about twenty-five years India's oil output was insignificant, but the last war led to vigorous prospecting and new fields were located at Badarpur in Assam and Khaur in the Punjab. The Badarpur field was exhausted in 1933, after a life of 18 years only but in the meantime other fields were discovered, notably the Digboi field in the Lakhimpur District in Upper Assam. Finally, a valuable field was found at Dhulian near Khaur in the Punjab. The development at Dhulian was so successful that the output in the Punjab amounted to 70,000 tons in 1938. But production in that year at Digboi was much larger at 270,000 tons. Since India's oil requirements are placed at two million tons in a year, it is clear that the home production is only a small part. Expansion of output in Bahrein or saudi Arabia can hold out advantages only if tanker tonnage is adjusted. As the war has admittedly raised demand at the same time as India's seaborne supplies are limited by the loss of Burma, the search for other fuels has begun. Producer gas was an obvious choice like power alcohol but for domestic uses only vegetable illuminants can be acceptable. As the price of vegetable oils has risen as sharply as that of mineral oil, it is clear that new lamps for old will make little difference. More reliance must be placed on daylight saving.

Cost Of Living Changes

In a month characterised by extensive unrest working class costs of living in Bombay did not rise. The stationary index at 168 was 65 points above that for August 1939. The rise of 60 percent or so in the cost of living in three years is not peculiar to Bombay. But the arrest of a major trend infuses some faith in the measures adopted to check the rise in the price level. The "Bombay Labour Gazette" refers to the fall in the price of foodstuffs as compared with July 1942. There was little or no change in the price of grain or pulse, and tea, for instance, was a little cheaper, as also vegetables, milk etc. The main change was a rise in the cost of clothing and conventional necessities like soap, medicine and arecanuts. Rent was stationary as usual and the cost of fuel and lighting was lower according to the Gazette. The rise in the Ahmedabad cost of living during July was smaller than that reported by Bombay for July, but the upward movement was obvious. In Sholapur, too, the cost of living for Labour was higher. Movements in the prices of food, fuel and clothing were against the consumer in this case and the rise as compared with August 1939 was as pronounced as in Ahmedabad where the index was 17 points above that for the base period 1926-27. Throughout 1941 and 1942 the working class cost of living has risen in India and there is some support for the view that economic hardships accentuate political unrest in the cities. To judge only by the changes in June and July 1942 the rise was less appreciable in Madras than in Jubbulpore while the cost of living index for Nagpur was 81 percent higher than that for August 1939. Over a year the advance in prices has raised the cost of living for the working class in Bombay and many other cities. Figures for Calcutta cannot be cited to show the extent of the difficulty, but the main factor this year apparently is the rise in the cost of foodstuffs. If food prices are not near the 1919 level to-day it is certain that prices have risen steadily from 1940 and the efficacy of all control measures had to be reviewed once again in September. As trade disputes this year have turned largely on grant of dearness allowance and bonus, it is easy to see the bearing of prices on factory labour. In Cawnpore, Lyallpur, Amritsar and other distant towns many strikes occurred in June and earlier owing to a demand for adjustment of wages. Unorganised workers were not immune, and the most interesting dispute reported is those of bidi workers in Ahmedabad. Women held out for equal wages and asked for wages in respect of bidis rejected by the employer. The dispute lasted for 11 days and concessions were secured as in Kurla by the workers, though the women could not get the same pay as the men.

War Production

Lord Halifax referred only recently to the advance in Britain's tank production and shipbuilding. Though there are 100,000 men less engaged in shipyards to-day building and repair alike are better than in the last war. That ships remain the way to victory is universally accepted, and America's achievements do not reduce the interest of disclosures that shipping losses are going down. Nevertheless, ships remain the prime need, and Mr. Churchill again called upon shipyard workers to strive to the utmost. The appeal elicited a pledge to do better with new ships and old ships alike. Shipbuilders have the same importance as sailors, and for the Second Front, the main burden must fall on shipping. By July last new construction was ahead of destruction by the enemy and the battle of sea transport was definitely won. Not only is the U.S.A. interested in shipping, but Russia, which is held up by Allied convoys, has a direct in-

terest in the major tool of victory. Parity in the air is no longer an ideal. It has been attained and British aircraft output has risen successively. Mr. Ben Smith in a broadcast to America described its development. Bigger and better types have come into operation. Bomb-carrying capacity settles the weight of the attack on Germany and the Sterling, the Halifax and the Manchester are the counter part of the Flying Fortress that helps the R.A.F. Britain's bombers are now more famous than the fighters that won fame in 1940. But the Allies still count on U.S. output. During 1940 Britain alone produced nearly three times as many aircraft as the United States, said Mr. Smith who added that in 1941 the two nations were within five per cent of each other. The greater industrial resources have given the U.S.A. the lead at present. Mr. Smith disclosed that Britain still exports more aircraft than she gets from the U.S.A. It should not be thought that the great bulk of overproduction, and what we are importing from the U.S.A. to supplement it is kept in this island, said Mr. Smith. It is necessary to keep great forces, but in the first half of 1942 Britain exported to Russia, the Middle East and elsewhere well over three times as many aircraft as she imported. Repairs and salvage of damaged aircraft are also carried out by the aircraft industry, and those put back into work count for much.

Reduced Goods Traffic

The total approximate earnings of State Railways for August was Rs. 10.25 crores, showing an increase of Rs. 24 lakhs only on the total earnings in August, 1941. The Railway Board's communique states that earnings in August showed an increase of Rs. 76 lakhs under coaching receipts and a fall of Rs. 55 lakhs under goods receipts, while miscellaneous receipts rose by Rs. 3 lakhs as compared with August, 1941. The decrease in earnings as compared with July, 1942 is due to the dislocation of railway traffic. In the debates in the Home Member's resolution last month, no reference was made to the fall in revenue occasioned by civil disturbances. The usual analysis of income refers to the rise in coaching receipts as a result of enhanced fares, increased parcels traffic, and movement of troops. The earnings from goods showed a general fall except in the case of kerosene oil, salt, metals, military stores, gunnies and rice. The communique records also the fact that receipts from traffic in coal showed a fall of Rs. 20 lakhs and metallic ores of Rs. 11 lakhs. These changes measure the repercussions of political discontent on the Indian railways' revenue. But the Government of India has no reason to say that the railways are not supplementing its revenue. Total approximate earning of Indian railways from April 1, to August 31, amounted to Rs. 58.05 crores showing an increase of Rs. 7.59 crores on the total for the same period of 1941 and an increase of Rs. 15.1 crores as compared with 1940. The increase in fares and rates was operative during both the periods chosen for comparison. The most important result of the disturbances in August was the fall in goods traffic. The number of wagons loaded in August decreased by 21.4 per cent on the broad gauge and 16 per cent on the metre gauge. This was due to the reduction of traffic in all commodities. The wagon loading figures available since April 1, 1942 point to reduced movement of grains, cotton, oilseeds etc. The fall in traffic is connected with the changes in prices. Reduced supplies explain the higher prices ruling. It has been noted that in comparison with 1941 figures there is a fall up to August 31 of 15.8 per cent in the total number of wagons loaded on the broad gauge and 18.2 per cent in wagons loaded on the metre gauge. The detailed statement indicates only a slight fall under miscellaneous full wagons and home line

Excuse me— Inner Cleanliness keeps you freshest!

Pay as much attention to Inner Cleanliness as you do to your outward appearance, and you'll always keep fit and fresh, for Inner Cleanliness is the first rule of Health. Make sure of it by taking a regular glass of sparkling Andrews Liver Salt.

Andrews cleans the tongue and mouth, settles the stomach and relieves acidity. It tones up the liver and checks biliousness. Finally, to complete your Inner Cleanliness, Andrews gently clears the bowels, sweeping away trouble-making poisons. It corrects constipation — is economical and not habit forming. The same small dose is always effective.

85

stores and a quite small increase in coal carried for three railways. Restriction of booking explains the fall under miscellaneous smalls, and the actual figures point to a shortage of transport that naturally provokes impatience but is explained by the strain placed by the war on the Railways which have to put aside cotton and oilseeds in favour of other consignments. That the smallest fall is shown under miscellaneous wagons on both the broad and metre gauges is clearly due to the expansion in military traffic.

Progress in the Air

Aircraft recognition despite Mr. Steele-Sneath's book is caviare to the general. That the Allies have many types and their quality is exceptional are generally known, but few care to link the Bomber Command's operations with the industry. If Hawker shares are going up from last month only, it is because of the tradition continuing from the days of the Sopwith 'Camels.' If Rochester has become famous because of Short Bros. it is because the Stirling is up to its job. Four-engined bombers made in Britain answer to the Boeing and Consolidated Aircraft's imported planes. The Douglas Boston and the Havoc are earlier imports like the Lockhead Hudson which almost displaced the Aviro Anson, but most recent of the imports is the Mustang of the North American Aircraft Company, which provided the Harvard Trainer. Additions to the Curtiss and Grumman range have proved that the Fighter Command and the Fleet Air Arm benefit from U. S. production. As the Americans like the Germans give numbers it is not easy to say whether the U. S. A. has provided any fighter other than the Bell Airacobra. In its own advertisements the U. S. aircraft industry gives little away, and what the new Lockhead Vega can do or what the latest Vultee would accomplish in comparison with the Martin Marauder can only be guessed. What is clear now is that as against the handful German of types—the Heinkel, Dornier, Junker, Messerschmitt and Focke-Wulf—the Allies have a whole host of specialised types in production from the Midlands to Maryland. The Bristol Beaufighters' work in New Guinea has already become a legend—the Australian-made Beauforts have won a name as rapidly as in Europe and the only Company that does not appear to have put out new types with new names is Vickers—whose Wellesley planes made flying history in the non-stop flight of 7,182 miles from Ismailia to Darwin in Australia. The Americans are going to produce a new Boeing with better performance. Improved spitfires and hurricanes have become quiet familiar, but the "Daily Herald" has spoken recently of a new Mosquito with a powerful sting. Fighters with a speed of over 400 miles have become commonplace and Allied superiority based on resources and skill must win many battles in the Atlantic and Pacific alike. The R. A. F. like the Army is ready to go anywhere and do anything, only recently its fighters did the work of Coastal Command with a convoy to Russia. Sea-Hurricanes are a new element in the Fleet Air Arm and form a worthy addition to the usual Fairey and Blackburn planes that look after the work of attack.

Anglo-Turkish Trade

Turkey's familiar trade dilemma has almost disappeared. Evidently the U. K. C. C. concentrates on the only surviving neutral. In spite of the rise in prices, the rationing in force, and many other difficulties. Turkey has been able to avoid the explosion of discontent. An effort to renew the old agreement to take chrome ore suggests that Turkey is not likely to help Germany even in 1943. Herr Clodius' determined efforts last year failed. Now that Germany can sell little, and Turkey is eagerly turning to supplies from the British Empire, through the Middle East, the trade position is simplified. Anatolia is not menaced by the German advance into Russia; and it is the Turkish view of the war situation that governs the expansion of trade. "Times" recently drew attention to the growth of trade fostered by the U.K.C.C. which, in turn, has undertaken to take raisins and sultanas. The misfortunes of Greece explain the inclusion of olive oil etc. The trade in chrome ore and tobacco is regulated by separate agreements, but the U.K.C.C. has arranged to take more copper and valonia—one of the most useful tanning materials. The agreements concerning chrome ore will follow that negotiated by the U.K.C.C. for the purchase of larger quantities of Turkish produce. The arrival of larger quantities of Empire goods in Turkey is taken as proof of Britain's ability to stimulate trade. If the Aegean is closed to trade, Britain can always send goods through Alexandretta. And the supplies of British and Empire

goods go through Asia Minor besides the improved harbours of Alexandretta and Mersina. The Germans were promised some chrome ore last year but they cannot expect anything as Turkey is a neutral pledged to defend herself against the Axis. Turkish journalists are touring Britain, and Turkey's trade with India too, is growing. The Turks hope to get more from America and Britain as they doubt German ability to keep up supplies under the agreement of June. They refused to sell chrome ore then, and are negotiating another which will give Britain the right to take up 100,000 tons annually or practically the entire output of chrome.

Loan to Britain

Every speech of the day teems with suggestions as to the use of India's growing sterling balances. The London press could not ignore the abundance of comment, and the proposals for purchase by some means of British investments in India have been followed by the usual reaction. The only important suggestion made (by the "Financial News") is the consolidation of the sterling balances into a short-term loan bearing a reasonable rate of interest. India's credit may be high, but there are few ways of making British enterprises Indian. The only way to use blocked assets, which exceed £300 million is to invest in London and wait for repayment in the course. Conversion either into gold or dollars is ruled out, and unofficial references to the lien of the R. F. C. on British insurance companies' assets in the U. S. A. ignore the fact that the arrangement was made when America was neutral and the procedure was different as lease-lend was at work. Whether the Government would be justified in buying out and selling back shares in old established enterprises is a question which need not arise when Mr. Amery is repeatedly stressing the firmness and continuity of the Indo-British connection. The Reserve Bank, of course, has not indicated its views though the Central Board is said to have examined the problem in August. That present conditions on the London stock exchange warrant sale and that British investors in funds would find new war loan acceptable seem to be extraneous considerations. Since South Africa has not attempted to buy out British and American interests and is content to pay off external debt by instalments, the present policy of the Government of India appears to be intelligible and acceptable. That the 'drain' has been reduced by payment of sterling debt, and shipping and insurance receipts are falling, are generally known. The view of Mr. Oscar R. Hobson to the effect that post-war reconstruction should be financed by the pile of sterling assets is not altogether novel. But many will beg leave to doubt, if there is a place for big construction programmes in India. To pay back in goods appears wholly reasonable to the "Manchester Guardian" which thinks in terms of an export drive in new creditor countries. But Indian industries would not relish the prospect, and a short-term loan at 2 per cent appears quite the thing. Buying of Conversion Twos might be embarked upon with advantage in the interval and the Reserve Bank might even find it easier to get afterwards the better terms advocated. That India should borrow at home at 3 per cent appears unreasonable to many here who ask that something more should be done after trying to get 2½ per cent on the £30 million laid out for the railway annuities. That sterling can be changed to other currencies or gold after the war or that India might have to lend to Europe after the war for self-evident reasons does not seem to occur to every mind.

AIK. 14

Route To Alaska

A new link between Canada and the U.S.A. is the highway to Alaska. The Territory is connected with the Pacific slope by a direct route wholly independent of shipping. The road is nearly ready for use, and the recent announcement of Mr. Stimson that the highway will come into use as from December 1, proves that a major construction job has been finished well ahead of schedule. The Washington correspondent of the "News Chronicle" reported recently that the 1,600 mile highway has been got ready by Army engineers and construction gangs against difficulties that looked insuperable when work began in March last. The road through British Columbia and the Yukon had to be made in a bad climatic, on bad terrain; mosquitoes were encountered in marshes while the ice of the untamed north was enough to freeze up machinery. It was originally expected that a road would be ready in March 1943, but actually the well-graded and well-drained road is meant for two-way traffic over much of its length. Trucks are likely to become common, and the Klondike is likely to have a fresh spell of prosperity, at least after the war. The new highway may not be as important as the projected road through Central America to the Panama Canal but it is likely to be more vital for the war in the Pacific. The operations in the Aleutians underline the great importance of Alaska in the air age. A feeder route independent of frozen ports was a necessity before war came and the work began before the war long before Dutch Harbour was attacked. The highway starting at Dawson, Creek, B.C., which is served by both U.S. and Canadian roads and railways, will enable supplies to go straight across the almost uninhabited wilderness through White Horse in Yukon and then westward to Fairbanks in Alaska.

(THIS PROSPECTUS HAS BEEN DULY FILED WITH THE REGISTRAR OF COMPANIES, COOCH BEHAR AS REQUIRED UNDER COOCH BEHAR COMPANIES ACT).

(A copy of this prospectus certified by the Chairman and two other directors of the company as having been approved by a resolution of the board of directors passed on October 3, 1942 has been delivered to the Registrar of Joint Stock Companies, Bengal).

The Subscription list will open on the 12th October, 1942, and will close as soon as the issue is subscribed or earlier if the Directors so desire.

THE COOCH BEHAR TOBACCOS, LIMITED

(INCORPORATED IN COOCH BEHAR UNDER COOCH BEHAR COMPANIES ACT II OF 1933 ON 27TH FEBRUARY, 1942).

AUTHORISED SHARE CAPITAL - - Rs. 25,00,000

Divided into 10,000 perference shares of Rs. 100 each, 1,49,500 ordinary shares of Rs. 10 each and 10,000 deferred shares of As. 8 each.

The holders of preference shares shall be entitled to be paid out of the profits which the Directors shall determine to distribute by way of dividend a fixed cumulative preferential dividend at the rate of 6 per cent per annum on the capital for the time-being paid up thereon and to a right on a winding-up to be paid all arrears of the preferential dividend whether earned or declared or not down to the commencement of the winding-up and also to be repaid the amount of capital paid-up or credited as paid-up on the preference shares held by them respectively in priority to any payment in respect of the Ordinary and Deferred shares but shall not be entitled to any other rights in the profits or assets of the Company.

Subject to the provisions of clause 4 and other clauses of the Articles of Association hereof the Ordinary shares shall confer on the holders thereof the right to a dividend at the rate of 12 per cent per annum on the capital for the time being paid-up thereon and also the right to half share of the surplus profits of the Company of each year which shall remain after paying or providing for payment out of such profits of the dividends on the Preferences shares and on Ordinary shares and the Directors' commission and shall rank as regards dividend and capital next after the said Preference shares.

Subject to the provisions of the other clauses of the Articles of Association the deferred shares will confer on the holders thereof the right to half share of the surplus profits of the Company of each year which will remain after paying or providing for payment of the dividends on the preference and ordinary shares and the Directors' commission and such profits to be distributed in proportion to the number of shares held by them. They shall also rank as regards capital next after the preference and ordinary shares. *THE PRESENT ISSUE AT PAR OF*

4,998, 6 per cent cumulative Preference shares of Rs. 100 each and 49,500 Ordinary shares of Rs. 10 each payable as follows:—

25 per cent with application, 25 per cent on allotment and the balance in two instalments of 25 per cent each at such intervals not less than two months as the Directors may determine.

Applications have already been received from the Government of His Highness the Maharaja of Cooch Behar for 23,333 Ordinary shares and 1,000 Preference shares. Her Highness the Maharani Saheba of Cooch Behar also kindly intends to take 6,000 Ordinary shares. 10,000 Deferred shares have also been taken up.

On the 17th day of March 1942 a prospectus was issued whereby shares of all classes of the total nominal value of Rs. 10,00,000 were offered for subscription but no shares have so far been actually allotted.

The offer contained in the said prospectus, dated the 17th day of March, 1942, is hereby withdrawn by the Company and the persons who applied for shares under the said prospectus are at liberty to take back their applications with the application moneys paid to the Company or to apply for shares under this prospectus and to authorise the Company to appropriate the money lying with the Company or its Bankers towards the payment of the application money in respect of the shares subscribed under this prospectus.

COOCH BEHAR TOBACCOS LIMITED.—PROSPECTUS—Contd.

The Company was incorporated on the 27th day of February, 1942, in the State of Cooch Behar under the Cooch Behar Companies Act II of 1933, with the object of utilising the concession granted by His Highness the Maharaja Bhup Bahadur in Council with regard to the manufacture and sale of tobacco and cigarettes and to carry on the business of manufacturers of and dealers in tobaccos, cigars, cigarettes besides, match lights, pipes and any other articles required by or which may be convenient to smokers, and of snuff grinders and merchants and to deal in any other articles and things commonly dealt in by tobacconists and the other objects set forth in the Memorandum of Association of the Company attached hereto.

The tobacco grown in Cooch Behar has been found to be of approved quality for the manufacture of high grade cigarettes. The Agricultural Department of His Highness the Maharaja is taking all necessary steps to improve both the quality and quantity of Virginia tobacco grown in the State.

In addition, the Company will be able to secure Guntur tobacco which has been acknowledged to be good cigarette tobacco. India now ranks as the second largest virginia tobacco producing country in the world yielding place only to the United States of America. In the British Empire, India holds the premier place as a producer of the best grade Virginia tobacco.

Cigarette consumption in India, as in the rest of the world, has increased year by year. While, in every other country, the cigarette industry has grown from strength to strength and the cigarette-making concerns of the world are amongst the soundest and most profitable enterprises, India requires a purely Indian concern of some magnitude for the manufacture of cigarettes.

The cigarette industry is a simple and steadily expanding structure, with its formation broad-based on universal demand. The raw materials are easily available. The manufacturing process is nothing very complicated. Marketing organisations are ready made. The market is ever expanding.

This Company starts with important initial advantages. The crucial factor is the availability of high grade cigarette tobacco. The climate of Cooch Behar, being equable, will be quite suitable for a cigarette factory. The construction of the factory can be done on an economical basis as the State has given on lease the required land adjacent to the railway on favourable terms.

The potentialities of the Company are recognised by the Cooch Behar State who have applied for a large number of shares as mentioned above.

The Cooch Behar State has by Notification, dated the 3rd August, 1942, granted the following concessions:—

(1) For the first ten years that is upto 1951-52 (inclusive) the rate of income-tax and super-tax applicable to the Company shall be 30 per cent of the ordinary rates current in the Cooch Behar State.

(2) The company will be granted a lease of a selected site covering not more than hundred standard Bighas for 20 years, at a lump revenue of Rs. 400 only per annum for the first ten years and thereafter at the prevailing rates.

(3) For the first ten years aforesaid the Company shall be charged export duty at annas 3 only per maund of manufactured tobacco.

Agreements as to Appointment of Managing Agents and their Remuneration.

Pursuant to the Articles of Association the Company will enter into an agreement with Messrs. Chari and Chari Ltd., whereby Messrs. Chari and Chari Limited (of which Rao Bahadur T. M. Rangachari is a Director), will be the first Managing Agents of the Company for a period of 20 years from the date of the incorporation of the Company and will have the general conduct and management of the business and affairs of the company subject to the direction and control of the directors and the remuneration of the Managing Agents shall be:—

(1) An office allowance of Rs. 500 per mensem.

(2) A commission at the rate of 10 per cent of the net annual profits of the Company to be calculated in accordance with sub-clause (3) of Section 87C of the Indian Companies Act introduced into the State of Cooch Behar by the Cooch Behar Companies Act IV of 1942, with a minimum commission of Rs. 1,000 per month in the case of absence of inadequacy of profits in any year to pay the commission aforesaid.

In addition the company will pay all office rents, taxes, salaries, wages, stationery, postage and telegrams, travelling and other incidental expenses incurred by the Managing Agents in connection with the business of the Company.

Interest of Directors.

Rao Bahadur T. M. Rangachari is interested as Managing Director of Chari and Chari Limited, the Managing Agents of the Company, Rai Chowdhury S. K. Chakravarti and Mr. Ansaruddin Ahmed, Finance and Audit Officer, Cooch Behar, as nominees of the Government of His Highness the Maharaja Bhup Bahadur, and Rai Bahadur K. N. Khandelwal as partner of the Firm of Brokers of the Company.

Minimum Subscription.

The minimum subscription on which the Directors may proceed to allotment in respect of the offer is Rs. 3,40,000 which in the opinion of the Directors must be raised out of the proceeds of the present issue to provide for

(a) necessary plant,

(b) preliminary expenses and commission, and

(c) working capital

to make a commencement with.

Directors' Qualification and Remuneration.

The qualification of Directors (other than *ex-officio* Directors, Lawyers or other Technical Adviser) shall be the holding of 100 shares of any class in the Company. A Director may act before acquiring his qualifications, but must acquire the same within two months after his appointment or election.

The remuneration of each Director shall be such sum as may from time to time be fixed by the Directors, but not exceeding Rs. 50 for each meeting of the Board attended by him. The Directors shall also be entitled to be paid their reasonable travelling, hotel and other expenses, if any, incurred in consequence of their attendance at Board meetings and otherwise in execution of their duties. Whenever the profits of any year available for dividend on the ordinary shares shall be more than sufficient to pay a dividend at the rate of 6 per cent per annum, on the capital for the time being paid-up then the Directors shall, in addition to the above remuneration, be entitled to a commission of 5 per cent of the surplus profits of such year and such remuneration shall be divided among them in such proportions and manner as the Directors may determine and in default of such determination equally.

Commission.

The Articles of Association provide that the amount of commission for agreeing to subscribe or procuring or agreeing to procure subscriptions for shares of this Company shall not exceed 5 per cent on the shares. The commission may be paid in cash or shares or debentures of the Company.

Brokerage.

The Directors may pay brokerage at 2½ per cent to approved brokers for the number of shares allotted on the applications canvassed by such brokers.

Preliminary Expenses.

The preliminary expenses have been estimated to be Rs. 15,000 exclusive of stamp duties and brokerage.

Voting Power.

On a show of hand every member present in person shall have one vote and upon a poll every holder of Preference, Ordinary and Deferred shares present in person or by proxy shall have one vote for every share held by him.

Restrictions of Right to Transfer and Attend or Vote.

The Directors may decline to register any transfer of shares upon which the Company has a lien and in the case of shares not fully paid-up may refuse to register a transfer to a transferee of whom they do not approve. The Directors may also refuse a transfer of shares whether fully paid-up or not without assigning any reason therefor and that in spite of the fact that the transferee is already a member of the Company.

No transfer shall be made to an infant or person of unsound mind.

No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a pool or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of the Company.

Restrictions on Powers of Directors.

The Articles of Association provide as follows:—

1. The Company shall not give loans to or guarantee loans made to any director or a firm of which a director is a partner or a company in which a director is a director or to a managing agents or to any partner of the managing agency firm or to any director of the private company which is the Managing Agents of the Company or to any other company under the management of the Managing Agents of the Company.

2. The Company shall not without the previous approval by a unanimous decision of the Board of Directors purchase any shares or debentures of any company under the management of the Managing Agents of the Company.

3. The Directors shall not, without the consent of the company in General Meeting, do any of the following things:—

(a) Appoint any director, or a firm of which a director is a partner or a company of which a director is a director to any office of profit under the Company save and except that of a manager, managing director, lawyer, technical adviser or banker.

(b) Remit any debt due from a director or sell or otherwise dispose of the undertaking of the Company.

The powers of the Directors are, subject to any regulations not being inconsistent with the Articles of Association of the Cooch Behar Companies Act II of 1933 as amended by Act IV of 1942 which may be made by the Company in General Meeting.

Documents.

Copies of the Memorandum and Articles of Association of the Company and the agreement and the Cooch-Behar Companies Act referred to above can be inspected at the registered office of the Company in Cooch Behar or at No. 13, British Indian Street, Calcutta.

A copy of the Company's Memorandum of Association is annexed to this prospectus and forms part of it.

The company has not yet commenced business.

Application for Shares.

Application for shares should be made on the form accompanying the prospectus or which may be obtained at the registered office of the company and No. 13, British Indian Street, Calcutta, and sent to the Company's registered office or to the Company's Bankers together with a remittance of the amount payable on application. Where no allotments are made the deposit will be returned in full; where the number of shares allotted is less that the number of shares applied for the balance of the deposit after providing for payment in full on the shares allotted will be returned.

Certificates.

Certificates will be ready for delivery in exchange for allotment letters within three months of allotment.

Dated this 6th day of October, 1942.

The offer contained in the said prospectus, dated the 17th day of March, 1942, is hereby withdrawn by the Company and the persons who applied for shares under the said prospectus are at liberty to take back their applications with the application moneys paid to the Company or to apply for shares under this prospectus and to authorise the Company to appropriate the money lying with the Company or its Bankers towards the payment of the application money in respect of the shares subscribed under this prospectus.

(*Continued from page* 624)

The active resumption of efforts to drive the Japs from Kiska can be linked to the construction of the road. Most U.S. observers regard the highway as part of the bridge to Asia, and reckon that supplies to Russia across the Behring Sea may become feasible sooner than fancied.

Life in Sweden

As little is known of life in neutral countries, one must naturally attach great importance to Swedish press news. That Herr Hansson will again be Premier may be taken as certain, in spite of reports of German displeasure with the Swedish communist party and encouragement to local Nazis. That the Socialists will stick to neutrality appears axiomatic and the remnant of Scandinavia will probably remain as it was. Mr. Justin Brooke, who stayed in Sweden for two years, lived in a hotel in a small town. In a broadcast speech he pointed out that many Swedes knew English; many had seen America or had been stewards on big ships. Pro-British sentiment therefore appeared natural in a small town where the pro-Germans knew better than to declare themselves. Describing the conditions of life in Sweden, Mr. Brooke said: Although one country is at peace and another is at war, there is little to choose between living in Sweden and living in England. The most obvious difference is that there is no black-out in Sweden. But taxation in both countries is almost on the same scale. Food is rationed, and the average Swede gets about the same quantity as the average Englishman. In other ways, Sweden is worse off. A lot of things are now extremely scarce, the sort of things that a Swede could get in abundance before the blockade stopped supplies. The quality of many foodstuffs, too, is inferior to what it used to be. Some have been replaced by substitutes as in Germany. Coffee used to be the national drink. Now they tell me that the Swedes make their choice out of a hundred and forty-two brands of substitutes. These are made from peas, beans, acorns, rye, barley, wheat or oats which are roasted and ground in exactly the same way as coffee. Last winter, said Mr. Brooke, when meat was scarce, we used to have horse, fox and cow. For the most part the fox-meat came from the fur farms. (The Swedes did not comment on the unmentionable sin of killing an animal meant to be killed by hounds after a hot chase by a mounted crowd). Food is carefully rationed, said Mr. Brooke, who said that a shelf of ration cards was pleasant to look at because each card is printed in a different colour—yellow for butter, red for bread, green for meat and so on. Cattle-food is short as well as human food and to make hay and corn go farther the cows and horses are fed on a special cellulose preparation. It looks just like cotton-wool, but it is more nourishing. A direct result of the war is the adoption of wood gas generators to every car and lorry seen on Swedish roads. The generator, said Mr. Brooke is usually fixed to the back of the vehicle or is on a separate trailer of its own. As to industrial conditions Mr. Brooke said: Many lumberers have been called-up and firewood production has dropped. Coal imports from Germany have decreased, and Sweden is facing a very serious fuel shortage. Bathing, central heating, etc., have been modified, and electric voltage has been reduced by ten per cent. Though heating is less obtrusive, life is pleasanter. As to Swedish views on the war Mr. Brooke could only refer to the preparations in Sweden against any surprise. Germans have great freedom of movement except, of course, in defence areas and industrial districts. Neutrality said Mr. Brooke is not profitable. Sweden is not getting fat from her exports. Iron and paper are paid for in Italian oranges and French wines. He noted privation in a neutral country.

Australia's Experience

Australia's experiences in this war are mixed. Public expenditure is growing like the armed might of the Commonwealth. To replace the lost cruiser the British Government is giving the "Shropshire." War expenditure in 1942-43 is expected to be £440 millions. The main change in the September budget was a new Federal entertainment tax. Mr. Chifley also announced the proposed holding of a referendum in order that the Government might have increased powers to cope with post-war problems. The rationing in vogue rather than limitation of imports explains the limit set on gift parcels of tea for Australia, particularly, as the ration has been raised to 8 oz. for five weeks. Australia has got, as from August 31, rationing of sugar, the allowance per head being 1 lb. per week with a special allowance for jam-making. The most recent departure in price stabilisation is a plan to help the wheat-growers. Under a new plan, Australian growers will receive 4 shillings a bushel at country stations for their first 3,000 bushels of the coming season's wheat, and an advance of 2 shillings on the balance. Further payment will follow when the wheat is sold. The arrangement will assure a good living to 80 per cent of Australian wheat-growers. The Commonwealth has signed the new international agreement to control wheat production and keep down excess stocks

At this time of national stress, it is essential that every effort is made to conserve the supplies of paper at our disposal. We urge all business houses to see that the strictest economy is observed in the use of paper. So often one page can be made to do the work of two. Everywhere and always this must be done. We must save paper.

India's fighting men overseas, eagerly await the precious sheet of paper bringing news of home and family.

It is good to hear that the crops are satisfactory, that there is no sickness in the family and that two healthy calves have been added to the homestead.

And in the village, it is a proud man who can read his son's letter from overseas to an admiring circle, in the cool of the evening.

Do not waste paper; it may be needed for such a message.

ISSUED BY THE TITAGHUR PAPER MILLS COMPANY, LIMITED

during the war. Signatories are the Governments of Argentina, Australia, Canada, the U. K. and the U. S. A. The four chief exporters will contribute to a relief pool of 100 million bushels for distribution to starving countries after the war. Australia's war effort has many aspects and the increase in arrowroot production in Queensland from 800 to 1,800 tons yearly for the production of mucilage is as important as the Army's attempt to grow rubber in New Guinea or the abolition of holidays for war workers. Chief item of intelligence is the construction of at least 100 aerodromes. Construction was rushed through in a few months and many more are to come. General MacArthur's assistant, Brigadier Casey declared that work on the aerodromes are being pushed through and everything relating to them has an A1 priority among Allied works. Australia has her own post-war plans. Mr. Holloway, the Minister for Health, declared that housing and unemployment insurance were to be tackled. Housing will come first because in insurance plan is harder to put into force. It was revealed that the housing plan would go into operation immediately after the war and would take up thousands of men from the fighting forces and the munitions factories. It was claimed that the housing plan would not only meet the shortage of houses but would also be a great labour-providing machine. South Africa is not the only Dominion to know Chinese labour. It is not a regrettable necessity there. The men from South China who were working phosphate mines in the Nauru and Ocean islands two years ago, are toiling in two wolfram mines in Central Australia. The men work under a manager formerly running the Austral-Malay tin mine. It has been reported that the field had produced 1,000 tons of wolfram since 1913. The present value of wolfram or tungsten is £330 to £400 per ton according to quality. The quality of Australian ore is high. Another change of wartime will be the advent of pool petrol. A new company has been formed in Victoria and the older companies have agreed to give up trade names and marketing interests. Quotas will be allotted in order to save labour and transport and the common pumps will provide a brand called pool petrol. This is a small change compared with those proposed under the rationalisation plans propounded for all industries in Australia in order to advance the War effort.

Goods for Egypt

The market for Indian goods in Egypt keeps growing as imports generally have risen, particularly, in April, according to the Trade Commissioner's report. In the import trade of Egypt the first place is held by the U.S.A. followed by Britain and India. It is stated that there is scope for improvement in the trade with India as enquiries are increasing in number and range. Business remains difficult because of a variety of controls, but exporters are urged to respond to enquiries and enlist the help of the Alexandria office. Egypt manifests interest in textiles, jute manufactures, spices, tea, cocoanut oil, paints, foodstuffs etc. Shippers of cotton goods have not shown much interest in the Egyptian market owing to their apprehensions as to export control. Since the beginning of 1942 India has become the biggest supplier of cotton goods and shippers are asked to keep up trade connections in spite of the import licensing adopted by Egypt. Indian exporters have been warned that the future should be safeguarded by attention to enquiries and the maintenance of quality. Egypt is keen on drugs and chemicals. Small quantities from India have appeared on the market. The opportunities presented by the war can be utilised only to a limited extent as Indian requirements have the first claim on Indian supplies. There is, however, much force in the suggestion that a good name should be won, and kept, for Indian pharmaceutical preparations. Catalogues and samples are in request for display in the Alexandria office.

Military expenditure in India has after a long time come to the fore as a subject of absorbing attention. The questions which were recently asked in the Central Assembly and the replies thereto of Sir Jeremy Raisman refer to matters of far-reaching importance; and Mr. G.L. Mehta the vigilant President of the Federation of Indian Chambers of Commerce, has lost no time in entering a protest against the Finance Member's attitude to the problem. Where expenditure of hundreds of crores are involved, it is not difficult to feel a sense of grave concern or to induce it in the mind. But getting to brass tacks, so far as this question is concerned, is not easy. The principles are easily stated and general agreement, too, obtained though certainly with less ease. But the application of these principles to particular cases raises a host of issues on all of which no one man can speak with indisputable authority. With the best will in the world to treat this as a financial problem, you find yourself landed in the infernal bogs of the political deadlock. The Congress under the leadership of Mahatma Gandhi gave up long ago this futile attempt at settlement with the British Government on particular issues. Swaraj alone matters, nothing else does—this was the new faith. And all discussions on particular issues were avoided as being certain to distract attention from the main issue.

* * * *

Naturally enough, the converse of this appealed to the Congress of the days of Phiroze Shah Mehta and G. K. Gokhale. The latter particularly revelled in debates in which the pointed nature of his criticism exculpated him from a general charge of sedition. His armoury consisted chiefly of statistics relating to other countries of the world. And nowhere could this be displayed to greater advantage than in the matter of Army expenditure. Gokhale's criticisms of the Army Budget in India were hardy annuals, the same as were the resolutions of Pandit Motilal Nehru at a later time on what was called the National Demand. There used to be little booklets, if I remember right, in our school days on the military budget by Sir Dinshaw Wacha, Mr. Gokhale and others. One would have thought we had moved far from those days when nationalist-minded politicians and public men would, as the saying goes, ask for cream, butter and buttermilk, when they should be striving for the possession and use of the cow. But not only has the question of military expenditure suddenly raised its head again, but its come-back coincides with the inauguration of what Gandhiji insists is the last fight for Swaraj

Is this more than a coincidence? I for one should think that this is proof of the increasing complexity of the problem of our national existence. No longer can we think on lines with which we have till now been familiar. The choice between particular issues and the comprehensive issue of Swaraj no longer reflects the realities of the position. Nor, for the matter of that would the old idea that the only change called for by army expenditure is a reduction in total outlay. It would be idle to pretend that, because Britain is interested in the preservation of her far-flung Empire, the defence of every spot marked red or pink in a world map is an exclusively British interest from which we can afford to stand aloof. If you look from the other side, too, you are confronted by the same complexity. No longer can it be said that the British soldier in India is a Knight of the Round Table anxious only to protect the defenceless masses of this country. No longer can Britain leave India to make the most of her slender resources and put up the best defence she can against the powerful invaders from the East. Britain has, without any offensive pretensions to altruism, to help India to reorganise her defence equipment, make good the shortage of essentials, whether it be capital expenditure or arms or other equipment. India and Britain are interested, in degrees which vary as different aspects of the problem are viewed from different angles, in checking the advance of the Axis powers, throwing them back and ultimately overpowering them. All these efforts can be made only through a greater mutual understanding between the two countries. That understanding can be hindered by the imposition of bad bargains on India on questions like military expenditure. But it can be helped to an even greater degree, by the settlement of the larger political issues. For, once these issues are settled, there would be little room for those bad bargains, which are after all only a euphemism for one-sided bargains that is, bargains in which all the bargaining strength is on one side. When the political issue is being fought (?)

UNDER THESE BANNERS WE WIN

IT is these banners that help us ride the present international storm with confidence. With these principles as our guide we have, during the 45 years of our existence, tided **over two wars, several earthquakes, many epidemics and slumps.**

The various buildings and investments of the Company in almost all important towns are visible signs of our strength and absolute security.

It is our willing service to policyholders that has made **BHARAT** so popular today.

by mobs in the mofussil tampering with the lines of communication, our legislators are obliged to make the most of the point that, though the principles may be acceptable, the application may prove as inequitable as if the principles themselves were iniquitous.

* * * *

That, after all, sums up the position taken by Mr. Jamnadas Mehta in the Assembly and Mr. Gagan Mehta outside. The only point of principle which does not lend itself to sabotage in application is that, before the Government of India comes to a decision on any of the outstanding questions and enters into an agreement with His Majesty's Government, the Assembly must be taken into confidence and must be given an opportunity to discuss it and make clear its views. Sir Jeremy Raisman was quite clear on the point, though one can see a marked reluctance on his part to commit himself to any definite undertaking. With his usual clarity, he pointed out that at present there is an agreement in force; that new situations are developing and are more than likely to develop in the future; that the question would arise whether the principles of the present agreement could be applied to the new situations and how, if they could not, departures therefrom should be effected. It is only in the last contingency that the rights of the Assembly would at all arise. He deprecated the general assumption that there was any special effort at hush-hush. And he said at the end that, "if the Government were contemplating a liability of this kind (i.e. one not covered by the present agreement), the House would be entitled to an opportunity to consider it. Discussion of such a matter of principle might well take place apart from the actual budget debate." The Assembly is anxious that members must have time to study the question before they are called upon to debate it. On this point, therefore, the principle is clear—that no new liability should be undertaken without the previous consent of the Assembly, that the Legislature should not be confronted with an administrative "fait accompli" and that the matter should be brought before the Assembly in time for members to study it carefully. If this principle is sabotaged, the saboteurs can hardly plead that they did no more than apply well-defined principles.

* * *

But this principle, however cheerfully granted or faithfully adhered to, will avail us little if the basis of the old agreement lends itself to different interpretations. As Mr. G. L. Mehta aptly points out,

> One of the clauses in the present financial settlement lays down that the cost of such war measures as can be regarded as purely Indian liabilities by reason of their having been undertaken by India in her own interests is hardly free from vagueness because it is all a question of interpreting as to what are the 'war measures' in question, what can be regarded as 'purely Indian liabilities' or what has been actually 'undertaken by India' and as to what is 'in her own interests'. The Finance Member himself acknowledged that even under the terms of the existing financial settlement, questions might arise regarding the allocation of share to India of the cost of measures related to India which at the same time cover a wider objective. This opens up a possibility of fresh liabilities being accepted even within the four corners of the existing settlement bcause, after all, it will be the British Government which will decide as to what are such wider objectives and what are India's interests.

Can such a situation be helped except by acquiring an equality of status with Britain for deciding these issues?

* * *

At the same time, the broad equity of the case may be readily recognised, that is, the main considerations that will govern not only the opinion of the rival parties but also the actual upshot of the disputes and controversies on this head. There is, first and foremost, the severe limit to India's capacity to pay. Unless one can contend that this war will leave India vastly richer than it found her—a patently absurd proposition to make—any exhorbitant claims on this country that Britain may accumulate through her present hold on this country would avail her no more than war debts on the European nations avail the U.S.A. The reduction in India's sterling debt may create an illusory notion of improvement in India's financial position. And it might be thought that India might repay her debts in the same way in which she bore her sterling debt in the past. But ultimately, it would be found that the replacement of rupee by sterling debt does not represent a corresponding addition to the national wealth. The second feature of the position which cannot be circumvented by ingenious argument is that, when the interests of Britain and India are so closely bound up together in this war against the Axis powers, it is not easy to divide financial responsibility to any degree of nicety. These two points, taken together with the fact that a political settlement will necessarily reduce the intensity of purely financial wrangles, serve to deprive present controversies of not a little of their value.

* * * *

I would say, therefore, for my part that, on the one hand, the Government will lose nothing by taking the Assembly into its confidence and being above reproach of doing an unfavourable deal with the British Government. On the other, we in India have to realise that the military expenditure which we have been accustomed to think of as appropriate to a country of India's economic position is but a drop in

D. F. SANDERS, *General Manager*

Olympus

(From Our Correspondent)

New Delhi, October 7.

NEXT in importance to the political situation —in a way, even more importance was the issue raised in both the Houses of the Central Legislature regarding Sir Jeremy Raisman's discussions in London. The debate in the Council of State was particularly illuminating—it revealed clearly non-official opinion on the one hand and the difficulties felt by the Finance Member, on the other, in acceding to this demand. The fact appears to be that though the London discussions have resulted in clarifying the position it has not been possible for the Government of India to consider Sir Jeremy Raisman's report and come to any definite decisions. Two important assurances were given by the Finance Member in the Assembly which were repeated later in the Council of State. Firstly, a statement will be made by the Government, as early as possible before the actual presentation of the Budget, giving the Government's decisions on the Raisman discussions. This is intended to give time to the country to study these decisions and enable elected members of the Legislature to deal with the question in detail when the time comes for dealing with the Budget. Secondly Sir Jeremy gave the assurance that in determining India's liabilities under the existing formula, it has in actual practice been assumed that only measures for the local defence of India would fall within the category of India's liabilities. In answer to Sir Jeremy Raisman's query the Finance Member categorically stated: "It was always so interpreted, and I may say that there is no question of widening the interpretation of that clause".

* * * *

Two questions now arise owing to the present development of the war which has made India the base for extensive war operations. There is even the possibility that if Japan tries to invade this country or if it is found necessary to carry the offensive against Japanese forces from India's frontiers, the scale of war expenditure may increase considerably. As an instance of the intensification of Defence measures in this country, the Finance Member mentioned the "enormous increase in the strength of the air forces stationed in this country," the strengthening of our anti-aircraft defences, etc. The first question therefore is weather the existing terms of the financial settlement can be regarded as suitable for the new situation also—if not, in what respects it should be modified in India's interests. Secondly, there is the further question that if the existing settlement is sufficiently comprehensive, certain principles should be decided by common agreement for applying the terms of this settlement to the new situation. The Finance Member did not commit himself in any way, but he stated the problem quite frankly and fully.

* * * *

Certain statements made by the Finance Member carry, however, certain important implications which cannot be overlookd. He said at very outset: "It is clear that even within the terms of the existing financial settlement certain questions may arise regarding the share which may fairly be allocated to India of the cost of measures which are indubitably directed to the defence of Indian territory and which at the same time covers a wider objective." Later he said: "The war for the defence of India is a part of the war generally. The House will, I trust, realise that it is hardly possible for questions relating to the amount of that expenditure to be discussed except in relation to the total picture which is presented in a Budge' speech". And lastly, he also indicated: "Now on the other hand, a different type of question may also arise, namely, whether any liability should be accepted which goes beyond the principles of the existing financial settlement". The Finance Member drew a clear distinction between what he termed a departure of principle—in other words the acceptance of a new type of liability which went beyond the principles of the existing settlement,—and what was not. These were the only indications available in the Finance Member's speech. It is somewhat significant, however, that in the course of his speech in the Council of State the Finance Member asked the members to bear in mind the possibility that even with reference to the new situation it may after all be more advantageous to go on with the old settlement.

* * * *

It is idle to deny that many serious apprehensions exist in the public mind. According to a statement made in the Council of State, the expenditure on defence and on supply brought to account in the books of the Military Accountant General was at present of the order of Rs. 1½ crore. This is bound to increase to Rs. 2 crores or more before the end of the year. The cost to the Indian Exchequer which the proposed increase in the pay and allowances of British officers and other ranks in the British Army in India will mean, has not yet been announced, but the revision of the pay of Indian soldiers announced today is expected to cost another Rs. 5 or 6 crores per year. It is impossible to foresee at what rate the Indian Army will have to expand in the coming months or what will be the extent and nature of future war expenditure which India will have to be prepared to bear. In his answer in the Council of State, the Finance Secretary told the House "How much of this would be charged to India and how much to His Majesty's Government could not be estimated until the revised estimates for the current year had been drawn up". That was one of the main reasons for the anxiety felt by non-official members. They desired to know whether even in so important a matter as the revision of the financial settlement in the light of the new problems and demands, upon which the nature and extent of Defence expenditure chargeable to India's revenues depends, no attempt will be made to consult representatives of the Central Legislature before final decisions are taken. This was the point of view urged by Mr. Hossain Imam in the Council of State and supported by elected members generally. When the Indo-British Trade Agreement was being negotiated, the Government of India set up a panel of non-official advisers for purposes of consultation. Similar bodies have been set up in the past by the Government of India on many occasions. So it was asked—why should not the Finance Member appoint a small committee or panel whom he can consult during the period of negotiation? Non-official speakers made no secret of the fact that they resented the old practice of coming to decisions first and then merely placing them before the Legislature for discussion. They considered it derogatory to the dignity of the Central Legislature that instead of giving them an opportunity to offer advice and help in shaping the decisions, they should be asked to wait for the Government's decisions and say at the time of the Budget what they want to say. Heated speeches were made on the point, but the Finance Member showed no inclination to accept this suggestion.

* * * *

For the first time this year, Railway earnings have disclosed a fall as compared with last year. The gross earnings of State Railways during the first ten days of September show a fall of Rs. 7 lakhs from last year's figure—partly probably due to the disturbances which have interfered with communications and partly to other reasons. Still the fall cannot be regarded as sporadic or accidental, for there is reason to think that the next few months of the year are not likely to be as prosperous as had been anticipated. The increase so far over last year's earnings during these five months is nearly Rs. 8 crores, but if the present fall continues, it may not be easy for the Railway Member to realise the surplus for which he has budgeted. The Standing Finance Committee for Railways which met yesterday considered the general traffic and revenue position of the Railways. The committee was told that the figures for working expenses up to July 31, 1942 amount to nearly Rs. 20 crores which shows an excess of Rs. 1½ crores over the budgeted provision. It appears that in the three ten-day periods following the recent civil disturbances there had been a slight increase in coaching earnings but a decrease of Rs. 87 lakhs under goods traffic the drop on the E.I.R. being half a crore.

* * * *

doors. It is still too early to say what the result of these talks will be, but the fact that two Provincial Premiers—and one ex-Congress Minister who is believed to be in close touch with Congress circles though he has no official connection with it—shows that more than ordinary importance attaches to these conferences. The idea was in fact to have an All Parties Conference, but as many important invitees like Mr. C. Rajagopalachari, Sir Sikandar and others have not found themselves able to come to Delhi, the organisers of the conference have been obliged to postpone it. In order to fall in line with other groups the Working Committee of the Hindu Mahasabha which also had its meeting this weekend to consider the report of the Shyamaprasad Mukherji committee, has also decided to wait for one month more and in the meantime pursue its efforts for bringing all parties together. At present the groups which have joined together are the Hindu Mahasabha, the Akali Sikhs, the Azad Muslims represented by Mr. Allah Bux (the Sind Premier), the group going with Mr. Fazlul Huq, other prominent individuals like Mr. K. M. Munshi. They seem to be hopeful that if the British Government is prepared to concede the substance of the National demand, other parties including the Congress and the Muslim League will also come round and agree to participate in a National Government in support of an all-out war effort to defend the country.

* * * *

No information is yet available whether Dr. S. P. Mukherji proposes to meet Mr. Jinnah again for further discussion. The feeling in the Hindu Mahasabha camp is that if the Viceroy had permitted its leaders to meet Mahatma Gandhi in jail, it would have been possible to take the matter further with Mr. Jinnah, but as under the existing circumstances this has not been possible, all that they can do is to wait. I have it on good authority that certain improtant Muslim leaders have been trying to negotiate a formula on the Pakistan issue which will be acceptable both to the Muslim League and to the other parties. It is difficult to say what the chances of this move are, but one section at least among the leaders present in New Delhi has not lost hope of finding a settlement. Mr. Fazlul Huq who is due to have another conference with political leaders this afternoon, is leaving tonight for Simla to meet the Viceroy. Though the main purpose of his interview is to acquaint the Viceroy with the situation in his province, it is expected that Mr. Fazlul Huq would again appeal to the Viceroy to persuade His Majesty's Government to take the initiative and explore further avenues for ending the political deadlock in the country.

* * * *

What exactly is the Government's attitude to the critical questions which have now come up? At a Press interview which Mr. Aney gave to British and American correspondents two days ago, one of those select gatherings arranged by Sir Evelyn Wrench, the American Relations Officer appointed by the Government of India, who for reasons still unexplained has been keeping out all Indian Press representatives from these meetings, the Member for Indian Overseas is said to have spoken out frankly and strongly. He is reported to have deprecated the present "passive" attitude of the British Government, to have expressed himself in favour of opening consultations with Mahatma Gandhi for a settlement and further to have emphasised that something should be done at once to end the present state of things and bring the people wholeheartedly into the war. The firmness with which Mr. Aney gave expression to these views, came as a surprise to the gathering, but the fact is that certain Indian Members of Government, like Mr. M. S. Aney and Mr. N. R. Sarker have for some time been urging the British Government to initiate a positive policy and stop the present drift. If they have now come to feel that the time has arrived for speaking out, it is certainly not surprising. Mr. Aney made it clear at the Press conference that Mr. Aney spoke not only for himself but for some of his Indian colleagues also. The impression which Mr. Aney's talk to foreign correspondents gave was that quite a large section of Indian Members were far from satisfied with the present political policy pursued in this country and were anxious to see a move on at once.

the ocean, in relation to the expenditure which a modern war on a world scale entails. In the days of Gokhale, the army budget was as much as Rs. 80 crores, assuredly an inflated figure for the circumstances and needs of the time. The politicians cried themselves hoarse over it. But the first real cut was made only during the great depression; and even then, it was not the Finance Member's axe, so much as the fall in prices, that achieved it. When the basic army expenditure came down to below Rs. 40 crores, we were inclined to shout.

* * * *

But the irony of it all! We were then most in the heart of the wood! For that was the eve of this world war. The first year of the war gave us an inkling of what was needed. The Chadbourne scheme became obsolete almost before its features could be scanned. And now we are having expenditure which was Rs. 50 crores above the basic figure in 1941-42 and Rs. 80 crores in 1942-43. While at the same time Britain according to the Finance Member in his last Budget speech, has footed bills to the tune of Rs. 400 crores. This war is not of our seeking. This war is for British Imperialism. True. But it menaces us not less for all that.

Bombay Millowners' Association Report

The Bombay Mill Owners' Association report for the year 1941, published recently, is of more than ordinary interest to readers. Even as a compilation of the statistics relevant to India's premier industry the volume is of great interest to everyone concerned with the progress of the industry. It is unnecessary to emphasise therefore that the publication has greater value as relating to a year full of developments in the industry.

At the annual general meeting held early this year, Sir Chandavarker referred at length to the great progress made by the industry since November, 1940 and the important part played by Indian mills in the Empire's war effort. It will be remembered that only recently the Government decided to increase their takings of Indian mill production from 20 to 35 per per cent. Earlier in the year the problem was one connected with the exodus of labour from the important producing centres on account of the serious reverses suffered by the Allies in the Far East. Conditions were returning to normal after April but the arrest of Congress leaders in the first week of August has again given rise to problems of additional labour and maintaining the high rate of production.

The problems connected with the freezing of the Japanese assets in India, the cessation of Japanese imports, with that country becoming a belligerent, and the difficulties in regard to supply of Government requirements are discussed at length in the report. But for the representations made by that efficient organisation, it would have perhaps not been possible to get over the difficulties confronting the industry. The usual statistics relating to exports have not been published as the Government of India have decided to suspend publication of seaborne trade figures in detail.

Jute Crop of 1942

In view of the discussions turning on the probable surplus of jute reference may be made to the final forecast published in the "Indian Trade Journal" last week. Total area in Bengal under jute is estimated at 2,712,540 acres and the estimated outturn is 8,039,815 bales. Acreage and outturn in Assam and other Provinces, as also Tripura, is lower so that the increase in the present crop is due exclusively to the increase of over one million acres on 1941 and the higher average yield of 2.96 bales per acre recorded in Bengal in 1942 as against 2.77 bales in 1941. In the review of the Bengal crop for 1942, it is noted that the season opened with favourable weather and the low and midlands crop in East and North Bengal started well. Except in the west and parts of north Bengal, where the high and midlands crop has suffered, the crop did well, and the late-sown crop was quite promising. The total outturn for Bengal is put at 8,039,815 bales out of the gross total of 9,014,130 bales. The crop forecast tabulates the district reports which indicate that jute is unimportant only in the Bankura and Birbhum districts. The increase in acreage is most pronounced in the Rangpur, Mymensingh and Dacca Districts.

A most significant feature emerging from the returns is the smallness of the crop in Chittagong where the area sown with jute was 600 acres only. Cultivation appears to have suffered little in Noakhali and the increase in the estimated outturn from 4.2 million bales to 8.04 bales is a consequence of the Ministry's decision to provide more jute. Rainfall figures in June-August convey no notion of the changes in outturn caused by a weak monsoon in certain districts. The crop in Bihar is below normal, and the outturn consequently lower than in 1941 except in Muzaffarpur, Champaran and Darbhanga which are hardly as important as Purnea. In the Assam figures the most arresting change is the increase reported by Sylhet and the decrease reported by Goalpara and Kamrup. The Assam crop at 466,000 bales is estimated to be considerably less than that of 1941 but is only 4 per cent. less than the decennial average.

The consolidated crop forecast supports the general view that the jute situation in Bengal which produces 88 per cent. is the result of the increase in area. The original licensing procedure was meant to curtail the crop, and in spite of the crop outturn this time being less than the normal estimated outturn, the situation is difficult because the total outturn is put at 10 million bales and there would be no market for more than 8.5 million bales by the Bengal National Chamber. Arrivals in Calcutta may be quite small but the glut is obvious in the production centres and the disparity in prices referred to in all representations is a consequence of the shortage of transport. Early improvement is postulated as a condition of remedial measures to be adopted for the benefit of the jute-grower, for whom a return of at least Rs. 10 per maund is viewed as right and proper by the Krishak Party as against another of Rs. 6 made in connection with a calculation as to the cost to Government of buying and holding off the market two million bales of jute this season.

Cooch Behar Tobaccos

Never before had the tobacco industry in India such great scope for expansion in this country. With the growth of the cigarette habit of smoking the potentialities of the home market increased; but hitherto it has been the privilege of foreign companies to serve the needs of the home market. The needs of the Defence services have greatly increased the demand. The advantage which certain companies enjoyed in the manufacture of cigarettes with import of virginia tobacco is no longer present as these imports are in very small quantities at the present moment and use of American tobacco can be made only with an admixture of Indian tobacco. There is room, therefore, for new enterprises in this country.

The Cooch Behar Tobaccos Limited (the prospectus is published elsewhere in this issue) starts with certain initial advantages. The concessions secured from the State of Cooch Behar should prove to be of considerable benefit to the Company while the interest taken by His Highness the Maharaja of Cooch Behar should ensure the success of the enterprise. Arrangements have been made for the purchase of machinery and it is expected that the Company will soon be in the production stage. The high rates of taxation in British India have been mainly responsible for the absence of new company flotations on a large scale. The rate of income-tax in the Cooch Behar State is very low and the Company's earnings are not liable to E.P.T. With the present favourable conditions in the capital issue market, the issue should meet with good response.

WATER STERILIZATION

MAN has always settled near water. To him water meant Life, and indeed many rivers have been venerated as Gods, arbiters of life and death. The peoples who dwelt on the banks of rivers had in the past no means of realizing that the same water from which they drew their life, brought also death, killing them in their thousands because they or their animals polluted them with the bacteria of dysentery, typhoid and other plague-causing diseases. Throughout India, amid all the amenities of modern civilization, river and stream water threaten the lives of millions of dwellers in the great cities. Fearful epidemics may be caused by infected drinking water: diseases spread by contaminated swimming baths. The chemist has fortunately developed weapons with which to meet these dangers, particularly the use of chlorine for the sterilization of water. This is largely a British achievement as the credit for its first systematic use for the purpose belongs to a Scotsman — the late Sir Alexander Houston — who employed hypochlorite during a severe epidemic of typhoid in England in 1904. His successful treatment attracted attention all over the world so that to-day chlorination is the standard method of purifying drinking or swimming-bath water. The British chemical industry — the first to manufacture chlorine on a commercial scale — continues the most energetic research into the problem of protecting public health by ensuring the safety of their water supplies.

Resume of Commodity Markets

Walfords
AGENTS FOR
ROLLS-ROYCE, BENTLEY, HUMBER, HILLMAN, SUNBEAM-TALBOT, COMMER, KARRIER, BUICK, PONTIAC, OLDSMOBILE, CADILLAC, G. M. C., G. M. & PERKINS, DIESEL ENGINES, CHARCOAL PRODUCER GAS PLANTS.
71-73, PARK STREET, CALCUTTA.

A DEFINITELY firmer tendency has been noticeable in the several commodity markets during the past week. The jute market has been firmer with the continued difficulty in getting transport facilities and the unsatisfied demand of mills. The jute manufactures market has been steadier in sympathy with the raw jute market and the announcement of a new order for hessians and sackings. The silver market has firmed up on the decision of the Government of India to withdraw all George V and VI standard silver rupees and half-rupees from circulation. Speculative buying caused a substantial rise in prices in the earlier part of the week, but towards the close there has been a recession in prices on account of profit-taking. The gold market has been firm in sympathy with the silver market.

As regards primary commodities the statistical position in regard to wheat appears to have improved and it is reported that during the past few days substantial supplies of wheat have been received from Australia. The rice problem also is expected to be successfully solved. It is pointed out that supplies to Ceylon and other countries in India will not be anything substantial and will not in anyway affect the Indian consumers. The Bengal Government has been making satisfactory progress with the arrangements for the distribution of sugar.

Jute:

The feature of the week is the announcement by the Bengal Government that loans will be made to the small cultivator to enable him to keep back his crop till such time as he is able to get a good return for his labour. This announcement has been received with enthusiasm by market circles as it has been found to be the best solution for the various difficulties confronting the industry and the ryot. It has been pointed out in these columns on more than one occasion that while it is necessary to improve the position of the ryot by helping him to get higher prices for his crop, it is not possible to institute any programme of purchase by the Government of mills or the fixation of new prices without ensuring that it will be possible to store or transport the quantity involved in the purchase. The Bengal Premier's suggestion is obviously the best solution and it is expected that the negotiations of the Bengal Government with the Central Government for financial aid will prove to be successful.

Jute Manufactures:

The new order for hessians and sackings does not seem to have had any effect on the hessian market though it is unfortunate that the belated announcement in regard to sacking requirements should have pushed up prices in the heavy goods section and increased the difficulties of consumers. The side of the order is not anything big as the total quantity involved is only three days' production of the Indian Jute Mills. The new order is for 25 million yards of hessian and 12.5 million sacking bags which are to be delivered in three equal instalments in October, November and December.

Silver:

The silver market seems to attach great importance to the decision of the Government to withdraw George V and George VI standard rupees and half-rupees from circulation. It was pointed out last week that the Government were trying to replenish their stocks of silver which were depleted by sales in London and Bombay markets and that the quantity of silver released by the melting of these two categories of rupee coins would be substantial. The withdrawal of these two classes of coins has given rise to the impression that for some time to come the Reserve Bank will not be able to sell effectively in the Bombay market and that it will not be possible to replenish Indian stocks of silver by purchases from abroad if it was found necessary. There was a rise in the quotation to Rs. 97-8 early in the week and only with some profit-taking there has been a recession in prices to Rs. 93-8, towards the close.

Piecegoods:

It is still reported that mills are busy on the production of standard cloth and that the Provincial Governments are expected to open depots only on December 1. The news that standard cloth will not be available before the Puja and Diwali festivals has come as a great disappointment to the poorer classes. The exact difficulties involved in the production and marketing of standard cloth are not clear and perhaps may not be convincing to the public even if there are any. With the shortage of supplies it is not surprising that there has been a sharp improvement in values in the last two weeks. With conditions as they are, it will not be possible to prevent further appreciation in values.

Sugar:

At a meeting of the Sugar Committee held early this week the problems concerned with the production of next season's sugar were discussed. The sugarcane forecast, which was published sometime back, does not reveal any great increase in the area and as such in the absence of any large supply of cane, it cannot be expected that there will be any substantial rise in production in the 1942-43 season. Intensified cultivation and refining may possibly increase the production of sugar, but more than the production it is the difficulty in moving the sweet commodity, which seems incapable of solution. For sometime past emphasis has been laid on the possibility of animal transport being utilised on a larger scale in the movement of sugar during the cold season. Whether it will be possible to move as much as 800,000 tons by animal transport with the help of rail over long distance remains to be seen.

Meanwhile the Provincial Governments seem to be somewhat successful in their efforts to relieve the present scarcity in regard to sugar. The Bengal Government has opened a hundred shops in Calcutta for the distribution of sugar in half seer bags and many more shops are expected to be opened.

Wheat:

It is reported that substantial shipments of wheat have arrived from Australia and some more shipments are expected in the near future. With the effective control regarding stocks and distribution within the country it is now reported that the position in regard to this commodity has considerably improved and that supplies will be more freely available.

Rice:

A decrease in the area under jute in the next season and intensified production in the areas under the rice crop are expected to relieve the shortage in regard to the staple food of the masses. Only recently it will be remembered that the Finance Member of Bengal made a statement to the effect that supplies of rice will be plentiful during the next season. If it were possible to get over the next three months satisfactorily, no great difficulty need be experienced.

The Governments of Madras, Orissa and Bengal have signified their willingness to release rice for Ceylon. For Southern Arabia, Sind, the Punjab and Bombay will make arrangements. The Bengal Government's commitments for foreign exports of rice, before the next crop is available, represent the province's consumption of rice for a couple of days only.

(Continued from page 617)

market quota would have left more money in the market and the demand for funds must have been due to Quarter Michaelmas day. Most striking change promised is the expansion in the Treasury Bill offer to £80 million from £75 million after the weekly tender had been for a long time at £65 million. The expansion in the floating debt may give relief to banks which find little employment for funds in the war period. It may be due to the American example in May when the short-term borrowing programme was modified considerably.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, October 6.

WITH the transport position as acute as it is the figures of estimated arrivals of jute into Calcutta are of particular interest at present. Despite the moans that have been emanating from most mills about the failure of jute to arrive, the figures just issued for September must have come as a surprise to most people. For arrivals into Calcutta during last month are estimated to have amounted to no less than 5,82,000 bales, not so drastically below the arrivals for the corresponding month last year, when they amounted to 6,87,000 bales. Certainly, if times were normal, the transport companies could, and would have carried very much more, for the season was rather slow to start and the total for the 3 months July to September only total 13,09,000 bales against 16,59,000 bales during the same period last year. And this shortage of 3½ lakhs of bales has to be deducted from the already attenuated stocks which mills carried into the new season at 1st July, so that their stock position at the end of September must have dropped to the uncomfortably low figure of around 15 lakhs of bales. The recent anxiety of some mills to purchase almost regardless of price is sufficient proof that they are not at all happy about the position. Fortunately, perhaps. the margin of manufacturing profit is sufficiently wide at the moment that mills can well afford to pay the advance which has been registered. But the mere securing of the jute on a paper contract does not actually relieve the pinch of shortage. Nothing less than a very marked improvement in the transport situation can effect that, and it is therefore to be hoped that the efforts of the Regional Priorities Authority will bear early fruit.

In that connection, it is understood that a number of suggestions have been considered, not all of them very practical. We mentioned last week the proposed further reduction in the size of bales and pointed out that a strict enforcement of the latest proposals might result in the wrecking of many of the presses, an event which would certainly not tend to amplify supplies of jute to mills. We would further point out that while a bale, directly it comes out of the press, may pass the measurement test all right, that is no guarantee that it will do so after the lapse of a week, or even of a day. For a certain amount of expansion always takes place, particularly when bales are handled for stowage, and packing cannot be held up till a flat is actually at the baler's jetty and bales can be exported direct to it from the press. Already thousands of bales have had to be repacked to get them down to the current scale of measurement, bales which had originally been packed to the old lenient standard and had been lying in stock awaiting shipment long before the current scale of dimensions was introduced on 15th September. It would be somewhat hard on the baler if he finds, when space is finally allotted to him, that his repacked bales again fail to pass the test and have to be pressed again, with every chance that he will meantime lose the freight allotment.

Another subject which has been discussed is the utilisation of country boats to supplement the normal freight channels. It is questionable to what extent this would relieve the position unless the country-boat traffic were organised on a less hap-hazard basis than it is at present. So far as individual action is concerned, this method of delivering jute to mills has several marked disadvantages from the Seller's point of view. Boatmen have already taken advantage of the situation and have raised their rates of freight beyond those charged by the regular transport companies. Insurance rates on country boat traffic are much heavier than on normal shipments on account of the greater risks involved and these rates are not likely to be reduced as losses, whether genuine or otherwise is open to question, have already been somewhat heavy. Again mills are only prepared to accept delivery by country boat on c.o.d. terms, which means the seller has to lie out of his money for a month or more after the jute is shipped, while he still carries the risk of replacement in case of loss though he may recover the insured value. He also has to carry the risk of damage or deterioration in the condition of the cargo in transit not due to insurable circumstances. Altogether shipment by country boat is not an attractive proposition to a seller if there is any alternative, but something might be done to remove the disadvantages.

Probably the best solution would be for the existing shipping companies to take over all the available country boats under some system of hire or requisitioning, when freight rates could be co-ordinated with the regular transport rates, Bills of lading could be issued, enabling the Seller to recover his money in reasonable time and relieving him of the replacement risk. Also, under proper control, there would be grounds for claiming a reduction in insurance rates. Finally, as quite a number of country boats can be towed by a comparatively small launch, it might be possible to speed up the turnround of the traffic so materially that this new branch would prove of effective assistance in relieving the situation.

The lack of sufficient towage power appears to be one of the main drawbacks under which the transport companies are suffering but it is understood that endeavours are being made to have some towing steamers released from Government control to relieve the difficulty. What seems of paramount importance is that there should be complete pooling of towing resources. That is to say, a towing steamer of one company should be available to tow the flats of any other company if required. Say a steamer has the power capacity to tow three flats. If there are only two flats of its own company ready loaded at any station, then the flat of any other company, if ready and loaded, should be added to the tow to expedite movement.

There has been much heartburning over inequalities in the allotment of space in up-country stations and a proposal was made that all such allotments should be made from Calcutta. That was manifestly impossible in the case of the railways with their innumerable stations, but steps have been promised to remove irregularities, which were rampant. The steamer companies also claimed that it would mean the setting up of a large organisation here if freight allotments were to be removed from the hands of local agents and that inevitable delays would result. What is essential, however, in competitive stations, that is stations which are served by more than one company, is that all the local agents should work in committee and allot the available pooled space according to the stocks ready in godowns for shipment. For under competitive conditions, each shipper places applications for space with each company in the hope of getting space from one. So there are bound to be overlapping applications and only by co-ordination of the whole can equitable allotment be made.

It is satisfactory to note from the Press *communique* issued at the end of last week that the Bengal Government has realised the futility of coming into the present market, either in Calcutta or in the mofussil, as a competitive buyer with a view to keeping up the price of jute. Their idea of making advances to the cultivators to save them from having to sacrifice their jute in order to procure money wherewith to buy essential foodstuffs has something to commend it, though some steps might equally well be taken to ensure that supplies of such foodstuffs are available in the villages at reasonable prices. No one will cavil at the recommendation that Bottom grade jute should not be sold under Rs. 5 per maund. Dealers will cheerfully pay that rate or more if they could get the jute shipped. Meantime there has been some almost panic-stricken buying by certain mills, which in the circumstances seems difficult to justify unless it is to secure a place in the queue for space at any price. With the very limited quantities dealers have been prepared to offer, naturally prices have risen sharply on a comparatively small turnover.

In the Export Jute market there has been little activity beyond some inter-baler sales of Dundee Tossa 4's at Rs. 64. Small sales to mills have been reported of Firsts at Rs. 57 and Lightnings at Rs. 47, but balers are reserved and are now asking one rupee advance for only small offerings. Hearts are practically unobtainable and all available low quality, such as Rejections, Habi-jabi and Ropes have been swept up. Fair quantities of Cuttings have been sold at up to Rs. 15 for N.C. grade and Rs. 14 for M.C.

In Loose Jute, European packing in limited quantities has sold up to Rs. 10-8 Middles and Rs. 7-12 Bottoms with buyers over. Supervised Jat fetched Rs. 10-4 and Rs. 7-8 Middles and Bottoms, and Supervised District Bottoms alone Rs. 7 to Rs. 7-8. Indian Northern and Assam Bottoms sold at Rs. 6 to Rs. 6-8 and Jungli Bottoms at Rs. 6. Sellers are very reserved at the close and asking higher prices.

In the Fabrics market some interest has been shown in the January-March Hessian position at the minimum rates of Rs. 15 and Rs. 19 for nines and elevens. Otherwise, 45/11 oz. for the country trade has been in request and has sold at from Rs. 20-4 to Rs. 20-8 October and at Rs. 19-14 to Rs. 20-4 November. The placing of a Government order for assorted Heavy Goods caused more excitement than its size justified, coming on a market already bare of supplies in the early position. Actually the extent of the order is some 17,000 tons, about three days' production spread over three months. But with mills already fully sold for near, the effect was to put up the price of "B" twills from Rs. 46 to Rs. 47 for ready and for Liverpools from Rs. 53 to Rs. 56 with other descriptions in proportion. Cornsacks for January-March sold early at Rs. 43, but are now quoted Rs. 43-8. Liverpools for the same position sold at Rs. 48 to Rs. 48-8. Woolpacks fetched Rs. 2-3 to Rs. 2-3-6 for November and Rs. 2-3 for November-December. Market closes firm.

JUTE

Calcutta, October 8.

THE raw jute market has continued firm with mills as eager buyers and no large offerings. Sellers are adopting a very cautious attitude and are not prepared to commit themselves owing to the difficult shipping position in the mofussil and the uncertainty regarding the future of supplies. Efforts are being made to improve the supply position but with the present strain on transport facilities it is feared that it will be sometime before any large increase in wagon or shipping space can be effected for the freer movement of the current season's crop. In Calcutta, prices have naturally recorded a further increase and the premium for ready shipment is rather fantastic.

While this is the position in Calcutta in the mofussil markets also a firmer tendency has been noticeable, not due to any increase in buying or offtake, but due to the announcement of the policy of the Government of Bengal in affording relief to the ryots. Earlier this week a *communique* was issued by the Government of Bengal to the effect that it was proposed to issue loans to small jutegrowers to enable them to keep their crops until such time as it was possible to market them on favourable terms. The same *communique* explains that it is not possible to fix minimum prices or institute a programme of purchase by the Bengal Government as the main difficulty is one of transport and storage. In the mofussil districts dealers are unable to keep on buying owing to the difficulty in finding storage space. Funds as such have been locked in earlier purchases. When such is the case any programme which aims at securing a minimum price for the ryot or which involves active buying by the Government cannot be successfully carried out. The Finance Member and the Bengal Premier have proceeded to Delhi to discuss with the Central Government certain proposals which have been formulated in conjunction with jute interests. The members of the Bengal Government have already seen the Commerce Member in this connection and the outcome of the conference, which has been called for this week, is eagerly awaited.

In the loose jute section business has been limited only by the availability of supplies. There has been a further improvement in rates. European packing Middles and Bottoms were done at Rs. 9-12 and Rs. 7-12 per maund while cross bottoms were done at Rs. 8 per maund. Supervised Jat Middles and Bottoms were done at Rs. 10, and Rs. 7 per maund. Assam District Bottoms were sold at Rs. 6-8 per maund.

In the pucca bales section, mills have paid the advance in prices asked for. Firsts 2/3 sold at Rs. 57 per bale, Lightnings at Rs. 47 per bale and Hearts at Rs. 42 per bale for October-November shipment, new crop. Ropes and H. J. were done at Rs. 27 and 25 per bale respectively.

JUTE MANUFACTURES

Calcutta, October 8.

THE hessian market has not been active and demand continues to be on a very small scale owing to the scarcity of freight. If there has been a slight improvement in the rates, it is due to the strength of the jute market and the heavy goods section. Stock figures for the month of September show that there has again been an increase in hessian cloth and bags by 3½ crores yards, the increase on civil account being 1.32 crores yards and that on military account 2.21 crores yards. Sacking cloth and bags also show an increase from 21.2 crores yards to 21.9 crores yards. There is a decline in stocks on Government account from 2.99 crores yards to 2.8 crores yards. Stocks on civil account show an increase from 18.2 crores yards to 19.2 crores yards. The figures are given in the next column.

Nine porters ready are quoting Rs. 14-12, October Rs. 14-13, November-December Rs. 14-14 and January-March Rs. 15. 11 porters ready are Rs. 18-12, October Rs. 18-13, November-December Rs. 18-14 and January-March Rs. 19.

The heavy goods section is very firm and there is great difficulty in executing orders for near deliveries. The announcement of the new order for 12.5 million gunny bags has complicated the position. There has been a jump in the rates for "B" twills for October to Rs. 49 against Rs. 45-8 at the time of last writing. Liverpool twills are Rs. 56-8 against Rs. 51-8, and Cornsacks Rs. 48-8 against Rs. 45-8. The tone at the close is slightly easier on account of profit taking. The new order for hessians and heavy goods is on account of the United Kingdom, the quantity being 25 million yards of hessian and 12.5 million sacking bags to be delivered in three equal instalments in October, November and December. In view of the present stock position and the uncertain shipping outlook, the committee of the Indian Jute Mills Association has decided that there should be no change in the working time agreement. Mills will therefore continue to work 54 hours per week.

The September figures include the returns of Gagalbhai in addition to those of members but the returns of Kedarnath, Katihar and Maheswari Devi have not been received and are excluded.

GOLD

Calcutta, October 8.

IN sympathy with the silver market the gold market has remained firm. Gold ready touched a level as high as Rs. 59-4 and the closing quotation is only slightly lower at Rs. 58-12. Sovereigns are in short supply and the quotation has been marked further higher at Rs. 43, the highest quotation for the week being Rs. 43-4.

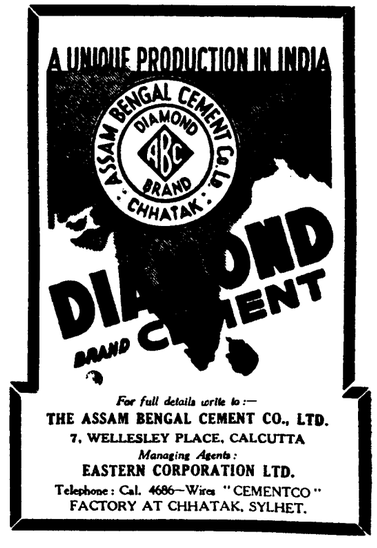
SILVER

Calcutta, October 8.

THE decision of the Government of India to demonetise George V and Georve VI silver rupees and half rupees has had a stimulating effect on the silver market. In the absence of any selling by the Reserve Bank speculators have naturally been busy and pushed up prices to further higher levels. The importance of silver as a strategic metal is now very much emphasised and we have reason to doubt whether the importance has not been over-emphasised. It is now the third year of the war and it is surprising to note that the United Nations have all of a sudden found great use for the white metal. While the decision of the Government to withdraw George V and George VI standard silver rupees and half rupees from circulation, perhaps indicates the seriousness of the stock position, let it not be forgotten that it is a logical pursuance of the policy of the Government to withdraw coins from circulation which have a higher silver content. After being higher at Rs. 97-8, Indian mint silver ready is now quoting Rs. 93-8. The tendency of the market is reported to be bullish.

There is no change in the London market and the quotation for both forward and spot is at 23½d. The market is quiet.

PIECEGOODS



Calcutta, October 8.

THE announcement by the Bengal Premier that standard cloth will not be available before December 1, has come as a great disappointment to the market. We have emphasised on more than one occasion that it was important that supplies of standard cloth reached the market in time for *Id* and *Puja* festivities. In the absence of any supplies from the Western Presidency even of standard styles, there has been a regular ramp and the quotations have been marked very much higher. Mills do not seem to be anxious to sell for any position and the labour trouble in the important producing centres seems to be causing considerable anxiety. Sales during the past few weeks have been mostly from stocks which have not received any large replenishments recently. Bengal mills have been very busy and handloom weavers as well.

TEA

Calcutta, October 8.

IN the auctions held this week for sale of tea for consumption in India a rather irregular tendency was noticeable and prices for all grades except black grades and tippy sorts were marked lower. There was a large number of Darjeeling invoices which resulted in a further irregular demand and a marking down in values. Green teas were offered in small quantities and prices were fully firm to dearer.

Stock Markets to-day and to-morrow

BROADENING OF INTEREST IN JUTE SHARES

USUALLY, on the eve of the Pujah holidays a rather quiet feeling will be noticeable and on profit-taking quotations will be marked lower. On the present occasion, however, no such profit taking on a large scale has been in evidence. As a matter of fact, in the last two days, a greater amount of buying has been noticeable and some useful rises in prices have been recorded. The increase in buying during the last two days is attributed to the activity of the speculative element in the market which, it is reported, tried to take advantage of the long holidays as deliveries will fall due only after October 26 in regard to purchases on October 6, 7 and 8, 1942.

The fact that operators have chosen to enter into fresh commitments when markets will be closed for a fortnight is perhaps due to the anticipations regarding some favourable developments during this period.

There are as yet no signs of any appreciable broadening of interest and whatever rise in prices that has taken place has been only in the speculative counters. The reports regarding the possibility of an early offensive against Burma and the clamour for a second front might well result in a further improvement in values.

* * * *

The sudden revival of interest in jute shares cannot perhaps be satisfactorily explained. For, with the insuperable difficulties regarding shipping there is a regular accumulation of stocks. The latest order for 2.5 crores yards of hessians and 1.25 crores gunny bags, to be delivered in equal instalments in the three months of October, November and December, cannot have any great influence on the market as the total quantity involved is very small and in any case does not represent additional production. The Committee of the Indian Jute Mills Association has decided that there should be no change in the working time agreement.

Without any great increase in demand for hessians and improvement in prices it is not justifiable to expect any substantial improvement in values.

Further proof of the difficulties experienced by coal Companies in getting wagon supplies is provided by the earnings of the Bokaro and Ramgur and Central Kurkend Coal companies for the half year ended June 1942.

* * * *

The net profit of the *Bokaro and Ramgur Limited* for the six months ended June, 1942, before providing for taxation and depreciation, is Rs. 1,64,225 against Rs. 1,83,014 for the previous six months. The provision for depreciation is slightly lower at Rs. 35,000 (Rs. 40,000). In spite of the lower level of earnings the provision for taxation is higher at Rs. 50,000 (Rs. 35,000). The dividend has been maintained at 5 per cent.

* * * * *

The net profit of the *Central Kurkend Coal Company Limited* for the same half year, before providing for taxation and depreciation, is Rs. 96,796 against Rs. 98,893. The amount set aside to depreciation is unchanged at Rs. 35,000 while the provision for taxation is Rs. 27,000 (Rs. 28,000). The transfer to Reserve is Rs. 2,500 (same). The dividend is unchanged at 2½ per cent.

* * * *

Publicity Society of India Limited has been able to report a substantial increase in earnings for the year ended July, 1942 but the increased provision for taxation has taken up the greater portion of the increase in earnings. The net profit, before providing for taxation and depreciation, for the year is Rs. 1,25,501 (Rs. 81,049). The amount written off deferred expenditure and furniture and fittings is Rs. 3.974 (Rs. 7.575). The provision for taxation is the substantial sum of Rs. 73,000 (Rs. 35.500) while the transfer to General Reserve is Rs. 2,867 (nil). On the last occasion there was a provision on account of bad and doubtful debts of Rs. 2,274. The net profit for the year 1940-41 has been calculated after providing for bad debts written off to the extent of Rs. 2,274 and for 1941-42, Rs. 8,369. The final dividend of eight annas per share, with the interim dividend of one rupee per share already paid, makes Re. 1-8 per share for the whole year against Re. 1-4 per share for 1940-41. At the present quotation of around Rs. 10 cum-dividend the yield works out to more than 15 per cent tax-free.

The Company has acquired a controlling interest in Radiant Display (India), Limited, a private limited company, on terms which the Directors consider to be favourable. The company has been working in association with the *Radiant Display (India), Limited* for several years and the directors have reasons to believe that the controlling interest acquired by the company will prove of mutual benefit.

* * * *

The *Indian Finance* Daily Index of stocks and shares reveals that the index for All-shares stood at the highest level for the year at 126.21 on October 7, 1941. Since the beginning of September, 1942, there has been a rise of more than five points, perhaps the most impressive rise recorded in any month this year. As remarked above, there is as yet no sign of the beginnings of a boom but given the continuance of the present conditions it may very well be that new high levels will be touched after the holidays.

* * * *

Last year the recovery movement gained momentum in the months of September, October and November and a few days before the Japanese declaration of war values were quoting at the highest levels for the second recovery movement in the war period. The entry of Japan into the war on the side of the Axis powers naturally resulted in a sharp break in values and it was only with the fixation of minimum prices and restrictions on trading a further fall in prices could be prevented. At this time last year the All-share Index stood at 129.96 so that even with the recent improvement in prices, the All-share Index is now 3 points lower than the level at this time last year. The highest level touched last year was 138.94. If there is going to be anything in the nature of a recovery movement staged last year, there is thus good scope for a further rise in prices.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Oct. 9.

THE Calcutta Stock Exchange has continued firm and active. Not much of pre-holiday profit-taking has been in evidence. The undertone in the several sections is quite steady and there is a tendency to await further developments. The general sentiment is inclined to be optimistic. In the last two days there was buying on a larger scale as there was no need for financing the purchases until after the holidays. The revival of interest in jute shares cannot be altogether explained and the placing of the new order for sandbags does not mean any increase in production of mills. The giltedged securities section has remained firm.

There has been no important change in prices in the giltedged securties section. 3½ per cent. Paper remained unchanged at Rs. 94-1. Among terminable loans, 3 per cent 1951/54 were done at Rs. 99-14, 3 per cent. Defence Bonds at Rs. 100-4, 3½ per cent. 1947/50 at Rs. 103-2, 4 per cent. 1960/70 at Rs. 109-12 and 4½ per cent. 1955/60 Rs. 113-8. 3 per cent. 1963/65 are slightly higher at Rs. 93-12. Among provincial loans, 3 percent. U.P. Bonds 1952 were done at Rs. 98-4, small lot. There has been no change in the conditions in the money market and the treasury bills rate is unchanged at nine annas and eight pies per cent per annum.

Among fixed-interest securities, 3 per cent. *Calcutta Municipal* debentures were Rs. 91-12, 3¼ per cent. *Howrah Bridge* debentures were crossed at Rs. 95 and 3 per cent. 1963/68 *Calcutta Municipal* debentures at Rs. 91-10. 5½ per cent. *Dalmia Cement* debentures at Rs. 105 and 5¼ per cent. *Rohtas Industries* at Rs. 104-8 were among the transactions recorded in industrial debentures.

Among preference shares a small lot of *Birla* preferences was noted at Rs. 127, *Alexandra* at Rs. 136 and *Hooghly* at Rs. 19-6. *Craig* were Rs. 65, *Kamarhatty* were Rs. 140 and *Calcutta Jute* Rs. 122-8. Among other sections, *Dalmia Cement* were Rs. 132-8, *Shree Gopal Paper* Rs. 139 and *Jessop & Co.*, Rs. 104-8.

Cotton shares are easier with *Bengal-Nagpur* at Rs. 27, *Bowreah* at Rs. 472-8, *Cawnpore Textiles* at Rs. 11-8 and *Kesoram* at Rs. 12-6. *Dunbar* were Rs. 265 and *New Victoria* Rs. 7-4.

There is very little interest in Coal shares. *Bengal* were Rs. 387, *Burrakur* Rs. 13-1, *Equitable* Rs. 35-2, *Nazira* Rs. 8-9, *Raneegunge* at Rs. 27-9, and *West Jamuria* Rs. 30-12.

In the jute section, as remarked above, there has been a considerable broadening of interest in the popular shares. This revival of interest in jute shares is to be welcomed but there does not appear to be any justification for the more optimistic view regarding the immediate future. It has been pointed out in these reports on more than one occasion that the prospects for the industry are dependent mainly on the shipping position and the ability to export goods. There is good demand but it is as good as non-existent because there is no means of taking advantage of the demand.

Adamjee has improved to Rs. 26-10, *Agarpara* from Rs. 20-4 to Rs. 22-12, *Anglo-India* from Rs. 344 to Rs. 350 and *Bally* from Rs. 240 to Rs. 252. *Clive* are higher by two points at Rs. 25-12 as also *Howrah* at Rs. 555. *Ganges* were Rs. 319, *National* Rs. 23-12, *Nellimarla* Rs. 14-2 ex-dividend and *Soorah* Rs. 12-8.

In the Engineering section, there are no important features. *Indian Iron* are higher at Rs. 33-10, and *Steel Corporation* at Rs. 21. *Burn & Co.* were unchanged at Rs. 388, *Bhartia Electric Steel* at Rs. 15-4 and *Indian Malleable Castings* deferreds at Rs. 2-14. There has been some good buying of *National Iron and Steel* and the quotation has been marked upto Rs. 14. *Kumardhubi Engineering* were Rs. 5-13.

In the Sugar section, *Buland* were crossed at Rs. 34-4. *Carew & Co.* were Rs. 4-4 and *Cawnpore* Rs. 28-10. *Champarun* were Rs. 26-6 and *Raza* Rs. 36-4. *Samastipore* were Rs. 14-8. It will be noticed that there has been a further improvement in the quotation for *Raza* shares.

Tea shares have been in good enquiry and the popular shares have been marked higher. *Bishnauth* were Rs. 26-12, *Dessai and Parbuttia* Rs. 250, *East India* Rs. 10-8 and *Tezpore* Rs. 9-2.

In the Miscellaneous section, *Burma Corporation* are further higher at Rs. 2-12. *Indian Copper* were Rs. 2-4. *Assam Bengal Cement* deferreds were Rs. 3-10 and *Dalmia Cement* deferreds Rs. 4-1. *B. I. C.* were not very much changed at Rs. 5-9 but *Indian Cables* were higher at Rs. 24-12. *National Insulated Cables* were Rs. 11-11 and *Assam Saws* Rs. 3-14. Among Paper shares, *India Paper Pulp* were Rs. 161, *Mysore Paper* Rs. 20, *Shree Gopal Paper* Rs. 19-8 and *Titaghur Paper* Rs. 20-8.

THE CALCUTTA STEAM NAVIGATION COMPANY, LIMITED

DIVIDEND NOTICE

A dividend of Rs. 4 per share for the half-year ending 30th June, 1942, has been declared payable at once.

HOARE MILLER & CO., LTD.,

INDIAN STEEL AND WIRE PRODUCTS LIMITED

NOTICE

The Seventh Ordinary General Meeting of the Shareholders of the Indian Steel and Wire Products Limited will be held on Thursday, the 5th November, 1942, at 3 p.m. at the Registered Office, 7, Wellesley Place, Calcutta, to transact the following business:—

1. **To receive and adopt the Directors' Report and Audited statement of Accounts for the year ended 31st March, 1942, and to declare Dividends on Ordinary and Deferred Shares.**
2. **To elect a Director in place of Sardar Ajaib Singh, who retires by rotation and is eligible for re-election.**
3. **To elect a Director in place of Mr. K. B. Ghose who retires by rotation and is eligible for re-election.**
4. **To appoint Auditors for the current year and to fix their remuneration.**

The Transfer Books of the Company will be closed from 16th October to 6th November, 1942, both days inclusive.

By order of the Board of Directors,
INDRA SINGH & SONS LTD.
INDRA SINGH.
Director.
Managing Agents.

Calcutta,
7th October, 1942.

Note:—If Dividends on shares, as recommended by the Directors, are passed at the Meeting, they will be paid after the 10th November, 1942 to those Shareholders whose names are registered in the Books of the Company on the 5th November, 1942.

Holders on blank transfer are, therefore, requested to submit their shares for registration immediately.

THE TITAGHUR PAPER MILLS CO., LTD.

NOTICE TO SHAREHOLDERS.

The Board of Directors have decided that future dividends declared will be paid to registered shareholders only and Dividend Warrants will be forwarded to the registered addresses of shareholders whose names appear on the Company's books at the date of declaration of the dividend.

The owners of share scrip held on blank Transfer are advised to take immediate steps to register their holdings by forwarding the Scrip with the Transfer duly completed to the Registered Office of the Company—

"The Retreat,"
Kurseong, D.-H. Ry.

for registration in the books of the Company.

(Sd.) F. W. HEILGERS & CO.,
Managing Agents,
Chartered Bank Buildings,
Calcutta.

Dated, 3rd October, 1942.

Carry forward ..	18,273	18,676	22,207	28,741

(Half-yearly meeting, held 8th October, 1942).

Audited Accounts for the half-year ended 30th June, 1942:—

After providing Rs. 28,339-11-9 for Depreciation, Rs. 28,000-0-0 for Taxes and Cesses and transferring Rs. 15,000-0-0 to General Reserve the Accounts show a sum of Rs. 38,273-3-1 at credit of Profit and Loss Acount including Rs. 18,675-15-7 brought forward from last half-year. The directors recommend that this should be allocated as follows:—

	Rs.	A.	P.
To payment of a Dividend at the rate of 2½ per cent. per annum, free of Income Tax, for the half-year ended 30th June, 1942 ..	20,000	0	0
Leaving to carry forward	18,273	3	1
Total ..	38,273	3	1

Net Raisings during the half-year were 94,665 tons compared with 81,805 tons during the previous six months and 90,583 tons in the corresponding period of 1941.

Despatches amounted to 84,026 tons compared with 81,709 tons and 90,529 tons in the preceding two-half years.

Stocks totalled 12,145 tons on 30th June, 1942.

Colliery.—The Company's Colliery has been maintained in good order.

Serious mining difficulties are being encountered owing to the great depth at which depillaring operations have now to be carried on.

The Sandstowing Scheme is designed to mitigate these difficulties is nearing completion, but is subject to disappointing, though unavoidable, delays owing to war conditions.

(Half-yearly meeting, held 8th October, 1942).

Audited Accounts for the half-year ended 30th June, 1942:—

After providing Rs. 1,61,231-0-0 for Depreciation, Rs. 1,80,000-0-0 for Taxes and Cesses and transferring Rs. 1,50,000-0-0 to General Development Reserve the Accounts show a sum of Rs. 3,54,680-11-10 at credit of Profit and Loss Account including Rs. 1,90,734-15-3 brought forward from last half-year. They recommend that this should be allocated as follows:—

	Rs.	A.	P.
To payment of a dividend on the Preference Capital at the rate of 6 per cent. per annum, free of Income Tax, for the half-year ended 30th June, 1942	12,000	0	0
To payment of a dividend on the Ordinary Capital at the rate of 10 per cent. per annum, free of Income Tax, for the half-year ended 30th June, 1942	1,48,188	0	0
Leaving to carry forward	1,94,492	11	10
Total ..	3,54,680	11	10

Net Raisings.—Raisings during the half-year were 6,71,615 tons compared with 6,33,860 tons during the previous six months and 6,11,763 tons during the corresponding period of 1941.

Despatches were 6,11,907 tons against 6,44,016 tons and 5,99,245 tons during the preceding two half-years.

Stocks stood at 1,07,454 tons at the close of the half-year including coal at Depots in India and abroad.

Collieries.—The Company's Collieries have been maintained in good order.

Serious mining difficulties are being encountered in the Dishergarh Seam pits owing to the great depth at which depillaring operations have now to be carried on.

General.—The coal trade continues to steer through unpredictable, though usually stormy weather.

The scarcity of wagons is still the main factor which conditions all activities, and has necessitated from time to time restrictions in output.

Such restrictions would have been more severe but for the automatic brake on output unfortunately imposed by the mining difficulties referred to above, and by shortage of Labour due to various causes, some normal, and some due to the war and the generally unsettled state of the country.

Costs of stores have increased sharply. The rising cost of living has been reflected in dearness allowances to Labour not only in money but in the shape of the distribution to employees of essential foodstuffs at reasonable prices.

Largely owing to the restricted supply of wagons the increased demand for coal has been ineffective because unsatisfiable and has not resulted in the rise in coal prices which would have been not only natural but justifiable.

Though the Directors are confident of the future they recommend that an extremely conservative view should be taken of prospects for some time to come.

Managing Agents.—Messrs. Macneill & Co.

Authorised Capital—Rs. 40,00,000. Issued and Subscribed—Rs. 33,63,760 in 2,96,376 Ordy. shares of Rs. 10 each, and 4,000, 6 per cent Cum. Pref. shares of Rs. 100 each, both fully paid-up.

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

NATIONAL INSURANCE COMPANY, LIMITED.

Three years of War Finance—VII

Stocks and Shares

With the controlled economy of the present times and the extremely uncertain atmosphere created by the proximity of the theatres of war, one would perhaps be inclined to think that stock exchanges are not performing any useful function and that the gyrations in prices as a result of the developments, adverse or otherwise, have been more harmful than beneficial to the small investor. The controlled capital market also does not perhaps call for any active functioning by the stock markets. But with all the uncertainties caused by the war, such as higher taxation, destruction from the war, the fear of invasion etc., stock exchanges in this country have functioned very well during the first three years of the war. Thanks, of course, to the vigilance on the part of the stock exchange authorities.

Any comparison between the behaviour of stock markets in the last world war and in the present, is pointless. For, conditions then were very different from now. In fact, very few could anticipate what would exactly be the reactions in the markets immediately after the declaration of war. And the expectations of a boom in equities and a slump in giltedged proved to be wrong. In the last war the boom in values did not start before 1917; and it was only in the last two years that there was anything in the nature of an extraordinary rise in values. Immediately after the declaration of the present war, there was a drop in values for both equities and giltedged. It was only later that equities showed a recovery with the activity in the commodity markets. The reduction in the Bank of England rate to the old level of 2 per cent from the increased level of 4 per cent. a short time after the war and the continuance of easy money conditions resulted in substantial gains in the giltedged market as well.

The most important factors that have had a sustaining influence on the market are the continuance of easy money conditions and the maintenance of the borrowing rate of the Government at 3 per cent. It is true that the fears regarding higher taxation and the levy of the E. P. T. have had a depressing influence; but the growing importance of the country's war effort and the large volume of war orders have more than offset the higher charge on earnings in this regard. Stock exchange activity has in fact more solid foundation since November, 1940 when as a result of the fall of France and the deliberations of the Eastern Group Supply Conference greater attention was paid to India's resources, the development of new industries and the expansion in the capacity of existing industries.

Another important factor to be noted is that operators and investors are prone to be less nervy and more inclined to see things in their proper perspective. In the earlier stages when there was a boom in exports and nothing happened to shake the faith in the quick victory of the Allies markets were moving in a one-sided manner. The decision to levy the Excess Profits Tax had a temporary upsetting influence. The rude shock came with the completion of the Norwegian campaign and the attack on France. Panicky selling had to be checked only with the closure of markets. In 1940 the Calcutta market was closed for business for several weeks. Forward trading had to be suspended in the Bombay market. Resumption of business was effected in Calcutta only with the fixation of minimum prices and relaxation in trading conditions was permitted only where there were signs of returning confidence. The control of speculative activity and the prevention of distress selling by the prompt action of stock exchange authorities have been very useful in helping many over their difficulties.

There were no important developments between November 1940 and November 1941. The Balkan campaign had a chilling effect but the Russo-German war, the improvement in earnings of the better established companies, and the increase in industrial activity firmed up values and the highest levels for the war period were touched in November 1941, just a few days before Japan's entry into the war. The reaction in prices after Japan's declaration of war and the spectacular initial successes was, of course, violent; but as on the former occasion there was no need for closing down markets. Giltedged securities experienced a sharp setback; and but for the fixation of minimum prices for Central and provincial government loans, for the first time since the war, further low levels might have been touched. The recovery was painful and the threat of invasion for a long time had a dampening effect. The inactivity during the past four months, the introduction of the war risk insurance scheme and other developments have resulted in a resumption of the upward movement. And if the Japs are not after all invading this country, values might again touch the levels from which they receded before the Japanese entry into the war.

It is the general opinion that the recovery movement of 1941 was really justified and substantial; and that with large surplus funds and improving prospects stock exchanges will again hum with activity.

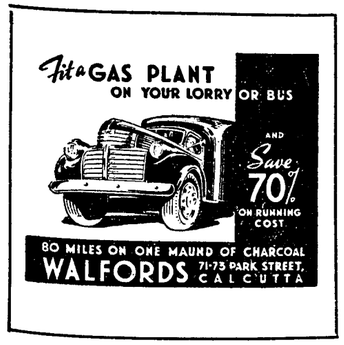
We have so far dealt with the general tendencies in the stock exchanges during the past three years. A detailed analysis will prove to be interesting. Taking giltedged securities first. There was an initial adverse movement in prices in September, 1939. By mid-October the downward movement had been stopped. The last two months of 1939 witnessed a recovery movement side by side with equities and in the selling of January and February 1940, with the fears regarding the budget proposals, there was actually a switchover to giltedged securities and taxfree preference shares. After the slump in May, June and July 1940, there was a recovery in the quotation for 3½ per cent Paper to Rs. 96 early in 1941 and with the exception of May 1941, the quotation was mostly around Rs. 96. In March 1942, there was a drop to Rs. 84 and only with the fixation of minimum prices was there an improvement in prices. In recent months very steady conditions have been noticeable and the quotation is higher at Rs. 94. In view of the easy money conditions and the improved state of the market revised minimum prices have been fixed. On balance prices are not very much changed, the index for giltedged securities on August 30, 1939 being 100.57 against 100.26 on September 4, 1942. If allowance is made for the higher level of taxation and prices were readjusted on the basis of the same yield it should be said that prices are on balance higher.

The developments during the last three years from the point of view of giltedged securities have been very encouraging. The large-scale repatriation of sterling securities has considerably strengthened India's financial position. There has been no net addition to the rupee debt in spite of the large war expenditure.

We have pointed out above that taxfree preference shares have been in great favour and that with the prospect of a further increase in taxation, they should continue to be in favour.

Cotton shares were not very much favoured in the earlier stages of the boom and in the slump periods were hard hit.

But since July 1941, they have been very active. In the case of these shares, perhaps, the lost ground since December 1941 has been completely regained. On August 30, 1939 the index stood at 72.42. On September 4, 1942 the figure was 179.25.



It is unfortunate that jute shares enjoyed only a brief period of boom conditions. In the first four months of the war period they were the rage of the market. But the relatively less importance of jute manufactures and the difficult shipping position accounted for a diminution of interest. The recovery in November 1941 in this section was not quite pronounced as in the case of the other sections. As such, the difference in prices for jute shares at the end of the third year of war, and in the midst of the third recovery movement, was not very much, the index figures on August 30, 1939 and September 4, 1942 standing at 71.95 and 77.58 respectively.

Engineering shares have, of course, been the centre of attraction. New high levels were touched in the last quarter of 1941 and the recovery movement after April 1942, would have been helped to a greater extent but for the dividend policy adopted by the Tata Iron and Steel Company. The preference for iron and engineering shares is quite understandable, as the progress made by the iron and steel and engineering industries is one of the outstanding developments of the war.

The general trend of the market in the last three years of the war will be evident from the movement in the index for All-shares. On August 30, 1939 it stood at 100.39. On December 3, 1939 the peak for the first four months of the war was touched, the figure being 127.48. On February 20, 1940, it was 113.92; there was a recovery to 120.16 before the Norwegian campaign but in May 20, 1942 there was a slump to 113.56. In the days of the "Battle for Britain" there was a further drop to 110.14.

The second recovery movement started at this point. On March 31, 1941 there was a rise of more than 10 points in the index to 120.56. The Balkan campaign resulted in a decline to 113.54 but the outbreak of the Russo-German war caused a resumption of the upward movement. The highest level for the war period was touched on November 27, 1941 at 138.86. The Japanese entry into the war and their initial successes caused again a setback to 112.87. The recovery (the third recovery movement) after this shakeout, however, has been rapid. On September 4, 1942, the index stood at 120.89.

Editorial Notes

Business Condition in June

Monthly Survey of Business Conditions in India for June 1942, published just now, reveals that the cotton textile industry was able to report a considerable improvement in production. As a result of the exodus of labour in the months of January and February, production was adversely affected and came down to 332 million yards in April 1942 from 433 million yards in December 1941. The production figure for May was 352.8 million yards. The number of spindles and looms working double shift increased substantially. The condition in the jute mill industry was dominated by the shipping position. Like the jute industry, the coal industry also has been affected. Besides the difficulty on account of wagon space within the country, the lack of shipping space has adversely affected exports which were only 3000 tons against 16,000 tons in the previous month and 91,000 tons in the corresponding month in 1941. There was a seasonal decline in exports of tea.

The monthly survey of business condition for July 1942 may perhaps show further improvement in the conditions in the textile industry. Mills would certainly have been in a better position to supply requirements of the Government which have recently been increased to 35 percent from 20 percent of the total production formerly. Since the first week of August, however, there has been considerable labour interest and production in the various important centres must have been adversely affected. Even last week it was reported that Ahmedabad Mills owners had great difficulties in recalling workers back to work. On account of the difficulties in one particular section, mills had to be closed. Actual figures will not be available before the end of the year and it is to be hoped that by then conditions would improve considerably.

Rubber Production Board

It is reported that as a result of the deliberations at a recent conference of rubber interests and representatives of the Government of India, it has been decided to set up a Rubber Production Board which will do the functions hitherto performed by the Rubber Contorl Committee and the Rubber Controller. Not much has been heard of the deliberations or the decisions reached at the conference. It will be remembered that the difficulty in dealing with the rubber interests in India was mainly due to the apathetic attitude of the Government of India and the differential treatment accorded to Indian planters. The prices paid to Ceylon producers have been invariably higher than those paid to Indian producers. As a result of agitation, it was also decided that the entire stock of rubber should be acquired by the Government. There was a complaint for sometime that arrangements had not been made for the acquisition and storage of stocks and that the interests of the small planter were not properly cared for. It is hoped that these and other various problems were considered in detail at the last conference and that the new Rubber Production Board will look after the interest of the Indian planter to his satisfaction.

India's Munition Production

Increasing co-ordination in the activities of the United Nations is the important feature of the war effort in the past few months. The fact that the various theatres of war are far and away from each other has given rise to serious difficulties, namely, shipping, development of new industries etc. The difficulties in this regard have proved to be a great handicap so far as this country is concerned. With the fall of France and the importance of the Middle East theatre of war, the part played by India in the Empire's war effort became more important. Even at the time of the Eastern Group Supply Conference, due recognition was not given and could not be given owing to the difficulties of getting over supply, transport and production. But these difficulties have got to be got over somehow, now that Japan has entered the war on the side of the Axis Powers and Australia is not any more in a position to supply the requirements in accordance with the agreement reached at the Eastern Group Supply Conference.

Thanks to the earlier planning in certain directions by the British Government and the active co-operation on the part of the United States the striking feature of India's 1942-43 programme, over the whole range of production, is the gradual line-up of industries which during the past few years were either in the process of expansion, reconstruction or were being born. Monthly, new records for munitions production are being obtained and it is believed that with the arrival of new equipment and expansion in the existing capacity, it will be sometime yet before the peak is reached. There is considerable scope for expansion, in the sense of further installation of factories and import of machinery. But, as pointed out above, the only difficulty is in regard to the supply of the necessary materials owing to the pre-occupation of other countries with war work and also the question of shipping.

As a result of the efforts in the past three years, a new technique in the production of high-speed tool and high die steels has been involved which results in a considerable economy in the use of ferro-alloys and may ultimately result in the saving of Rs. 40 lakhs of these alloys and valuable shipping space. A new use for detoluated benzol obtained from India's toluene industry as a solvent in the processing of rubber replaces oil previously obtained from the oilfields.

The increasing co-operation between the different countries in their war effort enables greater attention to be paid to problems connected with other things. It is reported that large supplies of wireless and steel baling hoops have been received from the United States under the lease-lend programme. Steel baling hoops have no manner of relation to munitions production but, it will be remembered, that sometime back there was considerable difficulty in regard to these hoops and that the cotton trade found it a great difficulty to move the cotton crop. There was a roaring trade in secondhand baling hoops. A new saw mill has been erected in South India, thanks again to the United States while the plate mill capacity at a steel mill is to be expanded by 25 to 50 percent at a cost of over Rs. 35 lakhs. This particular mill supply the plates for shipbuilding and repairs, bullet proof and other armoured steel. Additional demand will be met when new plant is installed. It need hardly be mentioned that the progress achieved by the steel industry in the last three years is one of the most outstanding developments of the war.

Relief to Jute Growers

For some time past there has been considerable agitation in the Bengal Province for the improvement of the lot of the jute grower. The difficulty in regard to shipping and wagon space has resulted in a crisis in the jute trade. There was considerable disparity in prices between districts as the ryot in his anxiety to cash his crop, was at the mercy of the dealer. But even the dealer could not keep on buying as he found that it was not possible to move the raw material from the mofussil districts to the consuming centres. The piling up of stocks in godowns in upcountry centres and the lack of finance caused a glut of supplies. Apart from the need of stabilising jute prices, there was also the question of improving the purchasing power of the ryot as the abrupt increase in prices for the staple commodities had considerably reduced his effective income.

Thanks to the efforts of the Bengal Government it has now been announced that loans will be granted to small jute growers to enable them to keep their crop until such time as it was posssible to get a better price. The Central Government has agreed to advance to the Bengal Government a loan of Rs. 2 crores which is to be augmented by Rs. 50 lakhs from the Bengal Government itself. This amount will be advanced as loans under the Agricultural Loans Act against jute stocks to meet immediate requirements.

The figure of Rs. 2½ crores might sound big but it is not big enough if the requirements of the trade are taken into consideration. For outright purchase the amount will be sufficient only for five lakhs bales. It can, however, be expected that the relief afforded to the ryot in this way will be considerable as it is reported that the mills and banks will co-operate with the Government in their policy.

Everything is done in the hope that the efforts of the Bengal Government will bring about an early improvement in internal transport facilities will prove to be successful. How far these efforts prove to be successful remains to be seen. There may be an improvement in both the internal and external transport position but whether the improvement will prove to be helpful in moving larger quantities of jute and jute manufactures, is a mute problem. There is good demand for both jute and jute manufactures but it is as good as non-existant, if one is not able to take advantage of it.

Standard Cloth and Yarn Control

The production and distribution of standard cloth and the putting into operation of a successful yarn control scheme have been engaging the attention of the interest concerned for some time past. But the delay in the supply and distribution of standard cloth and the opposition to the institution of any scheme aiming at control of yarn prices have caused some apprehension in certain quarters. Standard cloth should have been on the market in time for the Id and Puja festivities but the public are now told that it will not be available before the first week of December when the bulk of the demand in connection with the festivities for the poorer classes would have been satisfied. What exactly are the reasons for the delay in the production of standard cloth are not quite clear.

The position in regard to yarn supplies is getting complicated. There is considerable delay in putting into operation the scheme which was prepared sometime ago and even the preliminaries connected with this scheme have not been carried through. Two main objections have been put forward by the interests concerned against the formulation of any scheme which aims at controlling the supply of yarn and prices. According to trade estimates it is said that there is no dearth of supplies and that there will be only a small deficiency which can be got over with greater co-operation between the producers. But the estimate furnished by the Government of India discloses that the shortage is anything up to 200 million lbs. against the total estimated consumption of handloom weavers of 400 million lbs. Such a great discrepancy between the two estimates cannot be satisfactorily explained and one is inclined to believe that the estimates furnished by the Government of India are more reliable.

The other objection put forward is that there should be no control of prices of yarn without any control of prices for cloth. This objection seems to be valid and if not considered in relation to cloth prices may affect certain units which are mainly spinning mills. It will not be irrelevant here if a suggestion is made that any scheme which aims at fixing prices for yarn should relate to wholesale prices for cloth at the time of distribution. Otherwise, for one particular section of the trade to be penalised is unfair. These are difficulties which can be satisfactorily got over by negotiation. Simply because there are obstacles in the way there should not be any delay in putting the scheme into operation. The position has become complicated by the slow-down in production in certain of the important centres since August, and it is more than ever important that the interest of the handloom weaver should be safeguarded.

Control of Raw Material

Speaking at Pittsburgh on the occasion of the 45th anniversary of the Carnegie School of Technology, Lord Halifax had some interesting remarks to make regarding the position of the Allies in respect of raw materials. The burden of his talk was that complacency should be avoided by the Allies. He reminded the audience that the time was not necessarily a favourable factor so far as the Allies were concerned as with the improvement in the position of the Axis Powers in regard to raw materials any opportunity for exploiting the same would prove to be ultimately harmful to the allied cause. He remarked! There has been far too much of easy optimism over the control of raw material. The United Nations were so accustomed to the idea that they commanded the world's resources that very few people realise how adversely the position has changed since 1939 and especially since the entry of Japan into the war. We lost to the Japanese the oilfields of the East Indies and Burma. We lost to Germany the Rumanian. Gallician and some of the Russian oilfields while others are gravely threatened.

"In 1939, the Axis Powers had no rubber apart from their accumulated stocks and synthetic product. To-day they had 91 per cent of the world's supply. They had 25 per cent of bauxite. They now have

D. F. SANDERS, *Genera Manager*

66 per cent. They had seven per cent of the world's iron ore, they now have 44 per cent. They had nine per cent of the tin ore, they now have 74 per cent. They had 10 per cent of the manganese ore, they now have 35 per cent. They had six per cent of the world's flax, they now have 36 per cent. These are bad figures. To some extent they are offset by our control over most of the materials which the enemy has not got and by the lead we still retain in such commodities as nickel, so important for steel making, in which Canada produces 90 per cent of the world's supply."

The above are very interesting figures but one should not be unduly alarmed either at this turn of the scale in favour of the Axis Powers. They have certainly greater access to the important raw materials but the geographical disposition in regard to certain of these materials is such that it is not possible for the two important partners in the Western hemisphere to derive any great advantage out of the recent acquisitions. It is, therefore, very important that the Allies hope for a very swift and short war. If only they can put more energy into the present programme and avoid undue optimism they would have achieved their object.

Unsinkable Ships

Sometime back Colonel Knox, the U. S. Secretary of the Navy said that the problem of combating U-boat warfare would be present as long as the war lasted and that the menace had been considerably minimised by the perfection of the technique of anti-submarine warfare by the U. S. and British Navies. Confirmation to this statement made by the U. S. Secretary was forthcoming from the figures for shipping losses in the months of July, August and September. It was reported that the crisis in regard to shipping had been passed and that it was possible to move supplies more freely and fulfil the undertakings on behalf of other countries. Mr. Churchill's statement, however, emphasises that the problem is yet to be got over satisfactorily. It appears that submarines have a rather difficult time in the Atlantic and that they have been concentrating their attention in the West and East Coast of Africa recently. Also what time the Allies have been trying to perfect their technique in regard to anti-submarine warfare, the enemy has not been sitting quiet. It is reported that most of the enemy submarines operating near Africa are small-sized craft with guns mounted on their coming towers. It is said that this practice has been adopted only since the start of this war. The campaign in Madagascar has, to a certain extent, minimised the danger from Japan off the East coast of Africa. The problem would be far more easy if the strain on the navies was less.

Under the circumstances, announcement that the United Nations have been making experiments in almost "unsinkable ships" is very encouraging. The first of such a tanker had its test action against a U-boat and it proved to be very successful. The tanker was torpedoed in the Atlantic while carrying 1,000 tons of highly inflammable spirit. Four torpedoes are considered sufficient to sink a modern battleship, but six were needed to sink this one. Even then, it was several hours before the tanker went down to the bottom and none of the crew were killed. If it were possible to put these tankers into extensive use and if aerial transport were adopted for the movement of goods with the aid of cargo airships planted on the model of Henry Kaiser, the Allies would have satisfactorily got over the dangers resulting from the U-boat campaign. It need hardly be mentioned that the weight of the equipment and the availability of supplies in time mainly determines the course of war.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

The rains have come and gone; and the Rain-God, as he leaves, ushers in a revue of festivals for which hedonistic Hinduism has always had a wistful longing. First the Pujas, then the Divali—for a month and more, the festive spirit is on the ascendant. The Hindu calendar, set for all Time by Heaven itself, fits admirably into the changing circumstances of each season. Economic pressure is as a rule at the lowest, when the great festivals of the year are on. Could the same thing be said of the present? It is difficult to disguise the pangs of regret that must damp, though only superficially, the joys of Puja and of Divali. A religious festival is that kind of auto-suggestion on a mass scale, which teaches the poorest of us to go about wreathed in smiles. An effortless packing of one's troubles is achieved, because of the momentum of tradition, at once age-old and wholesome. The depression of the 'thirties familiarised the world with the paradox of poverty amidst plenty. Religion on the other hand accomplishes its converse. Its achievement is the alchemy by which poverty is transformed, if only in momentary subjective feeling, into plenty.

* * * *

Even in the years in which our trade reviews are crowing about a boom in progress, the material prosperity of India is nothing to speak of. In the years of the depression, the level is very low indeed. Withal, the masses have an equanimity of spirit which makes the buoyancy of the festive season easy and becoming. Ask the economist what is the per capita consumption of cotton cloth in India. It does not work out to even two pairs of dhoties a year. The consumption of sugar, taking gur and all the forms in which Nature provides this country with sucrose, is about 20 lbs. per head per year. That is poverty, pure and simple. But give the setting of a religious festival to these meagre sweets and clothing, persuade the ordinary man to postpone his purchase of new cloth to the Puja and the Divali, you get the transformation of poverty into fleeting transports of joy and cheer. That is the alchemy of religious sentiment.

* * * *

Cheerfulness is a moral quantity which is rated much higher by thinking men than mere animal joy. But the cheer which the poor man finds out of necessity or is taught to command by religious tradition is an unsatisfactory substitute for the joy that comes when one is above want. But where it is vain to ask for immediate prosperity, the relief and the sense of exaltation which religion gives is not to be despised. India, particularly Hindu India, has always had this in abundance. Maybe, it is a virtue of necessity. Or, it flows from the very nature of agriculture as a primary occupation, for it is in agriculture that Nature shows her prodigality and stinginess in their most capricious forms. In modern times when harvests, good and bad alike, are a curse to the cultivator, it is well that the religious tradition survives to cheer up the masses to whom controls are like King Stork, where once the Log of laissez faire simply let them alone.

* * * *

In all these years in which I have been called upon to let my mind dwell on the Pujas as a preliminary to offering my readers the compliments of the season, there have been but few occasions in which reference to the poverty of the people could be omitted. These three years, there has been the additional circumstance of the war. And now the political deadlock and the detention in jail of the leaders are superimposed on it all. The troubles that are personal and individual are serious enough in all conscience. Imagine the lower middle-class man of modest means setting out with the usual advance or bonus from his office for the usual puja or divali purchases. I have said already that the joy of these festivals lies not in indulging in some luxuries, but in dating the purchase of the necessaries of life. Usually, the children are taken round to the shops to give them the illusion of free choice of the clothes they can have for themselves. But the iron laws of the domestic budget rule them nevertheless. Even that pathetic illusion is no longer available to them. The standard cloth with unstandardised prices is the only thing open to them. The dark streets, the crowded trams and the forbidding frontage of the shops compel people to leave the children at home. People knocking about in the labyrinth of baffling walls find to their utter discomfiture that there are more such inside than that outside. Prices are a Chinese wall; and the average purse is no means of scaling it. A rationed Puja would have been thought a contradiction in terms. It is now a depressing reality. When clothes and sweets are on ration, the Puja is a religious austerity and not a festival.

* * *

It is to the spirit, then, that one has to turn for unrationed plenitude. And the world cannot have too much of the Puja spirit. Never was it more out of joint than now. Never was there more need for every individual, every group to wish well of others, in order that all may be well. The mark of the civilised man, it has been said, is the wide orbit of happenings which are relevant to his happiness.

116, *LOWER CIRCULAR ROAD, CALCUTTA.*

There are men who wouldn't stay a minute to see whether they can be of any help when there has been a road accident. There are others who would remain gloomy because of some atrocity in a distant country. If this is true of individuals, how much more should it be of civilised nations? Nations which, so to say, feather their own nests are only digging their grave. It is true that Nature knows no morality. But the evolution of man's social life is such that the intelligent man or the intelligent people sees little room for altruism as such. Virtue is but prudence seeing a little farther ahead than vice. The U.S.A. shied at internationalism and European entanglements and has her hands full with a world war. But the change from isolationism to acceptance of wardship of the world is neither easy nor unattended by errors and blunders. It must be said to her credit, that she is no longer inclined to underrate the gravity of her responsibilities.

* * * *

But the time for a unified policy has not yet come. In the last war people talked of a unified command. I doubt if the same issue will be raised in this. For what is required is not the centralised direction of campaigns, but understanding as to how the attack on civilisation is to be foiled. The Atlantic Charter came earlier in this war than Wilson's Fourteen Points in the last one. And it stands discredited even more quickly. America is restive, if only because she sees that the Atlantic has yielded priority to the Pacific. The renunciation of extra-territorial rights in China has come. But it helps China but little, when India is obliged to sulk behind in this war for civilisation.

American opinion has taken in all the broad facts of the position as it is. There are men of goodwill in the U.S. who take full-page advertisements to compel public attention to the importance and gravity

SAUGOR ELECTRICITY SUPPLY COMPANY, LIMITED

NOTICE

is hereby given that the Twenty-Second Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Friday the 6th November, 1942, at 11-10 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-year ended 30th June, 1942 and to transact any other ordinary business of the Company.*

The Share Transfer Books of the Company will be closed from the 31st October to the 6th November, 1942 both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated, Calcutta, the 15th October, 1942.

***The Directors have recommended a dividend of 4% per annum free of Income-Tax which if passed at the General Meeting will be paid to Registered Shareholders on and after 6th November, 1942.**

N.B.—In pursuance of the Government of India Defence Department Notification No. 1564-OR/42 dated 7th September, 1942, Directors' Report and Accounts of the Company are not being published.

UNDER THESE BANNERS WE WIN

IT is these banners that help us ride the present international storm with confidence. With these principles as our guide we have, during the 45 years of our existence, tided **over two wars, several earthquakes, many epidemics and slumps.**

The various buildings and investments of the Company in almost all important towns are visible signs of our strength and absolute security.

It is our willing service to policyholders that has made **BHARAT** so popular today.

of the Indian problem. Religious leaders submit a petition to President Roosevelt asking his intervention to the settlement of the India problem. Radio talks by persons of the eminence of Bertrand Russell have been arranged. There is no mistaking the keeness of American interest, especially as America is not having the fullest accounts of the position in India. The "Economist" of London observed sometime ago that "the people of the United States for obvious historical reasons, are constitutionally inclined to regard all matters appertaining to the British Empire, and in particular to India, with the deepest suspicion ; that is to say largely because of this unfortunate tradition and because of the subtle Congress propaganda—which is no new thing, but began many years ago—there is a large section of American opinion which does not really want to see the British side of the case."

* * * *

In this season of goodwill, who would wish that American isolationism would triumph over the sound instinct which prompts her to play the good friend to Britain and India alike? Bertrand Russell's suggestion of a Four-men Commission consisting of representatives of U.S.A., U.S.S.R., Britain and China to negotiate with the Indian parties for a settlement has much indeed to be said for it. For only then could intransigence be firmly dealt with wherever it may be found.

"EAVESDROPPER."

ART *in Industry*

Exhibition

The third "Art in Industry" Exhibition will take place at the Sir J. J. School of Art, Bombay, next February.

Sections DEVOTED TO

BATA • BENGAL CHEMICAL • BURMAH-SHELL • CEMENT MARKETING CO. • DUNLOP • GENERAL MOTORS • INDIAN TEA • LEVER BROS. • • MAHALAXMI COTTON MILLS • METAL BOX • RAILWAY BOARD • E. D. SASSOON • TATA OIL MILLS • TIMES OF INDIA • GOVT. OF INDIA • GOVERNMENT OF BOMBAY • NATIONAL WAR FRONT

Artists are cordially invited to compete for prizes and scholarships totalling Rs. 12,000/-, of which the best entry in the Exhibition will get Rs. 750/-.

Artists, through the Exhibition, are not merely able to sell their entries, but can bring their talent to the notice of Government and leading industrialists.

A prospectus containing full details, which should be read carefully, can be obtained from any of the prize donors or from the sponsors.

The last date for receiving entries is 2nd January, 1943, at the Sir J. J. School of Art, Bombay, or 5th December, 1942, at Burmah-Shell offices at Karachi, Lahore, Delhi, Lucknow, Calcutta, Madras and Secunderabad.

Stock Markets to-day and to-morrow

ALKALI AND CHEMICAL CORPORATION RESULTS

THE Calcutta Stock Exchange remains closed on account of the *Id* and *Puja* holidays, and will not reopen for business before October 26, 1942. The Bombay Stock Exchange also has remained closed and it is reported that business may not be commenced before *Muorat*. In the circumstances, no comment can be made regarding the progress of markets. One could, however, hazard a guess. The latest speech of President Roosevelt and the report that General Smuts is in London for consultation, lead one to expect that there will be an early allied offensive. With Stalingrad still holding out and no possibility of a fresh German offensive it can very well be expected that the re-opening after the holidays will be active. Last week we pointed out that "with the continuance of the present conditions, it may very well be that new high levels will be touched after the holidays." The developments during the past few days tend to confirm this view.

* * * *

The accounts of *Alkali and Chemical Corporation Limited* for the year ended June 1942 have been published and the Corporation has been able to report a further improvement in earnings. The accounts cover a year's working of the Calcutta factory and another year of construction of the Punjab factory despite delayed deliveries of plant and equipment on account of the war. Subject to war contingencies it is hoped that the factory will be completed in 1943 and a starting-up party of ten specialist technicians is expected to leave England shortly to assist in the initial stages of production.

The net profit, before providing for taxation and depreciation, is Rs. 4,96,823 against Rs. 2,83,379 for the previous year. The amount set aside to depreciation is Rs. 1,08,467 (Rs. 73,630). The provision for income-tax and super-tax is higher at Rs. 85,004 (Rs. 39,546). Out of the earnings for the year ended June, 1941, the sum of Rs. 38,310 was set aside for writing off preliminary expenses in full and Rs. 18,409 off brokerage in full. After the payment of the preference dividend at 5 per cent per annum, the amount carried forward is the substantial sum of Rs. 1,88,085 against Rs. 39,733 brought in.

The issued capital has now been fully subscribed and paid-up. The figure at the end of June 1942, is thus higher at Rs. 93 lakhs against Rs. 91,96,440 at the end of June 1941. On the assets side of the balance sheet, there is an increase in the amount of the block during the year by Rs. 12,90,821.

The present agreement with Imperial Chemical Industries (India), Ltd., under which they act as Secretaries of the Company is due to expire on the 7th of December, 1942 and a resolution approving the agreement for their re-appointment will be put before the shareholders. The suggested period of appointment is ten years subject to extension with the approval of the Directors for a further period of five years from the expiry of the ten-year period. Except for the term, it is proposed that the Agreement should contain precisely the same provisions as the present Agreement.

* * * *

Central Provinces Collieries are having a relatively busier time at the expense of the Bengal and Bihar Collieries. The nearness of the markets in Western India and the shorter haul involved, have resulted in an increase in the earnings of the *Rewa Coalfields Limited*. There is an increase in both raisings and despatches. The net profit, before providing for taxation and depreciation, is Rs. 3,44,174. The amount set aside to depreciation is Rs. 49,798 while the provision for taxation is Rs. 1,82,114. The dividend has been only maintained at 17½ per cent per annum.

Both collieries of the Company have sufficient orders on hand to ensure a full offtake for sometime ahead, provided there is an adequate supply of wagons.

* * * *

In spite of the difficulties in war time, and the constant changes in staff and work people making it a strenuous year for all those working fo rthe Company, the *Henley's Telegraph Works Company, Limited*, has been able to report satisfactory progress in the year 1941, the turnover again reaching record figures. The percentage of profit earned showed quite an appreciable reduction and as all the work is in connection with national requirements, it is not surprising that the former rate of profit has not been maintained. The profit on trading account for the year 1941 is £410,645 which is approximately £10,000 higher than in the year 1940, and this profit has been struck after providing for taxation. The business of overseas branches has suffered during the year owing to restrictions upon exports but as branches had ample stocks in hand at the beginning of the year, the reduction in the turnover was less severe than might have been expected and the profits satisfactory. The amount provided for depreciation is over £94,000 in addition to the Company's expenditure of over £50,000 on maintenance. The final dividend of 10 per cent and 5 per cent cash bonus makes with the interim dividend already paid, 20 per cent for the whole year.

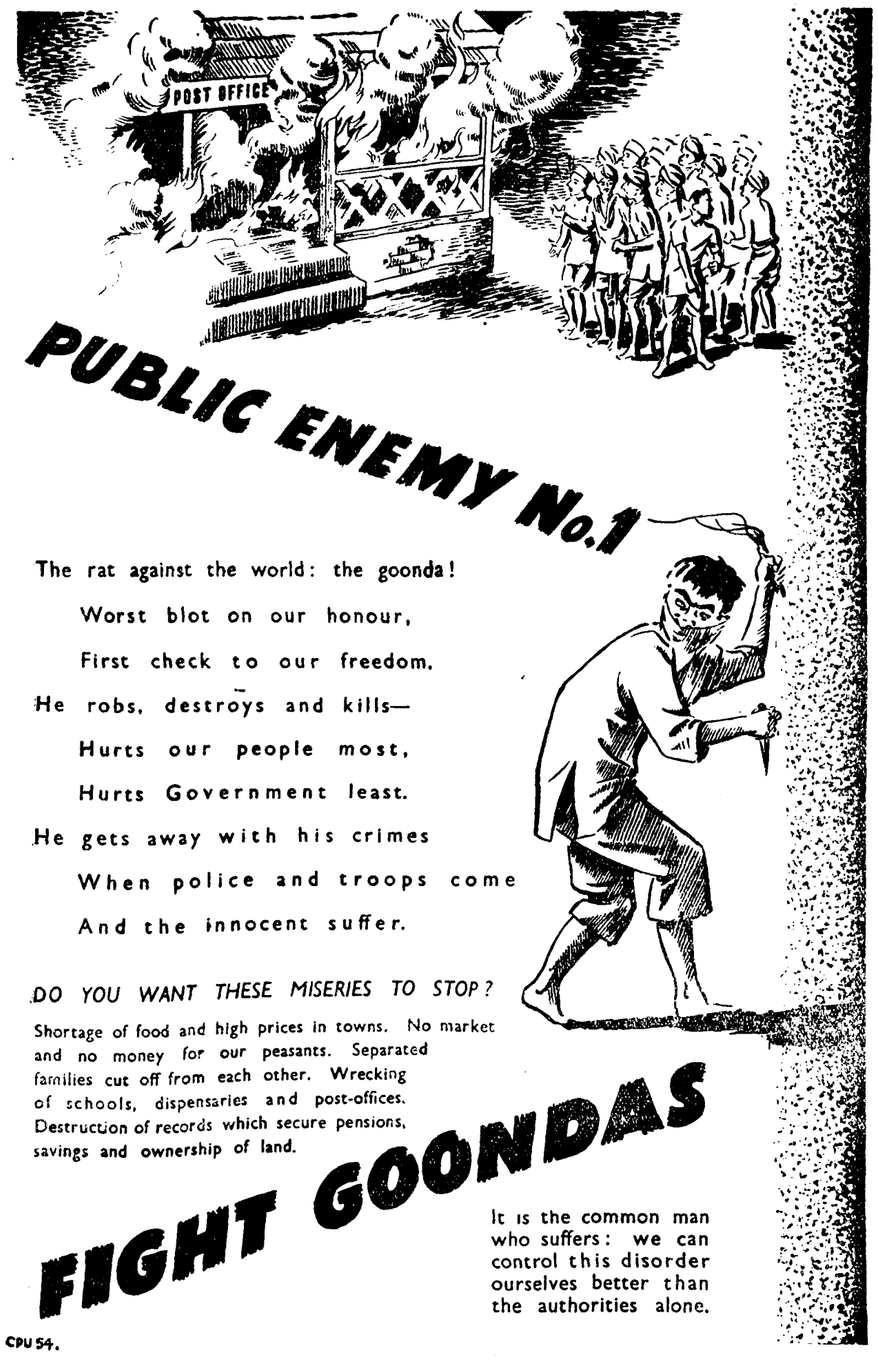
Dated, Calcutta, the 15th October, 1942.



***The Directors have recommended a dividend of 5 per cent per annum free of Income Tax which if passed at the General Meeting will be paid to Registered Shareholders on and after 6th November, 1942.**

N.B.—In pursuance of the Government of India Defence Department Notification No. 1564-OR/42 dated 7th September, 1942, Directors' Report and Accounts of the Company are not being published.

One would have expected that with the improved conditions in the sugar industry and the sharp upswing in the prices for sugar, it would have been possible for Indian sugar mills to report a substantial improvement in the earnings for the last season. But the profits of the *New Savan and Gur Refining Company, Limited* for the year ended May 31, 1942, actually show an appreciable decline in earnings over those of the previous year. The directors point out that the bulk of the earnings for the year 1941-42, are mainly due to the profit on the unsold balance of 1940-41 sugar. The appreciably lower level of earnings for the last season is ascribed to the shortage of cane, the factory being able to crush only 8,38,118 maunds and produce 86,638 maunds of sugar against the estimated quantity of cane to be crushed of 15,61,428 maunds realised on the minimum selling price.

The net profit before providing for taxation and depreciation for the year ended May 1942 is Rs. 1,28,841 (Rs. 2,79,470) for the previous year. The amount set aside to depreciation is Rs. 43,975 (Rs. 95,024). The amount provided for taxation is Rs. 25,000 (same). On the last occasion, the sum of Rs. 50,000 was transferred to other funds. The dividend declared is lower at 7½ per cent against 10 per cent.

Editorial Comments

Three years of War Finance—VIII

Commodities

Difficult as it is to anticipate the erratic and nebulous course of stock exchange values, during these three years of war, it is even more difficult to determine the trend of prices of commodities. The problems confronting the producers at the different stages of the war period have varied alike in degree and kind. The origin of disturbances, too, apart from the war as such has varied not a little. Shipping, closure of markets (consuming our products), exchange and export control, were some of the factors which caused important fluctuations in prices. In the last ten months, since the entry of Japan the position has become even more complicated. Besides the intensification of the difficulties mentioned above the loss of Malaya, Burma, the N.E.I. and other countries has resulted in great confusion. The increase in the United Nation's demand for certain products, for which there are no alternative sources, and the difficulty in getting certain food supplies, combined with the acute difficulties in wagon and shipping space, have pushed up values to a great extent. The Calcutta wholesale index of commodity prices is at present at the highest level for the war period.

It will be noticed from the above that, for the purposes of this review, we can classify the 3 years of war into three periods: (1) from September, 1939 to May, 1940, a period in which there was a boom in prices for export commodities—jute, cotton, oilseeds etc., with the large purchases by Britain and her allies; (2) from June, 1940 to November, 1941, a period in which the demand in the earlier stages was affected considerably by the closure of the Continental markets and the fall of France with consequent dislocation and improvement only in the later stages when shipping position was better and purchases by the U. S., some Empire countries and those in the Middle East increased; and (3) from December, 1941 to September, 1942, a period of great confusion, increased demand for sugar, tea, rubber, wheat, rice etc. and interferences from an imperfect and shifting system of price control.

It is interesting to note that the boom was at first confined only to the export commodities, jute, cotton and oilseeds and, if there was any improvement in prices for other commodities, it was only sympathetic. Large purchases of jute, cotton, and oilseeds, huge orders for sandbags, and the hopes of similar orders for the cotton textile industry whetted the appetite of speculators. Thus, cotton and jute touched the highest levels for the war period even in the first four months of the war; Broach being quoted over Rs. 330 and jute futures over Rs. 125. These levels are yet to be regained, not to speak of being surpassed.

In the early months of the war speculators did not stop to think that the difficulties on account of shipping would prove to be insurmountable. Neither did the authorities. The large war orders seemed to suggest that any amount of shipping could be made available. The rude shock came when it was decided to postpone deliveries of sandbags. The allied reverses in April and May and the fall of France finally resulted in a sharp break in values.

Slump conditions were noticeable in the five months ending November, 1940. The problem of finding new markets seemed almost insoluble and the Gregory-Meek mission to the United States proved to be a failure. The recovery in prices and the readjustment in trade after November, 1940 was natural and eventually showed that the loss in trade on account of continental markets could be more than replaced. What the Government of India could think of was only restriction of the production of the affected commodities. Groundnut was the chief sufferer. The production of jute had to be curtailed drastically; also that of cotton. In the case of cotton, however, the loss on account of exports has to a certain extent been compensated by the increased consumption by Indian mills.

In the third period the picture is completely different. The entry of Japan into the war on the side of the Axis made the Pacific supply route also dangerous. The greater strain on shipping was in itself bound to affect trade, it being very difficult to maintain exports and imports. The loss of some countries made the position worse. This country is dependent on Burma for rice. Australian wheat supplies also have been helpful. Till very recently it was not possible to bring in Australian wheat. In the matter of rice, far from being able to import, we have been obliged to export to countries like Ceylon. The threat to coastal shipping and the disorganised internal transport facilities have also added to the difficulties. Relative scarcity caused undue disparity in values and it was difficult for the Government effectively to control prices.

As regards sugar, India has been obliged to supply the requirements of the United Nations in the East. There was a crisis in the industry on account of overproduction in 1939-40 and it was necessary to restrict production to reduce the carry-over. There is now scarcity. These are strange trends indeed. And the problem of internal transport affects this industry most as nearly 80 per cent of the total production is from the provinces of Bihar and the United Provinces.

†Price quotations not available.

Thanks to the more organised state of the tea industry and the efforts of the British Ministry of Food, uncontrolled rise in prices for tea has been checked. Only recently, an agreement was concluded by the British Ministry of Food with Indian and Ceylon producers for the purchase of the whole of the exportable surplus.

The Index number of wholesale prices in Calcutta by groups of articles given on the previous page, from August, 1939 to July, 1942 fully confirm the observations that we have made.

It will be observed that the index for all commodities is at the highest level for the war period and that the improvement in the index from May, 1941 has been very pronounced, from 130 to 182. In the early days of the boom period, the highest level touched was only 137. The lowest level for the war period was touched in July, 1940 at 114.

The rise in the general index from 130 to 182 in the course of fourteen months may perhaps suggest that the improvement in prices is inflationary in character. It cannot be denied that the large additions to currency in recent months have been responsible to a certain extent, but if due account is taken of the peculiar difficulties and the lack of foresight on the part of the Government in anticipating difficulties, it will be admitted that a great part of the increase in prices could have been avoided.

"WHAT! STILL NO SUGAR?"

"Come, now, how much do you want us to pay; that's it, isn't it?"

"I tell you there is no sugar in the whole market. How can it get here with the railways torn up by goondas?"

"But you are a great Nationalist—aren't you happy to see Government embarrassed?"

"Government! Who do you suppose is suffering from this goonda work? Good Nationalists most of all . . . And you, can you get vegetables?"

"Only at enormous prices."

"Of course, the demand is far more than can be met by the stuff that gets here from just a few miles round. And rice, grain or ghee are just as bad."

"I know . . ., and what will the poor peasants do to get money at Divali. If they can't move their crops how can they sell them?"

"That's what I say: this kind of tearing up rails and destroying railway buildings and signals will take months to put right. Meanwhile we shall all suffer, except the goondas who have had their excitement and their loot."

"What can we do about it?"

"Well, I am telling my *arratiyas* that they must go into the villages and tell the people to watch for goondas and stop them destroying more."

"Good idea! I'll tell my relatives in the country to do just the same."

Indian Customs Revenue

The improvement in the shipping position has resulted in the increased seaborne trade of India during the last three months. There has naturally been an increase in the amount of revenue realised from customs duties. The total income, however, is substantially lower than that for the corresponding period last year as even with the improvement in the level of imports in recent months, the total value is considerably lower than the figure last year.

The gross Indian sea and land customs revenue, excluding salt revenue, collected in British India during the month of September 1942, is Rs. 3.15 crores against Rs. 2.74 crores for August 1942 and Rs. 3.53 crores in September 1941. The increase in income from import duties will be properly appreciated if it is taken into consideration that imports of cotton fabrics tea, kerosene oil, sugar and other commodities, which were imported from Japanese occupied territories last year, are no longer available and, to that extent, the revenue of the Government has been affected.

The total gross central excise duty on motor spirit, kerosene, sugar, matches etc., is necessarily lower at Rs. 93 lakhs against Rs. 97 lakhs in August and Rs. 123 lakhs in September 1941.

The total of customs and central excise revenues realised in the six months ended September 1942 is Rs. 22.91 crores against Rs. 28.29 crores in the corresponding period of 1941. Of this amount import duties accounted for Rs. 15.44 crores, export duties for Rs. 1.35 crores, land customs and miscellaneous for Rs. 33 lakhs and central excise duties for Rs. 5.79 crores. A comparison with the figures for the six months ended September 1941 shows that decreases are on account of the import duties on cotton fabrics, kerosene oil, artificial silk yarn and thread, artificial silk fabrics, iron and steel, motor vehicles, cotton yarn and thread, raw cotton and other items. Import duties on motor spirit, tobacco, silver bullion, coin, sheets, plates and other manufactures, liquors, batching fuel and lubricating oils and spices, land customs receipts and the excise duties on motor spirit, matches and steel ingots showed increases.

Steel Re-rolling Mills Association

As a result of the difficulties experienced by the steel re-rolling mills and the representations made by certain important members of the indusry, the Government of India have decided to invite all steel re-rolling mills started before September 1, 1941 to enrol themselves as members of the Steel Re-rolling Mills Association on or before November 15, 1942. It is explained that this decision has been reached in order to provide equal opportunity to mills started before September 1, 1941 to secure efficient conversion of steel, to safeguard established mills as far as possible against a failure in the supply of scrap and to avert profitless competition.

In a **communique** issued on September 6, 1941, the Government of India expressed the view that the available scrap was scarcely enough to enable the existing mills to carry on their normal business and warned all concerned that in the event of the Government of India having to take special measures to regulate the supply of scrap to re-rolling mills and other users, they would not include any re-rolling mills started on or after September 1, 1941.

It has been found convenient to work through a single Trade Assodiation. A committee for the classification of all mills (old as well as new) which are or may become members of the Steel Re-rolling Mills Association on or before November 15, 1942 will be appointed as soon after that date as possible. This committee will consist of the representatives of Government and a representative elected by all the member firms of the Association and will determine the classification of the mills according to their efficiency, convenience of location and transportation facilities, into categories A. B. & C.

An endeavour will be made to supply scrap to mills in category A for two shift working and to category B for one shift working. Mills placed in category C will receive whatever is left after the requirements of mills in categories A and B have been supplied.

The rate of charge for conversion from scrap to steel will be fixed by agreement between the Government and the Association from time to time on a sliding scale, mills in category C getting the highest rate for conversion. The rates at which steel will be supplied to Government or sold and the other conditions will also be determined by agreement. All re-rolling mills will be obliged to dispose of the whole of their products in accordance with the instructions of the Iron and Steel Controller. Government also intend in the near future to control iron and steel scrap by statutory order and to fix maximum prices for all categories of scrap.

Future of Hessian Shipments

To those who are looking for an early resumption of normal hessian shipments from Calcutta to the U.S.A., the latest issue of the Bulletin of the Indian Central Jute Committee can bring but chilly comfort. It is true that the Washington correspondent of an Indian paper is quoted as venturing the opinion that the use of burlap will be welcomed instead of most of the substitutes as soon as war conditions permit its availability in amounts nearer normal. A very categorical review of the situation culled from the New York Journal of Commerce however makes it abundantly clear that the exclusion of burlap imports in favour of articles of greater immediate importance to the war effort, is the definite policy of the War Production Board. In a normal year the U.S.A. consumes something in the region of 700,000,000 yards of burlap. Actually the figure is larger than that because for some obscure reason, the consumption of the Pacific coast is not included in the returns. When the War Production Board ordered that the production of osnaburgs and cotton bagging cloth should be stepped up from the level of around 7½ million yards to practically double that

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

figure, it was apparently because the total exclusion of burlap imports from India was visualised, and preparations were thus made for the necessary supplies of bags for all requirements independently of burlaps.

The entry of the U.S.A. into the war has naturally increased the demand for bags tremendously and it is estimated that requirements of textile goods on Government account will show an increase from a normal of 20 per cent up to a war time level of 50 per cent. At the same time the entry of Japan into the war, and very soon into the Bay of Bengal, brought the shipping situation to an acute crisis, with American Insurance Companies for some time refusing to quote rates on shipments from Calcutta. While the shipping situation has eased considerably and export to other markets is proceeding fairly satisfactorily, the U.S.A. Govt. had apparently meantime decided to pin their faith to cotton and paper as the material for their bag requirements and burlap looks like being left out in the cold for some time to come, if not for the duration.

While cotton bags are normally more expensive than burlap bags, this disadvantage is set off to no small extent by the much greater number of times that a cotton bag can be re-used. That is to say that a once-used cotton bag has a much higher resale value than a once-used burlap bag. This incidentally is a point usually lost sight of by those who advocate high minimum prices for jute and manufactures. Jute can only compete with cotton when it is relatively cheap. What may well prove to be another strong competitor with burlap is the new type of "multiwall" kraft paper bag, which consists of 6 separate thicknesses of heavy duty kraft paper, one layer being "asphalt laminated", rendering the bag waterproof and moisture proof. This type of bag is reported to be able to stand very rough handling while at the same time protecting the contents against extremes of climate, and can actually be used to convey foodstuffs which were formerly normally tinned.

The point we wish to make is that the fading out of burlap exports to the U.S.A. is not merely due to the scarcity of shipping but is at least equally the result of a definite pre-conceived policy of the War Production Board to do, as far as possible, without Calcutta hessians. The reinstatement of that fabric in the graces of those who have had to do without it for a considerable period, and who have in the mean time perhaps found a perfectly satisfactory substitute, may not be too easy, and may certainly take quite a long time. The question therefore arises whether it would not be advisable for the Industry to prosecute enquiries through the appropriate channels as to the possibility of at least maintaining some footing in the American Bag manufacturing industry. We do not know to what extent India may have benefited from the Lease and Lend programme. If she has a credit balance in this respect, why not a **quid pro quo** in the way of hessians to the U.S.A.? It is a suggestion which might be worth following up, and though it might entail some sacrifice on the part of Mills at the moment, the ultimate benefit, if they could thus maintain their place in the U.S.A. markets till the return of more normal trading conditions, might far outweigh the immediate loss. It is to be

assumed that in balancing any Lease and Lend transactions the Central Government would undertake the main liability. But it might be to the ultimate interest of the manufacturing industry if Mills were to undertake to supply the hessians at or about cost, so that they might be landed in the States at a price which would ensure their continued recognition as the world's cheapest wrapping material, which after all is the foundation of the Jute trade.

On the other side of the picture there is the report of acute shortage of bags to care for the handling of the Argentine seed crops, while in Cuba and other neighbouring sugar producing countries there is considerable anxiety as to how their crop, due to be produced in the early months of 1943, is to be stored without their usual supplies of jute bags. Every effort should be made to ensure that these important markets also are not tempted to return to cotton or paper containers.

Increasing Central Govt. Expenditure

Mounting defence expenditure is widening the gap between revenue and total expenditure. The latest statement of the Central Government's monthly accounts shows that excluding periodical adjustments and the transactions by railways and posts and telegraphs expenditure in the first five months of the financial year 1942-43 exceeded revenue by Rs. 53 2/3 crores. The deficit in respect of the corresponding period last year was only Rs. 23¼ crores. It is stated that the increase in expenditure during the current year is mainly due to the higher level of defence expenditure, the increase on this account being more than Rs. 33¼ crores. Against this increased level of expenditure the revenue position has improved by only Rs. 14¼ crores, general revenue being higher by Rs. 9 crores and net receipts from railways by Rs. 5¼ crores. There is thus a net increase in deficit on account of the five months 1942-43 of Rs. 16 crores. The addition to permanent debt is only Rs. 45 lakhs so that the whole of the budget has been financed by short-term borrowings and ways and means advances. If it were possible to estimate the total increase in deficit for the year on the basis of the figures for the first five months may be between 38 to 40 crores. Having regard to the provision of Rs. 45 crores for cash payment of purchases under the lease and lend arrangement, it appears thus that one has not to worry very much regarding the level of expenditure of the Central Government at the present moment.

Regional Disparity in Prices

The effect of the war on the prices of foodstuffs and other necessary materials has been different in different Provinces. From certain representations made to the authorities of the Government of India by their Departmental staff it would appear that the prevailing prices in the Delhi market generally work up to 100 per cent higher than the pre-war prices. A statement attached to one of these representations gives in detail the increase in percentage of present prices over pre-war rates—wheat flour, 150 per cent, rice 100 per cent, dal 200 per cent, vegetable 200 per cent, tea 200 per cent, sugar 85 per cent, milk 100 per cent, ghee 55 per cent, oils 75 per cent, kerosene 300 per cent, fuel charcoal, 100 per cent, soft coke 700 per cent, firewood 100 per cent, salt 150 per cent, razor blades 350 per cent, medicines 200 per cent, etc. The price of cotton cloth has generally increased from 100 to 150 per cent while the cost of woollens has

Aspects of an Industry No. 6

MECHANISATION

IN these days 'mechanisation' has, for most of us, but one meaning — the mechanisation of the means and instruments of war, the substitution of the petrol-driven tractor, tank, 'dragon' or lorry for the horse- or mule-drawn vehicle. But mechanisation depends on rubber as well as petrol, for without rubber in some form or other petrol cannot function efficiently. The most successful engine is disastrously handicapped unless rubber is available not only for tyres and treads but also for the hundred-and-one rubber parts in engine and chassis. Leave war aside for a moment. Have you ever pondered the amazing increase in the life of the motor tyre? No farther back than 1920 you were well satisfied with a tyre that stood up for 5,000 miles. During the past 20 years or so the average mileages have been trebled, and long and satisfactory service been accepted as a matter of course by private car owners, commercial vehicle users and coach and bus operators. These astonishing developments could not have been achieved without the work of British organic chemists. Working in their laboratories, these men are constantly adding to the range of products used by the rubber manufacturing industry. Chief among these are what are known as accelerators and anti-oxidants. The use of the former means that the rubber manufacturer is able to construct tyres of increasing strength and of greater resistance to abrasion. The presence in the rubber of small quantities of special anti-oxidants delays the action of flex-cracking. Just as mechanisation depends on the rubber manufacturer, so he in his turn depends upon the organic research chemist.

ICI

Imperial Chemical Industries (India) Ltd.

doubled itself. Since this statement was prepared, the prices of all articles have increased further, but these figures are sufficient indication of the present upward trend of prices. According to the representation made to the Government of India, "the abnormal rise in prices of all materials particularly foodstuffs, cloth, labour, etc., has of late rendered the situation alarmingly acute for salaried persons with more or less a fixed income factor".

This abnormal increase in prices brings the inevitable question—what exactly is the monthly expenditure per head at the current market rates for an ordinary lower middle class family in New Delhi—the class of clerks and assistants whose present income now ranges between Rs. 60 and a little over Rs. 100 per month according to their grade and seniority in service. Taking as the basis for a plain balanced budget the Health Bulletin recently published by the Government of India, it is claimed by the Departmental staff of the Government of India that "the average expenses per head on board, lodging and clothing alone amount to Rs. 40 per mensem on the basis of the cheapest and coarsest balanced diet necessary for an average person of the simplest habits." As a lower middle class family generally consists of three or four members, the inadequacy of the present initial scales of pay for the lower Services in the Secretariat, owing to the present steep rise in prices, finds emphatic expression in the representation.

In many cases the increase in prices has no economic justification—it is either due to profiteering or maladjustment. Both can be rectified by suitable administrative measures if a sound economic policy can be settled and steadily pursued. In the case of Government staff and other large labour employing establishments, industrial and other, it should be possible to open shops where foodstuffs and other articles will be available at reasonable prices. Similar shops can also be opened in various localities in the poorer quarters of cities to enable the working class public and those similarly placed to get what they want without difficulty and at prices which are economically justified. There is reason to believe that leading members of the business community are prepared to co-operate in any well-organised scheme for supplying foodstuffs to the ordinary public at cost price, but what is required is a definite and active policy by the Government of India and the Provincial Governments in order to keep down the price level and provide adequate stocks to the civilian population.

BOMBAY · CALCUTTA

The trickle of news about American interest in the Indian problem has been more than sustained during the last week or two. I barely mentioned that topic in the course of my last week's gossip. For, I was viewing it less as a political problem than as affording scope for that constructive fellow feeling of man for man which alone can provide salvation for the human race. I am not lapsing into a Tennysonian optimism on the future of mankind. But I am stressing the importance of a dialectic of events of which we have firsthand knowledge, which can force the trends of history, no matter at what cost, along more acceptable channels. It does need such a dialectic to transform the human race. For the race is not so young that it can be impressed by sermons from the pulpit, whether from Geneva or elsewhere. Cynicism is another name for the wrinkles which age furrows on the mind. And between the last war and this, cynicism has grown. Let us make no mistake about it—if the trouble in the last war was a certain superficial sentimentality, the trouble in this is a deep-rooted and, so far as circumstances will permit, even frank and open cynicism. In the last war, there was an honest confusion between the might of the Allies and the permanent good of the world. Mr. Edwin Montagu didn't stop to think of the hornets' nest he would raise when he condemned the Government of India as wooden, anti-diluvian and all that. Today, Mr. Churchill has no thought for a sugar coating for the bitter pills which he flings across the oceans for Indian consumption. The U.S.A. was in no hurry to rush to the aid of the democracies. Perhaps, in most cases, it is mere prudence—cynicism is a hard word. But whatever it is, the virtues which alone can make for a better world, are wrought on the anvil of history by the hammer strokes of a world war, and not kneaded like dough in the deft fingers of prophets and saints. I for one would have no hope, if I see no more powerful force for the making of a brave new world than newspaper articles or paper schemes or even—I say it without hesitation—the example of a Mahatma.

* * * *

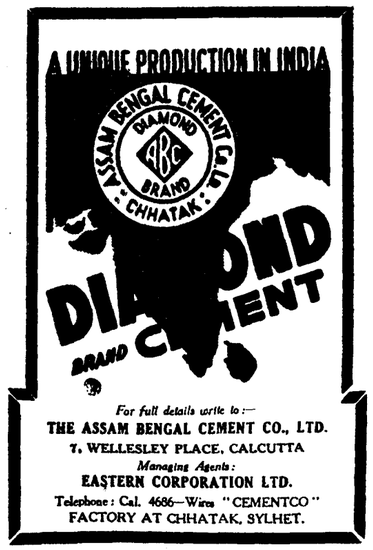
Whether the world will be ultimately saved or not, I am sure I have escaped for the present the necessity of this bleak outlook. For, I do think that the pressure of events is towards a settlement of the Indian problem, towards securing for India and Britain alike—both need it equally—a certain amount of international help; that, in other words, altruism would be produced by chemical action, so to say, in the international world, and not by magic or other miracle. It is in this sense I said in the course of my last week's gossip that virtue is but prudence seeing longer ahead than vice. There are situations in the life of nations as of individuals, when they are compelled to take the long view instead of the short one, and to prefer mutual helpfulness and the various shades and degrees of altruism to the promptings of immediate self-interest. I would be as suspicious of American intervention as of British pledges and professions—perhaps more—if I knew there was nothing to show that America, too, has a substantial advantage in taking that course of action. There are then two prime requisites that are necessary for the course of developments we are envisaging. One, that America has a legitimate self-interest in lending the weight of her influence to the cause of Indian settlement; two, that the pressure of events is in that direction.

* * * *

When we try to make sure that these two requisites are present in the world situation to-day, we are confronted by the lack of direct knowledge. International news agencies are encountering far more barriers to-day than international trade ever did. All we have is a small trickle of news, garbled, scrappy, and perhaps even distorted. Nevertheless, during the last two weeks, quantity would seem to have made up for quality. I have with me a number of cuttings which I have tried hard to put together to form a reasonably reliable picture of the state of effective opinion in America. They seem to be like so many bits of a jigsaw puzzle, that were never meant to make a unified picture. But one thing is certain, that sympathy for India is a clearly distinguishable strand in American relations with Britain. It has its place in the public consciousness as an element in what determines and may shape in the future the relation between the U.S.A. and Britain. Time was, no doubt, when the New York, or Washington or London correspondent of "the Patrika" or "The Hindu" sent out copyright messages to his paper made up largely of pungent remarks by some radical writer or faded intellectual in some rag or, what is equally ineffective, some highbrow journal. In all those cases, one might be sure that nothing more happened in that country, so far as concerned India, than that so-and-so wrote in such-and-such a journal. This great event was of course helpful to the correspondent and to the paper; but what place has it in history? One has to be sure, therefore, that the same is not the case with what has been cabled out to India in the last fortnight. Let us note, in the first place, that among the news items I have before me only one or two are from foreign correspondents of Indian papers. Quite a large number are Reuters!; and Reuters are not known to be over-anxious to paint the picture of American interest in the Indian problem. On the other hand, I should think Reuters reports are sent out with a view to balance the highly coloured versions that might otherwise find their way to this country. "India would be wholly misinformed," we are told in one of these despatches, if the meetings and advertisements supported by liberal writers during the past week or two were regarded as a spontaneous movement of the American people. There is also the addition, "and it would be equally wrong to suggest that the mere absence of criticism betokens approval of the British course."

* * * *

There, in a few lines, you have indubitable confirmation of American interest in the Indian problem. The recent reports are not fatuous expressions of opinion on the part of isolated cranks. A feeling of disquiet or, if we must take the Reuters' report literally, a potential disapproval of the British course, pervades the American public. What we want to know is its character and potency. The newspaper articles and other expressions of opinion, which might formerly be brushed aside, now acquire a new importance. It goes without saying that groups with which Indians have been closely associated will be the first to express this feeling of disquiet. Most of the news reports from London which seem to be heartening at the start will be found at the end to refer to some association with which Mr. Krishna Menon is connected. That is inevitable. But now in America, such variegated groups, as religious leaders, the magazine, "Life," the Daily, the Washington Post, writers like Miss Pearl Buck not to speak of a foreign intellectual like Bertrand Russell, all have joined to give form to the vague unrest in the public mind. If we may judge from this distance, the open letter in "Life," by Henry Robinson Luce would seem to have brought the question within the sphere of animated public controversy. The P. M. is forced to join the issue, and Luce's "loose talk" was strung up. It is quite an animated debate, with that kind of quick thrust which the American public will never miss. "The people of England are going to lose the United States as an Ally unless they quit fighting the war to hold the British Empire together, says Luce. The P. M. asks, 'just where do you want the British people to stop holding the Empire together.' Listing Australia, Egypt, the East Coast of Africa, the West Coast of Africa and Canada, this paper shows the bad results for the United Nations if the British decided to discontinue holding the Empire together and cites the Far East and the Japanese



successes as the result of when 'the British did stop holding the Empire together in a few spots.'

* * * *

Saying that the open letter to the British people in the news magazine "Life," might, to say the least, have been more happily phrased, the Herald Tribune wrote: 'There is not the slightest doubt that all parties to this imbroglio (except Goebbels) are on the side of the angels.' It hardly seems necessary to assure our British Allies, friends and partners, that such exercise of an individual vocabulary bears no relation to the mind of the American people. There is an interest in war aims in this country. A deep one. But it is much too far from definite conclusions to be expressed in any such boyish sermon as that in which "Life" in a moment of relaxation indulged." In a formal reply Mr. Luce observes:

"The editors of "Life" are amazed to find that one editorial in its recent issue has been the cause of much misunderstanding in Great Britain. The fault is partly ours for not having said what we meant as clearly as we should. The fault also lies with others who chose to read into the editorial things we did not say.

What then did we mean? We meant that our war aims—beyond the total destruction of the Axis—ought to be made much plainer than they have been to date. The editorial which caused the misunderstanding was intended as a plea to the people of Britain to help clarify the positive aims of freedom and world peace for which all are fighting.

One specific misunderstanding can speedily be cleared up. In speaking of the British Empire, we failed to stress what we know quite well that, to a large extent, the Empire is a Commonwealth of free peoples. In no sense did we advocate the break-up of the British Commonwealth. What we do advocate—and what we plead with all British peoples to join us in advocating—is the end of Imperialism through the world—British, American, French or any other.

With regard to the peace which we shall win together, the great majority of the American people today believe that it must be based on the utmost co-operation between them and the people of Commonwealth. "Life" 's uncompromising anti-Axis stand has been crystal clear not only in America, but to readers in most countries of the world."

With the entry of the "Washington Post," one sees the first effort to transform controversy into constructive thinking. There is balance between the two rival views—and balance is often more judicious than judicial. The "Washington Post" observes:

"It is foolish of Indians to expect any effort to explore a wartime settlement until the commotion in India has been ended." Nevertheless, the paper suggests, "it has been the fear of the Japanese that has started the agitation and India's fears should be removed. A reassuring word is as easy to-day as it was in Egypt, but of course it must be accompanied by deeds. Both our war aims and peace aims meet an acid test in India". and "the Americans realise these implications of the trouble in India, but a constructive approach to the new problem in India created by civil disturbances require something more than British or even United Nations' assurances of all-out protection. For if this is recognisably an all-for-one, one-for-all war, as it is, the British should therefore admit the principle of a third-party interest in wartime settlement."

We see, therefore, that American interest in India, though it started with a vague feeling of disquiet about British policy soon developed into an important controversy in the Press and took the shape of a concrete suggestion, namely, an international commission with the representatives of the U. K., the U. S. S. R., the U.S.A., China and the Philippines. The proposal is such as to hold the field for some time, if only because it bears on it the impress of the motive of intervention in the Indian problem. It shows clearly that neither Britain nor India can take advantage at the suggestion of foreign intervention, because the motive behind it is not an assertion of power but the victory of a cause which is dear to all the parties concerned. It will be some time before it becomes clear whether the proposal will meet with general acceptance. The source of the suggestion, viz., the "Washington Post," the circumstances in which it has been put forward, the motive behind, and the form it has taken are all calculated to assure for it that amount of respect and consideration which proposals for foreign intervention cannot normally be expected to have. But its ultimate fate depends on the attitude of the American Government and the attitude of Britain and India.

* * * *

Since the initiative is with the American Government, its attitude is of primary importance. But in the nature of things, it is impossible to get any inkling of it. However, there are two facts which I may single out from the medley of statements and reports that we have got from abroad. There is the fact that Senator Reynolds, Chairman of the U. S. Military Affairs Senate Committee, told the Senate that the United States would demonstrate the sincerity of the Atlantic Charter by calling on Britain to grant independence to India. We are also told that "an authoritative Administrative spokesman said in reply to one friend of India "well, even suppose all you say is true, do you expect us to go to war with our ally, Britain, at this moment to achieve independence for India?" There is a suggestion of petulance in the question which is a mark of honest perplexity. And that is, I believe, the real state of mind of the American Administration—a perplexity expressing itself in a "poker face." Since no problem is solved by perplexity or poker face, the Administration might feel called upon in an appropriate setting to express itself in suitable language and actions. But what are the chances of the Administration favouring the idea of an international communism? That would depend wholly on whether Mr. Amery sticks to his story of Indian dissensions being the only impediment and Britain being quite prepared to establish a National Government with qualifications about unitary control. If that story is stuck to, U.S. opinion will perforce stick to the idea of some form of international mediation. Britain might not be quite opposed to it, for it would then be a question of getting our communal comics played to an international audience instead of a merely Indo-British one. And if the play proves a success, nothing is lost and the Americans will have been fooled again in Delhi as in Versailles years ago.

But what about India? I would fain consider this in detail. But there are a number of considerations arguing against detailed examination of this aspect. Suffice it here that the Congress policy in recent times has been shaped not a little by the determination that our unedifying squabbles shall not be played again to make a Roman holiday for Mr. Amery. And that applies as much to an international commission as to a purely British commission. If Mr. Amery has his story that communal dissensions are the only obstacle, the Congress is sure that this obstacle will go, the moment the British grant us our independence. And the Congress will stick to its guns. But it will only too gladly awail of the co-operation of other allied powers, if the first hurdle is cleared.

CENTRAL INDIA COTTON PAYS HIGHER DIVIDEND

MARKETS have remained closed both in Calcutta and Bombay. As our readers are already aware, Calcutta markets are closed on account of the *Id* and *Pujah* holidays and will reopen for business only on Monday October 26. In the case of Bombay, however, it is not known when operators will decide to resume business officially.

But while in both centres no business is officially reported, it appears that a large amount of business has been passing through unofficially and that there has been a substantial improvement in the quotations. In private dealings, it is reported that Indian Irons are quoting somewhere around Rs. 34-14, Tata Iron and Steel deferreds around Rs. 1,650 and Associated Cements Rs. 190. It will be remembered that two weeks back I wrote in these columns that there is every likelihood of the upward trend being maintained even during the holidays. The prolonged resistance of the Russian defenders in Stalingrad, the talks of the possibility of an early Allied offensive, and the American successes in the S. W. Pacific are necessarily encouraging factors. But for the uncertainty regarding the fate of Stalingrad, it would perhaps be possible to assert that the reopening in the Calcutta markets after the long holidays will be marked by an aggressive rise in prices.

* * * *

Thanks to the decision of the Government of India to withdraw from circulation George V and George VI standard silver rupees and half-rupees as from May, 1943, silver prices have shot up in recent weeks from Rs. 92 to Rs. 107 and are now reported to be around Rs. 104. The rise in the prices for the white metal to above Rs. 100 defeats the purpose of the Government in withdrawing the standard rupees and half-rupees from circulation. There are no reports about any official selling so far and if the authorities are not able to conrol effecively any further rise in prices, the position will deteriorate further.

It is also important that the possibility of any inflationary boom in prices should be avoided. Even now there is a tendency to characterise the recent rise in prices for equities as inflationary in character to a certain extent. But for this statement to be true, there should have been a corresponding depreciation in prices for giltedged. Far from there being any suggestion of a weakness in the giltedged securities market, prices have remained fully steady with 3½ per cent Paper quoting Rs. 94-8.

* * * *

As expected, the re-issue of 3 percent 1963-65 loan for Rs. 15 crores has not proved to be successful. The lists were closed on October 15, 1942 and it is announced that subscriptions amounted to only Rs. 3.41 crores against Rs. 15 crores asked for. The Reserve Bank of India has taken up the balance of Rs. 11.59 crores and an equivaleat amount of *ad hoc* treasury bills has been cancelled. The Reserve Bank has been a persistent seller of 3 percent 1963-1965 in the open market in recent months and it was only before the flotation of the third defence loan that there was not much of vigorous selling. The further additions to the holdings of 3 percent 1963-1965 keeps the Reserve Bank a potential seller.

* * * *

The boom in prices for cotton manufactures began from April 1941. With the freezing order in July 1941 the movement gained further momentum and in the last week of November of that year, quotations were at the highest levels for the war period. The entry of Japan into the war caused a temporary dislocation in the market but the upward trend has again been resumed from April this year and the highest levels for the war period have been surpassed.

With the most satisfactory conditions in the trade, except for a short period, it is not surprising therefore that the *Central India Spinning, Weaving and Manufacturing Company Limited*, has been able to report a substantial improvement in earnings for the year ended June 30, 1942. The net profit, before providing for taxation and depreciation, is Rs. 61,30,249 against Rs. 14,18,909 for the previous year. The increase in earnings, however, has not been of any great advantage to shareholders as the higher provision for taxation has offset the improvement in the net profit, provision in this regard being Rs. 42.25 lakhs against only Rs. 2.5 lakhs in the previous year. The amount set aside for depreciation is Rs. 6 lakhs against Rs. 4 lakhs while the transfer to reserve is Rs. 1,92,036 against Rs. 50,000. The Employees Gratuitous Pension Fund gets Rs. 50,000 and the Dividend Equalisation Fund Rs. 1,49,390. The final dividend of Rs. 8 for ordinary shares, makes with the interim dividend of Rs. 6 per share already paid, Rs. 14 per share for the whole year against Rs. 10 per share for 1940-41. The amount carried forward is higher at Rs. 20,373 against Rs. 12,814.

Against the interest due on the Tata Mills debentures held by the Company, a sum of Rs. 70,747 was received during the year at the rate of Rs. 26 per debenture less income-tax. This sum covers interest due for the year 1941, as well as the previous year's balance. No interest now remains in arrears.

The debentures and the deposit with the Tata Mills Ltd., of Rs. 2,50,000 which were due for payment on 31st December 1941, have been extended for a further period of two years, the deposit being secured by the managing agents guarantee during the period of extension.

The Tata Mills Ltd., under the Scheme of Arrangement between them and the debenture holders, paid to the debenture holders, their surplus profits in part payment of their debenture capital. Accordingly, the Company received during the year Rs. 1,64,500 at the rate of Rs. 47 per debenture on 3,500 debentures.

* * * * *

Speaking at the annual meeting of the *Mysore Sugar Company Limited*, the Chairman said that the decrease in the quantity of sugar produced was not due to the lower efficiency of the factory but to the over-ripe condition of the cane and the appreciable loss in the sugar content.

The Chairman's remarks at the annual general meeting of this Company are usually awaited with keen interest as there is considerable dissatisfaction with the policy of the Company in regard to the distribution of dividends to shareholders. It is generally felt that the directors are pursuing an extremely conservative policy in the declaration of dividends and that, having regard to the extremely sound position of the Company, surplus profits are unnecessarily held over. Justifying the transfer of Rs. 6 lakhs to the Cane Stabilisation Fund, the Chairman said that it was necessary to keep the ryot happy so that the industry might grow well. Considerable difficulty was already being felt in regard to the supplies of cane. On account of the very attractive prices prevailing for jaggery, there is a diversion of cane for jaggery manufacture. To ensure a regular supply of cane the directors have under their active consideration the question of extending the farms owned by the company. At the present moment the quantity supplied by the company's farms is less than 10 percent of the total quantity crushed by the factory. To provide for such expansion and to safeguard the company against the repercussions of the aftermath of the war, it is pointed out that the directors have found it wise to continue their policy of recommending a steady dividend and maintaining the reserves in their present liquid form. The remark in this connection is very interesting: "with the variouns funds at our credit standing at more than Rs. 53 lakhs we may have the confidence of steering clear of the troublous times that seem to lie ahead of the sugar industry."

The directors seem to be satisfied with the soundness of the financial position of the Company. If only they decide to adopt a generous policy in regard to distribution of dividends out of earnings in the future, I believe shareholders will be satisfied.

WATCH-DOG.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

This review covers a three-week period during which there were only few working days. The various markets reflected the lethargic conditions usually associated with the long Puja holidays. This is the time of the year when as many of the members of senior staff as could be spared in business offices take a spell of rest. Which accounts for the comparatively restful state that prevails in the markets. October is being rung out; and November will be rung in on Sunday. There is already a bite and zest in the air betokening the approach of cold weather. By ordinary tokens, November is definitely a month belonging to what may be called 'cold weather finance'. But there is no zest or bite in the money market where short credits continue in plethoric supply and trade activity is but on a subdued scale. Interbank call money continues to be quoted nominally half per cent in Calcutta and ¼ per cent in Bombay. In the last three weeks of October, the weekly offer of Central treasury tender bills has been on the basis of Rs. 8 crores. Bidding has been keen, judged by the amount of applications received, though the average discount rate has shown a slight but definite tendency to rise. This may be due to a number of provincial governments competing in the bill market.

On October 27, against Rs. 8 crores of Central treasury bills on offer, applications came to Rs. 13.40 crores as compared with Rs. 15.57 crores on October 20. The average rate of accepted tenders was annas ten and pies three per cent per annum as against annas nine and pies nine. The Assam Government secured their Rs. 30 lakhs of three months bills at an average rate of annas twelve and pies seven per cent. Madras treasury bills for Rs. 50 lakhs were on offer to-day; and the results are not known up to the time of writing. On November 4, the Bengal Government are inviting tenders for Rs. 50 lakhs of three months bills. The offer of Central treasury bills for next week is again Rs. 8 crores. Maturities on July 31 amount to Rs. 8 crores. The maturities during November are on the basis of Rs. 6 crores per week. It is, therefore, not unlikely that the Government of India decide on reducing the weekly offer of tender bills to Rs. 6 crores from the second week of November. Should this reduction take place, the present upward trend of treasury bill discount rate may be reversed.

It will be most convenient, from the point of view of maintaining the continuity of the money market reviews in "Indian Finance", if we study the Reserve Bank returns for the four weeks since October 2. Between October 2 and October 23, sterling securities held in the issue department have risen by Rs. 21 crores to Rs. 325.83 crores. On the other hand, there has been a substantial outflow of rupee coin, the latest figure of rupee coin in the issue department being Rs. 22.20 crores against Rs. 26.23 crores. This shows that the famine for one pice coins has induced a kind of mildly panicky demand for rupee coins. Active note circulation has risen from Rs. 497.79 crores on October 2 to Rs. 512.51 crores on October 23.

Turning to the returns of the banking department, the first point to note is that foreign balances have declined from Rs. 88.60 crores to Rs. 87.37 crores. The decline is thus Rs. 1¼ crores. On the other hand, sterling securities have risen in this period by Rs. 21 crores. It may, therefore, be inferred that the payments received from the British Government by the Indian Government since October 2 are of the order of Rs. 20 crores. Thanks to this substantial replenishment, the Central Government have been able to plan their ways and means adjustments during October without any temporary loan from the Reserve Bank. The deposits maintained by the Government of India with the Reserve Bank have declined from Rs. 17.53 crores on October 2 to Rs. 13.98 crores on October 23. During this period, deposits of scheduled banks registered a substantial rise from Rs. 64.83 crores to Rs. 68.51 crores.

Between October 2 and October 23, the deposits of the Imperial Bank of India have risen from Rs. 149.64 crores to Rs. 151.58 crores. On the other hand, investments have declined from Rs. 99.91 crores to Rs. 96.78 crores; and loans and advances from Rs. 26.17 crores to Rs. 25.78 crores. In the result, cash shows a substantial expansion from 33.20 crores to to Rs. 38.65 crores. The Imperial Bank has an exceptionally strong cash position and must be able to subscribe for substantial amounts of treasury bills and thus help to initiate the decline in the treasury bill discount rate.

The exchange market has been overshadowed by holiday conditions. The turnover of business has been on the small side. There were not many bills showing. There was some remittance enquiry. Rates are unchanged.

TREASURY BILLS

India

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills were opened on Tuesday, October 27, 1942. Total amount offered was Rs. 13,40,25,000 (Rupees 13 crores 40 lakhs and 25 thousand). Tenders at Rs. 99-13-6 per cent and above were accepted in full and those at Rs. 99-13-3 per cent were allotted approximately 37 cent. Total amount accepted was Rs. 8 crores the average rate of accepted tenders being Re. 0-10-3% (Rupees nil annas ten and pies three per cent) per annum.

Tenders for Rs. 8,00,00,000 (Rupees 8 crores) of three months' Government of India Treasury Bills will be received on Tuesday, November 3, 1942, in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, November 2, 1942, at other centres. Successful tenderers should make payment on Friday, November 6, 1942. Other conditions are as usual.

During the week ended October 23, 1942, Government of India Treasury Bills for Rs. 37,00,000 (Rupees 37 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Bengal

Tenders for Rs. 50,00,000 of three months' Government of Bengal Treasury Bills will be received on Wednesday, November 4, 1942, in Bombay up to 11 a.m. and up to the close of business on Tuesday, November 3, 1942, at the Calcutta office of the Reserve Bank of India.

(*ii*) Bills will be of the following denominations, *viz.*, Rs. 25,000, Rs. 50,000, Rs. 1,00,000, Rs. 5,00,000 and Rs. 10,00,000.

(*iii*) Each tender should specify clearly the term of the bills applied for, the nominal value of the bills required and the price per cent which the tenderer is prepared to pay expressed in rupees, annas and quarter annas only.

(*iv*) Successful tenderers will be required to make payment and take up their bills on Friday, November 6, 1942.

(*v*) A tender may be for the whole of the amount offered for tender, or for any portion thereof which is a multiple of Rs. 25,000. The minimum amount for which a tender can be made is Rs. 25,000. The amount of tender or tenders submitted by any Bank, individual, etc., must not in the aggregate exceed the amount offered for tender.

(*vi*) If the total of tenders received is in excess of the amount offered, a proportionate allotment will be made. These allotments will, in all cases, be in multiples of Rs. 25,000 the minimum being Rs. 25,000 and, in order to effect this, the Reserve Bank of India reserve to themselves full discretion to allot a higher or lower percentage, or to make no allotment, to individual tenderers as may be appropriate.

(*vii*) The Reserve Bank of India reserve the right to reject the whole, or any part, of any tender without assigning any reason.

(*viii*) A Treasury Bill will be paid on maturity only at the office of the Reserve Bank of India at which it was issued.

Assam

Tenders for Rs. 30,00,000 (Rupees thirty lakhs) of three months' Assam Government Treasury Bills were opened on Wednesday, October 28, 1942. Total amount offered was Rs. 36,00,000 (Rupees thirty-six lakhs). Tenders at Rs. 99-13-0 per cent and above were accepted in full and those at Rs. 99-12-9 per cent were allotted approximately 80 per cent. Total amount accepted was Rs. 30,00,000 (Rupees thirty lakhs), the average rate of accepted tenders being Re. 0-12-7 per cent (Rupees nil annas twelve and pies seven per cent) per annum.

SUFFERERS' RELIEF COMMITTEE

102-A, Clive Street,
Calcutta.

29th October, 1942.

"The Sufferers' Relief Committee (102-A, Clive Street, Calcutta), invites applications from all persons who have lost their means of livelihood on account of the bread-winner of their family having been killed or permanently disabled due to the present political disturbances. Application Form for this purpose can be had from the office of the Sufferers' Relief Committee at 102-A, Clive Street, Calcutta. (Top Floor)."

Finance Abroad

Thursday Morning.

ABSORBING idle capital, devising measures for combating inflation and preventing the leakage of foreign exchange are some of the important problems confronting the belligerent countries in the present war. The democratic countries have found the solutions to the problems more difficult as the rights of individuals had to be respected and in every case, it had to be made sure that the Governments were not over-stepping the limits in their anxiety to prevent certain occurrences. Any relaxation on the part of the governments concerned in exercising control or devising new measures creates new situations. The British Government are still experimenting though in their recent experiments they have been meeting with greater success.

As an instance in point, the British Treasury has decided to make a supplementary issue of savings certificates which can be purchased at £1. These certificates mature after ten years and fetch the investor £1 3s working out to an annual interest rate of £1-8-2 tax-free. Individual holdings are limited to 250 certificates. It has been found necessary to make a supplementary issue of these certificates as the worker gave off his saving habit once the maximum holding in regard to the first issue of savings certificates was reached. The leaving off of the saving habit is ascribed to the anxiety of the worker or small investor not to disclose his true position to the income-tax officer.

Stock exchange control has played an important part in preventing the use of looted holdings or the wrong movement of capital from one centre to another in recent years. It will be remembered that soon after the fall of France stricter measures were put into effect by the stock exchange authorities in London as it was feared that the holdings of Royal Dutch and other companies would find their way into the London market and deprive many of their legitimate holdings. The procedure in respect to certain transactions on the London Stock exchange was hitherto very complicated. In view of the more settled conditions and the improved monetary technique of the British Treasury it has now been decided that there should be a relaxation in the measures even at the risk of some leakage of foreign exchange. Reservations, however, there are. The relaxtion in the restrictions is mainly intended to benefit the non-resident investor who was obliged to sign many declarations regarding the proprietory of his interests. It is now pointed out that a plain declaration will be enough and that the procedure has been simplified by the appointment of more agents authorised to approve non-resident transfers.

The production of gold is being systematically discouraged. Sometime back Australian miners decided to switch over to the production of the base metals to help the country in its war effort. Next came Canada's turn. It is now pointed out that the War Production Board has also decided to close down the majority of America's large gold mines so that, workers may be transferred to non-ferrous mines, chiefly copper mines. Unlike the other precious metal no use has so far been found for war purposes for gold and it is, therefore, not surprising that the production of the yellow metal is being systematically reduced. In the present money economy gold does not play any very important part, especially with the advent of the lease and lend agreement. It remains to be seen what exactly will be the position of gold after the war.

The financial policy of China is to be shaped to the changed conditions in the country so as to prepare her for a war of attrition. Dr. Kung, Vice-president of the Executive Yuan and con-currently Minister of Finance, had some very interesting remarks to make regarding the financial policy of China in recent years. He said that the large increase in the expenditure of the Government, on account of the prolonged war with Japan, was nothing when compared to the increase in expenditure on account of Britain, the U.S.A., and even Japan. The average war burden of the Chinese citizen was the lightest when compared with the citizen of any other country at war. Outside help has certainly been responsible for the relatively lower level of war expenditure in recent years, as also the low tempo of the war waged in the early stages. It has to be taken into consideration that the national income also is at a low level.

It has now been proposed to utilise to a greater extent the resources of the country and organise the financial front which has been known for its degree of stability, so that there is no idle capital left over and that the effects of the policy of industrialisation resulting in increased earnings will not be felt in inflation. It is proposed to organise the banking system. The Central Bank of China will be transformed into a banker of banks for this purpose and will assist the Bank of China, the Bank of Communications and the Farmer's Bank of China in discharging their respective functions and supervising banking business and absorbing idle capital. New taxes also are proposed to be levied and old ones adjusted. A drive will be made for the sale of domestic bonds through voluntary and compulsory methods. The first method will be applied to owner farmers, tenant farmers, public functionaries and those with fixed salaries. The second method will be applied to industrialists, businessmen, landowners, rich farmers etc. The conclusion of foreign credits and the flotation of internal bonds is expected to improve considerably the financial position. The credit loans, the stabilisation loans and the commercial agreements concluded with the U.S., Great Britain and Soviet Russia will be very helpful, the lease and lend agreement alone affording substantial supplies to China for the vigorous prosecution of the war. Besides, there are the $500 million and £50 million credits afforded to China by the U.S.A. and Britain.

The stringent financial measures resulting in the absorption of idle money and the tapping of the rich will, it is believed, check any further rise in prices for commodities in the country. As in India, the recent sharp increase in values has, to a certain extent, been due to the lack of transport facilities and local shortages. Efforts are being made to improve transport facilities and increase regional production. The reduction in the volume of currency also will be helpful. For selling war bonds and savings certificates it is proposed to fix certain quotas for the provinces who will in turn apportionate sums to the districts. The drive for more production and improved transport facilities coupled with the stringent financial measures will, it is hoped, strengthen both the financial and economic fronts of that great ally China.

A novel way of soaking the rich and crushing the power of the upper classes is being pursued by the Germans in Norway. Inflation is the method. The *Economist* points out that since May 1940 German-occupation expenses have been financed by direct loans by the Bank of Norway in Oslo on behalf of the Norwegian State. It is pointed out that such payments for occupation amounted to 3.7 million kroner by the end of 1941 and were rising at a rate of 5 to 6 million kroner a day. This huge deficit has necessarily to be financed by inflation and in support of this conclusion, circulation of paper money has reached proportions never before known of in the history of Norwegian banking. The reduction in the amount of purchasing power should naturally hit hard the cultured classes. By sapping energy in this manner the Nazis ultimately hope to subjugate these classes effectively.

Three years of War Finance—IX

Industrial Profits

The periodical surveys of industrial profits should have familiarised our readers with the important developments in the industrial organisation of this country and also the main trends in the growth of industrial profits. To that extent, it is impossible to avoid repetition of certain conclusions but the attempt to present the theme from a different angle will, we hope, give a completer picture.

Hitherto we have undertaken a discussion of industrial profits over a period and we were content to point out the growth or otherwise in industrial profits as due to certain members or branches of industries. We will now try to appraise what exactly the gain has been from the point of view of the country, the exchequer and the investor.

It was pointed out that the growth of industrial profits in the earlier stages of the war period was sporadic and mostly confined to those which were directly related to the war effort. From the beginning of the war in September 1939 to September 1940, there was really no great general improvement in the level of earnings. Only jute companies had a very busy time. The large orders for sandbags resulted in a very high level of prices and mills were enabled to enter into large forward contracts at remunerative rates. The rise in prices for cotton cloth and other manufactures enabled certain other industries to report a temporary improvement in earnings; but, with the fall of France in June 1940, and the dislocation to shipping, export trade was badly affected and with that jute mills' earnings. Thus, after the first year of high earnings, jute mills had to experience a bad spell till June 1941. After that period, there was again a notable improvement and the highest level of earnings for the war period were reported in the third quarter of 1941. After the declaration of the Japanese war, the industry has fallen on evil days; and, until conditions regarding shipping improve to a great extent, it will not be possible to expect a comeback to the level of earnings for the second half of 1941.

The one industry that has not looked back since the advent of the war, is the iron and steel industry. There is cause for jubilation that, during this short period, Indian production has nearly doubled; and the capacity for earnings has naturally increased. The earnings of the three important companies, the Tata Iron and Steel, Indian Iron and Steel and Steel Corporation of Bengal would have been considerably greater but for the controlled prices at which the whole output of these three companies is sold to the Government.

While the changes in the war situation and the shipping position affected adversely the prospects of the jute industry, the other industries were beneficially affected. Such developments in the war situation as the fall of France and the overrunning of the Balkan countries had favourable effects on this country but there is no gainsaying the fact that the intensification of the war effort came only after the visit of the Eastern Group Supply Mission. The difficulties in the shipping position enabled Indian industries to thrive and take advantage of the situation arising from the lack of foreign competition. Attention was also paid to filling up gaps in the industrial structure; and this process would have been very much easier but for the difficulty in getting machinery and technical help which handicapped very much the progress in this direction.

The important feature in the last two years is the growth in cotton mills earnings. The loss in jute mill profits will be more than offset by the increase in cotton mill earnings. The absence of any imports, the large increase in Government requirements, the demand from overseas markets and the needs of the large home market have made the supply problem difficult. For the duration of the war, prospects are assured. The glass, paper, chemicals and sugar industries are now doing very well; and there is a great shortage of the products manufactured by these industries. The whole exportable surplus of the tea industry is taken up by the British Ministry of Food. Sale of cement is rationed. The only industry, perhaps, that has been adversely affected is the coal industry. The fall in exports and the shortage of wagon supplies, have made it even difficult for the earnings of the prewar period to be maintained.

The weekly statement of cumulative results according to groups, published in the 'Investor's Supplement' of October 10, 1942 is a fairly reliable indication of the profits of industries in the first three years of war.

Sixty-two jute companies which published their reports from January 1, 1942 to October 3, 1942 disclosed earnings, before providing for depreciation and taxation, of Rs. 5.82 crores against Rs. 2.78 crores for the same companies reporting in 1941 and Rs. 3.40 crores in 1940. 25 cotton companies were able to report an aggregate profit of Rs. 4.52 crores in 1942, Rs. 1.88 crores in 1941 and only Rs. 94 lakhs in 1940. The earnings of 26 micellaneous companies were Rs. 7.54 crores, Rs. 3.64 crores and Rs. 2.34 crores in 1942, 1941 and 1940 respectively. As no comparative figures are yet available, the earnings of Steel Corporation of Bengal for the year ended December, 1941, have not been included in the statement. The progress of the iron and steel industry is best revealed by the earnings of the Tata Iron and Steel Company, Limited, for the years ending March, 1942, 1941 and 1940. The profit before providing for taxation and depreciation for the year ended March, 1942, was Rs. 7.49 crores against Rs. 6.03 crores in 1940-41 and Rs. 4.92 crores in 1939-40.

194 companies were able to report Rs. 19.12 crores in 1942, Rs. 11.65 crores in 1941 and Rs. 10.64 crores in 1940. The bulk of the increase in earnings has gone to the State. The directors of companies have also been careful to make additional provision for depreciation and strengthen the financial position of companies. The benefit derived by the individual shareholder has, therefore, been only a small proportion of the total increase.

An idea of the total increase in the net income of industrial enterprises can be had from the tax receipts of the Central Government. There is no warrant for the presumption that the increase in tax receipts, allowing for the increases in the rates of taxation, is due to the increase in industrial profits but there is every warrant for the presumption that the bulk of the excess profits is paid by the industrialists. The proceeds from Excess Profits Tax were Rs. 8 crores in 1941-42 while receipts in 1942-43 are expected to be as much as Rs. 20 crores. The sum of Rs. 8 crores collected in 1941-42 was levied on the basis of 50 per cent of the taxable surplus and the sum of Rs. 20 crores, expected to be realised in 1942-43, on the basis of 66 2/3 per cent less some refunds. Therefore, on the basis of these tax receipts, the taxable surplus has been at least Rs. 46 crores. If it is assumed that tax receipts for 1943-44, which really takes us to the third year of war, were also estimated at Rs. 20 crores, though one would be justified in assuming a greater figure having regard to the prospects in the cotton and other industries, the taxable surplus for purposes of E. P. T. in the first thirty-one months of the war would be Rs. 76 crores. Adding Rs. 15 crores for the five months April 1, 1942 to August, 1942, the total of excess profits will be Rs. 91 crores. Having regard to the fact that several industries had earnings well below the profits for the standard period, the earnings for the standard period being high in the case of the jute, coal, sugar and tea companies, the increase to the level for the standard period should be a substantial figure. This figure can perhaps be set off against the income of assessees included in the above figure of Rs. 91 crores which does not directly relate to the scope of this article.

It can thus be said that apart from other benefits, the increase in industrial earnings alone can be put at Rs. 100 crores during the three-year war period.

CURRENCY EXPANSION AND PRICE-LEVEL

(By P. S. LOKANATHAN, University of Madras).

In an article which I wrote for "Indian Finance" in January last, I referred to the inflationary forces at work in India and the need to hold them in check. The events that have followed since then have strengthened those forces and have brought to the forefront the question of controlling the rapidly mounting price-levels. Expansion of currency has been greatly accelerated in recent months. In August 1939, notes in circulation in India were Rs. 179 crores; in December 1939, it increased to Rs. 236 crores; in July 1941 to Rs. 277 crores; in December 1941, it was Rs. 325 crores; in July 1942, Rs. 450 crores; and in October 1942, note circulation was Rs. 490 crores, thus showing an increase of Rs. 320 crores in three years. Besides notes there has been a great increase in active circulation of rupee coins and small coins, the amount of which has been estimated with some margin of error at Rs. 70 crores. Thus the total increase in currency circulation during the last three years has been nearly Rs. 400 crores—a record in the monetary history of India.

Such a sudden and rapid increase in the volume of currency circulation, however brought about, is bound to have its effect on the internal price-level. The Calcutta price index, which was 100 in August 1939, moved up to 114 as soon as the war broke out and rose to 137 within three months. In January 1940, the index fell to 130 and the fall in the price-level continued till July 1940, after which a definite upward movement started which has proceeded without break. In December 1940, the price index was 120; in July 1941, 150; in December 1941 it was 154; and in May 1942 it was 169. Since then prices have gone up still higher. In Madras, the index of wholesale prices rose to 172 in May 1942 from 100 in August 1939. The working class cost of living in all the major cities for which figures are available measuring roughly the index of retail prices has registered an appreciable rise. The Bombay index has moved from 105 in 1940 to 140 in May 1942, while the Madras index has moved from 98 in July 1939 to 121 in May 1942. The trend of rising retail prices is gathering momentum, and, if uncontrolled, will lead to a really dangerous situation.

Before considering what action might usefully be taken, it is necessary to clear the ground of the wide-spread misconceptions that prevail in regard to the relation between currency expansion and price-levels. The idea that the increase in prices is directly due to the increase in the volume of currency, in the sense that the causal factor bringing about an increased price-level is always the increased money circulation, mistakes the symptom for the real cause. The increases both in currency circulation and price-level may be themselves the unavoidable result of another factor, and in India at the present time are undoubtedly so, due to the large purchases of goods and services made by the British Government and to the larger external demand for our goods, resulting in a great increase in our money income; and the supply of money has only adjusted itself to the new situation.

But the matter does not stop there. The mere fact that Government have done nothing themselves to bring about increased price-levels, but have financed their own needs by taxation and by drawing genuine savings and have not resorted to inflationary methods of finance does not affect the main question whether there is real inflation or not. It is true that the Government of India's own expenditure is met by taxation and by public borrowing. It may also be conceded that Government were not responsible for inflationary prices, if they exist. But the issue is not one of responsibility. It is whether, in the first place, inflation exists in India at the present time; and, secondly if it does, what action Government should take to check it.

The supply of money in a country can increase in one of two ways. When the country is on an international standard, any increase in its external assets can bring about increased supply of currency, as the currency authority is generally ready to convert such assets into internal currency. An increase in external assets is generally brought about by a favourable balance of trade. The other method of increasing the supply of money is through the internal banking system, which increases the supply of credit in response to the demand from 'entrepreneurs' to increase productive output. A monetary system that is elastic and responds to the needs of industry and trade will always increase its supply of credit when there is rising industrial activity and restrict credit when demand slackens. In India up till now, the more important means of securing increased money supply has been through the first channel. The export surplus of the country which resulted in credits to the people of India was converted into currency by the monetary authority whose duty it was to convert the foreign assets [illegible] currency also expanded. The price and income structure of the country attained a higher level. But whether there was inflation or not depended upon what use the recipients of income made of it. In so far as part of the income is hoarded, the price-level will not increase as much as it may otherwise have done. In so far as it is spent, it will result in a higher price; but, in peace time, production will respond to the demand for it and hence the higher money income will lead to a higher real income, and there will be no inflation. If part of the increased money income be invested, similar result will follow and increased production will accompany increased money supplies.

But to-day the situation is very different. Inflationary forces are in effective operation on account of the fact that corresponding to increased money incomes there are not increases in the production of goods and services. The increased volume of currency circulation has been brought about by two factors. In the first place, the favourable balance of trade has been rapidly increasing. The total value of merchandise exported from the country on private account amounted to Rs. 228 crores for the ten months ending April 1942, while the value of imports for the same period was Rs. 129 crores. The balance of trade was Rs. 99 crores as against Rs. 25 crores for the corresponding period of the previous year. These figures are exclusive of the war purchases of the British and Allied governments. Besides the favourable balance of trade is the large amount of money spent in India by the British and Allied governments for which credits are given to us in Great Britain in sterling. The Government of India issues currency against 'ad hoc' securities and uses it for the purchase of goods and resources on behalf of the British Government which places sterling in England. Thus the sterling credits that India accumulates are derived from two sources: the favourable balance of trade and the moneys owing to the Government of India on account of expenditure incurred on behalf of British and other Allied nations. The net sterling purchases made by the Reserve Bank of India for the 11 months ending May 1942 were £77.2 millions as compared with £50.5 millions during the corresponding period in 1940-41. Repayments made by the Secretary of State on account of recoverable war expenditure and purchases made on behalf of British and other governments increased from £41.3 millions to £158 millions. As a result, the net credit in favour of India for the eleven months ended May 1942 rose to £127 millions from £19 millions in the previous year.

These growing sterling assets are the basis of the large currency expansion in India. But, and this is the most significant fact, the currency expansion is inflationary because with the increased money income consequent upon large Government expenditure of funds there is no corresponding increase either in the supplies of goods and resources directly purchased by Government or in those of the articles of consumption by the public who find themselves with increased money incomes. There are unfortunately no reliable statistics to measure the extent of the increased production in industry and agriculture. In the absence of a composite index of agricultural and industrial production, one can only rely upon trends of production of particular industries and goods. Undoubtedly some expansion has taken place, but not in proportion to the increased money incomes. Economic resources have not increased in proportion, but the wages in terms of efficiency units have increased. Thus the inelasticity of the resources for the production of consumable goods and the rise in the efficiency wage have led to a rise in prices which is an index of real inflation. The only ways by which this inflationary tendency can be held in check are increased production of all goods, increased investment in industry, and the drawing away of purchasing power from the public to Government either by taxation or by loans. Increased food production is most desirable from every point of view, and the country's 'Grow More Food' campaign, if it gains strength, will go some way to relieve the pressure on food supplies and reduce prices. Investment in industry, desirable in itself is at present rendered almost impossible on account of the difficulty of getting capital goods from abroad. In the early years of the war, if this had been done it would have promoted industrial development and ensured larger output; but now that course is not available to us. Apart from taxation, the only alternative left to reduce purchasing power in the hands of the public is investment with a view to replacing the sterling and other foreign liabilities by internal obligations. If this is not done, it will result only in an infructuous attempt to buy up the inelastic supply of goods and services and in increased prices. It, therefore, the mounting level of prices is to be checked, currency circulation should be

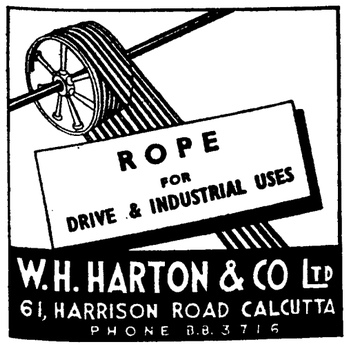
ART in Industry Exhibition

The third "Art in Industry" Exhibition will take place at the Sir J. J. School of Art, Bombay, next February.

Artists are cordially invited to compete for prizes and scholarships totalling Rs. 12,000/-, of which the best entry in the Exhibition will get Rs. 750/-.

Artists, through the Exhibition, are not merely able to sell their entries, but can bring their talent to the notice of Government and leading industrialists.



A prospectus containing full details, which should be read carefully, can be obtained from any of the prize donors or from the sponsors.

The last date for receiving entries is 2nd January, 1943, at the Sir J. J. School of Art, Bombay, or 5th December, 1942, at Burmah-Shell offices at Karachi, Lahore, Delhi, Lucknow, Calcutta, Madras and Secunderabad.

Small-Scale Industries and War Effort

The important part played by small-scale industries in India will be evident from the fact that the Central Government will be spending over Rs. 10 crores on purchases of war supplies during the current financial year. It has been found, though rather in a belated-fashion, that the innumerable beehives of industries born and nurtured in the centuries-old tradition of ancient Indian craftsmanship are being brought into new life. While the pressure of necessity has perhaps been the main reason for the great interest shown in small-scale industries it should be admitted that the difficulties regarding supplies were the main obstacle in the way. Purchases from small industries in 1941-42 were only Rs. 5 crores

It is now revealed that an organisation especially devoted to the encouragement of small-scale industry has combed the country in recent months and that with the help of the co-operative departments in the various provinces, some sort of organisation is being evolved and orders placed. Every effort has been made to ensure that the benefit in respect of these orders is mostly derived by the primary producers and not the middlemen. In this connection it is pointed out that the present arrangement has been functioning very satisfactorily in the Punjab and the manufacture of cutlery in this area has reached eloquent figures.

The adaptability of the Indian worker to new conditions is proverbial. Even in new lines it has been found that the skilled worker has been able to copy out from models without any drawings, and the sewing machines and other important items have been manufactured on a large-scale and have been taken up by the Supply Departments. Camouflage nets alone will cost Rs. 5 crores this year against only Rs. 1.82 crores in 1941-42. Pith hats are expected to total Rs. 43 lakhs. On the textile side, handloom weavers are manufacturing in large quantities tents, bandage cloth, gauze cloth and various woollen fabrics.

While, in wartime, cottage industries help to a great extent the Government in augmenting production, and also achieving at the same time a dispersal of the effort which is so essential in total war, the development in this direction may prove to be important in the resuscitation of cottage industries in this country. In this connection, it is relevant to point out that even in such an advanced industrialised country like Japan the cottage industries are performing a very useful function in the economy of the country and have progressed side by side with the great industrial enterprises.

Indian Insurance in 1940

One direct consequence of the war is the reduction in the new business of insurance companies in India. While perhaps the need for insurance protection is greater than ever in wartime, the uncertainty regarding the ability to maintain the level of incomes and the lack of confidence in the ultimate victory of the Allies, at certain stages of the war period, have been mainly responsible for the retrograde movement so far as new business is concerned in the case of Indian companies. Prior to the war most of the leading companies were making rapid progress and the record of 1938 is yet to be surpassed in some cases. The Insurance Year Book for 1940, just published, reveals that insurance companies in India had rather a difficult time in 1940. Total new life insurance business effected during the year amounted to 2 lakhs policies insuring a sum of Rs. 36.11 crores and yielding an annual premium income of Rs. 1.89 crores against 3 lakh policies insuring a sum of Rs. 46.62 crores and yielding an annual premium income of Rs. 2.37 crores in 1939. The new business done by Indian insurers amounted to 196,000 policies insuring a sum of Rs. 32.23 crores and having a premium income of Rs. 1.67 crores against 2.89 lakhs policies insuring a sum of Rs. 42.51 crores and having a premium income of Rs. 2.14 crores in 1939.

A comparison with the results for 1940 with those for 1939 will naturally reveal a strong contrast as it will be remembered that in 1939 the companies had fully eight months of peacetime conditions. Also in 1940 the people had to get over the first shocks of war. With the improvement in the war situation and the adjustment of the insuring public to new conditions, it is happy to note that there has been a substantial improvement in new business written by the more important companies in 1941 and we are assured that such a tendency will be revealed by the figures in the Year Book for 1941.

The Year Book, as usual, gives interesting details regarding the progress of insurance companies in this country. The total life insurance business effected in India and remaining in force at the end of 1940 amounted to 15,53,000 policies insuring a total sum of Rs. 2,85,63 crores and having a premium income of Rs. 13.99 crores as compared with 14,97,000 policies insuring a total sum of Rs. 2,71.80 crores and having a premium income of Rs. 14.26 crores at the end of 1939. Of this, the share of Indian insurers was represented by 13,72,000 policies insuring a sum of Rs. 2,25.51 crores and having a premium income of Rs. 10.69 crores as compared with 13,31,000 policies insuring a sum of Rs. 2,15.19 crores and having a premium income of Rs. 11.13 crores in the previous year.

The total new sums insured by Indian life offices in 1940 amounted to Rs. 35.23 crores as compared with Rs. 45.96 crores in the previous year. The total business remaining in force at the end of the year was Rs. 3,43.91 crores as compared with Rs. 2,32.42 crores at the end of the previous year. The total revenue income of the Indian life offices during the year amounted to Rs. 14.67 crores as compared with Rs. 14.83 crores in 1939.

The life insurance funds increased by Rs. 6 crores and amounted to Rs. 62.41 crores at the end of the year. The rate of interest earned on the life funds during the year, after deductions of income-tax at source, was 4.37 percent as compared with 4.68 percent in the previous year. The total expenses of management expressed as a percentage of the premium income during the year worked out to 28.9 percent as compared with 33.2 per cent in the previous year.

Some Indian life offices had been operating outside India, mostly in Burma, British East Africa, Ceylon, Federated Malay States and the Straits Settlements. The total new sums insured by these offices outside India in 1940 amounted to Rs. 2.91 crores yielding an annual premium income of Rs. 16 lakhs as compared with 3.45 crores yielding an annual premium income of Rs. 19 lakhs in the preceding year. The total sums insured remaining in force at end of 1940 amounted to Rs. 18.40 crores having a premium income of Rs. 96 lakhs as compared with 17,23 lakhs having a premium income of Rs. 93 lakhs in the previous year. The loss of Malaya, Burma and other countries have necessarily resulted in the loss of business outside India but it is interesting to note that the proportion of overseas business to total business is not more than 3 per cent.

Sugar Industry Problems

Speaking at the 10th Annual General Meeting of the Indian Sugar Mills Association, Mr. D. Khaitan observed, "the control over sugar has benefited nobody except perhaps the dealers selling in the black markets and it has been respected more in its breach than in its observance." It is true that the sugar control scheme like other schemes of the Government of India has proved to be a failure and that owing to lack of proper distribution the consumer has been obliged to pay fancy prices in the black markets. The overlooking of the claims of the Indian Sugar Syndicate in regard to distribution and other matters has been unjustified but it is very doubtful whether in the existing conditions anybody else could have possibly done better. For, the sugar problem is very different from the others. The concentration of the industry in two provinces has been the main obstacle in the way of ensuring effective distribution

of this commodity to the various provinces; and transport facilities were seriously strained and disorganised, and it was not possible for the Government of India to get over the problem satisfactorily, even with the best of their intentions. It is reported that efforts are being made to ensure an adequate supply of sugar to the various centres where there is an acute shortage but how far it is possible to increase wagon space effictively remains to be seen. Mr. Khaitan had some very interesting remarks to make regarding the need for the consolidation of the industry in the present circumstances and taking advantage of the present conditions to develop export markets and retain them effectively after the war by a reduction in the cost of production. Towards this end he pointed out that it was necessary to develop the by-products industry, in particular power alcohol. It is also necessary to reduce freight rates and excise duties. The problem of sugarcane cultivation has also to be seriously tackled. In this connection it is glad to note that it has been proposed by the Government of India to undertake a Sugarcane Area Research and no less an eminent person than Sir T. S. Venkataraman is to be in charge.

The industry has difficulties in procuring materials like quick-lime, sulphur, coal and other things; and also help from Government in this direction is quite necessary in order to be able to maximise production during the next season. The progress achieved by the industry since the grant of production has been phenomenal and it is necessary that it should be kept up and that India enabled to compete effectively with the other countries as soon as the war ends.

Speaking on the same subject at a Rotary Club meeting in Bombay, recently, Mr. M. P. Gandhi also had some very interesting remarks to make on the present position of the industry. The preoccupations of a Government department have not in any way minimised the interest taken by that eminent expert on sugar. He pointed out very clearly that the problems connected with sugar shortage were very different from those of other commodities. The blame was mainly laid on transport difficulties which were felt most on account of the industry in the provinces of U. P. and Bihar but with the efforts to improve transport facilities and increased production in the new season, the shortage will, it is believed, in time be removed. Control prices are not very high if proper allowance is made for increases in the cost of production. It is satisfactory to note that during the next season also there will not be any undue increase in sugar prices, thanks to the longer crushing season. The dislocation in the trade, according to Mr. Gandhi, was due, to a certain extent, to the abruptness of control, the inevitable time taken for the adjustment of entirely new machinery operating in a very large area in the initial stages, and the difficulties experienced by various district officers in fixing prices and the quotas of sugar due to lack of any precedents.

Central Revenues

Interesting disclosures are made in the Central Government's revenue and expenditure figures published last weekend. Railway earnings have for some weeks continued to fall as compared with last year—rather a disquieting sign. The figures for the earlier months showed such big increases that general revenues stood to gain much more than had been anticipated in the Budget; but if the present fall continues, it may not be easy to realise even the expected surplus. It has to be remembered that owing to the additional grant of dearness allowances and other expenditure, the working expenses of Railways have greatly increased this year. As regards general revenues, the position of income tax and corporation tax receipts continues to be satisfactory. The first five months have only brought just over Rs. 12 crores though according to the Budget estimates the year's total receipts should be Rs. 64 crores, but as much of the collections under these heads are generally in the later half of the year, the receipts may finally come up to expectation. Even excise receipts are now on the decline though according to the Budget estimates the current year should yield more than last year. The total revenue receipts now come up to about Rs. 9 crores per month. On the other hand the cost of Defence Services alone has now come up to Rs. 18 crores per month. This is bound to increase further as Defence expansion proceeds—in fact, it may not be far wide of the mark to state that next year the country may have to meet a war bill of one crore per day. As compared with last year, the increase in expenditure during these five months is nearly Rs. 40 crores, while the increase in revenue despite additional taxation is only Rs. 9 crores. Civil expenditure has also increased by Rs. 8 crores during these five months.

General Increase in world costs of living

In spite of the many handicaps the League of Nations continues to perform its function so far as the compilation of its statistics is concerned. The July number of the "League of Nations Monthly Bulletin of Statistics" gives some very interesting figures regarding population

Managing Director:
Dr. Amal K. Roy Chowdhury, M.D.

and vital statistics, public finance and price movements. So far as population statistics are concerned those relevant to Japan are very important especially as the Japanese Statistical Office has not published any data since 1938. The figures cover up to 1941.

It is given that the number of births in 1940 was 2.21 millions against 1.9 millions in 1939. With the increase in the birth-rate there has been a decrease in the death-rate. It is estimated that against the figure for births in 1940 of 2.21 million, deaths were only 1.14 million. These figures correspond approximately to the rate of 29.9 per thousand of the population for births and 15.4 for deaths.

Price indices computed under a system of official prices and rationing must necessarily be accompanied by serious reservations, particularly in the cases where the system of consumption has undergone considerable changes. Nevertheless, a detailed table shows the changes that have occurred in the cost of living since the war in thirtynine countries and gives separately the price indices for foodstuffs, heating and lighting, clothing rent etc. As in this country, rents in general have remained stable but the cost of foodstuffs and clothing shows considerable increase. In the United States foodstuff prices have increased the most (relatively), those for clothing coming next. In other countries the rise has been greatest in the case of clothing prices, for example, in several countries of latin America, India, Japan and Germany (30 percent), Hungary and the United Kingdom (more than 90 per cent) Norway and Switzerland (about 80 percent) and Sweden (nearly 70 percent).

The Bulletin points out that the increase in the cost of living in the case of Ireland, the United Kingdom, Switzerland and some other countries has been side by side with the increase in note circulation. In most other cases the increase in note circulation has been more marked than the increase in the cost of living.

Industrial Production

Interesting figures are available regarding general industrial production in the country under present war conditions.

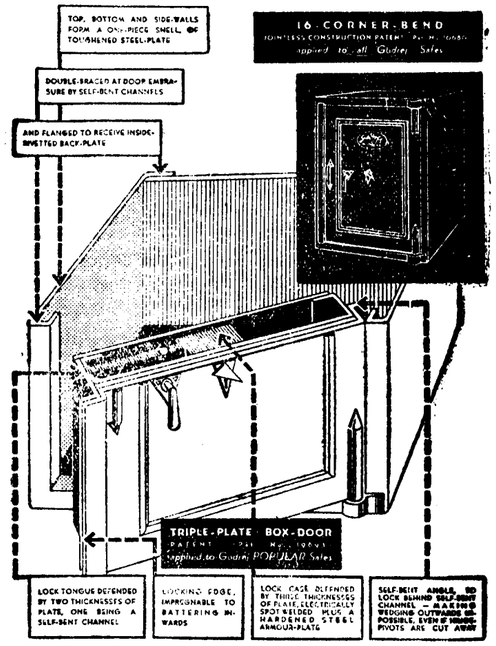
According to the Government's survey of business conditions, issued a few days ago, "the foreign trade position was as healthy as could be expected in the present emergency conditions, and though imports declined, exports during the present financial year were larger than in the same period in the preceding year, and the balance of trade much greater in India's favour." The report which refers to the first three months of the financial year, points out that as a result of general improvement in trade and industry wholesale prices rose by as much as 13 points during June. It will be some time, however, before the full picture of business conditions in the subsequent quarter is known. Production of cotton piece goods in India was well over 350 million yards in May which compares favourably with last year's average. How largely India has ceased to depend on cloth imports is shown by the fact that imports of cotton manufactures in the opening months of the current financial year totalled only just over a million yards per month as against nearly 70 million yards in May 1939 just before the war. From another point of view also the figures are interesting, for exports of cotton piecegoods from India have averaged to over 100 million yards per month this year though it was only 11 millions in April last year. Mill consumption of Indian cotton during May last amounted to 311,000 bales—an increase of 12,000 bales compared to the previous year. Exports of raw cotton during the month were only 64,000 bales—a decrease of 66,000 as compared with May of the previous year. Imports of raw cotton were 44,000 bales in May last—a small increase over the previous month's figure.

July Trade Returns

The increasing importance of the trade on Government account is, perhaps, mainly responsible for the shrinkage in the total volume of trade in recent months though, it is to be admitted that the difficulties on account of shipping position also have played their part. The improvement in the balance of trade in India's favour has, therefore been, not due to any large increase in the export trade, but to the more-than-proportionate decline in imports. The validity of the statement will be noticed from the following figures. Imports, re-exports and exports declined from Rs. 18.42 crores to Rs. 9.65 crores; Rs. 1.2 crores to Rs. 61 lakhs and Rs. 20.4 crores to Rs. 15.01 crores respectively between July 1941 and July 1942.

It is satisfactory to note, however, that in July there has been a slight increase in both imports and exports being more pronounced than imports. Compared with June 1942 imports and exports recorded increases of Rs. 83 lakhs and Rs. 1.92 lakhs respectively while re-exports indicated a drop of Rs. 2 lakhs in July 1942. There was an increase in imports from Empire countries but the decline in imports from U.S.A. and Iran offset to a certain extent the increase. The gain in imports from Empire countries was Rs. 1.22 crores, excluding Rs. 63 lakhs from the U. K. while the fall in imports from U.S.A. was Rs. 18 lakhs and Rs. 42 lakhs from Iran. Empire countries again accounted for the increase in the offtake of Indian goods, though Australia took Rs. 81 lakhs lower. The net gain on account of exports to Empire countries amounted to Rs. 1.24 crores. There was a fall of Rs. 32 lakhs in exports to the U.S.A. which was to a certain extent compensated by the increase in the trade with the countries in South America and the Middle East.



Balance of trade in merchandise for the four months ending July 31, 1942 shows an export surplus of Rs. 26.58 crores against Rs. 14.5 crores in the corresponding period of 1940 and a deficit of Rs. 5.4 crores in the four-month period ending July 31, 1941.

A Survey of the figures for the four month period indicates that imports o

ain, pulse and flour showed a big decine from Rs. 7.35 crores to Rs. 6 lakhs, also provisions and oilmen stores from s. 1.09 crores to Rs. 1.33 lakhs. There is decline in the imports of sugar from s. 20.08 lakhs to Rs. 1.85 lakhs. Total nports of food, drink and tobacco amount only Rs. 2.52 crores against Rs. 11.72 ores in the corresponding period of 1941. nder raw materials and produce and ticles mainly unmanufactured, imports raw cotton show the biggest decline om Rs. 6.19 crores to Rs. 2.89 crores. here is a sharp decline in articles wholly mainly manufactured from Rs. 34.89 ores to Rs. 20.37 crores; vehicles (exuding locomotives for railways), being wer at Rs. 3.33 crores against Rs. 5.17 ores in the four months of 1941 and tton yarn and manufactures being only s. 64 lakhs against Rs. 4.05 crores in the rresponding period of 1941. Dyes and lours showed a decline from Rs. 3.04 ores to Rs. 1.76 crores and machinery of l kinds from Rs. 4.63 crores to Rs. 3.69 ores. Metals, iron and steel and other anufactures were also lower at Rs. 1.01 ores against Rs. 3.03 crores.

Coming to exports, grain, pulse and nour are slightly lower at Rs. 2.95 crores against Rs. 3.1 crores while sugar shows a substantial rise from Rs. 2.86 lakhs to Rs. 83.56 lakhs. Exports of tea are naturally higher at Rs. 5.23 crores against Rs. 4.73 crores. Coal exports have been very much affected, the figures for the four months ending July 1942 being only Rs. 5.69 lakhs against Rs. 50.18 lakhs. Exports of raw cotton are naturally lower at Rs. 3.2 crores against Rs. 8.08 crores while exports of jute have been fairly well maintained at Rs. 2.69 crores against Rs. 2.88 crores. Total exports of raw materials and produce and articles mainly unmanufactured were Rs. 17.01 crores against Rs. 21.99 crores. The increase in piecegoods from Rs. 7.04 crores to Rs. 15.42 crores has to a certain extent been offset by the decline in the exports of jute manufactures from Rs. 14.43 crores to Rs. 10.19 crores. Exports of iron and steel manufactures were appreciably lower at Rs. 30 lakhs against Rs. 1.55 crores. Total exports of articles wholly or mainly manufactured were Rs. 1.75 crores higher at Rs. 29.49 crores.

The grand total of exports for the four-month period, as remarked above, shows a decline from Rs. 65.34 crores in the four months ending July 1941 to Rs. 62.38 crores; at the same time total imports have declined from Rs. 70.78 crores to Rs. 35.8 crores so that if there has been an increase in the favourable balance of trade, it is due more to the decline in imports than to any increase in exports.

Allied Aircraft Production

Interesting figures regarding Germany's output of aircraft have been furnished by the "Daily Express" aeronautical correspondent. These figures confirm the reports published in the press in recent months that Allied production of aircraft is growing daily, and that even at the present rate has far outstripped Germany's production. The fact that reserves of the Axis countries are not quite strong enough and that production is not keeping pace with the demand of the various theatres of war, is evident by the fewer number of aircrafts in certain theatres of war and the concentration in two theatres namely Malta and Stalingrad. It is stated that the front-line strength is not more than 4,700 planes. The reserve is generally estimated to be four times the front-line strength.

The approximate deployment of the Luftwaffe's first-line war planes is now believed to be as follows:—"Eastern front (2,000 miles) 2,500 planes nearly half in the Stalingrad area. Mediterranean: 800 machines (more than half in Southern Italy and Sicily for assaults on Malta). Western Europe: 800 planes (550 fighters and 250 bombers) held in reserve to oppose Allied raids on occupied territories. Northern Norway: 200 planes, mostly fighter bombers for attacks on Anglo-American convoys on Russia. Germany: 300 to 500 planes of all types forming a central reserve including a larger number of night fighters (many converted Ju. 88 bombers) to resist heavy R.A.F. bombing of the Ruhr and Rhineland."

It will be clear from the above, that with three powerful air forces, the R.A.F. the Red Air Force and the rapidly expanding U.S.A.F. opposing the Luftwaffe. Germany's task is a very hard one. Against a total production of the Axis countries of 50,000 planes a year, it is estimated that the Allied countries are now producing 103,000 planes a year and that if the latest American production figures are taken into consideration, the Allied figures will be nearly 125,000 planes a year. It is very clear, therefore, that the initiative has been wrested from Germany and that the loss of the initiative to Germany in the air will mean ultimately her defeat.

The famine for one pice coins is now an extensive and intensive distress. Extensive because there is no city, town or village in India which is not sorely afflicted by this acute shortage of small coins. Intensive because everyone in every manner of transaction is feeling the pinch. Did I say 'everyone'? Let me hasten to correct myself. For, it is obvious that those who belong to the super-tax and excess profits tax category, are people to whom one pice is not the currency unit. I may add that everyone who can afford or who needs to subscribe for "Indian Finance" belongs to the category which, as I have said, is not dependent upon one pice as the currency unit. But, for one thing, such people are only a handful. And, for another, even they are bound to be engulfed in the repercussions set up all over the country by the famine for small coins. Let me narrate how I have myself been affected in this respect. Till recently, the "Telegraph," which is the stable companion of "Indian Finance," was priced at one pice. Many of my friends suggested that the price was too low; and that, in any case, they never carried one pice coins with them and, therefore, could not allow themselves the pleasure of buying a copy of the "Telegraph." "Make the price one anna," they advised. "Although you may not sell as many copies, the sale proceeds will be as satisfactory." It was difficult for them to appreciate my point of view that the aim and object I had in mind when inaugurating the "Telegraph" was to place before the masses a class paper; and that, in my judgment, one pice was the universal currency unit.

* * * *

So, I stuck to the one pice paper; and it was a job counting up, every day, heaps of one pice coins for anything like Rs. 100 to Rs. 150. If counting the coins was a mighty job, disposing of them was an even more difficult job. Point blank, the banks refused to receive daily from us mountainous totals of one pice coins. In the circumstances, we hit upon the plan of paying out most bills in cash; and, at one time, there would be, on our premises, four or five bill collectors busy counting unending heaps of coins. The situation changed with the Government imposing minimum prices for daily papers in accordance with the number of pages. The price of the "Telegraph" had to be raised to half anna. Even then, we continued to be inundated with one pice coins, though the new half anna coins began to trickle in a steadily increasing stream. Two months ago, however, the hawkers began to report that sales of the paper were being hampered by their not being able to give change. They wanted me to provide them with a minimum stock of one pice and two pice coins; and they declared that, without such a reserve, many people who wanted to buy the "Telegraph" could not buy it as they had only one anna coins. In the long run, the hawkers seem to have been benefited because many a keen reader paid one anna for a half anna paper so that the hawker coolly pocketted the extra profit in addition to the commission he already gets. But, from the point of view of our office, the most notable fact is that, while, till recently, we were embarrassingly rich in one pice coins, we have today a serious shortage of these coins which affects the sale of our paper.

* * * *

It is easy to imagine the plight of the Tramway Company in these circumstances. I suppose, the Tramways are the one organisation in Calcutta whose need for one pice coins is greatest. Between 11 a.m. and 4 p.m., the system of cheap fares is in vogue; and the general ticket during these hours is 3 pice. You get into the tram and ask the conductor, 'what fare?' 'Three pice', he replies. You hand him a one anna coin. 'Sorry', he says, 'can you give me three pice coins?' 'I cannot,' you answer. He gives you the ticket, complacently pockets the extra pice, and coolly walks to the next passenger. The same enquiry, the same answer, the same collaring of the extra pice from most passengers. I am sure that many a mickle of one pice coins must make a muckle of rupees daily; and I wonder who is the real beneficiary from these accumulating pices—the Tramway Company or the conductor. If it is the Tramway Company, it will be more becoming to stop the cheap fare altogether and collect the full fare of one anna. If it is the conductor that benefits from this unearned increment, all that I can say is that it is a state of affairs which should induce the conductor to plead poverty of pice coins even if he has any with him.

* * * *

At this point, my stenographer tells me that, in the Wellesley tram which she uses daily, there is no difficulty about pice coins. She is, perhaps, right to some extent. For, I have myself travelled by the Wellesley tram and noticed that, immediately after the conductor pleaded to me bankruptcy in one pice coins, he produced one pice coins for two Anglo-Indian fairies who were also passengers in the same tram. I called the conductor and asked him for an explanation. He looked sheepish; but the other Indian passengers in the car said that this was no new experience. Even Indian conductors show racial discrimination—or, is it only sex discrimination?

* * * *

In episodes during the cheap fares interval, the loss is only one pice. Paren-

The BOMBAY MUTUAL
LIFE ASSURANCE SOCIETY LTD.
THE OLDEST LIFE OFFICE IN INDIA

thetically, I may add, that the loss of one pice on a three pice ticket works out to a loss of 33 1/3 per cent. But I had an even stranger experience. I asked for a five pice ticket and handed in two annas. The conductor asked me: 'have you got a one pice coin?' No, was my answer. Without more ado and without any explanation, he punched a one anna ticket, gave it to me, and returned one anna. On reaching Esplanade, he came to me again and said that I must buy another ticket. 'How much?'—I asked. 'One anna, of course,' he coolly informed me. Not being initiated in the rites and rituals of tram travelling until recently, I understand very little of fare and transfers and what not; so, I quietly paid up another anna. In the reflection that followed, I calculated that I had lost 9 pies on 15 pies. This works out to a loss of 60 per cent. I have now decided that I shall not travel in trams unless I have a substantial reserve of one anna coins, half-anna coins and one pice coins. When the conductor accosts me, I proudly put my hand into my trouser pocket, and, with great show, pull out a handful of vareigated coins. I have noticed that the conductor is generally greatly amused while the rest of the passengers look at my handful of coins with unconcealed envy.

I asked my bearer for his experiences with regard to shortage of small coins. He said: 'I go to the market and ask the price of salt'. 'Two and a half annas a seer; but you can have only a quarter of a seer. Price three-fourths of an anna,' the shop-keeper replies. He pays down one anna, and the dealer replies that he has no pice coin, coolly pockets it and turns to the next customer. In his first transaction, my bearer has thus lost 33 1/3 per cent. This is the profit which the dealer has made over and above the large profit which, in these days of food shortage, he is already reaping. The vegetable market exposes the bearer to the same experience. He buys brinjals for a quarter seer. Price is 3 pice. He pays one anna; and the vegetable seller coolly pockets the extra pice. On the three annas he paid for rice, he lost half an anna. And so on in the many transactions which make up the routine.

* * * *

Imagine the plight of the poor people in the villages. Out of the three annas or so which the villager spends for his daily necessaries, he pays an excess of anything like 25 per cent. In simple terms, the cost of living has been, imperceptibly but effectively, raised by 25 per cent for the poor people—that is, for those classes of the population whose currency unit is one pice. The gravity of such a sharp rise in the cost of living for the masses has not been adequately appreciated either by the Government authorities or by the public leaders. The continuance of this position is intolerable. It spells a more widespread and a more acute disaster than even the hardships arising from the shortage of foodstuffs. Neither the Government of India nor the Provincial Governments seem to have realised that they have an urgent and imperative duty to provide immediate relief. Not even an explanation has been forthcoming from New Delhi—much less any assurance that immediate relief measures are being taken. The Gods in Delhi are busy creating the National Front. May I urge that the Price Front is more important than the National Front?

what? defending India in the Arctic Ocean?

Yes, R.I.N. ships sometimes operate a long way from home. Such is the magnitude of modern battle strategy. Facing daily perils and discomforts, they protect our shipping and help to bring us the vital munitions of war. So why make it more difficult for them? You make it more difficult if you buy paint to paint your home knowing full well that the navy needs all the paint it can get. Paint, petrol, rubber, steel, rope and a hundred other things—they are all VITAL to defence. So is the money you spend on them. Let us cut down on everything and bring victory nearer!

(From Our Correspondent)

New Delhi, October 27.

It was not till the fourth year of the war that the Government of India realised the need and urgency of having a separate Transport Department. By that time transport difficulties had taken a serious form and added to the responsibilities of the new Transport Member, Sir Edward Benthall. Sir Edward has only this week returned to New Delhi after an extensive tour to get a clear idea of the problems and the difficulties. The course of the war has been such that it has not been easy to anticipate the future and provide for its needs sufficiently in advance. For instance, had the Government of India had any idea of the events as they had now developed in 1941 and 1942, they would not have shelved the considered recommendations of the Locomotive Manufacture Inquiry Committee. The only satisfaction at the moment is that Sir Edward has a clear picture of transport conditions in the country —and the danger, both to the fighting forces and to the civil population, of following a policy of aimless drift. Sir Edward has, even during his short stay in the Secretariat, earned a reputation for zeal and thoroughness. It now remains to be seen how he proposes to adjust and revise the policy of his Department to reduce if not entirely eliminate the transport difficulties facing the country. Without a bold and imaginative transport policy, it will not be easy to find an effective remedy for the present serious problems.

* * * * *

Some time ago it was said that a number of Railway experts will be coming to India from the United States to advise the Transport Department. That suggestion arose from the Grady Mission's report, but evidently this proposal is now in abeyance. There is little doubt that if new methods can be introduced to secure greater efficiency and speed in the working, of Railways, there would be all round benefit. But what is of greater importance is to secure certain essential supplies from the United States to supplement and replace existing stocks—particularly locomotives. There is no information to show that the work of locomotive construction at the Ajmere workshops has advanced appreciably, for they themselves require machinery from the United States and Britain for enlarging their work. The new Transport Member, however, can do a great deal by developing alternative methods of transport both by land and water. Sir Edward has during his tour met representatives of the commercial community and tried to understand their needs; but some non-officials here feel that if Sir Edward can convene a special conference sufficiently representative of non-official interests, for discussing transport problems and finding ways to remove them, it would be helpful. The charge against his predecessors has been that unlike the Commerce Department which has sought in every way to keep itself in touch with non-official opinion, the Communications Department has been deliberately isolating itself and giving little opportunity to non-official leaders to influence its actions and policies.

* * * * *

Much of the usefulness of the policies and schemes of his colleagues depends upon the efficiency and adequacy of transport arrangements. In his opening address at the Marketing Officers' Conference, Sir Jogindar Singh, the Member-in-charge referred to the food situation in the country and pointed out how our resources "have been crippled to a large extent by the transport difficulties within the country." The food problem is intimately connected with the transport problem as it exists to-day. The former also has now assumed fairly large proportions. There appears to be a proposal before the Government of India that for effectively planning and carrying out a food supply programme for the country, a separate Food Department should be organised. Certain aspects of the problem of food supply and prices are now dealt with by the Commerce Department. Certain others like agricultural production, crop planning, scientific research, etc., are in the hands of the Education Member. Certain others dealing with transport and distribution come within the responsibilities of the Transport Member. There has for a long time been the suggestion that in order to plan and work a comprehensive food policy for the country to meet the needs of the civil population, all these various sections and departments dealing with food questions should be brought together under one Member. It is likely that a decision may soon be taken by the Viceroy after his return from his North-Western tour.

* * * * *

There is little doubt that though some attention has been paid to the question of redistributing on more rational lines the various portfolios and the subjects comprising them, there is still a good deal of illogicality about it. If a separate Food portfolio is constituted it would be a good thing to associate Public Health with it, but subjects like Education, Archaeology, etc., which are now under the Education Member may well go to other Members who have comparatively less work to do, like the Overseas Member or the Information Member. There is also no justification for placing Departments like the Geological Survey—particularly the Utilisation Branch—under the Labour Member, for they should properly be associated with the Departments dealing with industrial research and expansion which to a large extent come under the Commerce Member. It is believed that one reason why the Information Membership has not yet been filled up is that the question of reorganising portfolios is under consideration. After the formation of the Food portfolio, the question may be taken up of constituting a separate Production Department as suggested by the Grady Mission, but so far there is no indication to show that any such plans are in view.

* * * * *

The Viceroy has been out of Delhi for nearly a fortnight on a visit to Rawalpindi and Quetta—areas which His Excellency had not so far been able to visit. As he is said to have definitely decided to retire early next year, H. E. Lord Linlithgow is evidently anxious to visit all those places which could not be included in his previous tours. This may entail more touring during the coming winter months than was possible for him in previous years. There are also reports that for this reason His Excellency may decide to give up his usual Calcutta visit in December. Though His Excellency has made a public reference to his impending departure in his Quetta speech, no official announcement has yet been made regarding his successor. There has been a crop of rumours in New Delhi during the last few days. Four names stand out prominently—Lord Carnbourne, Mr. Oliver Lyttelton, the Duke of Devonshire, and Sir Roger Lumley.

Resume of Commodity Markets

In the last three weeks markets have continued active, the strength of the jute and silver markets especially being very pronounced. The Bombay raw cotton market is closed but it is reported that in unofficial transactions a very firm tendency was noticeable and the operators were very strong in their ideas regarding the new crop. The latest forecast is encouraging from the market point of view. The piecegoods market continued active and the problem, as ever before, is one of getting supplies.

New control measures are being devised and transport facilities are also being provided on a larger scale. It is thus hoped to improve the position so far as controlled commodities are concerned. The wheat position has improved to a great extent in certain areas while the sugar problem also is reported to be getting under control. Large supplies of the commodity have been received by the Madras Presidency in recent weeks. The prospects for the new rice crop are reported satisfactory though it is feared that the recent cyclone has affected the crop in certain districts.

Jute:

The measures taken by the Government of Bengal to improve the condition of the ryot and to arrange for the freer movement of the crop, have resulted in a substantial improvement in prices in the jute market. Our readers are alrady aware of the measures with which the Bengal Government propose to afford relief to the jute growers. The Government of Bengal are to be congratulated on their promptness in coming to the relief of the ryot though it is expressed in certain quarters that the help is delayed and that in certain parts of the Bengal Presidency most of the ryots have disposed of their holdings. Efforts to improve the supply position in Calcutta and other important areas have been to a certain extent successful; but the arrivals are still short of mill requirements and until such time as it is possible to replenish stocks adequately, buyers will naturally continue to be keen to swallow up any quantities that are offered, even by offering suitable premiums.

The U. S. Defence Supply Corporation has become the sole purchasing agent for all raw jute imported into the country. Only such jute as is rejected by the Supply Corporation, because of damage in shipment may be sold by importers to processors for civilian use.

According to the October issue of the Indian Central Jute Committee Bulletin jute plantings have begun in the territory of Misiones in Argentine and about 150 hectares (1 hectare is equal to 2.47 acres) are expected to be under cultivation this season. The land and the climatic conditions of the territory are believed to be favourable for the development of this crop, but unusually cold weather has caused a setback in the condition of the crop this year.

In 1941 Argentine imported 10,000,000 kilos (1 kilo is equal to 2.20 lbs.) of raw jute as against 12,800,000 during the previous year. Imports of jute goods amounted to 61,300,000 and 66,500,000 kilos during 1941 and 1940 respectively.

Jute Manufactures:

There is nothing to report so far as the jute manufactures market is concerned. Export demand is as poor as before, inspite of the reported improvement in the shipping position. Rates have been maintained in the hessian market only with the strength of the jute market. The difficulty in regard to the shipping position will be evident from the fact that it is proposed to do away with the use of burlap in the Latin American countries and substitute cotton bags. The October issue of the Indian Central Jute Committee has some very interesting remarks to make in this connection. A cotton mill and bag factory, it is understood, will soon be established in the Argentine by the Government. The factory will be exclusively used for the manufacture of cotton sacks and cotton yarns. The annual outturn of the factory is expected to be 20,000,000 sacks.

In Brazil, a factory has been established to manufacture bags in which the national fibre "Guaxima" will be used in combination with jute. The new industrial plant has an annual capacity of 1,500,000 bags.

Cotton:

The Bombay raw cotton market is still officially closed and mills are doing their business only through mofussil agents. The tendency is reported to be very strong and a substantial improvement in values has been recorded. The forecast figures also have been encouraging. The total estimated acreage for All-India is 16,033,000 acres or a decrease of 17 per cent as compared with the corresponding figure last year, due chiefly to the "grow more food campaign". According to trade descriptions, Bengals cover an area of 2,064,000 acres, Americans 3,006,000 acres, Oomras 4,633,000 acres, Broach 6,75,000 acres, Surti 510,000 acres, Dholleras 1,265,000 acres and others 3,880,000 acres.

Sugar:

It has been decided to relieve the acute shortage of sugar in the presidency of Bengal by taking over stocks to the extent of 50 percent lying in factories' godowns in the province of Bengal. For this purpose, the province has been divided into certain areas and it is reported that the necessary stocks have been already requisitioned. It is pointed out, however, that it is not the intention of the authorities to interfere with the normal trade channels and that the present measure is only designed to enable the Government to step in when it is not possible to relieve the acute shortage in any particular area.

The Sugar Controller in his recent visit to South India had some very encouraging remarks to make so far as the position in the Southern Presidency was concerned. It appears that large stocks have been recently received by Madras dealers and that with the early crushing season in certain parts of the presidency, it is said that there will be no scarcity at all in the new season. As the Sugar Controller rightly pointed out the problem of the sugar industry is solely one of transport and if it were possible to get over this difficulty satisfactorily, there will be no question of sugar shortage.

Railways require relief for war purposes.
BENGAL NAGPUR RAILWAY

In this connection it is important to note that the Government of India have authorised a sugarcane survey of India and that an officer has been appointed for this purpose. It is no less a man than the eminent Sir T. S. Venkataraman. This special officer is expected to tour the different provinces and inspect the sugarcane farms maintained by the Government. He will also consult those associated with the industry.

Wheat:

While in Calcutta it is reported that the wheat position is pretty serious and that it is not possible for mills to continue crushing even a smaller number of working hours, it is reported that in some other places the wheat position is easier and that the recent arrivals of Australian wheat have been very helpful. It is paradoxical that in a world of plentiful supplies people in some parts of the globe suffer from the lack of one commodity while others suffer from excess of the same commodity in other parts of the world. Lack of transport is the root cause of all the difficulties. It is pointed out that supplies in the Latin-American states, North America and Canada are in such great quantities that even without one grain of wheat being sown in the next three years, it will be possible to feed the whole population of these countries.

Tea:

Even with the decision of the British Ministry of Food to buy over the entire export surplus of Indian and Ceylon producers, the British and the U. S. consumers will not be able to get their former quantities. With the loss of N.E.I., an important source of supply has been lost and as the countries which were taking their supplies from this source have now to be fed by India, there is necessarily a reduction in the quota consumed by the important consumers, namely U. K., and the U.S.A.

At the sale of teas for consumption in India there was a strong demand; total offerings were 33,000 packages. Fannings and lower sorts advanced approximately by 2 annas; Tippy teas, Broken grades and Leafy teas showed a greater rise. Assam brokens with tip were in particular request. At the sale of Dusts a strong tone was noticeable in the beginning though as the auction progressed, a slightly easier tendency was noticeable. The total quantity offered was 15,861 packages and prices were on balance between 1½ to 2 annas above the last rates.

Silver:

It will be remembered that we remarked at the time when the Government of India dcided to withdraw George V and VI silver standard rupees and half-rupees as from May 1, 1943, there would be an improvement in prices in the silver market. As we expected, there was an aggressive rise in prices in the silver market during the holidays and a quotation as high as Rs. 108 was reported in unofficial transactions. There has been some selling at the higher levels and it is not known whether the Reserve Bank has been a seller. The quotation, however, is lower at Rs. 103 at the time of writing. But even with silver quoting at the present levels, it will not be possible to persuade the silver hoarder to part with coins as the standard silver rupees and half-rupees are 916 fine and the loss on account of melting will be negligible. There will also be a tendency to await further developments as the time available is nearly six months. Between now and May 1, 1943, it is incumbent on the authorities to push down prices for silver appreciably as, otherwise, they will not be successful in their programme of getting back silver coins, to replenish their stocks of silver by melting them down.

N. W. R. SUBORDINATE SERVICE COMMISSION LAHORE

Applications are invited from Muslim candidates up to 30th November, 1942, for appointment to the post of a Laboratory Assistant in Mechanical Workshops N.-W. Railway, Moghalpura. Applications must be on prescribed forms which are obtainable at Re. 1 from Station Masters of large stations on N.-W. Railway.

Pay.—Rs. 65-5/2-85.

Minimum Qualifications.—Graduate of a recognized university with Chemistry as a principal subject and Physics as a subsidiary. Candidates with training and experience in a Railway or Commercial Laboratory will be preferred.

Age on 22.12.42.—Between 18 and 30 years. Further particulars can be obtained on sending a stamped and addressed envelops to the Chairman, N.-W. Railway Subordinate Service Commission, 34, Lawrence Road, Lahore, superscribed in left hand top corner "Vacancy of Laboratory Assistant."

CHAIRMAN.

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, October 29.

TRANSPORT continues to be the crucial factor in the jute situation and its repercussions are to be felt not only in the raw material market but also in the market for the manufactured article. From a superficial point of view, mills are on an easy wicket. There is an ample margin of manufacturing profit between the current rates for jute and fabrics, and on paper, simultaneous business looks just too easy. This may to some extent account for the somewhat feverish activity which has characterised the raw material market even during the holiday period. But it is by no means the whole story. These purchases have still to be delivered and some mills cannot be in too comfortable a position as regards stocks of certain grades of jute. One noticeable factor regarding the recent buying has been the much wider producing area over which the purchases have been spread. This has been a wise procedure, inasmuch as all possible avenues of transport will be tapped and practically none neglected. Mills have been buying from districts which in normal circumstances they would not touch for loose jute, though curiously enough they are prepared to accept exactly the same stuff when deliverd to them in their pucca bale purchases. Whether intentionally or not therefore mills have made a contribution towards the fullest utilisation of the transport available for the movement of the crop. But it is still open to doubt whether the last word has yet been said regarding the fullest coordination within the transport agencies themselves.

In fact, with regard to the river services, there is as yet practically no sign of coordination whatever. In what we have described as "competitive" stations, that is, where more than one transport company supplies service, each still works independently without regard to the others and there is no such thing as pooling of resources for the more efficient handling of the traffic. Until co-ordination reaches this point, we cannot believe that the best or fairest use is being made of the space available. In present circumstances we maintain that particular interests must go to the wall and we understand that the head of the Regional Priority Committee has the power to enforce this, and we hope that it will be done without delay.

Circumstances have changed considerably in the last week or two. There has been a sharp rise in prices, not only in Calcutta, but in mofussil markets. Indian sellers have come much more into the picture on the rising market, leaving Europeans and packers of proprietory marks with a large quantity of cheap jute still to deliver. In many cases, due to congested accommodation on account of the lack of freight, a good deal of this cheaply sold jute has still to be covered. It therefore seems that, in the allotment of freight, priority of date of sale should be considered of overriding importance, so that these earlier contracts may be cleared. Priority of delivery date contracted for should not be taken into consideration for this might easily lead to sales being made for early delivery simply in order to secure freight. Some margin should certainly be kept in hand to provide for really necessitous cases in order that no mill may have to stop for lack of jute, but that is still an improbability. A mill can still keep going even though it may have to batch a higher quality than it would normally do, for instance. When overseas exports came under control, it very soon became obvious that early dated sales had to be given priority to enable these to be cleared off, and we submit that the same will apply to sales of loose jute to mills, otherwise advantage will be taken of the situation by less scrupulous dealers to get their higher priced contracts delivered.

It is to be hoped also that instances of unfair advantage having been taken of priorities will be severely dealt with so that any such sharp practises may be nipped in the bud, or at least sufficiently discouraged.

From the general, let us turn to the particular. Estimated arrivals of jute into Calcutta for the first half of October amounted to 3,01.000 bales as against 3,39,000 bales in the same period last year. This may look pretty good, but it must be remembered that last year was a short crop, that mills then still held large stocks and were not feeling the pinch for jute, and that over a number of years the arrivals during this period average more than double those this year.. These arrivals, say 6 lakhs of bales per month, would just about satisfy mill demand if equally distributed, but are insufficient to provide for export demand as well. And as this latter feature is by no means negligible even in these days of freight scarcity, it is obvious that mills are still eating into their already attenuated stocks of raw material. This is more obvious when we quote the total arrivals of jute from the 1st July to mid-October at 16,03,000 bales this year against 19,98,000 bales last year. Practically 25 per cent less.

This is where the repercussion of the shortage of inland freight is being felt on the manufactured goods market. On paper, as we have said, simultaneous buying of jute and selling of goods is easy and profitable. But mills must also keep a wary eye on their stock position and the rate at which deliveries of raw material are coming forward. They cannot sell with that freedom which they normally would on a goods market such as obtains at present and this reserve of sellers again reacts on the price of goods. For it must be noted that the present demand for fabrics is very largely speculative. Genuine overseas demand is not large and even a very large proportion of the country demand has all the hall-mark of speculation. It has only to be mentioned that Liverpool Twills, which can be bought here to-day for ready shipment at Rs. 57, will fetch Rs. 85 in Bombay. Therefore the recent advance in the prices of gunnies is to a large extent the result of the scarcity of inland freight. One thing for which to give thanks is that the Fatka markets are no longer in existence!

In the Export Jute market there have been reports of a fair amount of direct business with both the U. K. and the U.S.A. which has not appeared on the open market. Transactions there have mainly been confined to Dundee Daisee at around Rs. 60 for assortment and Rs. 53 for 4s. with Outport Daisee 4s. at Rs. 44. Dundee Tossa 4s. have also sold at Rs. 61 and Rs. 62 with Outport 4s. at Rs. 52. Mills have also been considerable buyers of pucca bales at Rs. 61 to Rs. 64 for Firsts according to marks at Rs. 53 for Lightnings and at Rs. 46 and Rs. 47 for Heart marks. Practically all available lower grades have also been swept up by mills at advancing rates, including Cuttings.

In the Loose Jute market there has been an active demand from mills for practically all descriptions offering and prices have naturally registered a sharp advance. European sellers have only been offering in very limited quantity and up to Rs. 12 and Rs. 9 have been paid for Middles and Bottoms. Supervised Jat has fetched Rs. 11-12 and Rs. 8-12 and Indian Jat almost the same prices. Cross mark has sold between Rs. 6-12 and Rs. 7-4. Northern Bengal and Assam qualities have been freely taken by mills, mainly Bottoms at from Rs. 7-8 to Rs. 8-4.

Calcutta Branch:—15, CLIVE STREET

JUTE

Calcutta, October 29.

THE raw jute market has been very firm during the past week and a larger amount of business has been transacted at advancing rates. Mills continue to be keen buyers and, with the present rate of arrivals, it appears that it will be a long time before their requirements will be satisfied. It is reported that during the past two weeks there has been some increase in the arrivals though, they are still short of mills' requirements and consumers are obliged to eat into their old stocks. The statement by the Transport Member that it will be possible to transport all the jute required, though over a longer period, has been well received. The announcement that the Government of Bengal is to release immediately Rs. 1 crore for affording relief to jute growers in the district of Mymensingh particularly and a few other districts, has also had an encouraging effect. The recent rise in prices, thanks to the policy adopted by the Bengal Government towards the jute grower and the efforts to improve transport facilities has been very welcome to the ryot. But for any substantial improvement in values to be recorded, there must be freer movement and until such time, it will not be possible to remove the disparity in prices between Calcutta and other mofussil districts.

In the loose jute section sellers have been very firm in their ideas and mills have been obliged to concede in the rates asked for. European Bottoms were done at Rs. 7-8, and Indian Districts, Middles and Bottoms at Rs. 8-4 and Rs. 6-8 respectively. Cross Bottoms were higher at Rs. 6 per maund while Tossa Middles and Bottoms were done at Rs. 11 and Rs. 8-4 per maund.

In the Pucca bales section firm conditions have been noticeable, balers reporting a good amount of business. Dundee Daisee 2/3 were done at Rs. 60 per bale and Dundee Tossa fours at Rs. 61 per bale. Mills bought N.C.'s and M.C.'s at Rs. 18 and Rs. 17 per bale respectively. Firsts 2/3 and Lightnings were higher at Rs. 60 and Rs. 45 per bale respectively.

JUTE MANUFACTURES

Calcutta, October 29.

EARLIER in the week the jute manufactures market was inclined to be easier as with the dislocation in railway facilities and the holidays not much business was passing. On reopening after the long holidays, there has been a strong upcountry demand and prices for near positions especially have firmed up in the hessian market. 9 porters ready have improved from Rs. 14-11 to Rs. 14-14, November-December Rs. 15 and January-March Rs. 15. 11 porters are quoting Rs. 18-13, November-December Rs. 19 and January-March Rs. 19.

The heavy Goods section was inclined to be easier early in the week, demand being apparently satisfied but as the week progressed, the firmer tone has again asserted itself and quotations are, on balance, higher. Sellers for near delivery are not prepared to negotiate unless substantial premiums are offered. "B" twills sold at Rs. 52 for October and Rs. 53 for November-December as also Liverpool twills at Rs. 57 for October. Cornsacks were done at Rs. 52-8 and Heavy Cees Rs. 45-8.

Local stock figures for the month of October should make interesting reading as producion should have been affected on account of the holidays. If the reported improvement in the shipping position has resulted in an increase in offtake there should not be any appreciable increase in either hessian or sacking stocks.

GOLD

Calcutta, October 29.

IN sympathy with the sharp rise in prices in the silver market, gold prices have been marked higher. Not much business has been passing but stocks in the local markets are reported to be small. Gold ready are quoting higher at Rs. 59-13 against Rs. 58-7 at the time of last writing. The improvement in the quotation for sovereigns is particularly pronounced, being Rs. 44-5 against Rs. 42-14 two weeks back. The Bombay market is still closed and it is not known when business will re-commence officially.

SILVER

Calcutta, October 29.

THE silver market, as reported above, has been very inactive. It will be remembered that following the decision of the Government of India to withdraw King George V and George VI standard rupees and half-rupees, the impression gained ground that the Government of India's stocks of silver had gone very low and that with the difficulty of getting further supplies of the white metal and the increase in world prices, it will not be possible to prevent any further increase in the Indian price for silver. It was reported that a quotation as high as Rs. 108 was recorded during the holidays. At the time of writing it is now quoting Rs. 100. The undertone, however, is steady.

There is no change to be reported in the London market and small demand has been officially satisfied, the quotation for both spot and forward remaining unchanged at 23½d.

PIECEGOODS

Calcutta, October 29.

THE piecegoods market has not been very active as demand on account of *Id* and *Pujah* festivities has just been satisfied and with the scarcity of supplies an abrupt rise in prices has already taken place. But even in the absence of any large business, there is no suggestion of any weakening in prices. The recent interruption in production, in the Western Presidency especially, will, it is believed, upset the programme of the Government to a considerable extent. If their requirements are to be satisfied in full, there will be very little left over for civilian consumption. The delay in the putting into effect the yarn control scheme also prevents an increase in production from the handloom weavers. With the large requirements of the defence services overseas markets and the home markets, any loss in production would, therefore, be difficult to be made up.

There is naturally considerable agitation for the marketing of standard cloth on a large scale but it appears that there are many difficulties in the way and certain quarters are not satisfied with the quality of standard cloth proposed by producers. It is very doubtful whether it will be possible to control any undue rise in prices, at least for the lower qualities, without any intervention on the part of the Government.

GOONDAS HURT US

Destruction and robbery are the hallmarks of *goonda-raj*. Every good Nationalist condemns them, because they delay *swaraj*.

ROADS SMASHED
BRIDGES AND CULVERTS BROKEN!

These acts isolate villages and small towns, cut off their supplies and prevent them from selling their products. No money—even for the money lender!

If your relatives live in a district infested by *goondas*, just think what they are risking!

SEED—STORES, POST-OFFICES AND *KATCHERIS* BURNT

Is the cultivator to have no crops to sow? And when a Post Office or *Katcheri* is burnt down, it is the poor people who will have endless trouble. Because the records of their savings, their pensions and land-ownership are destroyed. Government suffers least of all.

If we are all determined to act together, we can end the goonda-menace. *The authorities alone cannot stop it as quickly as we can.*

FIGHT GOONDAS

Form local committees, organise volunteer patrols.

BURN & CO., REDUCES DIVIDEND FOR 1941-42

THE reopening on the Calcutta stock exchange after the holidays was rather active. In Monday's session quite a large volume of business was recorded and the quotations for Indian Irons and Steel Corporations were around the levels reported in unofficial transactions during the time markets remained closed. There was some accumulation of orders, though not enough for a sustained rise in prices. The reports regarding the deterioration in the situation in Stalingrad and the bombing of Chittagong and some aerodromes in North-East Assam by a strong Japanese air-force had, therefore, a depressing influence. With the tendency to cash profits at higher levels bears took advantage of the opportunity and pushed down values. From Rs. 34-8 cum-dividend Indian Irons have come down to Rs. 30-4 ex-dividend, a decline of nearly two points during the past four days. Steel Corporation also are more than a point lower at Rs. 20-4. Friday morning's reports of a further attack on aerodromes in North-East India have not had any discouraging effect though there is a perceptible decrease in the volume of business. There is no suggestion of weakness but a note of caution has set in and both operators and investors are inclined to await further developments.

In the absence of any encouraging news regarding the war situation, it is unfortunate that the decision of the directors of Burn and Company to reduce the dividend for the year ended April 1942 should come about at the same time.

* * * * *

Indian Steel and Wire Products Limited also is to reduce the dividend for the year ended March, 1942. In spite of a large increase in sales it has not been possible to report a higher level of earnings. The entire output of the factory is controlled by the Government to meet direct and indirect requirements of war and essential services at fixed prices. The increase in the cost of raw material, stores and labour charges have actually resulted in a slight decline in the earnings for the year over 1940-41.

Total sales amounted to Rs. 1.41 crores against Rs. 1.22 crores in the previous year. The net profit before providing for taxation and depreciation is only Rs. 46,84,012 against Rs. 54,92,668 for the previous year. The amount set aside to depreciation is slightly higher at Rs. 7,59,268 against Rs. 7,62,288. but owing to the necessity for providing for taxation and Excess Profits Tax on an almost equal scale, Rs. 24.75 lakhs against Rs. 26 lakhs, it has not been possible to maintain the dividends even after reducing the allocations to other funds. The general reserve receives only Rs. 2.5 lakhs against Rs. 6 lakhs on the former occasion while Rs. 1 lakh has been provided for war risk insurance. The dividend on the ordinary shares has been reduced from Rs. 4-8 per share to Rs. 3-8 per share and that on deferreds from Rs. 3-6 per share to Rs. 2-8 per share. The amount carried forward is slightly lower at Rs. 1,07,542 against Rs. 1,42,101 brought in.

Throughout the year the plant produced sufficient quantity to meet the heavy Government requirements. The production in the Rod Mill was satisfactory and new machinery was purchased during the year to increase the productive capacity of the plant. These machineries, however, had to be purchased at rather prohibitive prices and provisions have, therefore, to be made for depreciation at a higher rate. Capital expenses incurred in the extension of factory buildings and staff quarters have been considerable during the year which would account for further depreciation.

Even with the lower level of dividends the return on the shares is attractive being over 6 per cent tax-free. It need hardly be emphasised that the financial position of the company is very strong and that the percentage of earnings to total capital is nearly 200 per cent. Out of the balance-sheet figure of Rs. 144.96 lakhs, the net block amounts to only Rs. 19.78 lakhs; outstandings are Rs. 19.38 lakhs while investments are Rs. 15.62 lakhs. Cash and bank balances constitute the substantial sum of Rs. 43.52 lakhs.

* * * *

Prosperous conditions in the cotton textile industry are again borne out by the results of another important company, the *Sholapur Spinning and Weaving Company, Limited* for the year ended March 1942. The net profit, before providing for taxation and depreciation, shows a jump from Rs. 15,28,854 to Rs. 34,81,821; the provision for depreciation is Rs. 12,12,000 against 12,34,300; Rs. 2,10,000 (same) has been transferred to the Sinking Fund. The dividend is considerably higher at 30 per cent against 6 per cent formerly. The amount carried forward is the substantial sum of Rs. 15,88,987, subject to taxation. It is noteworthy that out of the earnings of over Rs. 34 lakhs the amount paid on account of dividends is only Rs. 4.8 lakhs. The total capital even after the increase in May, 1940 is only Rs. 16 lakhs whereas the total fixed capital expenditure is Rs. 1.47 crores. Reserves and other funds amount to as much as Rs. 111.39 lakhs. Against the debenture capital of Rs. 36.17 lakhs there is a debenture sinking fund of Rs. 25.2 lakhs. It is possible therefore to increase dividends substantially even if there is a small increase in earnings. If the directors have not declared any bigger dividends, it is because they do not want to give the impression that they were over-generous.

* * * * *

The difficult conditions in the jute industry have not affected the earnings of the *Bally Jute Company, Limited*, to any great extent. This company has again been the first to come out with its balance-sheet for the half-year ended September 30, 1942. Sales are only slightly lower. The net profit before providing for taxation and depreciation is Rs. 8,87,879 against Rs. 9,96,960 for the previous half-year. The reduction in the earnings of the company has not in any way affected the interest of shareholders as there has been a decrease in the provision for taxation from Rs. 6.2 lakhs to Rs. 5.3 lakhs. The dividend on ordinary shares has been maintained at 10 per cent. The amount written off for depreciation is the same at Rs. 1 lakh. The amount carried forward is slightly lower at Rs. 82,297 against Rs. 94,417 brought in. It is highly doubtful whether, with the lower level of prices for hessian and the difficulty in getting shipping, it will be possible for earnings during the current half-year to be maintained at the previous level.

* * *

It has been pointed out above that the declaration of the dividend by Burn & Company, Limited for the year ended April 1942 has come as a surprise to the market. No doubt the surprise has been unwelcome as it was generally anticipated that it would be possible to maintain at least the dividend at Rs. 25 per share, not to speak of an increase in the level to Rs. 30 per share, the dividend declared for 1939-40. In the absence of any accounts, it is difficult to state why the directors have chosen to reduce the dividends to ordinary shareholders. But it must be borne in mind that the directors referred to the difficulties in getting imported supplies and getting over technical problems.

WATCH-DOG.

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, October 30.

THE reopening after the long *Id* and *Puja* holidays was rather active on the Calcutta Stock Exchange. With the accumulation of orders and the reports regarding unofficial transactions at rather high levels during the holidays, opening quotations were naturally higher. Indian Irons and Steel Corporations were done at Rs. 34-8 and Rs. 21-8 respectively. But once the initial buying was over a sagging tendency was noticeable. The reports regarding the attack by a strong Japanese air force on Chittagong and some aerodromes in N.-E. Assam also had a chilling influence. During the past two days a rather quiet tone has been noticeable and most of the gains have been lost. Quotations, however, are higher on balance. There is a tendency to await the outcome of the Battle of the Solomons. The news from Stalingrad also has not been quite encouraging.

The giltedged securities section has been rather quiet. The quotation for 3½ per cent Paper is lower at Rs. 94, but terminable loans have remained steady. 3 per cent 1963-65 was crossed at Rs. 95-2, 3 per cent Second Defence loan was done at Rs. 100-2, 3 per cent 1951-54 at Rs. 100, 4 per cent 1960-70 at Rs. 110 and 5 per cent 1945-55 at Rs. 109-2. Among provincial loans, 3 per cent Punjab 1949 were crossed at Rs. 99-13. There has been no appreciable change in money conditions though with the coming into the market by the provincial governments for treasury bills there has been a slight increase in the central government treasury bills rate from nine annas and nine pies per cent per annum to ten annas and three pies per cent per annum.

Not many transactions have been recorded in public bodies debentures. A small lot of 3¼ per cent *Howrah Bridge* debentures were done at Rs. 94-14. Among indusrial debenures, 5½ per cent *Dalmia Cement* debentures were Rs. 104-2 and 5½ per cent *Hukumchand Jute* debentures Rs. 101-8.

Bank shares were firmer with the quotation for *Imperial Bank* fully paids at Rs. 1,605 and contributories at Rs. 392. *Reserve Bank* were noted higher at Rs. 104 earlier in the week but the quotation has declined towards the close to Rs. 102.

Cotton shares have been steady and have not displayed any weakness. *Benares Cotton* were Rs. 6-10, *Elgin Mills* Rs. 40-2, *Kesoram* Rs. 12-8, *Muir Mills* Rs. 333 and *New Victoria* Rs. 7-8. *Cawnpore Textiles* were Rs. 12-12.

Coal shares have not been very interesting and quotations have been maintained around last levels. *Amalgamated* were Rs. 28-4, *Bengal* Rs. 385, *Bokaro and Ramgur* Rs. 18, *Equitable* Rs. 34-10, *Hurriladih* Rs. 12-13, *New Beerbhoom* Rs. 16-4, *Seebpore* Rs. 22-10 premium, *South Karanpura* Rs. 4-12 and *Union* Rs. 32-12.

Jute shares were marked higher early in the week but closing quotations are lower. The improvement early in the week was due to the strength of other sections and also to the belief that the worst had been seen so far as the jute industry was concerned. *Albion* were Rs. 189, *Alliance* Rs. 300, *Anglo-India* Rs. 348, *Auckland* Rs. 169, *Bally* Rs. 247, *Howrah* Rs. 54-8, *Kamarhatty* Rs. 482, *Megna* Rs. 61-8, *Nuddea* Rs. 69, *National* Rs. 23-12 and *Union* Rs. 308. Earlier in the week *Howrah* were noted higher at Rs. 57 as also *National* at Rs. 24-8. The higher-priced popular shares were in good request but most of the ground gained has been lost towards the close.

In the Engineering section, rather active conditions were noticeable early in the week and Indian Irons and Steel Corporations were noted as high as Rs. 34-8 and Rs. 21-8. Some selling at the higher levels, the reports regarding Japanese air activity in the Eastern border and the disappointing dividend by the Burn & Company, Limited, have had a discouraging influence. The quotation at the time of writing is around Rs. 30-8 and Rs. 20-8 respectively. In the case of Indian Irons the quotation is ex-dividend. A dividend of Rs. 20 per share for the year ended April, 1942 is to be paid to the ordinary shareholders of the Burn & Company, Limited. It was generally expected that the dividend would at least be maintained. It is not surprising, therefore, that there has been a drop in the quotation to Rs. 370 from Rs. 390 on the announcement of the dividend. *Bhartia Electric Steel* were Rs. 15-13, *Britannia Building and Iron* Rs. 11-12, *Kumardhubi Engineering* Rs. 5-6 and *National Iron and Steel* Rs. 11-12.

In the Sugar section, rather quiet conditions have been noticeable with *Balrampore* lower at Rs. 12-15, *Carew & Co.* at Rs. 15-15, *New Savan* at Rs. 14-7 and *Samastipore* at Rs. 14-3. *Buland* and *Raza* were steady at Rs. 36-14.

Tea shares have been rather uninteresting with *Banarhat* at Rs. 452, *Choonabhutti* at Rs. 470, *Hantapara* at Rs. 415 and *New Samanbagh* at Rs. 28-8. *Sapoi* were Rs. 12-8 and *Tukvar* Rs. 13.

In the Miscellaneous section, *Burma Corporation* were higher at Rs. 3 but have receded to Rs. 2-12 towards the close. *Indian Copper Corporation* were higher at Rs. 2-8. *B. I. C.* were fully firm at Rs. 5-13. *Britannia Biscuits* were Rs. 11-14 and *Indian Rubber Manufacturers* at Rs. 25-12. *Borooah Timber* were Rs. 18-8 and *Bararee Coke* Rs. 27. *Dalmia Cement* ordinaries were Rs. 16-2, *Dunlop Rubber* Rs. 39-8 and *Indian Wood Products* Rs. 29-4. Paper shares were firmer with *Titaghur Paper* higher at Rs. 21-8, The quotation is easier at the time of writing at Rs. 20-10, *Bengal Paper* were Rs. 164, *India Paper Pulp* Rs. 164, *Orient Paper* Rs. 22-13 and *Shree Gopal Paper* Rs. 19-8.

Allocation to funds including depreciation ..	23,558	28,127	25,687	28,897
Provision for taxation ..	10,000	20,000	10,000	17,000
Dividend amount ..	20,000	40,000	40,000	40,000
Dividend per cent ..	2½	5	5	5
Carry forward ..	3,172	5,992	4,605	7,363

(Half-yearly meeting, held 29th October, 1942).

Audited accounts for the half-year ended 30th June, 1942:—

Accounts.—The Profit and Loss Account after making provision for taxation, providing Rs. 23,558-6-3 for Depreciation, and including the sum of Rs. 9,402-2-1 brought forward from last half-year, shows an available balance of Rs. 23,171-14-11, which the directors propose to dispose of as follows:—

	Rs.	A.	P.
In paying a Dividend at the rate of 5 per cent per annum without any deduction for income-tax paid by the Company	20,000	0	0
In carrying forward	3,171	14	11
Total Rs. ..	23,171	14	11

Market.—The market has recently been steady with an upward tendency.

Labour.—The labour available in the early part of the year was considerably below normal reflecting on the raisings which were below the estimated expectations.

Owing to the rising cost of living it was decided to grant in the Jharia field a further allowance of 12½ per cent on basic wages as from 1st January. This was mentioned in the last Directors' report.

Transport.—During the half-year under review, the wagon position has deteriorated and the available transport has been insufficient even for orders on priority. Further, a large percentage of covered wagons has been supplied, thus immobilising the Company's mechanical screening and loading devices. The coal raised has first to be dumped and thereafter loaded by hand, thereby entailing additional loading cost.

Colliery.—The mines and machinery were maintained in good order.

Sandstowing.—During the half-year under review, the Ropeway was practically completed but due to War conditions there has been a very considerable delay in obtaining certain essential parts and until these arrive the full advantage of the installation cannot be obtained.

Until such time as sand in considerable quantities is stowed at this colliery a reduction in raisings must be expected and it is with regret that the Directors have to intimate that on account of the delays over which neither they nor the supplies had control it may be some time before the full planned output is achieved.

Managing Agents.—Messrs. F. W. Heilgers & Co.

Authorised, Issued and Subscribed Capital—Rs. 8,00,000 *in* 80,000 *shares of Rs.* 10 *each, fully paid-up.*

Carry forward ..	8,102	11,863	11,727	12,662

(Half-yearly meeting, held 27th October, 1942).

Audited accounts for the half-year ended 30th June, 1942:—

	Rs.	A.	P.
The Profit, after deduction of all working charges and commissions, amounts to	1,61,224	10	9
To which must be added the amount brought forward from the previous half-year	5,877	13	11
Total Rs. ..	1,67,102	8	8

After providing for:—

	Rs.	A.	P.			
Reserve for taxation ..	50,000	0	0			
Depreciation	30,000	0	0			
General Reserve	10,000	0	0			
and the following sums written off:—						
Mining Lease Account ..	3,300	0	0			
Surface Lease Account ..	1,700	0	0	95,000	0	0
There remains a balance of				72,102	8	8

which the directors recommend should be dealt with as follows:—

In payment of a dividend for the half-year at the rate of 10 per cent per annum, without any deduction in respect of income-tax paid by the Company	64,000	0	0
To be carried forward	8,102	8	8
Total Rs. ..	72,102	8	8

Despatches from the Railway Collieries were considerably less than during the previous half-year. Owing to large stocks of coal accumulating through short supply of wagons, raisings at Dhori Colliery were restricted during May. The wagon supply subsequently improved and full raisings were resumed in June.

Managing Agents.—Messrs. Anderson, Wright & Co.

(Annual meeting, 3rd November, 1942 *at* 3-10 *p.m.)*

Audited Acccunts of the Company for the year ended 31st March, 1942:—

Capital.—Capital Expenditure incurred during the year amounted to Rs. 18,131-12-0, making the total expenditude from the commencment of operations to 31st March, 1942, Rs. 66,13,938-4-2.

Net Revenue.—The Net Earnings for the year amounted to Rs. 3,47,048 as compared with Rs. 3,11,579 for the prvious year. The increase is mainly attributable to increase in Coaching Traffic consequent upon Petrol Rationing and the War.

During the year an Interim Dividend at the rate of Rs. 2-4-0 per share, less Re. 0-7-6 being the equivalent of the current rate of Income-tax, was paid. The amount available for final distribution is Rs. 2,07,097-7-0. The Directors recommend the payment of a Final Dividend at the rate of Rs. 2-4-0 per share, subject to a similar deduction for Income-Tax, making Rs. 4-8-0 per share for the year, which will absorb Rs. 1,46,250 and leave, after payment of the Managing Agents' Commission, a balance of Rs. 52,722-7-0 to be carried forward.

Authorised, Issued and Subscribed Capital—Rs. 65,00,000 *in* 65,000 *shares of Rs.* 100 *each, fully paid up.*

Synopsis of the balance sheet as at 31st March, 1942:—

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Friday Evening.

THE banks continue apathetic towards short credits as well as term money; and the nominal rate for interbank call money is half per cent in Calcutta and ¼ per cent in Bombay. It is difficult to place new deposits with bankers, who, were they in sunniest mood, could be persuaded to accept renewal of deposits. In spite of treasury bill outstandings exceeding Rs. 90 crores mark, banks are groaning under piles of uninvestible cash. Deposits maintained by banks with the Reserve Bank maintain their upward tendency and have risen from Rs. 68.51 crores on October 23 to Rs. 70.81 crores on October 30. On the weekly treasury bill tender day, though the amount of applications at Rs. 11.10 crores does not suggest keen bidding, there has been a sharp reduction in the average discount rate from annas ten and pies three per cent per annum on October 27 to annas nine on November 3. The benefit of the cheaper treasury bills is also reaped by the Bengal Government who secured their Rs. 50 lakhs at annas ten per cent on November 4. It was unfortunate for the Madras Government that they entered the market at the end of last week as they had to pay annas ten and pies eight per cent for their Rs. 50 lakhs of short term bills. The U. P. Government are asking for Rs. 75 lakhs of Treasury Bills; and tenders are receivable on November 11.

It is also noteworthy that the Central Government have increased their offer for next week to Rs. 10 crores. This may be due to the heavier maturities to be provided for this week; but the maturities thereafter are on the comparatively small side. It is, therefore, not unlikely that this increased offer will last only for a week or two.

The return of the Reserve Bank for the banking department for the week ended October 30, shows a receipt of Rs. 7 crores from the British Government. Foreign balances have risen from Rs. 87.37 crores on October 23 to Rs. 94.41 crores on October 30. Sterling securities in the issue department remained unchanged. It may, therefore, be inferred that the increase of Rs. 7 crores in the foreign balances in the banking department is roughly the measure of payment received by the Indian Government in respect of inter-governmental transactions. Active note circulations builds a new record at Rs. 514.70 crores, due mostly to the decrease in notes held in the banking department from Rs. 12.33 crores to Rs. 9.78 crores. Rupee coin has declined further from Rs. 22.20 crores to Rs. 21.84 crores.

With the sterling payment received in the week under review from the British Government, the Reserve Bank has made up for the loss of sterling assets caused at the end of September in connection with the scheme for sterling railway annuities. This scheme involved the payment of sterling for £30 million to the British Government. For this reason, there was a sharp fall in sterling securities held in the issue department from Rs. 329.79 crores on September 25 to Rs. 304.83 crores on October 2. Since then, there have been gradual additions of sterling securities to the issue department; and sterling securities as on October 30 were Rs. 325.83 crores, comparing with Rs. 329.79 crores on September 25. That is to say, there is a decline of Rs. 4 crores in sterling securities between these two dates. But sterling assets in the banking department have risen from Rs. 86.27 crores on September 25 to Rs. 94.41 crores on October 30. There is thus an increase of over Rs. 8 crores. In the result, the total sterling holdings of the Reserve Bank to-day exceed those of September 25 by Rs. 4 crores. The substantial recovery thus recorded in the short space of a month is likely to be repeated when, early next year, similar withdrawals of sterling securities from the Reserve Bank may be necessary in connection with the repayment of 3½ per cent undated sterling stock.

This super-prosperity of India in sterling assets may well prove India's undoing. It is already well-known that the Government of India are considering proposals put forward by the British Government for a new agreement with regard to allocation of war expenditure as between India and Britain. The full facts about this new plan will not be known for some time; but two messages from America received this week should confirm suspicion and deepen misgivings. A New York message dated November 3, was reported in the morning papers of November 4 and read as follows:

"The United States Secretary of Treasury, Mr. Henry Morgenthau arrived here to-night abroad a Trans-Atlantic clipper. He had been abroad for about three weeks. Mr. Morgenthau arrived in England on October 17, on what was described as Treasury business. He spent about ten days in London."

On the morning of November 4 also appeared a Washington message which was despatched on November 1 and was evidently delayed. The Washington message reads as follows:

"Opposition was voiced here on Saturday to the suggestion made by General Sir Walter Venning, Director of the British Supply Mission, that British and American Lend-Lease accounts should be cancelled.

"Senator Tydings said that although the United States 'stood a small chance' of getting back the 648 million dollars officially reported to have been advanced up-to September 1, he thought the United States 'ought to keep a record to show what had been furnished, how it had been furnished, who used and how they used it.

"Senator Reynolds of the Senate Military Affairs Committee said that he could not see why the American tax-payers should 'be forced to pay all bills of the war' adding that 'before the war is over we will be paying in blood as well as in dollars'."

Putting two and two together, it looks as though the British Government are busy taking measures from now with regard to the reduction or extinction of her financial liability at the end of the war; that, moved by this desire, they have proposed to the U.S. Government the cancellation of Britain's debt under Lease-Lend accounts; and that

Aspects of an Industry No. 7

ORDEAL BY FIRE

OUR forefathers used the ordeal by fire for two main purposes — a test of innocence and a test of endurance. It was a form of trial common in India as late as the XVIIIth century. It took the form of carrying a red-hot iron rod for a set distance in the naked hands. To-day the inhabitants of Great Britain in common with those of many Eastern lands know what it is to endure the ordeal by fire from enemy air raiders. The British chemist is similarly concerned with fire in two main directions. First he is constantly examining new materials and processes for lessening the danger from fire. From the laboratories come chemicals impregnated with which wood, fabrics and even thatch are given powers to resist flames or are made proof against fire. Research is being pressed forward unremittingly to increase the fireproof properties of buildings by the development of fire-resisting paints, plasters and other building materials. War has enormously accelerated this work and great strides have been made by the British chemist to win the battle of fire by countering the effect of the incendiary bomb. There remains the test of endurance. Fire scientifically applied has the power to give metals the high temper and durability that modern conditions demand of them. Among the many important services that the chemist performs for the great metallurgical industries is the casehardening and heat treatment of steel. Nor does he only produce the chemicals used in the processes : he helps in the design and construction of the furnaces and other equipment in which the metal parts are treated. The British chemist is as active in defending the citizen from the dangers of fire as he is ready at all times to bend fire to the service of Industry.

Finance Abroad

Wednesday Evening.

THE buoyancy of industrials and the stability of giltedged in London alike have been sustained by the progress of British arms in Egypt. If Wall Street has got one of its fits of blues, London markets have been shaping very well. Military operations have not been alone in supporting optimism since the broadcast of Marshal Smuts. There is the general view as to the benefits given to important textile groups like Lancashire Cotton Corporation and the advance in motor shares is suggestive. The most convenient explanation is that the spread between giltedged and equities has to be narrowed, and the market is merely making the adjustment this year. Small savers who are putting up more money for war bonds and savings certificates may not be impressed by the rise in share prices but the non-appearance of large scale air attack should strengthen faith in the industrial future of Britain. A further reason may be the evidence of inflation provided by the Bank returns. If the market takes avidly £85 million in treasury bills every week and puts up £50 million or more for six-month deposits it may be due to the glut of funds. The weekly Bank returns in October certainly indicated that circulation is still rising and share values are being affected by monetary influences this year. The parallel is not lacking in India at present and the disturbance produced by the general rise in prices is more or less tolerated.

While nothing has appeared of late to suggest that inflation has been fought to a standstill in the U.S.A. evidence of a reaction has not been lacking in the cotton and grain markets. The Allied nations, as a whole, welcomed President Roosevelt's decision to arrest the rise in prices. As his own salary has been adjusted to the optimum level of $25,000 a year the U.S. public at large will put up with all the emergency measures. The big book of coupons contemplated by over-all rationing procedure will not be unfamiliar to Americans. What is most obvious is that this year's elections to Congress will lead to a smaller majority for the Democrats in both Houses but there is a chance that more Democrats may be elected Governors of States. Mr. Roosevelt's choice of Mr. Farley's nominee for the Governorship of New York will put the Democrats in the lead in the Empire State and Wall Street's listlessness is merely the effect of Republican ill-humour. The elections are a market factor in the U.S.A. far more than Mr. Morgenthau's return to Washington. Mr. Morgenthau's affirmation that the Treasury will buy gold at $35 an ounce seems to have so far received little attention. Now that Russian output is excluded and so many countries are actually curtailing gold mines' output for several reasons, the assurance that the big buyer will keep on buying has special importance. It is of direct importance to bullion operators in India. Gold has touched last month the Rs. 60 per tola mark in Madras where sovereigns sold for Rs. 45 and over. Difficulties of transport produce curious and pronounced variations in prices; and the scramble for precious metals is proved by the fact that offtake exceeds influx in the two big cities. The jump in silver has influenced keen buying of gold and silver thread. Augmentation of silver supplies from this source cannot be considerable, but the ban on exports and the present price of silver are enough. The only notification other than one relating to the deletion of postage stamps from the list of articles, the export of which is prohibited at present is one stating that currency notes on which any message of a political nature appears are invalid. A brief message indicated that notes were being put to an unusual use in India and the Government intervened by declaring that independent additions to the printed words are likely to produce serious loss for holders of notes. Statements as to standard silver rupees have not created much excitement. The possible addition to silver supplies cannot be large and the present tendency is to discount anything short of an assurance that the Government will not sell silver in London and will get enough silver from America.

One beneficial result of hoarding is that it freezes purchasing power and is a most potent anti-inflation remedy. The voluntary sterilisation of money in private bullion holdings is to be welcomed since it takes off money from speculation in share markets and if bullion prices were held rigidly, the buying of gold should be viewed as a proper means of using surplus income in wartime. That the shortage of imported goods deflects money into bullion, may not be accepted but the time is not far off when bullion dealings should be under supervision. Total war demands the application of all available money to the war effort, and the present buying of precious metals suggesting panic, has not been officially frowned at. There is a possibility that the precious metals are generally treated as a hedge against inflation. Funk money is not going out; it is used for buying the metals.

Though China may not be buying silver, and India alone may be devoted to silver, the average buyer of silver declines to believe that silver prices may break. There is, however, a real risk that plentiful supplies after the war may reduce the value of present purchases. This fear must haunt every mind at present, and the zigzag variations in silver prices in India, compared with the price in London and New York (naturally lower, apart from the import duty) makes it necessary for one to suggest that official discouragement of silver purchases is required.

The most important refutation of the Nazi claim that interest rates have been reduced in Europe by Nazi supremacy is found in the fact that the yield on bonds is 1½ percent higher in Germany than in Britain. In Germany until July industrial bonds enjoyed the same esteem as State loans and the usual margin between gilts and bonds appeared to be narrow. The rate of interest is naturally lowest in the U.S.A. where the ruling rate for Treasury bonds is 2 percent and for jointstock companies' bonds is just a little below 3 percent as against 3 1/3 percent in Britain. The rate on gilts is high in Rumania (over 7½ percent in fact) and fairly low in Belgium. Dr. Einzig has argued effectively against the German claim. The war has not changed money markets, which is proved by the fall in the yield in gilts and debentures alike in Sweden and Switzerland. They are still enjoying the benefits of the cheap money era though Swiss short-term rate of 1¼ percent (with the Bank rate at 1½ percent only) is higher than the average of ¾ percent cited in the case of India.

The conventional differences between the value of Dominion currencies and sterling appear to persist in the war period. The Canadian dollar is worth about 90 cents in New York and the South African pound is quoted at $3.98 to the pound. The full parity of the Iraki dinar at present with sterling is illustrated by the quotation of $4.035 to the Dinar in New York. The Egyptian currency appears to have strengthened slightly since 1941 and Latin American currencies as a group have hardened slightly after America entered the war. The cause must be sought in the course of U.S. trade. It is evident that European currencies, except sterling, are not quoted in New York and one cannot say if the rouble at present has any standing as compared with the devalued rial of Iran.

The changes in value cannot be measured by reference to the changes in the purchasing power in various countries. Europe is a dark continent in fact and the most that can be said is that cheap money is the universal factor; and this makes for inflation rather than otherwise. The rate at which Britain spends money on the war has ceased to interest the public. Whether it is £14 million or £12¾ million a day and whether 40 percent comes by way of taxes or less is hardly taken into consideration. To affect unconcern is the fashion for the people have been taught to put finance last. The stability of discount rates etc. is, therefore, of little interest even to the City which knows that the Bank rate will not be altered if borrowing extends and prices keep rising. The old controls have been superseded by new controls and rationing of money is not the only thing introduced in the period of controls. As bank pass-books are to be subject to new rules as to their use in the U.S.A. and banking syndicates are anxious to finance General Motors Corporation for its own war programme up to 1000 million dollars through a revolving fund, one might say that across the Atlantic big changes are in progress. The phrase used last month was rationed banking suggestive of control of the individual depositor's use of his deposit. Compulsory saving may be effected though the segregation of a part of the savings pooled by banks and the fight against inflation launched from yet another quarter.

Editorial Comments

Three years of War Finance—X

Foreign Trade

Reviewing the course of India's Foreign Trade for the year ended June, 1942, we had occasion to point out that this country was able to get over the shocks in the early stages of the war period and that the loss in trade, with the closure of certain markets, was more than gained by the increase in trade with certain other new markets. We also emphasised at the same time that the expansion in export trade would be limited only by the availability of shipping space as with the large natural resources and a favourable geographical position, it was convenient for the United Nations to draw upon this country for their supplies. Nothing has happened between now and then to dispute the validity of our conclusions. There is still great demand for the country's products and if there has been a slight decline in the total of trade or rather if there is any suggestion of a decline, it is only due to the difficulty in obtaining shipping space.

That this country has stood to gain ultimately on account of the war situation in spite of the loss of the continental markets, and more recently of Japan, Malaya, the Straits Settlements, Burma and the Netherlands East Indies, is something very remarkable. For, used to the conventional notions regarding the trends of foreign trade, the average exporter has never been so optimistic enough to accept that the losses on account of trade in respect of the usual channels would be more than regained.

The readjustment in trade has been very welcome as otherwise there would have been considerable disturbances to the economy of the country but whether we can be exuberant over the changes that have occurred in the direction of trade is a moot question. For, an analysis of the composition and direction of trade reveals that access to new markets and trade has been possible only because there was no competition and importers were prepared to pay the prices asked for. In the post-war period whether the former exporters will first try to recapture their lost markets, which will naturally be the tendency in every case including Indian exporters, and whether it will be possible to retain our hold on the new acquisitions remains to be seen. Efforts should naturally be made to take full advantage of the present situation.

Coming to the course of trade during the first three years of war, figures are available only for eleven months in the third war period September, 1941 to August, 1942, total exports in 1939-40 (first war year) were Rs. 212.64 crores; in 1940-41, Rs. 157.58 crores; and in the eleven months of 1941-42 Rs. 213.13 crores. The figure for 1941-42 was adjusted on the basis of the figures for July, 1942; the total for 1941-42 will be about Rs. 228 crores. During these three years of war, imports totalled Rs. 161.37 crores in 1939-40 and Rs. 175.23 crores in 1940-41. In the eleven months of 1941-42 actual imports were Rs. 114.14 crores and the figures for 1941-42, adjusted on the basis of July 1942, will be about Rs. 124 crores. Total exports in the first three years of war will thus amount to Rs. 628.22 crores against total imports of Rs. 460.6 crores. The favourable balance of trade thus amounts to Rs. 167.62 crores. In the twelve months ended March, 1939, a year in which peace-time conditions existed, the surplus of exports over imports was only Rs. 10 crores. So that on a three-year basis the total favourable balance of trade was only about Rs. 30 crores. In spite of the serious handicaps and the disturbances to trade experienced by our exporters, the advantages accruing to this country on account of the present emergent conditions is thus of the order of Rs. 130 crores. The improvement may be striking, but compared to the achievements in the field of industry, even with our limitations, the addition to the purchasing power of this country, having consideration to the higher level of prices, is nothing much.

An actual study of the figures shows that the improvement in the balance of trade in our favour was due more to the declining rate of exports than to any appreciable expansion in the volume of trade. To this extent, it must be said that the improvement is negative. Our trade in the important commodities is still on a very small scale, cotton exports in 1940-41 being Rs. 17 crores lower than the figure for the first year of war and jute exports Rs. 10 crores lower- Oilseeds in spite of the recent improvement in trade conditions are still Rs. 1½ crores lower while trade in oilcakes has practically disappeared. The only improvements to be noticeable in the export of articles, wholly unmanufactured, are in metallic ores, and hides, undressed. Prior to the fall of Burma there was a big export trade in food grains but we are not sure whether the trade in this regard has been actually discouraged during the past few months in view of the present conditions in the country. Other notable increases are those in tea and sugar. Total exports of food grains, drink and tobacco show an improvement from Rs. 38.42 crores in 1939-40 to Rs. 51.87 crores (11 months) in 1941-42. Raw materials and produce and articles mainly unmanufactured show a decrease in the same period from Rs. 82.43 crores to Rs. 54.64 crores. The increase in the exports of manufactured articles would be even more pronounced (the increase being from Rs. 89.77 crores in 1939-40 to Rs. 102.94 crores in 1941-42) but for the decrease in the exports of jute manufactures, hides and skins and metals, iron and steel. The only saving feature is the boom in exports of cotton manufactures from Rs. 10.65 crores to Rs. 41.23 crores.

So far regarding the actual trade in the last three years. We have remarked earlier regarding the direction of trade in recent years and pointed out that the loss on account of export markets has been more than regained. Only it was doubtful whether the advantage would prove to be temporary or permanent. If one were told that the loss on account of continental markets and others like Burma, Malaya, Hongkong and the Netherlands East Indies and Japan was as much as Rs. 60 crores, we would perhaps be surprised to note as to how such a large volume of trade could be replaced. That such a development has actually taken place, only serves to emphasise the wide range of commodities offered for export in the country and the popular demand for the same. The favourable balance of trade in respect of the loss of markets was not very much. In 1941 the unfavourable balance with Burma was as large as Rs. 12.39 crores and Japan Rs. 12.57 crores. If, therefore, we can only utilise our resources fully inside the country, or rather develop the trade in the usual channels, the actual gain would be very much more.

Coming to a study of the direction of trade in 1940-41 and 1941-42, out of the total exports of Rs. 213.2 crores in the eleven months of the third war year, Rs. 135.24 crores was taken up by Empire countries and Rs. 77.96 crores by foreign countries. In 1940-41, out of total exports of Rs. 187.53 crores, the share of Empire countries was Rs. 120.87 crores while that of foreign countries was Rs. 66.66 crores. The improvement in trade with Kenya, the Union of South Africa, Canada and Australia is substantial. Of the total increase of exports of Rs. 14¼ crores in the eleven months of 1941-42, nearly half is accounted for by the United Kingdom. Among foreign countries the trade with Iraq shows an increase from Rs. 1.11 crores in 1940-41 to Rs. 5.01 crores in 1941-42. Iran from Rs. 0.17 crores to Rs. 4.81 crores, Egypt from Rs. 2.91 crores to Rs. 6.84 crores, the U.S.A. from Rs. 31.22 crores to Rs. 38.51 crores and the South American Republics from Rs. 5.93 crores to Rs. 7.9 crores. There is considerable scope for a further increase in trade with all American countries but the difficulties on account of shipping prevent us from taking advantage of the position. The development of trade with the Middle East countries and the greater co-operation between Empire countries is the most important feature of the present war.

CURRENCY EXPANSION AND PRICE-LEVEL—II

(By P. S. LOKANATHAN, University of Madras).

The level of prices in India would have gone up higher but for the hoarding habits of the people. Unlike as in Western countries the increased money incomes of the people are not used up in spending, but in hoarding. The velocity of circulation of money is rather low. While this reduces the extent of the inflationary effects in India, it carries with it ultimately great danger and disappointment. The hoarded money gets completely lost when the inevitable day of reckoning comes and deflation follows. The public of India cannot even have the satisfaction of having enjoyed the rake's luxuries at the expense of later suffering. They do not enjoy when they can, but must share the same fate when the tide turns.

The problem before the public and the government to-day is how to reduce the purchasing power from the public if production cannot keep pace with the growing demand of the people clothed in money. The poor response of the public to the recent loans floated by Government is unfortunate. It renders the task of funding the large temporary debt more difficult. Another unfavourable feature is the tendency on the part of the public to hold an increasing percentage of their income in the form of demand deposits and a smaller percentage in fixed deposits. While the bank deposits increased from 246 crores in 1939 to 586 crores in 1942, the demand liabilities increased by 148 crores, whereas time deposits diminished by Rs. 9 crores. It means that these current deposits may at any time be used for the buying up of current supplies which are obviously limited, thereby bringing about an increase in prices. Rationing and restriction of consumption is therefore an urgent necessity, if the rising spiral of price inflation is to be prevented. Other more direct means of price control must also be resorted to.

The difficulties of regulating and controlling prices in a country like India are by no means to be underrated. Where production is carried on by millions of small agriculturists or by thousands of small producers, where organization in respect of wholesale and retail trade is loose, where consumers are also wholly unorganised and illiterate and where public opinion is wholly lacking, it is not easy to secure price control. Nor have the Government the requisite technical and administrative machinery for the purpose. But despite these difficulties price control must be effected; for the dangers of incipient inflation lurk in the present situation. We have a mounting public expenditure, increasing competition for the stationary or decreasing stocks of consumable goods, rising prices, higher wages for part of the labouring classes, further rise in the prices of these goods, and so on leading inevitably to the vicious spiral. The consequences are most serious. The poor find many of the necessaries of life beyond the reach of their very slender means. Apart from the deepening poverty of the poor, their distress and discontent, inflation if uncontrolled, would result in serious deflation after the war; and deflation, even more than inflation, would be disastrous in its evil effects. If India is to avoid the dangers of deflation after the war, she should now take steps to control prices.

With all their imperfect machinery of control, Government have not been slow or unwilling to control the prices of goods required for war purposes. But the prices of goods of civilian consumption must also be controlled. The problem of price control has to be looked at in its proper setting, not only in relation to the present needs but even more in relation to the imperative demands of the future. If the increased money incomes and purchasing power merely go to finance high prices, the country would be faced with the terrible disaster of a slump in prices after the war.

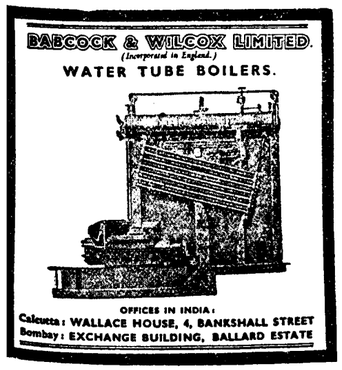
It is a pity that the country is not yet fully alive to the dangers of the inflationary tendencies which continue to persist. The scheme for the repatriation of a large portion of the sterling debt, which was inaugurated in December, 1941, was perhaps not the best of all the alternatives then open to the country; but to-day with the reduced opportunities for investment in industries not directly concerned with war effort, it is the only course to adopt. The 3 per cent Indian sterling stocks of £70 millions and 2½ per cent sterling loan of £11 millions have been discharged and by January, 1943 the 3½ per cent sterling stock of £78 millions will also be repatriated. They were all replaced by 'ad hoc' treasury bills and rupee securities, and as the public invested in rupee securities and defence loans, the 'ad hoc' bills would be reduced. But the rate of public investment in rupee loans is rather poor and should increase. Sterling credits continue to advance, and it is not desirable that they should. As long as India has large sterling debts, there is no reason why all the available credits should not be utilised for liquidating them. The whole of the funded debt has been practically paid off, but there remain other fields for repatriation. The recent arrangement by which Sterling Railway annuities aggregating £34.11 millions have been paid off by handing over a lump sum of £30.05 millions to the British Government is a step in the right direction. For this purpose sterling securities equal to Rs. 40 crores have been withdrawn from the Reserve Bank and payment is financed by Ways and Means Advances and the issue of 'ad hoc' bills. Besides the above there are Railway Debentures amounting to £32 millions, Indian railway stocks, of which £9.76 millions are still outstanding, and the debentures and shares of municipalities, port trusts, public utilities, etc., amounting to about £18 millions. In all the total debt that can be thus paid off is about £84 millions. There may be some difficulties in converting them into rupee debt, since some of the obligations are non-governmental; but in the light of what other countries have done in similar circumstances, the task will not be impossible. South Africa was able within a decade to reduce not merely her public debt but a very large proportion of the British commercial capital. From the beginning of the war to the end of 1941 Canada was able to repatriate sterling debt to the extent of 512 million dollars.

The continuing expenditure by the Government of India on behalf of the Allied Governments, for which payments are made in sterling whose future value will be affected by all sorts of factors, makes it imperative that the sterling credits should not be allowed to be merely accumulated but utilised for liquidating not merely Government and semi-public obligations but also foreign commercial investments in India. A definite plan for paying off all foreign investments in India must be adopted, for only then would the public come forward to invest in the rupee securities, thereby causing a reduction in the purchasing power of the people. After the war the sudden cessation of purchases by British and Indian Governments, unemployment due to military and economic demobilisation, and the threat to the favourable balance of trade might all bring about a disastrous fall in prices. Hence control of foreign trade and exchange must continue even after the war.

The effective mobilisation and utilization of capital which the war has made possible will not only liquidate India's debt but enable her to borrow funds, if necessary, at a favourable rate. Whether India would require external loans after the war will depend upon (a) how far the favourable balance of trade can be maintained in view of the greatly reduced interest obligations and (b) how far the rate of capital investment will be accelerated. It may be possible for the Government to ensure as much import of capital goods as she needs by controlling her export trade and by reducing the demand for imports of luxuries, etc. But if the funds thus made available are insufficient, she can certainly borrow from abroad more cheaply than any other country in the world. The war has already altered the financial position of India. She is daily lending large sums to Great Britain which go to reduce her old debt. In future India will not have to depend upon Great Britain for her seasonal finance. Whether she would require any external capital at all would depend upon the pace of her industrialization. There is nothing to prevent her from raising all the funds she needs from within. The dream of India transforming herself from a debtor country into a creditor country is not altogether visionary.

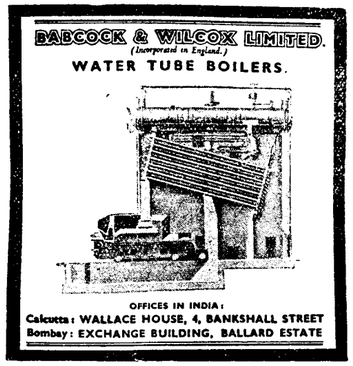
(*Concluded*).

(*The first instalment of this article appeared in the issue of "Indian Finance," dated, October 31, 1942*).



(*Continued from page 731*).

Mr. Morgenthau's visit to London was connected with this suggestion. A few months ago, Sir Jeremy Raisman was invited to London, presumably with a view to get something done whereby the liability which Britain was continuously incurring to India could be reduced or wiped out. In this connection, the United States Government propose a formula which, in effect, means that every country will share in post-war economic benefits in proportion to sacrifices made during the war. This formula cannot be very acceptable to Britain who would like to propose that no member of the United Nations must be in debt to any other member at the end of the war. This is the kind of formula which Sir Walter Venning must have put forward in Washington on behalf of the British Government; and it is already clear that America is not overpleased with the proposal. So far as India is concerned, a formula on these lines will mean that all the sterling credits that we are now creating will be decimated at one stroke. The issues raised by this question are too serious and too elaborate to be discussed at length in this column. And we will revert to it in a subsequent issue.



The exchange market has been dull and lifeless except towards the close when some activity was noticed. Rates are unchanged.

Editorial Notes

Wholesale Prices in Calcutta

That the recent sharp rise in prices, food articles in particular, has been responsible for the rise in the costs of living, is borne out by the movement of the index numbers of wholesale prices in Calcutta during the last six months. Till April there was no suggestion of any runaway rise in prices and the index for all commodities was fluctuating around 155. In April there was a rise to 157 from 153 and in May to 169. It remained stationary at 182 in June and July but there has been an advance to 192 in August and to 198 in September. In August and September the only two groups to show a retrograde movement were hides and skins and oilseeds. The rise in the index for all commodities from 192 to 198 following the improvement of ten points in August is again due to food grains and other food articles. Cereals are three points higher in September at 177, pulses twenty points at 186 and sugar 46 points at 261. Tea also showed a rise of ten points while other food articles were three points lower at 349. The general rise in prices of staple commodities clearly shows that the control measures adopted by the Government have not been successful. The relaxation of the permit system in regard to sugar in Bengal has been greatly responsible for the jump in the index for sugar. The improvement in general trade conditions also is reflected in the higher prices for jute, jute manufactures and cotton. No figures are again given for cotton manufactures. The decline in the index for other textiles in August to 136 has been only temporary. Following some seasonal buying the losses of the earlier month have almost been regained.

Since the beginning of the war there has been a rise of 98 points and it does not look as if there will be an early stop to the rise in prices.

Mill Consumption of Indian Cotton

The goal set up by the textile industry to consume four million bales of Indian cotton per annum was nearly achieved in 1941-42 and the figure would perhaps have even been exceeded but for the slow-down in production in August, due unfortunately to the disturbances of a new kind within the country. The figures now available for the cotton year 1941-42 show that 3,995,914 bales were consumed against 3,617,147 bales in the previous season and 3,050,106 bales in 1939-40. It will appear at first sight that the increase in consumption in 1941-42 has not kept pace with the increase in 1940-41, as the net increase in 1941-42 is only 378,676 bales against 567,041 bales in 1940-41. It would perhaps have been possible for Indian mills to keep up the rate of increase but for the large exodus of labour in the early months of the year on account of the startling successes of Japan in the Far East and as mentioned above to the slow down of production towards the end of the season. But it has also to be remembered that there was a large increase in production in 1940-41, especially from May, 1940, thanks to the large war orders. On a single shift basis, it must be said that the highest capacity was reached in the closing months of 1941, when conditions were quite satisfactory in the industry. It may look simple to encourage production with multiple shifts, but the problem of labour and machinery present great technical difficulties. The number of mills working double shifts as the season 1941-42 progressed, showed a tendency to decline.

Given satisfactory conditions, it may perhaps be possible to report an increase in Indian cotton consumption to 4.5 million bales in the current season. Even with the last season's production the consumption of cotton must be higher as in order to maximise production and save unnecessary labour, it has been decided to switch over to production of lower qualities and avoid as far as possible the manufacture of finer qualities.

The present conditions in the industry cannot be allowed to remain for long as the problem of production, if neglected, will have serious repercussions on the country and its war effort. Government requirements have been increased recently from 20 to 35 percent of total Indian production while, with the complete cessation of imports and increased demand from overseas markets, it has not been possible to cater to all requirements. All these go to show clearly that increased consumption in Indian cotton in 1942-43 is inevitable.

Coming to details regarding the consumption figures for 1941-42, Bombay again stands first with 1.06 million bales against .98 million bales in 1940-41; Ahmedabad shows an increase to 440,000 from 342,000 bales; Madras comes third but the only province to report a decrease in consumption of cotton is Bengal.

New Scheme For Standard Cloth

On an earlier occasion we pointed out that the delay in the production and marketing of standard cloth was rather inexcusable and that the authorities had not taken into consideration the difficulties in the way and announced a date on which it will be possible to market in fairly large quantities standard cloth. We also pointed out at the same time that there was considerable difference of opinion as to the quality of the cloth. It is now reported that supplies will not be available before January next year. Evidently, the interruption in production in the Western Presidency on account of the recent troubles, has been responsible for the further postponement of the date on which large supplies will be available. It is also reported that the Commerce Member has a new scheme under consideration by which cheap cloth will be produced not only for the poorer classes but for the lower middle classes as well. Pending the consideration of the new scheme, it has been decided that the production of the originally approved cloth should be proceeded with.

It appears that even with normal working, it will not be possible for mills to supply the required quantity of standard cloth, not to speak of the increased requirements of the types of cloth for the poorer and middle classes, as a result of the new scheme. The shortage of labour is the main difficulty. Even if it were possible to induce mills to work longer hours by granting extra depreciation allowance, it is very doubtful whether the required amount of labour will be available.

The yarn problem also is under consideration. The contention by the industry that the estimates by the Government regarding yarn requirements were rather inflated seems to hold good. Military requirements are being revised and methods also are being devised to substitute fibres like coir for the manufacture of ropes. Whether there can be any substantial saving in this regard will be determined by expert examination.

State Railway Earnings

The first month in which there is a decline in State Railway earnings is September 1942. It is pointed out that the interruptions to traffic have been mainly responsible for the decrease in total earnings. The approximate gross earnings of all State-owned Railways for the month amounted to Rs. 10.27 crores or Rs. 13 lakhs less than the actuals for the corresponding month of the previous year but Rs. 1.5 crores more than the corresponding month of 1940-41. Coaching earnings showed an increase of Rs. 9 lakhs for the corresponding month last year while goods earnings decreased by about Rs. 23 lakhs. Other receipts were higher by Rs. 1 lakh. The total approximate gross earnings for the six months ending September 1942 were Rs. 58.77 crores or Rs. 7.91 crores more than the actuals for the corresponding period of 1940. The improvement in earnings is very pronounced in the case of the G.I.P., being as much as Rs. 2.35 crores over the figures for the six months ending September 1941. The N. W. Railway is second with an increase in earnings of Rs. 1.97 crores while the B.B. & C.I. comes third with Rs. 1.16 crores.

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

Against the total increase in earnings in the current financial year of Rs. 7.8 crores, the rise in working expenses is only Rs. 2.18 crores over the actuals for 1941-42.

The figures regarding wagon loadings for the month of September show that goods traffic decreased by 20.3 percent in the broad gauge and 22.8 percent in the metre gauge as compared with 1941. The number of wagons loaded in the six months of September 1942 decreased by 16.6 percent in the broad gauge and 19.1 in the metre gauge. The decrease is under all commodities.

With the increase in military traffic and the difficulty in providing additional rolling stock, not to speak of the interruptions to traffic on account of the present demonstrations, it may be difficult for the railways to report any appreciable increase in earnings during the rest of the current financial year. As the contribution in 1942-43 by the Railways is expected to be only Rs. 20.13 crores against Rs. 19.12 crores in 1941-42, even if there is no further improvement in earnings it will be possible to give the budgetary figure. But with the fears regarding the decline in income for the Government from other sources, effort should be made to keep up the improvement in railway earnings as far as possible.

Argentina's Difficulties

The expansion of the Argentine mercantile marine is referred to in a report sent to the Indian Central Jute Committee's bulletin. The 24 vessels owned by Argentina engage in Pan-American traffic but carried only about 5 per cent of the total foreign trade in the first quarter of 1942. Argentina's need of coal has forced her to investigate local supplies and five million peso has been allotted for opening up iron and coal deposits at home. Transport difficulties are said to be at the bottom of nearly all troubles but Argentina's crops in 1942 will be smaller than originally expected though maize and potato supplies will be larger than forecast. There will be a surplus of wool according to Mr. Jackman's report and this may stimulate the demand for woolpacks. The bag famine has encouraged bulk handling of grain, but most farmers still cling to bags, as proved by an official statement. Farmers have since been told that only 40 percent of bag requirements can be expected, though efforts would be made to obtain increased supplies of canvas, substitutes of cotton etc., and additions to storage facilities. The Republic is desirous of growing jute within its territory and a bank official touring Misiones found plants in good condition. Experts have investigated the possibilities of jute cultivation and 150 hectares under experiments may even lead to extend cultivation. Cold is said to have damaged the experimental jute crop, but the country may go on trying in order to get its bagging material without importing. The increase in jute imports in 1941 over 1940 has not eased the situation caused chiefly by the increase in crops last year. India exported more sacking and jute than any other country; while Great Britain lost ground Uruguay and Chile became suppliers. The difficulties this year seem to be independent of the increase in supplies of jute and jute manufactures recorded last year. The small recovery in Argentine exports is belied by the fact that shipments up to April were at the lowest level for 10 years. Transport difficulties as in regard to fuel may force Argentina to examine the question of producing locally the goods she needs.

Power Alcohol

The Indian States have stolen a march over British India in the matter of power alcohol. It is unnecessary to recapitulate here in detail the various controversies regarding the production of power alcohol on a large scale. Suffice it to say that it was only very recently that it was decided to allow the manufacture of power alcohol in the U. P., as a result of the recommendations of the Power Alcohol Committee, and the actual production of power alcohol was started at a distillery in Meerut.

The pioneer so far as the industry is concerned, is Mysore. The Mysore Sugar Company's distillery at Mandya is producing this much-needed addition to petrol on a fairly large scale. It was only in August 1941 that it was found necessary to introduce a system of petrol rationing and it was found that efforts should be made for the effective utilisation of molasses on a large scale and reduce the country's dependence on imported fuel. The absence of any active policy and the lack of equipment have retarded the progress in this regard. Even the Grady Mission which visited this country recently had some very interesting remarks to make. The usefulness of power alcohol cannot be over-emphasised. It was reported that arrangements had been made for importing equipment from the U.S. but we have not heard anything so far in this connection.

It is interesting, however, to note that the Hyderabad State has made very good progress in recent years. The Government power alcohol factory situated near the Nizam's sugar factory at Bodhan is reported to be producing 3,000 gallons per day. The total production last season was estimated at 300,000 gallons when the factory worked for only six months. It is proposed to work the factory throughout the current season and the total estimated production of the factory is about 600,000 gallons per annum.

In British India no progress has been reported since U. P. undertook to produce

wer alcohol. Not even the formalities in nnection with the production have been mpleted in certain provinces. Only now s the Bombay Government come out with details for starting production in the sidency.

One must not overlook, however the efforts de by the Government to produce recti- l spirit on a large scale and the proposals the readjustment of existing machinery distilleries for the manufacture of power ohol. The advantages resulting from the oduction of this fuel at the present moment n be inferred from the fact that the Gov- ment of India have found it necessary to e measures to prevent illicit distillation molasses.

sam Budget for 1942-43

The revised budget for 1942-43 of the sam Government is to be placed before Legislature for its approval. It will be nembered that at the time the original dget was framed, the constitution was der suspension in the province of Assam d the estimates in this connection were epared by the Governor. Since the nistry took up office in August the figures ve been revised. There is a revenue icit of Rs. 33.45 lakhs. At first sight, this rt fall in income over expenditure may pear big especially if it is taken into con- eration that the total budgeted expendi- e is only Rs. 3.67 crores. The increase in deficit is really Rs. 7.22 lakhs, if due owance is made for the provision of 22.66 lakhs for the purchase by the Go- nment of foodstuffs, clothing, etc., for dis- bution to the people during the present ergency. There is also another important m which has resulted in the increased el of expenditure, civil defence expendi- e costing Rs. 20.65 lakhs out of which only 5.44 lakhs will be borne by the Govern- nt of India as a result of the agreement. The total expenditure for the year is put Rs. 3.67 crores of which Rs. 2.39 crores ates to the period from August 25, 1942 which date the present Ministry assumed rge, up to March 31, 1943. Out of the al receipts of Rs. 3.34 crores, the corres- nding figure which relates to the period since the Ministry resumed office, will be Rs. 2.18 crores. Evidently new taxation measures have not been proposed and the deficit may be expected to be made up by loans. The question of additional taxation will be taken into consideration when the next budget is presented to the Legislature.

Shipbuilding in Britain and Japan

In spite of the fact that the United States has made rapid strides in shipbuilding, with the adoption of mass production methods, the gross tonnage turned out is still lower than the total from British yards. It is pointed out that the more effective utilisation of equipment and the greater efficiency of the average shipbuilder are helping Britain to remain at the head of the list. The colossal effort of the British shipbuilding industry will be evident from the fact that British yards have repaired gross merchant shipping tonnage amounting to 40 million tons or 35,000 ships and put them back into service while 20,000 units of the fleet also have been repaired and refitted. These figures give some idea of the tremendous effort made on the repair side. It has been stated that at one time considerably more than 2 million tons of ships were needing repair at once. An idea of new shipbuilding constructing can be had from the fact that recently shipping losses have been completely offset by new production.

Against this colossal effort, the figures regarding Japan's merchant shipping as discussed by Speyer in the "Royal Naval Service Institution Journal" provide an interesting contrast. The figures regarding new construction are given out as 450,000 tons in 1937, 470,000 tons in 1938 and only 400,000 tons in 1939. The net increase in tonnage, allowing for older ships to be broken up, are, however, much less and is estimated at only 160,000 between June 1939 and 1940. The gearing up in production since 1940 cannot be properly estimated but even if the total production were taken as the net addition to shipping for the year, there will still be a great leeway between British and Japanese production. While the United Nations have met with no difficulties in securing raw materials, steel being the most important factor in shipbuilding, Japan has to adjust her production to the supply of raw materials. The reports regarding the building of wooden ships, under consideration, suggest that the Japanese are trying to get over the difficulty on account of raw materials. All of which only goes to show that there is a great gap between the Allied and Axis production and that with increasing Allied submarine attacks the enemy's supply problems will become acute.

Britain's War Effort

Till very recently there was criticism of the direction of the British war effort, and it was for long a standing complaint that surplus labour had not been properly utilised and that the resources of the country had not been fully employed. The critics were then justified, as what time the Axis countries were complaining of the shortage of labour and the U.S.A. was making progress in new production, Britain had a surplus of labour and the unemployment figures were being continually published. The process of adjustment was rather slow in the earlier stages but if the achievement of the past one year and more are taken into consideration, the enormous progress made would appear rather staggering. Some interesting details in this regard have been

PROSPECTUS

(A copy of this Prospectus has been filed with the Registrar of Companies, Bombay, as required by Section 92(2) of the Indian Companies Act, 1913.)

THE EXCHANGE BANK OF INDIA & AFRICA LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913).

AUTHORISED CAPITAL - - Rs. 2,50,00,000

Divided into 2,00,000 ordinary shares of Rs. 100 each and 50,000 preference shares of Rs. 100 each.

ISSUED CAPITAL - - - Rs. 1,25,00,000

Divided into 1,00,000 ordinary shares of Rs. 100 each and 25,000 preference shares Rs. 100 each.

Out of the above issue:—

Colonel His Highness the Maharaja Jam Shree Sir Digvijaysinhji Saheb Bahadur of Nawanagar State, K.C.S.I., G.C.S.I., G.C.I.E., A.D.C., who has kindly consented to become the First Patron of the Company, has agreed to take up in terms of Clause 196 of the Articles of Association 1,000 Ordinary Shares of Rs. 100 each of the total face value of Rs. 1,00,000/-.

In addition the Directors and their friends and associates have agreed to take up 10,120 Ordinary Shares making in all 11,120 Ordinary Shares of Rs. 11,12,000/-.

The remaining 88,880 Ordinary Shares and 25,000 Preference Shares are offered for public subscription.

The Shares will be payable as follows:—

(1) On application for Ordinary Shares Rs. 30 per share; on allotment of Ordinary Shares Rs. 20 per share; and the balance of Rs. 50/- per Ordinary Share, as and when called up, with an interval of at least one month between the calls; no call to exceed Rs. 25 per share;

(2) On application for Preference Shares Rs. 25 per share; on allotment of Preference Shares Rs. 25 per share; and the balance of Rs. 50/- per Preference Share, as and when called up, with an interval of at least one month between the calls; no call to exceed Rs. 25 per share.

The rights of the Preference and Ordinary shareholders in the profits and assets of the Company are provided in its Articles of Association in the manner following:—

The Preference Shares confer on the holders thereof the right, out of such profits of the Company as it shall be determined in terms of the Articles of Association, to distribute in dividends, to a fixed cumulative preferential dividend at the rate of *four* per cent. per annum (free of income tax), calculated as hereinafter mentioned on the capital for the time being paid up thereon respectively, and the right, in a winding up, to payment of capital and arrears of dividend, whether declared or not, up to the commencement of the winding up, in priority to the Ordinary Shares, but shall not confer any further right to participate in the profits or surplus assets.

Subject to the provisions of the Articles of Association, the profits of the Company which it shall from time to time be determined to distribute in dividends in respect of any year or other period, shall be applied first in paying the fixed cumulative preferential dividends at the rate of four per cent. per annum (free of income tax) calculated on and after the 1st day of January, 1943, on the capital for the time being paid up on the Preference Shares to the close of such year or other period and the surplus shall be divisible among the holders of the Ordinary Shares in proportion to the Capital paid up or credited as paid up on such shares held by them respectively.

The Articles of Association also contain provisions following:—

The Directors shall have the power before recommending any dividend, to set aside out of the profits of the Company, such sums as they think proper as a reserve fund to meet contingencies or for equalising dividends, or for special dividends, or for repairing, improving and matinaining any of the property of the Company, and for such other purposes whatsoever as the Directors shall in their absolute discretion think conducive to or advisable in the interest of the Company; and to invest the several sums so set aside upon such investments (other than shares of the Company) as they may think fit, and from time to time to deal with and vary such investments, and to dispose of all or any part thereof for the benefit of the Company, and to divide the reserve fund into such special funds as they think fit with full power to employ the assets constituting the reserve fund in the business of the Company, and that without being bound to keep the same separate from the other assets;

Where capital is paid up in advance of calls upon the footing that the same shall carry interest, such capital shall not, whilst carrying interest, confer a right to participate in profits;

The Company in general meeting may dclare a dividend to be paid to the members according to their rights and interest in the profits, and may fix the time for payment;

No larger dividend shall be declared than is recommended by the Directors, but the Company in general meeting may declare a smaller dividend;

No dividend shall be payable except out of the profits of the Company and no dividend shall carry interest as against the Company;

The declaration of the Directors as to the amount of the net profits of the Company shall be conclusive;

The Directors may from time to time pay to the members such interim dividends as in their judgment the position of the Company justifies.

BOARD OF DIRECTORS:

GENERAL SCOPE AND OBJECTS. The objects for which the Bank is established are those mentioned in Section 277F of the Indian Companies Act, 1913, and are set out in the Memorandum of Association. Attached to and forming part of the Prospectus is a copy of the Memorandum of Association. It is desired that in due course the Bank be included in the Second Schedule to the Reserve Bank of India Act, 1934, as a Scheduled Bank, and become a member of the Clearing House.

As observed by so eminent an authority as Sir M. B. Nanavati of the Reserve Bank of India, "Organised Banking institutions are *indispensable* concomitants of the present day economic system based on large scale organisation and joint stock enterprise." The fact remains however that in this country, once famed for the genius of its bankers all over the world, banking facilities and banking systems have lagged far behind the growth and development of commerce and industry in recent years.

Whilst banking facilities in British India, as compared with several other countries, are considered to be inadequate and almost rudimentary, the necessities in these matters of Indian India have even seldom been considered. In the result, we have two pictures before us today, one of British India where banking organisations are quite inadequate for the people's needs, and another of Indian India where modern banking facilities of any kind for the most part simply do not exist. It is high time that definite policies and definite projects should be boldly adopted to conserve, safeguard and develop the financial and economic interests of India as a whole.

Moreover, India has considerable stakes in international commerce and finance. Our countrymen in ever-increasing numbers have business and trading connections with numerous foreign countries. Many of them have even settled down in various parts of the world. Yet, for the exchanges of remittances, we have to depend largely on non-national agencies.

In short there is a tremendous scope for Indian banking concerns. India is already passing through the throes of commercial and industrial progress as well as political advancement. The advocacy by our leaders of economic self-sufficiency, the inauguration of many new joint stock enterprises in recent years, the growing popularity of technical and industrial education and training, are amongst the signs of the times. More and more it is being realised, that, the shy and stagnant capital of India must come forth and aid her commerce and industries and grow and multiply in the process, instead of being what it is *a halter round the neck of a budding nation.*

These are some of the nation's needs to which this Bank hopes to contribute its services. It is its ambition to gather a fair share of the idle capital of the people and princes and make it available, in accordance with sound banking principles, for industrial, commercial and agricultural purposes amongst others. The Bank hopes to create in due course an organisation with a network of Branches in various parts of the country including Indian States, and, in due course, in various other countries.

The Bank will carry on banking business and will as such engage in banking activities of all kinds, including those of a commercial bank, and hopes to offer a wide range of services in and outside India. Without, by any means, seeking to enumerate such services, it may be mentioned that, amongst other things:—The Bank will help and advise in matters of investment and finance; assist internal trade and industry as well as exports and imports; collect dividends, interest and other moneys; make and receive payments and remittances for constituents; deal in Indian and foreign moneys, bills, hundis, shares, stocks, bonds, securities, etc.; have in due course its correspondents in all important countries; issue letters of credit, circular notes and the like; discount foreign exchange operation; undertake safe custody of securities, valuables, documents, etc.; work as executor and trustee; help farmers as well as manufacturers, traders and merchants; assist in the economic marketing and disposal of produce and manufactures; etc., etc.

Investment in Bank shares is rightly regarded as "gilt-edged," and the recent changes in the Company Law in relation to banking companies, are certainly calculated to secure a considerable measure of protection and safety. An institution calling itself a "Bank" must, however, have sufficient capital to enable it to operate on a scale large enough whilst conforming itself to purely banking business. Bearing this in mind, the promoters have formed this Company with an Authorised Capital of Rupees two crores and fifty lakhs.

The Board of Directors has been formed, consisting of experienced and well-reputed businessmen belonging to various important Indian communities; and with the help of God Almighty, there is every hope that the institution will grow and prosper, having regard to the auspices under which it is starting and the enormous possibilities for Indian Banking.

MINIMUM SUBSCRIPTION. The minimum subscription upon which the Directors may proceed to allotment and which in their opinion must be raised by the issue of share capital in order to provide for matters comprised in Sub-Section 2 of Section 101 of the Indian Companies Act, 1913, is the shares of Rs. 21,00,000/-

CERTIFICATE OF SHARES. The Share Certificates will be ready within 6 months from the date of allotment.

VOTING AND RESTRICTIONS ON TRANSFER, ETC. The Articles contain provisions folowing: On a show of hands every member present in person who, being an individual, is present in person or being a corporation, is present by a representative duly authorised under Section 80 of the Act, shall have one vote, and upon a poll every member who is present in person or by proxy shall be entitled to vote for each share held by him of whatever class or denomination. Subject to the provisions of the Articles votes may be given either personally or by proxy. A corporation being a member of the Company may appoint as its proxy any officer of the corporation or other person, whether a member of the Company or not. Save as expressly provided in the Articles of Association, no person other than a member duly registered and who shall have paid everything for the time being due from him and payable to the Company in respect of his shares shall be entitled to vote on any qustion either personally or by proxy in respect of his shares or to be reckoned in the quorum at any general meeting. The Directors may at any time in their absolute and uncontrolled discretion and without assigning any reason refuse to register any proposed transfer of shares whether the proposed transfer is a member of the Company or not; and they shall not be bound at any time to specify the grounds for the refusal.

No restrictions are imposed in the Articles of Association upon the Directors of the Company in respect of their powers of management except such as are imposed upon them by the provisions of law.

BROKERAGE AND COMMISSION. The Articles of Association provide:—"The Company may at any time pay a commission to any person for subscribing or agreeing to subscribe (whether absolutely or conditionally) for any shares, debentures or debenture stock of the Company or procuring or agreeing to procure subscriptions (whether absolute or conditional) for any shares in the Company, but so that if the commission shall be paid or payable out of capital, the statutory conditions and requirements shall be observed and complied with; and the amount of rate of commission shall not exceed three per cent. of the price at which the shares are issued or three per cent. of the nominal value of the debentures or debenture stock in each case subscribed or to be subscribed. The Commission may be paid or satisfied in cash or in shares, debentures

THE EXCHANGE BANK OF INDIA & AFRICA LIMITED.— PROSPECTUS—Contd.

or debenture stock of the Company. The foregoing shall not effect the power of the Company to pay lawful brokerage."

Brokerage will be paid by the Company to approved brokers at a rate not exceeding three per cent. of the face value of the shares subscribed or got subscribed.

PROMOTION FEE & PRELIMINARY EXPENSES. No promotion fee will be paid to the promoters. Preliminary expenses are payable by the Company and are inclusive of all expenses of and incidental to the promotion, floatation, incorporation and establishment of the Company including travelling and other expenses. The estimated amount of the preliminary expenses (exclusive of underwriting commission and brokerage) is Rs. 20,000/-.

DIRECTORS' QUALIFICATION AND REMUNERATION. Under the Articles, the qualification of a Director, other than a Managing Director and other than a Special Director appointed under Article 196 hereinafter set out, shall be the holding of Ordinary Shares of the aggregate nominal value of Rs. 30,000/- (i.e., 300 Ordinary Shares).

The following are the provisions for the remuneration of Directors:—The remuneration of a Director for his services shall be such an amount not exceeding Rs. 100 as the Directors may fix, for every meeing of the Board attended by him. The Directors may allow and pay to any Director who is not a *bona fide* resident of Bombay and who shall come to Bombay for the purpose of attending a meeting, such sum as the Directors may consider fair compensation for his travelling expenses, in addition to his fees for attending such meeting as above specified. The Directors may from time to time fix the remuneration to be paid to any member or members of their body constituting a committee appointed by the Directors in terms of the Articles of Association is a sum not exceeding Rs. 50/- for every meeting of the Committee attended by him or them and may pay the same. If any Director, being willing, shall be called upon to perform extra service (which expression shall include work done by a Director as a member of any committee formed by the Directors or in relation to signing share certificates or debentures), or to make any special exertions in going or residing away from his headquarters or otherwise for any of the purposes of the Company, the Company may remunerate such Directors either by a fixed sum or by a percentage of profits, or otherwise, as may be determined by the Directors, and such remuneration may be either in addition to or in substitution for his or their share in the remuneration hereinabove provided. Additional provisions for the appointment and remuneration of the Special Director (when apointed) are hereinafter referred to.

AGREEMENT AS TO THE APPOINTMENT AND REMUNERATION OF MANAGING DIRECTOR. Pursuant to the provisions contained in the Articles of Association an agreement has been entered into between the Company of the one part and Mr. J. M. Akhaney of the other part, whereby Mr. J. M. Akhaney is appointed Managing Director and as such a principal executive officer of the Company in terms of the said agreement for a term of 20 years from the date of registration of the Company, i.e., 30th day of April, 1942. The said agreement is in terms of the draft specified in clause 3 and 4 of the Articles of Association as altered and modified by the Board of Directors; the alterations and modifications being set out with the said agreement and agreed to be subject to the approval of the statutory meeting of the Company as provided in clause 4 of the Articles of Association.

The said agreement provides for Mr. Akhaney's remuneration for and during the said term being as follows:—A fixed salary of Rs. 1,250 per month with an annual increment of Rs. 100 per month in every year from and after the expiry of the first official year of the Company provided that the salary shall at no time be increased beyond Rs. 3,000 per month. In addition to salary as aforesaid, Rs. 200 per month as and by way of conveyance allowance.

As such Managing Director Mr. Akhaney will be subject to the supervision, control and direction of the Board of Directors. The said agreement also contains provisions *inter-alia* to the effect that, in the event of Mr. Akhaney's demise before the expiry of the period of the agreement, his heirs, executors or administrators shall be entitled to be paid by the Company a sum of money equivalent to the then one year's salary and three months' conveyance allowance; and that, in the event of his ceasing to be Director or Managing Director of the Company otherwise than under clause 112 of the Articles of Association his appointment as one of the principal executive officers of the Company, will be continued for the then residue of the said term of 20 years upon the same terms (including as regards salary, increments in salary, and conveyance allowance) and with such duties and powers as the Board of Directors may assign.

CONTRACT. The following contract has been entered into:—The agreement hereinabove refered to dated the 14th day of Oct., 1942, between the Company of the one part and Mr. J. M. Akhaney of the other part, appointing Mr. J. M. Akhaney as Managing Director of the Company upon the terms and provisions therein contained.

SPECIAL DIRECTOR. Clause 196 of the Articles of Association provides: "It is hereby provided that on His Highness the Maharaja Jam Shree Sir Digvijaysinhji Saheb Bahadur of the Nawanagar State purchasing Ordinary Shares of the nominal value of not less than Rupees one lakh (Rs. 1,00,000) (in the name or names of himself and/or any other person or persons), he will be entitled at his discretion:—

(*i*) To nominate any one person, other than an employee of the Nawanagar State or of the Company, to be a Special Director on the Board of Directors of the Company;

(*ii*) to cancel the nomination of any special director for the time being nominated under this Article; and

(*iii*) in case of the office of such special director for the time being falling vacant owing to the cancellation of his nomination as aforesaid or owing to any other cause whatsoever to nominate in his place any person, other than an employee of the Nawanagar State or of the Company, to be such special Director in his place.

Every person nominated as special director under this Article shall be called a special director and shall in all respects be governed by and subject to the rules and provisions of these presents applicable to the Directors except as otherwise expressly therein provided. A special director shall not require any share qualification nor be subject to retirement by rotation of Directors nor be reckoned as a Director for the purpose of determining the rotation of retirement of Directors or in fixing the number of the Directors to retire. Such special director will vacate his office in the event of (a) his nomination being cancelled as herein above provided or (b) acceptance by him of employment under the Nawanagar State or the Company or (c) his resigning the office or otherwise ceasing to be a Director under any of the provisions of these presents. The nomination of a special director as well as the cancellation thereof under this Article will be in writing and delivered at the office. After the Company opens any Branch or Branches of the Company in the Nawanagar State as hereinafter provided, the special director for the time being appointed under this Article, will during the continuance of his appointment, be paid by the Company such special remuneration not exceeding Rs. 350 per mensem on such terms as the Directors may from time to time decide. Such special remuneration of the special director shall be in addition to his remuneration as one of the Directors under these presents."

Clause 197 of the Articles of Association provides:—"The Company will at the earliest opportunity after commencing business activities in British India, open such Branch or Branches of the Company in the Nawanagar State for doing such types of banking business as the Directors may decide. The special Director will, subject to the directions of the Board of Directors, superintend and look after such Branch or Branches."

NATURE AND EXTENT OF DIRECTORS' INTEREST. No Director, except Mr. J. M. Akhaney, the Managing Director, is interested in the promotion of the Company except as holder of shares and to the extent to which he is entitled to remuneration, allowance and travelling expenses as provided in the Articles Association. Mr. J. M. Akhaney who is appointed Managing Director under the aforesaid contract upon remuneration as therein provided is interested accordingly.

APPLICATION FOR SHARES. Application for shares should be made in the form accompanying the Prospectus or which may be obtained at the Registered Office of the Company and should be forwarded with the application money at the rates specified above per share to the Registered Office of the Company or to the Company's Bankers. Imperial Bank of India, Bombay, and all its branches in India, or The National Bank of India, Ltd., Bombay. Where no allotment is made, the subscription will be returned in full. Where the number of shares allotted is less than the number applied for, the balance of deposit will be applied towards allotment money, and the balance, if any, will be returned. The Directors reserve the right to refuse any application, without assigning any reason. Failure to pay any amounts due on shares allotted, when due, will render previous payments liable to forfeiture. The shares when issued will be subject to the Memorandum and Articles of Association of the Company.

Application will be made to the Native Share and Stock Brokers' Association, Bombay, in due course, for a quotation for the shares.

The Company will in due course apply to the proper authorities to be included in the second schedule of the Reserve Bank of India Act (II) of 1934 as a Scheduled Bank.

INSPECTION, ETC. Copies of the Memorandum and Articles of Association of the Company and of the aforesaid contract between the Company of the one part and Mr. J. M. Akhaney of the other part dated the 14th day of Oct., 1942, may be inspected at the Registered Office of the Company during usual business hours and any person subscribing for the Company's shares shall be deemed to have full notice thereof respectivly.

A copy of the Memorandum and Articles of Association may be supplied to any member on payment of Re. 1/- only.

Copies of the Prospectus and forms of applications for shares may be obtained at the Registered Office of the Company or at all the offices of the Imperial Bank of India or Bombay office of The National Bank of India, Ltd.

Dated this 30th day of Oct., 1942.

(*Continued from page* 739).

made available to the press recently and British leaders have naturally been making much of the fact that the output per head of the Britisher is twice that of the American or, for matter of that, higher than that of any citizen in the world so that even with the small population of 48 million the war potentials of the U.K. is very great. It is not justifiable to make any comparison of outputs per head so far as individuals in the United Nations are concerned for some of them are yet to show their best. But it is very interesting to note that the authorities are planning to get the hitherto 100 percent unattainable efficiency. The problem is one of proper utilisation of labour in particular areas, proper distribution of industries in particular areas to suit labour conditions, and to secure reasonable efficiency, elimination or co-ordination of activities to get the maximum of production and so forth. The Minister for production, Mr. Oliver Lyttelton, believes that re-allocation of contracts or work assigned to each unit will be justified if a different run of jobs will permit a more balanced utilisation of firms' resources. By all these means it is also aimed to achieve that much needed dispersal of war effort to prevent excessive damage from enemy action. The progress in this regard will have to be watched but if what the Britisher has achieved in recent months is any guide, we need not have any misgivings as to what will happen in the future.

To-day's Prospectus: A New Bank.

From the prospectus appearing in this issue, it appears that more than Rs. 11 lakhs of the ordinary share capital required by the Exchange Bank of India and Africa Ltd. has been secured in advance. The prospectus is altogether removed from the run of those appearing nowadays in that it refers to a fairly large sum and starts with the support promised by a prominent Indian ruler. The appearance of preference shares in the present offer is not unusual, and the rate of four per cent payable to preference shareholders is a nice adjustment of yield to the semi-gilt status of the new shares. In the prospectus appearing to-day will be found statements as to opportunities opened up by the war. The limit of banking expansion in India has not been reached and a large well-managed institution, such as the new bank promises to be, retains important advantages among newcomers. Though the prospectus does not refer to Arfica, it is clear that a bank with Kathiawar connections cannot but have overseas connections, more particularly in East Africa and South Africa. The growth of India's trade with these countries will naturally support banking extension, and if the new bank concentrates on exchange banking, as the title suggests immediately, it will be a worthy addition to the English exchange banks of which only one is influential in Africa. Commercial banking in the widest sense is described as the object of the new bank. So far as is known, only two Indian banks have attempted to enter the chosen field of the Exchange Banks and a new-comer may well obtain exceptional advantages. As the promoters have provided for a capital far larger than that secured by most Indian banks, it might also be said that the bank will launch out in a big way quite soon. The Directors' plans are confidently outlined in the prospectus. That the enterprise originates in Bombay is to be regarded as an exceptional advantage for a bank desirous of diverting idle capital into fruitful channels. The Board contains well-known names, and Mr. Akhaney chosen as Managing Director is already reputed as the force behind that fast-growing insurance office, the Union Life Insurance Company. The special interest evinced by the Jam Saheb may lead to support from other Princes in Western India. To that extent, and more, success is assured for the new issue which comes at a time when Indian banking is unusually stable and prosperous. The steady growth of deposits in the case of Scheduled Banks implies that a new entrant will not have difficulty in attracting funds. As India's economic development proceeds fresh openings for all Indian banks will have to be sought and the Exchange Bank of India and Africa may well become a pioneer in many directions. As the capital structure is designed to put the new bank among the Big Five in India from the outset, it is but right to add that all the plans regarding branches etc. are likely to fructify soon. Banking facilities in Kathiawar are likely to extend rapidly after the new bank gets going, and it may become dominant in one part of Western India. It is scarcely necessary to say anything about the merits of banks shares as an investment. As a class they may appear heavy, but they certainly offer a degree of security *plus* assured yield that makes it worth while for all judicious investors to examine carefully the present chance of getting at par shares that should stand at a high premium in the not distant future. The prospectus is a clear and persuasive statement of easily realised aims, and having regard to the dearth of eligible investments at present, it may well be urged that an opportunity for prudent investors like the present may not recur. To say more would be to gild the lily, and one can only refer in conclusion to the important concession made available as regards subscription by instalments.

I have often referred to and discussed, in this column, the handicaps which the war has imposed on writers generally and writers on economic questions in particular. The black-out in the streets at night is nothing compared to the black-out in the mind. More damage is done and pain caused when the mind gropes in darkness than when the hands do. And I often regret the lack of up-to-date foreign journals even more than the meagreness of our usual official publications. Time was when the foreign journals were on my table on the fifth day of their publication in London. How I used to pore over them and try as best as I could to keep my mind well-filled with knowledge of the world abroad! Now all that you can do is to conjure up in your mind, more with imagination than with knowledge, a picture of conditions abroad, a picture, obsolete, vague and distorted. The value of such a picture is, however, not to be despised, especially when it can throw light on the conditions of the post-war period, the aims and motives of economic policy of the great powers, the conflict of professions and practices, the confusion of cross-purposes, and the swirls and eddies thus set up, in which small countries and weak peoples might well be swallowed up. To a country like India, nothing is more important to-day than an imaginative anticipation of the commercial policy of the great powers when the war will be over. Its importance will be more not less this time, because every action of theirs, every move they may take will be part of a policy carefully deliberated and formulated, in calm seclusion from the tumult of the war. They are not making the mistake of the previous occasion.

* * * *

While, in India, we were making abortive efforts to secure more or less amateurish counsels in the problems of post-war reconstruction, in Britain, the best brains are applying themselves to it with patience and courage. The policies they evolve, one may be sure, will be based on an understanding of the economic conditions of the post-war world, the needs and aspirations of each nation, the extent to which their needs and aspirations are complementary or conflicting, the limits within which an alteration of these conditions may be attempted or the purposes of others foiled to suit the aim and purpose of one's own country. One has only to consider that aspect to realise the vastness and the intricacy of the problem on hand. Every nation has to look at it in the same light; for, no nation can have aims and aspirations which are totally in accord with those of every other. Post-war goodwill, even if it should prove to be real and sincere, is bound to have its limits. And if there is to be progress, national or international, it is necessary that each nation should know where its policy will come into conflict with those of others and where the policies of others will impinge on its own. Such knowledge is necessary as well for international accommodation and the minimisation of conflict as for the successful pursuit of one's own policy regardless of the interests or inclinations of others.

* * * *

In India, we have little knowledge of the economic and, particularly, the industrial position in which we shall find ourselves at the end of the war. As I often like to say, far too, too much has been thrown into the cauldron of this war; and what will come out of it, Heaven alone knows, if any one does. However, we can be fairly sure of what we shall want. The doubt is rather about what we shall be able to achieve. The gap between desire and the ability to achieve is, if anything, always exaggerated in India. That way lies no doubt, failure. Has not Bertrand Russell said that one can achieve nothing, if one had not more faith in oneself than reason can warrant? Well, whatever may be our faith in ourselves, people in Britain hardly think of any possible gap between desire and the ability to achieve. This trait has, as I shall endeavour to show, been carried to a fault. But there it is: the plans are being formed, ideas are being formed and disseminated; the industrial and commercial world is being familiarised with the demands which the nation's economic policy of the post-war period will make on them.

* * * *

The July issue of "The Banker" throws welcome beams of light on these ideas and these policies. There is the report of the Federation of British Industries, a speech of Lord Keynes to the Lancashire textile industry, statements from American sources, a survey by "Fortune" and, last but not least, an article from the Financial Editor of the "Manchester Guardian". "Without exception", as "The Banker" says, "the American statements have been animated by and intensely liberal spirit", though it is too much to say whether this liberal spirit in its present form "promises well for the future of the world". But our first concern is the commercial policy of Britain. And here we are confronted with a striking cleavage of opinion—the F. B. I. on the one side which can envisage nothing better than what will be almost a system of barter with import and export controls; and, on the other, those who refuse to take a pessimistic view of British trade and who advocate a vigorous expansion of British exports—and, to that extent, of

world trade—through co-operation with the U.S.A in the liberation of international trade relations.

* * * *

Let me take the F.B.I. first, if only because it will detain us less, being far less complicated and ominous to our aims and policies than the rival policy. The crux of the report is in the following passage :—

"It is easy to talk of Anglo-American co-operation, but we must be realistic and face our difficulties. After the war, we shall not be in the same favourable position, as in the past. Instead of being a creditor, we shall be a debtor nation, to an unknown extent, in view of the implications of Lease-Lend .... A large part of our overseas assets will have been hypothecated and, in certain cases, destroyed. Our ability to render services may, for the time being, have been reduced. The stability of our currency and foreign exchange situation will be in danger. In such circumstances, the view is widely held in industrial circles in this country that we must, at any rate for some considerable period, rely upon a policy of directive imports, on the assumption that we only import from overseas countries those essential commodities for which overseas countries are prepared to accept payment by the only means which will be open to us, i.e., by the export of our products and such services as we can render. This involves export and import controls, possibly by quota, preferential treatment of those countries which are prepared to assure us of the means of paying for them and exchange control. Otherwise, our economic stability crashes, owing to our importing beyond our ability to pay, which is the road to national bankruptcy".

* * * *

With this view of the F.B.I. of the post-war position of British economy, more people will agree than disagree. Those who disagree are probably anxious that the acceptance of this view would weaken the policies they are inclined to recommend. But what is important is that India need not have much fear of the policy advocated by the F.B.I. beyond what is suggested by certain implications. If the F.B.I. is correct, we shall have good reason to be apprehensive of the large sterling balances which are being built up out of our war profits, to be apprehensive, too, of the freedom of trade relations; for, if Britain should be set firmly on the path of bilateral trade, India will find it hard either to promote her industrial development or to find wide enough markets for her staple exports. But the dangers are less in the case of the F.B.I. policy than in the case of policies associated, to all appearances, with economic liberation.

* * * *

The suggestions emanating from the U.S.A. are comparatively broadminded. The American journal, "Fortune", has outlined a scheme of which the principal features are: (1) the creation of a free market area between Britain and America as a step forward towards a larger area embracing other nations (including the Dominions) willing to join; (2) the creation of a joint committee to work out common demobilisation policies; and (3) the creation of a Reconstruction Fund by the U.S. out of its gold reserves, making it possible for its allies to return quickly to the free market area after the war. The "Fortune" plan also contemplates a sympathetic attitude on the part of America and Britain towards the special problems of countries endeavouring to work out arrangements on a pragmatic basis, because these special problems may stay in the way of their return to the free market.

* * * *

From the tone of comment in "The Banker" and from one's own examination of the proposals, it will be clear that the "Fortune" plan can hardly find favour with British opinion. For, what Britain wants is to safeguard the standard of living of her people in the face of the very substantial decline in her national income through the loss of her invisible exports and in the face of changes in the redistribution of productive activity all over the world. She is far from having reconciled herself to the loss of her export trade in cotton textiles, to the establishment of industries in countries like India which had attained a fair amount of self-sufficiency in regard to consumer's goods even before the present war broke out. The American proposal has but cold comfort for Britain; for, it advocates the

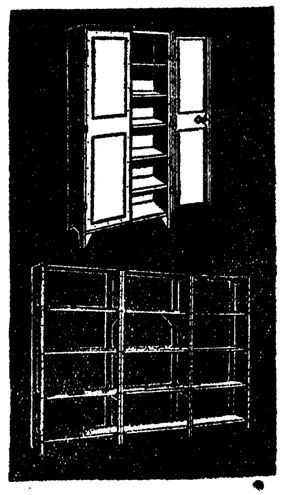
(By Our Jute Correspondent)



Calcutta, 5th November.

The October Bulletin of the Indian Central Jute Committee has, as usual, much to interest, if not a great deal to cheer, those connected with the jute industry. There is a valuable report of a fairly extensive survey of the jute districts undertaken by the marketing staff to enquire into the effects of the scarcity of transport on jute prices in the mofussil. Naturally, with the larger crop this season, it was found that a much greater quantity of jute had actually been marketed in the first two and a half months of this season than in the corresponding period last year, but the increase did not bear a proportionate ratio to the increase in the crop. The movement of prices in the mofussil did not conform during that period to the price movement in Calcutta, though the conclusion to be derived from the analysis is rather that the mofussil was leading Calcutta during that period last season while this year the mofussil was lagging behind, while it has to be borne in mind that balers' expenses are appreciably higher, from a variety of causes, this year than last. A survey taken just now would, we think, show that mofussil prices were catching up on the Calcutta prices pretty rapidly. But to what extent the recent rise in the mofussil is benefiting the actual cultivator is a matter more difficult to determine, also how the projected loans to needy cultivators may be affected by the rise in the market. According to the published terms, no loan is to be granted to the holder of a license for an area exceeding 3 bighas and the loan is to be at the rate of Rs. 5 per bigha with a maximum of Rs. 15, while the applicant for a loan must attest that he still holds jute to the value of at least twice the amount of the loan applied for. Now three bighas are approximately one acre and represent roughly an out-turn of say 15 maunds of jute. To secure a loan of Rs. 15 from Government the applicant must have still in hand jute to the value of Rs. 30. Over large areas of Western and Northern Bengal the interior price is not likely to be yet above Rs. 5 per maund for average Bottom quality, so unless the applicant has still retained in hand 6 out of his 15 maunds of production, he is not eligible for any loan. There is evidence in the reports from the mofussil that, even at the higher rates current today, jute is being held back, presumably in anticipation of securing loans on it. So if the Government proposals are promptly put into operation, the desired results may be achieved and the cultivator enabled to avoid throwing his jute on to the market to keep himself and his family alive.

One of the conditions of the loans originally notified is that they are repayable as soon as the holder sells his jute and in any case not later than 31st January 1943, presumably because by that time the winter paddy crop will be harvested. This short term would detract greatly from the value of the scheme, as present progress points to the improbability of getting all this crop moved before even June of next year. A statement credited to the Premier indicates that this term of the loans will not be strictly enforced however, and for the sake of the rayat-log it is to be hoped that this is so.

The progress of the crop up to the end of October is indicated by the estimated arrival figures for that month at 6,54,000 bales against 7,72,000 bales for October last year. This brings the total arrivals for the July/October period to 19,56,000 bales this year against 24,31,000 bales last year. And it is regretfully to be noted that the transport position shows little sign of improving, nor does the co-ordination that is so desirable, in fact necessary if the full value of the available facilities is to be utilised, show any sign of being adopted. We submit that if it cannot be adopted voluntarily, it should be enforced by direction from the head of the Regional Priorities Committee. Less than 20 lakhs of bales into Calcutta in the first four months of the season is no achievement to be proud of even with the limited transport available. It is only too obvious that, unless a much improved rate of progress is attained, not only will it be impossible to market much more than one half of the crop before the next one is upon us, but the local Mill industry will be in a parlous plight for lack of raw material.

The report of the Indian Government Trade Commissioner in New York, quoted in the Bulletin, merely serves to bear out the view that the authorities in the U.S.A. have adopted a policy of excluding burlap wherever it can be replaced by a cotton fabric. One rather surprising statement in the report is that spinners were overstocked with supplies of raw jute due to the restrictions on its uses. It might have been thought that all available sources of raw material for manufacturing bag fabrics would be utilised. And that the U.S.A. still wants raw jute is confirmed by the reports of orders received recently and which are getting priority of shipment.

ENDURANCE
The IRON PILLAR
The famous Iron Pillar of Delhi, which bears a Sanskrit inscription dating back to A. D. 300, has successfully withstood the ravages of time. Likewise, we claim that our STEEL Equipment, even if it may not last for centuries, does definitely last for much more than a life time.
Important, too, are other advantages . . . Steel Equipment is insect, fire and burglar-proof. It will not warp. Each unit remains for years in the same condition as when originally purchased. The first installation cost is the last. May we quote for your individual requirements?

Resume of Commodity Markets

THE important feature of the week is the sharp rise in prices for gold and silver. Ordinarily, a rise in prices for the precious metals would have been followed by an equally aggressive rise in prices for goods as well. The improvement in values for both the white and yellow metals in recent weeks has been due to special factors, and as such it cannot be said to have any significance for an inflationary boom in prices. As it is, we do not suggest that there has not been any inflation in prices at all. We only point out that the higher prices for gold and silver should not precipitate any inflationary rise in prices for commodities. But it appears that if the present uncontrolled appreciation in values is allowed to continue for any length of time, the damage to the existing price structure will be irreparable.

Coming to the developments in the market during the past week, the jute market has continued firm while the jute manufactures market was inclined to be irregular. The sugar market is reported to be easier but the rice market has tended to be firm on reports of cyclone damage in some important districts of Bengal and large-scale exports to Ceylon.

Jute:

As has been pointed out in these columns on several occasions there cannot be any change in the conditions in the jute market unless there is a substantial improvement in the supply position and it looks as though it will not be possible to make any substantial progress in this regard for some time to come. As the Transport Minister pointed out sometime back deliveries will have to be spread over the whole season; naturally, mills will have to eat into their stocks until such time as it is possible to get their requirements in full. Usually, the bulk of the buying is done by mills in the early months of the season. In fact, by February, the whole purchasing programme of the season would have been completed. This policy, however, cannot at present be followed. It may even be necessary at a larger stage to effect a proper distribution of the arrivals between the various mills.

There has been some criticism of the policy of the Government of Bengal regarding the relief proposed to be given to the jute growers. Delay in announcing the measures by which they propose to afford relief to the jute-growers, it is pointed out, has deprived the scheme of its charm as the ryot in certain parts of the Presidency has disposed of the bulk of his crop. Instead of measures which are designed to relieve the distress of the ryots on a short-term view, it is proposed that arrangements should be made for storage space co-operative selling and so forth. These are no new suggestions but have been repeated only to impresss on the authorities the necessity for shaping a constructive long-term policy.

Jute Manufactures:

The hessian market was inclined to be easy earlier in the week. It appears that the available shipping space was utilised for the export of jute to U.K. and U.S.A. where the commodity is badly needed in order to keep the mills going and manufacture special types. As the expectations regarding the possibility of an increase in freight space for hessian shipments were deferred there was naturally some selling but the lost ground has been more than regained during the past two days. Though the outlook for the next two months is reported to be quite satisfactory nobody is prepared to operate freely for positions beyond December. No substantial premium is, therefore, available for near positions.

Rice:

It was only recently that reports were received to the effect that the prospects for the next rice crop were quite satisfactory and that with the large increase in area for the crop in Bengal and Assam and a higher yield substantial supplies will be available during the next season. It is now reported, however, that extensive damage to the crop has been suffered in certain districts of Bengal and to that extent the yield might be affected. It is only to be hoped that the damage on account of the cyclone will not be heavy. Meanwhile, the reports that over 40,000 tons of rice have been shipped to Ceylon are rather disturbing. It is also reported that it has been definitely arranged that there should be a regular shipment of 20,000 tons a month to our small neighbour. The Indian Merchants Chamber, Bombay, is naturally anxious and warns that such large quantities of the essential staple commodity of the masses should not be exported from the country without due regard to the statistical position within the country.

Bullion:

Reference has been made earlier to the substantial rise in prices for gold in recent weeks. The quotation for gold and sovereigns constitute a new record for war period. In fact for all time. The rise in the quotation for sovereigns is more pronounced and on the basis of the prices for sovereigns the quotation for bullion should be as much as Rs. 70. It is clear, therefore, that due to the chronic shortage of sovereigns buyers are inclined to pay higher and higher premiums. It was remarked in these columns last week that the policy of the Governments of Australia, Canada and the U.S. to discourage the production from gold mines in order that miners can be more effectively utilised for the production of the baser metals, might result in an undue appreciation in the rise in values if the reduction in the production of the metal was encouraged for any appreciable length of time.

Tea

At the auctions for consumption of tea in India held on Tuesday a rather irregular tendency was noticeable and prices were lower for all classes of black tea except common and medium fannings without tip. Medium broken grades were marked lower by 2 annas while tippy sorts broken and leafy grades were irregularly lower by 2 annas to 6 annas. Offerings of all green tea met with strong demand.

Piecegoods:

The suggestion that the Commerce Member been is considering a scheme for large-scale production of cheap cloth designed to meet the requirements of the poor and the lower middle classes, is said to be welcome. It will be remembered that it was pointed out in these columns on more than one occasion that Government interference in some manner would be necessary before long if the uninterrupted rise in prices for piecegoods continued. In the absence of any definite scheme for catering to the requirements of the wage earners, any unchecked rise in prices is bound to have an adverse effect on the poor man's budget and lead to a further demand for an increase in wages. Before the new scheme is taken into consideration, approved and put into operation, it is proposed that the production of the existing type of standard cloth should be proceeded with. The present type of standard cloth has not met with the approval of many dealers and fears have been expressed regarding the possibility of effectively marketing these goods. The new scheme, we hope, will be to allow for a higher standard of cloth and take into consideration the requirements of the average consumer.

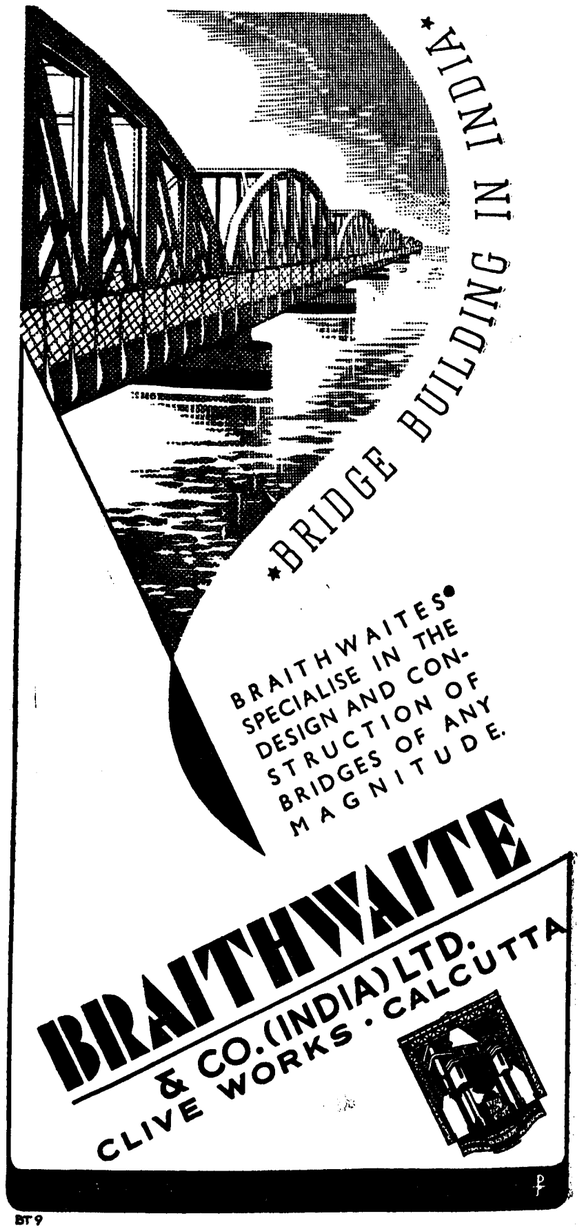
(*Continued from page 747*)

system of free markets which Britain has ceased to believe in, except as the policy for other countries to follow to suit her convenience. "The free exchange prepared by "Fortune", observes "The Banker", would impart a tremendous stimulus to our export industries, but it would not in itself offer any solution of our balance of payments problem".

* * * *

Britain's position is not bettered by the Feis scheme proposed by Mr. Herbert Feis, of the U.S. State Department, in his personal capacity. According to a "Times" report, the Feis Scheme "reduced to its simplest terms is that, at the beginning of each year, the American Government would set aside a designated sum of dollars, say, three or four billion, which would be allocated among the various countries for specified purposes. To the extent that each country drew upon its allocation, it would, in return, make available to the United States a corresponding sum in its own currency at a fixed rate of exchange. If, at the end of a specified period, say, two years, any of the foreign countries had not needed all the dollars allotted to it, the unused remainder would be cancelled. Similarly, if the United States had not used the full amount of the credits in the foreign currencies, received in exchange, the remainder would be cancelled. The arrangement would be self-liquidating and—what is more important—no permanent debt would come into existence". The consequences of the Feis Scheme on economic development and international trade are not easy to analyse; for, far too much is left hazy and in doubt. The main idea, however, is to enable undeveloped countries to obtain capital equipment. But it is from the standpoint of markets that the writer in "The Banker" considers it. It is argued that, when capital goods are available under the Feis arrangement, similar goods from any other country would be unattractive at any price. "The arrangement in this respect is nothing more than the "reductio ad absurdum" of exchange dumping and would, no doubt, be regarded as such by any other country suffering from unemployment in export industries capable of supplying, (e.g.) the Chinese market."



* * * *

I have given these schemes and British reactions to them to show that British policy in the post-war period is less likely than ever to indulge in the generalities of economic liberalism and is bound to aim at the expansion of the British export trade on traditional lines regardless of the interests of others. Lest the last phrase seem unwarranted, I give below an extract from the speech of Lord Keynes at the Manchester University:

> "The future prosperity of this country depends on a great expansion of our export trade. With that assured, the rest is comparatively easy. Without it, our good hopes for the future are sunk. It simply must happen. We must increase the volume of our exports by at least 50 per cent compared with 1938..... It will be for other people so to order the economic relations with the rest of the world to suit the pocket of Lancashire, India, of course, is the most important. Perhaps, Keynes meant by "other people" the Government at Whitehall also. But it makes little difference, so far as we are concerned. The danger that threatens India, when even men like Keynes speak in such disregard of conditions in world economy, can hardly be exaggerated. In Britain, preparation for post-war economic reconstruction is twofold, firstly, the lines on which public policy should be shaped and directed; and, secondly, the readiness of industry and trade to seize the opportunity when it offers itself or is created for them by the Government. In India, things are quite the opposite. We are neither bestowing thought on our problems nor preparing ourselves for the opportunities that might present themselves. The post-war Economic Reconstruction Committee is, to say the least of it, moribund. There was flutter for some time; and, then, animation was suspended and finally disappeared. We have problems galore. The war and the war effort are changing the face of the national economy. But the war cannot be eternal. In a year or two or three, it must come to an end; and the problems of peace will assail us. We shall be more helpless than ever we found ourselves in war.
>
> "EAVESDROPPER."

* * *

Among the "other people" who must order their economic relations with the

JUTE

Calcutta, Novr. 4.

THE jute market has continued very firm and a further improvement in prices has been recorded. There is a scarcity of higher grade jute and buyers are prepared to pay good prmiums; but with the difficulty in regard to transport, it is not possible to bring in supplies freely. The recent disturbances to communications on account of the cyclone have resulted in a drop in arrivals. If there is no appreciable increase in the present rate of arrivals it will be necessary to effect a proper distribution of the stocks in Calcutta and the surrounding areas at some later date among the several mills on the basis of their capacity, to keep them going. The time has not yet come for such a procedure to be adopted at the present stage but if adopted would prevent unnecessary competition and dislocation in shipping. At the present moment there are reports of abuses on the part of the river traffic authorities. More influential people seem to be able to get their requirements by paying larger premiums. A system of priority and quotas would be helpful.

In the loose jute section mills are still unsatisfied buyers supervised Jat-Middles and Bottoms were done at Rs. 12 and Rs. 9-4 per maund respectively while Cross Bottoms were 8 annas higher at Rs. 7-8 per maund. For small lots a premium is demanded.

In the pucca bales section not much of business has been reported as only last week large purchases on account of U.K. and U.S.A. were reported. These were not, however, recorded in market transactions. Dundee Daisee 2/3 and Tossa 4's were done at Rs. 60 and Rs. 53 per bale while Lightnings and Firsts 2/3 were done at Rs. 55 and Rs. 62 per bale respectively.

JUTE MANUFACTURES

Calcutta, Nov. 4.

The jute manufactures market was inclined to be easy earlier in the week on account of cancellation of some shipments and some near selling. 9 porters ready came down to Rs. 14-8 from Rs. 14-14 but reports regarding the satisfactory local stock figures for October and the resumption of buying by Bombay and Karachi dealers, however, have brought back prices to original levels. Most of the demand is for near positions and not much of business has been reported beyond January. 9 porters ready are quoting Rs. 14-14, November Rs. 14-15, December Rs. 15 and January-March Rs. 15. 11 porters ready are quoting Rs. 18-12, November Rs. 18-13, December Rs. 18-15 and January-March 19.

The Heavy goods section was inclined to be easier earlier in the week in sympathy with the hessian market but quotations are at the highest levels towards the close on late buying. B twills for ready delivery sold on basis of Rs. 55, Liverpool twills Rs. 58 and Cornsacks Rs. 53-8.

GOLD

Calcutta, Nov. 4.

A further improvement in prices has been recorded in the local gold market during the past few days. Demand is in excess of supplies. Speculators are busy but there seems also to be some investment buying on reports regarding the restriction of the production of gold. There reports have given rise to the hopes that there would be uninterrupted rise in gold prices. The improvement in the quotation for soyereigns especially is very pronounced. At Rs. 47-8 it constitutes a new record. Gold ready were quoted at Rs. 62-11 against Rs. 59-13. The quotation for sovereigns at the end of last week was only Rs. 44-5.

SILVER

Calcutta, Nov. 4.

The silver market has been steadier only in sympathy with the gold market. Reminders given by the Government of India that standard silver coins will cease to be legal tender as from May 1, 1943, are perhaps having some effect. The undertone is bullish and if the present conditions continue to prevail, it appears that it will not be possible to prevent a further rise in prices. From Rs. 100 at the end of last week the quotation at the time of writing is Rs. 106-8. Freer transactions between Bombay and Calcutta have resulted in the narrowing down of premiums.

There is nothing interesting to report in the London market and the quotation for both spot and forward remains unchanged at 23½d. Moderate trade demand has been met officially.

PIECEGOODS

Calcutta, Nov. 4.

The piecegoods market has been not very active but prices in the several sections are further higher. The great difficulty is to get supplies from mills in the Western Presidency as there is trouble in resuming full production. Stocks with local dealers have been depleted and need replenishment badly. Meanwhile, buyers are inclined to defer their requirements as considerable interest has been aroused by reports that a new scheme for the production of cheap cloth for the poor and lower middle classes is under consideration and that efforts will be made to induce mills to manufacture these types of cloth on a large scale as early as possible. In view of the present prohibitive level of prices, consumers are in no mood to purchase their requirements if they can postpone them to a later date.

With the advent of the cold weather there has been the usual sasonal demand for winter styles but with the whole Indian output being requisitioned by the Government and the lack of imports, those dealers who hold stocks are in a position to dictate their terms. Business passing is naturally on a very small scale though there has been a substantial improvement in values.

Calcutta Commercial Bank Ltd.

Executes LETTERS OF GUARANTEE on behalf of contractors, suppliers and clearing agents, in lieu of cash deposit, acceptable by the Indian Custom and Tatas.

Furnishes INDEMNITY BONDS for issue of duplicates for lost share scrips, insurance policies, etc.

Undertakes CLEARING and FORWARDING work at Ports.

Collects Bills, Cheques and Hundies, Insurance Premia, etc., at competitive charges through sixty branches in India; specially reduced rate on exclusive arrangement.

Supplies regularly silver and coins to Collieries, Tea Gardens, Mills, etc., on nominal commissions.

Discounts approved Bills, makes investments against approved collaterals, Tea Quotas, Insurance Policies, etc.

Vol. XXX. No. 19 FRIDAY, NOVEMBER 6, 1942 Price Re. 1

Stock Markets to-day and to-morrow

HOPEFUL OUTLOOK FOR EQUITIES

THE Calcutta Stock Exchange remained rather quiet earlier in the week and business was on a very small scale. Prices were fluctuating within very narrow limits and there was a general tendency to await further developments. During the last two days a definitely steadier feeling has been noticeable and a more confident view is taken of the immediate future. The fears regarding the possibility of an extensive air attack by the enemy have now receded to the background. There would perhaps have been a marked improvement in values but for the fact that most of the Marwari firms will be closing their books day after to-morrow, *Diwali* day. *Moorat* business this year, as on the last occasion, may prove to be lively with this difference that the upward movement this year may be more sustained than on the last occasion. There was nothing intrinsically wrong with the last recovery movement and it will be remembered the break in values came about only with Japan's entry into the war. As at present, there does not appear to be any chance of a great surprise in the war situation. Even if there are any, it must be satisfactory from the market point of view. Reports regarding the skirmishes on the Eastern border are perhaps an indication of the coming Allied offensive, while the news regarding the retreat of the Japanese from the Solomons is another encouraging factor. The rapid march towards Buna, New Guinea, the main Japanese supply base, is perhaps the most encouraging bit of news for some time. On top of all these developments Thursday morning's news of the victory of the Eighth Army over the Germans in Egypt should prove to be very encouraging. The reopening after the holidays should, therefore, be very interesting.

* * * *

It was pointed out last week that the reduction in the dividend of *Burn & Company, Limited* for the year April, 1942, must have been due to the difficulty in getting imported supplies, the utilisation of the greater portion of the Company's capacity on war orders and the increase in the costs of production. The accounts for the year, now to hand, show that in spite of a large increase in the volume of turnover, earnings are lower although most shops of the Howrah Iron Works enjoyed fairly continuous production during the period when there were difficulties in obtaining imported and raw materials to complete the work in hand. All the reserves of the Company are being fully utilised by the Government for the outturn of essential war supplies.

* * * * *

The net profit, before providing for taxation and depreciation, is lower at Rs. 26,54,527 against Rs. 28,02,155 for the previous year. In spite of the lower level of earnings, it has been necessary to provide the same amount for taxation, Rs. 13,25,000 against Rs. 13,35,670 on the former occasion. The amount set aside to depreciation is Rs. 3,31,815 (Rs. 3,36,708). The dividend on the ordinary shares is lower at 20 per cent against 25 per cent previously. The amount carried forward is considerably lower at Rs. 77.229 against Rs. 1,00,513 brought in.

* * * * *

Total sales were Rs. 2.11 crores against Rs. 1.71 crores. There is no increase in stock-in-trade and works-in-progress as on the former occasion. The figure as on April 30, 1941 was Rs. 1.05 crores against Rs. 1.08 crores. Working expenses were Rs. 2.06 crores against Rs. 1.93 crores. It is clear, therefore, that the higher cost of production and lower realisations have cut into earnings.

The Refractory and Ceramic groups of works are actively employed and remain a vital link in the supply requirements for key industries in work of national importance. While the decline in the earnings of the Company is fully explainable, the market has not yet got over its disappointment with the dividend for 1941-42. The quotation is around Rs. 350 cum-dividend. But even on the basis of the lower dividend, the return is 6 per cent tax-free.

* * * *

Unlike the Bally Jute Company the *Anglo-India Jute Mills Company, Limited* has not been able to maintain the earnings for the half-year ended September 1942 at the level of the previous six months. The decline in earnings is due both to the smaller volume of sales and increase in the costs of production, relatively. Perhaps the position in regard to forward sales was not so favourable. The net profit, before providing for taxation and depreciation, for the half-year is Rs. 17,08,038 against Rs. 23,57,437 for the previous half-year. Provision for taxation is considerably lower at Rs. 9.2 lakhs against Rs. 16.25 lakhs. The sum of Rs. 1 lakh against Rs. 1.5 lakhs has been transferred to war contingency reserve while a smaller sum has been placed to general reserve in addition. In view of the strong financial position of the Company the decision of the directors to strengthen their reserves is rather surprising. It was perhaps due to the need for maintaining the dividend at the former level, as any increase in the distribution to the ordinary shareholders at this stage might perhaps be difficult to maintain in the next half-year in view of the confused outlook for the industry. The dividend has been maintained at Rs. 10 per share. The amount carried forward is Rs. 1,34,111 against Rs. 1,34,820 brought in.

* * * *

Smith Stanistreet & Company, Limited has been able to report good progress during the past three years. The earnings for the year ended June, 1942 show a further increase. The profit, before providing for taxation and depreciation, is Rs. 1,95,888 against Rs. 1,81,408 for 1940-41. The allocations to funds including depreciation amount to Rs. 53,295 against Rs. 28,843. Provision for taxation is slightly lower at Rs. 84,100 against Rs. 87,023. The dividend to the ordinary shareholders has been maintained at 25 per cent.

* * * * *

The improvement in gold prices has not hitherto had any effect on stock exchange values. The rise in prices in the bullion market at the present moment is very different from the previous occasions. Whenever there was a deterioration in the war situation there was a switch-over to the precious metals. Thus in the days before the fall of France there was heavy speculative and investment buying of both the yellow and white metals. Again, when Japan entered the war there was a rush for buying for hoarding purposes. With the improvement in the war situation, however, the higher prices for bullion were not held and the quotations were fluctuating narrowly at the lower levels. The behaviour of the market in recent weeks, however, is something very different. There are no fears of any major surprise for the Allies. In fact the position has improved so far as the Allies are concerned. In some quarters there is a suggestion that the higher prices for gold and silver may be due to fears regarding inflation but, as pointed out before, there has been no slump in giltedged prices. Neither has there any boom in equities. Hitherto, the one-sided movement in the bullion market has been isolated. For how long it will last cannot be definitely said.

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 4.

It will be remembered that rather quiet conditions were noticeable at the end of last week with selling at the higher levels and the reports regarding the bombing of Chittagong and some aerodromes in N. E. Assam. Quiet conditions continued to be in evidence early in the week, but business was on a restricted scale and operators and investors were inclined to await further developments. During the last two days slightly firmer conditions have been noticeable with the withdrawal of the Japanese from Guadalcanar and the continued resistance of the Russian defenders at Stalingrad. This morning's news regarding the full retreat of the Germans before the Eighth Army has had an encouraging effect on the market. The undertone is firm and quotations are at the highest levels for the week. Given the continuance of the present conditions it appears that the upward movement will be sustained.

The giltedged securities section has been quiet but steady. Business passing has been on a small scale. Cheap money conditions continue to prevail and there has been a decline in the average discount rate from ten annas and three pies per cent per annum to nine annas per cent per annum this week. The Government have taken advantage of the present occasion to strengthen their position and the treasury bills offer has been increased to ten crores from eight crores. 3½ per cent Paper is sticky around Rs. 94-1. Among terminable loans, a small lot of 1963-65 was done at Rs. 95-8. 3½ per cent 1947-60 were Rs. 103-3, 4 per cent 1960-70 Rs. 109-12, 4½ per cent 1955-60 Rs. 113-12 and 5 per cent 1945-55 Rs. 108-10. Among provincial loans, 3 per cent *Punjab* were crossed at Rs. 99-4.

Business in public bodies' debentures has been rather restricted. 4 per cent *Calcutta Port* debentures 1974 were done at Rs. 102. 5 per cent debentures 1986, of the same body, were noted at Rs. 110. 5¼ per cent *Rohtas Industries* at Rs. 103 and 5½ per cent *Carew & Co.,* at Rs. 102 were among the transactions recorded in industrial debentures.

Bank shares have remained quiet with *Imperial Bank* fully paids at Rs. 1.606 and *Reserve Bank* at Rs. 101.

Coal shares have been rather uninteresting with *Amalgamated* at Rs. 28-8, *Bokaro and Ramgur* at Rs. 18, *Burrakur* at Rs. 13-4 and *Hurriladih* at Rs. 12-15. *Ghusick and Muslia* were Rs. 5-3, *Katras Jherriah* Rs. 26 and *Talcher* Rs. 2-10.

Cotton shares have remained firm though any substantial improvement in values has not been recorded. *Cawnpore Textiles* were slightly higher at Rs. 12-14. *Basanti* were Rs. 6-5, *Bowreah* Rs. 475, *Dunbar* Rs. 262-8 and *Elgin* Rs. 40. *Kesoram* were Rs. 12-12 and *New Victoria* Rs. 7-8.

In the jute section there has been a slight broadening of interest. *Agarpara* were noted at Rs. 23, *Alexandra* at Rs. 202, *Anglo-India* at Rs. 345, *Calcutta Jute* at Rs. 24-9, *Ganges* at Rs. 312, *Howrah* at Rs. 55, *National* at Rs. 23-12 and *Standard* at Rs. 218.

The Engineering section has not been quite active but steadier conditions have been noticeable. From the lowest level for the week of Rs. 30-4 there has been a rise to Rs. 31. *Steel Corporation* also record an improvement from Rs. 20-4 to Rs. 20-12. On the declaration of a lower dividend *Burn & Co.* are lower at Rs. 350. *Indian Malleable Castings* ordinaries were Rs. 7-8, *National Iron and Steel* Rs. 13-4 and *Saran Engineering* Rs. 6-1.

Sugar shares have been marked higher with *Balrampore* at Rs. 13-4, *Belsund* at Rs. 6-12, *Carew* at Rs. 15-4, *Cawnpore* at Rs. 27-8 and *Raza* at Rs. 36-14.

Tea shares have been in great demand, *Barduar Tea and Timber* being noted at Rs. 7-4 and *Tyroon* at Rs. 15-8.

In the Miscellaneous section, *Burma Corporation* were noted at Rs. 2-12 and *Indian Copper Corporation* at Rs. 2-6. *B. I. C.* were steady at Rs. 5-14. *Dunlop Rubber* have been marked higher on active buying to Rs. 40-4. *Indian Cable* were Rs. 24-8 and *Moradabad Water Supply* Rs. 4-4. *Assam Saw Mills* were Rs. 3-10 and *Port Shipping* Rs. 16-14. Paper shares were not very much changed, *Titaghur Paper* being noted at Rs. 20-15, *India Paper Pulp* at Rs. 162, *Shree Gopal Paper* Rs. 19-10 and *Star Paper* Rs. 18-8.

(Annual meeting held on November 5, 1942)

Audited Accounts for the year ended 31st March, 1942.

The disposable profits for the year ended 31st March, 1942 are as under:—

	Rs.	A.	P.
Net profits after providing for taxes and setting aside a sum of	7,59,267	15	6
On account of depreciation, amount to ..	13,19,743	10	10
Add Amount brought forward from last year's account	1,42,100	14	9
The Amount available is, therefore ..	14,61,844	9	7

Out of this total of Rs. 14,61,844-9-7 the Directors have transferred Rs. 2,50,000 to the Reserve Fund, leaving a balance of Rs. 12,11,844-9-7.

Out of this sum of Rs. 12,11,844-9-7 the Directors have proposed to declare dividend as follows:—

	Rs.	A.	P.
(1) Dividend at the rate of Rs. 3-8 per share, free of income-tax on 1,70,000 Odrinary Shares of Rs. 10 each, fully paid up, and at the rate of As. 5-6 per share on 26,580 Ordinary Shares of Rs. 10 each paid up Re. 1 per share, absorbing	6,04,303	0	0
(2) Dividend at the rate of Rs. 2-8 per share, free of Income-Tax on 2,00,000 Deferred Shares of Rs. 2-8 each fully paid up, absorbing	5,00,000	0	0
	11,04,303	0	0
And to carry forward ot the next year's account	1,07,541	9	7
Total ..	12,11,844	9	7

The entire output of the factory is controlled by the Government to meet direct and indirect requirements of War and essential services at prices fixed by them. This year's working shows a substantial reduction both in the gross and net profits only because the prices of raw materials, such as billets, coal etc. have increased to a great extent in addition to the increase in prices of stores and expenditures on wages, etc. Furthermore, expenses on A.R.P. measures and Dearness Allowances have to be accounted for. On the other hand, the liability for taxation remained unchanged inspite of lower profits due to high incidence of Excess Profits Tax and increases in the surcharges on Income-Tax and Super-Tax.

Throughout the year the plant produced sufficient quantity to meet the heavy Government requirements. The production in the Rod Mill was satisfactory and new machinery was purchased during the year to increase the productive capacity of the plant. These Machineries, however, had to be purchased at rather prohibitive prices and provisions have, therefore, to be made for depreciation at a higher rate. Capital expenses incurred in the extension of factory buildings and staff quarters have been considerable this year which would account for further depreciation.

Managing Agents.—Messrs. Indra Singh & Sons, Ltd.

Synopsis of the balance sheet as at 31st March, 1942:—

Limited.	Rs.	*Assets.*	Rs.
Capital paid-up ..	22,26,580	Block net ..	19,92,409

FORTHCOMING MEETINGS

Bally Jute Company, Limited.—Half-yearly Meeting, 18th November, 1942 at p.m. Transfer Books closed from October 31, 1942 to November 18, 1942. *Dividend on the Ordinary shares Rs. 10 per share and on the Preference shares Rs. 3 per share.*

Smith Stanistreet & Company, Limited.—Annual General Meeting, November 16, 1942. Transfer Books closed from November 1, 1942 to November 16, 1942. *Dividend on Ordinary shares As. 4 per share and Preference shares 10 per cent.*

ANGLO-INDIA JUTE MILLS CO., LD.

NOTICE is hereby given that the Fifty-second Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office, 101, Clive Street, Calcutta, on Tuesday, 24th November, 1942, at noon for the following purposes:—

(1) To receive the Report of the Directors, and to pass the Audited Accounts for the half-year ended 30th September 1942.
(2) To declare dividends.
(3) To elect a Director.
(4) To appoint Auditors.
(5) To transact such other competent business as may be brought before the Meeting.

The Share Transfer Books of the Company will be closed from 13th to 24th November 1942, both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary, and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board of Directors,
DUNCAN BROTHERS & CO., LD.
Managing Agents.

Calcutta, 31st October, 1942.

HOWRAH MILLS COMPANY, LIMITED

NOTICE is hereby given that the One-hundred and fourth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 27th November, 1942, at 12 o'clock noon, for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1942.
(2) To declare Dividends.
(3) To transact any other bisiness that may be brought before the Meeting.

On application, Dividend Warrants will be made out in favour of Shareholders whose names are in the Company's Books on the 12th November, 1942, or their Attorneys authorised to receive them. Holders of Scrip under blank transfer are reminded to send in their shares for registration in the Books of the Company as soon as possible, but not later than Thursday, the 12th November, 1942.

To facilitate the issue of Dividend Warrants, Shareholders are requested to insert share numbers and the nature of the shares held by them in their applications.

The Share Transfer Register of the Company will be closed from Friday, the 13th November, 1942, to Friday, the 27th November, 1942, both days inclusive.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 30th October, 1942.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Seventy-second Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 27th November, 1942, at 12-5 p.m., for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September, 1942.
(2) To declare Dividends.
(3) To transact any other bisiness that may be brought before the Meeting.

On application, Dividend Warrants will be made out in favour of Shareholders whose names are in the Company's Books on the 12th November, 1942, or their Atterneys authorised to receive them. Holders of Scrip under blank transfer are reminded to send in their shares for registration in the Books of the Company as soon as possible, but not later than Thursday, the 12th November, 1942.

To facilitate the issue of Dividend Warrants, Shareholders are requested to insert share numbers and the nature of the shares held by them in their applications.

The Share Transfer Register of the Company will be closed from Friday, the 13th November, 1942, to Friday, the 27th November, 1942, both days inclusive.

By order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 30th October, 1942.

AMRIT BANASPATI CO., LTD., GHAZIABAD

NOTICE

Pursuant to a resolution passed by the Board of Directors in their meeting held on the 27th October 1942, an interim dividend at the following rates has been declared by them:—

On Preference Shares at the rate of 6 per cent per annum.
On Ordinary Shares at the rate of 10 per cent per annum.
On Deferred Shares at the rate of 10 per cent per annum.

The above dividend shall be payable on or after the 21st November 1942. The Share Transfer Books shall remain closed from 15th November to 21st November 1942. The dividend warrants shall be posted to the registered shareholders as on the 15th November 1942. Persons holding shares on blank transfers are requested to lodge the shares for transfer in their name before the 15th November 1942.

For AMRIT BANASPATI CO., LTD.,
AMRIT AGENCY LIMITED
T. KHAITAN,
Secretary,
Managing Agents.

THE STEEL CORPORATION OF BENGAL, LTD.

NOTICE is hereby given that the Directors have authorised the half-yearly payment of dividend due on the 5 per cent Cumulative Preference Shares of the Corporation for the half-year ended 30th November, 1942.

The Share Transfer Books for the Preference Shares of the Corporation will remain closed from the 16th November to 30th November, 1942, both days inclusive. Payment will be made only to those Members or their Mandatees whose names appear on the Registers of the Corporation on the 15th November 1942.

No applications for Warrants will be necessary. Claims on behalf of holders of Shares held on blank transfers will not be entertained.

By Order of the Board,
BURN & CO.,
Managing Agents.

ISSUED WEEKLY

Vol. XXX. No. 20 SATURDAY, NOVEMBER 14, 1942 Price Re. 1

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

NATIONAL INSURANCE COMPANY, LIMITED.

The war of Materials!

Aeroplanes, Tanks and Anti-Aircraft Guns etc. are required in ever increasing quantities to defend our country.

Army clothing is another war time necessity and we have placed our entire plant at the disposal of Defence Service.

We regret we shall not be able to meet civilian demands at present.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been in abundant supply with interbank call money nominally at ½ per cent in Calcutta and ¼ per cent in Bombay. All money market indices point to plethoric conditions, and there is no indication yet that anything like demand for money, associated with the busy season, will be felt for some time to come.

Though the deposits maintained by member banks with the Reserve Bank of India show a decline of over Rs. 2½ crores, they are still at the high level of Rs. 68.13 crores. The Imperial Bank showed a sharp rise in deposits to Rs. 154.39 crores as on October 30. The Bank's cash was at the comfortable figure of Rs. 40.44 crores. Month-early disbursements, however, have caused a decline in deposits to Rs. 153.89 crores and in cash to Rs. 39.20 crores. There has been a further expansion of currency for Rs. 15 crores against sterling securities. In view of these factors, the rise that has taken place this week in the treasury bills discount rate must be considered unjustified. The only explanation that can be adduced is the increase in the offer of tender bills from Rs. 8 crores to Rs. 10 crores. The average rate of accepted tender is 10 annas and 4 pies per annum against 9 annas last week. The offer for tender bills for next week is unchanged at Rs. 10 crores.

The maintenance of the offer of tender bills at Rs. 10 crores is unconnected with the volume of treasury bills maturities which are comparatively on the small side but the ways and means position of the Central Government stands in need of assistance. In the week ended October 30, 1942, the Government of India received Rs. 7 crores from the British Government in respect of war commitments. In spite of that the deposits of the Central Treasury with the Reserve Bank showed only a slight increase from Rs. 13.98 crores to Rs. 14.13 crores. The return of the Reserve Bank for the week ended November 6, 1942, disclosed further receipts of sterling payment from the British Government. Sterling securities in the issue department have risen from Rs. 325.85 crores to Rs. 340.83 crores or by Rs. 15 crores. On the other hand, foreign balances in the banking department have declined from Rs. 94.41 crores to Rs. 86.31 crores. That is to say, the net increase in sterling assets of the Reserve Bank is Rs. 7 crores. We may infer that the payment received from the British Government during the week ended November 6, is approximately Rs. 7 crores. In spite of cash replenishment the deposits of the Central Government with the Reserve Bank showed a sharp decline from Rs. 14.13 crores to Rs. 5.65 crores. It must not be forgotten that this cash position at the beginning of the month is somewhat inconvenient unless further sterling payments are received from the British Treasury. In any case, that the Central Government deposits have declined to Rs. 5.68 crores may be said to be the justification for the maintenance of the weekly offer of tender bills at Rs. 10 crores.

Rupee coin held in the issue department records a very sharp setback from Rs. 21.84 crores to Rs. 19.67 crores. It is evident that the demand for one rupee coins is no less marked than the demand for small coins. In view of the stock of rupee coins with the Reserve Bank declining to below Rs. 20 crores, it is not unlikely that the Reserve Bank applied to the Central Government for rupee coins for Rs. 5 crores or thereabouts. Rupee securities in the issue department show no change.

* * * *

The sharp reaction in prices in the bullion market during the past week should have been welcomed by many for, the sensational rise in the price for the yellow metal in the last two weeks had a disturbing influence. It was feared that a continued rise in bullion prices would have its repercussions on other markets as well. Also, the sudden improvement in values for gold was regarded as a flight from currency. The fall in prices during the past week has been mainly due to the reopening of the Bombay market. There was a drop from Rs. 71 earlier in the week to Rs. 65. The recovery towards the close is a reminder that the upward movement has not spent itself out.

* * * *

There is not much activity in the exchange market except for a few dollar bills.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains at ½ per cent, all lenders.

TREASURY BILLS

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills were opened on Tuesday, November 10, 1942. Total amount offered was Rs. 14,03,25,000 (Rupees fourteen crores three lakhs and twenty-five thousand). Tenders at Rs. 99-13-6 per cent and above were accepted in full and those at Rs. 99-13-3 per cent were allotted approximately 63 per cent. Lower tenders were rejected. Total amount accepted was Rs. 10 crores, the average rate of accepted tenders being Re. 0-10-4 per cent (Rupee nil annas ten and pies four per cent) per annum.

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills will be received on Tuesday, November 17, 1942 in Bombay upto 11 a.m. (Standard Time) and upto 3 p.m. on Monday, November 16, 1942 at other centres. Successful tenderers should make payment on Friday, November 20, 1942. Other conditions are as usual.

During the week ended November 6, 1942, Government of India Treasury Bills for Rs. 70,00,000 (Rupees seventy lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Finance Abroad

THE great tonic administered by U. S. forces in Africa to the financial world cannot be reflected in the London quotations alone. The revival in the oil share market and the advance of Industrials testify to the optimism generated among jobbers and investors alike. As interest and exchange rates are unaffected by any news, good or bad, the major effect will probably be a rush of money into tax certificates. The Mansion House speech must be interpreted as an encouragement to tax-payers and tax-gatherers alike. London will have no doubts about the application of funds voted, and Parliament before it dispersed had some very good news to digest from Egypt and from Morocco. The break with Vichy is not at all discouraging for markets. The support of Continental bourses is unnecessary for shares like Royal Dutch which have shared fully in the general revival noticed during October. The general atmosphere has changed after the realisation that Hitler has failed at many points besides Stalingrad. The events abroad must lead to an increase in British war expenditure. But production is rising and incomes are larger. Bank deposits, too, are larger and the definite increase in the weekly borrowing on 3 months' bills by the Treasury is accompanied by an increase in the takings of treasury deposits. As clearing banks' balances have touched record levels this year, borrowing from the banks will be readily carried out.

The Empire's contribution for victory through the Canadian gift is substantial. The direct effect of many recent victories is a slipback in bullion prices in India. Prices in Bombay and Calcutta have shaded off rapidly, and there is a possibility that an early slump will be assisted by the upswing in share prices in India. The continuance of exchange control is long reflected in the absence of any change in the New York rate for sterling. The sterling area must again widen after the occupation of French territory, for it is certain that Algeria and Tunis will be treated like Syria and Lebanon. The new Free French bank will be linked with the banks of issue in Morocco and Algeria. Questions raised by the declaration of war by Vichy are not many. It is, however, clear that Petain will refuse to keep on paying occupation costs, and Morocco too will cease to pay interest on its external debt. The misfortunes of the French *rentier* class do not concern the Allies who are only anxious to eject the Axis from Africa. It has been indicated already that the Allies have been welcomed in Tunisia and the Italian occupation of Bizerta can be only temporary. The fact that General Franco has been satisfied by U.S. assurances must be given due weight in any appraisal of the probable effects on non-belligerent Spain. An Allied loan to Spain is perhaps a contingency of the drastic measures adopted to detach the oversea empire of Vichy. The possible decline in Spain's maritime trade will be doubtless met by familiar measures. The absence of any change in London rates for European currencies must be recorded here, but the depreciation of the franc is inevitable. The closing of the Franco-Swiss frontier will have led to a fall in Zurich. That Tokyo's stock exchange registered immediately the effects of Allied entry into North Africa has been mentioned like the earlier panic caused by the Japanese failure in the Solomons.

The further experience of France under invasion can only be guessed. The prevalence of inflation for two years, after the franc was forcibly chained to the German mark, can be deduced from the lift in prices. It has been recorded that wholesale and retail prices, in spite of control of a sort, had risen by 100 per cent as compared with August 1939. Rationing will become more difficult, and the note that the average French ration was only half of the normal requirements of an adult, can only be taken to mean that shortage of foodstuffs was both chronic and acute, as is shown in the threefold rise in the prices of eggs and potatoes. The franc, as quoted in Lisbon was at least 50 per cent lower in value, not unusual as stolen notes were freely offered in Lisbon.

The virtual disappearance of the fleet and the earlier swallowing up of investments by German interests will accentuate the effects of a blockade. Since the Vichy *regime* has broken with Washington, the only safe part of the original French Empire is Martinique which is still negotiating with the State Department. The future status of the Morrocan currency must be uncertain, except in the Spanish zone. As the franc was common to all these territories, like the metric system of weights and measures, efforts will be made to order finance and trade along the lines evolved in regard to the Free French colonies in the past. What is most obvious is that the minerals and cereals are denied to the Axis and a formidable leak in the Allied blockade has been closed. It is quite likely that in French Africa bullion is at a high premium at present, and the prices in India are merely keeping step with the quotations in Fez. Nothing is known as yet about the attitude of the Jews in Morocco and Tunis, but it must be wholly favourable. Since they are prominent in local trade and industry readjustment will be facilitated by Allied assurances. The trade of French Africa will be no longer with France but with the U.S.A. and other countries which will recognise their needs and draw on their resources. Supplies to Russia through southern Europe are likely to be directed by the Allies whose supremacy in the Mediterranean is ensured by the appointment of Sir Andrew Cunningham, presumably over Sir Henry Harwood.

The general increase in the active note circulation in every land has to be explained with reference to the advance in prices. A diagram in the June bulletin of statistics issued from Geneva indicates that the increase is characteristic of neutral countries like Sweden and Switzerland since 1939. The increase is least in the case of Argentine and most marked in the case of Bolivia. It is noteworthy that the note issue in Portugal has increased substantially alongside of the increase in foreign trade in wartime. The recent relations between the currency in Goa and the rupee will doubtless have to be viewed in relation to the altered value of the escudo which is implied by the increase in the Portuguese note issue until the present year, reflected as usual in a rising cost of living. The growth of bank deposits in the war period in neutral countries is a development conditioned largely by the increase in notes in circulation. More important from another standpoint is the pronounced and regular addition to the foreign assets as also the gold held by Portugal. The inflow of gold had apparently ceased last year but the Bank's foreign assets kept increasing. It is clear that the escudo must be stronger in consequence and the prejudice in Goa in favour of the local currency as against British Indian was due to appreciation of the change either in terms of bullion or of purchasing power. The escudo, it may be remarked here, was quoted in New York in 1941 at a higher rate than in 1940 showing incidentally that the Swiss currency alone was not dearer for Americans when their country was not at war.

The announcement last week of the terms of the third Victory Loan in Canada for 1,000 million dollars was not unexpected. The Dominion expects to spend over 3,000 million dollars and borrowing is rendered easy by the many checks to civilian spending. Though price control is due for revision, Canadian production has risen steadily and in the first two months of 1942-43 the revenue from both income-tax and excess profits tax (standing at 100 per cent as in Britain) was about 90 per cent higher on the previous year. The gift to Britain has naturally enhanced war expenditure. The fall in the balances held abroad this year by the Chartered Bank is a measure of Canada's readiness to write off debt due from Britain. The Canadian budget this year is likely to expand as a result of increased shipbuilding at the rate of ten ships a month. British Columbia where the yards work seven days in the week with ideal weather has led the way.

The other Dominion which is having a tap issue is South Africa. The 3 per cent War Bonds are on offer from September. It has been called the first direct war issue in the Union and those who put up £17,000 for the Union will be allowed to put their names on a tank going north. Dr. Jan H. Hofmeyr told South Africans that citizens who are unable to join the fighting forces can make their money fight. As the far west of the Rand is producing gold (as proved by the bril-

Three years of War Finance—XI

Industrial Expansion

In our discussions on the course of foreign trade, industrial profits, commodity and stock markets, we gave our readers to understand that vast changes in the internal economy of the country have taken place and that there has been a process of natural adjustment, not in any way helped by those in power. It will be remembered that more than two years ago we published a series of articles entitled "Planned Economy for India" and pointed out the need for harnessing and developing the country's resources and to follow a policy of industrialisation suited to the needs of the Allies and aiming at filling up the gaps in the industrial structure so as to make the country less independent on imports of manufactured articles.

We are now aware that the policy of the Government towards Indian industries has been quite apathetic and in the first two years of war, when the United States remained outside the war, nothing at all was achieved. No attention was paid to the country's resources and no efforts made to start new enterprises which would minimise the hardship on account of the difficulty in imports. Chemicals, glassware, dyes, oil fuel, ships, aeroplanes, locomotives, automobiles and numerous other items were badly needed and it was very clear that when the war needs grew and the shipping position grew more difficult, it would not be possible to get in supplies to this country and that the war effort would be affected to that extent.

It was possible to visualise clearly the position after the fall of France, but even then, there was no tendency to look at problems in their proper perspective. At the Eastern Group Supply Conference, India was allotted a very minor place. The demand for a constructive policy of industrialisation was met by the answer that the Eastern Group Supply Mission had visited the country only to develop the effort closely related to war purposes. Australia had to supply the bulk of the important items to countries in the Eastern Hemisphere. But with the entry of Japan into the war, it has not been possible for Australia to fulfil her obligations and even the liquidation of the Eastern Group Supply Council in this country is under consideration.

The familiar argument forwarded by the authorities in support of their policy towards Indian industries is that any unregulated expansion or promotion of existing or new enterprises would have resulted in a dissipation of the war effort and that it was no use starting on new enterprises for which the required technical skill and machinery were not available. Also the new projects could not be completed in time to be helpful to the war effort. If Indian entrepreneurs had been given the slightest encouragement and provided the normal facilities, a lot could have been done between 1940 and 1942 when the Pacific supply route was clear and the United States were out of the war.

Controls of foreign exchange, shipping and imports have all operated against our interests. That is the reason why in the first three years of war, there has been no boom so far as new capital issues are concerned. There is a plethora of funds and there is no restriction regarding the flotation of new issues inside the country. But other restrictions have more than offset the advantages in this respect. The country is to be thankful for the progress in the 'thirties.' The phenomenal progress made by the sugar industry in the early 'thirties' stands us in good stead at the present moment. Again, in the boom of 1937, the Steel Corporation of Bengal and two other important chemical companies were floated. Several new paper and cement companies came into being and in South India a number of rubber plantations were formed into public limited companies and proper development of the estates was ensured. It cannot be denied that these developments have been found to be very advantageous to us now.

From the foregoing it cannot however be concluded that our intention is only to criticise the Government's policy. Surely, what has been achieved in certain directions is noteworthy. The capacity of the iron and steel industry has nearly doubled in four years. The country has been enabled to manufacture nearly all the items for defence purposes. At first it was possible to manufacture only 20,000 out of the 40,000 items needed. There is a large group of ordnance factories and Indian munition production is daily creating new records. Apart from the increase in production, new kinds of steel are being manufactured. For the first time wheels and tyres for railway rolling stock have been produced. We have to be thankful to the Government for the technical help rendered. And now the small-scale industries are playing a very important part. What has been achieved can be considered impressive by the country's standards, but we cannot afford to make any comparison with the progress made by the other leading industrial countries in the same period.

We can only conclude the article with an actual study of the figures regarding new capital issues as far as they are available. The figures published by the Government of India relate only to the period ended December, 1941. The figures for 1939-40 and 1940-41 alone are enough to substantiate the conclusions made above. There has not been anything in the nature of a boom in new capital issues. The total number of new company flotations in 1939-40 was 1,005 having an aggregate authorised capital of Rs. 35.78 crores. In 1940-41, 978 new companies were floated having an aggregate authorised capital of Rs. 46.61 crores. That even the peacetime totals have not been exceeded will be evident from the fact that in 1937-38 new companies floated were 986 having an aggregate authorised capital of Rs. 53.12 crores while in the boom of 1936-37 the total of new companies registered was 1,075 with an aggregate authorised capital of Rs. 109.05 crores.

In the year 1940-41 the number of companies registered decreased by 3 per cent and the authorised capital showed an increase of 30 per cent as compared with 1939-40. The principal increases in the authorised capital were under the following heads:—Transit and transport—Others (Rs. 8,88 lakhs); Public service companies (Rs. 8,59 lakhs); Agencies (including Managing Agent companies) (Rs. 4,28 lakhs); Iron. steel and shipbuilding (Rs. 73 lakhs); Estate, land and building (Rs. 67 lakhs); while decreases in the authorised capital were noticeable under Banking (Rs. 3,61 lakhs); Chemicals and allied trades (Rs. 2.04 lakhs); Sugar (including jaggery) manufacture (Rs. 1,71 lakhs); Engineering (Rs. 85 lakhs); Tanneries and leather trades (Rs. 72 lakhs); Motor traction, dealing and manufacturing (Rs. 65 lakhs); Trading and manufacturing—Others (Rs. 64 lakhs); Mills for wool, silk, hemp etc. (Rs. 56 lakhs) and Tea planting (Rs. 55 lakhs).

In the nine months ended December, 1941 more money has been finding its way into industries but it is not of the same dimensions as in 1936-37. The increase in the aggregate authorised capital for the twelve months ended March, 1941 of existing jointstock companies in India was Rs. 8.39 crores while the subscribed capital increased by Rs. 11.96 crores and paid-up capital by Rs. 11.88 crores. In the nine months ended December, 1941 the net increase in the authorised capital was Rs. 7.8 crores. While the increase in subscribed capital was Rs. 12.53 crores that in the paid-up capital was as much as Rs. 13.6 crores.

In the nine months ended December, 1941 the number of companies registered totalled 903 with an authorised capital of Rs. 41.26 crores, subscribed capital of Rs. 2.15 crores and paid-up capital of Rs. 18.14 lakhs. In 1940-41, as given above, 978 companies were registered with an aggregate authorised capital of Rs. 46.37 crores, subscribed capital of Rs. 1.36 crores and paid-up capital of Rs. 5.22 lakhs. It is clear, therefore, that new money has been utilised to a greater extent in developing the capacity of existing companies rather than in the promotion of new enterprises and the starting of new industries. In 1940-41 the increase in the paid-up capital of existing companies totalled Rs. 11.88 crores, mostly due to the Bombay and Bengal Presidencies. The share of Bombay was Rs. 6.15 crores and Bengal Rs. 3.7 crores. In the nine months ended December, 1941 the total increase in paid-up capital to the extent of Rs. 13.6 crores was accounted for mostly by Bombay, Bengal and New Delhi. The share of Bombay was Rs. 3.73 crores, Bengal Rs. 3.86 crores and New Delhi Rs. 4.77 crores.

AN EMPIRE IN ECLIPSE

It is too early to discuss the full effects of Allied intervention in North Africa. The consequences must, in any case, be far-reaching, for the citizens of France and the native peoples too. The dramatic announcement on Sunday of landings at various places on the Atlantic and the Mediterranean seaboard of French North Africa was interpreted hopefully though it was recognised immediately that Vichy would, and could, resist. The destruction of the **Jean Bart** does not leave Vichy without a navy and Hitler's obscure threat at Munich may be reflected in measures taken by Laval and Doriot. That the response of markets in India and abroad to the latest extension of the war remains wholly favourable can be inferred readily from the rise in oils and industrials alike in London. The burst of activity has again sent the market leaders ahead, and the prompt rise in Calcutta share prices since Monday indicates that improvement is not confined to London. Whether the fighting in Africa is the beginning of a major offensive, designed to force the Nazis out of all occupied countries or merely a move to encircle Rommel's army in Libya, need not be considered at length. The letter of Mr. Roosevelt to the Bey of Tunis, as the flight of the defeated Axes forces continues, is reassuring in many respects. The eclipse of France's oversea Empire is complete. The armistice enforced in Madagascar by Sir William Platt preceded that enforced in Algiers.

Since Weygand's return to France nothing has occurred to show that an effective defence, other than naval, can be put up by Vichy. The organisation of friendly elements in French Africa at present devolves on General Giraud, and the latest variant of the Fighting French movement comes after the tactics of persuasion were adopted by General Eisenhower. That the initial victory was secured by superiority in numbers and equipment does not detract from the boldness of the move. The presence of Darlan in Algiers has not improved appreciably the defence which is to be undertaken hereafter by Petain. Petain's age and record go to suggest that he may choose surrender once again. The friendly attitude of the Bey of Tunis and his people must necessarily influence the attitude of the Sultan of Morocco. If treaty rights are respected, as in the case of the Spanish zone, there is no reason why the French should receive unusual support in their resistance. Casablanca like Mesr-el-Kebir is a British naval victory, and it is assumed that the former should put an end to Vichy's naval power. It is taken as certain that the fleet at Toulon will cease to matter, and no conference can save M. Laval who has been forced to temporise on the issue of forced labour.

The greatest change portended by the extension of the war is in regard to the shipping and trade of France. The Axis supplies from Africa across the Mediterranean must have come to an end when French ships were peremptorily ordered to stay in port. If the Allies will have fresh responsibilities in regard to supplies for North Africa, it can be said without hesitation that essential supplies like iron ore will be prevented from reaching the Axis. Since the capture of Rabat, Port Lyautey and Saffi, there are few ports to receive men and material from metropolitan France. Since the U.S.A. has broken with Vichy all Morocco must be reckoned enemy territory, but the Spanish zone where the peseta circulates along with the old Hassani currency, will probably receive special treatment. The agricultural production of French Morocco is both considerable and varied. Cotton and linseed are among the crops raised in Morocco. The distinctive fibre is the wild palmetto which is quite common. Cork figures in the list of trees grown but the most commonly cultivated plant is the olive though the fig and the date are also cultivated over large areas. The chief mineral is phosphate, the production of which runs into millions of tons. Lead ore and manganese are produced in fair quantity. The production of other minerals has not made much progress. The mineral deposits of Algeria are more important in regard to transport facilities. The deposits of lead, zinc, copper and antimony have been long regarded as important as the iron ore and phosphate. Coal, too, is available, but Algeria, in French eyes, was a source of vegetable products. Sheep and fruit were exported largely to France, but more important for the French food supply was the fishing industry. That of Western Morocco centred at Casablanca was certainly surpassed by the extensive Algerian fisheries whch produced over 20 million kilogrammes in a year. Tobacco and mulberry are crops favoured by Algeria's climate but in war, the wheat, oats and barley must be deemed even more important.

Production in Tunisia is characteristic of most Mediterranean countries. The land produces substantial crops of wheat and barley but the date is quite common in the south. The cork and pine are common timbers. Like Algeria, the protectorate produces iron and phosphate in large quantities and smaller quantities of lead and zinc. Lignite and manganese occur and bronze is made locally. As France held the largest share in the maritime commerce of Algeria, Tunis as also Morocco, the disturbance to the economy of unoccupied France, apart from the curtailment of food supplies for a divided and impoverished country, must be great. Trade as between the three territories referred to was at all times considerable. The Royal Navy's supremacy in the Mediterranean is ensured by the Allied control of Oran and Algiers. This, in turn, will influence the trade of Spain with France, and the blockade will have the further effect of increasing Franco-German trade. War will clearly condemn France to impotent dependence. As industries in French Africa are hardly of more than local importance, it is in regard to phosphates and iron ore that both France and Germany stand to suffer. The reduction in imports of many other minerals is not calculated to sustain the German war effort which is still suffering from the shortage of workers. The success of operations will, to a certain extent, be assisted by the mild climate of Algeria. The Allies have well chosen the site and time of their first winter campaign, and should receive material aid from the railway lines connecting Morocco with Algeria and Tunis.

For about sixty years Algeria has enjoyed law and order, and the wars in the Riff caused little trouble either to Algeria or Tunisia where the Arab element is more prominent than in Morocco and nationalism is rampant. Since the export of cattle, fowls and hides from Morocco to France will cease the economic difficulties of Vichy will be aggravated. That is inevitable when the French Empire except in West Africa is shaken to its foundations. It is now clear that Hitler cannot stand forth in shining armour when the future of Morocco is settled by the Allies alone: war implies most certainly the exclusion of Vichy's authority hereafter. The preservation of the Spanish zone is postulated by the assurances given to General Franco in advance, but in the case of the French zone what is now desired is the deposition of France's Imperial authority on

the score of its susceptibility to the Axis pressure at present. There may be incongruities in any forcible measures adopted towards French territories and Mr. Hull's distinguishing between Martinique and Vichy indeed suggests that Allied policy will be less rigid than realistic. It is clear that the end of hostilities will not produce another conference of Algeciras for the simple reason that France and Germany alike have no **locus standi**. It is this fact which governs the general assumption that the break between Africa and Europe will be absolute and final. As to the shock given to the Anglo-French entente, which contributed largely to the building up of the French Empire in Africa, one must speak with reserve. The temporary acquisition of control does not imply permanent forfeiture and the friendly broadcast to the French people suggests that U.S. intentions are both precise and honourable. One must therefore speak of the eclipse and not of the end of the French Empire in Africa. The calm in Dakar may prove to be deceptive, but reinforcements from West Africa would be difficult to secure, and the Allies may have their own way in West Africa after inflicting defeats at sea and in the air.

Inquiries from Kabul

In the report of the Indian Trade Agent at Kabul may be found frequent references to the difficulties produced by the war for Afghanistan. The shortage of fuel has checked the growth of lorry transport. The export of fruits has inevitably fallen off, and the trade in wool and furs is clearly showing the marks of decay. In the first quarter of the year the difficulties, caused by the termination of trade with Russia and Germany alike, were reflected in trade enquiries from Kabul for telegraph and telephone stores. The Afghan Ministry is said to have made a contract with a Swedish firm which could not provide supplies because of the Russo-German war. Kabul's cinema is known to have asked for carbons and the forwarding of enquiries for wire, insulators, motors etc., from a big Kabul organisation devolved on the Trade Agent in the first quarter of 1942. Firms in India were also to be approached in the usual manner. The fuel oil and sugar shortage are not discussed but trade openings in Afghanistan now cover leather. Indian saddles were ordered for the Afghan Army in place of Czechoslovak saddles and the postponement of purchases referred to was due to the rise in prices. India was recommended to the Afghan War Ministry for the supply of paper for typewriting. What is clear from the successive reports is that India is the only large manufacturing country that can export the goods wanted by Afghanistan. Short supply of most imported goods in India is sure to hamper the Afghan Government in its search for goods, formerly procured from Russia and Germany. The experience of neutral Afghanistan is not different from that of other neutrals and no special efforts have apparently been made to provide her with goods by the U.K.C.C. which seems to have, strangely enough, neglected Afghanistan.

Tea Supplies in India

References to tea supplies in India were made by speakers at the budgetary meeting of the I. T. M. E. Board not long ago. The prohibition of private exports and the plans for bulk purchase have been announced but the observations of M. N. T. Brain (which may not accord with the recent press note) deserve special notice. Mr. Brain's speech followed that of the Chairman, Mr. J. S. Graham and made mention of the effects of the bulk purchase scheme on the quantity of tea available for the Indian market. He remarked that in 1941 the total crop was short of the total exoort and internal release, and as a result, the Indian market had gone short. If such a situation, said Mr. Brain, was not to arise again, there were certain points which must be clearly borne in mind. It was doubtful if the objective of a total Indian crop of 600 million lbs. would be attained and an unascertainable quantity of tea for internal consumption had already been exported with export rights. Mr. Brain's other point related to an estimate of production for the current season to be made for the adjustment of the export quota release in order to ensure that sufficient tea was maintained for Indian consumption. It was then suggested that a quantity of at least 120 million lbs. (as against the estimate of 113 million lbs. for 1941-42) should be reserved for Indian markets, though Mr. Brain doubted whether it would be enough, in view of the increase which was taking place in the Indian demand for tea. Mr. Brain advocated the Board's taking action designed to retain a sufficient quantity of tea. The rise in prices was interpreted by Mr. D. C. Ghose as a result of short supply at certain places, and the Tea Market Expansion Board, after hearing Mr. Brain's views on the need for safeguarding the Indian consumption of tea, accepted the general view that Government should be addressed on the need for retaining enough tea to meet internal requirements even if the Government embarked on block purchase. The conference arranged last month therefore had the advantage of knowing the views of the most influential organisation connected with the tea industry. Since the Board is going to spend over Rs. 30 lakhs for promoting the sale and increasing the consumption of tea in India during 1942-43 its views, given in advance, must command attention. Grants for the International Board were made for work in Africa, Canada and Australia. The Board approved the grant of Rs. 2,00,000 for providing tea vans for use with Indian troops. The reduction of the cess as from October 1st, to Re. 1-2 per 100 lbs. was discussed by the Board. The reduction is a consequence of the expansion in exports produced by the 125 per cent quota. The Government's decision to reduce the cess was not questioned by Mr. Graham who, however, deprecated the suggestion that the export cess should be reduced to Re. 1 per 100 lbs. because such reduction would injure the ability to resume tea propaganda in Europe after the war. Consumption in India is responding to the Board's urban work as also the special work conducted in industrial establishments by opening up canteens and supervising those taken over by private managements. In Bombay and Madras the work has advanced further and in South India the workmen continued to get a daily cup of tea for one pice.

The Amateur's Part

The cold weather in Northern India is distinguished by an abundance of vegetables and the climatic conditions etc. warrant the belief that the grow more food drive will help to secure a copious supply this year. Dr. Burns in a notice of kitchen gardening in "Indian Farming" has indeed declared that the alluvial soil associated with the Indus and its sister rivers and with the Ganges is a wonderful medium for growing vegetables; but it is not the only kind of soil useful for vegetables. Old farmyard manure or municipal refuse well decayed is recommended as dressing. Manuring demanded by the soil naturally varies, but Dr. Burns suggests that one cubic foot for a square yard of ground is desirable. Bath water can be applied to the kitchen garden. Preparation of the beds before planting is the rule and Dr. Burns urges that if local Malis are successful, there is no need to interfere. The arrangement of the seed-bed will require attention and Dr. Burns suggests that transplantation should be done at times so as to give various vegetables at varying intervals. No shade is needed for growing vegetables and a dry thorn hedge alone is approved. The careful removal of weeds on newly cultivated soil is recommended. Hints on the culture of tomatoes and potatoes are given by Dr. Burns. Broken rubble as a soil-dressing is favoured and a most necessary hint is that growing tomatoes should be fully exposed to the sun. Advice against the planting of potato sets in wet earth is given by Dr. Burns who says that from the middle of September to the middle of October is a suitable time to plant, at intervals of about a foot in the furrow. October is again approved for sowing onions, the plants being thinned out to six inches. Watering is always dependent on the condition of plants and the soil, and Dr. Burns thinks that a good soaking once a week may be enough. There are plenty of hints for the amateur who is cautioned against waterlogging. Greenfly can be dealt with by tobacco solution but caterpillars demand picking and destruction one by one. These general hints may be superfluous to all market gardeners but this year every available plot has to carry growing plants and it is not only in distant Madras that citizens are enjoined to grow more vegetables. In the northern plains the conditions are better, and Dr. Burns' article appearing in September should have created much interest in what can be done in his spare time by every householder. Good digging must precede cultivation; and fortunately the food drive started in April. Many should be in a position to make use of Dr. Burns' advice on vegetables in this season. As somebody has said gardening promotes fortitude; and the

Briton cannot be shaken by either bombs or bombast. The lesson for India in the present phase of war is obvious and even amateur gardening may make for better nerves besides adding to the food supply.

Defence Loan Progress

In a discussion of the progress of the defence loans in August special importance was assigned to Bengal being displaced by Bombay for the first time in regard to total subscriptions. The change in August was not unrelated to political disturbances within India but it is surprising that Bombay should have put up Rs. 5.21 crores out of the total of Rs. 5.79 crores subscribed for the 3 per cent Defence loans. Whether the Bombay total marks the strong initial response from the Western City to the third defence loan, it is most certainly in excess of the total provided for the 1963-65 loan floated in September by the Government for paying His Majesty's Government in respect of the sterling railway annuities. The jump in Bombay's subscriptions has led to that Province claiming a larger percentage of the total so far provided. The total up to the end of August was Rs. 43.83 crores as against Rs. 4.11 crores reported in the case of Bengal. The majority of provinces make a poor showing and the contribution through the States and Central Treasuries is hardly 3 per cent of the gross total collected in respect of Defence Loans. The total net sale of savings certificates up to August 31st, 1942 is reported to have brought Rs. 4,63,36,000 while defence savings stamps had brought Rs. 19,66,000.

The contribution of the small saver in India is undoubtedly modest, but it may be urged that a restraining influence on the growth of savings has been the rise in retail prices. The higher cost of living militates against any striking increase in private saving or additions to capital. Since the gross total for over two years is Rs. 114.43 crores it may be argued that saving at the rate of Rs. 50 crores per annum is a remarkable achievement for India but the amount is obviously below the net annual addition to bank deposits. Only a fraction of the increase in bank deposits has gone into defence loans because banks have to maintain as usual a highly liquid condition; and 3 per cent is not generally accepted as an adequate yield on investments. Since further readjustments have been made in regard to interest payable on bank deposits this year, it is reasonable to look for an extension of interest on the part of banks, though it might fairly be urged that regular support for a treasury bill issue of Rs. 10 crores every week represents a great advance on anything known. In regard to total subscriptions Coorg had provided Rs. 18,000 only up to August 31, 1942 mainly in the form of defence savings certificates. It is surpassed by Baluchistan with a total of Rs. 23.14.000 and in one respect Coorg (distinguished for its literate policemen) is far behind other Chief Commissioners' provinces (the Andamans and Nicobars excluded).

Indo-China's Future

The future of Indo-China is seldom discussed though U.S. airmen's raids on Haiphong receive full publicity. The Chinese who ask for the return of Formosa and Manchuria do not refrain altogether from discussing the future of Vichy's Empire in Asia. The present supremacy of Japan in Indo-China is barely two years old, and the Chinese view is that Indo-China should be fully emancipated or converted into a Mandate under the control of China until she is ripe for independence. This interesting proposal was made by a Chinese savant in July. China has no reason to ignore the French territory in the south. Her relations with the southern provinces go back to the Han dynasty. For over a thousand years Indo-China was a part of the Chinese Empire and when a break came, Tonking and Annam emerged only as vassal kingdoms. When France acquired control in 1884 the old ties with China were not wholly forgotten for the people of Annam were influenced by Chinese ways, and they constitute still the great majority of Indo-China's inhabitants.

China's interest in Indo-China's future springs from the fact that Indo-China is the seaboard of south-western China. It may be spoken of as the corridor to South China and the Gulf of Tonking too must be called part of Chinese waters. Since China's industries have migrated from the north it is most important that Haiphong should be held by China. And control of Indo-China is deemed essential for the development of a new hinterland whose security depends on the control of Indo-China. Trade relations have been close. In the last decade rice, coal and cement were largely drawn by China from Indo-China. Further, there are over 350,000 Chinese settled in Indo-China and from the Allied point of view it is most important that the Japanese should be ejected from Indo-China and Camranh Bay turned into a naval base that will assist in the successful defence of China. The argument can certainly be strengthened by reference to the events of 1942. In any event, the weakness or ineffectiveness of local princes and local nationalist movements in Indo-China can be adduced in favour of the Chinese claim.

Bihar's Cement Factory

The history of a great enterprise is told by Mr. C. W. Harvey in the Martin-Burn Magazine. The Sone Valley Portland Cement Company uses the limestone of the Rohtas plateau. The Company formed in 1922 thus uses local raw materials only. The process of manufacture converges on the correct admixture of all those for producing a fine powder, the quality of which never varies. At the Japla works on the east bank of the River Sone the cement manufactured is equal to any brand produced in Europe or elsewhere. The limestone required is conveyed to the works by a five-mile overhead ropeway described as the Japla-Baulia Ropeway, spanning the river Sone for half its length and carrying 100 tons of limestone per hour. The limestone is ground and discharged into correction tanks. The slurry is made to flow into rotary kilns which are really long and slightly inclined tubes of steel rotating slowly on heavy steel rollers. In the burning zone of the kiln a very high temperature is produced for reducing the slurry to clinker which is cooled and conveyed to a concrete store. The grinding into cement is marked by the introduction of small quantities of gypsum or plaster of paris to adjust the setting time after the sifting is over. Prior to being put into sacks the cement is stored in a 15,000 ton storage bin and silos where it is further cooled. The Rohtas plant was laid down originally for the production of 60,000 tons of cement per annum. It is now capable of an annual output of 250,000 tons and is as far as possible self-contained with its own power plant with a total generating power of 13,250 kilowatts together with the necessary boiler plant. Mr. Harvey's article is illustrated by a photograph of the hill and the staff quarters at the quarries. The cement factory at Japla has a range of repair, fitting, blacksmithy, moulding and carpentry shops fully equipped with the necessary machine tools together with ample stores for spare parts, oils and other necessities. A laboratory and testroom make the factory self-contained. Amenities for employees are many and varied, and Mr. Harvey refers to extensive residential accommodation provided for the benefit of the employees.

African Enquiries

According to the Trade Commissioner in Alexandria Egyptian merchants seek information concerning Indian manufactures. They have heard of the rapid progress made by Indian industry, and have seen Indian-made goods in the markets there. When enquiries produce disappointing replies, they are anxious to find out what goods can be had from India. The Trade Commissioner adheres to the view that export licenses in India will restrict supplies from India. Home demand will curtail exports but Egyptian merchants are keen on getting goods, and it is necessary to see that interest in Indian goods is kept alive. Small exports to keep up contacts may be necessary. Exports to neighbouring countries in the Middle and Near East can be effected mainly through Egypt, and the Trade Commissioner has suggested that catalogues and samples should be sent to his office. It has been made known that, in spite of difficulties, there has been a tenfold increase in takings of Indian piecegoods in May. Over 65 per cent of total imports came from India but import licensing adopted in Egypt is likely to reduce the proportion. Nevertheless, trade connections deserve to be kept up and every opportunity for increased trade studied. The office has received enquiries for sewing machine needles, silk, fish and fish meal as also cycles and accessories. Laces for boots and shoes, brushes, stationery etc., were among the articles mentioned by Egyptian importers who are looking to India for goods formerly obtained from Europe.

There is an abundance of openings but home prices are likely to be more remunerative for the average exporter who will fight shy of shipping and other difficulties. Advice to the same effect as that given by the Mombasa office is given in the earlier report from Alexandria. The import control in force in African colonies limits opportunities for Indian shippers but the post-war future demands certainly the cultivation of promising markets. Africa is taking more and more Indian cloth as the Trade Commissioner at Mombasa observes in his report for June-July. When normal conditions return it will be necessary to build up trade. Not long ago, sugar manufacturers in Uganda asked for sulphur from India and got samples of crude sulphur secured in Baluchistan. Caustic soda was asked for by soapmakers and oil-crushing machinery like sawmill machinery was asked for by firms. As before local enquiry for drugs and medicines was common, and hairdressing requisites of Indian manufacture formed the subject of another enquiry. Interest in Indian toilet soaps is apparently large and samples sent from India led to the query whether India can satisfy East Africa's needs. Indian soaps are already popular and there is good scope for Indian exporters of soap as toilet soaps are not made locally. Interest on the part of East African traders extends to motor batteries and agricultural machinery and implements. The position of India, looking towards Africa and the Indian Ocean, was described by Mr. L. S. Amery as one calculated to strengthen the ties with the dependent Empire. In regard to trade relations the entry of Indian goods in larger quantities has been assisted by the war, but the trade of the Indian Ocean will doubtless change, and the place held by Japan and China previously in India's trade may be occupied by African colonies.

(Managing Agents: Investa Industrial Corporation Ltd.)

NATURE & SCOPE OF ACTIVITIES

This Company has been formed for the manufacture of machine tools and implements. With the greatly increasing industrialisation of the country, a demand has arisen for machine tools which cannot be met by imports as the war has created a situation in which free imports of machine tools have almost ceased. The machine tool industry is a basic industry, not merely on account of its value for national and defence purposes during the war, but also because it feeds other industries which use plant and machinery in times of peace. India is greatly handicapped in taking advantage of war conditions and promoting rapid expansion of various industries, as industries are largely dependent on a continuous and ready supply of machine tools and implements of various descriptions. Efforts are now being made to remedy this defect by the setting up of an indigenous machine tool industry in the country.

The Company has acquired a well-equipped factory in Bombay to which they have added further necessary plant and machinery in order to cope more fully with the demands for various kinds of machine tools and implements.

PROGRAMME: The Company will start to manufacture, (1) *Machine Tools* such as lathes, milling, slotting, shearing and punching and other machines, (2) *Castings*—ferrous, non-ferrous and alloy, (3) *Replacements*—of machinery and parts for sugar, textile, jute and other industries.

MANAGEMENT: The factory is under the supervision of a highly trained expert who has had considerable experience of manufacturing machine tools and implements in Europe.

The Company will supply the demands of railways, engineering firms, shipyards, mills and industrial concerns of all kinds who are invited to address their enquires to:-

INVESTA MACHINE TOOLS & ENGINEERING CO., LTD.,

Bigger blows at Italy

Air mastery in the Mediterranean is illustrated by the succession of blows delivered at Genoa, Milan and other cities. Candid communiques issued in Rome testify to the damage done by the R.A.F. The failure to reduce Malta like the ineffectiveness of the Axis air forces in Egyptian battles is proof of the dominance of the long-range fighters working with the big bombers. In the last week of October, the German air force made a poor showing because aircraft were shattered wrecks on the landing grounds as far afield as Crete. With the fall of Fuka and el Daba and the pursuit up to Mersa Matruh, the Luftwaffe cannot at all stage reprisals. The present supremacy of the R.A.F. in Egypt will have important results for possible operations in Tunis. The remnants of Vichy's air force can be dealt with in a period of enforced quiescence for the Germans by the R.A.F. While the Bomber Command has acquired greater importance in offensive operations the sweeps over occupied Europe continue, because more than ever the fighter is able to seek out and meet the enemy. The Luftwaffe is fully stretched and is clearly unable to support the U-boats in the Atlantic which owing to their distance from bases are now more liable to destruction. Sir Archibald Sinclair has emphasised the value of long-range bombing raids of which that on the Schneider Works at le Creusot in the Department of the Saone et Loire is clearly the most important. Since le Creusot is nearer Geneva than Paris, the greater part of France was crossed by the R.A.F. The direct result is the modification of German steel production in order to make good the reported loss of productive capacity of 1¼ million tons. The master plan of the R.A.F. is executed by the Bomber Command whose chief is now Chief of the Air Staff. The bomber's operations are no longer confined to Western Germany or Northern France. Italy is now the target, and the punishment for the conversion of Catania into a German base is being inflicted with the result that Mussolini is squealing for help.

Mixed Farming

Agriculture in Nigeria has features in common with Indian agriculture. If livestock are of limited importance, even in mixed farming, it is because emphasis is continually laid on food and cash crops, because permanent pasturage or meadows are unknown though farmyard manure is regarded as vital. In Northern Nigeria, in the Emirates, cattle is scarce and Fulani tribesmen have pastured their droves on other people's land. The droppings of three million head of cattle represented manure but the value was variable because even if dung was not burnt, it soon became dust and much of it was eventually blown away. Mr. O. T. Faulkner, Head of the Imperial College of Agriculture in Trinidad, declares that folding as practised was ineffective and the ordinary peasant had to rely on shifting cultivation. The difficulty in Nigeria was caused by a limited supply of working cattle and the main line of agricultural improvement was held to be manuring and the use of plough-oxen in a very dry climate. The introduction of old cows for keeping on farms was the first point of departure in experiments connected with mixed farming. It was proved that dung did not burn up the crops, and certainly led to larger outturn in every case. The keeping of livestock proved profitable and dairy farming soon became a sideline of arable farming. The systematic cultivation of grass has also been tried and mixed farming, rather than pure arable farming, is found to possess advantages even in the tropics. On the sugar estates in the West Indies Mr. Faulkner declares that cattle manure is usually regarded as unimportant but sugarcane is specialised farming, far removed from the cacao farms of Grenada on which cattle dung is regularly used and soil fertility maintained at a very high level. The decline of this practice is presumably the cause for the fall in the yield of cacao, though

Mr. Faulkner declines to discuss whether the turning away from mixed farming is the real cause.

Middle Eastern Trade

Certain Asiatic countries which had a large trade with Europe are listed in the League of Nations statistical bulletin. The war has necessarily reduced the trade of most Asiatic countries and neutrality was no advantage in the field of foreign trade during and after 1940. The fall in imports characteristic of Iraq where the total value fell from 8.7 million dinars to 6.9 million dollars in 1941 must be larger than apparent owing to the fall in the external value of the dinar. The volume must have fallen as a result of the progressive advance in the prices of imports. The U. K. owing to the sterling link remained the chief supplier of Iraq, but the share of India in the import trade was increasing. The Indian trade returns certainly support such a conclusion. The principal exports of Iraq are mineral oils and dates but trade with Syria and Asiatic Turkey through Iraq is more important for exporting countries, Basra is now the port for more than one country. In the case of Iran too the foreign trade is dominated by oil production. The fall in imports recorded in 1941 was due to the cessation of trade with Germany which figured as the principal supplier of Iran though the duty-free imports of the Government and the Anglo-Iranian Oil Company would put Britain in the first place. The British Empire took nearly all the oil shipped from Iran. The fall in Iran's oil exports in 1941 reflected the disturbed conditions prevailing before and after August. Total exports for the nine months, April to December, 1941 amounted to 3.5 metric tons against 5.3 million tons in the same period of 1940. The unsettled conditions reported from Iran had a parallel in Syria and Lebanon where the exports showed a continuous fall. In the case of Palestine the growth of minor industries does not obscure the fall in foreign trade. The culture of citrus fruits has taken a bad knock as exports in 1941 were valued at £p56.000 only. What was predicted in regard to orange-growing certainly was enforced to the closure of the Mediterranean. The Middle East has its troubles, and these can disappear, not through the link with sterling but only through the regular flow of adequate supplies for which the Cairo Council is working.

Interesting Census Totals

The population totals of certain European countries are furnished in a recent issue of the monthly bulletin of statistics. The census totals in respect of countries where the people were numbered in 1940 and 1941 make their appearance after an interval. The population of Greece as on October 16, 1940 was returned as 7,336,000 against the total of 6.21 millions returned in 1928. The total relates to a period when Greece was neutral and is obviously larger than the present population, if that can be at all ascertained. The Spanish census, taken after the end of the Civil War on December 31, 1940 indicated a total of 25,878,000 showing that the normal intercensal increase (in 1939-40 it was over 2.2 millions) was not affected by the civil war or any other change undergone by Spain since 1930. The Canadian census of July 2, 1941 gave a total of 11.42 millions for the Dominion showing an increase of over one million on the total of 10.37 million returned in 1931. The Dominion's population is growing in spite of the reduction in immigration. The growth of numbers is not likely to efface the inter-Provincial differences, and in this respect, the last census would reproduce the features of that made in 1931. In relation to present population the Canadian contingent of three divisions for overseas service appears large, like the number of workers detailed for war work.

The population of Hungary has been definitely increased by the territorial changes of 1941. The census taken in October 1941 transferred 1,026,000 in Yugoslav territory to Hungary. The official estimate at the end of 1941 for the population in the Trianon territory, northern territories, Subcarpathia and Transylvania was 13,726,000 showing an increase of over 5 million on the census taken eleven years ago, but swollen naturally by the addition of Transylvania and other provinces. A country which reports a decrease in population as compared with the 1930 census is Rumania. The population of Rumania within its present boundaries including Bukovina and Bessarabia (recaptured from the Soviet Union) was estimated in October 1941 at 17,018,000. Having lost territory to both Hungary and Bulgaria the decrease as between 1930 and 1941 in Rumania's population is not unexpected. The area and population of Croatia after the German conquest is returned as 395.000 square miles and 6.663,000 respectively.

Canada's War Industry

The benefits derived by Canada from the war have attracted much attention everywhere. The stimulus of war is undeniable, and aircraft is not the only field in which the Dominion has surpassed anticipations. Being industrially developed before war came, the Dominion could grasp opportunities but it was not

till the spring of 1940 that plans were laid for the production of a complete range of equipment. Between 1940 and 1941 much plant extension and construction was under way. The result is that the value of war orders in the twelve months ended April 1942 rose by over 600 million dollars on the value reported in the preceding year. Further progress was recorded in May. New and more varied equipment is provided by Canada as the plant projects have been finished at a cost of over 400 million dollars. Canada aims to produce in 1942-43 twice as much as in the preceding year if need be by diverting men and material from civilian industry. The scale of achievement since May 1940 has led to big changes in trade and employment. The decision to curtail paper and pulp production is a consequence of industrial expansion—not of depression. The monthly Letter of the Bank of Commerce indicates that Canada's industrial capacity has increased by about one-fifth in the two years following May 1940 and approximately half of the national economic activity is industrial. This large claim is supported by reference to the fact that over 40 per cent. of the industrial system is engaged on war work ; but the proportion varies between groups and individual units. Nearly 90 per cent. of the major steel plants and 75 per cent of machinery in textile mills are devoted to war orders. It was noted in a survey which remarks that subcontracting is common and small enterprises, too, are sharing in war orders. It has been stated that over 1,500,000 Canadians are engaged indirectly or directly in war service and a shortage of labour was reported at the time when 50 per cent of available resources had been diverted to war work. Further restrictions on supplies of materials and diversion of labour are probable in Canada as the total volume of manufacturing production has risen by 52 per cent only in the two years ended May 1942. During the present year the food processing industries have lost ground like the motor industry. If the growth of output in the steel and other industries has slackened it is due to the limit having been reached earlier in certain cases. The most remarkable feature of the war period is the large increase in the output of copper, nickel, lead and zinc while gold and silver are neglected. Canada provides about 40 per cent of the aluminium required by the Allies and the Dominion's output of mercury has been doubled in the war period. The output of scarce Far Eastern minerals like antimony, tungsten, and tin has also concurrently increased. Coal-mining has made progress and oil production has expanded by 10 per cent nearly.

South African Industries

Secondary industries in South Africa are more than ever active. Diamond tools are being made by a firm that dealt previously in industrial diamonds. Local manufactures has assisted war production and a surplus for export has been provided by the firm in question. The use of diamond lathe tools is essential for the finishing of aluminium pistons and for all mechanical work where grinding to mechanical exactness is necessary. South Africa's mineral production is to be raised. Near the Limpopo in northern Transvaal workings are being opened up, and it is hoped to produce at least 200 tons of ore monthly. Mixed with lubricating oil graphite is used for the bearings of machinery. Siberia, Britain, Ceylon and Germany produce graphite but they need what they produce. South Africa's industries in spite of limited supplies of materials are producing more. In two industries, foot-wear and engineering, progress is pronounced. Port Elizabeth turns out army boots and civilian supplies are delayed. A new manganese field has been located in the fringe of the Kalahari desert. The new deposit will supplement the supply from the Postmasburg mines. Fertiliser production in the Union is to be increased by a scheme for the conversion of town refuse and camp refuse as well. South Africa also is engaged in the search for rubber substitutes. Plants in Zululand and Natal are being examined and the Union also hopes to draw more rubber from the Congo. The economic mission to the Congo is meant to promote trade with the western ports of Africa. The Union hopes to increase her trade with Brazil as well in the immediate future. South Africa's trade with the U.S.A. has been rising and the Union's gold has more than paid for the merchandise imports drawn from the U.S.A. in recent years.

The Bharat Bank, Ltd.

With its Head Office in Delhi, the Bharat Bank is distinguished in many other ways from Indian banks. The prospectus published today will, therefore, demand consideration on the part of everyone with a banking account, not only from would-be shareholders. The new Bank has a large share capital of which over two-thirds has been obtained before October 20. The issue of new shares at a premium is suggestive of complete confidence, derived in this case from applications and promises for Rs. 10.27 crores out of the proposed issue of Rs. 15 crores. In its organisation the Bharat Bank partakes of the system adopted by the Imperial Bank after the amalgamation of 1921. Ability to operate without statutory restraint will, doubtless, be advantageous to the Bank whose major

The proposed subscribed capital of the Bank will be larger than that of any other bank registered in this country. Applications and promises have been received till 20th October, 1942, for shares of the NOMINAL AGGREGATE AMOUNT OF Rs. 10,27,00,100 without any brokerage or commission.

The sponsors of this Company feel that there is an immediate and urgent need of a bank of this kind, and in starting it, their avowed aim is to render service to the country. They solicit the sympathy and good wishes of all those who may or may not be its shareholders or clients, so that present and future directors may stick steadfastly to the ideal that is theirs to-day and their efforts to realise it may increase in volume and intensity, as the years roll on; with the blessings of God to inspire them, the directors hope to establish such traditions in banking as will rehabilitate the lost glory of Mother India.

APPLICATION AND ALLOTMENT MONEY IS PAYABLE AS FOLLOWS:—

On Preference Shares—Rs. 50 with application and Rs. 61 on allotment, including premium of Rs. 11.

On Deferred Shares—Full amount of Re. 1-4 with application including premium of As. 4.

On Ordinary Shares—Application and allotment money is payable in any one or more of the following manners:—

1. Rs. 5-6 application and allotment money, payable on application, including premium of As. 6 on Rs. 5 partly paid-up shares *and/or*
2. Rs. 10-8 application and allotment money, payable on application including premium of As. 8 on Rs. 10 partly paid-up shares, *and/or*
3. Rs. 12 with application and Rs. 14 on allotment, including premium of Re. 1 on Rs. 25 partly paid-up shares *and/or*
4. Rs. 25 with application and Rs. 26 on allotment, including premium of Re. 1 on Rs. 50 partly paid-up shares *and/or*
5. Rs. 50 with application and Rs. 51 on allotment, including premium of Re. 1 on Rs. 100 fully paid-up shares.

In alloting deferred shares preference will be given to those who apply for ordinary shares of comparatively lesser paid-up value. Applications will not be considered of those who apply for deferred shares only.

Directors may give preference in allotment shareholders of the following companies:—

1. Dalmia Cement Ltd.
2. Rohtas Industries Ltd.
3. Dalmia Cement and Paper Marketing Co., Ltd.
4. Dalmia Investment Co., Ltd.
5. Lahore Electric Supply Co., Ltd.
6. South Behar Sugar Mills, Ltd.
7. Dehri-Rohtas Light Railway Co., Ltd.
8. Shree Krishna Gyanodaya Sugar, Ltd.
9. Kharkhari Coal Co., Ltd.
10. Maheshpur Collieries, Ltd.
11. Bharat Insurance Co., Ltd.
12. Dalmia Dadri Cement, Ltd.
13. Bharat Fire & General Insurance Co., Ltd.
14. Rohtas Quarries, Ltd.

The intention of the Directors in providing such an enormous subscribed capital is to strengthen the position of the Bank from the very start, so that it may launch large banking projects.

Preliminary expenses and brokerage often amount to a substantial figure and generally it takes years to liquidate them out of the profits of the Company. Expenses of this Bank on these heads are nominal and can be easily met out of the premium received on the shares and still a reserve can be built —a feature of great advantage.

The Directors do not need making further calls nor intend doing so, because the proposed paid-up capital is more than sufficient for running the business of the Bank in a manner befitting the glorious status to which it expects to rise at its very inception.

The Directors propose formulating a scheme, which, though somewhat complicated, is unique in conception and of a practical value to the shareholder and to the public in general. Such a scheme, as far as the Directors are aware, has never been introduced. In due course, after providing for reserves and dividends, the Directors propose to apportion some of the profits for distribution amongst its depositors (both in fixed and current accounts), borrowers and other constituents, entrusting their exchange and bills business with the Bank. Amounts so apportioned may be given away as bonus in proportion to be decided by the Directors from time to time. Individual depositor, borrower or other constituent will get this bonus in proportion to the amount of business placed by him with the Bank. For the same volume of business transacted, a constituent who is also a shareholder may be allowed a rate of bonus higher than what may be allowed to one who is not a shareholder.

Preference shares shall confer on the holders thereof the *right to a fixed cumulative preferential dividend at the rate of 6 per cent per annum (less income-tax)*, with effect from January 1, 1943, on the capital for the time being paid up. They will rank both as regards dividend and claim on capital in priority to ordinary and deferred shares, but will have no further rights to participate in the profits or assets.

The Ordinary share capital, both as regards dividend and claim on capital ranks in priority to the Deferred share capital. After the Ordinary share capital, for the time being paid up is paid a dividend of 7½ per cent the Deferred share capital to the extent it is paid up will be entitled to a dividend of 7½ per cent. The balance distributable surplus will be divisible between ordinary shareholders and deferred shareholders in the ratio of 70 per cent and 30 per cent respectively, and they will be entitled to the surplus assets in a similar ratio.

Objects.—The Company has been formed for the purposes set out in the Memorandum of Association and particularly to carry on banking business of all sorts all over the world.

PROSPECTS

No bank of first class status has its Head Office in Delhi, the Imperial Capital of India. There are several lacs of villages and towns in this country but no proper banking facilities exist in many places. The mentality of Indians is fast changing and they are becoming more banking-minded everyday. There is doubtless a great scope for many a first class bank with branches all over India.

On the termination of the war, the Directors may extend the Bank's activities to wider spheres and establish branches in England, America and other foreign countries just as foreign banks have their branches in India.

Many Indian States have no proper banking facilities. They are anxious to develop the marketing of their agricultural produce on scintific lines with the aid of modern banking. The Directors have been assured of the support of many prominent States, names of which may be known when negotiations are completed. Many of these States propose to entrust their treasuries to the care of the Bank. They will also guarantee that if any of the branches of the Bank functioning in their areas do not prove paying (though there are no such chances), they will grant such subsidies to the Bank as will make good any losses that may arise in running branches in their areas. Thus the Bank will be able to establish a large number of branches.

The prospects of the Bank appear to be bright. It is expected to be one amongst the foremost banks of the country, including foreign banks and may set examples and establish traditions in sound banking principles.

The Directors expect that there will be a great rush for the purchase of these shares. There are enquiries from several Indian States for shares of large amount. For capital appreciation and good return, these shares may be really attractive only for genuine investors who can patiently wait till the Bank develops and extends its activities.

VOTING RIGHTS.

On a show of hands, every holder of Deferred or Ordinary shares present in person shall have one vote and on a poll, every member present in person or by proxy shall have one vote, for each share held by him.

Cumulative preference shares do not confer a right to vote to the holders thereof.

Restriction on Voting.

No member shall be entitled to vote on any question either personally or by proxy for another member at any General Meeting, or upon a poll or be reckoned in quorum, while any call or other sum is due and payable to the Company by such member.

Restriction on Transfer of Partly Paid-up Shares.

The Directors may, in their discretion, decline to register any proposed transfer of shares other than fully paid-up shares.

Directors' Qualifications and Remuneration.

Qualification of a Director for the Central Board, other than an Expert Director or a Director nominated by States, called ex-officio Directors, shall be the holding of shares in the Company of the nominal value at least of Rs. 10,000 registered in his name. The remuneration of a Director shall not exceed Rs. 100 for every meeting of the Board attended by him and he will be entitled to travelling expenses incurred by him in attending meetings of the Directors and also to any other expenses properly incurred in connection with the business of the Company.

Preliminary Expenses.

Preliminary expenses, including registration fee, printing charges and other incidental expenses, but excluding commission and brokerage for getting the capital subscribed, are estimated not to exceed Rs. 40,000.

Brokerage.

Brokerage will be payable to brokers at the rate of Re. 1 per preference share Re. 0-1-6 on Rs. 5 partly paid-up ordinary share, Re. 0-2-6 on Rs. 10 partly paid-up ordinary share, Re. 0-4-0 on Rs. 25 partly paid-up ordinary share Re. 0-8-0 on Rs. 50 partly paid-up ordinary share and Re. 1 on fully paid-up ordinary share and Rs. 2-8 per 100 deferred shares in respect of applications bearing their stamp.

A copy of the Memorandum of Association of the Company which forms part of this Prospectus and the Articles of Association can be inspected at the Registered Office of the Company at Delhi during business hours.

MY HUSBAND'S FORESIGHT SAVED ME AND MY CHILDREN — SAYS THIS WIDOW

Soon after our marriage my husband insured his life. He invested in a Family Income Policy.

A few years later he was the victim of a fatal accident. The future of our children was then in my hands.

The Family Income Policy relieved me of all financial responsibility. It brought me a regular monthly income for more than ten years.

Thanks to my husband's foresight in obtaining this policy, I was able to continue the maintenance of my household, and my children stayed at school.

When this income stopped I received the full assured sum. With this help, I arranged a satisfactory marriage for my daughter, and my son was able to complete his higher studies.

New India's Family Income Policy offers attractive rates of premiums. The large assets of the company guarantee maximum protection to its policy-holders and their beneficiaries. Since its establishment in 1919, New India has paid claims over Rs. 8 crores.

Authorised Capital—Rs. 6 crores. Subscribed Capital—over Rs. 3 crores. Paid-up Capital—over Rs. 71 lacs. Total Funds—over Rs. 4 crores.

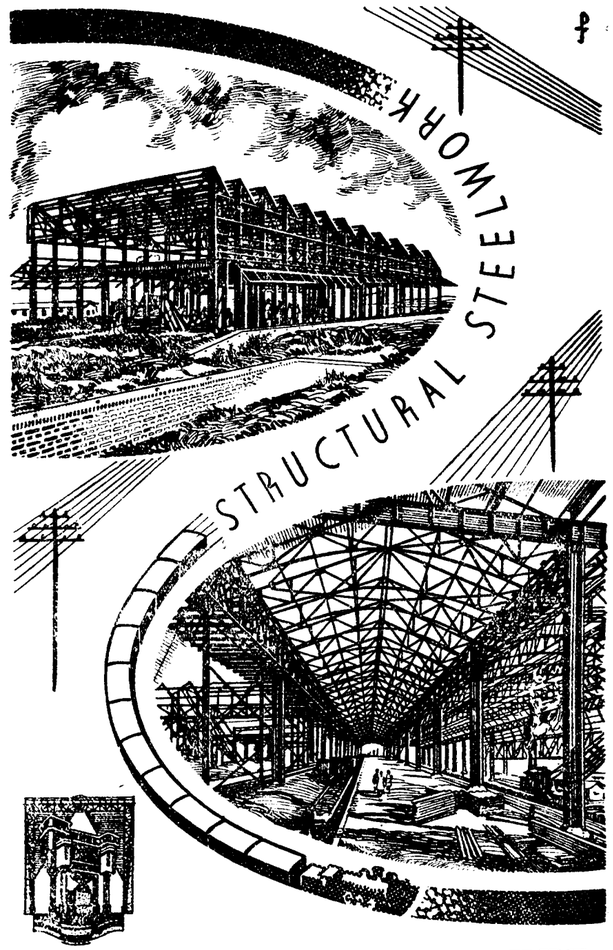
Bankers/Secretary.....



advantage, however, lies in the assurance of support from the States. Though it is not the first or the only bank directly linked with the Durbars one must draw attention to the composition of the Central Board. There is a wealth of administrative talent at the disposal of the Bank, and investors will take care to note that a representative of Magneeram Bangur is associated in a direct and formal manner with the new Bank.

The promise of benefits to prospective clients of the new bank is by no means a departure in indigenous banking. The all-Indian composition of the Boards at all places will claim attention for now obvious reasons. The Bank is invested with great importance by its large paid-up capital, far larger than that of the Reserve Bank, and its connection with the enterprises launched by Seth R. Dalmia whose name may be taken as a guarantee of the ability to realise ambitions outlined rather sketchily in the prospectus.

Some will naturally bestow great attention on the link with the famous house of Bansilal Abirchand which has, in the past, had experience of the treasury work referred to. The share premiums are meant for meeting preliminary expenses and the creation of an initial reserve. Not every bank makes such provision in advance. The gradation of the denomination of shares is an admirable adjustment of the Indian investor's capacity to the requirements of the promoters. The early realisation of the hopes described in the prospectus will not be affected by the war as banking is sounder and stronger than ever. The shareholders of fourteen specified companies have been promised special consideration in the matter of allotment, and there should be large support from the special quarters referred to in the prospectus itself. Indian India presents opportunities for a more eclectic kind of banking such as is promised by the Bharat Bank. It will certainly have a career, distinct from that of ordinary jointstock banks, but novelty is not the only feature to recommend the Bank to the notice of investors who should be also aware that bank shares are not like other shares.

Conserving Paper

The appearance of the Paper Control Order on Saturday last is formal admission of the need to adjust demand to present supplies. The persistent shortage of imported paper was not countered by injunctions to use less paper. Private or voluntary economy was not enough and the more drastic curtailment of the consumption of paper could only be effected by measures comparable to those enforced in Britain for over two years. The appointment of a Commissioner whose main concern will be the adaptation and increase of paper production in India is not surprising. How the existing mills will respond to the demand for larger output need not be discussed, for the effects of regulation of consumption alone concern the public. That the printing and publishing trades will not accept cheerfully the loss of business enforced by novel regulations relating to circulars and posters cannot be gainsaid. New journalistic ventures too cannot be started, and certain weak publications indeed may go out. The power to grant exemptions, or to relax the Order in favour of war contracts, is as usual vested in Government. That the Order will upset British publishing firms who got books printed in India when it is difficult to get paper or labour in Britain may be ignored in judging the ultimate results. That pools, competitions and betting will suffer through the restraint of advertising must be welcomed as a benefit secured under the Order. Since no city in India has been a big book centre like Leipzig or Edinburgh restriction of output is a material factor in favour of the rules introduced. If directories and guides cannot be published without express authority few will suffer. The Order refers to moneylenders' circulars by name, but it is very doubtful if India is conversant with the moneylender as known to English law. As legal proceedings etc. will not be hampered by the Order, the general public does not lose much and the exception made in favour of seedsmen's catalogues is both pleasing and correct. The limitation of size and weight for calendars, showcards etc., cannot affect business much, and the limits set to poster display and bill-posting will be approved by aesthetes who have deplored the lack of a Scapa in India. The actual relief afforded by the Order cannot be great, but it is only right that all should recognise the disadvantage of

BT.10.

using paper as carelessly as in peace-time. Since established journals are protected by the schedule of maximum prices, the Order makes no difference either to them or to newspapers which are subject to a separate Order, enforcing at present the restricted use of imported material.

Rail Receipts

State railway earnings in October showed no great increase on the corresponding period of 1941. What was noted after August in regard to receipts was accentuated by the curtailment of services. The total for the State railways for the ten days ended October 20 amounted to Rs. 346 lakhs, showing an increase of Rs. 13 lakhs only on the same period in 1941. The total receipts from April 1st to October 20 amounted to Rs. 76.26 crores showing an increase of Rs. 8.69 crores. The improvement is based largely on the growth of traffic on the G.I.P., N.W. and the B.B. C.I. Railways. The increase is smallest in the case of the B. and A. Railway and there is actually a decline in the case of the Tirhoot and Lucknow-Bareilly railways. That railway receipts this year are higher despite the fall in wagon loadings on both the broad and metre gauge has been discussed frequently. It is only on the metre gauge that there has been an increase in the transport of home line stores and materials. The increase formerly noted as regards miscellaneous smalls has been decisively arrested. The reduction in inland trade this year is attested by the reduced movement of oilseeds, grains and pulses as also cotton. That the fall in private goods traffic has not altogether operated to the disadvantage of the revenue must be deemed exceptional. The Indian railways continue to sustain the Central Government's revenue in the usual manner, and the loss of one crore occasioned by the disturbances in August should be made good by the buoyancy of revenue that generally marks the cold weather.

Coal Traffic

In the latest issue of the G.I.P. newsletter is found a discussion of coal traffic. There is no longer a slack season when coal can be secured and stored. Owing to war conditions the railways cannot provide the seasonal facilities. Even so the railways, says the news-letter, do not overlook the important role coal plays in the daily life of the average citizen and the figures for wagon allotment on Class 1 railways from 1st April to 31st July, 1942 show that in spite of the continued demand for more and more rail transport public coal transport has not been too adversely affected. The limited increase in the local price of coal indeed supports the view that the coal shortage this year was purely temporary. The newsletter declares that compared with the figures for the corresponding period of the previous year the figures for coal show only a fall of 13.9 per cent whereas wagon loadings in the case of cotton, oilseeds and miscellaneous smalls show a fall of 24.9 per cent 30.5 and 33 per cent. Economy of transport is being secured, according to the newsletter, by steps taken for the best use of wagon space, and the minimum weight for charge in the case of the G.I.P. for coal wagons is now two tons instead of one ton as from October 1st. A coal allotment section is attached to the D.T.M.'s office in Nagpur to deal with indents and allotments. The Railway is considering the appointment of a coal inspector to investigate the traffic and see that loading takes place in accordance with allotment.

Limited Increase

Crop forecasts issued this year point to a limited increase in the area under rice and sugarcane. An increase of 2 per cent in area does not seem adequate in the face of known shortage, but the estimates of outturn have not appeared. The rice crop of 1942 was certainly larger than usual, and a further increase is to be welcomed. The reduction under cotton is due largely to the successful campaign against the growing of short staple varieties. The decrease has, in great measure, contributed to the increase in groundnut cultivation reported this year. The increase in groundnut is not confined to Madras, for the stimulus of high prices has been long operative. An increase of 11 per cent in the area under groundnut does not restore the pre-war balance, but present conditions warrant only a moderate increase. The increase of 11 per cent in the area under gingelly seed is a pointer to the high prices for all vegetable oils, due largely to the loss of large copra-producing regions to Japan. It is likely that the area under winter oilseeds will also show a marked increase. The most substantial increase in the current year is noticed under jute, and in this case, the increase has produced a knotty problem, for Bengal at any rate. The cotton forecast still shows an increase under long-staple, and present cloth prices must raise the customary premia for Americans. A recovery in area in regard to castorseed, wheat etc. may be deemed certain, and agriculture in India must be modified by the diversion of a larger area to food crops.

Halcyon Days

Traffic by country craft is acquiring importance and Mr. C. A. Buch's article in the Journal of the Indian Merchants Chamber describes the historical and other aspects of native shipping. During the last war sailing ships were common and a recent notice of windjammers in Table Bay proves that in the Atlantic too sailing vessels are supplementing Allied tonnage. Mr. Buch recalls that during the last war, Indian merchants built a number of ships and traded in them between coastal ports especially between Karachi, Bombay and Malabar ports in the south and Persian Gulf ports in the North. A few voyages were made to the coasts of East and South Africa, to Burma, and at least one voyage was made to Penang. It is said that 50 new ships were built in Cutch Mandvi in two years. The minimum capacity was only 12½ tons but freights were high, being Rs. 3 to Rs. 8 per bag of 164 lbs. from Karachi to Basra and Rs. 5 to Rs. 10 per bag from Bombay to Zanzibar. The enormous increase in sailing vessels is duly reflected in entries and clearances at Tuticorin and Cochin which are still the busiest ports in India for sailing craft. The total tonnage then is estimated by Mr. Buch at 80,000. Since sailing vessels have not been added to in the last ten years, it is not easy to forecast any strong revival, even when other conditions are promising. Without developing a modern shipbuilding industry, India is known to have neglected for years the construction of sailing vessels. At the end of 1938 there were 146 sailing vessels of over 100 tons with a total of 23,466 tons and meant for conveying goods, not taken by steamers

While I am not competent to say whether, in the military sphere, the Allies have fully utilised in this war the lessons of the last, I have more than once stressed that, on the economic front, policies and plans and programmes have been moulded and fashioned in the light of the experience gathered in World War I. With regard to budgetary policy, taxation, defence borrowing, regulation of exchange, control of money and capital markets, requisition of foreign securities, etc., the custodians of the Treasury as well as the authorities guiding the central banking institutions have acted decisively and promptly, with the result that it can be said that the mobilisation and organisation of the economic front in Hitlerian War has been most efficient and least wasteful in everyone of the leading countries. In particular reference to Britain, it may be further pointed out that, in these respects, she has had the benefit not only of the lessons of the last war but also of the totalitarian policies and organisations which, for well-nigh a decade, Germany had successfully adopted in reference to a state of things in that country which, in a setting of apparent peace, was as good as war economy. For these reasons, the economic machinery has been functioning without much friction; and it is, from this point of view, intelligible that Britain has decided to pay attention and thought, from now, to the problems connected with inter-Allied debts.

* * * *

Full facts about the proposals that have been advanced by Britain in this connection have not been revealed from authoritative sources; and the few details that were furnished in the "World of Indian Finance" section in last week's issue of this journal may be said to be the first definite information brought to public knowledge in this country. I quote the following passage from INDIAN FINANCE of November 6:

> "This super-prosperity of India in sterling assets may well prove India's undoing. It is already well-known that the Government of India are considering proposals put forward by the British Government for a new agreement with regard to allocation of war expenditure as between India and Britain . . . . . .
>
> Putting two and two together, it looks as though the British Government are busy taking measures from now with regard to the reduction or extinction of her financial liability at the end of the war; that, moved by this desire, they have proposed to the U.S. Government the cancellation of Britain's debt under Lease-Lend accounts; and that Mr. Morgenthau's visit to London was connected with this suggestion. A few months ago, Sir Jeremy Raisman was invited to London, presumably with a view to get something done whereby the liability which Britain was continuously incurring to India could be reduced or wiped out. In this connection, the United States Government propose a formula which, in effect, means that every country will share in post-war economic benefits in proportion to sacrifices made during the war. This formula cannot be very acceptable to Britain who would like to propose that no member of the United Nations must be in debt to any other member at the end of the war. This is the kind of formula which Sir Walter Venning must have put forward in Washington on behalf of the British Government; and it is already clear that America is not overpleased with the proposal. So far as India is concerned, a formula on these lines will mean that all the sterling credits that we are now creating will be decimated at one stroke. The issues raised by this question are too serious and too elaborate to be discussed at length in this column. And we will revert to it in a subsequent issue."

* * * *

In fulfilling this commitment, the best course will be to give, at the outset, a brief resume of the history of the inter-Allied debts occasioned by the last war. In broad terms, it is stated that, of the total war expenditure, six per cent was met by taxation, 77.2 per cent by home borrowing, 14.5 per cent by loans between the Allied Government themselves and 2.3 per cent by borrowing in other foreign countries; that only three of the Allied and associated powers acted to any appreciable extent as lenders, namely, Great Britain, the United States of America and France; and that, while extension of aid by the lending countries was attended, at the time, by hardly any higgling or haggling, the process of post-war settlement and funding arrangements with regard to these obligations was marked by dilatoriness, indecision, "Jewing", bitterness and a general lack of gracefulness and alacrity which characterised the proffering of the original instalments of aid. The United States was the ultimate creditor. And the original indebtedness of the Allies to the United States was $10,338 million. This was finally funded into a total debt of $11,873 million. Great Britain's only debt to another Allied Government was that of $4,277 million to the United States; and her own advances to Allies greatly exceeded the amount borrowed from the United States. The history of the inter-Allied loans during the last war may be divided into three periods. In the first period, which extends up to the date of America's entry into the war in April 1917, Britain and France had to provide considerable finance to Russia almost from the fourth month of the war. France, however, found herself in difficulties and had to borrow from Britain. During this period, France borrowed altogether £200 million from the British Government, against which she had despatched gold for about £53½ million. In her turn, France had lent approximately 6,500 million francs to the other Allies. Great Britain during this period loaned to her Allies £900 million. In thus making credits available to the Allies, Britain was able to manage without any outside help up to October 1915. It was, however, found impossible to maintain the American Exchange unless funds were available to cover the greatly increased purchases of war materials from the United States. At this stage, a joint Anglo-French loan was raised on the New York market for £500 million; and there was no other security for this loan than the credit of the two Governments. All monies subsequently raised in America, however, took the form of credits or secured notes, collateral being deposited in each case. It was in connection with such collateral that the British and French Governments had to requisition the holdings of American securities by British and French nationals. These securities were either sold for dollars or employed as collateral.

* * * *

The second period starts from April 1917 when the United States entered the war and extends to the armistice in November 1918. Even before America joined hands with the Allies, Britain and France found difficulty in mobilising dollar securities that would be eligible as collateral for advances from America. The entry of the United States into the war provided from this point of view most timely relief in regard to the war time finance of Britain and France. One of the first acts of the United States Government after the declaration of war was to enact the Liberty Loan Act, authorising the extension of credits to Allied governments up to a total of $3,000 million. This limit was subsequently raised three times up to a total of $10,000 million in July, 1918. With respect to these advances paid by the United States, no collateral was to be furnished; and the understanding at the time was that the credits extended to the Allies should bear the same rate of interest and be subject

to the same conditions as the corresponding bonds to be issued on the United States market in order to raise the sums required. The total advances made by the United States Government to the governments of the Allies during the second period amounted to $3.696 million, France $1,970 million, Italy $1.030 million and Belgium $172 millions. Total loans made by Great Britain to her Allies during these years amounted to over £550 millions.

The third period may be said to extend from November 1918 to September 1920 and pertains to the advances which the lending governments had to continue to make to the other Allies for the payment of goods already supplied or ordered and for relief credits for the purchase of foodstuffs and for reconstruction.

* * * *

It will thus be seen that, though the armistice was signed on November 11, 1918, advances were being made and obligations were being incurred among the Allies for nearly two years after this debt. Meantime, the reparations to be recovered from Germany by the various Allies were being discussed and settled in an atmosphere of extreme controversy and bickering among the Allies. But before the last of the inter-Allied loans had been made, it was realised that the problem of repayment of these obligations might come to occasion as bitter a controversy and as unedifying a bickering as the repercussions. The British Government were the first to make it known that they favoured a general cancellation of inter-Allied debts. This attitude of Great Britain was made known soon after the armistice. But the United States Government made it equally clear that they were not prepared to agree to such a course. Then followed a period when each of the Allied countries set out its attitude and ability to pay. It was only Britain that expressed a readiness to deal with the debt due by her to the United States independently of what she would get from Germany as her share of indemnity. In February 1922, the United States attempted to provide a final elucidation of her policy by the enactment of the American Foreign Debt Funding Act, authorising the refunding of Allied debts to the extent of $11,000,000,000 into securities with a maximum currency of 25 years, carrying interest at a rate of not less than 4¼ per cent, the negotiations to be carried out by a commission of five members (subsequently increased to eight) under the chairmanship of the Secretary to the Treasury. It was, at the same time, made clear that the United States Government would not consider the remission of debts due to them from the Allies but would look for repayment, though it was recognised that immediate payments would not be possible in every case. This action had a determining effect on the attitude of the Powers concerned towards the whole problem of inter-Allied debts. In such circumstances, Great Britain had no choice but to initiate negotiations for funding of her debt to America and was thus compelled to declare her own policy towards her debtors. This policy was enunciated in the Balfour Note of October 1, 1922. Great Britain declared that she would have been willing to forego all claims for reparations and the repayment of Allied debts due to her if this had formed part of a universal settlement. This being impossible, she was obliged to ask for some measure of repayment. She would, however, be content with a total sum from her Allies and Germany sufficient to cover her own payments to the United States. The British obligations to America were funded finally in January 1923; and on June 15 of that year, the first payment under the settlement was made by Great Britain. With various degrees of dilatoriness and haggling, other funding arrangements were concluded; and they were ratified by the Congress in Washington early in 1926. In the settlement made in respect of each debt to America as well as Britain, two main standpoints have been kept in view. The United States insisted and the others had to agree that the problem of inter-Allied debts must be treated as entirely separate from that of reparations. The second is the doctrine propounded by the United States and

accepted by others that repayment of debt must be in proportion to capacity.

* * * * *

It is not difficult to realise that much time and more temper were lost in the discussions and negotiations connected with the funding of inter-Allied obligations. The most interesting part of the inter-Allied debts of the first war is that mutual aid was extended with the utmost goodwill; that the period and process of the funding arrangement of these obligations were marked by utmost illwill; that, while, after all these elaborate and vexatious talks and negotiations, proposals and counter-proposals, the whole plan of payments has collapsed, there is a state of feeling among the old Allies which is, so to say, neither active goodwill nor active badwill.

* * * *

Considerations of space require that I cry halt at this point and postpone the detailed discussion of the inter-Allied debts of the present war to the next issue.

(*From Our Correspondent*).

New Delhi, November 10.

To depressed New Delhi—depressed owing to various frustrated hopes, mainly political—the succession of good news from the military front in Africa came with double cheer. The remarkable success of General Alexander's drive in Libya, the landing of big American forces in North Africa and the general improvement in the military situation both to the east and the west of India, have undoubted importance for this country. The African successes have definitely removed the threat of enemy aggression to India from the west. The situation in the east is so favourable that whatever may have been the possibility some time ago, it is not now considered possible for Japan to attempt an invasion of India by land or sea. The Allied preparations for an offensive to retake Burma are reported to have so well progressed that it is now merely a question of military strategy to choose the moment for attack and achieve the declared objective. From the military point of view the events of the next few weeks may easily prove decisive.

* * * *

The change in the military situation has undoubtedly some effect on the public mind in regard to other matters also. It may be, for instance, no exaggeration to say that the talks which began on Monday between Mr. Jinnah and Mr. C. Rajagopalachari have opened far more auspiciously than at any previous time. Mr. C. Rajagopalachari seems to be all too eager to pull through and though he has not disclosed all his cards to the public yet, is reported to be in a confident mood. In his recent speeches and statements Mr. Jinnah was disposed to talk derisively of "kite-flying" and "plane-flying," but in his opening speech at the annual meeting of the Muslim League Council on Monday, he struck at least one happy note—the note of conciliation so far as the efforts of peace-makers like Mr. C. Rajagopalachari are concerned. He deplored Britain's attitude as merely one of "marking time." To those who had put forward proposals for forming a Provisional Government he said: "Concede the Muslim right of self-determination by plebiscite, and we shall not only have any difficulty in the way of a Provisional Government being formed but will do everything on a footing of equality to get all power transferred." That was as far as he was prepared to go enough, but only the result of the Jinnah-Rajagopalachari negotiations will show whether it is far enough.

* * * *

There is no difficulty in agreeing to the principle of self-determination in fact, it may be said to have been already accepted. What remains to be determined is its application with due regard to all the interests concerned. At the same time it has to be remembered that there is bound to be a redistribution of provinces after the war—the creation of new provinces, the fusion of existing ones and the fixing of new boundary limits for provinces. It is to go into these details, but Mr. C. Rajagopalachari's attempt appears to be to arrive at a general formula which will satisfy Mr. Jinnah and also prove acceptable to the other groups in the country. If the talks now in progress between the two leaders yield this formula Mr. C. Rajagopalacari will not hesitate to apply for an interview with Mahatma Gandhi and try to secure his consent. No attempt has yet been made to establish any contact with the Viceroy or other leaders, for apparently the view held that is that if the main parties, the Congress and the Muslim League, come to an agreed arrangement, the British Government will be bound to recognise it and facilitate the next step—the formation of a Provisional Government with representatives of the major parties.

* * * *

It is still a mystery why no appointment has yet been made to fill the Information Membership. Though at the time of Sir C. P. Ramaswami Iyer's resignation it was stated that an announcement would be made "shortly" three months have passed by without any announcement. Had there been any proposals for a general reorganisation of the Council, and redistribution of portfolios, there might have been no explanation for the delay, but there is no evidence of any such proposals being under consideration. Even the suggestion reported to have been made by a majority of Indian Members that as a first step the Viceroy's Council should be completely Indianised, has been summarily turned down by Mr. Amery. In New Delhi there is nothing to show that any political move at all is under consideration—even to the extent of reducing the European official element and throwing open the Home or Finance Membership, if not both, to non-official Indians. There have also been reports that the Information Membership may either be abolished or transferred to some other portfolio, but even that has not been done. Whenever a sudden vacancy arises—by death, resignation or some other reason—and no immediate arrangements are possible for filling the vacancy, the obvious course is to ask one or other of the Indian Members to hold additional charge of the portfolio until permanent arrangements can be made, but the present practice in the Government of India is to leave the administration of the portfolio in the Secretary's hands. According to current reports, Mr. Jamnadas Mehta who is a Nationalist Member of the Central Assembly stands a good chance of being appointed Information Member.

* * * *

Nothing has yet been issued officially about the proposed Food Production Department. It is probably considered too big a change to have a separate portfolio for Food Production and Supply, but the need for a separate Department which will exclusively deal with the problems of Food production and distribution appears to have been at last accepted. It will come directly under the Commerce Member who, is already dealing with price control and similar questions. Formerly the Commerce Member used to have a double portfolio as both the Commerce and the Labour Departments came under him. The creation of the new Labour Membership lightened the Commerce Member's responsibilities to some extent, but with the creation of the new Food Department, a heavy and responsible charge owing to present war conditions—the Commerce Member will again figure as the most hard-worked Member in the Government of India. The complaint still persists that owing to the existing distribution of portfolios, some Members have comparatively little to do while some others have far too much to attend to.

Railway returns have again taken a favourable turn. For nearly two months the earnings of State-owned Railways showed a continuous fall—sometimes fairly big—which seemed more than accidental. During the last four or five weeks, however, there has been a decided improvement. In October the increase as compared with the previous year has been well over Rs. 1 lakh per day. The improvement in earnings during the first seven months of the current financial year has been nearly Rs. 9 crores. If this improvement is maintained there will be no cause for any fear that the surplus budgeted for will not be realised. No less favourable are the sea-borne trade figures for August published this week. Exports of Indian merchandise during the month were nearly Rs. 15 crores in value—well over the average for the year 1940-41 though below the level of 1941-42. As compared with the previous month imports in August showed an improvement of nearly Rs. 1 crore. If one takes the figures for the five months, April to August, one finds that imports have not come up to even half of last year's figure for the corresponding period, but exports have decreased only by about Rs. 10 crores. The balance of trade in India's favour during these five months is as much as Rs. 27 crores.

* * * *

Is the war any reason for neglecting educational problems? This important question is ably dealt with by Mr. N. R. Sarker, in his Convocation Address at Agra. So often does one hear that questions such as these may be left over for consideration after the war that Mr. N. R. Sarker's warning is welcome. "The truth is," as he says, "that war enhances the importance of our educational problems, and increase the urgency of studying them without delay." He pointed out that it was during the last war educational reform was undertaken in England through the Fisher Act and said that in India also the problem of reconstructing the educational system should be treated as both urgent and important—a problem to be studied from two points of view reorganization of the educational system and reform and revitalization of the socio-economic system.

COSSIPUR - - CALCUTTA

(From Our Correspondent)

Bombay, November 11.

THE appearance of an article reproducing somewhat familiar views in the Journal of the Indian Merchants Chamber was not altogether the climax of a discussion provoked by the accumulation of sterling balances in London. Apart from the flood of memoranda released already, there is a committee at work. Mr. A. D. Shroff and Mr. Mani Subedar give the Merchants' Committee all the academic ballast required. The general view prevailing here may be summed up as one favouring the outright purchase of British interests and the repayment of all sterling obligations. The London *Financial News'* suggestion of a short-term loan to the British Treasury is generally deprecated. The policy adopted in regard to liquidation of U.S. interests by Britain is viewed as practical and necessary.

* * * *

The improvement in the sugar supply position here has not apparently blunted the edge of criticism. Only last week Mr. Lalchand Hirachand, M.L.A., once again discovered the limitations of the Control Scheme. He argued that equitable distribution was a myth and described the black market as the direct result of the control scheme. Since April, local and Indian sugar prices have gone up by leaps and bounds and the chronic inadequacy of supplies is established by general experience. Reference was made again to the fact that scarcity was a feature of Cawnpore as of other cities.

The stoppage of work in Ahmedabad mills is proof of the disturbed conditions still prevailing in Guzerat. The assumption of control over municipal affairs by the Government has not extinguished the disorder. The protection of officials has been carried further, but the daily press contains reports of arrests at various places. Commercial leaders in Bombay urge in this connection that repression has proved no remedy for the situation. Last Wednesday, Mr. Setalvad added his protest to those lodged against the barren policy that clings to the Cripps' declaration as the limit of concession. The Jam Saheb in England does not perhaps enjoy the benefits of the Princes Protection Act, and his criticism of the Congress attitude as pro-Japanese was condemned as irresponsible.

* * * *

It is very strange that criticism should appear in a Madras paper of advantages secured by the Bombay-Burmah Trading Corporation, Ltd. The privileges secured in regard to timber contracts certainly appear logical to the Indian shareholders of this famous Bombay Company. As pioneers in the trade of India with Burma, the Corporation has a long and distinguished record. In view of the present strain on timber supplies in India, it was only natural that the Government should seek the assistance of the House of Wallace. Under the mistaken notion that the Corporation is exclusively British, from distant Delhi criticism has appeared. If the correspondent had a bare minimum of knowledge connected with the share markets in India, he would have known that the Company has very large interests in South India, in rubber, tea and timber. Fuss is made about the concessions afforded in the States with the possible exception of Travancore. But the Corporation's standing and experience cannot be ignored at any time and the Supply Department consulted its own interests by enlisting the support of the Corporation. As to the possible denudation of forests in India that is an idle fear, for the Corporation has an experience of forestry surpassing that of the Government, and the Company incidentally may claim an age as great as that of India's Forest Departments. The mere fact that Burma has been lost cannot be made to operate to the disadvantage of the Company which has thousands of Indian shareholders and had more than one Indian director, including that well-known Nationalist businessman, Seth Mathradas Vissanji. The average citizen of Bombay is indeed amused by the display of ignorance and prejudice in an unexpected quarter but the shareholders will be definitely cheered by the news that earning power is resolutely maintained in the case of one of Bombay's most active securities.

* * * *

The report that the Nizam's Government have passed orders concerning the maintenance of the usual ratio of 116 O. S. rupees to 100 British Indian rupees suggests that inflation in India led to the unsettlement of the usual exchange ratio. Hyderabad's new bank has been instructed to help in the free encashment of British Indian currency locally. It is quite likely that the depreciation of British Indian rupees upset trade relations with Bombay; but there is now a welcome guarantee that Hyderabad will help in every way. The State Budget for Fasli 1352 has been interpreted here as proof of Hyderabad's ability to reduce to manageable limits the usual wartime deficit. The deficit expected by the new Finance Member is as small as Rs. 4.18 lakhs in spite of the war outlay being as large as Rs. 193.01 lakhs. Old surpluses and new savings alike are available for meeting extraordinary expenditure in the current Fasli. Retrenchment has not been neglected even in the face of the normal growth of Hyderabad's revenue by Rs. 18.4 lakhs in the current year. Customs revenue is expected to fall, but the Nizam's State Railway should certainly provide an addition to revenue. The setting up of a Rural Trust Fund is a departure in State finance. The usual nation-building expenditure is not curtailed like the provision for buildings and public works. The operations of the Industrial Trust should also be favourable to Hyderabad's revenue in the current year. It is generally believed that Mr. Tyabjee's transfer to Hyderabad from Bombay is a result of the increase in work falling on the Trust which runs many mills.

* * * *

The suspension of business generally has put investors at a disadvantage. Company reports and share quotations appear as usual but the market is closed, and Bombay is apparently resigned to the abandonment of *Moorat* business this time. Not the usual fireworks, but frenzied buying is the main feature of the local festival of lights, and yarn control and other factors cannot stand in the way of cloth business on a big scale. But Hindus decided otherwise and made a real sacrifice. Even the assurance that India's defences are much stronger did not weigh with the brokers who are resigned to picketing. Members of the National Defence Council who described last week the progress of defensive preparations in India referred to the British grants for India's war expenditure. Sir Cowasji Jehangir was concerned to prove that India's poverty was not overlooked by the Allies. Mr. Jamnadas Mehta, already tipped for the new Food Department, had a fling at the Congress and asked Bombay to arrange a big anti-Congress demonstration to mark its admiration of Indian soldiers. Many feel it was hardly necessary for the National War Front to criticise Congress again. It certainly suggests that Congress is not a discredited minority as it is made to appear.

(*Continued from page* 773).

liant results of Blyvoor, a West Wit subsidiary) savings on the Rand alone must be substantial. Apart from the drive to increase the supply by civilian goods from local factories, it has been reported that South Africa, too, is bent on austerity. The result will be favourable for the 3 per cent issue referred to. The Union is raising its money at a lower rate than Australia, for higher wool prices, tin discoveries in South-west Africa, and bigger manganese production must contribute to the Union's revenue. The South African pound in New York has always been at 3.98 dollars to the pound and has not fluctuated and recovered like the Australian or New Zealand pound.

Resume of Commodity Markets

THE recent Allied successes have not had any great effect on the commodity markets as the factors determining the movement in certain commodity markets are of a special character and external developments have ceased to have any great significance. One important change, however, as a result of the recent improvement in the war situation, is to be noticeable. That is, the success with which the Allies have been able to carry out their North African campaign, according to plan, has given rise to the hopes that the shipping position is not as bad as it is made out to be and that with the new construction programmes and the effective anti-submarine measures, it will be possible before long to report a substantial improvement in the shipping position. As a matter of fact, for some time past exporters have been definitely given to understand that the freight outlook is more encouraging. Only, such improvement in the freight position as has taken place in recent months, has not been of any great help to private traders owing to the growing needs of materials for war purposes and the necessity for granting priority in regard to the transport of these commodities. With the expected improvement in the shipping position, it may perhaps be possible to export greater quantities to new markets on private account. It is this development, that many have been looking forward to for a long time and if this really comes about, the present unbalanced position in the general economy of the country will be to a great extent rectified.

Coming now to the developments in the market during the past week, the raw jute market has continued very firm, but the hessian market has been rather quiet. Heavy goods have been steadier while gold and silver have been marked down on heavy selling by Bombay operators. The position in regard to sugar and rice is reported to be easier.

Jute:

It will be several months before it will be possible to bring in any large supplies of the new crop. So far only about 20 per cent of the total crop for the current season has been moved what time usually 40 per cent of the crop is transported. The first four months of the season are over. In the remaining eight months a minimum of about 50 lakhs bales for consumption in Calcutta alone will have to be imported. Another 10 lakhs bales will be required for export. In all, the total quantity that will have to be moved in the next eight months will be of the order of 60 lakhs bales or an average of 7½ lakhs bales a month. The present rate of arrivals is only about 6 lakhs bales; so that, it is very doubtful whether even with the longer season, it will be possible for the authorities to rail or ship the quantity required, not to speak of the movement of the whole crop. It is not surprising, therefore, that mills have been very anxious to get supplies at whatever premiums they can pay only if they can get the goods in their godowns. Sellers also are very diffident about getting supplies in time and are not prepared to sell for forward positions if they cannot buy their goods in the mofussil districts and bring their supplies in time for delivery. It is even feared that export demand will develop to such an extent as to make it impossible for any large supplies being made available for Calcutta mills. We pointed out on a former occasion that it will even be necessary to ration out supplies between mills so that no member will be obliged to curtail production on account of the insufficiency of raw material. The stage has not yet come but the day is not far off. It is important that the authorities pay necessary attention to this matter.

Jute Manufactures:

There were reports sometime back that the space allotted to hessian shipments was cancelled and raw jute was exported instead to the U.K. and U.S.A. These reports have proved to be true as the figures for the month of October 1942, reveal a substantial increase in both hessian and sacking cloth and bags. It was generally expected that, as a result of the shorter working month on account of the Pujah holidays, there would not be any appreciable increase in either sacking or hessian goods. The figures, however, show that there is an increase of over 4 crore yards in hessian stocks and nearly 1 crore yards in sacking stocks. With a scarcity of supplies for near positions one would generally expect that sacking stocks would show a decline. Mills have apparently been unable to ship their goods to their consumers. Hence the increase in stocks on civil account from 19.42 crore yards to 20.25 crore yards.

There is considerable apprehension regarding the future of hessian shipments. As we have pointed out above, even with the hopes of an improvement in the shipping position, it is very doubtful if the authorities will decide to ship hessian goods in any large quantities.

Bullion:

Last week we drew the attention of our readers to the fact that the rise in prices for both gold and silver was entirely unjustifiable and that saner consideration should result in a fall in prices. If prices had continued to rise at the rate reported in the early days of this week, it could not have been without its effect on other markets. If there were an uncontrolled boom in prices, it would have resulted in a great confusion in the ordinary man's budget. For the rather sharp decline in prices during the past two days one has to be thankful to the Bombay operator. The Bombay bullion market reopened for business after the *Diwali* holidays and in the two days markets have remained open a substantial decline in prices for gold has been recorded. The quotation was as high as Rs. 71 earlier in the week. In the local markets Bombay operators turned out sellers and at the close the rate was even lower on balance, Gold ready being Rs. 65. Sovereigns touched a high level of Rs. 52-8 but have come down to Rs. 48. The decline in the quotation for sovereigns has not been proportionate as no stocks are practically available.

The silver market was inclined to be firmer in sympathy with the gold market earlier in the week, but on selling at the higher levels, quotations for Indian mint silver ready has come down to Rs. 108-8 from Rs. 113. There has been considerable selling for forward positions and the discount for ready is as much as Rs. 3 for hundred tolas.

Tea:

At the auctions of tea for consumption in India held this week there was a very strong demand for black tea offerings and prices advanced by as much as 3 annas. Common and medium broken grades were higher at 2 annas while tippy sorts fetched 3 annas more. Leafy grades and Fannings provided the strongest feature of the market and quotations touched new high levels for the year.

At the conference of representatives of the tea industry held in New Delhi this week, it was agreed that the scheme of international tea control should be continued and that the Government of India should proceed with the necessary legislation for the continuation of the Tea Control Act for the period of the war and for two years after the cessation of hostilities. The three important signatories to the agreement are India, Ceylon and the Netherlands East Indies. Out of the total volume of production, 149 million lbs. are produced by the N.E.I., 220 million lbs. by Ceylon and 379 million lbs. by India. This is the average of the figures between 1934 and 1938. The standard output of the country is very much higher. At the present moment, the problem is one of producing enough especially with the difficulties experienced in regard to labour on the plantations.

It appears that some of the representatives wanted greater freedom in regard to new plantations and also the revision of the export quotas particularly in case of the smaller estates. The questions discussed at the conference will be considered by the Government of India and a new bill is proposed to be placed before the Central Legislature in the next session.

Rice:

The Government of India have come out with a statement regarding the policy pursued in respect of the shipments of rice to Ceylon. It will be remembered that it was pointed out in these columns last week that the objection of the Indian Merchants Chamber to the export of rice in large quantities to Ceylon was justified as much as local shortages in this country had not been rectified and considerable damage has been done to the crop in recent weeks. The Government of India, however, point out that due consideration has been paid to the requirements of the country and that a survey of the stock position was taken before undertaking to the Government of Ceylon to export 20,000 tons of rice every month. It is said that these exports are to be regular with due regard to the supply position within India.

mainly for short distances without any definite time being set for transit and delivery. The low speed and the defective rig of Indian sailing vessels is balanced by durability but for long the square-rigged vessels on the Jaffna-Akyab run had quite a reputation. Though present demand for space, even in a sailing craft may be keen, the post-war future must be uncertain unless yachtsmen develop a passion for ungainly dhows. From the statistics provided by Mr. Buch the ports of Bombay and Karachi received and cleared in most years a large number of sailing vessels but the registration figures put Madras definitely in the lead. The minor ports must share in the revival experienced by sailing vessels—now the subject of an official enquiry.

Exploring Fresh Tin Resources

Along with intensive research in economising the uses of tin and also employing substitutes wherever possible, it appears that attempts are being made by the Allies to explore fresh tin mines within their territories. News comes from South Africa, for instance, that a new tin deposit has been discovered in the Kaukauveld (South West Africa). Colonel C. F. Stallard, Minister of Mines, South Africa, stated recently that an expedition, which he had sent to the Kaukauveld, had returned recently with samples of high grade tin deposits which have proved that these deposits might well prove to be extensive. The Minister pointed out that the discovery is now subject to negotiations between the South African Government and the South West Africa Administration and that questions of development and future production are being discussed.

Meanwhile, the Saaiplaats tin mines, situated in the Province of Transvaal, are working day and night in order to cope with the demand for tin in South Africa, and these provide a striking example of the enormous change brought about by the war in South Africa's mineral industries. Before the war, all the tin mined in South Africa was being exported to Singapore for processing and smelting, but when war broke out, the managing engineer in charge of the mine developed his own smelting process and the mine has the only tin-smelting plant in Southern Africa, the only other similar plant being in the Belgian Congo

Another African colony where tin is mined on an extensive scale is Nigeria. Here also, production of tin is being speeded up to a considerable extent in recent months.

(*Continued from next page*).

Despite the difficulty which dealers are experiencing in buying any large quantity of jute owing to their jammed position, Mofussil markets have firmed up in ratio to Calcutta and imports are being held back and only judiciously fed to the market in view of the rising prices. Dealers can only buy to replace what they are able to ship and that is still regrettably little.

The Fabrics market has ruled firm and active though the demand has not been backed by a commensurate overseas enquiry. Hessians have come in for more attention than of late and the turn-over has been considerable. Nine porters improved from Rs. 14-13 ready to Rs. 15, November from Rs. 14-14 to Rs. 15, while the December, January-March and April-June positions were all recorded at Rs. 15. Eleven porters registered a similar advance in the ready and November positions from Rs. 18-11 to Rs. 19. December was booked at Rs. 19 to Rs. 19-4, January-March at from Rs. 19 to Rs. 19-8 and April-June at Rs. 19. 45/11 oz. sold for November at Rs. 22. In the Heavy Goods section the firmness for near goods was accentuated by the placement on behalf of the Russian Government of an order for some 120 lakhs of bags at market rates for December-January shipment. With this fillip, "B" twills registered an advance of from Rs. 54-4 to Rs. 57-12 in the ready position, Rs. 52-12 to Rs. 57 for November, Rs. 51-4 to Rs. 56 for December, and from Rs. 48 to Rs. 52-8 for January-March, while April-June was recorded at from Rs. 45-8 to Rs. 47. Liverpool Twills showed similar appreciation, ready advancing from Rs. 58 to Rs. 61-8, November from Rs. 57-8 to Rs. 61, December from Rs. 56 to Rs. 59-8, and January-March from Rs. 52-8 to Rs. 56-8. March alone was taken at Rs. 55 and April-June at from Rs. 51 to Rs. 52. These were the principal counters in an active market. "A" Twills now quote Rs. 62-8 ready and Cornsacks Rs. 55-8 with business reported in the latter for January-March at Rs. 50. Cuban Sugars were taken at Rs. 62 January-March and 6 by 8 Sugars at Rs. 63 December and at Rs. 54-8 April-June. The market closes firm.

A WAR-TIME ANOMALY

In common with many other industries we find ourselves today in the anomalous position of appealing to our clients to use our products sparingly. Where we once encouraged the broadest use of paper in all walks of life, now we cannot stress too strongly the urgent need for rigid economy in this valuable commodity.

Use paper thoughtfully and thriftily, thereby avoiding the necessity for frequent fresh supplies. If your demands on us are rare, we can supply Government with more paper for the propagation of the war effort.

Be sparing with paper in Government and Military offices, in factories and Mills, in commerce, in publishing and printing, and in your own home.

There is an acute paper shortage. Your attention is drawn to the following methods of avoiding waste of paper:—

Use the smallest sheet of paper for any purpose that will do the job.

Write, type and print on both sides of the paper. For short letters, bills and and accounts reduce the size of the paper.

Do not make copies except where absolutely necessary.

Always type single spacing.

In all cases (letters, commercial printing jobs and pamphlets, etc.) curtail margins.

Reduce the size of labels on manufactured goods.

Use the back of the letters received for the carbon copy of your replies.

ISSUED BY THE TITAGHUR PAPER MILLS COMPANY, LIMITED

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, November 12.

MILL stocks of manufactured goods at the end of October registered a further total advance of over 14,000 tons, 10,000 tons representing an increase of some 428 lakhs of hessians and 4,000 tons an increase of about 100 lakhs yards of heavy goods. The greater proportion of the increase is in Government held goods which have gone up by about 9,500 tons of which over 400 lakhs yards is in hessians and some 16 lakhs yards in sacking goods. Movement of commercial hessians must have been better than expectations as the increase in stock is only 31 lakhs of yards or 350 tons. Heavy goods do not make so good a showing with an increase of 83 lakhs yards, or over 4,000 tons. The total weight of goods held in stock by mills at the end of October amounted to 284,840 tons or just about 3 months production of goods. Two-thirds of this is hessian and one-third sacking. It is certainly a heavy holding of goods, but as mills raw material stocks are much below normal, their storing capacity is by no means yet overtaxed.

Mills would certainly gladly replace some of this manufactured stock with raw material but there is little sign as yet of any improvement in the movement of jute from the mofussil to Calcutta and a certain restiveness is becoming apparent, and not a few complaints of apparent irregularities and inequalities in the distribution of the available freight space. Consideration seems to have been given to various factors and interests, but one interest which certainly has received very little consideration is that of the seller. It cannot be said that the quota system in vogue at present, though perhaps the fairest that can be evolved offhand, deals out impartial justice to all dealers. One of the principal complaints is that dealers who did not open up their business till the season was well advanced are now in a much better position with regard to ability to ship than their brethern who had the courage to emerge from their Rajputana fastnesses at an earlier date. These braver comrades participated in the cheap sales made in the early part of the season and started shipping before there was any question of allotment of space by quota. Now all the shipments which they made before October 1, are debited against their quota for the season, while the late arrivals start with a clean sheet and get their full seasonal quota, which enables them to start shipping higher priced contracts before their bolder bhailog have got all their cheap contracts disposed of. To adjust this injustice, it would be necessary to exclude from the quota shipments all quantities dispatched before the quota system came into force, or alternatively to allot an adequate proportion of the available space to clearing up the "backlog" of early sales. Another factor ought also to be taken into consideration. Not a few dealers, being given to understand that service of freight to some of the more remote stations could not be undertaken, established new agencies at some of the bigger stations where freight could be assured. But not having been regular shippers in the previous 3 years from these stations, their quota allotment has to come out of a meagre 5 per cent reserved for such cases. It would surely not be unfair to give consideration to their shipments in previous seasons from the stations where these balers were previously established. There is in any case no blinking the fact that sales made at cheap rates early in the season and for early shipment are still being held up, while sales made at a much later date and at higher market rates are getting space. We have pointed out already that exactly similar conditions appeared soon after the control took over export jute shipments, had to be made in freight allotments to enable the early and cheaper sales to be cleared up. It is only too apparent that something on the same lines is necessary, and should be promptly introduced, to liquidate the "backlog" of early sales of loose jute to mills.

In view of the recurrent demands from ill-informed sources that the jute sowings for season 1943-44 should be drastically reduced, an objective survey of the position by the Indian Central Jute Committee merits attention. This estimates that two-thirds of the current crop will go into actual consumption during the season leaving one-third of this year's crop as the available stock. But local mills will endeavour to ensure that their holding of this surplus will not fall below the figure at the end of June, viz., some 24 lakhs of bales. If it is at all feasible, they will endeavour to increase this figure. At the worst the unsold carry-over should not exceed 18 lakhs of bales which is by no means a terrifying total.

The Export market for Pucca Bales has not been active. Some "Lucky-day" transactions in Dundee Daisee were reported early in the week on the basis of Rs. 59-9-3 for assortment, but with a considerable quantity taken up by mills, the rate now asked is Rs. 61. Dundee Daisee 4's. for shipment sold at Rs. 54. Mills have again absorbed a large quantity of assorted pucca bales, Firsts from Rs. 62 to Rs. 65, Lightnings at from Rs. 53 to Rs. 57, Hearts at from Rs. 49 to Rs. 53, Dundee Daisee assortment at Rs. 62 and Rs. 63, Dundee Tossa 4's. at Rs. 63 and Out-port Tossa assortment at Rs. 62 with 4's. at Rs. 55.

A large turn-over has also been recorded in loose jute at steadily advancing prices. Offerings have been limited in quantity but have been practically taken up each day. European packing sold at Rs. 12-12 and Rs. 9-12 for Middles and Bottoms for storage with four annas more paid for shipment. Since then Rs. 10-4 has been paid for Bottoms alone and now the quotation is Rs. 13-8 and Rs. 10-8 with almost nothing offering thereat. Supervised Jat sold at Rs. 12-4, Rs. 9-8 and Rs. 8 and later up to Rs. 10 was paid for Bottoms alone. Supervised District sold early at Rs. 9-4 and Rs. 7-12 for Bottoms and Cross. Indian Jat White has sold up to Rs. 12-8 and Rs. 9-12 and Northern District at Rs. 11-8, Rs. 8-12 and Rs. 7-12. Tossa has been in keen demand and offerings of this have been larger than of white jute. Indian District Tossa has been taken up at from Rs. 12-4, Rs. 9-8 and Rs. 7-12 to Rs. 12-12, Rs. 10 and Rs. 8. Northern Tossa sold at from Rs. 12 and Rs. 9-4 to Rs. 12-8 and Rs. 9-12 and Jungli at from Rs. 11-12 and Rs. 9 to eight annas over these rates.

JUTE

Calcutta, November 12.

The raw jute market has been very active during the past week and business has been limited only by the availability of supplies, as on former occasions. Sellers are very reserved and are not inclined to part with their goods freely. It is feared, that, with the existing transport facilities, it will not be possible to bring in jute on any large scale sufficient to meet mills requirements. It is not surprising, therefore, that mills have been willing to pay the premiums asked for. Quotations are at the highest for some time and it appears that the present upward tendency in the several sections in the jute market will be maintained for sometime yet. Arrivals in Calcutta and other adjoining areas are rather small for this time of the year. Despite the difficulty in regard to transport facilities, it is reported that in the mofussil centres firmer conditions are noticeable and that holders are not quite willing to part with their goods. It is expected that the higher prices will be available in the near future. Owing to the difficulty of buying jute in the mofussil and the need for replenishment of stocks before effecting any fresh sales, local sellers have naturally been very reserved. It is reported that the disparity in prices between Calcutta and the mofussil prices is narrowing down.

In the Loose Jute section, mills have been eager buyers of European Jat Middles and Bottoms at Rs. 12-12 and Rs. 10 per maund respectively. Supervised Jats and Bottoms were done at Rs. 12-8 and Rs. 9 per maund. Cross Bottoms were done further higher at Rs. 8 per maund. District Tossa Middles and Bottoms were done at Rs. 12-4 and Rs. 9-8 per maund while Northern Tossa sold at 4 annas lower and Jungly by at 8 annas per maund less.

In the Pucca bales section a greater amount of business has been passing and shippers are willing buyers for forward positions but there were no offers. Firsts 2/3 were done at Rs. 64 per bale; Lightnings at Rs. 55 per bale; Hearts sold at Rs. 49 per bale and Dundee Daisee 2/3 at Rs. 62 per bale.

JUTE MANUFACTURES

Calcutta, November 12.

The jute manufactures market has not been quite active with quotations fluctuating within narrow limits. Rather, quotations have been maintained only with the strength of the jute market. Export demand has been very poor. The latest stock figures also have not been encouraging from the market point of view. It is expected that if there are not large increase in exports of jute manufactures there wil not be any increase in prices for hessians. It is, however, satisfactory to note that the increase in stocks of hessian cloth and bags have been mostly on Government account. 9 porters ready are quoted Rs. 14-14, November Rs. 14-15, December Rs. 15 and January-March Rs. 15-2. 11 porters ready are quoting Rs. 18-14, November Rs. 18-8, December Rs. 19-2 and January-March Rs. 19-4.

The heavy Goods section has been firmer. There was practically little doing for near positions on account of the scarcity of supplies. The firm tone of the jute manufactures market has naturally resulted in a considerable appreciation in values. "B" twills for November delivery sold at Rs. 56-8, Liverpool twills at Rs. 60-8 and Cornsacks at Rs. 55. Quotations are two points higher on balance all round. Local stock figures for the month of October 1942, show hessian cloth and bags on civilian account at the end of November 1942 at 31.33 crore yards against 39.02 crore yards at the end of the previous month and on military account 36.75 crore yards against 32.78 crore yards. Total stocks thus show an increase from 71.8 crore yards to 76.08 crore yards. Sacking cloth and bags on civilian account show a rise of 18 lakhs yards at 20.25 crore yards. Stocks on military account are higher by 17 lakh yards at 2.88 crore yards. Total stocks of sacking cloth and bags are 27.13 crore yards against 22.14 crore yards.

GOLD

Calcutta, November 12.

A further substantial rise in prices for gold has been recorded in the local gold market during the past week. Supplies from mining centres in India were on a very small scale while local dealers were not inclined to sell freely. Demand was both on account of speculators and investors. Gold ready improved from Rs. 62-11 to Rs. 70 and sovereigns from Rs. 47-8 to Rs. 52-8. With the spectacular successes of the Allies in Northern Africa, there has been some selling at the higher levels and the quotation has come down to Rs. 66-2 for gold ready and Rs. 51 for sovereigns.

There was considerable anxiety regarding the continued rise in prices for gold as it was generally felt that any unchanged rise in prices would result in an unbalanced and disturbed economy of the country. In the absence of any adverse developments in the war situation, the abrupt rise in prices for gold was regarded as a flight from currency. It is happy to note that there is some realisation at the moment that the recent improvement in prices for gold has been rather overdone. The Bombay market reopened for business after a long time and the assumption of the chief role by the Bombay market has been welcome at this stage. For it has been very helpful in checking a further rise in prices for gold. It appears that operators in the local market have been mainly responsible for the upswing in prices and that premiums offered here were higher than in other centres. Vigorous selling by Bombay operators has resulted in a drop in the quotation for gold ready to Rs. 65. First settlement also sold at the same level. Sovereigns were quoted Rs. 47-8. On Tuesday, the quotation for gold ready was about Rs. 66-8 and sovereigns Rs. 48-4.

SILVER

Calcutta, November 12.

Prices in the silver market did not improve to the same extent as in the gold market. There was nevertheless a rise in the rate from Rs. 110-8 for ready, in sympathy with the gold market, to Rs. 113. Selling at the higher levels has brought down again prices to Rs. 109.

Business in the Bombay market was resumed on Tuesday this week and the quotation was Rs. 109-8. There is not much change in the quotation for ready on Wednesday, the rate being Rs. 109 but that a generally bearish view is taken by operators is evident from the discount for first settlement, the quotation being Rs. 106-4.

There is no change in the London market and the quotation for both spot and forward is unchanged at 23½d. Rather quiet conditions were noticeable during the past week and small demand was officially satisfied.

PIECEGOODS

Calcutta, November 12.

The piecegoods market has been very active in spite of the recent substantial rise in prices but the tendency is still upward. The supply position is very difficult and with the interruption in production in the Western Presidency, it is not possible to get replenishments freely. It is hoped that with the resumption of production in the Ahmedabad Mills after the Diwali holidays there will be an improvement in the stock position in the local market. Bengal mills have been able to put through a large amount of business in coarser varieties at higher prices.

Even the limited business for winter styles has resulted in a further appreciation in prices. It is not possible to get any imports. Neither is it possible to get supplies from Indian companies as the entire production is taken over by the Government. It will not be possible, therefore, to prevent fancy prices being offered for woollen goods.

15 Points ON SAVING PETROL

2 FAST DRIVING

A car running at 60 m.p.h. requires a great deal more power to gain and retain its speed than one running at 40 m.p.h.; it must, therefore, consume more fuel per mile. Actually, petrol consumption at 60 m.p.h. is about 35% more than at 40 m.p.h. In the same way, to obtain quick acceleration, or make a quick getaway after a stop, more power is required than to accelerate easily; here again, more petrol must be used to obtain the greater power. For the average car the most economical running speed lies between 28 and 35 m.p.h.

FREE Copies of our leaflet "15 Points on Saving Petrol" are available free on application to us at Hongkong House, Calcutta; in English, Hindi, Urdu, Bengali, Marathi, Gujerati and Gurmukhi.

Vol. XXX. No. 20 SATURDAY, NOVEMBER 14, 1942 Price Re. 1

Stock Markets to-day and to-morrow

JUTE COMPANY RESULTS

THE reopening of the Calcutta Stock Exchange after the long holidays was marked by considerable activity in several sections. It will be remembered, that even at the end of last week, a definitely firmer tendency was noticeable, thanks to the reports regarding the complete defeat of the German forces in Egypt by General Alexander. It is not surprising, therefore, that news regarding the Allied landing in French North Africa had a further stimulating effect and in Tuesday's session Indian Irons were done as high as Rs. 32-12. The volume of business recorded on Tuesday and Wednesday was quite substantial. The improvement in prices would have been kept up but for the fact that operators and investors are inclined to await the outcome of the next few days. In view of the confident statement made by the British Premier, it can generally be expected that the developments in the war situation in the near future will be satisfactory from the market point of view. If only the Japanese are kept on the defensive in the Pacific it will not be possible to prevent a further upward movement in prices. The technical position in the market is very healthy and there is no sign of an over-bought position.

The important feature of the week is the spectacular rise in prices for cotton shares, especially Cawnpore Textiles. At Rs. 15-8 the quotation for the shares perhaps touched a record for all time. The improvement in the value for the shares of the sister company, Elgin Mills, is not quite so pronounced. It is generally expected that the account of the two companies for the half-year ended September, 1942, will be satisfactory and that substantially higher dividends will be declared. Usually, there is some knowledgeable buying of the shares on the Cawnpore register just before the accounts are published.

* * * * *

The accounts of some important jute companies have been published during the week for the half-year ended September 1942 and they should be considered very satisfactory having regard to the difficult conditions in the industry since the beginning of this year. It has been possible to maintain ordinary dividends in almost all the cases.

The net profit of the *Fort Gloster Jute Manufacturing Company, Limited* for the half-year ended September, 1942, before providing for taxation and depreciation, is Rs. 20,13,911 against Rs. 18,96,822 for the previous half-year. The amount set aside for depreciation is Rs. 2.5 lakhs (same) and provision for taxation is Rs. 13.25 lakhs (Rs. 13 lakhs) while the additional sum of Rs. 2.5 lakhs has been set apart for the deposit with the Central Government under Section X(1) of the Finance Act, 1942. The ordinary dividend has been reduced to Rs. 15 per share from Rs. 17-8 per share on the former occasion. The amount carried forward is substantially lower at Rs. 69,814 against Rs. 1,39,903 brought in.

It will be seen that the lower dividend to ordinary shareholders is not in any way due to the decline in earnings, but to the considerably higher provision on account of taxation and deposits.

* * * * *

The *Gourepore Company, Limited,* reports a decline in earnings for the same half-year, the net profit, before providing for taxation and depreciation, being Rs. 17,03,738 against Rs. 20,94,881 for the previous half-year. The provision for taxation is Rs. 8.5 lakhs against Rs. 13 lakhs. The ordinary dividend has been maintained at Rs. 25 per share. The amount carried forward is not very much changed at Rs. 4,15,888 (Rs. 4,41,050).

* * * *

Owing to the very high level of earnings for the half-year ended March, 1942, the *Nuddea Jute Mills Company, Limited,* has not been able to maintain earnings for the six months ended September, 1942. The decline in the volume of sales and the increase in working expenses have been mainly responsible for the lower level of profits. The shareholders, however, have not been affected as the provision for taxation is considerably lower and it has been possible to maintain the ordinary dividend at 5 per cent.

The net profit, before providing for taxation and depreciation, is Rs. 11,58,676 against Rs. 17,26,064 for the previous six months. The charge on account of depreciation is lower at Rs. 1,76,634 (Rs. 2,76,224), but provision for taxation is Rs. 6.5 lakhs (Rs. 11.7 lakhs). The amount carried forward is very much the same at Rs. 1,16,229.

The *Howrah* and *Reliance Jute Mills* have been able to maintain the ordinary dividend at Re. 1-12 per share. The net profit of the *Reliance Jute Mills Company, Limited,* is lower at Rs. 10,64,219 against Rs. 12,87,482. The provision for taxation is Rs. 5 lakhs while the charge on account of depreciation is Rs. 1 lakh, and the allocation to replacements and renewal reserves Rs. 1 lakhs. The ordinary dividend has been maintained at Re. 1-12 per share.

The *Howrah Mills Company, Limited* has been able to report a net profit before providing for taxation and depreciation of Rs. 35,87,228. The transfer to taxation reserve is the substantial sum of Rs. 27 lakhs while the provision for depreciation is Rs. 1 lakh and that on account of Replacements and Renewals Reserve Rs. 2 lakhs. The ordinary dividend has been maintained at Re. 1-12 per share.

* * * *

Since the present Managing Agents took over the administration of the Company the *Steel Products Limited,* has been able to report remarkable progress. The increase in total sales from Rs. 5,09,282 in 1940-41 to Rs. 14,52,232 in the year ended April 30, 1942, has been possible only with the large addition to plant in recent years. In spite of the fact that the Company has been handling big Government orders for war supplies, there is a substantial increase in the profit after providing for depreciation to Rs. 85,124 from Rs. 49,765 in the previous year. The optimistic view taken by the directors in the last year's report has been, therefore, fully justified. Out of the earnings, Rs. 10,000 is transferred to Reserve Fund while Rs. 40,000 is provided for taxation and Excess Profits Tax, etc. The dividend has been increased to 10 annas per share from 6 annas per share on the former occasion.

In view of the increase in the potential earning capacity it has been decided that the company should approach the authorities for a liberal assessment in regard to the profits for the standard year so that the liability on account of Excess Profits Tax will not be very heavy on earnings.

* * * *

The accounts of the *Scindia Steam Navigation Company, Limited,* for the year ended June, 1942, will not be published on account of the promulgation of the Ordinance relat-

(*Continued on next page*)

The Week in the Exchanges

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 13.

In the early days of the week under review rather active conditions were noticeable on the Calcutta Stock Exchange. With an increase in the volume of turnover a substantial rise in prices in the several sections was recorded. The strength of the markets was obviously due to the news regarding the landing of a big U.S. expeditionary force in French North Africa and the spectacular successes on the battle fronts. Even earlier, the reports regarding the rout of Rommel's forces had an encouraging influence. Indian Irons improved from Rs. 30-14 to Rs. 32-12 and Steel Corporations from Rs. 20-12 to Rs. 21-12. One would have expected that the rise in prices would have been kept up for the news regarding the attack on French North Africa was thoroughly unexpected and it was never expected that such a big operation would go through without any complications. During the past two days a slightly easier tone has been noticeable. There is a tendency to await further developments. Also, it has to be remembered that nothing has happened in the Pacific to alter the outlook and operators have been guided by the developments in recent weeks on this side of the Continent. The undertone in several sections is quietly steady.

The giltedged securities section has not been affected in any way and business passing has been on a very restricted scale. Quotations are more or less unchanged. With the easy money conditions and the improvement in the war situation it could be reasonably expected that giltedged values also would improve. 3½ per cent Paper has remained steady at Rs. 94-2. Among terminable loans, 3 per cent Second Defence Loan were Rs. 100-2, 3 per cent 1963-65 Rs. 95-10, 3 per cent 1951-54 Rs. 99-14 and 4 per cent 1960-70 Rs. 110. 5 per cent 1945-55 were Rs. 109. Among provincial loans, 5 per cent U.P. 1944 were dealt in at Rs. 104-4 and 3 per cent Bombay 1955 at Rs. 99.

Cotton shares have been very firm with *Cawnpore Textiles* recording a big rise from Rs. 12-12 to Rs. 15-8. There has been some profit-taking at the higher levels and the quotation has come down to Rs. 14-14 towards the close. *Elgin* have been firmer at Rs. 42-4 with no sellers. *Dunbar* were Rs. 274 and *Muir Mills* Rs. 352. *Kesoram* were Rs. 13, after being higher at Rs. 13-8. *New Victoria* have been in great demand with the quotation at Rs. 8-12. There are reports that a higher dividend will be paid on the ordinary shares for the year ended October 31, 1942.

In the Coal section, *Bengal Coal* are higher with the quotation at Rs. 392. *Burrakur* were Rs. 13-8 and *Equitable* Rs. 33-14. *Bokaro and Ramgur* were Rs. 18-4 and *Hurriladih* Rs. 13-12. *West Jamuria* were Rs. 30.

The Jute section has been firm and the strength of the jute manufactures market in Thursday's session has been helpful. The maintenance of dividends by some important companies has also been an important factor. *Adamjee* were Rs. 25-12, *Agarpara* Rs. 23, *Anglo-India* Rs. 359, *Clive* Rs. 25-12, *Hukumchand* Rs. 16-14, *National* Rs. 24-4, *Nuddea* Rs. 72-8, and *Standard* Rs. 218.

In the Engineering section, as pointed out above, Indian Irons recorded a sharp rise to Rs. 32-12 earlier in the week. There has been some selling at the higher levels and the quotation is lower at the time of writing at Rs. 32-2. *Steel Corporation* are quoting Rs. 21-6 after being higher at Rs. 21-12. *Burn & Co.* show a rise of about 10 points at Rs. 360 cum-dividend. *Indian Malleable Castings* deferreds were Rs. 2-14 and *Jessop & Co.,* Rs. 20-4. *Marshalls* were Rs. 4 and *National Iron and Steel* Rs. 13-12.

In the Miscellaneous section, *Burma Corporation* have been marked further higher at Rs. 3-6. *Indian Copper Corporation* were steady at Rs. 2-6 and *B. I. Corporation* have very few sellers at the high level of Rs. 6-2. *Indian Cable* are a point higher at Rs. 26 as also *Alkali and Chemical* at Rs. 22. *Dunlop Rubber* are in good request and a rise of two points has been recorded in the quotation to Rs. 42-4. *Balmer Lawrie* have been dealt in after a long time at Rs. 345. *Dalmia Cement* were ten annas higher at Rs. 16-12. *National Insulated Cables* were steady at Rs. 12-6 while *New India Investment Corporation* were firmer at Rs. 61-8. Paper shares have been firmer. The paper scarcity is now being advertised. It has existed for a long time. In any case a further increase in mills' earnings cannot be of any great advantage to shareholders especially in the case of new companies. *Titaghur Paper* are Rs. 21-12, *India Paper Pulp* Rs. 167 and *Mysore Paper* Rs. 20-12. *Star Paper* were Rs. 18-12, *Orient Paper* Rs. 23-6 and *Shree Gopal Paper* Rs. 20. *Publicity Society* have been marked higher, being quoted at Rs. 9-8 ex-dividend. *B. B. P.* were Rs. 2-2 and *Assam Saws* Rs. 3-12.

(Continued from previous page)

ing to Public Utility concerns. The dividend for the year has been maintained at Re. 1 per share as also the bonus at four annas per share. In the absence of the accounts it is not possible to make any comment regarding the progress made by the company in the last accounting year.

The *Murree Brewery Company, Limited* has been able to report a substantial increase in earnings for the year ended August, 1942. It is common knowledge that the company is busily engaged on war orders and that the problem is one of supplying adequate quantities. The net profit, before providing for taxation and depreciation, is Rs. 13,95,176 against Rs. 9,55,357 for the previous year. A sum of Rs. 1,75,000 has been placed to special depreciation against Rs. 76,705 while Rs. 70,000 has been transferred to other funds. The total distribution has been maintained at 20 per cent, but the dividend has been lowered to 15 per cent from 17½ per cent while the bonus has been increased to 5 per cent from 2½ per cent. The amount of Rs. 41,211 is carried forward subject to the payment of bonus to staff against Rs. 15,128 brought in. The shares at Rs. 19-8 yield just over 5 per cent tax-free. In view of the excellent financial position and assured prospects it can be said that the shares are rightly valued.

WATCH-DOG.

THE GANGES MANUFACTURING CO., LTD.

NOTICE

Notice is hereby given that the Fifty-fourth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 4th day of December, 1942, at 12 Noon.

AGENDA

(1) To receive and approve the Report of the Directors for the half-year ended 30th September, 1942.

(2) To receive and pass the Company's Audited Profit and Loss Account for the half-year ended, and Balance Sheet as at, the 30th September, 1942.

(3) To declare Dividends on Preference and Ordinary Shares.

(4) To elect a Director.

(5) To appoint Auditors and fix their remuneration.

(6) Any other ordinary business.

The Share Transfer Register will remain closed from 25th November to 4th December, 1942, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividends, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 24th November, 1942.

By Order of the Board,
MACNEILL & CO.,
Managing Agents.

Calcutta, 18th November, 1942.

THE GANGES ROPE COMPANY, LIMITED

NOTICE is hereby given that the Eightieth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, the 4th day of December, 1942, at 12-10 p.m.

AGENDA

(1) To receive and approve the Report of the Directors for the half-year ended 30th September, 1942.

(2) To receive and pass the Company's Audited Profit and Loss Account for the half-year ended, and Balance Sheet as at, the 30th September, 1942.

(3) To declare a dividend.

(4) Any other ordinary business.

The Share Transfer Register will remain closed from 25th November to 4th December, 1942, both days inclusive.

Shareholders and holders under Blank Transfer are reminded that upon declaration of the Dividends, the Dividend Warrants will be posted at once to registered Shareholders or their Mandatees. No application for payment will be necessary.

Applications for Dividends from holders under Blank Transfer will not be considered. They are therefore recommended in their own interests to send us their Shares for registration as soon as possible and not later than the 24th November, 1942.

By Order of the Board,
MACNEILL & CO.,
Managing Agents.

Calcutta, 18th November, 1942.

(Half-yearly meeting, 24th November, 1942 at noon).

Audited accounts for the half-year ended 30th September, 1942:

These show a profit on Revenue Account of Rs. 16,52,870-12-7. On transfer of this sum to Profit and Loss Account and after reserving Rs. 9,20,000 for Taxation there is a balance at credit of that account of Rs. 9,22,858-4-0. Of this the Directors have transferred Rs. 1,00,000 to War Contingencies Reserve Account, Rs. 1,00,000 to Reserve Account and now recommend that the following dividends be paid, free of income-tax:—

	Rs.	A.	P.
On Preference Shares at the rate of 7 per cent per annum (Rs. 3-8-0 per share) ..	96,677	0	0
On Ordinary Shares at the of 20 per cent per annum (Rs. 10-0-0 per share) ..	4,92,070	0	0
Total ..	5,88,747	0	0

leaving a balance of Rs. 1,34,111-4-0 to be carried forward.

Working hours were decreased on 18th May to 54 per week and due to the scarcity of freight for North America it was found necessary to close down 10 per cent of the total complement of looms off the Hessian side.

Carry forward ..	68,814	1,39,903	87,080	44,242

(Half-yearly meeting, 23rd November, 1942 at 3 p.m.)

Audited accounts for the half-year ended 30th September, 1942:—

	Rs.	A.	P.
After writing off for Depreciation Rs. 2,50,000, the accounts shows a net profit of ..	17,63,911	7	3
To which has to be added the balance brought forward from the last account, namely ..	1,39,902	11	3
Giving a total of	19,03,814	2	6

	Rs.	A.	P.		
From this is deducted the amount set aside as a Reserve for taxation .. and as provision in respect of Deposits under Section 10(1) of the Finance Act, 1942	13,25,000	0	0		
	2,50,000	0	0	15,75,000	0 0
Leaving a balance for disposal of				3,28,814	2 6

The Directors recommend that this should be dealt with as follows:—

To paying the dividend on the Preference Shares for the half-year ended 30th September, 1942 at Rs. 3-8 per share (*i.e.*, 7 per cent per annum) free of Income-tax	49,000	0 0
To paying a dividend on the Ordinary Shares at Rs. 15 per share (*i.e.*, 30 per cent per annum), free of Income-tax	2,10,000	0 0
To carry forward	69,814	2 6
Total ..	3,28,814	2 6

As the result of a conference in Delhi with the Government of India, the Committee of the Indian Jute Mills Association recommended that with effect from 18th May, the working time should be reduced from 60 to 54 hours per week with 10 per cent of the complement of looms sealed.

Since the last report the labour position has become more settled and further allowances to all mill employees have been made to meet the increased cost of living.

The U.S.A. consumption of hessians during the period under review has declined to a level which is very much below normal and stocks in Calcutta have consequently accumulated. A sustained demand, however, has existed for sacking goods chiefly on account of Australian, South African and Indian requirements, mills now being well booked in this section for some time ahead.

Military priority inevitably creates difficulties in the shipment of manufactures to overseas markets or the transport of raw jute from upcountry, and this important factor must be kept in view when considering future prospects.

Managing Agents.—Messrs. Kettlewell Bullen & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 28,00,000 *in* 7,000, 7 *per cent Cumulative Pref. shares and* 7,000 *Ordy. shares of Rs.* 100 *each fully paid-up otherwise than in Cash and* 7,000, 7 *per cent Cumulative Pref. shares and* 7,000 *Ordy. shares of Rs.* 100 *each issued for payment in cash.*

				4,50,203	14 5
There is available for distribution ..					
It is recommended that this be disposed of by:—					
Payment of a Dividend on Ordinary Shares at Rs. 2-8 per share or 10 per cent per annum				3,33,975	0 0
Leaving to be carried forward				1,16,228	14 5

7% Mortgage Debentures.—Notice was duly given during the half-year of the Company's intention to redeem the outstanding Debentures as at 30th September, 1942, and, in response to the Notice, Debentures to the value of Rs. 9,95,000 were presented for payment and paid by the above date, leaving only Rs. 3,90,000 unclaimed. It is expected that the holders of those Debentures will claim repayment during the curnet half-year.

Debenture Redemption Reserve.—Following upon the redemption of the Debentures at par, the Directors resolved to transfer to General Reserve the sum standing at credit of the Debenture Redemption Reserve as at 30th September, 1942, namely Rs. 13,60,553-2-0.

Working Hours.—During the half-year, the Mills worked 60 hours per week up to 17th May and from 18th May onwards, 54 hours per week with 10 per cent of looms sealed.

Managing Agents.—Messrs. Barry & Co.

Carry forward ..	3,158	2,733	2,474	2,285

(*Half-yearly meeting, 20th November, 1942 at noon*).

Audited accounts for the half-year ended 30th September, 1942:—

Accounts.—The result of the half-year's working after providing for Debenture Interest and Commission to Local Agents and Staff shows a credit balance of Rs. 23,035-0-9 to which must be added Rs. 2,732-12-11 brought forward from the previous half-year making a total at the credit of Profit and Loss Account of Rs. 25,767-13-8 which the Directors propose should be dealt with as follows:—

	Rs.	A.	P.
Transfer to Replacements and Renewals Account	20,000	0	0
Transfer to Staff Superannuation Fund ..	2,610	0	0
Carry forward	3,157	13	8
Total ..	25,767	13	8

Expenditure during the half-year under review shows an increase when compared to the same half-year in 1940. This is accounted for by the increased cost of materials, extensive repairs to Rolling Stock and Locomotives.

Earnings on Goods Traffic shows an appreciable increase over the corresponding half-year in 1940.

Due to the necessity of purchasing a further Locomotive and the continuation of the rail replacement programme, it is considered essential to allocate a large sum to Replacements and Renewals Account. Sanction is awaited from the Railway Board to purchase a Locomotive which has been offered and which is essential.

Managing Agents.—Messrs McLeod & Co., Ld.

Authorised, Issued and Subscribed Capital—*Rs. 4,00,000 in 1,750 Ordy. and 2,250 6 per cent Pref. both of Rs. 100 each fully paid-up.*

"HELP THE COUNTRY WHILE HELPING YOURSELF"

Never before in the history of a country or an individual was the call of INSURANCE more urgent and its necessity more vital.

And this war has made it imperative.

"INSURANCE is a double blessing." It protects and provides the individual while contributing to the economic progress of the country.

WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Short credits continue unlendable, with interbank call money rate nominally quoting ½ per cent in Calcutta and ¾ per cent in Bombay. We are nearing the end of November, and there is hardly any prospect of the onset of the so-called busy season. We may not be far out of the mark if we hazard the forecast that this year's busy season may show a conspicuous absence of those features which are usually associated with this period of the year. In normal circumstances, the busy season stands for comparative stringency in the money market, headier volume of exports, firmer exchange and quieter tone in giltedged. So far as exports this year are concerned, it is largely a question of available freight. With regard to exchange, there is no question of firmness or otherwise in conditions in which completest control is exercised by the central banking authority and the rupee sterling rate is kept pegged. The giltedged market too is strongly under official control; and this war has proved that official policy suitably fashioned can insulate the government securities market from those influences and forces which characterised this market in former wars.

We are now left with the consideration of money rates and monetary conditions. Even in this regard, the war has wrought striking changes. There has been continued expansion of currency right from the beginning of the war; and there is hardly a week during which some degree or manner of expansion is not carried out either against sterling securities or rupee securities. This is especially true of the last few months. Active note circulation has now reached the Himalavan total of Rs. 535.46 crores. And there is every ground for believing that the process of expansion in note circulation will continue without intermission at least so long as the war lasts. This has naturally resulted in swelling deposits with banks and in growing cash balances. Deposits maintained by member banks with the Reserve Bank as on November 13, showed a sharp fall from the previous week but, even so, amounted to Rs. 64 crores. This superabundance at the end of November is unprecedented.

There are two other factors to which we should like to draw pointed attention. In the first place, while the deposits of banks have maintained a persistent upward trend, the reverse is the case with loans and advances made by banks. As on November 6, 1942, advances made by all scheduled banks in India amounted to Rs. 80.97 crores as against Rs. 104.18 crores on November 7, 1941. That is to say, the loans portfolio of banks in the beginning of this year's busy season is lighter than last year by Rs. 23 crores. If we add to this the shrinkage of Rs. 2 crores in bills held by scheduled banks, the total reduction in the trade advances of banks is Rs. 25 crores in the space of a year. What is this falling off in trade advances due to?

This leads us to the second point. While industrial concerns have substantially improved their profits since the war began, 199 companies which have issued balance sheets from 1st January to 22nd November, this year show a profit of Rs. 19.23 crores as compared with Rs. 11.75 crores in the corresponding period in 1941. Though profits are higher by Rs. 7½ crores, the amount distributed as dividend is only Rs. 60 lakhs higher at Rs. 5.50 crores. Tax allocations in each case have been on a much heavier scale; and this largely accounts for tax and other appropriations totalling Rs. 12.88 crores in 1942 as against Rs. 6.68 crores in 1941. The carry-forward has also increased from Rs. 1.74 crores to Rs. 2.42 crores. In other words, the liquid resources retained by companies during 1942, are Rs. 7 crores more than in the last year. To the extent that a substantial proportion of this sum is in respect of taxes, they will not be disbursed for a good long while. For, the tax-payable in respect of the current year is hardly paid till the end of the following year. In simple terms, the cash and liquid assets of companies have been strengthened by anything like Rs. 10 crores in a year on account of the higher incidence of taxation. This affluence must have meant that most industrial concerns are now able more or less to dispense with loans from banks. This must be also largely the case with business concerns run on other than joint stock lines. A banker informed us this week that most of the big loan accounts in his bank had been liquidated. In such circumstances, it is hardly likely that any hardening of money rates in this year's busy season will take place.

The plight of banks in such circumstances of expanding deposits and contracting advances would have been very much more embarrassing if it were not for the colossal increase in the volume of treasury bill outstandings in the hands of the public. In spite of total treasury bill outstandings being very near the Rs. 100 crore mark, the deposits maintained by banks with the Reserve Bank are well above Rs. 60 crores. To this must be added the considerable amount of cash maintained by banks in till. From the point of view of the Treasury, this is a most fortunate development. The Central Government have been taking full advantage of it: but we consider that a firmer policy on their part would have been justified. That is to say, it is our confirmed view that the increase in the weekly offer of treasury bills to Rs. 10 crores need not necessarily have meant a week-after-week rise in the discount.

TREASURY BILLS

India

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 17th November, 1942. Total amount offered was Rs. 14,66,50,000 (Rupees fourteen crores sixty-six lakhs fifty thousand). Tenders at Rs. 99-13-0 pr cent and above were accepted in full and those at Rs. 99-12-9 per cent were allotted approximately 54 per cent. Total amount accepted was Rs. 10 crores. The average rate of accepted tenders being Rs. 0-12-0% (Rupees nil annas twelve per cent) per annum.

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills will be received on Tuesday the 24th November 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday the 23rd November 1942 at other centres. Successful tenderers should make payment on Friday the 27th November 1942. Other conditions are as usual.

During the week ended the 13th November 1942, Government of India Treasury Bills for Rs. 75,00,000 (Rupees seventy-five lakhs) were sold in favour of the issue Department of the Reserve Bank of India.

EXCEPT for a brief report suggestive of greater agreement between the U. S. Congress and President in regard to additional powers needed for absolute control of U. S. war economy, there is nothing to suggest that the qualified Democratic reverse in the recent elections has produced any important effects. A congressional committee indeed favours larger powers for the President who is asked to vary tariffs and immigration quotas at his discretion. The report indeed suggests that, with a reduced majority, Mr. Roosevelt can carry through Mr. Byrnes, his own programme of economic stabilisation at home. Opposition to the New Deal is no longer a feature of U. S. politics and business puts up with regulation in the interests of the war effort. The production drive continues, particularly, in the field of shipping. The navy does not worry over its losses in action and new tonnage has already made a decisive contribution in the North African campaign. The plan to build giant cargo-carrying flying-boats holds the field, and Mr. Henry Kaiser in distant Oregon is now a national figure. There is no fuel problem as in Britain where the scarcity of mining labour has interfered with Government's control. Mine-workers have been consulted by Major Lloyd Gorge and surface working of a new kind has been accepted. Demand for coal in a year is said to exceed supply by 14½ million tons, not a large quantity in relation to the annual output in Britain, but one which causes difficulty. The rationing of fuel this year will increase the winter's rigours but the Government is also encouraging bigger output by asking the workers to help in every way. As war output increases, the demand for coal, in spite of reduced transport, increases.

President Roosevelt who has spoken approvingly of the British war effort this week has been influenced by Mr. Lyttelton's visit. The U.S.A. may be no longer ankle-deep in the war but it has been at war for eleven months only. Britain is however helping the U.S.A. by giving information about inventions. The British methods of wartime control are regarded with favour by the U.S.A. and this must be given due weight in India where such facts as the increase in Lease-Lend aid in October are ignored as compared with congressmen's views on what Britain can pay in return after the war. What her allies are going to do must be decided in consultation but the limit of U. S. generosity has not been reached as yet.

There has been no recent estimate of Britain's revenue or expenditure. In the first half year revenue was up to estimates in spite of the fall in customs, and expenditure financed through taxation, was in reasonable proportion to total outlay. The present rates of saving and spending have not been discussed, but the rise in note issue and the increased short-term borrowing of the Treasury warrants the belief that the advance of 8 points in the cost of living index in 1941 will be followed by a further rise this year. Rationing by itself cannot keep prices down when money is cheap. The rise in the cost of living in neutral countries like Turkey may be ascribed to other reasons but nations at war, for instance Japan, must share the experience of Britain.

As the war's progress has no effect on markets except in pushing up share prices the week may be called barren. The assumption that the trade of South Africa will increase is supported by Mr. Sturrock's reference to bigger supplies. India, too, will be better off in regard to imported goods in the near future. This may reduce the desire to spend and increase the desire to invest. The response to the improved tone of the local stock exchange suggests that spending is curtailed by the increase in saving to which every successive rise in bank deposits bears witness. The growth of savings in India may appear slow in relation to the increase in note circulation but how much has gone into bullion and commodity hoards can only be guessed. Such hoarding being hardly possible in Britain, the investors' response there is always good, more so when giltedged prices are singularly steady. If it has been suggested that the 1963-65 loan has been placed with the public by the underwriters of late, it is certainly possible that the rise in the treasury bill rate here is due to other factors than the bullish feeling in Indian markets. There has been recently some advocacy of a lower bank rate in India. The announcement that the U.S.A. has a bank rate of only ½ percent from this month will naturally stimulate expressions of opinion. The U.S.A. has at present a rate of ½ percent instead of 1 percent, the rate in force since August 1937 when it was reduced from 1½ percent. The reduction will assuredly stimulate the flow of bank's funds into war bonds and facilitate a bigger treasury borrowing programme. The normal effects of cheap money will again be experienced at home, but the further effects on the world will have to be recognised. If the U.S.A. keeps down the cost of borrowing by the simplest method known as regards the rate of interest after the war the U. K. will keep step and the experience since 1931 will be duplicated. The Federal Reserve Board's decision to lower the rate must have been due to the administration's desire to divert money from banks into war bonds. If the average saver gets nothing from a bank deposit war bonds will look more tempting and tax anticipation notes would seem more profitable. The average rate of all Federal Reserve Banks outside New York must be lower this month. There may be no variation between New York and Chicago when it is to the interest of the banks to utilise excess reserves 'even if the rate for 90 days' commercial bills drops to ¼ percent money must be used. It is known that the U. S. circulation has been rising steadily but the stock market has been idle with occasional firmness and the index number for U. S. industrials is probably lower than at the outbreak of war. While everything rose in 1941 in the U.S.A. the average value of industrial shares was lower. This implies that giltedged will be more favoured. Though banks may extend credit there will not be the usual desire to take up ordinary industrial shares, even if the net yield on giltedged falls again as in 1941. The U.S.A. has not known a boom in Home Industrials. From the way in which shares like British Celanese have risen of late, it is clear that recovery prospects and hopes of arrangements with preference shareholders have forced up prices. It may be otherwise with Foreign Bonds and South African gold shares. The improved showing of oil shares, especially, Anglo-Iranian may be chiefly due to the Nazi failure at Stalingrad. Motor shares have risen rather sharply this year and the giltedged industrials, Imperial Chemicals, Distillers, Imperial Tobacco and Levers Bros. have been strongly favoured for months. The usual spread between the 3 per cent offering on Governmnt stocks and sound industrials has certainly been reduced by the advance in prices for which a parallel already exists in India.

The fall in bullion noted at the beginning of last week has not been followed by a recovery. There are many reasons to support the view, a recovery would be disadvantageous to most. The longer life promised to gold mines by high prices cannot be a great advantage to any except the shareholders in Kolar gold mining companies, the shares of which stand at a premium like the shares of Eastern exchange banks, and are necessarily better than Burma mining shares which have been given quite a run by the markets in India.

The material assistance given by Brazil to Allied war effort can be inferred from the exports of vegetable oils and refrigerated meat recorded in year-books. It is true that exports in 1942 have shown a falling off but that country's exports of iron and manganese ore show an improvement on 1941. The small production of rubber is supported by a rising coal output, to which extent local industries e.g., cement will be able to expand in wartime as imports will be difficult. If Brazil does not produce tin, tungsten and antimony like Bolivia, until March 1942 Brazil's imports as well as imports were rising steadily and the milreis in the free market rose in terms of U. S. cents even before Brazil entered the war. If appreciation was not so marked as in the case of the Cuban peso, the exchange position might have changed since the declaration of war.

Three years of War Finance—XII

Agricultural Income

In this series of articles reviewing the effects of the war on our national economy, we have so far confined ourselves to those aspects, in which it is comparatively easier to assess the changes, thanks to the availability of statistical data. But in Indian economics, more than in any branch of human knowledge, what we do not know far transcends in importance what we know. Those aspects of our national economy, for which statistical data are meagre or are wholly lacking, are far more important than those on which periodical publications or official blue books throw a few random beams of light. Of the fabric of Indian economy, the fortunes of the large masses of cultivators are the very texture, and money and exchange and industry and share markets only provide the border, sometimes strong and bright, sometimes frayed and dull. No review of the three years of war can altogether overlook the importance of estimating the agricultural income of the nation. The difficulties are, as we have hinted already, in direct proportion to the importance of the task. For the sake of completeness, more than on grounds of accuracy or adequacy, an attempt has to be made to take note of the changes in the agricultural income.

Such an analysis has for the present to be more or less confined to the export commodities. There are two reasons for adopting this course. Firstly, there were no great developments so far as the staple commodities were concerned till December 1941, and secondly, even if there has been a substantial rise in prices of food grains in recent months, it will be wrong to presume that the ryot has been able to get the advantage of the rise in prices. In any case, the rise in average prices could not have been very high. For thanks to inadequate transport, distribution has been defective, and the rise in places of scarcity is no index of the real rise in prices. Another important factor to be taken into consideration is that subsistence farming is the general rule and food crops are usually intended for farming and home consumption. The benefit of any large increase in prices so far as the food crops are concerned, can, therefore, be easily exaggerated, besides being difficult of computation.

A study of the fortunes of cash crops in recent years can be expected to yield more reliable results. It is common knowledge that the boom in exports of the early stages of the war was short-lived and later shipping difficulties and the loss of exports markets greatly affected trade. In 1939-40, it was at first feared that even a normal crop would not be enough to meet the requirements. The large volume of war orders in the closing months of 1939, created fears of a shortage of the raw material before the new crop for 1940-41 arrived. There was a great increase in the acreage and the crop for 1940-41 was over 130 lakhs bales. The inaccurate estimates of war needs and the plentiful supplies of the crop caused a slump in values and it was necessary to fix minimum prices and the crop for 1941-42 had to be restricted to one-third of the size of 1939-40. Even the advantage of a larger crop was, therefore, offset by the reduction in its size in 1941-42. In 1942-43, it was decided to increase the yield by 40 lakhs bales. The outbreak of war in the East dashed the hopes of an improvement in the position. Only recently, there have been signs of an improvement, but the difficulties on account of shipping and internal transport prevent the ryot from taking advantage of the improved conditions. It will be clear, therefore, that far from there being any increase in the money income, there has actually been a decrease. There has been no net increase in the yield of the crops in the last three seasons and the average of prices has been low.

So far as cotton is concerned, the first two years of the war did not make any difference. The loss on account of cotton exports can be said to be offset to a certain extent by the higher mill consumption, but that such an increase will not be sufficient to compensate the loss on account of exports is clearly borne out by the need for effecting a reduction in the area under cotton. As for oilseeds, the trend of exports is the best pointer to the fortunes of the cultivator engaged in their production. In 1938-39 total exports were Rs. 15.09 crores, in 1939-40 Rs. 11.89 crores, in 1940-41 Rs. 10.05 crores and in 1941-42 Rs. 10.05 crores. On the basis of 1938-39 the total loss in trade is Rs. 15 crores. The lot of the groundnut cultivator in the Madras province in the last two years is very well-known. It was found necessary to afford relief to the grower and induce him to change over to the production of the other crops. The only saving feature is the boom in tea trade, but here the increase in income is not entirely Indian.

From the foregoing it is clear that the ryot has not prospered to any great extent. Canada is perhaps the only country which has benefited both industrially and agriculturally. Australia also, till recently, was a great beneficiary but her remoteness from the benefactor has to a certain extent deprived her of the benefits.

An analysis of the course of foreign trade in the three years, 1939-40, 1940-41 and 1941-42, does not, however, yield such a gloomy picture, though in the main it confirms our conclusions. From the table given below it will be seen that there is a decline in exports of jute, cotton and oilseeds while there is an abrupt rise in cotton and jute manufactures. Tea exports also are substantially higher.

But there is need for qualification in the study of figures especially those relating to the jute and cotton trades. The cotton industry has been able to get phenomenal prices for its exports without being obliged to pay higher prices to the ryot, while the jute exporter has been particularly fortunate as there was a backlog of orders contracted at higher prices. The periods of depression were short-lived and frequent enough to prevent the ryot from taking a correct view.

(In crores Rs.)

	Jute raw	Cotton raw	Jute Manufactures	Cotton	Oilseeds	Tea
1938-39 ...	13.40	24.66	26.27	7.12	15.09	23.29
1939-40 ...	19.83	31.04	48.72	8.58	11.89	26.30
1940-41 ...	7.85	24.45	43.38	16.49	10.05	27.78
1941-42 ...	10.47	17.55	53.78	36.06	10.50	39.28

The effects of the war on our agricultural income have been different at different stages. While at first there was a rise in the prices of our export staples, it was followed before long by the loss of a number of our foreign markets. The increase in the consumption of our raw materials by indigenous industry did not suffice to prevent either a fall in prices or the need to restrict the acreage under such raw material. But the change-over from cash crops for export to food crops for internal consumption was not attempted till the loss of Burma and the consequent stoppage of imports of rice aggravated our food problem. Clearly Indian agriculture is faced with a need to effect a redistribution of acreage between the various staple crops. Since these changes will be achieved in a regime of price control and official distribution of foodstuffs and probably even raw material, it is more than doubtful if the Indian cultivator will in the end be found to have benefited from the war to the same extent as the industrial worker. In the first three years of the war, the accounts of Indian agriculture may be said to show many entries on both sides of the account but not much on balance.

NUMBERS AND THE SOIL

The launching of a popular campaign for immediate additions to India's food supply this year was only a formal admission of known deficiency. That India's poverty is pervasive is realised, but few know that habitual starvation is an incident of poverty in India. Sir Willam Hunter realised that in Bihar the agrarian labourer ordinarily went short of food, but fifty years later, it might be said that starvation is not peculiar to Bihar or to the class of agricultural labourers. It is not the cessation of imports of rice from Burma that leads to the melancholy conclusion that there is not enough food for India's teeming millions. The problem of organisation has always been one of increased output from the soil, and pessimists as well as optimists latterly have agreed that, in striving for agricultural output, the home front will grow stronger. It is characteristic of India that the problem of food receives attention only in the third year of war. Britain's achievement in producing about 60 per cent of her own needs did not attract enough notice, for the idea here was that the war effort here did not cover agriculture. It cannot be said so for the National War Front is a sponsor of the Grow More Food movement and rural uplift is directed to the one intelligible end.

As a long-range policy the addition to food supply has much to commend it. It is more than ever a question of adjusting numbers to the soil. What the soil demands and why may seem unimportant, fertiliser is scarce and expensive, but the means of improvement are not wanting. As to the urgency of the question one can refer only to the reports of food riots this year. It is not price control, but scarcity that lies at the bottom. The scarcity is not casual or accidental. It is a commonplace as Dr. Radhakamal Mukherjee insists in his recent pamphlet in The Food Supply (The Oxford University Press, 4 annas). All economists will not accept his thesis as to the way in which numbers have grown more rapidly than crops, but all will approve readily his views on national nutrition. It is as a plea for readjustment of diet and crop rotation that the pamphlet will win approval. If the last rice forecast points to an increase of only 2 per cent in area, the rice problem will remain, though we have been assured that exports will be carefully adjusted to home needs. The short-term programme is one of taking land away from cotton for millets, pulses, and oilseeds, but what is postulated is an enormous programme of land reclamation. In the years after the last war, there was no unbalancing of and supplies, even though prices were high. The present situation is different in that rice and wheat supplies are alike deficient for home requirements, and the margin for exports has vanished. In spite of its argumentative framework, the pamphlet must remain the most effective statement of India's Economic Problem, Number One. The remedies are many and obvious. The utilisation of waste and fallow seems feasible but there are obvious difficulties. The soil in an old country cannot be added to rapidly. If Canada and Australia can reduce the area under wheat in war, they are exporters whereas India has to support a population which is chronically under-fed. The radical difference between the Dominions and India lies not in the constitutional status, as imagined, but in their economic circumstances and handicaps. The handcaps are not at all removable at will. Soil erosion and the adverse effects of canal irrigation cannot be disposed of readily, but there are ways. Dr Mukherjee suggests, for instance, the growing of "Spartina Townsendi (a rice grass suited for mud-uats) for the reclamation of salt marshes in South Bengal, Orissa and Madras in the way it was used by the Dutch for the reclamation of the Zuider Zee. Not for the time has it been said that forestry must rescue agriculture in the U.P. If crop-planning is a phrase, familiar to India since 1934, its content remains strange. The U.S. soil programme against erosion has not been altogether ignored, but the main adjustment must come through inter-provincial migration in this country. The settlers from Bengal colonised parts of Assam. Their experience can be cited to prove that redistribution of population must accompany any measures taken to stimulate cultivation. The co-efficient of over-population may appear small, even for Bengal. Here the limit of profitable cultivation is receding. But the superfluity of cattle and the passion for jute are distinctive, and in Dr. Mukherjee's view, retrograde features of Bengal's husbandry. If irrigation provides some benefits for Western Bengal latterly it has not arrested the decay to which reference has been frequently made in the last ten years. An agricultural revolution must come before Dr. Mukherjee's precepts are carried out. But its necessity cannot be questioned, for Dr. Mukerjee insists that even in 1934, there was no home-grown food for 48 million people in India. It is indeed calculated that in 1937-38, there was a deficiency of 7 per cent in the food supply. To that extent, the process of recovery from the Depression was clearly at an end. It is indicated that the 'bad years' 1929 to 1932, were the best in regard to food supply in India. The deficit since then has been met by the growing of less nutritive cereals in place of rice and wheat. The millets have been adopted like barely as easier to grow, particularly, in the U.P. and mixed diets adjusted to the seasons, have been adopted to the detriment of health, as Dr. Mukerjee firmly believes. In his view only a plan of growing more wheat and rice can help. The rice-eater must eat more wheat and 'vice versa'. The diet programme covers also the adoption of wheat and rice by those using millets. The additional consumption entails an increase in the average outturn per acre. The Indian output of wheat and rice per acre is far below the averages recorded in Japan. Self-sufficiency in Japan has been attained by concentrating on superior types of rice and discarding barley. The more obvious line of improvement is to grow more pulses and beans, especially in Bengal and South India.

The more fundamental remedy is the removal of the previous emphasis on cash crops. For a cultivating peasantry, food is more vital than money, at all times, and the partiality for sugarcane in the U.P. must disappear. Nutrition must come before income, for income is no permanent solution of poverty. It is no hard or novel doctrine that Dr. Mukherjee preaches, for wartime experience has shown that Germany by developing potato cultivation has faced many problems, and Europe by adopting the soya been (officially recommended for India in recent years) has acquired a source of vegetable oil. In the Punjab too the extension of potato cultivation has led to an extra supply of starch. The most important line of improvement still lies in the growing of most vegetables which require less water for cultivation than other crops. Agricultural practice is at present divorced from nutrition research, but in the last ten years, the defects of the Indian dietary and the line of reform have been indicated. Organic manures and cultivation under comparatively dry conditions help to produce better rice. There is undoubted value in the methods applied in Russia to raise the quality of wheat, for the attainment of the right quality is as necessary as additional yield.

The most drastic suggestion is made in regard to cattle. There are too few working cattle and not enough dairy cows in a country that has to carry 125 million useless cattle out of the gross total of 200 million. The perennial shortage of fodder demands the reduction of cattle. If mixed farming through the addition of livestock to arable cultivation is to progress, as it has done in the Punjab, the principal line of advance is the reduction of numbers and the growing of separate fodder crops. In the Punjab, while the "per capita" consumption of milk is the highest in India, the cattle per 100 acres of sown area is far smaller than in Bengal and Madras where more cows mean less milk. The scientific development of fisheries must supplement agricultural improvement. It is not difficult to perceive that unless health improves, Indian agriculture cannot develop and the economic progress, possible through a reordering of crops and methods alike can alone lead to the develpment of rural small-scale industries. If it is permissible to indicate the most important section of a well-developed argument, it is that which deals with food shortage in wartime. Shortage is inescapable, if Bengal has a surplus of rice on account of the jute restriction programme, nothing can obscure the deficit of Madras. Small provinces like Orissa, Sind and Assam have no problem. The U.P. wants rice like wheat though the Punjab can export less than in the past. It is reckoned that two and a half million tons of rice are needed this year, because Burma has been lost, and 430,000 tons of wheat too are wanted. Only a miracle can avert the shortage of grains, for 63 million per-

'sons need to be fed, and the only possible solution is the adoption of a mixed diet even in Northern India, where wheat may be adequate. The other method is one of regional self-sufficiency. Exports should be adjusted to local needs, and cultivation of food crops should be encouraged by revenue and other concessions. These suggestions have been quite familiar to the public which has been told that economy must be our watchword in the matter of food. Various cereals have been grown to supplement wheat and rice. It is not surprising that crops and their condition have a permanent interest for conservationalists at present. Britain's harvest in the war period has expanded because more land is under the plough. Such changes are altogether wanting in India, and price control has been a qualified failure, because the supply of food grains, more than the transport, has been inadequate. Many dark places have been illuminated by common experience this year, and the remedies for our difficulties are also being made familiar, because agriculture is India's major industry on which 73 per cent of her population must live.

That India is hungry and ill-clad is not altogether due to the war, but the war has aggravated the burdens arising from an ill-balanced agriculture. To lighten them in every way is a task that falls on every citizen for whom the Oxford pamphlet is meant.

Never before in India have so few done so much harm to so many. But, like the rule of the gangsters in America, *goonda-raj* can be blotted out of our country . . . as soon as public opinion is solid against this menace.

FROM SMASHED COMMUNICATIONS

You can be cut off from your family.
If you live in a town, you will suffer shortage of food and high prices.
Villagers cannot market their produce.
Therefore they get no money this *Divali*.

IN THIS ORGY OF VIOLENCE

Your innocent loved ones may get hurt.
Records of your savings, pensions and ownership of land may get destroyed.
Our schools, colleges and even private doctors have been attacked and robbed.

GOONDA-RAJ OR GOVERNMENT?

It is almost a straight choice. The transfer of power to our own leaders cannot be won till we have put our *goondas* out of business. This is primarily our job; official force alone would take much longer to end the *goondas'* power. And their killing, robbing and destruction have hurt us most and the Government least of all.

FIGHT GOONDAS

Form local committees, organise volunteer patrols.

A COPY OF THE PROSPECTUS HAS BEEN FILED WITH THE REGISTRAR OF COMPANIES, BOMBAY.

PROSPECTUS

THE

PHALTAN SUGAR WORKS LIMITED

(INCORPORATED IN PHALTAN STATE)

AUTHORISED CAPITAL Rs. 1,00,00,000 Divided into 2,00,000 shares of Rs. 50/- each.
ISSUED AND PAID-UP CAPITAL Rs. 40,00,000 Divided into 80,000 shares of Rs. 50/- each.

DIRECTORS :

(1) Seth Mafatlal Gagalbhai, Merchant, Bombay.
(2) Seth V. S. Apte, Merchant, Bombay.
(3) Seth Kantilal Nahalchand, Merchant, Bombay.
(4) Seth L. V. Apte, Merchant, Bombay.
(5) Seth Navinchandra Mafatlal, Merchant, Bombay.

Managing Agents :

Messrs. Mafatlal, Apte & Kantilal Limited.

Bankers :

Messrs. Shri Laxmi Central Co-operative Bank Ltd., Phaltan.

Auditors :

Messrs. G. M. Oak & Co., Registered Accountants, Poona 2.

***Registered Office :*—PHALTAN**

Objects.—The Company was registered as a limited liability Company with an initial capital of Rs. 10,00,000 according to the Companies' Act in Phaltan State, with its main object as the manufacture of sugar and by-products of sugar, Molasses, etc.

History.—The Company's Factory is erected at Sakharwadi in Phaltan State and has a plant capable of crushing 650/700 tons cane per day. Being the first factory in Phaltan State, the Phaltan Durbar has granted some valuable concessions to the Company which are:—

(1) Help to acquire land for cultivation of sugar cane and securing adequate water supply for cane.

(2) Exemption from income-tax for a period of 10 years from the commencement of actual manufacture of sugar.

(3) A flat rate of one anna per rupee by way of income-tax, super tax, etc., after the expiration of 10 years.

The Company started manufacture of sugar in 1934 and therefore the profits are not subject to any taxation till 1944.

A little under 3,000 acres of land is under cultivation for growing sugar cane. The Nira canal from which the water is available runs alongside the estate of the Company.

Messrs. Mafatlal, Apte & Kantilal Ltd., are appointed Managing Agents of the Company by agreement dated 17th September, 1942. The remuneration payable to them is (1) An office allowance of Rs. 1,000/- per month (2) 12½% commission on the net profits of the Company. Three of the Directors of the Company Messrs. Mafatlal Gagalbhai, V. S. Apte and Kantilal Nahalchand are the Directors of Messrs. Mafatlal, Apte & Kantilal Ltd.

Working Results.—The details of the working can be seen from the auditors' certificate attached hereto.

Practically the whole of the profit received by the Company during the previous three years (Rs. 30,00,000) has been capitalised by the Company bringing up the total paid up capital to Rs. 40,00,000.

Following table shows the gross profit by this Company during the previous three years.

	Year 1938-39	Year 1939-40	Year 1940-41
Phaltan	10,57,529	20,98,790	10,72,763

From the figures of working available for the year ending 30-9-42 it is probable that the Company may be able to pay a dividend of 14 to 16 per cent on the paid up capital of the Company.

Prospects.—Sugar industry is at present one of the premier industries of India particularly by reason of the Sugar Factories (Protection) Act XIII of 1932 by Government of India whereby Indian Sugar has been very beneficially protected against importation of foreign sugar until 31-3-1946, in consequence of which the outlook for Indian sugar is believed to be bright.

Article 105 provides that no member shall be entitled to be present or to vote at any meeting whilst any call or other money is due from him.

The Directors were holding the entire share capital of the Company till recently when they offered 24,000 shares of their holding for sale at Rs. 125 per share during June, 1942. All these shares have been under-written by Mr. Vasantlal M. Mehta.

The Company does not intend to establish a place of business in British India.

Copies of Prospectus and other details can be available from Mr. Vasantlal M. Mehta, 42-44, Champa Galli, Bombay 2.

A summary of the Balance Sheet for the year ending 30-9-41 is given hereunder:—

Capital & Liabilities.	Rs.	*Property & Assets.*	Rs.
Capital ..	10,00,000	Lands, Buildings,	
Depreciation Fund ..	11,21,358	Plant & Machinery,	
Reserve Fund ..	19,50,000	Rly. Lines, etc. ..	30,80,757
Liabilities ..	4,07,225	Motor cars, Stores,	
Profit & Loss A/c. ..	11,79,817	Live stocks, etc. ..	5,71,696
		Crops in progress ..	9,95,992
		Debtors ..	9,75,184
		Cash & Bank Balances	34,772
Total ..	56,58,400	Total ..	56,58,400

The present price of the shares is about Rs. 172. The buyers are entitled to the dividend on thse shares for the year ending 30th September, 1942 which is expected to be paid in January, 1943.

An application is being made to the Bombay Native Stock Brokers' Association, Bombay, to have the shares for dealing in the market.

AUDITORS' REPORT

Auditors' Report Under Section 93 (1A) (1B)
of
The Indian Companies Act, 1913-36.

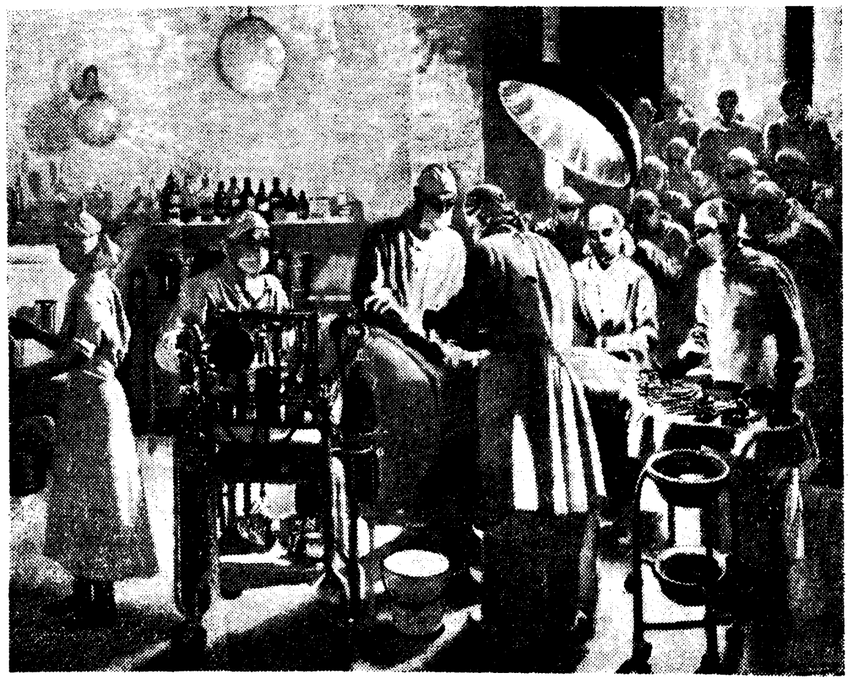
We beg to Report that the Phaltan Sugar Works Limited made Profit during the three years ending 30th September, 1939, 1940 and 1941 and that no dividend was declared by the Company, out of the profits in any of the said three years.

The statement showing working results for the above mentioned three years is as follows:—

INCOME

Source of Income	Year ending 30th Sept., 1939	Year ending 30 Sept., 1940	Year ending 30th Sept., 1941
	Rs.	Rs.	Rs.
Sugar Sales	27,56,466	44,71,414	37,99,926
Sundry Receipts	979	3,886	17,621
Total ..	27,57,445	44,75,300	38,17,547

EXPENSES



Head	Year ending 30th Sept., 1939	Year ending 30th Sept., 1940	Year ending 30th Sept., 1941
	Rs.	Rs.	Rs.
Plantation Expenses	10,53,683	13,99,594	13,04,352
Manufacturing Expenses including stores, Chemicals, salaries and wages, etc. ..	2,38,608	3,31,037	2,83,254
Excise Duty	4,06,646	6,41,992	8,90,856
Administration Expenses	1,11,290	1,00,399	2,52,323
Directors' fees ..	Nil	Nil	Nil
Managing Director's Commission	14,972	28,235	13,999
Depreciation	1,36,700	7,14,521	Nil
	19,61,899	32,15,778	27,44,784
Net Profit	7,95,546	12,59,522	*10,72,763
Total ..	27,57,445	44,75,300	38,17,547

* (Subject to provision for Depreciation for the year) if required.

Out of the above total Net Profits only a total sum of Rs. 19,50,000/- has been appropriated by the Shareholders to the Reserve Fund Account.

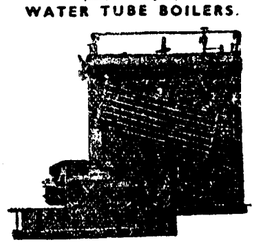
Registered Accountants,
Auditors.

Aspects of an Industry No. 8



CONQUEST OF PAIN

IT may at first seem a far cry from the chemical factory to the hospital operating theatre. Here is a modern surgical operation in progress. The picture was painted in an operating theatre at St. Mary's Hospital, London. The chief interest in it must naturally centre in the figures of the surgeon and the patient, whose form is no more than suggested on the operating table. Yet it is appropriate that the anæsthetist with his trolley should occupy such a prominent place, for surgery as it is known to-day dates from the discovery of practical methods of anæsthesia. The power to produce insensibility to pain has enabled the surgeon to achieve his miracles. Less than 100 years ago surgery was a dire last resort and a brutal business, the patient either having to be tied down or drugged with quantities of alcohol. In 1846 ether was used as a surgical anæsthetic by Dr. Warren in the U.S.A. In the following year chloroform was used in Edinburgh by Dr. (later, Sir James) Simpson. To-day anæsthesia is a highly specialised branch of medicine, employing a large and constantly increasing number of chemicals. Of these some are inhaled through a mask, some are injected into a vein, and some are infiltrated into the tissues. Some give complete anæsthesia, others varying degrees of local anæsthesia only. Ether and chloroform are still used, but modern chemical research has made available special anæsthetics for all purposes. Some anæsthetics are derived from the normal products of chemical factories. Ether is made from sulphuric acid and alcohol, and chloroform from bleaching powder and alcohol or acetone: cyclopropane and trichlorethylene are also relatively simple substances and are easily made, though skill and experience are necessary to produce all these in a high state of purity. Other anæsthetics, such as those of the barbituric acid group, are far more complex and their manufacture is made possible by the skill, resource and research of the British organic chemist. In the field of anæsthetics, British chemical factories and research laboratories stand behind the faculty of medicine to make available better and safer chemicals for the conquest of pain.

Improved Results

The Central Government's deficit of 1941-42 is smaller in the light of actuals. A statement of the receipts and expenditure in 1941-42 issued last week shows that the reduction was due to the growth of revenue. The total revenue for 1941-42 amounted to Rs. 134 crores after taking into account the contribution from the Railways (Rs. 20 crores), the net surplus of the Posts and Telegraphs Department (Rs. 3½ crores) and payments to Provinces totalling Rs. 7½ crores out of income-tax receipts. The total expenditure for 1941-42 was Rs. 147½ crores of which Rs. 104 crores was spent on defence. The actuals (for the figures may be treated as the actuals that will go into the next budget), are definitely better than the revised estimates in regard to both revenue and civil expenditure. The revenue for 1941-42 fell short of expenditure by Rs. 13¾ crores instead of Rs. 17¼ crores, even if there was a rise of Rs. 1½ crores in defence expenditure last year. Except for an increase in the floating debt, the position in respect of indebtedness was better as 3½ per cent sterling stock was paid off and subsequently rupee loans were paid off. The debt reduction exceeds the addition of Rs. 56 crores under the new defence loans. The saving in interest cannot be ignored, even if it is said that the addition to the floating debt makes for a net increase of Rs. 10¼ crores in India's debt. The reduction in the 1941-42 deficit may not be succeeded by a similar reduction as customs revenue is shrinking and railway receipts are not rising fast though there is a possibility that there will be substantial contribution from the State Railways to General Revenues. As for the Provinces, they can count on grants for civil defence and their statutory share of income-tax. But defence expenditure this year has been rising and in Burma's war is paid for by the British Government, the expansion of the Indian Army will take up more money than anticipated. But the 1941-42 figures will anyway help the Legislature to receive the next budget without dismay and discuss tax proposals in a responsive mood, mainly because no emergency budget has appeared as was widely apprehended at one time.

Vinegar Manufacture

Vinegar manufactured in India commands a growing market; but the quality demands attention. Vinegar made from sugarcane and fruit juices is generally called 'shirka', but its acid content is low and its taste remains sweet. An article in "Indian Farming" examines the present possibilities of improvement while describing the methods of manufacture. Fermentation precedes the formation of acetic acid and certain esters which give flavour. As alcohol can be had from sugar cane-juice is an important source of vinegar. Messrs. Datta and Biswas, in the article referred to, advise the use of mature canes only for the extraction of juice. The addition of yeast extract and phosphates or 0.1 per cent ammonium phosphate is recommended for stimulating bacterial action. The method of manufacture is one of heating cane-juice and cooling it in vats or big jars. Yeast is added, and the jars are covered with cloth, for fermentation takes four to six days. The addition of vinegar follows fermentation. The conversion of alcohol into acetic acid demands storage in vats in a warm place, covering, and further fermentation takes place after the Mother of vinegar appears. The process takes three to six months, but it can be reduced by the use of shallow glass or earthern vessels for acetic fermentation. A small percentage of alcohol is retained for maintaining the keeping quality of vinegar. Decantation and filtration succeed the acetic fermentation, and pasteurisation is the final stage before ripening for colour and flavour.

Hints regarding the manufacture include one on yeast. When pure cultures cannot be had, the sediment from toddy or a few 'mohua' flowers may be used. The addition of vinegar or aectic acid is the mark of the second stage of manufacture following fermentation of the juice. The juice of ripe fruits like guavas, bananas, jack, grapes and jamun can be used for making vinegar of varying flavours. Where the fruit is a drug in the market its conversion into vinegar should be profitable. The method of manufacture from overripe fruit is the same as that for sugarcane juice. Additions of sugar are justified in cases where the fruit is not sweet enough. 'Gur' which tends to go soft in the rains can also be turned into vinegar according to the article which tabulates the results obtained in experiments. In regard to acetic acid content and the percentage of alcohol, the first place is held by sugarcane-juice which is more suited for industrial fermention. It has been recorded that an acetic content of over 10 per cent can be obtained from cane-juice. The sugar companies with distilleries are most likely to embark on the making of vinegar. The authors speak of enquiries for vinegar, and the improvement of existing indigenous methods was the main purpose, of the separation of the two processes of fermentation and acid fermentation. Samples examined showed an acid content of below 4 per cent, and the authors observe that 7 per cent acid content can be secured if correct methods are used. The large-scale manufacture of vinegar appears a suitable side-line for sugar mills for whom the article in "Indian Farming" will naturally have special interest.

Revealing Figures

The last month of 1941 witnessed no great increase in the rate of investment for figures relating to new issues disclose that total capital was small and the majority of new companies were floated in Bombay. The addition to the paid-up capital of existing companies reported in December 1941 was, however, considerable at Rs. 109 lakhs. The statistical statement issued in this connection reveals that new issues in relation to most major industries were few. In the nine months ended December, there were twenty new mill companies which obtained hardly Rs. 6.6 lakhs. The stagnation of the capital market in 1941, hardly requires statistical proof, but it may be pointed out here that it was favourable to the Government's borrowing programme. It is noteworthy that the flow of capital into the older industries was arrested by the war. The total subscriptions for 903 companies floated in nine months amounted to Rs. 2.15 crores, and if one reckons the authorised capital, the largest share of the new money went into agencies including managing agencies. The largest number of registrations in 1941 was claimed by Bengal as in the past, but the lead in regard to subscribed capital was held by Bombay.

Opportunities for investment being circumscribed by the war, it is only natural that new issues have made little headway. If the figures for December show the effects of Japan's entry into the war, the total for nine months is smaller than that of 1940. While control of the capital market is absent, it is clear that all enterprise was checked by uncertainty as in 1940. The failure of activity is not surprising, but the flotation of 56 chemical and allied companies and 40 irons and steel and shipbuilding companies in nine months is an indication of the changes that have been produced by war. If mills and presses registered last year are numerous, the capital provided is by no means large, as is proved by the figures relating to the paid-up capital of the cotton and jute mills registered in 1941. How many of the enterprises registered can, or will, survive the apathy of

Collection of Upcountry Bills and Remittances to all important Trade Centre undertaken at very low rates. Advances made against Approved Securities.

AND ALL KINDS OF BANKING BUSINESS TRANSACTED

the Indian investor is not a question that waits for an answer. The four paper mills and the three sugar companies registered in 1941, attracted little capital. It is not only British India that shows a lack of enterprise, but the Native States. The spawning of companies in Travancore was apparently at an end to judge by the excess of failures over new registrations.

Established enterprises received usual accretions to previous paid-up capital. Banks naturally make the best showing, but the printing, publishing and stationery trades appear to have done better than most. The new industry that seems to have done best is the chemical. The addition of Rs. 1,11 lakhs to the paid-up capital of the cotton mill industry in nine months is not at all surprising for one so favourably placed. Rubber, even last year, offered better prospects than other plantation industries, for rupee capital and Indian management are dominant in the field of rubber. The rubber boom is recent and the 1941 figures do not show any traces of the average investor's present view of Indian rubber companies. Of the net increase in capital reported in 1941-42, the greater part is claimed by Bombay and Bengal, but many Delhi companies have had their resources strengthened considerably. It is evident from the registration figures that Delhi is chosen for several reasons by company promoters. The preference continues, as also the conversion of private concerns into jointstock cncerns. Many companies are particularly denoted as private companies in the December registrations. Of the changes in capital reported in December, the chief feature is the flow of money into the cotton mill industry in Madras and Bengal. It needs no explanation, any more than the increase of capital arising from the issue of bonus shares by the Bird-Heilgers group of jute mills in December last.

Drugs Control

The branch of the Indian chemical industry that has received the greatest impetus from the war is the manufacture of drugs. Many imported drugs and specifics have been replaced by Indian preparations, and the lessons obtained by tests at the nucleus of a Central Drugs Laboratory have been utilised. This month there was held the meeting of a new advisory board associated with the Laboratory (still to come) which was to be set up after the Drugs Enquiry Committee reported. The enactment of legislation in 1940, designed to secure purity in drugs has not been followed up by the establishment of special provincial laboratories and the existing laboratory has found that quality was deficient in most samples provided for examination. If the import trade does not advance its special claims at present, it is none the less essential to maintain standards of manufacture, for war needs certainly emphasise the importance of purity in the local preparations. The new Board has power to submit opinions on what, other pharmacopeias besides the B. P. can be prescribed for standards of purity and strength. What has been accomplished by the Calcutta laboratory already was referred to by Sir Gordon Jolly in the inaugural address to the Drugs Advisory Board. The laboratory has aided the war effort by testing and reporting on drugs and medicines required by the Army. The main feature of the speech was the promise of a new laboratory which will carry out the work outlined in the Drugs Act of 1940. The rules for its working are to be got ready against its creation, and the new advisory board has been asked to comment, before the rules are published, and accepted later by Provincial Governments which have certain duties under the Drugs Act. Progress in the field of manufacture will be doubtless assisted by the early setting up of a laboratory such as was contemplated by the Drugs Act. The delay in the establishment is attributed to the war, but meanwhile the Biochemical Standardisation laboratory has filled the breach adequately as was shown in its frank report on the divergence of dispensary mixtures from the approved standards. The leading chemical manufacturers in India should be the first to welcome an aid to technical progress such as has been promised lately and Indian medicinal preparations should keep their hold on newly-won foreign markets if quality is certified and maintained by manufacturers.

Success in the Solomons

The naval engagements in the Solomons are a reminder of the Japanese navy's ability to survive the loss of six aircraft carriers. In October, the navy failed to take Guadalcanar and returned to the attack since November 12. From the little information that has been provided it is clear that the U.S.A. realised its hope to use its air strength as in the Midway battle to keep its hold on the Solomons. The Japanese failure in New Guinea, followed by fortification of positions taken by the Allies, naturally made the Japanese fleet anxious to force a decision in the Solomons. The Japanese are at present more or less inactive in China because air power had been withdrawn to support the navy in the far south. Shipping losses have made it difficult to carry on simultaneous operations, and the equality of losses in previous battles had clearly inspired the third attempt to meet the U. S. Navy. As the Marines disputed landings and U. S. Bombers kept up an offensive against transport ships, the Japanese could hope for the recovery of the Solomons. In any event as the Free French territory in Oceania can be used against the Solomons there is no longer any tenure than will be permitted by the U. S. Navy in prospect. The U. S. air force had damaged the Jap naval base at Buin more than once and the latest attempt on the Solomons by the Japanese was in part provoked by continued action against their fleet. The naval balance has been altered since May by the despatch of reinforcements and the qualified success in August in the Solomons did not interfere with the arrival of reinforcements. The general belief that the danger to Australia which was acute in May has receded is supported by the reports of wholly successful encounters in the Solomons. The Japanese if they hold Burma have shown little ability to use the new conquest against either India or China. The advance into Yunnan has been voluntarily liquidated, and the strong defences on the north-eastern frontier, deter the enemy from moving against India. Little is heard of troop movements on the Manchukuo frontier, and the open anxiety of Tokyo in regard to developments in North Africa was conditioned by the realisation that she could do nothing for her own allies. The U. S. navy besides aiding the British in the Mediterranean is able to tackle the Japanese fleet even if the former is far from its bases. In eleven months of war the offensive power has increased greatly, for Australia has become a big base, and the Japanese have added in the past six months nothing to their conquests while the Allies, besides keeping up the resistance of China, have built up a great naval force that should carry the war into Japan's home waters. In the U. S. navy communique on the action of November 15, some will read the epitaph of the Japanese fleet. It may revert to the attack for the U. S. forces hold Guadalcanar, but it cannot hope for much when its own ability is impaired by the loss of six aircraft-carriers.

Canada's Forests Help

The experience of Canada's timber industry in wartime illustrates the value of timber. It has been said that in 1940 unprecedented demands were made upon the forest industries. They were called upon to meet the requirements of the largest construction programme in a decade including the camps and airports for which wood could be used instead of steel which was urgently wanted for other purposes. Coincident with the demand was one from the U. K. for greater supplies of all kinds of wood products, and another from the U.S.A. for pulp and paper consequent on the cessation of Scandinavian and Baltic supplies. Canada became the major source of forest materials; soon wood and pulp became more important than the minerals and grain entering into Canadian export trade. The greater part of the timber comes from British Columbia. It has been noted that in the two years ended May 1942, the logging output of B.C. rose by nearly 15 per cent. A similar increase was reported by the other Provinces. Evidence of the increased output is provided by the rise in newsprint production by 20 per cent to 6.9 million tons although the mills never had to work their machines at full rated capacity. The value of exports of wood products in 1941-42 was $409 million showing a rise of 50 per cent on the preceding two years because the pulp shipments had more than doubled in value. The domestic construction programme costing $742 million also led to large purchases this year. This year, however, forestry has been affected by the advent of control in the U.S.A. of the use of wood, while the export trade has been restricted by the shipping difficulties. The U.S. demand for home-made newsprint has also fallen and this has reduced the demand for Canadian pulp. The increase in costs this year has resulted in a decline in the lumbermen's operations and the shortage of labour was also felt. On the other side, there was the fall in building activity at home. Contracts other than those awarded by the Government were fewer and of reduced value. But the present demand in Canada will strain the available labour resources as is shown by the fall in output reported from British Columbia and the Maritime Provinces. Reduced pulp production accounted for the fall in newsprint reported in April and May 1942, the fall being due to the smaller oversea demand, but partly occasioned by U.S. publishers deciding to use their own large stocks for meeting their reduced requirements of paper. The decline in output was a feature of May as the output of pulp and paper was lower though the timber industry utilised 98 per cent of current capacity. Employment in the logging and construction industries showed a decrease again and the record in the matter of industrial employment in Canada (39 per cent above the 1929 peak and 46 per cent above the level in April 1940), did not cover the timber industry in which alone output in 1942 was lower in comparison with 1941.

Dominion Controls

The last issue of the "Indian Trade Journal" reproduces regulations concerning import control in New Zealand. The Dominion intends, in many cases, to reduce imports from the U. K. and Crown Colonies as well to 50 per cent of the 1940 level. Classification and discrimination go together as in all schemes of import control, and absolute prohibition is not unknown. Those goods secured through the Ministry of Supply are treated as outside the licensing procedure. The rules in force in the second half of 1943, will therefore reproduce the curtailment of imports that is aimed at for obvious reasons in many countries at war. Exports from India will in most cases be admitted, not on the basis of percentage allocation, but on the basis of essentiality, the applications of importers being examined individually except in the case of precious and semi-precious stones, in which case the import quota is fixed at 50 per cent of the 1940 imports.

The main items of interest to India are tea, rice, sago and tapioca, confectioner's moulding starch, etc., essential oils and textile piecegoods in which case, however, there is a provision against silk and rayon mixtures. Coir, flax and all yarns are distinguished from woollen knitting yarn, etc. Cordage, rope and twine excluding sash cords as are treated like cotton yarn, etc. Goatskins and kidskins can enter under license like cotton goods. The trade of India with New Zealand in the past two years has shrunk because that country adopted import control in advance of the other parts of the Empire. But the discrimination in favour of esential imports has long obtained, and the improvement in the shipping position should permit the maintenance of present volume of exports, e.g., of woodpacks and tea to New Zealand.

The adoption of export control in the Mandated Territory of South-west Africa as from August 28, is noticed in the "Trade Journal." Sugar, films, and wool are not articles subject to the new rules relating to export permits. Because they are already subject to other regulations. Exports to the Native Protectorates under the High Commissioner and the Union territory are outside the export licensing prescribed by the orders issued by the Union Government. The procedure which lays down that permits can be withdrawn at any time without notice doubtless has many parallels. But India should notice that except for fruit and vegetables (except potatoes and onions) to specified countries including the Congo and Free French colonies, everything else is subject to the control scheme in operation. The main purpose is the retention of limited available supplies in the interests of the home population. This aspect of export control can be seldom ignored for

the maintenance of export trade is hardly as important as the satisfaction of domestic demand which cannot be met by imports as in the past.

Britain's Stake in India

The future of British investments in India is frequently discussed in relation to the accumulation of India's overseas balances. The main interest of the "Manchester Guardian's" discussion of India's change in position from a debtor to a creditor nation lies in the estimates of British investments. It is known that holders of sterling 3½ per cent stock have been asked to buy war bonds at home. The Bank of England, said the City Editor of the "Manchester Guardian" on November 7. has just appealed to holders to use the special facilities which will be provided for investing the proceeds directly in current Government loans. After the repayment of the 3½ per cent loan, the total sterling debt will be only £66 million. After the repayment of about £300 million of public debt, apart from the continuing liability for pensions, etc., the external obligations left will be the sterling debentures of public bodies, put at £15 million only. But as the "Manchester Guardian" points out, interest and dividend, will have to be paid to British investors either in sterling or in rupees as British capital in industry and trade will remain. This has been estimated by a reliable authority at £240 millions, made up as follows. Municipal and port trust loans 15 millions; companies registered in India 75 millions; companies registered elsewhere, but operating in India 100 millions and other trade interests 50 millions. If this estimate is accepted, Britain's total financial stake in India amounts to £300 millions which is less than British capital invested at certain times in one or two of the South American states. The "Manchester Guardian" declares that, on the whole, the estimate seems sound. It is often said that British companies with offices in India have enormous capital. but it is absurd to include for example the share capital of the Chartered Bank of India, Australia and China in the British stake in India. The City Editor proceeds to discuss the growth of the Reserve Bank's sterling balances and mentions as an interesting point that all British investments could in theory be bought out in one sweep. As to the further consequences, it has been said that British debts to India will from now on increase rapidly, and we shall end as debtors to India. That will provide India at the end of the war with power to make great imports from Britain without any real current payment, and it will mean that for part of our postwar exports to India. we shall get no return except the cancellation of some figures in the ledgers. The final sentence is perhaps likely to impress on Lancashire the need for an export revival. The perennial anxiety to regain former markets is explained by the fall in Britain's overseas investments. Apart from the sale of dollar securities British investments abroad must have suffered greatly through the war. The future fall in imports entailed by loss of income must be accompanied by an increase in exports, at least to defend sterling by the balance of trade, Britain's exchange problem rules out any return to gold, and devaluation of sterling must be reckoned with as a possibility. If there is less need for India to remit sterling, the rupee must be strengthened, and a change in the rupee exchange ratio as after the last war cannot be dismissed as impossible. If controls are retained, as widely advocated, there may be no change, but the return for lease-lend aid will create problems for the British Exchequer, in regard to the transfer alone. If a general standstill agreement is promoted, and British export trade is jacked up by various means, the situation might change, but India as a market must offer less scope for British goods, and India as a rival in the export trade with Africa may have to be reckoned with, in which case, the rupee will remain stronger than anticipated.

Tribute to British Industry

The British aircraft industry may not have a stock exchange boom as in 1936 but it is certainly receiving tributes. A recent cable received by the Associated Chambers quoted Mr. T. P. Wright. Director of Air Production of the W.P.B. Mr. Wright led the U.S. aircraft experts who visited Britain. Factories producing aircraft had been dispersed and more and more women were at work in aeroplane factories, said Mr. Wright. The U.S. delegation's visit followed that of the British mission to the U.S.A. Exchange of information and experience at present

A copy of this prospectus has been duly filed with the Registrar of Joint Stock Companies, Bengat as required under the Indian Companies Act.

The subscription list will open on the 25th November, 1942, and will close on 5th December, 1942

THE MAHALAXMI COTTON MILLS
LIMITED

(INCORPORATED IN BRITISH INDIA UNDER THE INDIAN COMPANIES ACT, 1913)

AUTHORISED CAPITAL - - Rs. 20,00,000

Divided into 5,000 Six percent preference shares of Rs. 100 each and 60,000 ordinary shares of Rs 25 each.

The holders of the preference shares will be entitled to a fixed cumulative preferential dividend of six per cent per annum on the Capital paid up and in a winding up to repayment of Capital in priority to all other shares for the time being forming part of the Capital of the Company but to no other right of participating either in profits or assets.

SUBSCRIBED CAPITAL.

THE CALCUTTA COMMERCIAL BANK LTD.

Auditors:

S. N. DAS GUPTA.
Registered Accountant & Auditor.

PROSPECTUS:

The present issue of capital, which is for slightly over Rs. 6 lakhs, is made with a view to reduce the bank loans and to reinforce the working capital of the Mahalaxmi Cotton Mills Ltd., which is an old established concern and whose cloth manufactures are well known in the Bengal markets and very popular with consumers in this province.

The Company has its mill at Palta, sixteen miles from Calcutta. The factory is situated at a site convenient from the point of view of transport facilities; and, while the building area now occupied by machinery and plant is 46,000 square feet, there is ample space available for further expansion, the lands owned by the Company being nearly 54 bighas.

The mill reached the production stage in 1932; but it was only from 1939 that the mill has been functioning as a complete unit. Till 1939, production was confined to weaving; and the directors realised that unless the relative spinning machinery were added and the requisite dyeing and finishing plants were installed, the production of the mill could not be effected on what could be deemed economic basis. These additions were carried out and completed in 1938; and the results achieved since 1939 have fully justified the decision of the directors to equip the mill as a self-contained and complete unit.

The machinery are in first-rate condition; the mill has been well laid out; and, while output per spindle and per loom makes good showing compared with contemporary results, the standard of efficiency has steadily gone up since the extension and expansion of the plant.

The products of the mill are in much demand; and, for many months, it has been necessary to work day and night shifts. Monthly production now averages 5 lakhs of yards; compared to 1938, this shows expansion of 220 per cent; compared to 1939, this shows expansion of 165 per cent; and compared to 1940 the expansion works out to 140 per cent.

Owing to this vast expansion in production, it has been necessary to carry larger stocks of raw material and lay by larger

MAHALAXMI COTTON MILLS LIMITED PROSPECTUS—(Contd.)

reserves of mill stores, necessitating a much greater outlay of working capital. As at June 30, 1942 the Company had secured loans for Rs. 5.85 lakhs and unsecured loans for Rs. 1.15 lakhs. A moiety of the proceeds of the present issue of shares will be utilised to reduce these loans.

Three-year figures of profit, etc., are given, as required by the Act, in a later context in this prospectus; but it may be added that they do not give an adequate idea of the kind of prosperous conditions with which cotton mills in India are now faced. Real prosperity for the textile industry started only from the beginning of 1941; and the situation has since been improving both with regard to present working and future prospects.

Below are given the profit figures of a number of representative cotton mills, from which it will be seen that the sharp jump in 1941 stands out in bold relief:—

NET PROFIT BEFORE TAXATION AND DEPRECIATION.

	(Half-year ended).			
	31.12.41	30.6.41	31.12.40	30.6.40
	Rs.	Rs.	Rs.	Rs.
Bengal-Nagpur ...	1,75,318	1,02,753	30,406	26,001
Dunbar	7,66,667	5,01,131	2,14,906	1,08,126

Buckingham and Carnatic	61,26,615	42,88,226	21,97,942	17,24,161
	(Year ended December).			
	1941	1940	1939	1938
Kohinoor	44,20,514	10,83,670	10,17,175	12,59,035
Madura	30,02,011	14,98,895	2,03,711	14,77,553
Muir	35,77,662	13,93,742	9,08,996	8,03,510
	(Year ended October).			
New Victoria	10,98,875	3,69,718	2,16,935	3,80,965

The significance of the present year to cotton mills as compared with recent years is also stressed in the following table giving the market quotations of the same shares on selected dates from 1939 onwards:—

	Aug. 10 1939	Jany. 11 1940	Nov. 20 1941	Sept. 22 1942
	Rs.	Rs.	Rs.	Rs.
Bengal-Nagpur	10¼	17⅛	20¼	26⅜
Dunbar	141	240	283	257
Bowreah	190	315	406¼	441
Buckingham and Carnatic ...	175	228	319	237
Kohinoor	211	419	629	504
Madura	27	39⅜	52	50
Muir	208⅛	332	351¼	324
New Victoria	As. 10	1⅞	5½	6⅜

The "Indian Finance" index for cotton shares Calcutta (base July, 1935) was 105.04 on August 20, 1939 and had risen to 166.58 by October 7, 1942. The index for Bombay cotton mill shares was 72.42 on August 20, 1939 and advanced to 185.60 by September 30, 1942.

In such circumstances, this provides an opportunity for investors to secure, at slightly above par, shares in a well-known concern, belonging to an industry which is assured of exceptionally prosperous conditions.

It may be added that investors in these shares have not, as in the case of those who subscribe for shares in new concerns, to wait for the lengthy period usually covered by purchase of land, construction of buildings, installation of machinery, etc. The advantages of investment in the shares of a company which is not only a going concern but is well advanced in the earning stage are too obvious to require stressing. Suffice it that, apart from such working profit, the saving in the interest charges now incurred on bank advances will, by itself, provide a six per cent return on the total capital, old and new.

AGREEMENTS.

The following agreement has been entered into by or on behalf of the Company:—

An agreement dated the 17th November 1942 between the Company of the one part and Messrs. H. Datta & Sons Ltd., of the other part appointing Messrs. H. Datta & Sons Ltd., as managing agents of the Company, the terms of which are referred to elsewhere in this prospectus.

APPOINTMENT OF MANAGING AGENTS AND THEIR REMUNERATION.

The Articles of Association provide that Messrs. H. Datta & Sons Ltd., shall be the Managing Agents of the Company for a period of 20 years certain computed from October 22, 1938 being the date of the adoption of the Articles of the Company, and shall carry out the business of the Company subject to the supervision and control of the Directors and shall exercise all such powers as may be exercised by the Company and are not by the Articles of Association or by the Act required or directed to be exercised by the Directors or by the Company in General Meeting. The remuneration of the managing agents as such shall be:—

(a) Monthly allowance of Rs. 1,000 (Rupees one thousand) with effect from 24th March, 1938, which allowance will be further increased by Rs. 50 (Rupees fifty) per mensem with the sale of every additional lakh of rupees of shares in the capital of the Company after the 30th June, 1938, provided that at least 50 per cent of the amount due for these shares shall have been paid up.

(b) A commission at the rate of 1 per cent (one per cent) on all sales of the mills.

(c) A commission at the rate of 10 per cent (ten per cent) on the profits of the company after deducting interest on the debentures or other loans and such sums as may be placed to depreciation, but before any moneys be placed to reserve or other special accounts.

Provided, however, that the said remuneration and commission of the managing agents shall be exclusive of any item of expenditure in respect of house rent, establishment, wages and remuneration payable to brokers, solicitors, engineers, commission agents, lawyers, bankers, auditors, officers, clerks, labourers, workmen, menial and all other employees of whatever description who may be employed by the said managing agents on behalf of the Company and of all travelling and necessary expenses incurred by them in connection with the business of the Company.

MINIMUM SUBSCRIPTION.

The minimum subscription on which the directors may proceed to allotment in respect of the present offer of shares to the public is Rs. 2,00,000, which in the opinion of the Directors must be raised out of the proceeds of the present issue to provide for the payment of loans to the extent of Rs. 1,00,000 and for working capital Rs. 1,00,000.

DIRECTORS' QUALIFICATIONS AND REMUNERATION.

The qualification of each of the directors elected by the company in General Meeting shall be his taking up shares of the face value of at least Rs. 5,000 (Rupees five thousand) in the capital of the Company in his own name, whether beneficially or as trustee for any company or person or persons.

But this rule shall not apply in the case of the present directors, either for the present or in future elections.

Until otherwise determined by the Company in General Meeting, every director including the members of the managing agents' firm who are directors shall receive out of the funds of the Company by way of remuneration the sum of Rs. 16 for each meeting attended by him and the directors shall also receive a commission of 2 per cent on the

MAHALAXMI COTTON MILLS LIMITED PROSPECTUS—(Contd.)

net yearly profits of the Company after deducting interest on debentures or other moneys borrowed and such sums as may be placed to depreciation but before placing anything to reserve or other special account and before deducting the commission payable to the managing agents. The commission mentioned above shall be divided among the directors equally or as they may determine.

The Directors shall also be paid all travelling and other expenses properly incurred by in, or with a view to, the performance of their duties.

As required by clauses (1A) and (1B) of Section 93 of the Indian Companies Act, below is given the report of the Company's auditors:—

S. N. DAS GUPTA, B Sc., R.A.,
Registered Accountant.

'Phone: Cal. 4655.
17, Mangoe Lane, Calcutta.

I beg to report that Mahalaxmi Cotton Mills made profit during the three years ending 30th June, 1940, 1941 and 1942, and declared dividend at the rate of 3 per cent and 5 per cent less income-tax during the two years ending 30th June, 1940 and 1941 respectively (out of profit of these two years). As the General Meeting for the year ending 30th June, 1942 has not yet been held, so no dividend on Ordinary shares has been sanctioned for the said year. The cumulative preferential dividend of 6% per annum on Preference shares for the years ending 30th June, 1941 and 30th June, 1942 is to be paid by the Company.

The statement showing the trading results for the above mentioned three years is as follows:—

	Year ending 30-6-40		Year ending 30-6-41		Year ending 30-6-42

The profits as shown by the above statement have been arrived at before placing anything to reserve for income-tax and other special accounts, but after making provision for commission on net profit payable to the Managing Agents and Directors. Further no depreciation has been charged in arriving at the profit as per statement for the year ending 30th June, 1941, as assets have been over-depreciated in the previous years as per valuer's report.

In the above statement, items of income amounting to Rs. 3,966-10-4, Rs. 622-6-0 and Rs. 3,697-5-3 for the years ending 30th June, 1940, 30th June, 1941 and 30th June, 1942 respectively, having no relation to trading for the above mentioned three years have been excluded.

(Sd.) S. N. DAS GUPTA.
Registered Accountant.

VOTING POWER.

On a show of hands every person present in person or by proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote only irrespective of the number of shares held by him.

Votes may be given either personally or by proxy.

RESTRICTIONS ON RIGHT TO TRANSFER AND VOTE.

The directors may in their absolute discretion and without assigning any reason decline to register any transfer of shares.

No transfer shall be made to an infant or person of unsound mind.

No member shall be entitled to be present or to vote on any question either personally or by proxy for another member at any general meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any share of such member and no member shall be entitled to be present or to vote in respect of any share that he has acquired by transfer at any meeting unless he has been the registered holder of the share in respect of which he claims to vote for at least three months previously to the time fixed for holding the meeting at which he proposes to vote or if such meeting be an adjourned meeting to the time originally fixed for holding the shares but this shall not affect the shares under a testamentary dispossession or by succession to an intestate or under a bankruptcy or insolvency or liquidation.

RESTRICTIONS ON POWERS OF DIRECTORS.

The Articles of Association provide as follows:—

The directors shall not except with the consent of the Company in general meeting (a) sell or dispose of the undertaking of the Company and (b) remit any debt due by a director. The powers of the Directors are, however, subject to any regulations not being inconsistent with the Articles of Association or Indian Companies Act, which may

MAHALAXMI COTTON MILLS LIMITED PROSPECTUS—(Contd.)

be made by the Company in General Meeting.

APPLICATION FOR SHARES.

Application for shares should be made on the form accompanying this prospectus or which may be obtained at the Registered Office of the Company and sent to the Managing Agents or to the Company's bankers together with a remittance of the amount payable on application. Where no allotments are made, the deposit will be returned in full; where the number of shares allotted is less than the number of shares applied for the balance of the deposit after providing for payment in full on the shares allotted will be returned.

COMMISSION.

The Articles of Association provide that the amount of commission shall not exceed 10 per cent of the face value of the shares. During the periods 1940-41, 1941-42 and July 1942 to October 1942, the Company paid the sums of Rs. 10,630, Rs. 11,195 and Rs. 177-8-0 as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for shares or debentures of the Company or as discount, all of which were paid to the Managing Agents.

BROKERAGE.

The directors have decided to pay a brokerage of two and a half per cent (that is, Rs. 2-8 per preference share and ten annas per ordinary share) of the nominal value of each share on allotment made in respect of applications bearing the stamp of any recognised firm of brokers.

DOCUMENTS.

Copies of the Memorandum and Articles of Association of the Company and the agreements referred to above can be inspected, at the Registered Offices of the company or at the office of the company's solicitors.

CERTIFICATES.

Certificates will be ready for delivery in exchange for allotment letters within three months of allotment.

Copies of the Prospectus and forms of application for ordinary shares may be obtained from the Registered Office of the Company or the Company's brokers or bankers.

must lead to bigger output and as 80 per cent of current war production goes overseas, it will be seen that India and every Allied nation benefits. As the output of British aircraft in September was 18 per cent higher than in August, according to Mr. Herbert Morrison, constituting a record as in many branches of war production, the U.S. tribute to the industry, which had already minimised by its own efforts the effects of bombing, seems appropriate. The R.A.F. in the Mediterranean is winning fresh victories and Malta is now as much an air base as a naval base. The production achievements of the third year reached a climax in the first month of the fourth year of war in Britain. Mr. Morrison remarked that in regard to warlike stores it rose by fourteen per cent as compared with August. It was indicated that shipbuilding workers in Britain had an output at least twice as great per head as that of any other country. Mr. Morrison reiterated that 80 per cent of British war production and every fighting men for whom shipping space could be found were being sent overseas. Britain's production improves as shown in the new Vickers Supermarine Spitfire. The Germans are hampered by shortage of materials and skilled labour as was proved by expert examination of a Focke-Wulf 190. Insufficiently trained operatives had been put on skilled operations. Vital faults in workmanship had not been corrected though marked by an inspector. That hustle is the enemy of good workmanship is illustrated by the report, but the defects may be due to the carelessness, perhaps deliberate, of foreign workers compelled to work in German aircraft factories.

Australian Legislation

Social security legislation is contemplated in Australia where the Government has promoted a bill to amend the constitution. Apart from the desire to realise war aims, the bill is inspired by a desire to obtain powers for carrying out postwar reconstruction. The Labour Government intends to obtain popular sanction through a referendum. The Statute of Westminster has been enacted, and Australia's sovereignty will be established by local legislation. The Attorney-General said in this connection that the adoption of the Act would remove a number of restrictions which had caused doubts and anomalies since the outbreak of war. It did not involve any new definition of Australia's constitutional status as a Dominion. While the year-old cabinet is firmly seated, the Commonwealth Government has also obtained fresh powers to deal with black markets and profiteering. The penalties laid down are three months' imprisonment for individuals and a fine of £1,000 in the case of companies. In case of punishment the offender is required to advertise on his premises the details of his offence. Apart from the legislation referred to, Australia has indicated her position by sending an envoy to Russia. The new Minister to Russia is Mr. William Slater who was Speaker of Victoria's Assembly. The Emergency Powers Act permits the Government to conscript single men up to 45 years of age. The call-up of women for war work is considered certain. The shortage of manpower is expected to lead also to longer hours in factories and offices including Government offices. The non-essential industries will be rationalised further when further diversion of manpower takes place. In the six months ended April the number of women at work rose by 26,000. The increase was chiefly due to the absorption of 16,000 women in Government's munitions factories. Women have been taken out of retail stores for war work and the changes, familiar to Britain, are taking place in Australia. The statement of Professor D. B. Copland that the economic honeymoon is over, receives fresh support from the application of controls to shipping and the freezing of commercial motor materials. The first two years of war produced prosperity and a war effort of 20 to 25 per cent. But a total war effort demanded sacrifice, and Professor Copland declared that shortages, black markets and other difficulties preluded a bigger war effort in Australia under which standard of consumption

NOTICE

Non-Ferrous Metals Requirements:—In order to arrange for the import of metals required for essential purposes, a combined estimate of the minimum All-India requirements of non-ferrous metals and their alloys, in virgin form, is necessary. All "essential" consumers should send their quarterly requirements for 1943, giving particulars of their stocks and of the main types of goods for which each metal is required, together with the quantity used against each. It will be impossible to arrange supplies of metals unless estimates are sent before the 30th November, 1942.

N. HACKNEY.
Controller of Non-Ferrous Metals.

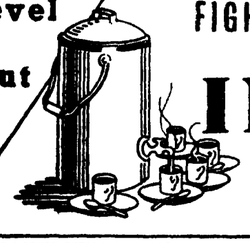
would be lower. Since the output of munitions plants has increased tenfold in the past year, Australia has good reason to feel satisfied with the pace of her war effort. The direct result of the cloth shortage is the extension of hire facilities. But such changes in civilian consumption like the drastic advance in prices have little importance as compared with the production of anti-submarine bombs for the air force. The Dominion is known to be making the Austen gun—local version of the Sten submachine-gun. The weapon corresponds to the Owen gun. Australia, which is to have higher steel prices has reported the manufacture of the first durable steel cable. The cable was made in Queensland for a vehicular ferry in Victoria. The anchor chain will solve a transport problem. If Australia is short of clothes, as proved by the high prices ruling, owing to the difficulties of imports, she is experimenting with guayule shrubs in the south in order to meet the rubber shortage. An addition to mineral resources is the production of potash in West Australia. The Lake Campion deposits are expected to provide potash at the rate of 5,000 tons per annum and would, in Mr. Beasley's opinion, make Australia largely self-sufficient. The Australian war effort in the light of the budget figures is great, but it is naturally in the matter of production that it is greater. The expansion of the canning industry has been promised. Vegetables are to be provided for many nations, while the subsidy to the dairy industry should multiply supplies to Britain, particularly, of cheese from Queensland.

For The Investor



Sugar factories in the Deccan have an outstanding record like sugar factories in Indian States. A sugar factory in a native State in the Bombay Deccan must then have double the advantages, by ordinary reckoning. The cultivation of cane on irrigated land in Western India has always been profitable, and eight years of successful operation in the case of the Phaltan Sugar Works are due to the possession of 3,000 acres of land commanded by the Nira Canal. A medium-sized plant at Sakharwadi crushing 600-700 tons a day was set up, and the Phaltan Durbar gave valuable concessions including exemption from income-tax for ten years. The Phaltan Sugar Works, the details of which are published to-day is backed by important industrialists of Bombay. Seth Mafatlal Gagalbhai's name sheds new lustre on the Indian cotton industry; and he is a partner in the managing agency firm. That a company with Rs. 10 lakhs as capital has issued shares for Rs. 40 lakhs in ordinary shares of Rs. 50 each will not surprise those who will notice from the advertisement that profits for three years totalling about Rs. 31 lakhs have been applied to supplement the original capital. Only in the case of a private joint-stock company, not called upon to pay dividends, would this have been possible. As the balancesheet issued in this connection will show the value of real assets greatly exceeds the issued capital in this case. The earnings cover, to judge by the gross profit for 1940-41 alone, is assuredly large. The reserves are ample, like the depreciation fund, in the case of the Phaltan Sugar Works, Ltd. The investor should be rightly interested in two other facts. There is, in this case, a surplus of debts over liabilities, and the balance at credit of profit and loss account is altogether impressive at Rs. 11.79 lakhs. The fully equipped character of the Phaltan Sugar Works will be readily indicated by the value of the block in the case of this Company. It has the great advantage of being a mature, well-established concern which is likely to pay 14 to 16 per cent on the shares, to quote an estimate made in the prospectus. As to the future, to evaluate earning power in terms of sugar prices, is not difficult at present. It might well be said that Protection is the least of the advantages now enjoyed by the Indian sugar industry. As the auditors' certificate shows, the Company's position is enviable in regard to both manufacturing expenses and plantation costs. The annual profit should be larger than in the past owing to important changes in the sugar position in the year ended September, 1942. As the statement issued by the Board is brief and clear, the investor, who looks only for safety and a moderate assured yield, will do well to note the merits of the shares which naturally stand at a high premium, based on the prospects of a dividend of 14 to 16 per cent for 1941-42 likely to be paid in 1943. The more important features of the present offer for sale which follows a sale of 24,000 shares in June at Rs. 125 per share have been described. If the prospectus differs from that of the average new enterprise most investors will not fail to note that Maharashtra's sugar companies are few and very good. A premium in this case is no accident, and the adoption of what is comparable to the placing of South African gold-mining shares in the London market is not surprising to those who can judge the earning and distributing power of the Phaltan Sugar Works, Ltd. Proof is not wanting for profits, and the new shares are full of dividend as intending buyers should note.

High Pressure EFFORT

Wartime production throughout India demands high pressure effort by the industrial worker. That means a greater strain on his working capacity and thus an increased proneness to fatigue; but he need no longer dread the dead points of declining energy because he knows they will disappear the moment he drinks his cup of tea. Tea is a storehouse of living energy and is, therefore, the best corrective to workers' fatigue. Get concentrated work from your operatives by giving them tea during mid-work fatigue spells.

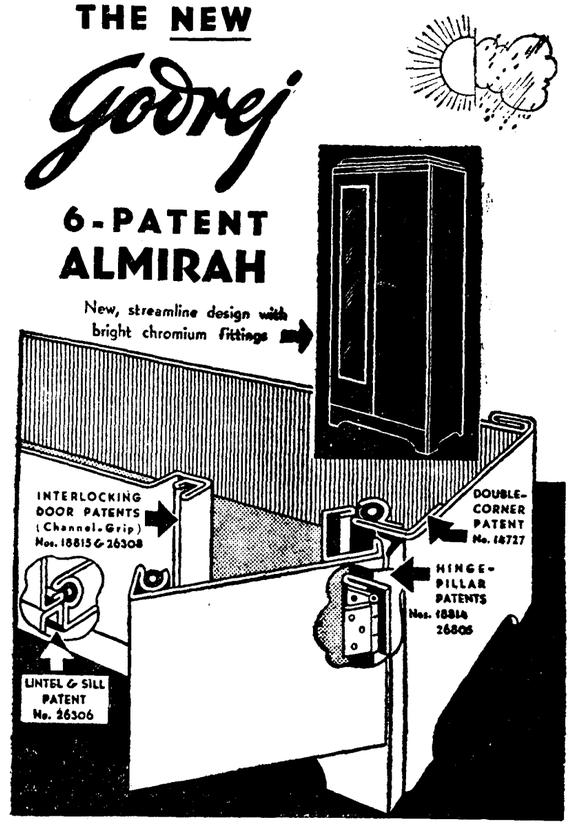
TEA relieves the strain of war-level output

FIGHT FATIGUE WITH INDIAN Tea

INSERTED BY THE INDIAN TEA MARKET EXPANSION BOARD IK 168A

A New Department

The introduction of several Ordinances this year attested to the Central Government's interest in food supplies. Agriculture may be a Provincial subject. There is however concurrent jurisdiction owing to the I.C.A.R. which was the first authority to recommend the growing of more food this year in India. It is, therefore, right that the new Food department starts its career under Mr. Sarker who launched a popular campaign in April and has seen it strengthening by degrees. The grouping of subjects under the new Department is not surprising. The new staff includes the former Wheat Commissioner, and Mr. Holdsworth, who has examined already the question of civil supplies, is at the head. If certain things are taken out of the Supply Department and the link with War Transport is strengthened the new Department stands to gain definitely. It may well be remarked here that the British Ministry of Food started as a branch of the Board of Trade in 1938. Since there is no dependence on imports in the case of India, and rationing too is unknown, action against hoarding and the ordering of movement will be the chief functions assigned to the new Department. That a new Member was not appointed for this purpose must be no surprise. Since Labour was taken out of the Commerce portfolio, and fiscal policy is not important in wartime, the Commerce Department naturally has the first claim to examine and advise on all civilian supplies including food, the fixing of responsibility in case of delay or default will be easier if a special Department with an independent Secretariat takes over. Already there has been grant of priority for food supplies on the railways for the whole month of November. The importance of the food front, even after a good harvest following a good monsoon, will be apparent to everyone protesting against black markets and continued scarcity. There is no threat to Provincial authority in this case. Fortunately the liaison work in Provinces is being performed. Food like civil defence will inevitably call for close consultation, and Ministers where they are in office, will find opportunities of advising and co-ordinating in the interests of the regional self-sufficiency deemed necessary for effective price control. Since exports loom large in wartime, the entrustment of food to the Department that deals with oversea trade is logical and acceptable. The Member concerned will certainly get the non-official point of view through an advisory council. Owing to the intermingling of Provincial interests and the adjustments of inter-provincial trade necessary circumstances will call for a dilution of bureaucratic interference at times. Since the new Department will be presided over by a Member with direct experience of Provincial autonomy, there is little risk of any Province's interests suffering. In regard to the future the Department may formulate a long-range policy for the re-orientation of Indian agriculture and persuade the Provinces to carry it out. It was suggested here in April that a Department concerned with food was necessary, and that Mr. Sarker should be the first Member in charge of it, for he knows about surpluses and deficiency and can tackle also problems of distribution effectively. The next session will not produce many questions relating to the organisation of civil supplies, for the Provinces have set up machinery. There is also the possibility that seaborne imports of wheat and, on a reduced scale, of sugar can be had, for Madagascar is friendly territory at present, and exports of coffee, sugar and rum can be had by the United Nations.



Undeveloped China

The links with China's hinterland now being forged will bring India nearer to the undeveloped north-west. The China Information bulletin described recently

Last week I traced the history of the war debts up to the point of the Balfour settlement and the general acceptance by the European nations of the principle that war debts and reparations should not be unduly related. The rest of the story of the war debts is a matter of common knowledge, how like the "mahajan" in India who has to nourish and keep alive his debtors, if necessary with fresh advances if he is to get anything at all of his dues, America was obliged to take up the Dawes Loan and the Young Loan, pay Germany large amounts for both short term and long term loans and get them back by a circuitous chain of reparation and war debt payments, how the chain snapped all of a sudden through the crisis in the New York Stock Exchange; how Germany suspended the reparation payments; how Hoover declared his moratorium; how stage by stage reparations and war debts were alike annulled in practice, except in the solitary instance of Finland. All these are comparatively recent developments and what is more, they are so deeply woven into the almost personal experiences of the present generation that they hardly need to be recounted at length here.

* * * *

They are important less as the denouement of the story that I began last week than as the prologue to the story of war debts at the present time. In fact, looking into the nature of the inter-Allied transactions during the present war, it is doubtful if it is correct to use the very term, war debts, in the present context. For the striking contrast between the attitude with which the U. S. started, when this war first broke out on the Polish-German frontier, and the spirit in which it has to be fought and won leads to certain peculiarities of inter-Allied transactions for which we must look in vain for any precedent. Even before the war clouds first gathered on the European horizon, the U.S.A. had tried to define her policy in regard to loans to European belligerents. That attitude was determined, not by the sympathies which she felt for the democracies, nor even by her appraisement of the possibilities of the war vis-a-vis herself, but by a violent reaction to her experiences with the war debts owed by Europe in the past. The States were never reconciled to the action of France and Britain in suspending the war debt payments, however much they were ready to recognise the force of the causes that led up to it. Probably in a different age, the country might have cried for war against the defaulters. As it was, the result of the general feeling of sullen resentment in the minds of all classes was the passing as early as 1934 of the Johnson Act, which the Government and the public alike recognised to be the best, in the sense, of the least offensive and ineffective, method of penalising the defaulters. The Johnson Act sought to shut the doors of the American capital market to the defaulters on account of war debts. It was not, of course, passed without an uneasy feeling in the back of the American mind, that, the Fascist threat being what it was, any war, once it broke out in Europe, would speedily break down the ramparts of American Isolationism, and that the Johnson Act would be the first to be affected. Strangely enough, rather paradoxically, it is the uneasy feeling that something obviously impossible was being attempted that made the U.S.A. cling all the more tenaciously to the Johnson Act. This applies to the entire policy of non-entanglement in European affairs, which started with President Wilson's fatuities at Versailles and led up to the Johnson Act.

* * * *

I have mentioned the Johnson Act only to show that on the occasion of the present war, there was no flow of American capital into the treasuries of her European allies. But the pressure of facts on the sentiment embodied in the Johnson Act was felt as soon as war broke out. The repeal of the Johnson Act was at that time one of those delicate questions on which President Roosevelt could tread but warily. In every American's mind was going on the fight between isolationist sentiment and the suggestions of political realism. But though the issue of the fight was a foregone conclusion, the President could do nothing in anticipation of it. The Johnson Act was not repealed till American policy in this regard crystallised round the idea of intervention.

* * * *

The Lease-Lend Act was passed in 1941 when the possibilities of the war in Europe had unfolded themselves and America was left in no doubt about her ranging herself determinedly against the Axis. Between the passing of the Johnson Act and the Lease-Lend Act, there was the Neutrality Act, another expression of the forlorn spirit of isolationism, which like

the Johnson Act made no distinction between Fascist and democratic countries. The cash-and-carry clause operated equally, till President Roosevelt made the distinction between aggressor and defender and reduced the hardships of the democracies.

* * * * *

It is hardly surprising that in a situation like this, Great Britain had to finance her war purchases in America with every cent that she could command across the Atlantic. Exports had to be maintained in the face of every imaginable obstacle in order that the sources of foreign currency might not dry up altogether. American securities held by nationals had to be commandeered. The dollar pool of the Empire countries had to be created. And when all these steps proved inadequate to meet her dollar needs, Lord Lothian felt obliged to raise the cry that Britain was at the end of her tether so far as foreign exchange was concerned and that unless the U.S.A. could see its way to help her out, democracy's would be a lost cause. It may be recalled here that the special methods by which American destroyers were acquired in 1940 for the British navy marked a crucial stage in the development of the crisis which led to the passing of the Lease-Lend Act.

Of the manner in which the Lease-Lend Act is worked or operates, I am afraid I can say little. Perhaps I could go so far as to say that the actual working has undergone changes and it stands to reason that there must have been significant changes. Its incidence on the Allied nations cannot be the same as was envisaged by Congress when it passed the Bill into law. It is impossible in the nature of things that when the U.S.A. is an active belligerent, it can preserve the same view of its obligations to its allies that it could when it was only a sympathiser standing at a goodly distance from the heat of the conflict. In the last war, the Allies stood together as disparate entities.

* * * * *

They maintained accounts of all monetary transactions with meticulous care. If Russia had less credit than France, and France less credit than Britain, it was all that Britain would do to raise loans in America and make advances to her allies. Men and human lives were somewhat different. But the nature of warfare at the time and the nature of the crises that developed during the war did not serve to break down the spirit of, shall I say, separatist calculation. Now, matters are different. It is not funds that are the primary need of hard-pressed allies. When the blitz starts, the nation which is threatened looks up at the skies for planes from its allies. It wants tanks and guns. Either these are rushed to the beleaguered without waiting for any documents to be signed, or another nation is added to the victims of Axis aggression. No longer can borrowed capital enable munitions to be produced, tanks and planes built, behind the active war front. If help is to be effective they have to arrive from far away, ready for use. The old system of war loans with guarantors and the like simply cannot work. Hence it is that a new system of inter-allied relations has to be developed. Naturally, it is developed under the stress of emergencies, which Axis tactics and strategy have succeeded in creating in disconcertingly large numbers. Poland, the Low Countries, Norway, France, all went down before such a system could even be conceived of. The battle of Britain was fought without much of extraneous help. But the system had to come. The outbreak of the Russo-German war and the spectacle of a heroic people staking everything on the fight, bearing cheerfully the brunt of the war for civilisation and asking for no more than what was humanly impossible to produce for themselves—that I believe, removed nearly all the vestiges of the commercial spirit. The Lease-Lend Act provided a happy working compromise between the call for sacrifice and the call for caution. Supplies from America flowed freely into Britain on lease-lend terms. And Britain sent planes and other materials to Russia within the limits of her capacity. In every theatre of war each Ally has to mass all the material it can gather without caring for the contribution which others are making to the pool. In these conditions, whatever may be the method of accounting in respect of inter-Allied transactions, it is certainly not the old one of raising loans at stipulated rates of interest and other terms. The change is the result as much of the methods of German aggression as of America's reluctance to lend after the debacle of war debts in the past.

* * * * *

But what kind of post-war settlement can be made of these transactions which are entered into under pressure of crisis in more than one theatre of war? So far as America is concerned, she had resolutely set her face against loans. That is why when she replaced the Johnson Act by a more practical piece of legislation, she adopted the queer term, "lease-lend." The two words are to some extent contradictory. But they emphasise the main point that it is not money but material that the Allies are given the use of. An obvious implication of it is that after the war the material so leased or lent reverts to its owners. But what if the material does not survive the war? What about foodstuffs and other things which are meant to be consumed? Administratively speaking, the Lease-Lend Act provides for appropriations which the President utilises for giving help to the Allies. But the idea of return is far from being absent. Indeed, now that America's fighting forces are abroad, and America, too, takes certain materials from her allies, the principle of the Lease-Lend Act is supplemented by the principle of reciprocal Lease-Lend.

* * *

There are thus accounts kept on both sides. There is recognition on both sides that these accounts should not be taken too seriously. Indeed, as was pointed out last week, the idea is now being given currency that at the end of the war no country should end up with a debt to another. Debts of gratitude will, of course, be owed on all sides and freely acknowledged. No one is poorer by a pice for it. But monetary debts are a different matter. Now, it is too early to say how far this Solonian principle will work. It is too soon to say. But it is a definite gain that huge war debts will not be raised as another barrier to post-war prosperity. In all this medley of lease and land, of give and take, of Hindu co-parcenership in modern warfare, where does India stand? There are other elements in our problem than defaults on war debts. These are some features which we have in common with China and some unique to ourselves. Of these I must write next week.

Readers of this column have had more than one occasion to suspect that I have a soft spot for H. Datta and Sons Ltd. The head of the firm is Mr. H. Datta who is a fascinating blend of the missionary with undimmed idealism and the businessman with uncanny shrewdness—of the enthusiasm and enterprise of the young with the judgment of the old. And his three sons and, I must add, his daughter aid and abet him because they are devoted to him both as father and as creator and organiser of business in varied aspects. H. Datta and Sons have been especially fortunate as each one of the concerns connected with them has, in the three years of war, advanced and progressed in strident style. One of the most prosperous concerns in their group is the Mahalaxmi Cotton Mills, which had a humble birth and a chequered career but has been progressing in all ways since the managing agency was taken over by H. Datta and Sons. The mill reached the production stage in 1942; but it was only from 1939 that the mill has been functioning as a

New Delhi, November 18.

New Delhi has been the scene of one political move after another during the last three months, but so far there is no sign of any improvement in the situation so far as attempts to end the deadlock are concerned Mr. C. Rajagopalachari was satisfied with the result of his talks with Mr. M.A. Jinnah, but he has gone disappointed as he has failed to secure the Viceroy's permission for interviewing Mahatma Gandhi. Official attitude is now fairly clear on the subject. The Government of India's policy is understood to be that so long as the Bombay resolution of the Congress is there they cannot allow any political parleys with Congress leaders in jail, for no useful purpose can be served by negotiations with a party which is committed to civil disobedience. It seems to be also the official plea that it is open to Congress leaders, if they choose, to address the Government and explain their intentions if they have undergone any change. Presumably Mr. C. Rajagopalachari feels that if he is allowed a chance to meet the Mahatma he may be able to convert him to his view. There the matter stands at the moment.

* * * *

It would appear that Sir T. B. Sapru, whose committee is due to meet this week-end in New Delhi, has revived the idea of an All Party Leaders Conference. There is no doubt that if such a conference is convened Mr. C. Rajagopalachari will cooperate with it, but no definite answer is available yet from the Muslim League camp. The question noted in political circles is the obvious one—what should be the next step in the present situation? There is the possibility that if all the non-Congress parties combine to put forward a point demand and express readiness to form a new provisional Government at the Centre, it might help to advance matters somewhat further. These parties which are strong and well organised are in a position to form a strong Government, at the Centre, but they will not be satisfied with anything less than the Cripps offer for the interim period. If such a Government is formed, it will be in a better position to take up the larger questions and see if the Congress also cannot be made to give up its present attitude. It is on these lines that political minds are working at the moment in New Delhi, but there are no clear indications about the British Government's attitude to these proposals. When Sir T. B. Sapru meets the Viceroy next week, some light may be thrown on the subject.

* * * *

An official announcement has at last been issued on the formation of the new Food Department. Various were the proposals under consideration including the constitution of a separate portfolio, but it has been finally decided to have only a separate Department and entrust it to Mr. N. R. Sarker, the Commerce Member. Even as Education Member, Mr. N. R. Sarker had taken considerable interest in the food supply question and initiated on fairly successful lines a Food Production drive in the country. It was also due to his initiative that the Food Advisory Council was formed. There can be little doubt that Mr. N. R. Sarker will show particular zeal in the working of the new Food Department—late though its inception is. Still it cannot be said that the arrangements are perfect. Some large Departments which deal with production and research continue to be attached to the Education portfolio. The transport question upon which the solution of the food problem so largely depends, is in the hands of another Member. There is also the difficulty that though the policy may be laid down by the Government of India, the responsibility for administration is to be to a large extent in the hands of Provincial Governments. Much of the success of the new Food Department will necessarily depend upon the effectiveness and efficiency of the liaison arrangements with other Departments for which it is proposed to appoint a special officer. In any case the fact is that the present distribution of Departments among Members—the result of a curiously haphazard growth, is in many ways irrational. In the interests of the efficient working of the Departments themselves it is necessary to reorganise them completely and see that they are properly grouped. For instance one may say that there is far greater need for a separate Food Member in wartime than for an Overseas Member. And the need for a separate Production Member to develop industries has never been greater though it is still waiting to be recognised.

* * * *

Generally speaking the food position in the country may be said to be sound. Production in the coming year will suffice to meet normal requirements—where, as in the case of rice, there is some deficiency owing to the sudden stoppage of imports, it is not difficult to make other adjustments for meeting the needs of the civil population. The real problem arises from the possibility of local shortages, owing to transport or other difficulties, the fluctuations in prices and the hardships caused to the public owing to hoarding and profiteering. The Food Department has to tackle this problem as effectively as it can in order to ensure that neither the fighting forces nor the civil population suffer from lack of essential supplies regularly. As regards sugar, an official statement issued last week ways that "the cane crop is good and there should be sufficient quantity of sugar subject always to transport being available both for cane as well as for sugar." In the Government's opinion the system of licensing sugar dealers is the one desideratum throughout the country as thereby the Government can get control over the middlemen and make them play the game. It is said that on November 1 there were 88000 tons of surplus sugar in U. P. and Behar available for export after meeting local requirements.

* * * *

Recent orders in connection with paper control have brought to the forefront certain important considerations. There is a report that the Government of India have commandeered, or propose to commandeer, 90 per cent of the total production of Indian paper mills. The prewar consumption of paper in India is estimated to have been 200,000 tons of which only a fourth was being produced in India. It may be mentioned that before the war as much as 160,000 tons were being consumed by the public. As a result of the establishment of new mills in India India's production has been doubled, but as imports have practically ceased and owing to the war, Government needs have enormously increased, a new situation has been created. If as now proposed 90 percent of the paper produced in India is taken away by the Government it will leave only 4 or 5 thousand tons of paper for public consumption as against an annual requirement of 160,000 tons—even according to prewar figures. The effect of such drastic reduction on educational institutions, the newspaper press which is already facing a serious crisis, and other general requirements of the public looked upon as essential has to be seriously considered. There are two ways in which the Government can seek to remedy the situation. In the first place, the Government can adopt even more drastic means to economise the use of paper for official purposes —in fact there is still great room for economy. Secondly, the Government can offer greater facilities for the import of paper to relieve the paper shortage in the country.

* * *

I have just returned after a visit to Dehra Dun where I saw the extraordinary progress made by the Forest Research Institute. Before the war neither the public nor the Government were disposed to pay any great attention to the researches of the Institute, but the impact of war conditions has shown

(From Our Correspondent)

Bombay, Nov. 18.

Brokers look like having a busy time soon for markets here are waking up and investors are pressing forward. It is not easy to stand aside when brokers in other places are raking in the shekels as fast as they can. There is a definite thaw on the stock exchange here after the news of the Allied offensive in North Africa came through. The big dividend paid by the famous old Sholapur Mills Company helped to put in some optimism. It has been noted that the giltedged market is fully steady though money is going into equities again this time. The shake-out or rather the shake-up in the bullion market has not done much harm. All the new money cannot be kept for the distant date when British interests will be on offer. If Bombay is latterly putting up more money for defence loans, it is not losing faith in steel and textile shares. Officially business is not done, but brokers must make a living through inter-market business, and Bombay's interest in South Indian industries is said to be expanding. Mill shares of the South do not look high-priced in relation to prices of Bombay and Cawnpore shares; and Mysore industrials still look good to the most cautious investors here. It is not surprising when Burma shares are being bought on recovery prospects. The rubber boom in the South must be attracting some attention and it would not at all surprise Bombay if there is a jump in Bombay—Burma shares on the present strength of rubber. The cotton and cloth markets are still firming up and inflation or what looks like it, helps the average buyer to pick up confidence as he goes on.

Last week Dr. Ambedkar came down to Bombay and gave his views on the labour position to a newspaper here. He said much the same thing as he said in Delhi about the big changes like the Bevin Boys' scheme and the conscription of technicians. He declined to say anything about the demobilisation of workers when it comes as that lay outside his department. But he indicated that a scheme for health insurance is under consideration.

* * * *

A contributory scheme certainly has its points and millowners here would not raise objections to make the payment that the State and the workers in turn make. But the Central Government is not likely to assume any liability as factory labour is under Provincial Governments. It may be otherwise with railway workers and mines for whom the Centre can provide. The war is an impediment to Government's making any contribution and what is possible, in Dr. Ambedkar's view, is the grant of a loan to an insurance fund set up in connection with the scheme in question. Not very cheering to men who quote the arguments for a minimum wage and social insurance. Health insurance demands the creation of the panel system with the help of the medical profession. Aftr all the real job always is one for the doctor. Mill workers are likely to raise the subject soon in view of the textile boom and the relaxation of the Factories Act's provisions is a drain on health for which compulsory insurance is a wholly proper remedy.

* * * *

There may be no shortage of tea and India may have 130 million lbs. this year but control, that is to say restriction is, still in force. The Bombay Chamber has its own views on tea control, and being dissociated from tea, it can take a disinterested view. Production and exports are not always adjusted to each other and the output does not seem to fit in with the regulation percentage. There are quota rights on offer and bits of paper, as distinct from tea-chests, seem to sell well. It means that crop control and export control do not dovetail, and the present rise in prices further raises questions as to the wisdom of restriction. A fresh survey of what the gardens can effectively produce seems necessary in the opinion of the Chamber. The restriction scheme is likely to continue in force after the war. The Bombay Chamber's main point indeed relates to the necessity for keeping enough tea in India for some consumption. Governmental buying and monopoly exports are no remedy as against the retention of adequate supplies. The retail price here is higher than known for months, tea-drinkers have been complaining. They will be certainly glad to find the Bombay Chamber asking questions about what the gardens can produce in 1942-43 and how the export quota should be fixed. In fact, the average man's present view is that tea production should be conducted like rubber production and prices fixed in order to protect the consumer here, not only to stimulate exports hereafter by a lower cess.

* * * *

Before a new mission begins to report on the working of Indian ports from the point of view of efficiency in wartime the Indian Merchants Chamber asks if Indian shipping interests are not to be represented. It is assumed that the mission's job is to help shipping or shipbuilding not merely to check upon available harbour and transport facilities. The new mission with which Dr. W. A. Burns of Calcutta will be associated has got to see things in Africa and Asia and it is unlikely that it will start investigating possibilities as distinct from facts for the good of anybody. Of course, shipping is not in a bad way. There is quite a boom in Britain's coastal trade and the way in which P. & O. Deferred shares are rising proves that British shipping is doing very well indeed. If the idea is to add to naval facilities at Indian ports, following the R.I.N.'s expansion, nobody will deny the value of the new mission. As it is mainly a question of war transport and of the British Government taking special steps to procure what is needed for the shipping it controls in all waters, it does not seem as if there is any justification, for either the Commerce Department or the Indian Merchants Chamber asking either questions or making submissions about what has not been done or is not going to be done. Private enterprise has faded out in the shipping field. The investor and his agent have no function for the duration, and the support or discouragement of enterprise is really a matter for the Government which has asked the foreign experts to advise.

* * * *

One more minority has published its views on a deadlock in India. Last week Indian Christian leaders led by the ex-Mayor Dr. Collaco issued a statement in support of the Indian claim for independence after the war, the postponement of a decision being due to the war. A Royal Proclamation seems desirable even though the King's speech said less than nothing. The Indian Christian, however, suggested that Gandhiji should be given a chance to see Mr. Rajagopalachari. The manifesto is, in the main, a plea for a national Government, as much as for the sake of the war effort as to conciliate the leaders for whom an amnesty is demanded. As regards Pakistan, the question should be in abeyance for the duration. The manifesto will not secure for us the revival of provincial legislatures or the establishment of new coalitions. But it is important to note that the manifesto is likely to cheer up C. R. who has refused to take the Viceroy's answer to his request as final. The difficulty of securing an interview appears for the present to be greater than of securing a national government. Mr. Churchill's last speech said in effect, what we have, we hold. The Indian Christians demur, and other communities will rejoice in a way.

(Continued from previous page)

its usefulness. As a matter of fact the value of its researches from the point of view of the war effort may be described as second to none. As a result of these researches wood substitutes for iron or steel are now available for a variety of war uses. By means of preservatives the durability of wood products has been greatly increased. As India is rich in timber, this new policy of dispensing with steel and using wood wherever possible means considerable economic gain to the country. A number of discoveries have been made for utilising Indian forest products as substitutes for materials formerly imported in many cases, what was formerly going to waste is now being turned to valuable war material. An important section of the Institute is dealing with the production of paper. The process is easy and simple, but if sufficient machinery is available, India can produce all the paper it requires.

Hill-Burn.

Resume of Commodity Markets

THERE are no important developments to be recorded in several commodity markets during the past week. Only, earlier in the week the jute manufactures market was inclined to be firmer on reports of the possibility of a substantial improvement in the freight position and some speculative buying. Higher prices have not been fully held. Towards the close a fall in prices is to be recorded. The jute market has continued very firm while the bullion market has been rather quiet, the late rally at the end of the week not being sustained. No business in the cotton market is reported and transactions have not officially begun in the Bombay market.

The important development during the week is the announcement that a separate Department for Food is to be created and that all the problems regarding control of price, movement of commodities and arrangements of freight will be attended to by this newly created department. It will be remembered that for sometime past there has been a demand for the creation of such a department, and that with the growing difficulties regarding the movement and control of food supplies, greater attention had to be paid and the problem was not capable of a satisfactory solution unless somebody was appointed to give special consideration to the questions at issue. In a *communique* published by the Government, it is pointed out that it is difficult to secure adequate quantities of food grains to meet the normal requirements and that the natural difficulty, during war, of securing a free flow of commodities from the producing to the consuming areas owing to heavy pressure of movements of war requirements, has been aggravated by the tendency to treat food supplies as a form of investment. The new department will take over the administration of all measures of control for prices, supply and distribution of food stuffs and for the procuration and purchase of the requirements of the Army which are at present the concern of the Commerce Department and the Supply Department respectively. It will also establish an effective liaison with the Department of Education, Health and Lands and the Imperial Council of Agricultural Research which will continue to be responsible for securing the maximum production on the basis of forward planning of requirements asked by the Food Department. The experience of the British Ministry of Food should afford a valuable guide to the new Department of Food; but it is important to remember in this connection that the conditions in the U. K. are not exactly applicable to this country.

Jute:

The problem in the jute market is one of getting adequate supplies into the consuming areas from mofussil districts. Thus, paradoxically, there is a shortage of raw materials in one place while there is an abundance of the same in another. In fact, a situation similar to the sugar industry can be said to exist though, it has to be admitted, the problem in regard to the transport of jute is less complicated than that of sugar. Efforts are being made to bring in supplies of jute as fast as possible. The question of priority has naturally assumed importance. Priority in the sense of proper transport over other essential commodities and priority in the sense of arranging for transport of jute to the different balers, some being very badly affected by their earlier contracts of cheap jute and their inability to effect delivery in time on account of the lack of transport facilities. We have pointed out on several occasions the need for a correct understanding of the various problems involved in this connection, and said that the quota system which has been in force as from the beginning of October operates disadvantageously to a certain extent in the case of some balers. We hope that the several aspects of the question will be given due consideration and the defects remedied.

Jute Manufactures:

The spurt in prices in the hessian market has not been satisfactorily explained. It has to be only attributed to the belief that there will be a substantial improvement in shipments in the near future though as we pointed out last week the recent improvement in the shipping position has not been in any way helpful to exporters in the jute trade. The figures of American stock and consumption for the month of October 1942 also point to the same conclusion.

Production figures for the month of October, 1942 clearly show that the absence of any increase in hessian stocks, on civil account at the end of October 1942 was mainly due to the decrease in production during the month on account of the *Puja* and *Id* holidays and that the increase in stocks on military account was due to the maintenance of the rate of production at the level of the previous month in spite of the fewer number of working days. Thus production of hessian and canvas on civil account amounted to 30,398 tons against 26,933 tons and on military account 14,786 tons against 14,478 tons. Sacking stocks have increased even with the lower level of production, the figures for October being 47,439 tons against 51,317 tons. This clearly shows that in spite of the shortage of goods for near positions for civil consumption and the well-sold position of the mills, the movement of goods is not fast enough to take up the whole of the production in any one month. Production, on military account, of sacking shows an increase at 4,376 tons against 3,583 tons, other manu-

Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, November 19.

THE validity of two points which were raised in these columns last week on the subject of allotment of transport for jute has been questioned, so it is necessary to revert to them. First was, why should the interest of the seller receive special consideration? In the ordinary way, a seller enters into a contract for delivery over the subsequent two months. It is at his option whether he ships immediately or towards the end of the contract period, but in normal times in the past he was always able to secure freight space whenever it was most convenient for him. The situation is very different this year. Contracts for shipment as far back as July and August are still held up for lack of space or because it has not come to the seller's turn to get space under the quota. As a result, sellers have been compelled in spite of themselves to hold jute for anything up to three months or even more with all the attendant expense and risk. His finance is tied up, his current business hampered or completely stopped for lack of finance and also for lack of space in which to work and store his jute. He has to keep his stocks covered by insurance at steadily increasing rates as the market has advanced, and he has to carry the risk of replacement of his sold stock in the event of anything happening to it. In a market such as the present there is the moral certainty of loss, and heavy loss at that, in such a contingency, for in the event of a fire loss, the seller would only get the local market rate of the day of the loss, provided he was fully insured, while by the time he had recovered his insurance money and was able to buy to replace his lost stock, the market might easily have gone against him by a very large margin. It should be emphasised that this is a risk which the seller, in the ordinary course, is not asked to undertake and against which he cannot insure in full. Hence, we submit, the sellers' interests, particularly those sellers who have early and cheap sales which they have been unable to ship, should receive at least equal consideration with any other interests involved.

The point of giving priority to early sales, another point questioned, is partially dealt with above, but there is the additional argument that mills should be entitled to get delivery of the cheap jute which they bought in the early months of the season against sales made at much lower gunny values than those ruling at present. It may be argued that, as mills average the price of all their jute purchases, it does not matter to them whether they get in their cheap jute or their dearer jute first. But there may be some prudent buyers who bought sufficiently at the lower levels of price and have not had to buy on the recent higher market. Are their cheap purchases to be indefinitely held up? In any case, there is no mill whose mind would not be easier to see the early and cheap purchases safely shipped. Again there is the flagrant injustice of seeing recent sales at high market rates getting freight space allotted, while the earlier and cheaper sales with all their attendant risks, are left unfulfilled. For these reasons we submit that a strong case has been made out for the allotment of a fair proportion at least of the available space to be definitely earmarked for the lifting of contracts on the basis of priority of date of sale. This suggestion has been, we understand, put before the Regional Priorities Committee but was turned down on the plea that it would involve the collection of too much data. But it is understood that the Jute Dealers Association, whose interests are closely involved in seeing these early contracts liquidated, owing to the risk they carry in having undersigned them, have undertaken the task of collecting the necessary data; and it is to be hoped that, when this is placed before the Priorities Committee, it will receive the consideration and the action which it undoubtedly deserves.

If all reports are true, the abuses which have attended the issue of priority certificates, particularly for Balers' jute from rail stations, amount to nothing less than a scandal. It is neither our function nor our intention to endeavour to fix the blame, but it would appear that priorities have been issued with so lavish a hand that no shipper without such a certificate has the slightest hope of getting a wagon for months to come. The situation has been rendered more acute by the withdrawal to the central pool from the B. & A. Railway of some 800 wagons. In any case, such anomalies as a Baler holding priority for jute not yet bought, or an upcountry seller being provided with shipping space for jute not yet sold, must cease. The latest news at the close is that the issue of all further priorities is to cease meantime, and it should be a matter for serious consideration whether all priorities already issued should not be cancelled and only such reissues authorised as are proved after proper scrutiny to be essential.

The extent to which country-boat traffic has been reverted to, to bring jute into Calcutta in the absence of other available transport, is indicated by figures published by the Government of Bengal in issuing an Order for the Control of Boat Traffic in the Calcutta Canals to clear up the resulting congestion. It appears that from 17,000 maunds in July and 16,000 maunds in August, the traffic jumped to 88,000 maunds in September and to no less than 5,59,000 maunds in October. This phenomenal increase has necessitated the entire prohibition of discharging jute from boats within the lower reaches of the Canals. Estimated arrivals of jute into Calcutta for the first half of November are placed at 3,47,000 bales against 4,52,000 last year for the same period. This brings total arrivals since 1st July up to 24,20,000 bales against 28,33,000 last year.

Mill production for the month of October totalled 90,833 tons of which slightly over 19,000 tons was on Government account. Total production shows a drop of over 10,000 tons from the previous month, much of which is accounted for by lost time over the Pujas. The proportion of Military production is higher than in the previous month. Of the total, 41,411 tons was hessian or 1,525 lakhs yards. Sacking amounted to 54,900 tons or 1,305 lakhs yards. Taking the increase in stocks into consideration, despatches from Mills must have amounted to 76,000 tons during the month, by no means an inconsiderable total in the circumstances, though not as great as in some recent months.

American stock and consumption figures are also now available. Consumption is returned at 300 lakhs yards, a slight improvement over the previous month but only about half what it normally should be. Stocks have shrunk to 740 lakhs yards equally divided between spot and afloat, and amount to little over two months supply at the present ratio, but no more than a month's supply in normal times. The complete disappearance of burlap from American economy would almost seem imminent.

A small business, apparently in replacement of losses, was placed for shipment over the week-end, mainly in Dundee Daisee assortment at Rs. 64 to Rs. 66 and in Dundee Tossa 4s. at Rs. 66 to Rs. 68. It transpired that these rates paid here were in excess of the current rates in the Dundee market. Mills' purchases seem to have been limited only by the amount of jute offering. Business resulted in Firsts from Rs. 64 to Rs. 68, in Lightnings at from Rs. 55 to Rs. 59 in Heart marks from Rs. 50 to Rs. 57, and in Dundee Daisee 2/3 from Rs. 62 to Rs. 65. Cuttings were taken at Rs. 20 M.C. and Rs. 21 N. C. At the close sellers' quotations for Mills are Firsts Rs. 70, Lightnings Rs. 64, Hearts Rs. 60, Daisee Rs. 69.

Loose Jute business has also been limited only by the extent of the offerings, practically everything having been taken up from day to day without regard to price or district. European packing has been sparingly offered and has fetched up to Rs. 14-4, Rs. 11-4 and Rs. 9-4 for Middles, Bottoms and Cross with Buyers over. Supervised Jat sold up to the level of Rs. 11 Bottoms, Bengali Jat up to Rs. 13-8 and Rs. 10-8, Indian Jat at Rs. 13, Rs. 10 and Rs. 8-8 and Indian District at Rs. 12-8, Rs. 9-8 and Rs. 8-8. Resale of European Tossa by Balers to Mills was recorded at Rs. 14 Mids and at Rs. 11 to Rs. 11-8 Bottoms. Supervised Jat Tossa also sold at Rs. 14 and Rs. 11 and Indian District Tossa up to Rs. 13-8, Rs. 10-8 and Rs. 9-4.

Mofussil markets, as a result of small imports, have recorded a sharp advance in price levels, in most cases practically up to the equivalent of Calcutta parity. At the close Mills are showing less inclination to follow the daily advances asked and as the rise has been much too rapid to be healthy, it may be hoped that there is a pause till equanimity is recovered.

Interest in the Fabrics market made a sudden shift from Heavy Goods to Hessians, apparently on the realisation that the latter were relatively cheap and afforded a better speculative or, euphemistically, "investment" counter. This swing forced ready nine porters in a few days from Rs. 15-2 to Rs. 17 though the buying was mainly in the forward positions, Jan/March from Rs. 15-8 to Rs. 17-8 and Jan/June from Rs. 15-12 to Rs. 16. There was a sharp set-back from the top followed by a partial recovery and the closing tone is quieter at Rs. 16-6 ready and Rs. 16-12 Jan/March. Eleven porters followed a similar course from Rs. 19-4 to Rs. 21-8 ready and November, Rs. 19-6 to Rs. 22 December, Rs. 19-8 to Rs. 22 Jan/March and Rs. 20 to Rs. 21-12 April/June. Here again the closing is below the top, notably Jan/March at Rs. 21-8.

Heavy Goods have been much less active than of late but prices followed to some extent the lead of Hessians. "B" Twills for near moved from Rs. 58 to Rs. 59-8 but at the close, in the face of little enquiry, are no more than Rs. 57-8. Rs. 50 and Rs. 51 were recorded for April/June and Rs. 50 for April/Septr. Heavy Cees also fetched Rs. 50 for April/June.

(*Continued from page 837*)

the potentialities of the remote provinces. Thirty years from now the north-west will be the Golden West, if the development programme is carried out. In a recent discussion organised by the Bank of China on the resources of the north-west reference was made to the Chungking Government's plans for winning the north-west. Dr. Wong Won-hao, the Minister for Economic Affairs, has investigated the possibilities, and declared that railways would link the north-west with Soviet Turkestan and Chinese coastal provinces; irrigation would extend into the loss farms, while cotton and wool would be abundant. The minerals evidently include petroleum and gold—two things vitally necessary for China. China's resources in the north having passed temporarily out of control, the north-western wealth is the more necessary. In ancient times the north-west was more than the barrier against the Tartars. Its rediscovery should be easy as plans have been drawn up. First condition for modern development in the opinion of the Minister is the construction of railways. At present a short stretch of the Longhai railway leads from Honan to Paochi in western Shensi via Sian. Work in progress covers the extension of this line to Tiensoi in Eastern Kansu and then to Lanchow. A new line is to take off from Tiensui to Chengtu in western Szchwan. Dr. Wong emphasised the importance of continuing the railway through the Kansu Corridor to Tihwa in Sinkiang and Tacheng on the Sino-Soviet border in order to connect it with the Soviet railway system. The trunk line connecting the provinces of Szechwan and Shensi is to be supported by branches to reach Sining in Changhai and Ningsia and other cities in the north-west. Navigation on the Yellow River and air transport are expected to supplement railway communications which will bring the north-west nearer to the other Provinces.

(*Continued from page 841*)

complete unit. Till 1939, production was confined to weaving; and the directors realised that, unless the relative spinning machinery were added and the requisite dyeing and finishing plants were installed, the production of the mill could not be effected on what could be deemed economic basis. These additions were carried out and completed in 1938; and the results achieved since 1939 have fully justified the decision of the directors to equip the mill as a self-contained and complete unit. The machinery are in first-rate condition; the mill has been well laid out; and, while output per spindle and per loom makes good showing compared with contemporary results, the standard of efficiency has steadily gone up since the extension and expansion of the plant. The products of the mill are in much demand; and, for many months, it has been necessary to work day and night shifts.

While production and efficiency have thus been rationalised, it was still necessary to rationalise the balance-sheet. The early antecedents of the Company have endowed the balance-sheet with features whose elimination is imperative. Among such features was the heavy total of forfeited shares. These forfeited shares are now being re-issued at Rs. 28-8-0 for a paid-up share of Rs. 25. Over a third of the present issue is already subscribed for; and one may be sure that the balance made available to the public will be avidly taken up. These forfeited shares may well prove a blessing in disguise; for, the premium on this issue plus the amount originally paid up on these shares must make available to the directors over Rs. 1½ lakhs which should come in handy for pruning the balance-sheet of all excrescences. That these shares are being issued at a premium, is a sign and token of the confidence of the directors in the earnings of their Company. That they have taken up one-third of the issue, is a vindication and exemplification of their confidence.

The known regard I have for H. Datta and Sons entitles me to tender advice on an important particular. As I have said, the mill has been rationalised; and, now, the financial position is being rationalised. What remains to be done and must be done is the rationalisation of the managing agency terms and, if necessary, the charter of the Company.

"EAVESDROPPER."

(*Continued on page 844*)

factures total 3,834 tons against 4,761 tons. Total production was 90,833 tons against 101,180 tons.

Bullion:

Rather quiet conditions have been noticeable in the bullion market during the past week after the recent excitement. It was pointed out last week that the upswing in prices both for the white and yellow metals was not quite in accordance with the developments in the war situation and that there was a suggestion that inflationary tendencies were at work. Sober considerations have perhaps resulted in the marking down in values during the past few days and it looks as if quotations will fluctuate around the present levels for some time yet.

Sugar:

The Government of India have issued a press communique explaining the position in regard to sugar. They say that the problem connected with sugar is primarily one of distribution and consequently of adjusting transport. From the beginning we have been pointing out that there cannot be any sugar shortage as far as internal consumption is concerned if Indian production was carefully conserved. As a matter of fact, the industry has considerable excess capacity and is in a position to export as much as two lakh tons to other countries. The question of shortage, therefore, arises only when exports exceed two lakh tons. Under the present circumstances, consumption must be very much lower than the normal level as many would like to curtail consumption on account of the unduly high level of prices in the black markets. The authorities have, therefore, a great duty in ensuring adequate transport facilities for each area. In the earlier stages there was no correct understanding of the various problems at issue, but it is satisfactory to note that there has been considerable improvement in the position and that sugar supplies to the public are much easier over large areas in India. Adequate transport, on which supplies primarily depend, is also more readily available. The factories in U. P. and Bihar are expected to commence crushing shortly and in Madras late in December.

Rubber:

There is considerable agitation for an upward revision in prices paid by the Government of India for the purchase of rubber from the producers. There is, at present, a range of maximum prices at which the Government has offered to buy up existing stocks and arrange facilities for getting them into godowns. It is now reported that there will not be any revision of prices and that the anticipations of certain sections of producers, who have been keeping back their stocks in anticipation of a higher level of prices, and whose action has, to a certain extent, been interfering with the manufacture of certain essentials war supplies, will not be realised. Much as we deprecate the attitude of the producers in holding back supplies, one cannot entirely take sides with the Government of India as greater consideration should be given to the young plantation industry.

(*Continued from page 819*)

Again and again, we have stressed that one of the ways by which the financial authorities could vouchsafe evidence of a firm policy to the market is the rejection, when necessary, of some portion of treasury bill tenders on the plea of unsuitable rates. In other words, the present aim of securing the full quota must not be construed and looked upon as an inflexible aim. There can be no great harm done if, for one or two weeks, the Central Government get only Rs. 8 crores as against the offer of Rs. 10 crores. In the light of this reasoning, we cannot see the justification for the rise in the average rate of accepted treasury bill tenders to twelve annas as compared with annas ten and pies four per cent per annum last week.

The statement of the Reserve Bank for the issue department for the week ended November 13, shows a further expansion of currency for Rs. 11 crores against sterling securities. Sterling securities in the issue department as on November 13 were Rs. 351.83 crores. Rupee coin continues the downward trend, being Rs. 17.59 crores against Rs. 19.67 crores. The outgo of coin seems to be on an accelerated scale. And application to the government for rupee coin cannot long be deferred. Active note circulation has expanded from Rs. 527.37 crores to Rs. 535.46 crores.

The return of the Reserve Bank for the banking department shows a decline in foreign balances from Rs. 86.31 crores to Rs. 82.59 crores. The decline is, therefore, Rs. 3¾ crores. The net increase in the total sterling assets of the Reserve Bank is Rs. 7¼ crores. It possibly represents the payment received by the Indian Government from the British Government during the week. As a result of this payment, the deposits of the central treasury with the central banking institution have risen from Rs. 5.68 crores to Rs. 10.59 crores. On the other hand, the deposits of provincial governments show a decline from Rs. 8.28 crores to Rs. 6.36 crores.

There is hardly anything of interest to report in the exchange market, except for a small showing of dollar bills.

Banks are sellers of T.T. at 1s. 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D.A. bills on London at 1s. 6 9/32d., and four months bills at 1s. 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are sellers of T.T. New York Ready at Rs. 332¾.

Interbank call money remains at ½ per cent. all lenders.

JUTE MANUFACTURES

CALCUTTA, Nov. 19.

THERE was a sudden flare up in prices in the jute manufactures market in the early days of the week on reports that the trade outlook had definitely improved and that there would be a large increase in shipments during the current month. It is actually reported that some shipments have been made during the past few days. As there was an oversold position bulls had the upper hand. 9 porters ready were done as high as Rs. 17-4. That the rise is purely technical is evident from the fact that there has not been a corresponding rise in the prices for forward positions. Some selling at the higher levels has brought down the levels towards the close, 9 porters ready being done at Rs. 16-10, December at Rs. 16-10, January-March at Rs. 16-12 and April-June at Rs. 16-12. 11 porters ready are Rs. 21-8, December Rs. 21-8, January-March Rs. 21-8 and April-June Rs. 21-4.

The heavy goods section has not been very interesting and only a moderate rise in prices has been recorded. Not much business has been passing. B. twills for November delivery sold on the basis of Rs. 57-8, Liverpool twills Rs. 67-8 and Cornsacks Rs. 56-8.

The production figures for the month of October are now available. On account of the holidays production is lower at 90,833 tons. The production of hessian and canvas for civilian consumption is 20,328 tons and for military 14,786 tons. Production of sacking goods on civil account is 47,439 tons and on military account 43,736 tons, other manufactures on civil account were 3834 tons. It is clear that the reduction in stock on civil account was mainly due to the lower rate of production though the improvement in offtake during the month was helpful. Stock and consumption figures for U. S. for the month of October show that there has not been any improvement in the situation so far as those markets are concerned. In the absence of any large increase in shipments, there is naturally a further decline in stocks spot to 37 million yards from 49 million yards in September. Stocks afloat are unchanged at 37 million yards while consumption for the month shows a slight improvement at 30 million yards against 29 million yards in the previous month and 63 million yards in the corresponding period in 1941.

GOLD

CALCUTTA, Nov. 19.

Last week it was poined out that the aggressive rise in prices in the bullion market had been checked and that with the sober attitude of operators it was very clear that the highest levels had been reached, at least for the time being. The late rally noticeable towards the close of last week has not been sustained during the past three days and very little activity has been noticed with quotations fluctuating within narrow limits. In the local market operators are not so enthusiastic as before. Gold ready are quoting at Rs. 65 and sovereigns at Rs. 48-2 against Rs. 66-2 and Rs. 51 at the end of last week. The London quotation remains unchanged at 168s.

SILVER

CALCUTTA, Nov. 19.

The silver market also has been quiet and quotations have been fluctuating within narrow limits during the latter half of the period under review. It is expected that with the improvement in the war situation any further appreciable rise in prices for the white metal will not be possible. The Government of India also have been repeatedly reminding the public regarding the fact that standard George V and George VI silver rupees will cease to be legal tender as from November 1943 and will be acceptable for payment only at the Reserve Bank and its branches after May 1943. It is well to remind the public regarding the fact that standard coins will cease to be full legal tender after November 1943 but if silver prices continue to remain at the present levels, it will not be possible to induce the holder to part with his coins especially as the loss involved in melting them is only small and there will be a tendency on the part of every one to take supplies against the possibility of any further appreciation in values.

In the London market, rather quiet conditions were noticeable and the quotation for spot and forward remained unchanged at 23½d. Some small trade demand has been officially satisfied.

JUTE

CALCUTTA, Nov. 19.

Rather excited conditions have been noticeable in the raw jute market during the past two days both in the loose jute and pucca bales markets which have been very firm with sellers reserved and asking for higher prices. At the advanced rates no large amount of business has been passing but the slowdown in the buying by mills has not caused any change in the attitude of sellers. The strength of the markets during the past two weeks, is, our readers are aware, due to the demand for the raw material on account of Indian consumers and those in foreign countries being substantially in excess of arrivals from mofussil districts. The efforts made to increase arrivals have not been enough for even current consumption, not to speak of the need for replenishment of old stocks have been received in recent weeks and that there is a congestion in certain canals owing to the lack of facilities for unloading. Efforts are being made to speed up unloading from these boats and turn them round for bringing in more jute. With the help of the railway authorities, the river steam navigation companies and country boats, it is expected to bring in more and yet more jute.

In the loose jute section sellers have been very reserved and mills have been obliged to pay the further advance in prices asked though it is reported that at the higher levels a smaller amount of business has been passing. Indian District, Tossa Middles and Bottoms were done at Rs. 13-8 and Rs. 11-8 per maund. Supervised Jat Middles and Bottoms were done earlier in the week at Rs. 13-8 and Rs. 10-8 per maund; the quotations are 8 annas higher towards the close. At the end of last week Supervised Jats Middles and Bottoms were done at Rs. 12-8 and Rs. 9 per maund.

In the pucca bales section nothing important is to be reported. Rather small interest has been shown by buyers at higher levels. Some small business has been reported done with shippers. Dundee Daisee 2/3 were done at Rs. 66 per bale and Tossa 4's at Rs. 68 per bale with sellers over. Firsts 2/3 were bought at Rs. 66 per bale, Lightnings at Rs. 57 and Hearts Rs. 52 per bale.

Total Reported Production of Manufactured Goods*

(By the mills in the membership of the Association and also by Gagalbhai Mills).

Description.	Quantity.
1. TWIST AND YARN—	
(*a*) for sale ..	2,301 tons
(*b*) all other, including that used in sewing bags ..	1,387 tons
2. CANVAS—	580 tons
	10,58,677 tons
3. GUNNY BAG (Tonnages exclude sewing twist) ..	
(*a*) H ssian ..	1,852 tons
	69,33,246 yards

Civil		3,834
Grand Total (Tons)		90,833

The returns of Maheswari Devi have not been received and are excluded.

PIECEGOODS

CALCUTTA, Nov. 19.

The piecegoods market has not been very active and business passing has been rather of small dimensions. Efforts to check a further increase in prices will, it is hoped, meet with greater success. There is also considerable anxiety regarding the policy of the Government to regulate production for civil consumption and control prices for at least the coarser qualities. Nothing as yet is known regarding the Government of India's decision but for some time there has been a demand from the public that something should be done to control prices and distribution of cloth of the commoner qualities in the interests of the poorer and lower middle classes.

Bengal mills have been busy selling large quantities of the commoner styles. Supplies are still coming in small quantities from the Western Presidency.

No large amount of business has been reported in winter styles but the undertone is steady and prices are on the upward trend owing to the limited quantities of stocks available.

I-P.R. 154

We must see that they have the necessary equipment.

We are doing our bit by providing the cloth for their uniforms and the blankets which keep them warm at night.

Stock Markets to-day and to-morrow

INDIAN COPPER CORPORATION RESULTS FOR 1941

RATHER firm conditions were noticeable on the Calcutta Stock Exchange in the early days of this week. It was only after Wednesday that a slightly easier tendency has been in evidence and business has shown signs of contraction. It is unfortunate, however, that doubts regarding the Spanish and Turkish involvement in the war have been responsible for the slow-down in the recovery movement, especially at a time when there was a broadening of interest in all the sections. In the first two days of the week greater attention was paid to shares like Alkali and Chemicals, Dunlop Rubbers, Indian Cables and Indian Rubber Manufacturers. There was a general feeling that the market was entirely dominated by dealers and that the recent improvement in prices was not quite broad-based. As there have been no fresh adverse developments in the war situation and there will be a clearing up of the position in the near future, it can be expected that the upward trend will be resumed and that substantial rise in prices for important Industrials will be recorded.

* * * *

Speaking at the annual general meeting of the *Indian Copper Corporation Limited*, Sir Geoffrey Fell said that the decline in net earnings for the year ended December 1941, was mainly due to the higher provision for Indian taxation, £43,000. Before providing for taxation, there is a net increase of £17,000. As our readers are already aware the dividend for the year is only 10 percent (taxable) against 12 percent (taxable) for 1940. For the payment of the dividend the amount brought forward from the last account has to be drawn upon. The balance-sheet shows a substantial increase in the Corporation's overdraft with the Bank due to the heavy payments made in advance for forward purchases. It is reported that since the close of the year, the position has been considerably easier with the sale of the Corporation's holdings in British Government's securities and the receipt of larger remittances from India. Arrangements are also being made under which the Corporation in future will not have to finance any of the forward purchases made in connection with the work carried out for the Government.

No account has been taken in determining the profits for last year of the income arising from the treatment of blister copper on behalf of the Government, the exact amount of which has not been finally agreed upon with the Government authorities. The Company's activity is increasingly devoted to work on behalf of the Government in connection with war supplies.

* * * *

The results of the Bird—Heilgers group of jute companies for the half-year ended September, 1942 are perhaps not quite so satisfactory as those of other companies published last week. The accounts are not yet available but it is reported that with the exception of Kinnision Jute Mills Company Limited, dividends to ordinary shareholders are, in all cases, lower. *Auckland* is reducing the distribution from Rs. 3½ per share to Rs. 3 per share while *Clive* is to pay Rs. 2½ per share against Rs. 3¾; *Dalhousie* Rs. 5 per share against Rs. 6; *Lansdowne* Rs. 1½ per share against Rs. 2¼ *Lawrence* Rs. 4 per share against Rs. 5; *Naihati* Rs. 3 per share against Rs. 4; *Northbrook* Rs. 3¾ per share against Rs. 6¼; *Standard* Rs. 4½ per share against Rs. 5½; and *Union* Rs. 7½ per share against Rs. 9.

* * * * *

Commenting on the splendid progress made by the *Sholapore Spinning & Weaving Company Limited* in 1941, I said that the directors were very considerate in regard to the payment of the dividend and that with the small-sized capital of the Company, it was possible to pay a higher dividend even with a slight improvement in earnings. The directors, however, seem to follow a conservative policy regarding the distribution of dividends and it appears that even for the payment of 30 percent out of the earnings for 1941 the consent of the debenture holders had to be secured. For the time being it is proposed that the dividend should be limited to a maximum of 30 percent. While the conditions in the industry were quite favourable for trading, it was however not all smooth sailing for the Sholapur Spinning and Weaving Company Limited. Considerable difficulties in regard to coal supplies and despatch of food supplies to labour also had to be satisfactorily solved. The following extract from the Chairman's speech will make interesting reading: "I shall refer to only two or three thorny problems which have continually agitated our minds. One such problem is the question of getting adequate and regular supplies of coal. Notwithstanding repeated representations to the authorities concerned, we did not get in proper time the requisite supply of coal. There was a time when the mills had stocks barely enough to meet three days' consumption. You may well imagine the anxiety of the management under the circumstancs. Most of the Bombay mills being electrically driven, had not to face these difficulties. Another difficulty that we hava to overcome is in respect of wagons. Owing to the shortage of wagons, bookings in respect of cloth and yarn had to be held up for long periods, say, for stretches of three or even five months, with the result, that large stocks accumulated at the mills for months together. Similarly for the same reason, we had to experience considerable difficulties in getting supplies of cotton and essential stores for the manufacture of goods."

* * * *

"Jessop and Company," is to pay a final dividend of 4 annas per share for the year ended October 1941. This dividend with the interim of 6 annas per share already paid, makes 12½ per cent for the whole year, the same as for 1939-40. The accounts are not yet available but we are sure that they will make interesting reading. On the basis of the latest dividend the shares afford the handsome yield of 6.25 per cent tax-free. In view of the fact that the Company is busy on war orders, the shares should be quoting very much higher.

* * * *

"British Ceylon Corporation" is doing very well and has been able to declare three times an interim dividend of 8 per cent on the ordinary shares for the year ended October 1942.

The boom in the Copra trade has been mainly responsible for the sharp increase in the earnings of the Company, and it

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, November 20.

AFTER earlier firmness rather quiet conditions have been noticeabie on the Calcutta Stock Exchange during the past week. There has been a perceptible decline in the volume of business but quotations have been fluctuating in narrow limits. The easier tone noticeable in the several sections during the past three days is mainly due to the anxiety of operators to await further developments in the war situation in North Africa and the reports regarding partial mobilisation in Spain. There is no suggestion of weakness, however, and the undertone in all the sections is steady. In to-day's session quotations have been fluctuating in narrow limits with not much of business passing.

Earlier in the week there was a definite broadening of interest and a substantial rise in prices was recorded by Alkali and Chemicals, Indian Cables and Dunlop Rubbers. Jute shares also were active on the strength of the hessian market. Closing quotations are lower than the highest levels for the week.

There has been no change in the giltedged securities section and no important movements in the quotations are to be reported. Money conditions have continued easy though there has been a rise in the treasury bills rate during the last two weeks. 3½ per cent. Paper is unchanged at Rs. 94. Among terminable loans there were buyers at the quoted levels for the short and medium-dated loans. No large increase in the actual amount of business is, however, to be reported. 3½ per cent. 1947/50 were noted at Rs. 103-6, 4 per cent. 1960/70 at Rs. 110, 4½ per cent. 1955/60 at Rs. 114 and 5 per cent. 1945/55 at Rs. 109. 3 per cent. 1946 were Rs. 102-9 and 3 per cent. 1949/52 Rs. 100/3. No transactions have been recorded in provincial loans.

Business in public bodies debentures has not been possible freely owing to the paucity of offerings. In Thursday's session 5 per cent. 1956/86 *Calcutta Port Trust* debentures were dealt in at Rs. 111, 5 per cent 1916/46 debentures of the same body at Rs. 106-14 and 6 per cent. *Calcutta Municipal* debentures at Rs. 120. 3¼ per cent. *Howrah Bridge* debentures were crossed at Rs. 96-2. Among industrial debentures, 5½ per cent. *Belsund* debentures were done at Rs. 100-8 and 5½ per cent. *Dalmia Cement* debentures at Rs. 104-8.

No important rise in prices has been recorded in the Cotton section. *Cawnpore Textiles* were unchanged at Rs. 15-6 while *Dunbar* were Rs. 282-8 and *Elgin* Rs. 42-9. *Kesoram* were noted at Rs. 13-12 and *New Victoria* at Rs. 9-4.

In the Coal section earlier in the week greater interest was shown in the shares of Central Provinces collieries. *Amalgamated* were Rs. 30 and *Bokaro and Ramgur* Rs. 18-6. *Bengal* were unchanged at Rs. 391 while *Burrakur* were higher at Rs. 14-4 and *New Beerbhoom* at Rs. 16-12. *Equitable* were Rs. 33-13 and *West Jamuria* Rs. 30-2.

In the Jute section firmer conditions were noticeable earlier in the week on the publication of encouraging earnings figures by the important companies. *Howrah* were noted as high as Rs. 58. *Adamjee* were Rs. 26-9, *Agarpara* Rs. 23-10, *Anglo-India* Rs. 368, *Bally* Rs. 278, *Dalhousie* Rs. 231-8, *Gourepore* Rs. 738 and *Hukumchand* Rs. 17-3. *National* were a point higher at Rs. 25 and *Nuddea* at Rs. 74-8.

In the Engineering section, Indian Irons and Steel Corporations were noted at Rs. 32-12 and Rs. 22-6 respectively earlier in the week. Towards the close quotations are lower at Rs. 32 and Rs. 22 respectively. *Burn & Co.* were Rs. 366, *Indian Malleable Castings* ordinaries at Rs. 8-2, *Jessop* at Rs. 20-4, *National Iron and Steel* at Rs. 14 cum-dividend and *Marshalls* at Rs. 4-3.

Sugar shares have been uninteresting. *Carew & Co.* were noted at Rs. 16-8. *Buland* were Rs. 36, *Cawnpore* Rs. 28, and *New Savan* Rs. 14-4. *Murree Brewery* were Rs. 20-12 and *South Behar* Rs. 20-1.

Tea shares continue to be in good demand but sellers are scarce. *Banarhat* were sharply higher at Rs. 547. *Dimakusi* were Rs. 32 and *Hasimara* Rs. 46-4. *Hantapara* were noted at Rs. 417-8 and *Moheema* at par. *Killcott* changed hands at Rs. 60-8 and *New Samanbagh* at Rs. 29-10.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* were noted at Rs. 3-6 and Rs. 2-9 respectively. *B.I.C.* were very firm at Rs. 6-2. *British Ceylon Corporation* have been noted higher at Rs. 12 cum-dividend. *Dunlop Rubber* recorded a sudden rise to Rs. 50 but some selling at the higher levels has brought down the quotation to Rs. 47-8. *Indian Rubber Manufacturers* were one and a half points higher at Rs. 29-8. *Indian Cable* were Rs. 26-12 and *National Insulated Cables* Rs. 12-6. *Aluminium Corporation* were Rs. 12-12 and *New India Investment* Rs. 65.

Transactions in first class preference shares have not been on a large scale. *Cheviot* were Rs. 151, *Fort Gloster* Rs. 161 and *Hukumchand* Rs. 151. *Lawrence* were Rs. 141 and *Soorah* Rs. 128. *Burn & Co.,* six per cent preferences were Rs. 139, *Kumardhubi Engineering* Rs. 157. Steel *Corporation* were Rs. 114-8. *Titaghur Paper* Second preferences Rs. 109 and First preferences Rs. 196.

(Half-yearly meeting, 23rd November, 1942 at 3-10 p.m.)

Audited accounts for the half-year ended 30th September, 1942:—

	Rs.	A.	P.
After writing off for Depreciation Rs. 1,00,000, the accounts show a profit of	5,28,960	6	11
To which has to be added the balance brought forward from the last account, namely ..	1,05,180	15	10
Giving a total of	6,34,141	6	9

	Rs.	A.	P.	
From this is deducted the amount set aside as a Reserve for Taxation	3,60,000	0	0	
And as provision in respect of Deposits under Section 10(1) of the Finance Act 1942 ..	1,00,000	0	0	4,60,000 0 0
Leaving a balance for disposal of				1,74,141 6 9
The directors recommend that this should be dealt with as follows:—				
To paying the dividend on the Preference shares for the half-year ended 30th September, 1942 at Rs. 3-8 per share (i.e. 7 per cent per annum), free of income-tax				35,000 0 0
To pay a dividend on the Ordinary shares at Rs. 5 per share (i.e. 10 per cent per annum), free of income-tax				70,000 0 0
To carry forward				1,74,141 6 9

As the result of a conference in Delhi with the Government of India, the Committee of the Indian Jute Mills Association recommend that with effect from May 18th, the working time should be reduced from 60 to 54 hours per week with 10 per cent of the complement of looms sealed.

The labour position has become more settled and further allowances to all mill employees have been made to meet the increased cost of living.

The U.S.A. consumption of hessians during the period under review has declined to a level which is very much below normal and stocks in Calcutta have consequently accumulated. A sustained demand, however, has existed for sacking goods chiefly on account of Australian, South African and Indian requirements, mills now being well booked in this section for some time ahead.

Military priority inevitably creates difficulties in the shipment of manufactures to overseas markets or the transport of raw jute from upcountry, and this important factor must be kept in view when considering future prospects.

Managing Agents.—Messrs. Kettlewell Bullen & Co., Ld.

Authorised, Issued and Subscribed Capital—Rs. 24,00,000 *in* 14,000 *Ordy. and* 10,000 7 *per cent Cum. Pref., both of Rs.* 100 *each, fully paid-up.*

Synopsis of the balance sheet as at 30th September, 1942:—

Dividend % ..	17 6/7	10 5/7	4¼	Nil
Carry forward ..	10,707	6,833	8,834—1,08,015*	

*This loss was written off during reduction of Capital of the Company.

Audited accounts for the year ended 30th April, 1942:—

The Company has made a net profit of Rs. 85,123-9-5 for the year after allowing for depreciation and other incidental charges. Adding Rs. 6,833-11-0 brought forward from last year the total amount of the net profit to the credit of the Profit and Loss Account is Rs. 91,957-4-5. Out of this, the directors recommend setting apart of a sum of Rs. 40,000 as reserve for income-tax etc. After deducting the said amount a sum of Rs. 51,957-4-5 is available for distribution and they recommend that a dividend at the rate of Re. 0-10-0 per share be paid. This will absorb Rs. 31,250 leaving a balance of Rs. 20,707-4-5. Out of this they propose that a sum of Rs. 10,000 be transferred to the Reserve fund and subject to what is stated below the balance of Rs. 10,707-4-5 be carried forward according to the audited accounts.

This year the sales amounted to Rs. 11,52,232-5-6 as against Rs. 5,09,282-10-0 during the corresponding period of the last year. The directors consider the result quite satisfactory. The activities of the Company have been greatly expanded and the figures of sales have risen by leaps and bounds. As reported last year, the directors have made considerable progress in handling big Government orders for war supplies and it is a matter of great satisfaction that the factory has been kept quite busy.

Managing Agents.—Messrs. D. Khaitan & Sons. Ld.

*Authorised, Issued, Subscribed and Paid-up Capital—*Rs. 1,75,000 *in* 50,000 *shares of Rs.* 3½ *each, fully paid-up.*

(*Continued from page* 849).

looks as if the present level of earnings will be maintained for the duration of the war. In view of the sound financial position of the Company the shares have scope for further appreciation.

* * * *

The giltedged securities section has been rather uninteresting and quotations have remained unchanged for several weeks in succession. With the boom in bullion prices one could not, however, have expected any improvement in values for giltedged securities, but with the arrest in the upward movement in prices for the precious metals, greater attention should have been paid to giltedged. There is plenty of money seeking investment, but the tendency of investors is to put in money more in short-term obligations than in permanent ones. There is a complaint that the Reserve Bank has been standing in the way of any substantial improvement in prices for giltedged as at every rise there has been persistent selling of 3½ per cent 1963-65. Readers perhaps will remember that we remarked several weeks ago that the addition of a large parcel of 1963-65 to the investment portfolio of the Reserve Bank was not quite advantageous as the tendency would be to liquidate one's holdings at every rise and it is precisely this tendency that has been standing in the way of any sustained improvement in values.

WORLD OF INDIAN FINANCE

Friday evening.

From the point of view of the money market, the current week is a replica of the last. The same glut in short credits, with interbank call money quoting nominally at ½ per cent in Calcutta and ¼ per cent in Bombay; and the same unwarranted rise in the treasury bill discount rate. This is the third week during which the market is being asked to put up Rs. 10 crores for tender bills; and, during each of these weeks, a fairly substantial rise in the average rate of accepted treasury bills has been registered. On November 3, when the amount of tender bills on offer was Rs. 8 crores, the average discount rate was annas nine per cent per annum. From November 10, the weekly offer was raised to Rs. 10 crores. And the consequence is a rise in the rate to annas ten and pies four per cent on November 10; annas twelve on November 17; and annas thirteen and pies four on November 24. It is true that there has been some decline in the deposits maintained by scheduled banks with the Reserve Bank; but, at over Rs. 60 crores, the deposits indicate an extremely comfortable cash position for banks. In relation to this superabundant surplus cash resources, banks should be eager to avail themselves to the full of the welcome opportunity provided by the expansion in treasury bills. In ordinary circumstances, this should have led to competitive rates. On the other hand, there has been a stepping-up of the discount rate week after week. Banks, for their part, find ample scope for self-interest by quoting rates increasingly favourable to themselves. This process will go on until the Government vouchsafe some gesture which will make it clear to bankers that no further increase in rate will be allowed. Such a gesture is more than overdue. And the simple form which this gesture must take is rejection of unsuitable tenders. The offer for next week remains unchanged at Rs. 10 crores. The Madras Government are also coming on the market for Rs. 50 lakhs of three months treasury bills on December 4.

The Reserve Bank returns for the week ended November 20 have not been received up to the time of writing. We have, therefore, only the Imperial Bank return for comment. Deposits have recorded quite a substantial advance to Rs. 156.37 crores. Advances declined from Rs. 25.30 crores to Rs. 24.56 crores. As a result, in spite of investments showing an increase from Rs. 103.66 crores to Rs. 105.49 crores, cash is substantially higher at Rs. 35.97 crores as against Rs. 35.02 crores.

In recent weeks, we have been drawing pointed attention to developments connected with silver. That Indian commercial opinion is seriously concerned by these grave developments, is shown by a weighty and knowledgeable memorandum submitted to the Government by the Federated Chambers of Commerce. An important point made out in this memorandum is that, with the fall of Malaya, Dutch East Indies, Burma and other countries in the Far East, and their occupation by the Japanese, some of the metals which are essential for plane manufacture and other war industries are no longer available in sufficient quantities for the use of the Allied Nations. This situation has necessitated the adoption of measures for the conservation and purchase of other suitable metals which could be utilised as substitutes for copper, zinc and lead in war industries. One of such measures was the embargo put by the Government of the Dominion of Canada on the export of silver, thereby restricting all stocks of Canadian silver for Canadian war industries. For the same object, the Government of the United States of America revised their agreement with the Government of Mexico with regard to the purchase price of the Mexican-mined silver. The price which was fixed in December 1941 was 35 3/8 cents per ounce for Mexican silver. The new agreement taking effect from August 31, 1942 increases the price to 45 cents per ounce. By this means, the U.S. Government not only hope to secure all the available silver from the Mexican mines but also of stimulating greater production of lead with which silver is found and extracted from Mexican mines. Thus, in this war, a special use has been found for silver with regard to war industries. Moreover, there is always increased demand for silver during any war. What happened in the last war was that, while there was a great shortage of supply between 1914 and 1918, the average mine production of silver in the world between 1914 and 1917 being 178,075,000 fine ounces per year as compared with 228,552,000 fine ounces, being the average of the four years 1910-1913, the world's demand for silver was specially keen, particularly for coinage. The coinage of the British Empire, for example, absorbed nearly 108 million fine oz. of silver in the years 1915-18 as against 30.5 million fine oz. in the years 1910-1913. There were similar increases in the silver coinages of other countries. We have, therefore, two factors to take note of in this war in regard to silver. There is, firstly, the increased demand for silver which is usual to all wars; there is, secondly, the increased demand on account of the strategic status which silver has come to occupy in the weapons and implements used in this war.

In such circumstances, one would have thought that the Government of India would have completely withdrawn from London as a seller of silver. Firstly, there is no point in continuing to sell

TREASURY BILLS

India

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months Government of India Treasury Bills were opened on Tuesday, November 24, 1942. Total amount offered was Rs. 15,85,50,000 (Rupees fifteen crores eighty-five lakhs fifty thousand). Tenders at Rs. 99-12-9 % and above were accepted in full and those at Rs. 99-12-6 % were allotted approximately 46%. Lower tenders were were rejected. Total amount accepted was Rs. 10 crores, the average rate of accepted tenders being Re. 0-13-4% (Rupees nil annas thirteen and pies four % per annum).

Tenders for Rs. 10,00,00,000 (Rupees ten crores) of three months' Government of India Treasury Bills will be received on Tuesday, December 1, 1942 in Bombay up to 11 a.m. (S. T.) and up to the close of business on Monday, November 30, 1942 at other Centres. Successful tenderers should make payment on Friday, December 4, 1942. Other conditions are as usual.

During the week ended November 20, 1942 Government of India Treasury Bills of Rs. 12,81,00,000 (Rupees twelve crores eighty-one lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

(Continued from previous page)

silver now when every consideration points to a tremendous increase in the price in the near future. Secondly, there is great demand for silver within India; and the price has gone to over Rs. 100. When there is so much demand for the white metal in India, it is inexcusable that India's stocks of silver in London are being sold. Thirdly, it becomes more than folly when the silver that is being sold in London is sold at an unchanged price of 23½d. per oz. India is thus being asked to make a wanton gift to the buyers whoever they are. If these buyers are the British Government, there is every necessity for disclosure of full details about these transactions. There is already great suspicion in the public mind that important financial transactions are being put through in a way that India's interests are not adequately safeguarded. The public are entitled to get full and frank answers for the following questions:

Is there any agreement between the Indian Government and the British Government with regard to the sale of the Government of India's stocks of silver in London?

What are the terms and conditions of this agreement?

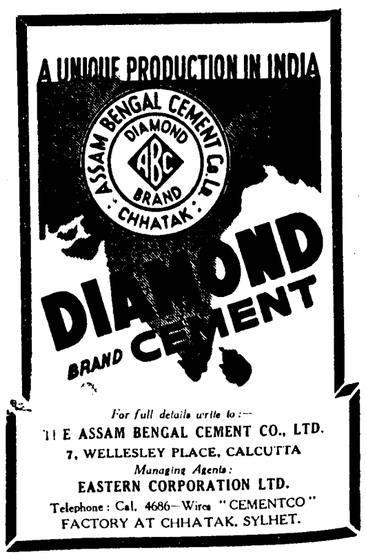
How long has this agreement been operating?

Does this agreement envisage sales of silver at the unchanged rate of 23½d. per oz., irrespective of what the price of silver may be in New York or in India?

How much silver has so far been sold and at what price?

There are various other aspects of this matter which require further elucidation; and this section is hardly appropriate for such an elaborate treatment Suffice it to say that any delay or hesitation on the part of the Government to give clear answers in regard to the questions raised about the silver policy will have the effect of, not accentuating, but confirming suspicions in the public mind.

The exchange market continues to be very steady at unchanged rates. Business has been dull.



Money is easy with interbank call quoted ½ per cent. Rates for firms' fixed deposits remain unchanged.

Banks are sellers of T.T. at 1s 5 31/32d., for London Ready to six months forward. Banks have been buyers of three months D. A. bills on London at 1s 6 9/32d., and four months bills at 1s 6 11/32d.

Banks are buyers of T.T. New York Ready at Rs. 325.

Banks are buyers of T.T. New York Ready at Rs. 332 3/4.

Interbank call money remains at ½ per cent all lenders.

Such news as has come from the front has helped giltedged in London rather than industrials. The London markets still retain buoyancy and every day the cable says the stock exchange was quietly firm. In New York, U.S. Steel is dull but other leading Industrials are going up. The news that there was no autumnal recession, but a real pick-up, which sent up the Federal Reserve Bank index for industrial activity further, has naturally helped sentiment on Wall Street as the opening is called firm for most days. The U.S. investor must be in the right mood for the Treasury offering. Mr. Morgenthau has said recently that in December the Treasury expects to raise 9 billions by borrowing, a sum greatly in excess of the biggest Liberty Loan launched. The need to borrow springs from the rise in war expenditure. Not 56 billions as originally anticipated, but 60 billions has been spent and that within eleven months of war. The U.S. outlay is truly formidable. The war will take more money as supplies to the Allies increase. But that makes for more employment and the U.S.A. in topping schedules reduces the duration of the war. The Administration has received more powers, though not to raise taxes. The debt must be growing but the States and cities are not rivals. It is not hard to link Mr. Morgenthau's announcement of the biggest loan ever with the Bank rate reduction. That falls into its due place. It is not known at what rate the Treasury is going to borrow. Mr. Roosevelt's advisers will float perhaps a medium-term loan at 2 percent or so because the short-term borrowing is conducted at about ¼ percent as in the past. Anyway, money conditions in New York make for success. The average yield on first-class bonds is below 3 percent, and short-term loans of the Treasury at 1 and 1½ percent have always found ready takers. If post office saving banks deposits have not grown rapidly in 1942 and savings deposits are lower than in 1941 the commercial banks held over 70 billions at the end of last year and they must have added to resources because employment and production have increased. The U.S.A. is still reporting additions to plane output and shipping. That is good when private spending has been checked by rationing.

The fact that war expenditure exceeds estimate is not surprising as prices in 1942 were going up when the President was asking for powers to freeze wages and prices. The U.S.A.'s foreign assets can also be drawn upon and the fact that no changes occurred as between December and June in regard to foreign assets cannot be cited to show they cannot be touched. The main surprise is that lease-lend has not reduced the U.S. holding of gold or silver. They should be over 27 billions at present so that the note issue is much lower than the reserve held by the U.S. Government. Devaluation by the President has not affected the dollar's status at all. The measures adopted to push down grain prices by buying Canadian feed for U.S. cattle, show how the antiinflation programme is being worked out. If prices are curbed, borrowing will be easier, and if the new Congress is not bucking, as feared, the U.S. people will have no doubt to the value of investing in war bonds or other new issues.

The U.S.A. has reported a big success. Admiral Robert has obliged the U.S.A. by breaking away from Vichy. French Guiana, too, comes within the scope of the agreement. The report that French gold has been taken over has been denied, but it is easy to see that the currency in Martinique to-day is sounder than the Vichy currency. The exodus of Frenchmen referred to in a Lisbon message is proof of the diffidence prevailing in France. Laval has got to make good, and he is faced with rebellion in West Africa. The loss of the gold sent out in 1940 will make Vichy's currency a byword. It has borrowed steadily from the Bank of France to pay the Nazis and the franc has depreciated in terms of the Reichsmark even. It is not known if Vichy closed the banks when Petain abdicated, but it would not be unusual. The break-up of the Empire has settled Laval's fate, and French West Africa cannot be held together by its former Governor-General, M. Brevie. The Allies have taken off the ban on trade with Madagascar. The island is like Syria, and it must be said that the Allies will gain thorough control of its resources. As for Dakar, it is not known if its support to Darlan is inspired by de Gaullist initiative in the four colonies of Fighting France which grouped as the French Congo adhered to the Allies in 1940. The eight colonies include a small enclave around Dakar. The white population is quite small and the native chiefs are powerful. Senegal alone has provided troops. The area of West Africa including the Sahara is nearly equal to India's but the population is hardly equal to that of an Indian province. The three things that France got were cotton, cocoa and groundnuts—things in demand in Germany as well. There was a loose federal tie between the seven provinces and Dakar. The West African territories had a separate note issue though the French currency and French weights and measures were compulsory. But for the native village industries there is nothing of note in West Africa.

The Belgian Congo has always had close relations and the gain to the Allies comes in the rubber that French Guinea and the Ivory Coast produce. It is quite likely that wild rubber than plantation rubber is exported. Rubber was exported in the past by the French Sudan which reported sisal plantations. The reported defection of Dakar will cripple Vichy rather than add much to Allied resources. By comparison with the Belgian Congo West Africa is poor and undeveloped. The U. K. imported little from French West Africa because its mineral resources are small; and groundnuts and castorseed can be had from India. Cable communication made Dakar on the Senegal important as shown by Lord Halifax's allusion to the narrowness of the South Atlantic between French West Africa and Brazil. The attitude of the mandated territories to Petain has not been indicated. Togoland and the French Cameroons are the share of what was secured from Germany in August 1914. Plantation industries make Togoland rich and iron deposits account for the native smelters. Tropical produce is of less interest than the establishment of British authority in territories that adjoin British West Africa.

The peculiar conditions in the bullion market are, apparently, at an end. The main changes in the fortnight make for the stability of gold and silver at lower levels. Report of an interview of Sir James Taylor with the Finance Member has not caused any flutter in the bullion market. But more importance will be attached to the expectation by Mr. Kaiser of no slump after the war. If it is good for the U.S.A. the assurance of full employment in all industries is good for the world. The plans for post-war world security depend on the maintenance of prosperity. Sir William Beveridge has asked for the Government's keeping all men at work. Readjustment for peace should not produce difficulty, and he has asked for the continuation of planning and control of enterprise by appropriate changes in the machinery of Government. Here is the first authoritative sanction for Government control. Employment, rather than export, is the goal and the Beveridge plan for social security must be as different from Mr. Lloyd George's as from Hitler's. The old Liberal Yellow Book of 1928 will be studied again and the Indian Government might do well to ponder over the advice to retain regulations. The Chancellor of the Exchequer wants control to continue; so does the Oxford-London economist. The financial mechanism will be unchanged. The social services will stand, if the Means Test has been modified. It is necessary to look at this advice in the light of what the National Debt will be after the war. The Government can expect no relief and Industry will receive none. This means, in short, that peace will make no difference to the taxpayer and India, too, must be reconciled to the duty of reconstruction through control. While the duty to keep people at work is stressed, nothing is said about trade recovery. Mr. Sumner Welles assures the world that plenty will be the motto, and economic justice the rule for nations. A new colonial policy is postulated, in the opinion of the *Times*, and the British investor in the East will wake up to the threat or promise of justice for the subject races. The implications for British enterprise in the East are not very reassuring. Instead of reviving automatically it will have to make many adjustments because the Chinese want a square

Three years of War Finance—XIII

To Sum up

With this article is concluded the series, begun more than three months ago, for examining the fortunes of India's national economy during the first three years of the present war. Each article, as our readers must have noted, was devoted to one particular sector or aspect of our economic life. Each article dealt with a certain body of relevant facts, mostly statistical figures. The temptation to go beyond the range of specific data into the less known or the unknown, to indulge in guesswork and surmise, was at every stage carefully resisted. The aim was to get together pictures of our economic life, which however scrappy or disconnected they may be, could be regarded as accurate photographs of what were focussed on. India's national finances during the war period, with the changes in her foreign balances and external debt, the budgets of the central and provincial governments, the fortunes of her vast system of State Railways, the vicissitudes of our foreign trade as seen in published figures, the expansion of industry and the movements of stocks and shares, industrial profits and agricultural income, all these have in turn been examined in the light of concrete data.

It remains to attempt to make a continuous movie of these disparate lantern slides. Tempting as is this task, and necessary too in a certain sense, it would be wrong to essay it in oversight of the difficulties involved or of the inevitable imperfections of the final result. But useful conclusions are, no doubt, possible, if it is remembered that the purpose of this synoptic review is not to have accurate quantitative estimates of the changes in the national economy, but to see how far the hopes and fears which a world war induces in us have been proved true by the actual experiences of these three years. It is necessary at this stage, when in all probability, we are entering the second half of the war period, to know whether our anticipations in regard to this war were based unduly on the experiences of the last war, whether the surprises sprung on us by this war have altogether outweighed the expectations that were in due course fulfilled and, lastly, whether our experiences and our record of the last three years at all encourage hopes in our ability to direct the fortunes of our national economy in what yet remains of the war period.

For our part, we find ourselves in the position in which we can pose the problem in these terms and face it frankly. For, when the war broke out, we answered with alacrity the call which we felt within ourselves to envisage the problems that would arise during the war period and the endeavour to set out the lines on which their solution should be attempted. We classified the problem under three different heads, namely, "money", "industry", and lastly, as a term of residual, rather than definitive significance, "economy". Under each head certain assumptions were made about the effects of the war on our national economy. Similarly, though to a lesser extent, assumptions were made about the responsiveness of the Government and other authorities to the call for utilising in the best manner possible the opportunities created by the war. The purpose of this review is to test the correctness of these assumptions in the light of the actual experiences of the last three years and to see how far the economic problems of the war period lend themselves to intelligent anticipation and for careful provision.

Needless to say, when the problems of war economy were first considered in these columns, the actual course which this war has taken could not be accurately anticipated. Who could have thought that practically the whole of Continental Europe would be under the German heel within a year and a half of the outbreak of war, Likewise, neither the war with Japan nor the surprisingly quick loss of Burma and Malaya could be anticipated. The direct effects of these reverses on the national economy could not be foreseen and provided for in our examination of the problems of war economy. Nevertheless, the fundamental assumption that the effect of the war, generally speaking, would be to enrich the country in different ways and to create new opportunities for industrial expansion and industrial development has not been falsified by actual experience. The view which we took on the outbreak of war is that, so far as our finances are concerned, our sterling balances would show a phenomenal increase, that our export trade would be more than maintained in spite of the loss of some of our foreign markets, that the agricultural masses would experience an increase in income, while in the sphere of industry, the old industries would have to expand and new ones would have to be established. We suggested, therefore, that our sterling balances should be utilised in the main for the reduction of our external debt, that the Government should look to the interests of our foreign trade and reduce as far as possible the hardships of shipping shortage, and provide facilities for the establishment of new industries. that our industrialists should aim at filling the gaps in our industrial structure and effect the expansion of output only with due consideration for the need for restriction during the post-war slump and lastly that the agricultural masses should learn to utilise their increased income for increasing their solvency and improving their capital equipment.

It is in the financial sphere that our forecasts have proved most true and our suggestions most apposite and effective. The story of the increase in our sterling balances and their utilisation for the reduction of our sterling debt is too familiar to call for recapitulation. But here, too, it is necessary to remember that the rate at which sterling balances are accumulated has far exceeded our most sanguine expectations. And for this, one has to thank the unforeseeable manner in which the war has developed. While, on the one hand, the war has brought about the loss of a number of our foreign markets, it has, on the other, increased the dependence of the Empire and the allied nations on this country, not only for the supply of raw materials, but also for a wide range of services which no other country is in an equally favourable position to render. The net result is that, while the value of our foreign trade is fairly well maintained, the Empire making up for the loss of our European and Far Eastern markets, what would be normally regarded as invisible trade has gone up and gets duly registered in the mounting figure of our sterling assets. These changes may be understood from the simple fact that after our sterling debt has been reduced by about £100 millions, our sterling balances now stand at the equivalent of Rs. 435 crores. That is, the problem of our sterling balances has far outgrown the dimensions of our foreign debt, that is, in the present position of our military expenditure and with the settlement with His Majesty's Government in this regard. It is quite possible that our sterling balances should be affected by adverse changes in our liabilities in this regard. Military expenditure and sterling balances are more closely related than one would be disposed to think. It is well, therefore,

to recognise that at this stage firstly, there is a threat to our sterling balances and secondly, that the utilisation of our sterling balances should be considered in other terms beside those of reducing or extinguishing our foreign indebtedness. This, however, is a problem which we must consider in a later issue.

For the present, it should suffice to note that in the purely financial sphere, the experiences of the first three years of the war afford good ground for feelings of gratification. The war may be said up to now to have given us a good start on the road that leads away from the position of a debtor country to that of a creditor country. And since no country can reduce its debts without coresponding income, we may be said to have tasted liberally of war profits. That in the conditions of soaring foreign balances, the money and giltedge markets are having healthy conditions and that the correctness of our forecast of a 3 percent war is proved to the hilt hardly needs saying.

It is in the sphere of industry and, even more, of the general economic life of the masses at large that the picture is more patchy, more contradictory and less helpful to the formation of impression, at once general and accurate. At every stage, in the first half of 1940, it was possible to hope for a political settlement and the establishment of national government both at the Centre and in the Provinces. With politics getting more and more into a muddle, it was too idle to hope for policies calculated to make the most of the opportunities for industrial development. Neither the Eastern Group Conference nor the Grady Mission resulted in the formulation of plans for development with any wide scope. When even the direct requirements of the war were not paid adequate and timely attention, when they called for expansion of industry in India, it is idle to expect that on questions like price control, the authorities would make an early start with policies conceived in the broad public interest. Nevertheless, as our previous articles in this series have shown, the expansion of the Indian industry has gone on, though new industries have been all too few. The loss of foreign markets and the shortage of shipping have forced on the jute industry a measure of restriction which ill accords with its buoyant outlook on the outbreak of war. But other industries like cotton textiles, iron and steel, cement, sugar, have profited from the fact that not only imports are little, but there is the increased demand on military account as also the need to supply neighbouring markets which have been cut off from their former sources of supply. The record of industrial profits during the last three years reflects these changes faithfully, that is, if regard be had to the fact that these industries have to meet the demands of the Supply Department at controlled rates. Though the bulk of these profits goes to the payment of taxes, what remains for the investor is sufficient to maintain share market activity, whenever the operators' psychology is not too violently affected by the developments in the various theatres of war.

As for the masses, we pointed out last week that nothing definite can be said. On the outbreak of war, we visualised the problems in regard to them as one of augmenting and conserving their profits and of ensuring their proper utilisation. To-day, however, at the end of the third year of the war, one cannot be quite certain whether the producers of foodstuffs and raw materials have had any war profits worth speaking of. The figures of foreign trade contain a clear suggestion of higher realisations for the reduced shipments of our export staples. But looking into the position, commodity by commodity, the picture is hazy and not too reassuring. Groundnut has neither a foreign market nor indigenous consumption. Jute had a bright first year and then fell into comparatively evil days. Cotton has had a better lot, but the need for restriction is inescapable. Foodstuffs command high prices; but what with price control and its vagaries and inadequacies, what with lack of transport and the threats of civil disorder hurled at holders, it is doubtful if the cultivating classes have contrived to gain much. It is certain, on the other hand, that costs of living have gone up and are going up and that only the industrial workers are able to secure compensatory allowances. The masses can have benefited only to the extent that more labour is called for in industry, in the execution of contracts brought about by the war and in the provision of the needs of daily life which the presence of large numbers of troops and salaried men sets up in the metropolitan cities and the urban areas. Whether the masses as such have benefited or not, their savings are not such as to call for special attention except in respect of safeguards for the costs of living. Altogether, the picture of our national economy at the end of three years of war is a hazy and patchy one, brilliant in odd corners (e.g. finance) and sombre over the larger part, with a few bright spots, no doubt, but overcast by clouds in some uncanny way. But the experiences are not such as to weaken one's faith that, given vigilance, energy and goodwill, the problems of the war period can be anticipated and adequately provided for in advance.

INDUSTRIES AND INVESTORS

Allied operations in Africa have not been rounded off with the early capture of Tunis. To that extent, initial optimism has suffered, though it should soon revive with Marshal Smuts' assurance that things are going with a swing. When we made a reference to the reassuring conditions in evidence in September in stock markets it was with a view to combat doubt and fear. Today it is wholly unnecessary to point to the silver lining that is larger than the cloud. There are many factors besides Spanish neutrality to encourage hope and restore faith. The Royal Navy is at work in the Mediterranean and Russian forces have more than turned the balance at Stalingrad. It is more than the turn of the tide. The louder talk of peace aims and reconstruction is indeed a guide to the revival of the belief that India is wholly secure because she is adequately protected. The thaw in the markets has gone far. The report that U. S. industrial activity mounted further in October proves how fast the Arsenal is functioning. From America comes an unusual estimate of postwar prospects. Mr. Kaiser, the Oregon shipbuilder looks to full employment for twenty years and does not picture a post-war

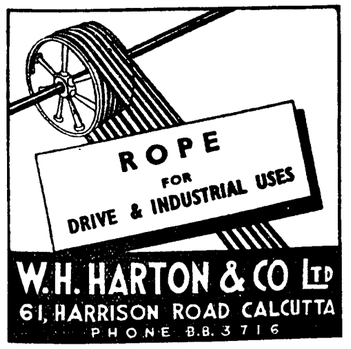
slump. If the U.S.A. has acquired already full immunity, that immunity must extend to India where, too, the burden of E.P.T. is to be lightened by a refund.



It is against this cheerful background that the investor in India must estimate the prospects for all sound enterprises. If the new industries have not taken root as expected, company reports appearing this year sustain the faith that war promotes prosperity. The jute and hessian markets are again giving a lead to the more wary investors. The sudden revival in jute shares defeats the belief that the mills had no bright future. War orders may not amount to much but the investor has glimpsed the future, with a shock it may be, but without a trace of doubt. There are no exact or up-to-date figures to buttress the theory that all industries are shaping well, and must shape, better. But it is enough to refer here to the sudden broadening of investment enquiry for tea shares. The higher yield obtainable on tea shares has naturally deflected interest and a sellers' market is the immediate consequence of a strong rise. The application of import control for over two years in ever-extending scope has naturally destroyed doubt as to the commanding position obtained by Indian manufactures. In the field of textiles, both cotton and woollen, the exports greatly exceed the imports. The seaborne trade returns, by indicating the fall in imports and the expansion of manufactured exports generally, produce the impression that all is well with Indian industry.

The broad-based advance in Calcutta share prices that came after the Puja holidays corresponds to the earlier boom in Madras and the late improvement in Bombay. The second revival leaves no doubt as to the investor's confident mood and the broker's activity. The deadlock in India has ceased to be a market factor after the authorities had grappled with the chaos. There is no emergency budget to nip a boom in the bud, and after three years of war, stock markets are wholly in a cheerful frame of mind. The advance in sugar, and brewery shares is wholly suggestive. The few, but good shares, are being bought as much on prospects as on past performance, and share prices generally flatter the yield. In the case of chemicals as of pharmaceuticals again, the shares of the few companies in production stand at a high premium, and as for paper, the investors' present passion recalls all the eagerness that followed the outbreak of the Russo-Finnish war.

It is difficult to speak of the trend of profits in India for industry as a whole but it is a fair guess, that in groups other than plantation companies, it would be difficult for the holder of ordinary shares to get more than 5 percent. A reduced yield on industrials has nothing against it. With the new defence borrowing of Government stabilised at 3 percent there should not be a margin of over 1 to 2 percent between gilt-edged securities and the active equities alike and the scaling up of quotations for preference shares and debentures generally, with the average yield nearer 4 than 5 percent, the share market is now fully attuned to cheap money for ever. The influence of foreign markets on the improvement noted in India may not be great at present, but some attention must be paid to the steady rise in British Industrials this year. If the Treasury guarantee is of help to Home Rails, the actual yield as against 1½ per cent on Consols helps also Home Industrials. In India it is only in the engineering group that opportunities for the investor to receive a return of more than 5 per cent on the outlay still remains. The firmness that characterised the textile and sugar groups, therefore, extends to the engineering group also. Better earnings and larger profits are still the rule; and once again, investors unmindful of market fluctuations, are finding their reward for sticking to Tatas and Indian Irons.

The war in Africa has been a more potent factor than fancied in all Indian markets. The export outlook for jute and jute manufactures is brighter with the absolute improvement in the Pacific and the mitigation of risks in the Atlantic. If jute has once again been sustained by hessian, is fair to say that there is no jute problem as believed in September. There is no need for exceptional measures and the languor of the bullion market in the face of a persistent rise in commodity prices, is not without its lesson. The Indian markets, as a whole, are buoyant because the average operator has overcome his fear of the future and is anxious to use idle resources. It is not surprising that new issue activity too has experienced a revival, and offers of shares in proved enterprises in recent weeks, create the impression that not a few opportunities come the way of the Indian investor at present. A more pronounced change cannot be expected, and the present strong interest in the few rubber and electrical equipment shares indicates how readily the more courageous are prepared to discount the future. If the railway and utility group lack the same impulse as other sections of the stock exchange the reason is self-evident. Time and again, the weekly surveys of the stock markets have dwelt on the ruling preference for equities; for continued support the investor and his advisers must be complimented. Though it is too soon to speak of the future, the guarantee of protection to new ventures like that of a concern manufacturing calcium carbide is a constant reminder that the future of any industry will not be prejudiced by any unexpected departure in fiscal policy. If planning has lost its appeal entrepreneurs are by no means idle. It is not surprising that the closest parallel to the present activity must be sought in the early months of war, when shares to buy and lock up were more numerous, and prices more tempting. If the same glamour does not appear to exist, it is opportune to remind investors that the outlook for many companies is actually improved by the loss of Burma and conditions at home demanding a larger outlay on the war.

If the taint of defeatism disappeared long ago, the revival of confidence is astounding. It is not easy to indicate the limited opportunities still available; but it is wholly permissible to suggest that the revival must cover local, as distinct from uncountry, shares. There is naturally a preference for shares full of dividend but it is arguable if holders will be tempted, even to realise profits; the strictly professional view may be different but investors should be in no hurry to part with sound holdings. Over a wide front, the market still looks like advancing, because it is assisted by auspicious signs in the banking and insurance fields. Nothing is more calculated to sustain the advance than the growth of deposits and the contraction of foreign trade. The increase in resources must strengthen the habit of investment, in and for, Indian Industry. If industrialisation has not supported original hopes, it has not destroyed as yet the faith that India can and must develop industry as a means to a fuller life for millions. If every industry has problems of its own, there is the certain assurance that investment is remunerative. The outlook for industry has been transformed in the fourth year, more than the first. The British export trade drive is not restricting opportunities, and the conservation of supplies, as in the case of paper, only emphasises the magnitude of the possibilities open to Indian enterprises and investors therein. The State may be an indifferent spectator but is an active sharer in profits at present. The progress of industry has altered once again the prospects for mining industries. In the past two weeks, the coal share market has come to life, not merely on the strength of railway tenders as before, and nothing deters the investor from assessing the merits of copper and manganese shares. It is hardly necessary to review the course of prices in Calcutta since the market reopened on October 25. There is everything to support the view that the present boom is no bash in the pan. The higher level of commodity prices, based perhaps on scarcity, is but one of many supports. The mild incidence of taxation is another. Soon there may be a scarcity of suitable investments as of everything else. That is not an uncommon view. There are assuredly more durable factors at work than the rationing applied to steel and rubber manufactures, as the majority of Indian investors will agree that self-sufficiency postulated by the war must promote the expansion of industry's earnings. The obvious conclusion to be derived from the figures that point to the steady rise in Indian cotton mills output, paper production, distilleries' production and of paint factories up to the end of 1941, to take a handful of representative industries benefited by the war, is that profits must be running at a high level in both old and growing industries. The cement and iron and steel production, no more than the year's coal output, is not published, but the consumption of power is still rising, and such figures as are available in relation to flour mills, sulphuric acid and other chemical plants, only strengthen the impression that the outlook for Indian companies is brighter than in February last when panic fostered undue realising. In ten months the markets have passed from despair to hope. The change is not one of market weather, measurable by the ordinary barometer of prices ruling. The courageous have already met with their reward, and those who lack it, must trust the future, for it is now certain that even the few unfortunate engineering companies have more than sloughed off their debit balances, and can, in most cases, pay good dividends. The accent is no longer on caution but on the selection of risks. There may be no risks but to those who still ask for an investment policy, the only intelligible answer is to buy and keep good, ordinary shares—the two adjectives being operative in the determination of values at all times.

Banking Expansion

In the U.S.A. and Britain the first half of 1942 witnessed no increase in bank deposits. The peak in regard to deposits was apparently passed in December 1941 and what has been noted in neutral Sweden or Switzerland in regard to additional resources at the disposal of banks does not hold good of Britain where commercial banks' deposits, to judge by the figures available up to June 1942 have been falling. In a sense this trend may support the conclusion that war bonds are selling better than ever and money goes straight into Government loans. But the slackening on the growth of deposits may also be due to the attainment of full production by most industries. The influence of the rising cost of living this year cannot be large, as compared with accelerated saving for the war. In the last year, there was no substantial difference between major banking trends in India and Britain. The fall in deposits recorded in the first half of 1942 suggests that clearing banks, while preserving the familiar cash ratio, are reducing their advances without decreasing their investments. The total deposits at June end stood at £3,263 million, much higher than a year ago, but far below the December peak. The explanation advanced in this connection is the increased use of tax reserve certificates. The certificates made their appearance only in December, but have established themselves swiftly, as in the U.S.A. If they lack negotiability, they provide a return, and can be bought for fairly small sums by individuals as well as companies which have freely put money into tax reserve certificates.

The inflow of money into the Treasury, instead of the banks, must have been assisted by the larger sale of savings certificates. In the first half of 1942, the Treasury reduced its short-term borrowing, but the percentage of bills was better than in last June, though the total invested in six months' treasury deposits up to June like the proportion to total assets was lower than in 1941. The original feature of wartime in regard to falling trade demand for funds persists in Britain as well as India. Scheduled banks in India with over Rs. 325 crores in current deposits alone, reported that in the week ended November 6, the total advances in India amounted to Rs. 80.96 crores while banks' balances with the Reserve Bank totalled Rs. 66.85 crores. Bankers' deposits with the Bank of England in the first half of 1942 were usually over 120 million to judge by the weekly figures. To judge by the clearing banks' figures alone, the money market remained easy, and the banks were ready takers of treasury bills and treasury deposits every week. In war the banks hardly change their rate of distribution to their shareholders even if profis are affected by the fall in advances, which fall, it must be added, does not affect the finance made available to those firms now doing war work. The steady fall in advances and the increase in investments have characterised banking activity in wartime in India as well as in Britain. But in India savings still go into banks rather than defence loans or advance payments for taxes and the banks have as yet no outlet equal to Treasury deposit receipts, (the total at June end was £542 millions) to take off the pressure of their own swelling deposits.

Industry in Madras

Industrial progress in Madras was slow and limited to judge by the annual report of the Department of Industries for 1940-41. The visions of indusrial development conjured up by hydro-electric development have not materialised and one of the three major enterprises referred to—a paper mill at Rajahmundry has failed to carry on continuously. The erection of a hydrogeneration plant at Mettur and another at Madras, however, is symptomatic of the progress made under difficult conditions. It is realised that the difficulty of obtaining plant and equipment and also technologists must restrict the establishment of new and specialised industries. The most striking feature is the addition of three more to the glass factories and the creation of factories producing enameled hollowware, glue and packing paper. Porcelain manufacture has been attempted by a firm that produces mosaic tiles. The manufacture of small motors etc. has also been reported from Madras; and brushware was produced in larger quantities by the three small factories of the Province. The most satisfactory feature is the expansion noted under pharmaceuticals. A factory to make tablets has been started and the only departure in the sugar field to date is the manufacture of golden syrup by Messrs. Parry & Co. The Province however has been a pioneer in the use of producer-gas plant, and in the year reviewed by Mr. Green in his report, over 500 plants were made and fitted by Simpson and Company. The report expected an assured increase in the use of charcoal-gas as fuel.

Madras industrialists were known to be interested in the reed available in Tinnevelly forests as suited for pulp and paper manufacture and a cotton mill in the Ceded Districts was projected. The 56 mills of South India make much cloth for war and peace. Handwoven blankets were sought from the scattered workers in the villages as also sheepskins for the making of leather jerkins. The demand for heavy leather increased and big orders were placed. The sawmills encountered a keen demand for timber and were working two shifts continuously. The demand for Malabar timber was increasing even before 1941. But industrial resources were by no means strained and it remained a grievance with Madras that the Province did not get its full or proper share of Supply orders. Of State aid to industry there is much in the report. Wattle bark was held in reserve by the Industries Department to help the tanning industry, but subsequently some part of the stock was diverted to Cawnpore. Though prospects for the makers of chemicals improved, the production of acid was below capacity. The cottage match industry in Madras obtained its share of the export demand; and production too is known to have increased. The soap industry benefited from the fall in imports, but small factories in Madras had their own difficulties. The Calicut Soap Institute was the subject of a special G.O. ordering its continuance. Despite a fall in the profit of the Soap Institute it reported progress and launched on the manufacture of cosmetics, although in small quantities.

Nuts from Baluchistan

In the upland valleys of Baluchistan, the almond flourishes and two officers of the Agricultural Department there describe its culture in **Indian Farming.** It is only in a few favoured distrcts that the almond grows well. For confectionery and other purposes the almond is supreme, and at present Afghanistan provides much of India's requirements. The best type sells for Rs. 40 and more per maund. The almond like the peach requires a congenial climate. Its great enemy is early frost, and growers in Baluchistan resort to irrigation to reduce the danger. The tree requires a deep, fertile and well-drained soil. If water can be had lucerne is cultivated in orchards to improve the absorption. Manuring like drainage does not receive much attention, though most growers recognise that proper irrigation is needed in the summer. As in Afghanistan, seedling stock is used for planting except in the case of a few choice varieties. Growers are convinced that the secret of successful growing is to plant different types so that pollination is secured. In Iran too, much seedling stock is used; and present practice has everything in its favour. Three types of nuts enter into

commerce, the sweet hard-shelled, the bitter hard-shelled and the paper-shelled or romali which however shows a relatively small yield per tree. New types have since been imported from California where the almond does well like all fruits. The average yield in California however is about 338 lbs. per acre, far below that reached in Baluchistan. The average commercial yield is said to be 16 lbs. per tree; and an acre can support 130 trees. In the matter of income, the Baluchistan grower is well-placed; and it is agreed that extension of orchards is desirable. Two development schemes in the Loralai District are meant to show the grower what he can do by himself. Advances are made and advice is given to the grower. The two groves taken in hand by the Department are meant to show incidentally that the income will be enough to pay back taccavi loans in ten years, after which the owner is free of debt but not guidance. Almond-trees are fairly long-lived, and if pests are controlled, the dry climate of Baluchistan, combined with organic manure, should help greatly. As a very handsome tree in blossom, quite early in the year, the almond is appreciated by others besides the Japanese. Irrigation necessarily improves the yield, and the present methods of raising the bitter almond and using only a few choice budded types are approved on the basis of observations in Afghanistan and Iran. The two development schemes are largely an extension of work carried out at the Fruit Experiment Station, Quetta and are designed to extend the culture of almonds. India is on balance a heavy importer of both fruit and nuts; and Baluchistan is one of the few Provinces that can satisfy India's requirements. Palestine, Spain and other exporters have sent limited supplies to India which has long got overland supplies. Transport difficulties can only be temporary, and the prospects for the Baluchistan grower must be called more than fair as present prices are fully remunerative. The almond, if robust, is often attacked by many pests. Fish oil sprays are recommended, but against the almond scale, lime sulphur wash alone is effective.

New Rulers

Laval's first broadcast contained a reference to Communism as still the enemy, and it was distinctive only in its mention of talks with Hitler and the Marshal supporting Laval's own conviction that French civilisation must be saved from Bolshevism. It is clearly a stale device, for the Communists have faded out in France after their support of the capitulation. The parliamentary regime ended in 1940 and all the parties were extinguished with the Chambers. The new Head of the French State has, of course, his former faith in collaboration whereas Darlan is now clearly committed to a break with the Nazis. After the Italian entry into Nice, and the Nazi capture of Corsica, the armistice is at an end, and Petain's abdication was in reality enforced by the end of the armistice. It is not known if Vichy is still liable for occupation costs. Its territory in the Western Hemisphere has been detached by patient negotiations. Admiral Robert is not subordinate to Laval, de Gaulle or Darlan. He has issued no declaration of independence, but the Navy and gold alike are in his charge. French Guiana, too, is under

Your

his control, and the State Department thinks of the agreement as something better than the temporary expedient adopted in North Africa. If Laval and Brevie are supreme, as Petain has made his exit, only a German defeat can lead to the ejectment of Laval whom Petain dismissed in 1940 only to reinstate him. If Laval has triumphed as against Admiral Darlan, it is far from certain that the fleet at Toulon is ready to obey him. The garrisons in Africa for the most part have thrown off the yoke and the Italian fleet is perhaps watching the French instead of fighting the English navy in the Mediterranean. To that extent, the French fleet is really helping the Allies at present. The permanent treaty spoken of last week has not been concluded by Laval who may think of the unfulfilled hopes of December 1938. Ribbentrop cannot arrange a conference of his allies as he did last year to meet the new ally. If Petain has not declined to fight the Allies he has done what M. Lebwon did two years ago—yielded to the pro-German clique and salvaged his reputation. The second surrender of Philippe Henri Petain is not so dramatic as the first, but it came significantly enough after the loss of the empire that put Vichy among the capitals of Europe. If it is assumed that an obscure blackmailer can enjoy his first consulate entirely by German countenance, it must be also said that Laval's position is not improved by the reported incarceration of Weygand. The proposed transfer of government to Paris can be no reward and what will happen to France this winter when food supplies by sea will cease is perhaps a question as much for the Allies as for the Germans. France is no longer protected by the theory of neutrality and the declaration of war has not saved Laval from Mussolini's claim for Nice, Savoy and Corsica in addition to Tunis where the Arabs demonstrated in favour of Daladier in 1939 but are not likely to do anything for anybody when operations are in progress. By putting up Laval in the place of Petain, the Germans have exposed themselves to the charge that there is nobody worth the name in France who supports them, though it might be said that Petain chose Laval for his own position.

U.S. Capital Abroad

The U.S.A. has been and is a large investor in Latin America and Canada. The Good Neighbour doctrine is based largely on economics and if Colombia has been for forty years at peace, it is because Panama was swiftly detached. The Panama Canal is clearly the major factor in U.S. trade and investments abroad, but the links with Cuba and Porto Rico are also many and obvious. In an official analysis of U.S. overseas investments, quoted by a Bombay contemporary, it was noticed that 70 per cent of the U.S.A.'s investments at present are in Canada and Latin America. The Monroe Doctrine is more than a diplomatic convenience and the Havana declaration of July 1940 finds some support in the increase of U.S. investments between 1936 and 1940 in Central America, though the Mexican oil trouble reduced the total value of investments which had shrunk since 1929. The largest field for U.S. investment in the past has been Canada and Newfoundland. The total, namely, 2,100 millions out of 7,000 millions shows that President Roosevelt's voluntary guarantee in 1938 of Canada's integrity was dictated by economic as well as political considerations. As between 1929 and 1940, the total U.S. investments in Canada have increased and it is not only in the banana republics that U.S. capital is dominant to-day. In the Canadian paper and mineral enterprices, U.S. capital is prominent. The tabular analysis is interesting for showing how much the U.S.A. has lost. The value of U.S. investments in Japan was put in 1940 at 37.67 million dollars and the Philippines attracted over 90 millions of capital. The total value of investments in China then was put at 46 millions, a figure sadly diminished by the Sino-Japanese war like the capital value of U.S. assets in Japan. The total value of U.S. investments in India at the end of 1940 was put at over 48.77 million dollars. The investments were larger than in 1929 and must be in the new auto-assembly plants and the oil companies as also in the motor tyre and mill companies. The U.S. interests in oil in all Asiatic countries must be large. The expansion of Socony into Saudi Arabia and Bahrein is clearly indicated by the increase of over 73 millions in Asiatic investments between 1929 and 1940. While there is nothing suggestive of dollar diplomacy as total U.S. assets at 7 billions show a fall of over 500 millions in the Thirties, it is clear that the U.S. export surplus is reinforced by investment income. U.S. capital is strong in the Argentine but the total of 383 millions must be far below the comparable total for British investments. Investments in the U.K. have increased between 1929 and 1940. It is somewhat unusual as other European investments and holdings generally had decreased. The growth of the great Ford Company clearly lies at the back of the increase referred to. Outside Britain the U.S.A. held over 800 millions' worth of investments and their present value must be problematical.

The rather limited expansion of U.S. interests in South African gold mining is attested by the over-all increase in the value of U.S. investments in Africa. It has been noticed that, if Europe and the Far East are ignored, the majority of U.S. investments are in safe places. If U.S. investments in neutral Chile and Argentina exceed those in Mexico and Venezuela, the fact that Brazil is at war makes for safety, U.S. capital is prominent in Chile's copper mines though British capital dominates the nitrate industry. In Venezuela and Argentina alike the U.S.A. appears as a rival of Britain. The most interesting question raised by the survey is how lease-lend will add to the imposing aggregate of U.S. investments after the war. If a direct return for U.S. aid in the war at some time is not ruled out, the proportion of U.S. investments to Britain must alter, at least in Latin America. The survey indicates that investments in oversea manufacturing enterprises have increased since 1929. In the field of oil the U.S.A. is long supreme and Standard Oil, controlling about one quarter of the world's oil output, is still the tallest poppy in the field of oversea oil enterprise. The U.S.A. received 450 millions on its total of 7 billions, an average of 6.4 per cent. indicating incidentally that the return is much better than the average on domestic investment. The best showing was made by mining and oil companies, but Cuba should be paying better and Liberia after the U.S. entry in October must be fully within the dollar area.

Mediterranean Warfare

The Mediterranean campaign has again emphasised the value of Spanish neutrality. If Sardinia has been fortified, the Balearic Islands are as before neutral. The Admiralty's warning as regards the danger to shipping presumably is meant for Vichy rather than Spain. Spain's choice of armed neutrality as against armed mediation was also indicated in the reported warning to the Axis and the United Nations. General Franco's reply to the original British note, however, puts an end to guesswork concerning Spain's role in the Euro-African war. The decision was governed, as much by Portugese friendship with Britain as by the Sultan of Morocco's acceptance of Allied intervention in French North Africa. Petain's abdication must also have had weight with Franco. Since actual operations are in the territory of the eighty-year old Bey of Tunis, rather than in Morocco, the Sultan has few claims. There has been no French claim for Tripoli, Sardinia or Sicily as if in 1938. For obvious reasons, Darlan can present no claims when the Germans in retreat from Libya are trying to make a stand between Tunis and Bizerta. If the link between Tunis and Vichy has snapped with the French garrison's decision to obey Darlan rather than Laval, the Italian minority's rights are in greater danger than the local nationalist movement. The pan-Arab movement must, naturally strengthen in the wake of pro-Allied sentiment in the Arab world. Nahas Pasha's satisfaction with the sequence of events from the battle of el Alamein will probably conduce to the emergnce of friendship for the Allies among the two and a half million people in Tunis who are more Arab than Berber. The limited range of present operations after the German landing in Gabes has led to the view that the fight in Africa will end soon. While the Germans' anxiety to keep a hold on Bizerta is based partly on a desire to make certain of the Vichy fleet, their main concern is to save Rommel's retreating army. German air strength is again being deployed in the Mediterranean to keep up reinforcements. The Italian fleet, with its base at Cagliari, may enter the arena as projected in the winter; and the final stage of naval operations in the war that began on June 10, 1940 is not yet in sight. The present danger to Sicily has raised the quesion of Italy being forced out of the war. Hitler's dispositions suggest greater anxiety than in 1940 as French interests in North Africa have been taken over by the Allies who control Cyrenaica in addition to Egypt. Italy's air strength makes it doubtful if the Axis can withstand the 8th and 1st Armies; but it is at the same time clear that in the Levant mastery is divided between Britain and the Axis as the Dodecanese and Crete are held by the enemy, a fact which explains both Turkish neutrality and the inability of the British fleet to enter the Black Sea.

Caucasian Wealth

As the German failure in Ciscausasia becomes increasingly clear the German failure at Stalingrad, which mounts guard over the Lower Volga basin is seen to be the climax of seventeen months of warfare. Grozny, Tuapse and Stalingrad are not occupied towns, and the advent of the winter, preceded by rains, makes for the successful defence of the region lying between the Don and the Volga. If the metal and lumber industries of Stalingrad have not survived the four months of fighting, the industries of Saratov must have been less affected by the war than imagined. Saratov may not get coal from the Donetz Basin, but its cement and chemical works cannot have been destroyed, while its salt works must help always. In the not distant past, Saratov was more important than Stalingrad which was, like Stoke City, a federated municipality. Since the North Caucasian region has witnessed bitter fighting for months, the tobacco supply must be sadly reduced like the grain output. But it is known that the fall of Maikop has not had any great effect on oil supply though the Caspian Sea in winter will be a problem. As Rostov and Novorosisk have been lost by the Soviet along with Taganrog, the industrial wealth available cannot be great, particularly as the coal in the Kuban district is no longer in Soviet hands. It is otherwise with the Trans-Caucasian Soviet Federative Republic. Oil is only one of its many minerals. Copper in Alavesdrski in Armenia and manganese in Chiatury, cotton and tea, added to the waterpower, distinguished it from the regions to the north of the mountains. An official handbook indicates that there is iron, coal, sulphur (to offset the loss of Crimea) in addition to the oil shipped ordinarily through Batum which is linked with Baku by a pipeline. To what extent the Soviet's mechanised agriculture will suffer through the loss of Rostov its plants, mills, canning factories etc, cannot be determined but the Trans-Caucasian Republic's resources must be intact as the German army is finding advance impossible in any direction. In the period of planning the Soviet Union established fertiliser and other plants in the three republics. The textile output has been increasing. The Trans-Caucasian republic produces over half the Soviet Union's oil. The loss in the North Caucasian province is inconsiderable and the Soviet hold on Grozny—the

THE NATIONAL ROLLING MILLS LTD.—Continued.

PROSPECTS.

There is an expanding demand in this country for both ferrous and non-ferrous rod in suitable commercial lengths. Brass and copper rods have not so far been rolled in this country, except only in small quantities which are being produced in short or uneconomical lengths.

The industries in India which need copper and brass rods as their raw materials have, in the past, relied mainly upon imports from abroad. This applies not only to commercial enterprises but also to Government Departments, Railways and Ordnance Factories.

There is now a vastly accelerated demand for both ferrous and non-ferrous rods for war production as well as for other purposes. It is not prudent in war time to quote figure of the imports of non-ferrous rods in this country, but it can be taken for granted that the consumption of this country has been colossal for this material.

The Company has already established valuable contact for disposal of its products; and, on this basis, the Rod Mill is designed to have an initial capacity of 6,000 tons per annum. This will be steadily increased according as the Company is faced with growing demand.

This project is being developed with the co-operation of the Government of India who are facilitating the supply of necessary raw materials.

PLANT.

Practically the entire necessary plant has been acquired. Erection and installation is energetically proceeding; and mill buildings are under construction. It is hoped that the works will reach a commercial productive stage by the end of December, 1942.

FACTORY SITE.

In view of the cable-making industry's demand for copper rods for wire production, the works of this company is being established in close proximity to that of the National Insulated Cable Co. of India, Ltd., somewhere in C. P., where all facilities, such as electric power, railway siding etc. have been arranged.

MANAGING AGENTS' TERMS.

The firm of Managing Agents is comprised of men who have long and intimate experience in the business; and their appointment is for a period of twenty years from date of incorporation of the Company subject to the usual provisos and terms and conditions fully set out in the Articles of Association.

MANUFACTURING TECHNIQUE.

The Company has secured the services of a highly qualified and specialised technician. The factory is being planned and developed on modern lines under expert supervision.

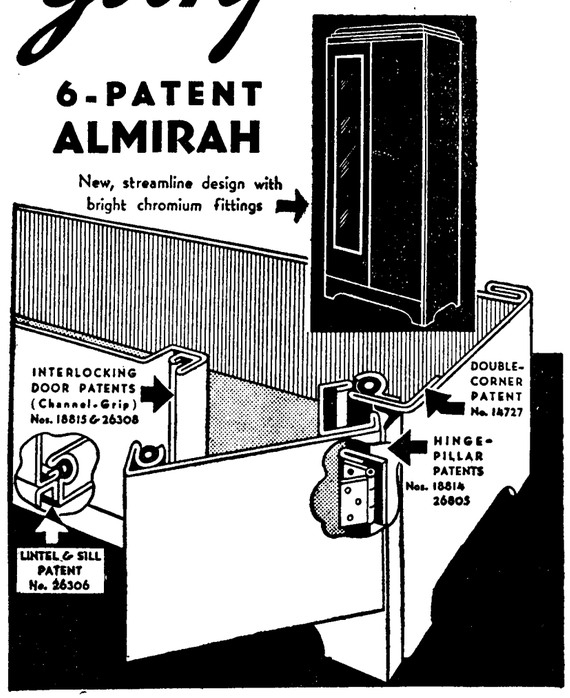
MANAGEMENT.

Mr. G. B. Page, who is the Managing Director of the National Insulated Cable Co. of India, Ltd., will also be the Managing Director of this concern; and his many years' experience in the cable and allied industries will be of special value to the Company.

MEMBERS' LIABILITY.

The liability of the Members is limited.

The share capital of the Company is Rs. 15,00,000/- divided into 1,00,000 ordinary shares of Rs. 10/- each and 5,000 redeemable preference shares of Rs. 100/- each, with the rights, privileges and conditions attaching thereto as are provided by the regulations of the Company for the time being, with power to increase the capital for the time being into several classes and to attach thereto respectively such preferential, qualified, deferred or special rights and privileges or conditions etc. as may be determined by or in accordance with the regulations of the Company and to vary, modify or abrogate any such rights, privileges and conditions in such manner as may for the time being be provided by the regulations of the Company.



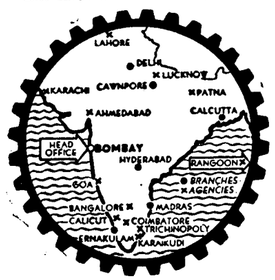
second largest oilfield in the Union—is unshaken. Since the mixed industrial-agricultural resources of the Lower Volga region and the Trans-Caucasian Federative Republic are of lesser importance than the Ukraine's, it may be said that the Soviet has not more than in 1941. But it must also be said that the Soviet keeps nearly all its oil resources, while it has great natural assets in Daghestan and far greater assets in and beyond the Urals.

CLIMATE-PROOF

THE NEW

Godrej

6-PATENT ALMIRAH



It is no longer necessary to pack up your delicate silks, woollens, leather, optical instruments and valuable books away from the damp or dust. You can keep all your perishable things handy in a fitted Godrej 6-Patent Almirah. With a turn of the wrist its contents are protected even from mildew.

Thieves, flames, white ants or other insects cannot touch your possessions in a Godrej Steel Almirah. Steel cannot alter shape like wood, and your things will be secure for always behind an unpickable GODREJ LOCK, defended by tool-proof armour plate.

Every Godrej Almirah is a handsome piece of furniture, stove-enamelled in a modern range of flat colours, on rust-proofed steel sheet.

There are several other models; and fittings at extra cost include cornice, inside or outside mirrors, fire-resisting internal locker, hanging rails and shoe-racks.

Mr. Churchill and others

The M.A.P. is to have a new head as Colonel Llewelin has been assigned to look after Supply in Washington. Like shipping, a major subject such as Supply requires a representative of the Ministry in Washington. Mr. Churchill's action therefore compels approval, but the other changes effected this month show that colleagues are apt to be dropped hastily as in the past. Sir Stafford Cripps is to run a new department. He has been Solicitor-General, Ambassador and Privy Seal, but to look after Britain's aircraft production is a new and strenuous job. His acceptance marks mutual confidence, but it is noteworthy that he will not have the same status as Lord Beaverbrook in the past. Since he will have to deal with the Air Ministry and the Supply Ministry the ex-Lord Privy Seal will have enough to do. He will clearly have no place in the consultations on the strategy conducted in accordance with the While Paper of April. The Lord Privy Seal's failure in India was no surprise, but that he had lost the right of deputising for the Prime Minister in the Commons is certainly a surprise. Labourites may be satisfied that Mr. Morrison is in the place of Mr. Greenwood (now in Opposition) but the Conservatives get a Leader of their own in Mr. Eden. The break with the Chamberlain era is complete with the promotion of Lord Cranborne. Mr. Stanley's appointment to the Colonial Office will excite no surprise. He has held high office in the past, and probably is the best candidate in view of post-war responsibilities in the dependent Empire.

Sinse Sir Stafford Cripps passes out of the War Cabinet the Minister next to Mr. Churchill is Mr. Eden. The Foreign Office is at present strongly represented in both Houses. Mr. R. K. Law, the son of Mr. Bonar Law, has been an efficient deputy for Mr. Eden, and in the House of Lords, Lord Cecil of Essendon will be the new spokesman in place of Lord Templemore. It is but right when foreign relations are of infinite importance that the Department should have adequate spokesmen in both Houses. As the Lord Privy Seal is a dyed-in-the-wool Conservative like Mr. Eden, it is increasingly clear that the Conservatives dominate the coalition and are making sure of a further term of office. Many will argue that Mr. Churchill has settled the question of a successor by making Mr. Eden the Leader of the Commons. Unlike Lord Curzon, Mr. Eden will have a great advantage and none who read his last speech of October 31 will urge that he forgetful of the burdens of Empire that Britain has to support. Mr. Churchill has dropped Sir Stafford Cripps as skilfully as he dropped Lord Beaverbrook. There is no change at the India Office, and all the promoted Civil Servants remain in the Government. The changes now made will not affect the Conservative party's position but will put Mr. Churchill right with the old guard. It will said that the changes have little interest for India which ordinarily looks for an addition to Labour strength in the Cabinet in the belief that India will obtain due attention. Those made by Mr. Churchill will kill hope, though India is agreed that Sir Stafford Cripps in broadcasting to America always took the Tory line.

Tighter Blockade

In an article discussing the end of Vichy's North African Empire, it was noted that supplies of minerals and oil would end at once. The U.S. Board of Economic Warfare in a recent report declared that the Allied campaign in North Africa spells economic loss for Germany as mineral and agricultural exports cannot be confiscated as before by pressure on Vichy. The U.S. Vice-President and his Board reported that control of North Africa would end all shipments of metals and minerals as well as fertilisers, food and other supplies from North Africa to the Nazis which are important for war production, and the maintenance of the home front. It would also cut off one of the principal supply lines of Rommel. It has been frequently said this year that Tunis was passing on supplies to the Germans in Libya. The Mediterranean Narrows and Tunis are now receiving the Allies' attentions. The African campaign, it was held, would increase the effectiveness of the blockade by restricting the use of the Mediterranean by the Axis. The Royal Navy has indeed announced that, except for the eastern coast of Spain, every other part has been made difficult for navigation. The more important result anticipated was the reduction of the length of the Allied supply lines to the Middle East and Russia. According to the U.S. report, the most important strategic materials of North

DOCTOR! IS IT TRUE...?

Sirdarji says that your brother has been attacked by *goondas*. Is that really a fact?

Yes, barrister-sahib, I'm afraid so—he's very badly hurt, and they smashed and robbed all his stock of medicines—some of them we can't get any more.

But why, why? Surely he wasn't I.M.S., nor in any kind of Government work?

No, it was a private practice, and in a poor place where you can only charge big fees to half-a-dozen big people. As a matter of fact, my brother was a strong Congressman.

Well, I can't see what good it does anyone—what do the *goondas* get out of it?

Oh, just the lust of destruction. Psychologists call it the will-to-power.

This is terrible, doctor! And I hear that these rats of *goondas* have been breaking-up a University laboratory, and raiding girls' schools too . . .

. . and worse, barrister-sahib! It's no use talking about it, though—what shall we do to stop this mad destruction? That's your job, law . . if not order.

Look here, we had a meeting of the Bar Association yesterday, and we're going to pass a strong resolution calling on lawyers all over India to form local watch-committees, to organise patrols. We can do this kind of thing much more quickly than Government alone.

FIGHT GOONDAS

CPU.60

Africa are phosphate rock, vegetable oils, high-grade iron ore, cobalt, manganese, antimony, molybdenum, wool, grains, fruits and vegetables. Hitler is believed to have confiscated 80 per cent of the African products shipped to France last year. The seized minerals were utilised in the German arms industry, and the wool for meeting the clothing shortage in Germany. The most important result is that rare Far Eastern materials cannot be sent by Japan. A leak in the blockade was known to exist. Washington admitted that Japan sent by way of Cape Horn scarce materials to help Germany. They were invariably passed on through French Africa. The neutrality of Chile and Argentina hampered the U.S.A. in closing the leak and the supplies were known to be reaching Germany in spite of the enormously long route. Submarines probably played a part in taking over tin, rubber and tungsten for Germany. That link in the Jap-German chain of supplies is broken by the Allies' control of Algeria and Morocco. Supplies from West Africa are also subject to Allied supervision and the rupture with Vichy should help the U.S.A. to stop colonial traffic. North Africa's trade even if it is already hampered by local customs law may expand as the Allied forces will be large buyers while General Eisenhower is expected to provide such things as are required by North Africa.

Trade in August

The value of India's seaborne imports in August rose on account of larger imports of cotton and mineral oils. The total value of Is. 10.74 crores is larger than the value noted in the four previous months. The only other important feature of the Indian trade returns for August is a fall in exports of jute and jute manufactures. No surprise would be occasioned by the enlargement of other textile exports from India. As the total value of exports at Rs. 15.59 crores was up to the 1942-42 average, it is clear that the major factor in the swelling balance of trade is the steady fall in imports noticed this year. For some months of 1941-42 an adverse balance was recorded. It is otherwise now, and the total for five months is as much as Rs. 31.74 crores. The fall in re-exports noted in August, and before, is a symptom of a falling import trade. If total exports show no increase on the 1941-42 figures at present due regard must be had to the loss of markets and the course of the war. As to the decline in imports, in evidence from April, it is clear that it is due to reduced intake of foodstuffs and manufactures. While the reduction in India's own exports of foodstuffs can be explained readily enough, it is not so easy to link the increase in exports of manufactures with other changes in the field of foreign trade, unless attention is bestowed on the reports of Indian Trade Commissioners which testify to the strong position held by Indian goods in many new markets. That Indian industry derives some support from foreign trade may be inferred from the relatively small decline in imports of raw materials. The main changes in imports drawn in August are the fall in chemicals, electrical goods and machinery. The difficulty in drawing from the usual sources is increasing rather than diminishing as quotas and licenses are the rule. But up to August, India's imports of mineral oils particularly from Iran, showed an increase in value, and the war which has reduced imports of food, timber and spices as also dyes and colours did not upset cotton much. The increase in cloth prices is based in part on the reduction in imports but the simultaneous fall in cotton exports seems favourable to the textile manufacturer in India. The commodity most affected by the war with Japan is cotton, and crop restriction practised this year is due to other things besides the need to grow more food. The export of sugar is familiar since April, but its continuance through August will provoke much anxiety as to the wisdom of building up a trade in sugar merely because the international sugar agreement has lapsed. In the matter of sources the trade returns point to no change. The U. K. sent less, but it is still the principal supplier. Trade with Canada this year continues to increase, but the U.S.A. no longer figures as prominently as in 1940-41. The Sudan is now as important a cotton supplier as Kenya. The Middle East is a bigger market for manufactures like the British Empire, but import control in Ceylon has led to a fall in trade though Australia and latterly, New Zealand, have bought more of India like African colonies, although the five-month totals might suggest that export trade with the Empire has been reduced considerably by the war. If the August figures show that confusion within the country did not affect India's maritime trade it is certainly suggestive that the exports of jute manufactures in August and since April were on a reduced scale. The fall in U.S. stock figures may nourish optimism, but the present rise in prices is obviously full of dangers when cotton, bagging and Central American fibres are established rivals.

Rising Mill Output

The spinning and weaving statistics for March permit one to have an idea of the advance in textile output that distinguishes the war period. The increase is as much a consequence of reduced imports as of improved demand. The main change came after July 1941 and in spite of the decrease recorded in February and March owing to the sudden migration of workers, the monthly output figures were running at a very high level. The total production of yarn in 1941-42 has been returned at 1.577 million lbs and that of woven goods at 1.577 million lbs, showing increases on the two preceding years in respect of both cloth and yarn. The total output of Indian mills was over 4,493 million yards showing an increase of 220 million yards on the 1941-42 output. The increase in yarn output proceeds from increased war demands for the coarser types. The limited increase in the production of finer counts may be attributed to limited supply of foreign cotton though it must be said that imports of cotton last year showed a tendency to increase while exports of Indian cotton were naturally falling. The limited increase in the Indian mills' output of coloured goods is as much a result of limited supply of dyestuffs as of the bigger demand for grey goods created by the disappearance of Japan as a rival. It is deducible from the textile production figures that the increase in home output is less than the imports normally derived by India. The cloth problem, if it is acute to-day, existed

GOVERNMENT OF INDIA
RAILWAY DEPARTMENT
(Railway Board)

NOTICE

TENDER FOR THE SUPPLY OF COAL TO THE NORTH WESTERN, BENGAL & ASSAM, GREAT INDIAN PENINSULA, EAST INDIAN, BOMBAY BARODA & CENTRAL INDIA RAILWAYS AND TO THE BENGAL NAGPUR, BENGAL & NORTH WESTERN, JODHPUR, MADRAS & SOUTHERN MAHRATTA, ROHILKHAND & KUMAON, SOUTH INDIAN, GAEKWARS BARODA STATE RAILWAY AND BOMBAY PORT TRUST RAILWAYS DURING THE PERIOD 1st APRIL, 1943 TO 30th SEPTEMBER, 1943.

Tenders are invited for the supply of the following quantities of coal for the above Railways during the period 1st April 1943 to 30th September, 1943.

		Tons
1.	Steam Coal—to be delivered by rail from Collieries in Bengal, Bihar, Central India,, Orissa, Central Provinces, Singareni and Assam Coalfields ..	31,88,000
2.	Steam Coal—to be stacked during the period January to June 1943 inclusive at Collieries in the Jharia and Raneegunge Coalfields working Low Volatile, Low Moisture quality coal	10,00,000
3.	Coke Breeze	3,250
4.	Soft Smithy Coke for Workshop purposes ..	5,000
5.	Hard Coke	4,500
6.	Screened Rubble Coal (for Power House) ..	4,500
7.	Slack Coal (from Collieries in the Central Provinces and Central India Coalfields) size 1/16 inch to 1 inch—delivery from 1st December 1942 to 31st May, 1943	65,000

Forms of Tender, Specifications and Instructions to Tenderers may be obtained from the Office of the Chief Mining Engineer, Railway Board, No. 1, Council House Street, Calcutta, on payment of Re. 1/- for each set.

Successful Tenderers will be required to execute an Agreement (paying the Stamp Duty thereon) on a Form provided by the Company-Managed Railways, if so desired.

The competent authorities of the Company-managed Railways, of the Railways of Indian States and of the Bombay Port Trust Railway do not bind themselves to accept the lowest or any Tender or to assign any reason for non-acceptance of Tenders; they reserve the right to accept any Tender wholly or in part.

Tenders should be deposited in the Tender Box kept in the Office of the Chief Mining Engineer, Railway Board, before 11-00 A.M. on Friday the 11th December, 1942 and will be opened at 11-15 A.M. in the presence of Tenderers on the same day.

J. R. HARRISON,
Chief Mining Engineer,
Railway Board.

CALCUTTA,
Dated the 19th Nov. 1942.

last year when Ahmedabad mills were running and double shift working and a 60 hour week became common in the textile industry. The figures indicate that Bombay Presidency still produces over half the cloth. The only provinces whose cloth output has fallen are Bengal and Delhi. Production in the U.P. mills has expanded at the same rate as in Bombay and the States, as a whole, have obtained a bigger share in the total. The fall in cloth production in Ahmedabad at a time when Bombay's mills reported bigger output is to be largely explained in terms of communal disturbances last year. The textile output of British India owing to successive increases has turned the investor again to the industry. The relatively small increase in the yarn and cloth output of Madras last year may be no guide to the profitability of operations. South Indian mills shares enjoy a commanding position for several reasons and the output figures for the current year should justify the faithful optimism that has lifted all Madras mill shares to an unusual eminence.

National Rolling Mills

An announcement concerning National Rolling Mills Ltd. invites the attention of every reader to the plans and objects of this company. Its appearance is a happy reminder of how Indian enterprise is stepping into the breach caused by import difficulty. The company intends to produce copper rod among other things, for cable and allied industries. Various industries stand in need of rods made of various metals. The new company's plant in the C.P. is equipped to produce copper and iron rod up to 300 feet; and the capacity of 6,000 tons per annum mentioned in the company's announcement is not the upper limit since capacity will be extended in accordance with demand for its products. The investor is not asked for support since Rs. 9 lakhs of the issued capital has been provided. The estimate of prospects in this case must include a reference to Mr. G. B. Page, the Managing Director, and the National Cable Works with which the new company is obviously connected.

The early introduction of the shares and the present premium may be taken as proof of the market's present rating of shares in a company that has most advantages desired. The co-operation of Government is of fundamental importance, and the new company which hopes to enter into production in December itself has got an assurance as regards materials. Mr. G. B. Page's original association with the company is a guarantee of success. The Board is one of strong and experienced businessmen, and as the company has unusual prospects the individual investor will do well to note shares stand is due to the expectation of the company's appearance at a time when the demand for rod—both ferrous and non-ferrous, is constantly growing. The new company has rich promise for the country which has found war production hampered by insufficiency of rod even in small lengths. The new company's future is further ensured by a continuation of advantages to which attention must be drawn. There is little doubt that the announcement will be taken as proof of industrial growth and capital market activity alike in the piping times of war.

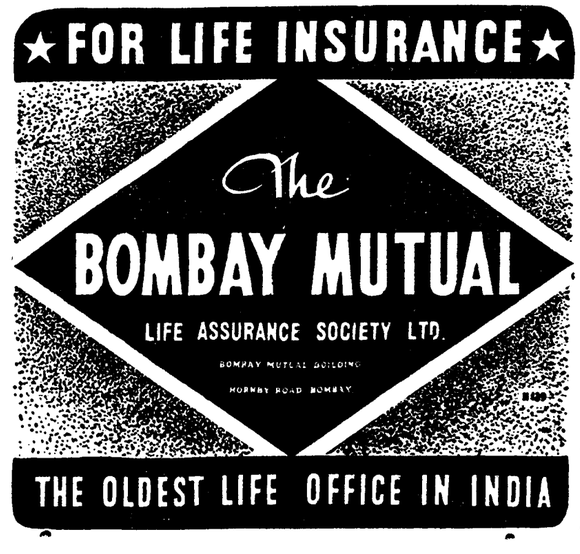
Now for the game, after such prolonged beating of the bush. The last two weeks, I spoke of inter-allied war debts, first of the debts contracted by the Allies in the last war and then of the inter-allied transactions as they are growing up and shaping themselves during this. It is not love of digressive chatter that led me to speak at length of these when our direct concern is our military expenditure during the war and our relations with His Majesty's Government in this regard. The relations between the Allies both during the last war and during this are quite germane to our purpose. For though the relations between India and Britain are unique and are altogether without parallel, it is well to know how allied nations with virtually equal stake in the war and with no large differences in resources have been tackling the problem of their relations inter se.

* * * *

So far as India is concerned, her obligations in respect of military expenditure can be determined only in the light of certain basic assumptions. It is true of any country engaged, along with one or more allies, in a common war. There is a cynical saying in the South that who feels the itching must do the scratching, a quaint way of saying that what is your funeral cannot be another's. In the last war, I suppose, it was tacitly agreed on all hands that America's interest was definitely less than that of the European allies. There was no European nation calling on America to bring all that she could into the common pool. Such communism in the comity of nations, tempting, no doubt, as it was to the hard-pressed, would have been laughed out of court. The war was primarily, and even predominantly, a European affair. But among the European nations, a mildly communistic principle had to be applied. "From each according to his might"—Britain had to find loans for her allies, big and small. She had to bear the brunt of the war, so far as finances were concerned, while France had to bear the brunt of it as regards material damage.

These two principles, namely, stake and resources, have been consciously or unconsciously recognised in all inter-allied dealings throughout the whole course of history. The last war is peculiar only in that the latter principle of capacity to pay was not fully deferred to and asserted itself only years after the conclusion of the peace. But it stands to reason that misconceptions about the relative magnitude of the stakes involved should prevail and that estimates of resources should also be coloured by the view each nation takes of its own stake in the war. These misconceptions and erroneous estimates are corrected only by the actual development of the war, the way it spreads and the force with which the danger to each country is brought home to its people.



* * * *

Now what is more natural than that these two principles should apply to India too? Only, in the case of India, the relations between her and Britain in regard to military expenditure are not in the nature of contractual relations between two nations of equal status. Normally, among allies engaged in a common war and, more so, in the stage prior to formal and active belligerency, the nation concerned is the sole judge of the stakes involved. Once it enters the war, it has to give good consideration to the view of its allies in regard to its capacity. Differences of opinion are more often than not quickly eliminated by the exigency of the war situation. In the case of India, Britain constitutes herself the sole judge not only of India's stake in this war, but also of her capacity to pay. The problem of our military expenditure is complicated by mistaken notions on the part both of Britain and of India. While India fondly clings to the idea that her stakes in this war are nil, since it is only a question of change of masters, Britain clings to the hope that she can arbitrarily determine India's capacity to pay.

But, in reality, the principles I have stated form almost an inexorable natural law. Britain can no more have arbitrary ideas of India's obligations than India can persist in the notion that because, she has no freedom, she has no liability of any kind towards military expenditure in this war. I have said already that estimates of stake and capacity tend to be altered in the course of the war by the exigencies of the battle-fronts. Perhaps, in the case of India and Britain I must add that there is another factor making for change, the political relations between these two countries. It is idle to try to discuss the question of our liability regarding military expenditure without reference to our political status. For there is no capacity to pay, apart from the stake involved; and there can be no stake with an appeal when there is no political status; the primary purpose of war is to alter the political status of the enemy.

* * * *

All this is thoroughly axiomatic. But the facts of life are never so simple. India cannot feign total indifference to the war. Nor can Britain rate India's capacity to pay or her stake in the war just as she likes. And if, as I shall show presently, the two principles of stake and capacity have applied in the case of the relations between India and Britain it is not as a matter of choice by omni-

potent Councils and Cabinets, but as part of the working of an inexorable natural law. So far, these two principles have, indeed, been quite as operative as elsewhere. Both the Chatfield Report and the Financial Settlement which Sir Jeremy Raisman announced in his budget speech of last year exemplify the working of these principles. According to the Chatfield Report, Great Britain was to bear by far the bigger part of the expenditure involved in the scheme of mechanising the Indian Army and making it up-to-date. Why should Britain foot so large a bill for the mechanisation of the Indian Army? The answer is simple, that India did not feel much of an itching and should leave the other to do the scratching for herself. The Chatfield scheme as a war measure or as a measure of war-preparedness became obsolete before its measures could be put into force. In the first year and more of the war, hardly any pressing need was felt for incurring war expenditure on any considerable scale—even the fall of France was thought to change the complexion of the supply problem and not the reality of the military problem. When events began to move fast in the Middle East the question of the expansion of the Indian Army began to be talked about and schemes of expansion were formulated and put into force.

* * * *

It should be remembered that in respect of these expansion schemes, the British Government, as the Finance Member has pointed out more than once, bore the weight of expenditure in regard to equipment. This is only natural, for having starved India of the industries necessary for war preparedness, and having turned a blind eye to the requirements of economic progress, Britain could hardly look to India either for the production of the necessary equipment or for payment therefor when it was supplied by others. It is, indeed, a significant commentary on the wealth of India that even when big burdens were taken off its shoulders, the Indian exchequer could hardly cope with what it was left to bear. It was no Congress Minister, but Sir Jeremy Raisman, a civilian who rose to the stewardship of India's finances, who felt that the position ought to be clarified and the British Government should be made to agree to a definite understanding regarding India's liability for military expenditure. His efforts bore fruit in the settlement which he announced in his budget speech of 1941. It will, I hope, be readily recognised that the validity of the principles of stake and capacity is borne out in the following terms which were then announced:

1. The basic military budget of about Rs. 36 crores.
2. Adjustments thereof on account of increases in pay and changes in prices.
3. The cost of purely Indian war measures, that is, measures which India has to take in her own interest.
4. A lump sum of Rs. 1 crore as India's contribution to the cost of external defence.

These items, however, do not exhaust India's liability in respect of military expenditure. It will be found from a perusal of the Appropriation Accounts—though Sir Jeremy failed for some inexplicable reason to mention it in his budget speech—that there was another liability, on account of what are termed joint war measures. It is assumed that there is a certain class of war measures in which both Britain and India are interested, though in varying degrees, but which will not brook the delay involved in a prior determination of the expenditure involved. It is part of the financial settlement that the expenditure on such scheme should be incurred, that it should be divided between the two countries according to the degree of interest of each party in the measure in question, and that, where a clear agreement is not possible or a suitable formula is not available, allocation should be on a half and half basis. It is difficult to take exception to a settlement of this kind, except on the ground that India or India's representatives have no voice in determining first, what are Indian war measures as distinct from joint war measures, and secondly, what allocation should be made in respect of the expenditure on the latter. But taking the settlement as a whole, the country has reason to feel thankful to Sir Jeremy Raisman for concluding such a settlement, though, as it would appear, the settlement is to be revised, to say the least.

* * * * *

When we pass from the settlement to the question of its revision, we are passing from certainty to doubt, from simplicity to complexity and, probably, from implicit, amicable understanding, to open, acrimonious controversy. Let us proceed from facts to opinions. Firstly, the war situation changed vastly. War came nearer to our shores and frontiers and almost knocks at our door. In other words, war effort was being transformed into warfare. The "Allies" slowly ceased to mean countries far away from us on the earth's surface. Large numbers of American and British troops have had to be brought into India and maintained and moved across the country. Defence did not mean the mere despatch of a few units to this country. India had to build her own navy, of a sort though, an Air force of her own, with a large element of the R.A.F. in it. The Army had to be expanded, new recruits had to be enlisted, trained and maintained and as is well known, the British Government have had at times to use India as a reservoir of men from which she could draw

(From Our Correspondent).

New Delhi, November 24.

WHO will be the next Viceroy? There has again been a burst of speculation in New Delhi consequent on the recent announcement of Cabinet changes in London. It is considered noteworthy that Lord Cranborne has been shifted from the Colonial Office and made the Lord Privy Seal, for it may well be a preliminary to his future appointment as Viceroy. He is a favourite with the Churchill group and, having served with the present Premier in an important capacity, knows the Cabinet's mind well. So far as Indian opinion is concerned, he has this advantage—there are no preconceived notions about him in this country to prejudice his task. It is difficult to say how situations will arise or adjust themselves between now and April next, when Lord Linlithgow is due to retire, but if Lord Cranborne's services cannot be spared the only alternative seems to be the promotion of the present Bombay Governor or the appointment of General Auchinleck himself as Viceroy. That the ex-Commander-in-Chief who is still in India is marked out for a big appointment in India —a Governorship if not the Viceroyalty—is the general feeling in India. In any case New Delhi is preparing for big farewell functions in honour of Lord Linlithgow. The Viceroy's plans for Christmas are still uncertain, but later reports show that His Excellency may be able to go to Calcutta for a few days and fulfil his usual engagements including the annual address to the Associated Chambers.

* * * *

More than ordinary importance attaches to the coming addresses of the Viceroy. Next month he will survey the situation—both economic and political—with special reference to the war effort in his address to the Associated Chambers in Calcutta. Two months later he is expected to address a joint session of the Central Legislature in New Delhi. And soon after there will be the annual meeting of the Chamber of Princes which also he will address at some length. As these will be his farewll addresses to the people of this country, His Excellency may go further than in his previous utterances on similar occasions and make an intimate personal appeal. The expectation here is that before he lays down his office he will plead for a united India and appeal to the various communities not to think in terms of separation but to unite in the service of the country. As some of the speeches of Mr. Amery have given rise to the impression that he is encouraging the idea of dividing the country, this appeal from the Viceroy may have a salutary effect. It is not yet too late to think of a Hindu-Muslim settlement without actual division of the country, if the necessary atmosphere is created in the country for friendly discussions.

* * * *

Sir T. B. Sapru was here last week-end and had intimate talks with the Indian Members of the Viceroy's Council. The latter, though not unanimously have been pressing the need for complete Indianisation of the Council, but whatever may be its value, it can be no remedy for the present situation. It was due to the efforts of Sir Tej in December last—his famous appeal to Mr. Churchill in Washington—that Sir Stafford Cripps came to India with his offer. That opportunity was unhappily lost, but Sir Tej has again stepped into the scene this winter to see if a way out can be found. He has revived the idea of an All Parties Conference and, as a first step, has convened an informal conference of leaders early in December to explore the possibilities of the situation. There is undoubtedly wide support for Sir Tej's move, but it is too early to say whether any immediate results can be expected. Official policy seems to be as usual "wait and see." Nor is there any indication that Mr. Jinnah looks with favour on Sir Tej's efforts and will be disposed to participate in any All Parties Conference.

* * * *

There is a good deal of mystery about the Government's plans for the Information Membership—now vacant for three months. Some time ago a number of names were being mentioned, but this week a different report has gained currency. Is there sufficient work at all for an Information Member? And is it not a fact that much of the work is actually controlled by the Home and War Departments? As the answers are generally admitted facts, it is now said that the question of amalgamating the Home and Information *portfolios* is again under consideration. Much of the publicity at the present time is war publicity which is directly controlled by the Army Department. The control of policy with regard to the Press and the administration of Press laws and regulations are the responsibility of the Home Member. If there is to be an Information Member, he should have all these directly under his control, for otherwise there is not only very little for him to do but there is also the other fact that his position becomes actually dependent on the Home Member. According to New Delhi reports this week, Sir Mahomed Usman may be given the Home Membership next summer when Sir Reginald Maxwell retires. In the meantime the question whether it is necessary to have a separate Information Member may also be finally decided. If the Home Membership is given to an Indian, the only European official in the Council will be the Finance Member.

* * * *

Last week there were important meetings of States Ministers under the chairmanship of Sir V. T. Krishnamachari. The constitutional sub-committee is more or less in the nature of a study circle to consider in detail the implications of the Cripps proposals and the formulation of suitable modifications and alternatives to safeguard the position of the States in post-war India. Nothing very tangible appears to have been done with reference to the proposals for grouping smaller States and also for internal reforms for improving the administration of the States. It was nearly three years ago that the Viceroy addressed the Princes on this subject and indulged in some plainspeaking. The Political Department is so curious that interminable discussions are still going on. Neither has there been any administrative grouping yet of smaller States in any part of the country as expected nor have internal reforms in the States progressed as had been expected. It is hoped that at least before the next annual meeting of the Chamber of Princes definite decisions would be taken on these subjects to facilitate immediate action.

* * * *

The new Civil Defence Member, Sir J. P. Srivastava, has proceeded to Bengal and Assam to complete his tour of the country. The organisation of his Department is now on a firm and solid basis—thanks largely to the financial help and expert advice which the Central Government has placed at the disposal of the provinces. The Department is now engaged in enlarging the organisation of the Department in two directions. It is expected that the Warning section for which appointments are now being made will begin to function from the middle of December. The country is to be divided into four organising areas which will be administered by separate staffs. There is also to be a women's wing attached to the Department under a woman Director to organise civil defence work among the women of the country. The complaint of the Department continues to be that the response from the medical profession is still not satisfactory. Efforts are being made to evoke greater response from practising doctors, both on a voluntary and paid basis, for civil defence work, but it is said that if it is not satisfactory, the question of compulsorily requisitioning the services of doctors may have to be taken up by the Governments concerned.

* * * *

The new Food Department is expected to function from about the second week of December with Mr. Holdsworth as Secretary. Mr. N. R. Pillai becomes Commerce Secretary this week relieving Sir Alan Lloyd who becomes Establishment Officer. There is general satisfaction that after all an Indian has become Commerce Secretary and that the choice has fallen on Mr. N. R. Pillai who is well-known to the commercial community.

Resume of Commodity Markets

THE important feature in the commodity markets is, of course, the strength of both jute and jute manufactures. Even at the end of last week a rather firm tendency was noticeable in the hessian market on reports regarding the possibility of a substantial improvement in exports though there was a tendency to discount extravagant hopes in this regard. This week, however, the hopes in regard to the possibility of a substantial improvement in shipments have reasserted themselves and there has been further buying by bazar operators and quotations are at the highest levels for some time. The strength of the jute manufactures market has naturally had an encouraging influence on the raw jute market where there is a great shortage of supplies with buyers prepared to swallow any quantity at whatever price demanded by the sellers. There is nothing of importance to be recorded in other markets, the downward trend noticeable in the silver and gold markets at the end of last week continuing to be in evidence. The piecegoods market, of course, has continued firm.

The report that the Government of India are seriously considering the proposal to introduce shortly the scheme for rationing competitive food grains all over the country has aroused considerable interest. According to this scheme food grains will be purchased by the Government through approved agents on the basis of a quota for the various provinces. The provinces in their turn will fix sub-quotas for the districts. The requirements in respect of the various provinces and districts are to be intimated to the Government of India before the middle of the month by which time it is hoped that the entire distribution plan will be ready. It will be remembered that at the last Price Control Conference the Commerce Member stressed on the necessity for keeping a strict control on the prices for staple grains and competitive commodities as well. Emphasis was also laid on the necessity for buying up stocks to prevent undue speculative activity. It is unnecessary to point out that the various price control orders of the Government of India have not served their purpose in recent months as they were not followed up by the provision of adequate transport facilities and also by the interference of the Government in the market on any appreciable scale. It is satisfactory to note that it is now proposed to buy up surplus stocks and distribute the same through official channels. All these have been possible only with the creation of the new Department of Food. The advantages that will accrue as a result of this arrangement will be evident from the fact that there is at present no manner of relation between controlled prices and those obtaining in the black markets.

Jute:

The one-sided movement in the loose jute market continues interrupted and prices in Calcutta especially, are at the highest levels for the year and for the season so far. It looks as if with the continuance of the present conditions and with the strength of the goods-markt, a further increase in prices can be looked forward to. Arrivals are still considerably short of mills' requirements and if there is to be an improvement in the exports of raw jute as well it will be very difficult for the leeway to be made up. The position will be further complicated if mills having large forward sales in the goods market try to cover their requirements of raw materials against such sales. The developments in the market during the next few weeks have to be closely watched.

Jute Manufactures:

The jump in the quotation for 9 porters from Rs. 14 to Rs. 17-12 in such a short time has been thoroughly unexpected. For, prior to the allied expedition in North Africa, operators were inclined to take a rather pessimistic view and there was considerable concern regarding the future of hessian shipments. Local stock and U. S. consumption figures also gave no room for optimism. There have actually been no developments during the past few weeks to justify such a sudden improvement in values; but it is now confidently stated that in the near future there will be a substantial improvement in exports and that with the existing Government orders there will not be much of hessian goods left over for export. How far the shipping position has improved remains to be seen.

Rubber:

The problem of intensifying the production of rubber is upper most in the minds of the authorities. Efforts are being made to produce rubber in greater quantities by intensive tapping and growing shrubs with rubber content. It is reported that a British mission to stimulate the production of rubber in the Eastern Hemisphere will arrive in India shortly after completing its survey of the rubber situation in Ceylon. With the representation of one British planter and Indian planter in India there will be co-operation with the mission during the tour. The report of the Mission will be available to the Government of India.

Tea:

Shortage of tea is a real threat according to certain well-informed quarters. Since the fall of the N. E. I. it has been found necessary for the entire requirements of the Allies to be supplied by this country. Only recently, the British Ministry of Food concluded a contract with the producers in India and Ceylon to purchase the entire exportable surplus for 1942-43. If, on the basis of a quota of 125 per cent, it was possible to produce all the tea, there can actually be no shortage. It is however pointed out that due to war conditions and the lack of facilities for increasing the production of tea, the actual crop will be considerably short of the quota as is generally the case. With Indian companies catering to the demand of export countries, in view of the more favourable prices offered by them, the shortage in respect of this commodity actually affects this country. It is no wonder that at the recent auctions of teas for consumption in India a substantial rise in prices has been recorded and quotations for certain grades touched levels unknown in the history of the trade. The Bombay Chamber of Commerce has naturally emphasised the need for the revision of standard output figures of various companies. It has also urged the need for a survey of India's crop capacity. They are making out a case for lifting the ban on new plantations.

Cotton:

Thanks to the efforts of the Cotton Movements Panel there has been freer movement of cotton. Mills and ryots alike have not been hard put to get or sell their requirements. The Cotton Movements Control Order, published recently, provides for a zonal scheme by which extra haulage will be eliminated as far as possible. Zonal scheme is not anything new, as such a system exists already in the coal and sugar trades. While the method has not been successful in the case of the coal and sugar industries, in view of the concentration in certain provinces, it is more practicable in the case of the cotton industry, perhaps with the exception of Bengal and Cawnpore. The two main centres of production are Bombay and Madras and for these centres of production adequate supplies are available in the neighbouring areas. Special attention is, therefore, to be paid only so far as the requirements of Bengal and Cawnpore are concerned.

The Second Cotton Forecast for 1942-43 shows the area under the crop at 16,370,000 acres against 19,235,000 acres or a decrease of 17 per cent. Only the Madras and Bengal provinces show an increase in acreage. The greatest decline is in the case of Bombay Presidency, the area being 3,365,000 acres against 4,907,000 acres.
