(Continued from page 585)

there is a probability of a scarcity of materials, and in certain eventualities, of labour.

* * * * *

With the maintenance of better trading conditions in the textile industry that were noticed since the beginning of last year all cotton mills have been able to report considerable improvement in their earnings. Government requirements for war purposes have also been on the increase and as a result of the gradual fall in the imports there is a very large demand for Indian Mill goods. Mills have also been able to obtain fairly remunerative prices. The *Svadeshi Mills Company, Limited* (Managing Agents, Messrs. Tata Sons, Limited, Bombay), has reported a striking growth in its earnings for the year ended 31st December, 1941. The net profit before taxation and depreciation amounts to Rs. 23,01,941 as against Rs. 4,23,412 in the previous year.

Full advantage of the higher earnings could not, however, be passed on to the shareholders as nearly more than half of the net profit has to be set aside to meet taxation amounting to Rs. 13,35,000 against only Rs. 5,000 previously. The sum of Rs. 3,00,000 against Rs. 1,00,000 has been set aside to depreciation. The Reserve Funds have been strengthened by substantial allocations out of the profits for the year. Rs. 50,000 goes to Reserve Funds, Rs. 50,000 to Investment Reserve Account and Rs. 1,00,000 to Dividend Equalisation Account. Nothing was added to any of these accounts in 1940.

After meeting the usual preference dividend at the rate of 5 per cent per annum the Directors have recommended a dividend, free of Income-tax, on Ordinary shares at the rate of 18 per cent per annum against only 7 per cent in 1940. It will be seen that the dividend for 1941 is more than double and is the highest in recent years. The amount carried forward to next year's account is also higher at Rs. 35,044 against Rs. 3,103 brought in. Stock-in-trade as disclosed by the balance sheet at the end of the period under review is considerably higher at Rs. 47,82,084 against Rs. 31,50,090 previously. Total liquid assets stand at Rs. 1,00,37,424 against Rs. 72,19,790 in the end of 1940.

The immediate future for the textile industry must certainly be considered good in view of the complete cessation of Japanese imports and the ever-increasing demands at home there is no reason why the Svadeshi Mills Co., Ltd. should not show still better results in 1942.

* * * *

The familiar arrangement is adhered to though the preface surveying the events of 1941 is shorter than usual in the *Investor's India Year Book*. The 29th edition of this standard work of reference does not present special features. Yet it is interesting to learn that coal output in India has reached an all-time record of 30 million tons, and it is not supply but distribution that explains many difficulties in recent months. The most recent of company reports are abstracted in a short supplement so that the record distribution of Swadeshi Mills and the large earnings cover for the B. I. C. dividend of 25 per cent are made known to the users of the Year Book. As an indispensable work of established reputation the work compiled by Place, Siddons & Gough is to be distinguished from other publications whose *raison d'etre* is not always obvious. The work's uptodateness can be guessed from its brief but pertinent mention of the Government's acquisition of the Tapti Valley Railway.

## WORLD OF INDIAN FINANCE

*Calcutta, Friday Evening.*

SHORT credits have been in strong request; and the inter-bank call rate has hardened to 1¼ per cent with more borrowers than lenders at this rate. This is somewhat at variance with the conclusions suggested by the size of cash balances maintained by scheduled banks with the Reserve Bank. The latest figure of these balances is Rs. 42.21 crores. This must be considered a fairly comfortable cash position. How, then, is the stringency in the money market and demand for short-term money to be explained? On an earlier occasion, we pointed out that the reverses at Hongkong, Singapore and Rangoon have had the effect of diverting, to some extent, deposits from foreign banks to Indian banks. This movement has evidently been gathering momentum. In the beginning of 1942, the Imperial Bank has increased its deposits by over Rs. 12 crores. Other banks with Indian domicile report similar increases in deposits. A part of such increases may be attributed to the general movement of increased deposits with all banks. But, taking all the Indian banks together, they have, from enquiries we have made, strengthened their deposits since January by over Rs. 25 crores. In relation to Indian banking conditions, increases in deposits by Rs. 25 crores is quite possible. The result has therefore been that while Indian banks have been embarrassed with plethoric funds, foreign banks are feeling the strain caused by the partial diversion of deposits. In the inter-bank call money market, most borrowers are foreign banks and most lenders are Indian banks. The present stringency must, from this point of view, be considered artificial; and the rate of 1¼ per cent for inter-bank call money is unjustifiably high.

---

In this connection, we should again refer to the broadcast of Lord Catto on the status, standing and resources of British credit institutions like banks and insurance companies. The British banks operating in India have a strong capital structure and abundant published reserves. In addition to the published reserves, it is well-known that these banks have tucked away substantial inner reserves. To the extent that foreign banks are not overflowing with surplus cash interest in the sales of Treasury Bills is limited, for the simple reason that foreign banks, more than Indian banks, used to invest in Treasury Bills for substantial amounts. The participants in Treasury Bills' acceptance under present conditions are mainly the Indian institutions. This accounts for the poor bidding at the weekly auctions. On April 14th, the amount of tender bills on offer was Rs. 2 crores. Applications were only Rs. 35½ lakhs over the offered amount. The average rate of accepted tenders was again high at Re. 1-4 per cent per annum. Sales of tap bills between April 8 and April 11 came to Rs. 99½ lakhs; and it seems probable that this figure of Rs. 99½ lakhs was possible only because of support from special quarters. The offer of tender bills for next week remains unchanged for Rs. 2 crores; and sales of tap bills are to continue, the rate being Rs. 99-11-3 per cent. We should again emphasise that the results of the recent sales of Treasury Bills provide a strong case for the discontinuance of intermediate Treasury Bills and for the reduction in the weekly offer of tender bills to Rs. 1½ crores or even Rs. 1 crore. The Treasury Bill maturities in the remaining days of April are only Rs. 2 crores and maturities in May are of the order of Rs. 9¾ crores. It will thus be seen that the maturities are comparatively light; and this seems a further argument in favour of any plea for the reduction in the weekly sales of Treasury Bills.

---

The ways and means position of the Government has been strengthened during the current week by two important operations. There has been an expansion of currency against rupee securities to the extent of Rs. 5 crores; and the Government have delivered rupee coin for Rs. 5 crores to the Reserve Bank in the week ended April 10. Both these operations have had the effect of reimbursing the Government's cash position by Rs. 10 crores. If there is expansion of currency against sterling securities the Government's cash position is unaffected; and it is only the cash position in the banking department of the Reserve Bank that is improved thereby. On the other hand, if there is expansion of currency against rupee securities, the additional currency thereby created against it goes to augment the cash balance to the Central Treasury. Changes in rupee coin, if caused by the outflow of coin into circulation or inflow from circulation, do not affect the cash position of the Government. The changes in the Reserve Bank's stock of rupee coin in the issue department, caused by delivery of coin by the Government to the Reserve Bank have the effect of helping the ways and means position of the Government. Thus, during the week ended April 10, the issue of *ad hoc* Treasury Bills as well as rupee coin to the issue department of the Reserve Bank has been of timely assistance to the ways and means deposits of the Treasury. In spite of the Rs. 10 crores being thus made available to the Central Government, the deposits maintained by the latter in the Reserve Bank show only a small rise from Rs. 4.83 crores to Rs. 5.30 crores. This shows that the Central Government are now called upon to make their heavy disbursements.

---

On account of the expansion of currency, first against rupee coin and second against rupee securities, the active note circulation in India has risen from Rs. 388.32 crores to Rs. 395.96 crores. Notes held in the banking department have also risen from Rs. 12.22 crores to Rs. 13.19 crores. As a result of the measures taken towards the expansion of currency, rupee coin has risen from Rs. 27.35 crores to Rs. 30.97 crores and rupee securities from Rs. 125.26 crores to Rs. 130.25 crores. In the banking department, ways and means advances, which were nil in the week ended April 3 are now as high as Rs. 5.85 crores. That is to say, even after benefiting to the extent of Rs. 10 crores, through expansion of currency, the disbursements which the Government of India had to make were so heavy that they had to borrow nearly Rs. 6 crores from the Reserve Bank. The disbursements in the week ended April 10, are

(Continued on page 618)

## TREASURY BILLS

### India

Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills were opened on Tuesday, April 14, 1942. Total amount offered was Rs. 2,35,50,000 (Rupees two crores thirty-five lakhs and fifty thousand). Tenders at Rs. 99-11-3 per cent and above were accepted in full and those at Rs. 99-11-0 per cent were allotted aproximately 89 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-4-0 per cent (Rupee one, annas four per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills will be received on Tuesday, April 21, 1942. Successful tenderers should make payment on Friday, April 24, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from April 15 to 20, 1942, at Rs. 99-11-3 per cent, subject to the conditions previously announced (viz., sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from April 8 to 11, 1942, amounted to Rs. 99,50,000 (Rupees ninety-nine lakhs and fifty thousand).

During the week ended April 10, 1942, Government of India Treasury Bills for Rs. 6,07,00,000 (Rupees six crores, seven lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

## G. I. P. RAILWAY

CANCELLATION OF MILEAGE COUPONS FOR MERCANTILE FIRMS

With effect from 1st May, 1942, and until further notice the G. I. P. Railway will discontinue the issue of mileage coupon books for mercantile firms.

Coupons from coupon books issued before 1st May, 1942, will however, be accepted during the period of their availability.

Coupons from books issued by foreign Railways on or after 1st May, 1942, will not be valid for local journeys over the G. I. P. Railway, but such coupons will be accepted in part payment for the issue of through tickets from stations on this Railway to stations on foreign Railways according to the provisions of para (13) of Rule 88 of Coaching Tariff Part I-A.

# Finance Abroad

Friday Morning.

THERE has been no sensational development in the financial world corresponding to the final act of surrender on the part of Vichy. The war is not at all a market factor, so far as London is concerned, though the Japanese advance has again brought down the price of Burma Oil Company's ordinary stock. The brightness of the giltedged market based on indefinite continuance of cheap money is out of line with the gloom precipitated by the appearance of a Japanese fleet in the Bay of Bengal.

The London market is wise and brave, and it may be that Mr. Roosevelt's firm faith in final victory is enough to sustain composure there for years perhaps. The importance of steady nerves is appreciated in London where pre-Budget fears were at an ebb and it was only the Common's questions that led to ease. The position is regarded as sound and stable to judge from the lift in the Funds and things cannot be bad when old Consols are over 83. The Indian market has yet to develop the same faith in ultimate Allied success, but the weight of investible funds in London is still a factor.

Exchange rates are wholly unaltered over a long period. The rates on Stockholm, Zurich and other centres are held successfully by control. The only development to record is Iran's break with Japan. Commercial relations were ended in this case before the diplomatic rupture came this week. The steady rise in bank deposits in Britain finds a parallel in India but there is not the same support for Government. The excess of money was responsible for a rise in the volume of applications to £155 millions for 3 months bills last Friday. Rate was a shade over 1 per cent but certainly below the rate ruling in India at present. Treasury deposits are to be increased to £40 million and this might help banks to reduce their large balances as usual held with the Bank of England. Their investments must continue to increase since demand for funds is negligible in wartime and normal financing requirements are lower. The reduction in 1941 profits of Banks proceeded as much from the low return on investments as from the fall in Advances. The trend will remain the same as six months ago.

The latest aspect of price control in Britain is mainly directed towards putting down luxury spending. The savings drive and the anti-consumption campaign are more than ever closely related. Customers of hotels are to be protected at the same time as sale of game and fish is to be prohibited on specified days. Public repasts, except for approved purposes, will be forbidden. It is not surprising that price control goes along with limitation of desired supplies in every case.

The Budget intends to take more money by reducing the portion of income available for private use. Treasury policy is orthodox, or so it seems, and the Budget which raises taxation on liquor and tobacco wants not even to cut imports and save shipping space but to discourage spending. Luxury spending is disapproved. The working class will continue to pay income-tax and also pay more on whisky yet it is the spirits, wine, tobacco and cigarettes are chosen? The rich stand to suffer because of higher excise. Entertainment tax has been doubled. Not that it is a big source of revenue, but it is to show that every thing except absolutely necessary expenditure is officially regarded with disfavour.

Sir Kingsley Wood wants a Spartan regime even after income-tax went up to 10 shillings in the pound. There is reason for leaving as much as possible to be taken out for the war. It is not enough to get only 40 per cent of the war bill through loans. Total expenditure for 1942-43 is estimated to be substantially higher at £m 5,286. The Exchequer needs, and expects as much as £m 6,500 in the year. But tax revenue will be £m 2,400 out of anticipated total receipts of £m 4,500. It is thus anticipated that £2,100 million or more must come from borrowing. Savings will play a bigger part than ever in the war effort and the real idea behind raising excise duties on tobacco etc. is to cut down spending, not merely to increase revenue.

For about a year the Treasury is identified with price control. Sir Henry therefore dwelt on what he was doing to keep prices down and wages unchanged. The price of cigarettes before the war only 10 could be had for a shilling not 25 per cent as hinted but 50 per cent up. Estimates of the smoke bill —340 millions—and the beer bill—330 million show that tobacco is a bigger item in the nation's way of living than suspected. A bigger drain is the weekly nine pennorth of dark' for which the craving undoubtedly exists, and is proved by the fact that £1,400 millions pass into cinema box-offices thereby making cinema properties vastly more prosperous and secure than film production companies. Changes in the purchase tax with a view to curtail consumption were announced. In effect the Budget represents no departure in policy. Expenditure is naturally higher. The growth of debt will naturally entail an addition to consolidated fund services. The budget presented on April 7th 1941 put ordinary revenue at £1786.36 millions, (Actually it was higher at £2,074 millions) and the anticipated deficit at £2,420.6 millions was naturally exceeded. This year expenditure will be further up by over £774 millions (if the Revised Estimates are compared by £510 millions) and the increases in indirect taxation would be partly offset by enhanced expenditure on the price control *cum* rationing policy. Sir Kingsley Wood claimed success in the fight against inflation. It is that success, which inspires the belief that the war bill can be met because investment will proceed as usual, with the result that there would be no difficulty about war production in the third year.

The poll tax in another form has appeared in the N.E.I. European and American citizens in the N.E.I. will have to pay 100 guilders for men and 80 guilders for women. Natives are untouched. Foreign Oriental including Indians are not exempt but will have to pay 100 guilders. for men and 50 for women. The new levy is called a registration fee and collected under what the occupied Dutch Indies and have introduced unusual measures. They have not, however, introduced their own currency and prefer to go by the German example in Occupied countries. What the Japs can get out of the new registration fee can only be guessed. Europeans etc. are not likely to exceed 50,000 and Asiatics may not be over 700,000 out of the total population of 60 millions. The African colonies familiar with the poll tax are on a different footing but the Japs may argue that alien minorities must pay for the privilege of military protection. The new levy will not make the occupation authorities popular either popular.

The spread of war towards Burma may well raise doubts as to the Allies' lead position. A recent cable from London to the Associated Chambers suggests that the supplied will be adequate despite the Japanese advance in Burma and restrictions on Australian shipping. Burma's production from mines, which are not yet threatened, is about 85,000 tons per annum, but Burma's exports have ceased since Rangoon was taken. The largest source, however, is Australia which produces 250,000 tons in a year. Canada's production must also be taken into account. Newfoundland, South-West Africa and Britain in combination can altogether 300,000 *tons*. But the difficulties *in getting supplies* from Australia will according to the *Economist*, lead to strict economy in the use of lead in Britain. The U.S.A. which can count on this Andean republics is in a different, and happier, position. The U.S.A. produces 460,000 tons and imports 320,000 tons from Canada among other countries because consumption is enormous.. Perhaps U. S. imports will fall, and it may even be necessary to conserve lead supplies there also. It has been noted in this connection that decisive superiority still rests with the Allies since the enemy cannot hope for more than 300,000 *tons*, assuming that neutral and occupied countries' production is destined for the Axis alone.

### British Railways' Performance

Fuel economy is developing rapidly. British railways bent on reducing travel in the winter made efforts to save tractive power. Larger hauls and bigger freights with a reduced intake of coal and reduced output of power in the process were a remarkable combination. Having lost many engines in the war at home and abroad, the British railways, operated at the instance of Government, cannot ask for new engines. But they have to run daily 700 to 800 trains more and wagon loads in recent months have been 11½ millions tons over the pre-war level. Shipping difficulties naturally add to the demands on the transport system. Haulage capacity is being raised by such methods as conversion of 12 tonners into 13 ton wagons. Central wagon control sees to it that all the coal wanted for war work gets to the factories. Every day the railways rush 53,445 wagon loads of coal from the fields to where they are wanted. The British railways have more than one achievement to their credit.

Constructional Engineers and Shipbuilders are now specifying

CHROMADOR

37—43 tons Tensile
Chromium-copper
Alloy Steel

for definite economic advantages and reduced maintenance costs

## Ways and Means Conundrums

For the first twenty-seven months of war, the ways and means machinery of the Central Government was functioning with exceptional smoothness. The entry of Japan into the war, however, has caused a sudden and rapidly increasing deterioration in the ways and means position. November recorded the most substantial sales of the defence loan, thanks to the observance of the Calcutta Savings Week. All the gain, however, was lost in the following two months, during which the Government had to purchase large parcels of giltedged securities in the open market with a view to lend spport at a time when disintegration on a vast scale was taking place. We have no means of knowing what is the total quantity of securities that the Government have thus purchased in their attempt to stabilise giltedged prices. But there can be no doubt that the open market operations on the present occasion have been on a much vaster scale than at any previous time. Our own estimate is that the Government might have purchased securities for anything like Rs. 10 crores to Rs. 15 crores. To that extent, the ways and means position has been adversely affected.

With such a heavy landslide in the giltedged market, it was inevitable that the sale on tap of the second defence loan had to be discontinued. For some time, the defence loan was on offer through the tap at par, while the market quotation for the same loan was Rs. 98. This anomaly could not be allowed to continue for long.

Conditions since then have shown no signs of improving. The Finance Member must be giving careful thought to the planning of the next defence loan. Planning a loan is one thing; and timing its issue at a propitious moment is quite another. Current indications seem to point that such a propitious moment may not arrive for a considerable time. In simple terms, the Finance Member may not be able to issue the third defence loan for some time yet.

Sales of Treasury Bills also have not been as smooth as before. It has been found necessary to offer higher and higher interest to secure the weekly quota of Rs. 2 crores from tender bills. There have been rises in the discount rate almost every week. In spite of the inducement of a greater yield, banks do not appear to be too keen. Applications received on the tender day this week make a poor showing at Rs. 2,35¼ lakhs, which is only Rs. 35¼ lakhs more than the amount on offer. Sales of intermediate bills are also not as satisfactory as might be desired. Sales in the current week came to Rs. 99¼ lakhs, and there is reason to think that it was the support from special quarters that brought the sales to this figure. In terms of money market rates, the rate paid by banks for deposits, and the cash balances maintained by banks, there is no justification for the continuing increase in Treasury Bill discount rate. We have this extremely anomalous position to-day in which a bank is willing to give only ¼ per cent. for three months deposits while the Government of India have to pay nearly 1.3 per cent. for three months accommodation. Surely, the credit of the banks is not higher than the credit of the country!

While open market purchases of securities have dug a big hole in the ways and means budget; while the second defence loan has been discontinued and the third defence loan could not yet be placed on the market; and while Treasury Bills borrowings are becoming dearer and more difficult, the commitments which the ways and means budget has to provide for are growing heavier. The Government of India are acting as agents to the British War Office for purchases of supplies and for various other war commitments. The monthly turnover in respect of these inter-governmental transactions has now come to exceed Rs. 30 crores. A few months ago, the monthly turnover was of the order of Rs. 15 crores. That is to say, the working capital, which the Indian Government have to maintain for fulfilling their functions as agents to the British Government, has now to be double of what it was six or eight months ago.

With the bombing of Vizagapatam and Coconada, the war is no longer at India's gates: the war has come to India. With India thus at war, and with India thus a war zone, the sclae of military expenditure must needs be heavier than was visualised by Sir Jeremy Raisman when he framed his budget proposals. Provincial governments also have been making heavy calls on him for such civil defence measures as they are now required to take.

In these three months and a half, Sir Jeremy has found it possible to solve the ways and means conundrums by recourse to substantial ways and means advances from the Reserve Bank from time to time and by sale of "ad hoc" Treasury Bills to the Reserve Bank. During the last week, the ways and means position was helped to the extent of Rs. 5 crores through the delivery of rupee coin for that amount to the central banking institution. Ways and means advances are a proper method of financing so far as the working capital required by the Indian Government for acting as agents to the British Government is concerned. In the nature of these transactions, payments are being made day to day by the Indian Government, who are being reimbursed at the end of the month in one lump sum. The transactions in this regard are thus settled in the matter of a few days or a few weeks at the most. Ways and means advances from the central banking institution are the correct technical methods for the finance which the Government require in this regard.

But the really serious problem to be tackled is in connection with the growing gap between current revenue and expenditure owing to the colossal increase in the expenses on the defence programme. This deficit cannot be met by recourse to ways and means advances whose essential significance is short-term financing. In other words, it is urgent and imperative that conditions should be recreated for the favourable issue of the third defence loan and for the smooth sales of Treasury Bills. To the extent that Japan's entry into the war was a shock in this regard, the market has got used to it. We suggest that the continuance of the political stalemate in India is an adverse factor from the point of view of ways and means operations.

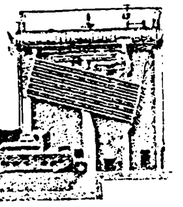
At the time when negotiations between Lord Irwin and Mahatma Gandhi were taking place, the ways and means position of the Government of India was almost desperate. In those times, the total outstandings of Treasury Bills in the hands of the public were over Rs. 70 crores. There were heavy maturities every week. Fresh sales of Treasury Bills were on a poor scale. The Government were at their wit's end as to how to balance sales of Treasury Bills with maturities. In the period when these negotiations were conducted, sales were poor. From the moment the negotiations were concluded successfully, sales of Treasury Bills shot up. In the week following this triumphant event, Government of India Treasury Bills were sold for over Rs. 10 crores. This has a great lesson for the present. War financing can again be resumed on a favourable basis only when the political impasse is ended and the people are able to realise that it is their war and it is they that have to finance the war.

## PENALTIES OF PARTITION

The attainment of a difficult ideal namely Pakistan has not been brought nearer by the withdrawal of the War Cabinet's proposals. Prolonged negotiations have only indicated the difficulty of reconciling the opposed viewpoints. If the Cripps plan made Dominion Status a positive goal deflecting India's aims to that extent it has introduced one more element of strife by specific vagueness as to the nature and limits of the Union. The word Union may suggest parallelism with South Africa but it must be emphasised here that the Union is more unitary than federal. The Provinces are not like the States in the other, older Union, the United States of America. We are not concerned now with the failure of the parties to reach a settlement with the British Cabinet's representative. While the urgent need for a settlement in India is universally admitted there need be no excess of regret over the shipwreck of negotiations which threatened to destroy the unity of India. The partition plan was a more fatal flaw than tthe reservation, for the duration, of defence. It was the latter which gripped attention, but the former was the more dangerous feature. The proposals and their fate are of little concern to us, particularly after the protracted post-mortem. But it is essential to note that on the side of economics it is open to doubt if two Unions could coexist in India. The creation of Northern Ireland does not provide a complete precedent. For Ulster has no sovereignty or even the status of a Dominion. Its continued existence is generally viewed as a threat to Anglo-Irish relations, and the chief consequences of Ireland's partition, as we know, is Eire's neutrality and the persecution in Ulster of Irish nationalists.

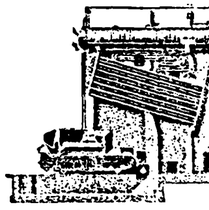
The more immediate displeasure excited by the clause defining the scope of an Indo-British treaty comparable to the Anglo-Egyptian treaty of 1936 springs from the scope allowed for interpretation. The paragraph reads. This treaty will cover all necessary matters arising out of the complete transfer of responsibility from British to Indian hands; it will make provision in accordance with undertakings given by His Majesty's Government for the protection of racial and religious minorities but will not impose any restriction on the power of the Indian Union to decide in future its relationship to other member-States of the British Commonwealth. The paragraph is vague; the undertakings referred to are not made known. It has been contended that the clauses relating to commercial discrimination in the Act of 1935 will be repeated as sacrosanct promises which should be respected **in toto** by the Indian Union. While there is no emphasis on reciprocity as such it is argued with some reason that India's freedom to act, for instance, in regard to the reservation of Coastal shipping will be seriously abridged position of European commerce.

It is not for us alone to question necessity for safeguards when European leaders have themselves urged insistently that goodwill is the only foundation for cooperation. To restrict as the Hoare Act does, the freedom of an Indian Union to limit the rights of foreign concerns and enhance the opportunities afforded to Indian Commercial interests under dominion home rule is inconsistent with a treaty. There will be no equality except in theory between the treaty-making powers, and the declaration has naturally been taken, as meant by its inherent vagueness, to perpetuate the present rules which bar India from giving protection, for instance, to Indian insurance companies in this country.



In spite of the claims made for the finality and immutability of the offer by all and sundry, it was manifest that authoritative opinion must be sought as to the application of the word undertaking in respect of a racial religious minority. The European in India, will, in the view of some, be taken as standing outside the scheme of minority protection envisaged by the treaty but covered by the promise as relates to past undertakings. That the European interests will obtain weightage in the electoral college, and hence in any constituent assembly, was taken as a new strong probability, but that by itself affords no guarantee that a new Franchise and Delimitation Committee will show the same respect for Commerce and Industry or for special interests for which the European stands. What the constituent assembly will be like depends ultimately on who will be inside and who will be outside the Union.

As has been widely urged by opinion of all shades the permission given to stand out can only be viewed as a surrender to the advocates of Pakistan. If Mr. Jinnah is not satisfied with the procedure adumbrated for indicating dissent he has gained to the extent that the unity of India is not treated as axiomatic. The option given to the States is on a different ground altogether. The British Indian provinces enjoy uniformity of administration. Any partition with provision for a separate Union of Provinces or States can only lead to a grave disturbance of the administrative order established as much as responsiveness to British public opinion as to Indian agitation for reform. While the offer of Dominion status on the full scale satisfies all, the incompatibility of two unions in one country stands revealed. The Sikhs like the Hindus jib at the prospect.



What will happen to the Public Debt of India if the Punjab and Sind decline to join? What can come of the projected statutory railway authority? What can be hoped for in regard to uniform labour legislation? The boundaries of provinces may be ill-drawn, illogical but surely the maintenance of two armies on the respective frontiers of two unions is ruled out. The leave given to formulate in detail the aspirations for separate nationhood will militate against the full war effort for which the Cripps plan is merely the scaffolding. It is not only the Mahasabha which argues that unity alone is consistent with freedom. What will happen to freedom of trade in India itself can only be imagined. If the Punjab's wheat or cotton is subject to an export duty, collected at the instance of a separate distinct Union Government, there may be retaliation in the form of an export duty on ghee, sugar and vegetable oil sent to the Punjab from the U. P. No region or province whatever its racial or cultural make-up can hope for self-sufficiency. The relative backwardness in point of industrial development may lead to unhealthy competition within new tariff walls and established industries outside Pakistan may have to face extinction. Questions relating to double taxation etc. may be answered summarily by pointing to the separation of Burma and Aden, but other issues raised by the advocates of India one and indivisible cannot be peremptorily dismissed. It is only a united India that can raise the money needed for this war. The apportionment of old debt on this basis of existing irrigation and railway assets may be quite feasible on orthodox lines but how is the remnant of external debt to be shouldered. It may be possible in theory to delimit the assets and liabilities in accordance with the existing Provinces, but the whole scheme of Central subventions on which Sind, the Frontier, Orissa and Assam depend will founder rapidly. How exactly is the railway debt to be shared? It may be reasonably contended that the return on the huge mileage of the N.W.R. is considerably lower than that on the E.I.R. Even more important in the war period is the maintenance of arrangements for financial assistance by Britain for India's defence. If Britain is to share responsibility surely it would be impracticable to police two north-west frontiers. It may be that there will be no navy for Pakistan but the Indian navy cannot do without Muslim recruits from the Punjab or Assam.

What was said on the score of inter-provincial trade receives its justification from the difficulties experienced by the survival of customs duties in certain States. Further question as to the devolution of Paramountcy will lead to the usual question about what will be paid by the States for defence. Who is to take the subsidies of the Punjab States if these refuse to join the smaller Muslim union? In regard to investment etc. any union will be gravely handicapped. A separate Reserve Bank or independent currency arrangements for a new union are **prima facie** absurd. A vear ago the economic limitations of the Pakistan plan were dealt with. The same arguments as regards debt, banking system etc. can be employed with effect. It is obvious that the War Cabinet which was perhaps influenced by the ill-fated Peel Plan for Palestine has not considered the consequences of wrecking the unity of India to make concessions to the more ardent Muslim Leaguers. Whatever good is accomplished by attaining Dominion Status and full cooperation will be jeopardised by the appeasement plan to which Sir Stafford Cripps is inclined. It is, of course, the task of our leaders to show that unity and efficient administration go together. Parallels drawn from the U.S.A. as to the F.T.C. and I.C.C. and other bodies will not be on all fours, for a new Sovereign Union in opposition to the larger Union is undoubtedly the ideal for which the League stands.

It is true that nothing was sharply defined then and the Cripps plan in deliberately trying to square the circle has left the States the chance to join in large numbers. But the separatist ideal has not been broken. Reference has been made to the handicaps that will be thrown on defence after the period of unqualified British control ends. Reference must also be made to possible claims as regards currency reserves etc., that may be advanced. Who is to be the umpire in such disputes. It will be beside the purpose to quote the Rowell-Sirois report for what is contemplated in the Cripps plan is the erection of a different State completely outside the framework of the Dominion, not the creation of privileged Provinces eligible for new rights. Southern Rhodesia's refusal to join the Union of South Africa is hardly an instance in point. Just as Newfoundland has chosen to be outside Canada, so has Southern Rhodesia. The argument from analogy is singularly dangerous, for if invention is lacking in politics, tradition must compel respect for all time. Many things beside the Distribution of Revenues Order will be threatened. Provincial monopolies and shortages may take on a different meaning, and an ill-divided responsibility for defence can only aggravate existing vulnerability.

### Assam's Surplus

The Assam Budget indicates that there will be a slight fall in revenue during 1942-43 though receipts from land revenue etc. will be higher than in the two preceding years. The financial statement issued under the authority of the Governor last month summarises the position created after the small surplus obtained in 1941-42 as in the preceding year. Assam can still look for a subvention of Rs. 30 lakhs but its share of the jute export duty is likely to fall short of anticipations. It is expected that only Rs. 9.59 lakhs will accrue in 1942-43. The only advantage retained is a fairly large balance of Rs. 77.2 lakhs. Nevertheless the Assam Government may have to take loans from the Reserve Bank. The total revenue for the year 1942-43 is placed at Rs. 319.38 lakhs as against Rs. 320.67 lakhs shown in the Revised Estimates for 1941-42. Since total expenditure is put at Rs. 317.39 lakhs only, Assam will have a surplus like Madras and other Provinces.The surplus is largely the result of a fall of Rs. 14.6 lakhs in expenditure as compared with 1941-42. The opening balance for 1943-44 will be higher in consequence of the surplus. Assam will gain through the larger contribution from income-tax while its own agricultural income-tax will give Rs. 27 lakhs as against Rs. 25 lakhs in the previous year. A noteworthy improvement in land revenue may be said to show that Assam will suffer little through the war. Assam's chief source of income is land revenue which will yield Rs. 96-5 lakhs in ordinary revenue. Rates and cesses will give Rs. 13.7 lakhs and Rs. 16.77 lakhs will be gained under miscellaneous heads. Revenue in 1941-42 was affected by floods and is expected to be better this year. A decline under excise is anticipated owing to the rise in the cost of living while stamp revenue is expected to be stationary. Forests are likely to yield less while the Department's disbursements are expected to go up. Registration is an inconsiderable source of revenue in Assam and other taxes including entertainment tax are expected to give only Rs. 3.14 lakhs. The annual provision for debt service is limited to Rs. 1.53 lakhs. and part of this is met by interest recovered on advances.

Owing to the absence of a Ministry and the suspension of the Legislature general administration charges are likely to be lowered by Rs. 4 lakhs. The suspension of autonomy is the ultimate cause of the Assam Government's surplus. Like all other provinces Assam is forced to spend more on jails and police and reduce where possible expenditure on Education and Public Health. Total revenue at Rs. 319.38 lakhs is below the total shown in the Revised Estimates but is higher than last year's budget estimate of Rs. 313.01 lakhs. The expenditure charged to revenue in 1942-43 will be lower and Assam owing to the eclipse of autonomy will have definitely broken wih deficits. There is no provision for civil defence in the Assam Budget and this may well provoke surprise. But it will be recognised that the surplus is too small to withstand any fresh calls, and Assam probably expects the Centre to spend whatever it can for civil defence. The contrast between Bengal and Assam in this respect will indicate the difference in resources and attitude.

### Growing Demand

The Trade Commissioner in London has often drawn attention in the past year to new openings for Indian manufacturers. U. K. merchants want to provide Indian goods for many Colonial markets. The Trade Commissioner has assisted them in enquiries for piecegoods, apparel, hosiery, hats etc. South America, too, is desirous of taking Indian goods as is proved by the increase of Rs. 2.67 crores over the preceding year in the value of Indian exports to South America in the eleven months ended February. According to the last report from London. U. K. firms were asking for direct shipment of goods like butter, carpets, padlocks, tennis balls, boot polish, stationery, pomades and perfumes as also cotton blankets for Nigeria. The other West African colonies expressed interest in camphor, salt etc., and the Belgian Congo also asked for cotton goods. South Africa expressed a desire for things like sewing cotton, curry powder and cotton towels as also nutmegs, tea etc. Beeswax required by the Iraq Government occasioned an enquiry which was transmitted to the Supply Department. Hongkong asked for a quantity of jute sacking. Information was forwarded through the Crown Agents for the Colonies in this case as in that of Iraq. Indian commodities received more attention than ever, and waterproof paulins, lime and lemon grass oil, clove and palmarosa oil, monazite, beryl, antimony and chrome ore were among the exports which were enquired for. The Trade Commissioner in the report cited refers to the ignorance concerning the export control adopted in India in the case of some minerals, and adds that efforts being made to build up trade connections and maintain them. Whatever may be the restrictions enforced on imports into Colonies under orders it is clear that the U. K. is a ready buyer. Over the whole of 1941-42 the U. K. has actually increased her takings of Indian goods and the usual percentage share of Indian export trade is evidently held at least by the U. K. It is not without significance in the war period when the U. K. has applied strict control of imports that the total value of takings from India has actually increased in value. Importers in Britain have made a material contribution to the growth of trade; though imports from Britain into India have languished for obvious reasons the U. K. took in the eleven months of 1941-42 as much as Rs. 70.4 crores worth of goods as compared with Rs. 42.12 crores taken by the U.S.A. The figures put the U. K. definitely in the lead and indicate that compensation for losses in the East may be sought by Indian shippers in the U. K. market where Indian tea, coffee, pepper, rubber etc., are among the commodities directly assisted by the war. Though the growth of exports to the U.S.A. in the war period appears more striking than ever, it is important to relate the progress of war production in Britain with the progressive increase in exports which was recorded in spite of the fall in the value of seeds and fibres shipped from India.

### Trade in February

A striking fall in imports stands out as the main feature of India's foreign trade in February. The fall of Rs. 2 crores under imports springs directly from the war. The declared value of almost all imports was higher so that the shrinkage in trade must be greater than it appears. There was a similar rise in the average value of exports as might be inferred from the rise in prices right through 1941 and afterwards. The total value of exports in February is shown to be over Rs. 20.68 crores. In view of the fewer working days, the total compares very favourably with the January total of Rs. 20.7 crores. Taken in conjunction with the marked fall in re-exports and the decline in imports it might be said that demand for Indian goods increased even after the emergence of fresh difficulties due to the war. The trade returns should infuse some optimism as to the establishment of an all-time high in regard to India's balance of trade, but satisfaction will naturally stop there. As compared with the previous year, the eleven months of 1941-42 accounted for an increase of Rs. 46.3 crores under exports while imports have risen by only Rs. 21 crores. The importance of this bulge in the export surplus can be grasped in relation to the second instalment of sterling debt repayment. But the further consequences disclosed by the large receipts of sterling in March can only be measured in relation to progressive changes in import trade. It is manifest that war purchases will help India which will, however, be handicapped by a shortage of imports. Yet it is reassuring to find a significant increase as compared with February, 1941, in imports of machinery and millwork. The more sensational decline under rubber manufactures and paper etc., points to the advent of control at both ends. More arresting is the fall under vehicles excluding locomotives. Anyway for the first time in many months the imports of manufactured goods registered a notable fall. The shipping difficulty is directly responsible for the fall noted under grain etc. The increase in import duty may explain the fall recorded under raw cotton, but that under timber can only be ascribed to the rapid spread of hostilities in Burma.

A noteworthy feature of the February returns is the big rise under exports of Indian manufactures. Compared with February last there was a remarkable increase under both cotton and jute manufactures. Even if the price factor is taken into account in this case there must have been a big rise in shipments during February; while improvement under hides and skins was moderate as compared with the position a year ago, there was a strong rise under tanned hides and leather. The more stringent demand at home accounts for the fall under India's exports of iron and steel, metals etc. A failure of Indian exports of paper can also be said to be due to pressure of home demand. Essentially the export picture is determined by things like tea and oilseeds. February saw an improvement under both items, and it may be possible to draw some comfort from a small increase under cotton and jute as compared with February last. But in the case of both the price factor was adverse to the Indian exporter, and it is more than ever important to note that more than half the export trade of India is at present in the form of manufactured goods. In spite of the rise under grain pulse and flour etc. in February it is clear that the food item means tea. Exports for the eleven months ended February were valued at Rs. 37.72 crores, if not decisively the single largest item, at any rate as important as jute manufactures in India's export trade. New markets have latterly been gained at the expense of the N. E. I. and tea is an exception to the restriction plans envisaged for oilseeds, jute and cotton.

### A Rajputana Experiment

Another experiment in reclaiming ancient waste is described in the account of the operations of the Bundi Agricultural Syndicate. The Syndicate is a new departure in estate farming, and Mr. Sykes tells in "Indian Farming" how much experience has been gleaned in the dry Rajputana tract. The soil is poor and railfall scanty. Vegetation is poor, if typical, and the tract taken up had certainly known better times before the famine of 1900. Irrigation appeared the obvious remedy, but the nature and properties of the soil had also to be studied carefully. Average crops of 7½ maunds of wheat per acre have been since raised successfully. Water storage has been provided in this case by a tank which holds one thousand million cubic feet. A bund was built, and a tank was ready, though it needed repairs soon owing to a heavy monsoon. Irrigation, however, was not understood by many cultivators in Rajputana, and this is part of the experience referred to. Trials with sugarcane came first on the Bundi estate. Cultivation spread and a Khandsari plant was ready. But there were many limiting factors besides the climate. Yet it was decided to extend cane cultivation up to the point at which a factory could be set up though the decision was soon revised. A bigger dam was decided upon, and soon the cultivation of rice seemed feasible. A bad year supervened but the Syndicate learnt enough to show that rice was a more suitable crop than sugarcane. New varieties of rice have been tried out. The Bundi Syndicate's experiment illustrates what has been said of the possibilities of extending rice cultivation in Northern India. Irrigation engineers have often urged that rice is a cure for waterlogging. The Bundi Syndicate did not have that trouble, but knew that, with the irrigation possible in a very hot place and the limited facilities for sale, rice was the better crop. The Syndicate does not yet know what is the proper rotation for Bundi soil or what is the right margin of profit in case of rice. Very good results were obtained with T 23—an obsolescent variety, acceptable because it was prolific and ripened late. It was obviously a hardy type and Garerda in Bundi is once again the home of paddy, as its name must have suggested to the Syndicate.

### New Insurance Scheme

Last week was memorable for the issue of an ordinance extending greatly the scope of the war risks insurance scheme. Factories and plant are covered like commodity stocks, and the scheme of compensation presents few vital differences except that Government has made no specific allocation for payment of compensation. Evidently a fully self-supporting scheme is envisaged. The Australian scheme introduced by the Federal Government in December itself was based on the principle of contributions, but the main responsibility falls on the State. The Indian scheme designed to provide compensation for damage to plant, machinery and buildings caused by the enemy or in combating the enemy sets at rest certain doubts provoked by anxiety as to the application of a scorched earth policy in India in the near future. The ordinance settles most doubts raised by replies to questions in the legislature. Denial tactics do not preclude payment whatever the N. E. I. Government may or may not do about aggrieved foreign investors, it is accepted that sconched earth if adopted in India voluntarily, entails compensation. Deliberate self-destruction in the interest of defence does not rule out compensation; that is maxium number one. As from April 1st the scheme is in operation. Compulsion is a recognised principle and all factories come within the orbit of the scheme. The actual value of buildings etc. alone will be considered, but residential structures will also be classed as factory buildings for the purpose of insurance. Owner and occupier alike are recognised as having liability but a mortgagee with a definite interest in property can also insure against war risks. The four per cent premium will, of course, cut at distributable profits, some people consider the rate too high. Insurance up to March 1944 is contemplated so that a two-year contract can be made by all those who can afford to pay the instalments regularly. The full value of property destroyed will not be paid. Only 80 per cent of the estimated loss is payable. But the insured will bear only

up to Rs. 1,000 of loss. The application of the principle of limited liability in this case receives its justification from the desire to conserve the funds obtained through insurance companies. Since the war risks scheme of 1940 provides for accredited agents the administrative machinery is more or less on a known pattern. The scheme's appearance has not been without effect on the stock exchanges and investors in India. It is now felt that the real value of the shares of industrial companies would not be greatly prejudiced by the risks incident to war. Even smaller factories can count on the benefits of insurance and the four per cent. premium payable is within the anticipated limit of three to eight per cent. It may be said in conclusion that the commercial community has received the scheme without doubts or questions. Ordinary policies for ordinary risks are likely to be viewed with less favour than the State scheme for war risks. And protection in this has been provided before the coast of India was attacked. The States are outside the scheme though Cochin Port may be an exception.

### Lower Cess Wanted

In a recent communication to the Department of Commerce, the All-India Tea Growers Federation have asked for a reduction in the rate cess on tea exported from India. The tea cess is old and familiar, but it is now at a much higher level than in the past. The Tea Cess Act of 1903 has been amended more than once, and after tthe raising of the export quota to 125 per cent., it is obvious that a case for reduction exists. The letter refers to the fact the Tea Market Expansion Board has at the end of March a balance of over Rs. 30 lakhs. In the half-year ended March 31 it got Rs. 37.34 lakhs and spent about Rs. 25.07 lakhs only. The Federation thinks that the Board's income is sure to rise now that the export quota has been revised to 479 million lbs. less at the rate of Rs. 1-6 per 100 lbs. would bring about Rs. 66 lakhs in the current year. There is not likely to be large scale expenditure as the tea propaganda campaign in Europe has been wound up, and there is not going to be any intensification of work either at home or overseas. Expenditure is put at Rs. 52 lakhs. The Federation argues that the rate of cess should be lowered to Re. 1 per 100 lbs. Even if India is called upon to pay Rs. 5 lakhs on behalf of the N. E. I. there would be a balance of over Rs. 48 lakhs. If the rate were reduced to Re. 1 per 100 lbs. on exports there will not be any difficulty in meeting expenditure. The Federation also makes mention of the rise in tea prices propelled by scarcity of supplies in India due in this case to enlargement of quota. The Indian Tea Market Expansion Board has not ignored this aspect of quota revision in the recent past. The Federation urges that a lower cess would reduce the export price and **pro tanto** the home price. The Ministry of Food might also favour a lower cess for obvious reasons and since the cess is collected for the good of the industry, and is not a tax in any sense, the reduction is both feasible and desirable.

### Sugar Control

Another commissioner and another scheme of control have appeared. Minimum prices ex-factory for sugar have been fixed already. Price control is thus to be applied in the case sugar as of wheat. The trade has registered no anxiety and it is realised that uniformity of retail prices cannot be produced because of basic difference in freights. A sliding scale based on quality is also devised. Marhowra crystals are taken as the standard and all grades are quoted on or off. The principle is intelligible, if not capable of continuous use. Government as a buyer does not want to pay too much. It cannot play off Java against the Indian mills. But most sugar factories have paid high prices for cane and their profit margins are inevitably reduced by price control. Investors who think of the relative safety of factories in the countryside will have to note that price control, and fixed wholesale prices for the producer—not the middlemen in this case—will militate against the universally anticipated growth of profits. It cannot be said that Rs. 11-2-0 ex-factory is too low a level. It is certainly far above the fair selling price cited by the Tariff Board. Whether the war is going to provide any usual benefits, because of Java's ceasing to be a rival, the level of prices on a definitely higher scale, well above the 1929 level had to be adjusted. Costs may not have risen but the 1941 reports of sugar companies showed that the year was quite good. Control on an All-India basis has been decided upon. Differential advantages will be retained by Daccan and South Indian producers. Questions asked as regards control of **gur** and **Khandsari** prices have no special relevance. A central marketing agency is, however, not contemplated as yet. Positive action is limited to the specification of a particular price for sugar. Transport will determine the price at points of distribution but the average consumer will know one thing, that a further rise in prices is ruled out. To that exent, the Government of India's decision is applauded, and rightly too. It is also manifest that rationing is not contemplated at all and the price fixed is high enough to stimulate the mills like the Government, anxious for a big cane crop this year. The inducement to reduce costs is retained, and the Commerce Member's decision is seen to be best obtainable under the circumstances.

### Bombay Budget

Last year it was the maintenance of nation-building service on a slightly large scale. This year it is the creation of a reserve for postwar liabilities. That is why the Bombay Budget obtained special notice in the press which has not overlooked the fact that provision for civil defence is as low as Rs. 50 lakhs. The explanation for the surplus of Rs. 1 lakh can be found in that or in the pruning of expenditure. Bombay is alone in anticipating a fall in total revenue this year. In spite of fresh responsibilities calling for Rs. 70 lakhs additional expenditure the total expenditure for 1942-43 at Rs. 15.17 crores will be lower than in the past year. Capital expenditure is limited by the difficulty of borrowing, and the estimated revenue of Rs. 15.18 crores in the case of Bombay means that Prohibition as a policy is abandoned in the interest of revenue though the Federal Court judgment has indicated clearly that Prohibition is not illegal. Small industries will be helped as in the U. P. because the Supply Department wants more goods from cottage workers. The handloom weaver as in Madras benefits through remedial measures and country blanket manufacture is to be developed further. The Special Development Fund of Rs. 65 lakhs (to which Rs. 20 lakhs is allotted this year) will bear the brunt of financing new industrial and other schemes in 1942-43. The postponement of much capital expenditure naturally called for the institution of a special fund to meet non-recurring expenditure after the war. The Province of Bombay with a start of Rs. 22½ lakhs intends to reduce the demands on revenue in the future. The fund, of course, will be outside the free balances but will smoothen the ways and means position. Very limited provision for rural transport facilities is made in spite of a new food-planning drive. City landlords might be disappointed about the failure to readjust the burden of the property tax. The Governor of Bombay has said that if the two preceding years have yielded surpluses, there is no justification for lowering the new tax. The decision has been defended as wholly proper for the war period, but the Bombay Government with a balance of Rs. 4.85 crores could have helped the City landlords who have been affected by the exodus and new liabilities arising out of air raid precautions. The actual budgetary position has not changed much; despite the promise of bigger receipts from the Centre, the balances will not be larger, yet the segregation of a part of last year's surplus may be pointed to as offsetting the decision to retain property tax after the modification effected last year.

### British Agriculture In War

The Oxford pamphlets have established themselves as objective, accurate and comprehensive accounts of the lands problems of today. The last batch of nine sent for review contain many interesting surveys of difficult and puzzling questions. Two are easily outstanding in a notable series. Sir John Russell of Rothamstead tells us in thirty pages all that can be usefully said about Britain's food supply. There was a food problem but it is vanishing. The major achievements of British agriculture are summed up. They have exceptional value for us in India today because we too are confronted with the need for more food. Food, of course ,is a wartime problem and it may be recalled that Lord Ernle in his tribute to the late Mr. Gerald Strutt emphasised the fact that a very large estate had been won for the plough by his friend's passionate interest in farming. It is the farmer's glory that he pays for more than the soldiers and the rise in agricultural wages has been definitely welcomed. Changes in diet and feeding habits too are concomitants of the revolution in food supply. Before the war Britain could hope to produce only 40 percent of her food, and this, too, entailed the use of imported foodstuffs. The Empire naturally provided about half the imports but all this has been changed by the war. It is a fundamental and striking change. Its necessity is realised; and its value is demonstrated every day. The change-over from the elaborate import trade of peace to the rationing procedure of the Food Ministry cannot be measured. What Germany has accomplished in this field is certainly not ignored. They got on with less meat and made the most of potatoes. An acre of cultivated land as against 1.67 acres in Britain was enough for the individual German. Sir John is certainly impressed by the efforts made in Britain to develop home-grown food for the people. Suggestions for a better diet figure along with an estimate of what can be done to keep livestock going. It is hard to indicate in a brief notice how much information is given in the fourpenny pamphlet. It indicates that in some respects e.g., in the location of wheat mills, the Germans enjoy advantages. Sir John envisages a

**NORTH WESTERN RAILWAY**

The notice issued to the public regarding the closing of stations, Matli exclusive to Badin inclusive, on the Hyderabad (Sind)—Badin Branch Line, which appeared in certain newspapers during the end of March, 1942, is cancelled. The Section in question will now be closed finally on 23rd June, 1942. The booking of traffic will, therefore, be stopped as follows:—

Traffic of all descriptions from foreign railways.
(From 14th June, 1942).

Local Goods Traffic in booking to stations on the section itself.
(From 14th June, 1942).

Goods Traffic in booking from stations on the Section itself
(From 22nd June, 1942).

Local passengers and other coaching traffic in bookings to stations on the Section itself.
(From 20th June, 1942).

Passenger and other coaching traffic in bookings from stations on the Section itself.
(From 22nd June, 1942).

The public is also advised that on and from the 23rd June, 1942, the running of trains 479 Up, 477 Up and 478 Down and 480 Down between Matli and Badin will be discontinued. There will be no change in the train service between Hyderabad and Matli.

wider use of oatmeal to reduce demand for wheat though the supply has been increased by extension of arable cultivation, by the larger yields obtained through the use of sulphate of ammonia as top dressing and by closer milling. Sir John indicates clearly that self-sufficiency in wheat can be obtained at too high a price. The citizen of India, who is now facing reduction of food supplies or unusually high prices, should do well to examine the note on the advantages of a free use of vegetables. It is certainly not the least of the virtues of the very practical pamphlet which tells us what vitamins can be had of the humble carrot and the favoured lettuce. Cooking plays its part but Sir John is content to place the food-facts. Assured of Canadian supplies there is no difficulty about wheat in Britain. Home dairy production supplemented by New Zealand, relieves the Briton of anxiety as to butter and cheese. Sir John is optimistic enough to suggest that it looks as if Britain can get all the necessary calories, vitamins and minerals wanted. It is only as regards firstclass protein that there is a problem. Of the farmer's effort to meet it there is universal appreciation, and the last harvest was decidedly gratifying for the farmer, his men and his beasts.

**Indifferent Year**

The Eastern Exchange Banks have yet to issue their balance sheets and reports. The dividend announcements have appeared and only in one case is there no dividend. The Head Office of the Hongkong and Shanghai Banking Corporation has been removed since 1941 to London from Singapore where it was transferred by special Ordinance before war broke out in the East. The Bank has to face many difficulties but the others, too, are not immune. All banks have reported lower profits and reduced their final dividends. The National Bank has paid only 6 per cent. as against 8 per cent. in 1941 though its African connections confer special advantages on this bank alone. What part of the profit made in the last year has gone to write off losses due to the war can only be guessed. In any event, the appropriation cannot be large enough to cover the losses entailed by war. The Mercantile Bank paid 9 per cent. for 1941 as against 12 per cent. in 1940. The Chartered Bank has reduced its dividend from 10 per cent. to 7½ per cent. The difficulties in Iraq last year, now happily over, account for the reduction in the Eastern Bank's dividend from 6 percent in 1940 to 4½ percent for 1941. The National Bank is notable for paying as much as 14 percent, though here, too, the final was lowered from 8 percent to 6 percent. For the major difficulties remain. The outlook is certainly disturbed for the exchange banks which lived largely by foreign trade. They have admittedly large reserves to take the strain off, but the drop below par in the case of the Chartered Bank shares (on which the dividend for 1941 was 7½ per cent.) suggests that the prospects are assessed persistently as deteriorating steadily. A big drop in usual receipts is anticipated by the Chairman because so many of the Bank's branches have been lost through the advance of the Japanese. As to the position arising from assets and liabilities in occupied territory, little can be said. Something may be said about the conduct of business under Japanese supervision but the true position cannot be known till the war ends. The Chartered has a second line of defence through its Indian associate the Allahabad Bank, the oldest and soundest of joint-stock banks in India. The connections in India are untouched by war, and it is only after some time that one can gauge the effects of what has been happening in Burma. It must be added that the growth of Governmental transactions between India and Britain does not help the banks which are hampered also by a variety of controls.

**Australian Measures**

The control measures adopted in Australia after the loss of Malaya and the emergence of a real threat to the Commonwealth, include the freezing of wages. Alongside of the commandeering of resources, there is the pegging of dividends. A fixed return is about all that can be hoped for, but the question immediately raised is whether 4 per cent. is a good return on the capital of the many mines worked in Australia. It is clear that investors will be puzzled and frightened by the limitation of dividends. Cheap money will be maintained by the

control of interest rates by the Commonwealth Bank at a level related to the bond rates. To fight inflation as well as the hoarding movement the prices of all goods and services is to be pegged at the January level. The Prices Commissioner, Professor Copland will acquire new powers over the distribution of resources etc. When operation of industry appears unremunerative in any case there may be a close down which should release men and equipment for war work. The diversion process will be accelerated also by the price-stop. That is its true purpose. Prohibition of the sale of new issues except by special leave is according to established precedent. Only vital, new enterprises can hope for new capital. The Government will naturally benefit because the defence loans will skim off idle money. Speculation in commodities including forward dealings in foodstuffs is also prohibited. The power taken to ban absenteeism is unusual, but understandable, on account of the exigent demand for labour. Employers will have little discretion in regard to keeping factories going for power is vested in Government to regulate transfers of labour. The Dominion has in a trice accepted the full scheme of control evolved in Britain. The power retained to proclaim any area under military authority is necessitated by the rapid emergence of a thrust at Port Darwin. Illustrative of the control system is the power vested in the Director of Aircraft Production to do what he likes with factories, workshops etc. connected with aircraft manufacture. Property rights as such have no significance and private contracts as also patents etc can be put aside. Women have been given leave to join aircraft factories and special training facilities have been provided to bring them in place of men. Evasion is to be drastically checked according to Senator Keane who has promised to suppress black markets forcibly.

**Vichy Vanquished**

Of the developments at Vichy and their probable effect few can speak as yet with assurance. When Marcel Deat said more than once that France was at the cross-roads, it was immediately seen that a new twist would be given to the career of the Fourth Republic. As the Government of Unoccupied France, with a duty to a bewildered nation and a relentless enemy, Petain and his coadjutors have always been in a difficult position, in no way eased by the Free French movement. It may even be possible to link the last act of surrender with U. S. recognition of de Gaulle but for the fact that Hitler's pressure is not recent .The new set-up is meant to favour full collaboration. In the new line-up of pro-German elements Laval is expected to do some surprising things. The Anvergnat's record is bad; it will be worse, now that the distinction between German and Vichy France will virtually disappear. It was either that or a forcible portion together with the esttablishment of a new regime at Paris. Philippe Henri Petain the man of Verdoun has apparently made an inescapable choice. On Wednesday, it was learnt that a triumvirate of Darlan, Petain and Laval was to settle France's affairs. Perhaps the word directory would be more appropriate in the circumstances of France but none cares to look forward to another Consulate and a third Empire. Laval's comeback after his peremptory expulsion is taken to mean the surrender of Vichy, final, positive and above all humiliating. Relief may be given as regards the prisoners of war and the indemnity of 400 million francs per diem but self-respect stands forfeit. Whether the raids on Poissy and the attacks on Breton ports influenced the new postscript to Compeigne or not it is clear that the deal is merely the preliminary to a Mediterranean adventure of Herr Hitler. We have yet to remember that without obtaining a decision in Russia the Fuhrer willl find it hard to vindicate his position as the first soldier of the age. A challenge to the East across Egypt, a plunge into Africa or a turn towards the Caucasus—one or all is possible and the Vichy regime by its fatal commpromise has made it possible for an overt transfer of Tunis, the fleet or even the Mediterranean ports. The beginning of a new diplomatic adventure has been noted, not without misgivings in Washington. The recall of Admiral Leahy is regarded as possible and once again discussion ranges round what may happen to Madagascar. There is, of course, the assurance—taken as bona fide by the Union of South Africa—that France is going to reinforce the Madgascar garrison and keep the island. But that can have little meaning in the new phase of cooperation. One can recognise the hand of Ribbentrop in the last triumph of the Wilhemstrasee. The New Order has been swallowed hook, line and sinker though it should have been apparent to poor plundered France that the New Order is just an euphemism for organised looting.

The task of running the ordinary business of a householder in Calcutta is becoming more and more difficult. With most of us the belief is that the important feature in the technique of the Axis Powers is to keep everyone guessing as to where the next attack will be. There is, as a result, universal apprehension of a general expectation of the worst. Evacuees and exodus are a peculiar feature of the Hitlerian war. Calcutta is tackling to-day, simultaneously, the problem of Indian evacuees from Burma passing through the City, as well as the problem of a considerable proportion of the population leaving for what are considered safer places.

Thousands of evacuees from Burma are arriving every day mostly by train, and some by steamer. The arrangements connected with receiving them at the jetties or at Sealdah, transporting them, accommodating them for a day or two, feeding them and finally despatching them to their varied destinations after securing their tickets for them have imposed considerable strain in various ways. The Sealdah and Howrah stations have to provide for this traffic what time they are called upon to deal with a great rush caused by the exodus of the residents from Calcutta. From the beginning, the Calcutta Tramway Company has been supplying free tramcars for the transport of evacuees from Sealdah to Howrah. This was a service offered spontaneously, and appreciated gratefully. The Tramway Company itself, in recent days, has had difficulties with conductors who also are prone to panic and flee from Calcutta. The facilities that can now be offered by the Tramway Company are restricted, not because the Company is unwilling, or there is a dearth of tramcars, but there are not a sufficiency of conductors available. As for the speedy arrangements for these evacuees, the organisation of cooks and other servants is daily becoming more and more difficult. Cooks, too, have fled in large numbers form Calcutta.

The Indian Tea Market Expansion Board of its own record is supplying tea and biscuits to the evacuees on the basis of a twenty-four hour service at Sealdah. It does one's heart a great deal of good to watch these famished men, women and children refreshed, before they start on their trek to Howrah, with copious cups of tea and generous quantities of biscuits. The Indian Tea Market Expansion Board would like to extend this service to Howrah; but the problem for them too is to secure the men to run the organisation that is to be created in Howrah.

As I said, all offices and households have begun to feel seriously the pinch of staff and servants. I heard the other day of a Clive Street Burrasahib scrubbing the floor and the Memsahib doing the sweeping and the two between them doing the cooking. This report may be slightly exaggerated; but each one of us should be able to relate some such experience in his own case. From my own general observation, it strikes me that it is the menial staff and the clerical staff who have been most affected by the panic. Most of those who stay put are men who hold fairly valuable jobs and who cannot afford to lose them. A cook or a sweeper or a bearer does not consider Rs. 20 or Rs. 30 much to run the risk. A clerk too getting below Rs. 100 thinks that it is not worth while facing the risk. The result is that Calcutta is now more or less rid of that section of the population which enables the other sections to have a comfortable and orderly time. The theme thrust upon us is that there is no work which anybody should consider too mean for him. In our own office, we had, at one time, over ten members on the Editorial staff. We are now doing with just two of us. **Indian Finance** has always boasted on its scrupulous avoidance of scissors and paste. Every article in the Main Number and the Investors' Supplement is an original contribution. **Indian Finance** has also set up definite features; and it is hardly possible to suspend even temporarily any of these features. For two of us to maintain nearly a thousand features week after week, and write anything like fifty columns of original matter, is no doubt a heavy strain, especially as we have to do the articles daily for our stable companion, **The Telegraph.** But I am not so concerned about the strain on the editorial staff; I am more worried about any deterioration in the standard of writing, any occasion for our features becoming dull and monotonous. Our readers have been encouraged to expect certain things and by themselves are highly discriminating; they will not accept anything but the best in **Indian Finance.** I can only hope that our efforts are not altogether unsuccessful in maintaining the standards and traditions built up in those fifteen years. We like our readers are passing through anxious times, we are working under severe strain; we do not know what will happen on the morrow; we are constantly at pains to solve the problems that arise from time to time; we have to prepare for the contingency of Calcutta

being bombed, or even being more seriously threatened. I earnestly beg of my readers to bear these considerations in mind, and to overlook any shortcomings on our part.

---

On the financial side, we are faced with equally acute conundrums. With Hitler overrunning Europe, and with the Censor none too friendly to an Indian-owned paper like **Indian Finance,** we have lost over 300 foreign subscribers. The disappearance of Burma from the British map, caused us the loss of another 150 subscribers. Communications with Madras being in danger or subject to serious delay, an important source of subscription income as well as advertisement revenue will be jeopardised. Advertisers in Calcutta are none too pleased to meet the advertisement managers of papers. This has not caused any serious disquietude to the more important daily papers as they are now receiving very substantial revenue from the various Departments of Government in one way or another. A weekly financial journal is neither fish nor flesh nor good red herring from the point of view of the advertiser. While our revenue is thus seriously threatened, our expenses are unavoidably increasing. The staff—that is to say of such staff as have stayed at their posts —ask for an allowance owing to the higher cost of living and the greater personal risks they are daring. Even the staff, who have left, think they are only on leave; in other words, we work with a depleted staff but there is no saving in the monthly salary bill.

---

The price of paper has gone up enormously, and ours would have been a hopeless plight except for the magnanimous behaviour of the Titaghur Paper Mills Company. From the beginning **Indian Finance** has been printed on Titaghur paper, and on Titaghur paper alone. The Titaghur Paper Company has stood up for its old customers and continues to supply paper at a price which is nearly 40 per cent. less than what may be called the market price. In fact, if I stopped the publication of **Indian Finance** and **The Telegraph** and sold the paper at the market rate, I should be making more money than I am by running these two papers. On behalf of the large body of the customers of the Titaghur Paper Company, I must place on record our appreciation of the considerate treatment we have received from the Company, and from Mr. Mellor. This is a very large beam of goodwill with a unique radiance in a world of naughty profiteers.

---

To go back to our own financial conundrums. May I appeal equally to advertisers that are doing business as usual like **Indian Finance,** which stands forth as the spokesman of Indian business, that we must anyhow be kept going; and that it is their responsibility to keep us going.

---

In all these 15 years the subscription list of **Indian Finance** has remained virtually unchanged. We give the Main Number, the Investors' Supplement, and all the supplements including the Year Book for an annual subscription of Rs. 27. I wonder how many of our subscribers will be agreeable voluntarily to pay an enhanced rate of Rs. 36 per year. It is far from my intention to raise the subscription rate. But I shall be profoundly thankful if those subscribers who are so inclined to do so voluntarily offer the war-time extra fee of Rs. 9. These contributions will be gratefully received, and faithfully applied, to the further strengthening of **Indian Finance.**

---

The real series of problems will arise when we are faced with conditions which will necessitate the transfer of **Indian Finance** to some other centre. In my own mind, I have a conviction that such a catastrophe will not arise. For one thing, the main objective of Japanese strategy is to link Rangoon, the Andamans, Colombo and Madagascar in such a fashion that the enemy's naval forces can menace all sea communications with India. In simple terms, the aim of the Japanese is to bottle up India rather than attack India. But the Japanese navy has so far been attacking only harbours and important points removed from India by sea, which may be said to provide confirmation of the view I have put forward. Reasoning thus I have a feeling that Calcutta will escape enemy bombing. At the worst, some of the military objectives in and around Calcutta may receive the attentions of Japanese airmen. Nor is there any reason to believe that the enemy will have such unimpeded access to this part of the world. It is now well-known that American reinforcements have been arriving on a fairly satisfactory scale; that the American Army air corps has established its own headquarters; that American squadrons have carried out offensive raids at such far-flung places as Port Blair and Rangoon, and also that the air defence of Calcutta has now attained a fairly advanced level. The greater the delay of the Japanese in attacking Calcutta the less chance there is for her to carry out a **blitz.** If there is no occasion, say for another month, I am told that Calcutta will be fully prepared for any the most serious air onslaught. The strength of the Army in Calcutta has been vastly extended by the arrival of troops from Akyab and other centres in Burma. My case therefore is that Calcutta may escape being bombed by air; that even at the worst, the civil population will suffer no harm; and that, with each day, the strength of Calcutta to give back as effectively as it receives is increasing. I am therefore not scared by the prospect of casual bombing. I am more concerned about the dislocation of civilian life, the emergence of hooliganism, the possible famine of the necessaries of life, and the behaviour of the troops. Even the Defence Secretary admitted the other day that some elements in the Army have behaved, on occasions, in a way that is not in consonance with the highest traditions of the Army. The Government are taking the necessary steps to prevent such unbecoming behaviour. But once a city is placed in the charge of the military authorities, the civilian population have always a fear that the military may behave in a high-handed way. The Government will do well to issue in advance a categorical statement that the civilian population will not have to fear any such high-handed conduct on the part of the Military Authorities. It is the fear in this regard that is at the bottom of the exodus of the population rather than the fear of bombs. The Government will add greatly to their prestige and heighten the civil morale by the issue of a reassuring statement. Under the circumstances, I do not contemplate any contingency for the removal of **Indian Finance** to another centre.

---

At the same time, common traditions demand that essential documents and reference books must be kept in a place that can be considered safe than Calcutta so that, if the worst happens, the business can be reconstructed from the other centre. Many offices in Calcutta are now distributing their staff between Calcutta and some one or other upcountry centre like Benares, Allahabad or Lucknow. In some offices duplicate copies of essential documents have been taken by photo-

graph. So far as **Indian Finance** is concerned, our statistical records are most valuable; and it is straining our resourcefulness and resources to plan the removal of those books that are not immediately required and to duplicate those which are in constant use. Yes, dear reader, you and I are faced with difficulties on every side, at home and in India; let us be ready and eager to make allowances for mutual shortcomings. Thanking you.

---

Sugar control has passed into another stage, and useful information is more than ever essential. To-day Java is out of the picture, and the sugar situation has taken a surprising turn. Editorial comments did not stop short of dwelling on export opportunities but went on to dwell on optimum production in India. To get the hang of things it is more than ever necessary to keep well posted, and for sugar at least, there is the indispensable guide, the Sugar Annual of Gandhi & Co., Ltd., of Calcutta to be precise. It is replete with an enormous assemblage of statistics, and is the most extraordinary summary, really speaking of the mass of orders relating to an industry that has the advantage or handicap (as you view it) of official supervision in two Provinces. The position created by the war—for Cuba, Puerto Rico, and Queensland too, demands summary analysis and if the sugar annual does not enter that rarified atmosphere. I am sure that export prospects in Iran and the Middle East generally demand expert assessment. We are entitled to expect that, and more too, from a popular and well-established publication that makes us wish that we had similar annuals, with a due loading of statistics, for our other industries. To-day in the statistical blackout the Sugar Annual casts indeed a powerful beam of light.

**Beyond the Bay**

The series of press conferences last week-end indicated the persistence of mutual difficulties in India, but none discussed naval affairs. As we were, is apparently the motto, though Pandit Nehru has indicated to Government and people alike that "depressionism" or defeatism is not the dominant mood. There was no mediation, and the ultimate chances of success were deliberately sacrificed by the reluctance to compromise on the issue of defence. Sir Tej Sapru has confessed his own acute disappointment but the British Cabinet shows little concern. The threat in the Bay is of more immediate interest. Colombo and Trincomalee are most vital ports from the strategic point of view than the Indian ports of Calcutta. To the Japanese naval staff a powerful base in being or potentially like Trincomalee means that a fleet in being can be maintained by the Allies. That is why Ceylon comes ahead of India and the operations in the Bay since Sunday week can only be understood by two assumptions. The Japanese take it that the R.I.N. presents no problem at all for a major naval power, and also assume that the western side of Ceylon is stronger because it leads to Africa. The junction in the Mediterranean with the Axis—favourite guess of local defeatists—is known to be impossible, but enveloping operations in and around India are known to be practicable. It is certain that future tactics will determine not the outcome but the course of operations. The naval staff in Tokyo never thought in terms of operations in another

A SCRAP OF PAPER . . .

*At this time of national stress, it is essential that every effort is made to conserve the supplies of paper at our disposal. We urge all firms to see that the strictest economy is observed in the use of paper. So often one page could be made to do the work of two. Everywhere that must be done. We must save paper.*

Yesterday it might have carried an office memo. To-day it carries a military command. It sets a thousand guns roaring in defence of freedom, sends a fleet of bombers across the skies, moves legions in a gigantic sweep against the enemy.

We are supplying paper for such purposes. We are meeting the needs of Army, Navy and Air Force. We cannot always meet orders we receive for commercial use promptly. Until the war is over we must ask our clients to take into consideration the work of vital national importance, on which we are engaged.

*(From Our Correspondent)*

New Delhi, April 15.

It is all quiet again in New Delhi after the departure of Sir Stafford Cripps—and the sudden breakdown of the prolonged negotiations. Even the Viceroy has gone off on a brief holiday to Dehra Dun. The word has again to come from Whitehall for the next step. It is clear that the authorities here have already taken some tentative decisions as to their future course, but nothing can be done until the debates in Parliament are over. Though Sir Stafford declared in Karachi prior to his departure that no further initiative will be taken by His Majesty's Government, political circles in New Delhi are of the opinion that before long things will begin to move again. It is clear that public opinion in Britain has been greatly agitated over the failure of the Cripps negotiations. When the full story reaches them—the statements made by Congress leaders particularly—the demand is bound to be made for a fresh approach. No one is seriously worried over the details of the constitution of the future, but if the promise of full freedom after the war has any reality, it has to show itself in the reconstruction of the Central Government on a national basis at once. What the *Statesman* has said—that it is not possible for India to accept the position, that nothing more can be done and what has to be done has to be done quickly—is generally echoed here.

* * * * *

What then has the Viceroy in mind—under instructions from the War Cabinet? The suggestion has come from certain important circles that the Viceroy, who had kept aloof from the Cripps mission should now step into the field. It is still possible for him to convene a conference of party leaders, take them as fully as possible into his confidence and try to form a Government at the Centre with the cooperation of the major political parties. It is understood that His Majesty's Government has decided not only to Indianise the Viceroy's Council completely but also to appoint an Indian Defence Member. The question now is whether the Viceroy should merely proceed to expand the Council further on the same principle as the expansion scheme of July last by appointing so-called non-party men or try, on his own initiative, to form a really popular Government at the Centre. There are different forces at work, but everything still depends upon the advice which Sir Stafford Cripps tenders to the War Cabinet.

* * * * *

There are two important factors which are likely to influence the course of events. The first is the great interest which the American public is taking in the Indian question.. American help, both in the supply of war material and personnel, is increasingly in evidence in New Delhi. If the American authorities have at last decided to take a friendly interest in Indian political questions, it can only be looked upon as a natural consequence. The new American Envoy Col. Louis Johnson, who is now in New Delhi, is an energetic personality who has already occupied himself in trying to bring about an understanding between Congress leaders and British authorities. He has not so far succeeded, but that does not mean that he will agree to the proposition that there is nothing more to be done. Secondly, Pundit Nehru has given ample proof of his desire to go very far indeed to meet the official point of view. And he has also given eloquent expression to the manner and spirit in which he proposes to work the National Government. Both have created a great impression on the public in England and America.

* * * *

I have just seen an important memorandum, circulated among certain influential leaders, showing how far the Viceroy can go, even within the limits of the present constitution, to turn the present Executive council of the Viceroy into a National Government. Only certain conventions have to be introduced in order to secure this change in the working of the Central Government. No amendment of the Act is necessary to Indianise the Council completely or appoint an Indian Defence Member. The Vice-Presidentship of the Viceroy's Council for which there is provision can be converted into the Premiership of a National Government. As the existing rules of business are entirely in the hands of the Viceroy himself, he can suitably change them to accord with the conception of popular Cabinet Government. It is also important to remember that even under the existing rules, it is possible to eliminate the official element both from the Council of State and the Assembly apart from the Members of Government and their Parliamentary Secretaries. Instead of the present system of nominated and official members, room can be found for the representation of certain important interests which are now grossly unrepresented. It is also possible to establish a convention that the Governor-General will place no resriction upon the Legislature in the matter of discussing or voting upon Budget proposals.

* * *

Two other important proposals which have been made in the memorandum deserve notice. Firstly there is the question of the Governor-General's separate Secretariat which has been steadily growing even subjects like Defence Co-ordination, Reforms, the Eastern Group Council etc. Why should these be not transferred to the Government? Presumably there will be no objection, for it is wrong in principle to allot large administrative duties to the Governor-General as distinct from the Governor General-in-Council. Then there is the question of the Indian States. From the enlightened Prime Minister of Kashmir, Sir N. Gopalaswami Iyengar, has come the suggestion that there should be an Indian Political Adviser who, when questions affecting the States are discussed can take part in the meetings of the Viceroy's Council. There is no reason also why a convention should not be established to enable the Crown Representative to consult the Executive Council before coming to any decisions on questions relating to the States. So much can be done by way of conventions that really no question of undertaking any major amendment of the constitution arises. It is with this object in view that the Viceroy is being urged to convene a conference of leaders to discuss the demands of the major political parties.

* * *

Sir Mahomed Zafrulla, who has filled many posts in the short period of his connection with the Government of India, has to face another change in his official life. It is not usual—and probably not quite appropriate to select a Judge of the Federal Court for an executive appointment, but the exceptional importance of the newly created post of Agent-General in China and its urgency are probably responsible for the Viceroy's decision in choosing Sir Mahomed Zafrulla. The public would have certainly preferred an eminent public man say, a man, like Sir Radhakrishnan but the Government of India have an incurable preference for officials even for ambassodorial appointments of this kind. Actuated by the same spirit as was shown in the selection of Sir G. S. Bajpai for the Agent-Generalship in America, the Viceroy has chosen this time for Chungking an ex-Member of Council who has latterly been a permanent judge of the Federal Court. It is also a matter for melancholy reflection that while the Dominions can be represented officially by Ministers, the Government of India's representative can only be an Agent General. The only consolation is that in actual practice he will have the status and functions of a Minister.

* * * *

The appointment of Mr. Ghulam Mahomed as Finance Minister of Hyderabad State has been received with great satisfaction here. He has already an exceptionally brilliant record and will doubtless have an even more brilliant future. He showed great ability in the difficult post of Financial Adviser of the Posts and Telegraph Department. After serving as Chief Controller of Stores in succession to Sir James Pitkeathly, he became Additional Secretary in the Supply Department where he showed his great organising capacity. He is undoubtedly one of the most outstanding men in the Accounts and Audit Department. As he is a very popular figure in New Delhi's social life his departure is certainly much regretted.

*(From Our Correspondent)*

Bombay, April 14.

The march of Japanese battalions up the Irrawaddy Valley finds Bombay in a sober mood. Markets are shaping well, even better than expected, but the commercial community is decidedly upset by the failure of the Cripps Mission.

Indian cotton is friendless for the moment. Consumption figures and mill statistics do not cause excitement. The extension of war risk insurance is not news in any way. There is a fear that lots of contracts will have to be carried out, and supplies in Bombay will be large. Mills will not be ready takers and we can guess what will happen to prices. Demand for cloth may be better of late but the market is not at all cheered up. In spite of warnings against speculators it is realised that the grower is going to have a thin time, if the mahajan market does not keep going. The long-term outlook may be better than suspected, but the market was easing over a long period until today. We are certainly back to prewar prices for cotton, though not for cloth. Mills are not going to have a very easy time, and cotton magnates may seek alternative investments in real estate. Cover for war risks is not going to make cotton less of a drug on the market. Maybe, a year hence things may mend, but just now the atmosphere is more than ever bearish.

A.R.P. has its rival in the P.V.B. The Congress-sponsored organisation has caught on tremendously. They ran a show only last week at the Jinnah Hall to show that the two months-old organisation has definitely met a public need. Ex-Ministers issued an appeal to take intelligent interest in civil defence, now that war had come to India. In scope and objects the People's Volunteer Brigade is very much like A.R.P. but the show organised for National Week lays emphasis on the people acting for themselves, without official direction. The bureaucracy failed to guide the people, hence P.V.B. has sprung up. Dr. Gilder spoke rather frankly on the work—non-communal, non-political and non-official. Fire-fighting, evacuation and even prompt repair of damage done by raids come within the purview of P.V.B. According to Dr. Gilder who said that aid to the poor and homeless would be the chief object of the new drive to let the people look after their own defence. The exhibition last week broke new ground in getting volunteers explain with a touch of realism here and there what passive defence properly carried out meant to the public. There are already a hundred circles, and clever posters did much to put across the central idea of co-operation for defence. The topography of Bombay was made familiar to one and all by the delimitation charts hung up in the big Hall. It was certainly a novelty for National Week to be heralded by 'the people's own civil defence rally. Women turned out to have a squint at the safety appliances on show. Household equipment held no interest for them; only for the men did they possess special interest. Women are now told how tidiness at home helps to secure efficiency in precautions. Dummy bombs, both incendiary and magnesium, were put up to let the public see what they have to expect from the marauder of the skies. There has, of course, been the extremely interesting series of advertisements meant to concentrate attention on the citizen's role during time of air raids. The local press for one month has run a fascinating series but the copy has been a little overwhelming. Anyway, the population has enjoyed unusual opportunities of instruction at the Jinnah Hall last week. The self-protection exhibition was visited by Mr. N. M. Joshi who showed such enthusiasm for the new departure in civic organisation. There is not much to suggest that danger is pressing, but Bombay has been asked to prepare. It is a big, crowded city and the brown-out is by no means enough. The shipping difficulty grows and country craft, denied safe seas during the monsoon, may go into hiding for the duration.

The Ahmedabad mill industry is as busy as ever. Mr. Jayantlal Amritlal in his speech before the Millowners' Association said that workers got the full benefit of active and prosperous conditions. He dwelt at length on the deficiency of coal and referred to the duty of Government to ensure adequate supplies of fuel. The Textile Labour Association was criticised for its opposition to the proposals for a welfare fund, a labour exchange and new co-operative societies. A further increase in working hours to ten per diem was advocated by Mr. Jayantlal on the ground that costs were sure to fall and rationalisation would be easier. Though transport will be a serious problem for some time, the Chairman of the Millowners' Association argued that the setback in mill activity can only be temporary. He looked forward to an expansion of output in all industries after a short spell. Investors will perhaps note with interest that he was more confident than Sir V. N. Chandavarkar in his recent estimate of prospects.

Prisons are to become hives of industry. It is all part of the aftercare scheme. The Discharged Prisoners' Society with 25 years of good work to its credit is more than ever anxious to help in the rehabilitation of convicts on release. The Bombay Government has added a Superintendent of Jail Industries to speed up and add to prison output. Prisoners will be taught useful trades likely to help in the war effort. There are eighteen industries carried on by prisoners at present. Some may compete with industries carried on outside by free citizens who are paying for the jails. Sir Roger Lumley even asked for more public support for released prisoners who must be given a chance to make good. The teaching to be in jails to produce artisans is presumably unrelated to the civilian training plans. But it may be asked why the Government does not ask the Army to take its artisans from discharged and framed prisoners instead of from the schools. Released convicts, desperately anxious for employment, can be placed more easily on defence work. One hopes that Bombay's jail industries will produce Army artificers in addition to the inevitable towels and dhurries. Borstal boys make good binders, said the Governor of Bombay who said that the principle should be extended. It should even be possible to make Bevin boys out of Borstal boys.

W. G. GROUNDWATER, General Manager

Mr. E. B. Ghasvala Chairman of the Empire of India Life Assurance Company, said at the annual meeting that new business for 1941 amounted to Rs. 134.38 lakhs. A small but welcome improvement in volume was accompanied by a higher average value per policy issued. The expense ratio of the company for 1941 was 22.6 per cent. In its 45 years of working, the Company has surmounted many difficulties and latterly there has been an improvement in revenue. The 1941 report shows a Life Fund of Rs. 520.83 lakhs plus Reserve of over Rs. 31 lakhs. The funds are in giltedged stocks with a low but constant return. Mr. Ghasvala defended the investment policy of the company and referred to the fact that at the end of 1941 there was an inner reserve of Rs. 119.16 lakhs on account of the difference between ledger value and market value. The redemption value of gilts is higher than market value in nearly all cases as he pointed out. The possibility of a fall in the valuation surplus, largely through the higher taxation in force at present, and hence in the bonus rates, was also mentioned. The 1941 valuation may be delayed in any event. On the question of cover for war risks Mr. Ghasvala furnished a firm and clear answer. Policyholders have been told that even those engaged in A. R. P. can count on full protection without any extra premiums. It is only in the case of officers on active service that a special set of conditions is imposed, but the Empire of India is prepared to consider proposals on the conditions attaching to military and naval risks. The Empire's own building was got ready after enlargement and reconstruction. To-day it stands, a big office suited to the age and standing of a leading insurance office.

# Resume of Commodity Markets

THE commodity markets in India are obviously puzzled and warned by the failure of the Cripps mission as also the appearance of a powerful threat to India in the Japanese battle squadron.

The jute market is permanently disabled and the hessian market looks more depressed than ever. In the event, prices have declined perceptibly during the the last few days. It is most pronounced in the case of 9 porters. The flatness of the local share market has doubtless been a debilitating factor but the main reason lies outside—in the Bay of Bengal.

In the case of cotton some brightness has reappeared, and prices are virtually unchanged in the week.

Except for a transaction in Dundee Daisee 2/3 for shipment at Rs. 55, per bale there has been little doing in raw jute and loose jute, as explained by our jute correspondent last week, and pressed jute commands but little attention. Mills have their worries but raw jute is not one of them. They are not at all eager to add to abnormally low stocks because it is realised that normal working on the basis of 60 hours is ruled out by the exodus of labour. Hessian prices have resiled suddenly and Wednesday's quotation for 9 porters was Rs. 16-8 for April shipment. Compared with Rs. 16-8 only a week ago, the quotation reflects the gloom in the market.

Changes in wheat control have led to the usual press note. The provincial Loans are to go and free trade (internally) is to be re-established. Sind and U. P. have given a lead. The trade, however, will be controlled and all movements will be covered by permits. Imports from States will come within the scope of the control scheme.

A lot of information has to be supplied to the Wheat Commissioner who will make recommendations as regards freight. For about a month there will be normal conditions, but after that, the wheat trade in India will be wholly supervised. Wheat prices, by the way, have fully held their ground. The Bombay quotation actually has risen somewhat. The limitations on what is called export will not affect the price level. The Calcutta quotation is higher at Rs. 6-8 per maund for both spot and May delivery. As in the previous week, the relative steadiness of seeds has helped wheat especially, in Bombay. If linseed is quiet in Calcutta belief in what the Ministry of Food will buy has raised hopes in Bombay.

A perss note published on Tuesday came as no surprise. Sugar prices are to come under control. There will be another Commissioner and the mills which asked for "no control, no exports" have to lump it. All-India control comes with fixation of ex-factory prices, Marhowrah 28 being the basic grade with a price of Rs. 11-12 per maund. The decision is a result of the price control conference it is said. Uniformity of prices, allotment of markets to specific factories, and registration of dealers are envisaged in the scheme published on Tuesday. Quality will lead, however, to differences in rates, but the main idea is to keep sugar prices down in relation to a presumptive maximum of 7 annas per maund of sugarcane. Speculative transactions can be ignored or cancelled, but old contracts will, to some extent, stand. The price situation is due for review before the next crushing season begins, which means, in effect, unchanged prices till October.

In Bombay the cotton market is still subdued. Price changes have been as narrow as ever, and the fears provoked by the anticipation of large tenders reduce interest in the Mahajan association. Though cloth prices are firm, as demand is broadening, the mills are not likely to be large buyers even after the decline in raw cotton. Transport and storage remain problems. New York rates are no longer a factor to consider, and the ready buying of African cotton implies a corresponding reduction of interest in Indian cotton.

War news, also, retards possible improvement. Short covering and liquidation by longs alternate and govern the movement in rates. Broach April-May is around Rs. 150 and the July-August contract is Rs. 20 higher. Steadiness at decline is thus the feature but rarely an upswing is ruled out though July futures in New York are over 19½ cents per lb.

The other Bombay market, viz., bullion shows signs of having quietened down. Gold is no longer firm and prices have moved narrowly round the pivotal limit of Rs. 50 per tola, though a break to Rs. 49 was noted on Wednesday.

The premium for ready silver remains because war news is still unfavourable. But the rate is definitely lower as compared with a week ago. Gold coin is no longer at a high premium, but the market has been quietly steady with silver and gold in a more distant market like Calcutta is higher than usual as gold bar here is Rs. 51-5 per tola and sovereigns quote Rs. 40 per piece.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, April 9.

EARLY in the week under review there was a short-lived spasm of activity in which mills made some purchase of the raw material, being encouraged by the reports of Ceylon's stirring reply to the surprise aerial attack and the heavy toll of enemy planes she destroyed in this raid. Rumours of losses inflicted on enemy naval craft were also circulating at this time which unfortunately proved to be false and were in fact our own reverses. But until the time facts could be gauged a wave of optimism encouraged a little timely buying. A little over a lakh of maunds was transacted spread over a few mills. European packing found the bulk of the purchases on 50/50 assort in cut in 10s and bots at the rate of Rs. 11 and 6-8 respectively. European supervised marks were also done at the rate of Rs. 10-8 and a small lot of special Dundee Tossa 2/3 was also bought in by a mill at the rate of Rs. 69. Thereafter as the extent of our reverses became known and the loss of shipping and cargoes from the port became apparent, the market has relapsed, and all sections are lifeless. Quotations are nominal and unchanged. New crop prospects are very favourable.

Whilst the position of shipping by inland river services has somewhat resolved itself, the graver insecurity in the Bay overshadows all other considerations. Until these ominous clouds lift, the outlook is gloomy, and the trade has, therefore, failed to respond in any way to the fresh Government order which presumably is to replace goods previously lost at sea. The order is for Hessian fabrics exclusively and is given out as under:—

| | | | | | | |
|---|---|---|---|---|---|---|
| 1/ | 200 | lakhs | Hessian cloth | | 40 inches | 7½ oz. Rs. 14 per 100 yards F.A.S. |
| 2/ | 160 | ,, | ,, | ,, | 40 ,, | 10 ins. at Rs. 19-2-0 per 100 yards. |

Ocean. They clung to the view that parity with the U.S.A. in the Pacific was about the only thing to think about. They have no threat to face because the Russians stand by the pact of April 1941 and the Americans are handicapped by distance alone. When the Malayan ports fell one after another it was apparent that war would come to Indian waters. It was then recognised that Singapore was the Gateway to the East, and that something more than rubber and tin was being fought for. The battle in the Java sea settled the question of advance or consolidation so far as Japan was concerned. The Japanese navy felt it could go ahead. Undoubtedly the evacuation of the Andamans on March 12th, simplified the problem for them. Their lack of success in China made it imperative to try a seaward sortie. Adequacy of air support made it easy on any view and it was only the Premier on Monday indicated the real nature and magnitude of the threat to India.

Except for two successful attacks on Port Blair the Allied score is love against the many points won by the Japanese off Ceylon in the destruction of two cruisers, an aircraft carrier and a certain number of planes besides damage to the two ports. The progress of withdrawals in Burma will inevitably keep the Japanese on the defensive in the Bay, for it must be confessed that it is the naval air arm that is often referred to in Burma communiques. Once the naval position is understood aright, decisive change thereof will also be admitted. One must assume that a U. S. battle fleet can come by way of the South Atlantic, if need be through the Panama Canal. For India today the key points are Richmond (Va) and San Diego (Cal.). Official comments will, of course, ignore the fundamental place of the American navy which is for the first time opposed to a first-class naval power and is also independent at the same time of British naval power. It is of exceptional interest for neither side can rely on the strategy of indirect attack. In that too again the essential difference from the last war will be demonstrated through the pressing pre-occupations of Britain with the Atlantic. For the moment the outlook is both dark and disturbing, but those who know American hustle and American efficiency will find it easy to believe that the U. S. fleet will avenge Pearl Harbour in Indian waters and break what look very much like a blockade. The inadequacy of Indian defences is naturally revealed, and unofficial criticism in this case tends to be loud and undiscriminating.

(Continued from page 599)

thus over Rs. 15 crores. If this is the scale of disbursements which the Government have to provide for in the coming weeks, the ways and means conundrums should become more and more baffling.

The exchange market has been dull, with business stagnant owing to the extremely difficult shipping position. The present is difficult; and the future, obscure.

T. T. on London is 1/5 31/32d. and rates for three months' and four months' bills on London are 1/6 9/32d. and 1/6 11/32d. U. S. dollars are quoting Rs. 332¾ per 100 dollars for telegraphic transfers. Firms' money for call and term deposits is quoted at ¾ per cent.

## JUTE

*Calcutta*, Thursday, April 16.

THE jute market is dull as ditchwater. Rates have dropped further and the absence of mill buying has made sellers more than ever eager. A stray transaction in supervised marks at Rs. 10-8 per maund reported on Wednesday made many believe that the market is not dead but dozing.

The decline in hessian has choked interest and prospective transport difficulties in Bengal do not inspire any faith in buying for stock. Pucca bales do not command attention though presses are in a difficult position and orders are taken reluctantly. Prices have given way in the circumstances entailed by poor demand and poorer prospects. Buyers are holding off and do not take the trouble to ask for rates on scale-down in prices.

A week ago the market was flat; no change is still to be reported though rates have come down in the wake of a decline in hessian. The outlook is not improved by the story of losses at sea in the past week or two.

## JUTE MANUFACTURES

*Calcutta*, Thursday, April 16.

THE hessian market has weakened consistently. The rate for 9 porters for instance is now at Rs. 16-8 as against Rs. 18-8 a week ago. The rate for 11 porters too has dropped from Rs. 22-4 to Rs. 20-8 in the same period. There is no longer a tightening in the spot situation to help sellers. Quotations for May-June and July-September shipment are naturally below the ready rates. The mills' decision to stick to a 60 hour week was not unexpected, but there was nothing else to lift the pall of gloom. The stock figures at March-end were by no means discouraging, but statistics cut little ice as compared with war news. The war bag order is no tonic.

The daily report has dwelt on the absence of business and the drop in rates. 9 porters have shaded off by 8 annas on almost every day in the week, and no assistance is forthcoming from speculators who are away from the scene.

Buyers do not show interest in forward delivery, whether of hessian or heavy goods. Rates in the case of the last have been more or less nominal, and Cornsacks have come down to Rs. 37 from Rs. 38-4 a week ago. "B" twills are also down to Rs. 36-12 and Liverpool twills at Rs. 40 on Wednesday were 12 annas below the quotation received a week ago.

## COTTON

*Calcutta*, Thursday, April 16.

A WEEK ago the cotton market appeared to enjoy a measure of support. Since then the fate of the Cripps mission has been settled by the Working Committee and the League as well. The tone is no longer fully steady and prices oscillate as narrowly as ever.

In the case of Oomras and Bengals the spread between April-May and July-August rates remains narrow as noted last week. The surrender in Batan has not been without effect and jobbers' selling was the dominant feature on Thursday and Friday. Yet the close was higher owing to hopes of a compromise between the Congress and Sir S. Cripps.

A brief rally marked the opening day of this week though Broach was unquoted in the early hours of the session. Covering later was referred to and a steady feeling characterised Tuesday's dealings as well. The April-May contract stood at Rs. 152 at the close and Wednesday saw no material change though hesitancy marked dealings after a steady opening.

## WHEAT

*Calcutta*, Thursday, April 16.

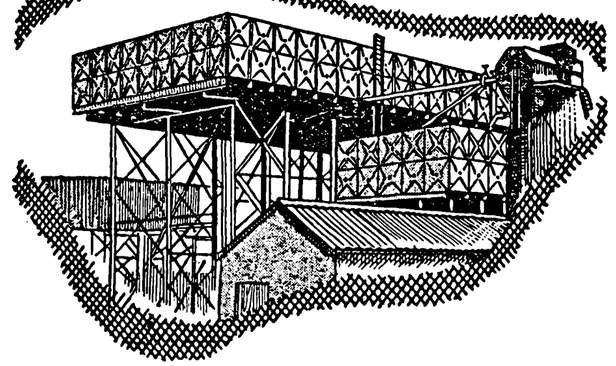
THE wheat market is turning firm after news of control at many points for many purposes. The demand for flour is good and prices in Calcutta are fully steady. The Bombay rate has gone to Rs. 7-8 per cwt., and if London rates for Argentine and Australian wheat remain as they were the change in official rates for wheat after three months of ineffective control helps wheat to keep up higher, also in relation to other grains, as remarked by many of late.

## BULLION

SILVER has flagged more than once. Prices have been easing over a week and the quotation for ready is lower by Rs. 2 after a dull week. London and New York quote 23½d. and 35⅛ cents as before. The Bombay market has its daily vicissitudes and the settlement rates are below Rs. 80 per tola. Good supplies and reduced offtake account for the change, while profit-taking accounts in some measure for the absence of any forward movement impelled by the adverse news from the Burma front.

Enthusiasm is hardly in evidence though the reports of Ceylon raids should have sent rates up.

Gold has obviously declined more rapidly than silver. Operators are cautious after the drop in rates. Nevertheless on Wednesday, the rates for ready silver in Bombay had recovered to Rs. 83 and it was only the Vaida rates which were lower on the week. Gold, however, was definitely easier since the closing on Wednesday was Rs. 48-8 and second settlement was also lower at Rs. 48-8 indicating that for a month ahead the market will see no big change. Toji-Mandi rates are unquoted. Sovereigns have receded to Rs. 38 in view of the drop in the gold market.



## PIECEGOODS

*Calcutta*, Thursday, April 16.

THERE is little or no change to report. Imported styles are in short supply and such demand as appear therefore appears large. Conditions are definitely depressed and no change is anticipated before the monsoon. The steady tone, latterly of raw cotton, does not help dealers to take a forward view at the moment. Yarn rates are firmer, in view of improved offtake, but that is not unusual.

The demand for mill goods in producing centres is said to be good, but the Calcutta market is obsessed by the war news and local market developments.

*Stock Markets to-day and to-morrow*

## IMPROVED TEA RESULTS

THE week's business in the local stock exchange has not been inspiring. The market has apparently been dead not merely dull during the past few weeks, the chief adverse influence being the nervousness among operators who are unwilling to enter into commitments and preferred to maintain high liquid resources. It is not easy, therefore, to take a confident view of the course of prices when the market knows that feeling of nervourness is still capable of forcing an all round slump.

* * * *

There has been some ground for encouragement in the Bombay market this week. The authorities of the Bombay Stock Exchange indicated to the management of the *Tata Iron and Steel Company, Limited*, the need for declaring dividends as early as possible to restore the confidence among shareholders. It is reported, upon their request, that the management is accordingly making arrangements to hold the annual general meeting by about the middle of July and to pay the dividends in the last week of the same month itself. In this connection, it is best to restrain hopes. Under the present conditions the Company has to provide large sums for taxation and depreciation and it is unlikely that there will be any substantial increase over the last year's dividends.

* * * * *

TEA company reports are now coming forward at a rapid rate and naturally provide most of the commentworthy news this week. The encouraging prospects for tea shares generally have been pointed out in these columns on more than one occasion, thanks to the commendable progress achieved by the efforts of the Tea Market Expansion Board at home and abroad. Present requirements for the domestic market are higher than they were two years ago. There has also been an increase in exports from this country under the increased allowance for exports which is largely on account of the increased needs of the U. K. for N. E. I. supplies are removed though not in 1941. These factors bear witness to the better earnings of the companies generally.

* * * *

The results of tea companies in the Davenport group and the Duncan Brothers group reveal in full measure the improved conditions in the industry during 1941. All the companies of the former group have increased their dividends, while the companies in the latter group have maintained their dividends.

The following table shows the dividends declared by these two groups for the last two years:—

*Davenport Group:*

| | Dividend per cent. 1941 | 1940 |
|---|---|---|
| Pussimbing .. .. | 10 | Nil |
| Teesta Valley .. | 20 | 17½ |
| Gielle .. .. | 10 | 7½ |
| New Chumta .. .. | 40 | 30 |
| Tumsong .. .. | 5 | Nil |
| *Duncan Brothers Group:* | | |
| Nagaisuree .. .. | 77½ | 77½ |
| Runglee Rungliot .. | 40 | 40 |
| Carron .. .. | 55 | 55 |
| Poobong .. .. | 12½ | 12½ |
| Putinbaree .. .. | 50 | 50 |
| Seeyok .. .. | 7½ | 7½ |
| Phaskowa .. .. | 10 | 10 |

* * * *

Outstandings in the group are the results of the *Pussimbing Tea Company, Limited*, which provide a pleasing contrast to those for 1940. The net profit, before providing for taxation and reserves, for the year ended 1941, is more than double the profit made in 1940 at Rs. 67,567 against only Rs. 31,910. The sum set aside to various Reserves amounts to Rs. 22,867 against Rs. 15,802, while the provision for taxation is also higher at Rs. 12,200 against Rs. 2,304. A maiden dividend of 10 per cent on the ordinary shares has been declared. The amount carried forward is slightly lower at Rs. 20,060 against Rs. 22,410 brought in.

* * * * *

Another member of the Davenport group, the *Gielle Tea Company, Limited*, for the same period, reports a good increase in profit. The net profit, before providing for taxation and reserves, amounts to Rs. 66,127 against Rs. 38,527 in 1940. A sum of Rs. 17,980 (Rs. 7,880) has been provided for Reserves, and Rs. 12,543 (Rs. 2,666) for taxation. On account of the increase in the profit, the company has been able to declare a dividend of 10 per cent against 7½ per cent for the previous year. The amount carried forward is higher at Rs. 15,392 against Rs. 11,787 brought in.

* * * * *

The *Nagaisuree Tea Company, Limited*, a member of the Duncan Brothers group, has also been able to earn a larger net profit, before providing for taxation and Reserves, of Rs. 1,95,217 as against Rs. 1,68,904 in 1940. The bulk of the increase in earnings has been taken away by the enhanced provision for taxation with the result that the dividend has merely been maintained at 77½ per cent.

Production during the year was 728,000 lbs. as compared with 679,360 lbs. in 1940, the average price realised being slightly higher at 10 annas 8 pies per lb. against 10 annas 3 pies per lb. in the previous season.

With the two increases in the quota and the greater demand for the propaganda work to be carried on in this country to increase the growth of the consumption coupled with the part played by the industry in feeding our Empire at war, it can be expected, that there will be a further improvement in earnings during 1942.

* * * *

After setting apart Rs. 3,97,244 for depreciation and providing Rs. 26,80,000 for taxation, the net profit made by the *Western India Match Co., Ltd.*, for the year ended 31st December, 1941, is Rs. 14,52,331-4-0. To this must be added Rs. 3,44,661-15-0 brought forward, less Rs. 21,70,000 which had been set apart for taxation for the years 1939 and 1940 to which the Company has not yet been finally assessed. Out of the total distributable balance of Rs. 17,96,993-3-0, the directors propose to pay a dividend of 7 per cent (same), absorbing Rs. 4,90,000, a bonus of 5 per cent (against 2 per cent), absorbing Rs. 3,50,000 to set aside Rs. 2,00,000 for Raw Materials Depreciation Reserve and Rs. 4,00,000 for General Reserve, to pay Rs. 2,29,578-1-0 extra commission to the Managing Agents as per Agreement, and to carry forward Rs. 1,27,415-2-0.

The shares have long stood up to adverse influences and the present price of Rs. 198 reflects the unusual investment status of the Rs. 100 shares of *Wimco*.

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Calcutta*, April 17.

THE period under review is a short-working one on account of the holidays for *Chaitra Sankranti* and the *Bengali New Year's Day*. During the short period in which the stock exchange remained open, absolutely uninteresting conditions have prevailed. Strangely enough, the market has not reacted to the developments early in the week following the breakdown in the negotiations between the British Government and the Congress. It is satisfactory to note, however, that there has been a steadying tendency during the course of to-day. Business continues on a very restricted scale, and there is a complete lack of investment buying. It should be pointed out, however, that if the Bombay market moves upward an improvement in prices in the local market may be inevitable.

The giltedged securities section has been very steady, 3½ per cent Paper remaining unchanged at Rs. 87-12. Among terminable loans, there were buyers of 3 per cent 1963/65 at Rs. 88-10 and 3 per cent 1949/52 at Rs. 95-3. Other loans were quoting at last week's levels.

There has been a slight demand for money during the week and the treasury bills rate is again higher at rupee one annas four per cent per annum as compared with

**The market report from Madras was not received up to the time of going to Press.**

rupee one annas three and pies seven per cent per annum in the previous week.

No trading is reported in public bodies' debentures. Among industrial debentures, 4½ per cent 1939/52 *Naihati Jute* came in for business at Rs. 97 and 4½ 1937/57 *Union Jute* at Rs. 97. A fair amount of business was done in Preference shares, *Muir Mills* being done at Rs. 58-8; *Steel Corporation* at Rs. 91-8 and *Titaghur Paper* 2nd preferences at Rs. 100-8.

A solitary transaction was possible in Railway shares, *Howrah-Amta* changing hands at Rs. 93.

Business in cotton shares was impossible owing to the paucity of offerings, *New Victoria* being dealt in at Rs. 4-10.

There were no transactions at all in Jute shares. In coal shares, like last week, a stray transaction was possible in *Singaran 'B'* at Re. 1-15.

Bank shares were steady, *Reserve Bank* being done at Rs. 91.

In the Tea section, *Hoolungoorie* were done in small lots at Rs. 203.

In the Engineering section, *Indian Iron* have been steady at Rs. 22, while *Steel Corporation* met with business at Rs. 13-7.

Among Sugar shares there was some enquiry for *Murree Brewery* at Rs. 15.

In the Miscellaneous section, *B. I. C.* were at Rs. 4-8 x.d. There was some enquiry for *Indian Copper* at Rs. 1-11.

## BOMBAY STOCK EXCHANGE

(From Our Correspondent)

*Bombay*, April 16.

*Money.*—The rate for call money was quoted 1 per cent with lenders predominating.

*Securities.*—Steady conditions were witnessed in the securities market and the price of 3½ per cent closed slightly better at Rs. 88-2. Among short and long-dated loans,1948/52 Loan changed hands at Rs. 93; 1951/54 at Rs. 94; 1963/65 at Rs. 88-8; 1947/50 at Rs. 97-10; 1960/70 at Rs. 103-2; 1955/60 at Rs. 107-8; 1945/55 at Rs. 105-2 and 3 per cent 1946 *Defence Bonds* at Rs. 97-14.

*Shares.*—The volume of business in the local share market has not shown any encouraging expansion during the week under report, as operators are unwilling to enter into commitments. Despite the nervousness over the war situation, the selling pressure was, however, small. Prices have closed a shade easier today in all groups. *The figures given in brackets are for cash.*

*Textiles.*—The turnover in this section was poor. *Bombay Dyeing* were well maintained at Rs. 1,000 (Rs. 985). *Central India* were done slightly lower at Rs. 315 (312); *Century* at Rs. 348 (342); *Colaba* at Rs. 136-4 (137-8); *Gokak* at Rs. 239 (235); *Kohinoor* at Rs. 410 (395); *Simplex* at Rs. 148 (140) and *Svadeshi* at Rs. 390 (390). *Sholapoor* have shown a drop of 225 points to close at Rs. 5,000, while *Vishnu* were maintained at Rs. 1,550 and *Ahmedabad Advance* at Rs. 298-12.

*Hydro-electrics.*—This section was a dull dull market, *Andhra Valley* being quoted at Rs. 1,427-8; *Tata Power* at Rs, 1,330 (1,316-4) and *Tata Hydro at Rs.* 147 x.d. *Bombay Tramways* were at Rs. 122.

*Steels.*—Steel shares were slightly marked down owing to the lack of support. *Tata* ordinaries showed a drop of about Rs. 15, closing finally at Rs. 226 (Rs. 209). The deferreds, similarly, suffered a drop of about 50 points, closing at Rs. 1,255 (1,090). The 1st preferences came in for business at Rs. 180 and the 2nd preferences at Rs. 107-8.

*Miscellaneous.*—*Associated Cement* continued to be steady at Rs. 155 (155). *Bombay Burmah Trading* old shares were more or less steady at Rs. 200 (185), while the new shares changed hands at Rs. 62-8. *Scindia Steam* were marked down to Rs. 16-14 as against Rs. 17-10 in the previous week. *Shivrajpur Syndicate* were available at Rs. 29 for cash and forward. *New India Assurance* changed hands at Rs. 39-8; *Alcock Ashdown* at Rs. 425 (400) and *Premier Construction* at Rs. 106 (105).

**CALCUTTA STEAM NAVIGATION CO., LIMITED**

*(Meeting, 24th April, 1942 at 4 p.m at Bombay).*

*Audited accounts for the year ended 31st December 1941:—*

| | Rs. | A. | P. |
|---|---|---|---|
| The profit for the year, after making a provision of Rs. 3,00,000 for Depreciation and of Rs. 13,35,000 for taxation, amounts to .. | 6,66,941 | 0 | 0 |
| Adding thereto the balance brought forward from the accounts of the previous year viz. | 3,103 | 0 | 0 |
| Total .. | 6,70,044 | 0 | 0 |
| Out of this sum the Directors have carried to— | | | |
| Reserve Fund Account .. 50,000 0 0 | | | |
| Investment Reserve Account 50,000 0 0 | | | |
| Equalisation of Dividend Fund Account .. 1,00,000 0 0 | 2,00,000 | 0 | 0 |
| leaving a balance of .. .. .. | 4,70,044 | 0 | 0 |

The Directors recommend the appropriation of this sum as follows:—

| | | | |
|---|---|---|---|
| (1) Payment of a dividend, free of income-tax, on Preference shares for the year ended 31st December 1941 at the rate of Rs. 5 per share .. .. | 75,000 | 0 | 0 |
| (2) Payment of a dividend, free of income-tax, on Ordinary shares for the year ended 31st December 1941 at the rate of Rs. 18 per share .. .. | 3,60,000 | 0 | 0 |
| (3) To be carried forward to the accounts of next year .. .. .. | 35,044 | 0 | 0 |
| | 4,70,044 | 0 | 0 |

The year under report witnessed considerable improvement in the textile industry. With increasing Government requirements for War purposes and decreasing imports there was a heavy demand for Indian Mill products at fairly remunerative prices.

Against the interest due on the Tata Mills Debentures held by the Company a sum of Rs. 26,600 was received during the year at the rate of Rs. 12 per Debenture less income-tax.

The Debentures as well as the Deposit with the Tata Mills Ltd. of Rs. 1,50,000 (the latter secured by a second charge jointly with the Ahmedabad Advance Mills Ltd. and The Central India Spg. Wg. & Mfg. Co., Ld. on the liquid assets of that Company) were due for repayment on 31st December, 1941. The Tata Mills Ltd., approached the Debentureholders with a request to extend the period of repayment of the Debentures for a further period of two years. As it was considered to be in the interest of all concerned, in view of the conditions created by the War, the Directors thought it advisable to agree to this arrangement. Similarly the repayment of the Deposit was extended by two years, secured by the Managing Agents' guarantee during the period of extension.

The Company's Mills and Factories with their contents and the stocks of yarn and cloth have been insured for Rs. 1,84,16,000. In view of the improved state of the industry the Directors have deemed it advisable to insure Profits and Fixed Charges against Fire and Riot risks for Rs. 33,00,000 per annum, indemnity being payable for 24 months. Under the War Risks (Goods) Insurance Ordinance, stocks as at 31st December, 1941, were covered for a sum of Rs. 54,00,000.

*Managing Agents.*—Messrs. Tata Sons Ltd.

*Authorised, Issued and Subscribed Capital*—*Rs.* 35,00,000 *in* 15,000 5 *per cent Cum. Pref. and* 20,000 *Ordy. both of Rs.* 100, *fully* paid-up.

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets* | Rs. |
|---|---|---|---|
| Capital paid-up .. | 35,00,000 | Fixed Capital Expenditure .. | 1,04,25,943 |

| Carry forward .. | —99,109 | —3,30,933 | —4,10,940 | —2,96,679 |

*(Annual meeting, 29th April, 1942 at 12 noon)*

*Audited accounts of the Company for the year ended 30th September,* 1941:

After allowing Rs. 1,12,499-8-7 for Depreciation on Block, a profit for the year of Rs. 2,31,824-5-6 which falls to be deducted from the debit balance of Rs. 3,30,933-4-10 brought forward from last year, leaving a balance at debit of Profit and Loss Account of Rs. 99,108-15-4 to be carried forward.

A considerable sum is due to the Company from the Indian Sugar Syndicate Ltd., in respect of the reduction of selling prices below basic prices in July and August, 1940. In view, however, of the uncertainty which still exists as to the ability of the Syndicate to meet its obligations, no credit had been taken in the Company's accounts for this outstanding asset which cannot be finally determined pending the outcome of Arbitration proceedings.

During the season 19,47,120 maunds of cane were crushed, the percentage of sugar to cane being 10.62 per cent or 2,06,776 maunds of sugar. Of this quantity of sugar, 1,79,772 maunds had been sold upto 31st December, 1941, at an average price of Rs. 9-11-5.6 per maund. The sugar remaining unsold at that date has been valued for the purposes of the accounts at Rs. 10-8-0 per maund. The average cost of cane at the Factory was 6.22 annas per maund.

*Taxation.*—As stated in the note on the Balance Sheet the results of the past season are subject to a possible liability for excess profits tax which will not be determined for some time and which it is impossible to estimate with any degree of accuracy at present.

*Buildings.*—The construction of some additional Staff Quarters is the main item of expenditure under this head.

*Machinery.*—The principal items of expenditure under this account are the costs of two Juice Heaters and two Blue Mixing Tanks.

*General.*—Manufacturing results in season 1940-41 were again very satisfactory due to efficient operation and the good quality cane supplies which were available, particularly early in the season, as a result of the introduction of improved varieties and favourable weather conditions.

Owing to the heavy carry-forward of sugar stocks from the previous season, production at all factories in the United Provinces and Bihar was restricted and, although cane was in plentiful supply the 1940-41 working season was short and costs were therefore high. Factories in the United Provinces and Bihar continued to repay, through the medium of a cane cess of 6 pies per maund cane, the Government Excise Loan previously granted in respect of sugar produced in season 1939-40. In addition, the Bihar Government imposed a revenue cess of 3 pies per maund cane and a further cane cess of 3 pies per maund to establish a fund for the payment of compensation to cane growers whose excess crops could not be handled.

The disposal of the sugar produced in 1939-40 was not completed until July, 1941, but thereafter the market took on a healthier tone. The efforts of the Syndicate and the United Provinces and Bihar Governmens to reduce prices to an artificially low level with a view to discouraging expansion in other Provinces were at their strongest during the period in which the bulk of the United Provinces and Bihar factories' 1940-41 sugars were sold.

*Prospects for Season* 1941-42.—The unsold balance of season 1940-41 stocks at U. P. and Bihar factories in March, 1942, is not important, but about 50,000 tons old season's sugar have still to be delivered to buyers, and despatches from factories are slow owing to shortage of railway wagons. With the reduced crop in view and the prospect of sugar being exported from India it is anticipated that marketing conditions during season 1941-42 will prove satisfactory. Transport problems, however, may continue to present difficulties.

The minimum cane price fixed for season 1940-41 was low and it is doubtful if the compensation to cane growers already referred to was generously handled by the Provincial Governments: this, coupled with the high prices ruling for other crops, has resulted in cane being considerably short of requirements for season 1941-42. Crushing of all available supplies was completed at Riga on 21st February, 1942, with a total of 9,06,616 maunds cane. The basic cost of production is likely to approximate Rs. 11-13-0 per maund sugar. Six annas per maund has been paid for cane and additional deferred payments will have to be made to growers under the latest scheme inaugurated by the Bihar Government if the price realised for sugar is more than Rs. 10-8-0 per maund.

*Managing Agents.*—Messrs. James Finlay & Co., Ld.

*Authorised Capital*—Rs. 21,30,000. *Issued*—Rs. 10,50,000. *Subscribed*—Rs. 10,49,925 *in* 1,39,990 *shares of Rs.* 7-8, *fully paid-up. Debentures*—Rs. 10,00,000 *in* 10,000 5½ *per cent bonds of Rs.* 100 *issued in* 1934 *at Rs.* 80 *repayable at par in* 1944.

Synopsis of the balance sheet as at 30th September, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|

(*Annual meeting, 6th May,* 1942 *at* 12-15 *p.m.*)

*Audited Accounts for the year ended* 31*st December,* 1941:—

*Profit and Loss Account.*—The gross profit for the year is Rs. 64,024-3-4, out of which we have reserved for staff expenses and for taxation, including Rs. 4,883 for Bengal Agricultural Income Tax which is expected to be introduced in the near future. The Directors have also set aside Rs. 10,000 to a Renewals and Additions Reserve, which they consider should be established to meet expenditure as necessary on new plant and equipment.

The nett profit thus becomes Rs. 40,604-10-1, and there is a final balance on this Account of Rs. 52,391-8-9, which it is proposed to deal with as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Pay the Preference Dividend for 1941 .. | 12,000 | 0 | 0 |
| Pay a Dividend of 10 per cent on the Ordinary Shares .. .. .. | 20,000 | 0 | 0 |
| Transfer to Reserve Account (bringing this sum up to Rs. 1,20,050) .. .. .. | 5,000 | 0 | 0 |
| Carry forward to 1942 .. .. | 15,391 | 8 | 9 |
| Total .. | 52,391 | 8 | 9 |

*Estimates for* 1942 have been based on a crop of 2,350 maunds at a total cost of Rs. 1,24,118.

*Managing Agents.*—Davenport & Co., Ld.

*Authorised, Issued and Subscribed Capital*—Rs. 4,00,000 *in* 2,000 6 *per cent Cum. Pref. of Rs.* 100 *and* 20,000 *Ordy. of Rs.* 10, *both fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1942.

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid up .. | 4,00,000 | Fixed Capital Expenditure .. | 4,00,000 |

| Dividend % .. .. | 40 | 30 | 20 |
| Carry forward .. .. | 27,937 | 25,193 | 10,114 |

(*Annual meeting, held* 2*nd April,* 1942).

*Audited Accounts for the year ended* 31*st December,* 1941:—

*Profit and Loss Account*—The gross profit for the year is Rs. 90,331-10-9, out of which the Directors have reserved for furlough and staff expenses and for Income Tax, including Rs. 7,843 to meet the Bengal Agricultural Income Tax, which is expected to come into effect in the near future. The Directors have also set aside Rs. 20,000 to a Renewals and Additions Reserve, which they consider should be established to meet expenditure as necessary on new plant and equipment.

The nett profit is thus reduced to Rs. 52,743-14-5, out of which an interim dividend of 10 per cent. was declared payable on the 9th December, 1941, absorbing Rs. 10,000; and there is a final balance on this account of Rs. 67,936-14-0, which it is proposed to deal with as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Pay a Final Dividend of 30 per cent. (making a total of 40 per cent. for the year) .. | 30,000 | 0 | 0 |
| Transfer to General Reserve (bringing this up to Rs. 1,65,000) .. .. .. | 10,000 | 0 | 0 |
| Carry forward to 1942 .. .. | 27,936 | 14 | 0 |
| Total .. | 67,936 | 14 | 0 |

*Estimates for* 1942 have been based on a crop of 3,000 maunds at a total cost of Rs. 1,09,154.

*Managing Agents.*—Davenport & Co., Ld.

*Authorised, Issued and Subscribed Capital*—Rs. 1,00,000 *in* 10,000 *shares of Rs.* 10, *fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital Paid up .. | 1,00,000 | Fixed Capital Expenditure .. | 1,00,000 |
| Reserves & other funds | 58,138* | Stores & Supplies .. | 4,159 |
| Current debts .. | 1,96,259 | Investments .. | 1,71,619 |
| Carry forward .. | 27,937 | Outstandings .. | 1,366 |
| | | Cash Balances .. | 91,190 |
| Total .. | 3,82,334 | Total .. | 3,82,334 |
| | | Total Liquid Assets .. | 2,82,334 |

*Includes Rs. 17,820, being provision for taxation.

ISSUED WEEKLY

Vol. XXIX. No. 18 SATURDAY, APRIL 25, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

**NATIONAL INSURANCE COMPANY,**
LIMITED.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

There is a slight abatement in the demand for short credits; but the position seems to be such that foreign banks, in pursuance of their traditional policy of preferring to keep their cash in sterling rather than rupee balances, are prone to sell sterling, only when compelled to do so. That is to say, they would rather tide over any awkward spell with the help of inter-bank call deposits if they could possibly do so. In such circumstances, demand for call money from two or three banks is calculated to cause a squeeze and push up the inter-bank rate.

---

Applications for Treasury Bills continue to be on the small side; and, against Rs. 2 crores on offer on April 21, applications came to Rs. 2,72¼ lakhs. The average rate of accepted tenders shows a further rise to Rs. 1-4-9 per cent per annum as compared with Rs. 1-4-0 a week ago. Sales of intermediate Treasury Bills between April 15 and April 20 amounted to Rs. 40¼ lakhs. The offer of tender bills for next week remains unchanged at Rs. 2 crores. The tap rate will be Rs. 99-11 per cent as compared with Rs. 99-11-3 in the previous week. We can only repeat that the time has arrived to cry a halt to the persistent rise in the Treasury Bill discount.

---

In the week ended April 17, there has been a total expansion of currency for Rs. 11 crores, Rs. 3 crores being against sterling securities and Rs. 8 crores against rupee securities. As a result of these transactions, sterling securities held in the issue department of the Reserve Bank have risen from Rs. 231.85 crores on April 10 to Rs. 234.85 crores on April 15; and rupee securities from Rs. 130.25 crores to Rs. 138.22 crores. The effect of expansion against sterling securities is to augment the notes held in the banking department; and the effect of expansion against rupee securities is to augment the cash balance of the Central Government as well as the notes held in the banking department. Active note circulation in India has risen from Rs. 395.96 crores to Rs. 408.25 crores. Expansion of active note circulation by over Rs. 12 crores in a week, is a measure of the scale of the disbursements, now being made, on account of war preparation in Burma as well as in India.

---

Foreign securities held in the banking department of the Reserve Bank have risen from Rs. 46.16 crores to Rs. 48.49 crores. This increase has been recorded in spite of the transfer of sterling securities for Rs. 3 crores from the banking department to the issue department. We may, therefore, infer that the Reserve Bank has received sterling for over Rs. 5 crores in the week ended April 17; and this possibly represents the balance left over in respect of March adjustments between the Indian Government and the British Government. The Central Government have thus had two kinds of addition to their cash balance, the first through expansion against rupee securities, and the second through the payments made by the British Government in sterling. These two factors account for an addition of Rs. 13 crores to the cash balances of the Central Government. This has enabled the Central Government to reduce the ways and means advances given by the Reserve Bank by Rs. 3 crores. Ways and means advances stood at Rs. 5.85 crores and have fallen to Rs. 3.85 crores on April 17. The deposits of the Central Government with the Reserve Bank, however, have gone down from Rs. 5.30 crores to Rs. 4.68 crores. There has been a sharp jump in Burma Government's deposits from Rs. 47 lakhs to Rs. 1.06 crores, while those of other governments have declined from Rs. 10.66 crores to Rs. 7.10 crores. Deposits maintained by member banks have also fallen from Rs. 42.21 crores to Rs. 40.85 crores. Investments held in the banking department continue on the down grade, being Rs. 7.79 crores against Rs. 8.98 crores. Notes held in the banking department are Rs. 10.58 crores against Rs. 13.19 crores. The statement for the week ended April 24, which will be issued next week, is likely to show further transfer of sterling securities from the banking department to the issue department. The cash balance of the Central Government may also need replenishment either by further borrowings on ways and means account or by delivery of rupee securities to the issue department of the Reserve Bank.

## TREASURY BILLS

**India**

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 21st April, 1942. Total amount offered was Rs. 2,72,50,000 (Rupees 2 crores, 72 lakhs and 50 thousand). Tenders at Rs. 99-11-0 per cent and above were accepted in full and those at Rs. 99-10-9 per cent were allotted approximately 69 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-4-9 per cent (Rupee one, annas four and pies nine per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 28th April, 1942. Successful tenderers should make payment on Friday, the 1st May, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from the 22nd April, 1942 to 27th April, 1942 at Rs. 99-11-0 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from the 15th to 20th April, 1942, amounted to Rs. 40,25,000 (Rupees forty lakhs and twenty-five thousand).

During the week ended the 17th April, 1942, Government of India Treasury Bills for Rs. 8,89,00,000 (Rupees 8 crores, 89 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

**NORTH WESTERN RAILWAY**

The notice which appeared in certain newspapers during the end of March, 1942, regarding the issue to the public of six monthly rail-cum-road return tickets to Srinagar (Kashmir), Murree and Dalhousie, is hereby cancelled.

Tickets to Srinagar, *via* Rawalpindi only will now be issued available for six months from the date of issue or the 30th November, 1942, which ever is earlier, from Karachi, Hyderabad (Sind), Sukkur and Multan Cantt. only with effect from 1st May, 1942, and with effect from the 1st of June, 1942, under the same conditions, from Ambala Cantt., Delhi, Ferozepore Cantt., Jullundur Cantt., Lahore, Lyallpur, Meerut Cantt., Peshawar Cantt. and Saharanpur.

The issue of rail-cum-road return tickets from certain stations on the N.-W. Railway to Dalhousie and Murree will be notified later.

Further information may be obtained from the Chief Commercial Manager, N.-W. Railway, Lahore.

*General Manager.*

**UNITED INDUSTRIAL BANK LTD.**

7, WELLESLEY PLACE, CALCUTTA.

A SCHEDULED BANK.

The Share Subscription List will remain open until further notice, but this advertisement must not be treated as an invitation to the public to subscribe to shares. Persons desiring to obtain copies of the prospectus should communicate with the Head Office or any Branch of the Bank.

Current Accounts: Interest allowed at ½ per cent per annum, on daily balances of Rs. 300/- to Rupees 1 lakh provided interest amounts to at least Rs. 2/- half-yearly.

Saving Bank Accounts: Interest allowed at 1½ per cent per annum. Withdrawals by cheque permitted and transfers to Savings Bank Deposits allowed on favourable terms.

Fixed Deposits received for one year or less.

Loans, Cash Credits and Overdrafts allowed against approved securities.

Securities, Shares, etc., purchased, sold and received for safe custody and collection of interest and dividends. Packages, Boxes, etc., received for safe custody.

Rules, rates and terms on application.

General Banking Business Transacted.

Friday Morning.

THE drop in exchange bank shares and the fall in Burma oil shares are again referred to as arresting features in the London Stock exchange. The money market is still described as easy, and whatever may happen, Lombard Street is apparently unshaken. The exchange rates are held by Control, and temporary changes in the credit position do not seem to affect the discount rates. Treasury bills are still taken at fractionally over 1 per cent and keener bidding was noticed last week. The changes in the market quota are duly recorded from week to week to show that apart from the public departments, there is a good deal of regular outside support for the Government as a short-term borrower.

The strength of the giltedged market after the Budget is *not* at variance with normal anticipations. The calculations that expenditure will rise and borrowing will increase do not affect the market, since it is assumed that the structure of interest rates will be unchanged. Cheap money is the only tenet to which all cling at present because only then could Government raise 6 months' deposits at 1⅛ per cent from the banks, average up to 600 million or 700 million sterling. This week, it is hoped to raise 40 million by deposits from the banks. The Chancellor's calculation that lease-lend supplies will be larger this year implies that the U.S.A. will allot some billions for her allies. How she hopes to get it can only be known next week when the President's message will be published. A week ago appeared the report that the U.S. taxation level need not be drastically raised. Washington circles were credited with the belief that there was no need to *modify* taxation. Mr. Morgenthau was said to favour the present tax system under which 7.6 billions could be had. There was said to be no new tax programme and the Treasury Secretary believed that *money* to this extent of 11 billions could easily be raised by him through savings bonds. Directly contradicting this surmise has appeared the report that the President is dead against inflation, wants to take off 99 per cent of all profits above 6 per cent, and is ready to pare down all incomes between 25,000 and 50,000 dollars. Curb spending by rationing was the original idea. Curb it by taking the money out in taxes is the President's idea though he likes ceilings and rations. Details will be known next week, but there is nothing to suggest the U.S.A. cannot stand a stiff dose of taxation, recommended by the President on the score that prices and profits alike must be restrained in the interests of the nation.

The exchange rates quoted in India are unchanged over a month except that Java's currency has been struck out. The U.S. and Canadian dollars stand at the same level, and whatever may be the effect of changes at Vichy on Kaffirs the bullion market is untouched, in London of course, not in India where a spasm of weakness has been noticed as though to destroy the public's inherited faith in the precious metals. The U.S. Treasury's operations in time of war can hardly be known for some months. One thing is certain. The level of taxation must rise, because of U.S. commitments to her allies. Russia expects to get more, and there are many other applicants including India. Efforts to ration petrol in 17 states and D.C. bespeak a desire to cut at private spending. The success of the Administration in 1941 in fighting the rise in prices was indifferent. A new effort is to be made and appeals to save are most insistent. There was recently an anti-Hitler rally to be linked up with the savings drive, and ingenuity will soon be taxed to the utmost because the Revenue Act of September cannot be taken as the final tax measure.

The U.S. stock market is naturally weighed down by fears of taxation. Earnings may run high, but the revenue will be the chief beneficiary. Of the first shock caused by war in the U.S.A. there is little doubt. Money rates tightened suddenly though banks held plenty of cash. The Treasury too had little difficulty in raising money and made large disbursements in December. All that has a lesson for India where panic appears to be the dominant market factor. Here the savings bonds do not catch on and when we read that people in the States bought in 27 days of December as much as 432 million dollars' worth of savings bonds one really knows the difference between confidence and dismay. The Federal Reserve system was a large buyer of securities as also member banks because the giltedged market reacted to a smaller extent than in September 1939. But new issues were few and their value was lower than ever. December saw the stock market break suddenly and this, of course, was a factor in the pricing of new issues. The exchange market was relatively immune. The Latin American currencies, however, appreciated in terms of the dollar. The Argentine peso recovered after initial weakness, and the free rate for the Venezuelan bolivar was well above the November level. The Cuban currency also appreciated slightly. Distinct, however, was the break in the Canadian dollar. The unofficial rate reflected the weakness of Canadian currency due to a fall in tourist traffic, and year-end selling of American-owned Canadian securities. The only other noteworthy feature was a rise of about 2½ per cent in commodity prices during December, essentially in line with the advance over the whole of 1941 in the prices of all U.S. manufactures. The main impression left by a review of December's changes is that the U.S.A. experienced little of hysterical satisfaction in having joined the war.

The only other development of the week is the announcement that the terms of compensation for the foreign oil companies expropriated in Mexico have been settled by a joint commission. The offer of about 24 million dollars to be distributed *pro rata* apparently satisfies Washington but is viewed as inadequate in relation to the loss sustained as shown by the abrupt decline in Mexican *Eagle shares* in the past few days. There is a general belief that the compensation arranged by the U.S. Government will help the companies, yet the distribution as between the Standard groups and the Royal Dutch-shell subsidiary may create dissatisfaction. On the other hand, it must be recognised that after four years the controversy has been put out of the way, and U.S. companies have enough oil at home not to worry about the future of Mexico's output. It is otherwise with the Shell or any foreign group. The oil group except for Trinidad issues has been continuously easing. It is necessary to recognise that compensation is a strong probability in view of the voluntary destruction carried out at Yenaungyang as at Syriam. The refusal of the N.E.I. authorities to promise payment for damage in Java cannot be taken as conclusive, but there is also the fact that the Burma Government does not have the means to pay. It may not be generally known the claims made under war risks insurance in Burma have not been paid; deferred perhaps, but certainly delayed. The destruction in the earlier raids on Rangoon resulted in claims, and as far as is known, payment has not come. The reason is obvious. Lack of revenue. The Burma Government functioning in a corner of a little-known plateau has not the grip over the people to collect revenue. It is known that the Government has drawn largely on its balances, treating most of its recent expenditure as under a vote of credit up to Rs. 8 crores but not making arrangements to replace depleted balances by revenue or taxation. How a Government can survive in Unoccupied Burma must seem a mystery to many. It is also clear that the compulsory balances held with the Reserve Bank of India must have melted below the minimum and an overdraft might have been given. From the situation arising from the expansion of Occupied Burma, one thing appears certain. Indians' claims to compensation can never be satisfied, and it is best to regard India's former oversea income as non-existent. The Burma Government's positinn is known to have worsened swiftly after January, and without any budget and a hostile population this year, the Burma Government is very badly off as compared with India. Naturally the banking position there has been affected by the lack of confidence in Burma. The suspension of business by Dawson's bank, which paid 5 per cent dividend for 1940, on account of the war has been advertised, but the removal of the Reserve Bank to little-known Shwebo on the rim of Occupied Burma is not known. The securities have been transferred, yet the attenuated scale on which things are carried on has hardly been mentioned. The Burman-owned banks must have felt the draft while Indian-owned banks were ready to close down. The schedule there has no meaning. The exchange banks moved up to Mandalay, though the Chinese banks preferred to open at Lashio. The American bank closed down in Rangoon, just as it intends to close down in India. Burma is no longer a country with business to preserve. It is just a theatre of war mentioned in *communiques*.

As to the position of Burman holders of Indian or other Government securities and resident in Occupied Burma little need be said. The financial difficulties incident to residence in Occupied Burma have not so far been listen in notification. What the Japanese have done by way of putting in a custodian of enemy property is hardly known. There is no original side for the High Court of Burma, so that Rangoon does not have the usual machinery for recovery of commercial debts.

As the Reserve Bank holds no assets outside India the note issue in Burma is in theory well backed, and the Burma currency is not likely to suffer to any extent. The Japanese are said to use the Burma notes with an overprint from the occupation authorities. It is not known what the exchange rate for Burma rupees in terms of yen is. It is singular that enlightenment has

## An Ounce of Example

The American Technical Mission is in India with a view to make available to Indian industries whatever is latest in technique, machinery and management of production. Colonel Johnson, the personal envoy of President Roosevelt, has, once for all, disposed of the bogey that the activities of the Mission were in the nature of the proverbial thin end of the wedge; and that, as part of a secret understanding between America and Britain, the former was to be allowed to establish her own industries in this country and to secure control, wherever possible, over Indian industries. This question is dealt with at length in another section of this issue; suffice it here to quote the categorical denial of Colonel Johnson. The Mission "is not here to introduce American capital. It is not here to build factories, or to bring in any American industrial operations. It is not concerned with the commercial or economic relationships that may exist between India and the United States after victory has been won. It is here solely to put at the disposal of India certain great technical skill, so that production in this country may be increased, so that industries may make the change-over smoothly from a peace-time footing to a war-time footing, so that India may be able the better to defend herself and the better to help in the defeat of our common enemy." It is as part of the united war effort that the present United States Technical Mission has been sent to India. Col. Johnson in conjunction with the Technical Mission will help to induce the people of India and the Government of India to let America aid them to the maximum of their ability for all-out war production. If India does this, there will be fewer things that America need bring in to assist India; and that will leave more room for other things that India could not produce, all to the end that the war may be ended the sooner.

Colonel Johnson has also given the assurance that there will be no discrimination in the provision of lease-lend facilities as between India and any other member of the British Commonwealth. Sir Shanmukham Chetty has also related, from his own experience, that the facilities so far extended to India under the Lease and Lend Act have been spontaneous and generous. We may, therefore, take it as certain that the advice and assistance, which will be placed by the American Technical Mission at the disposal of leaders of Indian industries, will play an important part in stimulating and expanding production in every direction.

Most industries in India are well equipped; and if the Technical Mission finds that any additional equipment will improve the output, we may be sure that immediate steps will be taken to secure such additional equipment from America. Indian industries have already trained the requisite number of technical hands. But if the Technical Mission finds that American industry has achieved further progress in technical methods, arrangements will, no doubt, be made for making available to Indian industries such American technicians as will be able to make our own technical men more perfect.

With regard to machinery and skilled men, the problem is now being tackled under auspices which spell quick and substantial results. We are afraid, however, that a great obstacle in the way of an all-out effort will be presented by the problem of industrial labour. In Eastern and Southern India, there has been much falling-off in industrial output owing to the panicky anticipation of air attacks or landings by the enemy. In the industrial establishments in and around Calcutta, the labour force is much less today than what it was some months ago. We understand that even permanent labour has left in part. In many cases, such labourers have been replaced by temporary hands; and, recently, there are heartening signs that some of the labour that left is returning. Even so, the situation calls for very tactful handling. The Indian Jute Mills Association, for instance, has a number of Labour Officers; and these officers must be utilised to address labourers in their own languages and to convince them that panic, as is now prevalent, is unjustified and inexpedient. In this regard, we must say that much depends upon the example that both employers and the Government set to labour.

Our point is that the Government and the employers themselves have been prone to undue panick. Many of the business houses have taken steps to transfer substantial portions of their offices and personnel to upcountry centres. This naturally makes labour think that the employers are not quite sure about the security of Calcutta. We understand that much pressure is being brought upon the Government of India to transfer the War Supply Board's Offices from Calcutta. We must warn the Government that this will have a most harmful effect on the clerical staff and on the labour staff. If the sahebs and their assistants who sit in safety in Esplanade wish to run away from the City, what is their face to exhort the men in the various industrial establishments to stick to their posts? Far from countenancing any proposal for the transfer of strategic offices like the War Supply Department from Calcutta, we should suggest that those departments of the Central Government, which have directly to do with war, must transfer their activities and offices to calcutta, not only because they will be freed from the artificial atmosphere of New Delhi, but because their presence will be the best antidote to panic concerning the safety of Calcutta.

In this connection, we cannot help referring to the jumpy policy pursued by the Madras Government. Last week, the Secretariat fled from Madras, proclaiming that the City had now come into the war zone. This was a signal for the City experiencing one of the wildest exoduses ever witnessed and for the completest dislocation of life and living and supplies. It is well-known that the Buckingham and Carnatic Mills are now devoting their entire production to war work. With the city denied of its normal population, how can these mills expect to retain their labour force? The Government of Madras blankly announce today that the danger has passed and that the Secretariat is returning to Madras. We consider that it is the undecent haste in transferring important offices that corrupts faith and lowers the morale of the population.

Again and again, we have been exhorted that the best thing to do is to "stay put." Let the Government and the big business houses "stay put." Let them give up the present fuss and frenzy of seeking safer asylums. Their example will be of great use in the retention of labour in all the industrial establishments. No amount of advice or supplies through the good offices of the American Technical Mission will be of any avail if, by example and precept besides active persuasion, employers, whether Governmental or other do not ensure the maintenance of the labour force at full strength.

## FORWARD FROM FAILURE

It is only necessary to remember the repeated requests of Indian Chambers of Commerce for a settlement of the constitutional issue in India to relate them to the hope springing anew in the country that it might be possible to move away from the deadlock.

The settlement is required as much in the interests of Britain as India. The Cripps plan was not good enough, and its withdrawal was enforced by a united opposition. It is not necessary to review the details of the breakdown. It is only necessary to indicate that the position is still changing in the face of adverse news from Burma, and an effective national government—not a further expansion of the Viceroy's Council—is still the prime requisite for appeasement in India.

After the interview with Mr. Churchill in London on Tuesday, Sir Stafford Cripps must have reported by now. Those who are fond of pointing to their original suspicion of the Cripps mission continue to dwell on the interference of Whitehall and urge that New Delhi was a more than sinister ally at a point when prospects seemed to be definitely changing for the better. The promised White Paper may not lead to any change in British opinion. As we know, Parliment is ready to endorse any decision taken as regards India. It is the Cabinet which has to plan. The Cripps plan had only the merit of promising Dominion Status of the Westminster variety. There was nothing else to commend it from the central Indian viewpoint. The reservation of defence like the absence of any provision for reducing the Viceroy to the position of a Governor-General in the self-governing Dominion made the draft plan unacceptable. The idea of a draft naturally implies the idea of revision. There is a place and a time for a new plan and for its modification as well in the cut and thrust of negotiation. It is still urged that the analysis made by Sir Tej Sapru and Dr. Jayakar would lead to a modification of the structure of Government at the Centre.

If nobody in India cares to look for outside intervention after Pandit Nehru's review of the situation Indian commercial and business opinion does not hesitate to believe that the country shares Dr. Sapru's deep disappointment over the failure of the prolonged parleys at Delhi. The concern produced by sermons in the U. S. press does not suppress the natural feeling that Government made rejection almost inevitable.

If Sir Stafford Cripps is still impressed by the forces of disunion in India, surely it might be said that invasion might produce unity. Japan through its disregard of Chinese Muslims may make the Muslim League take the same line as the Hindu Mahasabha. But unity in any event must be preceded by effective resistance and the declaration while asking for help in the war effort did not provide the conditions for making co-operation possible. On the shortest view possible to-day it is futile to dig into the events of the past three weeks.

The Viceroy's continued silence may be taken to mean that, after his failure to convince India that he means well and can do much, he is waiting for directions from elsewhere. In a sense, it may be said that independence of the India Office in other terms, the transfer of power to an autonomous Centre, will be really the crux of any scheme. The present situation under which the Viceroy's council marks time, in between the usual conferences, cannot be allowed to continue. On that point at least Indian commercial opinion is unanimous, mainly because of the progress of the Japanese advance in Burma. The thrust up the Irrawaddy has succeeded in that the Yenangyaung field has been destroyed in advance. The Chinese are still retreating, and the curt communiques are interpreted in India with a due measure of pessimism.

General Wavell's admission that sea power is held by the Japanese must be directly linked to Admiral Fitzherbert's dictum that India is a large island with an enormous foreign trade and an inadequate navy. The consequences of temporary mastery can be seen in the forcible detachment of the Andamans from India and the conversion of Port Blair into a seaplane base by the Japanese. If politicians in India react, in their own fashion, to the admission that the danger threatening India is more serious, they do not cease to wonder what will be done.

The weight of European opinion in India on the subject cannot be ignored. The anxiety for a national war front is a pointer to the universal desire for a settlement. If replies to private Members in the Commons seem hardly impressive, there is still the fact that the report of the Lord Privy Seal may lead to a change. What the defects of the proposed interim arrangements are have been made known. The constituent assembly and partition, if that is inescapable, are definitely items assigned to the future, and when we ask that prompt revision and issue of a new plan is advisable, it is regarding the interim proposals. Few can afford not to look at the interest of Britain in India's political future. The magnitude of the British stake in India is represented not only by the Home Charges but by the vast investments in India's fields and factories. Their maintenance and progress is not altogether independent of effective defence. Attention may be drawn to the familiar R.T.C. dictum that India's defence must be increasingly her own concern. It is not easy to reconcile that with the total reservation, under General Wavell or any other adviser, of the control of defence. As pointed out last week current financial indications are by no means promising. A close view of the paralysis of investment, the liquidation of holdings of Post Office Cash Certificates and Savings Banks accounts as also extensive withdrawals of cash is not necessary to confirm the suspicion that the third defence loan cannot start—until the question of political progress in wartime is settled. If we look at giltedged prices—the Treasury Bills results or even the call rate we know that the financial world's nerves can be frayed by the obstinacy of Britain. It is now boiled down to a question of transfer of power, and if we have paid too much attention to the rumours, current a fortnight ago, as to the imminence of a happy compromise, we will be excused if we continue to dwell on that delightful what-might-have-been. The scheduled banks may gain deposits as before but that is of little material assistance to the war effort when the nation's leaders ask for abstention. If Sir S. Cripps has objected to a possible dictatorship in view of Congress demands there is even stronger objection from non-Congressmen to the continuance of an irresponsible government at the Centre. Experience of autonomy is enough to indicate why the Cripps plan's failure to bring the Provinces in has caused extended dissatisfaction.

Internal dissatisfaction in India may not be enough to convince Britain that another start is wanted. It is still possible to tee up for a new, longer drive, since the Allies as a whole, want a fresh compromise. There is as yet nothing to make us believe that the process of changing the Hoare constitution is unusually difficult. If a Union or Unions can replace federation surely the Counsellors can be eliminated. Many are convinced fully that from the States there will come few objections. The Dewan of Kashmir was the first to indicate that the largest State in India is interested in two things, the preservation of unity and the transfer of power by Britain. The period of waiting before the initiative is again exercised cannot be long because a naval action may precipitate a new declaration. There has been so far little bitterness and Mr. Jinnah's repeated request for Pakistan has not been exaggerated into a demand for immediate abandonment of efforts to deal afresh.

The anti-Japanese note struck by Pandit Nehru, Dr. Prasad and more recently by Dr. S. P. Mookerjee, Finance Minister of Bengal, is in itself an offer of co-operation. It is then for Britain to frame an offer worthy of immediate acceptance. More than ever men of all shades of opinion ask for a coalition. Sir S. Cripps must have ascertained that, though compromise was made impossible by his unwillingness to procure essential changes—changes deemed desirable and practicable by an important organ of European opinion. If one opportunity has been missed, another must be created. The war effort cannot go on when panic reigns and confusion threatens. The co-operation of all major parties is the first condition of a successful defence. Nothing else can be the aim, nothing more can be wanted, after the assurance given in the Cripps plan that India will be a Dominion with a home-made constitution. But a Dominion cannot be made by a memorandum on closer union. The Anglo-Egyptian treaty has been mentioned more than once to prove that goodwill is the basis of all accord. But good-will in Egypt came only when the High Commissioner shed his powers. It may well be added that to keep faith with India in the same way as the Milner report was implemented in Egypt. Britain should ask Sir S. Cripps to try again.

### Latest Budget

Comment in these columns on Britain's fourth war budget had to be deferred pending the receipt of full figures. Herr Oswald Dutch's views have been cabled out to prove that an emigre journalist has approved fully. We do not know what has put into the specially written White Paper or what a leading M. P. like Mr. F. W. Pethwick Lawrence thinks about the Government's proposal to extend and modify the purchase tax—the sales tax in a new form. There is no talk of dividend limitation because the 1940-41 reports have shown that dividends of leading industrial concerns were cut when leaders in their own fields such as Turner and Newall and Tube Investments were reporting reduced profits alongside of higher taxation. The gilt is definitely off Home Industrials and if I.C.I. has mentioned its 8 percent dividend, after the brief boom of last autumn, there has been since the budget appeared an easier feeling even in the stores and breweries group. It must be noted here that all this means more support for gilts, all the more necessary because £1,000 more will be needed this year by way of saving. There is still a budget gap to be bridged by saving and such satisfaction as is inspired by the collections of warships week and the transfer of over 50 percent of the nation's income to the Government will have to be qualified by the caution that with wages frozen, the margin of saving may not at once expand. Except for adjustments in the fixation of wages including higher relief for married women at work, there is no large change in direct taxation although in this case there is assuredly little scope with the standard rate at 10 sh. in the pound.

It is even possible to anticipate a fall in receipts of the Board of Inland Revenue as overseas income of companies and individuals alike must diminish in view of the war in the East. War damage payments may be low up till now, but the spring campaign may put up the cost. The Budget throws into relief the gift of sterling 1000 million by the Government of Canada which almost compensates for the liquidation of investments in the U. S. A. over the war period. Expenditure is still rising, and Sir Kingsley Wood cannot prevent it. More money has to be found by taxation, estimated to produce £2,402 million in 1942-43 while loans will have to give £2,100 million. Actually new taxation will give £158 million only. Of this £90 million will come through the enhancement of the tobacco excise.

The customs surcharge of 20 percent in the latest Indian budget has had a parallel effect as all smokers of imported brands of cigarettes will agree. The troops will get their smokes a bit cheaper, but will otherwise join civilians in paying for the war by getting down their consumption of nonessentials. As Reuter's City Editor has pointed out the tobacco duty is twentyfour times larger than before the first world war and American leaf worth 1/6 was paying a duty of about 19/6. Whisky has been chosen like other luxuries in the case 4s. 8d. will be added to the cost of each bottle. This won't at all affect exports but will certainly cut home consumption of spirits. The working man's beer is not touched; so it may be said that Midland breweries, and investors therein, are hardly affected by the Budget.

The discouragement of feminine expenditure is carried far beyond the clothes rationing stage merely by the doubling of the purchase tax to two-thirds of the cost in the case of furs and even lipstick. In view of Indian interest in E.P.T. it may be noted that refunds allowed in the case of working class income-tax are left vague in the case of companies. No certificates will be given for the postwar payment of 20 percent of the E.P.T. (less incometax) to industry. The Chancellor has left the arrangements a little confusing. Beyond giving an assurance that the refund will be given by statutory right, subject only to the condition that it is not used for dividends or bonus shares' he has said nothing to show that 20 percent will be paid out to meet taxpayers' own notions of the fair treatement they deserve.

The Budget has also indicated that lease-lend aid will be larger than ever. The monthly average is taken as £100 millions, and the Empire should benefit thereunder. There is only one other part of the statement to which attention may be invited. The preferential duties on Empire sugar and tobacco are retained. They must help India. Another fact on which one must lay stress is that Government's stocks of essential foods have been substantially increased with no dangerous inroads into private stocks although supplies of non-essentials are properly drying up. It may mean that tea and oilseeds from India may not command so much attention as in the past.

### Indian-Made Tools

Machine tool production has responded strongly to the war. The introduction of special control measures has not interfered with the opening up of many new lines of production. Up to August 1941 as many as 71 licences had been issued for the manufacture of tools covering a very wide range. It was then assumed that production would be 400 units per month. Since then it is known that over 100 firms are engaged in the production of machine tools ranging from simple drills and lathes to special machines wanted for munitions production. Higher class machines such as cold saws and horizontal borers are being produced. Output has improved to the point at which 500 units can be had every month. A further increase in the number of tools is anticipated after the execution of a scheme costing Rs. 15 lakhs. Selected firms will be helped to increase the output of machine tools, and the major purpose of the scheme devised by the Controller is, of course, to increase India's output of higher class machines.

Another proved scheme is designed to stimulate local manufacture of small machine tools like tapes, reamers, twist drills and milling cutters. The machine tool industry is by no means old, but its efficiency is coming to be required. Prior to the war India did not make any tools though some things were made by some independently for their own purposes. The new survey of possibilities came along with the control order of March 1940 when the Central workshop acquired all available machines, and a supplementary reserve of tools was to be built up out of a special fund of Rs. 20 lakhs though it is admitted that it is hard to get supplies. The far-reaching control measures in this case have secured full and effective utilisation of machine tools generally, for it was realised early that war production depended as much among the toolmakers of the country, and their contribution has thus lain outside the field of shell-making.

### China's Insurance Plan

As early as December there was a war damage insurance scheme in Australia. Two months ago the wider application of the Commonwealth scheme was announced. It was originally stated that the benefits would apply retrospectively as from January 1, 1942, as regards buildings and other fixed property. The Government decided since to extend the retrospective operation of this scheme in the same manner to all property the insurance of which would be compulsory under the scheme. Buildings and fixed property and movable property including plant, machinery, office furniture and other business or professional equipment where the value of such property exceeds £1.000 as also commodity stocks and stocks of goods, where the value of such stocks exceeds £1,000. The important differences as between the Indian and Australian schemes need hardly be indicated here, but one defect, the absence of any specific period for payment under claims arising out of the insurance scheme must be widely regretted. Where total destruction of assets is entailed by enemy action it may be postulated that no special proof of claim is required.

Assessment of damage is certainly simplified by the clause in the ordinance limiting payments to 80 per cent. of insured value. Receipts into the Fund would solve the question of money. Surely the indefinite maintenance of a very large reserve for unexpired risks is superfluous in the case of a Government-operated scheme. The only effect of indefinite delay in paying claims under a compulsory scheme, limited in this case to two years, would be to make many suspect that it is because of providing insurance against "scorched earth" effects which the Government was pressed to include, that the Government is disinclined to prescribe any date for making emergency payments. There cannot be any justification for acting in a way different from any ordinary insurance company in regard to claims. The four per cent. premium has been described as larger than anticipated because it has been pointed out that in China the Government has charged less and not suffered in any way. It has been noted in "Capital" last week that the premium charged in China is only 1 per cent. An extract from the "New York Times" has been cited to show how the war risk insurance scheme is worked there. The China Central Trust, auxiliary of the Ministry of Finance, has got a monopoly so far as war risks business is concerned, mainly because the private companies could not enter the field. The war risk insurance scheme in China was initiated in October, 1937, with a view to encourage production and reconstruction of essential industries in the free western Provinces. A reserve of 20 million dollars was earmarked. Of the total war insurance issued by the Central Trust, the greater part has been in connection with war transportation risks covering goods in transit. The Indian scheme is one primarily meant for factories which are, in the main fixed assets though the immunity to risks must necessarily vary from place to place. It has been noted that after four years of successful operation, with premiums always low and covering bombing risks on land, the Central Trust, which collected 20 millions by way of premiums on 600 millions cover issued, has made a profit of 10 millions because the loss ratio and management expenses together took only

### Indian Bank Statement

Until the spread of war to Burma, the resources of the Indian Bank, Limited were not strained to any extent. The profit statement for the latter half of 1941 admittedly showed that no great change had come as the dividend was covered about three times by the profit. In the Directors' report dated March 13 and issued with the accounts, reference is made to the heavy withdrawals at several offices of the Indian Bank, the demand being easily met from liquid resources and by recovery of Advances. The Directors have added that loans availed of against the Government securities have been repaid. It may not be possible to draw a conclusive or reassuring picture of the banking position in South India at present merely on the basis of the figures furnished in the Indian Bank's or any other bank's report and accounts. The dividend for 1941 in the case of the Indian Bank may have been maintained at 10 per cent, free of tax, but the closure of oversea branches followed by general uneasiness adds a disturbing element. The disposition of profits for the past half year may conform to expectations, but it is the future that will really bring questions of a serious nature. Of the Indian Bank's ability to deal with them as and when they arise there can be no question. The position at the year-end was quite strong, with cash balances equal to 20 per cent and more of deposits totalling Rs. 6.43 crores. There were at the end of 1941 investments exceeding Rs. 206 lakhs in value, and over Rs. 195 lakhs of these represented purchases of Government securities. The Bank's ability to earn good profits is indicated by the good showing made under Advances, totalling in this case over Rs. 359 lakhs. It is perhaps only in regard to debts due from the Directors (fully secured in the majority of cases) that the Indian Bank's balance-sheet provides evidence of a nature conflicting with its own precedents and approved practice. But the total is not at all large and the classification of such Advances is meant largely to show that the law is complied with. Dead stock and premises have been written down and the Indian Bank with a Reserve Fund of over Rs. 17 lakhs against a paid-up capital of Rs. 12.8 lakhs has retained the reputation that makes for success. The present half-year should see a resumption of the progress to which successive reports have testified like the seventieth report noticed today.

### Shipbuilding Records

Like the shipping industry the shipbuilding industry of Britain has been wholly on Government work for over two years. Yet little is known about the tonnage launched and on the stocks end for very good reasons. Australia's plans to build freighters have been published but not the remarkable effort at Home to make good losses at sea. Not long ago appeared figures released by the Chamber of Shipping to prove that the Atlantic warfare had been neutralised, to some extent, by the efforts of Allied seamen and shipbuilders. Everything done by Admiral Land in the States gets full publicity everywhere whereas what is being done in Britain and the Empire has not full recognition. There are several reasons for this according to a cabled report received recently by the Associated Chambers of Commerce. The most important is that actual American programme figures for 1942 and 1943 have been announced in advance and criticism in Britain, reflecting the wish to get as near the theoretical maximum as possible, has been misinterpreted as indicating failure to achieve good results. Few have noted the observation of the Financial Secretary to the Admiralty to the effect that if we take the amount of shipbuilding, naval and mercantile and new conversions and repairs for naval purposes which was done in 1941, we find that there has been an increase between forty and fifty times compared with the worst year of the depression. The 1933 output of ships from U. K. yard fell as low as 152,000 gross tons but even so, that means Britain's total construction last year was at any rate somewhere near 7 million gross tons. The U. S. A. aspires to build only 12 million tons in the year 1942 and 1943 together. An idea of the industry's achievement is conveyed by Mr. Attlee's assurances that Britain completed in the last quarter of 1941 four times as much naval tonnage as in the last quarter before the war and twice as much merchant shipping. He clinched the argument by saying that actual current production of ships is greater than at any time during the last war where there were more yards, more men, and no blitz or blackout. Mr. Alexander, too, has confirmed the view that the output of yards in 1940-41 was much larger than in 1915-16. British tonnage during the war will be reinforced by Canadian yards' output. Mr. Malcolm Macdonald has stated that in this year there will be launched from Canadian yards a fleet of ships with a tonnage just about as great as those coming from British yards. There have been other things to show that shipyards are doing their best. Lloyds list indicated good output and brisker handling of ships. The dockers week in the northwest saw some noteworthy achievements in the rapid unloading of cargo. It is good to learn that losses at sea are outstripped by new tonnage. Victory at sea is a definite object to which the yards are contributing fully despite criticism based on the view that the tale of sinkings is again inordinately high.

**TRAVEL ONLY WHEN YOU MUST**

### Industries' Effort

Production changes in the field of industry right up to the end of 1941 indicated that Indian industry was well set up for the war effort. Cotton mill output was continuously topping old output records, and jute mills' production eg. in November 1941 was the highest recorded since May 1940. The absence of any figures relating to iron and steel does not mean the lack of progress since 1940. The fall in imports since May 1940 has been made by Indian enterprise. The reduction in exports merely point to fuller use of local supplies at home. In the field of coal production, too, the 1941 output is rated as being over 30 million tons comparing very favourably indeed with the record output of 25.05 million tons reached in 1930-40. Tea again is an industry which has reported continuous improvement in output. The production of Northern India for the nine months ended December 1941 has been returned as 415.7 millions lbs explaining adequately how a continuous increase in exports of tea has been possible right through 1941-42. It is only in the case of paper that output has fluctuated narrowly without showing that annual output has risen appreciably. So far as can be seen the most reliable guide is the total consumption of power. Excluding sales of energy by the P. W. D. and military stations the power generated and consumed in British India has kept rising month by month. If the traffic in coal and coke on the railways of India for nine months showed a very small increase over that for the previous year the wagon-loading figures generally indicate a marked increase in traffic though it was offset by the fall in coastal trade arising from the war.

### Air Power For Offence

The Bomber Command easily dominates the war situation as shown by the regular and successful thrusts at Germany and the Occupied territories. The Avro Lancaster's performance has been praised as readily as the prowess of the Short Stirling. But the conception of air parity connotes something more than the ability to raid frequently. Has the R.A.F. really been built up to the point at which air support for an invasion of Europe is available? Recognising, as everybody does, the importance of combined operations, it is not possible to give an affirmative answer yet. Air support in the Far East has never up till now been adequate and the British air strength in Libya is not at all overwhelming. Otherwise Rommel would not be watching for a chance. While there is reason to believe that after the loss of 8,000 aircraft in two years the Luftwaffe decided on self-restraint there is nothing so far to suggest that Germany's front line air strength amounts to 4,000 planes only because she is still deficient in fighters. Some of the mental confusion based on reports of the absolute superiority of new types of Allied aircraft like the Boston and the Chesapeake bombers can be eliminated by noting here that the war at sea is by no means wholly favourable for the Allies. The entire Atlantic coast of Europe is under German control, and there is no lack of either maritime or air bases. Air Marshal Viscount Trenchard, the father of the R.A.F. indicated not long ago, that it is only the Bomber Command that can be adapted to the offensive. Recognising the adequacy of the Fighter and Coastal commands at this juncture he has observed that a smart bombing force has to be kept for supporting operations in the case of either navy or army. He has argued that a really effective bomber force based on centralised training and direction alone can ensure effective air support. He cited recent experiences in the Far East to show that the air arm is a decisive factor in modern war. Though he has declined to claim infallibility for airmen he has indicated once again that air power must be lodged in a force entirely outside the jurisdiction of army or navy. Yet by insisting that strategy is interdependent, he points out the essentially offensive role of the bomber today. The R.A.F. has come to spell bombing, and successful operations on the scale of

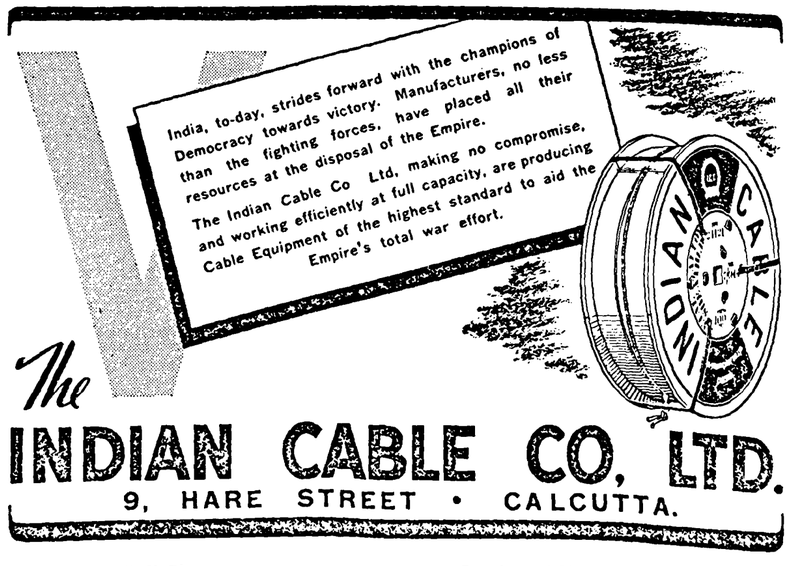
Goering's abortive effort of 1940 are soon to come. They alone can put an end to the German war effort by breaking the German people. That is why Monday's raid along the Ruhr to Augsburg in Bavaria has been interpreted hopefully.

**Congolese Supplies**



The Colonial Empire of Belgium is limited to the Congo and the small, little-known mandate of Ruanda-Urundi. Since M. Pierlot and his colleagues indicated that Belgium would fight on, the Congo is at war with the Axis. The legacy of King Leopold I is now paying dividends to others besides his descendants. Something more than raw rubber, important as it is at present, can be had for the Allied war machine. The minerals particularly, copper, put the Congo in a special position but many do not know that tin also is won from its mines. The territory, eighty times the size of Belgium, is now strengthened by the contiguity of Free France outre mer. Diamonds for industry, radium and cobalt. and gold too, are among the minerals. Baser minerals like coal, iron and salt are of additional importance for the Congo and the rapid development of resources for war purposes has been the main object of the Belgian Government in London. The agricultural resources are considerable and as said already tin production is an useful adjunct to Nigerian supplies. The variety of the Congo's climate is paralleled by the range of production. Its resources in cocoa, palm oil and cotton like groundnuts show that the Congo can reinforce the West African colonies of Britain in the matter of raw materials. Timber, maize, coffee, fibres, fresh fruit and even rice were included among the Congo's exports in 1939. The stoppage of imports of maize from Indo-China and timber from Thailand should enhance the original importance of such imports from the Congo. It is believed that kapok and cinchona bark—specialities of Java—can be procured from the Congo. An indication of mineral oil—such as has been mentioned in connection with South Africa—would strengthen the Congo's claims to be African supplier No. 1. The soya bean and tung oil—Far Eastern specialities—can also be had from the Congo which is sure to receive exceptional attention in view of the urgent need to develop alternative sources of material hitherto obtained from British and Dutch colonies in the East.

**Kashmir's Help**

In a recent detailed estimate of Kashmir's war effort the Dewan Sir N. Gopalaswami Iyengar made mention of materials and manufactures. Even two years ago reference was made to the hydro-electric possibilities. the desirability of the reduction of bauxite supplies and the possibility of newsprint manufacture. If large enterprises have not yet taken shape the smaller establishments, based on the use of local raw materials, have more than made good. The rosin and turpentine factory at Miransaheb is known to be doing well. In the current year, 90,000 maunds of crude resin will be dealt with. The factory set up at a cost of Rs. 3 lakhs has produced in 9 months of successful working a profit of Rs. 45,000. The profit for the year is put at Rs. 1 lakh, to be transferred to general revenues. Subsidiary manufactures have sprung up on account of the resin factory. Private business has entered the field of manufacture of varnish. soap. disinfectant, paint etc. The Indian Army is the chief customer for the products of the Baramulla factory which turns out half-finished rifles. The cultivation of pyrethrum (for germicide) has made considerable progress. More important on a long view is the drug research laboratory under Colonel Chopra. This has been set up to examine indigenous medicinal plants and other sources of drugs. Silk is, of course, the most valuable of Kashmir's products. The Dewan referred to the outstanding increase in the price of silk. It is related to the five-year plan for the development of sericulture introduced by the Kashmir Government in Jammu Province. An increase of 50 to 100 percent is contemplated. The filature has been busy last year reeling both Indian and Iranian cocoons. The silk weaving factory has benefited from large sales. Recently some of the looms have been set aside for the production of parachutes. In fact, demand is so acute that the second silk factory, set up at a cost of Rs. 3 lakhs, will concentrate entirely on the production of silk for parachutes. Kashmir's mineral wealth has not been overlooked during the war and barytes, mica and ochres are winning more attention. The extension of power production and the manufacture of newsprint were among the projects on which advice has been sought. A special investigation under the auspices of Tata Sons, Limited has already been launched according to the Dewan who expressed regret that the equipment necessary for either project could not be imported from abroad. The only possible extention of power production is through the themal plant for Jammu. Among concerns directly engaged in war work are the Karansingh wollen mills and the Indianite factory. The Kashmir State has a financial interest in both concerns which are carrying out large Defence Department orders.

**A Study Of Death Rates**

The expectation of life is generally determined by the average rate of deaths in the age groups. Variations as between the sexes are not without interest, and those in evidence are calculated to destroy inherent illusions on the subject. The statistical bulletin of the League of Nations in an analysis of death rates to be reproduced in its Statistical Year Book indicates not only the peculiar incidence of the child death-rate but also the average expectation of life in many lands. The

The INDIAN CABLE CO, LTD.

table based on specific rates per 10,000 inhabitants can, of course, be readily expressed in the conventional equivalent of rates per mile as per age-group. More male babes die in infancy than girl babes at least in the case of the white population of South Africa. This fragment of knowledge is of less significance than the progressive reduction in the death for Whites in the Union. Canada has a lower proportion of old men over 75 than the U.S.A. with a less taxing climate. But even the United States have a high death rate for babies in the first year of existence. The U.S. figures would also appear to suggest that maternal mortality plays a very small part in sending up the death-rae for women in the age-groups 20 to 40. The suggestion that neglect and poverty account for much mortality is conveyed by the figures for Mexico more than double the rate for the U.S.A. but, here too, the females of child-bearing age do not seem more liable to die off than the males who are immune from the risks of parturition. The rates for India, based on the vital statistics of 1938 and earlier years show that India is a less healthy place than neighbouring Burma though the child mortality rate or Burma is definitely higher and the actual proportion or old men, and old women too, would appear smaller in the case of India.

A series of surmises can, of course, be based on the table. Japan's death rate is not at all high, but infants are equally perishable in that Asiatic country. There are more old men than women and this, of course, will be taken as evidence of the subjection of women. The differences as between the Continents are as pronounced as those between the countries cited. The death rate for Austria in most years was naturally higher than for the Reich, and that for Bulgaria was markedly higher than that for Denmark which from 1911 to 1940 could claim that a rising standard of living supported an improvement in health, and hence, a fall in the death rate. The table indicates that the death rate for Scotland is somewhat higher thaan for Englnd and Wales. And France with a low birthrate did not apparently enjoy the corresponding benefit of a low death rate. Natural increase in Germany was favoured as much by the lower death rate as by a higher birth rate, but it cannot be claimed that it is all due to Hitler, for the average level of the death rate has actually risen as compared with 1932, the pre-Nazi base.

**Recent Decisions**

Regulated markets with licensed dealers are obviously the best means of controlling prices. That is why the last price control conference agreed that licensing of wholesale dealers is essential. Primary producers are excluded, and existing vested interests are recognised, but there is no bar to the licensing of new wholesale dealers. The conclusion is meant to serve as a direction to the Provinces which are more worried now about civil defence than price control. Regional variations will be tolerated. Experience has demonstrated that the price of wheat at Hapur cannot be the same as that at Karachi. The limitations on interprovincial trade arising from transport difficulty will perpetuate anomalies and differences. Yet the sugar prices scheme illustrates how the price control methods will be adapted to meet the situation. How transport facilities for coal and wheat will be extended has not been indicated so far. Price control cannot continue independent of additional supplies, and the actual improvement of distribution is yet neglected, though in the case of sugar, the Syndicate can add or vary supplies as before, at the instance of the Government. Nothing has been done about standard cloth though samples have been shown to the curious. Cotton and cloth prices are more than ever out of line. Meanwhile, yarn control has come, and the diversion of supplies to handloom weavers has kept mills, short-staffed and busy on war work wholly unwilling to reduce prices.

Over a dozen correspondents have written to me complaining that I have not realised the sinister implications of the visit of the American Technical Mission to India, and that it was surprising to find me indifferent at the prospect of Americans getting a considerable footing in Indian industries. A correspondent points out that it was not for nothing that, in the first instance, the United States gave fifty destroyers to Britain; and that Britain had to part with a number of her valuable strategic bases in return for this gift. The ultimate purpose of lease-lend facilities is, a reader informs me, to place Britain under a debt of obligations so as to make her a mere appendage of America. America's entry into the war completes, on this interpretation, her plan to become the overlord of all the world. In such overlordship, India, too, is included; and the American Technical Mission now in this country is said to be engaged in devising detailed plans whereby dominance over India by America will be properly established. One of the letters I have received makes particular reference to the participation of American interests in the managing agency of the Tata Hydro-Electric group. This group consists of three giant concerns, the Tata Hydro, Andhra Valley and Tata Power. All the companies were brought into being by the Tatas; the entire capital requirements were raised through the influence and resourcefulness of the Tatas; they have been functioning quite smoothly and rendering notable service to industries of the Western Presidency; yet, point out my correspondents, subsequent developments were such that the Tatas had to secure the assistance of Americans, and the price they had to pay was parting with a half-share in the managing agency. What happened to the Tata Hydro-Electric group will happen to most important industries if the menace of the American Technical Mission is not nipped in the bud, so I am warned.

---

The Indian Chambers of Commerce have been perturbed; and more than one official representation has been sent, suggesting that the British Government are a tool in the hands of Americans in this sinister plan. Before I deal with the fundamental issues raised by my correspondents, let me make the position clear so far as the American interest in the Tata Hydro-Electric Group is concerned. It is true that, in all the concerns of the Tata group, the only companies in which any important foreign interest is associated in any way, are the Tata Hydro-Electric concerns. Those who have any knowledge of the working of these companies will be able to testify that the American participation has produced nothing but good results. There has been no sordid plan to secure controlling interest or to use it for self-aggrandisement. On the other hand, American skill and experience in the execution of hydro-electric schemes have helped Tatas a great deal to rationalise the working and operations of the Tata hydel group. It has also been possible to secure first class machines and tools and stores at competitive prices through the good offices of the American principals. The latter have never tried to obtain any preference for American goods or to secure employment for American technicians. The concerns in the Tata hydro-electric group, even after the admission of the American interests, have pursued the same old policies; only many of the methods are being modernised. It is not only in the case of the Hydro-Electric Companies, that the Tatas have found it to their advantage to requisition American help.

---

In the plan of the Tata Iron and Steel Company, American technicians played a most important part. The consulting engineer of the steel works was Mr. Perin. A good many machinery were imported from America. A large proportion of the skilled workmen was Americans. But what is the position to-day? It was Mr. J. L. Keenan, the last and the greatest of the American General Managers in the steel works, who carried out the Indianisation plan to the completest extent. He carried out Indianisation so completely that his own successor is the young and brilliant Indian, Mr. J. J. Ghandy. Tatas

can justly claim that they know how, when, to what extent and with what limitations and safeguards they could and should take the help of foreign technical advice.

---

In our own province, the entire interest of Sir David Yule in Andrew Yule and Company Limited was purchased, over twenty years ago, by a leading American financier, Pierpont Morgan. Till recently, Andrew Yule and Company was controlled by Pierpont Morgan. But very few people knew at all that there had been a change in ownership from the Yules to Morgan Grenfell. Reason? Even after the companies in the Yule Group came under the control of Morgan Grenfell, they continued to be managed in the same way and with the same 'personnel' as during the Yule regime. There was not the slightest evidence to show that the American interests were exploiting the Yule group for any special benefits of their own. Just as very few people know that the Yules had sold their interests to Pierpont Morgan, still fewer people know now that the Yule estate has bought back all the shares of Andrew Yule and Company, Limited. In these transactions, the main factor was either a financial investment or the securing of American technical advice in fields in which American technical advice is most competent. Mr. Walchand Hirachand has been anxious to promote a scheme for the manufacture of motor cars in India; and Mr. Hirachand claims that he is a nationalist of nationalists. What is the essence of his motor car scheme? The success of his scheme entirely depends upon American help, co-operation, machinery and technical skill from beginning to end. The stage at which the motor car scheme will be able to discard with American assistance and advice will be reached in leisurely course in the same way as it was reached in the case of Jamshedpur. All of which goes to show that much of the advance criticism of the motives and intentions of the American Technical Mission arises from unnecessary suspicion or from a lack of correct perspective. These critics will now have no excuse to continue to air their fears and suspicions after the clear and categorical statement which Colonel Louis Johnson, President Roosevelt's envoy, made this week.

---

One reason why I did not take much notice of these critics was that, so far, I have had too much faith not only in President Roosevelt's political sagacity but in his political idealism to think him capable of manipulating and manoeuvring for petty trade or commercial advantages. For nearly ten years, "Indian Finance" has been a staunch supporter of President Roosevelt's policies and an admirer of his sincerity and statesmanship. When Mr. Roosevelt stood for election for a second term, Big Business in America was solidly opposed to him. Most of the Americans doing business in India were

likewise anti-Roosevelt. I was lunching with two American bankers who severely criticised Mr. Roosevelt's administration and said that, if he continued to be the President, America would go to rack and ruin. They were confident that Mr. Roosevelt would not be re-elected a second time. I retorted that Mr. Roosevelt's election was a certainty and that it was in the best interest of America that he should remain the President as long as he felt able to carry that great responsibility. We had small bet on it; and I won. The same friends challenged me for a bet when Mr. Roosevelt stood for the third time. I accepted the challenge without hesitation and won again. I am mentioning this episode to show how Big Business had set itself against Mr. Roosevelt; how the big papers in America which are controlled by Big Business have been against Mr. Roosevelt; and how, through the support of the common man and woman to whose hearts he appeals by his fireside chats over the radio, he has established himself not only as the undisputed leader of America, but as the undisputed leader of the United Nations. It is unthinkable that Mr. Roosevelt honoured with the responsibility of the leadership of the United Nations would wish to be identified, especially in the present context, with a policy of grab and exploitation directed against a poor country like India. In words which mark him out as a worthy representative of a worthy President, Colonel Johnson has clearly elucidated the aim and purpose of America's interest in India as well as the motives actuating the American Technical Mission.

---

I have read, and read over and over again, the statement of Colonel Johnson at Wednesday's press conference at New Delhi, and his Thursday's broadcast address to the Indian people; and they have stirred and moved me as only great literary masterpieces can do. Admirable in thought and expression, in cadence and charm, in sincerity and dignity, and in understanding and outlook, Colonel Johnson's address seems to form a communion between American hearts and Indian hearts. Why do you misjudge us, he asks in effect. America has no ulterior motives, no territorial designs on India. Colonel Johnson protests and pledges the absolute integrity of purpose of the American Government. America is interested in the development of strong, free, enlightened and friendly neighbours in the Far East. He is impressed by the dignity and value of India's venerable civilisation. He is captivated by the unfailing charm and grace of Indian people. And he adds: "I feel it to be a part of my pleasant duty here and a self-imposed obligation after I have returned to America to devote every effort that I can to helping America to know more about India and its people, and to contribute, if I can, to a more perfect understanding in India of the United States and of the Americans." India in co-operation with China holds the key to the destiny of Asia, the security and stability of Asia. If these two great Asiatic population blocs come together in the cause of liberty and enlightenment, such a union may well be the greatest political development of ten centuries. China and India have much in common. Each has a very old and very valuable cultural civilisation, which America views with the utmost respect and admiration.

(From Our Correspondent)

*New Delhi*, April 22.

It has been a quiet week—the only sign of activity being the arrival of the American Technical Mission headed by Dr. Grady which has already begun a number of important conferences with the officials of the various Government Departments. On the political side, little information is available beyond the fact that certain Indian Members of Government—more progressive than others—have begun to confer among themselves as to what should be done. They are reported to be drafting a detailed memorandum urging the need for a fresh effort to popularise the Government at the Centre and also pointing out how much can be done within the present constitution itself to develop new conventions for converting the present Executive Council into a National Cabinet. As the Viceroy is still away from headquarters the memorandum cannot be presented to him for some time yet. It is the unfortunate position of the Viceroy's Council at present that it cannot as the Council take up these constitutional questions. The Indian Members can only approach the Viceroy separately and submit their views to him for transmission to His Majesty's Government. Apart from these bigger questions of policy, there are the vacancies in the Viceroy's council still remaining unfilled—the Information Membership and the Communications Membership. Though Sir Andrew Clow has cancelled his leave and returned to take charge of the Communications portfolio, he will soon have to go to Assam as Governor.

* * * * *

According to the communique today by the Railway Board, the gross receipts of State-owned Railways during the year 1941-1942 have come up to Rs. 127.60 crores. As this is about Rs. 60 lakhs more than the revised estimates, the position is more favourable than was anticipated by the Railway Member. Whatever may have been the position last year, so many are the uncertain factors during the current year that the future is more doubtful than ever. The deputation of the All-India Railwaymen's Federation which came here last week considered the present war emergency and passed a resolution in which, recognising that India is now faced with invasion and normal working of Railways may become increasingly difficult, they have earnestly appealed to Railwaymen to stick to their jobs even amidst conditions which may involve danger and hardship. A special joint meeting of the Railway Board and the Railwaymen's Federation is shortly to be held to consider the demand for increasing the dearness allowance and extending it to staff drawing up to Rs. 150 a month. As regards compensation to workmen and their dependents, if injured or killed as a result of enemy action, the question of injury and other pensions under the Railway Establishment Code is now under examination by the authorities.

* * * * *

The Commerce Member has been engaged in considering the recommendations made by the fifth Price Control Conference which met last week. The most important question is that relating to the supply and distribution of foodstuffs. An Ordinance is expected to be shortly issued to prohibit any extension of cultivation of cotton for the next year in the whole of British India—an exception being made in the case of long-staple cotton. The object, as already explained by the Government, is to reduce the acreage under short and fair staple cotton and transfer it to the cultivation of food crops. The question also is under consideration of delegating to Provincial Governments the power to prevent the cultivation in any area of crops which were considered unnecessary or excessive from the point of view of the needs of the country. It appears to be the view of the Commerce Member that the proposed licensing system for wholesale dealers will, while maintaining the existing channels of trade, work satisfactorily so far as the general public is concerned. The conference which met last week, succeeded in achieving three important objects. Firstly, the Provincial Governments and State authorities have been brought to agree that the Central Government must continue to be in charge of the functions relating to the distribution of foodstuffs and the control of their prices. It means that situations of the kind caused by the action of certain Provincial and District authorities in prohibiting the movement of certain foodstuffs—action taken from the point of view of the supposed interests of that particular area instead of viewing the needs of the country as a whole—will not occur again. Secondly it has now come to be realised that the area of price control has to be widened rather than restricted Thirdly, the large movements of population which are now taking place in various parts of the country, have created problems arising from local shortages and surpluses requiring necessary adjustments in distribution arrangements in the interests of the general public. The Central Government has been strongly against the hoarding of foodstuffs either by individuals or by Governments—though for special reasons in particular areas, stocks of foodstuffs may be accumulated by local authorities up to a reasonable limit.

Regional Boards—five for the present with the possibility of a sixth for the Sind area—are to be constituted immediately for the purpose of co-ordinating the supply of food grains, suggesting wholesale prices and co-ordinating retail prices in adjacent areas of different regions. So far as transport arrangements are concerned it will have to work in consultation with the Provincial Transport Councils which are already in existence. The Regional Boards are bound to be helpful, but one improvement which can be suggested is the addition of non-official representatives—preferably from the commercial community. The control scheme for wheat is already working. As regards rice it is proposed to ask the Regional Boards to survey the question of maximum prices for different qualities and make recommendations. The position with regard to short staple cotton is that the Central Government has again given the warning that it is not prepared to enter the market to make surpluses of short and fair staple cotton during the next season. As regards sugar it is claimed that the sugar price fixed by the Government provided for reasonable profits. Having regard to the interests of the country, the Government of India have permitted the export of only 10,000 tons though the United Kingdom asked for 1,00,000 tons. A serious position has arisen in regard to kerosene for India produces only 12 million gallons as against the estimated consumption of 300 million gallons.

* * * * *

The present Commerce Member, Sir Ramaswami Mudaliar, is a great believer in the economic unity of India. In all his policies he has kept this in view. He has publicly stated that if necessary he would not hesitate to take into the hands of the Government the distribution arrangements for the supply of foodstuffs to the civil population and thereby enforce State control. That stage has not arrived and may not arrive, but the Government of India cannot be too careful in dealing with this question. Sooner or later there will have to be a separate food Ministry with sufficient powers to co-ordinate supply, transport and sale.

* * * * *

Col. Louis Johnson, the American President's Envoy, had his first Press Conference this morning. The assurance which he gave was that the Technical Mission had come only to give advice and offer such tangible assistance as it can for an all-out war production drive in this country. He emphatically doclared that America was not seeking to profit out of this war-nor was the Mission thinking of establishing American industries in this country in the sense of "after the war advantage for American Businessmen." The Mission will submit its recommendations to President Roosevelt who will arrange to communicate them to the Government of India. As consultations are already going on with the Government of India, the latter may not wait for the Mission's report but proceed at once to act for furthering production.

(From Our Correspondent)

Bombay, April 22.

The movement of people away from the City proves that Madras alone is not in the grip of panic. It cannot be said that the Government here has overtly promoted the exodus. It has naturally disturbing effects on others besides the public carriers. Over the whole of April lots were getting out of the City as is proved by the empty houses and deserted streets. Few of us attached much importance to reports of poor business and asked why the Exchange should not carry on. After the report that a three-day week in Mylapore satisfies Madras brokers it is felt there must be something in the suggestion that business as usual is an inapt motto. Railway stations are busier than ever, and the Madras Mail was the most crowded train all along. It is estimated that four to five lakhs of people have fled. The naval threat is apparently potent enough to send thousands out everyday.

Towards the end of last week, the mills had lost about half their labour force. They certainly face a difficult future and export restrictions are by no means the end of their troubles. Country craft have latterly played a notable part in taking off people to the coastal ports. Trade unions are doing their best to show that unreasoning panic and hasty flight are equally unjustified. Night shifts have already been given up in certain mills. The disturbance caused to the sex ratio in the City may have profound and lasting consequences. It is not for nothing that comment is made on the absence of women and children in most areas. The crowding in mofussil towns is producing problems already noted elsewhere. Rents, prices and wages have all gone up. Difficulties have been reported from Belgaum where voluntary evacuees halt. A high school serves as a shelter while people wait in shoals for buses—alas too few, because of petrol rationing. Maharashtra houses the bulk of the city's fugitives.

The most notable piece of evacuation done so far is that done by the Parsi community for its children. People here are struck by the disinterested efforts made to help children of all classes to get out of Bombay. There is nothing to compare with the organised pre-meditated transfer of juveniles, to appropriate reception areas. The Parsi Panchayat is identified with this as with all good works. Public spirit and pride in wealth go together it is being demonstrated over again.

Poona is attracting more visitors than it ever had as a temporary capital. A. R. P. is in full swing and a special feature is the shelter for manuscripts. The occupant is to be the Bhandarkar Institute which must keep its manuscripts safe. The first idea was to use a cave in the vicinity. The University's manuscripts will also be kept along with the Institute's old manuscripts. Poona has another claim to notice. Dr. Mahajani has gone off for military training largely because the Bombay University still hankers after a diploma course in military studies. The Defence Department could not send instructors, so the College staff have to take up training at a special centre for three weeks to come back half-civilians and half-soldiers. The price of kerosene oil has been fixed officially at Rs. 4-9-0 for a four gallon tin of the superior quality. It had to be done in Poona where the situation worsened last week. The retail price will be Rs. 4-11-0 per tin and Rs. 4-3-0 per tin for the lower grade. The prices show that on the Western side of India also oil prices are by no means low. The position is likely to worsen and something may come out of the invention of a special portable lamp like a hurricane lantern meant to take vegetable oil. The invention was referred to over three years ago to show that a big outlet for vegetable oil could be opened up in India. The other towns in Bombay have also noticed an exodus. Ahmedabad was the worst affected. There is no labour shortage so far and the people's organisations, as also the Municipality, are working hard to prove that it is foolish to flee in haste. The Congress has appointed volunteers to help people, in any emergency. The A. R. P. alone is not running a first aid service. Bombay's organisation is still the pattern for other places. But recent troubles prove that Bombay is more nervous than imagined. Places in Bombay are privately listed as unsafe.

The Bombay Government has taken a leaf from the C. P. Over a year ago, the cultivation of short staple cotton was widely deprecated. To-day the surplus is a formidable problem. The people of Bombay are told that it will pay to grow food crops in the immediate future. There has been a formidable communique detailing loss of markets, war, shipping trouble and the carry-over. It is said that Bombay should not grow short staple cotton. As far as can be foreseen much of it will be unsaleable, and what will be sold will fetch a very low price, in fact, below the cost of cultivation. It is beside the point to ask if the retrograde movement in cotton prices arise from the further statement saying that rail transport for cotton will be scarce and indefinite storage is all that can be expected for the 1942 crop. When Broach is below Rs. 150 per candy there will not be any chance for short staple. The market is any day a better guide than any press note. Oilseeds will be favoured, but here again there will be difficulty unless it be said that kerosene will be given up in favour of vegetable illuminants.

Rumours are still the bane of Bombay. Official propaganda is discounted, and even the final ban on listening-in to enemy radio stations is not going to help. Students have been asked to help fight rumours, but who can tell that their words will be heeded. The difficulty now is to locate the source of rumour and what is happening in Madras is a very good commentary on what cannot be done by a government without popular support. The first raids started with the mildest rumours. The markets still show traces of vulnerability, and even the general assumption that Admiral Somerville has taken over from Vice-Admiral Layton to beat the Japanese back to the Pacific does not help much. There is latterly a readiness to overdo the business of camparing Allied superiority in resources. Availability and use have to be distinguished, and the loss of Yenangyaung is not so much a loss for Japan as for India. That view is ignored officially, it appears, and the intelligent are shrewd enough to see that admissions of weakness are furnished as advance explanations of failure.

The latest sugar control scheme has by no account startled the market. The trade does not relish it, and the provision to open up part transactions does not appeal to the majority of Deccan sugar producers who do not like the Rs. 11-12 rate and seven annas per maund of cane have their own views. Their percentage of recovery may be high, but when they own their plantations may not find it easy to adjust their costs. They have to pay for irrigation, fire, research and other items, the U. P. factories don't pay for. Moreover they do not do regional allotment. They are not interested in the Bombay market which wants 90,000 tons in a year. It is only early in the year that the Deccan factories care to sell to Bombay. They have other markets to care for and keep and their present worry is that the U. P. mills will step in because diversion of supplies would be made on the ground of saving freight. The Sugar Controller is not expected to know all these things, and some people here still wonder whether the States are covered. If they are not, the two Rampur factories will have a bigger advantage than ever. Moreover, what the consumer is still anxious about is the retail price. Last week's press note, it is pointed out, made no reference to retailers and what they should charge.

Bombay will have a small department answering to the Supply Department. It will come into being as a result of recommendations made by a committee appointed in 1937. Certainly the mills of Government grind slow though promptitude has been the mark of other decisions for instance that relating to the suspension of free supply of reports, etc. to newspapers. A purchase department to do the requisite work for all depts. will naturally be attached to the Industries Department in the war period. Special contact will have to be maintained with the

(*Continued on page* 652)

# Tit Bits of Industrial Activity

**Calcium Compound**

A U. P. Industries bulletin describes the manufacture of calcium gluconate. Valuable as a tonic, the compound can be produced by electrolysis. The investigation turned on the use of glucose with calcium carbonate. Purification was needed at frequent intervals, but the final product was up to the standard of imported calcium gluconate. The technical process has been fully explained, and it has been pointed out that if the cost of electrodes is excluded, the cost of making one lb of calcium gluconate will be Rs. 2 per lb. If the omitted item is allowed for it cannot be more than Rs. 2—3 per lb. Lower costs on the basis of local glucose can be anticipated, but the findings generally support the view that an important medicinal chemical can be made easily and cheaply in India.

**More Manure From Sugar Mills**

Australia's success in using press mud, cane trash and bagasse confers interest on an investigation into using waste products of sugar mills. An article in the **Journal of Agricultural Science** for April states that enormous quantities can be had in India. Press mud is a good manure separately or for mixture with synthetic fertilisers. In Mauritius as also the U.S.A. the use of press mud has been remarked. Bagassse, too, can be used to nourish the land along with green manure. Farmyard manure is good for mixing in this case. In regard to restoration of soil fertility, the waste products are rivals of the more expensive oilcake. It is likely that additional manure from the sugar mills will help materially in the more food plans.

**Synthetic Rubber**

The beginnings of synthetic rubber manufacture in India have been noted recently. Not of course on the scale of the U.S.A. The lack of 7,000 to 8,000 tons of imported rubber together with additional demand at home apart from the difficulty of adding immediately to current production make it necessary to get on with alternative sources. Banyan sap or resin can be turned into something like rubber with the help of acetone, say some. Another way is to start with ethyl alcohol and oxidise it to the aldehyde. It has been said in this connection that vegetable oils can be used as a base of synthetic rubber. This makes the whole business more hopeful than fancied. At Lahore in the chemical laboratories experiments have started. The reclamation of scrap from discarded goods and old tyres has hardly started. Cleaning, crushing followed by mixture with chemicals will yield reclaimed rubber fully equal to natural, virgin rubber. The example of the U.S.A. in this field of reclaiming used tyres etc. deserves special notice in view of a sharp rise noted in 1941 in the proportion of reclaimed to crude rubber consumption in the states.

**Swadeshi Equipment**

The Post and Telegraphs Department supports Indian industries besides advising others to do so. In the last annual report it is stated that besides manufacturing much of its own equipment it had bought as much as Rs. 77.86 lakhs worth of stores in India. The war by itself explains the increase in purchases in India as also the sharp fall in purchases abroad. The Telegraph stores and workshops dealt with a greatly enlarged volume of work. Value of stores held at the end of March, 1941, exceeded Rs. 46.56 lakhs. Bakelite presses have been set up to manufacture bodies for telephones. Telegraph carrier equipment is largely made in India. Value of work done departmentally showed an increase of Rs. 14.45 lakhs on the previous year. As many as 1,916,073 items of stores were manufactured during 1940-41, says the report.

Supply Department. The Director of Industries will be invested with the powers of a Central Purchasing Officer.

The changes in import trade licensing are so many and frequent that few can keep track of them. While the 20 per cent surcharge is enough to choke imports down to a point far below the 1937 level, it is widely recognised that the licenses covering goods from Hong-Kong (of all places) stand in need of revision. Every day the area of control diminishes, but the procedure under open general permits has to be modified to suit British requirements. A further prohibition against aluminium and specified chemicals is enough to prove that this country must develop essential industries. The ban against copper scrap is accompanied by another on aloe, sisal yarn and hemp. Why it may be asked when Manila hemp cannot be had for obvious reasons. The amended license will make it impossible to get Canadian fruit, jams and medicines. Though India has an export surplus as with the U.S.A. it is felt that dollar exchange should be religiously conserved. Canadian paper and pasteboard figure among the goods excluded from the Schedule. The paper merchant will, of course, spring to attention, and do all he can to keep an available source open for his own purchases when price control at home is not enough to provide supplies.

Dr. Ambedkar is now important enough to get a leader all to himself in the *Times of India*. His forty-ninth birthday offered enough provocation and there was really a big meeting to hear the laudatory speeches. Dr. Jayakar presided and he spoke about the other Doctor's work for the Scheduled Castes and Independent Labour. The *Times* rubs in the point he is the only leader anxious to promote self-help among the excluded castes. He has been hailed as the stern foe of orthodoxy and it is alleged that Dr. Ambedkar enjoys the support of many Hindus in his fight against the caste system. It is all a bit confusing, but everybody admits that Dr. Ambedkar has got somewhere by his pugnacious skill. That success story of his puts him at the top of Bombay though his efforts to keep separate the scheduled castes for all time and his flirtation with the League make him suspect in more than one-quarter.

**3½ p.c. INTEREST**
**Free of Income-Tax**

*How does a Defence Savings Certificate grow in Value ?*
The value of a Rs. 10 Certificate increases year by year until it is worth Rs. 13-9 in ten years' time.

*Do I pay Income Tax on this Increase ?*
Not an anna.

*Where do I buy Defence Savings Certificates ?*
At any Post Office doing Savings Bank or at any Savings Depot.

*How do I buy Defence Savings Certificates ?*
You can buy them in any multiple of Rs. 10 up to the limit allowed to each individual, *viz.*, Rs. 5,000.

*Can I buy Defence Savings Certificates by instalments ?*
Yes, You can buy As. 4, As. 8, or Re. 1 Defence Savings Stamps and stick them on a card, which is supplied free when you buy your stamps at the Post Office or Depot.

*Suppose I'm ill, or want my Savings urgently ?*
You can apply, at any time, for repayment of your Defence Savings Certificates.

(*Continued from page 649*)

Each is achieving a new national consciousness, a new popular soul, a new popular will. It is because America believes in the future of Asia being bound up with the freedom and enlightenment of India and China, that she is placing "our skill, our resources, our brains and our hearts at your disposition."

America herself realises that she is honoured not alone for her sake but for the sake of her place in the world. America has been made powerful and free and exalted—powerful, not to be subject, but to serve; free, not simply to exult in freedom, but to make free; exalted not to look down, but to lift up. Thus believing in America's part in world destiny, as well as in the contribution which India and China have to make to the new order of the world, America is determined to do all in her power to help India to fight off the aggressor; to help India to help America. Colonel Johnson makes a fervent appeal in these words: "The United Nations propose to win this war. There is no other possibility. United Nations want India's help. For my own United States, I ask the help of the people of India in winning this war." I can only wish that our British statesmen know how to frame their appeals to India in words so earnest and stirring. It is the spirit of understanding, not of condescension, that can unite hearts and establish mutual bonafides. He wants Indians to extend their help to win victory—there can be no goal for America and for India except victory. Colonel Johnson avows a solemn pledge on behalf of the American people and of their great leader.

"And in that victory may I say on behalf of the President of the United States that we propose to bring to the problems of the eventual peace no less than to the battle-grounds of the immediate war, our aroused conscience, our highest resolves, our loftiest ideals."

"To the successful prosecution of the war and to the perfection of a noble peace, I pledge you the most earnest efforts of the people of the United States and of their great leader; and, to those high ends, we have dedicated our lives, our fortunes and our sacred honour."

These are inspiring words with an inspiring message; and India's response should be: "We thank you sincerely for the present promise of help for our defence and for the future promise of guarantee that India will have a worthy place in a nobly conceived and nobly planned peace." There is something greater than Almighty dollar. It is American idealism when properly awakened and aroused. This war as well as the last proves that, since the Crusades, Americans are the only nation who have gone to war at great sacrifice of men, money and materials, not because they coveted any material possessions or they were moved by material aims, but because they saw the issue as a fight between a free world and a slave world and could not resist the urge to throw all their resources and their energies and strength on the side of those fighting for a free world.

(*Continued from page 637*)

not been provided by the Burma Government though an anonymous Washington official has come out pat with a story that the Japs are up to all sorts of tricks and their notes are worse than greenbacks. The banking position in Burma is known to have worsened swiftly after everybody took money out. There was no moratorium and the drain of cash was unchecked. What the position is, after the raids on Mandalay, can only be presumed. It is clear that currency and credit have been dislocated for ever. There is, of course, the assurance that the British Government will see things through and pay for the administration of Unoccupied Burma just as it pays for the war. That may raise the hopes of serving officials but will not help the ordinary population to look forward hopefully to the restoration of peace-time prosperity.

# Jute and Jute Manufactures

(By Our Jute Correspondent)
Calcutta, April 24.

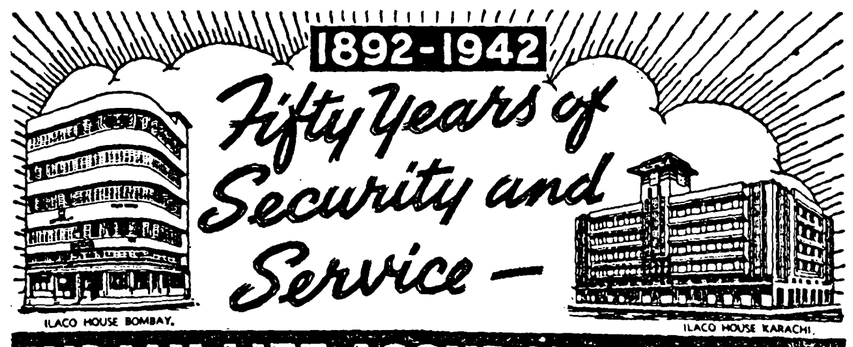
THERE has been little to lighten the gloom and dullness that clogs the Jute trade principally due to export difficulties. A silver lining, however, is discernible owing to two relieving features which whilst they lack official corroboration, nevertheless are accepted as having been successfully negotiated though in one project, certain details, it is understood, have yet to be finally determined.

Both these measures are designed to relieve pressure on those whose business interests are suffering owing to the curtailment of shipping facilities from the Port. It is understood than an agreement has been reached with the Railway companies to export 40 waggons of manufactured goods, Hessian products in the main, from Calcutta daily. These are to be apportioned equally for consignment to the U.S.A. and U.K. In addition 20 waggons per day are to be reserved for the Raw material, jute.

Whether this agreement has been reached between the Railways and the I.J.M.A. independently or under the aegis of the Government has not as yet been made known but it is a timely move and will prove of considerable value to the trade generally. The mills will be able to carry on at their present basis of working 60 hours without further reduction which would naturally tend to further labour unrest and will help also other vital interests in the trade to tide over a initial bad period. The other measure is still somewhat in an embryo stage but is known to have the approval of influential circles, and is expected to be the subject of an official announcement shortly from the I.J.M.A. to its members. This concerns negotiations between Mills and shippers in relation to goods for April due date, to assist them in carrying these over for one month. This does not affect the Bazaar but possibly some concessions might be afforded them were such representations to be made, whilst these measures cannot be said to have stimulated fresh activity or brought new orders in their train, the tone of the market has shown a slight improvement though no buoyancy.

Prospects for the new crop continue very favourable, and if the rivers behave themselves, the much-looked for good quality jute should be had well in advance. Weeding operations are being pushed forward in the midlands and even on the highlands in a number of cases and the growth of the plants is generally commended.

Mills have generally refused to be tempted by any propositions in loose jute or *pucca* bales so that very dull conditions have prevailed in this section. A very small business in European packing at Rs. 11 or 6-8 for MIDS, BOTS respectively is reported with a mill. A little Indian District Tossa MIDS were also done at Rs. 9-12 BOTS at Rs. 8-12. A small business with the mills in cuttings at Rs. 11, Rs. 10 for NC's, MC's is also recorded.



The tone at the close is quiet with little offering and prices unchanged.

There has been some activity in the export market though quiet conditions have generally prevailed. A moderate business for Russian Ports approximating to 10,000 bales all told, has been put through in Firsts at Rs. 45 to Rs. 48, Lightnings at Rs. 35 to Rs. 38. Outport Tossa 2|3's at Rs. 48.

Apart from this there are no other transactions to report. The closing tone is quiet, nominal quotations being as undernoted:—

Firsts at Rs. 45, Lightnings at Rs. 36, Hearts at Rs. 27, Dundee Daisee 2|3 at at Rs. 54, Dundee Tossa 2|3 at Rs. 67.

The Hessian position has been at a standstill during the past week pending some solution to the shipping question. As quoted earlier in this report the agreement with the Railways that has been reached to relieve these stresses has had a welcome effect but has induced no fresh business. Trade in Heavy goods has been too meagre to merit the name of a market although some transactions in B. Twills at Rs. 35-12 and Rs. 36 are reported for near delivery. Quotations are again purely nominal.

## JUTE

*Calcutta*, April 24.

THE jute market has had, to judge by the movement in prices, more than its fill of anxiety. An early shower, and the consequent progress of the crop like naval operations or the hint of operations to come have been equally depressing factors. The mills are resolutely negligent. The slipback in prices can be measured by a stray deal in Dundee Daisee 2/3 at Rs. 52 during the week.

The market for pucca bales is moribund; that for loose jute is even more idle than usual. The profound depression that has overtaken the market is not due to one single factor. While market reports agree as to the limitation of crop, the prospect of a normal season and mills disengaged for lack of labour, are overwhelming by adverse factors. Day after day it has been recorded that quotations are nominal and unchanged in the case of loose jute. Except for a little business in Lightnings and Tossa, there has been nothing to indicate a return of vitality.

The slump in hessian has all along been a disturbing factor and the shipping position alone is enough to arrest any revival of sentiment. Mills are not anxious to buy jute in hopes of fresh orders when productive capacity is disemployed. Nothing has appeared as yet to bring a hope that jute will buck up. The slump may have a decisive effect on the crop outturn this time while strengthening the hands of our food-planners.

The importance of the latter is indicated by the advance in rice (uncontrolled) and wheat (controlled) prices. There was mention of some interest in supervised marks previously at As. 10-8 per maund a few days ago, but the ebb of interest in manufactures has affected even a single favourable development.

## JUTE MANUFACTURES

*Calcutta*, April 24.

THE jute manufactures market is still in the gloomiest position imaginable. The lowest touched by 9 porters in the week ended Thursday was Rs. 13-12. Between two weeks the chief speculative medium has slumped tremendously and the pick-up of prices on Wednesday to Rs. 14-4 for 9 porters was obviously based on technical factors. On all days, the market has been deficient in tone. Each succeeding day has been responsible for a drop in prices. Between this week and the last, 9 porters have fallen from Rs. 16-8 to Rs. 14-4 and 11 porters from Rs. 20-8 to Rs. 18. Free selling at lower levels has emerged.

The depression in heavy goods has been equally noticeable. Inactivity propelled prices downward with the result that prices stood at Rs. 35-8 for Cornsacks. "B" Twills are lower at Rs. 36-4 and Heavy Cees are down to Rs. 35. As compared with hessian, heavy goods have stood up well, but the drop in ready rates is sure to cause anxiety. The market is more than ever vulnerable to war news although General Wavell's broadcast acted as a much-needed tonic at a critical stage.

Heavy goods are affected as much by the shipping position created by Japanese domination of the Bay as by the fall in the jute and hessian markets. The rates for forward delivery have shaded off in the case of both 9 porters and 11 porters. As market reports agreed last week, there is so little doing that no report seems worthwhile.

## COTTON

*Calcutta*, April 24.

THE cotton market has been affected by the prevailing lassitude. The quotations in Bombay have come down rather quickly. Occasional buying by jobbers has been offset by the nervousness manifested by all Bombay markets. New York may take up spot cotton to 2- cents and over, but Indian markets remain bearish. The Bombay communique on crop restriction is definitely a bear point, from a short-term view.

Broach April-May contract has fluctuated steadily downwards. The lowest reached was Rs. 143. The stray bulls are in full retreat, and the setback in bullion during the week has been another adverse factor. It is unlikely that rates will go up in the event of good news from Burma. The easiness of oilseeds, and fears of control of both crop movement and prices, have impaired the tone of the market for good.

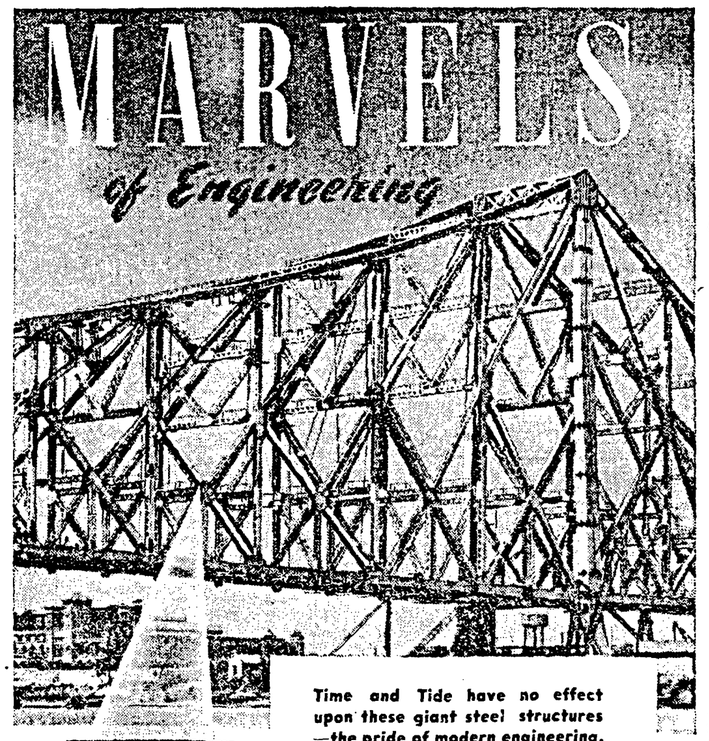
The recovery noticed on Wednesday is too limited and brief to support any hope of large-scale buying—merely on the facile assumption that cotton is good to buy and keep, now that war risks insurance is in operation.

The steadiness manifest on Wednesday is reassuring to the extent that selling pressure has subsided, but war news may force another break in prices. A week ago, the atmosphere was not too bearish. It must be said that at present it is so bad as to destroy all hopes reared on Indian mill consumption.

## PIECEGOODS

*Calcutta*, April 24.

THE piecegoods market in Calcutta is in an unpromising condition. Export difficulties may be peculiar to Bombay, but dealers who are acquainted with plans to put standard cloth on the market and are not at all anxious to hold stocks to be sold later on at controlled prices, are definitely disinclined to book for delivery.

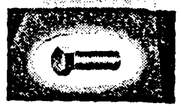


A little retail business may be passing but so far, there is nothing to suggest that the merchants are going to put large business in the way of mills. The slump in bullion augurs ill for many markets, or so, it looks. The fall in cotton and the decline in yarn are not calculated to nourish optimism at any stage.

Mill rates may be firm and war contract rates may be held firmly, but there is nothing to support the argument that merchants at present reckon that cloth is good to buy and keep for sale merely because mills will have more labour trouble and there must be demand for cloth in time. There may be an ascent in rates for rayon goods, but that has no significance, any more than keeness to buy up anything offering by way of imported yarns.

## SILVER

*Calcutta*, April 24.



THE bullion market appears to pursue a course altogether its own. The war news has not gingered up silver as expected though there is a big premium for Burma silver. A certain amount of buying was noticed last week but profit taking has been in the ascendant. The silver market in London has developed no features and the growing friendship between the U.S.A. and Mexico is hardly a bull point from the viewpoint of U.S. silver interests. The New York rate is unchanged at 35⅛ cents per ounce. Settlements are as usual below the spot quotation, for the weight of supplies is beginning to tell.

Time and Tide have no effect upon these giant steel structures —the pride of modern engineering.

They will serve generations to come, as vital links in the chain of progress..

## BETTER SHOWING BY BIRD COAL GROUP

THE course set for stock markets this week, both in Calcutta and Bombay, has been uninterruptedly good. The improvement in prices has, of course, been stimulated by the news of the announcement by the Tokyo radio, early in the week, that the Japanese capital as also Yokohama were attacked by hostile aircraft. Though the news has not yet been confirmed by Allied sources the part played by this news in this week's improvement cannot be assessed with confidence. It is clear that markets are politically overshadowed. It will, therefore, be difficult to look for any well-defined movement in any direction. It may be, that the market will take a turn for the better. There is still little business passing and prices are likely to be unusually sensitive until there is some evidence in business confidence. In the circumstances a week of mild improvement seems to be a very real blessing, not unexpected or undeserved, as I am tempted to add.

* * * *

The accounts and balance sheets of seven coal companies belonging to the Bird-Heilgers group covering the half-year ended 31st December, 1941, are just now available. They certainly make a satisfactory showing. The aggregate profit of these companies for the half-year under mention, in spite of the acute shortage of transport facilities and the adverse effect of war on the raisings of the collieries, is even higher than that for the previous half-year ended 30th June, 1941, being Rs. 9,68,033 against Rs. 8,34,307. Raisings of the group as a whole were maintained at a high level, being 8,24,695 tons against 8,17,791 tons. Despatches have also shown a rise from 7,29,297 tons to 8,40,900 tons.

Throughout the half-year the main factor determining the market position has been an acute shortage of transport facilities which shows few signs of alleviation as yet. During the latter part of the period under review, after the entry of Japan into the war, a general exodus of labour took place in the Jherria field. This too had a sharp and adverse effect on the raisings which would otherwise have been higher than recorded.

The incidence of taxation in the case of the group has also been such that despite the fact that profits have been well maintained, the burden placed upon the companies has absorbed a large proportion of the sum which would normally have been available for distribution.

* * * * *

Outstanding in the group are the results of the *Standard Coal Company, Limited*. The net profit of this company for the half-year ended 31st December, 1941, before providing for taxation and depreciation, is Rs. 1,44,877 against only Rs. 89,514 for the previous half-year. The improvement in earnings, however, has been more than offset by the need for higher provision for taxation, this item being Rs. 58,000 against Rs. 20,000. Owing to the recent increase in the surcharge on income-tax it has become necessary in this half-year's accounts to provide for additional taxation payable in respect of the previous half-year's profits. It is, therefore, satisfactory to note that the dividend has been maintained at 10 per cent per annum in spite of the absorption of a large portion of the profit by higher taxation.

* * * * *

Another of the companies in the group, which has paid all the arrears of dividend on the preference shares for the year ended 30th June, 1941, together with the dividend for the last half-year, is the *Ondal Coal Company, Limited*. In this case, the managing agents have foregone their allowance and commission. There is a rise in the net profit from Rs. 17,648 to Rs. 43,762.

* * * * *

It is not surprising to note that the directors of the *Burrakur Coal Company, Limited*, have been, as usual, conservative in the dividend distribution. In view of the inconsiderable increase in earnings from Rs. 4,41,690 to Rs. 4,49,890, the dividend declared is lower at 2½ per cent per annum against 6¼ per cent per annum for the previous half-year. The provision for taxation is again higher at Rs. 2,09,428 against Rs. 90,000 while the amount set aside for depreciation is lower at Rs. 99,038 against Rs. 1,14,821. The amount carried forward is lower at Rs. 15,082 against Rs. 40,218 brought in.

* * * * *

Regarding the prospects for the current half-year, the directors state that despite the ever-growing cost of material essential for colliery maintenance, the company may not be able to support its former level of profits and the sums available for distribution in the future are likely to be curtailed. There is, however, the possibility that the company may receive some relief as a result of the claim for reduction in Excess Profit Tax which has been filed with the authorities but has not yet been adjudicated.

* * * * *

Further testimony to the improved conditions in the cotton textile industry is provided by the results of two important companies the balance-sheets of which are just now available.

* * * * *

Of the two companies, the *Vishnu Cotton Mill, Limited* and the *Lakshmi Cotton Manufacturing Company, Limited*, the figures of the latter undoubtedly make a more impressive showing. The accounts of both companies relate to the year ended 31st December, 1941. The net profit, before providing for taxation and depreciation, of the *Lakshmi Cotton Manufacturing Company, Limited*, is more than fifteen times the figure of the previous year at Rs. 9,57,634 against only Rs. 58,934. A sum of Rs. 4,00,000 (nil) has been allocated to Reserves while the provision for taxation stands at Rs. 2,00,000 (nil). Taxation, the directors, state, has been computed on the basis of the statutory minimum standard profit of Rs. 36,000 and an appeal for a special standard will be made in due course. The dividend is higher at Rs. 40 per share against only Rs. 15 per share previously.

* * * * *

The *Vishnu Cotton Mill, Limited* has also done very well during the same year. The net profit before providing for taxation and depreciation amounts to Rs. 8,49,185 against Rs. 1,15,412 in the previous year. The amount set aside to various reserves is *Rs. 2,00,000 (nil)* in addition to an allocation of Rs. 3,00,000 to Reserve for taxation as against nil in the previous half-year. The dividend declared is higher at Rs. 80 per share, while, in the previous year, the dividend declared was only half of this which, too, was possible only through the transfer of Rs. 50,000 from Dividend Reserve Fund. The amount carried forward is Rs. 67,469 against Rs. 29,870 brought in.

WATCH-DOG.

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Friday*, April 24, 1942.

THOUGH the local Stock Exchange has taken a turn for the better during the week owing to better war news, there has not been any appreciable broadening of interest, and the few recorded rises in prices have not been substantial. Public buying is still on a very small scale. In view of the continued uncertainty regarding the Burma situation the majority of operators are not prepared to enter into commitments. It is encouraging to note, however, that the undertone in the various sections is healthy.

The giltedged securities section has been very steady, prices in some scrips having improved slightly. 3½ per cent Paper, which was quoting at Rs. 87-12 last week, has improved during the week to close at Rs. 88-4, this being naturally the highest level for the week. Among terminable loans, the 1948-52 Loan changed hands at Rs. 94; 1960-70 at Rs. 103; 1945-55 at Rs. 105; 1946 *Defence Bonds* at Rs. 97-6 and 1949-52 *Defence Bonds* at Rs. 95-2. Provincial loans were well maintained at last quoted rates.

Money conditions have been firmer during the week, and there is a further rise of nine pies in the average discount on treasury bills from one rupee four annas per cent per annum to one rupee four annas nine pies per cent per annum.

No trading is reported in public bodies' debentures. Among industrial debentures, 5½ per cent (1937-47) *Dalmia Cement* changed hands at Rs. 103 and Rs. 102-8 and 5¼ per cent (1938-50) *Rohtas Industries* at Rs. 103. Preference shares met with good business in small lots during the week, *Reliance* being done at Rs. 130; *Hastings* at Rs. 100 c.t.; *Dunlop Rubber* 1st preferences at Rs. 120; *New Dooars* at Rs. 154-8; *Cawnpore Sugar* at Rs. 152; *Steel Corporation* at Rs. 92-8; *Dalmia Cement* at Rs. 110-8 s.l. and *Rohtas Industries* at Rs. 135. An unsatisfied demand for *Alkali and Chemical* provided a bright feature in a rather black spell.

Among Bank shares, *Reserve Bank* improved from Rs. 91 to Rs. 93-8, closing a shade easier at Rs. 93. *Allahabad Bank* preferences came in for business at Rs. 130.

A solitary transaction was possible in Railway shares, *Mymensingh-Bhairab Bazar (Guar.)* changing hands at Rs. 105.

Cotton shares were steady, *Kesoram* being done at Rs. 8-8 s.l.; *New Victoria* at Rs. 4-10 and Elgin at Rs. 27.

There was again no business in Jute ordinary shares. The directors of the *Bally Jute Company, Limited* have maintained the dividend at Rs. 10 per share for the half-year ended 31st March, 1942. That is too mild a tonic against the slump in hessian which must mentally lower jute shares.

In the Coal section, *Singaran 'A' and 'B'* shares were transacted at Re. 1-14.

Tea shares fared somewhat better, *Amluckie* being done at Rs. 80; *Ethelbari* at Rs. 12; *Tumsong* at Rs. 9-12 and *Naga Hills* at Rs. 16.

Among Sugar shares, *Murree Brewery* continued to meet with enquiry at Rs. 15. *Purtabpore* were marked at Rs. 10-8 and *Raza* at Rs. 25-4.

In the Public utilities section, *Jubbulpore* were crossed at Rs. 14-12.

In the Engineering section, *Indian Iron and Steel Corporation* continued to be the only two counters in which transactions have been recorded. *Indian Iron*, after opening at Rs. 22-8, went up to Rs. 22-14 in mid-week, but closed to-day at Rs. 22-11. *Steel Corporation*, after improving to Rs. 13-14, touched Rs. 13-9, closing slightly better at Rs. 13-11.

In the Miscellaneous section, *B. I. C.* continued to be steady at Rs. 4-8. *Dalmia Cement*, after opening at Rs. 13-9, closed higher at Rs. 13-13. Among Paper shares, *Orient* were done at Rs. 14-14 x.d. and *Star* at Rs. 13-11. *Indian Copper* were steady at Re. 1-10. *Reliance Firebrick* were crossed at Rs. 11-8.

## BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, April 23, 1942.

*Money.*—The rate for call money was unchanged at ½ per cent.

*Securities.*—Government securities maintained a firm undertone and the price of 3½ per cent Paper has further improved to Rs. 88-6. Among short and long-dated loans, 1948-52 were steady at Rs. 93; 1963-65 at Rs. 88-9; 1947-50 at Rs. 97-10; 1960-70 at Rs. 103-1; 1955-60 at Rs. 107-8; 1945-55 at Rs. 105 and 3 per cent *Defence Bonds* 1946 at Rs. 97-14.

*Shares.*—The local share market was somewhat cheerful during the week under review following the reports early in the week that Tokyo, Yokohama and Kobe were bombed by Allied forces. Prices registered good advances. Steel shares received special attention. In the cash section, there was an active demand with an all-round rise in prices. *The figures given in brackets are for cash.*

*Textiles.*—There was a good buying in this section. *Bombay Dyeing* closed higher at Rs. 1,060 (Rs. 1,050); *Central India* at Rs. 317 (Rs. 315); *Century* at Rs. 356 (Rs. 355); *Colaba* at Rs. 136-4 (Rs. 145); *Gokak* at Rs. 246 (Rs. 242); *Kohinoor* at Rs. 405 (Rs. 410); *Sholapoor* at Rs. 5,000; *Simplex* at Rs. 155 (Rs. 155); *Svadeshi* at Rs. 394 (Rs. 392) and *Vishnu* at Rs. 1,550.

*Hydro-Electrics.*—*Tata Power* remained unchanged at Rs. 1,330 (Rs. 1,357-8); while *Andhra Valley* closed better at Rs. 1,450 (Rs. 1,352-8). *Tata Hydro* were steady at Rs. 150.

*Steels.*—Steel shares, as usual, maintained their leadership. The fluctuation in prices was mainly influenced by the nature of war news. Support was always in evidence when there was a slight decline in prices. *Tata* ordinaries closed at Rs. 257 (Rs. 245) as against Rs. 226 (Rs. 209) in the previous week, while the deferreds showed a rise of about 125 points in the forward and Rs. 130 in cash section, closing finally at Rs. 1,350 (Rs. 1,248). The 1st preferences met with business at Rs. 181-4 and the 2nd preferences at Rs. 118-8.

*Banks and Insurance.*—Bank shares were steady, *Central Bank* being done at Rs. 44-4; *Imperial Bank* fully paids at Rs. 1,415; contributories at Rs. 340; *Bank of India* at Rs. 130 and *Reserve Bank* at Rs. 95.

In the Insurance section, *New India* were marked higher at Rs. 42.

*Miscellaneous.*—*Bombay Burmah Trading* old shares were maintained throughout the major portion of the week at Rs. 200, closing to-day higher at Rs. 215 forward. In the cash section, there was a rise of about 15 points and the shares closed at Rs. 200. The new shares were also higher at Rs. 68-12. *Associated Cement* were done at Rs. 157 (Rs. 157). *Alcock Ashdown* were steady at Rs. 425 (Rs. 400); *Shivrajpur Syndicate* at Rs. 29 (Rs. 30-8) and *Premier Construction* at Rs. 107-8 (Rs. 110). *Scindia Steam* improved again to Rs. 17-10. *Bombay Steam* were at Rs. 316 (Rs. 325).

## MADRAS STOCK EXCHANGE

*(From Our Correspondent)*

*Madras*, April 23, 1942.

BUSINESS in the local market has been very restricted owing to the lack of support as many of the people have left the city following the Government *communique* advising all those persons whose presence is not essential to leave the place as early as possible. Business, it must be said, has practically come to a standstill.

*Securities.*—A steady tone was witnessed in the securities market, 3½ per cent Paper quoting at Rs. 88-2. 3 per cent 1963-65 changed hands at Rs. 88-8. Among Provincial Loans, 3 per cent 1952 *Madras Loan* were done at Rs. 93.

*Mills.*—Prices remained unchanged in this section. Among local shares, *Mysore Spun Silk* came in for business at Rs. 8-2 c.d. *E. D. S. U.* deferreds were crossed at Rs. 2-4.

*Plantations.*—Planting issues were steady, *Chembra Peak* being transacted at Rs. 4-8 x.d. The *Highland Produce Company, Limited* has declared a final dividend of 17½ per cent, making 27½ per cent for the year ended 31st December, 1941.

*Miscellaneous.*—*Singareni Collieries* were crossed at Rs. 8-12. Among outside issues *Premier Construction* were done at Rs. 103-4. *Burmah Oil* were on offer at 28s. 7½d.

| Sales .. .. | 1,00,117 | 63,173 | 83,506 | 83,142 |
| Net profit .. .. | 12,566 | 10,015 | 17,267 | 17,664 |
| Allocation to funds including depreciation .. | 2,893 | 2,806 | 6,441 | 6,142 |
| Provision for taxation .. | 5,500 | 3,000 | 6,500 | 4,500 |
| Dividend amount .. | 4,688 | 4,688 | 4,688 | 4,688 |
| Dividend per cent .. | 3⅛ | 3⅛ | 3⅛ | 3⅛ |
| Carry forward .. | 1,898 | 2,412 | 2,890 | 3,252 |

*(Half-yearly meeting, 8th May, 1942 at 11 a.m.)*

*Audited accounts for the half-year ended 31st December, 1941:—*

*Accounts.*—Owing to the recent increase in the surcharge on Income Tax, it has proved necessary to provide in this half-year's accounts for additional taxation payable in respect of the previous half-year's profit.

The Profit and Loss Account, after making provision of Rs. 5,500 for Taxation, providing Rs. 2,892-10-0 for Depreciation, and including a Balance of Rs. 2,412-0-10 brought forward from last half-year, shows an available balance of Rs. 6,585-2-3, which the directors propose to dispose of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| In paying a Dividend at the rate of 6¼ per cent per annum without any deduction for Income Tax paid by the Company .. .. | 4,687 | 8 | 0 |
| In carrying forward .. .. | 1,897 | 10 | 3 |
| Total .. | 6,585 | 2 | 3 |

Despatches to the Indian Iron and Steel Company, Limited, were made in full throughout the half-year.

*Market.*—The market has been steady throughout the half-year, but wagon supply has been erratic due to an acute shortage of transport facilities, and unfortunately this position shows no signs of improvement.

*Labour.*—During the latter part of the period under review with the entry of Japan into the war, a general exodus of labour took place in the Jharia Field. This had a very adverse effect on the raisings of the colliery and labour is still somewhat unsettled.

As from 1st January, 1942, the dearness allowance paid to workers was increased from 10 per cent of 22½ per cent of the standard wage.

*Sand Stowing.*—Considerable progress was made on the ropeway installation despite difficulties experienced in obtaining certain materials. It is confidently expected that the installation will be complete and running within the course of the next three months.

*Managing Agents.*—F. W. Heilgers & Co.

*Authorised, Issued and Subscribed Capital—Rs. 1,50,000 in 1,50,000 shares of Re. 1, fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid-up .. | 1,50,000 | Gross Block .. | 7,21,228 |
| Reserves .. | 49,482* | Depreciation .. | 6,06,127 |
| Current debts .. | 32,933 | | |

| Dividend per cent Ordy. | Nil | Nil | Nil | Nli |
| Dividend per cent Pref. | 9¾* | Nil | Nil | 3¼ |
| Carry forward .. | 6,793 | 1,023 | —327 | 5,825 |

*Includes arrears of dividend for the two half-years ended 30th June, 1941 and 31st December, 1940.

**After transferring Rs. 35,000 from Reserve for Bad and Doubtful Debts and including Rs. 4,500 foregone by managing agents.

*(Half-yearly meeting, 8th May, 1942 at 10-50 a.m.)*

*Audited accounts for the half-year ended 31st December, 1941:—*

The Profit and Loss Account, after providing Rs. 18,491-8-2 for Depreciation, and including Rs. 1,023-4-0 brought forward from last half-year, shows an available balance of Rs. 26,293-6-11, which the directors propose to dispose of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| In paying the arrears of Dividend on the Preference Shares for the year ended 30th June, 1941, at the rate of 6½ per cent per annum without any deduction forIncome Tax paid by the Company .. .. .. | 13,000 | 0 | 0 |
| In paying a Dividend on the Preference Shares for the half-year ended 31st December, 1941, at the rate of 6½ per cent per annum without any deduction for Income Tax paid by the Company .. .. .. | 6,500 | 0 | 0 |
| In carrying forward .. .. .. | 6,793 | 6 | 11 |
| Total .. | 26,293 | 6 | 11 |

*Colliery.*—The development of the colliery was continued despite certain mining difficulties due to faulting, which have not yet been overcome. In addition, the shortage in transport facilities mentioned above have had the effect of severely restricting the colliery during the period under review.

*Sub-Leased Properties.*—Raisings from the sub-leased properties exceeded the tonnage on which minimum royalties were payable.

*Managing Agents*—Messrs. F. W. Heilgers & Co.

*Authorised Capital*—*Rs.* 6,50,000. *Issued and Subscribed*—*Rs.* 4,50,000 *in* 25,000 *Ordy. of Rs.* 10 *and* 2,000 6½ *per cent Cum. Pref. of* 100, *both fully paid-up.*

*(Half-yearly meeting, 8th May, 1941 at 11-35 a.m.)*

*Audited accounts for the half-year ended 31st December, 1941:—*

The Hazaribagh Court have not yet heard the case instituted by the Raja of Ramgarh against the Company, but the first hearing is expected to take place in the near future.

As mentioned in last half-year's report, this litigation is likely to prove a heavy burden on the Company, and the Directors consider that the resources of the Company should be conserved as far as practicable.

*Prospecting.*—Prospecting has continued during the half-year.

*Accounts.* The Profit and Loss Account, after providing Rs. 38,000 for Taxation, and Rs. 9,300 for Depreciation, writing off Rs. 17,191 from Prospecting, and including the amount of Rs. 25,667-9-7 brought forward from last half-year, shows an available balance of Rs. 14,796-0-6, which the directors propose should be carried forward.

*Managing Agents.*—Messrs. Bird & Co.

*Authorised Capital*—*Rs.* 40,00,000 *in* 3,50,000 *Ordy. and* 50,000 *Founders' shares, both of Rs.* 10 *each. Issued and Subscribed*—*Rs.* 20,00,000 *in* 1,50,000 *Ordy. and* 50,000 *Founders', both fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid-up .. | 20,00,000 | Gross Block .. | 23,56,182 |

## THE BHULANBARAREE COAL COMPANY, LIMITED

*Audited accounts for the half-year ended 31st December, 1941:—*

*Accounts.*—Due to the recent increase in surcharge on Income-tax it has proved necessary in this half-year's accounts to provide for additional taxation payable in respect of the previous half-year's profits.

The Profit and Loss Account, after charging Rs. 37,221-4-0 for Depreciation, Rs. 8,000 for Taxation, transferring Rs. 20,000 from Reserve and including Rs. 3.049-5-10 brought forward from last half-year, shows an available balance of Rs. 13,287-5-8, which the directors propose to dispose of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| In paying a Dividend at the rate of 2½ per cent per annum without any deduction for Income-tax paid by the Company .. | 8,937 | 8 | 0 |
| In carrying forward .. .. .. | 4,349 | 13 | 8 |
| Total .. | 13,287 | 5 | 8 |

*Managing Agents.*—Messrs. F. W. Heilgers & Co.

*Authorised, Issued and Subscribed Capital*—*Rs.* 7,15,000 *in* 71,500 *shares of Rs.* 10 *each, fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid-up .. | 7,15,000 | Gross Block .. | 41,30,327 |
| Reserves .. | 6,77,049 | Depreciation .. | 29,85,177 |
| Current debts .. | 1,81,234 | | |
| Carry forward .. | 4,350 | Block (net) .. | 11,45,150 |
| | | Stores .. | 73,837 |
| | | Stocks .. | 1,983 |
| | | Outstandings .. | 1,64,842 |
| | | Investments .. | 1,73,000 |
| | | Cash balances .. | 18,821 |
| Total .. | 15,77,633 | Total .. | 15,77,633 |

## WALFORD TRANSPORT, LIMITED

| | Year ended December. | | |
|---|---|---|---|
| | 1941 | 1940* | 1940** |
| | Rs. | Rs. | Rs. |
| Net profit .. .. .. | 2,83,559 | 67,164 | 97,059 |
| Allocation to funds including depreciation .. .. .. | 41,685 | 34,240 | 46,210 |
| Provision for taxation .. .. | 1,36,452 | 7,483 | 17,500 |
| Dividend amount .. .. | 42,040 | 22,071 | 26,275 |
| Dividend per cent Ordy. .. | 10 | 4½ | 5 |
| Dividend per cent Prefd. Ordy. .. | 10 | 6 | 7½ |
| Carry forward .. .. | 33,512 | 10,144 | 6,754 |

*Accounts shown for nine months ended 31st December, 1940.

**Accounts shown for the year ended 31st March, 1940.

*(Annual meeting, 20th May, 1942 at 2-45 p.m.)*

*Audited accounts for the year ended 31st December, 1941:—*

| | Rs. | A. | P. |
|---|---|---|---|
| The profit for the year was .. .. | 2,75,109 | 0 | 11 |
| To which is added the balance brought forward of .. .. .. .. | 10,144 | 1 | 6 |
| Total .. | 2,85,253 | 2 | 5 |
| Out of the total of Rs. 2,85,253-2-5 the Directors have set aside the following amounts:— | | | |
| Depreciation .. .. .. | 33,250 | 0 | 0 |
| Taxation to Reserve .. .. .. | 1,36,451 | 8 | 0 |
| General Reserve thereby bringing it up to Rs. 80,000 .. .. .. | 40,000 | 0 | 0 |
| Total .. | 2,09,701 | 8 | 0 |
| This leaves a balance of Rs. 75,551-10-5 available for distribution, which the Directors recommend be dealt with as follows:— | | | |
| On the Preferred Ordinary Shares a dividend at the rate of 10 per cent per annum .. | 21,020 | 0 | 0 |
| On the Ordinary Shares a dividend at the rate of 10 per cent per annum .. .. | 21,020 | 0 | 0 |
| Carry forward .. .. .. | 33,511 | 10 | 5 |
| Total .. | 75,551 | 10 | 0 |

The advisability of paying a larger dividend was very carefully considered, but in view of the uncertainty of the future, the Directors have considered it prudent to increase the amount of the carry forward.

In spite of the fact that no motor vehicles stocks are being received from the United Kingdom and very little can henceforth be expected from the Company's other source of supply now that America is on a War basis, the Company has enjoyed a satisfactory year's trading. As mentioned in the last Report efforts were being made to intensify the activities in directions other than the retailing of motor vehicles. The Directors are glad to report that these have met with a considerable degree of success and with new machinery installed, the works have been able to undertake War contracts as well as develop the manufacture of gas-producer equipment for motor vehicles.

*Manager.*—Mr. J. W. Ross.

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid-up .. | 4,20,400 | Gross Block .. | 3,61,346 |
| Reserves .. | 93,297 | Depreciation .. | 2,97,986 |

## CALCUTTA STEAM NAVIGATION COMPANY, LIMITED

| | 31-12-1941 | 30-6-1941 | 31-12-1940 | 30-6-1940 |
|---|---|---|---|---|
| | Rs. | Rs. | Rs. | Rs. |
| Gross receipts .. | 6,78,772 | ... | 5,93,742 | 7,63,012 |
| Working expenses including commission, etc. .. | 5,41,907 | ... | 4,95,667 | 5,93,262 |
| Net profit .. .. | 1,36,865 | 1,12,202 | 98,075 | 1,69,750 |
| Allocation to funds including depreciation .. | 66,571 | 70,190 | 48,245 | 78,500 |
| Provision for taxation .. | 30,000 | ... | 14,000 | 46,500 |
| Dividend amount .. | 42,000 | 42,000 | 42,000 | 42,000 |
| Dividend per cent .. | 5 | 5 | 5 | 5 |
| Carry forward .. | 20,519 | 22,225 | 22,213 | 28,383 |

*(Half-yearly meeting, held 24th April, 1942).*

*Audited accounts for the half-year ended 31st December, 1941:—*

After providing Rs. 62,571-0-0 for Depreciation the balance at credit of Profit and Loss Account is Rs. 99,581-7-1 to which has to be added the sum of Rs. 22,225-10-8 brought forward from the previous account, making a gross total of Rs. 1,21,807-1-9.

From this has to be deducted Rs. 59,287-13-9 for Income-tax, Super-tax, Contingency Reserve and Commission leaving a balance of Rs. 62,519-4-0 with which it is proposed to deal as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| To pay a Dividend of Rs. 5 per share making a total of Rs. 10 per annum .. .. | 42,000 | 0 | 0 |
| To carry forward in Profit and Loss Account .. | 20,519 | 4 | 0 |
| Total .. | 62,519 | 4 | 0 |

In view of the difficult conditions under which the Company's varied interests were executed, and the increased costs of maintenance during the period under review, the results achieved may be considered satisfactory.

The Company's Fleet of Steamers and Lighters has been maintained in good condition.

*Managing Agents.*—Messrs. Hoare, Miller & Co., Ld.

**The Stock Exchange remained closed on the 13th and 14th April, owing to "Chaitra Sankranti" and "Bengali New Year's Day."*

# MARKET POINTERS

**Sugar Control:**

The Sugar Controller, Government of India, is immediately issuing a notification mentioning that there are about 250 recognized dealers in sugar all over the country.

Representatives of the Sugar Syndicate it is learnt are being invited shortly to discuss with the Government details of marketing and distribution of sugar under the Sugar Control Regulations.

It appears that war-mongers, speculators and hoarders, who had kept the prices high, are disturbed by the Sugar Control Order and are trying to suggest that the price has been controlled in the interest of export. Official quarters, however, state that the control measure has nothing whatever to do with any export of sugar, and that its main object is to bring about the distribution of existing stocks and economise transport.

It is stated that export is likely to be negligible in comparison to the total production of sugar. As a matter of fact even a tenth of the export of 200,000 tons which the United Kingdom had asked for is not likely to materialize, and owing to the altered circumstances the overseas export will be largely the requirements of our own troops.

It is also pointed out that the maximum price of Rs. 11-12 fixed by the Government is based on the price of cane at as. 7 which price has not been paid to the cultivators anywhere during the season.

* * * * * *

**Indian Customs Revenue:**

According to returns received in the Department of Commercial Intelligence and Statistics, the total gross Indian sea customs revenue, including land customs and excluding salt revenue, collected in British India during the month of March, 1942, amounted to Rs. 2,63 lakhs as compared with Rs. 2,50 lakhs in February, 1942, and Rs. 3,45 lakhs in March, 1941.

The total gross central excise duties on motor spirit, kerosene, sugar, matches etc. amounted to Rs. 99 lakhs in March, 1942, as compared with Rs. 91 lakhs in February, 1942, and Rs. 1,19 lakhs in March, 1941.

The grand total of gross customs and Central excise revenues realized in the 12 months ended March, 1942, was Rs. 52,77 lakhs as compared with Rs. 50,99 lakhs during the same period last year. Of this amount, import duties accounted for Rs. 35,76 lakhs, export duties for Rs. 3,55 lakhs, land customs and miscellaneous for Rs. 64 lakhs and central excise duties for Rs. 12,83 lakhs.

**THE CALCUTTA STEAM NAVIGATION COMPANY, LIMITED**

**DIVIDEND NOTICE**

**A dividend of Rs. 5 per share for the half-year ending 31st December, 1941, has been declared payable at once.**

**HOARE MILLER & CO., LTD.,**
***Managing Agents.***

**CLIVE MILLS COMPANY, LIMITED**

**NOTICE**

**NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the abovenamed Company will be held at Chartered Bank Buildings, Calcutta, on Saturday, the 23rd day of May, 1942, at 11 o'clock in the forenoon, for the purpose of considering and if thought fit of passing the following resolution which will be proposed as a Special Resolution, namely:—**

**"That Article 109 of the Articles of Association of the Company be altered by deleting the words '(to be divided among them) for each meeting of the Directors' and substituting therefor the words 'per mensem for each Director.'"**

**By order of the Board,**
**BIRD & CO.,**
***Managing Agents.***

**Calcutta, dated the 23rd March, 1942.**

**Note.—The object of the alteration is to provide for the payment of a monthly fee of Rs. 100 to each Director as in the case of other Jute Companies in the agency of Messrs. Bird & Co. and F. W. Heilgers & Co., instead of a fee for each meeting he attends as at present. The fixed fees payable to each Director have in fact approximated Rs. 100 per mensem in the past so that the alteration in the basis of payment will not affect shareholders.**

**THE TILKAH TEA COMPANY, LIMITED**

**The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 8th day of May, 1942, at 3-45 p.m. for the following purposes:—**

ISSUED WEEKLY

Vol. XXIX. No. 19 SATURDAY, MAY 2, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

STEADY conditions have continued to prevail in the money market; and the intensification of the emergency situation in Madras is partly responsible for this. It was more than three weeks ago that the South Indian Capital experienced an alert; but much has happened since to keep the sense of alarm alive. At the time when the news of the alert reached Calcutta, rumour-mongers went about saying that the Port of Madras and the Fort had been bombed out of existence. From people arriving in Calcutta from Madras, full reports of the alert are available; and we know now that there has so far been no incident of any kind in that City. All the same, rumour-mongers always ply a busy trade and even people who ought to know better lend a ready ear. It has thus happened that many banks in Calcutta are no longer discounting bills on Madras. This has naturally caused a considerable hold-up of funds. In Madras itself, the Government authorities seem to have succumbed to undue panic. The population were officially told that the City was in the danger zone and that those who had no actual business in Madras would be well-advised to leave. The High Court was closed earlier than scheduled and removed its headquarters to Coimbatore. The Secretariat was removed to Madanapalle, though it has now returned to Madras. All the banks have changed their offices from near the Beach to someone or other of the suburbs. It seems probable that some of the foreign exchange banks have decided on having combined premises. Amidst such dislocation, transfer of offices, disruption of staff and general unsettlement in the City, it is no matter for surprise that banking conditions in Madras have become extremely difficult. In such circumstances, banks will certainly be maintaining much larger cash balances than in normal conditions. With the fall of Rangoon, Indian banks have experienced considerable dislocation of business. The present emergency in Madras further complicates problems for them. The executives who control the destinies of banks are having new problems presented to them and have to watch the situation with daily alertness and concern.

Treasury Bill results during the current week make a better showing though, curiously, the average discount rate registers further rise. Applications were on the large side at Rs. 3,50¼ lakhs as compared with Rs. 2,72½ lakhs on April 21 and Rs. 2,35½ lakhs on April 14. The improvement in the amount of applications is, therefore, quite notable. And one would have thought that this would have resulted in a substantial decline in the average rate of accepted tenders. On April 28, the average discount rate had risen to Rs. 1-5 per cent per annum as compared with Rs. 1-4-9 in the previous week. We have often pointed out, in this column, that there should be strength and firmness in the Treasury Bill policy. To give way to the market as the authorities have been doing in the last many weeks, is a confession that the Government are dependent entirely on banks. This is actually not the case. Treasury Bill maturities are now on the small side. From the point of view of the obligations for repayment of treasury bills, the Government can well afford to reject treasury bill tenders if the rate is not suitable. We may be told, on the other hand, that the general ways and means position is such that there is need for the maximum amount securable from sales of treasury bills. It is not a weak treasury bill policy, but a strong treasury bill policy, that can induce a heady flow of bills.

In Britain, the Bank of England has been able, over a period of thirty months, to stabilise the treasury bill rate at slightly over sh. 20. This is no doubt due to the willing and ready co-operation which the Bank of England is able to feel sure of from the British banks. The pertinent question to ask is: why has the Reserve Bank of India not been able to secure similar co-operation from banks in India? The Imperial Bank, whose resources form more than one-third of the total resources of banks in India, is intimately connected with the Reserve Bank and the Government. During the past many months, the deposits of the Imperial Bank have been going up by leaps and bounds. With the support which is always forthcoming from the Imperial Bank, it should have been possible for the Reserve Bank to shape and enforce a resolute treasury bill policy. In the absence of such a policy, the banks are only too glad to mulct the Government whenever they can and to whatever extent they can. It is a sad reflection on treasury bills policy that a week, during which tenders have been exceptionally heavy, is a week which records a further rise in the treasury bill rate. Sales of intermediate bills between April 22 and April 27 amounted to Rs. 1,14¼ lakhs as compared with Rs. 40¼ lakhs in the corresponding period last week. The offer of tender bills for next week remains unchanged at Rs. 2 crores. Sales of intermediate bills will continue, the tap rate being unchanged at Rs. 99-11.

There has been further expansion of currency in the week ended April 24; and the expansion has been effected by transferring sterling securities from the banking department to the issue department of the Reserve Bank. Sterling securities in the issue department have risen by Rs. 7 crores from Rs. 234.85 crores to Rs. 241.85 crores. Correspondingly, foreign balances in the banking department have declined by Rs. 6.92 crores from Rs. 48.49 crores to Rs. 41.57 crores. Active note circulation in India has risen by Rs. 5.60 crores to an all-time record of Rs. 413.86 crores. Rupee coin has declined from Rs. 30.09 crores to Rs. 29.48 crores. Rupee securities are unchanged. In the banking department, Central Government's deposits have declined by Rs. 34 lakhs from Rs. 4.68 crores to Rs. 4.34 crores. This decline has taken place in spite of the Government taking additional ways and means loan for Rs. 8.82 lakhs. The latest figure of ways and means advance is Rs. 11.67 crores. The next returns of the Reserve Bank will be dated May 1; and it may be expected that they will disclose the changes consequent on the payment received from the British Government on the basis of month-end adjustments. Judging by the sterling payments received in recent months, the receipt at the end of this month may be anything like Rs. 30 crores. In which case, it should be possible to repay the entire ways and means loan of Rs. 11.67 crores. But as expenditure is also running at a high level, a substantial portion of the payment received

## TREASURY BILLS

### India

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills were opened on Tuesday, April 28, 1942. Total amount offered was Rs. 3,50,25,000 (Rupees 3 crores, 50 lakhs and 25 thousand). Tenders at Rs. 99-11 per cent and above were accepted in full and those at Rs. 99-10-9 per cent were allotted approximately 66 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-5% (Rupee one and annas five per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees 2 crores), of three months' Government of India Treasury Bills will be received on Tuesday May 5, 1942. Successful tenderers should make payment on Friday, May 8, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from April 29, 1942 to May 4, 1942 at Rs. 99-11 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from April 22 to 27, 1942 amounted to Rs. 1,14,50,000 (Rupees one crore, fourteen lakhs and fifty thousand).

During the week ended April 24, 1942. Government of India Treasury Bills for Rs. 1,47,00,000 (Rupees 1 crore 47 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad

Friday Morning.

In the difficult conditions of today shortterm borrowing is more than ever simple for the British Government. The money with the public may be larger, but it is regularly diverted through the banks into investment in defence bonds as also Treasury bills. A week ago no difficulty was found in raising treasury bills for 75 million by tender. The rate was a little over 1 per cent; the allotment to the market was a little better at 44 per cent. The weekly treasury bill issue is supplemented by the taking of Treasury deposits. The money market has not suffered in the least from the easiness that has overtaken giltedged in London. Nobody thinks any more about the difficulties of raising money, but only of the conduct of operations in distant theatres of war. The assurance that U. S. supplies as well as the U.S. fleet under Admiral 'Betty' Stark are in Europe is more constructive news from the market angle than any stories about lease-lend miracles.

The anti-inflation campaign has started officially. A 99 per cent levy on excess profits is approved in the U.S.A. The present levy of 75 per cent is called too low. A Gallup poll is known to have revealed a majority in favour of increased taxation. The stock market has not taken this news badly but then the market has been in poor shape for weeks. The behaviour of Wall Street suggests deep pessimism. The blue chips are all weak and it will not be said that the President is more popular by advocating equality. Equality of opportunity exists but the levelling down of incomes is not wanted. nearly everything will be frozen said a recent cable to the *Daily Mail* from New York. The public there is said to be avid for taxation, and there are few who have doubts that a nation, with an estimated income of 117 billion dollars in a year, can spend a hundred millions in a day. The anti-inflation drive is not blessed by men who still think of Roosevelt the reflationist, but there is the fact that a lot of idle money cannot be left where it is to go into durable goods made out of materials wanted for the war. So there is the case for stopping instalment buying. The F.R.B.'s Chairman sponsored the idea last year, and the shopping craze has to be killed somehow. The U. S. press has declared that unchecked inflation would add enormously to the war bill, and wageearners are told that there will be equality of sacrifice when incomes over $25,000 will be down to the President's ideal. Blanket freezing will not cut exports. It will perhaps help U. S. trade in Latin America and actually add to the national income.

The cost-price situation early in the year was disturbing. The note circulation was up on acount of full employment. If subscriptions to defence bonds in January rose to double the December level in the New York district alone and the Treasury netted 908 million dollars in 27 days of January as against 536 million dollars in December it was not taken as the limit. It was indeed urged that a plan to get wageearners to save regularly was needed. The Federal Reserve Bank as fiscal agent of the Treasury was ready to receive applications from corporations and revenue officers of Counties or Municipalities which had pay roll savings plans in operation. It was noted in January that total sales of savings bonds in that month would have yielded 1,000 million dollars or more. Moreover the U. S. Treasury enjoyed the advantage of borrowing at unusually low rates so that the savings bonds on sale from May last looked quite attractive. The U. S. treasury could raise 150 billions a week on 91 days bills at 0.23 per cent. by the end of January. The average yield on taxfree Federal bonds was below 2 per cent. The capital market was a little more active, but as was noted previously, the rise in bank deposits was far too large to be satisfied by offerings to the tune of 276 millions in January. Part of the money went to states and municipalities, and the demands of business were extremely limited. Further much borrowing was of a temporary nature. Inflation if it was in the air did not bring about large investment. The stock market was idle. Money was in more than one sense sterilised. Note hoarding was detected though bank reserves kept rising when Government was paying back previous loans. But the general situation was reflected in the rise under Banks' loans and advances, because U. S. treasure imports were going down and trade itself was affected by fears of scarcity of goods. Department stores got a good deal of money and sales in January topped the January 1941 mark by 33 per cent in the Second Federal Reserve District. Defence production kept rising through 1941 and afterwards too. Construction work was larger by 50 per cent in several industries. In New York alone factory employment was 22½ per cent above the December 1940 level and pay-rolls were 45½ per cent greater. This in many people's eyes is a sure indication of the vicious spiral. Prices rose, production rose and wages also rose. If investment did not rise there is the explanation that opportunities were few. Restricted investment in a way stimulated spending. This resulted in a further rise in the price level and the dangerous ingredients of the situation were present in January last, to judge by available comments. That is why high taxation and regular savings are regarded as approved remedies. The fact that Britain was taking out half the nation's income for expenditure impelled the U.S.A. to view high taxation as wholly justified by the war. It is hoped to raise 36 billions in a year for war outlay that threatens to be larger. The cycle of defeats will not come to an end, and the U. S. citizen has been told roundly that higher taxation is the price of liberty. The addition of 30 per cent to the U. S. labour force by January 1942 led to a rise of 75 per cent or so in factory payrolls. Higher production resulted in bigger incomes, and without leisure, the workers with larger incomes felt the urge to spend. This is to be checked by the President's seven-point plan meant to break the war boom and avoid the postwar slump.

LLOYDS BANK

*For every class of Banking Business*

Much has been said about the wonders it will procure for the people of America and the distinction drawn between systematic reduction of the cost of living and to lower standard of living enforced by the war shows that the views of the Left have come to colour the U. S. Treasury's views. Since wages in the U.S.A. rose by 41 per cent during 1941 and employment rose by 19 per cent the margin available for taxation is obviously large. It is all to the good, for the savings drive must give billions in a month, and there must be no investor's strikes. The Republican party can raise no obstacles now that Mr. Willkie's proposal that the only intelligible war aim is victory and the only means full effort has been accepted last week by the National Committee in Chicago.

The U. S. savings campaign must help the Allies to get larger supplies. That is the object of the U. S. mission in India. The only aim is to help India to raise herself to a war footing. That is not the same as making Indian war effort full, free and hearty. U. S. Indusry may be running in top gear but things here move slowly. Take for instance the announcement on April 25 that no dealings will be permitted with the Channel Islands. It has just been noted in Delhi that the islands lost in June 1940 to the Germans already established in northern France are enemy-occupied territory. So pat comes the announcement that except with the permission of the Reserve Bank there cannot be any execution of any order given by or on behalf of any person resident in the C. I. or any body corporate under the control of any resident there. In so far as the order refuses the person to make any payment or part with gold, the wording is as usual but it is the first reference to treatment of assets in India belonging to C. I. residents. Could there be such delay in including the C.I. with enemy-occupied territory. The Chairman of the big British Banks in their speeches last year touched on this subject in reference to the loss of assets there. The C. I. branches are put out of reckoning, and if they are classed with branches in Belgium and France at present operating under Nazi supervision, the reason is obvious. The normal relation is at an end and the C. I. should have been classed long ago with countries like Denmark and Belgium in as much as the enemy is in control and the resident's assets in India cannot be dealt with. Reference has been made previously to the absence of any notification concerning commercial or other relations subsisting between India and Occupied Burma. The administration of assets in India by

## American Tempo

The plan and procedure of the American Technical Mission have been announced; and the members of the Mission who are now in Calcutta for a stay of ten days, will then proceed to Bombay where they will stay for a like period, and return to Delhi for final consultation among themselves and the drafting of their recommendations. These recommendations will be, in the first instance, submitted to President Roosevelt; and, thereafter, they will be communicated to the Government of India. During their visit to the Eastern and Western Capitals, they will be meeting industrialists as well as commercial bodies; they will also be inspecting some of the factories. As the itinerary of the Mission is in charge of the officials of the War Supply Department, one may be sure that, while the members of the Mission were spending a few days in New Delhi, they would have had plentiful opportunities to read and digest the mass of commercial and industrial data which the department has been gathering and compiling since the time of the Roger Mission and the Eastern Group Conference.

The American experts have a quick way of understanding the broad outlines of a problem; and one may be sure that the essentials of the production problem which the Technical Mission is out to tackle have already been formulated in broad terms by the members of the Mission. The application of Amercican technical assistance in relation to each category of production is a question of detail; and the main point to appreciate is that the American way of extending industrial establishments and setting up new ones has an unique tempo of its own. Where Britain or even Germany will take a number of months to establish a new industry, Americans may generally be trusted to do it in the matter of as many weeks. M. Marilo is a Continental writer who has studied American industry in its actual working, and can speak with comparative knowledge of European industry and American industry. And the conclusion he arrives at is that it is American industrial superiority that will be the deciding factor in shortening the war. He has recently written a pamphlet entitled "A Short War through American Industrial Superiority". And the following comment appears in the "Saturday Evening Post".

> "M. Marilo has seen the American way of new plant construction, the steel frame going up while the ground was being levelled for the floor; he has seen an aluminium plant that was started in November producing aluminium in May, whereas in Europe it would have taken eighteen months to do it; he has seen heavy electrical machines made, delivered, installed and working in ninety days, whereas in Europe they would need a year; he has seen an air-plane engine factory, covering fifty acres of ground, with a capacity of 1.000 engines a month, built, tooled, manned and brought to production in 193 days; he looked at a hill on what they told him was the ideal site for an electro-metallurgical plant, and it made him gloomy to think how long it would take to remove the hill; a week later he looked again and the hill was not there, but in place of it the beginning of a metallurgical plant, and he could hardly believe his eyes—this being made possible, he remarks, 'by the big power excavators which at the same time carry away the soil, the trees and the rocks'. He adds: 'Nothing of this kind exists in Europe'".

This is what India should like the American Technical Mission to teach us. Production of war supplies in India can be on a more comprehensive scale if industries can be set up in India for the manufacture of engines,aeroplanes, machine tools, etc. With respect to projects of this kind, the British Government have been so far apathetic on the plea that the requisite machinery could not be secured and the requisite technical personnel could not be made available. We should like to have the assistance of the Technical Mission in setting up in India those new industries whose production will fill up the gaps in the matter of war supplies; in securing the plant and machinery for such industries; in also obtaining the technical hands necessary to instal the plants and run them in the early stages; and, above all, in endowing the whole plan and scheme with the tempo and speed which are characteristically American.

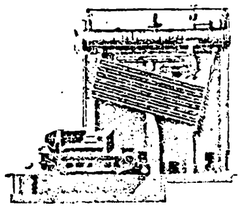
## TOWARDS EQUALITY

There may be no complete similiarity between the measures adopted in 1937 to arrest an upswing in prices and wages, and the new measures adumbrated by President Roosevelt this week as part of an anti-inflation campaign. In 1937 boom control was devised to brake the speculative activity that marked the recovery from depression. The effects of that policy were reflected in the recession and pump-priming was an expedient forced on the U. S. Administration thereafter. To-day the price-cost situation is different which the cost of living has risen to a point at which discontent is ripe. The budgetary position is abnormally distorted and the third term is above all dominated by war in Europe and Asia. Why, then, is the U.S.A. forced to adopt anti-inflationary measures. A week ago appeared reports from an authoritative quarter calculated to suggest that the turning-point in the battle of production had been reached. But further advance claiming over half the national income is wanted. The battle for production has not been won, but the decisive stage has been reached, claimed Mr. Donald Nelson a short while ago. A day or two earlier it was suggested that no drastic increase in taxation was contemplated by the U. S. Treasury Secretary. To contradict this optimistic forecast came another message dealing with the President's desire to issue a special message meant to eliminate the inflationary urge. Ceilings, wage policy, taxation and other things were mentioned, and on Monday the President's programme was actually known.

How Congress and Big Business will react to it cannot be known. The freezing of prices, wages, rents etc., is familiar. What is indicated now is that the U. S. besides stepping up her own war production is going to take up control measures in earnest. It is by no means suggested that control or the agencies therefor did not exist before. Right through 1941 Mr. Leon Henderson of the OPM waged an unequal struggle with prices and wages. The FRB came out as an ally of the Administration, and credit was tightened by changing banks' reserve requirements. Mr. Morgenthau has always been an anti-inflationist like Mr. Eccles but the success that attended his efforts was not impressive. There was a late compromise over the price control bill, and it is only necessary to look at the trend of New York cotton prices this year, as compared with the break in Bombay, to realise that a fundamental difference exists. To break a war boom and avoid a post-war slump is the avowed purpose of the President.

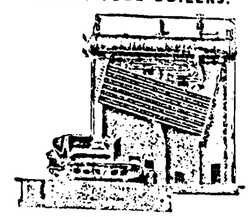
The seven-point programme starts with taxation to keep down profits. The Congressional proposal to limit dividends is not lost sight of in a demand for a stiff E. P. T. Wholesale and retail prices alike are to be controlled by the fixation of maxima. The stabilisation of wages is the third feature, and the fourth is the policy of stabilising farm prices. The fifth is to encourage savings, to make all citizens buy war bonds. The sixth point in the Presidential programme is to secure rationing of all essential commodities of which there is a shortage. The last is in the nature of a financial accessory, to discourage credit sales and instalment buying, and to encourage the paying off of debt, mortgage and other obligations.

The main object is not to lower the standard of living in the U.S.A. but to bring down the cost of living. The President has confessed his aim, and it will not make him unpopular with his own party He has also indicated that war and welfare are incompatible, and that total war demands total sacrifice. The reason for Mr. Roosevelt's fear is the present rate of war expenditure. In his Message to Congress the estimate of war expenditure is 100 million dollars per diem, and the President expects that before the end of 1942 the rate of expenditure will be doubled. It is imperative, in the President's view, to hold down the cost of living because of the inflation threat latent in the estimate of an enormous budget in the year beginning July 1st, 1942.



He has asked for an all-embracing programme. As anticipated last week in a Washington message, the President thinks a net income of 25,000 dollars good enough for any citizen. His own salary will yield only that, and that is why taxation to skim off profits and wages is vigorously recommended. Farmers will get their ideal of parity prices, but nothing more; the President does not like 110 per cent. The President has said openly that the war cannot be fought on the spend-as-usual principle. Rationing is deemed logical. Wage-freezing will not be arbitrary for the Labour Board will settle the business. What Britain decided upon last July as regards wages in wartime after trying the game of running with the hare and hunting with the hounds has been accepted in finality.

There is another important point in the Administration's programme. The sanction of Congress is asked, and President Roosevelt has announced his intention of getting necessary legislation enacted, should the cost of living go up further. The machinery, like the method, will be democratic. Departmental officials will have nothing to do with it, and ad hoc agencies will be in the background. The President has obviously learnt by his mistakes of the past. The measures are to take effect from this week. What will be the effect on world prices? Quite beneficial, for it must be confessed that prices have risen so high that a drop would be welcomed. The fixation of ceiling prices for exports on a cost plus basis as from April 30th means that home costs will regulate prices, not the foreign customers' ability to pay. Ceilings have been fixed on the basis of 1940 premium. And it must be confessed that only a year after he took charge of price control and supplies, Mr. Henderson has convinced the Administration that the war against inflation must be waged with courage and resolution. Price control has however, been a plank of the President's policy since last summer when the defence programme was altered rapidly and lease-lend entailed bigger spending by the Federal Government. Essentially the situation underwent a change in December when the U.S.A. joined the war. Prices of commodities including grain and livestock rose rapidly in December. The advance in prices stimulated retail trade which had also the benefit of advance Xmas buying. Though Federal regulation limited the advance in prices in several cases the general retail price-level was 18 per cent. above that of December 1940. Additional measures to prevent advances in prices in whosesale prices were soon announced for wool and shellac and for such imported foods as cocoa, coffee, pepper and fats and oils.



The rise in prices was sustained by free spending on the part of the public. The volume of retail trade rose in November, though not so much as in December. Rail traffic was larger and the rise in industrial output to 168 per cent. of the 1935-39 average in the U.S.A. encouraged optimism. Actually a slight fall in shop sales was recorded towards the middle of December but as the F.R.B.'s summary report notes; in the first half of January sales at department stores showed less than the customary sharp reduction from the Christmas buying peak and were at a level substantially higher in comparison with a year ago than that prevailing in other recent months. But this had little material effect on commodity prices. Wholesale prices increased sharply when the U.S.A. entered the war and then showed little change during the latter half of December. In the first half of January, prices again advanced, the principal increases being in agricultural commodities and chemicals. Price control was extended to cover many products including consumers' goods. Certain of the measures like those relating to rubber and wool products were associated with new production restrictions. In this period, also, says the semi-official survey, there were advances in a number of price ceilings.

The situation in the first six weeks of war gives a clue to what has been happening since and indicates why sharp remedies are applied. In December expenditure of 2 billion dollars a month would have sufficed. The latest estimate is one of 3 billion dollars per month and 6 billion dollars by the end of 1942. The realisation that all this must come from borrowing because it is not possible to add overmuch to the tax revenue of 7.6 billion dollars per annum may condition attempts to stimulate savings. As was pointed out in a critical estimate of general prospects in the third year in a war economy, there is a problem of control, as there is one of distribution. There is a transfer problem, also in a war economy, and its elimination is obviously the first object of the seven-point programme. Reduced civilian spending is desired. The limitations of previous control measures indicated to the Federal Government that the war production and full outlay mean a curtailment of civilian production. A ban until February 2 was placed on the retail sale of passenger cars and trucks, pending the establishment of a rationing system. The production of cars was increased in January merely to use up semi-finished supplies, but meanwhile, the claims of war industries were examined, and limitation of supplies to non-essential consumers became the rule in January. The more extended rationing approved by the President, and heralded by petrol rationing, is different from the control orders applied to aluminium, lead, mercury, nickel, tin, wool, rubber and latex after the entry into the war. Non-defence industries were not permitted to develop output and the diversion of materials favoured industries helping in the war effort. That is why industries producing durable consumers goods e.g. automobiles reported a fall in output after war broke out, while shipbuilding, aircraft etc. boomed. With steel output in 1941 equal to 97½ per cent. of rated capacity there was no major production problem, but the cost of living index (source Bureau of Labour Statistics) rose by one point, in December to stand at 111 as against 101 in December, 1940. The level of wages was higher since the November index was 127 as against 116 in December, 1940. The story of higher prices and wages in January illustrates the ineffectiveness of holding up prices. Wholesale prices rose to a new height since 1929 and the percentile rise, from December 27 up to January 17, was 2 per cent. while farm prices alone showed an average rise of 5 per cent. Cotton was over 20 cents per lb. the highest price in twelve years. Price ceilings for textiles had to be revised in January and the Agricultural Department anxious for its production drive promised better prices for farmers, particularly, oil-bearing crops. No restrictions were placed on cane and sugar acreage and the ceilings for both raw and refined sugar were raised, but it was made known that allotments of sugar to wholesalers, jobbers and industries would be 80 per cent. of the February, 1941 quantity. So rationing appeared in a familiar form. In response to a desire for higher output the price of lead was raised from 5.85 cents per lb. to 6.5 cents in New York. The Metals Reserve Company offered higher prices for copper, lead and zinc, for production in excess of the 1941 tonnage. Higher freight costs accounted for the upward revision of prices for petroleum products. The price situation obtaining in January may be summed up by saying that as compared with August 26, 1939 U. S. commodity prices were 27.7 per cent. higher, the increase being greatest under raw materials. Clearly the seeds of trouble were present and even the promise of labour leaders to work against the Axis was not enough to curb the urge to spend manifest among wage-earners.

### Indian Banking Progress

Banking progress in the first quarter of the year certainly supports usual optimism. Despite uneasiness caused by the war the Indian banking system has stood up very well indeed to greater strain and to its additional responsibilities. The support given to the giltedged market by the fixation of minimum prices, under a special ordinance, has not been overlooked in the usual reviews. There has been no change in the number of scheduled banks. At the end of March there were seventeen exchange banks and forty-five other scheduled banks. But the number of banks scheduled in India alone amounted to 59. They had total balances of Rs. 323.89 crores, and the increase of Rs. 2,65 crores in total deposits in an anxious period points to the normal growth of savings in India under unpropitious circumstances. The increase, as may be expected took the form of larger deposits in current accounts. Demand liabilities are up by Rs. 12.25 crores, while the proportion of these to total deposits is up to 69.49 per cent. from 66.25 per cent. as at December 26. Time liabilities show a decrease of Rs. 9.6 crores and their percentage is lower at 30.51 per cent.

Any period of strain is immediately marked by a rise in cash. The total cash and balances with the Reserve Bank of the Scheduled Banks in India were up from Rs. 40.33 crores on December 26, 1941 to Rs. 49.74 crores as on March 27. The cash ratio has risen in the interval from 12.55 per cent. to 15.36 per cent. comparing favourably with the ratio of 15.83 per cent. a year ago. The most characteristic feature of wartime is the fall in Advances and the rise in Investments. Compared with the position a year ago the total of advances and bills discounted by the Scheduled Banks is Rs. 8.68 crores less and Rs. 9.6 crores less than three months previously. That is why the percentage of advances etc., to deposits is down to 35.71 per cent. while the excess of balances over the statutory minimum with the Reserve Bank is sharply higher.

The exclusion of Burma figures by special permission under an ordinance of February gives one a clearer notion of what is happening. The general presumption is that the position is very sound and safe, and Indian banks as a class have, despite the events in Burma, attained a position at which progress is assured are small. Customers have few war risks. Perhaps the experience of the Imperial Bank in that period may be called unique, but it can be cited to prove that the rise in deposits is almost concentrated in one bank, since deposits of all types in the case of the Imperial Bank have risen by about Rs. 11 crores in the first quarter of 1942. There has been no increase under investments and almost exceptionally, the Bank's cash credits and bills show increases on the previous quarter. The cash balances in this case exceed Rs. 24.8 crores having risen from Rs. 17.2 crores as at December 26 showing once again that the cash ratio rises more than proportionately when trade demand for funds is slack.

### Crops in Argentina

The Indian Central Jute Committee's April bulletin contains as usual a note on trade conditions in the Argentine. The outstanding fact is a fairly normal increase in the value of Argentina's foreign trade in 1941 accompanied by a serious fall in quantity, by as much as 34.2 per cent. under exports. This fact conditions Argentine policy. The Government has had to assist the Grain Board which was bent on acquiring the wheat crop at fixed prices at a price equal to 54¼ cents per U.S. bushel. The price is not at all high in comparison with Chicago prices. Price control has led to the assumption of Government control of the grain trade. There is now no grain trade. There is now no grain market in the Republic in the ordinary sense of the term. Wheat for instance, is bought from the farmer at what is supposed to be approximately the cost of production (at 6.75 pesos per quintal) Grain merchants and shopkeepers are allowed a small margin for handling the grain. Exporters must buy from the board and sell as best as they can to the buyers abroad. There is therefore only one authority to buy, sell and fix or vary prices for the principal grain and seed crops, the Official Grain Board. The crop news from the Argentine has a specific bearing on Indian jute prospects. It is now known that the maize crop of Argentina will be substantially lower than in 1940-41. An increase of 10 per cent. under rice is at the same time reported but the area returned is 33,600 hectares. The potato crop, if it promises to be smaller, is likely to be above the average. It is the same with tobacco. As regards wheat the estimate is for a crop of 6.2 million tons revealing an increase of 200,000 tons. In the case of linseed, however, there is a decrease. Harvesting was over by February. The six major crops account for the production amounting to 8,910,000 tons and it is only in the case of wheat that an increase is reported. Argentina is said to be doing very well with wool. Though stocks had risen by December the wool trade was active on the anticipation that domestic consumption would exceed 70,000 tons as compared with 30,000 to 35,000 tons in other years. Mr. Jackman's report adds that a substantial export trade has been developed in tops, yarns and cloths. The textile industry promises to strike deep root in Latin America.

### Recent Anomalies

A development of unusual interest is the current stability of the giltedged market. It is a development independent of the near-stringency noted in the money market this month. The stability has neutralised some of the peculiar features noticeable last month, features that deserved comment, but were not previously referred to in view of certain considerations. It is, however, necessary to make a brief reference to the anomalies noticed a month ago using for this purpose the quotations ruling around April 1. The fixation of minimum prices early in March by an ordinance, prohibiting dealings in Government securities below certain fixed rates, reflected the determination of the Indian to maintain a market in the obligations of Government. It was essentially an action devised to defend its credit and protect investors by an announcement on March 2. It was widely welcomed, though it was confessed that it could not by itself stimulate investment in giltedged. The fixation of minimum prices for Provincial Loans was an afterthought prompted by the demand that provincial loans too deserved the support of minimum prices. The working of the minimum price rule in the case of specified industrial shares in Calcutta and Bombay indicated that the principle could be applied but certain abnormal features would arise.

Many would have noted with peculiar attention that the only taxfree loan the 5 percent 1945-55 loan commanded greater attention than ever after the increase in taxation announced in the Budget. It would also have been noted that the yield on 3½ percent 1947-50 was much better than that offering on 3½ percent paper at Rs. 88-1. The running yield on 3½ percent Rupee Paper at that price was 3.98 per cent. Compare this with the yield of 1½ percent given by old Consols at 83¾ to realise the vast difference between the London and Indian markets.

The spread between Indian loans and Provincial loans is similar to that between British loans and Home Corporation stocks, and hence understandable. But the difference as between one Province and another right through appeared unusual because Section 93 is in operation in the Provinces and there can be no intrinsic difference, particularly, in wartime. In the matter of liability to taxation there is no difference. The most unusual feature

was the premium reflected in the quotations for State loans. How State loans could find support at a premium when Provincial loans with a sinking fund and arrangements for open market purchase were uniformly below par seems hard to explain. But it would have been noticed that 3½ percent Cochin Loan quoted over par even a month ago because it was of free of tax and the 5 percent 1943-53 loan found favour at Rs. 100-12 because of its early maturity and its exemption from tax. In the case of the Travancore 3½ percent loan, the exemption from incometax would favour local investors but not outside buyers. In the case of the Mysore loans the exemption from tax kept all the issues over par though if the market malaise, due to the war news, be considered in isolation, there was nothing to warrant the belief that Indian States as such enjoyed a creditworthiness higher than that of British India or individual Provinces. Yet there was the fact that when the majority of Indian trustee stocks were below par in Indian markets the 3 percent Mysore loan was quoting Rs. 101½ and the five percent 1955 loan stood at Rs. 119½.

### Bhopal Budget

Among the Indian States which have aspired to raise additional revenue to meet rising expenditure is Bhopal. The latest budget contains a provision of over Rs. 20 lakhs for defence and makes an allotment of Rs. 1 lakh for civil defence and Rs. 1 lakh for A.R.P. British Indian practice is responsible both for the balancing of revenue and expenditure and the new grants. Total revenue for 1942-43 is placed at Rs. 10,114,214. Expenditure on the Army is higher by Rs. 8 lakhs and expenditure on Administration and Social Services is up by Rs. 3.3 lakhs as compared with the previous year. The increase is almost covered by an extraordinary receipt of Rs. 8.13 lakhs anticipated by the Bhopal Durbar. In the last two years, Bhopal has spent more on its Army; yet it has obtained a surplus, available to meet the anticipated increase in expenditure. Expenditure in 1941-42 was Rs. 8 lakhs above the Budget Estimate, mainly on account of the rise in Defence charges. Revenue from customs, railways etc. kept rising and the State has paid back Rs. 10 lakhs out of the loan of Rs. 30 lakhs taken in 1937 for financing industrial development in the State. The Legislative Council, which considered the Budget last month, was asked to note that without any increase in taxation, additional expenditure was being met, and enhanced grants, equal to 21 per cent. of the State's total budget, were available for nation-building expenditure. The Bhopal State again expects to get larger income from the electric supply and the railway, investments, which, in the past, have been bringing larger receipts.

### Co-operation in Bengal

In the year ended June 30, 1941 it may be said that the co-operative movement in Bengal has more or less marked time. The reason is obvious. In the annual review of co-operative societies will be found evidence of reforming zeal and delay in adopting radical measures. The Co-operative Central Banks have to un-freeze assets, and the setting up of co-operative debt settlement boards is meant to help the recovery of dues and afford information as to free or realisable assets. The report states that a hundred settlement boards were at work and they are to be improved and extended. The primary societies also stand in need of drastic reform, and the report declares that proposals for reconstruction and improvement of societies have come to the forefront. The Provincial Bank obtained a larger advance from Government for making short-term loans in 1940-41 and did not recover its own advances in full. Easy borrowing presents dangers to lender as well as taker, and Bengal's co-operative banks have neglected the business of recovering old loans in repayment of new advances.

A number of co-operative loan societies came into being. The most important departure in the field of co-operation was a women's industrial society and 309 sugarcane growers societies. Co-operative marketing societies had a powerful appeal and there were 33 multi-purpose societies and 78 agricultural sale and supply societies with 87,000 members and working capital of over Rs. 11 lakhs. During the year ending June 30 these societies handled produce worth Rs. 6¼ lakhs against Rs. 4 lakhs in the preceding year. More members made use of the societies. To the co-operative rice mills at Gosaba, and Khepupara was added another rice mill at Manmathapur by the Parbatipur sale and supply society last year. Progress is readily measured by the increase in number and membership from 37,400 and Rs. 11.42 lakhs to 40,000 and Rs. 12.99 lakhs respectively. The working capital of societies of all types shows only a small increase of Rs. 12 lakhs at Rs. 21.4 crores. Of crops and prices the report says much, also of cyclonic damage in South-east Bengal. The report also mentions debts due by members totalling to over Rs. 391 lakhs against aggregate deposits totalling Rs. 4¼ crores. The figures are almost flattering in view of the admission that the movement is more or less stagnant.

### R. A. F. Answers Hitler

In the latest oration of Herr Hitler to a dutiful Reichstag, little is vouchsafed as regards the Nazi plan for victory. There are on any threats, but they are as vague

A SCRAP OF PAPER . . .

*At this time of national stress, it is essential that every effort is made to conserve the supplies of paper at our disposal. We urge all firms to see that the strictest economy is observed in the use of paper. So often one page could be made to do the work of two. Everywhere that must be done. We must save paper.*

Yesterday it might have carried an office memo. To-day it carries a military command. It sets a thousand guns roaring in defence of freedom, sends a fleet of bombers across the skies, moves legions in a gigantic sweep against the enemy.

We are supplying paper for such purposes. We are meeting the needs of Army, Navy and Air Force. We cannot always meet orders we receive for commercial use promptly. Until the war is over we must ask our clients to take into consideration the work of vital national importance, on which we are engaged.

as ever. It is clear that the R. A. F. offensive has affected the nerves even of Germany's master. In the tirade against Bolshevism, the Jews and Britain there is nothing new. But the request for plenary powers is universal. Herr Hitler has evidently concluded that a stricter regime is needed for a fuller war effort. In the tenth year of Nazi rule, he is content to dwell on old victories because he is not sure of new victories. Yet it would be a mistake to assume that the Fuehrer's military capacity has weakened or that his hold on Army and people is relaxed. The alliance with the formidable Reichswehr exists and the Junkers are latterly more prominent. In the very brief reference to Japan's successes in the Orient, some detect suspicion or jealously, but for others the emphasis on the encouragement drawn by Hitler seems ominous in the extreme. There is, however, one outstanding feature in the speech made on Sunday in Berlin. The Fuehrer is anxious to convince both the party and the inner group of yes-men that he can deal with the military problem despite the reverses in Russia. M. Stalin's confidence in victory demanded an answer and the Germans, facing unmeasured aerial attack from Flushing to Trondheim, have to be told that they must "take it" because more than ever national survival is based on endurance. The magnitude of Hitler's gamble has at last been made plain, and Dr. Otto Strasser's bitter comment on Hitler's fulmination proves that his early associates can see through the stunt of extended authority and unlimited powers. To the oration the R.A.F. bombers have given the necessary answer. The Occupied countries are also aware that if Vichy is more subservient than ever the Allies are not going to let Occupied France alone. From LeHavre to Rostock the bombers are busy and de Havilland, Short Bros., Hawker as also Vickers-Armstrong are the manufacturers whose machines have upheld the reputation of British pilots and gunners.

**Cotton Consumption**

In the light of the decline reported in the mill consumption of cotton in February, an analysis of raw cotton statistics for November may have no special interest. But it has some value in showing that the expansion in Indian textile output supported the increasing consumption of cotton recorded in the raw cotton statistics. Though coastal trade is left out of account the statistics may be taken as a pointer to the limited increase in the carry-over for 1942 as also to the problems raised by a slight increase in the 1941-42 cotton crop. There is more than one province like Assam in which the cotton trade is insignificant. The increase in Bengal's takings from the C.P., Bombay and Sind leading to an increase of 60 per cent. in the first quarter of the current cotton year can be directly related to the increase in mill output here. A somewhat different story is told by the statistics relating to the U. P. In spite of greatly enlarged takings from the C. P. in the three months ended November, 1941 the increase in cotton imports into the U. P. as compared with three months of 1940 is less than 10 per cent.; less cotton came from the Punjab and supplies of homegrown cotton were apparently smaller. The Punjab and C. P. being large sources of cotton naturally could reduce their own takings of rail and river-borne cotton, but the great expansion in imports into Bombay from Sind in the period covered by the analysis, proves that demand for long-staple cotton is still large and the immediate problem is one of reducing cultivation of short-staple. An increase of about 10 per cent. in Bombay's supplies in the first quarter of the 1941-42 cotton year furnishes a clue to the trend of prices in the months that followed the outbreak of war with Japan. The increase in Madras' takings of Bombay cotton was inconsiderable but it was larger than the increase in supplies of locally-grown cotton.

November witnessed a decline in imports and the first quarter accounted for a rise of less than 5 per cent. in imports in the Madras Presidency. Very interesting deductions might be drawn from it as suggesting that the prosperity of 1941 would not continue into the present year. Actually a hopeful view is taken only of Cawnpore mills' prospects. Elsewhere the labour situation and other factors are more than enough to repress hopes based merely on the fall in India's textile imports. Though Bengal gives its name to a distinct grade, the export trade to other provinces is negligible. The bulk of Bengal's cotton is consumed in this province, and successful expansion of cotton 1940-41 should not obscure the essential cultivation in the uplands is sure to be assisted by the mill industry of Bengal.

**Lost Markets**

Such changes as have come through the Pacific war cannot be fully known by reference to the February trade returns. But the fact that exports for eleven months ending February, 1942, are higher by Rs. 15 crores in value as compared with 1940-41 should not obscure the essential fact that half a dozen useful markets have been closed, and such as are open, are going in for stricter import control. The Indian Trade Journal in recent months has carried notices concerning restrictions in various Colonies. In spite of all that is said about prospects opened up by the war for Indian exports, it must be observed that limitation of non-essential purchases even from sterling countries, has become the principle in Australia as also in various Crown Colonies.

The decline in trade with Burma came before the extension of hostilities. The difficulties in maintaining trade are clearly illustrated by the abrupt fall in exports from Rs. 1.7 crores in February, 1941 to Rs. 17.72 lakhs in February this year. The disappearance of trade connections and the loss of several ports go far to explain the calamitous fall in Indo-Burma trade. The continuance of the 1941 trade treaty is obviously no advantage when Burma has no coastal port and no customs revenue to make preference a reality. Total

COSSIPUR - - CALCUTTA

imports for eleven months ended February from Burma were valued at Rs. 27.6 crores against Rs. 25.84 crores for the corresponding period of 1940-41. India's exports, in the same period, amounted to Rs. 14.17 crores but in the year following had dropped to Rs. 11.71 crores. The only conceivable reason is the war, though it must be added here that exports destined for China do not enter into the Burma totals and there should have been a considerable rise under these after July, 1941. It may be mentioned in passing that the increase is clearly reflected in the Hongkong trade figures. Exports to that colony exceeded Rs. 6.31 crores in value as against Rs. 2.76 crores in the eleven months ended February, 1941. The fall in total trade with Burma did not prejudice Indian manufacturers until recently, but it is becoming clear now that textile exports should be affected by the loss of a most promising market. It will be urged that Iran, Iraq and Arabia might offer compensation to manufacturers, but due regard must be had to the export restrictions in force at present as also the freight difficulties.

From a summary glance at the export table one might say that countries which usually took from India over Rs. 30 crores worth of goods in the eleven months of 1941-42 are lost on account of the war. That is to say the loss in 1942 will be as great as the loss in 1940. About a seventh of India's export trade is hit thereby. But one may dwell at the same time on the heady growth of exports to the U.S.A., to the U. K. also to a more moderate extent, and the expansion of trade with Canada, South Africa and Australia corresponding to the expansion of Indian imports from the Dominions in the war period. It may be added that the expansion of Empire trade is far more pronounced than the increase in exports to the U. K. The Dominions, to judge by the figures available, have displaced Germany and Japan, formerly prominent as India's customers. The most arresting feature, however, is the growth of Indian exports to Italian East Africa. The description covers Abyssinia and is clearly a result of successful operations in Africa last year. For the eleven months ended February, 1941 the exports were valued at Rs. 26.800. For the eleven months of 1941-42 the exports were valued at Rs. 53.20.637. The hope of increased commercial activity in Abyssinia under a new regime is certainly justified by the surprising increase. India's own exports from Italian East Africa were valued at Rs. 6.604 only but they should have increased thereafter since Eritrea is in Allied hands and has become a supply base for the Middle East.

**New Taxation**

The Indian Finance Act of 1942 is a short enactment giving effect to the budget proposals. It extends to the whole of British India. It retains the salt duty of Rs. 1-4 per maund on both manufactured and imported salt. It raises the excise duty on motor spirit to fifteen annas per gallon. The fourth section enhances the excise duty on kerosene to the same level as the import duty in force at present. The excise duty on silver is also enhanced to three annas and seven and onefifth pies. The increase is explained by the provisions of section 6 stating that a twenty per cent surcharge is to be levied on all customs duties. Exceptions are salt, motor spirit, raw cotton and machinery comprised in items 72 (1), (2), and (3) of the schedule to the Indian Tariff Act of 1934 also when the Customs Department is satisfied that they are the produce or manufacture of Burma there is no surcharge. Of the following articles, potatoes, onions, coffee, spices, betelnuts, cutch and gambier, sugar excluding confectionery, cigars and matches most are non-competitive with foreign imports. The surcharge provision is repeated in the case of inland postal rates and incometax and supertax rates in force for the year ending March 1943. Section 6 defines the procedure and subsections 5 and 6 define the procedure for defence savings certificates for the lowest assessed group. The amount deposited by the assessee is repayable not more than twelve months after the termination of the present hostilities. The E. P. T. Act of 1940 is renewed for a year. The rate of tax is maintained at 66 2/3 per cent of the amount by which the profits of a business during that chargeable accounting period exceed the standard profits. The section lays down rules as to funding of E. P. T. Actually, the assessee will pay one-fifth in addition to what he has got to pay before July 1st or thirty days in advance of the due date and get back one-tenth or half of the additional deposit afterwards. Relief under E. P.T. is given in relation to assessment in the U. K. It will not be necesssary to make any deposit to qualify for the one-tenth refund. The prior payment of excess profits tax will be used to the benefit of the assessee who is entitled to simple interest at 2 per cent and repayment within twelve months of the end of the war.

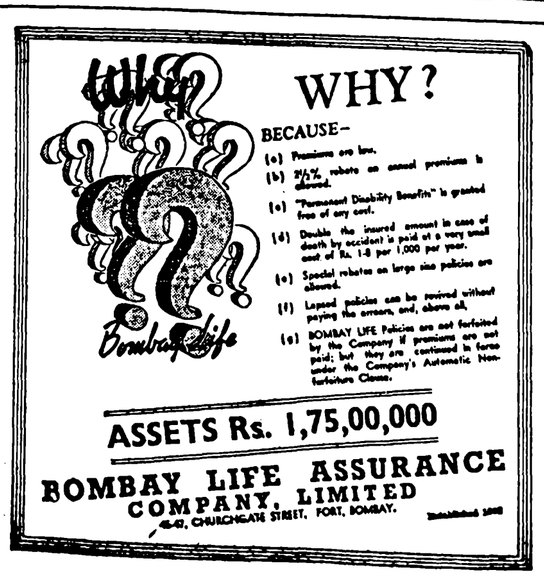
### U. S. Mission's Objects

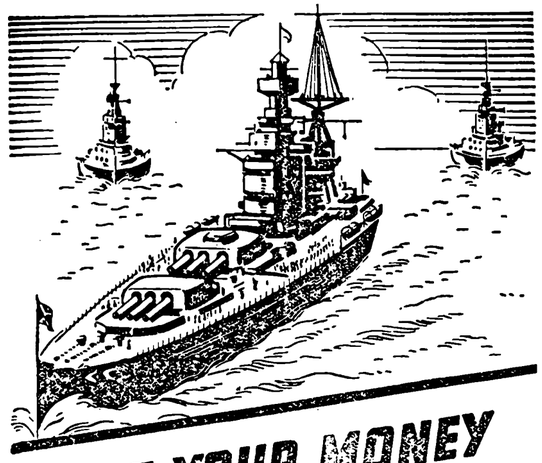
The objects of the U. S. technical mission have been outlined promptly enough by Dr. Grady after his arrival in Delhi. His talk to pressmen confirms Sir Shanmukham Chetty's affirmation that the U. S. wants India to produce more war supplies in the near future. The return of the head of the Indian purchasing mission promises much more than liaison with the appropriate departments in Delhi. The report that leading Indian businessmen have been invited to meet the mission composed of an efficiency engineer, a manpower expert, and an automobile authority among others, has certainly inspired satisfaction. Dr. Grady's remarks on U. S. businessmen's disinclination to invest in distant lands deserve special attention. He stated that American capital is enterprising, but does not think in terms of spreading itself abroad and getting control of other parts of the world. The remark supports the belief that U. S. imperialism is less mature and more conscientious than we imagine. Losses in Japan and Germany were mentioned by Dr. Grady to show that Americans are not likely to care for new investments in far places. The U. S. interest in industrial development is based both on the needs of India and her own need to save shipping. Shipping is neither safe nor easy now, and Dr. Grady added "we must find out what other means may exist of augmenting India's equipment and industrial personnel for the war effort." The interview goes far to suggest that the U. S. mission is more disinterested than originally presumed by Indian circles which were not tired of pointing to the secrecy, and hence the futility, surrounding the Roger Mission. Dr. Grady linked Russia and China with India. Their materials and manpower are by no means fully exploited and development, in and for the war, will help them to resist any industrial invasion, if attempted. Many apprehensions are sure to be removed by the conference promoted by Sir H. P. Mody who has asked the U. S. technical mission to meet Indian industrialists.



### Lower Customs Revenue

The State railway earnings for the year 1941-42 were above anticipations, exceeding the previous year's receipts by over Rs. 15 crores. The position is different as regards customs revenue for the year, since the actuals show only a small margin in hand. The total receipts under customs and Central excises for the year amounted to Rs. 39.95 crores against Rs. 41.37 crores in the previous year. Last year it was expected that only Rs. 39.11 crores could be had. So there is something in favour of habitually underestimating revenue. It must be remembered that the March total of Rs. 264 lakhs is only Rs. 4 lakhs above the Rs. 260 lakhs reported for February. Out of this as much as Rs. 1 crore came from Excises. It may be noted in passing that the increase can only be due to the higher rates in force from the day of the Central Budget. It may not be pointless to dwell on the fact that the Central excises have, in the year ended March 31st, given as much as Rs. 12.83 crores against an estimate of Rs. 12.10 crores. Industry rather than foreign trade has proved reliable, but due regard must be had to the fact that India broke off commercial relations with Japan on July 25th and has since experienced a notable fall in imports generally. The fall in patrol consumption has not done much damage to revenue but the story will be different this year as rationing gets tighter month by month. The decline in land customs is too familiar to be missed. The total customs revenue for March 1942 is nearly a crore below that for March 1941. The war has certainly done much harm to imports though it is the fashion to speak only of the loss of markets for exports and make light of the hardships of the ordinary consumer to whom most imports are a necessity.

A clue to the changes in foreign trade is found in the statement that import duties on cotton, electric bulbs, wireless apparatus, silver bullion, coin etc., cine-



motograph films and kerosene record an increase in yield during the year ended March 31 while duties on motor sprit, motor cars and cycles etc. iron and steel railway plant and stock rayon yarn, tyres and tubes, paper and stationery showed a fall in yield as compared with the previous year. The incompatibility of revenue and import control has been proved over again.

The export duties on jute and rice yielded more but that on jute manufactures yielded less than in the preceding year. The fall in the excise on motor and kerosene was balanced by the rise shown under the old excises on sugar and matches. What is obvious at present is that protected industries pay in the form of indirect taxation a fairly high price for tariff advantages which are, for the present, illusory. That is a point in which a great deal might be written. What is even clearer is that the Indian consumer having paid for protection cannot hope for relief because the excises have been clapped on protected industries. The 20 percent surcharge levied on import duties this year has not been followed by a 20 percent surcharge on the excise though this might very well have been done just to encourage the public to pay a little more for the war.

### War Uses For Silver

The U. S. A. alone reported an increase in silver production last year as compared with 1940. The U.S. output of 70 million ounces was exceeded only by 79 million ounces from Mexico. In recording the changes in the Western hemisphere's production and holdings of silver, Messrs. Handy and Harman record the fact that total output fell from 213.2 million ounces to 203.5 million. The U.S. Government's slackened its silver buying programme but took 69.7 million ounces of domestic-mined silver. Foreign silver to the extent of 70.2 million ounces was bought by the Treasury in 1941. The figures suggest the net addition to stocks in the U. S. A. out of 1941 output must largely explain why silver does not go up while sugar, cocoa and every other thing is rising. The Western hemisphere must have taken 60 million ounces out of 1941 output. The East is not a buyer, and the question now is what is being done with the surplus. The answer in part is furnished by Handy and Harman's review which states the substitution of silver for other metals has occurred both in industry and the arts, the purpose being to conserve scarce war materials, such as copper, nickel, alumnium and tin. For example, silver alloys containing only a small percentage of scarce metals are being used in place of brass and nickel alloys. Pure silver wire is replacing copper wire in certain electric appliances and small motors. As a plating material silver is producing corrosive resistant surfaces upon substitute metals that are satisfactory in other respects but lacking in this quality. Because of its peculiar properties silver may be used, in combination with lead, to sustitute for tin-lead solders thus saving large amounts of tin. These new uses are expected to absorb large quantities of silver, as long as there is shortage of tin and other metal. War demands million of ounces of silver. The metal is wanted for the construction of ships, planes, tanks, guns, shells, bombs, torpedoes and a wide range of miscellaneous equipment. The most extensive use is in the form of brazing alloys but other compositions are employed in the manufacture of electrical contacts and pure silver is used for making aeroplane beamings, photographic film, surgical equipment and pharmaceutical products. They are not wanted for war alone, but the items are now being diverted in large quantities to the Army and Navy. The Treasury find unexpected uses for its own silver stocks bought regularly since 1934 mainly to subsidise home producers.

On earlier occasions, I have referred to the measures taken by some of the business houses for the partial transfer of offices, records and personnel to some up-country centre or other. These measures are in the nature of precaution against the contingency of the worst happening to Calcutta. I have had a like problem to solve in my own office and in some of the companies with which I am connected. Readers of this column are already aware of my strong conviction that the civil population of Calcutta have really no need to be apprehensive of air raids. Consistent with this deep-rooted belief, all that I have done in the case of the office which I am connected with, is to arrange for the duplication of the more important records. This is a comparatively simple matter. I know, however, that many offices have transferred part of their activities to outside of Calcutta. I wish to ask them one simple question : "You are taking all these precautions about your own office—what precautions are you taking with regard to the Provident Fund of your Indian staff?" I know, from personal experience, that the attitude of the bosses towards applications for loans against Provident Fund is most unsympathetic. This is a matter with regard to which Clive Street Burra Sahebs should think of the relevant issues without any pre-formed bias.

In the first place, the Provident Fund money belongs to the members of the Fund. It is true that the Company has made its contribution. But this contribution cannot be taken back except for very grave reasons. In normal circumstances, the contribution of the staff plus the contribution of the firm belong, in their entirety, to the contributors. Secondly, the investments of the Provident Fund are kept in a separate account. The firm, therefore, incurs no financial strain when it is asked to make disbursements from the Provident Fund. Thirdly, a member of the staff is entitled to a loan under certain conditions as regards the amount, etc. If he leaves the service, however, he becomes entitled to the whole amount to his credit in the Provident Fund. Fourthly, these are times of exceptional difficulty and uncertainty. The experience of people returning from Burma is heart-rending with respect to their claims on the Provident Fund. The bosses in Rangoon turned a deaf ear when the assistants asked to be paid from their Provident Fund. Things were kept over to the last minute. Then, only a very short notice was given. They had to pack up whatever they could lay their hands on. By that time, the securities in the Provident Fund could not be sold. The whole lot of them have lost the whole dues from the Provident Fund.

I have come across many cases in which the staff belonging to an important company, on return to India, have applied for their Provident Fund monies and have been told that they will know about it in due course. Many of these men have been given one or two or three months' salary in lieu of notice. That is to say, these men are no longer in the company's employment. Automatically they become entitled to be paid whatever is due to them from the Provident Fund. I cannot understand under what rights this company is with-holding the payment of provident fund dues. These poor applicants are being told that instructions are being awaited from the directors. The directors have nothing to do with the provident fund. As I have said, the Fund is the property not of the Company but of the staff.

I am mentioning this instance in some detail because I wish that Indian employees in Calcutta are spared a like disaster. The only fair course is to disburse the provident fund accruals among the members. If this is not done, many of the staff will be forced to resign, as being the only course by which they can get the provident fund amounts. This is an alternative which should be the aim of businessmen to avoid.

As a matter of fact, the time has arrived for Calcutta businessmen to study clearly and carefully the lessons to be drawn from the experience of Rangoon. Companies and firms lost their all, securities, properties and sometimes even cash. The wholesome principle to follow is that whatever is due by a company to its staff or its shareholders be disbursed as expeditiously as possible. I would like to draw the

attention of readers to the policy pursued by the Publicity Society of India. In the normal course, it pays a dividend once a year. Owing to the extraordinary circumstances facing Calcutta, the directors decided to issue an interim dividend as well as an interim bonus to the staff. It may well be that another interim distribution may take place if the earnings warrant it. These are not conditions in which we should unduly emphasise long-term policies. Till we feel certain that American reinforcements reach India in sufficient strength, let us make disbursements to all those to whom amounts are lawfully due as speedily as they become due.

* * * * *

The news that Mr. C. Rajagopalachariar, affectionately known as Rajaji, has resigned from the Congress Working Committee, cannot be said to occasion any surprise; for, the resentment caused by his endorsement of the Pakistan project was too widespread and too strong to allow of his continuance on the Congress Executive.

This announcement has, it is true, caused no surprise; all the same, it is a shock.

A shock to the Congress itself. For, even his severest critic will admit that, for nearly a quarter century, he has been one of the leaders of acknowledged authority, integrity, clear-eyedness, clear-headedness and intense devotion to Congress ideals.

A shock to Rajaji himself. For, he has worked, so intimately and so intensively, with his colleagues and participated in every important deliberation and event to such effect, that it should be a cruel wrench for him to part with friends to whom he had been bound by ties of love and common purpose.

A shock to Congress High Command. For, his advice and his suggestions, his lucid exposition and expert drafting have been of immense help to the Working Committee members on any and every occasion. His exit creates a void which it is difficult to fill.

A shock to those who know him. Rajaji has much in common with Gandhiji. Both are enthusiasts about the Ashram discipline for the Congress leaders. Both are exceptionally austere in their personal lives. Both had given up successful worldly careers for the cares and rigours of public life. Both are mentally attuned. That is to say, they were mentally attuned till recently.

* * * *

When the late Mr. C. R. Das and Pandit Motilal Nehru unfurled the flag of rebellion against council entry and organised the Swarajist party with the avowed aim of capturing the legislatures and carrying the national fight into the legislatures, Rajaji stood out as an uncompromising no-changer. Mr. C. R. Das, of course, because of the sporting attitude of the Mahatma, was able in time to capture a big majority in the Congress for the pro-changers. The no-changers were left with only a few followers. This paucity of numbers did not daunt Rajaji. He maintained his faith as a no-changer and, to make up for numbers, propagandised his faith with increasing fervency.

In the end, Pandit Motilal Nehru made a grand admission that his programme of council entry had not met with the success in results which he had hoped for; and the Swarajists, as a party out to capture councils, ceased to exist.

This proved to be stagnation, not death, for the protoganists of council entry. Capture of the legislatures was revived a few years ago; and Rajaji, on this occasion, abandoned his old stand as a no-changer.

He himself stood for the provincial assembly while sending Mr. Satyamurthi, the originator of the idea, to the Central Assembly.

This phase of council entry but no office acceptance was the first stage. Such was the position when provincial autonomy was set in motion. Rajaji was invited by the Governor of Madras and asked if he would undertake the formation of the ministry. No—said the leader of the Congress party which commanded over 80 per cent of the votes in the Madras Assembly. Interim ministries were set up and functioned for a few months; but it was obvious they could not face the legislature.

It would have been easy for Rajaji to imitate the tactics of Mr. C. R. Das and throw out the ministry.

* * * *

That a better way than such tactics was open to the Congress legislators, was the question which Lord Erskine started discussing, earnestly, frankly and sincerely, with Mr. Rajagopalachari. The latter made certain stipulations which, if agreed to by the Government, could enable the Congress to take office.

In the result, Lord Erskine took on himself the task of converting the Government of India; and Rajaji the task of converting the Congress High Command.

These conversions were carried out successfully; and Congress was installed in office in seven provinces. In Madras, Rajaji naturally became the Premier.

* * * *

His regime as a premier was remarkable for the bold reforms he introduced in fulfilment of past Congress pledges as well as for the maintenance of most cordial relations with the Governor, the British officials and the British non-officials.

It was a kind of rope-dancing which demanded extreme nimbleness and adroitness; and Rajaji was both nimble and adroit.

Madras was soon the premier province with Rajaji as the Premier. Particularly in the financial sphere, with regard to which Churchill and Company had, during the India Bill debate in the House of Commons, expressed the gloomiest forebodings to the effect that India's credit would sink to zero, Rajaji's stewardship proved a marvellous success.

Madras Provincial treasury bills were more keenly bid for than those of any other province. Madras provincial loans were placed on the market on almost the same terms as those of the Central Government. Budget making was on orthodox lines though budget reform was revolutionary in many respects. Measures taken to ensure and enhance the credit of the Madras Government were scientifically planned and skilfully executed.

* * * *

All this good and useful work, which was appreciated alike by the British interests and by the Indian public, was brought to a sudden end by the decision taken by the Congress Working Committee after the war began. Congress felt that, as the legislature was not consulted before India declared war, Congress ministries must resign.

Then has followed an impasse which has aroused more and more controversy and, in the process, became more and more insoluble.

Rajaji, however, did attempt a solution. This was the famous Poona resolution. Rajaji had a real job in silencing Gandhiji and restraining Pandit Jawarharlal. He succeeded for the moment—and spent the next three months awaiting the corresponding response from the Government.

The response did not come. And the Poona offer was withdrawn. And withdrawn in a way which made out to the world that a proper snub was being administered to Rajaji.

Mr. Rajagopalachari was not deterred by the snub and persisted in his views that, with war clouds looming on the Indian horizon, the Congress must take up office somehow, anyhow. He thought, however, that the moment for airing his views was not propitious; and he bided his time.

The propitious time came with Sir Stafford Cripps' arrival in India. By all tokens, Rajaji must have been one of the strongest forces in the Congress counsels in favour of finding a solution at any cost on the basis of Cripps' proposals. In fact, as we all know now, a solution had almost been reached; and a premature cable was sent by American correspondents that a solution had been arrived at.

The last-minute break-down has, we must gather, upset Rajaji as much as it has upset Sir Stafford. For, within a few days, he threw a bomb-shell on an unsuspecting world that, even to the extent of agreeing to Pakistan, he and a few of his followers in the Madras Legislative Assembly were in favour of resuming office.

This is, by all canons, an extremely rash step for Rajaji to take. For, no one knows better than he that rashness is entirely different from boldness. People admired Rajaji's boldness but are not prepared to tolerate his rashness. Ins-

tinctively punctilious, Rajaji has himself realised the error of his step and made honourable amends for it though he is still convinced of the rightness of his views and proposes to press them with all his energy and zest.

* * * *

The letter he has addressed to the Congress President announcing his resignation from the Working Committee must reassure the public of Rajaji's bonafides and sincerity. Rajaji says:—

"With reference to your observations on the resolutions passed on my motion by the Madras Congress Legislative Party, I admit that I should have talked the matter over with you and other colleagues of the Working Committee before moving the resolutions, knowing as I did their disagreement on the subject. I write this to express my regret.

I have explained to you already how strongly I feel. I believe that I should be failing in my duty if I do not endeavour to get people to think and act in the direction which my conviction leads to. I desire, therefore, to request you to permit me to resign my place in the Working Committee.

Let me tender my grateful thanks for the unqualified trust and affection bestowed on me by you and my other colleagues during all these many years that I have served in the Committee."

It is not my purpose—nor have I the qualification or authority to adjudge on the merits of Rajaji's views. But, in fairness to a nationalist of his service and status, it is meet and proper that we recall the episode of Mr. C. R. Das starting the Swarajist programme for council entry and remember how, in the beginning, Mr. Das was criticised equally vehemently.

I know Rajaji and his former colleagues have agreed to differ. Let the public, too, realise that, while they may criticise in the strongest terms, they must do so in language that does not smack of inappreciation for great and valiant services rendered over a long period.

* * * *

The meetings of the week include one of the Indian Paper Makers' association. I am disclosing no secret when I say that paper is vital in the war, and not only for propaganda. That is why Mr. Mellor's account of production difficulties will evoke sympathy. Few will miss the significance of his plea to use less paper. I fear that journalists as a class are careless about paper, but when I read his story of control of various things at various stages I could not help thinking that now is the time for me to save on paper, by writing less or say as much as possible by copying Mr. Mellor's own admirable brevity. An example of reasonable co-operation is provided by the acceptance and loyal implementation of the scheme of controlled prices. Everybody knows where he stands—in the ports or upcountry, profiteering is out of the question. There are loud whispers about a black market in imported newsprint but thank God, none about Indian-made pulp or paper. The reason is that an efficient organisation to back its resolution is there, to do the control intelligently and I can't help regretting at this time the reported defection of some mills. Trade organisation is needed for each industry, and the paper mills in India are not so numerous that one could even appreciate the existence of a new rival to take in those who break away. Government has gained much and the public as well in the war period. When German or Norwegian is not to be had then the only thing to fall back upon is Indian paper. How good it is and how steady the supply is, and on what terms this journal gets it and why, has been explained not long ago. This paper has not been afraid to own itself deeply indebted to the sturdiest giant of a strong family—the Indian paper industry. It has risen to its opportunities; it has discharged its duties, and its resolution to carry on despite difficulties will be loudly applauded to-day when the temptation to look for safety first is so common as not to attract reproach.

(*Continued from page 677*)

persons resident in Occupied Burma has to be considered and many firms may have to be listed as concerns domiciled in enemy territory.

The savings drive in Britain will gather momentum from May 1st as savings bonds can be bought for sums as low as £10. A cable from the National Savings Committee to the British War Savings movement in India announces that the issue of 3 per cent 1955/65 savings bonds is closed and replaced by another issue of 3 per cent 1960/70 bonds. The purchase terms are a minimum of £50 for the Bank of England issue and £10 for the P. O. issue. Additions can be made in multiples of £5 but for purchase through the Bank of England the lower limit is £50. In the case of purchase through the P. O. the maximum is £1,000. Repayment at par on Sep. 1st 1970 is guaranteed but Government reserve the right to give three months' notice and pay off any time after Sep. 1, 1960. The income-tax in the case of the bonds bought through the P. O. is not deducted at source and exemption is made, subject to usual formalities, in the case of persons not ordinarily resident in the U. K.

For those who want to add to their holding of National Defence certificates and savings certificates the new bonds are recommended. The current issue of national war bonds 1949-51 is also open and the minimum for subscription is lowered to £10 for those who take them through the P. O. A further point may be added as to the 1955-65 bonds. Since tap sales are at an end, the bonds will be quoted on the Stock Exchange.

(*From Our Correspondent*)

*Bombay, April 29.*

THE U. S. mission has passed on to Calcutta from Delhi but Bombay industrialists had a chance of meeting the mission. They had an opportunity of consultation, at Delhi and important interests have accepted the view that the mission has no ulterior motive. How India is to pull her weight in war production is too big a problem for any one to solve. When the mission comes to Bombay and sees what can be done to change over to wartime production the production programme can start. Bombay circles naturally attach great importance to Mr. Walchand's last trip to Delhi. He was the first to think of getting direct assistance from the U.S.A. for his new projects and his compliance with the Supply Member's request to meet the U. S. mission is taken as a happy augury of full-fledged co-operation. The fact that Sir F. W. Tymms will soon join Tata Sons, Ltd., for special reasons is taken to mean that the second aircraft venture is no longer kept out from public view. A month ago details were given as to the project and the promoters were mentioned by name to indicate that in spite of the usual arguments against difficult projects there were going to be something.

The silver market here is unimpressed by broadcasts. Though a recent rally was put down to Sir Roger Lumley's talk it is now said that cut coins are being melted and offered for sale. There is a new factor in the suspension of booking of silver consignments by the B.B. & C.I. No threat of sales by the Reserve Bank can push silver down when war news is such as to drive operators to buy silver. The daily offtake is not large but there is the fact that gold has risen sharply in the wake of silver towards the end of the week.

A Bombay Government notification announced last week that the E.I.C.A.'s bye-laws have been amended. The amended bye-law prohibits trading in new crops in any year between March 31 and May 1 as may be fixed in this behalf by the Board provided such a date is later than May 1 and has been fixed with the previous approval of the Government. The notification is just formal because everybody here knows that cotton futures go out on Friday. In a broadcast last week Mr. R. A. Podar described the changes to come. Hedge contracts will not be the same and consumption might conceivably be affected along with production. Without futures Bombay will be a market void of significance, but much safer, from the grower's point of view. There will be no longer the old hedge contracts, no tender, no margins. The trade will be simplified when Broach A.M. drops out. There will, however, be a new system devised by the E.I.C.A. and its main feature will be that cotton below ¾ inch staple cannot be tendered. This seems a bigger blow than any to short staple after the ban on Bengal and some contracts for the next year. The Indian cotton crop is to change in volume and varieties. The restrainst of outside speculation appears an ancillary aim at this stage. But there is sure to be an ebb of investment in cotton. Nobody here will think of cotton contracts in the same as silver for delivery. The new hedge contracts will be in the nature of devices for smoothing out price changes. Delivery will be ruled out and the payment of differences will be uncalled for. The cotton contract based on ¾ inch staple will officially seal the doom of short staple types. It is now realised that only long staple has an assured market and the premium usually paid over Broach proves that the better types are in demand. If cotton up to ⅞ inch staple is made tenderable the buyer will gain. To that extent prices may even recover and impetus will be given to the restriction of cultivation in the case of short staple cotton. The country will gain through a diversion of the acreage to food crops. A new contract will contain an unusual clause. Cotton can be delivered up-country if need be. The transport difficulty will not affect the spot position and cause swings in prices. Some people think it is all to the good now that many operators have left the city. There is a belief that long staple cotton will get more popular and imports of raw cotton will decline in consequence. It is quite optimistic but one must wait for some months before one can be positive. The Indian cotton market is no longer sustained by export demand. The foreigners liked hedge contracts for various reasons. Now local mills are the main buyers and they are concerned only with ready cotton. The trade and its methods are to be adopted and some hope that middlemen will have pickings even under a new dispensation.

The eleven point programme of Dr. Rajendra Prasad has excited locally more attention than even the Food Planning conference. Intelligible and direct the plan puts certain facts and gibs specific advice. The essential warning against foodhoarding is given. Bombay rightly welcomes any move meant to add to food supply. Economy must be the watchword and altruism a working principle. The widely-circulated leaflets are meant for the whole of India. In the caution against rumour and panic is found the sum of human experience but growing cotton and spinning for all seems too ambitious.

Local industries should increase in number since the Government offers financial assistance to educated men who want to start industries as they fail to secure jobs. The scheme has found much support and the Director of Industries will pick the applicants and make grants for construction. The grant is limited to Rs. 2,000 in each case and Working Capital must come out of it. Fifty per cent of the grant will be taken as a subsidy and the rest will be treated as a loan free of interest and repayable in instalments. This is the first plan to put the educated workless to use. Cottage industries should develop further and the sale of tools and appliances should increase.

The food drive does not seem to end. There was a special radio appeal to Gujerat's ryots last week. There was a reference to the failure of imports, the danger of enemy action and the lack of demand for cotton. Sir P. Thakurdas said there was no money in deshi cotton and millet would pay better and help both men and animals. Change over quickly was the text of the address which dwelt on the fact that cotton prices would be modified by the absence of dealings in all futures.

The local sale room of the Ceylon Trade Commissioner has given up selling copra. The Ministry of Supply is going to buy up the island's copra and oil was the decision announced this week at fixed prices, £19½ per ton for copra as notified. The monopoly purchase scheme means the end of Ceylon's competition in India. It is sure to help Indian coconut growers and millers too though Indian soap-makers may complain that they will find their margin of profit reduced. As alternative vegetable oils are cheap and abundant naturally the problem will not be acute but edible oils as such will be in greater demand and the Bombay market, should register the effects quite soon.

There is for the moment greater interest in the abatement of panic though rumours still come and go. Some of the factories are getting back their workers and this is considered eminently satisfactory. The returned natives find Bombay quite calm and untroubled by notifications concerning the requisitioning of all property except such property as is used for the purpose of religious worship. Assurances concerning India's preparedness are of little moment against the departure of servants.

Company meetings are not overlooked by investors. Mill shares are on the mend after Sir S. D. Saklatwalla told shareholders of the Svadeshi mills on Friday last that the political horizon was clearing. He was sure that India's war effort would gain in strength and purpose. With 18 per cent. for the year on the 100 rupees shares the ordinary shareholders have done well. The 12 per cent. free of tax paid by Gokak Mills proves that a spinning concern gets its full share of war prosperity. Mr. R. W. Bullock told the 23rd annual general meeting that net profit for the year came to Rs. 12,68,072. Depreciation claimed Rs. 1,36,000 and staff bonus absorbed Rs. 20,000. The carry forward is as large as Rs. 6,43,508. The conditions were renewed, and Mr. Bullock declared that the only way to meet them was by a policy of 'give and take' as between employer and worker, mill-owner and cotton-grower.

# Tit Bits of Industrial Activity

India's reserves of cooking coal are estimated as a little over 13,000 million and conservation is advocated by nine managers among others. Lecturing recently at Dhanbad, Mr. K. K. *Bakshi* deplored the use of hard coke for steam-raising, and pointed out that by-products from coal were not produced in quantity. In view of the shortage of oil the adoption of low temperature carbonisation was recommended. This is not the first time that distillation of oil from coal has been favoured. Fuel research, with a view to the use of pulverised coal for steam-raising, has also been recommended by experts who are anxious that the use in India of inferior grades of coal should extend and a good coking types be reserved for iron and steel producers.

The B.E.S.T. is among the concerns engaged on war work. At the annual meeting last month the Chairman said that vehicles for military purposes had been undertaken by the company which had a special experience of making vehicle bodies. Shell casings, gauges and various fittings were also made to order. A.R.P. equipment has also been produced by the Company. Drivers and technical recruits for the Army have been tested at the instance of the Army authorities. More recently, the B.E.S.T. has been making various special types of vehicles as the company can claim more than ordinary skill in turning out special-purpose vehicles wanted for the war, though the number is limited.

To South Australia belongs the credit of starting a new cotton mill. The mill at Woodville should be under erection and will carry out all work from treating raw cotton to producing piecegoods. In the field of secondary industry the most striking departure is the cellulose paper mill which was expected to start work in February. A publication describing the war effort of Australia carried advertisements suggesting that Australia's board and paper mills besides producing newsprint for the first time had created an export industry. The addition to the secondary industry has taken place despite the pronounced easiness of the stock exchanges in Australia.

• • • • • •

**Oil for Leather**

Tanning is a process that calls for the use of oil in addition to tanning materials like babool bask and myrobalans. As the Burma-Shell news-letter points out, during the process of tanning it is found easy a mixture of lubricating oil Boc 373 to use and Cod oil which neutralises the excess tannic acid left in the leather which unless it was thus neutralised would work its way up to the surface causing the leather to turn black in patches. Also a mixture of lubricating oil Boc 180 and Turkey Red Oil is often used to soften the leather. Rude methods find a place for the mixture of curd or water with linseed oi. In the staining and polishing of leather paraffin wax and turpentine figure as essential ingredients.

• • • • •

**Kerosene Aids Banglemakers**

Dr. Nadel's account of the U. P. glass industry has naturally attracted much attention. In early times Indan glass makers used reh-alkaline earth-but nowadays the use of sand, borax, soda, wax, line, saltpetre etc. is common. Bangle factories in Ferozabad, says a note in the Burma-Shell newsletter, produce their own glass in large furnaces. This glass is first spun out in neat spirals then the spirals are cut into open rings after courting. These rings are joined by hand over the open flame of a small kerosene lamp. Thus kerosene lamps play a part in bangle-making, whether it is done in factories or cottage shops. The joining operation required for factory-made bangles has brought into being an anullary trade run on contracts. There are at least 500 joining shops in Ferozabad apart from others in the neighbourhood.

• • • •

**New Plastics**

Shellac in injection moulding is getting more important as a process distinct from hot as well as cold moulding. In the injection process the moulding powder is heated to the desired temperature in a hot barrel and then squirted or injected through a nozzle by a suitable locking device. The injection process is being adopted for thermoplastic resins but within the past few years it has been applied to thermosetting resins. Dr. Sen and Mr. Sankarkharayanam declare that a number of moulded articles can be made only by the injection press. Manufacture in different complex forms is possible, particularly, when brass or metal inserts are to be introduced. The machinery used carries the mould as also the nozzle. The materials that are most commonly used are those produced from cellulose acetate and styrol resins and recently benzyl cellulose. These are marketed under various trade names. Shellac is a more recent and more adaptable material. The development of a moulding powder has not helped to bring in injection moulding here particularly as suitable fillers are available. Bottle caps, switch bases, knots etc. are among the things that can be made by using shellac powder for injection moulding.

• • • •

**Fresh Achievements**

February saw new achievements in the field of war production. Anti-tank mines and anti-aircraft shell forgings, high explosive shell and cartridges were in larger production in India's ordnance factories. Altogether over 50 main items of munitions were made. The manufacture of ammonia was reported from an ordnance factory thus promising advantages in regard to nitric acid and ammonium nitrate. In co-operation with civilian firms the manufacture of several types of air bomb is projected. Planning is over, and all material ordered. Components will come from the trade, and forging and assembly will be carried out by the ordnance factories. Another departure in production proposed related to aero tyres and tubes. Government will bear the cost of equipment including buildings, and the firm concerned will bear the cost of buildings and service in connection with the scheme.

FORT, BOMBAY

This is nearly Rs. 44 crores. That is to say, active note circulation is going up at the rate of Rs. 30 crores a month. This is far from a healthy position. It is time that a careful study is made of the relevant factors with a view to devise measures necessary to control this heady expansion.

The exchange market has been steady with hardly any business.

The closing rates are: Banks sell T. T. London Ready to six months forward at 1s. 5 31|32d., and banks buy T. T. London Ready to six months forward at 1s. 6 1|32d.

Banks buy 3 months D.A. bills for first and second month at 1s. 6 9|32d., and for the third and fourth month at 1s. 6 5|16d.

Firm's money for call and term is ¾ per cent.

Banks sell T. T. New York Ready Rs. 332¼ to Rs. 332¾ for $100.

Banks buy T. T. New York ready Rs. 329½ for $100.

(Continued from page 675)

from the British Government may be consumed in the week's outgo. The deposits of provincial governments have risen by Rs. 59.60 lakhs to Rs. 7.67 lakhs, while those of member banks have risen by Rs. 8.98 crores to Rs. 43.81 crores.

The continued rise in treasury bill discount rate seems to us to be a measure of the lack of control over member banks on the part of the Reserve Bank. The unchecked rise in note circulation may be construed as an indication that, if the link between the Reserve Bank and member banks is loose, that between banks in general and the public is still looser. Additional currency seems to be going down a bottomless pit; and, as things look, this process seems to be without an end. Between March 6 and April 24, that is, in about six weeks, active note circulation in India has risen from Rs. 364.57 crores to Rs. 408.25 crores.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, May 1.

VERY dull conditions prevail in these markets, buying interest being negligible. The two measures which we predicted in our last report, viz., the arrangement with the Railways to supply a limited number of wagons to keep stocks of jute and hessian goods moving for delivery to the U.K., U.S.A. and the other to extend April due date goods to May to relieve the financial strain from shippers, have both come into being and have brought a measure of relief in their train. The Jute mill industry without this outlet for their goods would have had to devise some method of reducing their production which would have had serious repercussions on an already delicate labour situation. Shippers too, have had many serious handicaps to overcome in the conduct of their business and financial arrangements. Buying interest having faded out in the Bazaar except for immediate local necessities, mills have been treating direct with shippers for sometime past, so that it is essential in their own interests that shippers should be encouraged and assisted to keep in the field. Whether these considerations will weigh with them when better times come is problematical.

One of the chief difficulties with which the trade is now concerned is the preponderance of hessian goods which mills are being forced to turn out in comparison with sacking. Government orders are confined almost entirely to hessian specifications and unless Government are prepared to consider some alteration in these, it is difficult to see how mills will be able to work off their stocks and normal quotas of the lower grades of jute fibre. It would undoubtedly be beneficial to the trade and all jute interests if some heavier weights of cloth were to be accepted not only on present Government orders but also on any that are to follow, in which more use of suitable sacking yarns could be made, rather than the finer hessian. The overhead price for such an article would be considerably lower owing to the large disparity in rates between loose jute missles and Bots or even Low Bots, so that there would be appreciable saving to Government, and with the heavier weight no loss in strength to the fabric. It would then become possible to dispose of stocks of the low grades of jute which have been such a drag on the market for the last few years and give the cultivator much needed relief by finding an outlet for this commodity. Such a measure would have many salutary effects. It would in the first place encourage a somewhat more stable jute market, and also afford a breathing space, until the good quality which is confidently anticipated from the new crop comes to hand and can be distributed without unhealthy and undesirable fluctuations. As it is, the Jute Industry has lost many of her normal markets for her heavy goods and lacking production through enemy action, which cannot be removed until the cessation of hostilities. Unless some other channels can be found for this type of article the trend towards disorganisation is likely to increase in this respect, therefore an attempt at adjustment should be seriously considered at an early stage.

To all intents and purposes there has been no jute market this past week only a few odd lots have changed hands, buyers generally being completely disinterested. A small lot of mill Firsts are reported done at Rs. 51 and a few stray lots of Tossa have been purchased by a mill at prices reported to range from Rs. 10-8 to Rs. 11, for European Mids. to Rs. 9-7, for Indian marks and Tossa Bots. European from Rs. 7-12 to Rs. 8-12 and Indian from Rs. 6-4 (Jungli) to Rs. 7.

The only business in Pucca Bales for export has been a further small lot of approximately 5,000 bales for Russian Ports at almost identical rates. The closing tone is quiet.

During the past week there has been a slight steadiness in Hessians due to Bazaar covering on a restricted scale. At the close however prices have again subsided on this small demand being satisfied.

Heavy goods have been neglected except for a few isolated transactions in B Twills at Rs. 36 to Rs. 36-8 for April and Liverpools at Rs. 38-8 for April, although a special make was recorded at Rs. 39-8 for the same delivery.

(Continued from Page 685)

**Big Changes In 1941**

Price movements in the war period gain in interest from the application of control at many stages. To the study of these movements the most notable contribution so far made is the series of diagrams provided in the January issue of the League of Nations bulletin of statistics. The immediate lift in prices is not peculiar to the belligerent nations. The movement of wholesale prices and the cost of living in most countries was nearly always parallel and always upward. The year 1939 has been selected as the base to indicate how far the war is a determining factor. The advance in the cost of living by 25 points over the index, of 101 for 1939 in distant Peru is not independent of the war which has pushed China deep and hard. The smallest increase is reported by Uruguay which could actually claim a fall in the cost of foodstuffs in 1941.

The graph relating to India proves that by the middle of 1941 the cost of living had risen by 18 points of over 20 per cent in wholesale prices. The only country where pre-war-stability was demonstrably obtaining was Germany. The rise in prices and cost of living was very successfully held since the index for wholesale prices showed in 1941 a rise of two points only. The difficulties of Antonescu's regime are demonstrated by the rise of 130 per cent in prices as also cost of living in Roumania as compared with 1939. Prices in that country had risen by 50 per cent since the dictator took charge. The largest increase under prices, etc., is however reported by China where inflation and currency depreciation are reflected in the fall in the exchange value of the Chinese dollar as also the four-fold rise in the cost of living. The best showing of any Empire country is obviously made by Australia where the rise in prices between 1939 and 1941 was mild and largely due to the expansion in employment and foreign trade. In Great Britain by the end of 1941 prices had risen by over 50 per cent but the cost of living had risen by a little over 25 per cent. The latter was broken by rationing directed towards equality. The position is admittedly better than might be inferred from the rise of about 50 per cent in the note circulation. In the U.S.A. the level of wholesale prices by the end of 1941 were at least 20 per cent higher than the pre-war level. The cost of living also had risen by about 10 per cent indicating only that the reserve of purchasing power among farmers, for instance, could easily pass into retail trade, and thereby propel prices upward. The chart indicates that only where control is complete and pervasive keeping down wages, profits and investment alike, can stability be ensured. The Nazis, in their disregard of human welfare, have not failed to show remarkable results by way of control but the absolute price paid by the Occupied countries for the Nazi conquest is indicated by the rise of over 80 per cent in prices in Denmark accompanied by a tremendous upsurge in the cost of living.

**JUTE**

Calcutta, Thursday.

THE statement that the consumption of jute goods in March has fallen may have no perceptible effect on the jute or hessian market, but the report that U.S. price control will be complete and pervasive while the distribution of burlap also will be regulated, suggests that India's shippers will not get much benefit in the future. The consumption outlook is bad, and even hailstorm damage up north will not make much difference to the 1942, 8 annas crop.

The jute market is flat and inert. Quotations have been nominal for most days. Shippers are unconcerned and mills show no interest. Balers are yet to develop interest in loose jute and the great wonder is that Firsts are still nominally around Rs. 45. The interest shown in Tossa has flickered out abruptly. The war situation casts a spell over the jute market and prevailing steadiness of hessian prices does not seem to help jute in any way. The prices today for Tops and middles are unchanged on the whole but practically no transaction deserving mention has been reported in a week. The jute markets depression is not due to a further slump in prices or control threatened from any quarter. It is just due to lack of demand. The statistical position is not bad. The imports for the nine months ended March 1942 into Calcutta are put at 51.36 lacs bales and the quantity is definitely lower than that imported in the three preceding years. Stocks with presses and the bazar are known to be as low as 6 lacs bales and yet replenishment demand is absent. Stocks last year were not low, but they must have been worked off and the Calcutta imports are well within the Government forecast of 54.23 lacs bales. Yet the position is disturbing and mills refuse to support the monstrably low.

**JUTE MANUFACTURES**

The Jute Manufactures market has not jute market though present prices are deshown much response to the two announcements made on Saturday. There was mention of arrangements between mills and the trade to carry over business for a difficult period. Another concerned special wagon space for jute manufactures. The demand for special rail facilities was officially conceded. Jute goods are to be given priority as destined for civil defence. The hessian market has turned steadier in consequence, but actually improvement is limited to a rise of 4 annas in the case of Nine Porters. Forward sales as shown in the memo supplied by the I.J.M.A. for the week ending April 18 amounted to 28,822,467 yards. The forward sales of 40" 8 oz. hessian were as low as 688,000 yards. The figures prove that interest in Nine Porters is virtually at an end. Speculative buying is too limited to attract notice and the sporadic covering in Nine Porters for ready delivery does not prove much either way. Dealings were noted on Monday in 7½ oz fabric at 13-2 and 10 oz. at Rs. 18. The discounts for forward deliveries are now quite small but that is explained by the big drop in ready prices during the previous week. On all days the hessian market has been called steady, but dullness is always in evidence. Sellers are scarce in the case of Heavy goods but quotations do not show any advance as Cornsacks stand at Rs. 35-8 and B Twills at Rs. 38. There is little or no change to record although buyers, anxious to cover, have encountered a scarcity of sellers. The hessian market is not cheered up by broadcasts or a smart lift in bullion prices. It looks for other sustenance.

**COTTON**

A temporary rally in Broach July-August has marked the cotton market this week. Now that big changes in trade and terms are due there is nothing to go by. The market since Monday is generally summed up as quietly steady and the highest touched by Broach is 174-8 for July-August. A sharp and distinctive rise in the April-May contract was due to fears concerning transport of cotton.

Prices are higher on the week for all types and dates but it is absurd to say it is due to fresh buying. Operators are few and hypersensitive to bad news. Every rise is followed by a break, even now. But stability must come when the new contract comes and short staple ceases to be tendered after a year.

Karachi has latterly been steady with price fluctuations narrow as before. The New York market is not weakening after the message to Congress against inflation. The rise noted in New York futures last week after the drop was not unusual.

The stock position in Bombay is not bad as receipts this season are definitely lower. Mill consumption in April is not likely to be much higher as spot demand is not appreciable. Statistics prove that Karachi's stocks are low and mill consumption in India for six months ended February amount to over 2 million bales.

**WHEAT**

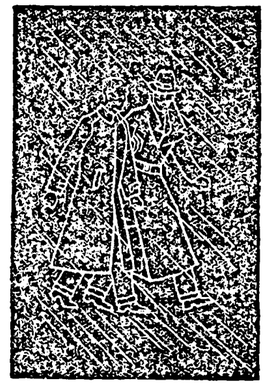
The wheat market is showing a little easiness after prolonged firmness. The Bombay rates have shaded off a little, but Karachi so far is commendably firm quoting over Rs. 45 per candy though the new crop is moving forward. Stocks are not large up till now. The latest forecast shows a crop below 10 million tons reflecting a fall of 3 per cent in the area under wheat in 1941-42. Weakness has been reported from Hapur owing to the difficulties of an important firm there. The Indian markets are sure to note that price control does not mean arbitrary prices but free transit and dishoarding in the first stage. The Calcutta flour market is known to be steady hence the wheat market here is unchanged with Rs. 6-8-0 bid for May delivery. The dullness of seeds has no effect on wheat.

**PIECEGOODS**

The cloth market apparently draws little consolation from the late rise in cotton. The Calcutta market is waking up slowly, and the improvement reported from Bombay has not held. The rates for indigenous yarn have declined in the absence of buying support. The scarcity of imported goods like the news concerning standard cloth does not lever up interest. If dealers are more numerous and active of late it does not mean that nervousness is at an end. There is also a transport difficulty to consider in this case. Up country markets are not giving much support and the market outlook can undergo a change only after the monsoon breaks. Bombay is uniformly steady as regards main grades as mill production must be lower for the past two months and civilian requirements cannot be easily met.

**SILVER**

The silver market has again gone up. Last week it was noted that rates had dropped suddenly. Now it is quite firm again by a strange turn of the wheel the Bombay rates have gone up. A week ago the rate for ready was 82-6 showing that mild recovery had taken place though silver for May delivery was quoted much lower at Rs. 76-4. The rate has since risen to Rs. 83-12 and declined to Rs. 82 with May settlement quoting Rs. 77-5. Prices are therefore higher on the week. In Calcutta the rate for Indian silver is 78-8 per 100 tolas. The usual premium is paid for Burma silver at all places. New York and London are unchanged. The U. S. Treasury made smaller purchases of silver in 1941 but that is not going to worry Indian brokers who think only of the war in Burma. Events in Burma continue to keep silver up. During the first two days the bullion market was firm with ready silver going up to Rs. 84-10 since then the market is quieter.



**GOLD**

The drop in gold reported last week was almost sensational. There has been as in the case of silver a prompt recovery. From Rs. 45 or so per tola the rate for ready gold in Bombay has advanced to Rs. 47-8 after touching Rs. 48. The recovery may be due to extraneous factors but upcountry buying is appreciable.

Larger arrivals cause no problem, and if the market on Wednesday was inert, the rates showed that the decline recorded up to Wednesday last was temporary.

The rate for the two settlements is identical with the spot rate. In Calcutta the price of gold is higher on the week by only 4 annas per tola and sovereigns are virtually unchanged. In Bombay the rate for gold coin has risen to Rs. 36-14 after touching a low of Rs. 35 in the previous week. The price of gold coin in Bombay had risen in the past few days up to Rs. 37-6 and this is still Calcutta price. Rates on Thursday afternoon in Bombay showed that the bullion market has eased up again with silver Ready quoting Rs. 81 per 100 tolas and gold quoting Rs. 47-4 per tola.

## LEADING JUTE MILL RESULTS

THE stock markets in India have so far construed adverse developments as being void of significance. Good news is assigned its own proper value. The absence of any material change in tone or turnover cannot be regarded as depressing. There have been glimpses of revival, and the Calcutta market especially retains faith in Indian Irons. The factories war risk scheme is of material advantage, and industries called upon to respond to the demands of the United Nations are not likely to do badly. The only industry likely to prosper under difficult conditions is paper. Mr. Mellor has described the benefits to the public of the system of controlled prices. The pressure of demand is established, and the retention of the protective duties for a further term confers advantages on India's paper industry. The market is not likely to lose sight of the fact that shares of upcountry mills, in spite of production difficulties referred to by Mr. Mellor, are not unattractive.

• • • • •

The central fact in the hessian market position is the recent decision of the Indian Jute Mills Association that there should be no change in the present working hours of 60 per week. The decision, taken only after a very full review of the position as it exists with regard to the trade and shipping position, confirms expectations. In reaching this decision the committee was again influenced by a wish to avoid intermittent changes in the working hours of labour which might tend thereby to disturb the situation which at present holds good. The hours of working were raised to 60 in the month of November last in order to meet the heavy demands from Government for sandbags. Before then, the jute mills had been working 54 hours per week, from 13th October last. When the hours were raised from 50 to 54 in October, the President of the Association in the course of his speech remarked "we must be prepared for all eventualities and there is far less danger in providing for ample supplies than in facing the risk of being unable to meet with possible demands."

• • • • •

The same reason must have prompted the Committee in deciding upon the continuance of 60 hours. But there are other factors to consider. The availability of shipping space upto the end of January was not satisfactory in view of the spread of hostilities. Further, the sinking of some merchant vessels in the Bay of Bengal and the unfavourable war news from the East caused a scare among the workers in jute mills who began to seek safety and many mills had to close down their looms in the month of January, 1942, owing to an inadequate labour force. Generally speaking, there has not been any deterioration in the stock position from the month of February owing to improved labour conditions to a certain extent, and the shipping position, too, was reported to be satisfactory in March which would have accounted for a partial clearance of stocks.

• • • • •

The outlook for the Jute Industry does not, however, appear to be bright if due regard be paid to the actual threat of war to this country which is likely to have an adverse influence on the shipping position. The outlook for jute shares may be expected to improve only after a radical change in the freight position in which safety at sea will be a vital factor.

• • • • •

A notable increase in earnings has been reported by the *Anglo-India Jute Mills Company, Limited*.. The net profit before providing for taxation and depreciation, for the half-year ended 31st March, 1942 is Rs. 23,57,437, showing an increase of Rs. 5,90,484 over the previous half-year's figure. In view of the present war situation the Directors have considered it advisable to transfer a sum of Rs. 1,50,000 to a War Contingencies Reserve Account against such abnormal liabilities as are likely to be incurred. The provision for taxation has naturally absorbed the bulk of the increase in earnings, the provision in this regard being Rs. 16,25,000 against only Rs. 9,00,000. The directors have been conservative in the declaration of dividend which is only 10 per cent. against 12½ per cent. in the previous half-year. The amount carried forward is also slightly lower at Rs. 1,34,820 against Rs. 1,41,130 brought in.

• • • • •

Though the Company has secured remunerative forward contracts it is impossible to give any indication as to prospects for the current half-year in view of the disturbing conditions referred to. A more direct clue to altered conditions is the report of the Bally Jute Co., Ltd. In this case there is no change in dividend but the drop in earnings carries its moral.

• • • • •

In spite of small decline in earnings the *Bally Jute Company, Limited*, has maintained the dividend at 10 per cent. for the half-year ended 31st March, 1942. The net profit, before providing for taxation and depreciations amounts to Rs. 9,96,960 as against Rs. 10,27,473 in the previous half-year. The allocation to depreciation stands at Rs. 1,00,000 (70,000) while the provision for taxation is slightly lower at Rs. 6,20,000 against Rs. 6,60,000. The amount carried forward is higher at 94,417 against Rs. 87,458.

• • • • •

In spite of the fact that no motor vehicles are being received from the United Kingdom, and very little can henceforth be expected from the Company's other source of supply, now that America is in the war, *Walford Transport, Limited*, has enjoyed a satisfactory trading during the year 1941. The net profit for the year ended December, 1941 amounts to Rs. 2,83,559 against only Rs. 67,164 for the nine months ended December, 1940. Originally the company used to close their accounts on the 31st March of every year, but, as provided for by a special resolution, the accounts now close on 31st December. The period covered in the 1940 report was, therefore, nine months only. The dividends declared during under review show an increase of 4 per cent. over last year on ordinary shares and an increase of 2 per cent. over that paid on the preferred ordinary shares. The advisability of paying an even larger dividend was also considered by the directors, but in view of the uncertainty of the future, they have considered it prudent to increase the amount of the carry forward to Rs. 33,512 from 10,144 in the previous year. The dividend per share, namely, 1 3|5 annas is identical for both ordinary and preferred ordinary shares this time. Efforts are being made to intensify the company's activities in directions other than the retailing of motor vehicles, states the latest report. The directors, it is reported, have met with a considerable degree of success, and with new machinery installed, the Works have been able to undertake war contracts as well as developing the manufacture of gas-producer equipment for motor vehicles.

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Calcutta, 1st May, 1942.*

THERE has been practically no change in trading conditions on the local stock exchange during the week and only a limited amount of business was put through as most operators are unwilling to enter into commitments in view of the continued uncertainty regarding the war situation. One notable feature during the week has been the improving tendency in government securities. The undertone in several sections continues to be healthy.

Government securities met with good support during the week, prices in some scrips having improved further from last week's levels. 3½ per cent Paper, which was quoting at Rs. 88-4 last week, has further improved to Rs. 89-2 at the time of writing, the highest level touched during the week. Among terminable loans, there were buyers of 1949/52 at Rs. 95-8; 1945/55 at Rs. 105-3; 1960/70 at Rs. 103-4; and 1946 *Defence Loan* at Rs. 97-13. Provincial Loans were unchanged.

Money conditions continued to be firm and there is again a further rise of three pies in the average discount on treasury bills from one rupee four annas nine pies per cent per annum to one rupee five annas per cent per annum.

There was no trading either in public bodies' debentures or industrial debentures. Among Preference shares, support for jute shares is still lacking. *Hastings* came to business at Rs. 100; *Howrah 'A'* at Rs. 120; *Kelvin* at Rs. 132; *Rameshwara* at Rs. 11-4; *Alexandra* at Rs. 97; *Dalhousie* at Rs. 130 s.l.; and *Fort William* at Rs. 125. In the Engineering section, *Steel Corporation* were crossed at Rs. 94.

Among Railway shares, *Shahdara (Delhi)-Shahranpur* changed hands at Rs. 163.

In the Cotton section, *Bengal Nagpur* were in enquiry at Rs. 18.

There was, as usual, no business in Jute ordinary shares. The results for the half-year ended 31st March, 1942 of some jute companies published during the week reflect in full measure the conditions experienced by the Jute industry. The *Anglo-India Jute Company, Limited* and the *Fort Willian Jute Company, Limited* have reduced their dividends to 10 and 12 per cent from 12 and 15 per cent respectively, while the *Bally Jute Company, Limited* and the *Fort Gloster Company, Limited* have maintained the dividends at the previous half-year's levels of 10 and 17½ per cent respectively.

No business was reported in the Coal and Tea sections.

In the Sugar section, there continued to be buyers for *Buland* at Rs. 25 and *Murree Brewery* at Rs. 15, but in the absence of sellers no business resulted. *South Behar* ordinaries changed hands at Rs. 17-6.

In the Engineering section, *Indian Iron* continued to be firm at Rs. 22-9 x.d. There were buyers of *Steel Corporation*, the closing price being slightly higher at Rs. 13-12.

Among Bank shares, *Reserve Bank* were a steady feature at Rs. 93-8.

In the Miscellaneous section, *Associated Hotels* came in for business at Rs. 5-4. *Indian Copper* continued to be steady at Rs. 1-10. A transaction was done in *Orient Paper* at Rs. 15 as also in *Titaghur Paper* at Rs. 18-4.

## BOMBAY STOCK EXCHANGE

(From Our Correspondent)

*Bombay, April 30.*

*Money.*—Money was slightly easier, the rate for call money being quoted at ¼ per cent.

*Exchange Market.*—Banks were selling T.T. at 1s. 5 31/32d. and buying three months' bills at 1s. 6 9/32d.

*Securities.*—A steady improvement in prices of giltedged securities has been witnessed during the week and there was a good demand for 3½ per cent Paper which closed higher at Rs. 89-12. Among short and long-dated loans, 1948-52 Loan were in support at Rs. 93-2; 1951-54 at Rs. 94-4; 1963-65 at Rs. 88-14; 1947/50 at Rs. 98; 1960/70 at Rs. 103-8 1955/60 at Rs. 107-12; 1945/55 at Rs. 105-8 and 3 per cent *Defence Loan* at Rs. 98-10.

*Shares.*—Prices in the local share market, after opening higher on Monday, met with some profit-taking towards the close of the week on unsettling Burma news. The market is, however, slightly steadier today due to the firmness of the securities market and the cotton market. In the Cash section, Bank shares, which were in good demand early in the week, were done lower at the close.

*The figures given in brackets are for cash.*

*Textiles.*—*Bombay Dyeing*, after touching a high of Rs. 1,060, gradually receded to close at Rs. 1,035 (1,045). *Central India* were marked slightly lower at Rs. 330 (334); *Century* at Rs. 360 (360); *Colaba* at Rs. 136/4 (150); *Gokak* at Rs. 247 (237); Kohinoor at 416 (414); *Svadeshi* at Rs. 385 (387) and *Simplex* at Rs. 165 (162). *Sholapoor* were, however, maintained at Rs. 5,000 and *Vishnu* at Rs. 1,600.

*Hydro-electrics.*—In sympathy with the securities market, prices in this section closed slightly higher, *Andhra Valley* being done at 1,458-12; *Tata Power* at Rs. 1,351-4 and *Tata Hydro* at Rs. 154.

*Steels.*—Steel shares have further advanced during the week, the ordinaries touching Rs. 254 (244) and the deferreds Rs. 1,400 (1,290). At these levels there was some scattered liquidation with the result that the prices slightly declined, the ordinaries finally closing at Rs. 248 (238) and the deferreds at Rs. 1,335 (1,262-8).

*Banks & Insurance.*—Among Bank shares, *Central Bank* were done at Rs. 41-12; *Imperial Bank* fully paids at Rs. 1,437-8; contributories at Rs. 348-12; *Bank of India* at Rs. 137 and *Reserve Bank* at Rs. 99.

In the Insurance section, *New India* were marked slightly higher at Rs. 42-4.

*Miscellaneous.*—*Bombay Burmah Trading* old shares continued to be steady at Rs. 215 (200-8), while the new shares were higher at Rs. 71. *Associated Cement* were steady at Rs. 157-8 (158). *Belapur Sugar* met with business at Rs. 225 (225); *Shivrajpur Syndicate* at Rs. 29-8 (30); *Premier Construction* at Rs. 111 (109) and *Alcock Ashdown* at Rs. 415 (400). *Scindia Steam* were a shade

## MADRAS STOCK EXCHANGE

*(From Our Correspondent)*

*Madras, April 30.*

The local market met with restricted business during the week under report. Prices are remaining unchanged at lower legels and in some cases prices must be regarded as nominal. It is reported that the session of the Exchange is to be held hereafter only three days a week, namely, Mondays, Wednesdays and Fridays but business by phone will go on during the other days.

*Securities.*—The securities market maintained a steady tone, 3½ per cent Paper closing slightly higher during the week at Rs. 89-2. *Mysore Loans* met with fair business, 3 per cent Loan being done at Rs. 101-8; 3½ per cent Loan at Rs. 104-8 and the 4 per cent Loan at Rs. 109-8. *Cochin Loan* changed hands at Rs. 100-6. Among Provincial Loans, 3 per cent 1952 *Madras Loan* were crossed at Rs. 93 s.o.l.

*Mills.*—*Bangalore Woollen* ordinaries were transacted at Rs. 226-8, while other shares were unchanged. The drop in Buckingham still stands out. Investors cannot help remarking the difference between the prices.

*Utilities.*—*South Madras Electric* ordinaries continued to be steady at Rs. 11, while the 5 per cent Debentures came in for business at Rs. 101.

*Plantations.*—Rubber shares showed no change in prices, *Cochin Malabar* being done at varying rates of Rs. 8-2, 8-0 and Rs. 8-3. *Velliamuttam* were done at Rs. 18-4 c.d. and *Coorg* at Rs. 28-8 x.d. Among Tea shares, *Nilgiri Neergundi* were done at Rs. 1-15-6.

*Sugars.*—*Mysore Sugar* had buyers at Rs. 49-6-0.

*Miscellaneous.*—*Mysore Chemicals and Fertilisers*, after being done higher at Rs. 15, closed slightly lower at Rs. 14-12. *Alkali and Chemical* preferences were crossed at Rs. 102. *Spencer* ordinaries were Rs. 3-3 and *Amrutanjan* preferences Rs. 93.

# MARKET POINTERS

**Fall in Consumption of Jute Goods:**

There was a further decline in the consumption of jute goods last month as compared with the previous month, according to the latest issue of the monthly bulletin of the Indian Central Jute Committee. Mill production, the bulletin states, declined by about 11,500 tons, stocks of manufactured jute by about 1,000 tons.

The present war conditions, the uncertainty regarding shipping and the difficulties experienced in obtaining payment on transactions with overseas markets were the major factors which contributed to the reported inactivity of the jute market during this period.

Referring to the problem of inadequate supply of jute, which is reported to have become very acute in Allied and neutral countries, the bulletin states that to meet the situation the U. S. A. Government has issued an order for conserving the supply and controlling the distribution of burlap and burlap goods. Similar action has already been taken in the Argentine Republic where the Government programme has been successfully carried out.

The shortage of textile goods has become so very acute in France that it has been decided that the sacks containing flour sent by the American Red Cross to Vichy will be used for baby clothes as soon as the flour is removed.

A flax substitute called "Celin" has been manufactured in Ireland using selected jute as a base. Canvas made from "Celin" is claimed to be better than the cotton-jute union fabric evolved in India.

**THE OODLABARI COMPANY, LIMITED**

**The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 22nd day of May, 1942, at 3-10 p.m., for the following purposes:—**

*(Half-yearly meeting, 15th May, 1942 at noon)*

*Audited accounts for the half-year ended 31st March, 1942:—*

The accounts show a profit on Revenue Account of Rs. 23,09,017-2-0. On transfer of this sum to Profit and Loss Account and after reserving Rs. 16,25,000 for Taxation there is a balance at credit of that account of Rs. 8,73,566-15-3. Of this the directors have transferred Rs. 1,50,000 to War Contingencies Reserve Account and now recommend that the following dividends be paid, free of income-tax:—

| | Rs. | A. | P. |
|---|---|---|---|
| On Preference Shares at the rate of 7 per cent. per annum (Rs. 3-8-0 per share) .. | 96,677 | 0 | 0 |
| On Ordinary Shares at the rate of 20 per cent. per annum (Rs. 10-0-0 per share) .. | 4,92,070 | 0 | 0 |
| Total Rs. .. | 5,88,747 | 0 | 0 |

leaving a balance of Rs. 1,34,819-15-3 to be carried forward.

In order to clarify the Balance Sheet position the amount of Rs. 50,00,000 at credit of Block Reserve Account has been transferred to Depreciation Account.

In view of the present war situation the Directors have considered it advisable to transfer the sum of Rs. 1,50,000, as indicated above, to a War Contingencies Reserve Account against such abnormal liabilities as are likely to be incurred.

Working hours were increased on 13th Ocober, 1941, to 54 per week and again on 6th November to 60 weekly in order to meet fresh demand for goods on Government account.

With the entry of Japan into the war and the extension of hostilities westwards trading conditions have become increasingly difficult, and while the Company has secured remunerative forward contracts it is impossible to give any indication as to prospects for the current half-year.

## VISHNU COTTON MILL, LIMITED

| | Year ended December | | | |
|---|---|---|---|---|
| | 1941 | 1940 | 1939 | 1938 |
| | Rs. | Rs. | Rs. | Rs. |
| Net profit .. | 8,49,185‡ | 1,65,412† | 4,46,711 | 3,65,581 |
| Allocation to funds including depreciation | 2,00,000 | Nil | 1,77,332 | 75,000 |
| Dividend amount .. | 3,12,000 | 1,84,000 | 2,48,000 | 2,39,785 |
| Dividend % Ordy. .. | 16 | 8 | 12 | 12 |
| Dividend % Pref. .. | 7 | 7 | 7 | 7 |
| Carry forward .. | 67,469 | 29,869* | 1,10,558* | 93,185* |

*Includes provision for taxes.
†Includes Rs. 50,000 from Dividend Reserve Fund.
‡Out of this, Rs. 3,00,000 has been reserved for Taxation.

*(Annual meeting, 6th May, 1942 at 4 P.M. at Bombay)*

*Audited accounts of the Company for the year ending 31st December, 1941:—*

| | Rs. | A. | P. |
|---|---|---|---|
| The accounts show a profit of .. .. | 8,49,184 | 10 | 11 |
| Which with the balance brought forward from the previous year .. .. | 30,284 | 0 | 9 |
| Gives a total of .. .. .. | 8,79,468 | 11 | 8 |
| The Directors have transferred to the credit of:— | | | |
| Depreciation, Renewal & Extension Fund .. | 1,50,000 | 0 | 0 |
| Dividend Reserve Fund .. .. | 50,000 | 0 | 0 |
| Reserve for taxation .. .. | 3,00,000 | 0 | 0 |
| leaving a sum available of .. .. | 3,79,468 | 11 | 8 |

Out of this the Directors recommend a dividend of Rs. 35 per share less income tax on 1600 Preference Shares and a dividend of Rs. 80 per share, free of income tax, on 3200 Ordinary Shares which will absorb Rs. 3,12,000-0-0 and to carry forward the balance of Rs. 67,468-11-8.

Taxation has been computed on the basis of the statutory standard profits but an appeal has been lodged with the Central Board of Revenue for a special standard.

Market conditions were on the whole favourable during the year, though for the first eight months prices in upcountry markets lagged some way behind the Bombay market. In the latter part of the year conditions were good but demand and prices have since deteriorated on favourable war news.

(n) Includes 1 per cent being arrears for 1937-38.

(Continued from page 700)

Night shift working was started in all departments on 1st July 1941 and continues. The supply of labour was insufficient and the quality of new workers engaged was inferior. The advantages of the increased production will be felt more fully during the current year.

A dearness allowance on a sliding scale for all workers was negotiated during the year, and a bonus of 1½ months' pay was given on the same terms as the Bombay mill bonus.

The new turbine is not yet working but the pumps and auxiliary turbine have been ordered from America and are expected to arrive within a few months.

The profits and fixed charges of the Company have been insured for Rs. 25,00,000 per annum for two years.

The buildings and machinery of the Mill and stocks of cotton, cloth, yarn, stores, etc. at Sholapur and elsewhere have been insured under declaration policies for Rs. 174,40,800.

*Secretaries, Treasurers and Agents.*—The Bombay Company, *Limited.*

| | | | Total liquid assets | .. | 52,73,986 |

*Includes Rs. 62,87,452 being the Depreciation Fund.

## LAKSHMI COTTON MANUFACTURING COMPANY, LIMITED

| | | Year ended December | | | |
|---|---|---|---|---|---|
| | | Rs. | Rs. | Rs. | Rs. |
| | | 1941 | 1940 | 1939 | 1938 |
| Net profit | .. | 9,57,634‡ | 58,934† | 1,93,573 | 2,48,997 |
| Allocation to funds including depreciation | .. | 4,00,000 | Nil | 75,000 | 65,000 |
| Dividend amount | .. | 2,56,000 | 96,000 | 1,28,000 | 1,28,000 |
| Dividend % | .. | 16 | 6 | 8 | 8 |
| Carry forward | .. | 1,13,665 | 31,506* | 68,572* | 74,011* |

*Includes provision for taxes.

†Includes Rs. 35,000 transferred from Dividend Fund.

‡Includes provision for Taxation of Rs. 2,00,000.

(*Annual meeting, 6th May, 1942 at* 3-30 *p.m.*)

*Audited accounts of the Company for the year ending* 31st *December,* 1941:—

| | | Rs. | A. | P. |
|---|---|---|---|---|
| The accounts show a profit of | .. .. | 9,57,633 | 10 | 4 |
| Which with the balance brought forward from the previous year | .. .. .. | 12,031 | 5 | 6 |
| gives a total of | .. .. .. | 9,69,664 | 15 | 10 |
| The Directors have transferred to the credit of:— | | | | |
| Engine and Machinery Fund | .. .. | 3,50,000 | 0 | 0 |
| Dividend Fund | .. .. | 25,000 | 0 | 0 |
| Building Fund | .. .. | 25,000 | 0 | 0 |
| Reserve for taxation | .. .. | 2,00,000 | 0 | 0 |
| leaving a sum available of | .. .. | 3,69,664 | 15 | 10 |

Out of this the Directors recommend a dividend of Rs. 40 per share on 6,400 shares which will absorb Rs. 2,56,000 and carry forward the balance of Rs. 1,13,664-15-10.

Taxation has been computed on the basis of the statutory minimum standard profit of Rs. 36,000 and an appeal for a special standard will be made in due course.

Night shift working was started on 1st February 1941. Shortage of labour and the low standard of new workers have caused trouble.

Dearness allowance on a sliding scale for all workers was negotiated during the year, and a bonus of 1½ months pay was given on the same terms as the Bombay Mill bonus.

Additions to machinery during the year cost Rs. 4,76,380. The principal items were 3 Roving Frames and 18 Ring Spinning Frames, which form part of the programme of replacement of the old spinning machinery, while Rs. 85,000 was spent on the completion of the Bleach House plant, which is now working to its capacity of 6 Tons per day. The number of new ring spindles now erected and working is 16,728.

The profits and fixed charges of the Company have been insured for Rs. 25,00,000 per annum for two years.

The buildings and machinery of the Mill and Stocks of cotton, cloth, yarn, stores, etc. at Sholapur and elsewhere have been insured under declaration policies for Rs. 1,67,63,050.

*Secretaries, Treasurers & Agents.*—The Bombay Company, *Limited.*

*Authorised, Issued and Subscribed Capital—Rs.* 16,00,000 *in* 6,400 *shares of Rs.* 250, *fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | | Rs. | *Assets.* | | Rs. |
|---|---|---|---|---|---|

| Dividend % Pref. | .. | 3½ | 3½ | 3½ | 3½ |
| Carry forward | .. | 15,082 | 40,218 | 5,911 | 71,367 |

*Includes Rs. 20,000 transferred from Equalisation of Dividend Reserves.

†Includes Rs. 60,000 transferred from Reserves.

*Audited accounts for the half-year ended* 31st *December,* 1941:—

*Market.*—The market has been steady throughout the half-year, but wagon supply has been erratic due to an acute shortage of transport facilities, and unfortunately this position shows no signs of improvement.

*Labour.*—During the latter part of the period under review with the entry of Japan into the war, a general exodus of labour took place in the Jharia Field. This had a very adverse effect on the raisings of the collieries and labour is still somewhat unsettled.

As from 1st January, 1942 the dearness allowance of 10 per cent. was introduced into collieries in the Lower Field and the allowance to labour in the Jharia Field advanced by 12½ per cent.

*Colliery.*—The mines and machinery were maintained in good order.

*Loyabad Coke Plant.*—During the half-year 40,600 tons of coke were manufactured and 41,092 tons despatched as against 40,622 tons manufactured and 40,535 tons despatched during the previous half-year.

Deliveries to the steel industry were contained during the half-year, but the future position is uncertain.

*Taxation.*—The incidence of taxation has been such that despite the fact that profits have been well maintained, the burden placed upon the Company has absorbed a large proportion of the sum which would normally have been available for distribution.

This position was emphasised in the last Directors' Report and even although, despite the ever-growing cost of material essential

for colliery maintenance, the Company may be able to maintain its profits, the sums available for distribution in the future are likely to be curtailed. There is, however, a possibility that the Company may receive relief as a result of the claim for reduction in E. P. T. which has been filed with the authorities, but not yet adjudicated.

*Accounts.*—A reserve amounting to Rs. 30,000 has had to be taken against the probable loss of stocks and bad debts due to enemy action.

The Profit and Loss Account, after providing Rs. 99,037-9-7 for Depreciation, and Rs. 2,09,428 for Taxation, and including Rs. 40,218-1-4 brought forward from last half-year, shows an available balance of Rs. 1,52,403-7-7 which the directors propose to dispose of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| In paying a Dividend on the Preference Shares of 7 per cent. per annum without any deduction for Income Tax paid by the Company | 80,493 | 0 | 0 |
| In paying a Dividend on the Ordinary Shares at the rate of 2½ per cent. per annum without any deduction for Income Tax paid by the Company .. .. .. | 56,828 | 0 | 0 |
| In carrying forward .. .. .. | 15,082 | 7 | 7 |
| Total .. | 1,52,403 | 7 | 7 |

*Managing Agents.*—Bird & Co.

*Authorised Capital—Rs.* 1,00,00,000 *in* 5,00,000 *Ordy. of Rs.* 10 *and* 50,000 7% *Cum. Pref. of Rs.* 100 *each. Issued and Subscribed— Rs.* 68,46,040 *in* 4,45,624 *Ordy. and* 22,998 *Pref.; both fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

ISSUED WEEKLY

Vol. XXIX. No. 20 SATURDAY, MAY 9, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

**NATIONAL INSURANCE COMPANY,**
LIMITED.

**7, COUNCIL HOUSE STREET, CALCUTTA.**

Phone: Cal. 5726, 5727 and 5728.

Branch and Agency Offices throughout INDIA, BURMA, CEYLON, BRITISH EAST AFRICA AND FEDERATED MALAY STATES.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

COMFORTABLE conditions are restored in the short loan market; and interbank call money rate has been re-established at ¼ per cent. All money market indices point to the continuance, even accentuation, of easy money. The deposits maintained by member banks with the central banking institution have now reached the high altitude of Rs. 47.06 crores. Active note circulation in India has touched the all-time record of Rs. 460.65 crores. After a long interval during which treasury bills did not evoke any keen or widespread interest, the auction on May 5 shows a sharp jump in the total amount of applications. Against Rs. 2 crores of tender bills on offer, applications came to Rs. 526¾ lakhs. The average rate of accepted tenders was Re. 1-4-8 per cent per annum as compared with Re. 1-5-0 in the last week. That, in spite of treasury bill tenders exceeding Rs. 5 crores and being over two and a half times the amount offered, the average discount rate shows only a small decline, is, in our opinion, confirmation of our repeated contention that the authorities have really no treasury bill policy as such. The aim and objective of the Reserve Bank would appear to be to secure the full quota against the announced offer. Treasury bill policy can be said to be positive and can prove effective only when the authorities are prepared to reject tenders which are unsuitable, even though such rejection may mean that they do not get the full quota of tender bills in the week in question.

---

So far as the treasury bill auction on May 5 is concerned, the Reserve Bank was in an exceptionally strong position to adopt a strong treasury bill policy. Tap bills sold between April 29 and May 4 had produced the unexpectedly large amount of Rs. 2.80 crores. And it would not have caused any inconvenience to government's ways and means position if the realisations from tender bills fell short of Rs. 2 crores. We may add that the Government had just received a substantial amount from the British Government in respect of inter-governmental transactions, as a result of which the Central Treasury's deposits with the Reserve Bank were over Rs. 14½ crores. Sales of tap bills had produced good results; the cash balances were plentiful. What more propitious conditions could be desired for the enforcement of a strong treasury bill policy? Banks in general know now that the Reserve Bank is mainly concerned with securing Rs. 2 crores or whatever is the amount of tender bills offered; the banks also know that the Reserve Bank is not unduly worried about the rate. What incentive is there for banks to quote rates favourable to the Government?

---

In spite of the Reserve Bank, there are reasons to think that further decline in treasury bill discount rate is unavoidable. As we have pointed out, deposits of scheduled banks with the Reserve Bank are now over Rs. 47 crores. Government disbursements in respect of war supply and other war commitments are being made on an increasingly large scale. This must result in further expansion of the cash resources of banks. We may, therefore, take it as more or less certain that the keen competition noticed in this week's sales of treasury bills will be further intensified; and that, in due course, this competition is bound to have decisive effect on the discount rate.

---

The Reserve Bank returns for the week ended May 1 disclose the usual month-end sterling receipts from the British Treasury and also what has now come to be the usual weekly expansion of currency. This expansion is effected by the transfer of sterling securities for Rs. 5 crores from the banking department to the issue department. Sterling securities from the issue department as on May 1 stood at Rs. 246.85 crores. Though Rs. 5 crores of sterling securities have thus been transferred from the banking to the issue department, foreign balances held in the banking department have increased from Rs. 41.57 crores to Rs. 58.53 crores. The Reserve Bank has thus increased its sterling assets during the week by Rs. 22 crores. This is approximately the measure of sterling payments received from the British Government in the week ended May 1. It is not unlikely that the next return of the Reserve Bank discloses some further sterling payments. This will go to confirm our view that payments by the British Government are now on a monthly scale of approximately Rs. 30 crores. The cash position of the Central Government was thus strengthened from this source by Rs. 22 crores. A portion of this amount has been utilised for reducing the ways and means advances taken from the Reserve Bank from Rs. 11.67 crores to Rs. 3.30 crores. The amount thus used up is Rs. 8.34 crores. The deposits of the Central Government with the Reserve Bank have increased by nearly Rs. 10 crores to Rs. 14.52 crores. The balance from the total receipt of Rs. 22 crores must have been used up in the usual month-early disbursements and also war expenditure.

It was in the first week of March that the repayment of the 2½ per cent and 3 per cent India sterling stocks was effected, for which purpose the Reserve Bank provided the requisite sterling. As a result of these operations, sterling securities in the issue department fell by Rs. 80 crores to Rs. 193.85 crores. Foreign balances in the banking department as on March 6 were Rs. 54.69 crores. Since then, the Reserve Bank has recouped a good part of the sterling assets which it had to part with at that time. Sterling securities in the issue department have gone up to Rs. 246.85 crores, that is, by Rs. 53 crores. Foreign balances have risen by approximately Rs. 4 crores. Since March 6, total sterling assets of the Reserve Bank have gone up by Rs. 57 crores. By the end of May, the loss of Rs. 80 crores would be fully made up.

The exchange market has been dull with no business of any kind. Export bills are conspicuous by their absence. The shipping position continues obscure and difficult. The undertone, however, is steady.

Banks sell T.T. London Ready to six months forward at 1s. 5 31/32d., and buy T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks buy three months D.A. bills for first and second month at 1s. 6 9/32d., and for the third and fourth month at 1s. 6 5/16d.

Interbank call money is quoted easy at ¼ per cent.

Firms' money for one to four months ½ per cent.

Banks buy T.T. New York Ready Rs. 332¾ Banks sell T.T. New York Ready Rs. 329½ to Rs. 332¾ for $100.

## TREASURY BILLS

### India

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills were opened on Tuesday, May 5, 1942. Total amount offered was Rs. 5,26,75,000 (Rupees 5 crores 26 lakhs and 75 thousand). Tenders at Rs. 99-11-0 per cent and above were accepted in full and those at Rs. 99-10-9 per cent were allotted approximately 31 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-4-8 per cent (Rupee one, annas four and pies eight per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills will be received on Tuesday, May 12, 1942. Successful tenderers should make payment on Friday, May 15, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from May 6, 1942 to May 11, 1942 at Rs. 99-11-0 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from April 29 to May 4, 1942, amounted to Rs. 2,80,00,000 (Rupees 2 crores 80 lakhs).

During the week ended May 1, 1942, Government of India Treasury Bills for Rs. 2,53,00,000 (Rupees 2 crores 53 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Owing to telegraphic delays time for receiving tenders until further notice will be 11 a.m. standard time in Bombay on auction day and close of business previous working day at other centres.

# Finance Abroad

Friday Morning.

THE exchange market remains undisturbed and even the bullion market appears quiet for the time being. There are only four foreign currencies quoted in India and they show no change at all for weeks even for months. London is again faced with a glut of funds and some relief may come from a larger taking of treasury deposits this week. Week after week it has been recorded that call loans are readily available, and the supply of bills has always been smaller than the volume of investible funds. For the tender issue on Friday there were takers at a farthing over 1 per cent and the money market as usual was just one of the parties buying three months' bills offered by the Treasury. What makes the situation perpetually comfortable must be the ready inflow of money from private hands into banks and thence to the Treasury. The rising circulation means in turn a more expensive system of saving along with a more active circulation. Velocity, of course, is an element in purchasing power and that is neutralised by saving, but one need think at all about the quantity theory to see that by an increase of nearly 300 million in the note issue Britain has created not only bigger incomes but larger savings for her people. By all tokens Sir Kingsley Wood expects the British investor to do much. The taxpayer is let off lightly with a few increases in indirect taxation. The Treasury expects income-tax to give £915 million, that is to say, £145 million over the actual revenue in 1941-42. A larger inflow of money from excess profits tax is expected to give £425 million as against £269 million in the past year. The only fall in revenue will be under customs which is expected to produce £59 million less than in 1941-42 when an unexpected increase over originally anticipated revenue was reported.

Mr. Rennie Smith has described the stoical reception of the Budget in the House. The country has taken it, according to recent reports, even more calmly. The Finance Bill has been treated as a non-contentious measure and the war production drive leading to absorption of about 60 per cent of the national income is meant to help Britain get a move on. In the U.S.A. also armament production promises to come up soon to expectations. The *Christian Science Monitor* carried an account of production targets being hit in the matter of airplanes, tanks and munitions. Victory on the production front, states the report, is now an absolute certainty. There will be 60,000 planes in a few months; 43,000 tanks are going to be produced not next year, but this year, 20,000 anti-aircraft guns are coming from the assembly lines; 8 million tons of shipping will be afloat in 1942. It is a flow, and it will soon be a river and in another two months, the river will be a torrent—the word used by Mr. Clarence E. Carmon in his report to a Congressional committee.

This staggering increase has to be paid for. A comparison of war expenditure totals in March, 1942, revealed that outlay was 14 times greater than the outlay in the fourth month of the last war. The expenditure in March 1942, was 2½ billion as compared with 187 million in July 1917. The March figures were incidentally 66 2/3 per cent up on the December total. The recent rate of expenditure is estimated to be 33 billions annually, i.e., to say not greatly below the President's assumed total of a hundred million dollars per day. The rate will increase to 40 billions annually by midsummer. Anyway, the shift from peace to war is absolute in the field of public expenditure. It results from the building up of the sinews of war in the world's military machine. Federal tax revenue in March rose to an all-time high level of $3,547 millions. It was equal to nine months' revenue on the basis of 1929, the pre-depression base.

The ground for a bigger tax revenue has been prepared by the Lower Houses, recent acceptance of an Excess Profits Tax at the rate of 94 per cent on the earnings of all corporations. The House Committee agreed that in addition to the present normal tax on corporations earning over $25,000 annually, there should be a flat levy. The Committee decided to bring up revenue to the $2,500 million programme to be made under the corporation tax alone. Some relief will be given by the sliding scale adjustments. The revised Excess Profits Tax credit allowed on invested capital will be as follows: 5 per cent on the first four millions, 7 per cent on the next five millions; 6 per cent on the next 190 millions and 5 per cent on the excess above two hundred millions. It will certainly be a hard job to compute Excess Profits Tax liability for U. S. Steel or A.T. The U. S. stock market is distinctly chastened after the announcement. May is going to be a very dull month on Wall Street where Steel Common is just around 46 though G.M. ordinary stock is substantially over par. The financial situation with many cheaps than ever is not likely to help brokers to cash in on a war boom. The anti-inflation programme's first part as regards taxation has taken shape. The corporation tax and the 16 per cent surtax fixed by the Senate Committee will push all distributions down and certain manufacturing lines, though not textile, are likely to do far less satisfactorily than in 1941, when the growth of profits was pronounced if uneven. It will be even more unequal in 1942, but the incidence of taxation will be more equitable, since the higher levy will cut at the largest and most prosperous combines, not at the small individualist concern.

LLOYDS BANK

1677

*For every class of Banking Business*

The only item of interest is a notification concerning debts owing by British Indians to people in occupied Burma, the Andamans and Nicobars. There is no duty to report to the Custodian of Enemy Property unless the debt is due to enemy nationals. This is the first overt mention of financial relations with occupied Burma, hence exceedingly important. The problem of usual transfers and remittance will certainly emerge soon as some Indians must be left behind in spite of the heroic efforts made by the Overseas Department to get them back to India. The dependents of Andamans and Nicobars officials have been promised half-pay, so that no trouble will arise, but there may be some concern over the lack of consular representation for any Protecting Power in the lost territories. What the Government of India can do is not clear unless it be to induce the Swiss Government to ask for additional exequatur's at least in order to help prisoners of war.

A postscript to the account of banking and financial changes in Burma seems called for in view of notices to the effect that accounts, etc. of certain Burma branches will be handled at Amritsar, Lahore and other places. It is now known that even after the Government officials fled the Exchange banks carried on valiantly. After the Indian joint-stock banks closed down in Rangoon the British exchange banks went about the business of transferring funds and arranging for remittances. Before February all ordinary business was at an end, but remittances to India were heavy. An explanation for the arresting increase in bank deposits in India is indeed found in the despatch of money to India. The exchange banks largely helped many unfortunate fugitives to send money out, and no praise can be too high for the sense of duty which impelled them to stay on and help clients. The contrast between the dogged desire of bank staffs to carry on and the collapse of the Civil Administration in Burma may induce one to ask if the weakening of moral fibre was not the major factor at all times in the Burma campaign.

Prior to the transfer of offices to Mandalay the banks had discharged fully their duty to clients which is more than can be said for serving officials of any race or description. What conditions in occupied Burma are is yet unknown. While accounts of the new Chinese 4 per cent gold certificate loan are published freely in the press, little is known of what is being done at Rangoon. It is, however, clear that the Yokohama Specie Bank would be back at its job and the expulsion of non-Burman interests must have been completed. The reality of occupation of its duration may be undetermined, but it is widely assumed that consolidation of conquest is the aim. The final surrender in the Philippines was enforced with a view to make exploitation speedy. As against calculations based on the notable recovery in Burma oil shares must be set the amazing losses to Indian investors. The holder of Burma Cement, B. B. petrol, Rangoon Telephone and Burma Corporation shares is, of course, tasting the fortune of war. But sometime hence the task of estimating losses under Indian overseas investments must be undertaken. The Bombay Shareholders Association may perhaps find it a job to its taste. Relief afforded under taxation may not help to keep up the Indian balance of payments based on regular remittances from

## Popular Campaign

There is no single question on which public opinion in India has been more united than the one concerning additional food supplies in war time. For the past two months we have been made food-conscious, not in the sense of being faddists about our diet, but in the sense of being anxious to get the most out of our agriculture. When due regard is had to the amazing development of British agriculture under the stimulus of war, progress which has been analysed by Sir John Russell in his celebrated pamphlet on Britain's food supplies, we will be compelled to accept once for all the propriety of the initial recommendations made by the Advisory Council of the Board of Agricultural Research.

It may not be out of place to link the inter-provincial conference of April with the earlier recommendations. What the problem is, and why it has arisen, have been described before and after the conference. But the conference of April got all the facts in the right order when the Hon. Mr. Sarker reviewed the problem in its true dimensions. The essential function of the Conference was to take back the information provided and carry out suggestions. The cotton fund, collected from the higher import duty in force from January, will be utilised to defray the cost of much propaganda. The Central Provinces alone as a cotton-growing tract, which should for its own sake reduce the area under cotton and grow more food, will get Rs. 25 lakhs out of the assignment of Rs. 1 crore. One may readily ascribe the generous grants for what is truly educational work to Mr. Sarker's special concern over the problem that turns as much on the difficulty of importation in wartime as on the urgent duty to raise nutrition standards. For the first time the Government of India acquires a specific interest in the task of regulating or rather augmenting India's food supplies.

The problem of rising prices can be readily dissociated from that of civil defence in which food stocks play a great part. The Ministry of Food, let us remember, took shape before the outbreak of war. Food as a defensive factor was recognised long before the Dig for Victory campaign came. Now a Dig for Victory campaign in India starts in the middle of a war, but it is none the less entitled to general support. The central facts in the situation are the loss of Burma, the loss of markets for India's raw cotton as also jute, and the immediate need to build up stocks in areas liable to attack. Yet Central direction had to be vouchsafed before the Provinces could make up their mind that food crops were more important than familiar commercial crops. To the new Member for Lands goes the credit of indicating the obvious lines of advance. He touched on the supply position in each Province and for each crop. He outlined the need, if not for winning the war with wheat, at least not for losing it through lack of food. A spring-sowing campaign had to get under way, and the food planning conference of April marked the beginning. According to the latest issue of the **Indian Trade Journal**, the crop forecasts reveal a short fall as compared with 1940-41 under many heads. The outturn of sugar in 1941-42, for instance, will be substantially lower than in 1940-41. If the fall under oilseeds is in line with general anticipations, the absence of any increase in the area under rice will naturally occasion disappointment, and sustain almost exceptionally the hope that the 4 percent increase under food crops, to which the Government and the country alike are pledged, can be achieved this year without too great an effort. But an effort there must be, though it may be recorded here that the rice crop for 1941-42 is estimated at 25,567,000 tons as against 22,150,000 tons in the previous year.

It is well to recall here that rice constitutes the major problem because Burma's supplies as also imports from Thailand and Indo-China are closed by the war. The estimated increase of 15 percent 1941-42 will not provide a crop of 27 to 28 million tons needed by India which has not got to satisfy the requirements of Indian troops abroad and former markets like Ceylon. The third wheat forecast for 1941-42 which recorded a fall of 2 percent in area and 3 percent in outturn as compared with the previous year revealed recently that total output would be below ten million tons. The decrease under local wheat supplies explains price movements and the new control precedure. But the ultimate remedy, it will not be denied, is an increase in crop by diversion if not extension of cultivation. We may pause to review what will have to be done when additional population of a million repatriates will be added to India's millions and the demand for foodstuffs from the Middle East does not slacken. For the first time agriculture acquires strategic importance—butter, it might be justly said, is on a par with guns, and the farmer in the field has a conscious part in the war effort. To have made us conscious from February last of the food problem arising from this war as also of the need for immediately adding to the food supply is the single largest task undertaken this year.

Food has almost elbowed out civil defence, and the drive for regional self-sufficiency launched this year marks a departure in policy for which non-officials, particularly businessmen, may well claim credit. The press has been enthusiastic about the food plans, and Congress, it may be said in passing, views the programme with favour. A series of recommendations were made in February rather tentatively and the Provinces more especially Bengal and Bombay have adopted them. The curtailment by a fifth of the scheduled jute acreage will give Bengal much real help in implementing the advice given by the Premier in the last month shortly after the Food Planning Conference. Mr. Sarker's estimate that 2.3 million tons of rice and .35 million tons of wheat are wanted over and above the outturn recorded in 1941-42 presents the problem in a nutshell. Not reduced consumption, but larger production was rightly seen as the remedy. Admittedly short-term planning for a season or two only is practicable, and the ready acceptance of Mr. Sarker's views on propaganda, prices and the use of waste land has secured unusual importance for the various expedients already adopted to maximise food production.

By and large, the problem is seen at present as one of reaching out to wartime responsibilities. Agriculture is in need of a stimulus, altogether independent of tariff protection, and that is vouchsafed under the special plans to make loans, distribute seed and extend irrigation. Obviously the most comprehensive plans have been launched by the Agricultural Department in Bombay, but elswhere the effort has been equally concentrated, though there is no problem in Bengal as regards oilseeds or cotton.

The assurance that free trade as between producing and consuming provinces is an effective ideal means that unadulterated self-sufficiency is not the goal. Bombay should take rice from Madras and wheat from Central India while Bengal will and can take wheat and gram from outside. Minimum disturbance is an intelligible principle. The pulses are admittedly important and being unirrigated can be grown on many types of land. The U.P. assuredly resembles Bombay in importing rice, and an exchange of rice with Bengal will be therefore seen as doubly advantageous. The Agricultural Department in all the Provinces have got a lead after the April Conference, but it will be recognised at the same time that in Bengal the Ministry had its own plans for an expansion of cultivation. The goal is one of adding to the area under grain as also fruits and vegetables. Normally the growth of population will determine the optimum area of cultivation. Today, it is otherwise, as the area must be immediately extended to make good deficiencies in supplies revealed by the defective working of price control. The practical economist in Mr. Sarker could recognise the limits of regulative practicability, and the directions contained in his own analysis of the international food situation were such as to ensure independent yet concerted effort. The campaign has begun well and the diversion of acreage to food crops promises a revolution in Indian agriculture. The planner of that revolution is Mr Sarker who may yet be India's Minister for Agriculture. He has recognised well in advance that the pivotal position of food crops is demonstrated not only amid the uncertainties of wartime but in the very definite importance given at present to agriculture in many countries. The manpower regulations usually leave farm workers out and the cheerful acceptance of the demand for more food in place of that lost in war-ravaged areas in the U.S.A. is a reminder of both opportunities and responsibilities for all belligerents. On such an issue as the Grow-More food plans, the Congress can join hands with the Government, and the formula for unity is admittedly found in the eleven-point programme published last month by Dr. Rajendra Prasad. It is meant as much for India as for Bihar. The survey of limitations and opportunities as well has been undertaken and completed in most provinces, and in Bengal the special officer, who wanted to put down jute cultivation, is successfully engaged in adding to the area under food crops. Mr. Sarkar has indicated more than once that no province can live unto itself and land revenue concessions promised, for example, in Madras for three years are meant to procure a permanent increase in cultivation. By October or even earlier it will be known what success has attended the efforts under way to reduce the crop deficits and augment surpluses. A fairly efficient working of the transport system is postulated, and one may justly connect the amendments in wheat control with Mr. Sarker's judicious survey of the main crops under changing conditions. The revolution in Indian agriculture will not add to our livestock but it will mean a change in manuring methods, perhaps an addition to the irrigation facilities may follow. What is essential to grasp is that a subsistence economy is desired for certain reasons, and Mr Sarker's knowledge of foundations has served the country well in what may be a cure for many old ills.

## GUIDE TO DEVELOPMENT

The most recent and reasoned evaluation of industrial prospects in, and for India, is to be found in the December issue of the Transactions of the Mining and Geological Institute. When the "Statesman" took editorial notice of the invaluable conspectus of suggestions made by Dr. Forrester and Mr. Gilbert in the volume (available to non-members at Rs. 4 per copy) it was apparent that something unusual and exceedingly important was given to the public.

In the most careful analysis yet made of opportunities and openings, the authors are concerned mainly to show that the frontier that divides chemicals from minerals is neither rigid nor lasting. They stress over and over again that the chemistry of metals is vital for industry and whatever can be done by way of recovery of mineral by-products for chemical manufacture can only come from thorough and patient research. But it is not as a plea for research that the paper entitled "Some aspects of chemical and mineral industries with special reference to war time problems and post-war industrial development" acquires importance. It is because it is a compressed but lucid, cautious yet encyclopaedic account of much that has been done in the field of industry. Where can we get a notion of the sulphur problem or the possibilities of explosive manufacture in India? Assuredly in the promising account of Dr. Forrester and Mr. Gilbert.

The lay press can only indicate the extreme importance of a survey of possibilities and a notice of most important and varied developments. The enormous labour that has gone into the preparation of a paper that has been considered at three successive meetings of the institute cannot be too highly praised. It is enough to indicate that on very few points has information been supplemented by discussion. For the rest it may be said that the paper stands by itself though Dr. Dunn's correction on such a point as the manufacture of sulphuric acid at the I.C.C. plant is admittedly important.

When we speak of the paper as a guide to development it is in regard to its specific arguments indicating of what can be done with existing resources at present. When it is stressed that the actual basis of the Nazi war economy is chemistry it is urged that the vast combines have helped in other ways than by boosting export trade in the depression period. At more than one point German experience is cited to prove that efficiency can go with ersatz. It is not for nothing that Germany chose autarky in 1936 deliberately. The use of charcoal gas for motors on a large scale began as early as 1938. The Germans have never been less than thorough, and some of their most memorable scientific achievements belong to the present. It is insufficiently known that Germany gets glycerine without oil-fats, and the Italians have striven manfully to make out of waste much useful materials as lava. Dr. Forrester and Mr. Gilbert have no use at all for the superiority affected by the average propagandist. They prove that Germany leads Britain in sulphuric acid production, in the use and adaptation of phosphates, and above all in making the fullest use of that versatile material—coal.

Much of the paper naturally deals with coal. Coal ash is considered, for instance, as a source of other things besides sulphur and coke-oven gases and flue products are referred to as also the chances of making something out of basic slag. It is not easy to cut the arguments and restate the conclusions of an exhaustive study. We can only ask interested readers to go through the volume mentioned to know what can be done with the right kind of cellulose and what may be used just at present to develop rayon manufacture. Over and above indicating the lacunae in industrial development it has been urged that India's minerals can be used to develop a variety of chemical industries, including plastics manufacture. For the industrialist as well as the technician there is much to note, though the caution that is uttered as regards projects and the employment of adequate experts cannot be viewed as superfluous.

If the authors have disclaimed any specific purpose, it is essential to remark that in its concern for immediate development as of neglected resources it blazes more than one new trail. It is only necessary to remember Dr. Grady's suggestion that Indian industry is not yet on a war-time footing to record our own view that negligence has been the fatal flaw of our policy. The hundred and odd pages are sprinkled with suggestions. At one stage we learn that chemicals are vital for metallurgy, at another point we are instructed as to the chemicals derived from the minerals. The few plates that embellish the volume make plain the relations and ramifications. In relation to such a subject as explosive manufacture or the making of basic chemicals the notes are more than illuminated by the arrangement referred to. The inferiority of Axis resources and the infinite superiority of Allied resources have been held up as awe inspiring in the past. The essential corrective to false prejudice is supplied by a clear narrative concerning Germany's marvellous achievements during and after the last war. Research has more than paid dividends. It has made victories. In stressing for instance the fact that production of sulphuric acid is far greater in Germany and Sweden they give a good account of what needs to be done to assist in the making of fertilisers. Pyrites are known to be a source of sulphur and India's deposits of pyrites are fairly large. It will not do to distort by summary of a highly potted and extremely interesting account. It is enough to say that in advocating the importance of sulphur production in India instead of relying as in the past on Texas or Sicily the authors endorse general opinion. India has been importing chemicals. It is only now she is attempting manufacture. In the eclipse of the Chilean nitrate industry there is an objective illustration of the way in which synthetic products acquire ever-increasing importance as sources, of not one, but several materials. It is useful to recall here what is said about the nitrogen and fertiliser position. To-day when Governments evince anxious concern for the augmentation of local food supplies that will, if need be, provide a margin for exports it is essential to remember that the key to efficiency still lies in the application of science. Quite apart from the requirements of war, observe the authors, India with an average crop production per acre of cultivated land equal in value to only about a quarter of that produced in Britain and only about one third of that produced in Japan (though she is not yet demanding) all the fertilisers she can get. With proper manuring (in which nitrogen compounds would play the predominating part) crop

### Help to the Treasury

The Bank Chairmen in Britain still deliver their annual sermons. They are not content to describe; they are prone to advise, and for excellent reasons, as will be admitted. The speeches circulated with the annual reports are meant to show how far financial control can carry the nation forward to victory. They are meant to show again that banks lend the maximum aid to war production, and the impressive contrast between the Treasury deposit receipts and the Tax Reserve Certificates now popular in Britain and the Government of India's adherence to the practice of borrowing for three months at rising rates has been referred to more than once. British Banks, as shown in the Bank of England returns, gained deposits and maintained larger balances with the Bank of England. In 1941 as a whole the deposits grew but the scope for employment was even more restricted than in the past. Falling advances and rising deposits went together, and the rise in the cash ratio is explained adequately by the reduced demand for funds. Clearing banks have, therefore, been free lenders to Government. The bank's purchase of new securities, particularly, national war bonds, showed consistent increase during 1941. The locking up of a large proportion of the banks' funds in Treasury Bills and Treasury deposits reduced the profitability of banking as a business.

The National Debt has grown but the big banks have helped materially in keeping down the cost of annual service. Mr. Reginald Mckenna urged that it was because of the banking system that the Treasury could get its requirements at an average rate of less than 2 per cent. Mr. Mckenna also indicated that while deposits had risen since September, 1939 by £1.000 millions approximately £1.100 millions were made available to the Government by the clearing banks. The depositors did not suffer as pristine liquidity was maintained, but Government was the chief gainer. Because over £700 millions were lent as Treasury deposits at 1¼ per cent. and £400 million went into Government stocks, mainly 2½ per cent. war bonds repayable between 1941 and 1951.

By a singular measure of agreement the Big Five still prefer to buy weekly deposits instead of going in for 4 per cent. funding loan. In the case of a single bank like Barclays, indeed the holding of Treasury deposits at the end of December, 1941 was as large as £152 million. It was only slightly below the Bank's holding of Government securities returned in the last balance sheet as £163 millions. An appeal to have more and lend more was made to both shareholders and depositors by Lord Wardington, Chairman of Lloyds Bank. They were also asked to pay taxes in advance through the certificates made available by the Treasury from December last. This alternative method of investment might conceivably reduce the normal increase in deposits and pull down profits, but the Chairman of the Big Five are convinced that to save more and lend more is the whole duty of the citizen in time of war. Curtailment of all private expenditure in order to minimise the risk of inflation was uniformly advocated. Lord Wardington, for instance, discussed the need for saving everything possible and refraining from entering into competition of trying to buy consumable goods, the quantity of which was limited and the price of which tended to rise with every fresh competition to buy, while the effect was to diminish the purchasing power of the pound. That a certain amount of inflation in war is inescapable has been recognised by many, but what is desired is a severely controlled rise in profits, prices and wages. Nothing else appeals to Britain's bankers who discussed not the changes in individual balance-sheets but the duty of the citizen to provide more of the sinews of war. The Bank Chairman endorsed the idea of prepayment of taxes which would limit the growth of taxes and withdraw purchasing power from depositors who might possibly succumb to the temptation to take money out and spend it.

### New Zealand's Record

New Zealand's finances have improved in spite of the war. The claim made by Mr. Nash as to the very satisfactory conditions at the beginning of this year, was based upon experience prior to March, 1941. The small Dominion is said to have done better than any part of the Empire. In fact, New Zealand's experiments in import and export control before the war had conserved exchange for debt service by that means. Moreover, the Labour Government had actually become afraid of adding to its debt, and equally keen on creating a sound economic basis for the country. The results are assuredly seen in the steady rise in the overseas assets of New Zealand banks. These rose from £8¼ million before the war to £33 million in May, 1941 and were never below £22 million during 1941. Overseas debt has not increased appreciably though New Zealand forces have been serving abroad. In the year ended March, 1940, the net addition to internal debt was £18 million; in the succeeding year it was £26 million. In the financial year 1940-41 half the revenue came from taxes, and ordinary civil expenditure was successfully reduced. There was actually a surplus of receipts and the New Zealand budget has since been reinforced by special tax measures. These include a national security tax of 5 per cent. on wages, a surtax of 15 per cent. on income-tax, an additional 5 per cent. on the sales tax and increased customs duties, beer duty, postal charges and succession duties.

Total revenue from all taxation was £61.2 million in the year 1940-41 as compared with £37.8 million in the last pre-war year. Big Governmental spending has influenced the cost of living which has risen but there were no signs of inflation in the rise in note circulation. In the Dominion, it was proportionately lower than in Britain or other Dominions. The most striking feature there is that prices have been relatively stable, though imports of consumers' goods have been reduced to less than half, in both value and volume, while increases in local production were too small to cover the deficiency. Price control has admittedly been helpful but the sterilisation of purchasing power is an even more important factor. External assets built up in London have been applied chiefly to meet overseas war expenditure. The export surpluses of recent years were applied towards paying for the troops serving overseas. The new wealth has been taken off at source. Government has succeeded in reducing ordinary expenditure while adding to the war outlay. It is clear that not only the wool and gold-mining industries can count on steady progress when the man-power regulations have interfered with the supply of labour. The Labour Government's success in dealing with prices and wages has inspired the belief that without such luxuries, as a stock exchange and houses for new issues, New Zealand has not failed to develop secondary industries, notably, boot and shoe manufacture.

### Fighting Inflation

The freezing of prices and wages at or around the level of March is an accomplished fact in the U.S.A. The President's message has given satisfaction to Mr. Henderson who has gone on record by saying that no harm would come out of the new control measures. The prompt freezing of export prices was meant to show that the Government was in earnest. The next newsworthy item was the adoption by the Lower House of a bill to tax excess profits at a flat rate up to 94 per cent. in the case of all corporation with an income exceeding 25,000 dollars per annum. The 75 per cent. levy is replaced by another revenue measure. Since wages are frozen under agreement or otherwise, the plain point of stabilisation is one of curbing the rise in prices of all primary products. Though the advance up to March must be due to the expansion of output the urgency of not revising periodically contract prices had become great. The War Labour Board had also to be relieved of the trouble of investigating if the cost of living had risen. The freezing of hoarded dollars is an ancillary purpose of the anti-inflation campaign. The note circulation in the States has risen while banks have in the past year been relatively free lenders. The cost of goods having risen, the lack of goods like cars and refrigerators was not felt so much. Reduced leisure again curtailed travel and saved money.

The second part of the U. S. plan lies in bringing the idle money out for war effort. With the assurance that the purchasing power of the dollar at the time of repayment would not be greatly altered, the individual buyer of war savings bonds can have few apprehensions. Mr. Roosevelt has through his last Message taken up a definite stand as a hard money man. That is something unusual, though his argument in favour of a maximum income of 25,000 dollars can hardly square with his receipt of 1 million dollar from his mother's estate. The cost of living in the U.S.A. is shown to have risen sharply. It will no longer rise. Compare the price control procedure in India with the all-in plan of the President to show that two vital features, taxation and savings, are absent in India. The Indian Government's credit may not have fallen, but its inability to borrow stands fully revealed. The enormous rise in note circulation and the unchecked rise in prices have impelled many to refrain from investing in defence bonds, on the score that at the time of repayment, the rupee would not be what it is. That is to say, the fear of inflation has checked investment. In spite of formal assurances there is much to suggest that the fear still hampers the public in its view of giltedged as against equities. The majority of observers are still unimpressed by the recovery in securities and stress the value of selective buying of shares of companies in safe regions. Whereas the Federal Reserve Bank's reports and circulars convey spirited appeals to U. S. citizens to buy savings bonds the official publications meant for perusal in many quarters convey nothing that suggests that it is the business of the Indian citizen to help win the war with his money. The buying of defence savings certificates outright or through stamps has tailed off miserably. A fairly recent study of currency figures has indicated that much money remains outside the banks and has not gone into investment. Hoarding explains, for instance, the shortage of small coin reported in Madras only last month. The danger of pent-up purchasing power is hardly realised and one might even say that if the normal volume of investment, say Rs. 5 crores a month, had continued, the prices of foodstuffs would not have risen as steeply as they actually did in recent months.

### More Food Campaign

A lengthy survey of additional food production possibilities in the immediate future is ruled out. From efforts made in a hurry by the Bombay Government to turn cultivators away from cotton to rice and millets, it might be readily inferred that the food shortage question affects Bombay most. Later in point of time came the grow-more food campaign though the Government of India, if it were aware of the results of the Burma campaign, might have made a brisker start. India was, according to the reckoning of many, the largest importer of rice, though she was at the same time an exporter of both wheat and rise. While export demand may survive the sources of rice imports, Burma, Indo-China and Thailand are all closed, and the idea of the protectionist has been reached as regards both wheat and rice. It has been argued that if free inter-provincial trade goes along with regional self-sufficiency, there will not be any problem. Even the recent loan on the transport of cotton may help to put more wheat and rice into Bombay.

Some concern has been expressed by sugar interests in the U. P. which apprehend a fall in cane cultivation. It is however, admitted that prior to the food crops stunt the U. P. Government had freely pledged itself to a grow-more cane campaign. Bengal grows more rice than any province as was shown by the last forecast which also showed that the Ministry's policy of restricting the jute crop has helped Bengal alone to increase the supply of rice substantially. It may be readily asked whether a system of export bounty (corresponding to the export duty on rice) should not be operated to help Bengal. Other Provinces must pay for such timely help. The Ministry is prominent among the supporters of the grow-more food campaign, and the first original impulse to the official campaign was given by the Bengal Premier's appeal to the Province.

It has been since pointed out that in regard to wheat and gram Bengal depends on outside supplies. Requests to grow more fruit and vegetables have been featured of late. In the U. P. as in Bombay, there is a shortage of grain. Here again, there is an obvious limit to the cultivable additional area. In Assam the eagerness to cultivate rice has been officially approved. The C. P. has a more difficult situation to meet and the cotton restriction plan's success hinges on the success of the food production plans there. A deficiency of wheat as also of rice has been noted in the Central Provinces. The Punjab is an exporter of wheat and grain but needs rice and millet. How the surplus-shortage will be adjusted is dependent as much on the availability of wagon space as on abundance in other provinces. The extension of irrigation is admittedly difficult but where the monsoon is unfailing, as in Assam, the possibiitly of a substantial increase in the outturn of food crops is certainly admissible. The eagerness of the States to imitate British Indian policy is illustrated by the policy adopted in Mysore recently to encourage food crops. Rajputana is peculiar in being deficient in food crops, and the wealthy fugitives from the coastal towns may soon find the position trying. Whether the reports of scarcity and high prices have impelled the Government to take up the question of adding 4 per cent. to area and yield or not the results to be discussed after October may not be independent of the local Governments' own efforts. There is the assurance that the latter are keen and active in this matter. Admittedly there must be more than propaganda to produce results and it is only in the U. P. that there is more than usual readiness to note the need for increasing the supply of manure.

### Swiss Experience

A rise in employment characterised 1941 in Switzerland. This goes far to explain the very even keel on which the finances of the confederation were maintained though a sharp rise in public debt indicates that neutrality has its penalties. The general financial situation was by no means unfavourable and Swiss banks continued to gain deposits. Savings grow as before and credit was easy enough. Commercial banks' deposits in the aggregate increased by over 200 million francs and savings banks' deposits also showed a moderate increase during the year. Almost alone among Central banks today the Swiss National Bank reported an increase in total assets exclusive of the exchange stabilisation fund liquidated at the end of April 40. An increase of 438 million francs testifies to the strong position retained in a difficult period. Almost exceptional was the very small rise in note circulation reported by Switzerland. A recovery in the market value of industrial securities was recorded in the past year perhaps through the inflow of previously exported capital due to fears of freezing orders abroad.

The best guide to the financial situation in Switzerland was the bank rate at 1½ per cent in force from 20th November 1936. There were few signs of strain in the Confederation, though the economic situation was not easy, as the blockade interfered with imports and Switzerland lost more markets, with the result that she came more and more to look to Germany for trade. The high credit of the Federal Republic was supported by the ample reserves of the Swiss National Bank which at the end of 1941 amounted to 5557.5 million francs—of the easiness of money conditions the lowness of the acceptance rate for 3 months' bills at 1¼ per cent speaks eloquently. The only snag in the economic situation was the rise in the cost of living, due largely to short supplies of many things including fuel. The lowness of interest rates is mirrored in the reduced yield on national railroad stocks falling to 3 per cent and the lower yield on first class mortgages which dropped to 3.83 per cent. The advance in wholesale prices, and consequently in the cost of living, forced up public expenditure which rose further independently of the Confederation's policy. Yet it must be admitted that the repatriation of capital helped to relieve distress, and enlarged military expenditure was not without its advantages. Exchange was fully steady and the Swiss franc in terms of sterling and dollar was absolutely unaffected by external developments. While the background was not unfavourable the fiscal position was in no wise improved. The 1941 deficit was bigger than the 1940 deficit and it is now known that only less than a third of emergency expenditure in the 1939-42 period will be covered by taxation. Though 320 million come from conversions there was a staggering rise in the Confederation's debt. The growth of public debt is the permanent feature of modern Europe including Switzerland. Various fiscal devices including a defence tax and a capital levy have been adopted like a war profits tax. Without being at war the expedients of wartime have been taken over by Switzerland.

### Hessian Control Order

In December last was adopted a new system of allocation and conservation of burlap. The April bulletin of the Indian Central Jute Committee reproduces the text of the order issued in Washington to regulate preference. A long list of definitions prefaces the Order which lays down that in regard to stock-piles preferences should be given to heavy construction. All control of supplies is vested in the O.P.M. which prescribes that two-thirds of imports shall be set aside and the balance distributed as laid down by the Order. An important clause lays down that any person on securing shipping space in Calcutta or other part of shipment for burlap for import to the U.S.A. shall fill such shipping space with ten ounce construction or heavier to the extent available. To the extent that heavy goods are preferred hessian and sacking is at a disadvantage and in recent months it will have been noted that heavy goods have been quite firm while hessian was weak. Restrictions on delivery or processing also are in force. The O.P.M. let it be known that unless wanted for bags the burlap should not be used without permission. For every other use the sanction of the O.P.M. was required. Quotas came into force, and importers could not handle quantities in excess of that allowed for importers and bag manufactures. The quotas were determined with reference to average takings for the 1935-39 period though provision was made for adjustments if ports of receipt varied. No one who was not already in the importing line in 1940 could become the holder of a quota. These manufacturers of bags who depended on imported fabric were not left unprotected in regard to price and terms of delivery. The prescribed base was the quantity purchased in 1939 and 1940. The control order took into account the requirements of non-importing bag manufacturers and thirty days'supply of burlap was ensured under the terms of the order. The terms of business as between importer and non-importing manufacturer were also regulated, and the quotas being separate, the importer cum manufacturer could get dual supplies.

The essential requirements of agriculture explain the scope of the order which undertakes that bag needs for 1942 would be considered, even though such user might not have taken bags in 1941. Overstocking by buyers is prohibited and in regard to stocks the secondhand bags will be treated as available for direct users. The bag manufacturers were forbidden to keep more than thirty days' supply of burlap and the O.P.M. alone was free to make adjustments or make use of waived, unused or forfeited quotas. Quotas were fixed to the nearest 25 bales and bags were allotted on the basis of the nearest thousand. Those holding more than ten bales of hessian were asked to report before January 1. Even previous contracts which were inconsistent with the Control Order were prohibited. The provision for re-use was implied in the prohibition that no person shall to the extent practicable slash or otherwise mutilate burlap bags as a means of opening the same. To the extent practicable, all persons filling agricultural bags shall close them in a manner which will permit speedy and intact opening of bags. To the extent practicable, users shall empty and return such bags or sell such bags for re-use through existing channels. The Order came into force from January, and the manner of using stock-piles was settled by an amendment to the control Order which specifies orders of the Defence Supplies Corporation or other affiliate of the R.F.C.

### Cotton Consumption

Inspite of the various difficulties referred to by the Chairman of the Bengal Millowners' Association at the recent annual meeting, there is much to suggest that Bengal's cotton mills are doing well—perhaps better than the jute mills. It is known that raw cotton consumption in Bengal during 1941-42 discloses no falling away. The striking increase in imports from Sind indeed suggests that apart from the port of Calcutta the most important port for Bengal is Karachi. The fuel problem and labour shortage are more recent and largely unrelated questions. Whatever be their bearing on the outlook for Bengal's mills it is only necessary to look at the cotton trade statistics to recover natural optimism for the Bengal statistics reveal a continuous and smart rise in receipts of cotton by rail and river into Calcutta. In spite of a fall in takings from the U.P. and the Punjab, the total quantity imported into Bengal was as high as 112.191 mds. as against 74.866 mds. in the month of December 1940. The total imports into Bengal from September to December 1941 were as much as 328.942 mds. as against 206.406 mds. for the corresponding period of 1940.

The pronounced increase in consumption of Indian cotton indeed suggests that Bengal's mills which got the bulk of their cotton through Calcutta, were busier than ever. Though the U.P. grows and consumes more cotton the takings in December actually showed a fall in comparison with December 1940. A noteworthy feature was, however, provided by the advance in imports of cotton from Central India as also the C. P. and Berar. In view of the fact that war introduced vast and far-reaching changes, it is not hard to see why imports in December into the maritimeprovinces eg. Sind fell away sharply as compared with 1940. Imports into Bombay from the Punjab, though not Sind, showed a striking fall, and the increase in receipts from Guzerta merely pointed to the stagnation of the trade at that time. Imports of cotton from the Nizam's Dominions showed a strong decline although Madras took more cotton from the Nizam's Dominions during the same month. The cotton statistics at any time are a fair guide to mill activity, and one may note in passing that Madras comes after Bombay in regard to cotton consumption the mills there getting over half the cotton from within the province. Neither the U. P. nor Bengal obtain considerable part of their cotton from within the home province, and the more rapid development of the textile industry in Madras would therefore appear to be

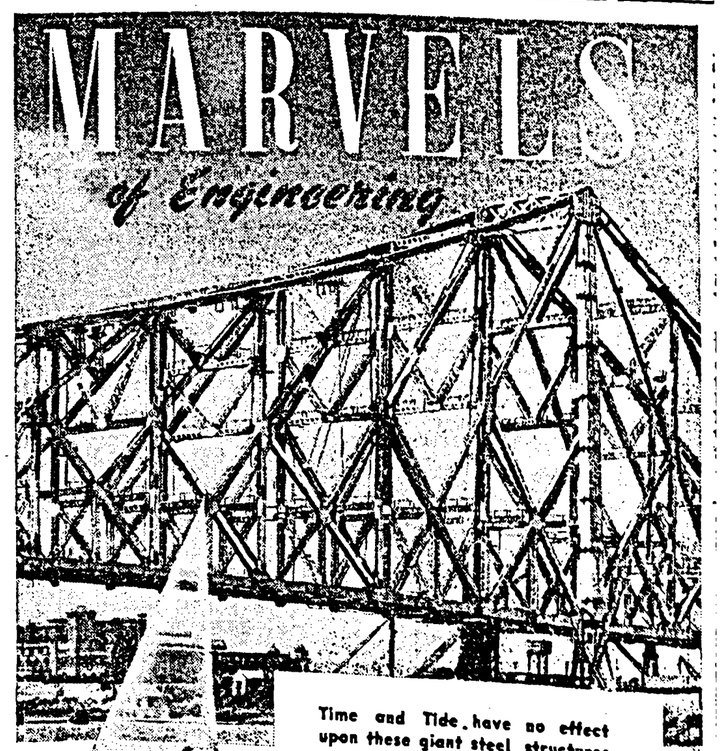
justified by more reasons than one. The Madras Presidency incidentally exports a sizeable part of its cotton crop, mainly to Bombay, though in the period under review, the exports recorded a decline as compared with 1940.

---

**Metal Shortages**



Certain facts about base metals deserve to go on record particularly after the loss of Lashio and the widely accepted belief that Burma's minerals are closed to the Allies by voluntary destruction. Zinc and tin are metals for which Burma was famed, and if Bhamo up north, has not been lost there is the fact that after piercing the Shan States, the Japanese have passed beyond Lashio along the Burma road into Chinese territory. India is a sure sufferer, and the pressure on Australian supplies will cause disturbance to all consumers of spelter and lead in India. Control orders by themselves cannot ease the supply position, and recent experience with reference to tin underlines our natural pessimism. London may still quote £260 or so for one ton of standard tin for spot delivery but the Indian price is far higher than the December quotation. The immediate effect on the Bombay metal market may be unknown as yet but in regard to Bombay's views based on the difficulty of getting silver from Burma, it may be expected that a sharp rise in prices will follow. The Germans may be hard up for silver, but the Empire, too, will lose an important source of silver through the difficulties created by the Japanese.

It is not only oil of which Burma was an important producer, Tungsten and tin are metals for the Empire's war effort and these too are lost like Malaya's minerals and Borneo's untapped riches. In regard to tin alone the Japanese are singularly well-placed at present. The tin output which she controls in Thailand, Indo-China, Malaya and the Indies amounts to over 60 percent of the world output. The tin islands of Banka and Billiton were among the foremost producers in the Far East, and if their output went to Europe's smelters, they were none the less valuable. Unoccupied China and Burma in conjunction produced usually about 6 percent of the world's tin. Since 70 percent or so of the world's tin comes from areas in southeast Asia lost to Japan, the Allies have at present a tin problem. The easiest way of meeting the situation would be to increase non-Asiatic output. As much as 30 percent of the world's total output of 100,000-150,000 tons annually is obtained from Bolivia, which is responsible for five-sixths of the production, the Belgian Congo and Nigeria. Europe provides little or nothing, though it has been noted frequently that the ancient mines of Cornwall have acquired special importance of late. It has been urged that the output of Nigeria and the Congo might be increased to about 20,000 tons each—nearly twice the 1940 production in either case. The U.S.A. also built up considerable stocks throughout 1941 and these might possibly redress the balance for some time. It was indeed said sometime ago that the U.S.A. held tonnage equal to a year's consumption. A further suggestion, made quite early, related to economy in consumption both by reducing the use of tinplate and the use of substitute materials. As noted last week silver is a handy substitute at any rate in the U.S.A. The winning of tin scrap might also be carried further. As was noted not long ago in regard to rubber as well as tin salvage might yield a large quantity. In 1937, for instance, the U.S.A. got as much as 27,054 tons equal to a quarter of its total consumption through the treatment of scrap.

---

**Co-operative Banking**

To supplement the facts and observations contained in a semi-official review published in December there appeared then another survey of co-operative banking, not of the whole movement, but of the place of co-operative banks in the financial system. Though co-operative banks and their resources make a poor showing when compared with the enormous assets and liabilities of India's joint-stock banks, it is essential to remember that co-operative banks are important particularly for places which are not served by branches of the larger joint-stock banks. In Bombay alone co-operative banks serve 137 towns and further in 98 of these towns there are no jointstock banks. As many as 90 of the 98 towns could claim a population of 20,000 and there is a real need for banking facilities. Mr. V. L. Mehta concluded that co-operative banking is the only form of banking that can suitably meet the needs of small sized trading and industrial centres and of the countryside. The habit of self-government developed by co-operative banks is not the least of the advantages vouchsafed under a system that has provided India with 10 provincial co-operative banks. These banks have deposits, in some cases exceeding one crore and in times of strain undoubtedly attract deposits away from commercial banks, for the semi-official status of the apex banks is regarded by many as a guarantee of safety. According to Mr. Mehta, the provincial banks held deposits totalling Rs. 7.6 crores and had a working capital exceeding Rs. 12.85 crores. If co-operative enterprise has not had conspicuous success it is assuredly the most familiar and universal form. In aiding rural credit societies the co-operative central banks which controlled over

Time and Tide have no effect upon these giant steel structures —the pride of modern engineering.

They will serve generations to come, as vital links in the chain of progress.

Rs. 31.61 crores have long played a prominent part. Co-operative banks can dispense with the impersonal mechanism of joint-stock banking and can afford to relax conditions. It can again depart from the principle of making short-term advances only and safety in this case is ensured by Governmental control of the movement. As Mr. Mehta shows there is no single pattern and the making of produce loans has been embarked upon to the advantage of banks and agriculturists. If the primary societies appear scattered with resources diffused rather than concentrated, the secondary non-agricultural societies called banking unions are gathering way. The provincial co-operative banks are free to undertake banking business as permitted under their bye-laws and under the co-operative societies act and rules thereunder.

---

**Railway Earnings**

If Customs revenue for 1941-42 fell short of anticipations in several respects it is otherwise with regard to railway receipts. The last 11 days of March showed a further increase in State railway earnings so that the total for the year showed a rise of Rs. 15.44 crores on the preceding year. The gross earnings for the fiscal year ended March 31st amounted to Rs. 127.6 crores as against Rs. 112.16 crores for 1940-41 and Rs. 98.43 crores for the year before that. The increase in earnings is naturally most pronounced in the case of the G. I. P. whose total receipts show a rise of Rs. 4.18 crores on the previous year. The next largest increase is reported by the N. W. R. whose total receipts rose from Rs. 19.08 crores in 1940-41 to Rs. 22.09 crores in 1941-42. The smallest increase of any railway was reported by the A. B. R. whose total revenue for 1941-42 was only Rs. 7 lakhs above that for 1940-41. Among the state-owned lines the Tirhoot and Lucknow-Bareilly lines reported indifferent results. It is clear that military traffic contributed largely to the increase reported by the G. I. P. and N. W. Railways last year. The railway surplus besides being larger than anticipated promises to continue into the present year. The most recent communique shows that progressive improvement in revenue still characterises the Indian railways.

The increase in railway revenue last year occurred in spite of a fall in the total number of wagons loaded. There was a decline on both the broad and metre gauges though the increase under miscellaneous full wagons testifies to the nature of wartime demands. The wagon statistics indicate also that chronic shortage of wagons led to the fall in coal and coke meant for the public and foreign railways on both broad and metre gauge. The fairly large increase under oilseeds is almost unexpected, but the total for wagons of all classes suggests that the shortage under grain and pulse, fuel etc. noticed towards the end of the year was not altogether independent of reduced wagon space. The Railways certainly helped the public by reducing their transport of home line stores and materials. As against the fall in miscellaneous smalls must be recorded the increase in miscellaneous full wagons. Though the negligible fall under loadings on broad gauge and of 2.4 per cent. in the metre as compared with the number of loaded wagons in 1940-41 may suggest that the material damage arising from transport shortage was small, reference must be made to the fact that this decrease in wagon loadings arose at the same time as a curtailment of coastal trade. It is the lack of naval protection that lies at the root of India's transport problem just as it cuts at the growth of exports.

*The only Indispensable and Authoritative Annual Reference Book and Directory for the Indian Sugar Industry*

THE INDIAN SUGAR INDUSTRY—

(1941 Annual)

With a foreword by Mr. D. R. SETHI, Director of Agriculture, Bihar.

Chief Features:

★ Retrospects and Prospects of the Sugar Industry in India in 1940-41 and 1941-42.
★ *Modus Operandi* of the Indian Sugar Syndicate Ltd., Cawnpore.
★ "The Sugar Industry at a Glance," containing Statistical Tables pertaining to production and consumption of sugar, imports and exports of sugar, production of Gur, Cane-crop, Duty and Revenue from Sugar, etc.
★ The Sugar Industry (Protection) Act, 1932 (Temporary Extension), Act, 1938 (Protection), Act, 1939, and Protective Duties Continuation Act, 1941.
★ The Sugar Factories Control Act of U. P. and Bihar, as amended by the latest Amendment Acts, enacted in November, 1940, and January, 1941.
★ Extracts of U. P. and Bihar Sugar Factories Control Rules, as amended, upto December, 1941.
★ Details re: U. P. and Bihar Sugar Commission, Cawnpore.
★ Necessity of Regulation of Industry on an All-India basis.
★ Discussion on Export Prospects, and Control of Industry.
★ Comparative position of the Industry in various parts of India.
★ Capital and Dividend Statement of Sugar Mills. (Latest).
★ Complete and up-to-date list of Sugar Mills, working and projected, with addresses of Managing Agents, etc.

Carrier Air Conditioning For HOMES & OFFICES

VOLKART BROTHERS ENGINEERS BOMBAY : CALCUTTA

It was in 1916 that I had the privilege of being admitted into the intimacy of Rai Bahadur Purnendu Narain Singh in Patna. He was a great theosophist; and, within a few days of his coming to know me, he proclaimed that I was a born theosophist and initiated me into the rites and mysteries of theosophy.

In 1924, I presided at a meeting in Bombay in which a Parsee girl fresh from the college was discoursing on Bahaism. After my concluding remarks, she felt convinced that I was a born Bahai. She, too, wished to convert me, but I put her off on the plea that, if I was a born Bahai, where was the need for any formal ceremony.

Since this war began, I have felt that I am, so to say, a born National Fronter. In the very first week following the declaration of war, I strongly pleaded for a truce to all political controversies, for giving up hair-splitting interpretations and meticulous definitions, and for an effort to bring together all the parties so that an army of five million could be raised and equipped in India.

I also pleaded for the organisation of a national front in finance and industry.

Despite my instinctive partiality for a national front, I must own that the recent appeals under official auspices for the formation of a national front leave me rather cold. In a full page advertisement that has been published in a paper which basks fully in the sun of government patronage, we are told that "words will not stop the Japanese."

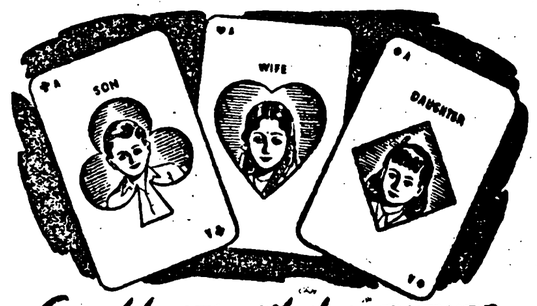
In his Thursday's broadcast, His Excellency the Viceroy also emphasises that a national front will not come into being just by wishing or talking, but only by doing. We have had quite a lot of wishing and talking, propaganda through the routine channels and advertisements in the favoured papers. But we are yet to know what exactly the authorities propose to "do"—what exactly is the concrete plan of action.

The address of Lord Linlithgow is well conceived and finely phrased. Day before yesterday's broadcast of the Hon. Mr. Fazlul Huq was likewise in forceful and convincing style.

But, analysing the addresses, one is still left with the question: "What am I to do?"

The following extract from His Excellency's broadcast is hailed as the most striking passage, as the central point, of his thesis:

"We must achieve unity and action and we must combine them in a spirit of attack. Passive defence or masterly withdrawals, forced on us as they are at times, do not win wars. Let us attack our work, attack the rumour-monger, attack the defeatist. We must make our front an attacking front, and think always in terms of the offensive."



Let us examine this passage carefully. It is the Congress that has been proclaiming that India is united. Lord Linlithgow and Mr. Amery have repeated, with wearisome monotony, that India is made up of opposing camps, irreconcilable groups. His Excellency is now anxious that unity must be achieved; how does he propose to set about this objective?

His Excellency is equally insistent on action. For nearly twelve months after the war began, there was masterly inactivity in this country. The plan of a hundred thousand army was thought of only in June, 1940. Even now, red tapism cramps war effort; and our gods in New Delhi cannot yet be convinced that they cannot plan a war from a centre so out of touch with real India.

We agree that passive defence or masterly withdrawals do not win wars. Readers of this column will appreciate that the most notable development of recent weeks is, in my opinion, the shift-over from the defensive to the offensive. British war strategy in the Far East has been one of the defensive, one of withdrawals. For the new spirit of offensive, we owe much to the energy, initiative and confidence of America.

His Excellency proposes that we should attack our work, attack the rumour-monger, attack the defeatist. Is this all the attack that is contemplated? All of us, in our own spheres and to the best of our own light and understanding, are attacking our work.

The best way of attacking the rumour-monger is to give news in time and in full. The kind of press censorship in

vogue is itself a breeder of rumours. If there is an alert in Calcutta, the newspapers here are told that we must not report it. At the same time, readers of the dailies in Calcutta are able to read full details of the alert in Tuticorin. I referred, only the other day, to the alert in Madras being magnified into bombing of the port and the fort. Rumour-mongers will find that they have no trade left if the public know that full news is being given by the Government without any undue delay.

I have, I claim, played a lustier part than any other agency in attacking the defeatist. But what are we to think of a government which announces to-day that the capital of the province is in danger; that all offices should be transferred to various centres, that people are advised to leave the city—and on the morrow, blandly proclaims that the danger has passed; that the offices will be reassembled in the capital; and all those who left earlier have to return?

It is for this reason that I have attached the greatest importance to the categorical assurance given by the Governor of Bengal that, air raids or no air raids, he will be staying in Calcutta.

It is for this reason that I insist on the heads of business staying on at their headquarters as this will be the most pursuasive sign and symbol to the staff and workmen that whatever danger there might be, will be shared by the employers with the employees.

The objective of the offensive outlined by the Viceroy is not sufficient. We need to attack not only our work, not only the rumour-monger, not only the defeatist, but also the enemy.

The offensive against the enemy is primarily through the defence forces organised by the Government. General Wavell furnished a few details about the strength of our defence forces; and this has gone a great way to reassure the public. More information of this kind supplied at regular intervals by the Commander-in-Chief will be the best form of propaganda for war effort.

The attack on the enemy has also to be waged by the civilian population in this war. The official attitude till recently was one of inappreciation of the significance of civilian morale to this war. The appreciation has now dawned on them. Better late than never. But the question is: Is this belated dawning the right kind of dawning?

His Excellency quotes General Wavell who said that, of all the elements which contribute to success for modern war, the spirit of the people is the most important. Lord Linlithgow adds: "That is our responsibility, yours and mine; and that is why I invite you again to join together in building a national war front."

To the question how, while we, the civilian population, are unarmed, we can take any part in the war, His Excellency furnishes the following answer:

"Well, here is my answer to that. Were the people of Great Britain armed in June, 1940? Were the people of Russia armed in June, 1941? During the long agony of China, have ordinary men had arms in their hands? The answer is 'No'. The mass of the people have never carried arms in any country or in any modern campaign."

It is true that the people of Great Britain were not armed in June, 1940; but the Government of Great Britain and the people of Great Britain were one and the same. It is true the people of Russia were not armed in June, 1941. But the people of Russia were fully attuned and at one with the Soviet Government. It is true that the ordinary men had no arms in China. But the Chinese people and the Chinese Government are one and the same. From the point of view of civilian morale and of the contribution which the unarmed forces can make to the defeat of the enemy, the essential condition is that the people must feel that the government is theirs and the war is their war.

The gap between the people and the Government in India has been growing wider and wider. There can be any reality in a national war front only when this gap ceases to exist.

This seems so obvious a proposition that it is difficult to understand why the political question is being allowed to drag on unsolved. Sir Stafford Cripps did intend to find a solution; and it is even now a mystery why the breakdown occurred at the last minute.

If the recognition of the importance of civilian morale is earnest and sincere on the part of the Government, they must not be content with the view that Sir Stafford Cripps had done his best and that there is nothing more to be done. Complete identity between the Government and the people is the 'sine qua non' for the upkeep and inspiration of morale among the population; and, till such identity is induced and stabilised, it is the task of the British Government to pursue their efforts at finding a way for reconciliation.

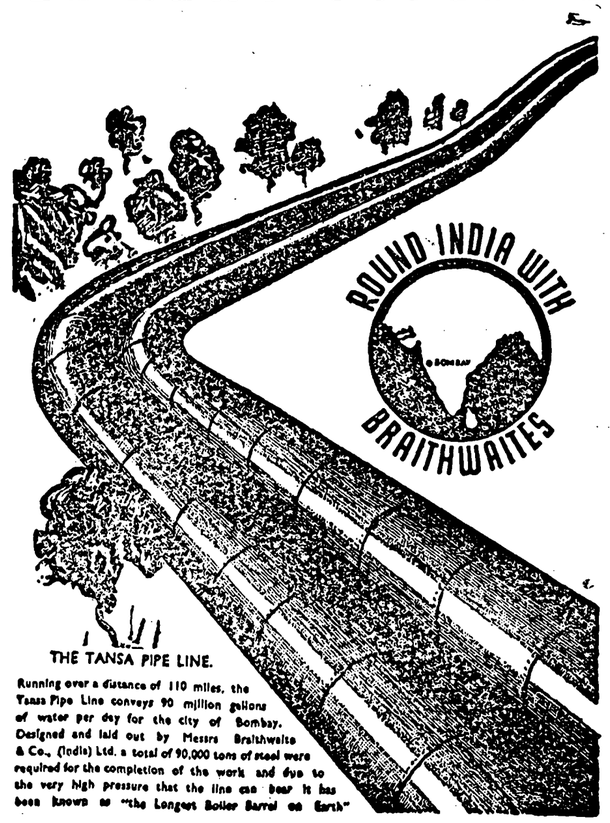
Apart from the settlement of the political problem, the people will have more implicit faith in the government only if they could be convinced that racial superiority, racial arrogance and racial discrimination are things of the past. How can Indians have any genuine concern in a war in which they see that every important function is reserved for Britishers.

We have heard much of the Indianisation of the Viceroy's Cabinet. But we would like to know how many secretaries of the dozen departments are Indians. Of the many appointments that have been created in the war supply department, how many are filled by Indians and how many by Britishers, many of the latter utilising the War Supply office as a pretext to avoid going to the front?

Take a simple matter like the handling of Government publicity for pilots or nurses, for national front or patrol. In all this broad expanse of India, the Government of India could not find Indian firms or personnel to handle this business. Handling of government advertisements is now a preserve and a monopoly of four foreign firms. There is no getting away from the fact that the public have yet to know that racial superiority is not the policy of the government.

While a war for equality and freedom is being waged, we still hear of cases of racial arrogance in India. There was the recent case of an Indian civilian being kept out of a railway compartment by a British publicity official. I shall narrate two recent episodes. A very high Indian official was sitting in the lounge of a hotel in Calcutta; and he was accosted by a European stranger who asked him for some information. This gentleman replied sitting in the chair. The European was offended and said that, while answering him, the Indian should stand up.

In another case, a clerk was sitting on a stool which was between two lifts in a building. A European was ringing the bell of one of the lifts, when the Indian gentleman pointed out that that particular lift was not working and that he should ring the other lift, "You must stand up when you talk to me"—pointed out the Sahib. "Well," quietly replied the Indian friend, "for all that I care, you can damn well go on ringing the bell of that lift."



Racial arrogance, at all times irritating, is an inexcusable crime in present conditions. I wish the Viceroy and the Governors speak straight from their shoulders to their countrymen in this country so to regulate their bearing and behaviour as to give no occasion for complaints of racial arrogance.

*Match point*

Don't keep your Gold Flake to yourself! That's one of the rules of the game, if you wish it to be a love game. Remember how popular they are with women nowadays. It's the flavour of the really fine Virginia tobaccos of which Wills's Gold Flake are made that appeals to the ladies as much as to you. So, if you want to be the court favourite, be generous with your Gold Flake.
WILLS'S GOLD FLAKE
*is the man's cigarette that women like*

New Delhi, May 7.

No clear idea is yet available of the Government's intentions in pursuance of the Cripps proposals. If anything emerged at all from the recent India debates in Parliament, it was the general desire that the Cripps negotiations, far from being regarded as a failure, should be fully utilised for a further effort. Apparently Whitehall has been awaiting the developments in this country following the recent A.I.C.C. meeting. The revolt of Mr. C. Rajagopalachari has undoubtedly deep political significance, for the issue which it raises—an issue upon which depends the fate of Mr. C. Rajagopalachari's new move itself—is the extent and reality of power which Ministries can expect to have. From this point of view the memorandum which certain Indian Memoers of the Viceroy's Council are reported to nave handed over to the Viceroy has particular importance. The memorandum is believed to contain several far-reaching recommendations for improving the position and influence of the Viceroy's Council by the adoption of suitable conventions. Why should this not be done immediately in furtherance of a forward political programme to satisfy the country? It seems likely that the Viceroy is already considering certain plans—particularly the further expansion of the Viceroy's Council and its complete Indianisation. If in addition an understanding is reached on the subject of conventions which the Viceroy's Council should observe, it is bound to be helpful.

* * * *

Mr. C. Rajagopalachari has been spending some days in Delhi after the Allahabad meeting and discussing the political question with his friends, official and non-official. His strong conviction is that at a time like this when the danger of enemy attack, if not actual invasion, is imminent in South India, no time should be lost to set up popular Ministries on an all-party basis. Mr. C. Rajagopalachari seems to be confident that he will be able to gather sufficient support in his province to bring the required pressure on the Congress High Command. The authorities are now probably realising that the presence of a popular Ministry will not only be steadying influence on the public mind but prove really useful in the task of carrying out Defence measures on a national scale, but they are, for their own reasons, unwilling to take any positive step at the moment. The statement made by Mr. Amery in the Commons has revived a certain measure of hope, but so far there has been no encouraging sign from the leaders of the Muslim League. If there is to be an all-parties Ministry, it can only be with the co-operation of the Muslim League. New Delhi is waiting to see whether it will be possible to bring about a meeting between Mr. Rajagopalachari and Mr. Jinnah for discussing the question.

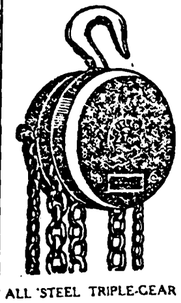
* * * *

There have been two or three meetings of the Viceroy's Council since His Excellency's return from Dehra Dun. Two questions of immediate importance which have been engaging attention are the Production problem and the Home Guard proposal. The American Technical Mission completed its preliminary discussion with the officials here and have now gone on a tour to Calcutta and Bombay. After its return the Mission is expected to draft its recommendations. As has already been indicated in *Indian Finance* the organisation of a separate Department of Production, distinct from the Supply Department will probably be one useful result of the Mission's visit. The talks which the Members of the Mission had with leading Indian industrialists are reported to have been satisfactory to both sides. As a result of the discussions two points have been made clear. Firstly the Mission has given the assurance that it is not seeking to establish American industries in this country nor looking for trade and tariff concessions in India in the post war period. Secondly, there appears to have been general agreement that at present India's industrial production is not on a war basis. The Mission has asked the Indian industrialists to give them suggestions for converting the potential economic capacity of India into actual capacity. What exactly will be the action that will be taken as a result of the Mission's investigations is still uncertain, but if the Mission had its way, it would certainly like to see the American example followed in this country of entrusting the Production work, its control and machinery—to Indian industrialists themselves in a position of authority and power. If all-out war production is the aim, there is no better way than not only to take and follow the advice of Indian industrialists but to entrust them with the entire responsibility. What can be done has already been seen in the appointment of an Indian industrialist, Sir Homi Mody as Supply Member. Why not therefore appoint an Indian industrialist as Production Member for speeding up India's production?

* * * *

The proposal to raise a Home Guard for India raises a ticklish problem. It was first mooted by Dr. H. N. Kunzru in the Council of State through a resolution, but the reply from the Government benches showed inadequate appreciation of its desirability and feasibility. Various objections were raised by the Government's spokesman particularly the lack of equipment and training staff—but since then the demand has received such prominent attention in the country that the Government of India cannot afford to ignore it. Especially in such situations as the one which only a few days ago faced Madras, the presence of a trained and disciplined Home Guard would have been of great assistance to the administration itself. It appears that the question has been discussed in the Viceroy's Council and correspondence has been going on with Provincial Governments also. Though time is the essence of the matter, action has been delayed, but if the present Indian Member pursues the matter something may be done in the near future. According to Dr. H. N. Kunzru who has studied the question in great detail, the difficulty of finding equipment and training staff can be surmounted—as has been done in China and other countries with far less resources.

* * * *



The Overseas Member, Mr. M. S. Aney, has returned after his visit to Assam and the Burma border to inspect the evacuation camps. The two non-official Members of the Central Legislature who accompanied him, Dr. H. N. Kunzru and Mr. Dam, have also submitted their recommendations. The latter's criticism that all the officers in charge of evacuation camps are Europeans, in many cases tea planters, is evidently receiving the Government's consideration, for I am told that these tea planters will now be replaced by Indians. As the evacuees are mostly Indians, the way to win their confidence and provide with the necessary assistance is to appoint Indian officers in charge of evacuation camps.

* * * *

Further reductions in passenger services have been ordered by the Railway Board. Dining cars on most Railways are being withdrawn in order to make available that space to passenger cars. A slowing up of the through timings of certain fast trains is also being made to enable a heavier train to be run. The use of reserved saloons is being curtailed to the minimum. It has also been announced that Railways will in future be unable to run special trains for individual members of public. An insistent demand was made in the Central Assembly during the last session that the Viceroy and Members of Government should give up special trains and saloons as a war measure and that the Railways should drastically revise the free pass concessions. Unfortunately no definite assurances have come from the Government of India on this subject. It is due from the Government of India themselves that they should without delay set the correct example by giving up peacetime privileges. If they travel more by air and less by rail, it will help both the public and the Railways at this time of stress.

*(From Our Correspondent)*

Bombay, May 6.

THE sugar control business seems to have no end. Dealers here have all been asked to make returns and file declarations before the Controller of Prices. Every Tuesday, it seems that information as to stocks must be laid before the officials. All because the Government is bent on maintaining adequate stocks for local needs. Traders naturally wonder when the control procedure will cease. It is one thing to protect consumers, and another to harass traders. The threat of action under the Defence rules is kept to cow objectors. The protests from Cawnpore and the criticisms made by Lala Karamchand at the Sugar Syndicate's annual meeting do not seem to have convinced the Government that control is uncalled for. The control procedure elsewhere invites opposition. Last week appeared a ban on cotton imports except under permits from a new official called Director of Civil Supplies. It was laid down in order to ease the stock position here and incidentally save wagon space. The idea of creating an artificial shortage of tenderable cotton seems ingenious, but misinterpretation was inevitable. There followed the usual clarification. By imports, it was explained, only imports by land—to be precise, receipts by rail, road and river—were meant. It was hastily explained that imports from Kenya and Egypt are not forbidden, nor even imports from Upper Burma. Valuable newspaper space has to be donated for setting out the correction which quotes sapiently that imports of foreign cotton are regulated by the Controller of Imports. Another point relates to supplies destined for Bombay and consigned before the order came into force. Not being a revenue notification surely, it was not necessary to suggest even by implication that supplies *en route* were subject to the new order, dated April 28th. It seems the railway and customs people have been told to let in cotton despatched before April 28 without a license, but that put on wagons after April 28 will require a license. Early application for licenses was advised. Nobody knows how long it will take to get a license and unload. The railways may be keen on hustling all users as well as wagons, but civil officers cannot be hustled.

The mill companies are not greatly cheered by their successful representations to the Commerce Department. It appears that export control will be relaxed only in regard to cotton goods meant for the Middle East. The question of shipping will have to be left to itself: the great concession is in regard to the lifting of the ban on seaborne exports. Investors in mill companies are not tremendously bucked up by factories insurance, factories A.R.P. and export concessions because they realise that all these luxuries have to be paid for, and the army of corrupt and inefficient placemen maintained at their expense for an indefinite period has also to be paid. But the situation for some shareholders is distinctly reassuring. In the case of the Finlay group profits have been uniformly good as regards 1941. At the annual meeting last week of the Gold Mohur mills, it was made known that the entire debit balance had been wiped out because the net profit in this case was as large as Rs. 10,11,554. Another meeting at which Mr. Geddis presided was that of the Swan mills. The shareholders in this case were informed that they would get Rs. 10 per share of Rs. 100 free of tax. The net profit in this case was not as large as that of either the Gold Mohur or the Finlay mills. Shareholders of the Finlay mills are also getting 10 per cent free of tax. The Directors have expressed a hope that satisfactory conditions would continue and satisfactory results would be shown next year. That appears to be the outer limit of optimism at present as regards the textile outlook because the closing of night shifts was mentioned openly by Sir Sorab Saklatwala at the Tata Mills meeting.

An announcement of some interest is the taking over of the premises of the National City Bank of New York by the Devkaran Nanjee Banking Co. A branch at Zaveri Bazar will certainly add greatly to the convenience of its customers in the bullion market and elsewhere. The bank's city branches are already numerous and the lusty infant enterprise's growth is assuredly climaxed by its moving in promptly into a famous American bank's office. The new office has arrangements for a safe deposit vault. Many here say that the new bank has pursued a safe course set by its board, feel that its bullion market connections must be of great advantage when there is a strong revival of interest in silver. This Denabank branch is regarded as extremely auspicious in view of many bank depositors' readiness to buy gold and silver in return for cash. The bank will make bullion a valuable commodity and open up a new way of saving for those who are at once cautious and thrifty. The acquisition of the business of Thos. Cook (Bankers) by Grindlay was not surprising. Locally the merger did not excite much comment, since everybody said that travel was a forgotten luxury and financing travel was both risky and superfluous. There is a possibility that Grindlays will launch out in a big way into the exchange banking field. The loss of oversea connexions and interests in the case of Cooks does not matter since it is only the knowledge that counts. Since Grindlays as the only affiliate of an important English jointstock bank will become registered dealers in exchange, they will enter the exchange field just as the Imperial Bank did some years ago. Since the travel agency has been acquired already by the railway companies the 101st year of Cooks' life leaves it high and dry—a famous name and a potent one. It is not known how the U. S. travel agencies are working now that travel restrictions and exchange control have knocked their business out. Brown, Shipley and American Express may have soon found new irons to toast in their home fires, to judge by their record.

Corresponding to the perfervid pleas made in Calcutta for blood (not yet for tears or sweat) there have been heard on this side arguments in favour of donations to a blood bank. The Governor has come out openly in favour of these inexpensive donations, which do not strain the donor and may do untold good to the givees. Employers have been asked to get their servants to volunteer for a pint or two. Classification, drying, etc., will be done by the Hafkin Institute people who are helping the Red Cross authorities. Transfusion without cognisance belongs to the war period and the thing can be got over in 20 minutes. Somebody spoke of the thing as being as easy as a haircut, and blood, by the way, is far more useful than human hair which is not good even for upholstery.

Factory owners now know where they stand. They should know who are authorised agents and when and where claims lie. Government has disclaimed any intention of paying when the damage is estimated at Rs. 1,000 or less. Restoration of plant, etc., in place of payment is also possible under the ordinance, and some people suspect that between the insurance people and the Army disposals board, there will be some arrangement to dump a lot of useless stuff on India's unfortunate compulsory policyholders. The last press note explained what is meant by payment up to 80 per cent, when the damage is below Rs. 5,000. Government is liable for 80 per cent, only if the claim is for Rs. 5,000. That is plain. It is obvious that this 20 per cent loss shoved on to the policyholder really makes the premium rate higher than 4 per cent. The biggest catch in the whole scheme is that no arrangements are contemplated to assess damage and pay promptly. This is not a war damage scheme, but a profit-earning venture on which the Government stands to lose next to nothing. Having regard to what has happened in Burma this year and the fatuous assurance given to the Federation of Indian Chambers that claims can be lodged by the unlucky policyholders for forwarding to the Burma Govt., when convenient, there is some reluctance to place much value upon the scheme. Two years' cover seems good, but if the war ends sooner, the contract is terminated, and the policyholder loses. Only single-year contracts are known in insurance and there is usually a no claim bonus for policyholders.

Some interest has developed in the subject of insurance after the appearance of a report to the effect that Government is considering an ordinance for the compulsory insurance of all buildings in certain areas as

(Continued on page 728)

(Continued from page 715)

yields could be raised by from 200 to 300 per cent. An average crop requires about 20 lbs of nitrogen per acre per year, but as India's 180 million cattle and 90 million sheep and goats at present constitute only a negligible quantity of the nitrogen so badly needed for enriching the soil, the size of the potential market for synthetic nitrogen compounds is at once obvious. The use of the world potential however should be pondered. Generations of persistent educational effort may yet have to pass before the potential market requiring about half a million tons of nitrogen annually becomes an actual demand, and it is not simply a matter of spending as much money as possible on the purchase of ammonium sulphate and nitrates.

In the further observations on the fertiliser position attention is drawn to sources of phosphates. Phosphate of lime and guano are important as are bones, blood, fishmeal and basic slag from steel furnaces. It is known that Tisco has used the basic process for a long time but slag as such does not command the attention it does in Germany. In deprecating the export of bones and bonemeal the authors merely record the common view that the expansion of agricultural production is limited by the export of phosphates, oil cake and other manures. An adequate supply of superphosphate can only be ensured by abundant supplies of sulphuric acid for treating ordinary phosphate for conversion into an acid phosphate soluble in water and therefore in the soil. It is pointed out in this connection that very large quantities of sulphuric acid are required in the superphosphate industry and the fact is of great importance in the economy of the heavy chemical industry. In Britain, for example, 40 per cent. of the total output of sulphuric acid is used in this branch of the artificial fertiliser industry. The arable land expansion programme of wartime has been made possible only by a large, well-developed fertiliser industry. This fact is of decisive importance for our own ambitions for Indian agriculture in the immediate future. The note on nitre in India and the chances of making use of what was largely exported has special importance because nitre as a source of potassium required for gunpowder manufacture, pot. permanganate and pot. chlorate. It is not surprising that the authors are not at all satisfied with the limited progress made even under the stress of war. Processes and products are not as widely known as they should be, but our legislators and our businessmen should do well to digest the conclusions of two expert investigators whose interest in industrial development is as pronounced as their passion for knowledge.

(Continued from page 727)

also compulsory insurance under the Workmen's Compensation Act. To a certain extent such compulsory insurance will cut at the business of private companies here. Today motor insurance is negligible. People with cars laid up indefinitely are not keen on insuring, and if more cars are taken over by Government there is precious little business to expect. While on the subject of insurance mention must be made here of a report to the effect that Indian companies are considering an increase in premium rates on account of the war. It must be generally recognised that the risk of enemy action is much greater after the loss of Burma. Suggestions have been made that a revision of rates in the near future is justified. It will apply only to new policies, for the terms of old contracts cannot be varied. Indian offices which are agreed on the question of no bonuses during the war, are likely to urge in unison that higher premiums are demanded by war conditions in respect of life business alone. As regards marine business nobody exactly knows what are the rates for cargoes outward or coastwise. Successive increases have been reported and the whole thing seems a matter of blind chance. After the fall of Corregidor there is sure to be another advance in rates. The rates for coastal cargoes have been raised pretty stiffly, and those who speak of c.i.f. prices can now learn that the middle item can be pretty considerable.

(Continued from page 713)

business corrections and emigrants. The Overseas Department must already have information to indicate what must be the loss suffered by sterling and Indian companies. The ruthless application of a scorched earth policy makes it necessary to ascertain what has been the extent of loss in Burma. The Indian stock exchanges have marked down all Burma shares drastically. Quotations are nominal and it is certain that the great loss will affect values of Indian shares as well.

Compare the profound ignorance with the precise estimates of British investments in Malaya and the Dutch Indies which public bodies may not default it is apparent that no company can carrry on its existence. The lack of a court need not interfere with liquidation proceedings where liquid assets are available for distribution. The shareholders' interest must override every consideration including Government's desire to see if the tide of war will not turn.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, May 7.

THE virtual closing of the Port of Calcutta has inevitably had marked repercussions on the Jute Mill Stocks. Commercial hessians are up by over 8½ crores yards of which 8 oz. shows an increase of 60 lakhs yards. Sacking goods on commercial account register an advance of 4½ crores yards. Turning to goods held on Government account, Sandbags show an increase of 2¼ crores yards, other hessian and canvas descriptions of 1¼ crores and sacking goods of 33 lakhs yards. Overhead therefore the increase in stocks at the end of April as compared with the end of March amounts to almost 36 per cent. Government goods have increased by 22 per cent and commercial goods of all sorts by 42 per cent, though the increase is much more marked in hessians at 59 per cent than in Heavy Goods at 31 per cent.

Naturally steps had to be taken to regulate production nearer to the offtake and at a meeting early this week the Mills Committee decided to recommend that working hours should be reduced from 60 per week to 54, and at the same time 10 per cent of the looms should be sealed. It is proposed that this alteration should be brought into force from 18th May, but as any reduction of working hours ought, by the Agreement, to be subject to one month's notice, a special meeting of the Association has been called for 11th May to regularise the proceeding so that the curtailment may be brought into force from 18th May. In actual practise, it is only the 54 hours that is in question, for, due to labour shortage, there is probably 10 per cent of the looms on the river already idle. In most cases weaving labour is in sufficient supply but in many cases spinning labour is short so that the full complement of looms cannot be kept supplied with yarn, and in other cases, shortage in the sewing and finishing departments results in inability to cope with the total loomage production. It follows therefore that the sealing of the 10 per cent of looms will result in little curtailment of production, whereas the reduction of working hours to 54 will probably in actual fact mean a better relative production on the shorter hours, for it is an accepted fact that, particularly in the hot season, eleven hours per day is beyond the capacity of the average worker and does not result in full proportionate production.

The last month's experience proves conclusively how absolutely Calcutta relies on export for its commercial existence. It is therefore heartening to hear reports of prospective resumption of shipping from the Port and it is sincerely to be hoped that these reports materialise before long. The makeshifts arrangements to ameliorate the position by railing goods to Bombay is no more than a drop in the bucket, for all railways are already overloaded with other and probably equally important freight, and the only hope for the continued existence of the Jute Industry is the reopening of the shipping routes to the west. There is no question of the demand being there. Enquiries are coming forward with unfailing regularity, but in present circumstances Shippers simply cannot accept further commitments until they see definite signs of their ability to ship the goods. Mills also are keen sellers for they now have few forward orders on their books. So continuance of trading boils down simply to the question of freight being available. Unfortunately this hiatus will give the opportunity for substitute fabrics getting a stronger foothold in markets which normally rely on Jute Fabrics for their requirements. So it is to be hoped that the present stagnation will not be long continued.

Meanwhile the U.S.A. Government had the foresight to protect their requirements by the issue of the Office of Production Management Allocation and Conservation Order for Burlap and Bags. This, according to the last issue of the Central Jute Bulletin, was brought into force on 22nd December, 1941, to apply to all subsequent imports of hessians, and to all shipments from Calcutta after 15th January, 1942. Broadly speaking, all importers have to set aside from their imports two-thirds for the O. P. M. or for priority orders authorised by them. All such reservations to be of the heavier constructions and all available freight to be filled with 10 oz. or heavier. The free one-third of imports to be manufactured solely into what are termed "Agricultural Bags." All importers are allotted quotas according to their proportion of imports in the past and no Processor or Consumer is permitted to purchase or to stock more than 30 days' normal supply.

Business in the Loose Jute market has continued on strictly retail lines. A small sale of European District Tossa Bottoms was reported at Rs. 7-12 and a limited quantity of Indian District Tossa Mids. and Bots. sold at Rs. 9-4 and Rs. 7 respectively, while Tossa Middles alone were reported as low as Rs. 8-14. Some Supervised White Middles were reported at Rs. 10 to Rs. 10-8. Reports from some districts in the mofussil speak of too much rain and the desirability of a week or ten days of clear weather to enable weeding operations to proceed. Generally speaking, however, the condition of the growing crop is good and prospects very satisfactory. It would appear that almost everywhere the full 10 annas licensed has been or will be sown, the Government demand for curtailment having come too late to be effective. Estimated arrivals of Jute into Calcutta during April amount to only 1,61,000 B/s as against 8,23,000 last April. Totals from 1st July to end April now amount to 54,29,000 B/s as against 81,60,000 B/s for the same period last season.

Little has been reported from the Export Jute market though it would appear that some further Russian business was put through at similar prices to last. Small sales of Firsts to Mills were recorded at Rs. 51 to Rs. 52-8, while Free from Samla Firsts sold at from Rs. 62-8 to Rs. 63-8. Some further N. C. Cuttings were put through at Rs. 11.

Hessian prices have ruled nominally unchanged ever since the announcement of the curtailment of working hours, but the tone is perhaps less stagnant. Some covering business in May-June Hessian bags is reported on the basis of Rs. 725 and Rs. 700 per ton. Small ready sales of 7½ oz. have been recorded at Rs. 13-4 to Rs. 13-12 with 8 oz. at Rs. 14 to Rs. 14-8, and 10 oz. at Rs. 18-8 basis. Otherwise prices are nominal. In the Heavy Goods section there has been a good demand for ready "B" Twills which have sold at from Rs. 36-8 up to Rs. 38 with May at As. 8 less. Other small sales recorded include Plain Heavy Cees at Rs. 34-8 ready, Liverpools at Rs. 37-12 to Rs. 38-4 ready and "A" Twills at Rs. 41-8 for May.

SAVINGS BANK--Deposits received and interest allowed at 1 per cent per annum.

SAVINGS BANK DEPOSIT ACCOUNTS--Sums of Rs. 500 and over accepted at 1 per cent. by transfers from Savings Bank accounts, subject to three months' Notice on withdrawal. Rules on application.

W. G. GROUNDWATER, General Manager

(Continued from page 725)

Finally, there is the question of racial discrimination which causes more estrangement than any other. It has been my duty as a volunteer for evacuees to listen to the accounts of hundreds of Indians who have returned from Burma. There has not been a more sordid chapter of racial discrimination. Mr. Aney seems to be satisfied that his visit to the evacuation centres has cured the complaint. Pandit Hridaynath Kunzru who accompanied him does not find himself able to support Mr. Aney.

The fact of the matter is that Britishers in India have grown up, for generattions, in traditions of superiority and discrimination. Even the common purpose occasioned by this war has not succeeded in ending those traditions. My own view is that a conscious and wide-spread effort must be made amongst the Britishers in India to realise that, in word, thought and deed, they must, from now onwards, demonstrate to the Indians that there is real equality and that there is a genuine common footing.

In simple terms, a national war front cannot be built only by the realisation of its need on the part of Indians. The Britishers, too, are fully in the picture of a national war front. They can cohere into a national front only when they see the errors of their past ways and firmly and sincerely resolve to mend them completely in the future.

That is to say, the Indians must be made to feel that the Britons ask for their friendship and their help not in an opportunist spirit but because there is genuine identity and goodwill between the two. Goodwill implies an understanding of hearts. The Indian is proverbially susceptible to sentiment and appeal to the heart. It is a change of heart on the part of the Briton that is needed.

Explaining what each of us can do in the furtherance of the objectives of the national war front, His Excellency addresses himself to the various classes of people. Are you desirous of joining the armed forces? Then, fill it quickly. For the rest of you, His Excellency says, there are opportunities galore.

> "The civil defence forces are crying out for wardens, fire watchers, doctors, nurses, ambulance men, helpers of all kind. Civic or home guards and pioneers need men. Women are wanted in hospitals, in offices, to run canteens for troops. There are the refugees to be helped. Let us look into our daily lives. Are we wasting money, food, clothes, electricity, petrol, coal? If we are, we are delaying victory. Do we travel when we need not do so taking up space badly required for troops and munitions of war? Are we farmers? Then can we not grow more food grains? Are we factory hands? Then are we working our utmost?"

It seems to me that much more than this is implied in a genuine national war front. A real national war front means a forty crore army refusing to extend any manner of co-operation to the enemy and harassing him in every possible way. Such a forty crore army for such high purposes is possible now and here; but it is possible only if the British government feel, in their heart of hearts, that Indians are equals and must be treated as equals, not in a make-believe but in genuine spirit.

---

Visits to industrial suburbs in midsummer are not everybody's cup of tea, but I could not withstand the temptation to go and see after the lapse of years what has been happening in Dassnagar. As most of my readers already know, it is just on the fringe of Howrah, which is to many just a dirtier, abridged edition of Calcutta without any of the glamour that clings to the latter. Dassnagar, however, stands well out of Howrah, and it is cut to a distinctive pattern for Mr. Hlamohan Dass put the inprint of a very powerful personality on the plant, buildings and enterprises that go to make Dassnagar a really rising suburb. The variety of enterprises and the range of production left me a little breathless after a conducted tour. I believe that I have written years ago about the very promising way all things were shaping. To-day, the final stage of progress has been passed and Dassnagar, which produces machine tools through its independent company and turns out weighbridges and specialised balances in addition to printing appliances and what not is a very busy hive of industry indeed. There was much to make the merely curious a little out of the swim, and I was more often tempted to follow conversation than to ask questions. The spirit of the place speaks of freedom, and a very robust will to get on. That is exactly what makes an everage workmen keen to go up the industrial ladder. Mr. Dass's own career, as my readers should not forget, exemplifies all the virtues of an older generation. His great success is the reward of not one virtue, but a host. He has naturally grafted some of them to a colony of his own making, and I could not help feeling that right along the Hooghly, stands another suburb that must compare with Lillooah or Belur, famous as they are.

## JUTE

*Calcutta*, Thursday, May 7.

THE jute market is more than ever distressed by the lack of mill buying. The familiar belief that the new crop will come up well tends to suppress all trace of optimism, and the reports of abnormal weather in the districts also go far to kill nascent faith in jute. There has been practically nothing reported by way of business over a week. It is a wonder that day after day there has been no business and no change in prices either. There has been a drop in loose jute, and sellers of Bottoms of European Assortment were reported to be asking for Rs. 6-8 per maund while Middles were on offer at Rs. 11 per maund without takers.

It might well be said that the present valuation of Rs. 44 or Rs. 45 per bale for Firsts is nominal. There is a threat from another quarter also. Any change in working hours or sealing up of productive equipment will inevitably reduce consumption. So what is good for hessian may not be quite good for jute.

A week ago, it was observed that even price-testing enquiry was absent. When compared with the relatively firm conditions of February-March, it is not hard to see that it is not export control or import restrictions that have put the market down but a firm faith that exports have no chance. Last week dealings in loose jute District Tossa bottoms at Rs. 7 per maund were recorded. Middles were taken up at Rs. 9-6 per maund yet these transactions did not show that prices were set for an advance after prolonged stagnation.

The market is more than ever idle and depressed. Its future is as uncertain as ever, though any small rise in hessian or alternatively good war news, might help it to shake off its gloom.

## JUTE MANUFACTURES

A WEEK ago hessian prices were stagnant. There has since been a slight drop, followed by a slow rise. Actually business has been restricted to covering against earlier sales.

Business for shipment has been non-existent and the small difference between rates for forward delivery and ready may actually kill interest in ready goods.

A certain amount of interest in heavy goods was noted towards the end of last week, but it now looks as if that too has not held. On Monday the market became steady: sellers were cautious, and the net result was that 9 porters was quoted a little higher at Rs. 14-12 and 11 porters also went up to Rs. 18-12 both for ready delivery. Business on Tuesday, showed that the rise could not survive, as 9 porters were back to Rs. 14-8 and 11 porters to Rs. 18-10. Sellers of heavy goods, however, manifested greater reluctance to sell, and the onset of firmness in this section led to sellers asking Rs. 38 for "B" twills.

The market was definitely quieter thereafter, and the main change was a drop in 11 porters to Rs. 18-8 and a similar drop in 9 porters to Rs. 14-4 with the rate for June delivery the same as for ready.

Fresh business has become exceedingly difficult and the market finds it hard to go on with a little odd covering. The recent decline in Heavy Goods certainly attract some attention though Cornsacks were a shade higher in the week at Rs. 56. Liverpool twills quoted at Rs. 38-4 and "B" twills at Rs. 37-4. The biggest item of news for all hessian operators is the Jute Mills Association resolution for Monday. The committee want a 54-hour week and sealing up of 10 per cent of looms. Government has been consulted in advance and it is likely that hours will be reduced from May 18. It is, however, doubtful if this projected reduction in output will help hessian prices. Last month's war bag order for four and a half to five and a half crores of bags caused no excitement. If one looks at the stock position at end of April, one may guess what lies behind the mills' new desire for fewer hours. Total stocks of manufactured goods, exclusive of goods for Government, show a big increase on March. There, is quite a large rise under sacking and the mills' holding of goods on Government account are also considerably higher. According to a memo detailing the stock position a rise of over 45,000 tons in manufactured goods occurred in April. This increase reveals a steady worsening of the jute and hessian position and it looks as if the chances of recovery in prices are negligible.

## COTTON

THE cotton market went up last week of its own accord, helped by a smart rise in New York after a drop. The Government of Bombay introduced licensing for supplies. It was urged in that connection that storage space for cotton was wasted when stocks were large. Exemption was given as regards mills' orders and immediate export orders; in all other cases a license had to be got by the traders.

The other changes, in the hedge contracts etc., had no discernible effect on prices, though it will be argued that a rally has followed the decline recorded previously. The mill outlook is none too good and prospects for cotton are more than ever uncertain. Madagascar news may help the market of late, just as a rise in New York, due to reported renewal of loans by the C. C. C. may lever up fresh support.

At every stage realisation of profits has been prompt. There is no Long interest worth the name. Activity in the spot market, however, is not inconsiderable and there appears to have been no fall in prices. Cloth and yarn prices assuredly give a good margin.

Statistics of cotton pressed up to April 17 from September 1, 1941, show a fall as against the previous year and a quite marked fall in receipts of cotton, reflected also in stocks in Bombay at present. Yet the market is wobbly, partly because India's exports have fallen off sharply this year. Two-way movements are still common and the price trend is far from settled. The spread between Oomra and Bengal is narrower than before, but the Broach contract is still over Rs. 20 higher.

The market is going on as usual after a shaky start this week. The Broach contract is over Rs. 150 and looks like staying up, while the July-August contract at Rs. 168 or around does not find much support. The Oomra May contract stood over Rs. 140 on Wednesday and Bengal for May delivery closed at Rs. 120. It may be even concluded that stability will continue for some time, though firms are not large buyers and outside support is scarce.

## WHEAT

A FALL in wheat prices in Bombay does not make much difference to Calcutta. The flour market here is known to be fully steady, and wheat, therefore, sells at Rs. 6-8 per maund. Fluctuations in Hapur do not count for much any more than London rates for Argentine or Australian wheat.

Forward prices in Bombay are by no means lower than the rates for ready, and one can expect a fall only after the crop expansion plans succeed according to expectations. Karachi has been more or less firm and the export-import plans for provinces will not obviously affect prices. As exports in 1941-42 were large coast line shipments were smaller and price control has to reckon with food hoarding.

## SILVER

THE silver market shaded off a little abruptly last week, but has bucked up again. Rates show little or no change on the week, though there is not much keenness to deal for June settlement at present. The premium for ready silver remains, and that for Burma silver of higher purity is maintained.

There is not much sign of profit-taking of late, but upcountry centres may not follow the narrow fluctuations as eagerly as in the past.

On Wednesday afternoon silver closed at Rs. 81-7 per 100 tolas in Bombay. The price in Calcutta was Rs. 80 per 100 tolas with the retail price just 4 annas higher.

A more interesting statement is that bullion is quieter on war news of late. June settlement thus stood at Rs. 77-7. As many will note, the big discount for forward is unusual to say the least. The U. S. announcement that exports of silver to Europe are prohibited is of absolute unimportance from the market point of view. Few care about imports though there is a chance that the fall in outside supplies may induce the Government of India to put up the import duty for the sales of revenue. It is no use speculating about wherefrom supplies will come. London shows no change in rates and New York still quotes 35⅛ cents per fine ounce.

## GOLD

THE gold market shows no sign of debilitation as yet. The demand for bullion remains and prices are a little higher as compared with rates ruling a week ago. A minor fluctuation in prices by 2 annas or so per tola has little meaning for the average citizen and it is better to call the market quietly steady.

The general tone in Calcutta is also satisfactory, and the present price of Rs. 48 per tola is almost identical with the Bombay rate. An equally interesting feature is that of late the rate for sovereign as between Bombay and Calcutta shows only a slight difference. It will not be surprising if rates in Amritsar and Madras have also been brought down. The present price of Rs. 37 per piece is admittedly below the former rate. An augmentation of bullion supplies by distress selling on the part of evacuees from Burma may partially explain the fall in rates. Generally the outlook for bullion must be called good, or rather better than usual. Speculative activity may not be great, but investment in bullion may appear wholly acceptable at present. Even silver is a good medium of investment from the average man's viewpoint. Stabilisation at higher levels for the duration seems both proper and probable in the case of gold as of silver.

## Investor's Supplement

Vol. XXIX. No. 20 SATURDAY, MAY 9, 1942 Price Re. 1

*Stock Markets to-day and to-morrow*

## ENCOURAGING JUTE MILL REPORTS

The importance of events abroad naturally makes for political markets with a distinct tendency towards recovery of late. Interest in jute shares, at least preferences, have developed to some extent, and this in addition to a notable steadiness in iron and steel issues has assisted in a marked change of sentiment. The revival in giltedged to which institutional buying, attested by the Imperial Bank returns in April, has naturally contributed is governed by the wider consideration that the United Nations' strategy will be equal to the demands of the immediate future. The very high degree of insulation developed in both Bombay and Calcutta is not without its advantages. It will be remarked that in the past fortnight or so little has occurred by way of a drop in prices, and the rise in gilts and semi-gilts has materially altered the investment outlook. A constructive attitude is sure to develop rapidly and meanwhile dividend news keeps a certain amount of investment interest alive.

* * * * *

The results of the *Bally Jute Company, Limited* for the half-year ended 31st March, 1942, published last week, tended to give the impression that there might be a drastic, though not unexpected, decline in earnings on account of the difficult conditions in the industry. Fortunately, however, the whole picture is not so sombre. The reports and balance-sheets of five important jute companies received during the week counteract the unfavourable view. The reports indicate that the aggregate profit for the six months ended 31st March, 1942, was Rs. 80,05,115 against Rs. 70,79,300 for the previous half-year and also that the rise in earnings was mainly due to the additional contracts placed by both the Indian and Australian Governments which kept mills so well engaged during the last six months.

Due importance must be given to the fact that at least two companies have been able to declare higher dividends, *Khardah* 15 per cent; and *Nuddea* 5 per cent as against 12½ per cent and 4 per cent respectively in the previous half-year. *Gourepore* and *Fort Gloster* have maintained their dividends at 30 per cent and 17½ per cent respectively, while the *Fort William Company* has been able to pay only 6 per cent against 7½ per cent for the previous half-year.

As the senior member of the Barry group with a prosperous record one expects much, and it must be said at once that the *Gourepore Company, Limited* has done exceptionally well. The net profit, before providing for taxation and depreciation, for the half-year ended 31st March, 1942, is Rs. 20,94,881 against Rs. 16,82,250 in the previous half-year. A sum of Rs. 13,00,000 against Rs. 9,00,000 is provided for taxation, while there is no allocation to any Reserves this time owing to the higher tax burden. In spite of the appreciable increase in the Company's earnings, the directors have been guarded in the matter of the dividend, which is maintained at 30 per cent. The amount carried forward is only slightly lower at Rs. 4,41,039 against Rs. 4,45,668.

* * * * *

The *Khardah Company, Limited* has increased its dividend from 12½ per cent to 15 per cent for the same half-year. The net profit in this case before providing for taxation and depreciation amounts to Rs. 17,72,928 against Rs. 15,84,274. The amount for depreciation stands at Rs. 2,975 against Rs. 2,963 while the provision for taxation is higher at Rs. 11,70,000 against Rs. 9,60,000. The amount carried forward is slightly higher at Rs. 3,94,950 against Rs. 3,61,998, brought in.

* * * * *

The net profit of the *Nuddea Mills Company, Limited* reveals also an increase of about Rs. 4,12,337 over the figure for the previous half-year. This is the highest profit made by the Company since its inception. The sum allocated to funds is Rs. 2,76,634 (Rs. 2,76,614) while the sum placed to taxation Reserve is higher at Rs. 11,00,000 (Rs. 7,50,000). The dividend declared is higher at 5 per cent against 4 per cent in the previous half-year. The amount carried forward is Rs. 1,18,162 against Rs. 1,02,707.

* * * * *

A decrease in earnings has, however, been reported by the *Fort William Jute Company, Limited*, the net profit before providing for taxation and depreciation being Rs. 5,14,420 against Rs. 8,62,211 in the previous half-year. The sum set aside to depreciation is Rs. 1,00,000 (Rs. 1,25,000) while the Reserve for Taxation stands at Rs. 2,50,000 (Rs. 5,75,000). The dividend declared is lower at 6 per cent against 7½ per cent. The amount carried forward is substantially higher at Rs. 1,05,181 against Rs. 59,761.

The improved trading conditions in the cotton mills industry have enabled the *Bengal-Nagpur Cotton Mills, Limited* to report a considerable increase in earnings, the net profit this time being Rs. 1,73,318 against Rs. 1,02,753 in the previous half-year. The amount allotted for depreciation is Rs. 33,450 (Rs. 35,196). The amount carried forward is higher at Rs. 21,858 (Rs. 9,990). There is no change in the preference dividend.

* * * * *

Thanks to large war orders, an increase in prices and a larger volume of production, the *Arthur Butler & Co. (Mozufferpore), Limited* has experienced a very successful working period in the twelve months ended 31st October, 1941. The net profit, before providing for taxation and depreciation, amounts to Rs. 1,98,278 against Rs. 67,605 in the previous half-year. A sum of Rs. 64,665 (Rs. 30,086) has been provided for depreciation and Rs. 61,645 (Rs. 11,700) for taxation. The dividend declared is 10 per cent against only 2½ per cent in 1940. The amount carried forward is Rs. 16,279 (Rs. 13,411). The directors state, in their report, that the volume of work in hand has necessitated extending the foundry and the structural shop. Provided supplies of material do not fall off seriously, the improved trading results should be maintained during the current year.

* * * * *

Now that the *Tapti Valley Railway Co., Ltd.*, has been taken over by the Government of India, the Company has been placed on voluntary liquidation as from 17th April, 1942. Messrs. Killick, Nixon & Co., who were the promoters and agents of the Company, have been appointed as liquidators.

The first distribution to shareholders of the assets of the Company, along with a brochure, containing some interesting points about its history, has already been made.

During its existence of forty-six years as a pulic limited company, the Tapti Valley Railway carried 57,974,000 passengers and handled 13,771,500 tons of merchandise. The average dividend paid from 1901 to 1941 works out to 6¾ per cent. This is indeed a notable record and indicates, in an unmistakable manner, the highly successful working of the Company, an achievement of which all those who have been intimately connected with it can justly feel proud.

WATCH-DOG.

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Friday*, May 8, 1942.

WITHOUT any appreciable increase in the volume of business rather firm conditions have been noticed on the Calcutta Stock Exchange during the week under report. The outstanding feature of the week has been again the improving tendency in the prices of government securities. There has also been greater interest in the Jute section on account of the better showing made in reports of Jute companies for the half-year ended 31st March, 1942. The tone in the several sections towards the close was cheerful following the news of the successful landing of British troops in Madagascar and the news of the surrender of the Vichy naval and military commanders.

Giltedged securities continued to meet with good support and there continued to be a good enquiry for 3½ per cent Paper at Rs. 89-14 which closed at Rs. 89-2 in the previous week. Among terminable loans, there were also buyers of 1945-55 at Rs. 105-9 and 1947-50 at Rs. 98-4 with no sellers in evidence. 1963-65 came to business at Rs. 89-4 s.l.; 1951-54 at Rs. 94-2; 1949-52 at Rs. 95-4; 1960-70 at Rs. 103-4 and 1946 *Defence* Bonds at Rs. 99-4. Among Provincial Loans, 3 per cent *Punjab* 1952 were done at Rs. 93.

Money conditions were slightly easier during the week and the Treasury Bills rate has come down from one rupee five annas per cent per annum last week to one rupee four annas eight pies per cent per annum.

Among Bank shares, *Central Bank* were done at Rs. 37 s.o.l.; *Imperial Bank* fully paids at Rs. 1,385 and contributories at Rs. 332. *Reserve Bank* closed slightly higher at Rs. 95-8.

There was no trading in Public bodies' debentures. Among Industrial debentures, 5½ per cent 1938-53 *Carew Sugar* changed hands at Rs. 102 and 6 per cent 1908-48 *Howrah-Amta Railway* at Rs. 105 s.l. A fair amount of business has been reported in Jute preference shares during the week, *Anglo-India* being done at Rs. 132-8; *Empire* at Rs. 127; *Hastings* at Rs. 111-8; *Kinnison* at Rs. 132-8; *Kamarhatty* at Rs. 124; *Caledonian* at Rs. 130; *Khardah* at Rs. 120; *Fort Gloster* at Rs. 130 and *Howrah 'A'* at Rs. 123. There were buyers of *Gourepore* and *Reliance*, but in the absence of sellers no business resulted. Among others, *Burrakur Coal* came to business at Rs. 130; *Associated Hotels* at Rs. 85-8; *Birpara Tea* at Rs. 145 and *Dunlop Rubber* at Rs. 122.

Among Railway shares, *Mymensingh-Bhairab Bazar* (Guar.) changed hands at Rs. 103.

In the Cotton section, *Elgin* changed in small lots at Rs. 27-4.

No business was done in Coal shares except for *Burrakur* preferences which changed hands at Rs. 130.

Thanks to the better showing in the results of jute companies for the half-year ended 31st March, 1942, there has been good enquiry for jute shares during the week following the announcement of the results. After a long time Jute ordinary shares came in for attention, Union being done at Rs. 310. *Naskarpara* were crossed at Rs. 17. The *Khardah* and the *Nuddea* companies have increased their dividends from 12½ and 4 to 15 and 5 per cent respectively, while the *Gourepore* and the *Fort Gloster* have maintained their dividends at 30 and 17½ per cent respectively. The *Fort William* have, however, declared only 6 per cent against 7½ per cent for the previous half-year.

Apart from transactions in *Naga Hills* at Rs. 14-8 x.d. no business took place in the ordinary shares of Tea companies.

There was a good enquiry for Sugar shares, *Buland* closing higher with buyers at Rs. 25-14 and *Cawnpore* at Rs. 25-4. *Raza* changed hands at Rs. 26-6; *South Behar* at Rs. 17-8 and *New Savan* at Rs. 12.

In the Engineering section, *Indian Iron* were steady at Rs. 22-12. *Steel Corporation* were marked slightly higher at Rs. 14.

In the Miscellaneous section, *Kangra Valley Slate* were marked at Rs. 235 o.l.; *Indian Copper* had buyers at Re. 1-10. There was some enquiry for *I. G. N.* at Rs. 80. *Orient Paper* were dealt in at Rs. 15-10 and *Star Paper* at Rs. 14.

## BOMBAY STOCK EXCHANGE

(From Our Correspondent)

*Bombay*, May 7, 1942.

*Money.*—The rate for call money continued to be quoted at ¼ per cent.

*Exchange Market.*—Banks were selling T.T. at 1s. 5 31/32d. and buying three months' bills at 1s. 6 9/32d.

*Securities.*—A further improvement in prices in the securities market has been witnessed during the week and there continued to be a good demand for 3½ per cent Paper which closed at Rs. 90-4 as compared with Rs. 89-12 in the previous week and Rs. 88-4 a fortnight ago. Among short and long-dated loans 1948-52 were marked higher at Rs. 93-5; 1951-54 at Rs. 94-4; 1963-65 at Rs. 89-5; 1947-50 at Rs. 98-8; 1960-70 at Rs. 103-12; 1955-60 at Rs. 108; 1945-55 at Rs. 105 and 1946 *Defence Bonds* at Rs. 99-6.

*Shares.*—The local share market exhibited a steadier tendency throughout the week more especially towards the close. The market was cheerful following the news of the landing of the British troops in Madagascar and the subsequent capture of the naval base of Diego Suarez. There was an all-round rise in prices. In the Cash section again there was good demand, while transactions on forward account were also slightly better. *Figures given in brackets are for cash.*

*Textiles.*—Small gains in prices have been recorded in this section in some selected scrips. *Bombay Dyeing*, which closed at Rs. 1,035 (1,045) last week, improved during the week to close at Rs. 1,052-8 (1,047-8), *Central India* closed at Rs. 330 (329); *Century* at Rs. 356 (357); *Gokak* at Rs. 244 (245); and *Simplex* at Rs. 167 (163). *Sholapoor*, were, however, marked higher at Rs. 5,610 as against Rs. 5,000 in the previous week, while *Vishnu* were done at Rs. 1,525 x.d. *Colaba* were unchanged at Rs. 136-4 (150), while *Kohinoor* were better at Rs. 419 (416).

*Hydro-Electrics.*—This section met with some scattered buying enquiry. *Andhra Valley* improved slightly to Rs. 1,460. *Tata Power* were steady at Rs. 1,351 and *Tata Hydro* at Rs. 155.

*Steels.*—Steel shares met with good demand during the week and prices towards the close tended to be higher on continued support, *Tata* ordinaries closing at Rs. 260 (249) and the deferreds at Rs. 1,342-8 (1,300). The 1st preferences were also higher at Rs. 190 and the 2nd preferences at Rs. 117-4.

*Banks and Insurance.*—In sympathy with the securities market, Bank shares continued to be steady, *Central Bank* being marked at Rs. 41; *Imperial Bank* fully paids at Rs. 1,460; contributories at Rs. 350; *Bank of India* at Rs. 135 and *Reserve Bank* at Rs. 97-8.

In the Insurance section, *New India* were quoted at Rs. 41-12.

*Miscellaneous.*—*Bombay-Burmah Trading* old shares continued to be unchanged at Rs. 215 (206-4), while the new shares were a shade easier at Rs. 70. *Associated Cement* were steady at Rs. 157 (158-8). *Belapur Sugar* were done at Rs. 227 (226); *Seindia Steam* at Rs. 17-14; *Shivrajpur Syndicate* at Rs. 29-8 (31) and *Premier Construction* at Rs. 108-8 (109). *Alcock Ashdown* were unchanged at Rs. 415 (400).

## MADRAS STOCK EXCHANGE

*(From Our Correspondent)*

*Madras*, May 7, 1942.

Conditions in the local market, it may be said, have returned to normal following the reports that most people are returning to the city. Though transactions have been recorded in some sections only, prices have shown no change.

*Securities.*—There was a good turnover in the local securities market, 3½ per cent Paper closing higher at Rs. 89-14. 3 per cent 1963-65 were crossed at Rs. 89-6; 3 per cent 1949-52 at Rs. 95-7-6 and 3 per cent 1948 at Rs. 98-12. Among State Loans, 3½ per cent *Travancore Loan* changed hands at Rs. 103. 3 per cent 1952 and 1953 *Madras Loans* at Rs. 93-2 were the transactions done in the Provincial Loans.

*Mills.*—*Buckingham* and *Carnatic* were dealt in at Rs. 177. *Rajalakshmi* were crossed at Rs. 85 x.d.

*Plantations.*—Transactions in Rubber shares were largely in the nature of cross transactions. *Travancore Rubber* were done at Rs. 10-12 c.d. and *Woodlands* at Rs. 8-14. Among Tea shares, *Nilgiri Neerugundi* were steady at Rs. 2-1, while *Devashola* were done at Rs. 8-2. *Chembra Peak* were marked slightly lower at Rs. 4-10.

*Miscellaneous.*—*Mysore Paper* were maintained at Rs. 14-10 c.t. *Mysore Chemicals and Fertilisers* were done at Rs. 15 c.t. *Amrutanjan* preferences continued to meet with enquiry at Rs. 98 s.l. *Hindustan Investment and Financial Trust* were on offer at Rs. 13.

| And recommend the payment of a Dividend on the Preference Shares at the rate of 7 per cent per annum, free of Income-tax, absorbing .. | 10,500 | 0 | 0 | | | |
| The directors also recommend the payment of a Dividend on the Ordinary Shares at the rate of 15 per cent per annum, free of Income-tax, absorbing .. .. | 67,500 | 0 | 0 | 1,28,000 | 0 | 0 |
| Leaving to be carried forward .. .. | | | | 21,857 | 11 | 10 |

*Trading Conditions.*—During the half-year under review the Company further benefited by the improved trading conditions in the Cotton Mill Industry. Since the close of the half-year trading has become rather more difficult owing to the disturbed conditions arising from the Japanese War. At present about 30 per cent of the Mills' output is sold under contract to Government.

*Managing Agents.*—Messrs. Shaw Wallace & Co.

*Authorised, Issued and Subscribed Capital—Rs. 12,00,000 in 3,000 7 per cent Cum. Pref. of Rs. 100 and 90,000 Ordy. of Rs. 10, both fully paid-up.*

*(Half-yearly meeting, 25th May, 1942 at 3 p.m.)*

*Audited accounts for the half-year ended 31st March, 1942:—*

| | Rs. | A. | P. |
|---|---|---|---|
| After setting off for Depreciation Rs. 2,50,000, the account's show a profit of .. | 16,46,822 | 2 | 10 |
| To which has to be added the balance brought forward from the last account, namely .. | 87,080 | 8 | 5 |
| Giving a total of .. .. .. | 17,33,902 | 11 | 3 |
| From this is deducted the amount set aside as a Reserve for Taxation .. .. | 13,00,000 | 0 | 0 |
| Leaving a balance for disposal of .. .. | 4,33,902 | 11 | 3 |

The directors recommend that this should be dealt with as follows:—

| | | | |
|---|---|---|---|
| To paying the dividend on the Preference Shares for the half-year ended 31st March, 1942 at Rs. 3-8 per share (i.e. per cent per annum), free of Income-tax | 49,000 | 0 | 0 |
| To paying a dividend on the Ordinary Shares at Rs. 17-8 per share (i.e. 35 per cent per annum), free of Income-tax .. | 2,45,000 | 0 | 0 |
| To carry forward .. .. .. | 1,39,902 | 11 | 3 |
| Total .. | 4,33,902 | 11 | 3 |

The Company's mills continued to work 54 hours weekly until the end of October when, on account of further Government orders for sandbags and hessian cloth being received by the Indian Jute Mills Association, working hours were increased to 60 with effect from the beginning of November.

Additional contracts placed by both the Indian and Australian Governments have kept mills so well engaged during the period under review that only small surpluses have been available to meet any enquiry from America for early shipment.

At the time of writing markets are disorganized owing to uncertainty regarding the export of manufactures and the general feeling of insecurity which is a deterrent to business.

Productions have been affected by the migration of many workers to their village homes since Japan's entry into the war.

*Managing Agents.*—Messrs. Kettlewell Bullen & Co., Ld.

*Authorised, Issued and Subscribed Capital Rs. 28,00,000 in 14,000 Pref. both of Rs. 100, fully paid up.*

Synopsis of the Balance Sheet as at 31st March, 1942:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |

*Annual meeting, 4th May, 1942 at 5 p.m.)*

*Audited accounts for the year ending 31st December, 1941:—*

The special feature of the accounts this year is that due to the amalgamation of the subsidiary concern, The British India Iron & Steel Co., Ltd. with this Company, the final accounts incorporate the assets and liabilities of the subsidiary company as well. The Profit & Loss Account shows a gross profit of Rs. 16,39,226-11-4. After providing Rs. 1,50,000 for depreciation and after allowing for all other expenses including Debenture Interest, Managing Agents commission & allowances, Law charges and Sundry adjustments there remains a balance of Rs. 12,07,574-9-7 being net profit for the year under review. To this is added Rs. 94,888-4-5 being profit taken over from The *British India Iron & Steel Co., Ltd.* as on the date of amalgamation. After adding again Rs. 27,813-7-10 being balance of last year's Appropriation A/c. we get Rs. 13,30,276-5-10 which the Directors propose to deal with as under:—

To payment of Dividend on 2,00,000 Ordinary Shares at the rate of Re. 1 per Share

| | Rs. A. P. | Rs. A. P. |
|---|---|---|
| i.e., 10% per annum .. | 2,00,000 0 0 | |
| To Taxation Reserve .. | 9,50,000 0 0 | |
| To Balance carried forward .. | 1,80,276 5 10 | 13,30,276 5 10 |

*Managing Agents.*—Jwalaprasad Bhartia.

*Synopsis of the balance sheet as at 31st March, 1942:—*

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid up .. | 20,00,000 | Gross Block .. | 25,08,812 |
| 3½% Debentures .. | 5,00,000 | Depreciation .. | 9,53,512 |
| Reserves .. | 8,03,000 | | |
| Current debts .. | 14,82,743 | Block (net) .. | 15,55,400 |
| Carry forward .. | 1,60,276 | Stores .. | 3,44,685 |
| | | Stock-in-Trade .. | 5,12,160 |
| | | Outstandings .. | 9,63,555 |
| | | Investments & Deposits .. | 2,40,055 |
| | | Cash balances .. | 13,32,161 |
| Total .. | 49,46,019 | Total .. | 49,46,019 |
| | | Total liquid assets: .. | 33,92,619 |

*There is a contingent liability *of Rs. 6,00,000* being Rs. 5 per share uncalled on 1,20,000 shares in the *Sijua (Jherria) Electric Supply Co., Ltd.*

### THE STEEL CORPORATION OF BENGAL LTD.

Notice is hereby given that the Directors have authorised the half-yearly payment of dividend due on the 5 per cent Cumulative Preference Shares of the Corporation for the period ended 31st May, 1942.

The Share Transfer Books for the Preference Shares of the Corporation will remain closed from the 16th May to 31st May, 1942, both days inclusive. Payment will be made only to those Members whose names appear on the registers of the Corporation on the 15th May, 1942 or to their Mandatees.

No applications for warrants will be necessary. Claims on behalf of holders of Shares held on blank transfers will not be entertained.

By Order of the Board,
BURN & CO.,
Managing Agents.

12, Mission Row,
Calcutta, the 4th May, 1942.

---

### EASTERN FEDERAL UNION INSURANCE CO., LTD.

(Incorporated in India)

NOTICE is hereby given that the Ninth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, No. 9, Clive Street, Calcutta, on Saturday, the 30th May, 1942, at 11-30 a.m. to receive and adopt the Directors' and Auditors' Reports for the year ended 31st December, 1941, to elect a Director, to appoint Auditors and fix their remuneration and to transact any other business that may be brought before the Meeting by the Chairman.

The Share Transfer Books of the Company will be closed from the 15th May to the 30th May, 1942, both days inclusive.

By Order of the Board,
M. A. A. ANSARI,
Resident Director.

9, Clive Street,
Calcutta, the 1st May, 1942.

---

### HOWRAH MILLS COMPANY, LIMITED.

Notice is hereby given that the One-hundred and third half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, on Friday, the 29th May, 1942, at 12 o'clock noon, for the following purposes:—

(1) To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 31st March, 1942.
(2) To declare Dividends.
(3) To elect a Director.
(4) To elect Auditors and to fix their remuneration.
(5) To propose as a "Special Resolution":—
That the Directors be and they are hereby authorised to make donation from the Company's assets to the East India Fund for British War Services of the sum of Rs. 12,500-0-0.
(6) To transact any other business that may be brought before the meeting.

On application, Dividend Warrants will be made out in favour of Shareholders whose names are in the Company's Books on the 14th May, 1942, or their Attorneys authorised to receive them. Holders of Scrip under blank transfer are reminded to send in their shares for registration in the Books of the Company as soon as possible, but not later than Thursday, the 14th May, 1942.

To facilitate the issue of Dividend Warrants, Shareholders are requested to insert share numbers and the nature of the shares held by them in their applications.

The Share Transfer Register of the Company will be closed from Friday, the 15th May, 1942, to Friday, the 29th May, 1942, both days inclusive.

By Order of the Directors,
JARDINE, SKINNER & CO.,
Managing Agents.

Calcutta, 30th April, 1942.

## MARKET POINTERS

**Small Orders For Iron:**

Small demands for iron and steel are now being planned and ordered through stockholders of iron and steel either for delivery from their stock, or for forward delivery as soon as they can obtain materials from their works.

This decision of the Government of India is expressed in a circular pointing out that many of the small demands that are now being planned and ordered through stockholders may be of even greater importance than some big demands placed direct on a producer. If, therefore, a stockholder's orders do not receive the same attention as other licensed demands some very important jobs may be held up.

* * * * * *

**Licence For Cotton Imports:**

The order made by the Government of Bombay regarding prohibition of the import of cotton except under licence of the Director of Civil Supplies applies only to cotton imported into Bombay from places within India. It does not apply to cotton imported into Bombay from places outside India, e.g., South Africa. Such imports are controlled by the Import Trade Controller of the Government of India, says a Press Note.

With regard to cotton imported from places within India, in order to avoid any hardship to the parties concerned the restriction on import will not be enforced in respect of cotton which has been shipped or railed before the date of the notification, April 28. The Customs and the railway authorities have been requested to permit cotton which has been shipped or loaded before this date to come into Bombay without a licence, but the imports of cotton loaded after April 28 will require a licence from the Director of Civil Supplies and an application should be made to him as soon as possible.

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

NATIONAL INSURANCE COMPANY, LIMITED.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

Comfortable conditions have prevailed in the short loan market, interbank call money quoting ¼ percent nominal. There has been a notable increase in surplus cash resources in banking circles; and with the so-called busy season finally and completely at an end, there is every reason to believe that cash will be piling up in the hands of banks on an embarrassing scale. Colossal payments are being made by the Government in respect of war orders and war commitments; and this process seems to be unending as is indicated by the current phenomenon of active note circulation setting up a new record every week. Thanks to further expansion of currency in the week ended May 8, active note circulation in India shows an expansion of Rs. 6 crores to 422.69 crores. The deposits maintained by member banks with the Reserve Bank are also higher by nearly Rs. 3 crores and are just short of the Rs. 50 crore mark. Since the war began, a good proportion of the currency created has found its way into banks in the form of deposits. From the consolidated statement of scheduled banks, we learn that demand liabilities of banks have risen from Rs. 134.36 crores on September 1, 1939 to Rs. 234.27 crores on May 1, 1942. That is to say, banks report an increase of Rs. 100 crores in the current accounts of clients. There has been a decline of Rs. 7½ crores in time liabilities of advances made by them. Nearly a third gone up by about Rs. 92½ crores, advances made by banks in India have only slightly increased from Rs. 101½ crores to Rs. 106 crores. On the other hand, bills discounted show a decrease of over Rs. 1½ crores. In other words, in spite of the resources of banks going up by nearly Rs. 92½ crores, there is hardly any expansion in the trade advances made by them. Nearly a third of the increase in deposits is represented by increase in cash on hand. Presumably, the balance is invested in government securities and treasury bills.

From this point of view, the study of the returns of the Imperial Bank for the last two months is revealing. Between March 6 and May 8, the deposits of the Imperial Bank have risen from Rs. 113-15 crores to Rs. 125.15 crores. In the same period, the Bank's investments have risen from Rs. 60.90 crores to Rs. 71.51 crores. Cash maintained by the Imperial Bank was Rs. 24.40 crores on March 6 and Rs. 24.75 crores on May 8. It seems clear that most of the increased resources from deposits have been directly diverted to treasury bills. This partly accounts for the substantial sales of treasury bills which have been made in the last two weeks.

On May 12, the amount of tender bills on offer was Rs. 2 crores. Applications amounted to Rs. 3,19½ lakhs. This compares with Rs. 5,26¾ lakhs on May 5. It must be pointed out, however, that applications would have been far heavier on May 12, except for the unusually large sales of tap bills between May 6 and May 11, which amounted to Rs. 5,83½ lakhs. Tap bills sold between April 29 and May 4 came to Rs. 2,80 lakhs. Between April 22 and April 27, three months' intermediates sold came to Rs. 1,14½ lakhs. It will thus be seen that there has been considerable improvement in sales of intermediate treasury bills from the third week of April. So far as tender bills on May 12 are concerned, the average rate of accepted tenders was Rs. 1-4 percent per annum as compared with Rs. 1-4-8 in the previous week. The offer of tender bills for the next week remains unchanged at Rs. 2 crores; and sales of intermediate bills will also continue, the tap rate being Rs. 99-11-3 percent as against Rs. 99-11 in the previous week.

There has been currency expansion for Rs. 5 crores in the week ended May 8 by transfer of sterling securities for this amount from the banking department to the issue department of the Reserve Bank. As a result, sterling securities held in the issue department have risen from Rs. 246.85 crores to Rs. 251.85 crores. The Central Government's deposits with the Reserve Bank show a big fall of Rs. 7.86 crores to Rs. 6.66 crores. And, as we have already pointed out, deposits of member banks have risen by Rs. 2.91 crores to Rs. 49.98 crores. Thanks to the transfer of sterling securities from the banking department to the issue department for purposes of currency expansion, foreign balances held in the banking department show a decline of Rs. 3.65 crores to Rs. 54.88 crores. Ways and means advances show only a slight increase of Rs. 35 lakhs to Rs. 3.65 crores. Considering that the deposits maintained by the Central Government with the Reserve Bank were only Rs. 6.66 crores on May 8, there is every reason to think that, for the succeeding three weeks, the Government of India will be obliged to take large-scale advances on ways and means account from the central banking institution. The expenses of the Central Government are now on a heavy scale. As treasury bill sales are now exceptionally satisfactory, a good part of the current heavy expenses may be found from this source. Even so, it is not unlikely that ways and means advances will reach the high watermark of Rs. 20 crores by the last week of this

## TREASURY BILLS

### India

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' *Government of India Treasury Bills* were opened on Tuesday, May 12, 1942. Total amount offered was Rs. 3,19,50,000 (Rupees 3 crores 19 lakhs and 50 thousands). Tenders at Rs. 99-11-3 per cent and above were accepted in full and those at Rs. 99-11-0 per cent were allotted approximately 96 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-4-0% (Rupees one annas four per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills will be received on Tuesday, May 19, 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, May 18, 1942 at other centres. Successful tenders should make payment on Friday, May 22, 1942. Other conditions are as usual.

Three months' Intermediates sold from May 6 to May 11, 1942 amounted to Rs. 5,83,50,000 (Rupees five crores eighty three lakhs fifty thousand).

During the week ended May 8, 1942 Government of India Treasury Bills for Rs. 1,00,00,000 (Rupees 1 crore) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad

THE rates for all foreign currencies are held by control and to judge by the absence of any change in sterling all is well. The slight dip in London in giltedged is of no consequence for the stock exchange there has developed a more confident aspect of late. Financial developments are few and far between. Last week the treasury bill issue went off as smoothly as ever and this week the requirements of the Treasury from clearing banks by way of six months' deposits have been reduced to 25 million. The money market is said to have developed slight stringency and reverted to the previous ease when bills were readily taken up. The Bank of England returns of recent weeks indicate not only a rise in the small bullion holding but a decline in clearing banks' balances.

The change in the U. S. Federal Reserve Bank's reserves are small, but throughout April the Bank's holding of bills has increased which means that the money market there has found support in time. Member banks' reserves have risen in April reversing a trend noted up till January. The holding of U. S. Government securities has likewise increased. The U. S. note issue is larger, as may be expected in consequence of rising production. Messrs. Nelson and Khudsen are convinced that the U. S. A. is getting somewhere. The U. S. Maritime Commission is pledged to provide transport. Admiral Land in a broadcast announced that fifteen million tons would come from U. S. shipyards in a single year. More astonishing is the claim made in the W.P.B. report that a plane would come out per every eight and a half minutes. The rate of production is likely to be much higher than the target figure of 65,000. The United Nations are confident of victory, for the moment, that is more important than any notification or regulation. Mr. Churchill's speech two years after taking office has been a tonic for all markets. Victory—not its cost alone—interests the countries, and steps being taken in the U.S.A. to conclude a series of financial measures. The Federal Reserve Board has joined in the fight against inflation. A new set of regulations concerning instalment buying has been adopted. The general purpose of these rules is to prevent an increase in the cost of living and to limit inflation. Mr. Roosevelt has already asked people to pay bills and avoid debt as a means of beating inflation. The new rules lay down that cash loans under $1,500 must be repaid within a year and a speed-up of payments is provided for. Exceptions to this include student loans, emergency hospital loans, farmers credits and the seasonal income amounts of impoverished persons. Items covered by the regulations include nearly every household article except food, drugs and cosmetics —46 items from kitchen pans to clothing are included. Among these are clothing, luggage sports equipment, tableware, kitchenware, auto accessories, bedding linen, electrical appliances, yard goods and used furniture. The former lists included new furniture, clocks, radios, refrigerators, vacuum cleaners, stoves, musical instruments, silverware and plumbing fixtures. It is hoped that this will choke off buying on hire-purchase agreements. Less goods sold means more money saved and the sale of savings bonds should in consequence rise.

The U. S. Treasury's full revenue plans have not so far appeared. It is known that Congress likes the idea of an excess profits tax but that will not be enough. The surtax make for corporations has been raised, but individuals also will be asked to face a new revenue law since the States favour a sales tax there canot be consumption taxes. Fortunately the constitution has been amended in the past and it is open to the President to alter the level of taxation for persons with an income of over $25,000. Since Wall Street has latterly been steady, if quiet, it is evident that tax fears alone do not depress the market. But the U. S. A. if it has gained from the experience of Britain has a bigger margin for both saving and taxation. The Republicans are ready to back the Treasury and get on with the war.

The announcement that Edinburgh is ready to make good lost warships came after Mr. Eden went to address a meeting. The idea of warships weeks is therefore permanent. The Lord Provost indicated the city's readiness to provide the money. That is a measure of new sacrifice. To save until it hurts is the ideal and such relief as is provided under the purchase tax for utility clothing and shoes can be trusted to go into war bonds. The idea of saving and paying for the war has at last been officially approved in India. Lend—don't spend, is the slogan of the national war front. Whatever may be gained by import control or a normal surplus of exports must go into defence bonds or certificates. In this way the ground is even now being prepared for the third defence loan. It must be presumed that the further rally in giltedged is meant to show that the market is revising its view and the drop in the Treasury bill rate also the heavy applications last week point to propitious conditions. After a long while giltedged stocks have definitely strengthened but that does not mean a rise in anything except bank shares. Buyers of municipal or port trust debentures are likely to be extremely wary since the revenues of corporations or of port trusts are not likely to come to expectations.

The exchange market is likely to experience indifferent conditions when import control is tightened. The demand for remittance should appreciably fall and the rupee should become stronger. The Reserve Bank is likely to purchase more sterling assuming that British demand for war supplies continues. Sterling balances should thereon rise steadily. The reduced demand for U. S. and Canadian currency will be viewed as inevitable but India's demands for U. S. goods is not likely to fall since the Grady mission is known to be in favour of speeding up production in India.

Up to December 1941 Britain spent, £8,750 millions on war and £5,250 millions came by borrowing. The exchange equalisation account alone gave well over £1000 millions and short-term borrowing yield over £1,200 millions. The remainder came through subscriptions from the public that is to say £3000 millions was saved and lent by the nation in 28 months of war. The rate of saving appears to exceed all statistical estimates but does not seem high enough to the austere. The figures were cited at the Midland Bank meeting by Mr. Mckenna who said that in this war the financial side gave no trouble at all because the floating debt and shortterm issues played the necessary part. In what Mr. Mckenna has called the Greater War the borrowing has been done cheaply. The average rate of borrowing is below 2 per cent and 2½ per cent war bonds at least have not fluctuated in value. Mr. Mckenna attributed the success of war finance to post-depression experience of monetary management. After reviewing success in taxation and curbing consumption, he described the usual post-war dangers. He mentioned 1919-21 experience to indicate that wartime control should survive the war. Though freedom be limited, a sound financial system is essential, particularly, as regards control of new issues and foreign exchange. The remarks may be taken to reflect the majority view.

Consistent progress in regard to business and profits has distinguished the Allahabad Bank in its long career. How remarkable that has been in a difficult year may be gauged by a perusal of figures published in *Indian Finance* to-day. The maintenance of the dividend is no achievement: it is the increase in net profit from Rs. 9.71 lakhs to Rs. 10.55 lakhs that really matters. Age and strength have made the Bank almost unique, and in the balance-sheet as on March 31st may be found all the usual marks of progress. There is a rise in Reserve. There is an increase in Deposits, by Rs. 60 lakhs over the past year, and an increase in liabilities in suspense. A fairly high proportion of the liabilities are represented by fixed deposits, and it is only under the savings bank deposits that one can see the slight fall that reflects public anxiety.

The rise in Deposits fully explains the rise in the balance-sheet total this time. The most noteworthy change in the disposition of profits is the transfer of Rs. 7½ lakhs to Investment account and the sizeable reduction as compared with last year in the carry-forward. The circumstances of the first quarter of 1942 explain the Board's departure from established practice. What really interests the student of Indian banking is the main movement in the balance-sheet. Evidence of the reduced demand for funds is forthcoming in the fall of Rs. 60 lakhs under total Advances though the small rise under Bills will not escape notice. Deposits are up by Rs. 60 lakhs and Advances down by Rs. 60 lakhs to Rs. 4.99 crores on the whole. An increase in investments is postulated, and the Allahabad Bank's portfolio of Indian Government securities alone shows an increase having risen from Rs. 4.39 crores at

## Late Offensive & Limited Object

It is not enough to say that Mr. Churchill's last review of the war has put a different complexion on the situation. The mind is naturally torn between hopes and fears about the gigantic operations on the threshold of the Crimea. The Dnieper and the Don again acquire a news value denied to other rivers. It is not easy to keep one's grip on the scale and purpose of preparations, made for what has been described as merely a proem to the spring offensive. There is no definiteness about the objective. The blitzkriege in progress from Sunday may be directed against something larger than the Kerch Peninsula. The present attack may threaten the Russian command of the Black Sea or the approaches to the Caucasus merely in order to ease the continuous pressure exerted by the Russian armies to the north. A glance at the map is enough to suggest that the position is curiously akin to that of September-October. Then too a fierce offensive came, and went on. The result was by no means decisive or favourable to the Nazis.

From what has been said of the Russian break-through around Kharkov one may derive sufficient encouragement to offset apprehensions as to the German desire to taste a Crimean spring. What is now obvious is that counter-preparations have not been lacking, and the singular violence of the campaign is merely proof of effectual resistance. What is equally obvious is that on the Russian front the Nazis have not lost the initiative which according to many passed from their hands in December and the winter months. This is by no means prejudging the operations, first mentioned in a Berne dispatch to the "New York Times". The possession of bases in the Balkans and command of the Ukraine gives Nazi strategy a coherence that has always stood out. What we are forced to accept is that Hitler's accumulated resources are being thrown into the presumably soft spot for which he has felt. Apart from the scale of casualties in the first three days, there is nothing to suggest that the war takes a new course. The operations of the last four months in spite of claims and counter-claims have been in the nature of a sitzkrieg. Up to December the Nazis met with success. Two things prove it, first, the intervention of Japan and second, the summary review of the war by Hitler in December before he took over from Brauchitsch. The great question now is whether the retreat from Rostov and the continuous defensive warfare have not altered the character of the campaign. Russian statements would suggest that there can be no successful drive to the Caucausus, particularly when the flank on the Mediterranean is strongly guarded by Britain and a neutral Turkey lies between the goal. The Nazis may not be banking on the strength of the position built up in White Russia and the Ukraine since there is much to suggest that it is the overmastering desire for oil beyond the confines of Europe that calls for and explains the new advance.

To force a decision has always been part of the Nazi strategy. Last year Yugoslavia and Greece held up the spring attack for a time. This year there was no obstacle, but there was delay, enforced by a grim winter in Russia with complications in the form of disease and famine.

While the new Crimean war is naturally seen as a fight between Russia and Germany, it is still open to suggest that the Near East will be involved. Much more than Turkish neutrality hangs on the outcome. The Turks probably see the battle for Kerch as part of a wider plan that may envelop Turkey from the Dodecanese airfields. It is, however, in relation to the British army that guards the Nile, that one must look for India's safety and much else. That army has not been inactive, but it has not been very busy. The reported transfer of Rommel preceded by the arrival of two new Generals can only mean that Libya is just a German garrison. An offensive apparently is ruled out. Whether an attack on Sicily or Tunis could give the Allies a chance to get a grip on Tripoli is a question that is forced by the reported transfer from the Mediterranean of sections of the Luftwaffe as also of Marshal Kesselring. The R.A.F. has interfered considerably with local preparations in Libya, and Italy's difficulties may prelude reinforcement It may well be that British intervention once more against Libya may be entailed by events in the south of Russia.

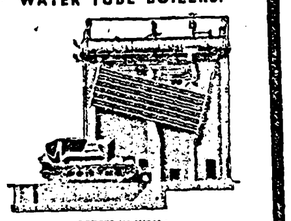
The demand for a second front can only be met by a further tightening of the Allied grip on the Mediterranean by coming to grips with the Italian fleet. The differences with Vichy may even be said to justify a positive move against French North Africa, at least for temporary advantage. Last year it was suggested insistently that a campaign within the limits of Cyrenaica offered little advantge if the major segment had been kept by an unfriendly neutral like France. A year ago at this time Crete was being held to the bitter end. Today Crete is a German base—so far inadequate, in relation to the Middle East, but likely to be used against Egypt whose non-belligerency has not always been respected.

## NEW POLICY FOR OLD ILLS

Hard thinking goes far to make a consistent reconstructive programme. If a constructive programme is elbowed out by the war, the value of the hard thinking does not disappear. No more appropriate comment can be made on a new analysis of the Indian economic problem. What the problem is, when it arose, and how, is, not quite familiar to all. The economic problem is commonly regarded as one of organisation (using the word in a wide sense) and in the case of India, it is viewed largely as a question of planning in the form made familiar by collectivists. But an independent appraisal leads another to call it one of co-ordination. In breaking away from orthodox views and in steering clear of current prejudice in favour of planning, the author of the "Economic Problem of India" (the New Book Company, Bombay, Rs. 10) has not only justified Professor P. A. Wadia's foreword, but made it clear that the root cause of our trouble goes back to the nineteenth century. When Lord Morley spoke of the fifth century marching along with the twentieth century he referred to the survival of incompatibles. Picturesqueness does not imply efficiency and it is essential to remember that industrial development so far is described as superficial and haphazard. If Mr. T. N. Ramaswamy is apparently obsessed by a world of ills, he is in the distinguished company of many conservative pessimists. In a few chapters he presents the problem, not as it appears to a graduate of the London School of Economics, but to an independent free-thinking citizen of India. In its emancipation from the restraints of scholastic research, the book is altogether new. There is a peculiar quality of tartness that makes us ask if the theme was deliberately chosen or forced on the author.

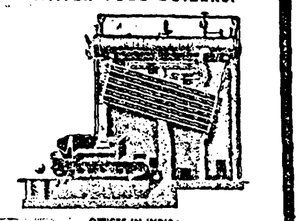
If the visions of planners are derided, the suave apologies for the economic transition are vigorously condemned. There is no economic transition to modernism, only the clash of old and new. The new is not always good, or efficient, for that matter, and the conflict rages in town and countryside. In spite of a certain confusion and vagueness the major conclusions of Mr. Ramaswamy require examination. He argues that the railways and paraphernalia of civilisation, thrust on India by alien rulers, have disturbed not only the old balance, but introduced various new ills. He is far from satisfied that the conditions for economic progress have emerged. Not because there is no planning, as urged by the men who want India to take the same road as Russia, but because India really cannot compromise with Wesern industrialisation. The viewpoint is unusual, to say the least, but many may agree that the arguments deserve extended examination. Has India an efficient system of agriculture? The answer will be No but then circumstances have always been against the Indian farmer. Peasant farming for subsistence as Dr. Mann insisted always is the feature of India—of all tropical countries, in fact. To super-impose commercial crops and production for export is not compatible with the true interests of the agriculturist.

The decay of agriculture seems amazing, and the theme is developed at some length. The German idea of "conjunctur" is frequently referred to in order to demonstrate that the conditions for economic progress cannot be obtained by frequent, incomplete and half-hearted compromises. India's inefficiency seems a venial offence, but it is a sin against the light—amid war conditions, the limitations of industry and trade alike stand exposed.



It is a remarkable measure of our dependence on exports that crop restriction programmes have appeared alongside of grow more food plans. The revolution in Indian agriculture was not anticipated by the writer of the Economic Problem of India, but he has made it plain that in its failure to satisfy the demands of health and efficiency agriculture was merely showing the effect of ancient handicaps. The evils of fragmentation and indebtedness are not voluntarily or universally accepted. They represent legacies of the time when India was conquered by the West and forced to tread the same road of development. The transport system again was subordinated to oversea commerce, and industry neglected conservation, which is to some, the foremost aspect of limited resources. A week ago the scope existing for further industrial development was discussed. But such development is contingent on conservation, or rather proper application, and even then India's minerals etc., make a poor showing against Canada's or Australia's. Age and numbers are a handicap like the deficiency of capital. But there is a further difficulty presented by a growing population. It is not merely in terms of labour and in its relation to wage standards that the problem has to be viewed. It has to be regarded as positively dangerous in view of the limited progress under food crops for decades and we can now see the bearing of the recent campaign in favour of grain and pulses against seeds and fibres. What is called the problem of higher conservation is mainly one of raising the standard of living, and to this too there are far too many obstacles. The conventional methods seem inadequate, and it is in regard to agricultural production that some line of hopeful advance is indicated. A higher average yield in the fields seems called for by the persistence of defective nutrition. But farming costs are high in relation to yield, and if a competitive commercial economy is arraigned and primitive barter lauded, it is because the merits of our ancient corporative system of agriculture seems brilliant in retrospect.

Poverty follows British rule, and the way it has spread is something amazing. The delay of rural arts and crafts is a sign of deepening poverty and the problem of adjustment is such as to encourage the propounding of heroic remedies. Caught in the toils of world forces, subject to external influences it is only of late that Indian agriculture is insulated from shacks. That is one reason why the food planning business seems specially promising. The true cure for poverty cannot be single, yet cooperative farming appears to offer advantages, if self-sufficient zones are the ideal. The major strand in modern thought is totalitarian, yet an urban proletariat appears undesirable. Technical advance has not taken the people far; corporative reorganisation alone can save a country when economic cohesion is absent. It is not only the "laudator temporis acti" that thinks so but the more efficient U.S. farmer who thinks at present that there cannot be too much government in farming. Yet people and plants, science and soil etc. are ancillary to adequate consumption. But adequate consumption is so far absent and fitful industrial progress cannot secure it. It is the central doctrine of the author that industrialisation in a country where the cost structure is reared on the foundation of tariffs is no solution either of unemployment or poverty. The latter are both symptoms and causes, and the shift of population, if it is approved, appears a counsel of perfection. The real cure for inefficiency is not the district development plan but the abolition of a system based on competition. Modern competition appears the bane as much as official indifference to the country's crying needs. It is only a knowledge of economic history that can give us insight into their nature and intensity.



India's social system, like her economic system, is not designed for strenuous modern conditions. The defects listed by foreign economists are only those which appear to the stark individualist. The influence of caste on economic evolution has not been bad. There is no need, on this view, to scrap social and cultural traditions for the sake of economic efficiency. The true solution is economic co-ordination between true regions. The existing centres of industrial and commercial activity are not located to advantage. That is axiomatic. Planning will not promote stability or true functioning, and progress, measured by output, is not the true goal. A happy life, in the ancient view, was independent of many modern amenities, and a severe, sustained exposure of modern economic discords in India demonstrates that India's agriculture is handicapped because the railways accentuate famines and drain away carefully husbanded local stocks. Standing in the tradition of Romesh Dutt above all other economists the author is content to analyse the rural problem and the urban problem to suit his thesis that India need not become like Germany or Russia, she can only be herself, and harmony is preferable to efficiency. It is no quietist doctrine that is preached for the group of ills, we know, yet may we not look for escape? The conventional doctrine is hardly adequate. India's industries under protection are regarded as inefficient, unable to stand up to effective competition and unable to get up to modern standards; also incapable of competing abroad at any time. This severe judgment will presumably have to be modified, but the author's main thesis is that industry has its evils, and it is better to avoid cyclical unemployment and other evils by turning away from the illusion that now industries will consume more raw materials and take more labour. It is within the older framework that reform must proceed, and reform in any case means the disappearance of new trade centres and many middlemen. It is well to ask if the changes can take place now and here. Many are already discernible, and the process of adjustment to war reveals the conspicuous merits of a household that can live unto itself. There is something fascinating about a mediaeval ideal and it is in half-heartedly meeting that threat from the West and discarding of older ideals that India has erred. This is a line of reasoning that is independent of the prescriptions offered. It is clear that Professor Guiseppe Michaelis has cast a powerful spell over the author in making him abhor modern aggregations of capital and labour. The trust like the public is menaced by the one big union, and India can dispense with both.

Being sceptical of all accepted views and previously received doctrine, it is not surprising that the suggestion of adjustment comes late. India's ideal should not be one of competing with X or Y but of supporting a growing population. Barter presents advantages, and with a population of less than two million engaged in modern industry at present the true ideal for India is agricultural advancement. Improved methods, additional area and new crops—these can be accepted, without prejudice even to fragmented holdings and indebted cultivators. What appears the overwhelming argument against piecemeal development of industry is the limited scope of the Indian market. It is claimed that only in regard to specialities like carpets and rugs can India hold her own but it is these which suffer worst and earliest through the war.

Much learning is deployed to cut at the root of protectionist teaching. Indian sugar seems unwarrantably dear and its overproduction a distinct menace. Had the circumstance of 1942 been present to the author's mind much of the argument would be rearranged. Unable to pay adequate wages and continuously dependent on protection, most Indian industries are pictured as inefficient and battening on the consumer. Selective protection is said to have nourished the three plutocratic divinities, finance, banking and the stock exchange. The author's bias then is away from industry, which in spite of its shortcomings is a provider of employment and a source of strength more so at present. The dormant evils of capitalism are exaggerated: instability is not engendered by dependence on world markets only. But the need for an elastic adaptable system survives all criticism of the peculiar advocacy of adjustment for efficiency. Technology will not produce a solution, for the evils are, in the main, due to unregulated evolution. The ability of industries to stand without aid is not the only mark of economic maturity, but we have to consider nearly all questions of adjustment in relation to after-war problems. It is then that corporative reorganisation will have to prove its value. The ideal of stability is not peculiar to those who uphold the tenets of Italian economists. Competition is discredited and conscious control is exalted and not only for reasons of State. There is a further transition in store for India. Of that, all are convinced, and the need for adjustment towards closed regional systems will emerge before then. A different, if difficult twist, will have to be given, and non-essential industries are seen to have no place during and after the war. The industrial concentration practised in Britain since last year illustrates the hard core of truth in the distinction drawn for example between weaving and embroidery. Any justification of discriminatory treatment would seem superfluous. The avenues of adjustment are many but they lead to conscious acceptance of big chances. Not all will welcome them—but they may come for all that.

### Colonial Markets

Things wanted by traders in East Africa from India are as usual listed in the Trade Commissioner's report. A Nairobi firm asked for furnishing fabrics, and an order is said to have followed the enquiry for the goods. Firms in India have been instructed as to opporunities for selling silk garments. A firm in Dar-es-Salaam asked for a connection with manufacturers of high class towels. There is said to be a big demand for fancy towels in attractive coloured designs. Since European imports are cut off many African markets want woollen blankets. A factory in Kenya is turning out blankets on a modest scale, but the demand is larger. The Mombasa office also reports that Indian confectionery was the subject of an inquiry from Entebbe. A Tanganyika firm asked for, and got, catalogues of agricultural implements of Indian manufacture. There was some interest in rubber balloons and toys, and manufacturers in India were asked for samples. The Trade Commissioner's report says little about import control adopted in the African colonies, but advises Indian exporters to make sure about the export control. Licenses, of course, count far more than markets, and 'no license' is more often heard than 'no stock'. The opportunities available to exporters are therefore limited by export control, but if one looks at the way in which India's trade has grown with South and East Africa last year one may expect that the colonies may compensate in some measure for the loss of Burma and other markets this year.

### More German Plans

To the reports of forced labour and more recently of extensive uprooting of peoples from their homes must be added those concerning German labour shortage. The manpower question must have been surely discussed at Salzburg, and Laval's trump card against Italy may yet be the prisoners who come back to work for Germany's war machine. In the east the Poles have suffered much, and seem destined to suffer more. In the absence of a political solution for the Ukraine the Nazis seem bent on monopolising whatever can be had. The grain of the Ukraine will not be available to Europe. The Nazis, according to an article in the "NEUE WIENER TAGEBLATT" of Feb. 26 emphasise that the spring sowing in occupied eastern territories is being made for the exclusive purpose of supplying the troops fighting on the eastern front. Occupation and exploitation go together, but starving Greece and fighting Yugoslavia cannot reckon on normal harvests elsewhere this year, for the Germans are on a different tack this time as they argue that spring sowings in occupied eastern Europe will not as yet be able to afford any radical improvement in the food supplies of Europe as a whole. They clinch the argument by saying this would not be possible in any case owing to transport conditions. The German admission is revealing, for it makes known two things, that the transport system from Russia to Germany is inadequate and exploitation of White Russia and the Ukraine are rendered difficult by various other reasons, also that the actual area available for German use is small. In the Ukraine previously inflicted damage would have spoilt the value of German acquisitions. The Germans hold out the hope that the 1943 harvest might be available to others besides Germany given certain favourable conditions. The Germans have had a fairly good harvest for two years running but are feeling the strain of war work and the never-ending substitution process. Moreover little can be had through looting at present and they have to look to regular cultivation. The R.A.F. offensive holds up production and smashes transport. By making more work for German hands there is assuredly a loss of the will to work, and in spite of the Fuehrer's message the raids are interfering with many things. The food supplies at home are perhaps curtailed by lack of labour—hence the pressing need for whatever grain the Ukraine may give this year. Any number of suggestive conclusions can be drawn, but the most important is that hard-pressed Rumania and needy Hungary can expect very little from their lord and master who aspires to everything and keeps everything back.

### Australia Checks Up

Australia's self-sufficiency plans include one for vegetable growing on a big scale. The Department of Supply and Development is ready to reorganise that side of farming. The scheme is necessitated by the exceptionally heavy demand for dehydrated vegetables and to overcome the difficulties in getting supplies for the defence services. The present estimate is that more than 8,000 tons of vegetables will come from this year's planting in the Murrumbidge irrigation area. Together with this goes a plan for a large increase in the production of vegetable seeds. The difficulty of getting imports underlines the plan which, according to Dr. Dickson of the Council of Scientific and Indusrial Research, is essential for Australia owing to the possibility of Australia being cut off from American supplies. While certain supplies will be larger, others will be greatly reduced. Australia is unique in prohibiting completely imports of brandy, whisky, wines and spirits from all sterling areas with the object of conserving exchange as well as shipping space. The luxury imports banned by the Commonwealth Government include cut glass, carpets, cutlery. The shortage of tea stocks will be met by increasing imports of coffee. The quota for imports from non-sterling countries has been raised to double the 1939-40 level in an effort to meet extra demands caused by the lowness of tea stocks. The latter explains the decision to ration tea. All tea has been taken over by Government, and future purchases will be entirely on Government account. In this connexion a provisional order to ration supplies to half of normal purchases was issued to retailers. The decision was explained by Senator Keane as due to interruption of normal channels of supply. Until further notice rationing was to continue, said the Commonwealth Minister. Supplies at current prices, but limited to half the usual quantity, became the rule of retailers, while importers and wholesalers were prevented from making further sales.

### Cane Facts And Figures

The review of the sugar industry in the year ended October 30, 1940 can only have historical interest. The Sugar Institute's Director provides little information about the restriction scheme. The information as to research etc. is fuller than expected and the success with hybrids may even modify the seasonal character of sugar manufacture. Four experimental stations were at work in the U. P. and experiments in rationing were a feature. In Rampur State a new cane farm made its appearance and improved varieties are being tried out. Research in Patiala has led to the displacement of local types of cane with lower yield by the better Coimbatore varieties. Mysore and Baroda are also carrying on experiments with new cane varieties. The agricultural research carried out in the year embraced observations on spacing and time of planting. Yield sometimes varies with the time of planting, and in Bihar, for instance, early planting was found to possess definite advantages. In the U.P. experiments with manures demonstrated the value of an additional supply of nitrogen for sugarcane. Green manure also yielded satisfactory results, and in Bihar castor and other oil-cake seemed to answer well.

A hint as to the efficacy of press-mud as manure is conveyed, while Padegaon's experiments with a compost made of cane trash showed that organic manure can be had from the cane crop. The green crop **Daincha** as also ammonium sulphate have established their merits on Orissa cane plantations. It is singular that nothing is said about work in Bengal. The Departments alone did not worry about research. Many sugar mills had their own experimental farms trying new cane varieties to ascertain yields. Carew & co., had a 50 acre farm at Rosa on which many varieties were planted and different manures applied. Here too, use was found for cane trash and press mud which went into pits two years earlier as manure. A large mill like the Harinagar Sugar Mills with a big cane acreage obtained on an average about 400 maunds per acre by the use of new varieties. Press mud and molasses were used as manures but the handling of molasses is difficult and uneconomic was the conclusion. The use of press mud is not confined to Upper India. It is reported that the Ramnugger Cane Co. which uses Coimbatore types is using press mud and ammonium sulphate as manure. The account reveals that sugar mills are established in Phaltan, Kolhapur and Bhopal States at present. Baroda had only 2,000 acres under cane in 1939-40 as against 5,000 acres in Mysore. Madras claimed a larger area under cane than Bombay but both Provinces produced less than Bengal which grew 316,000 acres in 1939-40 equal to 8.05 per cent of the total area under sugarcane in India.

### Major Achievement

Of the hardships of evacuees most politicians have made capital. Of official dereliction of duty, there has been eager criticism, but it is reassuring to find that with defective machinery three lakhs have already crossed the Burma frontier into India. According to a recent press note two thousand a day are coming back. Only about 50,000 came home by steamer from Rangoon but many thousands embarked from Akyab. High officials, many of them Indians, got home by air, and the success achieved with trekking and mixed transport by the coast route, the Manipur route and the Hukong Valley route proves that crossing by land is not so arduous. From the Assam side the reception arrangements were completed. Sanitation and medical relief had to be attended to, and the relief camps were equipped with medical staff and supplies. Whatever be the troubles in Burma all travel is free of charge from the moment Tamu on the border is reached. It is perhaps a mistake to speak of the returned emigrants as evacuees or refugees. Many of them are a long way from destitution, and their prosperity will make many ask why Government should provide everything free. No estimate has yet been made as to what has been spent up till now. The Overseas Department being the youngest and most inexperienced of Central departments got little. Its original grant must have been spent long ago. It has been cited in this connection that the value of free tickets issued from one station alone amounted to Rs. 8½ lakhs. Endeavours to improve reception areas have not been wanting. Mr. Justice Braund who saw the work done on the way from Burma to Assam by the Indian Tea Association and the Bombay-Burma Trading Corporation expressed complete satisfaction with the difficult work done by two experienced non-official agencies. Reception camps are being improved, and it is here that many philanthropic agencies have full scope. Allegations of discrimination in India have been refuted successfully, though the original segregation of routes in Burma, which excited great resentment, could not have been continued for long. The evacuation to Assam by air from Upper Burma by troop-carriers of late has been a remarkable feat. The use of air transport to China is spoken of as a promising possibility, mainly on account of recent experience in Assam. How long or how far the evacuation problem will extend cannot be ascertained at present. Employment is just one problem of many. There is education and immediate relief as also the prosecution of claims of private persons against the public authorities. Voluntary organisation has achieved no inconsiderable results and the Governments, Central and Provincial, have indicated that Burma domicile or experience is no bar to employment in India.

### Savings in India

In the usual tabular statement detailing the subscriptions to the Defence Loans will be found much to confirm earlier comment as to the slackening of public interest. The total subscriptions for February, when the 3 per cent. loan was taken off towards the middle of the month, was Rs. 90.14 lakhs only. The most unusual feature is that of this monthly total the largest contribution is that of Madras—a province that put up Rs. 39.76 lakhs for the 3 per cent. loan. There is nothing to suggest that it was investment by the Provincial Government which accounted for the lead held by Madras for once. The original primacy of Bengal is continually demonstrated under the grand total. Bengal put up Rs 40.74 crores out of the gross total of over Rs. 98.7 crores for the 3 per cent. loans but Bombay came a close second with over Rs. 37.55 crores. If these two provinces are left out there is nothing to suggest

**NORTH WESTERN RAILWAY**

Tender No. 212-S/2/1. Code word "CREDIT". Tenders are invited on a rupee basis for purchase by the North Western Railway of Glass globes lenses and Chimneys. Tenders must reach office of the General Manager, N. W. Railway, Lahore, not later than 14.00 hours on the 17th June, 1942 and will be opened in office of the Controller of Stores, N. W. Railway, Lahore, at 11.00 A.M. on the following working day. Tender forms and other relative documents can be seen at and obtained from office of the Controller of Stores on and from 11th May, 1942. The sale price of the tender is Rs. 3/-/- local and Rs. 3/8/- Muffasil excluding the cost of specification and drawing.

that India's response to the defence loan over a year and a half was prompt or enthusiastic. While the decline in February can be accounted for by events in the military sphere it will not escape notice that the progressive total for States and Centrally Administered areas was Rs. 2.53 crores only. Though one is free to admit that much outside investment is normally credited to Bombay and Calcutta, it is surprising to find that Indian India took inconsiderable interest in loans meant to uphold the Princes as much as the Paramount Power. The statistics establish also that the Punjab subscribed more than the U. P. or Madras, but actually the best showing of any province is made by Sind. The total of over Rs. 1.3 crores in this case includes subscriptions of the Provincial Government. The gross total under defence savings certificates after allowing for encashment is known to be Rs. 497.56 lakhs. Subscriptions in February were by no means arresting and encashments reduced the total to Rs. 15.16 lakhs. Total investments in the defence savings bank came to Rs. 9.69 lakhs only. In regard to savings certificates it might be mentioned here that the total received from States and Central Treasuries was fairly large being Rs. 101.73 lakhs out of the all-India total of Rs. 497.56 lakhs a much better proportion than the total of Rs. 4.27 crores out of Rs. 106.46 crores for the total of Rs. 4.27 crores out of Rs. 106.46 crores for the total secured by the Government. The February statistics attest the limited interest shown by the investor at a time when giltedged market certainly slumped. The tap sales of the second defence loan were therefore stopped a year after the start in view of the unsatisfactory response. But interest in savings certificates should have survived the decision to stop sales of 3 per cent. loans, which having been brought down below par in the market could not possibly attract investors who were asked to pay the issue price. The main lesson borne home by the figures is that India, in spite of a spreading war, showed no awareness of the additional responsibilities and opportunities. The addition of Rs. 106.46 crores only in about twenty months of open lists shows that Rs. 5 crores a month is the normal quantum of saving. It is all that can be had of India though one may assume that institutional support will be forthcoming, the statistics make one ask whether the third defence loan, if it comes, will be introduced without a savings drive in advance. It is still essential to remember that the general public is unconscious of its duty to stop spending and begin lending. The crowds of shoppers in city streets suggest as much. The limit of essential expenditure must be the work of telling the citizen in every way that it is better to lend than to spend. The limit of essential expenditure must be fixed and a recently reported decision to check all luxury imports is calculated to help.

---

**New Economic Plan**

Among the developments in Australia in recent months is the working out of a plan for closing branches of banks. A conference between the Minister for war organisation of industry, the Commonwealth Bank and the trading banks was followed by a ministerial statement. According to the Monthly Letter of the Bank of Australasia for March this will be part of the economic regulations framed under the National Security Act. It is taken as certain that rationalisation will invade the banking field to the extent that non-essential branches will go out of existence. It is also certain that services afforded by banks to their customers will be reviewed and reduced. Though the gain in manpower resulting from the closure of branches may be small, as investment from bank staff has been heavy, by reducing further services to bare essentials more men may be released for military duties. The proposals said to be under consideration include the withdrawal of a large number of branches, and involve a substantial reduction in the high standard of service to which bank customers have been accustomed. The letter remarks: no one regrets this more than the banking authorities themselves, but they feel confident that the public will fully approve of all efforts made by the banks to assist the country in these days of grave emergency.

The larger war production will, however, be retained without difficulty for the Government has indicated that it is prepared to accept changes in the economic regulations recommended by an all-parties committee. Government is said to

have made modifications in rules relating to sales and purchases of real estate, of shares, and to limitation of interest rates. The control measures, which give the Ministry power to call up men for national services, are all part of a new economic plan put out by Mr. Curtin's government. The Prime Minister's plan of simple economic justice is altogether devoted to speeding up and extending the war effort of Australia. The centralised control of manpower was not its only feature. Wages and prices were affected as also profits. In one respect at least the government has yielded to critics. The level of profits will not be limited before July 1, 1942. That the arbitrary limitation of profits to four per centt. on shareholder's capital will be discarded is meant largely to prevent the inflationary sweep that goes with full employment and the control plan will freeze many things besides wages and salaries. Though there is no danger to the liquidity of assets, and thereby to people's savings, the control of new issues and all building activity will promote investment in Government loans. The ban on speculative transactions for capital gain has been approved. Full regular mobilisation of labour will be attained by the ban on absenteeism in industry.

A feature of the New Economic Plan is the adoption of a rule which will enable a person who is a party to a contract or agreement to appeal to a tribunal for varying or cancelling the terms. It is, however, realised that 'socialism in our time' is the scarcely-veiled object of the Australian Labour Government's plan, though it has been declared that power to use property for national purposes does not include power for the confiscation of property. The effects of the N.E.P. (nothing to do with Lenin) were seen in Australian stock exchanges after February 19. Trading in all stocks and shares other than Commonwealth Bonds and semi-governmental securities ceased. Prior to the suspension of business there was a notable weakening in industrial shares. Throughout 1941 all share prices had drifted downwards, and the position became obscure until the National Security regulations were revised. Quotations reappeared on March 11. Minimum and maximum prices, based on values ruling on February 19, have been fixed subject to a trading margin of 10 per cent. below and 10 per cent. above the listed prices. The proposal is that these lists be adjusted fortnightly. The differences between the procedure adopted in India and Australia will suggest that the balance of advantage lies with Australia. Trading in stocks and shares is permitted either when they have been registered in the seller's names for not less than five months or made under certain conditions set out in the regulations. Borrowing or lending of money for the purchase of shares, stock or debentures of a company have been prohibited. A major change of definite advantage to the Liberty Loan drive has been a slight rise in giltedged. The selling of semi-governmental securities during and after February was noted but the yield basis was around 3¼ per cent. so that all Australian stocks were over par.

**Strategic Reserves**

Before the outbreak of the war in the East, it is known that the U. S. A. had made a notable addition to its stocks of rubber and tin. Of that there is no question since U.S. stocks at the end of October totalled 462,000 metric tons. A similar increase in stocks afloat was a movement characteristic of the pre-belligerency period. It is clear that part of these must have been meant for the U.S.A. always the world's biggest consumer of rubber. Fluctuations in shipments from producing countries are naturally reflected in most of the changes in stocks afloat. The main feature of 1941 was an increase in Malayan and N.E.I. rubber shipments. Since Brazil produces both wild and plantation rubber, the stock position in that counry is indicated in the League Bulletin of Statistics for January. The stocks in Malaya at the end of October amounted to over 50,000 metric tons. Ceylon also reported stocks amounting to 14,600 tons and stocks in the N.E.I. would probably have been around 50,000 tons. How much was shipped, and how much was destroyed prior to the loss of the Colonies can only be surmised. Anyway, the quantity cannot be large. Where Japan stands to gain is through the control of minor producers like Thailand and Indo-China. Of greater interest are petrol statistics. The

CONTROLS HUMIDITY

VOLKART BROTHERS ENGINEERS BOMBAY · CALCUTTA

Panic is suicidal. It does not help in any way. It does a great deal of unnecessary harm. It dislocates life. If the conditions, present and prospective, are difficult in Calcutta, panic makes them more difficult.

A manly race will face difficulties and dangers in a spirit of calm and composure. Half the terror of the danger is gone if you meet it in a calm spirit. On the other hand, panic magnifies the danger hundred-fold.

And why should you succumb to panic? Are you afraid that you would be bombed? Why do you give yourself that import-ance—as if, out of the one and a half million living in Calcutta, this destiny is marked for you?

Suppose you run away from Calcutta and from bombing (if any)? Where can you run away? To your village? Are there no cobras and other poisonous snakes in your village?

There is as much chance for your being bombed in Calcutta as for your being stung by a snake in your village.

The law of averages, which is operative even during a war, is a safeguard and protection for you. Mr. Fairweather, the Commissioner of Police of Calcutta, has stressed this fact through a forceful and apposite illustration.

Mr. Fairweather points out that panic only shows ignorance because Calcutta is now in a position not only to defend but to attack successfully in every sense of the term.

Panic is senseless because, even if a few Japanese planes did get to Calcutta before they are attacked and destroyed, the chances of the ordinary citizen being hit (provided he does what he has been told to do in the way of taking shelter) are, Mr. Fairweather stresses, about the same as he has of drawing a horse in the Cal-cutta Derby Sweep.

Mr. Fairweather has developed the metaphor so expressively that it were best to quote his own words :—

Until the Draw took place everyone was a potential owner of £40,000 or £20,000 or whatever the prize money was; but, when the draw was over, only a few lucky people got the money to spend.

Similarly, if an air raid takes place there may be a few unlucky people. At the moment, we all have an equal chance. There is no need for all the people of Calcutta to expect bad luck any more than all the holders of Derby tickets could expect good luck. The only thing to do in both cases is to wait and see.

Do not start expecting someone else's bad luck now for that is the meaning of senseless panic. It is wrong, stupid and may be disastrous.

What is the moral and lesson?

It is better to face danger bravely in your own homes or factories where help, protection and even safety are close at hand, than to face danger amidst strange surroundings where food, shelter, medical attention and perhaps safety are non-existent.

Banish panic: be calm and self-possessed; stay put.

You may not have the good luck to draw the first prize in the Calcutta Sweep—nor will you have the bad luck to be the first victims in an air-raid.

Wars generally are as devastating as they are degrading. All the same, they have their ennobling effect on humanity. Wars very often constitute a telling argu-ment for placing the society before the self. It enjoins on human beings a wor-ship of humanity.

---

"Thy necessity is greater than mine." The dying man denied himself the pleasure of the last drop of water and helped to save a soldier. This self-denial has kept the memory of Sir Phillip Sidney for ever green. He made himself an ideal which has served as an inspiration for genera-tions. But it was the circumstances that gave him the peculiar chance to distin-guish himself. War, therefore, has its compensations.

We are now living through a war—a greater war than any ever fought before; a total war, as they call it. These three years of war have been a period of train-ing for most of us. The gap between the fire-side and the firing line has been narrowed to the point of being non-exist-ent. The combatant and the non-combat-ant are now soldiers in different spheres.

Everyone has to make sacrifices for the others and smile all the while. We are being gradually elevated into a nation in which Philip Sidneys will be commonplace figures. Sacrifice, as a social virtue, is being encouraged on a mass scale.

It is a necessity. It is urgent that such a feeling should be cultivated, and the effect of it pooled for the benefit of humanity. Old things acquire a new value under changed circumstances. And it is, therefore, not in the least surprising that an attempt should be made to keep a credit and debit account of sacrifices made by men for men, by human beings for the sake of humanity.

The "Blood Bank" represents the summum bonum of this sentiment. Since this idea was conceived, giving of blood has ceased to be a mere figure of speech. By careful planning, it has been possible to utilise every drop of blood, which anybody can spare, for prolonging the lives of shaken-up soldiers and victims. Blood transfusion is no new idea. But the building of a Blood Bank is one of its most wonderful offshoots; and Dr. J. B. Grant, Director of the Institute of Hygiene and Public Health, deserves our warmest praise for the pioneering work he is doing in India.

But Dr. Grant needs our co-operation more than our admiration. Banks are based on co-operative efforts and its success depends on the co-operation of the public. And the same is true of the "Blood Bank." The crying necessity for blood suitable for transfusion need not be stressed now when humanity is being hacked to pieces by the Huns. Still, the public must be made conversant with some details about it before they can be asked to place their confidence in this project.

Ignorance is mostly responsible for the extremely lethargic response which the appeal for blood has created among the Indians. But they must realise that the Blood Bank is an insurance against blood bath. And little drops which you and I can spare, drops of the red fluid, might save many glorious lives. More. One drop of blood now may very well prove the timely stitch which will save the other nine.

It is the opinion of qualified doctors that the only treatment for air-raid victims who suffer mostly from shocks, is transfusion of blood. It is, therefore, to your personal interest to see that there is enough of blood in the bank for an emergency. There is sure to be a run on the bank. You must make it strong enough with your supply to make it serve in a crisis.

Yet the figures given by Dr. Grant were not encouraging. Up to last week, there had been only 1,772 Indian donors and 2,805 of other communities and the blood collected amounted to 1,120 litres. They need 15,000 donors in the next three months for a total of 5,000 litres of blood. Their demand is great, but it can be supplied by a small sacrifice on your part. Little drops of water make the ocean. Little drops of blood make the Blood Bank. Give your own quota. Do not wait for the other man to give for you.

You must remember—and the figures are verified—that among 2,000 wounded in an air-raid, there will be about 200 who are suffering from shocks. In India it may be more. And placing your deposit with the Blood Bank is the only effective remedy for it.

It is a shame that the response to this noble scheme should be so very indifferent in India. The Indians are imbued with the ideals of Dadhichi who immolated himself for the sake of the Gods. It must not be forgotten that, in a total war, every man has a duty towards the next man. You cannot, you must not, neglect your duty.

You may think that giving blood is a painful process. You suffer only in mind. Physical pain is totally absent. Besides, there has been such wonderful development in the science of blood transfusion since the last war that it has become almost as fascinating as a work of art.

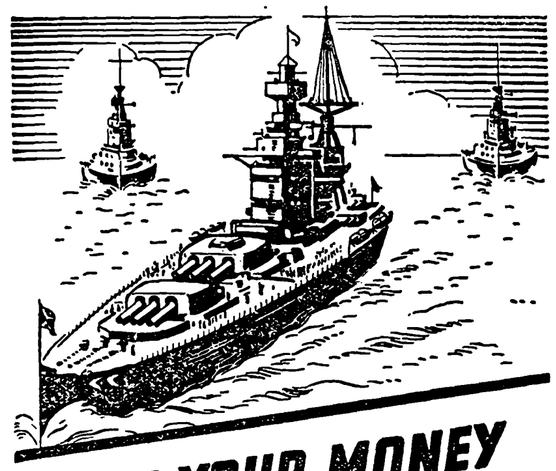
Blood now-a-days is never transfused as blood. That used to be the case before; and then it was necessary to have groupings of blood to find out the compatibility between the patient and the donor. But the process has been simplified. Blood from any normally healthy man is good enough. Yours may be better than you suppose.

The blood is drawn out through a needle from a vein in the arm. Then they make a serum out of it. Sometimes the blood is stored as a powder which can be dissolved in a liquid before transfusion is given. All these go to show that the system has been perfected to a wonderful degree and there is hardly any risk for the donor.

Dr. Grant has other difficulties, too, in India. The arrangements in the hospitals are very inadequate; and Mr. N. R. Sarker, who holds the portfolio of Health and Education, must have been shocked into surprise when he learnt from Dr. Grant that the second city in the Empire had such ill-equipped hospitals, that half of them cannot store the blood nor have the instruments for transfusing blood.

Believe it or not, exclaimed Dr. Grant. We who know how primitive everything is here will have been pleasantly surprised if Dr. Grant gave any other version.

But, difficulties must not be allowed to stand in the way of building the Blood Bank. It is too urgent, too imperative.



The donors also create some difficulties. They realise fully well that they are offering their blood for the cause of humanity. Yet, they cannot get over the narrow considerations of caste, creed and community. There had been some who demanded that Indian blood should be reserved for the treatment of Indian patients.

Such a demand does not indicate a healthy outlook. Humanity really transcends the narrow limits of nationality. But Dr. Grant has given them an assurance on this point too. It is not for nothing that it has been called a Blood Bank. The depositors will always have the option to withdraw their share in the pool. But it must be understood that the same blood you put in the Bank may not be returned to you. The ordinary bank does not promise to pay you back the same coins you had put in there. Yet, it honours your demand.

However silly it sounds that there may be inhuman contributors in the cause of humanity who demand a withdrawal of this deposit, the possibility has been considered and methods devised to safeguard even their interest.

This should eliminate the last objection to depositing your blood in this Bank. But I for one, am never prepared to believe that the absence of your account is due to objection or inhibition. It is just so. Your heart must heave when an appeal

*(From Our Correspondent)*

New Delhi, May 13.

Political questions have, once again receded to the background. The march of events in Burma, which has brought the threat of war nearer to the country's north east frontiers, has necessitated concentrated attention to war problems. The Commander-in-chief, who recently undertook an inspection tour of the north eastern frontier defences, returned only a few days ago to headquarters. It is due to General Wavell's initiative that the various Commands in India have now been reorganised on an operational basis to serve as fighting units. Owing to the seriousness of the war situation the Viceroy and his Members have been engrossed in war work, but despite these heavy preoccupations there is reason to think that the Viceroy is giving his close attention to certain suggestions made by some of his Indian colleagues for improving the political atmosphere in the country. "Something should be done without delay"—that is the purport of the appeal made to the Viceroy. It is generally believed in New Delhi that certain consultations are going on between the Viceroy and the authorities in White Hall, but the problem is not quite so simple of solution. On the one hand it is being urged that the Viceroy should strengthen the hands of those like Mr. C. Rajagopalachar who are for resumption of office for active defence, but on the other hand there is also the feeling that nothing useful can be done at this late stage for resolving the political deadlock. In this conflict of forces it is difficult to say anything for certain.

• • • •

An early decision cannot however be postponed much longer. Already there are signs to indicate that owing to this prolonged suspense the administration of the Government of India is suffering to some extent. For over four months there has been no Member for Information and Broadcasting. So important a Department as this, which needs a first class public man to guide it for raising the people's morale and carrying on national campaigns like the National War Front, cannot be left to go on indefinitely without a head. Even for the communications portfolio—no less important as it controls vital Departments like Posts and Telegraphs, Transports and Railways—there is at present only a stoppage arrangement for at the moment the Secretary of the Department, Mr. S. N. Roy, is officiating as Member. Important questions of policy like the bifurcation of the Communications Department and the creation of a separate portfolio for Production—even the association of an Indian Member for Defence—have all been held up. And what is more serious, though Mr. Churchill agreed some months ago to India' representation in the War Cabinet and in the Pacific War Council, the Government of India have not yet been able to nominate anybody yet—presumably because the future of the Viceroy's Council is uncertain. It is not a state of things which is desirable in war time, for if administration is to go on efficiently, it is neither right nor wise to be content with stopgap arrangements or to leave important vacancies unfilled for months together.

• • • •

Credit is due to the Indian Members of the Viceroy's Council, for the efforts which they are making to increase the pace of Indianisation in the Imperial Secretariat. Two new Joint Secretaries, Mr. R. K. Nehru and Mr. S. A. Venkatraman, have joined the Supply Department. Another Indian I.C.S. officer, Mr. Desai, has been appointed as the Deputy Director General of Supply. It is not yet known, however, whether the post of Additional Secretary recently vacated by Mr. Ghulam Mahomed, will be filled—if so, whether it will go to an Indian. It is understood that Mr. Sundaresan, a very capable officer of the Finance Department, has been selected for the Budget Officer's post. These appointments are small in number and do not therefore materially affect the proportion of Indians in higher posts—still surprisingly low. For instance, the fact is that even to-day there is only one Indian occupying the position of Secretary—Mr. Trivedi—though there are more than 20 Secretaries in the Government of India. There is only one Indian I.C.S. officer as Additional Secretary—Mr. N. R. Pillai. As several senior Indian officers of the I.C.S. and other Services are available, the position revealed by these facts is far from satisfactory. The only cause for satisfaction is that the Indian Members are aware of public feeling in this matter and are seeking to remedy the position by selecting Indian officers for as many of the future vacancies as possible.

• • • •

Certain facts connected with army recruitment are now available. It is now well known that the one million mark has already been passed. Recruitment is now on an average well over 50,000 a month. As regards officer recruits they are reported to be coming in at the rate of 300 a month. These figures are undoubtedly encouraging, but considering the rate at which army expansion is proceeding, one has to be prepared for recruitment on even a bigger scale in the future. Military authorities are now engaged in promoting certain liaison arrangements with universities for interesting students in military life. It would appear that there is shortage in the number of educated recruits coming forward for the technical branches of the army. Measures are now being taken to get more educated recruits for one army in order to cope with the requirements of modern mechanised warfare.

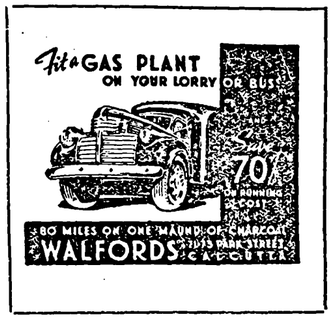
(From Our Correspondent)

Bombay, May 11.

THE appointment of Mr. R. P. Masani as leader of the war front in Bombay has given general cause for the belief that the non-officials here will be asked to help more vigorously. The Vice-Chancellor of the University has asked businessmen and students alike to hold their heads high and think for themselves. The war front, if it is to succeed, must be restrained in its own propaganda. The Viceroy's second appeal last week was not, on the whole, satisfactory. To say that being unarmed is an advantage seems absurd, and the dig at politicians for non-cooperating did not seem in quite good taste. The politicians have explained often why they ignore the Viceroy's appeal. While Gandhiji stresses non-violence, and does not at all take note of official propaganda, there is not likely to be much enthusiasm for the war effort as such. As the Viceroy said passive defence and withdrawals won't bring victory nearer, and all that seems to be done in Burma seems wasted effort in relation to the outcome. That does not at all imply a defeatist mood. What is lacking is the belief that a decisive triumph is coming soon. The national front organisers headed by Mr. H. V. R. Iyengar may have the antifascists under their wing which does not help much. More important is the new effort to tell the workers what to do. Labour, as Mr. Masani told a specilly arranged meeting last week, is a vital factor in the war, and various meetings since then have carried home the message—carry on with your jobs. That is the only thing which matters. Hotel keepers too held a rally of their own and pledged themselves to serve their customers in an emergency. No special inducements as in Madras will be necessary in their case. Though all sweetmeat shops are hampered by the high cost of sugar —which is nominally under control, they are likely to do the same as the hotel keepers. Since the majority of hoteliers are Iranis they are not likely to look beyond Iran to realise that support to the Allies in their own way is just what is wanted.

Mr. Jamnadas Mehta of the National Defence Council has sprung again into prominence. He has asked Bombay students to do their bit in the vacations and generally counter-propaganda appears the aim.

The Centre is going to spend up to Rs. 30 lakhs for the national war front though the officers, called Organisers, will be chosen by the Government. The general view is that publicity will be keyed up to suit the situation caused by the collapse in Burma.



The new plan to put down imports has not made for cheerfulness. The traders here are not anxious to hear that shipping is precious and their supplies are non-essential. Australia's example has been cited in advance. If defence supplies are to increase, the scheme must go through. Exemption and that from Delhi is promised only in special cases. Credit and other arrangements are treated as of no moment when it is a question of winning the war by getting out essential goods. The Delhi notification appearing on the week-end has inspired a hope that the Government will encourage Indian industry to the extent that supplies can be locally procured. A further rise in the prices of scarce goods will distress many but there is the further consideration that it is not only a question of saving money and lending to Government but space. Shipping losses in the Orient must be heavy, and it is not possible to make drafts on Allied tonnage, however rapidly replacements might have been or can be made. The interposition of import control goes back to 1940 and periodically the licenses have been modified. A fall in customs revenue seems likely, but that should cause little concern when rail receipts are rising, and there is no trouble about short-term borrowing, at a slightly higher rate it is true.

The adoption of the official view as to effective defence is unusual for the Indian Merchants Chamber. Mr. J. C. Setalvad at the last quarterly meeting pleaded that defence work must go on. But he deplored the lack of arms in the country for a people's war should invasion be attempted. The lack of touch between rulers and ruled was also mentioned as an obstacle, and the appeal for a fresh effort after the failure of Sir S. Cripps came voluntarily. Dr. Grady's mission is now in Bombay but the Chamber entered in advance a plea that new enterprises launched at the instance of the Mission should be in the hands of Indians only. The Chairman of the Central Bank was mainly concerned to describe the lack of any specific statement on scorched earth. This is not a dead issue despite Sir Alan Hartley's answer and the war risks scheme for factories and plant. Mr. Haridas Madhavdas felt impelled to say that compensation was not enough when property was destroyed deliberately. As regards the insurance scheme, he said that the premium was too high, and the insurer should pay claims in full, not up to 80 per cent of loss. He suggested that stocks of commodities covered by the original war risks scheme should be covered against seizure by the enemy. Mr. Haridas went on to discuss the control of foreign trade in war and the emergence of new shippers and institutions who had a pull with officials and got favours done by the various Controllers. He pointed to the danger of a monopoly or semi-monopoly, particularly, the danger of unduly high prices.

The Kolhapur State has held its first conference of women. The Maharani opened it and spoke of maternity welfare work, war comforts for troops and many other things besides the training of nurses. Mr. Hansa Mehta who went down to preside spoke of courage and faith, and also of women's rights. She ventured even on the succession issue and asked why the baby princess' claims were overruled and a child taken from elsewhere. The speaker did not omit to discuss the grievances of States peoples and what women should do to strengthen the Subjects' claims for self-government. There was an exhibition which made the most of Kolhapur's arts and crafts. Another Maharani opened that, and spoke of Kolhapur's history and the part played by women in it.

The cloth market has evidently turned the corner without difficulty. Since the cotton market is definitely rising, the cloth market will firm up soon. Upcountry buying has been in evidence, and the clearance of imported goods helps the sale of local goods. Export demand, too, is not dormant, and prices have latterly been hardening. The advance in rates for imported goods contributes to the revival in mill goods. The lift in prices extends to bleached goods and fancies. The market is once again buoyed up by the hope of better trade, and reports that Amritsar is active and firm, lead many to believe that with grain prices rising the ryot will be a good customer. Railway transport being not easy, there is eagerness to lay in stocks. After swift intervention in Madagascar, the trade is sustained by the hope that war news cannot upset prices.

An event of considerable interest was the opening of the Calcutta National Bank's branch here. To-day when foreign banks are inclined to say that there is too much banking the Bengal banks believe in expansion. In spite of the difficulty raised by admission to the clearing house in this place the expansion goes on. On Tuesday last, the new Mayor formally opened the branch. One of the Directors from Calcutta described the progress made in the last seven years by the Bank whose record is gratifying to shareholders and depositors alike. There was a large and friendly audience for the Mayor last week. The Calcutta National Bank has opened in Bombay because there is little trace of panic and the volume of trade in and through Bombay alone keeps growing in spite of the war. The safer city as Bombay may be called has also the advantage of effective A.R.P. after the big drive began last month. In distant Ahmedabad there is some support for A.R.P. after the municipality compromised over the question of Government control. The Textile Labour Association has formed a volunteer force of its own for first aid and fire fighting. The Congress is carrying on independently but the question of cost is causing some difficulty. The local government has been informed that the municipality can't foot the bill and this makes the people proud of Bombay which does not lack for help or direction.

(Continued from page 755)

production of Burma in October was estimated at 89,000 metric tons. Right through 1941 the monthly production of Burma was around 90,000 tons, only slightly larger than the production of Bahrein. The production of the N.E.I. in most months exceeded half a million tons so that the loss arising from the fall of the Dutch Government in the Colonies is more serious. N.E.I. output again was ahead of Mexico's, but less than Iran's production is not recorded. Iran's statistics indicate that oil output has steadily risen throughout 1941 after the fall recorded in 1940 and promised to outstrip the 1939 total. The Allies' control of Iran will be seen as a definite advantage at a time when the oil of the Far East has been lost owing to the Japanese aggression. In regard to tin the U. S. stocks at the end of 1941 amounted to 3,600 tons while U. K. stocks were larger at the end of November at 6,000 metric tons. World production and stocks of tin fluctuated much as usual but as noted last week, Bolivia and the Belgian Congo reported an increase in production in most months up to October. Nigerian output, if smaller, was a useful addition to British supplies, and the advance in Portugal's tin production must have been helpful to Britain.

(Continued from page 747)

month. It is quite possible that the Government have recourse to delivery of *ad hoc* treasury bills to the Reserve Bank for purposes of replenishment of cash position.

On the eve of the fall of Rangoon, we drew pointed attention, in these columns, to the disgraced status of the debentures issued by the Rangoon Corporation and the Rangoon Port Trust. The anxious conditions through which Calcutta is passing threaten a similar prospect for the debentures of the Calcutta public bodies. We understand that banks are already creating difficulties with regard to loans against the debentures of the Calcutta Port Trust, Calcutta Corporation and Calcutta Improvement Trust. The position in this regard has to be clarified. There will be serious financial unsettlement and anxiety if the Government of India do not intervene immediately and provide an assurance to the holders of these debentures. We think that the least that the Government can do is to issue a categorical statement that the debentures of public bodies in Burma and in India will be guaranteed by the Government during the period of war and for one year after the war is over.

The exchange market has been dull. Bills are conspicuous by their absence. Some remittance enquiry has been reported.

Closing rates are: Banks buy T.T. London Ready to six months forward 1s. 5 31/32d., and sell T.T. London Ready to six months forward 1s. 6 1/32d.

Banks buy three months D.A. bills for first and second month at 1s. 6 9/32d., and for the third and fourth months 1s. 6 5/16d.

Interbank call money is quoted easy at ¼ per cent.

*Firms' money for one to four months deposits* quoted ½ per cent.

Banks buy T.T. New York Ready Rs. 329½ for $100.

Banks sell T.T. New York Ready Rs. 332¾ for $100.

(Continued from page 749)

end of March 1941 to Rs. 5.46 crores at end of March 1942. Total investments are up from 4.88 crores to Rs. 5.84 crores. The cash balances of Rs. 2½ crores shown in the balance sheet are high enough in relation to total deposits of Rs. 12.95 crores though the cash ratio may be lower in comparison with the position shown a year ago. What concerns us most is the maintenance of high earning power despite slack conditions as also the retention of exceptional liquidity accompanied by traditional investment policy. The Allahabad Bank can always be trusted to do better than most since its standing is enhanced by experience. The expansion in business and gross profits alike demonstrates that the Allahabad Bank is always in a position to give most service and use opportunities to the full.

is made to it in the name of humanity. Besides, you must make your own sacrifice for your suffering brethren. And here is a chance for you.

You can do the most feeling act in the most casual way. You have such a surplus that a few drops should be stored up as a reserve. You must open an account in the Bank to draw upon in case of dire necessity. You may need a transfusion yourself, or wife, or children; and friends may need it. A few drops of blood given now will help you then. Help build the Blood Bank; and it will help in lessening for you the horrors of this inhuman war.

There was much to grip an urban audience, mainly of students, at the Calcutta University Institute when the Hon. Mr. Sarker marshalled all arguments for his favourite, non-partisan programme of more food. Mr. Donald Nelson may be talking about aircraft production all the time, but India's only production —the only thing worth considering at any time—comes from the fields. It has taken the Central Government over 50 years to make the discovery that India is permanently short of food. There is only one way of dealing with it, and that is Mr. Sarker's way. For the first time official propaganda is both intelligent and plausible. Nobody will find it hard to believe that more food is wanted so that none need go short. I am more than ever happy to find that the national war front people have taken up Mr. Sarker's cry, and ask the country to grow more food. I fancy that is more important than using less paper, because self-sufficiency is now more than an idea. More and better cultivation, for instance, happens to be the cultivator's ideal. Yet it is only the surplus that comes on the market, and it is only a bigger outturn that can bring a bigger surplus. Just now, in Bengal at any rate, the rice surplus is big enough. Statistics need not be flourished to prove that except for wheat there is enough food and to spare in Bengal. The Ministry's programme is a month old and Mr. Sarker as a former Minister must rejoice to find that the good work is going ahead in his own Province. Much of the gain accrues from the wise policy of restricting jute cultivation. Nothing can rob Bengal of her position as the biggest rice-growing province with 40 per cent. and more of the production to her credit. That is a very good reason why Bengal should lead, for instance, in supporting Defence Loans. Plenty cannot be dissociated from generosity, and there need be no failure of charity in Bengal where the sum of Rs. 20 lakhs will be wholly devoted to bring the villagers into the campaign. It is is no longer quiet on the food front. There will be another lecture—to convince our foreign citizens as also the more resolute sceptics that propaganda is sustained by faith, and even more by a series of formidable figures.

This is not the first time Mr. Sarker has examined the foundations of Bengal's agriculture. He knows specific remedies for underproduction, and the Indian Government in 1939 should have adopted food before putting more men into the fighting line. An army of million men has to be fed and the farmer takes his place in the war effort. Even more vital is the need to make good former imports, and Mr. Sarker, who generously acknowledged what has been done by Mr. Huq's Ministry, had only to address general suggestions. There is no trouble about a market, and it is not only the cultivator who has to think of it.

Horticulture is more than a hobby and Mr. Sarker has asked every householder to start a kitchen garden. Vegetables and fruits are called expensive, though valuable: the true remedy is to add to supplies. The Bengal ministry's effort has been praised at the outset and it is regarded as a non-class non-sectarian programme which the State and the parties alike can support without reservation. Much good should flow from the ready adoption of advice now freely given to cultivators about what to grow and where. This will be a new chance for the Bengal Department of Agriculture to forge strong links with the sons of the soil, and what is more, it will be a break with the crop restriction policy of the past. That is where Bengal has an advantage. The limitation of jute supplies is an established fact, and it is only the cultivation of pulses, wheat and sugarcane that needs to be encouraged. There is a formidable armoury of arguments in favour of more food, as my readers should know, but they are assuredly vindicated by experience. A new hobby for the rich should be the growing of fruits and vegetables. There is no place for rationing at any time, and as our Food Minister (that is Mr. Sarker) has shown, India can grow what she wants, and forget all about vital shipping space. The failure of imports seems just an admirable opportunity, and we should all be properly grateful to the Governments of our time for making an early start with the food plans that naturally go with defence.

EAVESDROPPER.

Today defence begins at the Blast Furnace. Armament factories are transforming hundreds of tons of steel into weapons of war.

When peace returns once more these giants of war time will again become strongholds of industrial prosperity.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 14th May.

At a special meeting of the Indian Jute Mills Association on Monday it was unanimously decided to accept and confirm the recommendations of the Committee to curtail working hours in Mills from 60 per week to 54, with effect from 18th May, and at the same time to seal 10 percent of the looms. At the same time it was agreed, as a measure of compensation to the Mill labour force, to increase what is euphemistically known as the "amenity allowance", but which is better known to the labour as "koraki", from a monthly payment of one rupee to a flat rate payment of twelve annas per week. This allowance is in part a "dearness" allowance, but like all other such allowances, once granted, cannot be withdrawn without grave risks of trouble. For it is characteristic that any concession of this kind, though granted to cover special circumstances, is immediately taken by labour as a permanent increase in wages, and even when the circumstances have altered, there is strong objection to the withdrawal of the concession. In this case the increase now granted is tantamount to giving the labour the same return for 54 hours week as they have been receiving for 60. If circumstances should so alter that a return to 60 hours working is desirable, it can easily be understood that labour will not be willing to work 60 hours for the same remuneration as they will have been getting for 54, but will demand at least a proportionate increase.

Mill production figures are now recorded showing commercial goods apart from Government goods and it will perhaps come as a surprise to some that the proportion of Government goods produced by mills last month was only 14 per cent of the total production. The total tonnage was 107,194 tons, of which commercial goods accounted for 92,077 tons and Government goods 15,117 tons. On commercial account 1532 lakhs yards of hessian and 1112 lakhs yards of sacking goods were produced. On Government account, Sandbags accounted for 284½ lakhs yards, other hessian bags, cloth and canvas, 150 lakhs, scrim, 89 lakhs sacking cloth and bags 73¼ lakhs.

Further orders for Sandbags have been placed with the Mills by Government to the extent of nearly 8½ crores of bags. Delivery is spread over 6 months from June tto October. The bags are not to be rot-proofed and the price fixed is understood to be Rs. 11-8 per hundred. This quantity represents approximately a consumption of 86.000 Bales of Jute, but so far there has been little sign that Mills are hurrying to secure cover.

The Government of Bengal is apparently somewhat apprehensive that little attention has been paid to their rather belated appeal to jute cultivators to refrain from sowing up to their full license area of 10 annas of 1940, and it has been announced that a sum of rupees one lakh has been sanctioned for a continuation of the census of jute acreage. Whether propaganda by the census staff will have any effect seems doubtful, unless in areas, and they are now few, where sowings are not yet completed. Reports from the districts are generally satisfactory, clear weather having prevailed in districts which had previously had a surfeit of rain. The crop has had exceptionally favourable conditions in the early stages, which is half the battle, and there is every expectation, not only of an ample supply of jute, but also to better quality than has been the case for the past few years.

The change from Bengal Time to Indian Standard Time, as demanded by the Military authorities seems to be causing a certain amount of confusion. For the most part it may be said that the introduction of "Bengal" time has been satisfactory to the general population, and they have got accustomed to it. The change now proposed is rather one in name only and not in reality. The Bengal Chamber of Commerce recommends that offices should open and close one hour earlier by the retarded clock. Offices which previously opened at 9.30 a.m. will now open at 8.30 a.m. and similarly close an hour earlier. As train schedules cannot be altered at such short notice, this scheme will suit all employees who travel by train to and from their work. They will now work to standard time throughout the day instead of travelling to Calcutta by standard time, working through the day by Bengal time and then reverting to standard time for their homeward journey.

It is perhaps a happy coincidence that this time change practically coincides with the change in Jute Mill working hours. Mills have been working eleven hours for 5 days of the week with a two hour rest interval at midday. That is to say Mills started up at 5.30 by Bengal time and closed at 6.30, at this time of year in daylight at both ends of the day. Under the new working time of 54 hours per week, Mills will for the most part work 5 days of 10 hours each and 4 hours on Saturday. The 10 hours with a two hour rest interval could be conveniently spread from 6 a.m. to 6 p.m. or even half an hour earlier, and the change coming into effect from next Monday, the labour will not be confused by a double alteration of time and working hours. For it must be remembered that attendance by labour is nowadays dependent on the clock, for Mill whistles and hooters no longer function, except in the event of Air-raid Alarms.

It was announced a few days ago that despatches of baled jute by rail to Bombay for shipment to the U.K. and the U.S.A. had been temporarily suspended owing to congestion and lack of storage space in Bombay. It is now notified that rail despatches will be resumed on 16th May but that consignments will leave only every fourth day instead of every alternate day. It is further notified that for the time being shipments will be confined to jute destined for the U.K. and none will be accepted for shipment to the U.S.A. meantime.

Markets all round have been in a state of almost suspended animation. In Export Jute, nothing has been reported. Neither has any business transpired in pucca bales with Mills.

In loose jute also business has been on the most microscopic scale. A small lot of European Tossa Middles were reported sold to a baler at Rs. 10-8, and a sale of Supervised White Middles is reported at Rs. 11. Some small lots of Indian District Tossa Mids and Bots were recorded at Rs 9 and Rs. 7 respectively.

In the Fabrics section. Hessians have declined to the extent of about eight annas during the past week in the absence of any appreciable demand. The only sales recorded are what have been met by second-hand sellers at rather irregular rates, but mainly on the basis of Rs. 13-8 and Rs. 17 respectively for nine and eleven porters. In the Heavy Goods section prices have also registered a decline in the absence of any export demand. The only enquiry has been for country goods and a fair turnover has been recorded in "B" Twills at from Rs. 37 to Rs. 36-12 for ready delivery. Some Union sewn "A" Twills were reported at from Rs. 42-4 to Rs. 42.

"I can assure you that if people keep their heads and take the precautions laid down by the A. R. P. Service, casualties will not be heavy and that an air raid produces more noise and dirt than loss of life or injuries."

## JUTE

*Calcutta*, Thursday, May 7.

THE jute market does not seem to move in step either with crop reports or war news. The reports of reduced rainfall and smaller sowings in parts of Eastern Bengal do not seem to galvanise the trade. Values are lower after a week of continued idleness. Barely any interest has been shown by mills and stray deals in supervised marks alone seem to suggest that the market is not dead but dying.

The demand for pressed jute appears to have disappeared altogether. Balers are therefore hesitant about their own purchases, though agents in the mofussil are not altogether idle. The only transaction reported has ben one in European Tossa at Rs. 10-8 per maund. Sellers are definitely anxious, and values for the main grades have come down in the wake of the mills' decision to control working hours. Indian Jat Middles were quoting Rs. 9-12 on Monday and Bottoms had weakened to Rs. 5-8. Mills manifested no interest. Stagnant conditions persist in both loose and pressed jute. Madagascar and Mr. Churchill's war survey do not seem to have stimulated the market. A week ago prices were reduced by 4 annas per maund so that all sections are easier with prices nominal as before. Buying interest disappeared. The river-levels and lowland cultivation are ignored, as also the reports from Europe. The threat to East Bengal makes it difficult to take a forward view and the jute trade's adverse reaction to the attack on Chittagong has pushed prices down. The prices for Lightnings and Firsts are slightly lower though odd deals for shipment are not altogether rare and the mills' refusal to support jute even at present prices makes the outlook pessimistic.

The hessian market has not been without its dose of tribulation. A week ago 9 porters quoted Rs. 14-4. On Wednesday the price had receded to Rs. 13-6. The explanation for the spell of weakness must be sought in the news from Burma rather than any special change in market conditions. On all days the market has been flat. The issue of a press note to the effect that another war order had been placed for about 8½ crores of sandbags (not rot-proofed) and estimated to take up 4.17 lakhs maunds of jute had not the usual effect on prices on Wednesday. In the case of heavy goods alone prices have been relatively steady. The chief fabrics are lower after the initial fall on Saturday. There was no buying interest then. There is none now. No longer can the market count on covering, and ready is now at a very small premium as compared with goods for June and July-September delivery.

The mills decided on Monday to seal up 10 per cent of looms and reduce their working hours to 54 per week. The decision was generally anticipated, and no rally in prices could come. Eleven Porters weakened to Rs. 18 on Monday and fell to Rs. 17-8 on the next day when Nine Porters had receded to Rs. 13-4. The tone was easy on Wednesday as business was sparse. Eleven porters declined further to Rs. 17 while 9 Porters rallied slightly to close at Rs. 13-8 for May delivery.

The fall in hessian has not left heavy goods unaffected. B Twills have come down to Rs. 36-8 as against Rs. 37-4 on Friday last but Cornsacks are steady at Rs. 36. Liverpools A Twills are standing at Rs. 37-12 as compared with Rs. 38-4 on Friday last. The lack of shipment demand explains the poor response to the mills' unanimous decision taken on Monday with Mr. W. A. M. Walker in the chair. As from May 18 the mills will work a normal week and pay an annuity allowance of annas twelve a week as compared with Re. one a month.

In view of the many changes pending this week when new contracts will come into operation this raw cotton market is turning steadier. Sentiment in Bombay has suddenly brightened and revival of buying as also short covering has been reported. The firmness of grains and oilseeds has helped to put up all commodity prices in that centre.

New York is decidedly firmer over this week but that has no significance. The outstanding feature is the rally in May 1942 contract standing at Rs. 171-8 on Wednesday. The supply position is tighter and is closing firm on most days. The July-August contract is now over Rs. 180. The rapid improvement is based, in part, on the brisker trade in piece goods as also the belief that the mastery of the Indian Ocean will remain with the Allies.

The improvement has pushed up Oomras partly on the assumption that the next crop will be a short one in view of the Bombay Government's notice to cotton growers that no help will be given to shortstaple cotton next year. A certain amount of profit-taking was conditioned by the swift recovery which may be contrasted with jute where no sign of recovery can be discerned. The cotton market's condition is decidedly good. The better conditions obtaining in mill centres underlie the improvement recorded since the last week. A week ago Broach July-August stood at Rs. 168½, it is now quoting Rs. 181. The premium for other types must have risen in consequence and the raw cotton season may be said to open well in spite of the increase of one per cent in area and yield recorded in the revised forecast.

A slight rise in gold may be due to improved offtake rather than to general calculations of a swift enlargement of buying. The fact that gold for June settlement stands below ready is proof of that. The daily variations in rates until Tuesday have been small.

Dealings were limited on most days and the movement in prices has been slight compared with the swift rises and falls last month. While London quotes 8 guineas per fine ounce the Calcutta rate is Rs. 47-12 per tola. For the first time the rate is lower than the Bombay rate of Rs. 48-1 but the rate for sovereigns viz., Rs. 37-4 is as one may expect higher than the Bombay price of Rs. 36-14 on Wednesday. Rates in Calcutta are a little lower on the whole but they are higher in Bombay. The offtake is now limited to Calcutta where the replenishment of supplies is both limited and irregular. Steadiness is, however, the main feature of bullion markets despite the recession in silver prices.

## SILVER

Calcutta, May 14.

The silver market abroad is dull and unchanged with small demand in London being satisfied by local supplies. In Bombay the market is distinctly quieter and prices are virtually unaltered over a week. Ready silver still stands at a premium as compared with June. The demand for first settlement continues to be small presumably on account of the war situation. Dealings have been limited and the highest touched has been Rs. 81-8 per 100 tolas for ready delivery. The tone is steady yet the demand is scanty. Supplies are fairly large and upcountry markets are not over-eager buyers. On Wednesday the market declined to close with ready silver at Rs. 80-8. Silver for Varda was Rs. 77 per 100 tolas. The Calcutta market has ben just a shade steadier though the rates are below those ruling in Bombay. Ready silver quotes Rs. 79-8 per 100 tolas. Daily offtake is scanty, and the lift in gold has not tempted outsiders to buy silver.

## PIECEGOODS

Calcutta, May 14.

The piecegoods market has suddenly strengthened. Not the hope of an early monsoon or even the Bengal Government's plan to stock millions of dhoties but the hint Bombay rates are going up. The yarn market too is firmer after working off supplies.

## OILSEEDS

Calcutta, May 14.

The Madras groundnut market is sadly upset by the lack of shipping. The Ministry of Food is a buyer in Bombay and is said to be buying both linseed and groundnuts.

One of the most curious developments of recent weeks has been the disappearance of the customary premium for Calcutta linseed over Plate linseed which quotes £20½ per ton in London at present.

The Calcutta market is hopeful but stagnant acording to reports for over a month. Local mills are buyers of oilseeds in Bombay and the rise in copra has encouraged Bombay buying of seeds generally.

Calcutta quotes Rs. 5-2 for May delivery and even the reports of enemy action, in and beyond Burma did not lead to frenzied selling.

The Bengal Government's intention to avert a cloth famine is auspicious for the market. In view of its plans for economic defence through the buying of foodstuffs, the plan is not far-fetched. It has not been criticised. Bombay rates for indigenous and imported goods alike are going up. Compared with prices a year ago, the rise is on an average of the order of 30 to 40 percent.

Groundnuts have risen this week further. Arrivals of seeds are on the small side, and that is why support has been forthcoming for cottonseed and castorseed.

## WHEAT

Calcutta, May 14.

Wheat, in spite of the drop in Karachi and Lyallpur, can be described as firm. The advent of control has not enlarged supplies or affected prices. Calcutta quotes Rs. 6-8 per maund for nearly a month. The rise and fall in Bombay does not touch Calcutta where control rates for retail sales has become effective. Karachi has since the weekend become firm maintaining the usual premium for spot. The rate per candy is still over Rs. 45 reminding us that prices have risen in a year by over 50 percent because of no imports and large exports.

## BIG RISE IN DUNLOP PROFITS

In developing greater faith in giltedged Indian stock exchanges have run true to form. For the first time in months, 3½% Paper is over Rs. 91 and the giltedged rise is well spread over the list. The rally is not independent of the Premier's confident review of the war at the same time as the German offensive was developing. The giltedged recovery has assisted bank shares and Reserve Bank shares are likely to touch par soon. The limited interest shown in fixed yield stocks is not altogether due to lack of faith. What the market lacks is a definite bull factor. That may not come without a political settlement in India. Dividends or hopes thereof do not seem an adequate stimulus to invest at present. The speculative issues mark time but Bombay has demonstrated anew its ability to set a definite course. While markets are not always ready to follow the giltedged lead the measurable change in sentiment makes for limited but selective investment. The response to war news is not direct or sudden so that adverse reaction on Monday were hardly noticed. It seems a material change can be discerned at present despite poor business in many popular scrips of all descriptions.

* * * * *

Shareholders have reason to feel surprised at the mere maintenance of the 20 per cent ordinary dividend by the *Dunlop Rubber Company (India) Ltd.* The report covering the results for the year ended 31st December 1941 reveals a striking improvement in the trading profits in relation to the greatly increased turnover, which by itself represents an increase of over 85 per cent. over the previous year. This must be considered a creditable achievement as the company's factory at Sahaganj saw the first full year of manufacturing in this country only in 1939. True, having an assured market for its entire production this company is one among those benefited by the increasing shortage of imports arising from shipping difficulties.

The net profit for 1941 subject to taxation and depreciation amounts to Rs. 73,16,582 and compares with Rs. 44,51,543 in 1940 and Rs. 38,15,750 in 1939. Provision for depreciation on fixed assets has been made at Rs. 6,00,616 against Rs. 5,73,296 previously which, in the opinion of the directors, is regarded as fully adequate. Appropriation for tax liability has absorbed Rs. 38,36,651, which represents an increase of Rs. 13,86,651 over that for the preceding year. Readers will be aware, in this connection, that, last year, steps were being taken by the company to press for equitable treatment for a pioneer industry such as the manufacture of tyres in India and not until October 1941 the basis of Excess Profit tax purposes was decided, though not favourably. Although it was conceded by the Government that the company's activities were those of a pioneer industry within the meaning of the Excess Profits Tax Act, the standard profit was fixed at a figure which is less than half the actual profit earned for the year 1939, the first full year of manufacturing in this country. As a result, the substantial provision made last year against taxation was almost entirely required to meet the actual liability upto 1940 and the estimated liability on the 1941 results is no less than 63 per cent of the total profits earned.

While nothing was added to the Reserves out of the 1940 earnings, a transfer of Rs. 11,50,000 to Reserve for Contingencies and Rs. 3,20,000 to General Reserve has been recommended as it was thought essential under the prevailing conditions to ensure, as far as possible, conservation of the Company's reserves and finances. After paying the dividend on both classes of preference shares at 6 per cent. per anum amounting to Rs. 3,63,750, a dividend of 20 per cent. on ordinary shares has been declared which, as mentioned earlier, is at the 1940 level. This absorbs Rs. 10,00,000. After all these appropriations a sum of Rs. 2,88,193 is carried forward being slightly higher than last year's at Rs. 2,42,628.

It is noteworthy in view of the heavy expansion in the volume of business working expenses have been well kept around the 1940 level. A sum of Rs. 1,21,059 has been spent for A.R.P. expenditure.

The Balance sheet discloses a position of exceptional strength and liquidity. Inventories have been conservatively valued, all raw materials having been taken at the lower of cost or market prices at 31st December last. Ample provision has also been made for bad and doubtful debts and every known loss has been provided for in the acounts. The increase in current assets of nearly Rs. 47 lakhs over the previous year's level reflects the greater volume of business handled.

No attempt to judge the prospects for the current year could be reasonably accurate, if it is not borne in mind that conditions have considerably changed since the beginning of the year. With the passing of N.E.I. and Malaya into enemy hands, the Allies have lost nearly 90 per cent of the supply of rubber and related raw materials. It is doubtful, therefore, whether the supplies that may be available from Ceylon, South India and other centres could fully sustain the company's factories and that too regularly, in view of the acute difficulties now being experienced in regard to transport. These factors should naturally influence, to a large extent, the company's earning capacity during the current year, if the present situation shows no sign of improvement. The publication of the next report will be awaited with great interest by shareholders and investors—and by students of company accounts; for, the neat and comprehensive planning of the annual accounts of Dunlop Rubber has made its balance-sheet a pattern and example.

* * * * *

The steady decline in earnings of the *Bokaro and Ramgur Ltd.*, since the last two half-years is again noticeable in the latest report covering the operations during the half-year ended 31st December, 1941. Comparatively lesser appropriations have been provided for meeting the tax liability and writing off depreciation on fixed assets. A substantial sum has been allocated to General Reserve to offset the continued downward tendency of the prices of trust and giltedge securities which constitute the entire investments of the company. The investments together with cash balances represent more than half the total liquid assets.

The net profit before providing for taxation and depreciation but after meeting all working and establishment expenses and writing off Rs. 5,000 towards Mining lease and Surface lease accounts amounts to Rs. 1,78,014 against Rs. 1,90,136 in the previous half-year and Rs. 2,18,085 for the half-year ended December 1940.

A sum of Rs. 35,000 against Rs. 40,000 has been set aside to depreciation and an equal

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

Calcutta, Friday May 15.

THE volume of business transacted during the week under review has not improved to any appreciable extent. In spite of such a steady tone in the Calcutta stock exchange, poor business was reported this week, Government securities again providing the main attraction. The tone in several sections is rather hesitant. If in spite of the confident note struck by the Prime Minister in his broadcast augmented by the encouraging tone of the Viceroy's recent speech, Calcutta has not yet settled down, it must be attributed to the fact that the Province is more vulnerable than most other provinces in India.

Money conditions were even easier than last week. The Treasury bill rate has come down by eight pies from one rupee four annas eight pies per cent per annum last week to one rupee four annas per cent per annum.

Among Bank shares Imperial Bank fully paids were done at Rs. 1,450 and Reserve Bank closed at Rs. 96.

Public bodies' debentures continue to be neglected. Among Industrial debentures also there was no transaction.

There was scattered buying of preference shares, Burn & Co being done at Rs. 110; Burrakar coal at Rs. 130 cum. dividend; Union jute at Rs. 130; Kamarhatty at Rs. 123; Dalmia cement at Rs. 110; India General Navigation at Rs. 105; Patrakola at Rs. 128 (Ex. Dividend) Darjeeling Himalayan Rly. at Rs. 83 C|T.

Among Railway shares Mymensingh-Bhairab Bazar (Gtee) changed hands at Rs. 105.

In the cotton section Cawnpore Textiles was done at Rs. 8-11-0 and New Victoria at Rs. 4-9-0. Prices are mostly unchanged over a week.

The coal section continues to be dull and except for Burrakar Pref. which were done at 130 c.d. there was no business in evidence.

The jute section continued to be dull and neglected throughout the week and with the exception of a limited enquiry for certain preference shares there was practically no other business.

Ethelbaree Tea was done at Rs. 12; the Gielle at Rs. 12 Ranicherra at Rs. 13-6-0 Apart from these there was no other business.

Among sugar shares Buland, Raza, Champaran & Murree Brewery came in for enquiry. Buland was quite firm after revised sugar prices were known Champarun was done at 19-14-0 New Savan at Rs. 12 C.T. & Purtabpore at Rs. 10-8.

Indian Iron & Steel and Steel Corporation in the Engineering Section were marked slightly lower at Rs. 22-6-0 & Rs. 13-11-0 respectively as against Rs. 22-12-0 & Rs. 14 last week.

## BOMBAY STOCK EXCHANGE

Bombay, May 13.

*Securities.*—The improvement in prices of Government securities in this market that was witnessed last week was maintained steadily this week also and 3½ per cent. Paper largely continued to interest buyers.

Among short and long-dated loans, 1948/52 were marked at Rs. 94; 1951/54 at Rs. 95-4; 1963/65 at Rs. 90-8; 1947/50 at

**The market report from Madras was not received up to the time of going to press.**

Rs. 100-4 1960/70 at Rs. 104-12; 1955/60 at Rs. 108-8; 1945/55 at Rs. 106-10; and 1946 Defence Bonds at Rs. 100-7.

*Textiles.*—This section has been steady gains in prices, however, have been recorded in some selected scrips. *Bombay Dyeing* throughout the week under report. Small which closed at Rs. 1,52-8 (1,047-8) closed slightly higher at Rs. 1,055 (1,055); *Central India* at Rs. 330 (329); *Century* at Rs. 362 (362); *Gokak* at Rs. 246-8 (244);

*In the Hydro-Electric Group Andhra Valley* maintained its steady advance, the price last quoted being Rs. 1,465. *Tata Power* also improved to Rs. 1,355 from Rs. 1,351 last *week and Tata Hydro* at Rs. 158-8 was in the main a sellers' market.

*Steels.*—This section provided the bright feature of trading on the Stock Exchange this time and all *classes of shares* met with good demand during the week with prices tended to be higher on continued support. *Tata ordinaries* closed at Rs. 262 (255) and the *deferreds* at Rs. 1,360 (1,302-8).

*Miscellaneous.*—Prices in the miscellaneous section naturally favoured holders. Once again the popularity of *A. C. C.* and the *Premier Construction* appeared to endure with the former around Rs. 180. In the Engineering group, *Alcock* showed a sharp rise to Rs. 433. *Belapur* was in request at Rs. 230 and lower. *Bombay-Burma* in spite of recent steadiness was neglected. A change of some interest is the *firmness of Shivrajpur Syndicate* still quoting at Rs. 31. No material change was discernible in *Scindia Steam* quoting at Rs. 17-2 or in *Tata Chemical* quoting at Rs. 13-4. Intermarket leaders attracted little attention, and mining issues were particularly flat. *Tata Oil* at Rs. 46 appeared to be in some request.

*(Continued from previous page)*

amount is allotted for taxation. A sum of Rs. 46,000 was provided for on the last occasion under this head. General Reserve Account receives Rs. 50,000 against nothing previously. The dividend at 10 per cent per annum which is maintained must be regarded as satisfactory. The amount carried forward is necessarily lower at Rs. 5,878 against Rs. 11,836 brought in.

The Company holds prospecting rights in the coalfields of Bokaro and Ramgur in Chota Nagpur. Considerable portion of the fields has been prospected and leased out and the income derived by royalties during the last six months is not small at Rs. 82,893. Despatches from the Railway collieries showed an improvement as compared with the previous half-year, whilst the output from Dhori Colliery where a selected grade section of the Kargali seam is worked over an area of about 700 bighas, remained at practically the same level.

| Carry forward .. | 4,058 | 4,922 | 5,978 | 7,706 |

*(Annual Meeting 29th May, 1942 at 3-10 P.M.)*

*Audited Accounts for the year ended 31st December, 1941:—*

The Revenue Account shows a profit of Rs. 62,691-10-0 as compared with Rs. 44,670-13-10 for the previous year.

After deducting Income Tax and Super Tax there is a nett profit of Rs. 46,856-0-0 which, with the balance brought forward from 1940, gives a balance of Rs. 51,777-12-2 at credit of Profit and Loss Account. This sum the Directors recommend should be disposed of thus:—

| | Rs. | A. | P. |
|---|---|---|---|
| Pay a dividend of 6 annas per share, free of Income Tax, for the year 1941 .. | 27,720 | 0 | 0 |
| Place to Reserve for Taxation .. .. | 20,000 | 0 | 0 |
| Carry forward .. .. | 4,057 | 12 | 2 |
| Total | 51,777 | 12 | 2 |

*General.*—The supply of electricity was satisfactorily maintained throughout the year. The number of units sold shows an increase of a little over forty-three per cent. as compared with 1940, the improvement being mainly due to the higher consumption recorded by the Shree Mohan Pannalal Mills. It is unlikely that this rate of progress will be repeated during the current year, as industrial consumers are experiencing difficulties in transporting their goods to districts outside Bhagalpur on account of the curtailment of Railway booking facilities, and this is almost certain to have repercussions on their output. The recently introduced lighting restrictions will also have an adverse effect on the Company's business.

*Managing Agents.*—Messrs. Octavius Steel & Co., Ltd.

*Authorised Capital*—Rs. 9,60,000; *Issued and Subscribed Capital* —Rs. 5,91,360 in 73,920 *shares of* Rs. 8 *each fully paid up.*

Synopsis of the Balance Sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid up .. | 5,91,360 | Gross Block .. | 8,80,201 |

*(Annual Meeting, held on 5th May, 1942)*

*Audited Accounts of the Company for the year ended 30th September, 1941:—*

The profit for the year under review amounts to Rs. 2,37,283-5-4½ after payment of Sugar Excise Duty. Deducting therefrom a sum of Rs. 1,04,638-13-6 as depreciation the net profit for the year comes to Rs. 1,32,644-7-10½ and after adding last year's carry forward of Rs. 152-15-8½ the total amount available comes to Rs. 1,32,797-7-7 which the Directors recommend and passed by Share-holders is noted below:—

| | | | Rs. | A. | P. |
|---|---|---|---|---|---|
| 1. | Provide for General Reserve .. | | 20,000 | 0 | 0 |
| 2. | For Income-tax Reserve .. .. | | 44,000 | 0 | 0 |
| 3. | To pay dividends (free of Income-tax) | | | | |
| | (a) On Ordinary Shares at the rate of 8% .. | 87,792 0 0 | | | |
| | (b) On Preference Shares at rate of 7% .. | 805 0 0 | 68,597 | 0 | 0 |
| 4. | Carry forward .. .. .. | | 200 | 7 | 7 |
| | Total .. | | 1,32,797 | 7 | 7 |

Crushing operation commenced on 25th December, 1940 and terminated on 23rd April, 1941, being 120 days. The quantity of cane crushed was 17,32,817 maunds, the average recovery being 8.91 or 1,55,001 maunds of sugar. At the time of the commencement of season the Company was carrying alarmingly a heavy stock of sugar, a position which was shared by all the concerns situated in the Bihar and United Provinces and did not begin to move off any considerable quantity until May, 1941. Since then there has been a great improved demand, the entire stock of 1939-40 has been disposed off and 95% production of the season under report has also been sold away. The average selling price recovered up to 30.9.41 comes to Rs. 9-12 per maund and that the average cost of the cane at the factory was -/5/3 per maund.

During the season 1941-42, there was great scarcity of cane and crushing of all available cane in our areas was completed on 15th February, 1942 with a total of 10,49,234 maunds of cane. The cost of production for the season 1941-42 is likely to approximate Rs. 9-6-6 per maund of sugar excluding sale commission and Excise. Six annas per maund has been paid for the price of cane and additional deferred payments will have to be made to growers

under the latest scheme inaugurated by the Bihar Government if the price realised for sugar is more that Rs. 10-8 per maund.

*Secretary.*—M. M. Raza.

*Authorised and Issued Capital*—*Rs.* 12,00,000. *Subscribed*—*Rs.* 8,58,900 *in* 8,474 *Ord. and* 115, 7% *Pref. both of Rs.* 100, *fully paid up. Debentures*—*Rs.* 1,25,000 *in* 125 5½% *bonds of Rs.* 1,000 *each.*

Synopsis of the balance sheet as at 30th September, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid up .. | 8,58,900 | Gross Block .. | 16,89,201 |

| Managing Agents' Commission on Profits .. .. | 1,672 | 9 | 0 | | | |
| Reserve for Taxation .. | 10,000 | 0 | 0 | 18,910 | 5 | 0 |
| Total .. | | | | 64,717 | 8 | 10 |
| and adding:— | | | | | | |
| Dividends on Investments .. .. | | | | 6 | 11 | 0 |
| there is a nett profit for the year of .. .. | | | | 64,724 | 3 | 10 |

After adding to this the credit balance of Rs. 6,333-6-9 brought forward from the previous year, there is a credit balance of Rs. 71,057-10-7 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Pay a Dividend of 7½ per cent, free of Income-tax, for Season 1941 .. .. | 28,125 | 0 | 0 |
| Place to Reserve Account .. .. | 35,000 | 0 | 0 |
| Carry forward .. .. .. | 7,932 | 10 | 7 |
| Total .. | 71,057 | 10 | 7 |

The *Estimates for Season* 1942 are 5,480 maunds.

*Managing Agents.*—Messrs. Octavius Steel & Co., Ld.

*Authorised Capital*—*Rs.* 6,00,000. *Issued and Subscribed*—*Rs.* 3,75,000 *in* 37,500 *shares of Rs.* 10, *fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid-up .. | 3,75,000 | Fixed Capital Expenditure .. | 4,87,185 |
| Reserves .. | 1,91,250 | Stores .. | 49,933 |
| Reserve for taxation | 17,331 | Stocks .. | 48,721 |
| Current debts .. | 54,303 | Investments .. | 500 |
| Carry forward .. | 7,933 | Outstandings .. | 6,844 |
| | | Cash balances .. | 52,634 |
| Total .. | 6,45,817 | Total .. | 6,45,817 |
| | | Total Liquid Assets .. | 1,58,632 |

## PANBARRY TEA CO. (1926), LTD.

*Audited accounts for the year ended* 31*st December*, 1941:—

The Revenue Accounts show a profit of Rs. 50,414-5-3 and after deducting from this:—

| | Rs. | A. | P. | Rs. | A. | P. |
|---|---|---|---|---|---|---|
| Manager's Commission on Profits | 3,781 | 1 | 0 | | | |
| Managing Agents' Commission on Profits .. .. | 1,008 | 4 | 0 | | | |
| Bonus to Indian Staff .. | 253 | 0 | 0 | | | |
| Reserve for Taxation .. | 6,000 | 0 | 0 | 11,042 | 5 | 0 |
| Total .. | | | | 39,372 | 0 | 3 |
| and adding:— | | | | | | |
| Interest on Investments .. .. | | | | 10 | 6 | 8 |
| there is a nett profit for the year of .. .. | | | | 39,382 | 6 | 11 |

After adding to this the credit balance of Rs. 5,549-7-11 brought forward from the previous year, there is a credit balance of Rs. 44,931-14-10 on Profit and Loss Account.

The Directors recommend that this balance be disposed of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Pay a Dividend of 3¾ per cent, free of Income-tax, for Season 1941 .. .. | 22,502 | 10 | 0 |
| Place to Reserve Account .. .. | 15,000 | 0 | 0 |
| Carry forward .. .. .. | 7,429 | 4 | 10 |
| Total .. | 44,931 | 14 | 10 |

The *Estimates for Season* 1942 are 1,745 maunds.

*Managing Agents.*—Messrs. Octavius Steel & Co., Ld.

*Authorised Capital*—*Rs.* 6,50,000. *Issued and Subscribed*—*Rs.* 6,00,070 *in* 60,007 *shares of Rs.* 10, *fully paid-up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |

ISSUED WEEKLY

Vol. XXIX. No. 22 SATURDAY, MAY 23, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

**NATIONAL INSURANCE COMPANY,**
LIMITED.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

THERE is increasing evidence of easier conditions in the money market, where short credits have been in plentiful supply, interbank call money quoting ¼ per cent, more or less nominal. Bidding at the weekly treasury bill auction has been quite keen; and sales of tap bills have been quite substantial, though this week's figures do not make such good showing as the exceptionally large sales in the previous week. Deposits maintained by member banks with the Reserve Bank have shown a further big rise. There has been expansion of currency; and active note circulation both in India and in Burma have touched new records. Demand for trade finance is on the poor side; and the main outlet for idle funds is treasury bills. In such circumstances, there should be much keener competition for tender bills if only the bankers were made to realise that the boot is now transferred to the other leg. We see as yet no sign of a firm treasury bill policy; and we are clearly of the view that the present rate paid for three months bills is unjustified in relation to the ruling conditions in the money market.

On May 19, applications for tender treasury bills amounted to Rs. 3,28¼ lakhs against Rs. 2 crores on offer. The average rate of accepted tenders was rupee one annas three and pies eight per cent per annum which compares with rupee one annas four per cent in the previous week. Sales of intermediate treasury bills between May 13 and May 18 amounted to Rs. 2,73 lakhs as against Rs. 5,03½ lakhs in the previous week. The offer of tender bills for next week is unchanged at Rs. 2 crores. And tap bills will also be sold at the unchanged rate of Rs. 99-11-3. We had suggested, in the last issue, that the Imperial Bank had been giving substantial support to treasury bills in recent weeks. The latest return of the Imperial Bank, which is for the week ended May 15, shows an increase of Rs. 2.16 crores in the investment portfolio. Most, if not all, of this increase must presumably be accounted for by purchases of treasury bills. During the week under review, Imperial Bank's bill portfolio declined from Rs. 6.66 crores to Rs. 5.28 crores. This is possibly on account of discounted treasury bills attaining maturity. On maturity, the funds thus released have been invested in treasury bills. The cash balance of the Imperial Bank is more or less unchanged at Rs. 24.74 crores. From the way in which the Bank has been receiving increasing deposits, there is every reason to believe that continued support will be forthcoming for treasury bills.

The returns of the Reserve Bank for the week ended May 15, disclose a further expansion of currency. Expansion has been effected, on this occasion, against rupee securities which have increased from Rs. 138.22 crores to Rs. 144.20 crores. There has thus been expansion for Rs. 6 crores. As a result, active note circulation in India has risen from Rs. 422.69 crores to Rs. 424.79 crores; active note circulation in Burma from Rs. 30.17 crores to Rs. 31.38 crores; and notes held in the banking department of the Reserve Bank from Rs. 9.79 crores to Rs. 12.30 crores.

Expansion of currency against rupee securities has the effect of reimbursing the cash position of the central government. Thus, while ways and means advances are more or less unchanged at Rs. 3.67 crores, Central Government's deposits with the Reserve Bank have advanced from Rs. 6.66 crores to Rs. 8.73 crores. The only other noteworthy feature in the Reserve Bank returns is the rise in deposits of member banks from Rs. 49.98 crores to Rs. 51.59 crores. It is quite on the cards that the cash balances of banks continue to swell on the present scale. The large disbursements made by the Government on account of war commitments and war orders are finding their way, in part, to banks as deposits. This is another way of saying that general support from banks should be forthcoming for treasury bills. In these circumstances, we should like to see a rapid decline in the average treasury bill rate to below one per cent.

That the pressure of idle funds for investment is rapidly increasing, is borne out by the sustained steadiness of the giltedged market in the last three weeks. There has been considerable improvement in the prices of the whole range of the giltedged market. Equally notable is the sharp advance in good class preference shares. Conditions are developing in which, by suitable open market operations and by a correct financial policy, the Government should be able to launch the third defence loan. The shock experienced by the giltedged markets after Japan's entry into the war has proved of longer duration than did the earlier shocks in the course of this war. But it is reassuring that there are now definite signs that the giltedged market is freeing itself from the effects of the shock. Further improvement is in prospect; and it is up to the Finance Member to coax the market into the right psychology for the next defence loan. The first essential feature in the creation of an apt psychology is a correct treasury bill policy. We are afraid that the present treasury bill policy is anything but correct. It is time that the Finance Member makes it clear to the market that he is, from now on, the master of the treasury bill situation. The second important factor for a proper giltedged psychology is well-conceived and well-timed open market operations. With operations conducted as they should be, it should not be a long or difficult way for three and a half per cent paper to rise over Rs. 95. At the same time, the first and second defence loan should be brought up to over their par levels. Thirdly, we would strongly advocate the lowering of the official minimum of the Reserve Bank from 3 per cent to 2 per cent. As we have pointed out on one occasion, a 3 per cent bank rate to-day stands high and dry in relation to other money market rates. If the bank rate is to have any reality, and if it is to be a real yardstick of money market rates, there is every case for the present fiction of 3 per cent rate being ended.

The exchange market has been dull. Bills are conspicuous by their absence. Some remittance enquiry has been reported.

Closing rates are: Banks buy T.T. London Ready to six months forward 1s. 5 31/32d., and sell T.T. London Ready to six months forward 1s. 6 1/32d.

Banks buy three months D.A. bills for first and second months at 1s. 6 9/32d., and for the third and fourth months 1s. 6 5/16d.

Interbank call money is quoted easy at ¼ per cent.

Firms' money for one to four months deposits quoted ½ per cent.

Banks buy T.T. New York Ready Rs. 329½ for $100.

Banks sell T.T. New York Ready Rs. 332¾ for $100.

## TREASURY BILLS

### India

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills were opened on Tuesday, May 19, 1942. Total amount offered was Rs. 3,28,25,000 (Rupees 3 crores 28 lakhs and 25 thousand). Tenders at Rs. 99-11-3 per cent and above were accepted in full and those at Rs. 99-11-0 per cent were allotted approximately 53 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-3-8 per cent (Rupee one annas three and pies eight per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills will be received on Tuesday, May 26, 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on *Monday*, May 25, 1942 at other centres. Successful tenderers should make payment on Friday, May 29, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from May 20, 1942 to May 25, 1942 at Rs. 99-11-3 per cent subject to the conditions previously announced (viz. sales can be stopped at *any time* without previous notice, if Government think it necessary).

Three months' Intermediates sold from May 13 to May 18, 1942, amounted to Rs. 2,73,00,000 (Rupees 2 crores 73 lakhs).

During the week ended May 15, 1942, Government of India Treasury Bills for Rs. 6,45,00,000 (Rupees 6 crores 45 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad.

The absolute fixity of money and exchange rates deprives one of the chances of referring to movements. Everything in London is held by control, and the four foreign currencies still quoted in India—the U. S., Canadian, Swiss and Swedish—are unchanged. Changes in purchasing power are hardly translated into the sphere of foreign exchange, and such depreciation as the rupee has undergone in the past year, will probably be counteracted by the possession of very ample sterling resources. The most important problem of the war is taken to be strategy, not finance at all. That is why measures meant to divert manpower are given greater importance than appropriations or credits. What China does under the new mobilisation law is of infinitely greater importance than the fixation of the value of the Chinese dollar at 5 cents. The very important developments in the field of war production, both in the U.S.A. and Britain, are again of greater importance than the retention of unspent balances under lease-lend. Finance as the "Economist" wrote early in this war is now a shroud for general policy (and only a shroud which notoriously has no pockets) and developments in the few neutral countries are not altogether independent of the war.

The stock exchange has ceased to be the only measure of changes in progress, but it is still worth turning to see if the advances in the giltedged market in London does not hold lessons for us. Recent stability of values in India has been put down to institutional buying on a fairly large scale. The 3½ per cent. War Loan redeemable after 1952 is quoting around 105 and this taken together with the fact that 2 per cent. Conversion loan is at par supports the view that no fall under breweries or rails can touch the giltedged market. The British Government has no difficulty in getting 75 millions week after week through Treasury bills placed at something over one per cent. The Treasury can also get money (30 *millions this week*) at 1 1/8 per cent. for six months from the Banks largely because the Banks like to advance to Government instead of making loans to industry. The Bank of England has latterly added to its gold but a total holding of £1¼ million is by no means impressive. What is most significant at present is that compared with May last the active note circulation in Britain has gone up by £150 million. War expenditure has risen of late and that means money goes into the hands of the public at the same time. The rise in the Bank's Proportion can have no relation to the rise in clearing banks' balances held at the Bank of England. How far continuity of policy has been secured by the indefinite retention of *Mr. Montagu Collet Norman as Governor cannot* be judged only by the measures taken to draw off money repeatedly from civilian consumption. It is realised that Mr. Norman is indispensable in a way others are not.

If war outlay exceeds £15 million per diem it is obvious that total resources of £6.500 million in 1942-43 of the British Treasury will leave a gap. The Chancellor does not appear to have any worries on that score. Public deposits with the Bank of England may rise or fall as between one Thursday and another, but it is almost certain that the Bank is not resorted to for ways and means advances. The floating debt is expanded at will to get the money needed. Herein lies a cardinal difference between India and Britain. The banking system here still lies outside war finance and it is clear that it must come into the unified front at which the Viceroy aims. It has, however, been said that compromise has weakened war effort in Britain and the Master of University College, Oxford discussed in the "Times" not long ago what must be done to secure a total war effort. Sir William Beveridge as the authority on employment has examined the manpower problem and knows what are the gaps in production. He at any rate has expressed no faith in the propaganda stories that everything possible has been done. He has concluded that British war effort is not up to German standard and it is only then that complacency can be tolerated.

There is however evidence as to the value of joint consultation between labour and management through joint committees particularly in this engineering industry. According to an article in "Engineering" agreements are in force as between the employers and about 40 trade unions chiefly to get together, cut waste and promote efficiency. The development must be related to efforts made by Mr. Lyttelton to raise production so that as much as 70 per cent. of Britain's national income is diverted to Government's own purposes. The U.S.A. aims at turning out 50 per cent. of national income to the war and this will mean that she will spend much more than Britain. Conservation of income has proceeded further than anticipated in the U.S.A. where a new revenue bill is expected to add 7 million people to the existing list of income-tax payers in the U. S. A. The increase in taxation is demanded by the most recent estimate of U. S. expenditure on war material as being equal to 36 billion dollars per annum. It is expected to increase further by next spring to some figure between 70 and 80 billions per year. Mr. Morgenthau may get his money at 2 per cent. or even less, raise three months' bills at ¼ per cent. or so, but the annual service will entail additional expenditure. Hence the scheme for new revenue of 7.6 billion dollars. It is hoped to get 4.2 billions through income-tax alone. An increase in the existing rate is portended by an estimate that a billion could be secured that way and the rest would have to be obtained by lowering the level of incomes exempt from tax. That is why 7 million more tax-payers will fall into the treasury net. The necessity for higher taxation has been conceded by big business, and it is now one of the planks in the anti-inflation platform.

LLOYDS BANK
LIMITED
(Incorporated in England.)

1677

*For every class of Banking Business*

The curtailment of civilian spending has deflected industrial production in the States. Under orders from the War Production Board the furniture industry has announced suspension of production. Factories which turned out furniture will soon make trainer planes and gliders. Metal furniture-makers will produce tail wing assemblies, rear fin struts, as also seating equipment for tanks, planes and ships. Ammunition boxes instead of letter trays or wastepaper baskets and fuel lines instead of chromium-plated chair legs are aimed at after the changeover. As America's furniture industry is second only to the automobile industry in the dollar value of consumer's goods produced, its transformation to war production is admittedly proof of readiness to cut at non-essential consumption. It should certainly be the object since Mr. Leon Henderson reported recently that the production of civilian goods in the U.S.A. was at the highest level in history. However, the vastly increased manufacture of war materials was also using up skilled labour, metals and other things to make planes, tanks and the articles wanted for the war. The diversion of resources has entailed some sacrifices. Substitute materials were already being used in many articles meant for civilian use and certain types of goods had already disappeared from the market. The enormous increase in aircraft production may lower unit costs but will absorb all the material. Not to cut petrol, but merely to save on tyres the U.S.A. has voted for restraint of motoring. The U.S.A. may stand to gain 60 millions through refunds on Government orders from plane manufacturers, but that will help little when billions are needed. The rubber industry incidentally has gone over to war work. Tyre sales have fallen rapidly but tyre-makers are producing pneumatic lifeboats, gun parts and machine tools. Industry is not only responsive, but versatile. It is this which inspires hopes of an offensive this year.

The U.S.A. has found the banking system a ready taker of new securities. The Treasury put through its 1,500 million dollar loan in February and the rise in bank reserves as also in securities held by the F. R. B. has shown that banks are helping. In 1941 U. S. banks reported an increase in net profit to 5.5 per cent; on the whole they did not change their dividends which absorbed only 1.9 per cent of total capital accounts as shown by an analysis of bank reports in the Second Reserve District. The increase in profit is attributed to a smaller percentage of losses and depreciation of assets together with an increase in the income derived from loans. The increase must not be taken as typical since small and medium banks alone got the benefit. The big

## Windfall of Rs. 30 crores

Among the many financial problems raised by the adverse developments in Burma, one which has not so far received any public attention and is, at the same time, of great significance and likely to have favourable repercussions is the liability of the Reserve Bank of India with respect to Burma notes. Since the emergence of Burma as an active theatre of war, note circulation in that colony has been going up by leaps and bounds. Such heady increase was to be expected as disbursements on account of war have been on a large scale and as the volume of currency in circulation is always stimulated by a war. At the end of last December, active note circulation in Burma was Rs. 21.08 crores. This has risen to Rs. 31.38 crores by May 15. That is to say, the increase in circulation is of the order of Rs. 10¼ crores. Which means an increase of more than 50 per cent on the circulation at the time of the commencement of hostilities.

Since the exodus from Burma began, a contrary development has also been taking place. The people returning from Burma have been tendering, at the Indian offices of the Reserve Bank, Burma notes for transfer into Indian notes. No figures are available as to the volume of Burma notes thus presented for transfer. But, basing our estimate on our daily experience with the evacuees arriving in Calcutta, we should think that anything like Rs. 3 crores of Burma notes may have thus been surrendered for conversion into Indian notes.

Presumably, the procedure adopted by the Reserve Bank in this case is to cancel the Burma notes so tendered and to issue Indian notes thereagainst. The effect of this operation is to reduce the liability on account of Burma notes and increase correspondingly the liability on Indian notes. In spite of this continuing process of reduction in liability with respect to Burma notes, the general tendency towards expansion of active note circulation in Burma has been steadily persisting. In other words, if the evacuees had not transferred Burma notes into Indian notes, the gross increase in active note circulation in Burma would have exceeded Rs. 13 crores.

Another important consideration has to be borne in mind in this connection. Large portions of Burma have already passed into enemy possession. The more important centres, that is to say, the centres which account for the largest proportion of note circulation, are in Japanese hands. The areas still left unoccupied by the enemy are only a small fraction of Burma. One has, therefore, to infer that, of the Rs. 31.38 crores of active note circulation in Burma, most of it must be circulating in enemy-occupied territories. Viewing the matter in another way, it is only a small proportion of Burma notes that can be in circulation in the territories still under our possession.

So far as the enemy-occupied territories are concerned, it is obvious that the Reserve Bank cannot and will not have any responsibility for the notes in circulation. In simple terms, the liability for note circulation in the enemy-occupied portions of Burma is no longer a liability of the Reserve Bank.

We are thus in prospect of the Reserve Bank being freed from note liability for anything like Rs. 30 crores. We may be told that the setback for the Allies in Burma is only temporary; that the offensive shortly to be launched by the United Nations is sure to result in the recovery of Burma; and that, therefore, there is the prospective contingency of the Reserve Bank having to undertake the liability for the notes once again.

We consider that, whatever the political future and status of Burma, the decision must be made, now and here, that Burma must be separated from India so far as credit and currency control through a central banking institution is concerned. With Burma separated from India as part of the constitutional changes effected in the middle of the last decade, the continuance of a link between these two countries in the form of a common central banking institution was an anomaly. If Burma was separated from India politically, it should have been realised that the logical sequel in the financial sphere was the creation of a separate central banking institution for Burma. As, however, the Reserve Bank had come into being on the basis of the recommendations which envisaged a joint institution for India and Burma, things were allowed to go on as though, in the currency sphere, there could be unity while difference was emphasised in the political sphere. The present occasion is opportune for ending this anomaly.

The Reserve Bank of India is hereafter to have jurisdiction only over India. When the time comes for considering the currency position of Burma, a solution might be found either by creating a separate central banking institution for Burma or by departmental control of credit and currency. The main point to note is that the currency position of Burma will be tackled on its own merits.

Our contention, therefore, is that the Indian Government will be justified in treating the liability on Burma notes as completely and finally extinguished. The return of the Reserve Bank for the issue department should, therefore, shortly witness the disappearance of the head "Legal Tender in Burma only" on the liabilities side. The next question that arises is: Who is to benefit from the disappearance of this liability—the Reserve Bank or the Government of India?

The Reserve Bank can have no legitimate claim to share in this benefit. The Government of India are creditors of the Burma Government for considerable amounts. The debt due by Burma was to be repaid on the basis of annual payments over a series of years. These instalments will no longer be available to the Indian Government. The latter, are, therefore entitled to the benefit from the disappearance of note liability in Burma as a set-off against the loss on account of non-payment of the debt due by Burma.

The proper course, therefore, is for a corresponding reduction to be made in the Government of India rupee securities held by the Reserve Bank in the issue department. The Reserve Bank will return, say, Rs. 30 crores of **ad hoc** treasury bills to the Government. The return of ad hoc treasury bills for Rs. 30 crores to the Indian Government should prove of value to their ways and means budget. To the extent Rs. 30 crores of ad hoc treasury bills are now withdrawn against the extinction of liability on Burma notes, it is possible for the Government to reimburse the cash position in the coming months by reissuing these treasury bills to the Reserve Bank.

## AFTER THE MISSION

Statements attributed to Dr. Grady concerning India's potential and the limits of immediate U. S. assistance in relation to Allied requirement have by no means gone down well with the public in India. Dr. Grady's tour is now over. His second visit to India has apparently resulted in a report to the President of the U. S. A. about the machine tools, etc. urgently needed by India. Dr. Grady's first interview to the Bombay press suggested that he does not look upon industrial advance as an end in itself. He stressed two weeks ago in Bombay that in the post-war period it would be a mistake for India to go extremely to protection. It means that U. S. views on fiscal policy are changing and whatever the U. S. technical mission may bring, it is not going to stimulate industrial advance in the near future. The mission was meant to consult Indian authorities on supply problems in relation to what the U. S. A. can do for India. U. S. imperialism may be disinterested as Col. Johnson claimed, but there is certainly no reason why the U. S. A. should provide assistance "ad libitum". It was wrong at the outset to hope for great things and we can only recall that in March we refrained from encouraging those building optimistic plans. Indian industry might have made slow progress in two and a half-years of war, but it does not concern the U. S. A.

Inasmuch as India is the road to China and Russia in the opinion of the U. S. A., this country deserves notice. India is not qualified by unusual misfortunes or exceptional endowments to obtain anything more than the lease-lend aid supplied.

The U. S. mission has given an indication of what India might expect. If the quantum of help increases, well and good. In this connection, one must observe that in 13½ months, the U. S. A. provided only goods for about a quarter of the two appropriations of 13 billion dollars. There is much unspent money, and the proper way of using the funds had to be settled. The U. S. mission had thus a subsidiary aim. Post-war trade does not concern the mission, but the U. S. Secretary of State envisages relative freedom of trade and a new framework of economic relations. The problems of the East especially sub-human standard of living do not apparently concern him. In a sense, except for replacing lost investments in China and elsewhere, the U. S. A. has no particular interest in India. Foreign trade as such is of singular unimportance for the U. S. A. She might even want the British Empire to work with her instead of separately, increase trade and unify currency and exchange arrangements, but she has no other interest. What she may plan or do for Cuba or Canada at present is to be distinguished from the lease-lend arrangements. The latter is an essential part of a short-term policy, but nothing more. Whatever India gets under the scheme of aid will be limited to U. S. appreciation of India's ability or intentions. The political situation and the poverty of India are both limiting factors. An independent country might receive even less assistance, but India gets aid only as part of the Empire, at war, and in alliance with the U. S. A.

It was even suggested not long ago that the U. S. A. being at war, might modify both the volume of assistance and terms on which it is made available. There were some indications in March that the U. S. Treasury, faced by a spreading war, was inclined to concentrate on U. S. interests though recent assurances as to despatch of supplies to Russia in April seem to contradict original assumptions. What is important to remember in this connection is that the U.S.A., apart from its need of certain raw materials, has no concern with India's economic affairs. There is no export drive such as Britain embarked upon. There is no desire to cut Britain or any other country out in Latin America, and the early restraint on non-essential production at home conveys an indication of U. S. policy in war. Much of it can only be understood by grasping the essentials of the American political system, together with the eclipse of the party machines in the Roosevelt era. The concentration of effort posited by a war leaves U. S. exporters no option but to retire. There is no longer any interest in investment openings or trading opportunities. Without politicians cluttering up the Administration, with a President working alongside a harmonious privy council, and the major economic units wholly converted or strictly on the defensive, the U. S. economic structure contains the clue to the objects of the Grady Mission. Indian Chambers of Commerce, consumed by an overmastering desire to set up this or that industry all at once can hardly pause to reckon with the changes in progress that put shipping and shipbuilding alike under the Maritime Commission, home investment and new issues alike under the S. E. C. and much foreign trade under the Export-Import Bank.

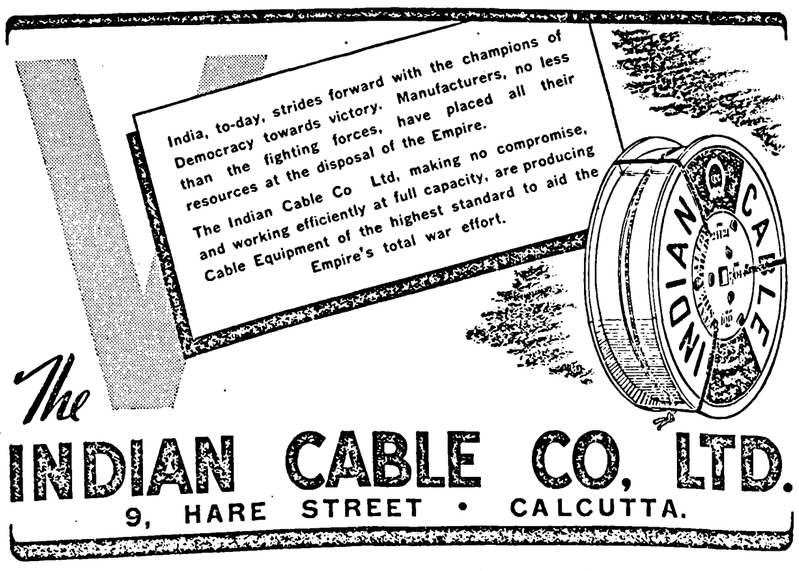
The authoritarian element in economic life is distinctly stronger than in the first term. Mr. Roosevelt is no longer identified with experiments. There are only settled policies to reckon with, for otherwise it would be hard to explain th fall in stock exchange values over 1941, when the general index of U. S. industrial production rose from 140 to 170 (the base in this case being the average of 1935-39). Nor must we forget that the major conclusion prompted by an independent evaluation of India's needs may not be favourable to this country. There may be respected pleas for planning: there may be vehement advocacy of this or that project. But the U. S. mission would have seen the shortcomings along with the advantages, and its views as to potential may not accord with anticipations. To strike a note of caution so soon may seem a matter of prejudice, but we may dwell on the well-defined limits to India's steel output and the inadequate development of chemical manufacture here to support the view that the U. S. Mission in spite of its energetic interviews with Supply officials could not have drawn parallel conclusions. It is quite possible that they might have formed an unfavourable opinion of the Department itself. Officialdom in India has never been renowned for efficiency, and the war has thrown into relief its lack of vision and energy alike. To assume that such a Department under a Government which has a reputation for aloofness would be a suitable tool for the high endeavour would, of course be, impossible for the Mission. Nor should Indian businessmen assume too readily that making known requirements and airing grievances would avail. The U. S. Mission met many industrialists who had their pet notions. But Dr. Grady indicated certainly frequently that general industrial development and war production for specified objects are entirely different. The U. S. Mission would only be confusing its objects if it listened to the familiar cry that this or that venture appears promising and must be, therefore, helped. Unless it can be seen by experts as furthering U. S. interests in wartime, it has no special claim and however familiarly Dr. Grady might have spoken here and there about war and industry, we must remember that the U.S.A.'s interest in India is circumscribed by the war. The view might seem unusual, but we should consider in this context the radical difference between India and Canada. That is a measure of our own diffidence. Where conditions are wholly promising as at Jamshedpur, or in regard to approved ordnance schemes, the U.S.A. might adopt an enterprising rather than a cautious view but that decision would be entirely governed by individual merits. Much of the argument in this case might appear purely conjectural, but it seems advisable to indicate possible retarding factors at any stage.

There is always a disposition in India to expect too much, and having regard to the limited progress made as from October 1940, we may well declare that sensational progress cannot be expected, much less achieved. The shipping and exchange difficulties might be got over, but the fund of U. S. goodwill is not unlimited, and India's political future being uncertain, there is no call upon the U.S.A. to undertake anything more than strictly limited liability. This view might presumably run counter to the genial assurances of Col. Johnson, of U. S. interest in India's defence and her readiness to help in every way. But we must remember that a personal envoy is not the usual spokesman for his Government abroad, and the peculiarities of the U. S. political system would at all times reduce the value of such assurances. One should not minimise the old rivalries between U. S. and British business in the East. It may have a bearing on more momentous issues than the implementation of Dr. Grady's recommendations.

## CRIMEAN ADVENTURE

The very limited scope of the new German offensive at once raises questions as to the scale of previous losses. Whether the Nazis have lost two millions or not, their force, supported by artillery and aircraft in larger proportions than usual has again plunged forward. The holding of strong fronts in Syria, Iraq and Iran by the Allies does not compromise the effectiveness of that move away from inaction to which the Kroll Opera House oration seemed to point. The Nazis, in trying to sweep into the Crimea perhaps think that the superiority at the decisive point will lead to another march to the mouth of the Don. As against this furious attack, the Russians, like the Allied strength, is dispersed. It is not necessarily unfavourable for the outer flanks have to be guarded to procure Turkish friendship and bar the route to the East. Hitler's designs on India are no longer questioned. He at any rate has looked beyond Bagdad. His desire to force the pace at the extreme south-east is conditioned by his inability to achieve superiority

along a two thousand mile front. It is manifest that Italy is helping little. She is at bay in and beyond the Mediterranean. To that extent Russia has been assisted, and the Russian winter counter-offensive was helped already by General Auchinleck's operations in the winter. Mr. Churchill has said often that in defending a line from the Caspian to the Nile the Allied dispositions may be such as to make an offensive of their own difficult. But we must remember that from Trondheim to Bayonne vast armies have to be constantly on the alert against commandos and against vigorous attack by air.



The R.A.F. is not merely carrying out a special type of blockade. It is putting the entire German war machine out of order. Where von Bock failed after a series of swift successes the Geman commanders may fail again.

The usual communiques are curt and confusing, but we would not be wrong in supposing that old successes, at Staraya Russa for instance—must count, for it is obvious that there has been no rationalisation of conquest as originally planned in December. Behind the lines the guerillas are always busy and M. Stalin's order of May 1st must have put fresh heart into the people of occupied territories. The Russian defence under Kozlov has not held the attack even if heavy losses have been sustained. There is a general belief that the Crimean fighting is a curtain-raiser—that its outcome will settle nothing, because Rostov's defences may have been improved and the Sea of Azov may be held against the enemy.

There is also another point on which one might dwell. It is not only into Czechie and Saxony that Britain's heavy bombers have plunged, and day excursions too are now common to the R.A.F. which is ready for a busy summer. Hitler's anxiety to get results in Russia springs from a keen desire to show the German people that on another side at least his army is winning. His failure to break Britain was followed by the R.A.F. offensive whose purpose has been explained by Sir A. Sinclair and Air Marshal Harris recently. Though there is no readiness to take it as proof of our parity, the diversion of Nazi aircraft to Russia means that Britain will have small scale raids while Germany will feel the weight of the R.A.F. The more important aspect of Allied strategy is that there can be no junction between the Axis and Japan. However skilfully the moment for attack was chosen, the Japanese have not got a two-ocean navy particularly after the losses of five months of war. Otherwise, they would not feel the defeat in the Coral Sea so much as to say that the battle is over and the losses need not be reported as promised. There may be no obstacles to Japanese air attacks from Burma on India, but the Japanese must certainly count on German help to try invasion. There must be a U. S. battle fleet in the South-west Pacific, and for the first time we can truly hope that distances are not going to obstruct American action.

Japan's unreadiness to move against Russia in the Far East may be cited as a measure of Hitler's weakness. While there will be a difficulty in carrying the battle to Japan from the Asiatic mainland, there is also the relief given to Russia by the Allies holding Japan in the south. The mere fact that Hitler has got only a thousand planes for the operations in Crimea contradicts familiar estimates of German air strength at 35,000 or over. The loss of 10,000 or more planes in thirty-two months of war must be taken into account. It is necessary to look at all aspects of the war situation before it can be said that a direct, concentrated attack in distant Europe must succeed. What can be done with the peninsula if Sebastopol holds and the Russian fleet aids defence has to be considered.

Many will willingly assume that the Crimean campaign is a diversion, meant to make a wider plan, but the Fuehrer's last oration, with its vague threats and vaguer promises suggests that no such plan is held in reserve. For the Allies delayed last year other things besides the conquest of Greece. The Russian campaign came to absorb a part of air strength and even the control of railways beyond Germany has helped little, while Russia has been directly benefited by U. S. efforts to catch up with war production. More important on the long-term view is the successful shifting of Russian factories in war. Threatened regions have few factories. They were split up; skeleton factories were left on the spot while equipment was moved to the rear. There are three new regions along the Volga with its centre at Kuibyshev. The south Urals are chosen for heavy armaments and the Kuznetsk Basin for machine tools. In Siberia and the Far East there are independent centres, and the fact of swift economic reorganisation must be set against the limited progress made in the removal of the invader from Russian territory. If operations go on around Kharkov, there is little danger to war industry, and the Allies' confidence in Russian ability to check the latest of a series of assaults is based on something more than faith. The importance of the developments beyond European Russia can only be seen in relation to the Nazis' own inability to overcome difficulties caused by discontent in the occupied countries, discontent fomented by the R.A.F's regular operations. The R.A.F. began its work by taking up the French General Donhets doctrine late, yet has not overlooked one point—the efficacy of anti-aircraft work. Britain may not have a continental army but she knows the whole bag of tricks. That is one reason why we hope, and believe that the aims of an opportune offensive will not be missed. That will be by way of being an answer to the landward march on the Crimea.

### War And Industry

The textile industries were almost unaffected by the outbreak of the war, though it is manifest that after its progress they are faced with unusual difficulties. The cotton mill industry reported an increase in output during December. Total production for the nine months ended December amounted to 3,432 million yards as against 3.178 million yards in the same period of 1940. The only adverse development was the constriction of demand for goods, caused by the collapse in the cotton market and discouraging war news. Except for the rise in the prices of Japanese goods, there was nothing to suggest that extra prosperity had descended on the mills in India. The increase in exports and re-exports, accompanied by a fall in the imports of cotton manufactures, has been an established feature of the trade returns while the further rise in mill consumption in December of cotton should support the views based on a reading of the raw cotton statistics. It is, however, noteworthy that December witnessed a decline under both imports and exports of raw cotton. The break in local prices could not have stimulated mill buying in any event. The increase in working hours explains the further advance in Indian jute mills' production in December. Though stocks were not increased quickly the war had a marked effect on exports. General anticipations were justified, in this case, by the fall which showed however that shipments were in advance of the quantity exported in December 1940. Total exports for the nine months ended December amounted to 679,000 tons as against 756,000 tons in the same period of 1940. Hessian prices during the period showed a striking degree of stability on account of the receipt of warbag orders. It will be remembered in this connection that the receipt of an order for sandbags in April had no effect at all on hessian but in January market sentiment had the support of demand from North America and the Plate. The decline in prices recorded during December was almost made good in January and improvement extended to raw jute as well though December saw a pronounced decline in shipments of raw jute.

If the increase in output is common to both jute and cotton in the war period little can be said about iron and steel or coal. It is certain that in both cases there should have been a distinct increase of activity. Imports from abroad were considerably lower than in the previous year, and prices of iron and steel manufactures, except in the case of galvanised sheets, showed no change over a considerable period. The increase in tea prices recorded in January was independent of the increase in production by 26 million lbs reported by Northern India towards the end of the season. Yet it is not surprising to find a fall in exports of tea in December although for nine months ended December total Indian exports amounted to 321 million lbs as against 272 million lbs 1940. The activity as measured by output in the paper industry can only be conjectured, but of the pressure of demand on Indian paper mills an indication is provided by the fall in imports during December 1941 to 47,000 cwt as compared with 128,000 cwt in November 1941 and 112,000 cwt in December 1940. The available figures in relation to electric power generated and sold indicate that the demand for industrial power up to December continued to run higher than in the previous year. Though the figures relating to the value of foreign manufactures imported into India show little change on the previous year, the decline under cotton and rayon yarn and goods was of material benefit to the Indian mills which had the advantage of large war orders in addition to the demand of other countries formerly supplied by Japanese manufacturers.

---

### Use for Bagasse

The evolution of a new plastic from bagasse has been reported from Louisiana. Pioneering work in the Iowa State College laboratories turned a Louishiana sugar factory on to putting up a pilot plant capable of turning out 200 lbs. a day of a plastic material out of a product obtained from bagasse. Moulders have tested and pronounced the material useful for a number of plastic components of cars; in powdered form, it can be compounded with rubber. The new material is hard, acid-resistant, can be made in sheets that can be dried and sawed. Bagasse being cheap and plentiful, the new plastic, different from others in composition, has attracted attention, particularly, as there is a desire in America to save zinc and aluminum. An article of Dr. Willcox reproduced in "Indian Sugar," indicates that bagasse, apart from its adapatability for making fibre-boards contains lignin which is suited to plastic manufacture. Bagasse, it is said, can be had at a cost of eight dollars a ton. Cellulose contained in bagasse is rejected. Aniline, a coal-tar product, is used to isolate the lignin from bagasse. A black powder is the base of a thermoplastic material obtained through two different processes. Since the plastic is black, it is mostly destined for the automobile and electrical industries, though its use may extend hereafter in other fields. How much bagasse will go into plastics is unknown, but Dr. Willcox expects that in the form of lustrous and strong sheets that can be employed in cabinet work and floor tiling the plastic will enjoy a considerable vogue. It is anticipated that bagasse may rival soya bean as raw material for plastics manufacture.

The author of the article estimates that by the use of the sulphuric acid process—the plastic material can be had at a cost of 2¼ cents per lb. as the total cost of treating one ton of dry bagasse valued 10.52 cents is less than 40 dollars. The aniline process will raise the cost of treat ment to about 100 dollars per ton, but even then the cost of the plastic will be only about 6 cents per lb. The former process has not been tried out with the same success as the aniline. The sulphuric acid process yields a glucose solution that can be used for making industrial alcohols or used as cattle feed. Even the pith can be used to produce furfurol required for plastics manufacture. It must be remembered that the exact process adopted at Lockport, La is a secret. Indian sugar manufacturers will naturally evince interest in the additional use found for bagasse, while moulders and plastic makers, who know that lac is abundant though not the chemical compounds needed for manufacture, are likely to show some interest.

### Madagascar

The events in Madagascar have made many look over the geography of the island. The island of turbulent queens has been pulled out from Vichy's lifeless hands. The operations were followed closely in India because the U.S.A. had endorsed in advance British action. Though Vichy is raising questions about Martinique, the U. S. Government has sent a special envoy to persuade the Government that it should stand out against Vichy if expedient. The Cape route to Europe is saved by the British Government's timely action and Portugal too has reason to feel secure after the end of resistence. Reunion lying in the same latitude offers temptation to the Japs but there is a belief that Britain will take steps to protect nearby Mauritius. The Free French have not been installed though the civil administration will work under British supervision so as to defeat enemy designs. The Vichy protest has been overruled by the swift passage of events. Since Madagascar produces both sugar and coffee, the chances of India getting supplies are bright. This country does not want mica or graphite but the tropical foods grown for export should find a market here, or in South Africa. The population of four millions is Asiatic rather than African. The Anglo-French agreement of 1890 recognsed French authority over the island. Military action was entailed by the hostlity of the natives and the island became a Colony only in 1896. There is only a joint delegation for consultation by the Governor-General. Once a year it meets but the real effectual touch with natives is afforded by the system of chiefs. Indirect rule is favoured for obvious reasons. The European population cannot exceed 30,000 or 40,000 while Hindus, Chinese, Arabs and other Asiatics carrying on trade constitute a negligible minority. Slavery was abolished in 1896 and forced labour also went out.

Poll-taxes were levied up to 30 francs and were payable by the natives between 16 and 60. Missions were active but paganism has survived in Madagascar. The one mark of progress is free compulsory primary education, and French is widely spoken. The island has its separate debt and a separate budget which is settled by the nominated delegation referred to above. Rice, manioc and beans, vanilla and potatoes are among its crops. Diego Suarez is a separate island under Madagascar like Nosybe, St. Marie and the Comoro Islands attached to Madagascar. Timber, gums and resins come from the big forests. Meat-packing factories work with the help of island stock breeders. Gold and phosphates, precious stones like zircon and radioactive minerals have been located. Though Madagascar imported in the past more than she exported, the difficulties of France must have caused a big change. Raffia fibre was one of the main exports until recently.

The principal import was cotton goods, though the island has its own cotton and silk weaving industry. Tamatave is the chief port and there is coastal traffic between many towns on the island with a total coastline of 3,000 miles. French shipping was naturally dominant, but British lines served Madagascar regularly. The road mileage is small and total railway mileage open since 1913 is inconsiderable. There is a big wireless station at Antanarivo, opened in 1924. Madagascar has its own bank of issue with a capital of 200 million francs. The French currency is current alongside of local currency in the same denominations. The Comptoir desscompte had branches but no other French bank considered Madagascar. worth any attention in the past. There were two local banks including an agricultural credit bank. It was only in 1920 that a savings bank was established. Reunion east of Madagascar and north-east of Durban is represented in the Parliament of France. Sugar is the island's chief product and there are valuable forests. Power alcohol is produced in plenty as many distilleries are at work. There is a local bank of issue which has adopted the French currency system. The chief imports in most years were rice and grains and cotton goods.

### Familiar Dispute

In its concern over the lapses of official policy the Indian Merchants Chamber of Bombay sometimes runs to extremes. In trying to refute a recent newspaper article of Sir Norman Angell it is sought to prove that fiscal autonomy is non-existent. Sir Norman, being wholly unofficial, the article has no special value, but always anxious to put the public wise the Indian Chamber wants to show that the Indian market, in spite of India's undependent tariff making powers, is Britain's preserve. The Indian Chamber is content to show that fiscal autonomy was limited by the rules pertaining to discriminating protection. Buchanan's (not Buchman's) History of Capitalist Enterprise in India (Macmillan) is cited to show that jealousy lay behind previous tariff policy in India. The excursion into history does not appear to have point since the only relevant consideration is what the Selborne Committee meant in 1920. If one looks at the development of industries in India under protection, one must admit that India obtained and exercised freedom. That Government sometimes disagreed with the Tariff Board or delayed action does not affect the major conclusion that customs was essentially a subject transferred by Whitehall. Sir George Rainy's speech in 1930 has been referred to in order to show that the Secretary of State is usually consulted in regard to tariff proposals. This was done under the Government of India Act of 1919 and the fiscal convention like any other convention cannot run counter to the provisions of a statute.

Imperial preference is the subject of lengthy criticism. In the middle of a war tariff questions cease to interest India. The exclusion of British goods, even if desired, is not feasible. The Indo-British trade connection in wartime appears to be beside the point. Preference may have diverted or modified protection in India but it has in the past helped India to win for her linseed and pigiron a favoured place in the U. K. Britain gains under all imports, says the Chamber, but it will be asked if the 7½ percent preference by itself has helped British motor exports. The suggestion that all countries can trade on equal terms with India is condemned as misleading. Tariffs or preference certainly do not stand in the way of trade and the U.S.A. with her growing trade with India could think that the import duties levied are paid by the Indians and therefore the Indian market is not closed by tariffs. Of absolute prohibitions due to war nobody can take note, but roughly speaking, the foreigner could consider preference a local issue and ignore it. India obtained preference in Burma by promising free admission to Burma's rice and timber. The fact that trade with Burma is at an end does not affect the validity of arguments employed last April. Sir Norman Angell may have sought, to prove that British Imperialism is in a way disinterested but the Indian Chamber's anxiety to prove that Imperial preference had damaged protection irretrievably is calculated to suggest that on many issues the Chamber is apt to go off at a tangent.

### Tea Propaganda

A full year's activities are covered by the latest, the 38th annual report of the Indian Tea Market Expansion Board. It covers also the work carried on by the International Board though it was only in the Dominions that vigorous work was possible. The allotment for U.S.A. and Canada was reduced but efforts were made to secure maximum results. The share of India in the allocation for the International Board's expenditure is shown as £128,900 out of the total of £276,830. A further liability may fall on India and Ceylon, owing to the N.E.I. being put out of reckoning, but that should not matter as India's tea exports will probably increase under the 125 per cent. quota in force at present. The compaign report for India describes the results secured in selected Indian urban centres. Ten towns were chosen in all, and six months created abiding goodwill for tea. It is only in the U. P. that indifferent results have been reported, mainly because of the prejudice against hot drinks in summer. The rural campaign in East Bengal is regarded as successful, but assuredly, the most hopeful field is the industrial town so that it is not surprising that Cawnpore as also other areas received the attention of the Board. That the tea canteen is gradually coming to be regarded as an essential factor in mill administration is proved by the very large number of mills which are now found to be desirous of taking advantage of the Board's help in connection with the establishment of canteens, and with the considerable wartime increase in industrial activity, it is confidently anticipated that the process will be greatly accelerated, says the report. Evidence is furnished as to the worker's willingness to accept tea.

The Commissioner in India reports that a third of the mill workers are supporters of tea canteens and more new canteens are springing up because the old ones show a profit. Tea stalls came into vogue in 1939 and have been formally approved by the Textile Labour Enquiry Committee which reported last year. Up to March, 1941, nearly all the Bombay mill canteens reported a striking increase in sales of tea. It was only in South Indian mills that free cups of tea had to be be given for six months. A new type of adherent for tea was sought in schools. A free cup of tea is a familiar amenity in Bangalore schools, and in Dacca also, the same work was begun, but was subsequently hampered by the riots. The Army has been the special object of attention at all times and Indian troops in the Middle East, as also troops in India, have been served by the teacars sent by the Committee. The work done under the auspices of the Board's Commissioner in Egypt for Indian troops has elicited nothing but praise.

### Shipbuilding Feats

The achievements of British shipyards have naturally been eclipsed by those of the U. S. A. The new Liberty Fleet is more than ever considered vital for victory, and it is coming to be recognised that quick construction of merchant shipping, as in the Navy yards, is as important as sound design. Methods have changed, through and because, of the war. They have changed largely because of one man—Harry Kaiser whose revolutionary shipbuilding is described as one of the most heartening achievements of U. S. production Kaiser made the Grand Coulee—largest concrete dam in the world. In 1940 he founded a company bent on making ships faster than ever before. Handpicked men helped to lay the keel of a 10,000 ton freighter which came off the stocks in 197 days. He has more than bettered the achievement by reducing the time for construcion to 126 days, and expects to cut it to 105 days. He is now busy on 36 Liberty vessels in his original yard, and holds contracts for 125 more. Another yard of his intends to turn out 136 freighters. Mr. Kaiser has slashed the time, though not the money needed, for a ship; formerly six months were required for a one and a half million freighter. Now the speed-up has come, and Kaiser's work is accepted by veteran shipbuilders. Speedboats are also coming off in quantity because Higgins has cut the time wanted for building motorcraft and landing boats. He, too, is building ships for Government and has a minimum of 200. One guess is that he will soon be able to build 24 ships a month. When such credits go to shipbuilders, it is clear that the U.S.A. has no worries. Yet a Gallup poll showed that the country was keen on further speed-up of production and addition to shipping and transport facilities. The U. S. public's reaction is similar to the British response to the December poll in which production was given first place and organisation of manpower second. In working for victory the U. S. aircraft industry is giving adequate results. According to Mr. John Jouett, President of the Aeronautical Chamber of Commerce, the U. S. military aircraft industry set new production levels in March. There was a huge increase in the production of aero engines. Further increases are expected shortly as the con-

verted automobile industry hits its stride and begins large-scale operations. The change-over to war production can be more readily measured by curtailment of output in non-essential industries. Limitation of supplies is the rule in the U. S. A. The limited manufacture of radios, the authorised use of rubber fabric and the claim made for a specified share of textile output show that British practice is copied, and one object of the U. S. anti-inflation campaign is to make it harder for civilians to get non-essential goods.

### Wheat Supplies

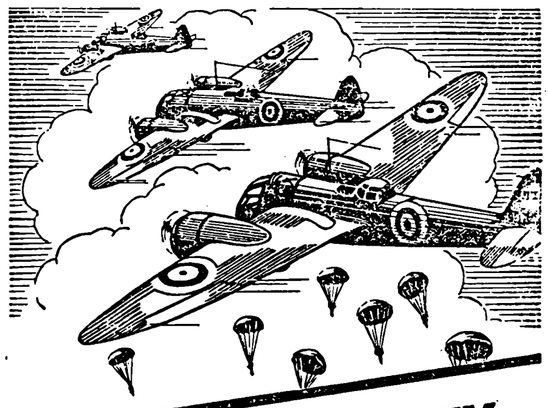
Much light on what has happened in wheat markets in the past few months has been shed by the third wheat forecast published recently. The forecast covers 98 per cent. of the area under wheat in India ; and was based on the information available in March. The area under wheat in 1941-42 is returned as 33,543,000 acres as against 34,110,000 acres last year, indicating a fall of 2 per cent. Total yield is placed at 9,948,000 tons as against 10,265,000 tons showing a fall of 3 per cent. on the previous year's crop. Conditions in March were said to be fairly good. The largest wheat-growing area in India is the Punjab where 11,258,000 acres, equal to 31.5 per cent. of the total wheat acreage are under wheat. The present Punjab crop is put at 4,313,000 tons against 3,736,000 tons in 1940-41, showing a strong rise on account of a higher average yield. Owing to a fall in average yield, the U. P., as also the C. P., will have a smaller crop compared with the last year. All Provinces, except Bengal and Bihar, will have smaller crops since crop damage was reported in Bombay and Bengal as also the Gwalior State. The Central India States with nearly two million acres under wheat are expected to give 280,000 tons of wheat this year while the Rajputana States should give 314,923 tons and Hyderabad alone should give 127,000 tons according to the forecast which shows that British Indian production is dominant always.

A study of previous forecasts will indicate that in regard to area and yield the Indian wheat crop is singularly stable, largely because it is not an export crop but grown chiefly for home consumption. The latter fact explains the recent food-hoarding movement as also the new doctrine of regional self-sufficiency. The more important clue to the present price situation is found in the striking growth of exports since April, 1941. The total exports for 1940-41 amounted to 45,000 tons only. It now looks as if the total for 1941-42 will not be less than 200,000 tons. Taken together with the fact that there were no imports of wheat between April and December one can judge how prices should move in step with an increase in demand. The Control Order came to arrest it, but did not succeed, and had to be modified soon after. While the crop reports and price trends of other countries have no significance at present, it may be noted in passing that the U.S.A. should have 25.33 million tons in addition to a winter wheat crop of 16.9 million tons as against 21.76 million tons in 1940 plus a winter crop of 17.9 million tons. The Canadian crop, as already known, will be substantially smaller, but the exportable surplus of the Dominion will be 14.8 million tons. Australian suplies in 1941-42 are put at 4.4 million tons, just double those of the preceding season. The Argentine crop of 1941-42 is estimated to be much smaller at 5.9 million tons. These figures are intended to show not only that India is surpassed by other wheat producers, but that owing to the war, which incidentally keeps Russia out, and the loss of European markets, other countries may be eager sellers. There is, however, the minimum price legislation in the Argentine and U. S. wheat prices look like staying up. So far as Karachi is concerned, prices have been notably firm for about three months, recording a slight fall only this month, and the larger supplies appearing in the Punjab markets of late should make no difference to the ultimate trend. While London has been stagnant, the fall in Karachi's coastwise exports explains this year why Calcutta rates for wheat and flour are higher and are likely to be so.

### Indian Cotton Progress

Founded in 1921 the Indian Central Cotton Committee has done much for the cotton grower. Its record of service for twenty years and more has received public recognition for what corresponds to the Empire Cotton Growing Corporation. Getting a cess of two annas per bale of cotton consumed at home or exported, the Committee has its own income which in 1941-42 came to Rs. 1.7 crores. Co-operation from the Agricultural Departments in the Provinces has always been forthcoming. Growers and millowners alike are represented on the Committee, and the trade has seldom failed to get satisfaction. Improvement in the quality of Indian cotton since 1924 is directly traceable to the Committee's work. For instance, the proportion of long and medium staple types has risen from 29 to 37 percent of the total grown. Making a detailed comparison of staples with this purpose, it is shown how cultivation has declined. The total quantity of short staple has fallen from 71 to 63 percent, or more precisely a fall of 18 percent has occurred. It is only under Broach that an increase has taken place. The production of long-staple—seven/eighths inch and above—has increased from 1,644,000 bales to 1,933,000 bales. An increase of 18 percent in this case is explained by the extension of Americans in the Punjab and Sind. The gain accruing from the fall under short staple and the rise under long staple is estimated at Rs. 1 crore at least. The area under improved types is placed at 5.8 million acres and an extra profit of Rs. 2 per acre would ensure an additional return of Rs. 1.16 crores per annum. The persistence of short staple is, however, a danger. More than three-fourths of the total area under cotton in India in 1940-41 was under short staple types and the proportion has to be further reduced. In view of the campaign launched this year for the discouragement of cotton cultivation not only in order to extend the area under food crops the previous results are not without interest. The Committee's work suggests that the chances are fairly bright.

It has been established that a rise in the average yield per acre has occurred during the period of the Committee's labours. The average yield in 1938-41 was 93 lbs per acre as against 87 lbs in 1924-27. If the commercial crop estimates are considered, the average yield in India is 111 lbs as against 92 lbs in 1924-27. Yield is variable and low; it cannot be otherwise. Demonstration on the farm is hence to be attempted to let the cottongrower know what he should do. Help on the marketing side has not been overlooked and ginning charges also were reduced more than once at the instance of the committee. The Cotton Transport Act has helped to put down admixture of Indian cottons while gins and presses have also been asked to put special marks, furnish returns etc. The pink boll-weevil has been fought by confiining all imports of U.S. cotton to Bombay and insisting on fumigation. The committee supervises this operation for which importers pay a small charge. The import of foreign kapas and seed alike is prohibited, except under special license for specified purposes.



The work of the Matunga laboratory reinforces the classification etc. adopted. A ginning section was added in 1940 to help the laboratory to investigate the ginning performance of various types. The mill industry freely resorts to the laboratory for help, and this side of the committee's work has been further helpful in solving the problem of storage etc. The summary of results obtained through the committee's agricultural research schemes is notable. Emphasis is laid on the evolution of Jayawant cotton for the Kumpta-Dharwar tract and Bijapur. Jarilla, a wilt-resistant type, whch is expected to displace Broach, seems suited to Berar. In the Broach tract again experiments with medium staple B.D. 8 have shown that the local type is hardly superior. In the Punjab the desi types have benefited, and 51 percent of the total acreage in Bengal is said to be under improved types. Verum types adapted for the C.P. have cut into the cultivation of Oomras. In at least four States there has been similar improvement, and the committee has its own special station attached to the Indore Institute. The Institute was reorganised in April 1940 and cotton research there is now independent of all other investigations. The Agricultural departments in Provinces and States are also subsidised by the I.C.C.C. and the results of the past two decades seem more hopeful than expected. Two things stand out. The average yield is not stationary; the proportion of short staple is being successfully reduced. These mean much and the public should know how the representative committee has carried out its work.

### A Practical Twist

Suggestions frequently made towards expanding the scope of the Indian Geological Survey's work have been given effect to in the setting up of a special utilisation branch. The premier scientific department's value will be amplified by the addition of the new branch. The decision is explained by the need to develop mineral resources for the war. The loss of Burma is obviously connected with the search for, and re-examination, of mineral deposits. The new branch will be under the supervision of the Director of Geological Survey. It will engage in proving deposits, small scale mining and the construction of experimental and pilot plants for smelting, etc. It is indicated that continued experiments will be the prelude to metallurgical production by the ordnance factory or commercial firm interested in minerals. The new branch should relieve the new Department of Scientific and Industrial Research of much of its work, while indicating to private enterprise available opportunities. An allotment of Rs. 12 lakhs has been made by the Government for the benefit of the utilisation branch. There is a hint that the branch will outlive the war, for the better utilisation of India's minerals will have to continue.

The chemical and metallurgical industries are closely related, and it is the function of the geologist to show what by-products are useful for agriculture and industry. That is all the more necessary owing to the war. This late, but welcome decision will help India to overcome the lag between the obtaining of information and its use. The Government of India realises that in regard to minor minerals some plan of development is necessary. The essential, exploratory work has been done, and efforts made of late to use Baluchistan sulphur in sugar factories and thereby dispense with imports proceed from the natural desire to limit all demands for shipping. Sulphur is but one

No. 87A

of several key minerals in this period. And the new branch, by a practical approach to industrial development, should also develop new avenues of investment. The extended use of a system of royalties must be envisaged in this connection, and it may be possible to interest foreign capital, to a certain extent, in hitherto undeveloped fields. The actual grant of concessions or control of patents and processes will naturally vest in Government, but it should be possible to afford Indian enterprise considerable scope in the future. The important decision taken last week creates a link between the Geological survey and India's industrial development. It also opens up possibilities of investments for new capital in more safe and remote regions.

**U. S. Defence and Industry**

War production hits a new high every week. Shipbuilding is not the only field in which rapid progress is the rule. The Chamber of Commerce of the U. S. A. at the annual meeting in Chicago announced that industry is solidly behind the war effort. The following claims were made. Every requirement for coal for war production and civilian use has been met. Electric supply companies have already added enough kilowatts of generating power to their lines. Industry is also making more 100 octane petrol than all the rest of the world combined. This naturally means absolute superiority for U. S. air force. It was also claimed that one automobile company which is producing 30-ton all-welded tanks is seven months ahead of schedule. Another is nine months ahead of schedule in the production of powerful engines for bombers. Added to the intelligence that the Ford Motor Company's new Willow Run plant is ready, it shows that the auto industry—U. S. industrial giant No. 1—is all set for war work. Recently Colonel Crane the U. S. Ordnance authority disclosed that Detroit, the automobile industry, has been fully converted to war production, and is now producing weekly more than 24 million dollars worth of tanks, guns, ammunition, combat cars and replacement parts of other war equipment. The curtailment of car output means more munitions for the Republic at war. It is estimated that every passenger car not built represents a saving of enough zinc and copper for 2,400 cartridge cases; enough steel and rubber for one-twenty-fourth of a tank; enough nickel for one hundred lbs. of armour-plate. Shipbuilding has proved the strongest sector of U. S. industry. In April alone 51 merchantmen were launched, and construction as from January 1 up to May 10, amounted to 120 vessels. Replacements in 1942 alone exceed total losses at sea due to the war. In April the U. S. Maritime Commission took delivery of 36 new vessels. An Oregon yard hopes to build a merchant vessel right off in 60 days. The U. S. industry will, however, find a keen rival in Canada's shipbuilding industry. What is more important is that U. S. plans for an offensive can take shape rapidly. The "Times" Washington correspondent has suggested that production is being modified in accordance with the trend of the war. The new policy takes note of the possibility that the U. S. A. may be able to pass from the defensive to the offensive. Long before next winter, the United Nations may be able to attack, and the U. S. A. means to give the weapons. The fact that steel ingot output according to the "Iron Age," exceeds rated capacity, and therefore all anticipations, must be given due weight in this connection. The output of all weapons and aircraft is rising. Under the new policy the rate of increase will be even greater.

## NORTH WESTERN RAILWAY

**NOTICE**

Applications on prescribed forms along with original certificates of character and school certificate showing age (Baptismal or birth certificates in the case of Europeans and Anglo-Indians) are invited from sons and grandsons (paternal side) of Railway employees for admission as Apprentice Mechanics in the Punjab College of Engineering and Technology, Lahore, which should reach this office not later than 24th June, 1942.

*Note.*—In the case of Anglo-Indians and Domiciled Europeans, candidates other than sons and grandsons of Railway employees may also apply. They should send their applications on prescribed forms, together with original certificates direct to the S.M.W., Moghalpura.

2. Candidates must not be less than 16 or more than 19 years of age on the 1st October, 1942, and must have passed either the Intermediate Examination in 1st or 2nd Division of an Indian University with Mathematics and Science, Senior or Junior Cambridge Certificate Examination, M. and S. L. C. Examination in the 1st or 2nd Division taking English, Mathematics and Science, Diploma of the Aitchison College, Lahore, the Indian Army Special Certificate of Education Examination or any other equivalent examination accepted by the Administration.

*Note.*—Candidates awaiting results of Examination will be considered provisionally.

3. The staff should submit applications of their sons and grandsons through the officers under whom they are serving. Applications received direct will not be considered. Prescribed forms of applications will be found at the end of the Prospectus which can be had at the Book Depot, Government Press, Lahore, at a cost of As. 4 per copy, or As. 7 including postage.

4. During apprenticeship Apprentices in addition to free board and lodging will be given stipends of Rs. 10, 15, 20, 25 and 30 for the 1st, 2nd, 3rd, 4th and 5th years respectively.

5. Candidates belonging to the Anglo-Indian and Domiciled European community should clearly state in their applications whether they are statutory natives of India or not.

SUPERINTENDENT,
*Mechanical Workshops,*
*N.-W. Railway, Moghalpura.*

**Concessions from Iraq**

The Indian Trade Journal reproduces an Iraq notification relating to the import duty on grain. The Prince-Regent, at the instance of the Ministry of Finance, had ordered the reduction of certain duties. The rates in force for ten months from the date the regulation was notified, are favourable to Indian merchants. The import duty on ghee has been reduced to 1 fils per kilogramme. The duty on rice in the straw or unhusked grain as also on broken and husked rice including glazed rice has also been reduced to 1 fils per kilogramme. The import duty on fixed oils, liquid or solid of vegetable origin, crude, purified or refined, has been lowered to 10 fils per 10 kilos net. The duty on margarine has also been reduced to 72 fils per 10 kilos. The fils is the thousandth part of a dinar which is equal to one pound sterling.

**Rubber-Grower's Request**

The recent fixation of maximum prices for raw rubber produced in India has indicated how far the Government is prepared to extend control. The decision to put the price at a level that suits manufacturers and their customer, the Government, is not calculated to satisfy Indian planters' hope that a fresh stimulus to rubber planting would be provided this year. A price of Rs. 61 per 100 lbs f.o.b. Cochin seems superficially in line with the Colombo price but the difference in yield, capital invested per acre and costs have to be considered. It cannot be said that the price fixed by the Government satisfies rubber growers. They have been asked to help fight the shortage of rubber, but the actual encouragement to invest more money and extend cultivation seems small. Of the world's supply, we know that India produces a minute percentage. Given time it should be possible to add to India's rubber cultivation beyond the permissible limit of 6,400 acres. The urgency of adding to output is recognised. It is known that synthetic rubber is hard to produce. The immediate need then is to add to local supplies. Only recently a conference of growers over which Mr. A.V. Thomas presided examined the question of rubber supplies. Imports are

ruled out, and demand is exigent. But representative growers have remarked that compared with Ceylon the South Indian estate is small and its output also lower. The British Government takes Ceylon rubber at a higher price—Rs. 71-72 against Rs. 61 fixed for India. The price differential excites mistrust. The cost of cultivation in India is higher. The demand for a revised price is unanimous since the demands of amortisation and depreciation have also to be met. The radical difference between plantation and manufacture has to be considered. A high revenue duty protects the tyre manufacturer. In the case of raw rubber it is only natural that a guarantee of adequate protection should be asked for in relation to extension of cultivation. There has been a suggestion that the Travancore Government has a special interest in this question of raw rubber. The State contains more than 77 percent of the area under rubber in India, and the growers there who ask for a minimum price of Rs. 1 per lb and the withdrawal of all restrictions on rubber cultivation have asked for the support of the Government of Travancore. It has been stressed that compared with prices during the last war, the price of Re 1 per lb for standard sheet seems low. Whether Travancore can get the international agreement cancelled or not, it is manifest that Indian rubber-growers have a right to ask for special encouragement. Maximum production is demanded by the war, and only if high prices warrant, can there be a speedy extension of acreage to make good plantations weakened by thorough tapping mainly in the interests of Government. The Government of India which has reiterated a right to acquire the position of a privileged customer for rubber manufactures, has been reminded that planters have their own interests to consider before they can put forth their best efforts. The general opinion appears to be that the maximum price of Rs. 61 per 100 lbs must be raised soon. Indian planters are entitled also to expect that if they add to the area under rubber they will be protected against imports of Burma rubber in the post-war period.

*At this time of national stress it is essential that every effort is made to conserve the supplies of paper in India. We urge all business houses and consumers of paper everywhere to observe the strictest economy in the use of paper.*

Aerial propaganda,—the widespread sowing of leaflets in enemy-terrorised lands,—is an important part of the war technique of modern times.

Each pamphlet is a "bullet" aimed at enemy morale, doing its part in undermining his insidious grip.

Unlimited supplies of paper are needed for this purpose.

"We are helping to meet the increasing needs of Government departments, the Army, the Navy and the Air Force in addition to those of our old customers all over the country. We cannot always fulfil orders from our old friends with our customary attention and despatch. Until the war is over we must ask our clients to take into consideration the work of vital national importance on which we are engaged.

ISSUED BY THE TITAGHUR PAPER MILLS CO., LTD.

TP. 1928.

**Trade With Canada**

There is a separate Trade Commissioner for Canada as from November 7, 1941. His first report has been just published. In the last quarter of 1941 itself the Toronto office dealt with a large number of trade enquiries. India, too, put through many enquiries. In Canada, as in Australia trade openings are often sought by Indian shippers. A Bombay firm wanted the names of likely importers of groundnuts, and two names were forwarded. Shippers of hides and skins as well as leather wanted to get in touch with Canadian importers. The advantage of separation from the New York office was demonstrated by the request from Bombay for representation of Canadian electical manufacturers. It was possible to get the name of a well-known manufacturer of electrical furnaces and send it. The Toronto office pointed out at the same time that owing to the restriction in force, it was very unlikely that any electrical goods would be available for export. Interest was evinced in Canadian newsreels and a Bombay firm asked whether Indian newsreels could be shown in Canada. The Trade Commissioner ascertained that everything was handled from New York and the Bombay firm got the relative addresses. Canadians showed considerable interest in glass bangles, pottery, and handkerchiefs made of mull. The usual enquiry was forwarded to India. From Vancouver to Quilon is a far cry, but the Toronto office cleared a complaint, and put the parties in touch about direct representation for exporters of cashew-nuts. A Montreal firm asked about finished sheepskin, calfskin, morocco and goatskin. Names of two Indian shippers were made available. Since interest was expressed in leather gloves as also the skins needed therefor names of Indian exporters were furnished. As in Britain, interest was shown in spices, sauces and nuts. A London firm asked for information and got it. The representative of a Toronto firm made known the articles he could ship and in return obtained the name of a firm which had enquired about imports generally from Canada. The office also obliged by forwarding a claim for commission from a Vancouver firm. The most important enquiry handled came from the Indian Coffee Market Expansion Board. Information as to the market for coffee in Canada was supplied to the Board. The main conclusion was adverse. It was found that under existing circumstances, with the preference for African and liquoring coffees, which sell at considerably lower prices, there was little hope for Indian coffee at present in Canada. In regard to nuts the prospects are otherwise. There is a definite shortage of nuts, and India has a good chance. The Chinese used to sell peanuts but are shut out by the war while almonds and walnuts from Europe are unprocurable. India produces these and other nuts for which there is demand. Reference is made to complaints regarding lack of proper grading or packing in the shipments of nuts received from India. Indian firms would do well to note that Canada is particular.

As we were going to press last week, I received disquieting news with regard to the attitude of banks towards the debentures of Calcutta public bodies like the Port Trust, the Improvement Trust and the Corporation. I had to content myself with a brief comment which appeared in another section of this paper. Below is reproduced what I wrote last week.

"On the eve of the fall of Rangoon, we drew pointed attention, in these columns, to the disgraced status of the debentures issued by the Rangoon Corporation and the Rangoon Port Trust. The anxious conditions through which Calcutta is passing threaten a similar prospect for the debentures of the Calcutta public bodies. We understand that banks are already creating difficulties with regard to loans against the debentures of the Calcutta Port Trust, Calcutta Corporation and Calcutta Improvement Trust. The position in this regard has to be clarified. There will be serious financial unsettlement and anxiety if the Government of India do not intervene immediately and provide an assurance to the holders of these debentures. We think that the least that the Government can do is to issue a categorical statement that the debentures of public bodies in Burma and in India will be guaranteed by the Government during the period of war and for one year after the war is over."

I have made further enquiries in this matter; and I understand that the difficulties created by banks owe their origin to a letter addressed by the Imperial Bank to such of those banks as had included debentures of the Calcutta Corporation or Improvement Trust or Port Trust or Howrah Bridge Commissioners in the portfolio of securities maintained with the Imperial Bank for overdraft facilities. The letter of the Imperial Bank was by way of advising the banks in question that the limits for overdraft would be determined after excluding the debentures of these four bodies. The letter definitely pointed out that these debentures were unsaleable.

I do not know on what authority the Imperial Bank made the categorical statement that these debentures were unsaleable. The Imperial Bank might have been justified if they had merely stated that these securities are not easily saleable. But, then, no securities are now easily saleable as trading in stock exchanges has become extremely narrow.

Even with regard to the securities of the Government of India, it will be difficult to sell any large parcels of them. One may be able to find buyers for one lakh or two lakhs or five lakhs of any Government of India security. But if any bank or a number of banks came out as sellers of government securities for Rs. 5 crores, they will be equally unsaleable unless the Reserve Bank or the Imperial Bank steps in.

If such a contingency arises, that is to say, the contingency of banks selling large parcels of government securities, will the Imperial Bank circularise all banks and inform them that government securities have become unsaleable and that overdraft limits fixed on the basis of government securities will no longer be operative?

I do not know what steps the authorities of the local bodies concerned have already taken or propose to take to clear the securities of the slur which has been cast by the Imperial Bank on them. But this is not a matter merely between the four public bodies and the Imperial Bank.

The issues involved in this question are not only political and constitutional but connected with what has now come to be called civilian morale, which is another name for Lord Linlithgow's "National War Front."

It was the Imperial Bank which dethroned the debentures of the Rangoon municipality and the Rangoon Port Trust from the giltedged status long before Rangoon fell into the hands of the enemy. "Indian Finance" took up this question at the time; but our words fell on deaf ears.

The Imperial Bank has now repeated the same tactics with regard to the public bodies of Calcutta; and, I hope, not in the interests of these bodies but of the much-advertised national war front, that my words will not again fall on deaf ears.

In the popular mind, the debentures of the premier local public bodies are supposed to have the backing and security of the local government behind them. Again, in the popular mind, the securities of a provincial government are supposed to have the backing and security of the Government of India behind them.

If the status of either the debentures of the local bodies or the securities of a provincial government is pulled down, it cannot but have the most adverse repercussions on the credit of the Government of India.

A simple question for which I would like to have an answer is whether the Imperial Bank took this line of action with regard

to Calcutta local bodies on its own initiative or after consultation with the Bengal Government and the Government of India.

If the Imperial Bank acted on its own initiative, it is firstly responsible for making a statement about unsaleability—a statement which is not correct and which will be refuted by the President of the Calcutta Stock Exchange. It is secondly responsible for action in the financial sphere which has serious import in the political sphere.

It will not do for the Imperial Bank to plead that it has nothing to do with political issues ; and that, as a bank, all that it is concerned with is the status of securities from time to time as they are affected by vicissitudes of war.

The Imperial Bank is not a bank in the ordinary sense of the term. It is a bank created by a special act of the legislature. It was the banker of the Government till the Reserve Bank came into existence. And after the Reserve Bank was created, the Imperial Bank is still doing Government's treasury work in those centres where the Reserve Bank has no branches. The authorities of the Imperial Bank cannot forget that it is, for all practical purposes, a Government-aided institution.

To the extent that the Imperial Bank enjoys government aid in various ways, it must have not only a business outlook but also a political outlook.

Those who have knowledge of the investments of the large mass of the population in India will be able to testify that the small investor in Bombay prefers the debentures of the Bombay Port Trust or the Bombay Corporation and the small investor in Bengal prefers those of the Calcutta local bodies.

The small investor is more drawn towards debentures of local bodies than towards government securities. These debentures are, therefore, held in small lots by large numbers of the population. Any shock to their value will have repercussions over a wider field of small investors than any shock to pucca gilledged itself.

We in Calcutta are being repeatedly advised to 'stay put' in Calcutta. Mr. Fairweather, the Police Commissioner of Calcutta, broadcast, the other day, that Calcutta is *now* in a position not only to defend but to attack successfully in every sense of the term. If Calcutta is able to resist any attack, the integrity of the Calcutta Corporation, the Calcutta Port Trust and the Calcutta Improvement Trust cannot be disrupted.

Yet, here is the Imperial Bank, which is the Government's bank for all practical purposes, hinting in a circular to all banks that the disruption of the Calcutta local bodies is not unlikely.

The letter of the Imperial Bank connotes a defeatist mentality. It strikes a jarring note at a time when the Viceroy and the Governor and the Chief of the Police are doing their best to inculcate faith and confidence in the public.

If the financial authorities are doubtful about the future of Calcutta, how is the humble citizen expected to believe in the security of Calcutta !

Fortunately, the finances of the Calcutta local bodies have so far been shaped and guided with skill and prudence. These bodies maintain sinking funds with respect

to their debentures ; and the accruals in the sinking funds are generally invested in the debentures of the particular local body. For one thing, sellers are scarce in these debentures for the simple but sufficient reason that those who buy these debentures are bona fide investors and keep them until maturity.

For another, when these debentures do at all come for sale on the market, they are readily snatched up by the Calcutta Corporation or the Port Trust or the Improvement Trust as the case may be, for purposes of investment of sinking fund amounts.

So, there can hardly have been a time when these debentures were unsaleable. On the other hand, on most occasions, these debentures are unprocurable. It is with regard to such securities that the Imperial Bank has chosen to cast an aspersion.

The Government of India cannot afford to allow the matter to rest here. The Rangoon episode is not calculated to increase the confidence of investors in gilt-edged. If the Imperial Bank's letter to the banks is to be the last word with regard to the Calcutta local bodies, the credit of the Government of India itself will suffer irreparable damage.

This is a total war in the financial sense as well as in method and technique of warfare. This is a total war in the sense that Madras cannot be safe in case Calcutta succumbs, that the credit of the Government of India cannot remain at par if the credit of the Government of Bengal goes to fifty per cent. discount and that of the Calcutta local bodies goes down to zero.

In simple terms, the Government of India must issue a clear and categorical statement that they guarantee the securities of every provincial government and the debentures of every local public body. The guarantee thus required will embrace a total amount of Rs. 80 crores.

But what is Rs. 80 crores in this war? What is Rs. 80 crores in a war in which the financial front is as important as the military front?

Sir Jeremy Raisman has so far shown a correct sense of high finance and skilful handling of defence borrowing. And I have a feeling that he, for his part, will have no difficulty in realising the identity between the credit of Calcutta and the credit of New Delhi.

The busman's holiday or the conducted tour of the U.S. Technical Mission took its members almost inevitably to Jamshedpur. I who had a chance to see and wonder in December can only hope that the Mission was equal to the local climate. But I can guess also that Jamshedpur, as the creation of Parsi enterprise and American skill, had a peculiar attraction for the efficiency engineer and the man-power expert alike. That attraction is due to Jamshedpur's history of nearly thirty years. Mr. Ghandy did the honours of the occasion thoroughly and described what was being done. There was timely and proper mention of rising output, departures in production, and modifications of technique. I do hope that shareholders will be properly impressed by the review of achievements. They must be many and varied, since what I saw going on at the time the tyre and axle factory was opened last December must be exceeded and improved. Jamshedpur's links with America were acknowledged, but Mr. Ghandy spoke of missing links in the chain of production. Rectification can only come from U.S. goodwill and help. Pivotal sentence would seem to be 'I have already brought our short-term requirements to the notice of the Mission, and now we look to it for help to supply us with these missing links so that our production may be stepped up to new and loftier heights. The sentence suggests that if expansion follows, and output rises, labour and investors alike would benefit to a marked extent. No concern has been more solicitous of the interests of its employees, and Sir A. R. Dalal's recent Hindustani talk to the workpeople was meant to correct local and temporary misapprehensions and offer advice to the wider world as to labour's part in the war effort. What was the effect of Jamshedpur on the mission? To judge by Dr. Grady's remarks it seemed quite remarkable—as remarkable as Mr. Ghandy. As Charles M. Schwab died only a year or two ago, the comparison made in the little story told by Dr. Grady would have helped the Mission to take Mr. Ghandy's measure. Dr. Grady was pleased, satisfied and impressed. The work at Jamshedpur is vital, and well done. Dr. Grady, who knew Europe in the throes of rationalisation, thinks that Jamshedpur has got the hang of up-to-date methods, and needs to learn little. It is something for the

largest steel works in the Empire to be told that it is up to its job by visiting experts. Only good can come out of the display of interest on the part of U.S. visitors, for we know that India cannot stand still. She must plunge forward, and fortunately Jamshedpur does make advance possible. I think it made some progress possible even in the last war when rails were produced to satisfy an anxious Government. This time the record is bigger, brighter and better. How else could it be if we think of Dr. Grady's compliments to "Tisco" and its town.

The exchange banks are a sort of super-caste in a caste-ridden banking system. I should say that it is only in India that one thinks of their being a conscious elite, but then they have deserved the esteem that goes with being in and out of the Indian banking system. I was reminded of their services and opportunities when I read a cabled extract from the "Economist". I think the estimate squares with a note that appeared in connection with the reduction of their 1941 dividends. What the "Economist's" leading article on the eastern exchange banks seems to have emphasised is that undue anxiety is not warranted because these banks retain their potential financial strength and earning power unimpaired. The problems which they have faced all along are the contraction of foreign trade and exchange restrictions. The major factor however is the war which has converted many British possessions into-enemy-occupied territory, and put China, the East Indies and Thailand among the areas cut off from the Empire. The advice tendered by the "Economist" to the Banks identify themselves with Indian banking is related to the acquisition of the Allahabad Bank by the Chartered Bank through the latter's absorption of the P. & O. Banking Corporation.

• • • •

The importance of adaptability and a local staff have also been mentioned, and it seems appropriate to add that in the future the Exchange banks will think of themselves as scheduled banks, with interests increasingly Indian. The National Bank and the Eastern are, I know, almost unaffected by this war, but they too are not unlikely to think more of East Africa and Iraq more seriously. There is admittedly limited scope for mergers in the banking field, but I cannot resist indicating that what happened in the case of the South American bank acquired by Lloyds might provide a very useful lesson. Within five years the South American acquisition of Lloyds has become a proved success, and if one recalls the rumours in connection with Barclays (D.C.O.) and the Eastern Bank, I suppose one could envisage a new form of consolidation, but admittedly not in this awkward period. How peculiar the conditions are has been indicated by Mr. Grantham in the course of his statement to the Chartered Bank's shareholders. I believe the statement immediately engendered pessimism in London, but the subsequent recovery in the Bank's shares indicates that all is well. The tribute to the staff has been well merited since it is now known that in Burma all through the period of raids the Chartered Bank carried on, and helped its clients to forward funds even after the Government departments prepared for evacuation. What is perhaps most remarkable is that the balance-sheet total is a record for the Chartered Bank. The increase in demand liabilities is adverted to as remarkable, and I can only endorse the views as to the stronger cash position, the increase in Government securities and the exceptional increase under Bills and Loans. The concentration of assets in Britain must reassure all clients and customers. I gladly take this chance of asking all my readers to note that no change can take place in relation to branches in enemy-occupied territory. What is a legitimate inference in my opinion is that the reduction in dividend entailed by the war cannot affect others than shareholders. Depositors are doubly protected by a high cash ratio and a large holding of gilts. The Chartered is old, famous and above all, wise in its ways. Its service, secure and complete, has been described fully five years ago when it was indicated that like the P. & O. the Chartered held a special place in the Orient.

(From Our Correspondent)

Bombay, May 21.

MAHATMA GANDHI'S private visit and press conference have been events of more than local importance. The very frank talk with pressmen has made the *Times of India* very much worried. There is a leading article on Mr. Gandhi who has declared that Britain cannot hope for his moral support. Since Anglo-Indian papers are convinced that the supply work is tremendous, recruitment a ripping success, and the National Defence Council plain proof of Indian goodwill, there is no reason why Mr. Gandhi's influence should be exaggerated. The Americans may have entered the war unwillingly, but there is the old quarrel between India and Britain. The most surprising suggestion made of late is that Gandhiji should get out of politics and leave Congress to do what it will. Mr. Gandhi's consistency seems absurd and the only thing said to his credit is that he is impervious to argument. Mr. Gandhi's statement came alongside of the Viceroy's last pep talk after a flying tour. It may be remarked by cynics that he might have done it in accordance with directions from the India Office to report after the loss of Burma, not because he is acutely concerned over the defence of India at present. Measures taken for the protection of the property and lives of British citizens at particular places may not add quickly to India's strength to resist. It is certain that morale as such stands in need of reinforcement and it is still hoped that non-officials will be asked to help the national war front build itself up. A lot of valuable time was lost in March and there is no longer any desire to read curt and confusing *communiques*. The peremptory judgment on the A.R.P. workers in Vizagapatam may make non-official volunteers reluctant to help. To say that they were inefficient and cowardly is not going to encourage the A.R.P. personnel here. Lessons from Malta have no precise value because the average Indian's mental make-up should be considered.

The importance of a change in popular attitude is realised at least by Liberals and Sir Cowasji Jehangir who urged that India's love of freedom should be turned into an useful channel. Sir Cowasji spoke of rumour-mongers and the mischief they do. Fantastic rumours come and go. The wind of falsehood apparently bloweth where it listeth, but it blows into many places. Enemy propaganda is never idle, and in Bombay it is apparently not ineffective. Civilian efficiency and civilian morale alike were demanded by Sir C. Jehangir, but if a secret ballot were taken, it would be found that the majority of defeatists in India are serving officials. The moral collapse of the bureaucracy in advance is seldom taken into consideration. The Viceroy, for instance must work to restore normal efficiency among the people reputed to be doing war work. No call for normal efficiency has yet gone out among Government offices and the private citizen, who is after all paying higher taxes for this war may well feel that his duty is not connected with the front, which is just one more opening for graft, as he may fear.

The U. S. Mission's work, present and prospective, has been reviewed, but the application of lease-lend to India has so far attracted little notice. It is to the credit of the Federation of Indian Chambers that its committee examined the question in some detail when Sir Shanmukham Chetty visited Bombay last week. It is not yet known if the U. K. is at all times an intermediary in case of lease-lend aid. The relief of Indian merchants who have suffered through the war is to be taken up by a special Burma Committee. The formal assurance as to scorched earth still appears unsatisfactory, and a clarification of policy is naturally sought. The activities of Government medical stores depots will form the subject of an interview sought by the Committee with Mr. N. R. Sarker. The All-India Employers Organisation also has been busy considering schemes for holidays with pay, etc. which are on the legislative anvil at present.

The food planning drive has not stopped. They are going to have a special week here, though it is felt that Calcutta has stolen a march. The Week starts on Sunday, and it is meant to teach the cultivators that Government wants them to stop cotton-growing and take at once to food crops. There was a press note to prove that cessation of imports from Burma lies at the root of the whole trouble. Cutting down rice consumption is officially advised. It has been urged that Indian foodstuffs can never be excessive in relation to probable demand. The war has changed all the conditions noted in the Great Depression and grow more food is a proper slogan. Ryots stand to gain—so also does the Government, and it would be a pity if there is any pretence that Government officers are disinterested advisers. What is clear now is that as paid propagandists they will have to carry out a certain job, and its worthwhileness must be measured by others later on. There is going to be a big crop of suggestions to officers.

Hotels will have to take note of the Defence rules. A control order applying to hotels and lodging houses was promulgated last week. Bombay city, Lonavla and Khandala are brought within the scope of the orders. Rates are to be determined by an official who will examine hotel tariffs. very soon. Hotels are also asked to put up approved rates and profiteering is to be checked. This is, obviously a result of the exodus which has driven many people to hotels and brought about overcrowding, high rates, etc. The remedy has come, but one must wait to see whether it affects the hotel keeper's will to carry on business as before.

Dr. Grady's mission had a very busy time last week. The Supply Member came down to see them and the Mission stays on for a week working at the preliminary report. What the supply problem is and how it is to be met will be put down, and what can be done in India immediately will also be indicated. The Indian Government will soon have the report. A lot of committees and officers had a talk with Dr. Grady. Mr. Gandhi, who has no connection with supply of any kind, was sought by Dr. Grady himself though not by the Mission. The members of the Central Legislature's advisory committee met in Bombay. The visitors from the United States had enough visits and routine talks, but they refused to visit Poona though requested to do so. Whether the U. S. Mission's visit has anything to do with the supply council in Cairo is not known. They had a big meeting in Cairo and discussed for three days on end all sorts of questions. The major revelation was that the Middle East needs grain badly, but the bigger question is whether India can export anything at present assuming that ships can be had. Nasik is known for its grapes but a Nasik grower thinks India is nowhere, when it comes to viticulture.. The dispute has come into the papers. A recent marketing report said that the average yield in India was large but area and outturn alike were limited. The objection came promptly. Notoriously poor quality goes with large crops, and it is no credit to say that India produces per acre more grapes of poor quality than any other country. The first thing to be said in return is that the climate is unsuitable. Compared with California where half a million acres are converted into vineyards, and the average yield is three to four tons of grapes India is a negligible quantity. It is known that up north much of the grape crop is turned into raisins, but in Bombay higher yields of table fruit are common. Less than a dozen varieties are grown in Bombay and the *Bokhari* is particularly fancied as the yield is up to five tons per acre. It is not good as a table fruit compared with other types which can be forced to yield more only at the risk of a loss of quality including suitability for transport India produces no wine grapes, but the dried fruit industry must certainly be reckoned with as a branch of horticulture.

Kathiawar has its war problems. The influx of returned emigrants is but one of them. Medical relief for its citizens is another. Not all States can claim the record of Gondal, but Wankaner has recently set up a big, up-to-date hospital. Sir Edmund Gibson went to open it. Officials in the States have been upset by the advance in prices. At least in two States they are wholly glad that Rulers have been both just and generous. Palitana and Junagadh have sanctioned dearness allowances to staff getting below Rs. 40 a month. Educational faci-

lities for children of soldiers away on service have also been promised in Palitana. In Nawanagar there is much talk of the war effort, and special concerts by girl guides, etc. are still regarded as notable. A large sum was collected as the ruling house patronised the performance. Exchange of visits by princes are not common, but the Rana of Porbandar went recently to Rajkot. The chief question in Rajkot is housing. There is also watersupply. The proposal of sinking tubewells is under consideration. Far and away the biggest problem is grain. This control order or that control can be always invoked to put the States to trouble. There is a suggestion that the States should have a chance to import grain immediately. Western India States usually turned to Bombay or Sind. They are giving salt, which is as vital as food to British India, and should be treated as specially eligible for imports. The States are trying to help evacuees secure new houses. The Bombay ban on rice exports has hit owners of countrycraft and also the States which bought rice from Bombay. The problem cannot be solved without careful consultation, and the Kathiawar States are likely to make a joint effort to make sure of rice and wheat supplies from outside.

*(From Our Correspondent)*

*New Delhi,* May 20.

It is not quite clear yet what the Viceroy proposes to do to fill the growing number of vacancies in the Viceroy's Council. There are a good number of candidates, but as large questions of policy are involved, it is not quite an easy matter to decide. Such information as is available does not show that any big political move is intended at the moment. That President Roosevelt is now taking some interest in the Indian question is obvious, for Col. Johnson would not have taken the trouble of returning to America at once if he had not something important to communicate to the President. The Cripps version has already reached the President his Secretary, Mr. Spry, who is now on a visit to the United States. Though it is difficult to believe that President Roosevelt will go out of his way to intervene in the Indian question, those who have had occasion to meet Col. Johnson in New Delhi seem to be convinced that he means to do something. The American President's Envoy kept in close touch with many Indian leaders in order to understand fully their point of view. If he succeeds in persuading President Roosevelt that a new approach should be made to political leaders in India—owing to the seriousness of the war situation—something is yet possible.

* * * *

It is now practically certain that the Civil Defence Member, Dr. E. Raghavendra Rao, will shortly proceed on leave. His health has been far from satisfactory for some time. If he takes leave for recouping his health, so important a Department as Civil Defence cannot satisfactorily function without a Member in charge. In fact so many are the departments now run only by Secretaries that the Viceroy cannot regard the present situation with equanimity. As has already been suggested in these columns one way out of the difficulty is to transfer these portfolios—now without Members—to other Indian Members in the Council. Without any serious inconvenience to themselves, those like the Overseas Member and the Law Member can easily take up other work. It has often been pointed out that if only there is a rational distribution of Departments and portfolios among the Members with a view to ensuring that certain Members are not overloaded with responsibilities and certain others find themselves without sufficient work, many of the present difficulties can be removed. The only other alternative is not to wait indefinitely for any possible political settlement in the future but to fill up the vacancies immediately for the sake of administrative efficiency. As the Viceroy is reported to be in correspondence with Whitehall on the subject, a decision may be expected at any moment.

* * * *

The decision of the Government of India to open a Utilisation section in the Geological Survey has been generally welcomed. As an initial grant a sum of Rs. 12 lakhs has been sanctioned for expenditure this year. In the past the question of developing the mineral resources of the country for large-scale industrial exploitation was sadly neglected, for had only the Government taken up this task in right earnest, the country would have been much stronger to-day industrially. In the Central Legislature and outside the Government has been repeatedly blamed for waiting so long to exploit the sulphur deposits in Baluchistan and elsewhere. If what is being done now had been taken up in the years before the war, the problem of finding enough sulphur for the growing industrial needs of the country could have been solved long ago. In connection with the Government's scheme for developing the mineral resources of the country, there is one important point, however, which has to be kept in mind. What is the justification for attaching a Department like the Geological Survey to the Labour portfolio? Properly speaking, all work connected with the development of mineral resources should be with bodies like the Board of Scientific and Industrial Research which has been doing eminently useful work. If industrial research is placed under one Department, and the industrial exploitation of mineral resources is to remain the responsibility of another portfolio which has no conceivable relationship with industrial research, it is difficult to expect any useful co-ordination in their policy and working.

* * * * *

Only very slowly is the Government of India learning the lessons of wartime economy and trying to profit by them. It was only a few weeks ago that it was decided to set up separate administrative machinery for the co-ordination of transport and the development of alternative methods for relieving the strain on Railways. It is too early to expect any big results from this belated action. No official announcement has yet been made regarding the creation of a separate Production Department which will be distinct from the Supply Department and give concentrated attention to the problem of increasing industrial production in the country for war needs. The need is so urgent that a decision canot further be delayed. Much valuable time has already been lost. One is entitled to ask how long the old pre-war arrangements like the inclusion of the Geological Survey in the Labour portfolio are to continue though even from the administrative point of view the grouping together of Departments like industrial research and development of mineral resources has a decided advantage.

* * * * *

Defence expenditure is mounting up at such a rate that Sir Jeremy Raisman's Budget calculations may soon be out of date. An order passed this week increased the deferred pay granted to Indian soldiers may easily mean an additional expenditure of nearly half a crore per month. Already the daily expenditure on Defence forces has been well over Rs. 40 lakhs. Owing to the close proximity of the military threat to India, Defence forces have had to expand more rapidly than at any time before, the daily expenditure on Defence measures may very soon exceed half a crore. The only relieving feature is that considerable help has been received from America, both in personnel and in equipment. Without this help which in terms of money amounts to several crores, the burden of Defence expenditure on the Indian taxpayer would have been much greater this year. As recruitment is going on at well over 50,000 a month, the Indian Army will very nearly be two millions strong before the end of the year. An idea of the vast army expansion which has already taken place is furnished by the fact that the increase in the strength of the Indian Armoured Corps has been as much as 1,200 per cent since the war began.

An unpleasant revelation of the unimaginative ways of the Government, even in the matter of military recruitment, was made this week. It has been repeatedly stated that there is a shortage of military doctors. In order to improve and speed up ways for recruitment to the I. M. S. a special conference was even called last year. The authorities have not been unaware of the fact that there are a large number of Indian women doctors with good qualifications who would prove useful as officers of the I. M. S. Still it was only in the third year of the war, after a good deal of public agitation, that the Government came out with a scheme for the constitution of a Women's Wing in the I. M. S., but the public was surprised to find that according to this scheme only women doctors with certain specified specialist qualifications would be appointed. Owing to this restriction, it is not surprising to learn that so far only ten women doctors of whom only four are Indians, have joined the I. M. S. Now the Government of India, profiting to some extent by this experience, have come out with a revised order dispensing with this restriction about specialist qualifications. Is this the way to deal with recruitment problems?

banks did not gain much. Most of the increase in earnings in all cases went into Reserves. In an analysis of the 1941 income of banks in the New York District it has been noted that the percentage of expenses rose, interest on time deposits went down, and taxation also took more. Net current earnings were 25.6 per cent of the gross profits and 5.1 per cent was charged off, leaving 20.5 per cent as net profit out of the total income. The U. S. banking situation can be sized up by the increase in discounts and the reduced return on investments in relation to total income of metropolitan banks. The increase in service charges testifies to the spread of the cheque habit under which the depositor with a current account pays a fee instead of getting a small sum as interest. It is the bank which makes payment by cheque possible, promotes safety and saves trouble; hence it is entitled to a fee.

A development of some interest to which reference must be made is the appreciation of the Cuban peso. Latin American currencies generally had strengthened through 1941 and have since then been firmer. In February there was keen bidding for the Cuban peso. Its strength appears to be associated with the expansion of Cuba's foreign trade (due largely to the demand for sugar) and with the prospect of U. S. credits to Cuba. In connection with the crushing of the largest sugar crop in several years Cuba has to import currency. The U. S. dollar is legal tender in Cuba but the war has added to the cost of importing dollars. Hence the demand for Cuban currency in New York was larger and 7/8 per cent premium was paid in February. The Cuban peso recovered in 1940 after having been at a discount in 1939. Since August 1941, there has been uninterrupted recovery in terms of dollars. Minor changes in the Venezuelan and Uruguayan currencies favoured those countries. The process will probably continue for Latin America's imports will fall and the exports will increase on account of the war. Price trends are also favourable to South American producers, and the current strength of coffee in New York has its effect on distant Mangalore.

# HOUSE PROTECTION FIRE PARTIES

IT is the duty of all Householders to take mutual protection against FIRE from Air Raids. The newly formed organisation of HOUSE PROTECTION FIRE PARTIES is organized towards this end; the organization is not regarded as a Regular A.R.P. Service and all householders forming the organization need not enrol under the A.R.P. Services Ordinance. HOUSEHOLDERS should group themselves into Parties of 125—to each of these Groups will be issued on loan ONE STIRRUP PUMP with equipment, subject only to the following conditions:

1. From among the Group of 125 persons not less than three and not more than six persons form a HOUSE PROTECTION FIRE PARTY; one of the members will be the LEADER.
2. The LEADER must register his name and the names of his party at the office of the local Staff Officer, Fire Parties. He will then be issued with the STIRRUP PUMP and Equipment.
3. The Pump and Equipment will be returnable by the Leader on demand.
4. The Pump and Equipment must be kept in an accessible place and be opened to inspection by an A.R.P. Officer.
5. All members of the Party must take training in the use of the Pump, and in elementary Fire-Fighting. This will be arranged by the local Staff Officer, Fire Parties, on application by the Leader, and will be held at or near the place where the Pump is kept.

SHOPS and SCHOOLS, BUSINESS HOUSES and HOSPITALS, etc., may take PUMPS and Equipment on loan under these same conditions.

WARDENS are instructed to give assistance in the formation of HOUSE PROTECTION FIRE PARTIES.

Existing Street Fire Parties will automatically become HOUSE PROTECTION FIRE PARTIES, and are then exempt from the obligations already undertaken when enrolled in the Street Fire Party Service.

The ADDRESSES OF THE OFFICES of the Local STAFF OFFICERS, FIRE PARTIES, to whom application should be made, are given below, and fuller details may be obtained from them direct, from Wardens Posts and all A.R.P. Information Bureaux. THESE OFFICERS WILL BE AT THEIR OFFICES DAILY BETWEEN 7-0 A.M. and 10-30 A.M. to register the Names of Parties and to issue STIRRUP PUMPS and EQUIPMENT.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

*Calcutta*, 21st May, 1942.

In the course of a published statement, the Chairman of the Indian Jute Mills Association has been at some pains to refute false impressions which have been disseminated by so-called Labour Leaders regarding the alleged hardships which the Jute Mill labour force will suffer as a result of the recently decided curtailment of working hours. Pointing out that the decision was forced upon the Industry by the rapidly mounting stocks of manufactured goods, due to the lack of transport facilities, the Chairman emphasised that the interests of labour had received particular consideration in arriving at the decision. At the time the decision was taken, the complement of labour employed in Mills was already short by 7 per cent so that the decision to seal 10 per cent of looms did not mean that that proportion of labour would be thrown out of employment. There is, in point of fact, still employment available for the whole of the previous labour force, but it may mean some redistribution of workers from one district to another, as there is shortage in some areas and excess in others. In many cases this difficulty may be overcome by adjustments which are permissible between groups of Mills within the same agency. On the subject of earnings, the Chairman refuted the suggestion that jute mill workers were miserably paid. He pointed out that under the recent 60 hours working, less than 4 per cent of the labour employed was earning under Rs. 15 per month, while 40 per cent of the labour force was earning over Rs. 30 per month and some 20 per cent over Rs. 40 per month. Compared with other industrial workers, it cannot therefore be said that Jute Mill labour is underpaid. Further, the increase of the so-called "amenity allowance" from one rupee monthly to twelve annas weekly is specifically designed to recompense the lower paid workers for the reduction in working hours.

Final adjustment of the figures for stocks of manufactured goods at the 30th April, which returns now include all members of the Association as well as Gagalbhai, show a further addition of 25 lakhs yards to the hessian cloth stocks held on commercial account and 12 lakhs yards addition to the Sacking stocks. Figures for stocks held on Government account show little difference from those previously published.

American Stock and consumption figures are now available for April. That month usually records a decline in consumption, but probably due to the uncertainty of shipping facilities, processors seem to have been laying in stocks, for the consumption is returned at 680 lakhs yards against 650 lakhs in March and 550 lakhs in April 1941. Last month's consumption is in fact the highest recorded for the month of April for five years. As we have already noted in these columns, two-thirds of all imports have to be reserved for Government requirements or for priority orders authorised by Government. So even with this higher consumption, ordinary consumers may be going short. Visible stocks are at the low level of 1,900 lakhs yards, 1,000 on spot and 900 afloat. Curiously enough this figure is almost identical with that of last April, which stood at 1,890 lakhs all told, but it shows a decline of 620 lakhs yards from the March figure, and with the dearth of shipping space, this decline is likely to be further accentuated in the near future.

Meanwhile export of manufactured jute goods, via Western India ports is subject to further restriction owing to congestion at these ports. Shipment of raw jute is suspended altogether for the time being.

For the first time for about two months, the Board of Control of the East India Jute Association fixed a clearing rate at their meeting last Friday. This, it may be said, was not done without opposition from the Special Officer, Jute, who represents the Government of Bengal on the Board, and it has been due to his technical objections that the hiatus in clearing rates has persisted so long. In fact, even on Friday, this representative held out the threat that the Board would fix a Clearing rate "at their peril," but what that peril was he declined to specify. The attitude maintained by the Special Officer, Jute, has been that, as the Futures market has been virtually moribund with few if any transactions going on, there has been no market rate on which to base a clearing rate. Those members of the Board who represent the Commercial Associations related to the Jute Industry take, on the other hand, the more realistic view that there are open transactions in the Futures market which ought to be liquidated before the June settlement and which, without a published Clearing rate, cannot be so liquidated. It might be thought that the views of the Commercial interests should carry the greater weight and that the Government representative merely holds a watching brief on behalf of his masters to ensure that the general policy of Government with regard to June should not be infringed. The Special Officer, Jute, however, apparently takes a much wider view of his functions. He would appear to arrogate to himself the duty to dominate the Board and to dictate its every move. At the meeting on Friday last the Board had before it the considered opinion of its legal advisers which indicated that its primary duty under the Bye-laws was to fix a Clearing rate, and that the said Bye-laws gave the Board full power to fix that rate. This opinion was not accepted as correct by the Special Officer, Jute, but he found himself in a minority of one, and the Board proceeded to fix the Clearing rate at Rs. 50-8. Curiously enough, the Special Officer, Jute, intimated that he had come to an agreement with the legal advisers of the Board that, provided the Board agreed to fix a minimum price for Futures transactions at Rs. 50, he would do no more than record his dissent from the fixing of a Clearing rate. Apart from the astonishing principle that a "bargain" can be made by a single representative with the legal advisers, such "bargain" scarcely seems consonant with the vital principle on which the Special Officer, had been basing his opposition to the fixation of a Clearing rate. Be that as it may, the Board, having clearly indicated its disapproval of the attempt at dictation by a single member, no matter whom that member might represent, then proceeded to discuss the advisability of fixing a minimum price. The general feeling was that there was no urgency in the matter as, with the paucity of interest in Futures transactions, there was little risk of a serious break in price. However, in the manner of an olive branch, a prominent "Bear" operator volunteered to second a proposal to fix a minimum rate for Futures transactions at Rs. 50 if the Special Officer, Jute, would put forward the proposal. After some persuasion, and still with none too good a grace, that gentleman put the proposal, which was duly seconded and carried. It is a somewhat intriguing reflection that, while the location of practically the whole of the "Bear" account in the Fatka market is a matter of common knowledge, there is a large block of the "Bull" account which to all appearances can only be described as "benami" transactions. It might perhaps be tactless to enquire whether there can be any connection between this fact and the recent obstructive tactics to prevent Clearing operations being proceeded with.

Very little can be said about the raw material section of the market. Export Jute is virtually at a standstill, as although there is enquiry from the other side, mainly for Daisee and Tossa, shippers in existing circumstances are not in a position to accept any further commitments till there is some prospect of freight being available. Nor have Mills been showing any interest in Pucca Bales. Loose Jute also is completely neglected with buyers showing no interest, though their stocks must be suffering steady depletion. Reports indicate that the new crop is making good progress under generally favourable weather conditions. Sowings are practically complete except in the Daisee districts and the full licensed area seems to have been sown in almost all cases, indicating a crop at least double last year's.

A steadier tone has been injected into the Fabrics section, partly by a good country demand for ready Heavy Goods and partly by the issue of an enquiry on Government account for 25 lakhs of various assorted Heavy Goods also for near delivery. "B" Twills have in consequence been marked up from Rs. 37 to Rs. 39-8 ready and to Rs. 38 May-June with a good turnover recorded. Liverpools have also sold in fair quantity at Rs. 38-8 ready and May and at Rs. 39-1 June. Other descriptions have been marked up one to two rupees in sympathy. In Hessians the business has mainly been inter bazar at Rs. 14 to Rs. 14-8 for ready nine porters and at Rs. 17-8 to Rs. 18-4 for elevens.

Terms on application.

SAVINGS BANK--Deposits received and interest allowed at 1 per cent per annum.

SAVINGS BANK DEPOSIT ACCOUNTS--Sums of Rs. 300 and over accepted at 1 per cent. by transfers from Savings Bank accounts, subject to three months' Notice on withdrawal. Rules on application.

W. G. GROUNDWATER, General Manager

## JUTE

*Calcutta*, Thursday, May 21.

The jute market has, so far from developing strength, passed into complete lethargy. There is no demand for either pressed or loose jute. Day after day no business is reported, and quotations are purely nominal. Mills refuse to show any interest whatever might happen in the mofussil. Quotations this week are on the basis of Rs. 9-12 per maund for Indian Jat Middles and Rs. 5-8 for Bottoms. The only other noteworthy item is a small business in Supervised Marks at Rs. 11.

The opening on Monday was steady since there was the hope that war orders would enlarge the offtake of raw jute. But the concurrent weakness of hessian nipped optimism in the bud, and the market has been dull and depressed uptill to-day.

There has been no business in Firsts which still quote around Rs. 50 and in the past one week no business for shipment has apparently been put through. In April there was occasionally business. Balers, too, buy on a much smaller scale and the transaction in Tossa at Rs. 10-8 per maund was out of the ordinary. War news does not help the market to fight the gloom that envelopes it. Between Thursday last and to-day there has been little alteration in prices signifying complete stagnation.

## JUTE MANUFACTURES

*Calcutta*, Thursday, May 21.

The jute manufactures market may not be unusually sensitive to war news, but it shows as yet few signs of life. The reluctance of sellers to sell at present prices is understandable, but it must be admitted that buyers are extremely scarce. On many days prices have hardly moved and the change from Rs. 13-8 to Rs. 13-4 for 9 porters, and the subsequently recovery followed by an advance to Rs. 14-4 would appear to be in the nature of artificial movements though a proper reason is forthcoming.

The hessian market has certainly displayed steadiness largely on apprehensions of extended labour trouble. The rise on Wednesday can only be explained on the assumption that the mill workers' deputation to the Bengal Premier and subsequent developments are seen as tending to reduce hessian supplies. Eleven porters have risen to Rs. 13 on the strength of the rise in 9 porters.

A revival of demand for certain types of heavy goods has led to a hardening of prices. The hessian market may have risen, but conditions in the main, are unchanged. Mr. Walker's statement as to the mills' decision to reduce hours and curtail output refers to lack of transport along with the rise in mill stocks. In abnormal times sealed looms are viewed as inevitable, and it has been emphasised that reduction in output will not entail discharge of workers, while specialised demand will help to absorb many who might conceivably be laid off.

Mr. Walker has declared that the mills will pay out Rs. 6 lakhs more for enhanced amenity allowance, and will find no gain under the head of wages. Mr. Walker's statement suggests that the claims of labour leaders and the talk of extended trouble are equally unjustified.

The lift in hessian may, therefore, not hold. The main change is not in fabrics either for May shipment or future delivery but in heavy goods and in this case the improvement is a little more pronounced than expected as Cornsacks have risen to Rs. 37-8 and Liverpool twills to Rs. 38-8 as also "B" twills for ready delivery. A week ago the prices were Rs. 36-4 for Cornsacks and Rs. 36-8 for "B" twills.

The lack of interest in jute shares on the part of investors decidedly reflects the difficulties obtaining in the hessian market.

The last Indian Jute Mills Association memo of sales for the week ended May 9, states that total sales for May and next month of hessian amounted to 3,029,720 yards and forward sales amounted to 315,974 yards. The total sales of twills came to 1,671,971 yards and sales for forward delivery came to 212,400 yards. The total sales of plain fabrics amounted to 298,514 yards with no sales for forward delivery.

## COTTON

*Calcutta*, Thursday, May 21.

The Bombay cotton market has shed its fears and has developed something like strength of late. The improvement in cloth markets has been a material advantage in helping on the recovery in cotton prices. There has been, as presumed, occasional profit-taking, but the general tone is fundamentally different. It is not merely founded on a hope that short staple cotton in 1942-43 will be 50 per cent less, but a hope based on the rise in commodity prices generally. The highest was touched by Broach July-August this week, Rs. 187-8 this week.

On most days the market has risen rather than fallen. Speculative buying has been in evidence, and the simultaneous improvement in Oomras and Bengals stands out. On Rs. 183-4 and the May contract was quoting Thursday last Broach July-August was Rs. 174-8. Since the terms for 1943, hedge contracts will be different in nature and purpose, the futures market need not be considered. What is important to note here is that cotton has regained its investment status and is bought by others besides mills.

The spot market is said to be in better condition. The spread between Oomra at Rs. 166-8 and Broach July-August at Rs. 184-4 is not unusual and Bengal July is also higher at Rs. 145. Though the closing on Wednesday was quiet, the general condition has altered much. Spasmodic declines do not conceal the measure of support available for cotton in Bombay and the present stability will, in all probability, continue for a while. Realising has been well absorbed of late, and the belief that from next month itself the new contracts will come into force has helped to keep prices up. The Bombay market on most days has been described as steady and the current level of U. S. prices with July Futures over 19½ cents has not failed to impress most operators. It may be said that the grow more food campaign will solve the carry-over problem and equate India's cotton production with mill consumption. It is this long range view which is now coming to find wide acceptance.

## WHEAT

*Calcutta*, Thursday, May 21.

The wheat market is fully steady. The Calcutta price remains Rs. 6-3 per maund. The offtake of flour has been well-maintained and mills are ready buyers of wheat. The fixation of retail prices for flour, etc., has helped to produce the belief that for this year at any rate there will be no change. An assurance that the Punjab will sell 900,000 tons out of the current crop has followed an assurance that no change in prices at Lyallpur and Hapur is contemplated in spite of various rumours.

The U. P. will not sell wheat in accordance with a recent decision. The suggestion that inter-departmental consultations will take place every week means in effect that price control and present ruling prices will stand. The U. P. permitted exports as from April and has reimposed its ban. The decision is taken because of denudation of stocks through unusually large exports from the U. P. It is feared that further exports would raise prices and create difficulties. Until the Punjab crop comes on the market it is decided that there will be no license for U. P. exports. This decision will help to keep Karachi prices up, should the assistance given by recent railway accidents be insufficient. The Karachi price per candy fell below Rs. 45 in recent weeks. It may be expected to recover swiftly. The rate for July delivery there will remain lower than spot as before.

There has been a sharp jump in Bombay prices. The rate per cwt has risen to Rs. 8-8 from Rs. 8-4 on Tuesday. Though forward business is sparse the Bombay Government's ban on despatches of rice and the readiness of all Governments to lay in food stocks has led to a noteworthy change. The September contract in Bombay is firm as ever at Rs. 8-4 per cwt. suggesting that Calcutta prices are aligned with Bombay prices.

## GOLD

*Calcutta*, Thursday, May 21.

A sharp rise in bullion attests general nervousness. The effects of Mr. Churchill's review have worn off, and the prevailing keeness to buy gold is independent of the eagerness to buy food grains. A major movement in bullion is portended by the initial raids on Assam. The rate for gold in London and New York may be unaltered but in India the price has moved up. The contrast between the first half of May and the second half is doubtless instructive. A week ago gold for ready delivery in Bombay quoted Rs. 48-5. The price, after narrow but significant fluctuations, has gone up Rs. 49 per tola. The rate for July settlement is lower at Rs. 48-11.

Calcutta prices have risen in sympathy, and in spite of limited support in Bombay, rates here are sure to rise higher. Gold is quoting Rs. 48-8 per tola in Calcutta and the sovereign quotes Rs. 38 per piece. The Bombay rate for sovereign is considerably lower at Rs. 37-5 per piece, but it will not escape notice that the rate there too has risen along with the rate for gold.

The fractional rise every day is accompanied by singular steadiness in the silver market. The changes were glimpsed towards the end of last week and the advance in both silver and gold supports the impression that the Japanese advance into Yunnan will produce a further rise in prices.

## SILVER

*Calcutta*, Thursday, May 21.

The silver market has fluctuated mainly upward. The change is more pronounced in the case of silver for delivery than in the case of spot silver. For the first time in months the settlement rates have strengthened. There may be little change in Calcutta where silver quotes Rs. 89-4 per 100 tolas showing a rise of 12 annas only on the week while Bombay has risen from Rs. 89-10 to Rs. 82 in the same period. Silver for July settlement is quoted at Rs. 79 in Bombay against Rs. 77 a week ago. The usual premium for ready supplies alongside of the premium for Burma silver. The report that silver coin goes into hoards does not affect the outlook for silver. Any addition to the note issue here in the form of two rupees notes will probably force silver prices up. Though stocks are fairly high and the daily offtake remains restricted in Bombay, general anxiety as to the war situation and the lack of openings for investment may lead to a rise that may lift gold and silver to the levels ruling in March.

## PIECEGOODS

*Calcutta*, Thursday, May 21.

The Calcutta market has been largely content to follow Bombay. The general tone is better than anticipated and scarcity of imported goods as also higher replacement costs have levered up buying interest. Dealers of late are not eager to sell, and Bombay reports of renewed enquiry for exports and satisfactory clearances of mill stocks are not overlooked.

The rally in raw cotton has not been ignored and reports of further war orders have certainly helped Bombay. Eagerness to lay in stocks is manifest, but in Calcutta the nervousness engendered by the raids on Assam has reduced buying. The demand for yarn seems like falling off, and caution has again crept into the market. A welter of rumours is calculated to kill buying enquiry and what appeared to be optimistic estimates of the outlook stand in need of revision.

## OILSEEDS

*Calcutta*, Thursday, May 21.

Linseed has already more than regained steadiness. The Bombay market quotes higher rates for all seeds including linseed. The market is responding to the greater demand from millers together with depletion of stocks. It was reported recently that the price of oil has gone up, and the traffic difficulties with upcountry centres may help to keep up the prices at ports.

The slight decline on Wednesday has no relation to the general underlying tone, reflected in the latest rise under groundnuts. The rise in Ceylon copra and oil has been definitely stimulating to the oilseeds market in India.

*Stock Markets to-day and to-morrow*

# SATISFACTORY COTTON MILL EARNINGS

A DEFINITELY better feeling has been noticeable on the Calcutta Stock Exchange during the past week. There has been a definite broadening of interest though actual business transacted continues to be on the small side. Fixed interest securities, especially first class jute mill preference issues, have been in good request and business has not been possible on a large scale only with the reluctance of sellers to part with their holdings. Sugar shares have been in favour. The strength of the giltedged securities section is a happy augury, though as I pointed out last week, with the prevailing uncertainties regarding the war situation one could hardly expect any sustained improvement in values unless there are exceptionally favourable developments.

• • • •

The results of jute companies published at the present moment are rather of academic interest at the present moment for, with the fall in prices for goods during the past few months and the restriction in production, the working hours having been reduced to 54 from 60 per week with 10 per cent of the looms sealed, it cannot be expected that jute companies will be able to earn anything like the profits for the last two half-years. That is the reason perhaps that the directors of the Howrah Mills Company, Limited have chosen to reduce the dividend to ordinary shareholders in spite of an increase in earnings.

The net profit of the *Howrah Mills Company, Limited* for the half-year ended March, 1942, before providing for taxation and depreciation, is Rs. 31,87,824 against Rs. 27,26,087 for the previous half-year. The provision for taxation is higher at Rs. 24.5 lakhs (Rs. 19 lakhs). The amount set aside to depreciation is unchanged at Rs. 1 lakh while the sum of Rs. 1 lakh is again transferred to the Replacement and Renewals Reserve. The dividend on ordinary shares is to be Re. 1-12 per share against Rs. 2 per share previously. The amount carried forward is lower at Rs. 1,68,693 against Rs. 1,82,118 brought in.

• • • • •

The results of the *Reliance Jute Mills Company, Limited* do not make an equally good showing. The net profit, before providing for taxation, for the same half-year is lower at Rs. 11,87,433 against Rs. 13,39,746 for the previous six months. The provision for taxation is Rs. 7.5 lakhs (Rs. 8 lakhs) while the allocation to Replacements and Renewals Reserve is the same at Rs. 1.5 lakhs. There is a reduction in the ordinary dividend as in the case of the Howrah Mills Company, Limited.

• • • •

In common with most textile companies who were able to report considerable improvement in their earnings during the last year, mainly as a result of gradual decline in the imports, necessitating a very great demand for Indian mill goods, the *Meyer Sassoon Mills, Limited* has also been able to show a record profit for the year ended 31st December, 1941. For the first time during the past many years the shareholders are to get a dividend at Rs. 7 per share of Rs. 100, free of income-tax in this case, and it is welcome that this company is back to the dividend list at long last.

The net profit subject to depreciation and taxation amounts to Rs. 13,23,090 against Rs. 2,14,291 in 1940 representing an increase of six times and over. That Rs. 5,00,000 out of 1941 profits has been set aside to depreciation on Fixed Capital expenditure must be related to the fact that no provision under this head was possible for a fairly long time. In 1940 a similar sum was set aside out of the comparatively poor results but only at the expense of the carryforward that year.

No definite amount has been reserved for tax commitments since the company has not yet been assessed to income-tax and supertax for the year 1940 and Excess Profits Tax in respect of the years 1939 and 1940. An application in this connection has been made to the Central Board of Revenue for a higher standard profit than the statutory minimum of Rs. 36,000 as the company earned no profits during the standard period prescribed under the Excess Profits Tax Act. But in the opinion of the directors, it is thought that the large amount of Rs. 5,55,966 recommended to be carried forward will be more than sufficient to cover the company's liability in respect of all these taxes upto the end of the accounting period, 31st December, 1941.

The capital of the company was increased to Rs. 40,00,000 by the creation and issue of 30,000 new shares of Rs. 100 each at a premium of Rs. 25 share by special resolutions passed on the 23rd December last. The whole of the additional capital has been issued and subscribed, and the new shares, as provided by the terms of the issue, will participate in the dividends now declared.

The sterling loan of £90,625 secured by the debentures of the company of the face value of Rs. 12,00,000 was repaid at the end of the year.

A new page in the history of the company is being written, and it would not be wrong to expect that the remarkable progress made in 1941 will be maintained in the coming years.

• • • • •

The *Elgin Mills Company, Limited* and *Cawnpore Textiles, Limited* have been able to improve further on the substantial rise in earnings recorded during the previous half-year. A heavier liability for taxation, and a higher amount provided for depreciation and other funds, have not stood in the way of these two companies' increasing the usual dividend distribution, and also carrying forward a much bigger sum to the next half-years' accounts.

Holders of Elgin ordinaries are to receive Re. 1-8 per share against Re. 1 on the last occasion while Cawnpore Textiles ordinary shares will provide holders with 6 against 5 annas.

Sales of the products of both the companies for the half-year ended 31st March, 1942, recorded an increase of 16.5 per cent over those for the six months ended 30th September, 1941 and 28.5 per cent over those for the corresponding period last year. That is a summary way of relating turnover to profits for the period.

The net profit struck before providing for taxation and depreciation of the *Elgin Mills Co, Ltd.* amount to Rs. 21,04,851 against Rs. 18,96,925. A sum of Rs. 12,50,000 against Rs. 11,30,000 has been reserved for taxation. The amount provided for Depreciation and Debenture Sinking Fund shows no change over the previous figures of Rs. 2,50,000 and Rs. 25,000 respectively. The transfer to General Reserve is Rs. 1,99,903 against Rs. 1,49,910. Dividend on the preference shares and both the ordinary and vendor's shares absorb Rs. 3,59,000. The amount

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

Calcutta, May 22.

A slight improvement in general sentiment has been noticeable on the Calcutta Stock Exchange especially during the latter half of the period under review. The reports about further bombings in North-east India have apparently had little effect on the market while the encouraging war news from the European front has been actually a stimulating factor. The speculative issues have registered a noticeable rise in values. Sugar shares have been in special request. The undertone is steady in several sections.

Giltedged securities have continued firm. The turnover in this section would have been larger but for the reserve of sellers. There has been good enquiry for short-dated and medium-dated securities. 3½ per cent Paper is not very much changed on balance being quoted around Rs. 99-11. 3 per cent Paper were Rs. 77-2. Among terminable securities 3 per cent Defence Bonds 1943 were Rs. 100-6, 3 per cent Second Defence Loan 1949-52 Rs. 97, 3½ per cent 1947-50 Rs. 101, 5 per cent 1945-55 Rs. 103 and 4 per cent 1960-70 Rs. 105. Among provincial loans, 4 per cent *Punjab* bonds were Rs. 101-8.

Money conditions have been definitely easier during the week and the treasury bills rate has declined further to one rupee three annas and eight pies per cent per annum from one rupee and four annas per cent per annum last week.

Bank shares have not been very much in attention. The rise in *Reserve Bank* to Rs. 83-8 earlier in the week has been short-lived and the quotation is now again around Rs. 83. *Imperial Bank* contributories were Rs. 253.

No business has been reported in either public bodies' or industrial debentures. But first class pref. issues have been in demand with not many sellers offering. Jute mills preference shares have been marked higher with *Anglo-India* quoting Rs. 129-8, *Delta* Rs. 120, *Gourepore* Rs. 124 and *Khardah* Rs. 113 ex-dividend. Among other sections, *Steel Corporation* have been noted higher at par. *Burn & Co.* six per cent preferences were Rs. 110 and *Dunlop Rubber* Second preferences Rs. 99.

In the Cotton section, *New Victoria* have improved to Rs. 5-4. *Cawnpore Textiles* were crossed at Rs. 6-12 and *Elgin* at Rs. 23-4.

With the exception of *Ruddex*, which have changed hands at Rs. 53 cum-dividend, there are no transactions reported in ordinary shares in the jute section.

In the Engineering section, *Indian Iron* and *Steel Corporation* are again the only two counters in which transactions have been recorded. *Indian Iron* are nearly point higher at Rs. 23-6. *Steel Corporation* were Rs. 14-7 against Rs. 13-14 last week.

Sugar shares have registered a further rise in prices with *Dalmia* at Rs. 27-3 and *Rana* at Rs. 23. *Cawnpore* changed hands at Rs. 25-2.

In the Miscellaneous section, *Indian Copper* were Re. 1-10 and *B. I. Corporation* Rs. 4-8.

## BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, May 22.

The encouraging news that the Russians are not only stoutly resisting the Nazis but under the able leadership of Soviet marshals have broken through the German lines in some sectors coupled with the ravaging raids by the R. A. F. on military targets in Occupied France and in some industrial towns of Germany, and the ever-increasing visits by Allied bombers to enemy occupied aerodromes in the Far and in the Near East, has had a brightening effect on the local stock exchange. Tatas were naturally in the forefront among shares that came in for support. Mill shares were also in demand. Government securities have remained steady.

*Securities.*—Prices of government securities in this market remained steady throughout the week, 3½ per cent Paper closing at Rs. 99-14.

The long and short-dated Loans showed a slight rise in values. The prices of 1948-52 were Rs. 95; 3 per cent 1941 Rs. 97-8; 3 per cent 1951-54 Rs. 93-4; 3 per cent 1963-65 Rs. 99-8; 3½ per cent 1947-50 Rs. 100-12; 4 per cent 1943 Rs. 101-13; 4 per cent 1960-70 Rs. 104-10; 4½ per cent 1955-60 Rs. 109; 5 per cent 1945-55 Rs. 108-15; and 3 per cent 1843 Defence Loan Rs. 100-6.

*Textiles.*—One of the prominent features of the market this week has been the rise in textiles. Selected scrips such as *Bombay Dyeing* and *Central India* and *Indian Bleaching* have been in the limelight again. *Bombay Dyeing* closed at Rs. 1,102-8 as against Rs. 1,055. *Central India* have risen to Rs. 333. *Indian Bleaching* have recorded an increase of Rs. 25 from Rs. 137 to Rs. 162.

*Hydro-Electrics.*—There has been an all-round improvement in this section. Prices of *Andhra Valley* and *Tata Power* show an increase of Rs. 75 and Rs. 23 respectively *Andhra Valley* closed at Rs. 1,549 as against Rs. 1,425 last week; *Tata Power* were marked at Rs. 1,440 against Rs. 1,355. *Tata Hydro* also improved to Rs. 181 from Rs. 153-8.

*Steels.*—The heartening war news had a direct effect in this section of the Bombay Stock Exchange. Tata Deferreds and Ordinaries elicited fresh inquiries and prices went up. Tata Deferreds closed at Rs. 1,475 (Rs. 1,427 forward) as against Rs. 1,350 (Rs. 1,302-8 forward) last week and Tata Ordinaries at Rs. 234 (Rs. 222), as against Rs. 262 (Rs. 255) last week.

*Miscellaneous.*—*Alcock Ashdown* were nearly 30 points higher at Rs. 445 cash while *Belapur Sugar* also had recorded a rise of 9 points to Rs. 239. *Shivrajpur Syndicate* have been notable with an improvement in the quotation to Rs. 32-8. *A.-C.-C.* also were better at Rs. 162 with *Scindia Steam* at Rs. 19-4.

(*Continued from page 802*)

carried forward is higher at Rs. 1,81,000 against Rs. 1,71,001 brought in.

The increase, as indicated in the latest balance sheet, in the liquid assets of as much as Rs. 25 lakhs over the previous half-year's figure of Rs. 62 lakhs could certainly be taken as an indication of the great expansion in business. Figures under Stock-in-trade, Stores and Spare Parts, Investments and Cash balances all show material improvement.

The net profit of the *Cawnpore Textiles Limited* has risen to Rs. 9,13,231 from Rs. 5,05,908 in the last half-year. Provision for taxation has been made at Rs. 5,82,000 against Rs. 2,64,000 while the amount set aside to depreciation is nearly doubled at Rs. 1,25,000. The Debenture Sinking Fund receives as usual Rs. 6,250 and General Reserve Account is augmented by a transfer of Rs. 73,776 against Rs. 50,856. The increased dividend distribution at 6 annas per share against 5 annas previously amounts to Rs. 1,12,500. The amount carried forward is higher at Rs. 63,739 against Rs. 53,034 brought in.

Jute Stocks have been valued at or under cost price and stocks of goods at contract rates.

In accordance with the Indian Jute Mills Association's Working Time Agreement the Mills worked 50 hours per week up to 11th October, 54 hours per week up to 8th November and 60 hours per week thereafter.

The proposal to make a donation of Rs. 12,500-0-0 from the Company's assets to the East India Fund for British War Services, which is to be placed before the Shareholders in the form of a Special Resolution to be moved at the Half-yearly Ordinary General Meeting, is one which has the recommendation of the Committee of the Indian Jute Mills Association. In view of the present International situation, the Directors do not feel that any further explanation of this proposal is necessary and they recommend its acceptance.

ISSUED WEEKLY

Vol. XXIX. No. 23 SATURDAY, MAY 30, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual [illegible] measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

THE monsoon will be on us in less than a fortnight; and it may be said that we are already at the threshold of monsoon months finance. One of the dominant features of monsoon months finance, as contrasted with the cold weather finance, is cheap money conditions. In spite of the Government draining away considerable funds from banking circles in the form of treasury bills, and in spite of fresh sales of bills far exceeding treasury bill maturities, there is a plethoric supply of short credits, with interbank call money quoting nominally ¼ per cent. Sales of tap bills, which have been on quite a satisfactory scale for the past one month, reached the unusually large total of Rs. 7,59¾ lakhs in the period May 20 to May 25. Applications for tender bills, however, showed only a small increase from last week. Against Rs. 2 crores on offer, tenders amounted to Rs. 3,33¼ lakhs; the average rate of accepted tenders shows a reduction of 8 pies to Re. 1-3 per cent per annum. The offer of tender bills for next week is raised to Rs. 3 crores. At the same time, sales of intermediate treasury bills are to be discontinued.

Judging from the heavy sales of tap bills now announced, from the somewhat modest applications for tender bills received on May 26, and from the present notification regarding the suspension of sales of tap bills, we may infer that the big total for tap bills this week is largely accounted for by purchases of the Imperial Bank. The Imperial Bank might have had an inkling of the impending suspension of sales of tap bills; and, anticipating a progressive decline in the treasury bill discount rate, the Bank must have taken up a big slice of tap bills. The return of the Imperial Bank for the week ended May 29 may provide confirmation of our view. Meantime, we may draw attention to three important features in the current return of the Imperial Bank. Deposits have consistently and persistently maintained the upward trend, the figure on May 22 touching the record level of Rs. 126.86 crores. And it looks as though deposits will continue to pile up. This accounts for the cash balance remaining at more than a comfortable level. On May 22, cash maintained by the Imperial Bank was Rs. 27 2/3 crores. This high level of cash has been possible in spite of the continuing purchases of treasury bills. In the course of two months, the Imperial Bank has increased its holdings of treasury bills by no less than Rs. 10 crores. The return of the Bank to be issued next week may show that the actual increase in the holdings of treasury bills is nearer Rs. 15 crores.

As a result of the substantial sales of intermediate bills in recent weeks, treasury bill outstandings in the hands of the public have now reached the high altitude of Rs. 50 2/3 crores. Treasury bill maturities in June are only Rs. 10½ crores. If the weekly tender offer continues to be on the basis of Rs. 3 crores, realisations from sales of fresh bills will account for Rs. 12 crores in the course of June. That is, on balance, the floating debt will be increased by Rs. 1½ crores by the end of June. The June-end figure of treasury bills outstandings may thus be Rs. 52 crores. With intermediate treasury bills suspended, there may be keener competition for the tender bills, though the edge of bidding will be blunted by the amount of offer being Rs. 3 crores as against Rs. 2 crores in recent weeks. All the same, an appreciable decline in treasury bill discount rate is to be expected.

Though sales of treasury bills have been giving apt and timely support to the ways and means budget of the Central Government, the current disbursements seem to be so heavy that the Government have had recourse to the delivery of further *ad hoc* treasury bills to the Reserve Bank for purposes of cash replenishment. In the week ended May 22, there has been expansion of currency against rupee securities for Rs. 5 crores. The latest figure for rupee securities in the issue department of the Reserve Bank is Rs. 149.19 crores. Rupee coin shows a further substantial decline from Rs. 28.01 crores to Rs. 27.45 crores. The result is an increase in active note circulation from Rs. 424.79 crores to Rs. 428.26 crores. Notes held in the banking department are nearly Rs. 1 crore higher at Rs. 13.26 crores.

Thanks to substantial sales of treasury bills and cash reimbursement through currency expansion, the deposits maintained by the Central Government with the Reserve Bank have advanced from Rs. 8.73 crores to Rs. 10.34 crores. The deposits of Provincial Governments have risen from Rs. 3.63 crores to Rs. 3.99 crores. Burma Government's balances have declined slightly. We should see this item gradually fade away for the time being. Deposits of member banks with the Reserve Bank are more or less unchanged at Rs. 51.61 crores. The current requirements of the India Office possibly account for the slight decline in foreign balances from Rs. 54.40 crores to Rs. 53.60 crores. Ways and means advances availed of by governments show a small reduction of Rs. 27 lakhs to Rs. 3.40 crores.

The government securities market has fully maintained its steadiness. The two defence loans have been in good demand; and there has been a satisfactory improvement in prices. Current omens seem to indicate that the ground is being prepared for the next defence loan. If, as we believe, open market operations are being carried out with a view to coax the defence loans to over their issue price, the conclusion is obvious that the third defence loan will be at least as favourable to the Treasury as the second. In fact, in relation to the first defence loan and the second defence loan, the third defence loan must be a 10-15 year 3 per cent loan issued at par and redeemable at par.

The exchange market was quiet during the week with very little business passing.

The closing rates are: Banks buy T.T. 1s. 5 31/32d., and banks sell T.T. London Ready to six months forward at 1s. 6 1/32d.

Banks sell three months D.A. bills for first and second months at 1s. 6 9/32d., and for the third and fourth months at 1s. 6 5/16d.

Money remains easy with interbank call quoting ½ per cent.

Firms money for one to four months deposits quoted ½ percent.

Banks buy T.T. New York Ready at Rs. 329½ for $100.

Banks sell T.T. New York Ready at Rs. 332¾ for $100.

## TREASURY BILLS

### India

Tenders for Rs. 2,00,00,000 (Rupees 2 crores) of three months' Government of India Treasury Bills were opened on Tuesday, the 26th May, 1942. Total amount offered was Rs. 3,33,25,000 (Rupees 3 crores 33 lakhs and 25 thousand) Tenders at Rs. 99-11-3 per cent were allotted approximately 85 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Re. 1-3-0 (Rupee one annas three per cent) per annum.

Tenders for Rs. 3,00,00,000 (Rupees 3 crores) of three months' Government of India Treasury Bills will be received on Tuesday the 2nd June, 1942 in Bombay upto 11 a.m. (Standard Time) and upto the close of business on Monday, the 1st June, 1942 at other centres. Successful tenderers should make payment on Friday, the 5th June, 1942. Other conditions are as usual.

Three months' Intermediates sold from the 20th May to 25th May, 1942 amounted to Rs. 7,59,75,000 (Rupees 7 crores 59 lakhs 75 thousand).

During the week ended the 22nd May, 1942 Government of India Treasury Bills for Rs. 5,91,00,000 (Rupees 5 crores of 91 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

RESTRICT TRAVEL

Essential Traffic in War time requires the full use of Railways.

BENGAL-NAGPUR RAILWAY

# Finance Abroad

THE London market presents the same front, and comments regarding the absence of any relation between war and financial news would appear to receive their justification from the way in which the cost of the war is being paid—by regular borrowing and accelerated saving. The only news that we have is that note circulation in Britain is still rising—in a week it jumped by £2½ million, showing that full employment keeps the flow of money. The last Bank Return showed also a rise in bullion which is a point of unimportance and a decline in Bankers' deposits at the same time as Public deposits had risen. The Bank return, however, is unimportant since there is no connection between the gold holding and exchange rates in general. The Spanish peseta and the Swiss franc alike are maintained at control rates. The most important development of this month seems to be a proclamation that India is at war with Thailand and all commercial relations are at an end. It would be idle to suggest that the development is of any greater interest than Mexico's reactions to the last note from Berlin. The only genuine development heard of recently is a devaluation of the baht in terms of the yen. The second devaluation is meant to fasten the new order on the unfortunate kingdom. Clearing arrangements are evidently in force, and it is generally surmised that Thailand has had a raw deal. In February the baht was devalued and a second devaluation, if it is meant to stimulate exports, will also lead to smaller imports. Buying up everything to be had and selling as little as possible has been the Jap game in Indo-China, and it is being played over again in Thailand. London papers have not failed to lay stress on the Jap's readiness to use German methods. The exact degree of depreciation is unknown, but having regard to the way in which the French currency has been manipulated, it is clear that the Nazis have despoiled France which has had to depreciate her currency largely for the sake of paying the costs of occupation.

It is not known if Thailand has to pay any bill for occupation but the Japs have made it convenient for themselves to get rice, rubber etc., on cheap terms and make the Thai people pay high prices for their own imports from Japan. There is not any fear of Japanese dumping but of Jap profiteering. The absence of any news about the currency arrangements in Java makes one conclude that the Japs are content to carry on as in Malaya. The abolition of the siesta in Batavia was featured in the papers but there has been nothing to show that Dutch bands and native guerillas interfere with the occupation. What sort of order is envisaged is not known since the Japanese Premier thinks that the war is yet to be fought and Japan cannot make any except in Thailand which put up a token resistance in December. It is just possible that Japan may think of a new currency bloc (in which the yen will be equal to one piastre or one baht or one Hongkong dollar). Uniformity can be imposed at will and their own success in Manchukuo may impel them to set up an exchange cum clearing group in which the yen will be interchangeable with the currencies of occupied territories. The Burma rupee might then be treated as the conventional equivalent of one yen and the occupation authorities would find their accounting simplified if yen and rupee were identical in value. There is, however, the fact that the rupee had depreciated during the war. But paper was acceptable always. The rupee was steady and exchange banks in Rangoon made remittances at the usual rate. One must note that the purchasing power of the rupee in Burma varied widely from locality to locality. According to accounts reaching India, the scarcity of goods and the pressure of demand at certain points were not the only factors. But there was no flight away from paper money and the hoarding of copper and nickel pieces noted in Madras last month was not in evidence. There was no overt sign of any difference in value between coin and notes as such, according to evacuees, who were surprised to find that shopkeepers along the refugees' route did not ask for either gold or jewels. Perhaps the break after the earlier boom in bullion prices in Burma accounts for the lack of any acute demand, which is one reason, why in spite of much looting, a fair amount of gold must have come from Burma. The value of Indian-owned gold must be fairly large and other fugitives too must have brought gold. Since they have come overland, many refugees would not have declared the value of gold brought in. The volume can only be conjectured on the basis of Burma's own treasure imports. Reference must also be made to the precious stones that must have come into India from occupied Burma, brought either by post or in person.

The occupation authorities are said to be overmarking existing notes so that Burma's paper currency is still essentially Indian, and the inflation that has been reported in regard to wages and salaries is only one of the results of a shortage of men and materials following extensive destruction. The most amazing stories have been told at the same time as reports of normal activity during the raids. The major factor in Burma's money is silver and if the Japs do not set up a mint they will perhaps take the silver away to their country assuming that the Chinese do not stop them.

The London money market is steady as before. The discount market is less active said a recent cable which noted that the treasury bill issue went off at a fraction over 1 percent as usual with applications larger than before, while the Treasury is to take £15 million only on deposit this week. The continued ease of money proves over again that control has been perfected and all that remains to be done is to get the interest paid on new loans. In America, too, the problem is similar with the advantage of a further rise in national income and aggregate saving to help the U. S. Government. The main result of the savings bond drive has not been ignored since the Federal Reserve Board came to help the Treasury. The U.S.A. thinks of the war as indispensable to its interests and Mr. Hoover has so far moved away from his individualism as to ask for an economic dictatorship in the Third Term. He has nominated Mr. Roosevelt himself for the job of boosting production to bring victory sooner. To find that Mr. Hoover has travelled so far away from the American ideal of each for himself is to show that the challenge to liberty has converted the most unyielding opponents of Mr. Roosevelt to his own vision of controlled inequality.

The position arising from the loss of assets in the colonies of the East has hardly been investigated. What it means in terms of employment and income for Britons or Indians has not been determined, and the Indian legislature being in recess, no official statement has been forthcoming. Any scheme for postwar prosperity must cover the restitution of property lost through enemy action. The losses of individuals are more serious than those of Government, and if we assume that the loss per head was Rs. 100 it is clear that a million Indians would have lost Rs. 10 crores at least in the form of immovable property. Apart from escaping liability for tax here later on, there is no single advantage to the persons concerned. Their dependants in India are sure to be affected seriously and the time seems ripe for a full statement.

Investors in Burma companies must know how they stand. It is not enough to have previous share transfer facilities retained. The responsibility for the Burma campaign is the British Government's and the formal statement of loss and gain has been made by General Wavell not as the Indian C-in-C but as the officer appointed by His Majesty's Government to conduct operations. Whatever claims lie against the Burma Government must assuredly be met by the British Government and yet the rules relating to administration of assets and income (now obtainable) must be settled by the Indian Government. Though much has been said about evacuation, no account of the losses of Indian citizens in Burma has been submitted. It is perhaps the job for various non-official committees who want to claim relief. The important point is that savings under imports will be accompanied by loss under invisible imports, and the loss of trade with Burma will put India's balance of payments seriously out of shape apart from restricting the quantum of saving. The Overseas Department has to indicate the extent of loss. Indians are said to have lost over a crore in Japan and their losses in Hongkong must be equally serious. There have been since 1941 much more serious losses and how much of India's oversea investment and income has been lost is not yet deter-

## Burma and the Investor

The twentieth century has seen Burma twice separated from India once by Britain and once by Japan. This startling statement is meant to preface an estimate, incomplete and provisional as it must be, of the economic effects of a campaign happily concluded with the return of General Alexander's forces to India. Retrospective surveys of the Burma campaign have been numerous, but not one has so far made even the briefest mention of the profound social, economic and financial disturbance engendered by the four months' war, marked by heroism, treachery and violence in equal proportions. The outstanding features of the fighting have been set out in interviews published already. All that concerns us is to hazard an estimate of what happens to currency, exchange and other arrangements.

In the recent comments of the "Economist" many will discern the makings of a new rupee problem. The influx of Burma notes and the blocking of Indian notes in enemy-occupied areas are twin aspects of a problem that has to be considered as not calling for immediate solution. The postal and other notifications are, of course, meant to prevent the enemy using the notes by devious means. The other question raised by the "Economist" relates to bank accounts. The demand for payment in India in rupees is regarded as valid, provided title is clear. And the establishment of special branches by Banks to deal with Burma affairs is clearly in response to the development envisaged by the "Economist." What will be the total value of accounts involuntarily transferred; what will be the amount in cash sent or brought to India? These two questions admit of no answer, but it may be surmised that the Indian minority would have brought home all portable wealth. The evacuation scheme will be seen by some as a repatriation of capital, designed to enlarge investible resources in India. The main difficulty lies in determining the exact value of cash resources that could have been transferred after December. It is known that gold jewels etc. pledged with Banks were removed to India early and exchange banks must have done much by way of assisting transfer of gold and silver from Burma before Rangoon fell, assuming that Indians went in for bullion on the outbreak of war.

While there are suggestions for compensation and relief nothing has yet appeared to indicate the extent of Indian losses in Burma; when we mean losses we do not except landed property in Lower Burma even where title and possession may not always have coincided. The value of actionable claims and judgment decrees etc. cannot be left out of account, and it is to be hoped that various trade associations will enlighten the public as to what has been actually lost through enemy action and how much has been retrieved.

There is still something to suggest that much wealth has come. It cannot be assumed that the expenses of evacuation will be covered by the wealth brought home by evacuees but there is a possibility that if the repatriated join in agricultural colonies etc. advocated there will be a net gain to the country.

The actual loss to India may be larger than computable at present. Trade with Burma is at an end. Trade worth about Rs. 41¼ crores in the last fiscal year and Rs. 45 crores in 1940-41 having come to an end, India faces a problem as regards rice. While it may be argued that the problem is being met in many ways the loss of middlemen, brokers etc. cannot be made good easily. Burma took sugar, salt etc. and sent mineral oils. All that trade is at an end, and the loss on import duties has to be considered along with the fall in income-tax. The effects on Government revenue can be measured only next year, but it may be suggested that the annual equated payment on Burma's debt accepted after separation may be in abeyance. The award of the Amery-Rowlatt tribunal is rudely disturbed, and the provisions of the orders made in April, 1937 obviously become inoperative. Whatever arrangements may be made the claims as regards provident funds and pension funds will take precedence, and efforts naturally are being made to interest Government in the claims of Government's own servants.

Whatever gain may arise from the disappearance of any liability concerning Burma notes, there is the fact that advances may have to be made to the Burma Government, apart from the non-payment of the annual debt payment compounded of both interest and sinking fund How far Burma's public debt has grown and how much of Burma's assets have gone can only be guessed at present but it is not improper to suggest that India should have a lien on the Burma Government's deposits with the Reserve Bank as shown in the May returns. The situation is to be viewed not as one of limiting currency confusion or defeating Jap attempts to use looted notes or even of getting the annual debt payments. There is the question of rehabilitating destitute evacuees, some of whom are of mixed origin without any connexion whatsoever with India. What expense will be required to put them to work, even when they are skilled workers, can only be guessed. For the moment relief appears a more important issue than the possible cost to the Indian taxpayer, but it is wholly proper to suggest that the cost of future repatriation should not fall on the Indian exchequer.

What was the net annual saving in Burma of Indians; will it continue are wholly proper questions. The former must have been large, and it is now wholly extinguished since many will have spent much of their savings and can hardly add to them except those placed in certain new jobs.

The major difficulty is not in regard to loss of trade connexions or Government's inability to aid recovery of dues. The problem of the investor in regard to investment in Rangoon Port loans and Rangoon Corporation loans was outlined in this journal rather early. There is little doubt that even if interest has been paid up till now there is no assurance of similar regularity. The holder of trustee securities has got some protection whereas the holder of shares in jointstock companies has none. It is scarcely possible to compute the erosion of stock exchange values. It is enough to indicate that in the fall in B.B.T.C. shares from Rs. 335 in January to Rs. 210 in May may be found the complete answer to pressing questions. Burma's shares are a nominal market. While it is wisely suggested that Bombay-Burma can never drop to par at any time for its vast Indian interests are unaffected, the Indian holder of Burma Corp.; I.B.P. and other rupee shares can get little. The passing of the Burma Corp. dividend evoked much dissatisfaction. In spite of a minimum price there is a feeling that Burma Corps. share is unsaleable and the same applies to all oil shares. The many rupee companies with plantations in Burma have difficulties of their own. Rubber shares bought in Rangoon may be lumped with Wabash. And Indians who rushed to buy Burma Cement shares in the past would have found that their speculation has turned up very badly. Since scorched earth was extensively adopted in Burma there is no bar to compensation. We are aware that in certain cases quotations are still maintained. B. B. Petrol is around par and Consolidated tin, Tavoy tin etc. also being sterling shares the prices are unchanged. Brokers certainly will be unanimous in saying that no Burma shares can be sold, now that the Indian army is out. What the proportion of Indian capital was in Burma companies is not known. Many Burma shares had a market in Calcutta, and to these must be added certain shares held by Indians in prosperous sterling companies like Anglo-Burma Tin and Heinze Tin. While an Indian holder of Burma Oil stock is doubtless well off (as the shares have staged a remarkable recovery) the market for Burma Corporation is narrowing. Time was when Rangoon Electric and Rangoon Telephone were extremely popular shares in Madras: to-day they are discredited. The losses of corporations will not in all probability exceed the loss of private citizens. There will be no dividends, and liquidation proceedings, even of companies incorporated in India will be doubly difficult owing to the war.

While we have previously spoken of a net influx of wealth we have ignored the loss of capital and income which accrued

in India in the past. Burma produced more than rice. Indian oil companies paid large dividends, and most of the shares listed in Mahony's report had a following in India. No detailed estimate can be made, but it would not be an exaggeration to say that Rs. 5 to Rs. 6 crores have vanished—in the investor's estimation at least—though, the loss in this case may be spread between residents and evacuees. Transfer and remittance of funds are impossible, and removal of registered offices does not seem an adequate remedy. While it is not easy to develop philosophic indifference it is not hard to cite that investors in Straits dollar tin and rubber shares are in as difficult a position as shareholders in Burma companies. Where share values are above par as in the case of Bombay-Burma Trading there is implicit faith on the part of investors as to the range of interests and prudence of management. But shareholders of smaller concerns can count upon little even by way of salvage. For the first time (or is it the second) the perils of oversea investments are brought home to India. If the separation of Burma makes the Indian investor less venturesome it will not be altogether bad, for Burma cannot offer a field for Indian capital hereafter. The British investors' losses may be even larger and the status of Burma Oil or I. F. shares may be inevitably injured. But that is of no concern to India which must think that the real cost of this war must include the irrevocable loss of investments in Burma. And permanent poverty for many who have come home is hardly compatible with estimates of war prosperity.

## LARGER EXPORTS AND THE WAR

Of the vast changes in India's foreign trade in progress and those yet to be, we have no more than an indication in the intensification of import control and the promised extension of lease-lend supplies. Of the changes in the second full year of war, we have some evidence at hand as usual provided in the trade returns of British India for March. Completing as the blue book does a full financial year, one must turn to it for a notion of the improvement in exports, the high prices of imports and the suggestive increase in the balance of trade. It may well be urged that the last nine months provided in ample measure the remedy for the import surplus noted in the first quarter of 1941-42.

The outstanding feature of the war period has been the progressive improvement in the balance of payments explaining the steps taken to reduce India's external debt. On any showing the most important change is a rise in the surplus of exports for the past year. The total imports for 1941-42 are valued at Rs. 158 crores and the total exports of Indian merchandise are valued at Rs. 158 crores. In the previous year the margin between exports and imports was as much as Rs. 41 crores; in 1939-40 it was Rs. 59 crores. The increase is fully explained by an advance of Rs. 50 crores under exports of Indian merchandise last year, while imports have risen in the same period by Rs. 16.32 crores only. There is thus a definite pointer to the improvement in prices and demand that helped India to go forward with the second instalment of debt repayment. Of greater importance at present is the fact that exports, in spite of the difficulties manifest in the last quarter, showed a notable improvement on the 1940-41 total. The result is eminently favourable for India's finances, and the limited purchases of sterling like the continued addition to the Reserve Bank's sterling assets, prove how much support is forthcoming for the rupee exchange at a time when the trade in treasure is virtually at an end.

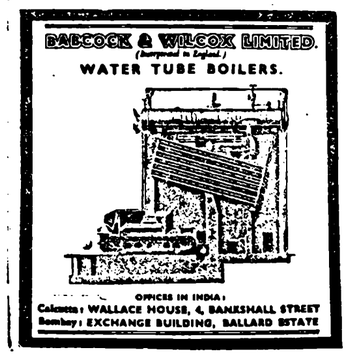
The general source of improvement in exports is still the war. It is only necessary to look at the increase over 1940-41 under grain, pulse and flour (Rs. 4.51 crores) and under tea (Rs. 11.5 crores) to deduce that war has lifted to a new plane the exports of food etc. Contrasted with the limited improvement under raw materials, it leads to the now-familiar conclusion that the old staples of India's export trade are of diminishing value and old markets again of reduced importance. For instance the last year saw a calamitous fall of over Rs. 6.9 crores under raw cotton exports alone. The justification for the crop restriction plan is indeed provided by this fall. Raw cotton ceased to be the principal item among India's exports even earlier, but it is only when we compare the value of cotton exports in 1939-40 namely Rs. 31 crores with the total of Rs. 17.55 crores for 1941-42 that we get a notion of what has happened to India's export trade. The increase of Rs. 2.63 crores under raw jute is not likely to generate much optimism for the jute-grower's like the jute industry's difficulties are widely known, and if we compare the total of Rs. 10.47 crores for 1941-42 with the total of Rs. 19.43 crores for the year 1939-40 we can see the measure of deterioration caused by the war. The decrease under oilseeds by Rs. 1.39 crores only as compared with 1940-41 suggests at once that a measure of recovery has indeed taken place since 1940 and the considerable measure of improvement, by Rs. 66 lakhs under hides and skins, belies the familiar view that limited shipping and controlled prices have created special difficulties for shippers of hides and skins, although we must note in this connection that a considerable fall has indeed taken place under exports of hides and skins, tanned or dressed and leather. But we must indicate here that internal demand for leather has risen at the same time to an astonishing degree, and the leather industry has received a great fillip from Governmental purchases.

The most significant feature of the export trade remains to be discussed at length. It is none other than the expansion in the exports of Indian manufactures. If there is a marked fall as compared with 1940-41 under exports of iron and steel manufactures from India, it can be explained by the pressure of home demand and the parallel reduction under India's imports. The increase of Rs. 19.58 crores under the value of textile manufactures exported last year points to the restoration of full prosperity for which mill company reports provide additional evidence. The increase of over Rs. 8.39 crores noted under exports of jute manufactures last year would appear to warrant considerable optimism, but for the fact that freight and other difficulties cannot be ignored. The total value of cotton yarn and goods exported in 1941-42 came to Rs. 36.07 crores while the value of jute manufactures came to Rs. 53.78 crores. These are obviously the two principal items in India's export trade at present. The outlook for both is a little obscure, but in the case of cotton, we must not forget the progressive displacement of imports by home production. As arresting in its way as the increase in Indian cloth exports is the fall noted last year under imports. The value of total intake of cotton yarn and manufactures was only Rs. 4.56 crores. This fact alone deserves to be cited in any analysis of foreign trade. Despite export restrictions still in force it is clear that the demand for India's cotton goods will continue. The fall under silk and rayon imports is again to be regarded as a stimulus to Indian cotton manufacturers whose position must be better than surmised at the time of the Bombay Millowners Association's annual meeting.

The increase in the value of imported manufactures of all classes is only Rs. 4.16 crores: under such heads as glass, paper, rubber, furniture and electrical goods there is a fall. The main increase is under vehicles excluding locomotives. The increase is readily explained by the Army demand for transport. The increase in metal imports last year is also satisfactorily explained by India's war production. The outstanding development of the woollen industry in the war period is clearly indicated by the expansion in imports of raw wool since 1939, also by the very limited increase in imports of woollen goods and the high stability of India's own exports. These three things go far to suggest that wool is more prosperous than jute or cotton at present. Through the war India's textile exports as a class have risen. This development needs to be related to the fall under imports and the heavy Government demand. That old industries have done well through the war is a view confirmed by the trade returns. If one turns to the increase under exports of wearing apparel, cutlery, drugs, glass etc. one may gain a further idea of the march of Indian industry. Exports of paper have been apparently stabilised at a lower level during the year but we must pause to record the fact that imports fell by Rs. 44.7 lakhs last year. This decrease is directly related to the advance in home production and the lift in prices, followed in turn by measures of control for which the paper industry has willingly offered co-operation. The increases recorded under drugs, chemicals etc. as also dyes and colours are clearly due to the heady rise in prices. The activity and prosperity of another industry can be judged from the fall in India's exports of tobacco in the war period, accompanied by a significant increase in her own takings of tobacco valued about Rs. 2.52 crores in 1941-42. The increase clearly suggests that the manufacture of tobacco has benefited directly through the war.

It is not, however, the past which concerns us but the future. In the year ended March an increase was recorded under oils mineral, vegetable and animal. The total value (Rs. 21.85 crores) made this the chief item in India's import trade. The second is grain etc. accounting for Rs. 15 crores. The next largest item, surprisingly enough, is machinery (Rs. 13.73 crores). The order indeed suggests immediately what should be done to develop home sources of fuel, food and machinery. But the process of rectification is assuredly not simple, and we must therefore note that in regard to the last two items, the position is likely to be complicated by the loss of Burma. It is clear that the anticipated reduction in the im-

ports of food grains will in turn lead to a curtailment of India's own exports of grain etc. which rose sharply last year under the combined stimulus of high prices and large demand. In any event a decisive reversal is to be expected, but one may at the same time hope that the further increase under tea (shipments of which totalled in value Rs. 39.27 crores in 1941-42) will continue since tea supplies from the N.E.I. are cut off. Exports of rubber last year recorded a fall, and a further fall may be reckoned as certain. Certain exports of vegetable oils rose and a striking increase under mineral ores and gums, resins etc., indicated how far the conclusions of the Meek-Gregory Mission were supported by the subsequent expansion of U. S. demand.



It is indeed the enormous increase in Indian exports to the U.S.A. in 1941-42 that makes one believe that reasonably adequate compensation for the loss of markets occasioned by the war will be found. The total value of exports to the U.S.A. rose from Rs. 25.89 crores to Rs. 46.39 crores in 1941-42. The total value of imports from that country similarly rose from Rs. 27 crores to Rs. 34.6 crores. These figures illustrate clearly the progressive improvement in India's trade with the U.S.A. largely on account of the war. There was not much improvement during the last war, but the U.S.A. is now second only to Britain which provided only Rs. 36.65 crores worth of imports in 1941-42 as compared with Rs. 34.6 crores of goods from the U.S.A.

The main change which we have to look for now is in regard to Burma. The total imports for 1941-42 in this case were valued at Rs. 29.47 crores. The value of exports to Burma was Rs. 11.73 crores so that it might be said that if India experiences difficulties regarding her own rice and timber supplies, the market she has lost is not so large as to produce permanent pessimism. A part of the trade with the Colonial Empire is gone but there remain opportunities in Africa. There has been in the past year a remarkable increase in India's exports to Egypt. There has been a simultaneous and more sensational increase in exports to Arabia, Iraq, and Iran. The Middle East is clearly marked out as a large customer. Equally hopeful is the other feature to which attention may be drawn in view of the story of rising war production in Britain. The U. K.'s total intake of Indian exports is shown as Rs. 77.01 crores as against Rs. 64.72 crores in 1940-41. The enormous increase in trade with other British possessions implies a very large increase in trade with African colonies other than Mauritius (including the Seychelles). Kenya and Zanzibar and Pemba. Trade with the Dominions showed as striking improvement as in the previous year. Indian exports to Australia, for instance, rose to Rs. 11.45 crores from Rs. 7.34 crores. Similar improvement characterised India's trade with Canada, and in this case also, imports rose in a pronounced manner despite the fact that the Canadian currency is outside the sterling group. The fact that Indian exports to the U.K. and the Empire rose by Rs. 32 crores in value while imports rose by about Rs. 16 crores only may be cited to show that the development of trade in the war period still favours India. It is, however, in regard to supplies from the Colonies that difficulties will be experienced. Last year saw a remarkable increase in imports of raw rubber. That is now definitely ruled out, and we must anyway learn to look beyond the figures and values in assessing the trade outlook. But one thing is clear. The war should not interfere with India's trade with Africa and America, and present hopes may be nourished by the large increase in exports to South America which took in 1941-42 goods worth Rs. 8.5 crores as against Rs. 5.45 crores in 1940-41.

# Editorial Notes

### Sugar Prices and Supplies

The Sugar Syndicate was among the first to criticise the price control scheme announced in April, and Lala Karamchand Thapar's speech at the annual meeting exhausts the points formulated against the scheme. Lala K. C. Thapar pointed out that if the mills had produced 200,000 tons of sugar from cane, voluntarily destroyed in 1941, the supply position would have been different, and prices would not have risen. It is essential to remember that the body which regulates about 70 per cent of India's sugar output does not favour high prices and only points out that the rise in sugar prices is not unjustified. As Lala Karamchand pointed out clearly, the Syndicate realises that sugar prices at a high level mean a higher price for cane will be asked, and this will be a stimulus to production in other Provinces and States. The Syndicate strove to keep down rising prices throughout the 1941 season and average despatches per month were as high as one lakh of tons. It seems surprising that the syndicate was not consulted before maximum prices were fixed and distribution procedure settled. It is only this month that the Syndicate's views on price control have been given weight. The scheme, according to Mr. Thapar, suffers, from many defects. The maximum is arbitrarily chosen, perhaps to help the Government buy sugar on U.K. account. Fixation of uniform prices ex-factory is again unfair, and registration of dealers is ill-advised. Retail prices are still out of line with controlled rates and the Sugar Controller's plan to use permits and limit the consumption of particular areas does not seem effective. As the Syndicate's members had 457,500 tons of sugar in April there was no real threat of shortage. It may be said that the Controller is going to ask for help from the trade but it may not be forthcoming. Export prospects are also affected by price control. India could hope to sell 300,000 tons according to the Chairman of the Syndicate who suggested that exports be given first consideration. A fear that cane prices would go up and 7 annas a maund would be considered too low by growers is certainly justified. Since vacuum pan factories cannot go beyond a certain limit, it is clear that gur and Khandsari manufacturers would set the pace. The speech has not been without its effect, and in view of the promise of deferred payment to cane growers, the rate per maund has been raised this month and the Sugar Control order of April 14 has been amended.

### America's Strength

After Mr. A. J. Brown's Oxford pamphlet on the arsenal of democracy there have been no connected accounts of U. S. war potential. There is thus good reason to welcome the Hon. N. R. Sarker's judicious estimate of U. S. resources and their immediate value in war. What is known about Dow Chemical's plan to make the U.S.A. supreme in regard to magnesium, so vital in war, might seem inadequate to those who look for a connected, up-to-date survey. Mr. Sarker's survey recalls the estimate made last year by Dr. Pinedo who went from Argentina to see how defence plans had stimulated U. S. industry, and went back to tell his people that freedom and initiative, aided by vast resources, made the U.S.A. a world in itself. It is now known that all schedules have been slashed; from sixty thousand planes in 1942, U.S. aircraft output will be jacked up to 125,000 in 1943. The U.S.A.'s steel output is eleven times that of Japan and U.S. plants have been set up and operated so swiftly that American commentators argue that the means for an offensive exist already. The U.S.A. is not so hard hit by the loss of strategic materials from the East as imagined. The U.S.A. and her allies control 90 per cent. of the world's oil, 80 per cent. of the refinery materials and nearly 90 percent of tanker tonnage. To save on tin wanted for tinplate the U. S. Steel Corporation has established three new electrolytic plating processes. This is expected to give a saving of 5,500 tons in a year or 14 percent of the tin usually required by the U. S. A. for making tinplate. The technical revolution that goes with the speed-up has other aspects. Saving in time and skill has been carried to a degree that a certain weapon which took 12½ hours to make is now produced in 12½ minutes. The U.S.A. is known to be supreme in regard to copper wanted for shells and bombs. She has at hand the lead, zinc and copper of other American republics, and can count on large supplies of bauxite and manganese from the new world. The U.S.A. is a giant whose powers have been hardly demonstrated, and every note on rising war output has a bearing on the question of victory. Added to that is the will to victory, quickened in this case by the reverses that have compromised the effectiveness of the U. S. fleet in the Pacific so far. Some part of the strength will be soon transferred to India and the future is viewed as distinctly hopeful by Mr. Sarker who is convinced that the U.S.A. can and will hasten victory.

### Foreign Trade in March

While seaborne exports held up well the import trade of India suffered serious shrinkage during March. The previous month too saw a considerable fall in imports and March witnessed an accentuation of the trend. Total valued Rs. 9,91 crores was only Rs. 40 lakhs over the record low figure of Rs. 9½ crores noted in February. The actual proportion of retained imports was lower than in February since the month accounted for re-exports of Rs. 1.52 crores nearly as against Rs. 68.74 lakhs in February. Total exports of Indian merchandise in March were valued at Rs. 19.23 crores nearly against Rs. 20.69 crores in February and Rs. 11.4 crores in March, 1941. The contraction in imports as compared with 1940 and 1941 stands out as the feature of foreign trade. The restriction of supplies explains in part the considerable advance in declared values per unit. From the usual table provided in the March returns one can deduce how much prices have moved in a year. The increase is most pronounced under salt, the average price per ton being Rs. 43-10-5 as against Rs. 24-2-3 in March, 1941. The only raw material of which the price was lower was coal, though imports of coal in March were negligible and India's own exports were lower on account of the war. The main changes in price were definitely against India, and it may be said in passing the chief factor in Indian price trends this year has been the higher cost of imports. This is indicated by the remarkable jump in the prices of piecegoods with the possible exception of silk goods. The only imports, the average value of which showed a fall, as compared with March, 1941, were brandy and soap. It must not be however supposed that the prices of exports did not rise. It is essential to note that much of the improvement in exports in the final quarter is obviously due to the advance in prices. The increase is too pronounced to escape notice in the case of rice, wheat and flour. Almost unique is the fall under barley. The average price of both tea and coffee shipped from India favoured producers. The increase is even more strongly established in the case of raw materials though the price of raw cotton showed inconsiderable improvement as compared with prices a year ago. The advance in prices is slight in the case of coal, but unusually large in the case of shellac, explaining why it has been since found necessary to control prices. The increases under raw and tanned skins, manganese and wool indicate that in India's expanding trade with the U.S.A. the price changes generally favoured India, although hessian prices in March were lower than last year.

The main change in import trade was a striking fall in imports of rice as compared with imports a year ago. The decline

under provisions and oilman-stores and milk is largely due to import control, and the serious fall under betelnuts is explained by the cessation of trade with Malaya, indicated also by the fact that total imports in March from the S. S. were valued at Rs. 4.22 lakhs only though an increase under imports from Java was recorded during the same month. The next important change is the fall under cotton and the rise under mineral oils. A fall was also recorded under motor cars as also imports of paper and stationery.

**Canadian Achievement**

Unemployment insurance was introduced in Canada last year and price control, complete and comprehensive, also took its place as part of the new economic order. The frequent mention of joint consultations with the U.S.A. is a reminder of the fact that British Columbia faces the Pacific, and the increase in foreign trade noted in 1941 may be modified considerably by the limitation of U. S. imports. The Canadian auto industry decided on curtailed output last year, but the changes resulting therefrom will not be so big as in the U.S.A. The production of non-essential goods was banned earlier than in the U.S.A. and the price-ceilings in operation since December 1 has not been a rigid or arbitrary system but meant to curb inflationary influences manifest in spite of rises in industrial and mineral output in 1941. The conservation of all essential materials and the check on non-essential production has been carried through successfully. Radio and electric equipment output has been cut, and Canada has gone in for rationing of petrol from 1st April, though her own oil production is continuously rising. The scrap drive launched to increase steel output at home was based on the apprehension that the U.S.A. could export little, and the use of metals has been forbidden in relation to the manufacture of toys, furniture and many other articles. Nickel and copper output have risen owing to larger demand from the U.S.A. Pulp and paper production claim a larger part of the industrial capacity. Except for agriculture all Canadian industries reported considerable increases in production since 1940. Flax and soya bean are new crops that are making progress in Canada, and new minerals e.g., baryte are being won. Like South Africa the Dominion reports an increase in gold output, and the fact that Canada is definitely a creditor nation at present may be said to sum up the progress achieved in the war period. The Canadian economy has developed its strength in and through war, and the progress of aircraft and shipbuilding alone shows that she is, after the U.S.A., the reservoir of industrial materials.

**Railway Earnings**

The State Railway receipts in April showed no sign of falling off. An increase of Rs. 43 lakhs over the second period of ten days in April was indeed reported by Indian Railways. With the exception of the B. N. and B. A., Tirhoot and Lucknow-Bareilly lines, all railways claimed larger earnings. For the first twenty days alone the increase in receipts was as much as Rs. 65 lakhs. A very large increase in coaching earnings is offset in certain cases by a sharp fall in goods earnings. The explanation is not hard to provide. In one case at least, the exodus from Bombay accounts for a very large increase in passenger earnings. The G. I. P. is consistent in reporting higher receipts from period to period. The withdrawal of cheap tickets accounts in some measure for the rise in N.W.R. receipts. Like the G.I.P. the N.W.R. reports an increase in goods earnings. The exodus from coastal towns is said to account for the increase in S.I.R. receipts but nothing at all is said about the similar increase in M. & S. M. earnings. Total earnings for the twenty days of April covered by the last communique amounted to Rs. 7.45 crores revealing an increase of Rs. 65 lakhs on 1941-42 and an increase of Rs. 1.4 crores on the same period of 1940-41 when too higher rates and fares were in force. This increase was achieved in spite of a considerable fall in wagons loaded on both broad and metre gauge. It is only in respect of home line stores and coal on three railways that an increase in traffic is shown. There is a sharp fall under coal and coke; also grains and pulses. Reduced movement of miscellaneous goods is also disclosed, explaining how the war affects transport, met by a new system of priorities regulated by a special officer since March.

**Important Islands**

The island of Martinique taken by the French in 1635 has become the subject of delicate negotiations, not yet concluded. Restored by Britain in 1814, the island along with Guadeloupe and its dependencies numbering five islands, are still subject to Vichy. The main object of Admiral Hoover's mission is to make them independent for the duration. While M. Laval harps on the attributes of French sovereignty in his formal answer, the local authorities are not impervious to the suggestion that the island of Martinique belongs to the Americas. It lies outside the field of Franco-German collaboration. That is not the State Department's doctrine: it is based on the declaration of Havana made in July, 1940, Martinique being the biggest island covers all including Guadeloupe. The products of Guadeloupe are similar to those of the British West Indies. Sugar, rum, bananas, cocoa, coffee and tobacco are the chief products. Local food resources are limited, but include sweet potato, manioc, maize and vegetables. The wireless station at Destrallan in Guadeloupe is of more than local importance for a point raised in the negotiations is that concerning radio weather reports. It is freely surmised that the general attitude of sympathy to de Gaulle and opposition to Vichy in the U.S.A. does not preclude an agreement with Admiral Robert.

M. Laval's reply was stiff but suggested that a working compromise was not unwelcome or wholly incompatible with the claim to issue orders to the Admiral. Local opposition as in Madagascar can have little effect. Since President Roosevelt has indicated that interference with the French colonies in the interests of Allied strategy is not discarded as inexpedient, the mission of Admiral Hoover to Port de France may be taken as a move in a bigger game. Sugar, vanilla, coffee, bananas and cocoa were the principal exports of Guadeloupe. Martinique too is the source of sugar and rum, also tobacco, coffee, cocoa and pineapples. There are many sugar mills and distilleries and a few factories. Fort de France is a thriving town with a law school, a lycee and a commercial school. Since the islands lie in the Caribbean, U. S. mail services reinforce the lines run by French steamship companies. The Bank of Martinique and

the Credit Martiniquais were independent institutions. A branch of the Royal Bank of Canada also served Martinique. The Royal Bank of Canada had also a branch in Guadeloupe. The Bank of Guadeloupe specialised in agricultural credit and the Credit Guadeloupean was a private bank. The official Banque de Guadeloupe had the privilege of note issue and also the minting of nickel coin. Pointe a Pitre with its fine harbour is the largest town in the island of Guadeloupe and the Antilles which are represented in the Chamber by two deputies and one Senator. The local elected council corresponds to the Privy Council which assists the Governor of Martinique. The island of Martinique is also represented in the French Parliament, but its chief asset to-day is the part of the French fleet which lies idle. Its immediate immobilisation is desired by the Allies. The shipment of tropical products to France may or may not be checked by the six point demand but on any showing the Allies want to see that the fleet does not move off to Brest or Toulon. Admiral Robert must have a very small force on the island but the men of war including an aircraft carrier should be taken into account. Road transport is well developed in the islands which have apparently no railways. It is noteworthy that the U. S. demands do not cover French Guiana which can be guarded at will by the U. S. marines now in Surinam. Martinique lies near Trinidad —chief source of oil in the British Empire. It lies across the gateway to Panama. Hence U. S. anxiety to make sure that it is in wholly friendly hands.

**Deposits Still Rising**

The increase in bank deposits in India up to March together with changes in cash etc., in the first quarter have been reviewed. Further changes apparent only after April fall due for notice. In this case the two sources are the usual weekly statements of the Imperial Bank and the consolidated statement of Scheduled Banks in India. A year ago total liabilities of India's scheduled banks came up to Rs. 289.84 crores; on May 1st the total was Rs. 329.25 crores. This rise was in evidence during April. On April 17 the Scheduled Banks reported total demand liabilities of Rs. 225.33 crores; the total on 1st May was Rs. 234.27 crores. The rapid increase coincides with a fall under time liabilities. As explained previously the rise in bank deposits over the whole of 1941 was accompanied by a fall under time liabilities; only in the second week of April was a fall under deposits noted. It has been more than made good to judge by the later returns. Week after week there has been a fall in time deposits and a rise in other deposits. The over-all increase is duly reflected in the rise under Scheduled Banks' balances held by the Reserve Bank, which have risen towards the end of April, reflecting in turn the onset of slack conditions in the Indian money market. The major change as between April 17th and May 1st is the rise in Deposits by Rs. 7¼ crores. In the last week of April deposits rose by over Rs. 1 crore. Whether this increase represents repatriation of balances held by individuals who have returned to India on account of the war, or is merely a movement indicative of the reduced velocity of monetary circulation at a time when the note issue has expanded through the regular additions to India's sterling assets cannot be determined. It is however clear that Burma's note issue will soon be merged into India's and the result may well be a permanent rise in Bank deposits checking in part the inflationary tendencies endemic in India. The returned, well-to-do emigrants may find few chances of investment and may even prefer to keep their money in current accounts. Anyway, it is obvious that the movement in deposits is largely connected with the return of Indian funds from Malaya and Burma to India this year. This point needs to be examined in detail since the volume of monies available for investment in India may be enlarged through this factor. The consolidated statement shows also larger cash balances including balances held by the Reserve Bank on their account. The fall of over 7 crores under total Advances as between April 17 and May 1 would not seem contrary to the trend towards easier money. The fall under Advances and bills discounted by banks explains the keener buying of Treasury bills and the record volume of applications together with the successive falls in the average rate of discount. The rise in deposits noted over April evidently continued into May. The Imperial Bank's return as on May 8 showed total deposits of Rs. 125.15 crores. There is a parallel increase under Government securities which stood at Rs. 70.32 crores. The cash items also are on the increase. The most significant change in this case is the further fall of over 40 lakhs under cash, credits and overdrafts. The contraction under bills etc., is not unexpected indicating how the giltedged market has strengthened in the wake of rather easier money conditions. Between May last and now the Imperial Bank's deposits have increased by Rs. 27 crores nearly whereas the scheduled banks' statement shows a total increase of Rs. 49½ crores over the same period. It is a point on which much can be said in relation to the Imperial Bank's permanent primacy among India's banks.

**Larger Margin**

Estimates of taxable capacity as between one nation and another have no great value since revenue measures are likely to be different and the effects of unrestrained public spending also may be different. The U.S.A. with a net national income of 92 billions (revised since to 100 billions) in 1941 was assuredly better off than Britain since the burden of taxation was lower. Per capita income of the individual U. S. citizen in 1941-42 was put at 709 dollars as against 616 dollars in 1940-41. The increase in tax burden on the average citizen is more than offset by the rise in average income. In spite of the percentage of State expenditure to national income having gone up from 21.6 per cent to 24.1 per cent in the States, the tax burden was relatively lighter than in Britain. A point to be stressed here is that in both countries a substantial part of public expenditure is still met by borrowing. For example, it was estimated that the U.S.A. will get in 1941-42 the sum of 22,859 millions as revenue, national State and local, but will spend 43.581 millions of which 26,000 will go to defence or war. The estimates are likely to be inaccurate, but the radical difference between Britain and America lies in the fact that Britain's national income of £6,200 millions in 1941-42 was too small to cover an outlay of over £4,200 millions. Since U. S. national income is expected to rise beyond 100 billions in 1942 the generally anticipated increase in taxation

will absorb a smaller portion of the national income despite present war expenditure running at the rate of 36 billions a year.

The addition of 7 billions by way of taxes will not solve the problem of borrowing. A normal intake of 20 billions by the Treasury will leave the average corporation no chance to ask money of the investors. The diversion of investment as in Britain will become an established feature and essential plant construction may have to be financed even more frequently than in 1941 by the Government. In the past year, war expenditure per head in U.S.A. was much smaller than in Britain, where, £263 was taken as the per capita expenditure but even after the projected increase and the doubling of 1941-42 expenditure the individual U. S. citizen's war effort in terms of money will cost less money than in Britain which was at war two years earlier and lost much capital, explaining the decline in national income in 1941-42. The disadvantages are not operative in the case of the U.S.A. where, total estimated expenditure by all public authorities in 1941-42 represented less than half the national income, whereas governmental spending in the same year absorbed two-thirds of the national income. The bigger margin available for a bigger war effort is assuredly a factor in war potential. Given the will to work, the U.S.A. can put in much more resources for victory than Britain or other Allies, and the U. S. citizen whose standard of living is lowered will again have the satisfaction of feeling that he is doing more for victory than anyone. The U.S.A. leads the United Nations because wages and salaries up to September last rose by 27 per cent. and average incomes of corporations showed further improvement in 1941. Since the national income in 1929 —Hoover's peak—was 83 billions, the U.S.A. has a great deal more to spend. Now that Mr. Hoover has asked for economic dictatorship, the President's programme of less spending and bigger saving has got a brighter chance of going through, and actual increase in production can also be measured in terms of income when price-stops are at work.

### Loss and Gain

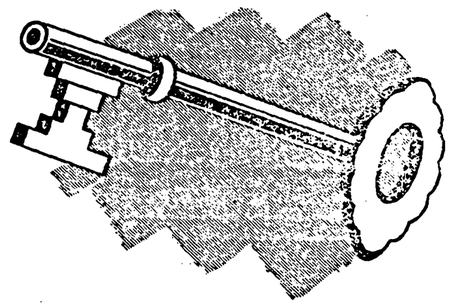
The shifting of factories to other safer regions has reduced the importance of the Ukraine, the possession of which is still disputed by Marshal Timoshenko. The second defence line was built up in two stages after the war broke out. The advance in tank and plane production is clearly behind the counter-offensive launched against the Nazis, and what has been done by way of economic reorganisation proves that the discipline of planning has been good. According to the "Economist" the situation is more hopeful than in the last spring. The minerals of the Ukraine, however, are lost, and the Russian steel output, for instance, will be below capacity. There is a darker side to the picture as the "Economist" admits, and it fears that the peak output of the current year cannot be maintained into the next year of war. The importance of Allied supplies remains even after the Russians have got second wind and retain the oil wells and mines in the Urals. The "Economist" draws attention to the labour problem also. The loss of territory means the loss of workers and the demand in the forces for manpower creates a problem for Russian industry. The danger signals are set: they signify, that in a war of attrition Russia's limitations will prove a liability to all. A continuation of the campaign into another year will mean that war efforts will slacken. Therein lies the difference between Russia and her allies. Russia needs victory in 1942 whereas the Allies can afford to wait. This frank appraisal will make one ask if the Nazis know Russia better than the Allies and stake everything on a break-through to the Caucasus. Peter the First could wait; Stalin dare not, and the insistence on a second front is to be treated as a measure of Russian weakness rather than Russian strength.

### Higher Prices

In view of the successive rises noted after March in the working class cost of living in India it is clear that the rise in March was only a prelude to a general forward movement. The wholesale price index for March in Bombay rose to 137 (base 1934) and this propelled the cost of living index to 137 which was 18 points above that for March, 1941. The chief factor there was the rise in the price of grains, oil and other food items. Except for charcoal everything was dearer, including clothing. Rent was as before stationary, and the higher cost of news papers put up the cost of one conventional necessity. The rise of two points in the Bombay index after February was manifestly due to smaller supplies of rice, sugar, vegetables etc. The difficulty was not cured by the exodus reported then or the previous measures of price control. In Sholapur and Ahmedabad the index in the earlier month moved in favour of the worker and the dominant trend, as widely suspected, was not adverse. Reports from six selected centres appear to speak of a decline in the local index at least in February. In Ahmedabad, Nagpur, Jubbulpore and Sholapur the cost of living was below the pre-depression base. The most decisive factor is, however, the advance in the cost of grain during and after February and the dislocation of trade owing to panic. It is known that food prices showed little variation throughout 1941 and the rise this year is largely due to the reverses in the East. Economic reasons, not even the additional currency, seem unimportant. It must, however, be added that the non-food index rose by 30 points in 1941 and this in turn accounts for the rise of 30 points to 149 in the average Bombay wholesale price index. A graph in the Bombay Labour Journal plotted to show the main changes proves that in the second year of war prices rose more rapidly than in the first year though a flattening out was noticed towards the end. This again has been reversed and the upward trend is clearly shown in the higher cost of living for the working class. It was recently pointed out that in respect of 1941 India shows a smaller rise in regard to cost of living than some neutral countries and she has been spared so far the rigours of rationing while the present difficulties in regard to salt, flour etc. reported from various places is due to a hoarding movement which has cut into supplies.

### Trade Unionism in Bombay

Students of labour questions who have noted the new importance assigned to labour by the Government of India will not fail to note that trade unionism which flourishes in Bombany rather than any other province did not show striking progress in 1940-41. The reason for this can be found in Mr. D. S. Bakhle's annual report on the working of the Act of 1941. In the year 1940-41 there was a net addition of six unions in Bombay despite the cancellation of fifteen unions. A remarkable feature of the year was the failure to submit the usual returns on the part of as many as fifteen unions. Ten of them have been since taken off the register. Many unions also furnished defective returns. Mr. Bakhle records that only seventeen unions had a membership of over 2,000. As many as 41 unions had their accounts done by auditors qualified to do company accounts. The major feature of the year was a big increase in the membership of the Railway and Transport Unions as well as the Textile Unions. After the big strike of 1940 labour unionism had evidently obtained a stronger hold on the Bombay millworkers and this deserves to be mentioned, particularly, as it is commonly said that long strikes weaken unions. The unions which failed to report progress in membership and fund were the Printers and Seamen's Union. The more reliable index of union activity is, however, finance. The large amount of subscriptions due and the low cash balances are even more common than the recurrence of the Red Flag in the titles of many unions. Total membership of Bombay unions compared with the preceding year rose by 6.87 per cent. but the entire resources of the trade union movement were hardly over Rs. 2 lakhs. It is, however, necessary to remark here that the unpaid dues and miscellaneous items should be added to the assets, in which case the unions would be able to claim Rs. 3,86,392 as the aggregate value of their assets. Individual unions certainly had heavy overdues and it was only the Textile Labour Association of Ahmedabad (which is a federation) that had a political fund in addition to a provident fund and spent as much as Rs. 45,579 by way of educational, social and religious benefits. The Association has had special advantages in the past as Gandhiji has been associated with it. That doubtless explains the financial rectitude noted here and the passion for uplift.



### Claims for Compensation

War damage schemes in the Colonies were unknown, and British investors in Malayan companies realised early this year that Home Industrials had their points. They may not be tempted to be very optimistic despite the recent mention of a posthumous scheme suggesting the pooling of all damage among the Allies. There are few Indian companies with interests in Malaya, and financial interests as such seem ineligible for compensation. Yet the scheme is directly meant to salvage extinguished interests. Payment of compensation is ruled out, unless there is a scheme for drastic taxation of natives and a capital levy on natives alone, neither of which can be treated as serious proposals. Shareholders in local and sterling tin and rubber companies will probably be advised to think that dividends have ceased and only a return of capital (or whatever is available) can be reckoned upon.

Not long ago Mr. Hall speaking in the Commons for the Colonial Office said that the question of compensation was receiving the earnest consideration of His Majesty's Government. What Indians will get through the registry method in operation at present can be ignored safely, yet, one cannot altogether give up hope when the British press is ventilating grievances. Small satisfaction can come from the extension to colonial proporties of the British War Damage Act of 1941. The "Financial News" thinks it can be done since the addition of Malayan property to British property, valued over 6,000 millions in entirety at present cannot present a problem. It is suggested that 75 millions or so of nominal capital in rubber and tin companies would not make much difference after the war and the reduction of probable compensation for British takers-out of cover would help Home investors in Malayan companies to get something

## TWENTY-THIRD ANNUAL REPORT OF THE DIRECTORS OF THE BENGAL CENTRAL BANK, LTD.

To

The Share-holders of the Bengal Central Bank Ltd.

Gentlemen,

The Directors beg to submit the duly audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1941.

A sum of Rs. 40,000/- has been added to the Reserve Fund making it Rs. 3,50,000/-. The available total of Profit and Loss A/c. is Rs. 43,327-13-0 and the Directors recommend the payment of a dividend of 5% per annum, free of Income-tax, *payable on application* in terms of the Articles of Association.

The liquid position of the Bank had to be further strengthened as a result of war conditions. The Cash and Bank balances are 22% of the deposits and the market value of the securities is 28% of the deposits making a total of above 50%. Over and above these, a considerable portion of the advances being against liquid securities, the same adds to the strength of the liquid position of the Bank. The position of the Bank is therefore satisfactory from every point.

The Bank's business during the year showed satisfactory progress.

During the year under review the Chairman of the Bank the Hon'ble Mr. Nalini Ranjan Sarkar had to resign from his seat on the Board on being appointed a member of the Viceroy's Executive Council. His appointment to such an exalted office was indeed a matter of great pride and satisfaction to the Directors. The Directors however keenly feel the loss of his wise guidance and advice in the working of the Bank.

Mr. N. Datta, Secretary, Hindusthan Co-operative Insurance Society Ltd. was appointed Director during the year 1941. He retires under Article 123 of the Articles of Association and is eligible for re-election.

Dr. R. Ahmed and Mr. R. C. Sett Directors retire by rotation but are eligible and offer themselves for re-election.

Messrs. Ray & Ray, Chartered Accountants, audited the accounts of 1941 and offer themselves for re-election.

The Share-holders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

86, Clive Street,
Calcutta.

## AUDITORS' REPORT

We hereby certify that we have audited the above Balance Sheet dated the 31st December, 1941, and the attached Profit & Loss Account for the year ending 31st December, 1941, with the books and accounts as kept at the Head Office and the Harrison Road Branch, in which are incorported the certified Returns of the Branches. We have verified Cash and Securities of the Head Office and the Harrison Road Branch. We have to report that we have obtained all the information and explanations we have required, and that, in our opinion, the above Balance Sheet and the Profit & Loss A/c. are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank. In our opinion the books of accounts have been kept as required by law.

instead of nothing. British investors have been alert and have set up a committee to look after the likely payment for damage. The fact that many British investors can get nothing out of the N.E.I. strengthens the general case for compensation of some sort after the war, and Allied interests will demand the reconstitution after the war of all enterprise, and the resumption of operations on the part of tin and rubber companies alike. The same might be said of Burma as well, and compensation here too may come from His Majesty's Government in which event Indian holders of Burma shares may feel inclined to hold on to what are at best speculative risks at present.

### Turkish Progress

The resources of Turkey are not widely advertised except for the chrome ore she has refused to sell to Germany until 1941. Recent newspaper articles, which have emphasised Turkey's economic dependence on Germany have also indicated that Turkey is not getting much because Germany cannot deliver the goods. In regard to trade generally the Germans have an advantage in the help of the Armenians who are Turcophobes on principle. It is not a far cry from the young Turks to Ismet Inonu, but Turkey's career of thirty years marks the transition from mediaeval to modern economy. Turkey has her own steel industry, and the development of Anatolia, marks the retreat from the West that was as important a factor in Kemal's work as the assimilation to European standards in many things. Turkey was an eager borrower, generally in Paris, before the last war. She is now an unready taker of credits. The Ottoman Empire had no financial system, and the mortgage of tax revenues quickened the cupidity of concession-hunters. It was only after the Revolution that budgetary principles were settled and the Army was brought under the Ministry of Finance like any other department. Parliamentary control was exercised through the Audit Court associated with the Ministry.

Turkey got a new financial system when the law of public accounts was settled. The Kemalists went further, and asked for a balanced budget from every department. Developmental expenditure began to loom large in the Kemalist era ; to-day the nation-building departments take up half the public funds. In the past extraordinary receipts were devoted to industrial development and public works ; that has been curtailed because defence expenditure is still rising, and the block grants for the Army mark an earnest will to maintain neutrality. The Ministry of Finance has its own Inspectorate and full accounts have to be drawn up by all departments within seven months for submission to the National Assembly. As in Britain the main control over finance is vested in the Government, and the individual deputy has little say in regard to public spending. The Assembly, however, votes on the Estimates, and the accuracy of these are seldom in question. Turkey has always managed to balance her budget because the Treasury has a veto on the proposals of spending departments. Here, too, may be noticed modern Turkey's readiness to adopt only approved methods.

### Textile Problem

As the largest exporter of both rayon and cotton goods in the world until recently, Japan's position as an industrial power was unquestioned in the past. The war must however have altered her position greatly, and she is now short of the fibres she wants. Java may give kapok but that is of little use to the enormous mills of Osaka. There is no longer any source of cotton except China since U. S. cotton and possible supplies from Peru and Brazil are not likely to come. It has been declared that the cotton industry of Japan is doomed. Japan has already been forced to use artificial substitutes in place of cotton and wool. A point, however, that needs to be stressed here is the superabundance of silk. Japan cannot have a clothing problem, though her chief industry will be crippled, particularly, as diversion to war work is impossible as raw cotton cannot be had and export trade has gone haywire. Japan's own requirements of cotton are put at 250,000 tons of raw cotton, and it is hard to see North China providing all the cotton for the mills in Japan and the occupied areas. They may have plans to grow cotton in the Philippines but the hot, moist climate which suits sugar, may not be favourable to cotton. It is believed that only a fraction of the cotton wanted can come from new conquered areas even under normal conditions.

The East Asia doctrine does not lay emphasis on cloth exports, but the men who are running up new factories in Bangkok and Haiphong assuredly look to Burma for some cotton. Staple fibre has been a Jap speciality, though in this case, too, the wood pulp and caustic soda was

not home produced. Mixture fabrics are, of course, sure to extend, and the Occupied countries, with clearing arrangements in force, cannot expect anything more than dubious materials. There is a belief that bagasse from Java may be used for various purposes including textiles, but the biggest problem for Japan will be in persuading Asiatics to take anything other than cotton. There is another aspect on which one may dwell here. India and the New World alike have their large textile industries to take up their cotton, and the recent development of mills in Latin America suggests that the cotton problem is solving itself. That is important since there will be no markets in the post-war period for Japan and no recovery in the ordinary sense can be counted upon. Perhaps the smaller establishments doing parts of textile manufacture in Japan will suffer more than the big mills, but due regard must also be had to what may happen to Japan's cotton industry when Osaka is bombed in the regular American fashion.

### Bengal Central Bank

Still renowned as the first scheduled and clearing Bengalee bank, the Bengal Central Bank has more than sustained its reputation after the changes made in the Board in 1940. The marks of progress were manifest a year ago ; they are again present in intensified form, to judge by the report and accounts issued recently. The general background was hardly normal, as may be indicated by a brief mention of the trying conditions of December, when liquidity preference caused a strain to the banking system of this country. In evaluating the achievements of 1941, therefore, due regard must be had to the complications noticed at the time the balance-sheet was prepared. The magnitude of progress in a mixed year is best measured by a look at the bulge in deposits. More money was, and is placed, both in current and savings accounts, mainly because the Bengal Central offers a degree of security fully compatible with normal expectations of profit. The main change in the balance-sheet as at the end of December is a rise in total deposits to Rs. 159.17 lakhs. The Bengal Central Bank is not under-capitalised as so many Bengalee banks are even now, and it has a useful reserve of Rs. 3½ lakhs against a paid-up capital of Rs. 7.44 lakhs. These things deserve notice on the part of the public which can hardly declare what are the pre-requisites of safety and progress. A further addition of Rs. 40,000 to Reserve is calculated to impress others besides shareholders at this time. It is somewhat unusual to find the first place among assets given to cash, but there is a self-evident reason. The total in this case is as high as Rs. 35 lakhs, equal to a cash ratio of 22 per cent, perhaps the highest shown by any bank of comparable size. The shareholders have a modest return of only 5 per cent, but high stability is certainly to be noticed in regard to dividend policy, for which too, the Board headed by Dr. S. C. Law this time, may well claim credit. The vitalising touch, however, has been given for over a year by Mr. J. C. Das, whose varied experience has promoted unusually rapid progress.

The Bengal Central Bank's Advances constitute less than half of its resources as may be expected from the high cash ratio. If investments valued Rs. 45.75 lakhs do not constitute a formidable proportion of the assets, it has the satisfaction that less danger could arise from fluctuations such as have been noticed after February. The relatively small proportion of Bills to Advances can be explained in relation to slacker trade demand induced by the war. The usual appropriations have been made from the year's profit of Rs. 5,27,278-3-7. The result is a net disposable balance of Rs. 43,327-13-0 out of which the 5 per cent tax-free dividend will be paid and the balance carried forward. The only item that may excite attention among the assets shown is the relatively high percentage of property, shown at Rs. 10,38,517-11-3. It might be suggested that annual transfers to Premises account should be larger. The more arresting feature is, however, the absence of any loans to Directors or officials. Here it may be said is something to copy for Indian banking which has suffered from the outgrowth of the managing agency system to some extent into the banking field. The certified balance-sheet presents a model for Bengal's banks, proving incidentally that age and efficiency can be seen in happy conjunction more often than not. The retirement of Mr. Sarker from the Bank has been followed by the election of Mr. N. Datta as a Director. The choice is indeed a happy one, though Mr. Sarker's single year of office as Chairman witnessed the most remarkable progress recorded by the Bank so far. The twenty-second and twenty-third annual reports have confirmed the common view that there is no looking back so far as the Bengal Central is concerned. With seven branches in and around Calcutta and a dozen other branches, the Bengal Central has wisely limited its branch extension, but its ability to give full banking service is attested by the larger circle of depositors who have the satisfaction of remarking over again that the Bengal Central is fully entitled to their support.

Anent my last week's discussion on the action taken by the Imperial Bank with regard to the debentures of the Calcutta Corporation, Calcutta Improvement Trust, Calcutta Port Trust and New Howrah Bridge Loan, I have received the following communication from a banker friend:

"Eavesdropper's comments, more than usually pungent, on the action of the Imperial Bank regarding the debentures of the Calcutta local bodies are fully justified. The Imperial Bank started the mischief with the debentures of the Rangoon local bodies. It is now Calcutta's turn. Nobody knows where it will end.

It is impossible to imagine that this action of the Imperial Bank was taken without the knowledge or approval of the Reserve Bank and the Government of India. How serious are the repercussions, appears to be hardly appreciated by the Bank.

The National Front Campaign is in full swing; and here is the Imperial Bank having recourse to a line of action which will disrupt confidence in the safety of Calcutta.

Big advertisement spaces have been taken in almost all the papers for enforcing the appeal to the public to subscribe to savings certificates and defence loans: and here is the rudest shock administered to investors in the debentures of Calcutta local bodies amounting to a good many crores.

We may address a few simple questions to the Imperial Bank authorities: 'Do you expect Britain to regain Burma or do you not? If you have faith in Britain, you must have faith in the Rangoon debentures. If you have no faith in Britain, you are defeatist No. 1. Do you expect Calcutta to be bombed and occupied by the enemy? If you do, you have to be dealt with as one who is the biggest obstacle to all that is implied in the National War Front. If you do not, why this indecent haste in knocking the bottom out of the Calcutta debentures.'

It is disingenuous to suggest that the Government of India have no say or authority in this matter. It is the Government monies, their patronage, their subsidy and the privilege and prestige secured through the association with the Government that have built up the Imperial Bank to its present position and that make it what it is. It is, therefore, clearly the duty of the Government to pull up the Imperial Bank in this matter.

This war will end some day. And all future wars will bring bombing on our port towns. Because port towns are liable to air raids, are all securities connected with such port towns to be permanently under a cloud. Will future investors be prepared to subscribe for such debentures at 3 per cent?

The least that the Government can do is to pull up the Imperial Bank official concerned and to issue a notification guaranteeing the interest and principal of the debentures of all local bodies in India and Burma. The sooner it is done the better.

Already panicky conditions have come to prevail with regard to the Calcutta Port Trust debentures and the New Howrah Bridge loan. There are sellers of the latter down to Rs. 85. A few days ago, the Imperial Bank said that these securities were unsaleable. At that time they were saleable. Conditions are now being created in which they will be really unsaleable.

Happily, the position is different with regard to the Calcutta Municipal debentures and Calcutta Improvement Trust loan. There are hardly any sellers in these two debentures. There is quite a considerable amount of buying in evidence. The Calcutta Corporation and the Calcutta Improvement Trust are themselves buyers of whatever debentures are offering, as they have still considerable sums to invest on account of the sinking fund.

The general position, then, is that the absence of sellers and the unsatisfied buying demand with respect to Calcutta Municipal debentures and the Improvement Trust loan are a direct rebuttal of the Imperial Bank's allegation regarding their unsaleability; and that the slur cast by the Bank has, however, succeeded in undermining the confidence of investors in the Port Trust debentures and the New Howrah Bridge Loan.

Everyone is agreed that the Imperial Bank had bungled. We expect speedy amends to be made by the Finance Member."

I have published, in full, the letter I have received from my banker friend, as it was he who first drew my attention, nearly four months ago, to the action then

taken by the Imperial Bank with reference to the debentures on the Rangoon Port Trust and the Rangoon Corporation. He took up this matter in energetic style with the Reserve Bank; but no suitable action was taken. He holds even stronger views on the present action of the Imperial Bank with references to the Calcutta debentures; and his letter seems to show that he has hopes of intervention, at least in this case, by the Government of India.

From the enquiries I have made since I wrote my article last week, I gather that the Finance Department of the Government of Bengal has received a communication on this matter from the Finance Department of the Government of India. While attention to the question was first drawn in India by "Indian Finance", there are reasons to think that London also has been perturbed by the developments with regard to the Calcutta debentures. The Calcutta Corporation and the Calcutta Port Trust have quite substantial sterling debentures outstanding in the London market. It is not unlikely that City circles have brought pressure to bear on the Secretary of State. In any case, it is clear that the Finance Member is being urged to take action in response to London reactions as well as to the reactions in India.

The communication received at Writers Buildings from New Delhi must be said to be reassuring. I have not been able to get authoritativt information; but, I think, it may be taken as almost certain that the Government of India have agreed to guarantee the interest and principal on the debentures of the Calcutta local bodies during the period of the war and for one year thereafter. It seems also safe to infer that New Delhi is agreeable to the fixation of minimum prices for the Calcutta debentures in the same way as minimum prices have been fixed not only for Government of India securities but for the Provincial Government loans. I also understand that this matter was discussed at a meeting of the Bengal Cabinet which has, in general terms, agreed with the proposals put forward by New Delhi. The authorities of the local bodies concerned do not appear to be fully in touch with the developments but they are looking forward to the early issue of a Government of India notification.

The Central Government's suggestion to guarantee interest and principal for the duration of the war and a year thereafter is in line with what I proposed in the last number. But on going into the matter further, I am not sure if a guarantee limited as to time will suffice. The development of the air weapon may be said to be a new hazard for all port towns; and, from this point of view, the debentures connected with such port towns may not command, in future years, the prestige which they had in pre-war years.

But this risk is part of what may be called the general war risk. As there is a general war risk insurance scheme, the debentures of the local bodies in port towns must be embraced in some manner in the war risk insurance scheme. It may be the simplest solution for the Government to provide a general guarantee applicable to the debentures of all local bodies without limit of time. If this is considered too wide in scope, the Government may give a guarantee that during the present war and any future war, and for a year after this or any other war, the Government of India will hold themselves responsible for the interest and principal of the debentures of all local bodies in India and Burma.

As regards the proposal for the fixation of minimum prices for the debentures of local bodies, the position in this regard is not on all fours with that in regard to Government of India's securities. Open market operations are an important feature of the monetary technique of the Central Government. These operations are effected, from time to time, through the agency of the Reserve Bank and, perhaps, largely on its advice. The local public bodies, however, are too humble to plan open market operations; and, from recent experience, we may say that the Imperial Bank has been none too friendly.

These local bodies will, therefore, have to depend largely upon the resources of their sinking funds and invest those resources in such a way as will have the effect of open market operations. Even so, one wonders whether any such operation will prove effective enough to hold the debentures above the specified minimum prices at all times. In simple terms, while the proposal of Sir Jeremy Raisman to fix minimum prices for the debentures of local bodies is admirable, practical assistance from him may also be necessary on occasions if the minimum prices are to be a reality and not a farce.

DON'T BELIEVE RUMOURS
BUILD INDIA'S WAR FRONT AGAINST THE JAPANESE

# Olympus

*(From Our Correspondent)*

New Delhi, May 27.

New Delhi is still in a state of suspense. The Viceroy proceeded on a brief visit to Simla last week but he has returned immediately to be in time for today's important meeting of the Viceroy's Council. It is important in more than one sense, for the final arrangements are expected to be made at this meeting for the redistribution of portfolios and the nomination of India's representatives to the Pacific War Council and the Imperial War Cabinet. The name of Sir Ramaswami Mudaliar is now being mentioned for the Pacific War Council. It is undoubtedly an excellent choice, for apart from his great qualities as politician and administrator, he has intimate experience both of Whitehall and the Government of India. If he accepts the Viceroy's invitation, it will be no easy task to find a suitable successor for dealing with the highly technical and multifarious duties connected with the Commerce Membership. Sir Ramaswami Mudaliar has mastered the details of this Department's working, and by the machinery which he has developed for keeping himself in touch with Indian commercial and business interests, has been particularly successful in winning the confidence and support of all Indian commercial interests. As Sir Shanmukham Chetti seems to be marked out for the Production Membership, it is likely that a front-rank businessman will be chosen for the Commerce Membership. Several are the names being mentioned including that of Sir Ardeshir Dalal, but at the moment, it is not yet certain whether Sir Ramaswami Mudaliar will accept the nomination abroad.

* * * *

The delay in making the official announcement appears to be due to the fact that certain preliminaries have yet to be completed. If, for instance, Dr. Ambedkar is brought into the Council, the most likely portfolio for him will be the Law portfolio. Sir Sultan Ahmed will prove a good Information Member. As a matter of fact, there was a feeling that a person of such energy and capacity as Sir Sultan Ahmed should have been given one of the more important administrative portfolios. In the case of Mr. N. R. Sarker also there has been a feeling that a man of his talents and organising ability would be more useful in a big Department like Communications or Finance. There is no reason why the vacant Communications portfolio should not be given to him. According to New Delhi gossip, Mr. N. R. Sarker may be entrusted with Civil Defence if Dr. E. Raghavendra Rao decides to take a short leave for recouping his health. The Viceroy's scheme is reported to aim at the complete Indianisation of the Executive Council, its expansion to fifteen members including the Viceroy and the organisation of new portfolios for Production and Transport. It is not yet certain whether the coming announcement will only be the first instalment in fulfilment of this scheme or cover the whole ground at once.

* * * *

Under the original expansion scheme the Viceroy's idea was to have one prominent States Minister as one of his Members. Now that Sir Akbar Hydari is no more, his place is believed, will go to Sardar Sir Jogendra Singh, at present Prime Minister of Patiala. His selection will also meet the demand of the Sikh community that it should have a place in the expanded Council. Lastly there is the Muslim seat, for which many candidates are in the field. It is not considered likely that the Nawab of Chhattari will care to leave Hyderabad for a seat in the Viceroy's Council. At one time the names of Sir Mahomed Usman and Sir Mirza Ismail were both being prominently mentioned, but from what one hears, there seem to be now good chances for Sir A. F. Rahaman who recently retired from the Public Service Commission. Before he came to the Government of India Sir A. F. was for a long time a Professor at Aligarh and later was Vice-Chancellor of the Dacca University. He is a man of great culture and wide sympathies. If Mr. N. R. Sarker takes up some other portfolio, Sir A. F. Rahman may be a good choice for the Education Membership. As the relevant provision in the Government of India Act has not yet been amended, it may be necessary to have one more official appointed—probably Mr. S. N. Roy who has already officiated as Communications Member.

* * * * *

Questions of military policy have been engaging considerable attention this week. The presence of General Stillwell has enabled the Viceroy and the Commander-in-Chief to hold consultations with the American General. As is well known the Burma campaign started with great hopes, in fact, at the time, no less a person than the Air Chief told a Press Conference that the Allied forces had decided air superiority and were confident of their strength in Burma. What then is the explanation for the fall of Rangoon and later developments in Central and North Burma? Such forces as were available in Burma gave a good account of themselves, particularly, the Indian Air Force. They were, however, pitted against numerically stronger forces both on land and air, and also more modern equipment. The fact appears to be that American reinforcements of aircraft and other war material did not come in time and also not in adequate quantity for immediate use in Burma against the enemy. Measures have now to be taken to induce the American authorities to speed up their despatches of reinforcements to this country. If as a result of Col. Johnson's visit the required reinforcements are made available to this country without further delay, it may be possible for General Stillwell to take the offensive against the Japanese and try to retake Burma. The need for sending an Indian reperesentative immediately to the Pacific War Council is urgent, for if there is an impression in Washington that the Far Eastern theatre of war is of secondary importance and can afford to wait, something must be done at once to remove this totally mistaken impression.

* * * * *

Rather shaky and uncertain is the position of the Central Government's finances owing to the rapid developments in the war situation. It will not be surprising to be told that Defence expenditure is already over half a crore per day. Income under certain heads like Customs is showing signs of even greater diminution than was indicated in the

*(From Our Correspondent)*

Bombay, May 27.

Just four days ago the motor transport people got many things off their chest. They could easily do so, thanks to the motor union Congress held at Poona. Mr. Nariman had something like a come-back at the Gokhale Hall on Saturday. Sheikh Husamuddin discussed the motor industry's practical difficulties seriatim and did not forbear to ask for sympathy and assistance from Government. There was a complaint about the high cost of spares and accessories, and there was a demand for control of profiteering. There was a request for special encouragement of alternative fuel in the provinces, and the only assurance given by transport enterprise was that evacuees would be helped by its own workers. Much was heard about the wartime importance of road transport. Relief under import control, the enforcement of Motor Vehicles Rules, etc. was asked for by the motor Congress which said that special protection given to railways against road transport was inexpedient. The Bombay Government has probably no specific views, but the I.R.T.D.A. has received strong backing from the Congress which has argued openly that road transport is more important than ever in an emergency.

A new rule about a limit to money orders to Goa was recently framed. There have been notifications to the effect that no sum more than Rs. 70 can be sent to Goa. It is not known if it is meant to save on exchange into escudos or to prevent the export of capital from British India at present or to warn against delay and difficulties experienced of late. The rule is not calculated to help Goanese with family obligations to discharge, and there has been noted in Bombay some discontent on the score that money orders sent from British India are not always paid out to payees there. Somebody has asked why there should be unusual delay and another query put is as regards recall of money orders by the Indian P. O. Naturally there is a claim for repayment of commission in this case. A paper has taken up the question, and found out, first that the Foreign P. O. which deals with money orders to Goa has received 550 complaints so far. It is believed that the Portuguese Indian Post Offices are responsible because if complaints are sent to the Governor-General of Portuguese India, there is payment at the other end. It seems the actual payment can only be ordered by the other Government. The payee has to look for his remedy to the Government of the territory in which he lives. The British Indian Post Office cannot guarantee prompt payment of money orders at present even for sums below Rs. 70 and it cannot recall the money order since the Goa post office is not under its authority. There has been no explanation from Goa, and it looks as if the imposition of a limit on private remittances is likely to help some remitters. Surely there must be some convention, and it is surprising that so far no efforts have been made to assimilate the position to that obtaining in the Indian States. An international convention may or may not apply, but the External Affairs Department's intervention seems called for though it would be open to Goa to refer the authority to the British Embassy and seek redress in Lisbon.

Sir Roger Lumley who has obtained an extension of his term as Governor of Bombay has joined in the food drive. For the Food Week he has signed an appeal to District officers asking for all help in the popular campaign. The Governor's letter is, of course, an imitation of the Bengal Premier's appeal issued last week to his province to take up cultivation of bigger crops. The Governor's letter retails the usual arguments used in the Grow More Food Campaign, and asks for official direction plus popular co-operation. The people most directly concerned are not the villagers, who may or may not grow cotton, as directed, but the citizens of towns who find rice supplies insufficient. It is widely hoped that the spring sowing will be a direct response to the appeal, provided the officers take up the job in earnest. The new restraint on speculation in what should help rather than retard the plans, and the further assurance as regards minimum prices for food crops will certainly help, though efforts made to extend the scope and effectiveness of price control may react on the campaign in an unexpected fashion.

The war front in Bombay has just begun. Mr. Masani wants to carry on educative propaganda in the districts and the start has been made in Guzerat—the most unlikely area for war propaganda. Ten leaders have been chosen (one is Sir D. B. Cooper), who have only to uphold the morale: the rest is done by kindness. The new campaign has eclipsed the war gifts campaign in speed and intensity. The results of the former are the new squadrons which have served in the war against Japan. Another part of the front is the spread of the message of civil defence to the districts. There has been a meeting in Dhulia to get together and arrange about civil defence after an enormous mixed procession had passed. The national front referred to has not been endorsed by Mr. M. N. Roy, who is now a critic of the Government rather than a supporter. He must be surprised to see the name of the weekly paper transferred to the movement sponsored by the Viceroy for his own reason and sought to be popularised through stage plays.

The Millowners Association has issued a long memorandum setting out objections to the recognition of trade views. There is opposition to the suggestion that employers should be found to recognise unions *suo moto*. The proposal to amend the Trade Unions Act is resolutely deprecated. The long letter addressed in this connection traverses the usual arguments, and maintains that where some of the basic conditions of a trade union are not fulfilled, it will not only become a farce, but an irritant, to compel employers to recognise such trade unions, and employers will be forced to deal with a mixed bunch of unions with no useful or practical results. The Employers' Federation was asked to get its members' approval for the Government's proposal about cultivating a liberal outlook. It should not be hard to get up evidence to support the millowners view from the last report on trade unions in Bombay. The movement is financially weak, and still dominated by outsiders. Yet the Government of India think that employers must adopt a liberal policy even if there are doubts about leaders of trade unions. It has been pointed out that experience in Bombay runs counter to these suggestions. Unless the leaders are themselves workers, it is feared that millowners cannot countenance any proposal to recognise unions without distinction. As to the probable results of the proposal the millowners are frankly sceptical. Their letter argues that the time to think of labour legislation is after normal conditions are restored though it does not disapprove of a new law on trade disputes and compulsory conciliation. The millowners are not chary of giving their views as to what unions should be recognised or when and where recognition should be withdrawn. The letter makes suggestions for immediate improvement while indicating that the millowners cannot support the proposal of Government. Other employers will certainly take the cue from this letter.

The oilseeds market here has strengthened continuously. Calcutta may be indifferent to linseed, but Bombay is not, and speculative interest is not dormant. Linseed is now as firm as groundnut and the tone of Jamnagar for both nuts and oil is firming up. The suggestion that the British contract with Ceylon will help oils and seeds generally has been borne out by the smart rise in the rates for coconut and other oils. Soap prices have been raised, and buyers, anxious to lay in a dozen or two, find shopkeepers reluctant to sell a whole box. It is believed that a rise is certain, and quite soon when there are no imported soaps, the Indian soapmakers will get a far larger market at will. There is little doubt that the grow more food business will keep up prices of oil seeds for which the demand should increase owing to the scarcity of kerosene. If somebody invents a really good lamp meant to take vegetable oil there should be a big market for groundnut oil in Western India, where too, kerosene is dear, if salt is abundant.

Investors in steel shares have been definitely cheered by the official survey of recent progress and expanding output. The increase of 50 per cent in output may be due to the coming into operation of a second

steel works, but there is also the assurance that double the peacetime output is in sight. Various shortages limit expansion and that is why the progress appears all the more creditable. Imports of 300,000 tons in a year have to be made good, and in this case, there was the need for departures in production to meet special needs. The demands of munitions production had to be likewise met, and the Indian steel industry's success has already elicited compliments from the U.S. technical mission. The Tisco dividends for 1941-42 are sure to reflect the technical and economic progress recorded in the year. The assurance of external assistance is not wanting, and a great deal more awaits the steelmaker who can count on manganese, chrome and iron ore supplies in abundance. Manganese shares are being persistently talked up here and Bombay investors are also asked to buy the sterling £1 shares of the Central Provinces Manganese Syndicate. There has been the usual caution about plant and personnel, but Dr. Grady's words on leaving India like the precis of his report encourage hope among Tisco sharcholders of all classes. The second preference is again at a premium, and the revival of jobbing has lifted the prices of both ordinary and deferred shares once again.

There was a big labour rally last week. The Indian Labour Federation was responsible for it, and the chief cry was Death to Facism. Support for the democracies was promised as a matter of course. There was a warning against Fifth Columnists. There was another against sabotage. The rally was held to show that fascism is the mortal foe of the working class everywhere. It was a field day for Mr. Jamnadas Mehta who roundly condemned the Japs, and said that the Jap radio was the mouthpiece of the enemy. He did not say there was any objection on the part of workers to dearness allowances for the duration. The National Democratic Union did not withold support from the rally and its Secretary, who got a cable from M. Maisky only recently, inveighed against Fascism in the best Royist manner. There was loud talk of a speed-up in war production, and the national war front should have found the rally a very useful forcing house for its own views as to the demands of war and India's duty.

(*Continued from page 842*).

Budget estimates. One favourable factor is, however, the phenomenal increase in Railway earnings. The first forty days of the current year have shown an increase in Railway earnings to the extent of nearly Rs. 1¾ crores. The first ten days of May it may be remembered that the increase in Railway fares and rates came into effect on 1st May have yielded an increase of more than half a crore in revenue. This is undoubtedly a favourable position, for the Railway Member has budgetted for an income of only Rs. 125½ crores this year as against the previous year's actuals, Rs. 127.60 crores. If the improvement in May may be taken as an indication of the year's total earnings, a bumper surplus of no less than Rs. 45 to 50 crores may be expected this year as against the estimate surplus of Rs. 28 crores. This is certain to be of great benefit to Central revenues this year.

* * * * *

The Supply Department's contracts since the beginning of the war are of the value of Rs. 279 crores. Of this amount, nearly Rs. 172 crores were in last year's account. In March this year, the purchases were of the value of as much as Rs. 22½ crores. According to an official statement, these figures which may be taken as a pointer to the larger volume of orders to be placed during the current year, represent an increase of more than 500 per cent over the monthly average during the first half year of the war. There is still a good deal of complaint, however, that though the volume of purchases has increased tremendously, the advantage has not ben evenly spread throughout the country. Some Provinces, particularly Madras, have been complaining that they have not been receiving as many orders as they have a right to expect. No figures have yet been given of purchase of war supplies made by the Defence Services direct, but they are said to be also "huge totals".

HILL-BIRD.

(*Continued from page 825*).

mined, though there is talk of reconquest of Burma and that sort of thing.

The British Treasury is still helped by cheap money. India, too, is helped by cheap money *plus* the liquidation of external debt. How satisfactory the position remains has been indicated by a detailed analysis of the Hon. Mr. Sarker whose main purpose was to encourage regular investment. Buying defence loans was advantageous in every way and it was a duty of every patriotic citizen was the sum of the survey. It was true that the question of concentrating investment in defence loans has not been dealt with by the Indian Government which has permitted company registration and offers of securities for sale to go on as usual. Surely the time for control of the capital market in the interest of Government came long ago. What has been done in Australia has yet to be attempted in India. Any forced scarcity of new issues would materially assist the stock exchange and help also in procuring more money for the defence loans. Mr. Sarker's statement did not deal with the question of new issues in wartime but was concerned with proving that India's credit is high, her resources ample, and her future assured.

### Calcutta Insurance Results

There are few young life offices with such a consistent record as Calcutta Insurance Ltd. In the first review of its report that appears in this journal, due acknowledgment, at some length, must be made of the prowess of this Calcutta prodigy. Though business conditions are in constant flux the 1941 results illustrate what can be achieved by efficient and economical management. The new business figures show remarkable improvement on the 1940 figures, commendable as they were. In the year ended December 1941 the Calcutta Insurance Ltd. received 1,456 proposals for Rs. 26.09 lakhs and issued 1,221 policies for a total value of Rs. 21.36 lakhs. An increase of over 28 per cent in the war period is more than arresting: it is miraculous. The simultaneous advance in premium income from Rs. 505,726-10-2 to Rs. 5,28,166-7-8 is of less importance than the growth of the Life Fund from Rs. 17.38 lakhs over Rs. 20.74 lakhs. This striking addition is the conjoint effect of a favourable claim experience and a low expense ratio. The revenue account shows that claims by death took Rs. 59,507-1 and those by maturity took Rs. 56,770-14. The total expenses excluding commissions amount to Rs. 86,380-12-10; they are within expectations. The report observes that, during the year, on the basis laid down by the Government of India, the expenses showed a substantial decline and stood at 16.2 per cent as compared with 25.2 per cent in 1940. The decline occurred in spite of a heavy increase in new business. The company's premium income of Rs. 5.28 lakhs was supplemented by interest, dividends and rents less tax totalling Rs. 88,165-15-8. Other receipts totalled Rs. 1,205-10 and the result is the striking addition of Rs. 3.36 lakhs to the Life Fund within a year. Equally impressive is the reduction under outstanding claims, pointing to higher efficiency in administration. The report makes mention of the investment policy, guided in this case by the law. As much as Rs. 13.71 lakhs including, statutory deposits were invested in Government securities. The Rangoon deposit has since been transferred to India, and the bulk of the securities are held on the Calcutta Insurance's account by the Imperial Bank at preesnt. To judge by the distribution of the assets a fairly high percentage has gone into mortgages. The total shown is Rs. 5.22 lakhs nearly and Rs. 2.2 lakhs shown as the total for loans to policyholders is but proof of the service that Calcutta Insurance offers. The due reflection of the Company's readiness to meet all claims is the aptitude of cash balances totalling at end December Rs. 197,625-10-4. There is the classified summary of assets to indicate judgment as to investment policy. In the past this helped the company to provide a bonus at its valuation. It has since helped to expand business to remarkable proportions.

## Resume of Commodity Markets

The present lull in the war situation has had a cheering effect on the jute, hessian and cotton markets and has, to a certain extent, checked the flutter in the foodgrains markets. The rise in bullion prices also has been arrested. In fact, prices for precious metals during the last few days are appreciably lower than the levels at the end of last week.

But, whatever may be the immediate trends in the various markets, the main problem at the moment is that of finding adequate shipping facilities for exports and internal transport facilities for the movement of goods from one centre to another within the country. Of the ability to provide shipping facilities on any large scale nothing can be definitely said at the present moment. It looks as if there cannot be any material improvement in the situation. Shipping in the Bay of Bengal has not been freely resumed and nearly all exports are now effected from Bombay. That in its turn means a congestion of traffic between Bombay and Calcutta.

The absence of proper transport facilities has thus seriously affected the jute and cotton trades. The very small export of jute manufactures has resulted in a reduction in production. Apart from the smaller amount of mill consumption of jute, supplies of new crop are expected to be plentiful next season. Already, the authorities are feeling that it will be impossible to solve satisfactorily the problem of disposing of surplus jute. The low level of stocks in mills' godowns and the uneven distribution of the same may lead to some heavy buying on the part of mills but once the initial buying is over, it will not be possible to check a steep fall in prices. The Bengal Premier said, towards the end of last year, that the Central Government would come to the help of the Bengal Government in their effort to stabilise jute prices if they fell below a certain level. It now remains to be seen as to how the Government propose to help the ryot.

As for cotton, the decline in exports of piecegoods and labour difficulties prevent the possibility of any appreciable increase in cotton consumption. Also with the present freight position, it cannot be expected that there will be any appreciable increase in exports of cotton. It was generally expected at the outbreak of the Japanese war that the shortfall in cotton exports would be made up to a certain extent by increase in exports to U.K. and the U.S.A. This cannot be achieved with conditions as they are. Considerable interest is therefore attached to the "grow more food campaign" and attractive bonuses are offered to cultivators in the Central Provinces if they change over to the production of foodgrains. The reduction in acreage of cotton, if any, can be achieved only in the next season, for, according to the supplementary forecast for 1941-42, the area and the yield of cotton are estimated at 23.547,000 acres and 5,980,000 bales respectively against 23.286,000 acres and 5,903,000 bales in 1940-41.

The dislocation of transport has told on imports with equally adverse results. There is a regular shortage of foodgrains. Formerly, wheat and rice imports made up the deficiency of this country in respect of these commodities. But now with Burma in enemy hands and with the absence of Australian wheat imports, there has been a regular rush for buying these commodities. Local shortages and the delay in replenishing stocks from centres where they are more plentiful have accentuated the rise in prices. It has, therefore, been found necessary to suspend all business in futures in wheat and gram. The Central Government have notified that if there were a similar rise in prices for other foodgrains, futures business will be suspended in their case as well. Resumption of futures business will be allowed at a future date, only if prices showed a favourable reaction and then too only on a regulated basis.

The position in regard to salt in Bengal is very critical and present stocks, it is believed, will not last more than two months' consumption. It is pleasing to note, however, that efforts are being made to bring in supplies from Sind and the Punjab, but the authorities will be failing in their duty if substantial imports of salt are not brought in when the shipping position improves.

The same position exists in regard to sugar in Bombay. It is reported that the Indian Sugar Controller has gone to Bombay to discuss the position with the dealers. Arrangements are being made to get stocks direct from factories to dealers.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 28th May

THE almost total lack of interest on the part of Mills of late in the purchase of loose jute, or jute of any kind, stimulates an enquiry into their probable stock position as regards raw material. Revised estimates and returns suggest that Mills carried into this season at 30th June 1941, stocks to the extent of 40 lakhs of bales. Their purchases out of the current crop are estimated to be in the region of 42 lakhs of bales, making a total of 82 lakhs of bales from which they have drawn their requirements in the current seasonal year, July 1941 to June 1942.

Calculated on their returns of production of manufactured goods up to 30th April this year, mills must have consumed 57¾ lakhs of bales up to that point. With the curtailment of working hours since 18th May, consumption will be somewhat reduced for the balance of the year, but provided no further curtailment of hours takes place, mills total consumption for the period 1st July to 30th June may be fairly accurately estimated at 68¾ lakhs of bales. That is to say out of a visible supply of 82 lakhs of bales (leaving aside for the moment what they may buy between now and the end of the season) Mills will have consumed almost 69 lakhs of bales, leaving a carryover into next season of little more than 13 lakhs of bales, a very small figure compared with what they brought in, and amounting to little more than two months supply, provided consumption remains around the present level. It is apparent therefore at the moment, Mills have overhead little more jute than will carry them past August. But there are other factors to be taken into consideration.

Stocks are not equally distributed nor are they properly balanced as regards quality. It follows that, while some Mills may be able to hold off longer, others will be forced to come into the market at an early date to secure the necessary jute to prevent their stocks falling below the danger mark. And there must be few Mills that will not be in the market very early to purchase good quality jute to balance the preponderance of low grade in their stocks. Another point which will have to be kept in view is that transport from the districts to Calcutta will not be in such free supply as under normal conditions, so many barges, flats and steamers having been requisitioned by the military authorities. Mills cannot therefore rely on such prompt and regular shipments coming forward as would ordinarily be the case, and will have consequently to take a longer view than usual to make themselves secure. Another point that cannot be lost sight of is that it is by no means sure yet what proportion of the regular Marwari Dealers will be working in the coming season. This fraternity normally handle a very large percentage of the crop, and if their ranks are appreciably thinned, it is questionable to what extent the European Balers, by extending their activities, could make up the deficiency. It must be remembered that in normal circumstances, the Marwari taps large areas of Jute production which are scarcely touched by the Europeans. It would appear inevitable therefore that Mills cannot keep out of the market much longer. So far little interest has been evinced in the purchase of New Crop Jute, so little in fact that there is at present no quotation for New Crop which could be substantiated as anywhere near what buyers would be likely to pay. On the other hand, offerings of old crop are not of the type to tempt many buyers, being mainly of low quality, Bottoms and Cross mark. Everything points to New Crop imports being in the market at an earlier date than usual and there is every reason to hope that the percentage of good quality will be higher than it has been for some seasons. At the same time, the position as set forth above, indicates that Buyers should be interested as soon as New Crop imports begin to show in workable quantities, and that such interest is likely to be steadily maintained for some considerable time till the Mill stock position in raw material is more secure, both from a quantity and a quality point of view.

The above is the short term view of the situation. To take a longer view, there is certainly more jute in sight in the coming season than there seems likely to be a market for. Export trade is virtually at a standstill with few ships in the port and unless this side of the situation shows marked improvement in the early future, it seems inevitable that Mills will have further to curtail their production, owing to continued accumulation of stocks of manufactured goods. The position also vitally affects the export of raw jute. So the longer view points to an ultimate fall in price of the raw material unless some steps are taken to support it artificially. It is understood that when the increase of the licensed acreage for jute this season was decided on, the decision was taken in consultation with the Central Government, which promised support to any scheme for the maintenance of prices, should this step prove to be necessary. The licensed crop for Bengal last season was officially estimated to produce 42½ lakhs of bales though unofficial estimates made the figure larger. In the coming season the outturn promises to be at least doubled, as in most districts the licensed area has been fully sown and the conditions point to a heavy yield. It is likely therefore that Bengal will show a yield of from 85 to 90 lakhs of bales, while other Provinces will add another 12 lakhs, making a total crop of at least 100 lakhs of bales. With exports of raw jute curtailed to somewhere in the region of 12 lakhs of bales in the most favourable circumstances, it is obvious that, unless local mill consumption can be maintained in the region of 70 lakhs of bales, the prospects of a heavy surplus might have, eventually, a catastrophic effect on prices. The question is, how can such a position be avoided.

In Season 1940-41 when an excessive surplus was in view, the situation was to a large extent saved by the co-operation of the Mills in buying well beyond their requirements of raw material and carrying much in excess of their normal stocks of jute. As an alternative to this we would advert to a suggestion already voiced in these columns that a scheme would be evolved for Mills to manufacture and stock, with Government aid in the matter of finance, manufactured goods of standard descriptions which will most certainly be urgently required, as soon as hostilities cease, for the transport of foodstuffs etc. to the distressed and occupied countries of the world. A scheme of this description would have manifold advantages. It would in the first place provide a pool of goods which will certainly be urgently required sooner or later. Such a pool would prevent any undue rise in the price of containers which a sudden demand would undoubtedly provoke unles this precaution is taken. The scheme would keep Mills fully employed to the extent of the available labour supply. It would avoid labour troubles such as might easily follow drastic restriction of working hours. And it would provide sufficient offtake from the visible jute supply to prevent any serious drop in the price of jute and thereby safeguard the interests of the cultivators.

There is little to comment on in the markets. The only business reported in Export Jute was a further order placed for Russia at Rs. 48 for Firsts, Rs. 38 for Lightnings and Rs. 48 for Outport Tossa. Shipment of Baled Jute to Bombay is still under suspension.

In Loose Jute a small business has been going on in Indian District Tossa Mids and Bottoms at from Rs. 9/- to Rs. 9-4 and Rs. 7 to Rs. 7-4 respectively. Estimated arrivals for the first half of May are 1,12,000 B/s against 2,99,000 for the same period last year. Total arrivals from 1st July to 15th May now amount to 55,53,000 B/s compared with 84,59,000 last season.

Reports from the districts are generally favorable, and the crop is making good progress. Weeding is either finished or nearing completion. Rivers are just about normal for the time of year.

In the Fabrics section, Hessian has engaged little interest except wide cloth for the country trade. 45/11 oz. has sold at Rs. 222 to Rs. 22-4 ready and 50/10 oz. at Rs. 19-4. Nominal quotations for nine porters ready, Rs. 13-10 and for elevens, Rs. 17-8, but no export demand. In the Heavy Goods section there has again been a good demand for "B" Twills which have advanced from Rs. 39-8 to Rs. 40 ready, and Rs. 39-8 also done for early June. Liverpool Twills sold at from Rs. 39-8 to Rs. 40-4 ready, Union-sewn "A" Twills at Rs. 43-8 to Rs. 44-8, and Heavy Cees plain at Rs. 35-8 to Rs. 36-8, all for the country trade. Business in these descriptions is now restricted by scarcity of sellers.

## JUTE

Calcutta, May 28.

Early this week, livelier conditions were noticeable in the jute market. Mills came in the market as buyers but during the last three days, no business of any importance has been recorded. Some transactions have been reported in low grades at unchanged rates. Sellers are willing to start business in new crop with a view to stabilising rates but mills have so far shown no disposition to enter into fresh commitments. Crop reports have been very satisfactory and with the present weather conditions in the mofussil, it is generally expected that th size of the new crop will be double that of last year. Mills would like to wait for a longer time to bring about a further reduction in prices as there is no fear of any shortage of supplies but there is some anxiety to lay in stocks as a rush to bu" at a later stage may result in serious transport difficulties.

In the loose jute section, Indian Jat Middles, Bottoms and Crosses were sold at Rs. 9-12, Rs. 5-8 and Rs. 3-12 respectively. Earlier in the week, mills bought Tossa Middles and Bottoms at Rs. 9-4, and Rs. 7. Balers bought European District Tossa Tops and Middles at Rs. 11-4 and Rs. 10 per maund respectively.

In the pucca bales section, shippers have been inactive. No export business is now possible except to U. K. and even for this country it is difficult to get freight allotment.

## JUTE MANUFACTURES

Calcutta, May 28.

The jute manufactures market has been rather quiet during the latter half of the week. The demand for hessian from Bombay has subsided and the enthusiasm over the encouraging stock and consumption figures for April for the United States has cooled down. The demand is there, but the main difficulty is in getting transport facilities. 9 porters ready are now quoting Rs. 13-12, June Rs. 13-12, and July/September Rs. 13-10 against Rs. 14-4, Rs. 14-4 and Rs. 14-2 respectively.

In the heavy goods section buying continued to be in evidence, B. twills for May delivery being sold on the basis of Rs. 40, Liverpool Twills for the same position at Rs. 40-4, and Cornsacks at Rs. 40-4. There is a rise of nearly one and a half points over last week's quotations.

The consumption figure for April is the highest since 1937, the figure at 68 million yards showing a rise of 3 million yards over the previous month and 13 million yards over the corresponding month last year. Usually, there is a decline in consumption in April. The improvement in consumption, therefore, is only indicative of the anxiety of consumers to lay in stocks as with the present shipping difficulties, there cannot be any certainty regarding future supplies. Stocks spot were 100 million yards, showing a reduction of 34 million yards over the previous month. The sharp decline in stocks spot is due to the low level of shipments. Stocks afloat were only 90 million yards against 118 million yards in March. Total stocks, therefore, are not even enough for three months' consumption.

## GOLD

Calcutta, March 28.

The firmness of the Bombay gold market last week was due to heavy buying by a well-known Indian firm. There was general anxiety also regarding the war situation and prices as such recorded a sharp rise. During the past few days, however, there have been no interesting developments and quotations are slightly lower on balance. There is a general tendency to await further developments. Gold ready closed at Rs. 48-8 and First Settlement at Rs. 48-7 against Rs. 49 and Rs. 48-11 at the end of last week. The narrowing in the premium for ready over First Settlement indicates that buying has been satisfied.

## SILVER

Calcutta, May 28.

The silver market also has been easier and most of the gains have been lost. The drop in prices has been pronounced towards the close. Business transacted during the week has been on a very small scale. Indian Mint Silver ready closed at Rs. 80-8 and First settlement at Rs. 77-12.

In the London market the quotation for both spot and forward has remained unchanged at 23½d. Moderate trade demand has been officially satisfied.

## COTTON

Calcutta, May 28.

Fears of long liquidation by bulls and the reports regarding the unsatisfactory nature of Broach staple have been responsible for the irregular tone of the Bombay cotton market during the past week. There was a rather sharp decline in prices early in the week particularly in Broach July/August. Only the rally towards the close has reduced the losses. Broach July/August were Rs. 181-8, Bengal July Rs. 145 and Oomra July Rs. 165-8.

In the New York market also rather irregular conditions were noticeable. Quotations are lower on balance. There has been some hedge selling. The quotations for July were 19.14 cents and October 19.42 cents.

## PIECEGOODS

Calcutta, May 28.

The local piecegoods market was inclined to be rather active early in the week though slightly easier conditions were noticeable towards the close. Mills have done good business in standard lines. There has been an increase in enquiry from upcountry centres. Business has been done in Japanese styles at advancing rates.

The yarn market has been more active after being dull for some time. There is good demand for imported yarns which are in short supply. Indigenous yarns have met better inquiry at steady rates.

## WHEAT

Calcutta, May 28.

The persistent rise in prices for wheat in recent months in spite of the control measures adopted by the Government of India has given cause for considerable anxiety. Speculative activity, in the Government's opinion, has been mainly responsible for the sharp rise in prices. It has therefore been decided that all futures business should be suspended in wheat and gram. Resumption of business in futures would be considered only when prices decline to a satisfactory level. But even if futures business were resumed, it would be on a regulated basis.

A similar procedure may be adopted in the case of other food-grains also if it was found that prices were being pushed up unduly by speculators.

## BALMER LAWRIE ACCOUNTS FOR 1941

RATHER cheerful conditions have been noticeable on the Calcutta Stock Exchange during the latter half of the week though business has not shown signs of any large expansion. It can however be said that with the continuance of the present conditions an early improvement in prices will be recorded. The strength of the giltedged securities section and the selective buying of equities are definite indications of returning confidence. Sugar, Cotton and Engineering shares have been well enquired for. Only in the jute section investors have not shown much interest and that is perhaps due to the uncertain immediate outlook.

• • • • •

As a result of a very satisfactory year's trading *Balmer Lawrie & Company Limited* has been able to report a substantial increase in the earnings for the year ended December 1941. Owing to the intensification of the war effort, and a sustained demand for goods and services, the various departments were exceptionally active, according to the report. The Engineering department was very fully employed while the demand for paper considerably exceeded the supply. The Tea and Coal departments also experienced a good year.

The net profit, before providing for taxation and depreciation, for the year is Rs. 38,96,963 against Rs. 22,33,673 for the previous year. The greater portion of the increase in earnings has naturally been absorbed by the higher provision for taxation which is Rs. 23,81,942 against Rs. 10,58,169. With the balance left over, it has been possible to declare a higher dividend on both ordinary and deferred shares, the ordinary dividend being 20 per cent and the deferred dividend 15 per cent including a bonus of 7½ per cent in both cases. The amount set aside to depreciation is Rs. 66,148 against Rs. 33,350. The allocation to Stock Reserve is Rs. 1,75,000 (Rs. 95,356) while the provision for bad and doubtful debts is Rs. 25,202 (Rs. 29,598). The sum of Rs. 3.5 lakhs has been utilised towards writing off goodwill. There was a transfer of Rs. 1.5 lakhs on the last occasion to General Reserve. With the transfer of Rs. 6.5 lakhs from General Reserve, it has been possible to write off the goodwill of Rs. 10 lakhs.

At the present quotation of Rs. 325, the yield is more than 6 per cent tax-free. Under ordinary circumstances the quotation should be substantially higher.

• • • • •

It could not have been possibly anticipated that there would be such a big increase in the earnings of the *Indian Galvanizing Company Limited*. The extensions to plant in recent years have considerably enhanced the earning capacity of the company. As the workshops were employed at maximum capacity throughout last year, it has again been necessary to purchase a large amount of special equipment for war contracts placed with the Company. Large stocks of spelter, drum fittings etc. also had to be purchased. It is unfortunate, however, that it has not been possible to increase the distribution to shareholders. The low level of profits for the standard period has made a large provision for taxation including Excess Profits Tax necessary. Moreover, the directors have thought it advisable to provide for a larger depreciation. Thus, out of the net profit of Rs. 13,44,032 (before providing for taxation) for the year ended December, 1941, against Rs. 5,43,277 for the previous year, Rs. 9,15,000 (Rs. 2,77,000) is provided for taxation. The amount set aside to depreciation is Rs. 1,50,565 (Rs. 1,09,988) while the transfer to General Reserve is Rs. 25,065 (Rs. 50,000). The sum of Rs. 75,000 against Rs. 16,845 has been allocated to Stock Reserve. The dividend has been only maintained at 20 per cent. The amount carried forward is slightly higher at Rs. 40,164 against Rs. 36,321 brought in. According to the report the Company sold during the year, its investments in Government loan and the profit realised viz., Rs. 24,935, was transferred to the credit of Reserve Account.

• • • • •

*The Saran Engineering Company, Limited* is perhaps one of the few companies which have not benefited to any great extent by the present emergency conditions. The results for the year ended March, 1942 show a slight increase in earnings over those for the previous year, but the improvement is in significant when compared with the results of the Indian Galvanising Company Limited, discussed above.

The net profit, before providing for taxation and depreciation, for 1941-42 is Rs. 1,77,507 against Rs. 1,41,736 for 1940-41. The provision for taxation is Rs. 55,500 (Rs. 40,000) while the charge on account of depreciation is Rs. 20,000 (same). The transfer to General Reserve is unchanged at Rs. 25,000. The sum of Rs. 10,000 is placed to Renewals and Improvements Reserve in addition. The dividend has been maintained at 18¾ per cent. The amount carried forward is Rs. 28,622 against Rs. 17,865 brought in.

• • • •

As one of the biggest tea companies in India, the results of the *Hasimara Tea Company, Limited* are always awaited with interest. With the loss of the Netherlands East Indies, Indian tea has acquired special importance. The entire quantity of Indian tea supplies is needed by the Allies.

In spite of higher costs of production and a smaller crop, it has been possible to report a substantially higher level of earnings in view of the high level of prices secured at the sales for internal consumption. Trade conditions were very favourable throughout the year.

The net profit, before providing for taxation and depreciation, for the year ended December 1941 is Rs. 12,22,064 against Rs. 8,58,404 for 1940. The provision for taxation is Rs. 2,86,845 (Rs. 80,369) while the total allocation to funds is Rs. 8,81,420 (Rs. 2,70,060). The final dividend along with the interim dividend of 7½ per cent already paid makes 32½ per cent for the whole year against 30 per cent for 1940. The amount carried forward is considerably higher at Rs. 1,78,344 against Rs. 1,45,545 brought in.

• • • • •

If money does not talk, it does nearly everything else. That is why the rise in the Bengal Central Bank's deposits from Rs. 85.78 lakhs at the end of 1939 to Rs. 159.18 lakhs at the end of 1941 is the best index

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

Calcutta, May 29.

A DEFINITELY firmer tendency has been noticeable on the Calcutta Stock Exchange during the past week. Sellers seem to be rather reserved and asking higher rates. The lull in the war situation and the hopes that Calcutta may not be bombed for sometime yet have been responsible for the improvement in the general sentiment. While the reserve of sellers has to a certain extent prevented business from being put through the transactions recorded during the week are still on the small side. Attendance on the floor has been more satisfactory and several brokers have returned to the City. The strength of the giltedged securities section has been mainly responsible for the steadier feeling in the several sections. There has been good demand for Cawnpore cotton shares with no sellers in evidence. Sugar shares also continue in favour. In the Engineering section Indian Irons and Steel Corporations have been marked further higher.

The giltedged securities section, as remarked earlier, has been very steady during the week and there has been a further rise in prices. Money conditions have continued easy and the treasury bills rate has come down further to one rupee three annas per cent per annum from one rupee three annas and eight pies per cent per annum. 3 per cent. Paper was noted at Rs. 77-12 and 3½ per cent. Paper at Rs. 91-11. Among terminable loans, there has been continued enquiry for short and medium-dated loans. 3 per cent. Second Defence Loan and 5 per cent. 1945/55 have been well enquired for. 3½ per cent. 1947/50 changed hands at Rs. 101-3, 5 per cent. 1945/55 at Rs. 107, 4 per cent. 1943 at Rs. 101-13, 3 per cent. 1946 at Rs. 100-8, 4 per cent. 1960/70 at Rs. 104-14 and 4½ per cent. 1955/60 at Rs. 109-8. Among provincial loans, 5 per cent. U. P. 1944 were dealt in at Rs. 103 and 3 per cent. U. P. 1952 at Rs. 93-12.

Bank shares have been firmer with *Reserve Bank* quoting Rs. 99 and *Imperial Bank* contributories Rs. 378.

There has been good demand for Cawnpore shares in the Cotton section with no sellers in evidence. *Elgin* have been bid up to Rs. 32. *Cawnpore Textiles* were Rs. 9-4, *New Victoria* Rs. 5-6 and *Bengal-Nagpur* Rs. 17-4.

No business has been reported in the Coal section.

In the Jute section not many transactions have been recorded in equities Nuddea were unchanged at Rs. 58 cum-dividend. *Kelvin* were Rs. 455.

In the Engineering section *Indian Iron* and *Steel Corporation* have registered a further rise to Rs. 24-5 and Rs. 15-5 respectively. Earlier in the week *Britannia Engineering* were noted at Rs. 11.

There are few sellers of Sugar shares. *Raza* and *Buland* were noted higher at Rs. 27-12 and Rs. 28 respectively while *Champarun* were put through at Rs. 21-12.

Tea shares were neglected earlier in the week but during the last two days a few transactions have been recorded. *Rydak* were Rs. 64, *Teen Ali* Rs. 14 ex-dividend and *Ethelbari* Rs. 12-12 cum-dividend.

In the Miscellaneous section, *Indian Copper* were higher at Rs. 1-14. *Balmer Lawrie* came in for attention with the publication of encouraging results for the year ended December, 1941. Among Paper shares, *Shree Gopal Paper* were Rs. 16 and *Star Paper* Rs. 15.

No transactions have been recorded in public bodies' debentures. Among industrial debentures, 5¼ per cent. *Rohtas Industries* debentures were Rs. 104 and 5½ per cent. *Dalmia Cement* debentures Rs. 104.

Many transactions have been recorded in jute mills preferences. *Auckland* were Rs. 120, *Dalhousie* Rs. 131 cum-dividend, *Empire* Rs. 125, *Howrah 'A'* preferences Rs. 121-8, *Kelvin* Rs. 133 and *Standard* Rs. 110. Among other sections, *Alkali and Chemical* were Rs. 106-8, *B. I. Corporation* Rs. 170, *Cawnpore* Rs. 162 and *Patrakola* Rs. 127 ex-dividend.

## BOMBAY STOCK EXCHANGE

*(From Our Correspondent)*

Bombay, May 28.

The local Stock Exchange remained closed early in the week for two days. Even on the days it was open not much of business was transacted. Very little interest was in evidence in all the sections.

The official announcement of the end of the Burma campaign and the sudden flare-up in Libya though anticipated may be expected to influence considerably the trend of the Stock Exchange in the coming week.

During the week under review prices fluctuated within narrow limits. Textile issues, however, maintained the steady rise in prices that was in evidence at the close of the last week.

The fact that the steady tone of giltedged continues to be maintained clearly demonstrates the firm faith in the strength of the Allies to achieve victory in the end.

*Securities.*—Government securities still remain as the main attraction of the local stock exchange. The steady tone noticed last week continued to be maintained this week also, 3½% Government Paper closing slightly higher at Rs. 91-1.

Among terminable loans short-dated issues were in good demand consequent on the growing confidence in the United Nations' ever-increasing strength. The prices were: 1948-52 Rs. 95-7; 3 per cent 1941 Rs. 97-14; 3 per cent 1951-54 Rs. 96-10; 3 per cent 1963-65 Rs. 90-12; 3½ per cent 1947-50 Rs. 101-6; 4 per cent 1943 Rs. 101-13; 4 per cent 1960-70 Rs. 104-14; 4½ 1955-60 Rs. 109-8; 5 per cent 1945-55 Rs. 107-2; 3 per cent 1946 Defence Loan Rs. 100-8.

*Textiles.*—In this section there is a pause in the rise reported last week. *Indian Bleaching* which showed an increase of Rs. 25 at the time of last writing are now quoting around Rs. 158, while *Central India* are unchanged at Rs. 338. *Bombay Dyeing*, however, are higher at Rs. 1,132-8.

*Steel.*—There has been some profit-taking at the higher levels and a slight recession in prices has been recorded. The rumours regarding the possibility of lower dividends have perhaps been responsible for the easier feeling. *Tata Steel*, both deferreds and ordinaries which rose up to 1,475 and Rs. 284 respectively now have come down to Rs. 1,425 (1420), Rs. 275-8 (273).

*Hydro-Electrics.*—The improvement reported in this section has been maintained. *Andhra Valley* are again higher at Rs. 1,590. *Tata Power* are also higher at Rs. 1,487, while *Tata Hydro* are slightly higher at Rs. 165-8.

*Miscellaneous.*—From Rs. 445 cash, which was 30 points higher than the previous week, *Alcock Ashdown* were again 27 points higher at 472-8. *Belapur Sugar* remain unchanged at Rs. 239.

---

*(Continued from previous page).*

of the progress that characterises Bengal's senior Bank. It was enough for Mr. J. C. Das to indicate to the shareholders that Mr. N. R. Sarker's hope of a new era after 1940-41 was fulfilled in ample measure. The increase in profits and the greater liquidity, reflected duly in the accounts and balance-sheet, are enough to distinguish the new era that commenced appropriately enough after the Bank was 21 years old. Points in the balance-sheet were discussed with an accountant's insight, and Mr. Das made only two points, remarkably important from the point of view of depositors and shareholders alike. There is no charge of any kind on the securities held and the greater part of advances are easily realisable. There was an assurance of greater prudence and greater skill in management—hardly necessary when Mr. Das is at the helm.

*Audited Accounts for the year ended December, 1941:—*

Owing to the intensification of the War effort and a sustained demand for goods and services the Company experienced a year of exceptional activity.

The Engineering Department continued to be fully employed while the demand for Paper considerably exceeded the supply. The company had a good year in both the Tea Departments and the results of the Coal Department were satisfactory. Necessary restrictions on Imports and shortage of Railway wagons tended to curtail business in certain lines, but there was a very satisfactory year's trading.

| | Rs. | A. | P. |
|---|---|---|---|
| The profit for the year, after providing for Taxation was .. .. | 13,23,313 | 15 | 0 |
| To which is added the balance brought forward from 1940 of .. .. | 4,55,417 | 12 | 5 |
| And a contribution from the Reserve Fund towards the writing off of Goodwill of Rs. 10,00,000 .. .. .. | 6,50,000 | 0 | 0 |

| The Directors recommend payment of the following dividends:— | | | |
| Rs. 3-8-0 per share on the Preference Shares | 70,000 | 0 | 0 |
| Re. 1-12-0 per share on the Ordinary Shares | 2,88,750 | 0 | 0 |
| Carrying forward in Profit and Loss Account | 1,02,800 | 15 | 9 |
| Total .. | 4,61,550 | 15 | 9 |

Jute Stocks have been valued at or under cost price and stocks of goods at contract rates.

In accordance with the Indian Jute Mills Association's Working Time Agreement the Mills worked 50 hours per week up to 11th October, 54 hours per week up to 8th November and 60 hours per week thereafter.

The proposal to make a donation of Rs. 9,000-0-0 from the Company's assets to the East India Fund for British War Services, which is to be placed before the Shareholders in the form of a Special Resolution to be moved at the Half-yearly Ordinary General Meeting, is one which has the recommendation of the Committee of the Indian Jute Mills Association. In view of the present International situation, the directors do not feel that any further explanation of this proposal is necessary and they recommend its acceptance.

## ASSAM BENGAL CEMENT COMPANY, LIMITED

*Audited accounts for the year ended* 31*st March*, 1941:—

The total number of shares issued and allotted up to the 31st March, 1941, is 2,47,179 Ordinary and 3,29,117 Deferred representing the total face value of Rs. 28,00,907 and Debentures worth Rs. 10 lakhs have also been allotted. A further lot of Debentures worth Rs. 15 lakhs is awaiting allotment. The Directors, however, wish it to be made known that they decided not to accept further application for shares from the public from the 23rd August, 1941.

From the audited accounts it will be seen an adjustable item of debit is carried to the Balance Sheet amounting to Rs. 1,071-4-6, which includes depreciation on quarry machineries as well Royalty, Protection fee, etc., paid to the Government of Assam.

*Factory.*—During the year ending 31st March, 1941, construction and erection of the Factory proceeded satisfactorily. The Directors, however, are pleased to inform you that since then and uptil the time of writing this report, the construction of the factory has been thoroughly completed and preliminary operations started from the middle of July, 1941. The Directors are further pleased to inform you that the Factory at Chhatak is now in full operation and the products are now placed in the market.

From the various analytical reports in hand showing the results of analysis made both in the laboratory as well as by outside agencies, it can be claimed that the quality of the products, popularly known as "Diamond" brand Cement, is in no way inferior to that of any of the superior quality of Cement now available in the market.

The eagerness displayed by the dealers and consumers, within the province as well as outside the province, for securing Cement and the reception given to it by the various customers fully assure the future of "Diamond" brand Cement which stands for quality.

*Quarries.*—The Quarries at Komorrah are now in full working operation being equipped with drilling and blasting plants. During the last two years, viz., 1940 and 1941, large quantities of limestone have been sent from Quarries to the Factory and there is now a very large stock of limestone at the factory site.

# BENGAL CENTRAL BANK, LTD.

## 1941 INAUGURATES NEW ERA

### CONSIDERABLE INCREASE IN DEPOSITS

*Presiding over the Twenty-third Ordinary General Meeting of the Bengal Central Bank Limited, held on the 23rd May, 1942, at the Registered Office of the Bank, in Calcutta, Mr. J. C. Das, Managing Director of the Bank, said:—*

Our Chairman, Mr. Satish Churn Law being unavoidably absent the responsible duty of presiding over this meeting has fallen on me.

With your permission, I shall take as read the Directors' Report and the Audited Accounts of the Bank for 1941, as these have been in your hands for the usual time.

Before I analyse the salient features of the accounts for the last year I may be permitted to refer to the changes in the Board of the Bank. Mr. Nalini Ranjan Sarker, who was the Chairman of the Bank and presided at last year's meeting and whose acceptance of a seat on the Board may be said to have inaugurated a new era for the Bank, was invited to join the Viceroy's Executive Council; and, while it has been a great loss to us, we have personal reasons to feel happy that his presence in the Central Executive Council has already proved a great gain to the country. The Hon'ble Mr. Sarker was the Chairman of the Bank only for a short while. But he was a Chairman long enough and, as everyone knows, he was so forceful a personality as a Chairman, that he had already played a decisive role in ensuring a bright future and more enlarged activities for the Bank. On behalf of the Directors, and particularly, on my own behalf, I wish to place on record our deepest gratitude for the most valuable support which he gave to this institution.

In the vacancy caused by the retirement of the Hon'ble Mr. Sarker, Mr. N. Dutta, the Secretary of the Hindusthan Co-operative Insurance Society Ltd., was invited to join the Board; and we are grateful both to Mr. Dutta and to his company for this great accession of strength.

During the year under report, I was asked by the Board to accept the position of Managing Director of the Bank. In agreeing to the proposal, I was conscious of the responsibility that I was undertaking, especially during conditions in which the proximity of war to this country raises more and more complicated problems. During the few months I have been the Managing Director of the Bank, I have been fortunate in receiving a widespread measure of support and confidence which have made my task easier and directly contributed to the increasing progress of the institution during 1941.

Presiding at the annual general meeting last year, Mr. Sarker said: "From the indications available, I think one may reasonably hope that 1940-41 may well mark a new starting point in the progress and development of the Bengal Central Bank." I am happy to be able to report that that hope has been fully realised. By every criterion, the progress of the Bank in 1941 is gratifying. Even after making substantial allocations towards bad and doubtful debts, the Bank's profit for 1941 has been more than that of 1940 and the intrinsic position of the Bank in this regard has been greatly strengthened. Substantial additions have also been made to the Reserve Fund.

From the following comparative table, it will be obvious that the Bank has the confidence of the public:—

| | Deposits | Share Capital |
|---|---|---|
| 1939 .. | 85,78,037 | 5,66,830 |
| 1940 .. | 1,06,56,111 | 6,19,853 |
| 1941 .. | 1,59,17,879 | 7,43,394 |

With the considerable increase in deposits, it has been necessary to exercise increasing care and vigilance about investments as well as to maintain the maximum liquidity desirable.

Cash in the till and cash balances with other banks amount to Rs. 35 lakhs and are 22 per cent of the total deposit liabilities. The market value of the Bank's holding in Government securities amount to Rs. 43,96,000. This along with the other stock exchange securities, which are below Rs. 1 lakh, form 28 per cent of deposits. Taking cash and government securities together, these form more than 50 per cent of the deposit liability.

There are two important observations I should make in this context. The securities we are holding are entirely free from any pledge. Secondly, a good part of our loans and advances is in such a form that they can be easily realised. This goes to underline and emphasise the liquidity of the assets.

Apart from my being unequipped for planning a general financial survey as part of the presidential speech—for, I am and I have always been, a banker and been brought up and taught to mind my own business—such a survey is rather out of place amidst present conditions which suffer kaleidoscopic changes due to the direct entanglement of India as a theatre of war. Arising from this development, there has been noticeable, particularly in the last few months, a definite tendency on the part of the depositors to transfer their funds from foreign institutions to Indian institutions. I must readily own that most of the foreign banks operating in India are well built financial structures and that the transference of the affections of depositors to Indian banks can in no way be a reflection on their financial stability. This is a development, however, which Indian banks must take full advantage of; and, what is more, they must prove that they are worthy and deserving of increasing support. I, for one, consider that the great measure of support which Indian institutions are now receiving emphasises a greater measure of responsibility on the executives of Indian Banks.

We will be failing in our discharge of that responsibility if we are not more vigilant than ever of the funds entrusted to our charge and if we do not maintain and even improve the quality of the services we render.

The war is at our door. The future is uncertain. The depositors and the general public are naturally feeling very nervous as to how the Banks would react to any emergency that may arise. I am sorry to say that the steps as far taken by one or two banks—important as they are—have strengthened the feeling of uncertainty. I would, however, assure all our friends, patrons and constituents that, whatever happens, the Bengal Central Bank will "stay put" and will continue its activities at each of the places where it has a Branch. The depositors have stood by the Bengal Central Bank; and I wish to assure the depositors that the Bengal Central Bank will stand by them and that the Bank is prepared to render not only the old services but such new services as the new times may demand. The Bengal Central Bank is only about 25 years old and there are much older and larger Banks who also should make a clear declaration to the above effect which will undoubtedly help in removing the uncertainty from the minds of the public.

(*Continued from page 852*).

*Ropeway.*—Considerable progress has also been made towards the construction of the Ropeway from Komorrah to the Factory covering distance of nearly 10.2 miles. The Company is greatly indebted to the Government of Assam for the assistance and support in this connection and the land required for the construction of the Ropeway has been acquired by the Government of Assam for the company. It is expected that within a short space of three months one section of the Ropeway will be put in operation. Messrs. British Ropeway Engineering Co., Ltd., have succeeded in delivering almost all parts and machineries required for the Ropeway and the construction of the Ropeway is under progress with their co-operation.

*Collieries.*—The collieries are giving the expected output. Arrangements for transport of Coal have also been made and coal from the Company's own mines is now daily transported to the factory.

*Managing Agents.*—The Eastern Corporation Ltd.

**Insure and Increase Nation's Strength**

Financial Independence of the individual is the measure of Nation's Financial Strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

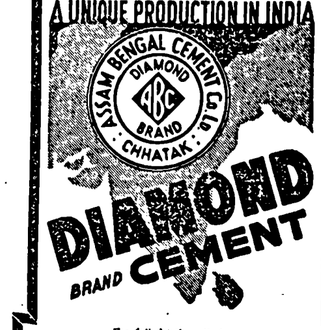
## WORLD OF INDIAN FINANCE

Friday evening.

PLETHORIC conditions have prevailed in the short loan market, interbank call money going abegging at ¼ per cent. Cash is piling up in the hands of banks and the latest figure of deposits of member banks with the Reserve Bank exceeds Rs. 56 crores, showing a sharp jump of Rs. 4½ crores. Applications for tender treasury bills reached the high watermark of Rs. 6,88½ lakhs; and the offer of tender bills for next week is for Rs. 4 crores—the biggest offer on record for tender bills. The average discount rate of treasury bills shows a substantial decline from rupee one and annas three to rupee one anna one pies seven per cent per annum. The Imperial Bank establishes another new record for deposits at Rs. 129.12 crores. The investment portfolio of the Imperial Bank has touched the high level of Rs. 75½ crores. Active note circulation in India establishes a new record at Rs. 431.84 crores. A further large payment has been received by the Indian Government from the British Treasury; and it is quite on the cards that the next week's return of the Reserve Bank will disclose the receipt of more sterling payments on account of inter-governmental transactions. By all tokens, the slack season of this year should prove exceptionally slack.

With reference to the specially large sales of intermediate treasury bills in the last week for over Rs. 7½ crores, we wrote as follows: "Judging from the heavy sales of tap bills now announced, from the somewhat modest applications for tender bills received on May 26, and from the present notification regarding the suspension of sales of tap bills, we may infer that the big total for tap bills this week is largely accounted for by purchases of the Imperial Bank. The Imperial Bank might have had an inkling of the impending suspension of sales of tap bills; and, anticipating a progressive decline in the treasury bill discount rate, the Bank must have taken up a big slice of tap bills. The return of the Imperial Bank for the week ended May 29, provide confirmation of our view."



The statement of the Imperial Bank for the week ended May 29, shows a rise of over Rs. 2 crores under investments from Rs. 73.24 crores to Rs. 75.45 crores. That is to say, the Imperial Bank must have taken up treasury bills for nearly Rs. 2¼ crores in addition to the bills which might have matured during the week under review. The deposits of the Imperial Bank continue to increase rapidly; and, as on May 29, the deposits stood at Rs. 129.12 crores as against Rs. 126.86 crores on May 22. The cash balance of the Bank is as high as Rs. 27.64 crores; and it is obvious that the Imperial Bank is in a position to lend increasing support to Treasury bills. The total treasury bills outstanding in the hands of the public are now Rs. 51½ crores.

The returns of the Reserve Bank for the week ended May 29, reflect receipt of part of the usual month-end payment by the British Government. Foreign balances in the banking department are higher by Rs. 13 crores and now stand at Rs. 66.65 crores. In broad terms, it may be assumed that payment made by the British Government to the Indian Government in the week ended May 29, is of the order of Rs. 13 crores. It is quite obvious that the next return shows a further large receipt. As we pointed out recently in this column, the money payment by the British Government is now averaging Rs. 30 crores. It is not, therefore, unlikely that anything like Rs. 15 crores is received by the Indian Government in respect of the settlement of May accounts. As a result of the large sterling payment, the Central Government's deposits with the Reserve Bank have gone up by Rs. 4.52 crores and now stand at Rs. 14.86 crores. Burma Government's deposits are slightly lower at Rs. 73.72 lakhs. The deposits of provincial governments show a rise of Rs. 4½ crores against Rs. 2.71 crores to Rs. 6.71 crores. As already stated, deposits of member banks have risen by Rs. 4.49 crores to Rs. 56.09 crores. Ways and Means advances have declined only by Rs. 26 lakhs from Rs. 3.40 crores to Rs. 3.14 crores. Considering that the Central Government's deposits are nearly Rs. 15 crores, one would have thought that the ways and means loan would have been liquidated in full. That the Rs. 3 crores, is possibly due to the fact that ways and means advance still stands at over the sterling payment from the British Government may have been received late on May 29. The next week's return of the Reserve Bank should see the ways and means advance entirely paid off and a further increase in Central Government's deposits. The return of the Reserve Bank for the issue department shows no changes on the asset side. On the liabilities side, legal tender in Burma has declined by Rs. 2.56 crores, while legal tender in India has gone up by Rs. 3.57 crores. It may be concluded that a considerable parcel of Burma notes had been presented to the Reserve Bank for transfer into British Indian notes.

The 5 per cent 1942-47 loan is shortly to be repaid; that this will not make much difference to the giltedge market or to money market as the total amount outstanding in respect of this loan is only Rs. 30 lakhs. The giltedged market has been maintaining its steadiness; and the second defence loan has been in good request. The First Defence Loan is quoting Rs. 101, while the 3 per cent

## TREASURY BILLS

### India

Tenders for Rs. 3,00,00,000 (Rupees 3 crores) of three months' Government of India Treasury Bills were opened on Tuesday the 2nd June, 1942. Total amount offered was Rs. 6,88,50,000 (Rupees 6 crores 88 lakhs and 50 thousand). Tenders at Rs. 99-11-9 per cent were accepted in full and those at Rs. 99-11-6 per cent were allotted approximately 36 per cent. Lower tenders were rejected. Total amount accepted was Rs. 3 crores, the average rate of accepted tenders being Re. 1-1-7 (Rupee one anna one and pies seven per cent) per annum.

Tenders for Rs. 4,00,00,000 (Rupees 4 crores) of three months' Government of India Treasury Bills will be received on Tuesday, the 9th June, 1942 in Bombay up to 11 a.m. (Standard Time) and up to the close of business on Monday, the 8th June, 1942 at other centres. Successful tenderers should make payment on Friday, the 12th June, 1942 or on Thursday, the 11th June, 1942 at centres where Friday is a holiday. Other conditions are as usual.

During the week ended the 29th May, 1942, Government of India Treasury Bills for Rs. 60,30,00,000 (Rupees 60 crores 30 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad

Thursday Morning.

THE only item of interest in a drab week is the overt mention of financial assistance to China given this year. Mr. Eden's statement indicates that £63 millions have been appropriated for the purpose so far and China is not altogether neglected. China, of course, is the only ally receiving such assistance. Belgium provides funds under the agreement of January 1941 and Holland has given much. The Chinese, cut off from all trade, are only helping to fight Japan, and the contributions made in defending Burma have been unavailing. The Chinese dollar's value after the big Jap offensive started can only be conjectured. Anyway, China's commerce is at an end, and there is nothing to worry about when lease-lend is at work.

Mention of lease-lend brings up the question of Mr. E. R. Stettinius' revelation as to the exchanges obtained under the Act of March 1941. The U.S.A. is not only paying out. The Republic is getting goods and services in exchange though her allies may have no dollar reserves, having spent all they had. The original purpose of the lease-lend Act was to promote security by additional expenditure abroad for others' benefit. The newer form of a barter or clearing arrangement is clearly grafted on after the U.S.A. joined the war. The average Indian who wants that the aid from U.S.A. should come direct not by way of Britain will learn that it was not freakish accounting that led the Finance Member to put in the cost of U.S. supplies in the Budget. Something will have to be paid, and the duty of making provision in advance has been recognised. Further, if the U.S.A. goes on spending in India, the U.S. taxpayer will feel entitled to ask what he gets in return. There is clearly a case for providing in return some of the goods wanted by the U.S.A. It would clearly be advantageous if the Indian Government buys and ships the hessian wanted in the U.S.A. Inter-governmental transactions would not affect the volume of trade or the prices and the business of providing freight would fall on the other party. It is quite likely that Britain may ship goods of Indian origin under her own version of lease-lend and the activities of the U.K. Commercial Corporation will probably extend in the future. Whatever has been spent already cannot be viewed as a donation on the part of the U.S.A. The U.S.A. clearly expects something in return for future assistance as well, and that is why present protests against the operations of the new agency founded in 1940 with Viscount Swinton as Chairman on the basis of a grant from the British Treasury cannot be called irregular. The Indian Chambers of Commerce are very much dissatisfied over the entrance of a semi-official agency which gets privileges and cuts in many times into the trade with the Middle East. But that is all part of the wartime organisation and the European Chambers who have as much stake in the export trade as Indian shippers have so far said nothing. The ordinary Indian trader can do little in Iran where the monopoly tradition is rooted and he certainly gets paid for exports to Asiatic Turkey. It is better to sell the goods to a third party and make sure of the money at the outset. Clearly this point of view must appeal to Indian merchants. Even though the rial may have appreciated recently Iran may not be a regular payer, and it would be much better to get money duly adjusted against the oil royalties. No official statement has appeared for the very god reason that the work of the U. K. Commercial Corporation cannot be discussed by a subordinate government in New Delhi. What it does or does not concerns only the British Government which let it be known in 1940 that the Corporation is quasi-official and meant to cut the Axis out. There are few neutrals but British exports are not easy to despatch and the only thing is to get goods where they can be had for others. Anyway, India will get Middle Eastern currency which certainly helps to pay for the usual pilgrimmage of Muslim citizens. The prejudice shown against the incursions of a powerful rival seems to have no justification, particularly, as the Ministry of Food and the Ministry of War Transport function in India without any reference to the local subordinate governments, created and sustained by an enactment of Parliament.

There has been no kind of change in exchange rates. Mexico's entry into the war should make the peso stronger in New York, but the Bombay rate seems to be unaffected so far. The Mexican Congress has certainly voted for war and the U. S. State Department has indicated approval. Mexico's oil, lead copper, zinc and silver will be reserved for the Allies and lease-lend will soon be stretched to cover Mexico. She may not borrow readily but she is sure to get many favours from her neighbour. People have already been informed that Mexico's decision commands respect in London. It is known now that Mexico has an envoy in London and there is a Minister in Mexico City. No need to ask the Norwegian Minister to oblige. One result may well be a smart jump in Mexeagle. Gneral Camacho is himself a bull factor and his declaration of war is more important than the compensation agreement negotiated this year. The Mexican peso is worth a little over a shilling so the four peso shares of the Eagle Oil Company are at a high premium in spite of the fact that no dividends have been paid for many years.

The F. B. I's vision of a brave new world is very much the same as the prewar world. There is a formal request for disarmament and renewed emphasis on exchange stability as making for restoration of former commercial contacts. The idea of a postwar programme was referred to in a brief *Reuter* cable last week, but there is nothing to encourage the hope that the programme will go into policy unless it be that the moderation of Mr. Welles in comment on Germany be translated into post-bellum intentions and plans. Meanwhile a speech of Mr. Keynes at Manchester has made many hark back to questions on the economic consequences of war. Dr. A. L. Bowley has analysed satisfactorily those of the last war. The present war's effect are still in the making. Recovery is expected to occupy three years and control must continue. That sums up Mr. Keynes' view of a fairly impoverished world. No post-war boom with men making big money out of the Army Disposals Board alone. After the recovery Mr. Keynes hopes to see the world well off, though taxes by that time would be inordinately high and the national debt almost staggering. Mr. Keynes wrote once on the economics of our grandchildren. To see him anticipate good times for our children is itself reassuring because Mr. Keynes hopes first of all there will be a satisfactory peace and post-war statesmanship will be equal to its tasks. As to the future of British export trade, Mr. Keynes was clearly diffident. He hoped to see engineering exports from Lancashire make headway, but Mr. Lyttelton should have finished the textile industry under the concentration plan of his. There is, however, the story of higher efficiency to consider. Diversion to peace purposes may be relatively easy and industrial mobilisation for peace may be easier than imagined. The Keynesian forecast is not gloomy. Britain can hope for a new deal three years after the war. The same idea appeals to Mr. Milo Perkins, Director of Economic Warfare, in the U.S.A. According to a recent cable he declared that in every civilisation of the past bar none if men took the most that was possible to produce and divided it among all that were inclined to share it, the answer was always a miserable standard of living. Within our lifetime, however, men had entered on an era dominated by machine and test-tube. If they took all that could be produced at the end of the war and divided it among the people who would then be able to share it, they would then be within reach of a very good standard of living for the first time in all history. Mr. Perkins is clearly an optimist, apparently basing his faith on production achievements of this year. Where the home market is large, industry has unusual opportunities, but that does not hold good of Britain whose oversea assets have vanished in part, and whose taxation would not have fallen after the war. The present estimate of a long war does not support the usual view as to a speedy recovery after the war, though present views as to what is proper as to trade, tariffs and exchange may bring back normal sooner than expected.

Mention in the *Economist* of the Indian currency in Burma and the liabilities of banks there in respect of deposits must be related

## Industrial Profits

The developments in the war situation during the past two years have all been favourable to the progress of industry in India. But for these developments, it is not likely that this country would have assumed such great importance in the Empire's war effort. The fall of France and the visit of the British Supply Mission brought out clearly the potentialities of this country. The recovery towards the end of 1940, the resumption of exports on a large scale and the placing of large war orders kept all the Indian industries busy and profits in 1941 were running at the highest levels for a decade.

The outbreak of the Anglo-Japanese war has perhaps enhanced the importance of Indian industries for the Allied war effort. The initial successes of Japan have deprived the Allies of certain materials which they do not possess in quantity, viz., rubber, tin, sugar, tea, etc., and for the last two commodities at any rate the Empire or part of it is to a great extent dependent on this country. Apart from this the dislocation to shipping traffic and the dangers to the Pacific shipping route have resulted in a sharp decline in Indian and Empire exports in recent months. The United States Government, therefore, has thought it necessary to utilise to a greater extent the resources of this country. The American Technical Mission visited India only recently. There were reports that the aim of the U. S. Government was to Americanise Indian industries and increase the scope for foreign influence. We have, however, had the assurance of the Mission that the United States have no such aims on India and that the sole aim of the Mission was to make a survey of Indian industrial capacity and increase her contribution to the joint war effort.

The preliminary report of the A.T.M. now released to press points out that the extent to which India can aid the United Nations in the equipment of a formidable Indian Army may prove an important, perhaps a decisive factor in the war. The two-fold problem of augmenting the production of certain peacetime commodities and converting peacetime industries to new war production can be only solved by a strong centralised power vested in and exercised by the Government. There seems to be considerable difference of opinion between the Mission and the Government of India regarding the question of rationalisation and regimentation of industry on a much more drastic scale than at present. In the opinion of the Government of India it seems that the rules suited to conditions in the United States and the U.K. are not equally applicable here.

We are not, however, concerned with the success or failure of the American Technical Mission or even the suitability or otherwise of the recommendations of the Mission. What we are concerned with here is this. Something subtantial should follow as a result of this mission. And much as we would wish to get the best of technical and material aid from the United States the efforts towards rationalisation and regimentation, even if partial, the creation of new war industries and the new equipment should revolutionise industrial development, and give also the Indian entrepreneur a much needed lead in certain lines. Many of the gaps in industry may perhaps be filled.

These factors combined with the special advantages at present available to sugar, cotton, tea, rubber etc., have thus considerably improved the position of this country. If there has been a setback in recent months on account of the fall in exports, it will be only temporary. The shipping problem has to be tackled satisfactorily for goods have to be taken out of India and brought into India. There is an acute shortage of jute goods in the United States and rationing on a severe scale has been resorted to. Once shipping in the Bay of Bengal is freely resumed, exports should be on the upgrade again. Exports of textile goods also have been affected but the possibilities of an early resumption are greater in the case of cotton industry as the main demand is from South Africa, Kenya, the Middle East and certain countries in the west. Perhaps the only industry which has been affected adversely is the coal industry. Apart from the loss of the Far Eastern markets considerable difficulty is being experienced in getting transport facilities and there has been a great decline in despatches. But increased demand for coal for internal consumption, in spite of the shortage of wagons, should help to keep consumption at a high level.

The sugar and tea industries, as pointed out above, have benefited most. The loss of the Philippines and Java has considerably enhanced the importance of Indian sugar. Besides the need to satisfy Indian demand wholly, this country has to look after the requirements of Ceylon, the Middle East and perhaps the U. K. The usual Australian surgar surplus cannot be utilised by the United Kingdom owing to shipping difficulties. It is not, therefore, surprising that there has been a sharp increase in prices and sugar has gone into hoards after the institution of price control.

As for tea, the whole of the outturn, which is now on a considerably higher level, is taken up fully by the United Nations.

The picture thus represented is encouraging. We can look forward to further improvement in conditions generally in industries. This country may benefit to the same extent as Canada on account of the war; only it should not be subject to the ravages of war. The outlook for the Indian investor can be considered satisfactory; yet with the level of war expenditure increasing every day, there cannot possibly be any big increase in his income from investments.

The profits of 103 companies published since the beginning of the year do not show any slackening in the growth of profits since 1940. But the accounts published during the next few months might possibly show a decline in the earnings of cotton and jute companies. Already a tendency is noticeable in the case of jute companies. The increase in earnings published in 1942 over the figures for 1941 is noticeable very clearly. The aggregate profit, before providing for taxation and depreciation, is Rs. 11.88 crores against Rs. 6.90 crores and Rs. 6.06 crores for 1942, 1941 and 1940 respectively. Out of the increase in earnings of Rs. 5.98 crores in respect of reports published in 1942, as much as Rs. 4.34 crores is to be provided for taxation, depreciation, reserves etc. And it need hardly be mentioned that the increase in allocations has been mostly due to the larger provision for taxation. The share of the investor in the increase is only Rs. 45 lakhs or 7.5 per cent.

It is no exaggeration to say, therefore, that after a particular stage the bulk of any increase in earnings goes to the State. Among the industries that have done well are jute, cotton, tea, sugar and miscellaneous.

Twenty-seven jute companies report a profit of Rs. 3.07 crores in 1942 against Rs. 1.21 crores for the same companies nounced, 15 cotton mills showing a profit of Rs. 2.93 crores in 1942 against Rs. 91.11 lakhs in 1941 and Rs. 57.02 lakhs in 1940. The miscellaneous industries have done very well. The aggregate profit of 3 companies in 1942 is Rs. 2.91 crores against Rs. 2.21 crores in 1941 and Rs. 1.56 crores in 1940. The position in regard to taxation which accounts for a rather big slice of earnings will be clear from the following.

We have examined for this purpose the accounts of 46 companies, 13 cotton, 19 jute, 2 iron and steel, 9 coal and 3 miscellaneous. The aggregate earnings of these companies in 1941-42 amounted to Rs. 14.82 crores. Out of this figure the sum of Rs. 6.39 crores or 43.1 per cent. had to be set aside for taxation. The amount allocated to reserves and depreciation was Rs. 4.03 crores or 27.22 per cent. while that paid by way of dividends was Rs. 4.28 crores or 28.92 per cent.

Coming to individual industries on the basis of the cumulative results, 13 cotton mills earned Rs. 2.66 crores in 1941-42. The provision for taxation was Rs. 1.40 crores or 52.54 per cent of earnings while allocations to reserves and depreciation were Rs. 66.06 lakhs or 24.8 per cent. The share-holders got a very small portion, Rs. 50 lakhs or 18.8 percent.
