ISSUED WEEKLY

Vol. XXIX. No. 1 SATURDAY, JANUARY 3, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection, need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

# Editorial Comments

## Second Thoughts

We could, in the last issue, offer only a brief comment on the decision of the Government of India to pay off the 2½ per cent. and 3 per cent. India sterling stocks and to give one year's notice to the holders of 3½ per cent India sterling paper. For, the Government Notification was received by us after we had gone to the press. It is, indeed, curious that so thorough-going an operation and so unique an event as ridding India of all sterling loans has hardly received any pointed notice or evoked any appropriate comment in the press of the country. It is, therefore, all the more incumbent on us to study this question in its proper context in relation to India's finances and economy.

Our second thoughts on a more detailed examination of the connected problems confirm the force and point of our first comment. The following extract was the concluding portion of our last week's article:

> "We congratulate Sir Jeremy Raisman on the unique record which he will enjoy in India's financial history as having once and for all ended the thraldom of foreign debt. We must also thank him for the full use which he has made of the opportunity—we appreciate his action all the more because a similar opportunity in the last war was wantonly neglected.
>
> We are, however, at a loss to understand why the plan of giving one year's notice to 3½ per cent loan has been adopted. The Indian Government have already built up such strong sterling resources and are adding to them at such fast pace that it should not be difficult to repay all these loans by March, 1942. A more detailed study of this and other questions will appear in the next issue."

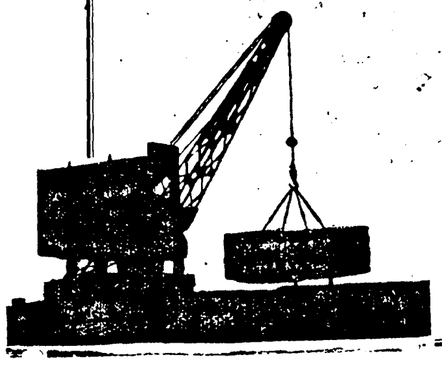
Let us repeat that Sir Jeremy Raisman is deserving both of thanks and of congratulations. And let us amplify our argument with regard to the practicability of redeeming 3½ per cent sterling paper in one and the same operation as the redemption of 2½ per cent and 3 per cent loans.

The New Delhi communique states that the amount of sterling loans covered by the present decision is £158 millions. As was the case in regard to the repayment of the dated India sterling loans, there may be a proportion of the non-terminable loans which, being held by investors who are not affected by Defence Rules of Britain or India, will not be tendered for repayment. We may be, perhaps, justified in assuming that £8 millions will thus continue to remain outstanding. In other words, the repayment of the three non-terminable loans at one and the same time will require sterling resources for £150 million. This is equivalent to Rs. 200 crores.

The Reserve Bank has been accumulating sterling assets on an increasing scale since the war began. Within these twenty-eight months, we have utilised, from the gathering sterling balances, as much as £105 million or Rs. 140 crores for cancelling sterling debt. In spite of this, the sterling resources of the Reserve Bank as on date are vastly in excess of the resources on September 1, 1939.

The sterling assets of the Reserve Bank on September 1, 1939 were as follows:—

| | | |
|---|---|---|
| | | Rs. |
| Foreign balances in banking department | ... | 10.08 crores |
| Sterling securities in issue department | ... | 59.50 „ |
| Total | ... | 69.58 crores |



The position on December 1, 1941 is as follows:—

| | | |
|---|---|---|
| | | Rs. |
| Foreign balances in banking department | ... | 53.23 crores |
| Sterling securities in issue department | ... | 217.63 „ |
| Total | ... | 270.86 crores |

The increase in sterling balances is, therefore, Rs. 270.86 crores minus Rs. 69.58 crores or Rs. 201.28 crores. And this amount is Rs. 1.28 crores in excess of what will be required if all the non-terminable loans are to be paid off together.

We must add that, by the end of December, there may be a sterling payment of the order of Rs. 20 crores from the British Government. This will recur in January-end and February-end. That is, by March 2, 1942, on which date payment for the 2½ per cent and 3 per cent sterling loans is expected to be com-

pleted, we shall have further sterling balances for Rs. 60 crores. With war continuing, the process will continue, so that it can be safely said that, if the 3½ per cent sterling loan were also paid off on March 2, 1942, the sterling assets of the Reserve Bank would still be more than ample.

In fact, we expect that, by the beginning of 1943, the accumulated sterling balances would be a most embarrassing problem. By March next, India could be free of sterling debt. Shedding debtor status, she would be growing into a creditor. And a most serious question which will have to be tackled sooner than most people expect is the way in which India must invest her sterling credits and the limit up to which it will be desirable to accumulate sterling credits. For our part, we have not yet given any deep thought to this matter but have no doubt that it will not be long before it should engage our careful study.

Meantime, we should like to know from the financial authorities what special reasons they had for postponing the repayment of 3½ per cent. India sterling stock to January next year; and whether nothing could be done now to reverse this decision and time its redemption with that of the 2½ per cent. and 3 per cent. loans.

# ART in Industry EXHIBITION 1942

The entries for the Art in Industry Exhibition, 1942, will be accepted at the Government School of Art, Calcutta between 5th and 29th January, 1942.

The exhibition is divided into twelve sections, each section carrying prizes amounting to Rs. 450/-. The donors of these prizes are :

**H. E. The Governor of Bengal; Bata Shoe Co., Ltd.; Bengal Chemical & Pharmaceutical Works Ltd.; Burmah-Shell Oil Storage & Distributing Co. of India Ltd.; Cement Marketing Co. of India Ltd.; Dunlop Rubber Co. (India) Ltd.; Metal Box Co. of India Ltd.; Railway Board; Tata Iron & Steel Co., Ltd.; Indian Tea Market Expansion Board; Mahalaxmi Cotton Mills Ltd.; Ananda Bazar Patrika and Hindusthan Standard.**

An additional prize of Rs. 500/- is being donated by **Mr. Bhabani Churn Law** for the entry in which any of the Indian Classical Art forms is best employed. The Prospectus and particulars can be had from the sponsors and any of the donors.

### War and India's Trade

Variations in import and export trade alike are likely to become more pronounced with the spread of war to the East. The cessation of trade with Thailand as with Japan has been ordered. The Far Eastern war has not assumed a definite character as yet, but its effects on trade are likely to be restrictive. The demand for industrial self-sufficiency and more generous assistance from Britain has been already voiced by Mr. John Curtin in a newspaper survey dealing with Australia's responsibilities. That demand has perhaps struck a responsive chord in India where Mr. Jamnadas Mehta has only recently expressed his opinion that it was a mistake on the part of Government to withhold support from the automobile factory scheme.

What are the main changes to be expected besides the stoppage of trade with places beyond Singapore. The fall of Hong-Kong implies that imports of a diversified nature will be denied to India as to China. The stoppage of trade with Thailand, imports from which in the seven months ended October were of a total value of Rs. 2.01 crores, will accentuate the shortage of rice caused by shipping difficulties and the export control enforced in Burma. Imports from Thailand this year appear to be negligible, but exports to Thailand in the April-October period were valued Rs. 20.83 lakhs as against Rs. 40.32 lakhs in the same period of 1940. More serious will be the loss of trade with the Straits Settlements. The loss of Penang entails grave hardships for Malaya's traders, and it is only to be expected that India will lose an export market that has rapidly expanded. In the seven months ended October India's exports were valued Rs. 3.57 crores as against Rs. 1.8 crores in the corresponding period of 1940. Trade with the U.S.A. and Canada may not suffer in any marked manner as the alternative route by way of the Cape is open.

With points on this side of Singapore there will be little difficulty in maintaining connections. The loss of Hong-Kong too means more by way of loss of exports than imports. As regards the Straits Settlements India's imports for the seven months ended October were valued Rs. 3.78 crores while her exports amounted to Rs. 3.58 crores. The possible effects on trade with Sumatra, Java and Borneo must be examined. The fact that Kuching has been occupied by hostile forces renders it unnecessary to look for the survival of trade. Java and Borneo took Indian exports valued over Rs. 1.78 crores in the seven months ended October while Sumatra took Rs. 10.9 lakhs' worth of Indian goods. Imports from British and Dutch Borneo in the April-October period were valued over Rs. 45.71 lakhs while Indian imports from Java valued Rs. 85.8 lakhs showed that the strong rise in Indian exports to the Dutch Colonies was accompanied by a similar rise in India's own imports. Though navigation by the Java sea remains a definite advantage after the entry to the Straits of Malacca has been closed, it is clear that the Japanese successes must interfere with India's trade with countries as remote as the U.S.A. and New Zealand. The war will have the effect of reducing further India's exports to China. This will be naturally as an additional depressant for the cotton market. The prevailing belief that antimony, tung oil and tin will be badly affected by the war with Japan receives support from the air raids on Rangoon. It is obvious that trade by the Burma-Yunnan road will be dislocated by the destructive activity of the Japanese. A probable effect may be a further depreciation of the Chinese dollar but this will have been anticipated by the Niemeyer-Cochrane mission.

### Working Class Difficulties

It may seem unusual to speak of a fall in the cost of living for the working classes when profiteering is the subject of general animadversion. The fall belongs to October and was a consequence of an earlier fall. The working class centre was Bombay where the October index was only 12 points above that for October 1940. Subsequent developments are sure to destroy the value of any comments or inferences based on the movements of indices collected in the Bombay Labour Journal. The events of December naturally militate against any statement meant to show that prices had come down and real wages had risen. The voluntary grant of bonuses by the Bombay mills also loses part of its value, but the extension of hours should lead to a rise in gross earnings per worker. The fall in the cost of living reported in October was independent of the rise in the cost of several food grains. While the Bombay index at 125 shows that the cost of living had risen by about 12 per cent after the war broke out it is only necessary to compare ruling prices of rice, wheat, gram and dhal in October 1941 and the base year ended June 1934 to realise that in Bombay the worker was at a disadvantage. In the case of tea and chillies alone was the average price lower.

Rent control has always an advantage available to the Bombay worker who has however had to pay extra for clothes, fuel and even pansupari. The changes reported by other centres can be related to that shown in the fall reported as regards Bombay. The Ahmedabad index at 92 was unchanged in September. It was certainly 12 points above that for September 1940 but it was below that for the 1926-27 base. The main factor that helped to keep the index stationary was the stagnation of prices of foodstuffs and the fall in the cost of clothing.

The small rise of one point reported by Sholapur showed that the tendency even in a single province was not the same. The Sholapur index constructed with 1927-28 as the base was 87 in September; this index showed a rise of 12 points on the year indicating that the same influences were at work as in Ahmedabad. The rise occurred on account of a rise in the cost of foodstuffs despite a fall in the cost of sugar, gram, potatoes and chillies. The industrial worker in India should have become resigned to contradictory movements by now. It does not however mean that the case for price control is defeated. It may be mentioned that in September the general feature, except in Bombay, was a definite rise in the cost of living. Jubbulpore reported a rise of 4 points in the index because of a rise in the cost of foodstuffs. If the Nagpur index was unchanged, like that of Madras, the percentile rise was equally marked on the basis of a common standard base. If one compares the movements in the working class cost of living during a whole year it will be clear that the rise has exceeded 10 per cent in all centres. The second year of war has therefore witnessed as striking a rise under prices and the cost of living as the first. To adjust wagerates is not the concern of the statesman who is however bound to point out that in regard to food and non-food prices

T. 96. 1789

there is a substantial difference between the 1940 average and the inflated prices of 1918.

**Obvious Limitations**

The only currencies with which the yen is linked are the Manchu yuan, the Indo-Chinese piastre and more recently the ticul or baht. The co-prosperity sphere has hardly emerged through the addition of Siam to the yen block. The Japanese currency has not been quoted in New York since July but even earlier its weakness was manifest even and the 23.44 cent. level was shaken. While descriptions of the the enormous resources of the A.B.C.D. powers and Japan's prolonged struggle to make both ends meet abound there is not much purpose in discussing how Japan's prolonged struggle to make both ends meet abound there is not much purpose in discussing how Japan's export trade with Latin America, for instance, will shape. It is however patent that the laboriously negotiated agreements with Brazil and Argentina will have no value. If Mexico and Brazil are neutral they are by no means friendly. Japan will have no trade with Europe, Africa or America. East Asia alone will be available and the more important gains in Hong-Kong and Malaya will be economically valueless. The winter will probably result in a deterioration in the production of power and new artificial fibres cannot and will not replace Australian wool. Wheat has long been an essential import for which the Far East generally looked to Australia. This trade is likely to be seriously upset. Its result should however be favourable for price control in India. Japan has always been a high tariff country like the U.S.A. with the important difference that export trade means little for the U.S.A. but a great deal for Japan. It is known that Japan's imports generally fell away to a marked degree after March. Her exports and their values are not known but the very indifferent condition into which her export trade was plunged both in 1939 and 1940 makes it easy to say that the import surplus to be distinguished from the export surplus which she had in normal years must be larger than ever.

While she is on to the tin and rubber of Indo-China and Thailand she has not yet got the gold and iron of the Philippines. She is again far from the coal and oil of the Dutch Indies. Japan's dependence on imports for all fats except soya oil and whale oil has long been known. It has been proclaimed that in spite of the peremptory legislation directed to make importers keep large stocks of mineral oils in both Japan and Manchuria the secrets of her fuel installations are known to the Allies. More important, in the long run, is the dependence of Japan's progressive farmers on imported nitrates. Not many will deny that the failure of fertilisers may cause as much havoc as a shortage of oil during the war. It is known that the cost of living has been rising throughout 1940 in Japan and this adverse feature was noted in Manchukuo too. Price control was by no means effective and the Cabinet Planning Board had quite early confessed its inability to deal successfully with the black markets for such ordinary things as charcoal. The remarkable thing, of course, is Japan's struggle for nearly five years against adverse factors created by her ownd aggression. The capture or control of Shanghai and Hong-Kong is not likely to yield more than temporary advantages.

**Canadian Changes**

After Mr. Mackenzie King's visit to Washington Canadian war effort will be geared to the war economy of the United States. It is both logical and convenient. Canada's iron and steel industry is by no means large but her nickel, manganese, bauxite and pulp represent very important assets for the U. S. A. The Canadian Government's own plan for armament production has progressed fast, and many branches of civilian industry have also developed at a corresponding pace. Notable progress has been reported after the first half of 1941 in regard to the capital expansion programme which had already led to the establishment of 12 out of 19 plants projected for the making of chemicals and explosives. Canada's supply activities, if they are of direct concern to the U. S. A. alone are not unimportant for Russia and the Far East. The manufacture of guns and projectiles has made headway. Like the development of ammunition manufacture it is directly related to the war. Tank production had begun before July and the domestic consumption of all metals had shown a staggering increase

while the monthly production of steel has on an average been over 200,000 metric tons. In regard to aircraft Canadian factories were producing towards July as many as 40 machines per week. Plans for the making of Glenn Martin bombers and Consolidated Aircraft's flying boats had taken shape. The total under employment disclosed an amazing increase within a year being as much as 27,000 in July.

Canada's ship-building programme is more ambitious than expected. The Dominion expects to launch a hundred cargo vessels the majority of which will be over 9,000 tons and it is believed that many will be afloat in 1942. Repairing facilities have been enlarged and the naval programme has also been modified to include destroyers. Most significant is the higher average returned for the production of petroleum in Canada. Since August, 1940, the Dominion has produced over 100,000 metric tons every month. This, it may be pointed out, exceeds the average production of Burma. The automobile industry has been kept busy by defence orders but the industry has been forced to reduce output this year first by orders restricting available foreign exchange and secondly by taxation which seeks to curtail investment in durable consumer's goods. The fall in Canada's cement production over 1941 is again significant of reduced private spending in the interest of the defence programme. While imports have latterly fallen away, the export trade of Canada has been consistently rising. With the entry of the U.S.A. into the war more far-reaching changes are to be expected. Hemisphere economy will become a concurrent part of hemisphere defence.

**War Risks Scheme**

Accounts have now been published of the War Risks Goods Insurance Fund for the year ended 30th September last. The receipts amount to Rs. 105 lakhs, while the expenditure incurred has come up to just over Rs. 86,000. It would appear that the Government of India are not satisfied with the result of the collections as according to the most conservative estimate goods of the value of Rs. 200 crores are covered by the insurance scheme. For this reason the premium rate has been suitably increased in order to provide the Government with sufficient funds for the purposes of the scheme. It is expected that the changes now carried out in the War Risks Goods Insurance scheme will meet some of the suggestions made by the commercial community. The territorial waters between the ship and shore have now by the changes announced been brought within the scope of the scheme. In addition to actual owners, all those having certain specified interest in goods will hereafter have the right to utilise the scheme. The definition of war risks has been widened so as to include also action taken in combating an enemy or repelling an imagined attack of the enemy. These changes are calculated to improve the working of the scheme and make it sufficiently comprehensive.

**Larger Populations**

Every war brings the Four Horsemen of the Apocalypse, but the four do not appear to have ridden very hard in the last year or two. A table that is to appear in the Statistical Yearbook of the League of Nations indeed suggests that the birth-rate has risen in belligerent countries like Canada. The birthrate, of course, has been higher in the Dominion in the past, and the table constructed to reveal variations since 1911-13 indeed suggests that a higher birthrate can follow more extensive development of resources as in Venezuela where the rate per mille has gone up in 1940 to 37.2. The birthrate in India in 1939 is shown as 33 per mille which is certainly lower than the corresponding rate for Malaya or Palestine and is just about the same as for the Philippine Islands. It is, however, a mistake to regard the birthrate as the true guide to natural increase. The fact that the birthrate both in the U.S.A. and Canada has fallen steadily since 1921-25 can only be associated with the economic progress of the countries, though the small recovery since 1936 in these countries has to be related to other factors besides the economic. In the U.S.A., the absolute decline in the birthrate must be traced to the curtailment of immigration since 1924 by the more prolific and backward peoples who sought new homes across the Atlantic. Generally speaking, a low birthrate goes with advanced economic development. It may be chance that in England and Wales it is lower than in Scotland, but it is not surprising that the lowest rate in Europe is returned by Belgium and the highest by Carol's Rumania.

If the birthrate in British India shows a fall as compared with 1911-13 when it was 38.6 per mille, it is clearly in tune with the general trend. Movements in the birthrate cannot be altogether divorced from political events. The sharp rise in births in the Sudeten territory of Czechoslovakia after Munich is certainly as striking as the constancy of the Swiss figure around 15. That a high death rate goes with a high birthrate is a familiar dictum, proved once again by Mexico. The lowest death rate of any country is claimed by Hawaii which reported 7.3 deaths per thousand in 1940. It may be said that the birthrate of 21.7 per mille for Hawaii puts the rate of natural increase higher than that of New Zealand which has long been considered the country enjoying unusually favourable conditions though Maoris multiplied and died in greater number than Europeans in the Dominion. The death rate for Hawaii may be considered an advertisement for the climate. The death rate in British India in 1939 was 21.8 per mille. It showed a fall as compared with previous years, and it may be assumed that the fall in the birthrate has been reflected in a lower death rate leaving the rate of natural increase unaffected. The very considerable increase in India's

"Worry and fear retard human initiative and efficiency, probably more than any other factor. Personal attainment and vocational efficiency are impossible when a person is living under the shadow of fear and anxiety. Life Insurance mitigates these evils and reduces the uncertainly which attaches to our economic affairs due to the risk of premature death."

population between 1931 and 1941 immediately suggests that an addition of over 1 per cent to the population every year will produce considerable strain in the future. That a country like the U.S.A. with a normal gap between the birthrate of 17.8 per mille and death rate shown as 10.8 per mille reported after the census of October 1940 no increase in total population may well be adduced in favour of a policy that aims at limitation of numbers.

**Australian Example**

On the threshold of a new year Australia has decided that her war effort must be more intense and comprehensive. Attempts latterly made by the Government to restrict imports have been explained by the desire to curb spending by the public. A Federal inquiry revealed that retail trade was booming in the war period. Between August 1939 and August 1941 the volume of sales in Sydney had risen by 35 per cent, in Melbourne by 45 per cent and in Brisbane by 26 per cent. If adjustments for the rise in prices during the war period are made the increase is about 10 per cent, an increase that has been depreciated. The Federal budget then has another object besides the securing of revenue and the raising of loans totalling £66 million for the war. Employment producing prosperity has to become the source of new savings for the loans contemplated. To the buying of clothes and furniture exception is taken. It has been revealed that Australia's imports of goods like rayon manufactures, piecegoods, crockery, tea, coffee and cocoa had risen since 1938-39. Existing outlets for fresh purchases had to be closed and the decision announced early in December to restrict imports even from sterling countries was aimed at cutting down the supply of goods. If Australia's imports of tobacco, canned goods and cars had fallen after the outbreak of war it is quite likely that local goods had replaced the imported product. The placing of a curb on secondary industry may not appear feasible but Australia may have to consider as in her line a plan for the rationalisation or concentration of industry on the Lyttelton scale. The restriction of all supplies of material and labour for local industries will have to be considered as part of a plan to put a brake on non-essential consumption. The encouragement of protected industries will have to be replaced by a new policy and it is for the Labour Government to promote the all-out effort rendered necessary by the new threat from the north across the sea.

As Australia has hardly any margin left after record recruitment war production will automatically draw men and machines from civilian employment. Women of course will be called upon to serve in munitions-making establishments but factories producing clothing and luxury articles would have to be treated as the nearest reservoir. It had been frequently urged that in order to put down wasteful spending Government should take powers to reduce the supply of goods. Sumptuary legislation may seem unusual in modern times but what has taken place in Britain cannot but be regarded as a distinction between essential production and non-essential that deserve to be adopted by others. A recent press despatch from New Delhi hinted discreetly at the possible introduction of rationing in India, for instance, of clothing in order to make sure of goods for the Army. It is worth asking if the imports into India of tinned and canned goods even from the sterling area should continue in the midst of war. Import control has to be modified on the lines already adopted in Australia and several Crown colonies mainly with the purpose of increasing savings for defence. In Australia this purpose has not been lost sight of. So far India has experienced in a very mild form the penalty of restricted motoring. The control of private expenditure has not been attempted so far either through the withdrawal of luxuries from the shop-shelf, the introduction of a general sales tax or the special excises levied in Canada. It is for India to consider whether special vend fees, e.g., on tobacco and aerated waters are not desirable in order to finance A.R.P. expenditure. The Provinces will gladly have recourse to taxation that will produce a few lakhs and restrict unnecessary consumption. The effect on subscriptions to Defence loans should also be beneficial. The response in 1941 has been good but it will have to be much better in 1942 because the war has spread and danger is nearer to India.

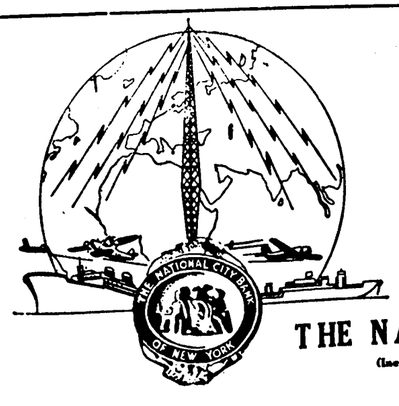
As 1941 dragged to its inglorious end, it administered, so far as India is concerned, its most violent kick. December proved the most upsetting month to morale and to markets. And, particularly, Calcutta and Jamshedpur have been living in constant dread of air-raids. There has been a considerable exodus of population; and, while, in Government offices, all leave has been cancelled, less fortunately-placed establishments such as our office have been helpless while the frightened members of the staff have left without notice and, in the bargain, made demands for funds for their travel and that of their families. Some of these evacuees have almost wound up their affairs in Calcutta, presumably intending not to return, or to return only if and after the Japanese menace ceases to cloud the horizon. In simple terms, folk such as these have mobilised funds for travel and for a considerable stay in their village homes. As I am writing these lines, I am assailed by two more members of my staff who say they must leave to-day and who must have money for leaving. I am reeling as much under the unending drafts for money, as under the increased pressure due to depleted staff. Imagine how many such establishments there are in this city; and figure to yourself the hundreds of thousands of people who have fled. You can then form an idea of what moneys the banks have had to pay in the last three weeks of December.



Heavy withdrawals in December are particularly embarrassing to banks as this is the year-end and bankers love to produce accounts which make as good a showing as possible. "Window-dressing" used to be the vogue in earlier years; but bankers had hoped that, with deposits flowing in a spate during the past many months, no artificial dressing-up would be necessary. All their hopes were dashed to the ground as the news of Japan's entry into the war was announced; and, when the withdrawals by depositors gathered rapidly increasing momentum, something like dismay came to prevail. As the year opens, the bankers' thoughts are: "The old year closed badly enough. The new year may open even worse". I reckon that anything like Rs. 15 crores have been paid out so far in the crisis and pressure caused by the Japanese menace.

---

The big banks are well able to take care of themselves. They have, on the whole, maintained satisfactory proportions of cash to liabilities; and their second line of defence in the shape of giltedged securities is quite impressive. I am concerned rather with the purely Bengalee banking institutions which have had to bear an exceptionally heavy proportion of the exodus of funds. To the extent that Calcutta is the one centre in India from which there has been the biggest emigration of population and to the extent that Indians have figured most prominently in such emigration, it is the Bengalee banks which have witnessed the heaviest drain. I may say that there are half a dozen Bengalee banks of medium status among Indian banks; and another half a dozen which are just short of the medium status. I have, for a few years, been carefully following their careers and shrewdly scanning their accounts and their financial position; and, in broad terms, it may be said that they have been making steady progress not only in the sense of expanding their resources but also in the matter of more scientific administration of their business. For over a decade after the debacle of the Bengal National Bank, Bengalee banks as such could not so much as raise their head; it was only in the last quinquennium that the Bengalee banks have really been making headway. To a student of Indian banking, the progress of these institutions during the last five years must have afforded special gratification as the final testimony that the public in Bengal had forgotten the nightmare of the Bengal National Bank's failure. It is against this background that the events of December have to be viewed.

---

On a rough estimate, I reckon the total resources of these banks to have been, say, Rs. 12 crores. The December withdrawals have made a cut of anything like Rs. 2 crores in such resources. This may well mean that almost all the cash balances maintained by these banks are by now depleted; and that they will be facing the New Year with the prospect of having to pledge their Government securities and drawing against them. In some cases, such overdrawing might have been necessary even as December was drawing to a close. In this predicament, banks will be, on the one hand, unable to entertain any new proposals for trade advances and, on the other, obliged to

call up or to reduce the earlier advances. Let it not be forgotten that the humbler Bengalee businessman is not much of a **persona grata** with our bigger banking institutions whose trade advances, on analysis, will be found to be principally among non-Bengalee interests. It is the Bengalee banks which have done the financing of the middle class Bengalee businessmen; and, from the enquiries I have made, I understand that a considerable proportion of the war orders secured by Bengalees is being financed by the Bengalee banks. If, therefore, the latter institutions propose to curtail credit facilities, even the little share which Bengalee business-men are able to secure in war orders will disappear.

Apart from these adverse repercussions on war orders, it has to be remembered that it is one thing for a bank to call up an advance; it is altogether a different story about its realising the advance in time. It is my conviction that, alike in the interests of the stability of Bengalee banks and the continuity of the business transacted by Bengalee businessmen, the problem of extending liberal re-discounting facilities must be tackled, now and here, by the Reserve Bank. In this connection, I would like to make four observations. In the first place, the Bengalee banks, scheduled and non-scheduled, should get together, take stock of their position, ascertain the class and volume of commercial paper, which may be considered, on the most rigid examination, as first-class security and put up a combined representation to the Reserve Bank on the kind of facilities which they need. In the second place, the Reserve Bank must be prepared for a more liberal interpretation and a more timely application of the relevant clauses of the Reserve Bank Act than it did on the occasion of the banking crisis in South India in 1937. I have had to do something with the negotiations with the Reserve Bank as regards the facilities to be made available to member banks. It was in 1936 that I approached Sir Osborne Smith (but yesterday the word of Caesar might have stood against the world; now lies he there, and none so poor to do him reverence); and he decided that, on the basis of a trust receipt to be executed by the bank in quesiton, documents for re-discountting of commercial paper should be devised. Straightaway, he fixed limits for the four banks who had applied in that behalf. This arrangement worked only for a time. Sir James Taylor, as Governor, was not satisfied with the trust receipt procedure and gave an interpretation which meant that the class of commercial paper in vogue in India was mostly ineligible for re-discount. This interpretation was widely criticised and its legality was questioned by such eminent lawyers as Mr. T. R. Venkatarama Sastri. The matter stands there. And, while the question of rediscount facilities is taken up in the present context, I must utter a warning that, if the Reserve Bank sticks to such an unhelpful attitude, it will only confirm the impression that it has hardly done anything to justify the description of a bankers' bank.'

NOTICE

Restriction of traffic carried in buffalo, bullock and hand carts over Howrah Bridge between 3 p.m. and 10 p.m. Bengal Time.

Consequent on new regulations notified by the Commissioner of Police, Calcutta, and the District Magistrate, Howrah, affecting traffic across the Howrah Bridge, the hours of booking and delivery of parcels will be revised as follows on and from 4th January, 1942.

REVISED HOURS

1. Howrah Parcels Office:—
   7 a.m. to 2 p.m. Bengal Time. Entrance and exit gates will be closed to all vehicles at 3 p.m. Bengal Time.
2. City Booking Office in Calcutta:—
   7 a.m. to 2 p.m. Bengal Time, for booking of parcels to the B. N. Railway and via. Inward parcels and luggage will be delivered, and passengers and luggage will be booked as at present.

Motor lorries proceeding with goods consignments to and from Shalimar will be allowed across the Howrah Bridge during the restricted period. There will therefore be no change in the hours of business at Shalimar Goods Sheds, except that deliveries for removal by buffalo, bullock or hand cart to within the prohibited area will not be given after 1-30 P.M. Bengal Time.

COMMERCIAL TRAFFIC MANAGER

In the third place, not only is there need for sympathy, broad outlook and understanding of the peculiar needs of the situation, but speedy action is the essence of successful solution of what might otherwise prove a grave crisis. Here again, let me recall an episode from Sir Osborne's tenure. In the closing years of the 'twenties, giltedged securities had fallen to low levels; and a fairly big bank in Northern India was holding a very big giltedged portfolio. The Chairman of the bank came down to Calcutta and consulted me. And I came to the conclusion that, if the bank were given a considerable overdraft facility against government securities, it could set its position right in the course of two or three years. I arranged an interview, Sir Osborne had passed orders sanctioning an overdraft of Rs. 90 lakhs with a minimum interest clause of Rs. 25 lakhs, interest at bank rate in busy season and one per cent below bank rate in on season, and the overdraft facility to be available in over thirty branches of the bank. This proved the turning point in the career of the bank which is to-day one of the Big Five. In contrast to this, the Reserve Bank authorities sat in their seats in Bombay what time the Travancore National and Quilon Bank was sending piteous appeals for immediate assistance. The Deputy Governor was on the scene in

*Stock Markets to-day and to-morrow*

# ENCOURAGING A. C. C. RESULTS

THE New Year cannot be said to begin under happy auspices. With the fierce Japanese drive in the Philippines and Malaya and direct threat to India there is general nervousness. Business in all important stock markets is practically at a standstill and only with the restrictions on trading has it been possible to prevent a further collapse in values. It was never expected that there would be any recovery from the low levels touched in the middle of 1940. The highest levels for the war period were touched only in November, 1940. A similar recovery can be expected as before but, as on the last occasion, it will be painful and slow.

The new year is different in many respects from the old. There were no major setbacks in the stock markets in the two important centres in India in 1941, and the long term trend was strongly upward. Only with the outbreak of the Japanese war there was a debacle in prices in the closing weeks.

* * * *

As a result of the further increase in prices for paper, the *India Paper Pulp Company, Limited*, has been able to report a substantial increase in earnings for the half-year ended September, 1941. But for the increase in provision for taxation and the higher charge on account of depreciation it would have been possible to increase substantially the distribution to shareholders.

The net profit for the half-year, before providing for taxation and depreciation, is Rs. 7,38,640 against Rs. 4,21,752 for the previous half-year. The provision for taxation is Rs. 3,72,000 against Rs. 1,25,000 while the amount set aside to depreciation is Rs. 2,00,000 against Rs. 1,50,000. The allocation to Reserve is slightly higher at Rs. 35,000 against Rs. 25,000. The dividend is increased by Re. 1 per share to Rs. 4-8 per share. This is the highest dividend recommended by the company in recent years.

There is acute shortage of paper at the present moment and it is impossible to meet demand from the existing production of mills. Mills are working day and night. For the duration of the emergency, therefore, earnings of paper mills, can be expected to run at very high levels.

* * * *

Commenting on the results of the *Associated Cement Companies, Limited* for the year ended July, 1940 we pointed out that with the conclusion of an agreement with the rival interests it was reasonable to expect a higher level of earnings. At the same time, however, doubts were expressed regarding a decline in the consumption in cement.

It is gratifying to note now that instead of the anticipated reduction in the consumption of cement there has been a considerable increase in the offtake due not only to the export demand, which has sprung up and has been increasing, but also to greater internal demand chiefly for military and industrial purposes. But for the shortage of transport, both as regards railway wagons and steamers, there would have been a greater offtake of cement. The higher level of prices as a result of the agreement with the Dalmia interests was operative during the latter half of the year covered by the accounts so that the higher manufacturing costs were offset only by the further economies in working expenses and the larger production.

The net profit, before providing for taxation and depreciation is Rs. 1,02,94,845 against Rs. 84,64,631 for the previous year. The provision for taxation is Rs. 14,53,000 against Rs. 8,04,000 while the amount set aside to depreciation is Rs. 38,66,054 against Rs. 37 lakhs. The amount written off Prospecting Expenses is Rs. 1,69,528 (Rs. 1,17,072), Unallocated Expenditure on New Works written off Rs. 1 lakh (same) while the amount on account of Rolling stock, Furniture and Equipment, Fixtures and Fittings etc., written off is Rs. 9,050 (Rs. 85,220). After transferring Rs. 86,931 (Rs. 1,10,668) to Debenture Sinking Fund, the General Reserve receives Rs. 3 lakhs. Even after the substantial increase in allocations the dividend has been increased to Rs. 6 from Rs. 5 per share. The amount carried forward is Rs. 1,06,475 against Rs. 4,65,634 brought in.

The further extension to the factory at Dwarka, mentioned in last year's report, has now been completed, and the increased output at that Works is now proving of great utility in meeting the increasing export demand. Owing to the greater general demand on the Company's works, other improvements and extensions have been and are being carried out, notably to the Shahabad Works.

WATCH DOG.

**NORTH WESTERN RAILWAY**

Tender No. 210-S|22|63.

Code word "ATTEND".

Tenders are invited on a rupee basis, for purchase by the North Western Railway of Tyres I. R. for barrows platform with steel bands. Tenders must reach office of General Manager not later than 14.00 hours on 16th February, 1942, and will be opened in office of Controller of Stores, Lahore at 11 A.M. on the following working day. Tender forms and other relative documents can be seen at and obtained from office of the Controller of Stores, on and from 4th January 1942. The sale price of the tender with one copy of drawing is local Rs. 1-8 and Muffasil Rs. 2.

**DEPARTMENT OF SUPPLY**

**NOTICE**

**IMPORT OF WROUGHT IRON AND IRON CASTINGS FROM THE UNITED KINGDOM**

**Importers of wrought iron and iron castings in all forms are now required to obtain import licenses from the Steel Import Controller or a Deputy Steel Import Controller. It is also necessary for importers who desire to place orders for these materials in the United Kingdom to obtain a recommendation from the Government of India before their orders can be accepted in the United Kingdom. All importers of wrought iron and iron castings from the United Kingdom are informed that applications for recommendations for supply from the United Kingdom should be made to the Deputy Steel Import Controller, 7, Wellesley Place, Calcutta, in accordance with the instructions laid down in Part V of memorandum No. G.3 (25), dated 26-2-1941 of which copies may be obtained from the Deputy Steel Import Controller. Authorisations permitting the supply of these materials from the United Kingdom will not be issued by His Majesty's Government unless the necessary recommendation has been obtained, and importers should, in their own interests, apply for recommendations before attempting to place orders in the United Kingdom.**

| Provision for taxation .. | 14,53,000 | 8,04,000 | 10,37,000 | 22,15,000 |
| Dividend amount | 42,32,526 | 35,27,105 | 35,27,105 | 35,27,105 |
| Dividend per cent | 6 | 5 | 5 | 5 |
| Carry forward .. | 1,06,475 | 4,65,634 | 4,73,887 | 9,22,924 |

*Audited accounts for the year ended 31st July, 1941:—*

The year's working, after meeting all expenses of operation and management and after allowing for depreciation and making provision for taxation, shows a profit of Rs. 45,54,035. To this has to be added the sum of Rs. 4,65,634, being the balance brought forward from the last year's account, making a total of Rs. 50,19,669 out of which the following sums have been appropriated:—

| | Rs. |
|---|---|
| To Debenture Redemption Fund .. | 1,10,668 |
| To Bonus to employees .. | 2,70,000 |
| To Reserve Fund .. | 3,00,000 |

This leaves a balance of Rs. 43,39,001 from which the directors recommend payment of a dividend for the year at the rate of Rs. 6 per share, free of income-tax, which will absorb Rs. 42,32,526, leaving a balance of Rs. 1,06,475 to be carried forward to next year's account.

There has been a considerable increase in the offtake of cement during the year under review. This is due not only to the export demand which has sprung up and has been increasing, but also to greater internal demand chiefly for military and industrial purposes. But for the shortage of transport, both as regards railway wagons and steamers, there would have been a greater offtake of cement.

Due to the arrangement come to with the *Dalmia Cement* interests, the price level throughout India has been stabilised. This, however, took some little time to bring into effect, and in any case the arrangement was only in operation for about half of the year under review. The effects will not, therefore, be fully reflected until a full year's working under the arrangement has been maintained.

In spite of the increased costs of nearly all the commodities required in the manufacture and packing of cement, manufacturing costs have been maintained at a satisfactory figure. This has largely proved possible both by economies effected at the factories and by the manufacture at works of several items of stores and spare parts previously obtained from abroad.

The further extension at the factory at Dwarka, mentioned in last year's report, has now been completed, and the increased output at that Works is now proving of great utility in meeting the increasing export demand. Owing to the greater general demand on the Company's Works, other improvements and extensions have been and are being carried out, notably to the Shahabad Works.

(*Continued from page 13*)

Madras only after the Bank had closed its doors; and all the assistance he gave to other distressed institutions was pompous advice. Repetition of such behaviour would be inexcusable folly now.

---

In the fourth place, I want to make it clear that this is not a matter which concerns only the Bengalee banks. The tension created by Japan's entry into the war is already serious; it will pass beyond the limits of recovery if a banking crisis were to complicate the position further. I would strongly commend this point of view to Sir Jeremy Raisman as the custodian of India's finances. It is fortunate he is here—and not less fortunate that Mr. Nalini Ranjan Sarker who has personal knowledge of the affairs and working of Bengalee banks. Mr. Sarker, I am sure, will make it his special business that whatever action is necessary and possible is taken in time and with effect. There should be no quibbling of words this time. No hair-splitting legal interpretations. No supine indifference to the smaller institutions. Let the New Year resolution for Bengal be that Bengal will see to it that the Bengalee banks are given the facilities to which they are entitled alike in their own interest and in the interest of the financial situation in the country.

---

Whom the king loveth to honour we must necessarily applaud. The appearance of many respected yet familiar names in the New Year Honours list makes it possible to add my little voice to the swelling chorus of approval. It would indeed be hard to cavil at any single name in the list which if it excludes the customary mention of "political and public services" of which many have been rightly suspicious, is once again proof of the greater discrimination practised in wartime. The press as such will not fail to register satisfaction, and the business community must indeed feel pleased with the inclusion of Mr. G. B. Morton among the new Knights. Mr. Morton succeeded Sir Henry Richardson as President of the Bengal Chamber, and only recently the duty fell upon him to indicate the limits set to national service by the inexorable demands of war production. A past President, Sir George Campbell is admitted to the Order of the Indian Empire as a Knight Commander. Of Sir George's recent achievements as Shipping Controller many may not be aware: all still remember him as the senior partner of Mackinnon, Mackenzie. When that is said, the extent and nature of his achievements in the not-so-little world of Clive Street is indicated precisely and clearly. I should add a special word of tribute to Mr. Walker whose career as leader of the European Group in the Bengal Assembly is in no wise below his feats as Adviser on Jute Supplies. What the Jute Mills Association has been able to do, both by way of accomplishment and compromise, redounds largely to the credit of Mr. Walker, C.B.E., who is destined surely for higher honours.

---

If British businessmen have been selected for titles with a rare and extremely happy sense of the appropriate I think that the same skill has been exercised in regard to the few Indian businessmen among the recipients of titles this time. The knighthood bestowed on Mr. Chunilal Mehta, a former sheriff of Bombay, comes almost at the end of his term as President of the Federation of Indian Chambers. It is difficult to think of one more acute or more practical among leaders of business to-day and I must add that his interest has always extended beyond the counting-house to the library. Mr. Ratnasabapathy Mudaliar of Coimbatore too has played a part on the larger stage of Delhi and his title is a timely reminder of the industrial prowess of the South. Few names will claim or command greater attention than that of Sir F. H. Puckle who is prominent as one of the few new K.C.I.E.s. His great work for an infant Department followed very remarkable work indeed in the Punjab and Central Secretariats. To him has fallen the task of looking after the Fifth Arm in time of war, and if he stands behind a new Member at present, his Department stands a permanent memorial of its first chief's judgment and tact.

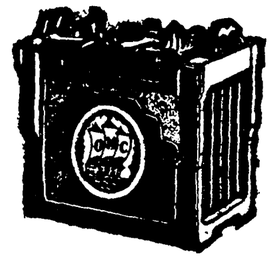
## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.



In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

THE New Year has opened in a far from comforting style. Stock exchanges are in the grip of panic; and the authorities may, before long, be considering if it be not the better course to close the exchanges for the time being. Brokers and jobbers are eager to cut losses but find it no easy matter for the simple reason that the buyers on whom they can foist their 'baby' are hardly to be found. Banks, which had been steadily accumulating deposits in the first eleven months of 1941, had a rude shock in December; and the first few days of January maintain the trend of the last month. The concern in December was the ill effects which the withdrawals of funds would have on the showing of the year-end accounts; the concern to-day is the need that has risen for utilising the first line of defence. There are ample signs that banks have already been obliged to rediscount portions of their Treasury Bills and to borrow against government securities. Between December 26 and January 2, Imperial Bank's advances have increased from Rs. 9.90 crores to Rs. 11.44 crores under Loans; from Rs. 19.30 crores to Rs. 19.98 crores under cash credits; and from Rs. 5.16 crores to Rs. 8.07 crores under bills. The increases under the first two heads are presumably connected, in large part, with the loans taken by banks against government securities; and the increase under the third head represents the rediscounting of Treasury Bills. These trends have, in fact, been manifest since early December. The significance of these changes is discussed by *Eavesdropper* in Clive Street Gossip; and the main point to note in this context is that conditions in the money market have been uncertain and inter-bank credit greatly strained.

---

It is, therefore, not surprising that bidding on the weekly Treasury Bill tender day was not keen though tender bills were available after the lapse of a fortnight from the last tender day. Applications came to Rs. 1,75¾ lakhs; and the average rate of accepted tenders was rupee one percent per annum as compared with the same rate a fortnight ago. The offer for next week remains unchanged at Rs. 1 crore. Sales of tap bills, reported this week, cover the long period of December 23 to January 4; and they would have made poor showing but for the substantial sales to governments. Tap bills sold during the period amounted to Rs. 4.01 crores, of which Rs. 3.22 crores were sales to governments. Sales of intermediates are to continue at the unchanged rate of Rs. 99-12-3 per cent.

---

Further large sterling payments have been received on account of internal-governmental transactions and constitute the main influence for the changes in the Reserve Bank returns. Sterling securities held in the issue department have risen from Rs. 227.63 crores on December 26 to Rs. 237.63 crores on January 2. This follows a similar increase in the week ended December 26, an increase of Rs. 8 crores in the week ended December 19, of Rs. 12 crores in the week ended December 12 and of Rs. 17 crores in the week ended December 5. Thus, during each week of December, it was found necessary to transfer sterling securities to the issue department. Between November 28 and January 2, sterling securities in the issue department have gone up by as much as Rs. 57 crores. If additions to sterling securities continue to be made on this scale, a very embarrassing situation is in prospect at a very early date. During this period, there has, thus, been currency expansion against sterling securities for Rs. 57 crores, while this expansion has been offset to the extent of Rs. 15 crores by withdrawal of rupee securities. Net currency expansion is, therefore, Rs. 42 crores—an all-time monthly record.

---

Between Decembr 19 and January 2, sterling securities in the issue department have expanded by Rs. 20 crores. Foreign balances in the banking department have gone down from Rs. 53.23 crores to Rs. 51.59 crores. Payment by the British Government in respect of December settlement is, so far, approximately Rs. 18 crores. As a result, Central Government's cash balance with the Reserve Bank has risen from Rs. 8.71 crores on December 26, to Rs. 15.63 crores on January 2. Active note circulation in India touches a new record at Rs. 321.09 crores. Notes held in the banking department of the Reserve Bank are on the large side at Rs. 14.67 crores.

The exchange market has been hesitant and business turnover on the small side, what with the uncertainty about the war situation and about freight. The undertone, however, continues steady.

---

Banks were sellers of T. T. on London for Ready up to six months forward at 1s. 5 31|32d., and banks were buyers of T. T. on London for Ready up to six months forward at 1s. 6 1|32d.

D. A. sight bills quoted 1s. 6 9|32d., for three months; and 1s. 6 11|32d., for four months.

Dollars were Rs. 332-12-0.

Interbank call money is unchanged at ½ percent.

Firms' money for call and short quoted ¼ percent and ½ percent for one to four months deposits.

### INDIANS ABROAD

The newly organised Overseas Department is having its hands full in connection with arrangements for the evacuation of Indians from occupied and other threatened countries in the Far East. There have been many complaints from the public that sufficient information has not been forthcoming in this country regarding the large number of Indians in Burma and Malaya though in both the countries the Government of India have their Agents. In order to satisfy this demand the Overseas Department has opened a separate section to receive inquiries and try to secure the necessary information through official channels. In this connection there are three different problems to be considered. Firstly there is the question of evacuation—particularly of women and children by securing suitable shipping facilities. Secondly, there is the question of making suitable arrangement in Burma and other countries for relieving distress among Indians rendered homeless or thrown out of employment as a result of enemy attacks. Thirdly, there is the question of setting up the necessary organisation in this country for helping refugees who arrive in this country and find themselves in difficulties. Delay and dislocation could not be avoided in the beginning, but now that the problem is being tackled in all its details, the measures taken by the Overseas Department may prove sufficiently effective.

## TREASURY BILLS

### India

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills were opened on Tuesday, January 6, 1942. Total amount offered was Rs. 1,75,75,000 (Rs. 1 crore 75 lakhs and 75 thousand). Tenders at Rs. 99-12-0 per cent were allocated approximately 60 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Re. 1 per cent (Rupee one per cent) per annum.

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills will be received on Tuesday, January 13, 1942. Successful tenderers should make payment on Friday, January 16, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from January 7, 1942 to January 12, 1942, at Rs. 99-12-3 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from December 23, 1941 to January 5, 1942 amounted to Rs. 4,01,00,000 (Rupees 4 crores and 1 lakh) of which Rs. 3,22,00,000 (Rupees 3 crores and 22 lakhs) were sales to Governments.

During the fortnight ended January 2, 1942 Government of India Treasury Bills for Rs. 5,00,000 (Rupees Five lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad

Thursday Morning.

THERE have been no striking financial changes so far to synchronise with the remarkable developments in the Far East. Victories in the field, however, mean money, and Mr. Roosevelt's broadcast on the subject of the 1942-43 budget is as arresting as the picture of war production he drew. An outlay of 56 billions means that something more than half the estimated national income of 100 billions will be swallowed up by the war. The cost of war is, however, ignored by the President who insists that a high price can be paid for victory.

The higher earnings of the majority of U.S. enterprises in the third quarter will support such expenditure. If certain materials like rubber and tin are in short supply, the U.S.A. will start using reclaimed rubber or other metals like aluminium. It is not the prospect of reduced tin supply that worries either America or Britain because Bolivia and Nigeria are important alternative sources. The U.S.A. has got to spend far larger sums than expected. Part of it must come from taxation, and this will hamper the recovery already in evidence. But the weight of opinion is decisively against unlimited borrowing, and it has been rightly asked why relief expenditure on the depression scale should continue when the seven-day week absorbs all the workless.

Taxation is uniformly recommended by the advocates of retrenchment. One does not have the full details of the Budget message. Moveover, the Secretary to the Treasury and the Budget Director have to discuss the subject. The financial implications of ground strategy and the record production that goes with it have to be examined separately by Congress. It is clear that limitation of dividends as recommended by Mr. Morgenthau will follow. But the restoration of empire is the dominant consideration. For that the Canadian war machine is joined to the U.S.A. If Canada is going to cut car production by half this year it is in line with the U.S. decision to spend 5 billions on converting her automobile plants to defence production. The economic changes in progress during the summer in the U.S.A. must have been important. An experienced Argentine observer like Dr. Pinedo went home and gave an account of the amazing defence effort in the States. He concluded that anything was possible for the great Republic. It is now war effort and even the year-old account of Mr. Hitch who has written upon the resources seems inadequate. Plans for a new supply council to second the military effort have taken shape. More dollar-a-year men will come into the news but that is not concerned with finance.

It is noteworthy that the U.S. Treasury has not made any agreement with its allies about financing the war. The lease-lend plan is deemed adequate for all purposes. For the moment the accent everywhere is on sacrifice and more sacrifice. A long, bloody and costly war—that is Mr. Roosevelt's equivalent of blood, tears and sweat. How Congress will react is not known, but the temper of the nation that entered this war only in December suggests that no cost can be too great when the goal is victory. The U.S.A. has not asked anything of its allies. It hopes to give more than it receives though it may take more nickel and bauxite from Canada. It can still help others fully; even neutrals like Turkey and Egypt are recognised as having claims. Many provisional governments are candidates for U.S. assistance at present. The Russian war production is expected to recover after the recapture of Kharkov. There is nothing yet to suggest that the need for outside help is less acute. Russian needs have receded only temporarily while the defence of Malaya has become the all-absorbing issue.

To turn to events purely financial. The London money market is said to have negotiated the turn of the year effortlessly. After the long holiday money was in demand and bills were on offer. Evidently, the Bank of England turned buyer, and the result was a restoration of comfortable conditions. Result is seen in the slight fall in the Treasury Bill rate last Friday when 158 million was tendered for the usual issue of 75 million sterling. That the Treasury needs less money in spite of record war expenditure which must be over the previously mentioned rate of 11¾ million a day is indicated again by the fact that only 15 millions, against 40 millions last week, will be taken from the Banks as deposits at a rate which is just the same as that quoted for six months' discounts.

The Far Eastern war has led to the disappearance of T.T. rates on Shanghai and Hongkong. This is more important than the end of the system of monthly accounts and settlements by chits reported from Singapore. As there is no mention so far of what areas in Malaya are regarded as enemy-occupied it must be assumed that Singapore dollars are still good. The rate quoted after the New Year was 2s 4 5|32 to 7|32d. Banks in India were quoting Rs. 155 per 100 dollars for telegraphic transfers. The steadiness is certainly proof of confidence that Singapore will be held effectively, even if the Japs have crossed into Pahang. No change is to be discerned in the quotations for the N.E.I. guilder. The recovery in the London quotation for the 100 guilder shares of the Royal Dutch Company is certainly striking enough to show that Mynheer Van Mook formerly Director-General of Economics in the Colonial Civil Service will do his job all right as Lt.-Governor. It was Mynheer Van Mook who told the Japanese envoys in Batavia last year that no agreement on Japan's terms could be signed when the Netherlands was at war with Germany and asserted firmly that obligations to the Allies of Holland transcended local considerations. His appointment like that of General Wavell will go far to sustain confidence.

New York bullion rates are unchanged. Indian markets are no longer clinging madly to bullion. So the year has begun well. London markets have latterly discounted war news and follow Mr. Churchill's assurance that victory is the end. The only communique issued recently relates to debts due or owing by Chinese nationals. Chinese territory is distinguished from other enemy-occupied territory and excluded from the jurisdiction of the control of Enemy Property. Since the Commonwealth Government functions nothing has been said about the peso. The Hongkong currency is out of the picture for the time being and it is certainly the time for Defence Rules to operate. Not many know that Indian capitalists had a definite stake in Hongkong. Mention has been made of Parsee millionaires who had a substantial interest in Jardine Mathieson at one time, but little has been said about smaller traders who have to stand the racket. Nothing has been said either about Armenians who were prominent in Hongkong not long ago. Perhaps the name of the late Sir Paul Catchick Chater should be mentioned to show that representatives of a community prominent in Calcutta obtained fame in the colony. The surrender of the Colony may thus affect individuals besides the British Commonwealth. There is not much to show that concerns incorporated in Hongkong or Shanghai had many branches in India. But it is certain that the Eastern exchange banks will find restricted scope for their activity this year as the war in the Far East deepens.

### High Explosives

Important details are now available regarding the armament production in this country. It is understood that in the manufacture of high explosives India is now well on the way of attaining self-sufficiency. Benzol-toluene plants and nitric acid plants erected for this purpose have proved successful. The first unit of a sulphuric acid concentration plant, manufactured in India, has passed its trial. Production of military aircraft has also begun commendably—the two types now undertaken, the Harlow Trainer and the Curtiss Hawk, both come out very well in trial flights. It is said that although at present the material used in these aircraft is largely imported, there is every reason to hope that in due course, with the further development of the engineering industry, it will be possible to manufacture most of the parts from indigenous raw materials. As regards shipbuilding it is pointed out that Indian shipyards are now engaged in building a large number of naval vessels ranging from Basset trawlers, bangors and minesweepers to motor launches and lifeboats. An attempt is now being made to manufacture propelling machinery also. Work on construction of floating docks is also now proceeding.

Constructional Engineers and Shipbuilders are now specifying

## The Practice of Economics

If economists as a class are still suspect, to some extent, their own acquittal after entry into the dock has never been questioned for their science as such commands universal respect. It is therefore with a clear conscience that the economist can enter the witness box and testify to the best of his knowledge about the things he knows. If his knowledge is limited, as many will urge, he has the means of extending it. That is the main argument put forward by Professor Niyogi of Calcutta last week. His speech dealt largely with teaching, not with method. A shift of emphasis towards reality—that was all he asked for, after reviewing the remarkable strides made by Indian students of economics. He asked for—and will doubtless get—more encouragement of analysis in place of descriptive economics. He declined to believe that the study could be static when conditions are changing rapidly and decisively.

As we have been taught to expect much from the economist, particularly, after the invitation to assist the inter-departmental committee on post-war reconstruction, we must put to ourselves the question whether Professor Niyogi's absolute endorsement of research through special institutes is relevant. To relate economics to business seems too ambitious a prospect, for one must admit here and now that the average managing agent will not encourage curiosity. Again, one must remark that institutional research on the enormous scale of the U.S.A. is incompatible with persistent, pervasive poverty. Finding facts is very well, but facts may lead to disturbing conclusions. If Mr. Wells as an early Fabian could be impelled to write on the Tragedy of Boots, the investigator here may write about the Tragedy of Bidis. Knowledge, if it does not lead to action, will be barren, and it may again be asked if the various Boards of Economic Enquiry have altogether outlived their usefulness. It is clear then that the proposed institutes of research would only carry out surveys and enquiries already undertaken independently, and would not, for instance, perform such functions as the adjustment of relations between Capital and Labour.

Whether an institute planned on the lines proposed by Dr. Niyogi, who wants that the regular secretion of statistics should be turned into channels for economic development, can attain the stature of the special foundations, mentioned with approval, is again a point that seems to invite disagreement. One must admit that the academic economist cannot influence policy much less practice. If they have been asked in the past to join Tariff Board enquiries, they have been shown, frequently enough and convincingly enough, that it is not for them to dispose, even if they propose. This is said in no spirit of criticism, but what is implied is that the luxuries of rich nations can have no place in India. If the conclusion appears chilling, support will be had from another quarter for the view that investigation often betrays latent limitations. The work of the National Planning Committee with its network of sub-committees was conceived on the right lines as we have observed often and insistently. It asked for the data which seemed necessary. It summed up the evidence, but could not pronounce judgment. For, it is manifest, now as always, that study is far removed from action. If the economist in India were to perfect his technique by attaining mastery of method on modern lines, he may perhaps command more respect. Ashley's admiration of research, personal contacts and visits to Western Germany may in turn impel admiration, but the question immediately arises whether the junior university teacher here can obtain the prescription filled in by Ashley. A compromise would necessarily be prejudicial, most of all to the average worker, for whom, too, a place is sought. Due regard must be had to the extraordinary limitations imposed on the teacher by the refractory nature of examinations and examinees. It would naturally be impossible to ask for drastic reform of university administration to suit the new plea for leisured or endowed research. So far as one is concerned with the possible development of industry in wartime, it may seem rather hard to relate an extension of what may be called field study with more pressing requirements. It may seem pointless to some to relate the protest of U.S. economists against the Hawley-Smoot tariff to the economist's abiding interest in practical affairs. Granted the interest remains, the question of responsible contribution arises. It must be admitted that it cannot exceed that of the intelligent citizen anxious to bring his instructed judgment to the common good.

If criticism of this type is deflected by Professor Niyogi's plea for closer relations with business organisations, it is worth while to recall that the closing part of his speech echoes views which should have been made familiar by specific suggestions made only in November last in this journal. Limited, purposeful research; all that surely has a place, but its financing should devolve on the munificent, private or corporate. It cannot be undertaken by teachers whose own popularising of foreign knowledge has created confusion rather than creative activity. If this criticism seems to underrate the contribution made by research so far, it is only necessary to recall that Booth and Seebohm Rowntree did their investigations without aid, though they had an object, at once laudable and obvious. Their investigations have been brought up to date and it may well be asked whether the comparable investigation into the condition of certain South Indian villages, resumed after a long stretch, has yielded conclusions of the same value as those obtained by Mr. Rowntree in York forty years after he finished his first study of poverty. Yet it would be a mistake to institute far-fetched comparisons except to indicate that the economist must learn to leave well alone. A new Central Department exists to carry out the special research required or justified, and few can say that its official character affects the conclusions. It is therefore correct to say that new institutes would be of strictly limited value. Their endowment and their organisation would call for an expenditure of energy and money that may well be turned in another direction.

The great question is, of course, whether research by new Provincial Institutes would lead to similar happy results. However estimable the investigator, however thorough and skilled the methods, its result would be small unless it is a precise copy of German methods. It is essential to indicate that the radical differences between Indian universities and German universities will destroy any hopes built on the possibility of linking academic studies with economic investigations. The field is restricted and resources even more limited.

If the economist still thinks of his dual function, it is not for the amateur student to say that the scope for the economist is restricted by war or peace. If plenty appeals to the economist, who is appalled by poverty, it is merely a mark of humanising influences at work. There remains, however, the task of enlightening the electorate. That cannot be altogether usurped by the professional politician, and one suspects that the accent is heavily laid on research to indicate that the economist has points of contact with the public. It has long been urged that no independent school has emerged though one might say on the occasion of Ranade's centenary that Indian economics owes much to the Essays of the judge.

It is only fair to the memory of Ranade that his broad point of view has coloured much writing and all talk on economic subjects. In Prof. Kale's admirable summing up of Ranade's achievements as scholar (published in a separate

souvenir) there is indeed much to show that specific sources of discontent might be productive of improvement. The estimate clearly proves that a broad sociological background alone will make economics both popular and respected. Research, institutional or other, would be endorsed as the most palpable imitation of others, superfluous when much of the investigation regarding cottage industries, financial organisation and even farm economics has been carried out already.

Over a wide field and for a long stretch of time the main conclusions of economists have commanded approval if not general, unqualified assent. Many have certainly stood the strain of war and peace alike. It may be therefore said that if the economist is often in the question box he is never put in the dock. He has no need to be on the defensive. He is free to recommend or reprove as the circumstances demand while his own reluctance to offer himself for consultation has vanished. It is therefore in line with the higher standing of the economist that one calls for the vigorous propagation of the knowledge that is peculiar to the professional. The professional, however, wants to retain his character, hence his advocacy of limited research. To preserve the mystery, to maintain what may be called the guild character, is become an aim. This suspicion receives confirmation from every speech demanding special and extended facilities for research; for leisure and for endowments too.

## REVIEW OF COMMODITY MARKETS IN 1941

Since the war began in September 1939 commodity markets all over the world have been subject to violent fluctuations. This has been true to a greater extent in the case of India as in the earlier months of the war period, this country was not directly concerned in the Empire's war effort and only such materials as could be taken without disturbing to any great extent shipping facilities were bought by Britain and the Empire countries. Thus, beyond the initial boom in prices, in the closing months of 1939, desultory trading conditions were witnessed in the first half of 1940. The fall of France and the acute shipping facilities thereafter frightened many operators and the worst slump in prices for the war period was witnessed in June and July 1940. Only the deliberations of the Eastern Group Conference in October that year and the successful outcome of the Battle for Britain restored confidence in markets.

The year 1941 can thus be said to have begun under very good auspices. There were no major setbacks for the British in the war. Even the overrunning of the Balkan Countries by Germany in the spring of 1941 had a depressing effect on the market only temporarily. The growing importance of India in the Eastern Group countries and the strategic importance in regard to supply of war materials, on account of her geographical position, caused active buying in all the markets. There was a good increase in exports. The outbreak of the Russo-German war and the considerable improvement in the freight position in the latter half of the year were easily the most favourable developments of 1941. There was a regular boom in the jute and jute manufactures markets. The cotton market continued firm though there was considerable anxiety regarding the Far Eastern situation. Wheat prices registered record new high levels. Oilseeds also registered appreciable improvement in the second half of the year.

But for the nasty shock to the markets with the commencement of hostilities in the first week of December, which resulted in a substantial decline in values, the year would have ended very satisfactorily.

**Jute**

Thanks to the policy of drastic restriction in production by the Indian Jute Mills Association and the policy of regulation by the Bengal Government both the jute and jute manufactures markets were maintained in a healthy state till the end of the year.

With the minimum price agreement in force throughout the 1940-41 season, the restriction of production by Indian mills did not disturb the jute market in any appreciable degree. Of course, with sellers keen for business, considerable difficulty was experienced in disposing of the large crop. Mills bought their quota completely under the agreement though there was some delay in effecting the purchases. For this reason, the minimum prices under the agreement remained effective till the end of 1940-41 season.

Normally, the strength of the jute manufactures market, which was noticeable right from the beginning of the year, would have had an encouraging influence but, as pointed above, the large supplies out of the 1940-41 crop and the uncertainty regarding the policy of restriction for the 1941-42 crop had a chilling influence. The Satta for the new crop over the old crop widened considerably and only the announcement by the Bengal Government that the area under the crop for 1941-42 would be restricted to one-third of the area registered under the Bengal Jute Regulation Act started the upward movement. The outbreak of the German war and the consistent improvement in shipments of jute manufactures, with the arrival of lease and lend ships, led to an improvement in values. The increase in the number of working hours in the last four months, thrice within a short period, had a definitely encouraging effect.

But for the cautious buying policy of mills, prices would have been forced up much higher. Considerable difficulty was experienced in getting the higher grade quality jutes. The crops for 1940-41 and 1941-42 are poor from the point of view of quality.

The large crop of 1940-41 contained a large proportion of cuttings and lower quality jute while the drastic reduction in the area under the 1941-42 crop led to intensified cultivation and over-maturing of the crop which resulted in a deterioration in quality.

Another factor which tended to have a discouraging effect on jute values was the agitation carried out by the vested interests to bring about a large increase of the area under 1942-43 crop to ensure plentiful supplies of the crop. It was eventually decided by the Bengal Government that the area for 1942-43 should be ten annas of the area registered in 1940. Having regard to the conditions prevailing in the markets before the outbreak of the Japanese war, the decision to increase the area under the crop for 1942-43 was quite justifiable but now that the export outlook has become very uncertain, with the dangers to the Pacific shipping route and the occupation of certain important Far Eastern markets, there is bound to be an appreciable decline in the ordinary consumption. So far there has not been any reduction in mill working hours and it is quite likely that for some time the increase in military requirements will offset the decline in exports to the U.S.A. and other countries. Whether the sharp fall in exports of jute manufactures will continue to be made up by sandbag orders and orders of special types of hessian cloth is very doubtful.

The outbreak of the Japanese war on December 6, 1941 surprised everybody completely. There was a slump in prices in all markets. From the highest level for the year of over Rs. 70 in the futures market there was a sharp setback to Rs. 57-8 per bale. The committee of the East India Jute Mills Association acted promptly and fixed a minimum price of Rs. 56 per bale. This has had a steadying influence on prices but business in futures came almost to a standstill and quotations were nominally around Rs. 57-4. Prices for loose jute and pucca bales were marked down appreciably and but for the fixation of minimum prices by mills also for jute manufactures, values would have been marked down even lower.

It would thus be noted that the year 1941 was satisfactory from the point of view of the ryot and only in closing weeks there was great confusion on account of the entry of Japan in the war. Against the price of Rs. 8 per maund for Indian Jat Middles in 1940-41 the ryot was able to get as much as Rs. 15-8 per maund at one time in the year. The quotation for new crop improved from below Rs. 40 per bale to over Rs. 70 per bale. Closing quotations for the year were very much lower than the highest levels but were on balance higher.

The chief feature of the year is the sustained demand for jute manufactures. The considerable improvement in the shipping position caused a shortage of ready goods. As the bazar had anticipated the possibility of improvement in the freight position, it got the upper hand over mills. For a considerable time there was agitation to increase production but mills adhered strictly to the policy of regulating production to strengthen the price structure. They worked 45 hours per week throughout the month till the end of August, 1941 with the exception of January and March in which mills were closed for one week in the month. Thus, from Rs. 12-7 for 9 Porters ready in the beginning of the month there was a gradual rise to Rs. 15-8. The Russo-German war had a stimulating effect on values and the arrival of the lease-lend ships after discharging their cargoes pushed up prices further. In fact, the improvement in values was so alarming that it was found necessary in the United States to fix maximum prices for hessians. For sometime there were reports that there would be fixation of maximum prices. But the Indian Jute

Mills Association at the conference held in Delhi for this purpose said that it would be possible to fulfil the requirements of the United States at below the maximum prices fixed provided the Bengal Government co-operated with them in ensuring adequate supplies of the crop in 1942-43 season. The placing of several large war orders resulted in an increase in the working hours to 50 per week from the beginning of September, 1941. The hours were increased to 54 per week from October 13, 1941 and then to 60 per week from November 8, 1941. Mills have been working 60 hours per week since then.

Since the outbreak of hostilities in the Far East there has been a slump in values. There was a sharp decrease in exports with the result that local stocks at the end of December showed a substantial increase. The passing of a bye-law by the members of the Indian Jute Mills Association forbidding member mills to sell below the fixed minimum prices had a cheering effect. Quotations in the goods market were around the fixed minimum levels towards the close of the year.

But for the shakeout in the market in the last three weeks of the year the jute manufactures market experienced very good trading conditions. Mills earnings were running at the highest levels for the war period. Production was nearly at the level of 1939-40. The mills, the bazar operators and the ryots benefited all alike.

**Cotton**

But for the confused outlook regarding the future of exports the raw cotton market should have been more active. For, since November, 1940 cotton mills have been busy on war orders. With the increasing demand from export markets, the decline in imports from Japan and the increase in war orders, speculators in the cloth markets have been active. Prices tended to move slowly upward till May. Owing to the difficulty in getting the defence requirements, a conference of Government representatives and millowners was held in May last year. The Government also relaxed the restrictions regarding specifications. There was a sharp rise in prices for all qualities of cotton. Broach April-May were marked as high as Rs. 263, and the outbreak of the Russo-German war had a further stimulating effect on values.

The smooth course of the raw cotton market was, however, interrupted by the order of the Indian Government freezing Japanese assets in this country. As it is a necessary condition that there should be free imports of Japanese goods for a good offtake of Indian cotton, values reacted sharply. In contrast to the decline in cotton, prices in the cloth market scored up. It took some time for raw cotton to stage a recovery but the bogey of the Japanese entry into war had a constant restraining influence and when the war actually broke out, hopes regarding the possibility of an increase in cotton exports were dashed.

Japan is our principal consumer of short staple cotton. Indian mills can use the short staple varieties only by mixing. There has no doubt been a record increase in consumption but the problem of disposing short staple cotton cannot be satisfactorily solved. The Broach crop will be taken up entirely and the fears regarding the shortage of these varieties were at one time responsible for a premium of over 50 points for old crop over new crop in the middle of the year.

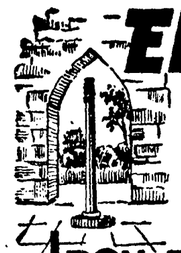
**Jute Marketing**

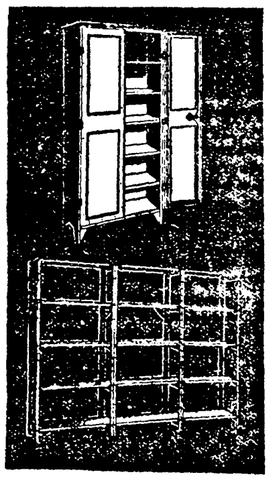


In the annual report of the Indian Central Jute Committee issued last month there was a reference to the completion of the marketing enquiry. The usual report has appeared this week and a summary of its conclusions does not lose its value on account of the prolonged stagnation of jute and hessian prices. The trade and industry should take note of the recommendations such as regular investigation into the prospects of rival fibres and the extention of tossa cultivation in North and East Bengal. Most of the recommendations will command general acceptance since the second report fulfils the promise made in the first report concerning a complete picture of jute cultivation, the mill industry and the trades that depend on the two. The survival of a handloom industry that in normal years accounts for as much as 3 per cent. of the jute consumption is no bar to the claim that the importance of jute dates from the export of mill-made fabrics. The second volume covers a vast deal of ground, much of it familiar, yet the analysis of price trends is valuable for the reason that both jute and hessian have quite recently come to a parting of the ways. It would be unusual if the report ignored the futures market, and its remarks on the relations subsisting between spot and futures prices for raw jute gains in value from the dispassionate, general terms in which they are couched.

The appearance of another marketing report may excite misgivings owing to the existence of a jute futures market and the periodical appearance of various proposals for its control. It is one of the merits of the latest of reports that the prevalence of speculation is recognised and the value of the speculative gunny merchant is conceded. The report admits again that his operations provided a hedge for the mills against their own stocks of jute. The shipper, too, gains because he can obtain competitive quotations, and turn, if need be, to a source of supply other than the mills. There are, however, limitations and the past year has demonstrated over again that speculative activity mars prospects. The report indeed argues that the speculative activity of gunny traders who have often failed to make reasoned estimates of demand and supply may adversely affect the manufacturing industry. In the past year working hours, for instance, had to be regulated by the Mills Association with an eye on hessian prices and this by itself seems a reason for the restraint of speculation. More recently the mills have been forced to intervene in order to prevent a landslide in prices which would prejudice the jute-grower as much as the manufacturer. It may be therefore urged that there is a place for the improved and co-operative marketing system for the benefit of the mills suggested by the report. The encouragement of consumption can only follow from the maintenance of a reasonable price level and last year's developments e.g. in the U.S.A. where the use of cotton bags has been extending are enough to adduce in favour of the view that the maintenance of exports in the maximum volume is the prime interest of the mills. More than once the divergence of interest between the mills, the shipper and the bazar has become manifest. If the report does not labour the point, it does not fail to indicate that the speculator has no function when prices are regulated by agreement as between the Government and the mills for raw jute and as between the mills and Government for the latter's purchases of sandbags etc.

**Improving Leather Supplies**

Reports to the effect that the quality of Indian hides is to be improved by direct encouragement of better breeding have appeared of late. As the demand for leather goods increases (with the result that a new Circle has been set up to develop leather production and manufactures in the Punjab) the need for improving the basic raw material, hides and skins, emerges. Better types of harness, saddlery and boots for the Army are needed, and India must at present satisfy the needs of other countries besides herself. The I. C. A. R. has evinced interest in this question of getting better hides.



ENDURANCE

The IRON PILLAR

The famous Iron Pillar of Delhi, which bears a Sanskrit inscription dating back to A. D. 300, has successfully withstood the ravages of time. Likewise, we claim that our STEEL Equipment, even if it may not last for centuries, does definitely last for much more than a life time.

Important, too, are other advantages . . . Steel Equipment is insect, fire and burglar-proof. It will not warp. Each unit remains for years in the same condition as when originally purchased. The first installation cost is the last. May we quote for your individual requirements?

**C. N. MUKERJEE,**
*Managing Director.*

The problem is not one of teaching the village tanner but of getting better skins off dead cattle. Improved methods of naying have to be taught alongside of better curing methods. The damage done by the warble fly has also to be eliminated. It has been estimated that India loses annually as much as Rs. 150 lakhs because of defects in hides caused by the holes bored by the fly. At Mukteswar the fly and its habits have been studied. Veterinary research in the Punjab will result in the evolution of effective control methods as the preliminary investigations have been promising. The I.C.A.R. has asked the Mukteswar Research Institute to study the insect that infests goat both the warble fly and ticks. The Institute has made progress with the preparation of suitable dips. In the Bombay Presidency a scheme has been drawn up to help the cattle owner by controlling ticks and diseases. Dips are admittedly useful and the hides are better. The improvement of initial preparation of hides is the object of a scheme adopted in the Frontier Province where village flaying centres have been set up. The result should be seen in better prices for hides, particularly, for kills. The long-standing problem has at last been treated and the present war will have proved helpful in more than one respect to the hides and skins trade.

### Cutting Petrol Consumption

The limitations imposed on bus traffic for instance in Calcutta are inspired by a desire to make the most out of the modifications in the petrol rationing. The cut of 40 per cent in normal consumption recently envisaged by the Government of India is as much a consequence of the war as of the defencelessness of the motor transport industry. That in spite of the new handicap there is still acute need for transport is seen in the decision only last month to set up a Transport Board in Bombay, at least to discover in time what means exist to augment existing methods and agencies. Rules have been framed in order to exempt producer-gas vehicles from the ban on certain services. The Madras Government has indicated that inferior gas producers should not be attached to vehicles and has insisted that only equipment of the approved pattern should go with licensed vehicles. A recent Government Order has indeed reiterated Madras' absolute preference for the producer-gas bus. This type will survive when many road services are abolished in the wake of intensified rationing. Only bus and goods services needed to feed railway services will be tolerated according to the terms of the last Order. That rationing will be stricter may be inferred from the Madras Government's instructions to car-owners including local bodies.

The possibility of oil imports being affected has not been mentioned: only the need to hold larger stocks for military requirements has been repeated in the India Government's decision last week to reduce the value of the previously issued petrol coupon. The hardship resulting may compel car-owners as a class to ask for corresponding economy or strictness of consumption by Government and Army alike. The **Spectator** has often held up the prodigal use of petrol as a mark of defective military administration. Men in the Army too have been appalled by the use of motor transport for trivial purposes and have contrasted this with the material loss and inconvenience sustained by owners of laid-up vehicles. Madras has wisely announced that licensing authorities too will take due note of petrol economy in the issue of licenses for Government and municipal vehicles. For them too economy is recommended: yet one may feel inclined to ask whether the Government has so far ordered the change-over to producer-gas on a large scale of vehicles belonging to civil departments and local authorities. The encouragement of charcoal manufacture has, of course, been zealously recommended by many but others will urge that the demand for charcoal must co-exist with the larger supply.

### Contributions to Loans

Not often does an opportunity occur to measure the growth of savings in any form over a specified period. If November viewed as a typical month it may be said that new capital to the extent of Rs. 9.9 crores was made available. The investor, of course, chose the 3 per cent. defence loan for that must inevitably be his first choice to-day. Compared with the total of Rs. 2.95 crores reported in October it must be said that the flow of savings was greatly stimulated after October. The larger and more rapid response must presumably be connected with the stimulus to stock exchange activity given by optimistic estimates of industrial companies' earnings mainly on account of the war. The November figures show that the contribution of Bengal alone to the Defence Loan had risen from Rs. 59.86 lakhs in October to Rs. 691.5 lakhs. The extraordinary jump can be explained on the ground that Defence Week began on November 28. The magnitude of the contribution of Calcutta and District has been effectively described in Mr. C. H. Heape's commentary on the Film Services production of the spectacles and thrills of the Week. It is only necessary to add that the December total too will reflect the enthusiastic response of this city. The progressive totals underline the fact that Bengal has provided more than any other Province. As against Rs. 36.85 crores put up by Bombay for the total of Rs. 91.41 crores for the 3 per cent. Bonds alone the contribution of Bengal is as much as Rs. 38.41 crores. Many will urge that the continuance of a popular Ministry provides an adequate explanation. It is certain that the U. P.'s total of Rs. 2.85 crores is altogether too small for a large and prosperous province with five large and prosperous cities. If the total for defence-free loans still puts Bombay in the lead it is clear that in regard to the sale of defence savings certificates also Bombay has done better. The progressive total, however, clearly shows that the stimulus given in November to sales in Bengal was great. Bengal led the rest of India in the matter of savings certificates also. Total sales of bonds, certificates and interest-free loan topped Rs. 97.9 crores in November. The actual contribution from savings certificates for the whole of India was Rs. 17,63,580 only and that from interest-free loan during November was Rs. 259,069 only. It is clear that the Government must look to the 3 per cent. loans to provide its loan requirements. The present depression in giltedged, if it is independent of the seasonal stringency of money, must naturally militate against the larger flow of subscriptions that one

was entitled to expect this year. There is, however, the fact that repatriation of a big block of sterling debt puts up India's credit while the investor will have to take due note of the lack of alternative investments as also his duty to save for victory which means freedom.

### Pulp and Newsprint

Continuous investigation at Dehra Dun has resulted in the preparation of suitable mechanical pulp for newsprint. No item of intelligence can be more pleasing than this when newspapers have had to contend against control orders added to the usual import difficulties. The Forest Research Institute is known to have tried nine different woods and one species of bamboo for producing mechanical pulp. That does not imply that newsprint manufacture can be undertaken in the immediate future. While many may conclude that in Kashmir and Tehir Garlewal there is sufficient supply of the needed woods there is the point that the large capital for a pulp mill may be hard to get. It is however, good to hear that spruce, fir, paper, mulberry, "genwa" and "chir" are sources of light-coloured plups suited to the manufacture of newsprint quality paper. The small experimental machine attached to the Dehra Dun Institute produced paper from a mixing of 70 per cent mechanical pulp and 30 per cent bleached bamboo chemical pulp and also from a mixture of 75 per cent woodpulp made from spruce and fir and 25 per cent bamboo pulp. The distinguishing characteristics of the resulting papers were noted. It was learned that the papers were equal to the average imported newsprint. The Institute also examined the question whether the manufacture of newsprint on the basis of local supplies of woodpulp was feasible. The supply of spruce and fir in both Kashmir and Tehri Garhwal is sufficiently large to warrant a small mill but proposals for setting up a mill have been held up for various economic and technical reasons. The other woods like the Salia bamboo tried out at the Institute yielded a brown or coloured pulp suited only for the making of cheap printing and wrapping paper, triplex board and cheap cardboards. The possibility of bleaching the brownish coloured pulp will, however, be ascertained through experiments now in progress. It is important to stress this as the supply of bamboo is large and it may be easier to embark on newsprint manufacture in India if mechanical pulp can be had from bamboo. The existing paper mills too are likely to manifest more interest if it is known that newsprint can be produced from a particular type of bamboo.

### Trade with Burma

Burma's trade in the future is likely to undergo many and grave changes. It is therefore important to examine the returns for the first half of 1941-42 to learn which are constant and which are variable factors. The official review published in the Trade Journal starts by remarking that seaborne trade has been well maintained in war conditions. The increase in exports that is a characteristic of India's trade extends to Burma. The rise is nearly Rs. 7.8 crores for the first half of the present year. Exports as compared with the first half of 1940-41 rose in value not only because of higher prices but on account of expanding trade with the sterling bloc. In the case of imports the increase in value as compared with 1940-41 was Rs. 184 lakhs. Total trade turnover for the six months shows an increase of Rs. 9.6 crores though there was no striking increase in Burma's trade with India. A rise in the value of re-exports accompanied the rise in the value of Burma's exports by Rs. 699.3 lakhs. The excess of exports also showed an increase of 41 per cent. since Burma's total exports at Rs. 35.18 crores during the first half of 1941-42 greatly exceeded her total imports for the period valued Rs. 14.74 crores. The resulting surplus must be the largest since 1929 though the total trade measured in currency was below the 1929 level. Burma's total exports to India in the six months, April-September, 1941, were valued Rs. 15.96 crores as against Rs. 15.3 crores in the same period of 1940. Exports to other countries grew more rapidly than Burma's exports to India being valued at Rs. 19.22 crores. Imports from India valued Rs. 8.78 crores showed a greater increase during this period than imports from other countries. If half of Burma's trade is conducted with India it is not at all due to any falling off in trade with other countries. That is clear from the simultaneous rise in both exports and imports. Burma's total exports of rice showing a rise of over Rs. 6 crores on the previous year account for over 50 per cent. of the exports. They also indicate how much of the expansion in export trade is due to a single commodity. A fall of over Rs. 21 lakhs is compared with the first half of 1940-41 is disclosed under exports of mineral oils and the increase of Rs. 7 lakhs under metals and oils is admittedly below expectations. Striking increases were, however, recorded under paraffin wax, rubber, cotton and pulses; also under potatoes and matches. Burma's own imports of manufactures have not increased much and the progressive rise under cotton yarn has disappeared though Burma's imports of cotton goods valued Rs. 2.07 crores show that the chief item provided by India commands a good market.

### Rail Receipts Still Rising

An increase of Rs. 12.2 crores or 16 per cent over the actuals for 1940-41 is disclosed in the last communique dealing with State Railway earnings. The 10-day period up to December 20 resulted in total earnings of Rs. 3.71 crores which again showed an increase of Rs. 43 lakhs on the corresponding period of 1940-41. The increase is as much as Rs. 65 lakhs if the 10-day earnings are compared with those of 1939-40. The succeeding period should have seen a more pronounced rise in coaching receipts as the exodus from cities gathered way. The pressure on goods traffic, leading sometimes to restricted booking, is a reminder of the strenuous days through which the railways are passing. That activity is immediately reflected in prosperity which can be measured by the total of Rs. 88.85 crores for the period April 1 to December 20 for State Railways. The certitude of such improvement being maintained throughout 1941-42 indeed goes to defeat pessimism generated by the periodical statements disclosing that the Central Government's expenditure necessitated by Defence requirements exceeded revenue receipts. The railways can be counted upon to ease the taxpayer's position when the budget proposals are formulated next month.

### Canada and America

If world trade has suffered grievously through the war, it has checked also the process of economic readjustment which followed the depression. No firm or swift revival can be looked for in spite of the promise made in the Atlantic Charter as regards unrestricted access to raw materials. There can be no promise either of equality of resources or distribution for the main pattern will remain the same as that obtaining before the war. If such a prospect is discouraging it is not particularly uncomfortable either for India or any of the Dominions, for they experience, in some measure, the stimulus without the disadvantages of war. Europe is a world in itself, and if Germany's control of economic activity in the Balkans has been accentuated it has not redounded to the advantage of highly developed countries like Sweden. Difficulties in regard to raw materials and fuel have been chronic, and the experience of Switzerland has been similarly unfavourable. The neutrals thus labour under handicaps akin to those of powers engaged in the war. On the other hand, it may be said that parts of the British Empire until the middle of 1941 experienced in some measure the prosperity associated with the last war. The same singular expansion in exports cannot continue hereafter as the Dominions have to make a more vigorous war effort of their own. Trade control too has extended, and if commodity surpluses do not excite special concern, it is recognised that the scope for inter-Imperial co-operation is limited by the war. It might be said that the Dominions have come off well despite the war as compared with Latin America. If the Pan-American trade programme has made headway with total U.S. trade with South America rising to one billion dollars, it has to be recognised that it was part of a two-fold movement at home in regard to defence production and the concurrent enlargement of exports notably to Britain. But it is certain that the U.S.A. went to the rescue of Brazil, Cuba and Peru as their exports to the U.S.A. as contrasted with the decline reported by Argentina showed a marked increase in 1941 over the previous year. The trade of the United States with the British Empire rose in a striking manner. In the first half of 1941 if there was not any increase, as much as 60 per cent. of the total exports went to the British Empire. It was noted also that the U.S.A.'s own imports from the British Empire rose by 20 per cent. as compared with the twelve months ended June, 1940. Larger exports to the democracies under the Lease-Lend Plan should have altered the volume and direction of trade since then. If the U.S.A.'s trade with China suffers sharply on account of the war it may be that in the Middle East as in Latin America the U.S.A. will increase her share of trade further. With Canada's war production directly linked under a new arrangement which if it does not increase dollar assets promotes security the Dominion cannot hope for the same conditions. It is clear that exports of all goods except foodstuffs will fall hereafter. In the first half of 1941 Canadian imports like exports were determined by Britain's pressing need of war materials. Civilian imports were controlled but Canada in spite of lost markets held her export trade up to 80 or 85 per cent of the pre-war level.

### Baroda's Industries

In the presidential address to the Agricultural section of the Indian Science Congress will be found a reference to the progress of industry and agriculture in Baroda. The efforts of the State in promoting the cultivation of improved types of cotton, oilseeds and rice were commended. Dr. Nazir Ahmad mentioned that nearly 30 per cent of the total area or 800,000 acres is under cotton. The annual outturn is over 225,000 bales. He added that Baroda's cotton crop included the improved types of 1027 A.L.F., B.D. 8, B. 9 and Wagad 8. Baroda, he added, had sixteen cotton mills with a total spindleage of 332,000 and a total loomage of 7,100. The textile industry of the State alone gives employment to over 20,000 workers. In addition to this large textile industry Baroda can claim many other industrial establishments. There is a China clay works at Ramespur, a woodwork factory for making bobbins and shuttles, etc., at Navsari a sulphuric acid factory at Pekad while a textile soap factory is also under construction according to Dr. Nazir Ahmad. Greater importance however attaches to the old established cement industry and another of more recent origin. The Methapur factory of Tata Chemicals now nearly complete will certainly enhance the industrial importance of Baroda. Due mention must be made of the Alembic Chemical Works at Baroda, the largest of its kind in India. The possible establishment of an automobile factory at Port Okha must not be left out in any notice of existing or potential industries in Baroda.

### New Uses for Cotton

Various aspects of India's textile production were discussed by Dr. Nazir Ahmad at Baroda on January 3. He outlined important suggestions as to the development of consumption. He observed that per capita purchases of cotton cloth in India at 15 yards fell below the level recorded in Malaya, Cuba, the Gold Coast and other tropical countries while it was less than half the average returned for Argentina and Denmark. In view of current calculations as to export markets his plea for the representative export organisation already proposed by the I.C.C.C. has great force. The development of the export trade would assuredly lead to a larger consumption of Indian cotton at home and preserve also transient advantages. He added one more suggestion in favour of a testing house or inspection bond to make sure that goods destined for shipment overseas are of uniformly good quality and fully in accordance with description.

The same address has dealt with the improvement over a ten-year period in India's textile production. It is true that there is an excess of short staple cotton for which the demand has shrunk. Out of India's total output of six million bales or so, there is not enough long staple cotton wanted for the finer yarns since the total production of yarn above 40 counts has risen from 23,612,000 lbs. in 1930 to 84,647,000 lbs. in 1939 it must be considered that improvement has been rapid and substantial. If the enlargement of India's textile output is reflected also in the case of yarns below forty counts it must be observed that in regard to counts between one and ten the production between 1935 and 1939 is just the same as in the preceding quinquennium while the production of yarns above 40 has shown an increase of 116 per cent. Against this must be set the fact that the Indian cotton of seventh-eighth inch and above which formed only 26 per cent of the total crop in the period 1928-33 rose by 6 per cent to stand at 32 per cent in the period 1933-38. The deficiency of long staple types has been referred to only recently by Sir P. Thakurdas who added that only recently these types had any future and argued that the cultivation of ordinary medium and short staples should be discouraged. Dr. Nazir Ahmad while endorsing the view that every encouragement should be given to long staples has asked that efforts should be made to increase the consumption of the surplus of medium and short staple cotton. The discovery of new uses outside the textile industry has to come here. It was mentioned that nearly 40 per cent of the U.S. cotton crop goes into factories other than cotton mills. He indicated that for rayon manufacture, road making, tyres, motor cars, cheap carpets, belting and tinning for irrigation channels, cotton would be acceptable. He added that the Matunga laboratory had begun to examine what scope existed for cotton fabrics in road surfacing and for the manufacture of bale coverings and sugar bags. That new uses will not develop rapidly was, however, recognised by Dr. Ahmad who pointed out that mills which started to make hessian cloth out of cotton lost interest when the price of jute came down.

It's a Fact—

that you can practically mint money without the slightest effort on your part by depositing your surplus income regularly with the Palai Central Bank. Year by year, add the interest earned to your capital and watch the total grow steadily and safely.

### Rising Output

If one goes by such statistics as are available at present the trend of industrial production in the first half of 1941-42 was more uneven than expected. If the trend was definitely upward in the case of cotton piecegoods, it must be recognised that in regard to jute manufactures the average production during this period was below the level attained in the first half of 1940-41. The lack of information does not obscure the fact that iron and steel production must have risen strongly in the first half of 1941-42. The Viceroy's speech at Jamshedpur last month throws as much light as is necessary. The improvement in India's merchandise exports during the first two quarters of the current year cannot be directly related to the advance in production except in the case of cotton piecegoods. The fall in textile imports since July is obviously a favourable factor leading to an enlargement of output which however is decisively below the record volume reported last December when total monthly output exceeded 422 million yards. Mill consumption of cotton has been running high after April, and the August total for instance showed an increase of 50,000 bales compared with August 1940. A pointer to the expansion of Indian mill production is furnished also by the increase in imports of cotton into India from April 1941. Imports in May topped 125,000 bales and it must be added that in regard to imports the total for the first half of 1941-42 should be equal to the total of 499,200 bales imported in 1940-41.

Fluctuations in the output of jute mills indicate that the output for the first half of the present year will fall below that for the corresponding period of 1940-41. There is, however, the possibility that the output in the second half will be much larger than that reported in September 1940 to March 1941. The major influence has been the irregular course of exports. If the stock position in the first half of 1941-42 seemed satisfactory in that a fall in sacking and bags took place while hessian stocks generally showed no increase over 1940-41, the fall of 112,000 tons in total exports of jute manufactures between April and August was enough to depress hopes even if prices were stable right through September because of improved shipping prospects. A welcome recovery in raw jute exports since May contributed to the maintenance of a favourable sentiment.

The expansion of pig iron and steel output cannot be measured but it may be pointed out that imports of iron and steel have been falling since April. The imports of protected types fell substantially dufing 1940-41 and it is apparent that a further fall will take place during this year. The fall in pig iron exports can be explained by reference to the advance in home production of steel. The pressure of home demand is again reflected in the reduced exports of iron and steel from India. There is at present no guide to figures for coal raisings and statistics relating to weekly receipts may not be useful for showing that the advance in India's output of coal up to December 1940 was followed by successive increases in output. If the marked increase in exports after May generates optimism, it is necessary to record here the expression of opinion in many coal company reports that the outlook is far from bright. The enlargement of tea exports has been a recurring feature of India's trade returns. The small increase in production is clearly due to larger offtake. The only indication of progress in chemical production is the drastic decline in imports of sulphate of ammonia. Perhaps the one adequate guide existing is the total regarding electricity generated and sold. If the totals exclude sales of energy sold by the P.W.D. and military stations, the gross figures convey the impression that in this year too there has been a rise in the demand for industrial power. Nothing can be said at present about the increased production of chemicals like sulphuric acid. But the steady upswing in India's paper production since April 1941 shows how strong has been the stimulus given by the war. This stimulus has been reflected in the development of stationery manufacture from local materials. It is clear that the decline in imports over the war period has helped Indian paper mills to obtain a steadily increasing share of the market.

BOMBAY · CALCUTTA

Frankly, I am not easy in my mind about the present withdrawal of funds from banks. Last week, I dealt with the situation so far as it affected the Bengalee banks; and, as the exodus of population has been heaviest from Bengal and as this province seems to apprehend that it has every likelihood of the first attack by Japan, the Bengalee banks have suffered the biggest drain. For similar reasons, banks in Madras, too, have been subjected to heavy raids. Many of the South Indians, resident in Calcutta, sent away their families to Madras to find that Madras was in the grip of panic no less widespread. It is, I learn, as difficult to secure a ticket at Egmore Railway Station as it has been at Howrah or Sealdah; and trains are packed as full on the South Indian Railway as on E.B.R., or E.I.R., or B.N.R. Places in the mofussil in the South have become overcrowded; and prices of foodstuffs are soaring sky-high. Houses which could be had, say, for Rs. 10 per month are now in demand for Rs. 100; milk which sold at 4 measures for a rupee is now selling at 1½ measures; there is a famine of vegetables; and the village-folk are finding things made far too costly for them by the swarming evacuees from the cities. 'Ananda Vikadan', ever able to see humour in the homely, narrates the story of what the population of a town near Madras did to get rid of the invaders. Two cases of feigned cholera were reported; and the town-folk went with long faces, blaming the evacuees for the spread of the epidemic. The mention of cholera was enough to drive away the new-comers who, evidently, are again on the run in search of a place which will be safe from Jap bombers as well as free from Indian epidemics.

As you and I can well realise, the funds we take out of our banks for a holiday are in proportion to what we can afford; and all of it comes back to the banks in due course. If, however, we apprehend an imminent danger and do not know when it will burst forth and how long it will last, we gather together whatever we can lay our hands on and entrench ourselves in the new camp, prepared for an indefinite stay. A large part of the population have thus withdrawn from banks most of what they held in the banks. On the top of this, Madras banks have had to suffer for another unfortunate coincidence. The two big banks of South India have branches in Malaya and Burma; and mischief-makers have not been slow to circulate reports that they must have lost heavily through their transactions in areas which are, or are threatened to become, enemy—occupied. The Indian Bank, promptly, came out with a clearly prepared statement of their advances and deposits for each of the branches situated in such areas; and it was clear, from the figures given, that the Indian Bank has taken more deposits than given advances in those branches. In simple terms, the depositors in other branches of the bank are distinct gainers. Even this precise information did not go any great way to allay alarm. And, so, we have had, since December 5, two major bank runs—one on South Indian banks and another on Bengalee banks.

Nor have I any doubt that bigger banks also, including the foreign banks, have experienced considerable withdrawals. Let me give a few figures. The deposits maintained by scheduled banks with the Reserve Bank have sharply shrunk from Rs. 47.31 crores on November 28 to Rs. 33.95 crores on January 2. That is, banks have their cash balances reduced by over Rs. 13 crores since Japan's entry into the war. And, mark you, this is a period during which active note circulation in India has gone up from Rs. 287.77 crores to Rs. 321.09 crores. While currency in circulation has expanded by Rs. 33 crores, banks have actually lost cash for Rs. 13 crores. Unfortunately, the latest statement giving the weekly position of scheduled banks has not been made available; and we are unable to make a detailed study of the important figures given in this return. I have, however, the statements up to the week ended December 12; and the following changes confirm the main trend of my conclusions. Demand liabilities in India have fallen from Rs. 224.72 crores on November 28 to Rs. 218.25 crores on December 12; and balances with the Reserve Bank from Rs. 46.50 crores to Rs. 36.53 crores. Advances made by banks have risen from Rs. 106.26 crores to Rs. 112.69 crores and bills from Rs. 4.71 crores to Rs. 5.77 crores. The Imperial Bank returns tell the same story. Loans have gone up from Rs. 6.85 crores on November 28 to Rs. 11.44 crores on January 2; and cash credits from Rs. 17.10 crores to Rs. 19.98 crores. It is obvious that banks have taken substantial advances from the Imperial Bank against their

government securities. They also seem to have discounted with the Imperial Bank large lines of Treasury Bills, as can be seen from the increase in the Imperial Bank's bill portfolio from Rs. 4.49 crores to Rs. 8.07 crores. That is to say, since Japan's entry into the war, the Imperial Bank has had to help banks with anything like Rs. 11 crores. Another significant change in the Imperial Bank return is the increase in deposits from Rs. 108.29 crores to Rs. 109.61 crores. It has always been found that, to the extent that bank runs are inspired by panic, the Imperial Bank ultimately gains in deposits.

---

From the Madras papers, I gather that Mr. C. D. Deshmukh, the new Deputy Governor of the Reserve Bank, is already at the Southern Capital; and Sir James Taylor, the Governor, is in Calcutta. It is up to them to provide timely and adequate rediscounting facilities on a quick and correct appreciation of the banking situation and its bearing on the general mood and temper of the public in these grave, critical and unsettled times. There are two points I would like to emphasize. The present runs on banks are not due to any bad news about this bank or that or the other. They are connected with the exodus of population and with the prevalent sense of total insecurity. For both of which the Government should take the responsibility. There is a widespread feeling that the Government, who have always dinned into our ears that we are unfit to defend ourselves, have failed to give India any kind of adequate protection against Japanese attacks by air or sea; and this is at the bottom of the scare and the panic. In other words, the runs on banks are not due to the banks themselves but to the Government. And, I maintain, it is the Government's duty and task to strengthen the banks in such ways and through such means as would enable them to come unscathed from the present runs. My second point is this: There is already intense nervousness not unmixed with bitterness in the public mind; and, if, on top of this, a banking crisis supervenes, public disquietude will pass beyond the limits of control.

---

For my part, I would like an emergency meeting of the Central Board of the Reserve Bank to be summoned; and comprehensive steps taken, in consultation with the Board, for preventing at all costs a banking crisis. As I began, so will I end. Frankly, I am not easy in mind over the banking situation; but all that I can do is to utter a warning in time. And I do so with all the emphasis at my command.

---

Many years ago I was admitted to the privilege of personal acquaintance with Sir Akbar Hydari. But his long working life lay far outside the somewhat narrow profession to which I cling, and it was no easy matter to retain a continuous or close connection. More recently that acquaintance was resumed after he had become Member for Information and Broadcasting. If the war has multiplied official jobs it has at least served to show that newspapers of all kinds must get attention, for public opinion is strongly influenced by the Press which still fights shy of the Home Department. It was,

*Match point*

Don't keep your Gold Flake to yourself! That's one of the rules of the game, if you wish it to be a love game. Remember how popular they are with women nowadays. It's the flavour of the really fine Virginia tobaccos of which Wills's Gold Flake are made that appeals to the ladies as much as to you. So, if you want to be the court favourite, be generous with your Gold Flake.

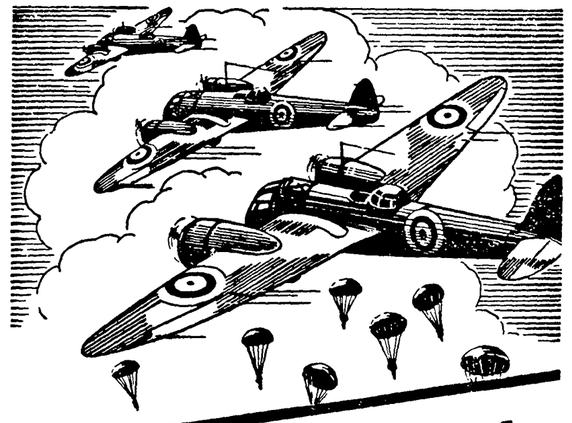
therefore, wholly appropriate that the new but exciting business of controlling Information and Broadcasting was assigned to Sir Akbar. For Sir Akbar in spite of his age retained the essential plasticity that goes with a great intellect.

He typified the brain of the aristocratic Muslim ruling class, a class which has always had its points. Sir Akbar's unlimited courtesy and remarkably equable temper went with the class from which he sprang to an elevation that no man of our time has reached. Of him one may say as Jowett said of Disraeli after his death 'Let us not heap meaningless praise on his head: we shall not look upon his like again.'



---

His new colleagues have said handsome things but one must wait for the elegantly timed quotations of His Exalted Highness the Nizam to obtain the correct, formal, obituary notice. For Hydari, in a very real sense, made modern Hyderabad. At one time it was fashionable to speak of mediaeval, picturesque, Hyderabad. But when Hydari went from the Indian Finance Department to Hyderabad he entered, not as a stranger, not even as the meddlesome reformer, but as the Minister called by his Prince to vitalise and improve administration. His great career assuredly belongs to Hyderabad's history. It was only natural that Sir Akbar, like Sir Ali Imam, should find the mental climate of the State more congenial than the bureaucratic system in which he had grown up. Even if Sir Akbar seemed to many a survivor from a former generation, he was distinctly modern. His amazing receptivity to ideas as such made him unusual among high officials I have met. Only recently I had a chance of airing some pet opinions on making a bill market for this country, creating the favourable conditions for the extension of short-term borrowings. Sir Akbar followed them with sympathy and undisguised interest, and he developed as much concentration as the present Finance Member in a subject that tends to become arid. This recent but brief revival of old acquaintance certainly helped me to get a fresh and direct experience of a many-sided and vital figure. Not for nothing did his remarkable academic and official record go with a personality that sought satisfaction in the preachings of mystics.

---

A profound sense of oneness made Sir Akbar truly catholic. He could grasp with the same sureness high finance and Sufi poetry. Hyderabad could only admire, and it was certainly a mark of his regime that his tenure is now taken as a sort of watershed in Hyderabad history. The State into an investor. His scheme for departmental finance showed conclusively that he understood the value of a compromise between extravagance and parsimony. The Osmania University is largely his creation, and he certainly anticipated many subsequent developments in making Urdu take the first place. Once or twice I had a chance of studying how Sir Akbar could and did master the most complicated subjects. He took only minutes to get a notion of a sticky note, and his long tenure of the Finance Membership in the premier Indian State was associated with a very fruitful period of office on the board of the Central Bank of India. If his interest in the cement industry was not prolonged all of us will recognise that the State Investment Trust owes everything to Sir Akbar's vision and courage. Of the more recent departures, the State Bank and the new Commercial Corporation, one can hardly say much, but it may be said that the reforms in customs administration like the notable agricultural progress in irrigated tracts bore the mark of Sir Akbar's remarkable administrative zeal. It is usual for the experienced official to get, so to say, a hardening of the spiritual arteries. Sir Akbar, of course, was a great and unique exception. It was thus possible to put new ideas before him with the feeling that he would turn them over in his mind.

As everybody admits, it was in Hyderabad that he obtained full scope for his very remarkable gifts. If he went abroad to represent the State, it was because his colleagues in the Council recognised that he, more than anyone else, could speak for the State. It was certainly in his time that the Nizam's claims to Berar received formal recognition, and his success in negotiation was marked by the rendition of the Residency Bazaars. He was certainly no Minister of Anglo-Indian fiction, but in

certain respects he recalled not the Kipling's Khan 'From the other side' but the sage Hindu Minister, who became an ascetic. There was, however, no harsh trace of the ascetic in his make-up. His nimble intelligence was wholly removed from asceticism. He was therefore a profound believer in communal unity and told young men plainly enough that the days of divisions are past. That, of course, represents the least of his services. If he did not tower over the delegates to the Round Table Conference all present recognised that in ability or sincerity he had few equals.

The undisguised admiration of his fellow citizens in Hyderabad accompanied him to his new high office in Delhi. If he chose to take a new post that demanded long and frequent travel, it was only a high sense of duty that made him take up office at the instance of the Viceroy.

That the job of picking a successor will be a great problem is perhaps the best measure of his tact and experience. Those who saw and heard him last month during the Editors' Conference in Calcutta must indeed confess that the most hard-boiled journalist would wince at the idea of picking up an obituary out of his mortuary. Not for nothing did the new Member tell an unabashed profession that they had privileges akin to responsibilities; that he would raise few obstacles if there was give and take. No wonder then that controversy is hushed by his death. He had few doubts as to his own ability to bridge the gulf between ruler and ruled. In Hyderabad he had certainly done great things; on a larger stage he certainly could hope to repeat his success. If he indulged a cultivated taste to the full in Hyderabad many had reason to feel gratified for a generous and discriminating patronage. That certainly distinguished him from many Indian officials whose judgement and taste is so often at fault. Remarkably level-headed and shrewd he could exhibit and develop enthusiasm up to the right pitch. A keen interest in finance coincided with much more than a passing interest in the arts. Enough has not been said about the budgetary reforms and new procedure he introduced but it must be added that he was ready to assist British India when he could. On a notable occasion he furnished prompt and adequate support to the giltedged market largely at the instance of Sir Basil Blackett who indeed recognised that the Finance Member of Hyderabad was far greater than any retired Accountant-General.

---

When the Viceroy laid the foundation stone of the Indian Seamen's home at Calcutta on Saturday last he performed a notable ceremony. What the Indian seaman contributes to the war effort today needs no telling. When Mr. Haddow lectured to the Rotary Club not long ago he indicated that Calcutta would have soon a home fit for seamen, if not heroes. Sir Thomas Elderton has mentioned the cost of the proposed Home not because it is insuperable obstacle but to convey an idea of what sort of Home is contemplated. The British Government's contribution is due recognition of what men of the Danale did. A distinguished gathering was present to give the auspicious start justified by the purpose of the home. And I feel justified in hoping that Calcutta's captains of commerce will follow the admirable example set by the shipping companies in the matter of donations.

*(From Our Correspondent)*

New Delhi, Jan. 6.

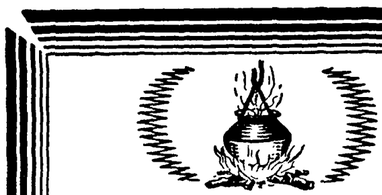
Constitutional questions have again come to the forefront owing to recent political developments. It is believed that the Sapru appeal to the Prime Minister was drafted in consultation with the Indian Members of the Viceroy's Council and may be therefore looked upon as representing their views also. The immediate question which is being actively discussed in New Delhi is the possibility of the complete Indianisation of the Viceroy's Council with the transfer of Finance and Defence also to Indian non-officials. Though the Congress resolution suspending the civil disobedience movement and offering full cooperation in defence measures subject to an interim political settlement has created a new situation and may well lead to resumption of negotiations between the Viceroy and political leaders, it is difficult to say whether there is any near chance of a Congress-Muslim League settlement to facilitate the formation of an All Party Cabinet at the Centre, but whatever that may be, it would appear that the Viceroy is being pressed to carry the expansion scheme to its logical conclusion and remove the official element altogether from the Viceroy's Council. Such a gesture in response to the Sapru appeal will undoubtedly be well received in the country.

* * *

There can be no difficulty in amending the Government of India Act in order to remove the present stipulation that there should be at least three members with not less than ten years' service under the Crown. As the present Commander in Chief, General Wavell, has been transferred to a more important war command, an opportunity has presented itself for initiating a new experiment, the appointment of a separate Indian Defence Member in addition to the Commander-inChief. In Assembly circles it used to be said that the former Commander-in-Chief, General Auchinleck, was not opposed to the idea of having an Indian Defence Member if it did not interfere with the powers and responsibilities of the Commander-in-Chief as head of the Defence forces. Whoever the new Commander-in-Chief may be—there is even a likelihood of General Auchinleck returning to India—it may be possible for him to set up a new precedent by associating an Indian Defence Member with himself. As regards the Finance Membership there can be no question that several eminent Indian non-officials are available. If, as Sir Tej Bahadur Sapru is reported to have suggested to the Viceroy, the present Finance Member, Sir Jeremy Raisman, becomes Financial Adviser to the Viceroy, the Finance Membership can easily be given to an Indian non-official. All these problems connected with the question of further Indianisation of the Viceroy's Council are understood to be under discussion between New Delhi and White-Hall. In the course of the next few days, a clearer idea may be available of possible future developments.

* * *

Owing to the spread of war operations in the Far East, which have practically reached the frontiers of India, Defence measures in this country will have to be intensified to an extent never before thought of. According to a statement last made in the Central Legislature, the cost of Defence measures has been over Rs. 20 lakhs per day. Before the end of the financial year this figure is bound to be greatly increased and even more so during the coming year. The statement made by the Viceroy that the financing of Defence operations requires on the whole about Rs. 20 crores per month shows the magnitude of the Government of India's requirements under this head alone from the combined sources of taxation and Defence loans. As the public will have to be called upon to bear far greater burdens in the coming year, the need for having non-official Finance and Defence Members—in fact, the need for a totally new relationship between the Government and the Legislature is being pressed. Though additional taxation is bound to figure in the coming Budget proposals even more than was found necessary last year, funds for Defence purposes will have largely to be found from Defence loans. The latter yielded last year only about Rs. 7 crores per month. New measures will have therefore to be thought of for doubling or trebling it in order to find the twenty crores required every month for war expenditure.



* * *

The effect of the new war developments is already to be seen in the import and export trade figures. On the import side there is a drop of nearly Rs. 3½ crores in value in November as compared with the previous month the figure for November being the lowest so far during the current financial year. This has been in spite of the fact that the United States took from India goods worth nearly Rs. 2 crores more than last year. On the export side the decrease as compared with the previous month is just over Rs. 2 crores, but the total value of the exports during the month is well over the average of the last two years. This is largely due to the fact that the United Kingdom doubled its purchases from India while the share of the United States has more than doubled itself. A gradual decline in exports and imports has to be expected during the remaining months of the financial year with their inevitable effect on customs receipts. Exports of raw cotton and waste declined during the month to the low figure of Rs. 75 lakhs which is just over a third of last year's figure. There is a big increase, however, in the exports of tea, raw jute and waste yarns and manufactures.

* * *

The decision of the Commerce Member, Sir Ramaswami Mudaliar, to call an urgent session of the Price Control Conference early next month has been widely welcomed. It is expected that by that time the newly appointed Wheat Controller and Coal Controller will be ready with their preliminary reports for the benefit of the conference and that the Provincial Governments also would have collected sufficient data to serve as useful material for the discussions. It is believed that the situation as regards high prices and supplies is now gradually easing down.

HILL-BIRD.

ELECTRICITY

*makes life easier*

FOR example, nothing can be more convenient than an electric kettle. The drinking of tea is a growing habit, but with an ordinary kettle it is sometimes rather a nuisance to make, especially if the fire has burnt low. When you come home unexpectedly late or feel that a cup of tea would be just the thing to end the day before going to bed, that is when you will appreciate how useful an electric kettle is—hot, fresh tea in ten minutes!

MAKE THE FULLEST POSSIBLE USE OF ELECTRICITY IN YOUR HOME

Issued by the Calcutta Electric Supply Corp: Ltd.

# Resume of Commodity Markets

With the anxiety regarding the Far Eastern situation and the continued Japanese successes in Malaya, it could scarcely be expected that there would be any broadening of interest in commodity markets. Nevertheless, it is satisfactory to note that there has not been any further deterioration in values and that during the last two days, there has actually been an improvement in the tone of the markets. Buyers are inclined to await further developments. A pointer to the possibility of an improvement in the freight position, and thereby an improvement in values, is the decision of the Indian Jute Mills Association to continue working mills 60 hours per week. The Committee came to this decision after a very full review of the position as it exists with regard to the trade and shipping position. From the information they had received, it would appear that there is a likelihood of some leeway being made good in this respect.

**Jute**

The decision of the Indian Jute Mills Association to make no change in working hours should have an encouraging effect on jute prices. For, it was generally feared that, with the large increase in local stocks at the end of December, there would be a reduction in the number of working hours. The consumption of jute by mills, therefore, will remain at the same level.

Mills, however, are buying very cautiously and with sellers keen for business, it cannot be expected that there will be any immediate improvement in quotations. The export market is neglected. The quotation in the futures market is nominally around Rs. 57 per bale.

**Jute Manufactures**

The hope expressed by the Indian Jute Mills Association that there would be some improvement in the freight position in the current month has resulted in a rise in prices during the last two days. The communique issued by the I.J.M.A. in this connection reads as follows:

"The stock position at the end of December 1941 was fully discussed at the Committee meeting to-day. The unanimous view was that there should be no change in the present working hours of 60 per week.

"The Committee came to this decision after a very full review of the position as it exists with regard to the trade and shipping position and they had information of the extent of freight facilities in the past month and those likely to be available in the near future. From the information they had received, it would appear that there is a likelihood of some leeway being made good in this respect in the current month. Further, the Committee were determined that a situation should not be allowed to arise whereby the immediate availability of freight space would result in such a situation in this market as had recently been witnessed."

The increase of nearly 10 crores yards in the stocks of hessian cloth and bags has not come to the market as a surprise. With the virtual cessation of exports since the beginning of the Japanese war, it was generally expected that there would be a large increase in stocks. The expectations of a large increase in stocks were responsible for the reports regarding a decrease in working hours. Therefore, when the actual decision to continue the same number of working hours was announced, a firmer tendency was noticeable.

**Bullion**

The bullion markets have not been quite active during the past week though in mid-week a larger volume of business was put through. The panic in the markets seem to have abated to a certain extent but the spot position is still tight and a substantial premium is offered.

**Coal**

The regulation of prices for coal has to a certain extent checked profiteering in consuming centres on account of the shortage of supplies. The onset of the busy season and the increased military traffic have resulted in a serious shortage of wagons. It is reported that Ahmedabad and other important centres are threatened with a serious coal shortage and that unless something is done to relieve the situation, many mills will be obliged to close down. It is understood that the question will be taken up at the forthcoming price control conference.

**Wheat**

There is not much of interest in the Karachi market to be recorded during the week. There is not any appreciable change in prices to be reported. Quotations are fluctuating around the controlled rates. Business passing is on a very small scale and there is a general disposition to await further developments. There is no tendency to buy forward in any large quantities.

# Jute and Jute Manufactures

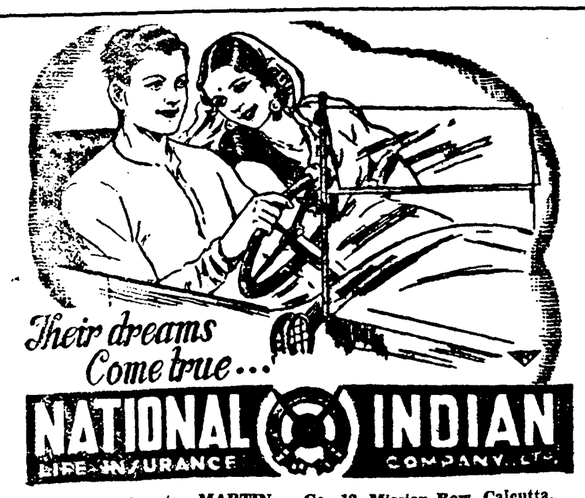
(By our Correspondent)

Calcutta, Jan. 8.

As was fully expected, the Mill stock position as at the end of December shows a considerable increase both of Hessians and of Heavy Goods held in stock in Mill Godowns. The official figures are not yet available at the time of writing, but the increase in Hessian is known to be in the region of 9¾ crores yards, but how this increase is distributed between goods on Government account and commercial goods is not yet ascertainable. This will place the gross hessian stocks at over 35½ crores yards, a high figure but one which has been frequently exceeded in the recent past. The increase in Heavy Goods is in the region of 1¾ crores yards, making the total around 18 crores. Looked at from all aspects, the position is not yet one to cause undue concern. It is reported that the Jute Mill Committee reviewed the position early this week and decided, considering all factors, that there was no immediate necessity to interfere with the working hours. Freight was scarce in the latter part of December but there are indications that it may be in fuller supply this month, which may do much to relieve the situation. Another consideration against any change in working hours was doubtless the disinclination to do anything to upset the Mill labour. Considering all the circumstances, the labour position so far may be described as satisfactory, though there are a number of looms standing in most mills. But there has been no large-scale exodus, and every encouragement is being given to the labour to remain at their posts. A further consideration which may have weighed with the Mill Committee is that practically all the goods in stock are known to be already sold for export and merely await freight space to be cleared.

The Bengal Jute Tax came into force on 1st January and by the edict of the all-powerful Mills, two annas per maund will in future be deducted from the invoices of all contracts entered into after that date. There is, for the time being, no question as to where the incidence of the tax will fall. Either on the Jute Dealer who is anxious to get quit of his stocks, or on the cultivator, passed back from the Mills through the dealer. For at the present time Mills are showing the very minimum of interest in the raw material, and could, if they wished, buy at almost any price they cared to name. It does not seem to have occurred to Mills that it might be sound policy to distribute some business amongst the Marwari dealers, if only to give them something to take their minds off the obsession of rapid retreat to the fastness of Bikanir. This seems to be the uppermost idea with most at the moment, and they are certainly receiving little encouragement to stay behind to look after their business. The Marwarri has become a very essential link in the marketing of the jute crop and the absence of the bulk of the community from Calcutta might, in some circumstances, prove awkward for the Mills. Another point which ought to be borne in mind is that the Bengal Government will not view with equanimity any serious drop in the price of Loose Jute, and are quite likely to take steps to counteract any considerable price decline.

The Export Jute market has shown few signs of activity. Some sales of Dundee Daisee assortment, and of Dundee Tossa 4s have been reported for near shipment, both descriptions at Rs. 55. Mills have purchased small quantities of Lightning grade from Rs. 42-8 down to Rs. 37-8. The Futures market is a purely nominal one at the moment, being quoted around Rs. 57 but with very few transactions.



Loose Jute is still entirely neglected by Mills, and prices are entirely nominal and controlled mainly by the steadiness in the up-country markets, where imports are very small and there seems no anxiety to get rid of holdings. Dealers who are holding stocks are very keen to liquidate. On Monday morning the nominal price of Indian District Bottoms was Rs. 7. During the day a report gained currency that there was Mill enquiry for this grade at Rs. 6. Immediately there were sellers at the lower rate, but no business resulted. This gives some idea of the keenness to sell and of the instability of quotations. Jute arrivals for the month of December are estimated at 7,04,000 bales against 9,95,000 B|s in December 1940. This brings total arrivals for the first half of the season to 39,80,000 B|s against 45,65,000 B|s in 1940. This is about the time of year when speculation commences as to the quantity of jute still left to come forward, and estimates vary widely, from 32 lakhs of bales upwards. All things considered a figure of nearer 40 lakhs seems like a safer one to calculate on.

The Fabrics market has shown quite satisfactory activity since the reopening. Fresh enquiry from abroad has not been extensive but there has been considerable covering of requirements for January shipment, both in hessians and Heavy Goods. Forward positions are neglected, Mills being unwilling to commit themselves forward even at minimum rates. But there has been quite a marked improvement in the near position rates, nine porters being marked up from Rs. 15-12 to Rs. 16-2 and elevens from Rs. 20-6 to Rs. 21-4. The only forward sales recorded in hessians have been April|June elevens at Rs. 19-8 and July|Septr. at Rs. 19 and Rs. 19-4. In Heavy Goods the main interest has been in Liverpools, in which quite a fair turnover has been recorded for January at from Rs. 40-8 to Rs. 41. Ready "B" Twlls have also been wanted and the price has advanced from Rs. 35-4 to Rs. 35-12. January Cornsacks have been taken up at from Rs. 37-4 to Rs. 38, and a sale is also reported for April|June at Rs. 36-4. Other sales reported include Cuban Sugars at from Rs. 48 to Rs. 48-8 January and early February, 6X8 Sugars at Rs. 42 Feb|April and "E" Bags at Rs. 27-8 January.

## JUTE

Calcutta, Jan. 8.

Absolutely dull and uninteresting conditions have prevailed in the raw jute market during the past week. Mills have not been interested buyers while sellers are very keen for business. Except for a small business, the export market is completely neglected.

With the sharp decline in exports, there was considerable uncertainty about the policy of the Indian Jute Mills Association. Happily, it has now been decided that mills continue to work 60 hours per week. The demand for jute has not, therefore, been affected to any great extent. The future outlook, however, is uncertain.

In the loose jute section, very little business has been put through. Mills are not taking any interest in the market. Sellers are very keen for business. Indian Jat Middles and Bottoms are now nominally quoting around Rs. 11-8 and Rs. 8 per maund respectively.

In the pucca bales section, Balers were interested in Dundee Daisies and Tossa 4's. Shippers brought Dundee Daisee 2|3 at Rs. 55 per bale. Mills are reported to have bought Lightnings 2|3 at Rs. 42-8 per bale.

In the futures market, business is practically at a standstill. Most of the operators have left Calcutta and only existing commitments are carried over.

## JUTE MANUFACTURES

Calcutta, Jan. 8.

The jute manufactures market also has been uninteresting and only the minimum of business has been passing. Towards the close a slightly firmer tendency has been noticeable. The decision of the Committee of the Indian Jute Mills Association to continue working mills 60 hours per week and the hope that there is some likelihood of the leeway being made good in respect of the exports have had a cheering influence and quotations are at the highest levels for the week. 9 porters ready are quoting Rs. 16-2, February|March Rs. 16 and April|June Rs. 15-6. 11 Porters ready are Rs. 20-14, February|March Rs. 20-10 and April|June Rs. 20.

In the heavy goods section, some business has materialised on account of near covering for standard goods. B Twills for January shipment sold on the basis of Rs. 35-10, Liverpool Twills Rs. 41 and Cornsacks Rs. 37-8.

The local stock figures for the month of December show a big increase in hessian stocks. It has not come as a surprise to the market as there was considerable difficulty regarding shipments last month. Hessian cloth and bags at the end of December were 34.35 crores yards against 25.92 crores yards. Stocks for ordinary consumption thus show an increase from 14.00 crores yards to 23.76 crores yards. Sacking cloth and bags show an increase from 16.31 crores yards to 18.09 crore yards. The figures are given below:

| Description | 30th Nov. | | 31st Dec. | |
|---|---|---|---|---|
| | Yds. | Tons. | Yds. | Tons. |
| Hessian Cloth & Bags* | 25,91,61,867 | 62,068 | 34,34,73,674 | 82,313 |
| Less sand-bags on Government Account .. | 11,91,74,510 | | 10,58,92,586 | |
| | 13,99,87,357 | | 23,75,81,088 | |
| Sacking Cloth & Bags | 16,30,82,738 | 68,305 | 18,09,41,848 | 75,195 |

The December figures include the returns of Gagalbhai in addition to those of members but the returns of Calcutta, Naskarpara, and Maheswari have not been received and are excluded.

Out of the total December hessian stock 1,18,15,163 yds. weighing 2,632 tons represent 40 inch 8 oz. cloth. The corresponding figures for November were 64,48,940 yds. weighing 1,416 tons.

## COTTON

Calcutta, Jan. 8.

The Bombay raw cotton market has been rather quiet during the past week and prices have been moving irregularly downward. At the lower levels there has been some investment buying. Broach April|May are quoting Rs. 211, July|August Rs. 210-4, Bengal December|January Rs. 128-8, March Rs. 130-4, May Rs. 131-12. Oomra December|January Rs. 190, March Rs. 163-4 and May Rs. 165-8.

Pending the clearing up of the present situation it would be foolish to expect any substantial recovery in values.

## GOLD

Calcutta, Jan. 8.

The gold market was rather uninteresting in the early days of the week. There was not much heavy buying for hoarding purposes and quotations were fluctuating in narrow limits. Towards the close, however, a firmer tone has been noticeable. There has been a resumption of buying with the continued Japanese successes. Gold ready are quoting Rs. 48-8, First Settlement Rs. 47-10 and Second settlement Rs. 47-12. It will be noticed that there is heavy premium for ready gold.

The London price for gold is unchanged at 168s.

## SILVER

Calcutta, Jan. 8.

The silver market also has been firmer. There is continued buying for ready position and the premium for ready over First Settlement has increased. The Government have been selling freely. That is the reason why there has been no appreciable change in the quotations for forward positions. Indian Mint Silver ready are Rs. 70-9, First Settlement Rs. 64-11 and Second Settlement Rs. 64-12.

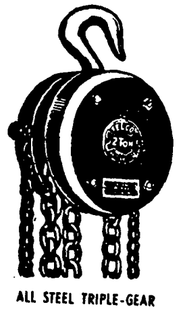
In the London market, no change in prices is to be recorded and the quotations for both spot and forward are unchanged at 23½d. Small demand has been officially satisfied.

## WHEAT

Calcutta, Jan. 8.

The Karachi wheat market has been uninteresting and a slightly easier trend has been noticeable. There is considerable uncertainty regarding the future. Stockholders have closed down and buyers are buying only their day-to-day requirements. Considerable interest is attached to the Price Control Conference which is to be held early next month. Choice white ready are quoting Rs. 43-14, January Rs. 43-12, March Rs. 43-14 and July Rs. 38-6 6.

The Calcutta market has been steady with Cawnpore ready quoting Rs. 5-12 and May Rs. 5-4-6. Mills are selling flour more freely and are at present working four days in the week.



## INDIAN TEA LICENSING COMMITTEE

### EXPORT QUOTA 1942-43.

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, Tea Estates desiring to be allotted an export quota for the year 1st April 1942 to 31st March 1943 are required to submit an application for such which must reach the Indian Tea Licensing Committee not later than the 1st of February 1942. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

J. J. B. SUTHERLAND,
Deputy Secretary.

# Tit Bits of Industrial Activity

### New Fabrics

New developments in textile production include oil-dressed fabrics made of cotton sheeting. The fabric is treated with linseed oil and a composition to withstand gas. This is in addition to union fabric used for anti-gas capes. Besides anti-gas clothing Indian mills have produced camouflage nets. This is made of jute cloth cut in strips and dyed in different colours. Enormous quantities have been bought on account of the war. Rubber-proofed cloth dyed with vegetable khaki dyes has been turned out in quantities. Webbing and braces for the Army have developed rapidly. Various widths have been manufactured. Cotton thread has been successfully used in place of flax thread in the manufacture of boots. Various other fibres, including sunn hemp and jute, are being used for making camouflage nets at present. Sunn hemp is used for twine that is needed to replace Italian hemp twine. The varied production is destined for the Eastern Group in addition to India.

### Jute For Felt

Dr. Barker is said to have taken out a patent for using jute as a base for felt-making. The *Jute Review* described the process. The fabric is rendered rot and ant-proof by initial treatment and metallic salts. Then follows immersion in bitumen emulsion which contains a suitable filler like paper pulp. Soda alum is added during immersion to secure precipation of the filler which is again secured by a bath of the electrolyte. Further wetting is followed by drying after squeezing. Weather proofing is also carried out with the help of bitumen and is followed by spraying some talc or aluminium powder. The process may however vary as different preparations can be used. The surfacing materials may also vary according to conditions. Surfacing may be obtained on both sides if desired and the invention in its broad aspects is meant to promote the use of jute in a new field. To Dr. Barker, the Scientific Adviser of the Indian Jute Mills Association, goes the credit of extending the scope for jute.

### Fresh Grants

Only last month the Standing Finance Committee approved the continuance of grants for the handloom, weaving and sericultural industries. The continuance is definitely a consequence of the retention of protection for the cotton and silk mills in India. The grant of Rs. 5 lakhs wil be paid also for the year ending March 1943. The Government's proposal was accepted in regard to sericulture. As the sericultural industry will enjoy protection after March 1942 the grant of Rs. 1 lakh meant for research and disease free seed distribution will continue for another year. The handloom grant is allotted to the various provinces in accordance with practice settled in the time of Sir James Grigg as regards the grants for rural reconstruction.

### Blanket Orders

The Supply Department's orders for woollen blankets keep growing. It was made known last month that total orders during 1941-42 will come to two million blankets. The U. P. necessarily has obtained the greater part of the blanket orders but Mysore, Madras and Kashmir also have benefited. Sheep-breeding is to be improved in order to develop the indigenous supply of wool. If the export of carpet wool to the U.S.A. suffers through the war hereafter the scope for rug-making at home will increase. Weavers are being helped to produce blankets for soldiers. The India Government has accordingly reviewed the grant originally made in 1935 for helping the cottage woollen industry.

### Strikes In September

Only three trade disputes were reported in Bengal during the four weeks ended September 25, 1941. The strike in the Berapukur workshop in Kidderpore reported in August war settled quickly through the intervention of the Assistant Commissioner of Labour. The bidi factory in Bankura was only temporarily affected by the strike which ended in August. The East India Cotton Mill dispute resulted in the indefinite closure of the mill at Andul in Howrah. There was a demand for 25 percent increment in wages, a demand which was rejected by the management. Payment of the workers' dues started on September 1, and the strike was at an end. The Coimbatore mill strike was called off on August 25 and it was only the Madras City bus dispute that was the major dispute in progress in Madras. A strike in the Bareilly match factory of Wimco and the stoppage of work in shellac factories in Mirzapore remind one that all was not quiet in the U.P. The shellac workers got an increase of piecework wages after the strike which required the Collector's intervention. The stay-in strike of the match workers was a result of a demand for dearness allowance. Here, too, the Collector's intervention proved fruitful. Only four disputes were in progress in Bombay while Ahmedabad and Surat reported two strikes.

### Australia Plans Ahead

Australia hopes to export 22 million worth of planes and expects to get 20 million worth of aircraft in 1942. Mr. John Storey mentioned this in describing the progress of war production. It is hoped that Australia will concentrate on Beaufort bombers. It is expected that 1942 output will exceed 1000 aircraft and the majority will be bombers. Aero engines of 150 h.p. and even 600 h.p. have been made and in September Australia reported that the 1200 h.p. engine too was made locally. Mr. Storey added that the Commonwealth had more trainers than needed. The export of these planes had also begun according to the Commissioner for Aircraft production who empahsised the merits of the heavy bombers used by the R.A.F.

## Investor's Supplement

Vol. XXIX. No 2 SATURDAY, JANUARY 10, 1942 Price Re. 1

*Stock Markets to-day and to-morrow*

## STEEL CORPORATION OF BENGAL DECLARES INTERIM DIVIDEND

ABSOLUTELY dull and uninteresting conditions have been noticeable in both the important centres, Bombay and Calcutta, and business passing has been very negligible. Operators and investors alike are not inclined to enter into fresh commitments. In many cases there are no buyers around the minimum prices.

* * * *

The first announcement regarding the intention of the directors to convert the deferred shares of the *Tata Iron and Steel Company, Limited* into ordinary shares was made as early as July 1940. Examining the possibilities in this respect we remarked as follows: "Based on the considerations outlined in this analysis, a rough and ready relationship may be said to be a market valuation for the deferred share at 5½ *times* the quotation for the ordinary share".

It is understood that the directors of the *Tata Iron and Steel Company, Limited* have decided to put through a scheme for converting the deferred shares into ordinary shares by offering five and a half ordinary shares for every deferred share held. An extraordinary meeting of the shareholders is to be held in the middle of next month for this purpose. The deferred capital is to be written off and the sum of Rs. 2,01,09,375 is to be capitalised from reserves for the issue of new ordinary shares. 2,18,125 new ordinary shares of Rs. 75 each will be created.

As a result of the conversion of the deferred shares into ordinary shares the total paid-up ordinary capital will thus be Rs. 4,63,59,375 against the previous figure of Rs. 2,62,50,000. The total paid-up capital will be Rs. 12,32,41,275. The capital structure would be simplified and the investment merits of the ordinary shares enhanced. For, it cannot be denied that the deferred shares have been the hot-bed for speculative activity on every occasion.

* * * *

For some time past there have been persistent rumours in the market that the directors of the *Agarpara Company, Limited* would recommend the issue of bonus shares to ordinary shareholders. And on these reports there was a sharp appreciation in the quotation to Rs. 45 for the ordinary shares. The quotation is now lower at Rs. 37-12 *cum* dividend but it is only in sympathy with other sections.

It is now announced that the directors have decided to recommend the issue of one new ordinary share of Rs. 10 each, fully paid, for every ordinary share held. The new shares will not be eligible for the dividend declared out of the earnings for the half-year ended September, 1941, but otherwise they rank for dividend and in all other respects *pari passu* with the existing ordinary shares of the Company. For the purpose of giving effect to the bonus issue, it is proposed, that the authorised capital be increased to Rs. 40 lakhs by the creation of 1,50,000 additional ordinary shares of Rs. 10 each. The sum of Rs. 15 lakhs is to be capitalised from the reserves of the company. Shareholders, whose names are on the register on February 18, 1941, are eligible for the bonus issue.

The earnings for the half-year ended September, 1941 show a substantial increase over those for the previous half-year. The net profit, before providing for taxation and depreciation, is Rs. 13,23,465 against Rs. 5,51,755 for the previous half-year. The amount set aside to depreciation is Rs. 1,10,525 against Rs. 99,001 on the previous occasion while the allocation to Reserve for taxation is the substantial sum of Rs. 8 lakhs (Rs. 2.5 lakhs). The dividend has been maintained at Re. 1 per share after transferring Rs. 2 lakhs to General Reserve. The amount carried forward is higher at Rs. 82,252 against Rs. 54,312 brought in.

* * *

Out of the earnings for the first full year of working, it has been possible for the *Steel Corporation of Bengal, Limited* to declare an ad-interim dividend of six annas per share on the ordinary shares. I have pointed out in these columns on many occasions that it would be possible to pay a substantial dividend out of the earnings for the year ended December, 1941. The ad-interim dividend of six annas per share, now announced, ensures the payment of a final dividend of a like amount. It can very well be a larger amount. But for the fact that the Corporation's earnings are liable to Excess Profits Tax above 6 per cent on the total working capital, it would have been possible to recommend a very much higher dividend. The accounts for the year should make very interesting reading.

* * *

But for the breakdown in the Company's powerhouse which resulted in a complete closedown of the mills for two weeks and in partial working for twelve days, it would have been possible for the *Kesoram Cotton Mills, Limited* to report a substantially higher level of earnings for the half-year September, 1941. The Company has been able to capture some important markets and has also produced a large range of goods on government account.

The net profit, before providing for taxation and depreciation, is Rs. 12,07,307 against Rs. 10,79,968 for the previous six months. The amount set aside to depreciation and written off for discarded plant is Rs. 3,01,000 (Rs. 5,00,000) while the substantial sum of Rs. 4 lakhs (nil) has been provided for taxation. The amount transferred to General Reserve is Rs. 1 lakh (*Rs. 4.5 lakhs*). The dividend on the ordinary shares is considerably higher at 20 per cent against 5 per cent.

At the quotation of around Rs. 9 cum-dividend the return on the shares is very satisfactory on the basis of the latest dividend.

* * * *

Commenting on the results of the *Birla Jute Manufacturing Company, Limited* for the half-year ended September, 1941, in the issue of *Investor's Supplement* dated December 27, 1941, it was mistakenly given that issue of new shares had been approved by shareholders at the extraordinary meeting held early in December. The new issue in question, however, relates to the decision taken by the shareholders of the *Brunton & Co., Engineers, Ld.* We regret the error.

Properly amended the para should read as under:

"At the extraordinary meeting held early this month, it was decided by the shareholders of *Brunton & Co., Engineers, Limited*, that 25,000 cumulative preference shares of Rs. 10 each and 25,000 ordinary shares of Rs. 10 each should be issued at par to shareholders registered as on December 6, 1941. *These shares* will be first offered in the ratio of one ordinary share to one preference share for every ordinary share held by the existing shareholders. The whole issue has been under-written. The cumulative preference shares carry interest at 6 per cent per annum, free of British Indian income-tax with preferential rights for the fixed dividend and for return of capital in a winding up."

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Jan. 9.

WITH the rigid restrictions regarding the transaction of business on the Calcutta Stock Exchange dealings have naturally been on a very small scale though a slightly steadier undertone is to be noticeable. There is little or no fluctuation in prices to be recorded. The strength of the giltedged securities section is the main feature of the week.

In supersession of the existing rule regarding the time of delivery it has been resolved by the Committee at the meeting held last Friday that delivery of shares is to be made by 3 p.m. on all working days (excepting Saturdays), return by 4 p.m. and payment by 5 p.m. Working hours will be upto 3-30 p.m. Anybody found working after 3-30 p.m. in the hall will be fined Rs. 250.

In the giltedged securities, as pointed out above, a slight improvement in values is to be recorded though business still continues on a restricted scale. 3½ per cent. Paper was Rs. 94-12, 3 per cent. Paper Rs. 81-14, 3 per cent. 1949|52 Rs. 98 and 3 per cent. *Defence bonds* 1946 *Rs.* 100-12. Provincial loans were not very much changed.

Among fixed interest securities, 5 per cent. *Calcutta Port Trust* debentures were done at Rs. 108-8. Among industrial debentures, 5½ per cent. *Chowringhee Properties* changed hands at Rs. 99-8 and 4½ per cent. *Naihati Jute* at Rs. 103-8.

Among jute mills preferences, *Alliance* were dealt in at Rs. 124, *Calcutta Jute* at Rs. 120, *Howrah* 'A' preferences at Rs. 155 and *Kanknarrah* at Rs. 145. *Dalmia* preferences were Rs. 120, *Dunlop Rubber* First preferences Rs. 150 and *B. I. Corporation* Rs. 176.

Cotton shares have been uninteresting with *Dunbar* at Rs. 233, *Elgin* at Rs. 27-4 ex-dividend and *Kesoram* at Rs. 9-1.

In the Coal section, *Bengal* were Rs. 370, *Dhemo Main* Rs. 13, Equitable Rs. 35 and *West Jamuria* Rs. 30-8.

Jute shares have been in greater enquiry with *Agarpara* at Rs. 37-12 cum-dividend, *Anglo-India* at Rs. 340, *Bally* at Rs. 220, *Kamarhatty* at Rs. 465 and *National* at Rs. 21-2 ex-dividend. There are not many buyers for Howrah at round the minimum price.

In the Engineering section, business in *Indian Iron* and *Steel Corporation* has not been possible at the minimum levels. It is reported that in private transactions at considerably lower levels have been recorded. The announcement of the interim dividend by the Steel Corporation of Bengal Limited has had an encouraging effect. *Burn & Co.*, were Rs. 340, *Indian Galvanizing* Rs. 32, *National Iron and Steel* Rs. 9-2 and *Jessop & Co.*, Rs. 18-12.

Among sugar shares, *Buland* and *Raza* were noted at Rs. 23-6 and Rs. 24-4 respectively. *New Savan* were Rs. 12 and *Ramnugger Cane and Sugar Rs.* 11-3.

In the miscellaneous section, *Indian Copper* were Rs. 2, *Dalmia* ordinaries Rs. 12-8, *Alkali and Chemical* Rs. 20-12, *B. I. Corporation* Rs. 4-12, *Indian Cable* Rs. 22 ex-dividend and *Titaghur Paper* Rs. 19-12 ex-dividend.

## BOMBAY STOCK EXCHANGE

(From Our Correspondent)

Bombay, Jan. 8.

*Securities.*—The local giltedged market was fully steady during the week, the price of 3½ per cent Government Paper being slightly marked up at Rs. 95. 1948|52 Loan were done at Rs. 97-8; 1951|54 at Rs. 98-6; 1963|65 at Rs. 94; 1947|50 at Rs. 101; 1960|70 at Rs. 109-4; 1955|60 and Rs. 113-4; 1945|55 at Rs. 108-14 and 3 per cent 1946 *Defence Loan* at Rs. 100-12.

*Shares.*—It is understood that the Board of Directors of the Bombay Stock Exchange have decided to make it compulsory for the members of the Exchange to carryover their outstanding business on January account to the February settlement. The authorities of the Exchange approached the Government of Bombay last Saturday in order to secure their sanction to the above decision. It is learned that Government are likely to agree to the continuance of the prevailing scale of minimum prices for various shares on the forward list for the February settlement. Pending the final decision by the Government, no business was transacted on Monday.

Though dealings for the February settlement opened on Tuesday, no business was transacted as the operators were unwilling to enter into commitments till the January settlement was over. At the moment members are busy preparing monthly settlement accounts at prices fixed by the Governing Body. There was some business in the shares on the forward list to-day which too were on cash basis. In the cash section, there was scattered business: as regards prices there was no change worth noting.

*Textiles.*—Mill shares showed small losses on lack of support. *Bombay Dyeing* were dealt in at Rs. 1,182-8; *Central India* at Rs. 349; *Century* at Rs. 380; *Colaba* at Rs. 186; *Kohinoor* at Rs. 465; *Gokak* at Rs. 250; *Simplex* at Rs. 190 and *Svadeshi* at Rs. 386. In the cash list, E. D. *Sassoon* were done at Rs. 2-13-6, while other shares were unchanged.

*Hydro-electrics.—Tata Power* came to business at Rs. 1,710 and *Bombay Tramways* at Rs. 136-8.

*Steels.*—Steel shares were maintained, *Tata* ordinaries being done at Rs. 320 and the deferreds at Rs. 1,710.

Agents:
BIRD & CO., CALCUTTA

*Miscellaneous.—Associated Cement* were steady at Rs. 161-8. *Bombay Burmah Trading* lost about 30 points to close at Rs. 327-8. *Belapur Sugar* were done at Rs. 240; *Indian Bleaching* at Rs. 108; *Indian Iron* at Rs. 28-8; *Steel Corporation* at Rs. 16-2 and *Scindia Steam* at Rs. 20. *Tata Chemicals* were in enquiry at Rs. 15 following the formal announcement of the proposal to issue 4 per cent debentures of the aggregate face value of Rs. 35 lakhs representing Rs. 35,000 units of Rs. 100 each, the debentures being issued in denominations of Rs. 100, Rs. 1,000 and Rs. 10,000 each as may be required at the option of the applicant for debentures. The existing shareholders of the Company have the first option to subscribe on the basis of one unit for a holding of every 30 ordinary shares and one unit for a holding of every 5 preference shares. The subscription list, it is reported, will open on January 19 and close on January 20 or earlier as may be decided by the directors.

## MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Jan. 8.

Business in the local market was restricted during the week with prices showing little or no change.

*Securities.*—The securities market ruled steady with 3½ per cent Paper quoting at Rs. 95-4. 4 per cent 1960|70 were transacted at Rs. 109 and 4½ per cent 1955|60 at Rs. 112-12. Among State Loans, 3 per cent *Mysore Loan* were in enquiry at Rs. 103-8.

*Mills.—Buckingham & Carnatic* were slightly marked down at Rs. 267-8 and *Cambodia* at Rs. 10-14. *New Victoria* ordinaries changed hands at Rs. 4-12 x.d.

*Utilities.—South Madras Electric* ordinaries showed no change at Rs. 13, while *West Coast Electric* were done at Rs. 7-6.

*Plantations.*—Rubber shares were a shade easier, *Cochin Malabar* being done at Rs. 8-3; *Midland* at Rs. 7-14; *Tropical Plantations* at Rs. 23-12; *Woodland* at Rs. 8-10 c.d. In the Tea section, *Fringford* preferences met with business at Rs. 11-8.

*Sugars.—Travancore Sugars* were steady at Rs. 13-4 x.d. *Mysore Sugar* were marked slightly lower at Rs. 51-12.

*Banks.—Bank of Mysore*, after a long time, came in for business at Rs. 290. *Reserve Bank* were done at varying rates of Rs. 102-8, Rs. 100 and Rs. 99.

*Miscellaneous.*—Mysore Paper were maintained at Rs. 16-15 x.d. *Indian Iron* changed hands at Rs. 29; *Steel Corporation* at Rs. 17 and *Brunton Engineering* at Rs. 10-4 c.r. *Hindustan Investment Trust* were crossed at Rs. 17-8 c.d. s.l.

Dunlop Rubber Ordy.:—(7th) 40-4 s.o.l.
Indian Cable:—(3rd) 22-4 C.T.; (5th) 22 x.d.
Ivan Jones:—(6th) 2-8.
National Safe Deposit:—(3rd) 1-4 C.T.

(Continued from page 42)

## LONDON STOCK EXCHANGE

With the exception of rubbers and tin issues and others with Far Eastern interests, a generally firm tone has been noticeable on the London Stock Exchange during the past week. Indian Loans especially were very firm following the announcement regarding the repatriation of the non-terminable loans. 3½ per cent. Sterling Paper was quoted at 101 13|16. British funds remained steady with 2½ per cent. Consols at 82 11|16, 3½ per cent. Conversion at 107 1|16, 4 per cent. Funding loan at 114¾ and 3 per cent. War loan at 101⅜.

Rubbers, teas and tins, as mentioned above, have been very weak. More than half the area under rubber in Malaya has been overrun. Between Malaya and the Dutch East Indies nearly 80 per cent. of the world's rubber production is supplied. It is not surprising, therefore, that there are fears regarding rubber shortage at least temporarily. Oils have been in good request with *Mexican Eagle* and *Venezuela* to the fore. Home Rails have remained steady.

## NEW YORK STOCK EXCHANGE

Wall Street has been rather irregular during the past week and business has been on a very small scale. *U. S. Steel* were $53⅝, *General Motors* $ 33⅜ and *Anaconda Copper* $ 27.

**THE STEEL CORPORATION OF BENGAL, LTD.**

**NOTICE**

**is hereby given that an Interim Dividend of six annas per share on the Ordinary Shares of the Corporation ranking for dividend for the year ended 31st December, 1941, has been sanctioned by the Board. ## NORTH-WEST COAL CO., LTD.

*Audited accounts for the half-year ended 30th September,* 1941:

After providing Rs. 9,996-5-0 for Depreciation and transferring Rs. 42,000|- to Reserve for Taxation and Cesses including Excess Profits Tax, there is a balance of Rs. 31,869-13-8 out of which the Directors recommend:—

| | Rs. | A. | P. |
|---|---|---|---|
| Dividend at 15 per cent per annum ... | 20,437 | 8 | 0 |
| Carry forward .. .. .. | 11,432 | 5 | 8 |

*Raisings* decreased slightly during the monsoon period, but *despatches* have been higher, and this has had the effect of reducing coal stocks.

*Managing Agents.*—Messrs. Andrew Yule & Co., Ltd.

Synopsis of the balance sheet as at 30th September, 1941:—

| *Liabilities* | Rs. | *Assets* | Rs. |
|---|---|---|---|
| Capital paid up .. | 2,72,500 | Gross Block .. | 7,76,135 |
| Reserves .. | 3,22,674 | Depreciation .. | 4,67,335 |
| Current debts .. | 1,36,935 | | |
| Carry forward .. | 11,432 | Block (net) .. | 3,08,800 |
| | | Stores .. | 36,969 |
| | | Outstandings .. | 2,20,218 |
| | | Stocks .. | 4,035 |
| | | Investments .. | 21,617 |
| | | Cash balances .. | 1,51,902 |
| Total .. | 7,43,541 | Total .. | 7,43,541 |
| | | Total liquid assets .. | 4,34,741 |

## MANDRA-BHON RAILWAY CO., LTD.

*Audited accounts for the year ended 30th September,* 1941:—

With the addition of Rebate payable by Government amounting to Rs. 24,659-7-5 and after making provision towards taxation, the working of the line has resulted in a profit of Rs. 1,14,056-8-8. To this must be added the sum of Rs. 4,475-1-2 brought forward from last year's accounts, making Rs. 1,18,531-9-10 in all.

The Directors declared an ad-interim dividend at the rate of 4 per cent. per annum payable less Income-Tax, which absorbed Rs. 55,000, leaving a balance of Rs. 63,531-9-10 which they recommend should be applied as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Dividend for the Second half-year ended 30th September, 1941 at 4½ per cent. per annum (making 4½ per cent for the year) payable less Income-tax .. .. | 61,875 | 0 | 0 |
| Balance to be carried forward .. .. | 1,656 | 9 | 10 |
| Total .. | 63,531 | 9 | 10 |

The statistics of traffic for the past three years are as under:—

| | 1938-39 | 1939-40 | 1940-41 |
|---|---|---|---|
| Number of Passengers .. | 370,335 | 428,020 | 512,090 |
| Gross Earnings (in Rupees) .. | 1,14,145 | 1,24,903 | 1,55,433 |
| Merchandise (in Tons) .. | 28,431 | 33,751 | 39,324 |
| Gross Earnings (in Rupees) .. | 54,775 | 63,519 | 78,351 |
| Terminal Charges adjustments | 35,244† | 17,622‡ | 11,748 |

† for 3 years. ‡ for 1½ years.

*Coaching Traffic.*—There has been an increase of over 84,000 in the number of passengers carried and over Rs. 30,000 in Coaching receipts, which accords with the general improvement in Railway business throughout India. Motor competition was continued in the area with the assistance of kerosene mixtures and coal gas, in spite of petrol rationing and high costs of operation, and the Working Administration has thought it advisable to effect an agreement with the Road interests from 1st December, 1941, whereby it is hoped, competition and rates will be controlled to advantage.

*Goods Traffic.*—There has been an increase of over 5,000 tons carried and the earnings are greater by Rs. 8,900. This is attributable to more booking of coal.

*Capital.*—The Capital expenditure of the Company now exceeds the Company's Issued and Subscribed Capital by Rs. 38,804. This is being financed from revenue on by means of temporary loans, arrangement has received the sanction of the Railway Board.

*Managing Agents.*—Messrs. Killick, Nixon & Co.

Synopsis of the balance sheet as at 30th September, 1941:—

| *Liabilities* | Rs. | *Assets.* | Rs. |

## SIALKOT-NAROWAL RAILWAY CO., LTD.

*Audited accounts for the year ended 30th September, 1941:—*

After payment of Government's Share of Surplus Profits (Rs. 66,780-7-10) and after making provision for taxation, including Rs. 17,632 to meet Excess Profits Tax, the earnings for the year show a net profit of Rs. 1,62,130-0-7. To this must be added the sum of Rs. 1,658-15-9 brought forward from last year's accounts, making Rs. 1,63,789-0-4 in all.

The Directors declared an ad-interim dividend at the rate of 4½ per cent. per annum less income-tax, which absorbed a sum of Rs. 71,100-0-0, leaving a balance of Rs. 92,689-0-4 available, which they recommend should be applied as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Dividend for the Second half-year ended 30th September, 1941 at the rate of 5½ per cent per annum on amounts paid up (making 5 per cent for the year) payable less Income-Tax | 86,000 | 0 | 0 |
| Bonus to the Company's Staff .. .. | 1,000 | 0 | 0 |
| Balance to be carried forward .. .. | 4,789 | 0 | 4 |
| Total .. | 92,689 | 0 | 4 |

The following statement gives the statistics of traffic on the line for the past three years:—

| | 1938-39 | 1939-40 | 1940-41 |
|---|---|---|---|
| Number of Passengers .. | 822,557 | 911,946 | 1,121,050 |
| Gross Earnings (in rupees) .. | 2,78,876 | 3,01,373 | 3,92,216 |
| Merchandise (in tons) .. | 96,024 | 91,282 | 1,16,028 |
| Gross Earnings (in rupees) .. | 1,28,329 | 1,38,059 | 1,87,910 |
| Terminal Charges Adjustment | 39,564† | 19,782‡ | 13,188 |

† For 3 years. ‡ For 1½ years.

*Coaching Traffic.*—There has been an increase of over 2 lacs in the number of passengers carried and over Rs. 90,000 in Coaching receipts, which accords with the general improvement in Railway business throughout India. Motor competition still continues in the area with the assistance of kerosene mixtures and coal gas, in spite of petrol rationing and high costs of operation.

*Goods Traffic.*—The tonnage of merchandise has improved by over 24,000 tons and earnings by over Rs. 43,000. This is partly attributable to an increase in the booking of coal and partly to movement of military traffic.

*Capital.*—The capital expenditure of the company now exceeds the Company's Issued, Subscribed and Reserve Capital by Rs. 1,344. This is being financed from Revenue, which arrangement has received the sanction of the Railway Board.

*Managing Agents.*—Messrs. Killick, Nixon & Co.

*Authorised Capital—Rs. 35,00,000 in 35,000 shares of Rs. 100 each. Issued and Subscribed—Rs. 31,60,000 in 31,600 shares, fully paid up.*

Synopsis of the balance sheet as at 30th September, 1941:—

| *Liabilities* | Rs. | *Assets* | Rs. |
|---|---|---|---|
| Capital paid up .. | 31,60,000 | Fixed Capital Expenditure .. | 31,81,345 |
| Reserve .. | 20,000 | Outstandings .. | 1,23,558 |
| Current debts .. | 1,60,809 | Fixed Deposit .. | 36,000 |
| Carry forward .. | 4,789 | Cash .. | 4,695 |
| Total .. | 33,45,598 | Total | 33,45,598 |
| | | Total liquid assets .. | 1,64,253 |

## FORTHCOMING MEETINGS

*Kesoram Cotton Mills, Ltd.*—Meeting, 16th January, 1942 at 4 p.m. Transfer Books closed from 2nd to 16th January, 1942. *Dividends proposed annas eight per Ordinary Share and Rs. 3½ per Preference Share.*

*Associated Cement Companies, Ld.*—Meeting, 16th January, 1942 at 3-30 p.m. at Bombay. *Transfer Books closed from the 7th to the 20th January, 1942.

**Transfer Books closed from the 23rd December, 1941 to the 15th January, 1942. Dividend is payable on and after the 20th January, 1942, to those shareholders whose names stand on the Register on the 22nd December, 1941.

# MARKET POINTERS

### Working Hours Of Jute Mills

The stock position at the end of December, 1941 was discussed at a meeting of the Committee of the Indian Jute Mills Association held during the week under review. The unanimous view was that there should be no change in the present working hours of 60 per week. The Committee came to this decision after a review of the position with regard to trade and shipping and the extent of freight facilities in the past month, and those likely to be available in the near future. From the information they had received it would appear that there is a likelihood of some leeway being made in this respect in the current month. Further, the committee were determined that a situation should not be allowed to arise whereby the immediate availability of freight space would result in such a situation in this market as had recently been witnessed.

On the whole the labour position in the mill areas was satisfactory and in reaching their decision as stated, the Committee were also influenced by a wish to avoid intermittent changes in the working hours which might tend thereby to disturb the present situation.

It is understood that the Committee have under constant review all factors which affect members in the conduct of their trade and will take such steps under the agreement and the Association rules as they consider necessary and desirable.

* * * *

### State Railway Earnings

The total approximate gross earnings of all State-owned railways for the period of ten days ending December 20, 1941, (26th period) amount to Rs. 371 lakhs. This is:—(A) Rs. 48 lakhs more than the approximate gross earnings for the corresponding period of the previous year. (B) Rs. 34 lakhs more than the actuals for the corresponding period of 1940-41, and (C) Rs. 65 lakhs more than the actuals for the corresponding period of 1939-1940.

The total approximate gross earnings from April 1 to December 20, 1941, amount to Rs. 88.85 crores. This is (A) Rs. 12.22 crores or 16 per cent., more than the actuals for the previous year and (B) Rs. 20.96 crores more than the actuals for 1939-40, states a Press "communique."

* * * *

### G. I. P. Railway

The approximate traffic earnings of the G. I. P. Railway for the ten days ending December 20, 1941, were Rs. 60,46,000, which is an increase of Rs. 4,97,000 over the actual earnings for the same period of 1940.

ISSUED WEEKLY

Vol. XXIX. No. 3 SATURDAY, JANUARY 17, 1942 Price Re. 1

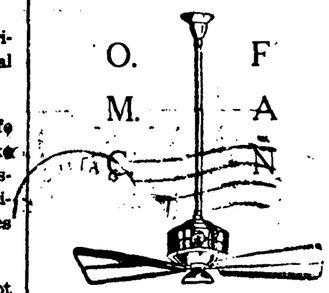
## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to



NATIONAL INSURANCE COMPANY, LIMITED.

## NO SHAREHOLDERS

The NORWICH UNION LIFE INSURANCE SOCIETY is a Mutual Company and there are no shareholders to absorb any of the profits accruing to the business. All profits that are made are returned to the policy-holders. With Pro[illegible] and the Society is run for their benefit. It is one of the very few Mutual Societies transacting business in India and is in a position to offer the very finest Life Insurance contracts at competitive rates of premium. Having been founded in 1808 the Society absorbed the Amicable Society in 1866 and thus can claim to be the OLDEST LIFE INSURANCE OFFICE in the World. The Society is

## WORLD OF INDIAN FINANCE

Friday evening.

SHORT credits have been in good supply, with interbank call money quoting ½ per cent. lenders, both in Bombay and Calcutta. There are gratifying indications that the pressure which was felt by banks at the end of the old year and the beginning of the new year is perceptibly dwindling. That Banks are finding themselves in a more comfortable cash position, is indicated by the substantial applications put in this week for tender treasury bills. While the amount on offer was Rs. 1 crore, applications came to Rs. 2,58¾ lakhs. This compares with Rs.1,75¾ lakhs last week. In spite of keener bidding, the Government did not get any more favourable rate. The average rate of accepted tenders on January 13 is unchanged at Re. 1 per cent per annum. Applications for Rs. 1 crore are invited on the treasury bill tender day next week. Sales of intermediate treasury bills will continue at the unchanged rate of Rs. 99-12-3 per cent. Tap bills sold between January 7 and January 12 amounted to Rs. 86 lakhs.

---

The return of more comfortable conditions in banking circles is also reflected in the statements of the Reserve Bank for the week ended January 9 as well as in the statement of the Imperial Bank for the same week. The most noticeable feature of the Imperial Bank is the sharp decline in advances from Rs. 39.49 crores to Rs. 35.55 crores. The most notable decrease is under the head bills which show a reduction of over Rs. 3 crores from Rs. 8.07 crores to Rs. 5 crores. Though cash credits have risen from Rs. 19.98 crores to Rs. 20.70 crores, loans have shrunk from Rs. 11.44 crores to Rs. 9.85 crores. The investment portfolio of the Imperial Bank is nearly Rs. ½ crore down from Rs. 64.47 crores to Rs. 64 crores. As a result of these changes, the cash balances of the bank are strengthened from Rs. 15.13 crores to Rs. 19.84 crores.

---

The statement of the Reserve Bank for the banking department shows a fairly good increase in the deposits of member banks from Rs. 33.95 crores to Rs.35.75 crores. That there is still considerable demand for money from the general public is an inference to be drawn from the continued withdrawal of rupee coin from the Reserve Bank. As on January 9, rupee coin held in the issue department was Rs. 32.40 crores as compared with Rs. 33.58 crores on January 2. Since the commencement of Japanese hostilities, rupee coin has declined from Rs. 37.60 crores to Rs. 32.40 crores. There has thus been withdrawal of cash for over Rs. 5 crores.

---

There has been further expansion of currency against sterling securities. Since the first week of November, there is hardly a week during which expansion of currency against sterling securities has not taken place. In the week ended January 9, there has been currency expansion for Rs. 3 crores, following one of Rs. 10 crores in the week ended January 2, Rs. 10 crores in the week ended December 26, Rs. 8 crores in the week ended December 19, Rs. 12 crores in the week ended December 12, Rs. 17 crores in the week ended December 5, and Rs. 4 crores in the week ended November 28. In the week ended November 21, there was no expansion of currency. But in the week ended November 14, there was expansion for Rs. 9 crores; and in the first week of November, the expansion was as much as Rs. 12 crores. In spite of currency expansion for Rs. 3 crores in the week ended January 9, notes held in the banking department have declined from Rs. 14.67 crores to Rs. 9.69 crores. That is to say, had there been no expansion of currency against sterling securities, notes held in the banking department would have been hardly Rs. 6½ crores. While sterling securities in the issue department have risen from Rs. 237.63 crores to Rs. 240.63 crores, foreign balances in the banking department show a decline from Rs. 51.59 crores to Rs. 45.25 crores. In other words, the addition to sterling receipts in the issue department is only Rs. 3 crores, but the fall in foreign balances in the banking department is Rs. 6¼ crores. How is the balance of Rs. 3¼ crores to be accounted for? As in the first week of January the India Office has certain big disbursements to make, these payments might have been of the order of Rs. 4 crores. This also accounts for the decline in the Central Government balances from Rs. 15.63 crores to Rs. 9.02 crores. Active note circulation in India has risen from Rs. 321.09 crores to Rs. 327.64 crores. Another notable development is the sharp increase in the Reserve Bank's investments from Rs. 9.23 crores to Rs. 11.86 crores. Whether this reflects the acquisition of purely temporary investments or whether this betokens the decision of the Reserve Bank to maintain a large investment portfolio can be known only after some time. The gilt-edge market in India has maintained an exceptionally strong tone in the last two or three weeks; and one wonders whether the increase in the Reserve Bank's investments is due to purchases of securities made by the Bank from the open market. The problem of issuing rupee loans against the sterling securities that are being redeemed has to be tackled as early as possible. And from this point of view, it should be the constant care and concern of the financial authorities to maintain and strengthen the intrinsically healthy forces in the Indian giltedge market.

---

The exchange market has been hesitant and business turnover is on the small side what with the uncertainty about the war situation and about freight. The undertone, however, continues steady.

---

Banks were sellers of T. T. on London for Ready up to six months forward at 1s. 5 31|32d., and banks were buyers of T. T. on London for Ready up to six months forward at 1s. 6 1|32d.

---

D. A. sight bills quoted 1s. 6 9|32d., for three months; and 1s. 6 11|32d., for four months.

---

Dollars were Rs. 332-12-0.

---

Interbank call money is unchanged at ½ per cent.

---

Firms' money for call and short quoted ¼ per cent. and ½ per cent. for one to four months deposits.

## TREASURY BILLS

### India

Tenders for Rs. 1,00,00,000 (Rs. one crore) of three months' Government of India Treasury Bills were opened on Tuesday, January 13, 1942. Total amount offered was Rs. 2,58,75,000 (Rs. 2 crores, 58 lakhs and 75 thousand). Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 41 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Re. 1 per cent (Rupee one per cent) per annum.

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills will be received on Tuesday, January 20, 1942. Successful tenderers should make payment on Friday, January 23, 1942. Other conditions are as usual.

Three months' Intermediate will be sold from January 14, 1942 to January 19, 1942 at Rs. 99-12-3 per cent subject to the conditions previously announced (*viz. sales* can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from January 7, 1942 to January 12, 1942, amounted to Rs. 86,00,000 (Rupees 86 lakhs).

During the week ended January 9, 1942, Government of India Treasury Bills for Rs. 2,08,50,000 (Rupees 2 crores, 8 lakhs and 50 thousand) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad

Thursday morning.

To the meagre intelligence available from abroad, little can be added by way of inference. The destruction of millions of U. S. assets in the Philippines has been reported. No comforting conclusion can be drawn from the survival of American resistance in the Isles of Fear. What has happened to the Philippine currency is not known. That is of little import as compared with the fate of 12 million people. Attacks on distant Samoa have also been reported, and the destruction of large parts of the U. S. empire is still in progress

The enactment of minimum wage legislation in the Islands proves that the New Deal has influenced the Commonwealth Government's policy. The output of sugar approaches a million tons almost equal to that of India. Manila hemp, copra and oil, tobacco, corn and maghey are among the crops grown while the cultivation of the banana is a reminder of the resemblance between the Philippines and the banana republics of America. If American beet sugar producers have evinced jealousy of the cane sugar factories, they have not interfered with the dominant position of the U. S. A. in the foreign trade helped as it has been by preferential tariffs in the past. All tropical fruits abound and the cultivation of rubber has been developed in recent years through the acquisition of plantations in the Southern Islands. The water buffalo and hogs are common and cattle raising was flourishing despite the depression. The forest wealth too was considerable and quite an export trade was built up in tanning substances, dyes, gums and resins as also chromite which was one of the most valuable assets while the export of iron ore was stimulated in recent years. The principal mineral was gold: the value in recent years has exceeded 8 million dollars and the output has been over 200,000 ounces. Silver and platinum are met with in the Philippines. Industrial output is small and the ardent gamblers of Manila play other things than the stock market. Chocolate and coffee factories, cocoanut oil mills and cigarette factories represented familiar aspects of Philippine agriculture rather than industry proper.

Something has to be said about banks and coinage. The Eastern Exchange banks had branches like the National City Bank and the Yokohama Specie Bank. The Philippine National Bank, inaugurated in May 1916, was a State-owned institution responsible for the management of the currency. As the Philippines were on the gold exchange standard, there is certainly a point of similarity with India. There was another bank besides the State Central bank with the right of note issue. The Philippines were familiar with silver coinage up to 1 peso weighing 20 grammes, 800 fine in addition to the cupro-nickel 5 centavo piece and the one centavo made of bronze. Treasury certificates and bank notes up to 500 peso were current and the exchange value of the peso namely 50 U. S. cents roughly equal to 8.09 pesos to the £ was guaranteed by the Gold Standard Fund Act of June 1922. The Manila Mint provided local currency and the note circulation, at least in the past, was reinforced by U. S. gold coins in the past as they were legal tender for all public and private debts. In the other insular possessions of the U. S. A. governed by naval officers as a rule, the U. S. currency alone was recognised. Guam, for instance, was closed to trade and shipping alike though its coffee, sugar and timber were in demand like copra and coconut oil which were the principal exports.

If the coming U. S. budget remains the main financial topic of all markets, it is but fair to recognise that the U. S. A. is not contemplating any radical departure from 1941 policy. Mr. William Davis and Mr. Donald Nelson may become more important personages but the actual effects on finance will be slight. Higher taxation and larger savings, supported by the freezing of wages, are predicated by the vast scale of expenditure contemplated in the President's message last week.

The victory programme is there and the eleventh deficit, the largest of them all, is also there. If Wall Street has behaved irregularly of late it has merely shown its sensitivity. The war is not a bull point even if profit trends are favourable. But that is of small concern as a threat to the standard of living in herent in a long and expensive war. It seems only proper to add that Mr. Roosevelt will do little to lower it particularly as the country is producing more war materials than the Axis countries as recorded in the report of Mr. William Witheroe, President of the National Association of Manufacturers. A striking increase in the output of aircraft, automobile, munitions and machine tools has put the U. S. A. ahead of its enemies.

Congress has to settle the financial details and the only possible effect may be a rise in commercial banks' advances to clients. The Banks' own customers will need money for production as distinct from investment. The trend noticed in the summer will certainly be accentuated and the F. R. B. may have to modify reserve requirements further. Such a forecast seems tame compared with the breath-taking prophecies pouring over the cables not only as regards Hitler's defeat but Allied economic supremacy to which successes in the Battle of the Atlantic contribute.

**LLOYDS BANK**

LIMITED

(Incorporated in England.)

*For every class of Banking Business*

**ADVANCES MADE AGAINST GOVERNMENT SUPPLY BILLS**

Canadian exports to Britain have doubled in the eleven months ended November proving that more and more convoys reach Britain and help to win the battle of production.

The maintenance of all old arrangements intact suggests that the blocking of receipts of United States companies in India will continue. It may perhaps be asked why the U. S. A. with its increasing influence on military policy does not put its foot down and ask the British Government to remember that in a full, free alliance, there is no place for restrictions of any kind. These are, however, pristine promises and earlier commitments. It is enough for the U. S. A. to see that Latin America accepts U. S. leadership without worrying over dollar income or export policy. The U. S. A. can live unto itself: hence, its indifference to the regulations and restrictions practised by the British Empire. These are decidedly pinpricks compared with the slap in the face suffered in North China. The occupation of Shanghai means that the Far East is cut off from all trade. If U. S. investments are reckoned to be less than British investments as pointed out by many students in the past, there is the grim fact that nothing can be had by way of compensation after the war. But the loss of trade and investments are not at all to be compared with the regulation of economic life at home.

The domestic problem represented by the clamant demand for all-out effort is obviously of greater consequence than the uncertain prospect of liquidating investments in the South African gold-mining industry. There is a possibility that the S. E. C. under Mr. Jerome Frank may come to have a much greater say in ordering many things during the war period. There is no need to experiment *a la* Wilson with a Capital Issues Committee or a Liberty Loan drive. The war finance appeared before the war. That is, on any reckoning, the flying start which many want and admire.

The formal admission that all is not well in the Far East has come in the form of an order issued by the Board of Trade. Export control is tightened as regards Malaya, the Philippines, the N. E. I. and other territories involved in the war. The Board of Trade order came into force on Sunday. Exchange on Singapore is unchanged and what is happening in Pahang and the Federated States apparently is of smaller interest than the withdrawal from Kuala Lumpur. What has happened to the Princes, the British Advisers and the Administration generally can only be conjectured. The usual drain on the P. O. savings bank must have manifested itself there and it is clear that Government currency notes, of which the issue must be over 100 million dollars, must have been encashed on a large scale. It is queer that in spite of Indian banks having branches in F. M. S. and S. S. very little is known here about the financial side of events though everybody knows that money conditions in London last week were easy; call loans could be had at ¾ per cent while the T. B. rate too showed a drop. Perhaps it was because the weekly tender was reduced to 70 millions and applications last week totalled 160 million sterling. No Treasury deposits are to be taken this week which means banks will turn eager buyers of bills this week.

The Straits dollar is flanked by the half dollar and silver pieces up to 5 cents. The currency, of course, is based on sterling and gold sovereigns are legal tender besides the S. S. dollar (value 2|4 or 60 dollars equal to £7 sterling) which circulates over a wide area including Labuan and Malaya proper including Malacca.

## Currency and Finance in 1941

The outstanding features of India's finances during 1941 were the continued accumulation of sterling resources; the utilisation of a substantial part of these resources for the redemption of the dated India sterling stocks; the announcement, towards the end, of the repayment in March, 1942 of the 2½ per cent. and 3 per cent. non-terminable loans and, in January, 1943, of 3½ per cent. non-terminable sterling loan; the achievement, present and prospective, but fully assured, of India's freedom from sterling debt: considerable transfer of sterling securities to the issue department of the Reserve Bank; resulting increase both in total note issue and in active note circulation. It will be observed that the various developments noted here are more or less corollaries to the colossal additions to our sterling balances. The same forces that were responsible for stimulating the acquisition of sterling resources since the beginning of the war were effective during 1941 with appreciable acceleration in the final quarter.

At the beginning of the last year, that is, on January 3, 1941, sterling securities held in the issue department of the Reserve Bank stood at Rs. 131.50 crores; and the foreign balances in the banking department were Rs. 57.58 crores. The total of sterling securities in the possession of the Reserve Bank was thus Rs. 189.08 crores. As on January 2, 1942, sterling securities in the issue department were Rs. 237.63 crores and foreign balances in the banking department Rs. 51.59 crores. Total Rs. 289.22 crores. There has, therefore, been an increase of Rs. 100.14 crores in the total sterling resources of the Reserve Bank during 1941.

This does not represent all the addition effected during the year to sterling resources. In February last, the Government announced the scheme for the compulsory repayment of five dated India sterling stocks; and payment in respect thereof was made in the following March and April. The sterling balances used for such payment, as well as sterling utilised for the earlier scheme of purchases of India sterling securities from the open market in London, may be roughly estimated at £75 million, which is equivalent to Rs. 100 crores. Sterling balances for Rs. 100 crores were made available, in the course of 1941 by the Reserve Bank to the Indian Government for the redemption of sterling loans. The actual additions to sterling resources during 1941 are, therefore, Rs. 100.14 crores **plus** Rs. 100 crores or, in round figures, Rs. 200 crores.

It was in the last week of March, 1941 that sterling securities were withdrawn from the Reserve Bank in connection with the scheme for the redemption of sterling loans. As a result, sterling securities in the issue department declined from Rs. 140.50 crores to Rs. 102.24 crores in the week ended March 28, 1941. Since then, however, there have been recurrent transfers of sterling securities from the banking department to the issue department, with the result that, between March 28, 1941 and January 2, 1942, sterling securities transferred to the issue department reached the colossal total of Rs. 135½ crores. It is noteworthy that the final quarter of 1941 records expansion against sterling securities on an unprecedentedly large scale. On September 26, 1941, sterling securities in the issue department were Rs. 136.63 crores: by January 2, 1942, these had increased to Rs. 237.63 crores. That is to say, the expansion in sterling securities in the issue department in the last quarter of 1941 was fully Rs. 101 crores.

Consequent on large-scale transfers of sterling securities to the issue department, total note issue has been going up by leaps and bounds. The total note issue, which was Rs. 255.37 crores on January 3, 1941, had gone up to Rs. 357.12 crores by January 2, 1942. Total note issue has thus risen by Rs. 102 crores. Active note circulation in India is, however, slightly less, though it represents the biggest increase ever recorded in a twelve-month period. Active note circulation in India rose from Rs. 229.96 crores on January 3, 1941 to Rs. 321.09 crores on January 2, 1942. Notes in active circulation have thus risen by Rs. 91 crores.

It would have been much more considerable if it were not for the fact that currency expansion against sterling securities was partly offset by contraction against rupee securities. At the time when sterling securities were withdrawn from the issue and banking departments for the redemption of sterling loans, the rupee finance was provided by the Reserve Bank expanding its portfolio of rupee securities from below Rs. 50 crores to just over Rs. 91 crores. Since July 1941, rupee securities have been withdrawn from the issue department from time to time. This process is responsible for the reduction in rupee securities from Rs. 91.32 crores to Rs. 41.50 crores. Rupee securities at Rs. 41.50 crores on January 2, 1942 compare with Rs. 49.61 crores on January 3, 1941.

Just as the biggest additions to sterling securities in the issue department were made in the last quarter of 1941, note circulation also records the greatest expansion in the final quarter. Total note issue rose from Rs. 296.76 crores on September 26, 1941 to Rs. 357.12 crores on January 2, 1942. The increase in the total issue in the final quarter is, therefore, approximately Rs. 60 crores. Similarly, active note circulation in India rose from Rs. 267.65 crores to Rs. 321.09 crores. The increase is, therefore, Rs. 55 crores.

The total sterling resources of the Reserve Bank on September 26, 1941 were Rs. 136.63 crores in the issue department and Rs. 52.55 crores in the banking department or a total of Rs. 189.18 crores. On January 2, 1942, the total sterling resources were Rs. 237.63 crores in the issue department and Rs. 51.59 crores in the banking department or a total of Rs. 289.22 crores. The increase in these three months is, therefore, Rs. 100 crores. Which gives a monthly average of Rs. 33 crores. There is ample evidence to warrant the conclusion that the pace at which sterling is being accumulated by the Reserve Bank has been greatly accelerated since last autumn. If this pace be kept up in 1942 the total sterling resources gained by the Reserve Bank in the current year may be nearly double the sterling balances which accrued in 1941. If this expectation should materialise, it will set an intriguing problem with regard to the utilisation of surplus sterling resources as the existing sterling balances of the Reserve Bank are more than ample for the commitments that have been entered into for the repayment of the 2½ per cent., 3 per cent. and 3½ per cent. non-terminable India sterling stocks.

The redemption of sterling loans has been carried out in three stages. In the first stage, the Government were buying India sterling stocks from the open market in London, cancelling them and issuing rupee counterparts thereagainst in India. This scheme was put into effect a few months after the war started. And it was functioning till February, 1941. In February was announced the scheme for the compulsory repayment of the dated India sterling stocks; and this was possible through the good offices of the British Treasury. The second stage of the sterling debt redemption plan was smoothly put through; and the subsequent accruals of sterling resources have been on such a heavy scale that it was possible for the Finance Member to announce the third stage of the scheme towards the end of 1941. The third stage of the scheme consists of two parts. The first pertains to 2½ per cent. and 3 per cent. non-terminable loans which will be paid off in March, 1942. The second pertains to 3½ per cent. non-terminable sterling loan for which one year's notice has been given. That is to say, the holders of this loan will be paid off early in January, 1943. Thus will be completed the operations which set India free from the thraldom of sterling loans. The sterling accumulations that are bound to be on a considerable scale during the current year will take India a step further. By the end of the current year, India will not only shed her debtor status but will take her place as a creditor country.

# REVIEW OF STOCK MARKETS IN 1941

Thanks to the encouraging developments in the war situation, the rapid strides made by Indian industries since the collapse of France and the growing importance of this country as the leading member of the Eastern Group, stock exchange activity was rather brisk in 1941. Except for a temporary recession in values in April and May, 1941, with the German successes in the Balkans, there was no interruption to trading till the end of November.

It was never at any time seriously doubted that Japan would actually enter the war. On December 7, 1941, therefore, when the actual declaration of war against the United States and Britain was made, the whole world was surprised. Nearly all the gains were wiped out and the outlook at the close of the year was considered rather gloomy.

With the recovery movement, which began in November 1940 following the successful deliberations of the Eastern Group Conference and the increasing volume of war orders, well under way confidence had been restored in the markets and the year 1941 began under happy auspices. For a time there was some hesitancy regarding the budget proposals but when they were actually announced they did not contain any surprise for the markets. Till the end of March, 1941, the trend continued upward, but the over-running of the Balkan countries and the setback to the British in Libya had a chilling influence and the lowest levels for the year were recorded in May. The outbreak of the Russo-German war and the improvement in the shipping position, however, caused a resumption of the upward movement.

The order freezing Japanese assets in India was responsible for a boom in values for cotton shares. The encouraging reports from industries also had a bullish effect on other sections. Prices were moving merrily upward. With a large increase in the volume of turnover in the stock exchanges in both the important centres in India, Bombay and Calcutta, substantial rises in prices were recorded. At the time Japan declared war against Britain and the United States values were at the highest levels for the year.

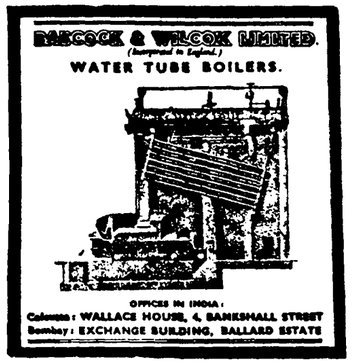
On December 8, 1941, the day after the Japanese declaration of war, there was heavy selling. With the Japanese successes confidence in the markets was rudely shattered. Both investors and operators alike were inclined to liquidate their holdings.

Only the measures adopted by the Committees of the Bombay and Calcutta Stock Exchanges arrested to a certain extent the decline in prices. The Committee of the Calcutta Stock Exchange was prompt in fixing minimum prices for the leading counters in the first instance. This checked slightly speculative selling but with the further deterioration in the Far Eastern situation, it was later found necessary to fix minimum prices for all counters with the exception of Government securities, preference shares, debentures, bank and railway shares. The regulations regarding delivery had to be scrupulously observed while the working hours in the day's session were also reduced.

The Governing Body of the Bombay Stock Exchange was undecided in the earlier stages of the downward movement regarding the course of action to be adopted but with persistent selling it later decided to recommend the fixation of minimum prices for leading counters in both the forward and cash lists and approach the Bombay Government for the necessary permission. The Bombay Government agreed to the recommendations of the Governing Body only on the understanding that all the outstanding transactions in the forward section were squared up in the next six months and business was suspended for the duration of the war. The fixed minimum prices also were to be reviewed after a fortnight.

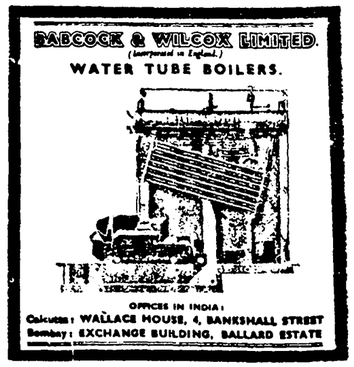
Thus the year ended in a gloomy note and conditions akin to the crisis of 1940 were noticeable. In most sections practically the whole of the year's gains were wiped out. Only Cotton and Jute shares were higher on balance. The strength of the Cotton section, as pointed above, was mainly due to the improved demand for indigenous goods, increasing orders from the Supply Department and the large demand from export markets. The freezing order caused a virtual cessation of Japanese imports.

The course of the markets will be clearly evident from the table given below:—



**"INDIAN FINANCE" DAILY INDEX OF STOCKS AND SHARES**

| 1941 | Giltedged | Jute | Coal | Cotton | | Engineering | | Paper | All Shares |
|---|---|---|---|---|---|---|---|---|---|
| | | | | Cal. | Bombay | Cal. | Bombay | | |
| January 2 .. | 99.76 | 78.31 | 124.74 | 103.23 | 121.67 | 174.96 | 285.40 | 108.79 | 116.37 |
| February 17 .. | 100.22 | 72.72 | 120.91 | 112.94 | 130.64 | 172.08 | 303.45 | 110.18 | 118.90 |
| March 1 .. | 100.07 | 77.59 | 119.10 | 112.90 | 132.38 | 172.51 | 311.55 | 107.62 | 119.65 |
| March 22 .. | 100.49 | 80.32 | 128.87 | 113.60 | 137.43 | 173.48 | 318.44 | 107.93 | 120.93 |
| May 6 .. | 100.20 | 77.24 | 114.89 | 103.89 | 123.09 | 162.43 | 280.43 | 103.79 | 115.95 |
| September 8 .. | 100.80 | 92.86 | 130.65 | 133.63 | 154.90 | 199.76 | 319.86 | 118.18 | 127.25 |
| October 31 .. | 100.76 | 93.57 | 128.73 | 144.48 | 170.16 | 191.33 | 339.30 | 126.41 | 131.32 |
| November 28 .. | 100.76 | 99.06 | 136.84 | 162.90 | 189.54 | 192.36 | 360.87 | 139.37 | 138.82 |
| December 9 .. | 100.32 | 92.13 | 125.74 | 156.97 | 182.42 | 175.61 | 324.72 | 129.16 | 132.13 |
| December 20 .. | 98.60 | 83.25 | 125.57 | 148.27 | 160.56 | 163.90 | 276.71 | 114.74 | 125.67 |



It will be seen from the above table that the highest level for the year was touched by the index for all shares on November 28, 1941 at 138.82. There was, thus, a gain of 22½ points in the course of six months. The lowest level for the year was touched on May 26, 1941, at 115.95. At the close of the year there was a drop of more than thirteen points from the highest level for the year.

Giltedged securities were very steady for the most part of the year. Earlier in the period there was a setback in the quotation for 3½ per cent Paper from Rs. 96-4 to Rs. 94-8. With the successful repatriation of the dated sterling loans the lost ground was recovered and the quotation till the first week of December was glued to Rs. 96. In common with other sections giltedged securities also were marked lower after the Japanese entry into the war, the lowest quotation for the year being Rs. 91-8. Some buying at the lower levels caused a recovery to Rs. 93-8.

The important feature of the year is the sustained demand for tax-free preference shares. The increases in the rate of income-tax and surcharge and the fears regarding the possibility of a further increase in taxation caused a sharp rise in values. Sellers were unwilling to part with their holdings. The rise in prices tax free preference shares can be said to begin as early as November, 1940, when the emergency budget proposals were announced. From 115.89 on November 12, 1941, the "Indian Finance" Daily Index for preference shares rose to 130.23 on November 26, 1941. Even while there was a debacle in prices for equities following the Japanese entry into war, preference shares were firmly held and the index stood only slightly lower at 129.58.

# Editorial Notes

**Promoting Safety**

To supplement the information sent by our Delhi correspondent last week comes a more detailed analysis of efforts made to procure information and other things about Indians abroad. Sir Shenton Thomas' statement concerning Penang had a disturbing effect. The Madras Government took the initiative and asked for information. That it was made available without the intervention of the Colonial Office may surprise some who are unaware of what has been done already. The Government of India, particularly the new Overseas Member, have not overlooked the interests of Indians. To evacuate labourers from Malaya numbering nearly a million is impossible but in other Occupied areas, efforts have certainly been made for the removal of Indians. Non-combatant civilians were being removed to safer zones from the Dutch Indies and the Philippines, according to reliable reports. Steps have been also taken to make sure of shipping. If the official policy in Burma is against the flight of male adults, when others have to take their chance, there can be no criticism of the steps taken by Mr. Hutchings. The value of an independent agency has been demonstrated again. Instructions went from Delhi to forward reports, and steps were taken to allay fears regarding discrimination. If the High Commissioner for Malaya has issued orders against discrimination only recently, it may be even suggested, that earlier such discrimination was practised. There is, of course, a risk of the under-privileged being ignored. That occurs not only in the enemy-occupied areas. Three departments are concerned at present with getting news of Indians abroad and the Red Cross is a supplementary agency though there is the possibility that Japan may ignore the Conventions. If relief work has begun in Rangoon one must be thankful to the Viceroy's War Fund for its initial donation of Rs. 3 lakhs last week.

That the British Government's representatives do not wait for a formal approach through the India office can be believed. In Shanghai, Manila and other places, information was sought of consular and other agents by the External Affairs Department. What is happening in Indo-China can only be learnt through the Red Cross which has proved its value again and again. The wealthier Indians are probably fending for themselves and could get in touch with Consuls or others. The position as regards the poorer classes, for instance, Sikh policemen in Hong-Kong must be more uncertain. Disarmament and internment must be the destiny of a force that could not obviously get on to the hotels. As Shanghai's trade, which means China's, must have come to an abrupt stop, it is clear that the Indians there face a very bleak period. Representation is rendered difficult by war conditions. It is however possible that the Malayan or Burma Government may demand that India should take back all emigrants. In that case a new problem, that of transport, would arise. When war demands are pressing, no amount of goodwill or organisation can help. It is lucky that even if the Japanese have overrun over two-thirds of Malaya already, there has been no demand for compulsory evacuation. Privation and unemployment face the seven or eight hundred thousand labourers in Malaya, but they are not worse off than Chinese labourers in the tin mines who are likely to invite more attention on the part of the enemy.

The regular appearance of reports concerning Indians abroad will anyhow be welcome because private effort to obtain information besides being expensive is often unsuccessful. A broad outline of the situation alone can be had at well-spaced intervals and one hopes that the Rulers and Residents of the Unfederated States are helping as much as they can though it must be admitted that Malays must have the first claim at this time on their own Princes.

**Trade in November**

The setback in exports and imports alike would serve to distinguish November. The decline will be promptly described as contra-seasonal if it were not that the monthly variations have ceased to be a reliable guide. The total value of seaborne imports in November was Rs. 13.48 crores. If re-exports valued Rs. 1.32 crores are deducted the total value of retained imports works out to Rs. 12.16 crores. Contrast this with the value of exports for November, namely, Rs. 24.33 crores. The difference is more than substantial and certainly suggests that the steady increase in the favourable balance of trade will help India throughout the war period.

It is clear from the summary table that improvement marked the course of foreign trade right up to November. This should compensate for the decline that may be forced by the war in the Pacific. If the variations in a single month cannot be taken as a certain measure of changes in progress, the trade returns lend support to the view that the temporary decline in exports in the first quarter of 1941-42 leading to a temporary change in sterling exchange has been more than offset by the striking expansion in exports thereafter. If the eight-month totals are examined it will be seen that in spite of shipping difficulties India's imports of foodstuffs rose by Rs. 4.38 crores. The increase in sugar imports is probably a consequence of last year's short production but the enormous increase in tobacco imports is proof that the manufacture in India of cigarettes and cigars has made great headway. The uninterrupted activity of the cotton mills explains the increase of Rs. 6.13 crores under imports of raw cotton alone this year. The secular increase since 1939 will indeed strike the student as remarkable, particularly as it accompanies a decline in raw cotton exports from India. It is clear that Egypt and East Africa are the main sources of imported cotton. Imports from Egypt have risen in value by Rs. 2 crores between April and November 1941 as compared with the same period of 1940 and the simultaneous increase of over Rs. 3.5 crores in the value of imports can be easily explained. The figures have demonstrated conclusively that the war with Italy had ceased to affect India's trade with Africa. It is certainly noteworthy that Indian exports to Kenya have risen by Rs. 1.36 crores over the 1940 level. If the expansion in exports is on a restrained scale it will be remembered that opportunities for Indian manufactures of drugs and chemicals are steadily extending in Egypt as in East Africa.

The increase under imports of oil is admittedly a characteristic of India's trade in the war period. It must be related to the advance in prices. But the November figures also suggest that petrol rationing in India was not the consequence of reduced imports but of the openly expressed intention to add to Government's reserves of essential fuel. The continued increase recorded under machinery imports in 1941 seems to suggest that greater freedom was permitted to the importer after the arrival of lease-lend procedure. The application of control was by-passed to some extent. It is only a reasonable inference supported by the increase in imports of electrical goods as well as metals. As mentioned in previous analyses the improvement in seaborne imports is attributable to the increases already referred and to such familiar features as the expansion in imports of motor vehicles and consequently of rubber manufactures. But it is certainly worth recording that the increase under paper etc., was negligible while India's imports of textile manufactures showed a decline of Rs. 2 crores as compared with the eight months of 1940-41 taken for comparison. The decrease cannot be dissociated from the fall of over Rs. 1 crore under the value of India's imports from Japan. One must add here that total imports from Japan from April to November were valued only Rs. 11.76 crores while India's total exports to Japan were valued Rs. 4.59 crores. The gaping difference suggests that the upset due to the war may not be violent but one must add that the war threatens the further improvement in exports to the U.S.A. envisaged on the basis of a doubling in the value of India's exports from April up to November as compared with the same period of 1940.

**Work for Lac**

In the latest annual report of the Indian Lac Cess Committee will be found an account of fresh investigations intended to enlarge the use of shellac. It will be noted that the chemical section was busy and the moulding manufacturer obtained more assistance as regards the preparation of shellac powders. New nitro-cellulose lacquers and shellac-coal tar varnishes appeared. Shellac moulded articles in place of vulcanite for medical requirements appeared; again the consequence of research was practical. The physico-chemical investigations were concerned largely with ascertaining what solvents are useful. It is hoped to learn through tests with solvents what new useful varnishes can be produced with shellac. The formulation of a process for extracting soft resin from shellac by using single pure solvents or blend of solvents has been reported.

Further research into the properties of shellac was in progress but the work on compositions was in its preliminary stage according to the report issued this week. The admixture of coal tar to shellac preparing varnishes makes it possible to get a cheap, weather-resistant varnish. Laminated paper board manufacture is also said to call for the use of shellac and certain transparent or translucent fabrics used in lieu of glass call for the application of a special varnish. Far and away the most important departure was the examination of lac dye. The question of utilising the dye and its economics under present conditions is receiving attention. The emergence of a plastics industry can be discerned in the reference to many moulding factories in India. There are evidently two in Bombay, one in Cawnpore and one in Calcutta. Bakelite manufacturers held last April a conference to discuss steps for establishing the moulding industry on a firm base. Various developments including the dry process and the use of casein and protein from tamarind seed, soyabean, etc., have been referred to as promising. Reference must be made here to the successful manufacture of moulded articles at the Institute to replace imported vulcanite goods required by Government medical stores. It was also ascertained that shellac moulded powders and laminated paper board prepared at the Institute are satisfactory for certain moulded or laminated radio parts. The report confirms the view that jute waste makes a good filler for injection moulding powders. Switches and bottle caps are mentioned. The report adds that two firms in Australia are developing injection moulding of shellac thermoplastics with the advice and help of the Institute. If the manufacturer's requirements were in the forefront the campaign against disease like the demonstration work pursued in Bihar and Bengal reminds that the cultivator's needs were studied. In the Santal Parganas pest control measures were adopted and improved propagation methods were popularised in Palamau. Distribution of improved seed was an integral feature of the year's work. Demonstration and participation in exhibitions advanced the work of letting cultivators know that improved methods can be learnt easily enough. The study of parasites as also of the hosts of the lac insect showed that entomology like botany comes within the scope of the Institute's work.

This good work at Namkum was seconded by the London Bureau which shifted to Edinburgh and conducted its work although on a restricted scale. Shellac comes into the war effort. So certain things are left unrecorded in the report but reference must certainly be made to the study of hot spraying of shellac at the Metropolitan-Vickers Works. Shellac in compounds, to replace waxes for use in polishes, obtained new importance and the blend of shellac with metallic oxides showed that more and more materials come to be used with shellac for the manufacture of the lacquers required, for instance, in the canning industry.

**Sterling Debt Repayment**

The second effort towards the liquidation of India's external debt has naturally attracted little attention in India. The building up of sterling balances has always been forced on the attention of the London money market which has all along enjoyed the support of oversea governments. That the new vesting order destroys the raison d'etre of the East India Loans Act and will lead to the disappearance of familiar stocks in the daily list has been recognised by others besides the jobbers in the consols market. Informed observers knew that it was coming and the assistance that will be given to the British Government by the repayment in February of 70 plus 11 million sterling is unreservedly recognised. Some kind of stimulus has certainly been given to the giltedged market in London by the announcement made a fortnight ago. When the 3½ per cent stock totalling 77 million sterling is paid off in January 1943 there will not be any sterling debt, no need for remittances of interest. Interest will converge on war loans necessarily and this is certainly valuable help to the British Treasury whcih is responsible for the last vesting order. In its comments on the scheme the Economist recently declared that 'with the completion of this operation the last of the obligations of India will have been redeemed and the consol market will be without this feature for the first time for over sixty years'. It also recalled that India had ceased to borrow in London and had begun to pay back before 1939. It cited the fact that one-third of India's total sterling debt had been liquidated during the five years ending March 1941 and of this reduction approximately half or 61 millions was due to the vesting of six undated stocks last February. After the repayment of 151 millions more there will be some 92 millions of indirect sterling obligations such as railway stocks). How this repayment has been effected has been described in the journal which remarked (from the standpoint of the investor however there can be little doubt that all India obliga-

tions both direct loans and guarantees will have been liquidated before hostilities cease). As the price of the 3½ stock has gone up over par it is certain that the British holder is well off though he may find it hard to put his money into Conversion fives while old War Loan also is perhaps a little too expensive from his point of view. It is interesting to note that India's freedom from all external debt is envisaged by the Economist which adds that the prospect of redemption rather than the vesting order had induced the money market to turn an eye on 'India irredeemables' previously. Compared with the comment made on the call-up of Canadian stocks in August 1941 there is no criticism of Treasury procedure in procuring the repayment of stocks which do not bring in dollars by way of interest.

---

**U. S. Production and Stocks**

The trend of industrial production in wartime is irregular but expansionary influences can be undoubtedly discerned not only in India but in other countries. In the September bulletin of statistics issued from Geneva the figures relating to industrial production in many lands are tabulated as usual. The movements of the index are to be distinguished from dominant changes either in the production or stocks of individual commodities. Having risen by over 25 points in the year the U. S. index for industrial production had risen to 146 by August as compared with an average of 112 for 1940. The advance in output, characteristic of iron and steel, supported the general advance in industrial production in the situation. The situation was regarded as definitely hopeful and all available indices confirm that view. An advance of 16 points in a year was also reported by Canada but the Dominion could not show the remarkable advance reported by the U.S.A. in respect of engineering and investment goods generally after the end of 1940.

More interest, however, attaches to the stock position in regard to rubber, etc. The rise in inventories described in another note is reflected in the steady rise in U. S. rubber stocks after September 1940. The reduction under stocks afloat in July-August 1941 was largely determined by the striking rise in U. S. stocks then and since. The U.S.A. held 401,000 metric tons at the end of July, a quantity greatly in excess of stocks elsewhere. One may suggest that stocks should have risen further and assuming that the U.S.A. consumes 50 per cent of the world output of a million tons of rubber, it may be summarily said that a year's stock is available at present. Its value will be amply demonstrated when shipments from the Far East are difficult. The diversion of interest to reclaimed rubber and synthetic rubber just now is readily explained by the assumption that wartime consumption will be in excess of normal peacetime consumption. In regard to oil the stock position was even more favourable. The total U.S. production was rising after October 1940 and rationing was attempted in consequence of tanker shortage. The total output in July exceeded 15,48,0000 metric tons. Nothing definite can be said about stocks or their distribution except that the U.S.A. produces five times as much as the U.S.S.R. the second most important oil producer and can command the output of Mexico linked only recently by a defence agreement. The despatch of a new envoy to the United States of Mexico coincides with the arrangement that brings General Camacho's country nearer to its great neighbour. A word must be said about stocks earlier in 1941. They must have risen after May, 1941 when the total exceeded 36.9 million tons.

The position in respect of coal was again singularly favourable. It may surprise many to learn that U. S. output is about 24 times that of India as the monthly output in 1941 has usually been 45 million tons. But for the sensational fall in April caused by labour disputes the coal position should be very good indeed. As regards copper vital for armaments at all times, production has been running high although U. S. stocks were falling after June, 1941. It is in regard to tin that the U. S. position is often described as vulnerable. In this case, too, the U.S.A. is well placed. Stocks in the U.S.A., after dropping sharply in July, rose in August. But compared with the stock in January, 1941, there must have been a fall owing to a considerable drain on account of the defence programme. Yet the U.S.A. held in July about one-sixth of the world's visible stocks, a quantity also larger than U. K. stocks, and must have held title to a big part of stocks afloat estimated at 25,200 tons in July. The U.S.A. is a big producer of lead and spelter and has no need to worry about most metals. If the uncertain output of Bolivia can be turned over to the new smelter put up by the F. W. Dodge Corpn. last year little anxiety will be occasioned. There is, however, a certainty that the tinplate industry will suffer as tin will go into munitions production exclusively.

---

**South African Example**

The call-up of South African loans for London in October was referred to as part of a new policy of getting more money. The repayment of external debt, and its replacement by internal loans, was deemed expedient by the Union. How the repayment was worked out has been explained in the October circular of the Standard Bank of South Africa. The Union Government offered for subscription in the Union at par local registered stock 1956-61 bearing interest at 3 per cent for the defence of the Union and for capital expenditure upon railways and harbours and other public works in the Union. The other issue offered in October was a 2¼ per cent local registered stock repayable in 1947 for the purpose of the defence of South Africa. The lists for both loans were to be open for one day, namely, October 13. The third type of security offered was a 3¼ per cent local registered stock, a twelve-year loan to be known as a savings bond issue. The loan was to be on tap, but the maximum amount to be held by any person, company or institution was limited to £5,000. The purpose of the loan was described as the same as that of the other two but an additional object, the redemption of stock domiciled in London, was cited. It was then announced that the Union Government intended to redeem about £30 million of the Union's external debt on December 1, 1941. It was also indicated that the transaction would be financed by the transfer of a corresponding amount of gold to the credit of the Bank of England.

It may be difficult to trace the arrival of the £30 million in gold in the Bank of England returns. It may have gone at once into the Exchange Equalisation Account. But the fact remains that South Africa paid gold, not sterling which is all that India can pay in respect of its external debt. Though the £30 million payment may not seem small as the Union held in August £52.9 million as currency reserve (a reserve which had been rising steadily after 1939) the proceeds of the 3½ per cent loan would have augmented the sum available. The Union's total debt at the end of August 1941 amounted to £363 million. The figure includes the external debt. Though internal debt, including the floating debt, has risen as a result of the war, South Africa has always enjoyed a strong position strengthened further by the repayment of debt in London. The response to the new issues in October was described as satisfactory and a further announcement recorded the appearance of a new tap issue from November 10 carrying interest at 3 per cent and meant like the savings bonds to meet external debt. The procedure is plain enough. South Africa borrows at home, buys gold, ships it and pays off sterling debt. It is the export of gold, not the export of capital that is involved. As for South Africa, gold is very much like jute or cotton, just another metal dealt in by exporters.

---

**Prices and Supplies**

Statistics relating to arrivals and despatches of staple commodities for the second week of December revealed that in Bombay the position was not too bad. Arrivals of coke and coal were up to average and the great excess of exports of cotton and cotton goods was in line with Bombay's position as the main source of supplies. Arrivals of wheat and rice too were reasonably large. While despatches of imported rice continued on a fair scale, the reduced scale of wheat flour exports from Bombay certainly favoured the consumer. It is clear from a cursory analysis that the menacing upswing in prices was not a direct result of an adverse stcok position but was largely due to middlemen's calculation as to what the traffic will bear. The substantial outflow of vegetable and mineral oils is certainly offset by equally large arrivals of oilseeds into Bombay where the seeds market has reacted violently more than once to war news. In respect of sugar alone the arrivals were rather small but the position can only be gauged in relation to stocks of imported sugar and the quantum of re-exports.

It is clear from a reading of Calcutta figures that the heady rise in prices after Japanese entry into the war was unwarranted unless it be argued that the pirces of Indian produce had to go up in order to catch up with the higher prices of imported goods. Since price control is the subject of further discussion it may be well to take into account the regulation of supplies into large cities and arrange for priority of transport. It is apparent that what has been promised as regards coal (the subject of Mr. Cook's enquiry) cannot be taken as adequate. The readjustment of transport facilities for all essential supplies is admittedly called for, but this is sure to interfere with the provision of rolling stock for more exigent military requirements. It is clear that the good remains the enemy of the best. If statistics compiled for a few days are too much random rather than sample, it must be said that only the wholesalers can say what is short and when. But the recent determined effort to extend the scope of price control on the part of more than one government will be supported on all hands. It is now as much a duty as a privilege to take the profit out of war, whether the profit be that of a contractor for the Defence Services or that of a grocer dealing with the men working on defence contracts.

---

**Australia's Prospect**

For the past one month much has been heard of Australia's decision to go in for full production the goal being Victory. To-day when the mandated islands are atttacked and the depleted coastal cities are liable to black-outs, it is no surprise to hear that 30 to 40 millions will have to be borrowed in the near future as also that the Government will modify the law to permit other units besides the A. I. F. to go in tor service abroad. It is now clear that Mr. Chifley's budget will have to be drastically modified. Attempts have already been made to stimulate saving in accordance with the essential and intelligible directive issued by the Colonial Office in August that all imports into British possessions should be cut to the bone and all spendable money diverted to the war effort. On any reckoning Australia will have to spend much more than the budget estimate of £221.5 millions on the war. Total expenditure, too, will be in excess of the £325 millions given in the Budget estimate. As the Labour Government had provided for an increase of about £70 millions in war expenditure in the October budget, it cannot be accused of being unrealistic merely because it sought to keep the figures as close as possible to the very recent estimates framed by Mr. Fadden.

As most of the States have balanced their budgets despite rising expenditure, the Commonwealth may be able to draw on the funds vested in the Loan Council the last estimate being £20 millions. But the annual borrowing programme must greatly exceed the £137 million estimated, an estimate which showed an advance of £70 million on the estimate made a year previously in connection with the 1940-41 budget. More frequent and extensive resort to the commercial banks will be forced on the Government which has dropped the compulsory loan scheme which was an interesting feature of Mr. Fadden's budget. So far Australia has not cut social services but she may have to, though it will be observed that with employment at a peak the actual demands for relief will be small and the States can do a bit for the people. The Commonwealth Bank again will be called upon to absorb increasing slices of the floating debt because the actual scope for fresh public saving will in turn be limited by the higher level of taxation and the demand for evacuation, passive defence, etc. Free borrowing may have injurious effects on prices and the cost of living but Mr. Curtin and Dr. Evatt are not worrying about inflation; that does not seem so dangerous as the swift success of the Japanese assault on Malaya and the Philippines which Australia aspired to link with herself when the former achieved full independence.

# GOVERNMENT OF INDIA

## DIRECTORATE GENERAL OF SUPPLY

### NOTICE

**Machinery, spares for machinery and mill stores for the Textile Industry other than Jute.**

In order to conserve existing stocks, ensure the maximum production in India and obtain the necessary supplies that cannot be manufactured in India from overseas, the Government of India have decided:—

1. In the case of machinery, parts for machinery and mill stores manufactured in India, the manufacturers in India concerned may consult the Cotton Textile Directorate, Hararwala Building, Wittet Road, Bombay, with regard to any assistance that they require to obtain their requirements of raw materials for the manufacture of these articles in India.

2. Textile Mills wishing to import machinery or parts for machinery should apply for the necessary priority assistance to the Cotton Textiles Directorate on the forms provided for this purpose. Only applications from mills will be considered. Forms can be obtained free of charge from the Directorate General of Supply, New Delhi, the Assistant Director General, Cotton Textilest, Bombay, and all Controllers of Supplies.

3. In the case of mill stores:—

(a) the following have been classified as essential mill stores:—

1. Bobbins.
2. Card Clothing and Card Clothing Sundries.
3. Shuttles.
4. Belting.
5. Picking Bands.
6. Ropes and Bandings.
7. Machinery Cloths.
8. Roller Skins.
9. Pickers.
10. Tape and Banding.
11. Healds and Reeds.
12. Loom Sundries.
13. Card Cans.
14. Emery Fillet.

(b) With effect from 15th February 1942 import into India of the above mill stores from the United Kingdom whether orders have already been placed or not, will require an import licence which will be issued by the Chief Controller of Imports, New Delhi. General licences will be granted to "recognised importers", but individual licences may be granted to other importers in respect of orders already placed in the United Kingdom. Mills and Firms who desire to be recognised as importers should apply in the prescribed form through the Assistant Director General, Cotton Textiles, Hararwala Buildings, Ballard Estate, Bombay, to the Chief Controller of Imports, New Delhi. Forms can be obtained from the authorities mentioned in (2) above. Recognition will only be accorded to mills and firms who imported from the United Kingdom the essential stores concerned in substantial quantities during the year 1st April 1938 to 31st March 1939.

(c) Priority assistance for recognised importers will be arranged as far as possible for the import of these items from the United Kingdom in sufficient quantities to meet the requirements of the Industry as a whole in the year 1942. His Majesty's Government will be asked to see that the United Kingdom manufacturers concerned despatch these stores through the normal pre-war channels of distribution in India. Individual mills should not therefore apply for priority assistance as ample stocks should be forthcoming as a result of this step. If any mill is in very urgent need of any particular item, the Assistant Director General, Cotton Textiles, Bombay, should be informed.

(d) In the case of Card Clothing, it has already been necessary to ration supplies and all sales now require a licence from the Cotton Textiles Directorate. It is hoped that it will not be necessary to extend this rationing so drastically to other essential mill stores. Much can be done by the industry and dealers in stores to prevent this step if care is taken in the use of stores to make them last as long as possible, and if mills refrain from placing orders for stores which they do not require in the near future. If this is not done of and hoarding of mill stores by dealers and building up of excessive stocks by mills continues, the requisitioning and control of stocks by Government will become inevitable.

### Burma's Rice Crop

In the Burma Trade Journal is published a detailed statement of what the rice crop of 1941-42 is likely to be. The reports of District officers had been examined prior to the first forecast. The estimates of area and yield were again made towards the end of the monsoon so that the forecast has definite importance. Since Burma's export control scheme has been modified to meet Indian objections it may be fairly urged that the crop is of direct importance to India, more so as the Madras crop is sure to have suffered from the cyclone in December. The area under rice in Lower Burma is estimated to be 99,49,900 acres revealing a small decrease on the acreage of 1940-41. Pegu claims the largest area as before and nearly all districts in Lower Burma reported small enlargement of area. It is significant that the area in Tavoy and Mergui is very small. War will not harm the total crop. The acreage in Upper Burma is estimated to be 27,01,000 as against 28,83,100 in 1940-41. The decrease reported by Upper Burma is not cancelled out by the increase in the South, but in view of previous variations the actual area may turn out to be larger than the estimate. The outturn per acre varies from district to district but in no case does it fall below 1,300 lb. per acre in Lower Burma. The 1941-42 acreage promises to exceed both the decennial and quinquennial average and district reports suggest that at the end of September the condition was fair, particularly, in the Pegu and Tharawaddy districts. In spite of the late arrival of the monsoon the Burma crop was reported to have made progress though insect damage was reported by Akyab and flood havoc by the Ahmerst district. The monsoon was more or less normal except in the dry zone of Upper Burma. According to the crop forecast the total area of 12.65 million acres is likely to be just above 12½ million as a certain part of the crop has been destroyed after saving, but it will perhaps be larger than the figure published in the final forecast last year. The figures still suggest that Burma's rice crop will be up to average and the normal export surplus is assured, particularly as exports to Hong-Kong and Japan must have ceased on account of the war. India can count on adequate supplies in the current year if shipping movements are maintained. This reassuring inference is of immediate importance to India where an alarming rise in prices has been engineered and anti-profiteering demonstrations of a violent nature have taken place.

## MAXIMUM PAPER PRICES

### (AS FROM 15TH JANUARY TO 30TH JUNE 1942)

**The following mills in the membership of the Indian Paper Makers Association with the approval of the Government of India have fixed maximum prices for the undernoted qualities of papers at all main stations throughout India—**

1. **Titaghur Paper Mills Co. Ld.**
2. **Bengal Paper Mills Co. Ld.**
3. **India Paper Pulp Co. Ld.**
4. **Deccan Paper Mills Co. Ld.**
5. **Mysore Paper Mills Ld.**
6. **Punalur Paper Mills Ld.**
7. **Upper India Couper Paper Mills Co. Ld.**
8. **Shree Gopal Paper Mills Ld.**

**The maximum prices fixed are:—**

| | Maximum price in annas per lb. at main stations throughout India. |
|---|---|
| **Bleached woodfree MF writing and MF printing paper 14 lbs demy and up, including pulp boards but excluding blotting paper** | **-/6/6** |
| **Brown wrapping and cartridge paper 22 x 29—30 lbs and up** | **-/5/9** |
| **Ordinary Badami 14 lbs demy and up** | **-/5/11** |

| **Additional prices** | **Additional price in annas per lb.** |
|---|---|
| **(a) for coloured MF printings and pulp boards** | **-/1/-** |
| **(b) for light weights—foregoing qualities under 14 lbs demy** | **-/1/-** |

**These are maximum prices chargeable by wholesale dealers for bale and/or ream lots.**

**Copies of the list of main stations to which reference is made may be obtained on application from the mills concerned.**

Activity in the stock exchanges as well as in the various commodity markets has dwindled to next to nothing. For one thing, the principals of most of the broking firms have, for the time being, transferred themselves and their families to their homes in Rajputana, leaving munims and skeleton staffs to deal with whatever might transpire in connection with business already entered into. There is no fresh business and no fresh commitments as such. The Royal Exchange Place with its two jute futka markets and the share market looks a howling wilderness. The few men that are left behind are generally engaged in winding up their affairs; and it may not be long before they, too, betake themselves to what may be considered safer places. Burra Bazar is full of empty houses; and, conversely, Bikaner and Jaipur and Jodhpur are overcrowded. I hear that prices of foodstuffs in Marwar have risen to giddy heights; and, in many places, fuel is not obtainable at all. Some of the Calcutta merchants have preferred to settle down temporarily in places like Allahabad. And an evacuee thus camping in Allahabad was deprived of cash and valuables worth Rs. 20,000. He thought that he was running away from Calcutta to a safe asylum. But the crooks in the mofussil obtain up-to-date information as regards worthwhile victims among the new-comers.

This is not a solitary episode. And people who have been transferring their deposits and securities into hoards have thus added to the element of danger. The investment problems on which I am constantly called to advise in these panicky times will make a curious study in psychology. "I have all my funds in foreign banks", said a friend. "Do you think it will be better if I transfer my deposits to Indian banks?" "What is wrong with foreign banks?", I asked. These banks, he replied, had branches in Hong-Kong and Shanghai and many of the affected places in China, Japan and Malaya; and it may be that they have more liabilities in India and more assets in those centres. In any case, he concluded, why should he take a risk why not transfer the moneys to Indian banks who have both their assets and liabilities in India?

It was futile on my part to point out that the financial system is organic; that part of it cannot grow and become strong while another part rots and dies; and that, if the powerful Eastern exchange banks are affected, there is hardly a financial institution in India that can remain unshaken. As a matter of fact, what is most noteworthy in the mentality of the men who seek an investment free from any risk whatsoever is their belief that, even if the worst happens, there must be some securities and some investments which could not be assailed under any circumstances. Take the case of a lady who, in all innocence, wished to know whether it would not be safer if she removed her valuables from the custody of the Park Street branch of the Imperial Bank to the Delhi branch of the same bank. I asked her what the matter was with the Park Street branch. She answered that the Park Street area would be more liable to air attacks as the Bengal Club and the United Service Club were in that neighbourhood. Another friend, who has been keeping a considerable amount of securities with the Calcutta office of his bank, asked for my opinion whether the safer course would not be to transfer the safe custody to the Agra branch of the bank. In his view, Calcutta was vulnerable, and particularly the area near the Strand, while Agra was not.

Another interesting problem was set to me by one who had disposed of his large holdings in Calcutta jute shares and Bombay cotton mill shares. He was convinced that the industrial concerns nearabout Calcutta would be the first target of enemy bombers. Though Bombay was too far away for a Japanese attack, his imagination had no difficulty in constructing the possibility of Germans driving through Suez what time the Japs are planning the attack from Singapore. He was fortunate in having sold his jute and cotton shares before the price collapses in the stock exchanges took a serious turn. With these sale proceeds lying idle in his hands, he asked for suggestions for investment in the shares of such companies as have their factories in areas far removed from the coast. I pointed out to him also that, if the greater proportion of shares dealt in the stock exchange experienced a drastic decline in prices, it was not to be supposed that a handful of shares would keep up their heads. To counter my argument, he advanced the view that Mysore Sugar or Mysore Paper should

prove invulnerable. "Recommend to me a few such shares, Saheb", he said. In the course of discussion from this point of view, he finally made up his mind to invest in Mysore Chemicals, Travancore Sugars, Gokak Cotton Mill, Central India Mill, Tata Chemicals and Belapur Sugar. He was not keen on shares of Cawnpore companies, as, in his view, so large a concentration of industrial activity might invite attack.

The shrewdest of those who consulted me was the man who asked for advice about rubber shares. Malayan rubber is now closed to the Allies. It is problematical if Netherlands East Indies will be able to supply any rubber now that it has become the theatre of war. This means that rubber produced in Ceylon and India will become most valuable. I agreed with my friend. There should be an amazing boom in the rubber shares of South India and Ceylon.

While the past one month has witnessed a general unloading of investments, a fairly universal hoarding of currency and bullion and scattered buying of select shares, the giltedged market has, after initial weakness, more than regained all the earlier loss. The strength of giltedged may be said to be final and conclusive testimony to the intrinsic strength and stability of India's finances and economy. So long as giltedged prices are well maintained, it is an assurance that the credit of the Government is high and that the currency position is impregnable. While the giltedged position remains unimpaired, we need not worry about occasional regressions in the share markets. Unless the political situation becomes critical beyond cure, the setbacks in share markets such as those we have witnessed recently, will prove to be temporary and shortlived. On the basis of the present values, our shares are quoting at prices far below their intrinsic worth. The present values can be destroyed only when India's defences are destroyed. But, then, it will be a new set of values in which you and I and all of us will have to begin anew.

Few can be found to question the opinion that the coal industry retains its importance at all times. How it seconds the war effort of all industries is common knowledge, but the light thrown from a special angle by Mr. K. W. Mealing on the meritorious performance of the Bengal and Bihar coal mining industry is assuredly welcome. The speech delivered on Wednesday to the shareholders of the Bengal Coal Company, the oldest and strongest member of a stable and efficient industry, conveys an adequate

notion of what collieries are doing. The Bengal Coal Company is certainly doing its best; its members and management alike have reason to be proud of the record (summed up in the speech by Mr. K. W. Mealing published in this issue). What is the position of the industry as distinct from that of one company. Not very satisfactory. As Mr. Mealing pointed out clearly, the wagon position is not at all reassuring. Quicker turnround cannot work miracles. There is a shortage of power and Mr. Mealing's determined scepticism as to the virtue of cutting down locomotives will certainly be shared by the industrialists who have had reason to complain of a shortage of fuel. So locomotives are as much a problem as wagons. As to the latter, the solution propounded is the adoption of priority and supply allocations.

Something of that kind must come, and it is right that the Chairman of the leader of the Indian coal industry should back rationing and priority. Domestic consumption can be cut; has it been at all tried. That may seem ambitious as compared with the very reasonable suggestion of Mr. Mealing that the system of allotting wagons to collieries should be modified in favour of priorities in respect of war effort. It is important to stress that coal-producers are at one with consumers in this matter of issuing priority certificates and getting wagon supply, a system, part of which is in operation, though it has affected customers. Mr. Mealing's revelation concerning what may be called aberrations in the course of coal prices will merit special attention in this period of price control. The trouble originates with the unscrupulous middlemen. The suspicion is confirmed.

The company's own affairs were succinctly reviewed. Special wear and tear like the incidence of higher taxation (Rs. 7 lakhs has been set aside for taxes and cesses) arises from the war and trouble in despatches means a rise in overhead expenditure. Replacements and stores present another problem. As Mr. Mealing remarked "the urgent requirements of vast quantities of steel for direct military use reduce heavily the amount available for commercial and other purposes and so call for special care in husbanding resources and improvising or using alternative materials, such as timber for tubs". This sentence sums up the duty of civilian consumers generally in the war period and is to be commended to the notice of all who grumble about Control Orders. Many aspects such as sand-stowing and responsibility for air raid precautions, were again dealt with by Mr. Mealing who entered a mild warning as to the way in which labourers should be handled in a period when rumours are rife. Mr. Mealing's remarks should be taken note of in high quarters at this juncture when alarm appears to be subsiding generally. Those who are keen on evaluating possibilities will not fail to take note of Mr. Mealing's observations concerning the pressure of demand, the efficiency of production, and the rise in costs. They must be read in relation to his hint concerning a possible rise in coal prices.

*(From Our Correspondent)*

New Delhi, January 13.

THE New Year for New Delhi has begun with mourning owing to the death of Sir Akbar Hydari. The generous tribute which *Eavesdropper* in *Indian Finance* has paid to the memory of Sir Akbar Hydari, has been read with great interest in New Delhi, particularly the tribute to his work as Finance Member of Hyderabad. No name aroused greater interest than Sir Akbar's when the Viceroy announced the composition of his new team last year, for he was easily the most pree-minent among our elder statesmen who had already given proof of his remarkable administrative capacity and energy in the reshaping of Hyderabad. And it was confidently expected that he would play a great part in the reshaping of the Government of India's policies. Even in the few months of his stay in the Imperial Secretariat as Member for Information and Broadcasting he was able to show something of his amazing versatility. In political circles his name was being freely mentioned for the Finance Membership of the Government of India when the second stage of the expansion scheme, for completely Indianising the Viceroy's Council was taken up—and there is little doubt that it will have to be taken up in the near future. The death of Sir Akbar is undoubtedly a serious blow to the Indian Members of the Viceroy's Council who had found in him an experienced guide and a friendly collaborator.

* * * * *

To-morrow the Viceroy returns to New Delhi after his long tour which has covered no less than three provinces. Almost the very first task which awaits his attention is the difficult question of finding a suitable successor to Sir Akbar Hydari. A man with a first-class reputation whose name may be expected to impress the people's imagination —and classes and communities alike—is necessary. It is difficult to think of a better person than Sir Mirza Ismail. And from what I hear there is little doubt that if the Viceroy consults his Indian Members, they will enthusiatically support the inclusion of Sir Mirza. Other claimants are in the field. And there is the additional complication that on behalf of the United Provinces it is being urged—encouraged no doubt by what happened last year in connection with the inclusion of Sir Firoze Khan Noon—that so important a province should not go unrepresented in the Viceroy's Cabinet. It is understood, however, that the Viceroy has already been considering some names and will not take more than a few days to make the announcement.

* * * * *

Recent developments have brought up the question of administrative needs for assisting the civil population in the present difficult times. The Overseas Department is faced with the question of making suitable arrangements for the Indian community in Burma and Malaya and providing for the large number of evacuees coming to this country. But even more important is the question of co-ordinating transport arrangements and ensuring essential supplies to the civil population. With it is also connected the problem of allaying panic and doing whatever is possible to increase the people's morale deal with the many evacuation questions. What has happened, and is happening, in big cities like Calcutta and Madras, has naturally attracted considerable attention. Though it may be primarily the responsibility of Provincial Governments these large questions have to be considered and provided for on an All-India basis. In New Delhi there is a good deal of talk on the possibility of the creation of a Special Membership in the Government of India to deal with these important problems connected with the needs of the civil population—adequate supplies, reasonable prices, provision for evacuees, etc. As the wisdom of the step taken in creating a new Department for Civil Defence with a separate Member in charge has already been seen, the value of creating a separate portfolio for food and transport arrangements for the civil population cannot be overemphasised. At the same time there has been for long a feeling that the present Communications portfolio is far too unwieldy for administrative purposes and can with advantage be bifurcated.

* * * * *

An urgent conference has been called by the Finance Member of the Provincial Finance Ministers and other Finance officials of Provincial Governments next week to consider, in the light of the latest war developments, the question of allocating civil defence expenditure between the Centre and the Provinces. In August last the decision taken was that non-recurring expenditure sanctioned by the Government of India prior to 1st July, 1941, without any stipulation to the contrary and recurring expenditure sanctioned and incurred up to 30th June, 1941, would be met entirely by the Central Government. non-recurring expenditure which was either sanctioned after 1st July last or which though sanctioned prior to that date carried with it a stipulation to this effect and all approved recurring expenditure incurred after 1st July was to be pooled on the understanding that 50 per cent of the first crore would be met by the Central Government and 75 per cent beyond the first crore. After the last Civil Defence Conference certain additional concessions were also made to provinces in the vulnerable area in order to speed up work—particularly for the purpose of employing paid personnel for A. R. P. work. As new problems have now arisen involving possible expenditure on a large scale, in the event of an air raid or as a precaution against air raids, it has been considered necessary to call a conference so that all these financial arrangements can be satisfactorily settled. It is reported to be the Government of India's intention to be as generous as possible in assisting Provincial Governments to go as fast as the situation requires in their Civil Defence preparations and get ready for any eventualities.

* * *

No definite information is so far available regarding the likelihood or otherwise of the Congress party attending the next session of the Central Assembly. In New Delhi, however, there is a general expectation that following the coming meeting of the A. I. C. C. the Working Committee will permit the members of the Congress party to attend the session—particularly owing to the possibility of large taxation proposals. The new Indian Members of the Viceroy's Council seem to be particularly anxious that the Congress party should be present in their full strength, for they feel that their hands would be strengthened by the presence of a large body of elected members. So far notice has been given of only six resolutions in the Central Assembly—mostly of a political nature. The most important of them is that of Mr. A. C. Dutta who has asked for the release of all political prisoners and detenus and the abolition of classification of political prisoners. Nothing is yet known finally of the Government's legislative programme. One important Bill which the Commerce Department is understood to have prepared refers to the collection of statistics for ascertaining the quantity of foodstuffs and other essential commodities available in the country. As the question of proper distribution, if not actual rationing, has already become a live one, this Bill is of considerable importance.

(From Our Correspondent)

Bombay, January 15.

To the uneasiness engendered by the reports that newsprint is not only dear but scarce must be added the surprise occasioned locally by the announcement that our leading daily will cost us more. The regular subscription rates too have been raised but it has since been explained that the higher price is only for the duration of the war. The old anna paper will return. The decision taken by the most important newspaper enterprise in the East is perhaps governed by a desire to curb a constantly growing circulation. The precise importance of the decision cannot be determined unless it is noted here, that even after the advent of smaller papers and fewer pages elsewhere, Bombay's morning daily, with its altered layout and modern display, has preserved the same size. As a national newspaper it carries much the same volume of advertisements as before though many continue to miss the varied bank and commercial advertisements, to be seen only in the **Times.**

Cotton once again hits the news. The official, peremptory suspension of business this week is an indication of the exceptional difficulties confronting traders here. The delayed crop movement is just one factor in a baffling situation. Delivery cannot be made as expected and the usual settlement is impossible. Payment of the prescribed fines is far too onerous and the Board of the E. I. C. A. has wisely determined to get its bye-laws modified, subject to Government approval. The interests of the trade, it is felt, demand the waiving of the usual penalty this time. The resolutions adopted by the Board is a mark of traffic difficulties, difficulties which have reduced coal supplies in Ahmedabad though the mills there have decided to carry on as usual. Wartime difficulties again explain a reduction in passenger journeys on the G. I. P. owing to curtailed services. The E. I. C. A.'s resolution has been sent to Government but its actual implementation will depend upon the state of affairs existing on January 25th when the Oomra December-January contract will call for delivery. Pending that members will be given a chance to prepare a formal representation. The Board's decision has not commanded universal approval and there has been a requisition for a special meeting of the East India Cotton Association to examine the situation.

The mild revival in exports has latterly infused much-needed strength into the local cloth market. The outlook still remains rather forbidding in spite of reports that imported goods are in demand and stocks of mill goods too have been drawn upon of late. The conditions generally may be described as more stable in spite of the lack of encouraging war news which have obviously led to new difficulties in the yarn trade. The position, naturally, demands close study and people here hope that the I.C.C.C. meeting will lead to a discussion of other things besides the perennial short-staple problem. A committee member has asked that Government should buy cotton in order to help the Indian cotton-grower. It is, however, felt that other resolutions in favour of extending improved types and a marketing survey are likely to find a small favour. Crop restriction will naturally be the major issue and in spite of revised views as to the outlook it is certain that Sir P. Thakurdas' advice to turn to food crops can only be rejected at the peril of a disastrous slump in prices.

The expressions of regret that continue to pour in regarding Government's attitude to certain industrial projects should be familiar by now. The appearance of one more memorandum, embodying a series of resolutions and discussing and deploring by turns, has hardly excited lengthy comment. That it is sponsored by the All-India Manufacturers' Organisation is not unusual. But the renewed emphasis on planning is somewhat fresh. The combination of complaints with pleas is again somewhat arresting for the manufacturers refer openly to their own difficulties in wartime. The open, deliberate approval of price control is again a refreshing departure from the accepted arguments. Sir M. Visveswarayya gave his support to the main resolution and stressed that industrial development was essential for an expansion of employment. The backwardness of industry seems to underly the poverty of India according to the President who asked that full production of agriculture could only proceed from an extension of industrial opportunities. The survey of deficiencies has impelled many to look to Government for specific co-operation, for instance, in the field of heavy industry. As he declared only last month in an interview to a pressman the Government's indifference to new enterprise is the basic obstacle. There is no sort of encouragment for pioneers, he urged once more, and the production of plant locally has never been promoted while one more possible avenue for the training of labour has been closed. Sir Mr. Visveswarayya's criticism is much fuller than the last diatribe of Pandit Nehru who is shocked by the neglect of the automobile project. The misconception as to the new assembly plant in Sind has been cleared up promptly enough but it seems a little surprising that the name of the American company concerned has not been disclosed.

Motorists who were grousing against stricter rationing are slightly bucked up by the news that Government will buy cars in fair condition. The makes mentioned, however, appear to be too few. Bombay has long had a partiality for expensive European cars and it is the owners of these costly high-powered cars that cannot carry on with the exiguous allowance of petrol. If the cold wave has displaced rationing as the subject of talk here latterly many think that after demand for the cars the remainder will fare better. Despatches from Delhi based on enquiries harp on the need for strict economy in the use of cars. If local taxis have been somewhat generously treated private motorists felt that they have come off very badly. Suggestions that bullock carts should replace motor transport in the countryside must seem novel. But others think that to scorn delights and live labourious days will only be possible when the rulers cut their own luxuries. The appearance of a new device for turning heavy oil into gasoline has been reported from Burma; that is small comfort to the car-owners here. Suggestions that only those connected with the war effort are eligible for petrol have been again heard. Some have even decided to lay up their cars. What happens to them is their own concern. If a saving of 40 per cent. in consumption entails so much hardship, it may surprise many to find that some can get extra rations on the strength of A.R.P. duties. A fear expressed by some motorists is that insufficient running will damage the older cars more quickly but others derive consolation from the fact that good prices are paid for old cars because of the import difficulty and argue that a little care goes a long way.

Bombay has reason to feel satisfied with the state of the textile industry. In the annual statement of the Millowners Association it is shown that the number of mills in India has risen to 390. The paid-up capital of the cotton mill industry has correspondingly risen by over Rs. 1 crore to stand at Rs. 44.77 crores at the end of August 1941. The quantity of cotton used in mills rose during the year ended August by 286.000 candies. The progress statement offers suggestive comparisons with the previous one. It is deserving of careful study as proving that mill companies came out on top in the second year of war. The ill effects of the big strike had gone. Total spindleage at the end of August 1941 exceeded 10 millions and the number of loans too rose by 1.500 during the year. The addition to employment as a consequence of higher activity can be measured precisely as the total number of workers employed on day shift rose from 430,165 to 459.509 at the end of the year.

# Resume of Commodity Markets

Excepting the jute and jute manufactures markets, commodity markets during the week have been rather uninteresting. On account of the deadlock in the Bombay cotton market, there was practically no trading till Wednesday. Only on the announcement that the East India Cotton Association has again reimposed the penalty for failures to tender cotton, trading was resumed yesterday. There was heavy professional selling and prices were marked down sharply.

The strength of the jute market is mainly in sympathy with the jute manufactures market where active trading conditions have been noticeable with the new order for sandbags and camouflage material and with the hopes regarding an increase in shipments.

With the continued seriousness of the Far Eastern situation, it could not have been expected that prices for gold would decline. But there has been an appreciable decline in prices for gold for all positions which are now at the lowest levels since the first week of December. The silver market, on the other hand, continues quietly steady.

**Jute**

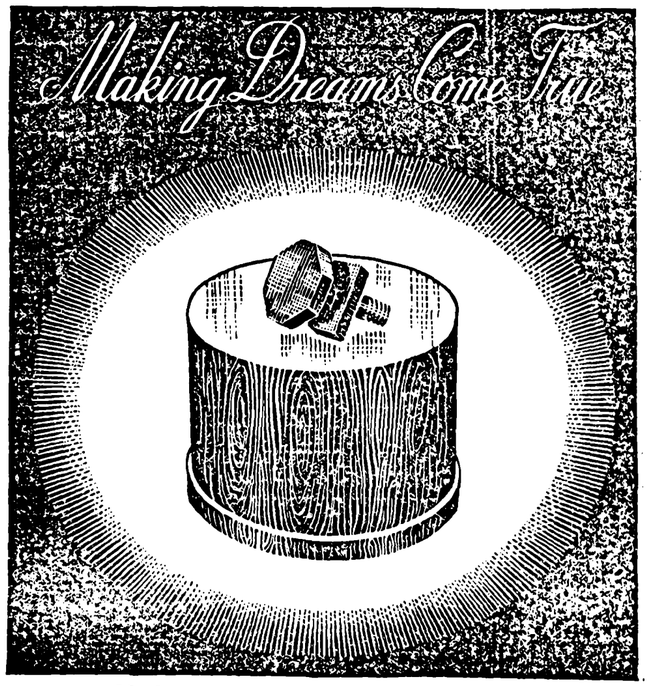
The absence of any activity on the part of the mills and the subdued tone of the goods market were responsible for the dull and idle conditions in the jute market last week. The announcement of fresh war orders, however, has been a helpful influence. Mills have bought jute more freely and a moderate rise in prices is to be recorded. Business in the jute futures market was at a standstill for four days early in the week. It is now reported that there are now buyers at Rs. 59, well above the minimum price of Rs. 56 fixed by the East India Jute Association.

**Jute Manufactures**

Even at the end of last week a firmer tone was noticeable in the hessian market. The reports regarding the actual arrival of ships for taking cargoes and the announcement of a new order for sandbags, therefore, had a distinctly encouraging effect. As there was a heavily oversold positiin,there was rush for covering. Quotations are now at the highest levels for the week.

It is reported that besides the new order for two crores sandbags, another order for four crores yards of strip hessian cloth for camouflage purposes has been received. These orders by themselves do not constitute any large quantity but they have come at a time when the short fall on account of exports can be made up by the production in respect of the new orders.

The U. S. stock and consumption figures for the month of December make interesting reading. There is a sharp increase in consumption to 75 million yards from 53 million yards for both the previous month and the corresponding month last year. This increase in consumption is perhaps in anticipation of the difficulties regarding the regular supplies of jute manufactures with the threat to the Pacific shipping route. Stocks spot are higher at 145 million yards against 101 million yards at the end of November while stocks afloat show a sharp decline at 63 million yards against 164 million yards for the previous month.



**Cotton**

As pointed out at the beginning, no business has been transacted in cotton for the most part of the week as the result of a deadlock in the Bombay market. There is acute shortage of ready cotton and owing to the difficulty in getting supplies of wagons it has not been possible to tender cotton. It was therefore at first decided by the Committee of the East India Cotton Association that the penalty of Rs. 25 levied in cases of failures to tender cotton should be removed. This was done in consultation with the Bombay Government. But there was considerable difference of opinion among bulls and bears and no business was transacted pending a clarification of the situation. On Thursday, after the Committee decided to reimpose the penalty, trading was resumed. The undertone is rather weak and a large decline in prices has been recorded.

**Piecegoods**

Business in the piecegoods market in Calcutta has been on a rather small scale. There has been a rise in prices for Japanese styles on account of the dwindling supplies. Business in indigenous goods has not been large on account of the absence of many of the prominent dealers from Calcutta. Also, Ahmedabad mills have been reserved sellers. The acute shortage of coal has slowed down production in that centre.

There were rumours that there will be no extraordinary meeting of the All-India Panel of textile interests to consider the question of yarn prices as in recent weeks there has been a decline in values. It is now pointed out, however, that there will be a meeting on January 20, 1942 and that the question of yarn prices and the distribution to handloom weavers at suitable prices will be considered.

Modest bolts and nuts of steel, translate ambitious blue prints into imposing edifices.

Discreetly imbedded at vital points, these steel pigmies create giants of industry.

# Tit Bits of Industrial Activity

**Scope for Shortstaples**

The textile advisory panel's service to the cotton grower has taken the form of a modification of specifications. The ordnance people have accepted the recommendations which aim at extending the use of shortstaple cotton by mills producing goods for Defence department orders. It has been said that the changes will increase the mill consumption of Indian cotton by 400,000 bales. There is thus a possibility of total consumption rising over 4 million bales. This cheerful prospect may have little influence on cotton prices but the more influential observers who continue to refer to U. S. price trends urge that record consumption in U. S. A. will be reflected in higher prices, and hope also that Indian prices will not drop.

The enlarged offtake of Oomras envisaged at present is on the basis of reports that more cotton will be wanted for dosuti and canvas for which low grade cotton can be used. With the co-operation of the jute industry it is believed that mills can provide new type tent fabric. Standardisation of mixing and counts is a further aim of the recent changes in specifications which have taken into consideration existing mill practice and layout and without prejudice to durability. One of the most far-reaching results of the new specifications will be that mills can speed up the production of almost all the major items required by the Supply Department such as khaki drill and twill, mosquito netting, towelling, flannellette, sheets, dosuti and cotton canvas. One must add that restrictions on yarn exports will materially assist in enlarging textile production though such a conclusion will run counter to accepted views.

**Towns and Industry**

Baroda's census has revealed that the drift to towns is as much a feature of the State as of India as a whole. Whether urbanisation is the cause or the effect the growth of industry is a settled fact. The amazing development of Port Okha which came on the map only in 1926 indeed illustrates the major process of industrial development. A more striking instance of rapid urban development is Suraj Karadi which is fast becoming a thriving townlet on account of its proximity to the Tata Chemicals' plant. The census report discloses that 149 establishments came within the ambit of the Factories Act. Establishments employing less than 20 workers have been ignored in the estimate of factory workers. In 1941 the state contained 36,563 workers employed in factories as compared with the total of 22,323 at the time of the last census and 11,225 at the time of the 1921 census. The increase appears to be governed by the development of modern industries in the State for a feature of the intercensal period is the decline in the total number of workers supported by cottage industry. If the rate of growth of the factory-workers is greater than the rate of increase in the working population, it is not difficult to relate it to the more rapid development of industry in Baroda since the reign of Sir Sayaji Rao.

**Producer-Gas Plant**

Bombay which is credited with a plan to develp power alcohol production within the province has now shown a desire to examine the possibilities of producer gas. The usual committee has been set up as a consequence of the measures under consideration. The control of charcoal prices as in Madras may be viewed as a further means of encouraging the use of charcoal gas producers. As compared with power alcohol production the encouragement of charcoal gas producers presents few difficulties and experience in Madras may well lead Bombay towards the adoption of familiar measures such as the encouragement of kilns and charcoal burners as also advice to extend the plantations of wood meant for fuel. The control of the manufacture of gas generators has also been advocated on the score that only plant approved by the Industries Department can be regarded as safe or suitable.

Charcoal gas is now justly regarded as the immediately available substitute for liquid fuel, rendered scarce by the war, and a hope has been expressed that Government should show the way by giving direct encouragement to users of producer gas. The tightening of rationing will naturally call for increased use of charcoal. To develop simultaneously the demand for charcoal and its supply must be the policy of Provincial Governments who have shown so far no specific desire to extend the use of gas producers. The committee that has been appointed in Bombay has yet to report, but two suggestions already hold the field. Remission of vehicles tax in whole or in part is favoured and another suggestion is that owners of vehicles should be declared eligible for advances for the purchase of charcoal-gas producers of approved design. As in Madras the Forest Department is expected to encourage the manufacture of charcoal. Refusal to license a vehicle, in case a plant of approved design is not fitted to a vehicle, is expected in Bombay.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, January 15.

A much more confident tone prevails throughout the markets than was the case a week ago. Then the Goods market was showing some acivity but the Jute section was still in the doldrums. It would perhaps be presumptuous to take the credit for the suggestion thrown out in the last issue regarding the desirability of some buying of jute to ease the tension in the minds of the Marwarri community. Actuated by whatever motives, Mills have in the last week made very considerable purchases, with the result that Jute Dealers now have business to attend to once more, and are consequently much more likely to stay in Calcutta to look after it.

Altruism not being the Mills' most notable characteristic, it is more probable that it was the placing of considerable further orders by Government for near delivery, combined with the lower level of jute prices which brought them into the market to buy. But the desirable end has in any case been achieved, and the Marwarri dealer is much easier in his mind than he was a week ago.

Another factor making for buoyancy is that the supply of freight promises to be on more ample lines than was the case last month, so that there is every prospect of a good deal, if not all, of the stock increases being eliminated before the end of this month. The revised stock figures issued by the Mills Association show that the increase of hessians in stock was entirely in commercial goods, Government holdings being somewhat less than at the end of the previous month. Mill production figures for December are now available and show a total of 115,770 tons, about 7,000 tons more than November. The production of Hessian was 22¼ crores yards against 21 crores in November, and of Heavy Goods, 13 crores yards against 12 crores.

It is regrettable to report that labour trouble has raised its head, in most cases in such an indefinite form that there is little doubt that the trouble is being fomented by disaffected elements. Something like ten mills have already been affected, but it is satisfactory to hear that some have already been able to resume work, and it is to be hoped that the others will follow suit very soon. There can be little complaint from workers on the point of earnings. Granted they are working longer hours, but the consequent increase in their earnings far exceeds any increase in living costs, which is more than can be said of many types of wage-earners.

Some pertinent observations were recently made on the subject of Jute cultivation by Dr. Nazir Ahmad while presiding over the meeting of the Agricultural Section of the Indian Science Congress. While emphasizing the necessity to increase the industrial consumption of the textile fibres produced in India, he voiced the opinion that, with regard to jute, the main problem was to increase the yield of fibre per acre so that the cultivator might get a greater return for his labour while at the same time some of the area at present under jute might be released for other crops without curtailing the size of the jute crop. He also stressed the necessity of efforts towards the improvement of the quality of the crop and further emphasized that the price of jute should be maintained at such a level as to discourage the cultivation of competitive fibres in other countries by rendering it uneconomic. It is indeed refreshing to find this subject discussed from a purely common-sense point of view as compared with the abstract vapourings to which we are so often treated by the local politician.

The Export Jute market has not shown much activity. Some freight has been allotted for Dundee and most of the transactions reported have been inter-baler, for the purpose of filling up this freight space. There are now only a few Press-houses working, and these only at a fraction of their capacity, owing to the desertion of much of the labour. Sales reported include Dundee Daisee assortment at from Rs. 55 to Rs. 58, Dundee Tossa 4s at the same rates and Dundee Tossa assortment at up to Rs. 69. There has been a considerable and varied business with Mills including Dundee Lightnings at Rs. 90, Dundee Hearts at Rs. 80, Special Firsts at Rs. 70, Ordinary Firsts at from Rs. 55 to Rs. 58, Dundee Daisee 2|3 at from Rs. 55 to Rs. 59 and Outport Tossa 4s at Rs. 40. N. C. Cuttings sold at Rs. 12-8 and M. C. at Rs. 11-8.

## JUTE

*Calcutta*, January 15.

THE decision of the Indian Jute Mills Association to continue mill working hours at 60 per week, the hopes regarding the possibility of improvement in the freight position and the announcement of new orders for sandbags and camouflage material, have had a distinctly encouraging effect on both the jute and jute manufactures markets during the past week. Mills have taken greater interest in the market and sellers were rather disclined to dispose of their holdings towards the close.

With the maintenance of mill working hours at sixty per week and the restoration of confidence in the markets, it is believed, that higher prices will be recorded. As pointed out last week, the large need for sandbags for defence purposes, with the war nearing our doors, may keep jute consumption by Indian mills at a high level.

In view of the unsettled conditions in the market mills were not inclined to buy in any large quantities earlier in the week. With the resumption of forward sales in fair quantities in the hessian market, however, greater interest has been shown in the jute market during the latter half of the week.

In the loose jute section, earlier in the week, sellers were keen to do business. Mills were buying only in small quantities. Indian Jat Middles and Bottoms were nominally quoted at Rs. 11 and Rs. 7-8 per maund. Buying has been on a larger scale during the last three days. Supervised Jat Middles and Bottoms were done at Rs. 12-8 and Rs. 8 per bale. Old Crop Indian Jat and District Cross Bottoms sold at Rs. 8 and Rs. 7-8 per maund respectively.

In the pucca bales section a small amount of business was done for export with shippers in Dundee Daisee 2|3 at Rs. 55 per bale. There has been a rise in the quotation towards the close to Rs. 57 per bale. First 2|3 also sold at Rs. 57 per bale and Outport Tossa 4's at Rs. 40 per bale.

In the futures market no business has been reported since last Friday when the Board of Control fixed the settlement rate at Rs. 56. Business is at a standstill and there are no buyers above the minimum levels.

## JUTE MANUFACTURES

*Calcutta*, January 15.

THE announcement early last week that the Committee of the Indian Jute Mills Association had decided to make no change in the working hours had a definitely encouraging effect on the hessian market. It was generally feared that with the large increase in local stocks of hessian cloth and bags and the prospect of poor shipments there would be a reduction in the number of working hours. The Committee, however, in their circular to members last week point out that there is every possibility of some leeway being made up regarding exports in the current month. It is, therefore, not advisable, in their opinion, to bring about a reduction in production which would create a situation like that witnessed in the last quarter of 1941.

The announcement of a new order for two crores sandbags, delivery in two equal instalments in February and March, had a distinctly encouraging effect on the market. It is reported that a further order for 4 crores yards camouflage material has been received. Closing quotations, therefore, are at the highest levels for the week. Such a sharp recovery in values was never expected. It has been mostly on account of near covering for shipments. 9 Porters ready are quoting Rs. 19-6, February-March Rs. 18-12 and April-June Rs. 17-8, 11 Porters ready Rs. 26, February-March Rs. 24-12 and April-June Rs. 22-8. Quotations are nearly two and a half points higher on balance.

In the heavy goods section also firmer conditions are noticeable with sellers waiting for higher prices. "B" Twills for January shipment sold on the basis of Rs. 38-12, Liverpool Twills for the same position Rs. 45 and Cornsacks Rs. 41.

The production figures for the month of December, 1941 show a slight decline on account of the intervention of X'mas holidays. The figures are given below:—

Total reported production of manufactured goods by the mills in the membership of the Association and also by Gagalbhai Mills.

| Description. | Quantity. |
|---|---|
| 1. TWIST AND YARN— | |
| (a) for sale .. | 2,647 tons |
| (b) all other, including that used in sewing bags .. | 1,435 tons |
| 2. CANVAS— | 687 tons |
| | 13,63,218 yards |
| 3. GUNNY BAG (Tonnages exclude sewing twist) .. | 9,119 tons |
| (a) Hessian .. | 4,19,61,619 yards |
| | 4,21,99,011 number |
| (b) Sacking .. | 51,295 tons |
| | 12,19,08,158 yards |
| | 5,23,40,133 number |
| 4. GUNNY CLOTH— | |
| (a) Hessian .. | 47,162 tons |
| | 18,28,89,102 yards |
| (b) Sacking .. | 3,183 tons |
| | 83,19,248 yards |
| 5. OTHER MANUFACTURES (including ropes) .. | 242 tons |
| 6. TOTAL PRODUCTION (above figures combined)— | |
| (i) All kinds .. | 1,15,770 tons |
| (ii) Hessian (both as bags & cloth) | 22,48,00,721 yards |
| (iii) Sacking (both as bags & cloth) | 13,02,27,406 yards |
| (iv) Canvas (both as bags & cloth) | 13,63,218 yards |

## COTTON

*Calcutta*, January 15.

THERE has been practically no trading in the Bombay raw cotton market since Friday last. As a result of the acute shortage of wagon supplies it has been impossible to tender cotton. A good premium is offered for ready cotton. Those operators who have sold short have covered their requirements in up-country markets, but it is impossible to tender cotton, as pointed above, on account of the shortage of wagons. In to-day's session Broach April-May is privately quoted around Rs. 208-8. Earlier in the week the premium for Oomra December-January over May-June was as much as 30 points, what time there should be a discount normally.

It is reported that the Board of Directors of the East India Cotton Association has passed a resolution rescinding the penalty of Rs. 25 for failure to tender cotton, in consultation with the Government.

In the New York cotton market there is very little fluctuation in prices to be recorded. March were quoted 18.13 cents, May 18.31 cents and July 18.42 cents.

## GOLD

*Calcutta*, January 15.

THE Bombay gold market has been rather uninteresting during the past week. Buying for hoarding purposes seems to have been satisfied for the present. In the absence of any speculative activity, quotations have been marked down and are now at the lowest levels for the week. Gold ready are quoting Rs. 46-5 and first and second settlement Rs. 45-13. The quotations at the end of last week were Rs. 48-8, Rs. 47-10 and Rs. 47-12 respectively.

## SILVER

*Calcutta*, January 15.

THE Bombay silver market has remained unchanged. The weakness of the gold market has not been in any way reflected in the silver market. The continued tightness of the spot position is responsible for the high premium for ready silver. Indian Mint silver ready are quoting at Rs. 70-1, and first and second settlement at Rs. 64-11.

In the London market there has been greater activity and a slight premium is available for the forward position. The quotation for spot is 23½d. and forward 23 9|16d. Production selling satisfied most of the demand.

## WHEAT

*Calcutta*, January 15.

SLIGHTLY easier conditions were noticeable in the Karachi wheat market during the past week. Quotations were fluctuating in narrow limits. Considerable interest is attached to the forthcoming Price Control Conference. It is reported that the question of the lifting on ban on exports of wheat by provincial governments will be considered at the Conference.

## BENGAL-NAGPUR RAILWAY AND EAST INDIAN RAILWAY JOINT NOTIFICATION

It has been found necessary to introduce procedure to ensure that wagons for Priority orders for coal are supplied in full before ordinary demands are met.

On and from the 19th January 1942, therefore, it has been decided to suspend the allotment of wagons for coal on public account for 5 days in the week viz., Mondays, Tuesdays, Thursdays, Fridays and Saturdays and on these days only Priority allotments will be made.

In view of the very heavy demand for wagons all over India, it is necessary to enforce more rigidly the rules and penalties for the irregular use of wagons. It has, therefore, been decided that if a Colliery does not book a wagon for a route for which it has been allotted, the consignment will be held up at the weigh bridge under demurrage, and further supplies of wagons to the Colliery concerned will be suspended until the misused wagon is correctly booked.

It is intended to take similar action when Collieries despatch wagons irregualrly by a route, which is not the normal route. Such booking cannot be accepted in the existing emergency.

The Coal Trade are reported to co-operate also in respect of the correct submission of Declaration Notes and the preparation of Card Labels, as incorrect preparation of Declaration Notes and Card Labels frequently results in detention to wagons.

In respect of wagons which have been underloaded, it is intended in future to pass these wagons on the minimum chargeable weight, regardless of the quantity of coal loaded therein. The Coal Trade are, therefore, advised in their own interests to see that all wagons are loaded to capacity.

Applications for diversions are also causing unnecessary detentions to wagons. It has, therefore, been decided that once a Declaration Note is tendered, diversions will only be allowed in very exceptional circumstances, and only then under the personal orders of the Coal Area Superintendent, E. I. Railway, Dhanbad, and the Coal Manager, Adra, the District Transportation Officer, Bilaspur, and the Assistant Transportation Officer, Khurda Road, District Traffic Superintendent, Nainpur, B. N. Railway, as the case may be.

## NEW WAR ORDERS FOR THE JUTE INDUSTRY

A SLIGHTLY steadier tone has been noticeable during the past few days in both the Calcutta and Bombay markets but there is no disposition to enter into fresh commitments.

The only important feature of the week is the announcement regarding a new order for two crores sandbags to be delivered in two equal monthly instalments in February and March. It is also reported that an order for four crores yards narrow hessian cloth for camouflage purposes has been placed with the Indian Jute Mills Association.

The sandbags are not to be rot-proofed and have been placed at Rs. 11-12 per 100 bags F.A.S. or F.O.R.

With the decision of the Committee of the Indian Jute Mills Association to continue mill working at 60 hours per week, it was generally expected that there would be some new orders even though the decision of the Committee was influenced by the hopes regarding some leeway in exports being made up in the current month.

After the announcement of the new war orders, there was a sharp rise in prices for hessians. Near covering business on a fairly large scale forced up values.

The strength of the goods market and the absence of any change in working hours naturally gave strength to the jute section on the Calcutta Stock Exchange. There was more enquiry for the popular counters and prices were mostly higher.

* * * *

Commenting on the results of the *Indian Cable Company, Limited* for the year ended March 1940, I pointed out on the last occasion that even if the amount distributed to shareholders by way of arrears of dividends on the preference shares and dividend on the ordinary shares were made available this year, it would be possible to declare a dividend of as much as 15 per cent on both the participating cumulative preference shares and ordinary shares.

In spite of the substantial increase in gross earnings during the year ended March 1941 to Rs. 37,54,253 from Rs. 18,33,074 in 1939-40, the dividend on both the preference and ordinary shares is to be only 10 per cent. The bulk of the increase in earnings, of course, is utilised in the higher provision for taxation, being Rs. 15,80,245 (Rs. 3,96,134). The amount set aside to depreciation is Rs. 1,09,692 (Rs. 74,877) while the provision to Contingency Reserve is Rs. 4 lakhs. After the payment of dividend of 10 per cent, the amount carried forward is considerably higher at Rs. 3,13,772 against Rs. 79,464 brought in. Surely, the directors might have been more liberal in the declaration of dividends.

The Company is at present fully engaged on work of national importance and for the duration of the war the prospects seem to be assured.

* * * *

Nearly 70 per cent of the total rubber production of Malaya has been destroyed by the Japanese onslaught in that part of the world. And it is now feared that there will be a virtual shortage of tin and rubber, at least temporarily. On this account rubber companies in India have gained additional importance.

Even with a smaller crop, 270,928 lbs. (290,059 lbs.), the *Thirumbadi Rubber Company, Limited* has been able to report a higher level of profit for the year ended September, 1941. The net profit, before providing for taxation and depreciation, is Rs. 87,221 against Rs. 75,290 for 1939-40. The final dividend of 15 per cent with the interim dividend of 5 per cent, already paid, makes 20 per cent for the whole year against 15 per cent previously. The amount carried forward is substantially higher at Rs. 65,612 against Rs. 39,410 brought in. The Directors propose, if all goes well, to increase reserve and investments to at least Rs. 70,000 in 1941-42.

The progress of the company has been very satisfactory during the last four years and the dividend has been increased from 5 per cent to 20 per cent. It can be expected that the distribution for the current year will be even higher.

* * *

A further improvement in earnings for the half-year ended August, 1941 is reported by the *Reliance Firebrick and Pottery Company, Limited.* Sales during the half-year were satisfactory. The net profit, before providing for taxation and depreciation is Rs. 89,466 against Rs. 70,064 in the previous half-year. The amount set aside to depreciation is Rs. 31,000 against Rs. 35,000. The provision for taxation is Rs. 20,000 (Rs. 10,000) while the transfer to Reserve is Rs. 7,000 against Rs. 7,500 to Bad Debts Reserve. The dividend is higher at eight annas per share against four annas per share. The amount carried forward is Rs. 12,188 against Rs. 10,772 brought in.

* * *

On account of the slight decrease in total sales the net profit of the *Bisra Stone Lime Company, Limited.* is lower at Rs. 4,57,625 against Rs. 4,88,507 for the previous half-year. The amount set aside to depreciation is Rs. 9,634 (Rs. 4,985) while the provision for taxation is Rs. 1,64,000 (Rs. 2,10,616). The dividend has been maintained at 27½ per cent. The amount carried forward is slightly lower at Rs. 18,865 against Rs. 22,325 brought in.

* * * *

Few can essay an appraisal of the future as the outlook may be influenced by imponderables. But the known economic factors are admirably listed and evaluated in an analysis entitled *Indian Industries.* The analysis issued by Mr. M. C. Mehta, stockbroker of Bombay, examines all relevant issues including taxation. What are the war babies of the stock market and what are the post-war giants can only be determined by elaborate investigation. Mr. Mehta's own conclusions are soberly optimistic. His opinion is certainly likely to appeal to those who believe that courage and caution alike must guide investors' policy in the near future.

* * * *

Among the Bengalee banking institutions, which have come into existence recently, the Calcutta Exchange Bank, Limited has made considerable progress. Practically, in the first year of regular banking, the bank declared a dividend of 4½ per cent on the ordinary shares and 6 per cent on the preference shares.

The financial position of the bank is taken as sound. With a large number of branches efficient service to constituents is assured.

WATCH-DOG.

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

Calcutta, January 16.

A SLIGHTLY firmer tone has been noticeable on the Calcutta Stock Exchange during the past week though there has not been any appreciable broadening of interest. The uncertainty regarding the Far Eastern situation has still a depressing effect and pending fresh developments operators and investors alike cannot be expected to show any interest in the markets. Giltedged securities have been slightly firmer during the week on some buying while jute shares have commanded greater attention after the announcement of the new order for sandbags. Paper shares also are slightly higher.

Giltedged securities, as mentioned above, have been slightly steadier and a larger amount of business has been reported. There has been no change in the conditions in the money market and the treasury bills rate is unchanged at 1 per cent per annum. 3½ per cent Paper was steady at Rs. 95 and 3 per cent Paper at Rs. 82. Among terminable loans, 3 per cent 1963-65 were Rs. 94-1, 3 per cent Defence Bonds Rs. 100-12, 3 per cent Defence Loan Rs. 98, 4 per cent 1960-70 Rs. 109-5 and 5 per cent 1945-55 Rs. 108.

Among public bodies' debentures, 3¼ per cent *Howrah Bridge* debentures were noted at Rs. 98. Among industrial debentures, 4¼ per cent *Bengal-Nagpur Cotton* debentures were dealt in at Rs. 102-8, 4½ per cent *Nellimarla Jute* debentures at Rs. 102-12 and 7 per cent *Nuddea Jute* debentures at Rs. 106.

Not many transactions have been recorded in jute mills preferences shares, *Caledonian* preferences being noted at Rs. 168-8, *Howrah* 7 per cent at Rs. 166 and *Hukumchand* preferences at Rs. 137. *Carew & Co.* were Rs. 125.

Cotton shares have been rather uninteresting with *Cawnpore Textiles* at Rs. 8-12, *Dunbar* at Rs. 224 and *New Victoria* at Rs. 5.

In the Coal section, *Bengal* were slightly higher at Rs. 375 cum-dividend. *Burrakur* were Rs. 12-8, *Equitable* Rs. 35-2 and *Standard* Rs. 21.

In the jute section, as pointed out above, greater attention has been paid. The strength of the jute manufactures market and the announcement of new war orders have been mainly responsible for the slight rise in values. The new order for two crores sandbags is to be delivered in two equal monthly instalments in February and March. *Adamjee* changed hands at Rs. 26-4, *Anglo-India* at Rs. 345, *Howrah* at Rs. 52-6, *Kamarhatty* at Rs. 483 and *New Central* at Rs. 301.

In the Engineering section, no transactions have been possible in Indian Iron and Steel Corporation ordinary shares. *Burn & Co.* were noted at Rs. 348, *Jessop & Co.* at Rs. 18-12 and *Marshalls* at Rs. 2-1. *Indian Galvanizing* were Rs. 32-8.

Sugar shares have remained steady with *Cawnpore* at Rs. 24-12, *Carew & Co.* at Rs. 12-2 and *Ramnugger Cane and Sugar* at Rs. 11.

In the tea section, *Bateli* were Rs. 7-4 and *Tengpani* Rs. 12-4.

In the miscellaneous section, *Indian Copper* were noted at Rs. 2 while *B. I. Corporation* were marked higher at Rs. 5-1. *Aluminium Corporation* were Rs. 11-8, *Indian Cables* Rs. 20-8 ex-dividend and *Calcutta Safe Deposit* Rs. 8. Paper shares were firmer with *Shree Gopal Paper* at Rs. 15-8, *India Paper Pulp* at Rs. 150 and *Bengal Paper* at Rs. 130.

## BOMBAY STOCK EXCHANGE

*(From Our Correspondent)*

Bombay, January 15.

*Money.*—There has been no change in the money market, the rate for call money being quoted at ½ per cent.

*Securities.*—Business in this section continued to be on a restricted scale, the price of 3½ per cent Government Paper remaining unchanged at Rs. 95. Among short-dated and long-dated loans, 1948-52 were quoted at Rs. 97; 1951-54 at Rs. 98-4; 1963-65 at Rs. 93-15; 1947-50 at Rs. 101-4; 1960-70 at Rs. 109-5; 1955-60 at Rs. 113; 1945-55 at Rs. 108-2 and 1946 *Defence Loan* at Rs. 100-12.

*Shares.*—The turnover in the local share market was somewhat restricted as the market remained closed for two days during the week. A resolution requesting the Government of Bombay to fix the prevailing minimum prices, which lapse to-day, for the February settlement, was passed at a meeting of the Governing Body. Prices, after opening steady, declined in mid-week following the series of adverse war news from the Far East. The decline in prices is also attributed to the possibility of reducing the minimum prices. Brokers, too, were not inclined to undertake fresh commitments until the forward accounts were settled. Business in the forward section was resumed to-day. Dealings in the cash section were of a restricted nature. Towards the close to-day, however, prices improved on good enquiry. Mill shares were specially favoured by operators owing to the good industrial outlook. Steel shares were a shade easier on lack of support.

*Textiles.*—Mill shares met with good support owing to good industrial outlook. An increase in the number of mills by two to 390 and an increase in the quantity of cotton are the features of the statement issued by the Millowners' Association, Bombay, indicating the progress of the Indian Cotton Textile Industry during the cotton year ended August 31. *Bombay Dyeing*, after touching Rs. 1,187, closed a shade easier at Rs. 1,185. *Central India* have, however, improved to Rs. 372 from Rs. 349; *Century* to Rs. 400 from Rs. 380; *Colaba* to Rs. 203 from Rs. 186; *Gokak* to Rs. 274 from Rs. 259; *Kohinoor* to Rs. 503 to Rs. 465; *New Great* to Rs. 288 from Rs. 283 and *Svadeshi* to Rs. 425 from Rs. 386. In the cash list, *E. D. Sassoon* were slightly higher at Rs. 2-15 and *Indore Malwa* at Rs. 242-8. *Khatau Makanji* were steady at Rs. 245.

*Hydro-electrics.*—The shares in this group were fairly steady, *Tata Hydro* quoting at Rs. 171 and *Tata Power* at Rs. 1,582-8.

*Steels.*—Steel shares were more or less steady in the absence of sellers. *Tata* deferreds, after opening at Rs. 1,695, closed slightly higher at Rs. 1,702-8, while the ordinaries were steady at Rs. 319. The Board of Directors of the *Tata Iron and Steel Company, Limited*, have decided to put through the scheme for converting deferred shares into ordinary shares by offering five and a half ordinary shares for every deferred share held. The scheme will be submitted to the shareholders for their approval at an extraordinary general meeting to be held in the middle of February.

*Banks.*—Prices remained unchanged in this section.

*Miscellaneous.*—*Bombay Burma Trading* have again improved by 30 points to close at Rs. 357-8. *Associated Cement* were done higher at Rs. 169-8. *Belapur Sugar* recorded a rise of about Rs. 30. *Alcock Ashdown* were transacted at Rs. 605; *Indian Iron* at Rs. 29-5; *Steel Corporation* at Rs. 16-14 and *Premier Construction* at Rs. 116-8. *Tata Chemicals* were better at Rs. 15-8 and *Scindia Steam* at Rs. 20-12. *Shivrajpur Syndicate* were marked at Rs. 36; *Tata Oil* at Rs. 54-8 and *Wimco* at Rs. 215.

## MADRAS STOCK EXCHANGE

*(From Our Correspondent)*

Madras, January 15.

The turnover was slightly better during the week, though the market remained closed on Tuesday and Wednesday owing to the *Pongal* holidays. Mill shares were slightly marked down, while Rubber shares met with fair enquiry.

*Securities.*—The securities market continued to be steady, 3½ per cent Paper closing at Rs. 94-13. 3 per cent 1963-65 came to business at Rs. 94-4; 4 per cent 1960-70 at Rs. 109-4 and 5 per cent 1945-55 at Rs. 108-2. There was no business in State Loans. Among Provincial Loans, 3 per cent 1952 *Madras Loan* were done at Rs. 97-14. 3 per cent 1962-66 *U. P. Loan* were transacted at Rs. 92-10.

*Mills.*—Almost all the issues in this section were marked down. *Vasanta* were a shade easier at Rs. 145; *Madura* at Rs. 38; *Sitaram* at Rs. 90 and *Radhakrishna* at Rs. 202. *Buckingham and Carnatic* were slightly better at Rs. 215, while *Cambodia* were unchanged at Rs. 10-12.

*Plantations.*—Rubber shares were in fair enquiry following the report that South Indian rubber growers may reap an advantage owing to the impossibility of securing supplies from Malaya and restrictions on shipping from Dutch East Indies. *Tropical Plantations* changed hands at Rs. 22-8; *Coorg* at Rs. 34; *Vaikundam* at Rs. 11-12 and *Rajapiri* at Rs. 7-6. *Thirumbadi* improved from Rs. 1-10 to Rs. 2. Tea shares were unchanged.

*Sugars.*—Sugar shares were a dull and neglected market. Among inter-market leaders, *Balrampore* came in for business at Rs. 12; *New Savan* at Rs. 11-14 and *Purtabpore* at Rs. 10-14.

*Miscellaneous.*—*Mysore Chemicals* ruled steady at Rs. 17. *Spencer "B"* preferences were done at Rs. 10-8 c.d. *Orient Paper* changed hands at Rs. 15-8; *Premier Construction* 2nd preferences at Rs. 113-8; *Jupiter Insurance* at Rs. 15-8 and *Indian Cables* at Rs. 21-12 x.d.

(Continued on page 89)

*COMPANY MEETING*

# BENGAL COAL CO., LTD.

## A SATISFACTORY YEAR'S TRADING

### Despatches Affected by Shortage of Wagon Supplies

### Mr. K. W. MEALING'S REMARKS

*Presiding over the Half-yearly General Meeting of the shareholders of the Bengal Coal Company, Limited, held on the 14th January, 1942, Mr. K. W. Mealing, the Chairman, of the Company said:—*

GENTLEMEN,

The Directors' Report and the Audited Accounts for the half-year which ended on 31st October, 1941, having been in your hands for the statutory period, I propose to take them as read and before passing on to the business of the meeting, I will, with your permission, give you a brief resume of your Company's affairs during the past year.

We are indeed fortunate that after 2¼ years of war, it is possible for us to meet here in Calcutta as our predecessors have done for nearly a century, to consider the successful conclusion of yet another year in the life of this great Company. Coal, like other primary raw materials, enjoys the ups and suffers from the downs of demand and supply and, in war time, as one of the essential producers of power, becomes of primary importance in the war effort. The proper and efficient working of our coal measures and the prompt despatch of suitable qualities to the ports and industries throughout the country is of vital importance at this time, and in these necessary functions your Company is, I venture to say, playing a large and worthy part.

#### War Time Difficulties

War time brings with it new problems to be solved, new difficulties to be overcome. The necessity of releasing all the staff of military age who can possibly be spared without decreasing efficiency to danger point in life and production is not the least of these difficulties. The urgent requirements of vast quantities of steel for direct military use reduce heavily the amount available for commercial and other purposes and so call for special care in husbanding resources and improvising or using alternative materials, such as timber for coal tubs. Replacements of such necessities as ropes, engines, pumps, electrical gear, etc., must be expected to become increasingly difficult and the efficient overhaul of existing equipment to keep it in service until after the war when replacements again become possible, becomes of first class importance. The most careful use cannot avert heavy wear and tear on essential plant, particularly pumps, and sand-stowing equipment, coal tubs and winding ropes.

These are among the many war time problems which have to be anticipated and solved, and I am proud to tell you they are being satisfactorily met by your Company. I mention them because it may not always be realised that such problems as these have to be dealt with in addition to all the normal problems of coal mining to which we are accustomed.

#### Increasing Demand For Coal

On the other side of the picture, there is very naturally an increasing demand for coal. Most industries are working at full capacity on direct or indirect production ancillary to the war effort. New industries and extensions to existing industries all require the essential prime mover—Coal. In spite of the worst efforts of the Axis Powers, ships continue to come and go, many driven by coal, many carrying coal cargoes or bearing the fruit of India's war effort to where it will be of greatest use. Of all commodities in which values have substantially enhanced since war broke out, coal was probably the last, or one of the last, to be affected. Pre-war coal prices were not far above depression level, and indeed only Companies in a high state of efficiency mining good quality coal could, at those prices, work at all profitably. Since then there has been a slight improvement but this, in the case of many companies, has already been largely discounted by increased costs of production. In the coming year further increases in costs must be anticipated and if the market price of coal should make a further moderate advance, it must in these circumstances be considered fully justifiable.

The export coal trade, in which your Company plays a leading part is, of course, entirely dependent upon the number of ships available for coal cargoes and although in the first half-year there was a marked decline in our export trade, a substantial improvement took place in the second half-year.

This brings me to what has become the controlling factor in the internal coal trade at this time—the wagon position.

#### Acute Wagon Shortage

Much has been said and written in regard to the Indian Railway wagon situation in 1941. We have been told that we are disastrously short of transport facilities. We have been told that the best use is not being made of the wagons available. We are being urged to turn wagons round quickly. Whilst we do not doubt the necessity for this, I would point out that the published statistics have shown that, so far as broad gauge lines are concerned, India had 633 fewer locomotives in 1939-40 than in 1929-30. We understand that the average tractive power per locomotive has increased nearly, but not quite enough, to counterbalance the decrease in numbers, but frankly I find it difficult to understand how those who control the destinies of the main arteries of Indian industrial life could have embarked on a policy of reducing, even by a small percentage, the total broad gauge tractive power, and the actual number of broad gauge locomotives essential in the operation of the Railway system by no less than 11 per cent during the decade ending in 1940. Indeed, there can be few, if any, industries in India whose record during the past ten years has been one of retrogression in essential capital equipment. When therefore the discussion about wagons is under way I cannot help wondering whether, if more wagons were available, the necessary locomotives would be available to draw them.

It is not my purpose to enter the arena on this vexed question of wagon supplies beyond drawing attention to the fact that it is of urgent and increasing importance, demanding the closest study by Government as it vitally affects the efficiency of all industries from the receipt of their raw materials, of which coal is not the least important, to the despatch of their finished products. Failure to deal with the present situation and plan ahead on progressive lines may create the bottle-neck of India's war effort.

I must, however, say somethin, about the method of wagon allocation hitherto in force. If the wagon situation is such that there are insufficient railway transport facilities to carry all the coal required, then we believe that a system of rationing should be introduced and would-be purchasers of coal granted wagon-priority in order of their importance in the war effort. The system of allocating wagons to collieries has, it is said, resulted in a form of profiteering by unscrupulous coal owners and merchants who perhaps by avoiding their existing contracts or through being free of contracts, are able to divert their allotted wagons to markets where coal is in short supply and there cell it at exorbitant prices. The revision of the system of wagon allocation in order to put a stop to this practice may call forth protests from the interests concerned, but in the interest of the war effort there seems little doubt this should be done and we believe steps in this direction are now being taken.

I should also mention that there has recently occurred a considerable increase in overriding priority orders for government requirements of certain classes of our coal. The fulfilment of these orders has resulted in many of our old customers having to go short. We are doing everything we can to assist them and we can only hope they will understand that it is a case of force majeure not of our making and entirely outside our control.

I recently undertook an extensive tour of your Company's properties accompanied by Mr. Worthington and by Mr. *Barraclough*, our Chief Mining Engineer. It gives me greatest pleasure to tell you that I was most impressed with all I saw. The condition of plant, machinery, and buildings above ground and particularly of the ingenious layout and successful operation of the sandstowing plant in the Dishergarh Group and at Parbelia Colliery were most impressive whilst the methods of mining adopted and projected for development below ground combine the maximum of safety in this dangerous industry with the greatest possible conservation of valuable coal assets.

Here I must say a word of appreciation and thanks on your behalf to our staff in the coalfields. The release of men for military service has thrown extra burdens on those who have not been released and these burdens are being cheerfully and efficiently carried, and we are grateful to them all.

I feel that a word of warning should be said on the subject of labour. The illiterate classes naturally believe that the black-out and other A. R. P. preparations imply that a real and immediate state of danger exists. Whilst the authorities have no option but to proceed with these preparations, the effect upon the illiterate classes is likely seriously to affect output, not only of coal but in other essential industries. I do not believe that enough has been done to rectify the alarm which has been caused among the labouring and other classes or to deny the many false rumours which have spread among these people, and I would suggest that more could be done to make it clear that the making of these preparations is purely of a precautionary nature.

#### Accounts

Turning to the Accounts, these are in their usual form and I do not think you would wish me to make a detailed analysis of them but I shall, of course, be happy to answer any questions you may wish to put in regard to them. The dividend recommended is the same as a year ago: Rs. 10|- with a Rs. 2|- bonus, which I think you will agree to be satisfactory. Depreciation has been maintained at the same figure as for some time past and, in view of the difficulty of replacements and the increasing wear and tear to plant and equipment, this must be viewed as a wise and necessary provision.

Block additions during the half-year only amounted to Rs. 1,58,957, which is considerably lower than for some time past, but our

Stores balance shown an increase of just over 6 lakhs of rupees more than last half-year and I am sure you will agree that in these times it is important for the Company to carry adequate stocks of essential stores.

Raisings were lower than in the second half of 1940 by just over 1 lakh tons and the drop in receipts from Rebates amounting to Rs. 1,86,819 against Rs. 3,30,667 a year ago is due to the decrease in the quantity of coal exported to which I have already referred. I must also refer to the large sum of Rs. 7,00,000 provided for Taxation and Cesses, and would remind you that the incidence of taxation is not likely to decrease and it is therefore very necessary to make full provision on this account.

### Conclusion

In conclusion I think we must all admit to a feeling of sober optimism in the achievements of the past year and the prospects for the future.

Although we in India have been brought closer to the war by Japan's criminal and suicidal act of wanton aggression, we can look forward to an early check to their initial successes, whilst on the main fronts the Axis Powers have failed in their objectives and suffered unprecedented losses. The recent events on the Russian and Libyan fronts together with the announcement of America's overwhelming armament programme spell beyond any doubt the defeat of the aggressors so that we can face the coming year with courage and confidence.

## TRANSACTIONS DURING THE WEEK

## CALCUTTA STOCK EXCHANGE

*(From 8th Jan., to 14th Jan., 1942*

**both days inclusive).**

### GOVERNMENT SECURITIES:

3 per cent 1949-52:—(8th) 98-5 s.l.; (12th) 98 (98-6 s.l.), 96-3, 98-4 (98 s.l.), 98-1, 98-3 s.ls.; (13th) 98-5 s.l.; (14th) 98.
3 per cent 1963-65:—(10th) 94; (12th) 94-2 s.l.; (13th) 94-1.

# MARKET POINTERS

**Government Telephone Board:**

It is learned that the Government Telephone Board has now purchased the entire stock of shares held by the Oriental Telephone Company in the Madras Telephone Company at Rs. 14-8 per share, which is the price the board had originally offered.

The shares so acquired constitute 53 per cent. of the total shares of the company. Under the Company Act 75 per cent. of the shares have to be acquired by the board before the remaining shares can be compulsorily bought and the company becomes state-owned and state-managed.

* * * *

**Indian Cotton:**

Cotton problems will be discussed at the half-yearly meeting of the Indian Central Cotton Committee, which will held in Bombay on January 23 and 24.

One of the most important questions before the Committee relates to short staple cotton. The meeting is expected to re-examine the possibilities of curtailing the area under short staple cotton in view of the loss of the overseas markets, creating thereby a surplus of over 800,000 bales of short stapled varieties. It is felt that the whole of this surplus cannot be absorbed by the indigenous industry. Besides considering the problem of premium ot staple cottons over established short stapled varieties, the Committee will discuss the resolution tabled by Sir Madhaorao Deshpande recommending to the Government of India to buy cotton as a measure of relief to the cotton grower.

Of interest to Bombay Province are a number of proposals for discussion before the Committee. At the invitation of the Government of Bombay, the Committee will review the cotton policy for Gujerat in order to make it more effective. The Committee has been requested by Government to undertake a marketing survey of cotton in Bombay Province on the lines of one made in the Punjab. Several schemes launched by the Committee in the province for improving the quality of cotton will also be reviewed.

* * * *

**Railway Earnings Up:**

The total approximate gross earnings of all State-owned railways for the period (11 days) ended December 31, 1941, amount to Rs. 387 lakhs. This is Rs. 33 lakhs more than the approximate gross earnings for the corresponding period of the previous year or Rs. 18 lakhs more than the actuals for the corresponding period of 1940-41.

The total approximate gross earnings from April 1 to December 31, amount to Rs. 92.72 crores. This is Rs. 12.40 crores or 15.4 per cent. more than the actuals for the previous year.

* * *

**Order for 20 Million Sandbags:**

A circular issued from the office of the Adviser on Jute Supplies, Calcutta, to members of the Indian Jute Mills' Association, states that an order for the supply of 20,000,000 sandbags has been received through the Government of India. Delivery will have to be made in two equal monthly instalments, 10,000,000 in February and 10,000,000 in March. The price fixed is Rs. 11-12 per 100 bags F.A.S. or F.O.R. The bags will not be rot-proofed.

* * * *

**Tin and Lead Control:**

Amendments to the Non-Ferrous Metals Control Order, 1941, which have just been published in the Government of India Gazette, apply the provisions of the order to tin and lead. Stockholders and dealers in these metals require licences, and persons engaged in any undertaking involving the use of tin and lead for the purpose of any manufacturing process require certificates. Sales by stock-holders, or dealers, can only be made under a permit.

Licences, certificates and permits are obtainable free from the Controller of Non-Ferrous Metals, who is the Director-General, Munitions Production.

The control thus established over tin and lead has immediate effect, and it is important that those persons likely to be interested should familiarise themselves with the contents of the Non-Ferrous Metals Control Order, and obtain any further information they require from the Director-General, Munitions Production.

*(Continued from page 86)*

### LONDON STOCK EXCHANGE

The Japanese invasion of the Netherlands East Indies and the further Jap successes in Malaya were responsible for the weak tone of the London Stock Exchange earlier in the week. Issues with Far Eastern interests suffered very much. *Shell Transport* were marked down sharply as their Pacific interests are affected. *Burma Oil* also were lower. Kaffirs and other industrials continued quietly steady. Teas were slightly firmer towards the close. Among giltedged securities, 3½ per cent Sterling Paper were not much changed at 101 13|16. Among British funds, 2½ per cent Consols were 82¾, 3½ per cent Conversion 107 5|16, 3½ per cent War Loan 105 3|16 and 3 per cent War Loan 101¾. In the Foreign Bond section, Chinese bonds were consistently on the upward trend.

### NEW YORK STOCK EXCHANGE

Slightly firmer conditions have been noticeable on Wall Street during the past week and a larger amount of business has been put through. *General Motors* were $32¼, *Anaconda Copper* $27⅞ and *U. S. Steel* $54½.

*(Half-yearly meeting, 18th February, 1942 at 3 p.m.)*

*Audited accounts for the half-year ended September 30, 1941:—*

Including the sum of Rs. 54,312-5-5 brought forward from the previous half-year and after deducting the manufacturing and revenue expenses, commissions, depreciations and all other charges, there remains a balance of Rs. 12,67,252-6-0 from which the directors have deducted Rs. 8,00,000 for Taxation, leaving a balance of Rs. 4,67,252-6-0 for disposal with which it is proposed to deal as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| To payment of Dividend on Preference Shares at the rate of 7 per annum, free of Income-tax .. .. .. | 35,000 | 0 | 0 |
| To payment of Dividend on Ordinary Shares at the rate of 20 per cent per annum, free of Income-tax .. .. .. | 1,50,000 | 0 | 0 |
| To transfer to General Reserve .. .. | 2,00,000 | 0 | 0 |
| To carry forward to next period .. .. | 82,252 | 6 | 0 |
| Total .. | 4,67,252 | 6 | 0 |

The Directors consider it desirable that a part of the Reserves should be permanently capitalised by the issue of Bonus Shares and they recommend that the sum of Rs. 15,00,000 should be utilised in the issue to the Ordinary Shareholders of one Bonus Share for each Ordinary Share held.

The following will be moved as an ordinary resolution at the Extraordinary General Meeting of the shareholders to be held next month:—

That the authorised capital of the Company be increased to Rs. 40,00,000 by the creation of 1,50,000 additional ordinary shares of Rs. 10 each which additional shares shall not confer the right to share in any dividend declared in respect of the half-year of the Company ending on September 30, 1941, but shall otherwise rank for dividend and in all other respects *pari passu* with the existing ordinary shares of the Company.

That it is desirable to capitalise a sum of Rs. 15,00,000 being part of the undivided profits of the Company and accordingly that the said sum of Rs. 15,00,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are on the 18th day of February 1942, holders of the 1,50,000 issued Ordinary Shares of the Company of Rs. 10 each in payment in full for 1,50,000 additional ordinary shares of Rs. 10 each and that such 1,50,000 additional ordinary shares credited as fully paid, which shall not confer the right to share in any dividend declared in respect of the half-year of the Company ending on the 30th day of September, 1941, but otherwise shall rank for dividend, and in all respects *pari passu* with the issued ordinary shares of the Company shall be accordingly allotted to such persons respectively in the proportion of one of such additional ordinary shares for each one of the said 1,50,000 issued ordinary shares held on the said 18th day of February 1942, by such persons respectively and that the additional ordinary shares so distributed shall be treated for all purposes as an increase of the nominal amount of the capital of the company held by each shareholder and not as income.

*Includes Rs. 20,000 transferred from Reserves.

*(Half-yearly meeting, 16th January, 1942 at 4 p.m.)*

*Audited accounts for the half-year ended September 30, 1941:—*

The accounts show gross profit of Rs. 16,30,988-6-8. After deducting Rs. 4,27,532-4-6 for insurance, interest and commission etc., and providing Rs. 3,01,000 for depreciation and discarded machine and Rs. 4,00,000 for taxes and after making sundry adjustments, there remains a balance of Rs. 5,06,307-7-8. To this is added Rs. 9,884-8-1, the balance brought forward from the previous half-year. Thus, there remains a balance of Rs. 5,16,191-15-9 at the credit of Profit and Loss Account, which the directors propose to adjust as follows:—

| | | | |
|---|---|---|---|
| To transfer to General Reserve .. | 1,00,000 | 0 | 0 |
| To pay dividends on Preference Shares at the rate of 7 per cent per annum, free of Income-tax, or Rs. 3-8 per share .. | 70,000 | 0 | 0 |
| To pay dividends on Ordinary Shares at the rate of As. 8 per share .. .. | 3,00,000 | 0 | 0 |
| To carry forward .. .. .. | 46,191 | 15 | 9 |
| Total .. | 5,16,191 | 15 | 9 |

The working of the Company has been satisfactory during the period under review. The Company has been able to capture some important export markets and has also produced a large range of goods for Government account. Though the earning of the Company on account of various favourable factors has increased during the period under review a substantial portion of the profits is eaten up by heavy Taxation and it has not been possible for the Directors to provide bigger amounts for General Reserves and Depreciation nor has it been possible for them to declare a higher dividend.

The directors regret to announce two major breakdowns in the Power-house one in October and another in November due to which the mills had to be completely closed down for more than two weeks and could run only partially for nearly 12 days. The directors, however, are glad to report that the mills are now working with full complements with the help of electricity supplied by the Calcutta Electric Supply Corporation, Limited.

Prices for various stores, colours and chemicals have recently increased enormously and acute shortage is being felt for many essential stores & chemicals. Besides, since the mills are working with the energy supplied by the Calcutta Electric Supply Corporation, Limited the power charges naturally are much higher than before. *In spite of all these serious handicaps the directors do not take any pessimistic view of the future.*

*Managing Agents.*—Messrs. Birla Bros., Ld.

*Authorised, Issued and Subscribed Capital—Rs.* 35,00,000 *in* 6,00,000 *Ordy. of Rs.* 10 *and* 20,000 7 *per cent Cum. Pref. of Rs.* 100, *both fully paid up.*

ISSUED WEEKLY

Vol. XXIX. No. 4 SATURDAY, JANUARY 24, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

NATIONAL INSURANCE COMPANY, LIMITED.

7, COUNCIL HOUSE STREET, CALCUTTA.

Phone: Cal. 5726, 5727 and 5728.

Branch and Agency Offices throughout INDIA, BURMA, CEYLON, BRITISH EAST AFRICA AND FEDERATED MALAY STATES.

## WORLD OF INDIAN FINANCE

*Friday evening.*

THE interbank call money market has, during this week, reflected a progressively easier feeling; and this is due to a number of causes. For one thing, the Reserve Bank seems to have carried out open market operations on a fairly large scale; and, to the extent that the central banking institution has purchased securities from the market, cash resources in banking circles have received substantial reinforcement. Secondly, the frenzied demand for funds on account of exodus of population has greatly abated for the simple reason that such of those as can leave the cities or as can be sent away from the cities have already gone. That the exodus has spent its force, is indicated by the absence of rush in trains. For the time being, panicky withdrawal of funds from banks may be said to have died down, though the smaller banking institutions have to watch their position with extra alertness from day to day. Thirdly, the need for window-dressing on the eve of the closing of bank accounts at the end of December was more strongly stressed on the present occasion. Banks had been showing mounting deposit figures during 1941 right to the end of November. Japan's entry into the war was announced on December 8. This was the signal for considerable withdrawal of funds from banks. This withdrawal was most ill-timed as it occurred at the end of a month when banks prepare their annual balance-sheets. To make up for the outflow of funds in this respect, banks had necessarily to have recourse to what is generally described as window-dressing. The demand caused by the needs of window-dressing is now a thing of the past. There has hardly been any enquiry for interbank call money, the rate for which is nominally ¼ per cent in Bombay and ½ per cent in Calcutta. Easier sentiment in the money market is also connected with the increase in the deposits maintained by scheduled banks with the Reserve Bank. These deposits, which stood at Rs.33.95 crores on January 2, rose to Rs. 35.75 crores on January 9, the figure for January 16 being Rs. 37.15 crores. There has, thus, been an increase of nearly Rs. 3¼ crores in the deposits of member banks with the Reserve Bank.

It is curious that, in spite of easier conditions in the interbank market and in spite of the increased cash balances of scheduled banks, the interest shown in Treasury Bills is none too keen. It is natural, in troubled times such as the present, for banks to maintain a fairly high production of cash. On the weekly treasury bill tender day, the amount on offer was Rs. 1 crore; and applications came to only Rs. 1,43¾ lakhs. The average rate of accepted tenders remained unchanged at Re 1 per cent per annum. Sales of tap bills between January 14 and January 19 amounted to Rs. 95 lakhs.

The statement of the Reserve Bank in the issue department for the week ended January 16 shows a further expansion of currency against sterling securities for Rs. 5 crores. Sterling securities in the issue department, after this addition, stand at Rs. 245.63 crores. As a result, active note circulation in India has risen by Rs. 1.82 crores to Rs. 329.46 crores; active note circulation in Burma by Rs. 46.58 lakhs to Rs. 22.07 crores; and notes held in the banking department have increased from Rs. 9.69 crores to Rs. 11.94 crores. Looking at the present level of notes held in the banking department, it is quite likely that there will be no expansion of currency against sterling securities in the week ended January 23. If so, the next week's return of the Reserve Bank will indicate a break in the uninterrupted expansion of currency that had taken place for the past eight weeks.

Turning to the banking department, there are two changes which require close study. Central Government's deposits have declined by Rs. 3.51 crores to Rs. 5.51 crores; and the investments of the Bank have declined from Rs. 11.86 crores to Rs. 9.23 crores. In the previous week, there was an equally sharp decline in Government's deposits from Rs. 15.63 crores to Rs. 9.02 crores. That is, in the space of a fortnight, Central Government's deposits have declined by over Rs. 10 crores. It is quite possible that a part of this decrease is connected with payments made by the Government for war supplies. But it seems to us that a good portion of this decline is related to the open market purchases of government securities. That is to say, our view is that these open market operations are being conducted by the Reserve Bank on behalf of the Government. In the first instance, the Reserve Bank pays for the securities thus bought; and then, the securities are handed over to the Government whose account with the Reserve Bank is debited with the requisite amount. In the light of this interpretation government securities for about Rs. 1¾ crores must have been delivered by the Reserve Bank to the Central Treasury in the week ended January 16. There must have been other transactions which took place in the course of the week and are not reflected in the bank returns. It is, perhaps, reasonable to infer that the total purchases made by the Government for the support of the giltedged market must have amounted to Rs. 4 crores or Rs. 5 crores in recent weeks. Considering that short-dated giltedged securities have not fully recovered and considering that the realisations for the second defence loan have dwindled, there is a clear case for further open market operations.

The statement of the Imperial Bank for the week ended January 16 shows a considerable increase in deposits to the all-time record figure of Rs. 110.76 crores. Advances and investments are slightly lower. As a result of these changes, cash has risen from Rs 19.84 crores to Rs. 21.55 crores.

The exchange market has maintained a steadier undertone and witnessed larger turnover. Business in American dollars has been on a fairly considerable scale. Rates are mostly unchanged.

Banks were sellers of T.T. on London for Ready up to six months forward at 1s. 5 31|32d., and banks were buyers of T. T. on London for Ready up to six months forward at 1s. 6 1|32d.

D. A. sight bills quoted 1s. 6 9|32d., for three months; and 1s. 6 11|32d., for four months.

Dollars were Rs. 332-12-0.

Interbank call money is unchanged at ½ per cent.

## TREASURY BILLS

### India

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills were opened on Tuesday, the 20th January, 1942. Total amount offered was Rs. 1,43,75,000 (Rs. 1 crore, 43 lakhs and 75 thousand). Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 69 per cent. Lower tenders were rejected. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Re. 1 per cent. (Rupee one per cent.) per annum.

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills will be received on Tuesday, the 27th January, 1942. Successful tenderers should make payment on Friday, the 30th January, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from the 21st January, 1942 to the 26th January, 1942 at Rs. 99-12-3 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from the 14th January, 1942 to the 19th January, 1942, amounted to Rs. 95,00,000 (Rupees 95 lakhs).

During the week ended the 16th January, 1942, Government of India Treasury Bills for Rs. 1,14,00,000 (Rupees 1 crore and 14 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

Thursday morning.

The absence of any change in the London rates for European currencies like the maintenance of discount rates over a long period has come to be accepted as part of the normal features of wartime. A slight lowering of rupee rates for the Straits dollar was reported towards the end of last week but this is obviously a change of minor consequence. Early this week banks were selling demand drafts on Singapore at Rs. 157¾ per 100 dollars a rate which means that the London rate is unchanged despite the southward march of the Japanese. As the peril to Singapore increases the Far Eastern currencies, of which only the Straits dollar and the Java guilder are to be reckoned with, must be in a difficult position. The Chinese currency too must be in a peculiar, vulnerable position when Shangai the highest port is under the control of the enemy. The damage done to China's export trade after the capture of Hongkong must be immense. If communications with Russia and Burma remain open, the Stabilisation Board has a difficult job. The certainty of Anglo-American cooperation will reduce anxiety. But it is an open question how far the Nanking currency and the Japanese sponsored notes have spread at the same time as the South Seas witnessed the triumph of Japanese arms. The Shanghai dollar rate is not known at present and it is only the assurance that supplies to China are covered by the lease-lend arrangements that makes it possible to say that nothing will affect the resolution of the Democracies to help China. The appearance of a Notification concerning debts owing to citizens of the colony of Hongkong, the distinction drawn between them and enemy nationals is due for record. The Notification makes it unnecessary to inform the Custodian of Enemy Property even if Hongkong is occupied by the enemy at present. Outstanding trade debts can be settled as in due course between the Eastern exchange banks and Indian traders without the usual complications that follow the proclamation concerning enemy-occupied territory. Debts due to Japanese are another matter, and the jurisdiction of the custodian of enemy property certainly applies.

Another Notification is presumably a corollary to the U. S. announcement concerning assets belonging to the Philippines. In spite of General MacArthur holding out and inflicting considerable punishment on the invader, it is recognised that the Philippines are out of the control of the U.S.A. The main job is to save whatever property is available for the Commonwealth Government. The proclamation that the islands are enemy territory is recognised in a Notification issued in India concerning trade and financial relations putting all transactions under the Reserve Bank's supervision. The links with the Philippines have been shattered and the cautious hope expressed by General Tojo on Wednesday as regards Filipino cooperation for the co-prosperity sphere may impel some to believe that the peso will soon be in the expanding yen bloc. The actual results may be small though the menacing possibility of Japan consolidating her gains in Malaya cannot be ignored.

If the bullion market in India has eased rather quickly, it is only a mark that apprehensions are no longer acute. The one direct result of the war has been the strong revival of interest in Cornish tin mines. Geevor is perhaps the best known of the few shares listed in London but the British industry as such is certainly older than anything in the world. That investors are quick to note that Cornish mines are the better buy certinly shows that the shares of Bolivian and Nigerian companies alone are not favoured. The Cornish shares were looked upon as highly speculative in recent years; perhaps that reputation has disappeared now. The importance given to minor producers is a consequence of the realisation that Malayan tin cannot be had now. The property of the largest tin mine in the Far East (Pahang Consolidated) is said to have been smashed up merely to prevent the Japanese taking over the plant. Much has already been written about prospects of compensation for the rubber and tin companies. In the absence of any War Damage Act there is no assurance of compensation and the advice of any official to adopt "scorched earth" tactics can be easily repudiated. It has been said that quotations for Straits rubber shares dealt in India are lacking. Investors are not likely to show any interest in any foreign companies and the only rupee share of a company whose estate is in Malaya has a nominal market in Madras.

Raids on the Dutch Indies like the loss of Tarakan and Minahassa in the Celebes have not shaken the financial markets. They are of no more consequence than Mr. Aney's pep message to Indians in Malaya.

The persistent fall in oil shares like the steady fall in rubber shares is a direct result of the war. What the British investor loses can only be guessed. Whether compensation will be extracted is known only to those who know all about grand strategy. At present of the three shares listed in Reuter's list only Gula Kalumpong is quoted over par. The 100-gulden shares of Royal Dutch still stand at £20 in spite of the lack of Continental speculative support whereas Shell has weakened directly after the threat to its Pacific interests emerged. By comparison with the stirring events in America, where Mr. Donald Nelson is the biggest noise with Bill Knudsen a close second and a former national hero like Lindbergh is nowhere, the review of money and markets may seem dull. The U.S.A. is going to build 632 freighters according to the Maritime Commission, the Navy is going to get 11 billions and also that motor car makers have got war orders for 3½ billions; that is headline stuff as against a tepid item saying that the Colonial office is going to help evacuees from Singapore with money. The last item can mean little for the unfortunate Indian emigrant. What the rubber industry thinks is not known but one of its biggest representatives, Mr. Eric Macfadyen has castigated recent British policy during the war in Malaya. The restoration of prestige has been demanded. Rubber is of course a bigger and more pressing problem. The London price may not be known but the Colombo price is known. If India, Burma and Ceylon producing just 10 per cent. of the world's supply even if the export quota is 120 per cent. are going to be more important, a rubber boom may be freely predicted. But the British Government like the U.S.A. is already thinking of salvage and reclamation. So the opportunity for the Indian planter may be only at home. Synthetic substitutes are also likely to be more important, and consumption will be cut by curtailed output of cars in U.S.A. and Canada where 60 per cent. of rubber consumption is claimed by a single industry. Export control of all rubber goods except tyres has been tightened in Britain in order to save supplies for herself. It is believed that motor tyres are getting more durable, and the armament demand for rubber can be adjusted by developing the two substitutes that have been developed in the U.S.A.

The Bank of England return in recent weeks contains nothing arresting. The gold held remains small but the Bank is latterly getting more securities. The clearing banks are also holding larger balances so that the steady rise in note circulation is neutralised to some extent. The upper limit was raised by fifty million sterling only last month so that the biggest note issue ever is not arresting. The latest Return shows few changes to draw attention. The Bank's recent relations with the Exchange Equalisation Account cannot be known and nobody knows how much gold has passed from the Bank to the Account after the war. By and large the new war has not touched London much. The inflow of revenue is said to be normal which is one reason why short-term borrowing has been reduced as shown in the fact that last week's sale of Treasury Bills was only for £65 million. The demand for Treasury deposits has slackened and the market got a rather small quota at the tender sale of Treasury Bills when 143 million was put up by applicants. The Treasury is still on an easy wicket however badly the Cabinet may be slated in the press for the muddle in Malaya. Markets have certainly kept their heads. That investors are having a thin time may upset revenue later on but the Budget will get over that fairly quickly. The last year presented few problems but this year, when lease-lend supplies will be reduced by the war in the Pacific, it will have to pay for bigger production at home and the national debt, too, will increase in a more pronounced manner.

## Industrial Profits in 1941

The last year may well prove to be a landmark in the industrial development of India. Indian economy has been undergoing vast changes since the outbreak of the war but not until the fall of France was any attention paid to the potentialities of this country in the Empire's effort. For this reason, the increase in the rate of industrial activity in the earlier months of the war and the rise in earnings of companies were confined to certain industries which were directly related to the war effort or which were of a special nature to this country. The story of India's participation in the Empire's effort since the middle of 1940, however, is different. Following the fall of France, the vast resources of this country had to be necessarily utilised and the large-scale operations in the Middle East war theatre made India strategically important.

Thus the fall of France and the setting up of the Eastern Group Supply Council mark the turning point in India's industrial history in the present war. While as a result of the deliberations of the Eastern Group Conference particular attention was paid to certain industries directly related to the war effort, certain other factors helped to promote indigenous enterprises. The complete lack of freight, the tightening of import control, the difficulty in getting supplies of machinery and other previously imported manufactured goods, even when necessary freight was available, gave considerable impetus to Indian industries.

The impression conveyed by the trend of industrial profits in 1941 is, thus, very different from the one gained from the figures of 1940. It will be remembered that we pointed out on the last occasion that the improvement in earnings of industries in 1940, consequent on the war, was spasmodic and was confined mainly to the jute and iron and steel industries. We pointed out at the same time that with the tempo of industries, which assist directly in the war effort heightened, a higher level of earnings will be seen.

During the year 1941, the jute, cotton, steel, paper, chemicals, glass and engineering industries have been working to capacity and have had to cope with the large volume of orders either on account of the Government or from the oversea markets. The improvement in the shipping position in the latter half of the year was of considerable help. The coal industry could have done better but for the difficulty in getting supplies of wagons and securing freight for export markets. Nevertheless, earnings were maintained at a high level and raisings were at a record level. The tea industry enjoyed good conditions throughout the year. Again, almost the total exports of tea were taken up by the British Ministry of Food. Even the sugar industry experienced better times and a higher level of earnings was reported by many companies though the improved position of the industry was not in any way related to the war effort. The policy of regulation of production pursued by the U. P. and Bihar Governments and the very small volume of imports of sugar were contributory factors.

The outstanding feature of the year is the splendid performance of the jute industry. With the debacle in prices in the goods market in the second half of 1940 and the low level of production, it was not at any time expected that there would be any substantial increase in earnings. But the gradual improvement in the technical position of the markets and the improved rate of exports in 1941 led to an increase in prices even with a higher level of production. Further, war orders and the increase in mill working hours to 60 per week resulted in earnings of mills running at the highest level for the war period.

As for the cotton industry, the year has been full of favourable developments. The large war orders, increasing enquiries from export markets, falling imports and finally, the order freezing Japanese assets in India caused prices for cotton textiles to rise to giddy heights. Mills were unable to meet demand and even the Government experienced considerable difficulty in getting their requirements. Production of cotton textiles is now restricted only by the capacity of mills.

The iron and steel industry has never looked back since the outbreak of war and the manufacture of certain lines, never undertaken before in this country, has been successfully achieved. The capacity of the industry also has been considerably enlarged.

As for paper, chemicals and glass, there is an acute shortage and the established companies are enjoying prosperous times.

Against this background the trend of industrial profits in 1941 can be clearly understood. Aggregate profits of 296 companies, which published their accounts in 1941, amounted to Rs. 32.30 crores against Rs. 26.02 crores in 1940, or an increase of 23.9 per cent. The earnings of these same companies in 1939 were Rs. 19.56 crores. At first sight, it may look as if the progress in 1940-41 has slowed down in relation to 1939-40. It is not, however, the case as in 1939-40 the increase was mostly on account of jute companies. 93 jute companies reporting in 1941 earned Rs. 6.20 crores against Rs. 5.37 crores in 1940 and only Rs. 70 lakhs in 1939. Leaving out the jute companies, the increase in earnings in 1941 was 26.3 per cent over 1940 while the increase in 1940 over 1939 was only 9.5 per cent. That there was no important change in the conditions in the coal industry should be evident from the fact that the earnings of 50 companies reporting in 1941 were Rs. 99.09 lakhs against Rs. 1,13.07 lakhs in 1940 and Rs. 1,00.47 lakhs in 1939. The aggregate profit of twelve sugar companies was Rs. 62.78 lakhs against Rs. 33.90 lakhs in 1939 and Rs. 37.35 lakhs in 1938.

The iron and steel and engineering industries made further headway. There was a virtual shortage of steel. In order to meet Government requirements rationing of steel had to be introduced in August 1941. It was not surprising, therefore, that the Tata Iron and Steel and Indian Iron and Steel Companies reported a substantial rise in profits. The engineering companies would have done even better but for their difficulties in getting imported supplies. Total earnings of twelve companies were Rs. 9.22 crores in 1941, Rs. 6.82 crores in 1940 and Rs. 5.58 crores in 1939.

As pointed out already, cotton mills in India are working to capacity and for the duration of the war prospects are fully assured. 22 companies earned in 1941 Rs. 2.75 crores against Rs. 1.81 crores in 1940 and Rs. 1.89 crores in 1939.

46 companies representing various industries also record a large rise in net income to Rs. 8.98 crores in 1941 against Rs. 7.08 crores in 1940 and Rs. 6.59 crores in 1939.

But, while there has been a marked improvement in the earning capacity of the several industries, the individual investor has derived small benefit from the improved conditions. The increased provision for depreciation, on account of the intensified use of machinery, and the need for substantial allocations to reserve for taxation, as a result of the increase in the surcharge and the rate of the E.P.T. to 66⅔ per cent, have deprived the shareholders from reaping any benefit out of the larger earnings. Nearly the whole of the increase in profits was appropriated by the larger provision for depreciation and taxation. Thus, allocation to funds including depreciation and taxation amounted to Rs. 20.21 crores in 1941 against Rs. 14.42 crores in 1940 and Rs. 9.70 crores in 1939. Against the increase in the aggregate profit of Rs. 6.28 crores increased allocations to reserves amount to Rs. 5.80 crores. It should not occasion surprise, therefore, if shareholders received in 1941 only Rs. 11.87 crores by way of dividends against Rs. 11.50 crores in 1940. Undistributed profits showed a further rise to Rs. 2.68 crores.

The continuance of the present emergent conditions should keep industrial profits on the upgrade but before long there would be a limit to the scope for expansion in earnings. For, industrial activity has been keyed up to the highest pitch and in the absence of any new enterprises it would be impossible to keep up the pace. The outbreak of the Japanese war has cut off India from practically the whole world and we are left entirely on our own resources. This should certainly provide additional impetus to some industries but, some remarked earlier, wartime difficulties and the uncertain outlook should necessarily have a restraining influence.

## WAR ECONOMY AND WELFARE

There is indeed a curious parallelism between the circumstances of the belligerent nations of to-day. To list the resemblances and differences would not be easy at any time, but in any analysis of the economic impact of war, it must be done. The more conscientious student who has followed all our recent reviews will readily find that much has been omitted in order to procure clarity and simplification. But India is not the world, even in miniature, and none of us can know the composition or colours of the changing picture—of world economy in a time of war.

It is generally known that the transition to war economy was very quickly achieved. It was easy for Germany which had devoted over 6 years a percentage of national income varying between 38 to 51 per cent. to prepare for war. It was relatively easy for Britain but not so easy for France. It should have been easier in any event for the U.S.A. which put into effect its own defence programme in the summer of 1940. The world drama sets up a curiously small echo in the economic world, for the ready acceptance of control before and after the outbreak of war, is the mark of democracy's approximation to totalitarian practice. Ideological differences have seldom coloured policy. That is certainly implied in our first reference to the parallel measures adopted in the countries at war. If Germany was ahead in certain respects, the Emergency Powers Act of May, 1940 put Britain a long way in front. To describe and measure the effects of war in a changing world calls for resources of knowledge and detachment that few possess. Yet it must be done, and it has been done well indeed to judge by the recently-issued World Economic Survey which covers the two years ended June last.

There is indeed real reason to welcome the synoptic picture of disturbed and highly fluid conditions, to gauge what has been the real effect of war on various national economies. Reviews of many markets over a year or two are apt to lose sight of the international aspect. Even in a closed economy, there is a vestige of pristine sensitivity, and if the blockade has harmed Europe's trade, German dominance has done infinitely more harm. But Europe advanced as it is, does not represent the world. There were other regions at peace but not untroubled by problems of their own. It is this latter fact that enhances the interest of the survey which opens more than one window on the world.

If the transition to total war was not complete in many countries the distortion produced by the organised looting of the Nazis had served to show that frightfulness can take many forms. If the major financial trends were the same as those described last year in the League publication entitled Monetary Review, there were and will be significant departures in taxation since. If Malaya's trade was boosted promptly enough by the war to a greater extent than the trade of any other country the fact is a melancholy reminder of what must happen to the Golden Chersonese hereafter. Perhaps the most significant conclusion that emerges from a careful study of world trade in the years between the outbreak of war and the Anglo-American alliance is that rationing, borrowing, compulsory saving, new taxation and monetary policy are not unique expedients but common, inescapable consequences of total war.

It is not in the sphere of propaganda that resemblance is complete or clear: it is in the sphere of economic policy. This may seem new, dangerous doctrine, but it is certainly supported by the analysis of policies and events up to and beyond the transition to war. Perhaps the main impression left by a comparative study is that neutrals experienced in some measure the direct as well as the remote consequences of the war. If Argentina raised the rate of income-tax it was as a result of the contraction in foreign trade with its adverse effects on customs revenue. That again is a reminder of the essential interdependence which the van Zeeland report emphasised not long before the war.

The most striking feature of the period in the countries at war, or about to engage in war, was the drive for production. The general trend has been plainly discernible in the tables provided by the monthly bulletin of statistics issued by the Economic Intelligence Service. If the expansion reported by many countries is a result of the war, it is also the result of a policy that aims to make the most of resources, human and material. The exploitation of unutilised resources like the maximising and direction of effort is not the only feature. The impossibility of maintaining capital intact has been demonstrated in the ready resort to the liquidation of oversea investments. The additions to domestic debt are again inseparable from the sacrifices entailed by the war. The strangling effects on trade are as much a result of limited supply and the canalising of consumption as of curtailed purchasing power. One cannot look at one segment of an ever-widening and concentric circle without being reminded of the other covered portions. Yet to obtain a view of all the segments one can only turn to the economic survey. The consequences of the last war had to be studied out of time, laboriously enough, by the Carnegie Foundation. The consequences of the present war have been examined in their right sequence immediately. Though parts of the economic landscape will always remain obscure—little can be learnt about the war potential or the war effort of the U.S.S.R. from this account—the exact evaluation of possibilities becomes possible through a notion of the available margin in the U.S.A. for war production. It is essential to stress just now that the U.S.A. had at the end of the fiscal year 1941 double the margin retained by the U. K. for war expenditure. The U. S. national income for 1940-41 was put at 77 billion dollars. The per capita annual income was put at 588 dollars. The individual citizen's contribution to defence effort in the past year was only 41 dollars. It must be said that the margin of 547 dollars not only makes for a ready expansion of saving but also makes possible the curtailment of consumption that is perhaps the outstanding feature. Nearly two years ago many economists asserted rather freely that the main effect of the war would be a lowering of the European standard of living. That it is not likely to rise after the war despite the ready promises of the Atlantic Charter seems axiomatic. What it will mean in terms of international trade after the war can hardly be gauged at present, when world war has burst suddenly on the colonies of Britain and Holland.

To indicate resemblances in the war effort of many nations has been the main task of the composite survey as distinguished from the highbrow analysis affected in previous surveys. If debt has risen and taxation has been stepped up commodity prices have not been stationary and the cost of living too has moved upward. The geographical and other variations in the movement of the usual indices have been described in relation to available statistics but not with the clarity and conciseness that is peculiar to the volume that lays as much stress on the control of production in consonance with the accepted aim of utter, final victory as on changes in monetary conditions. The contrast with 1914 is occasionally referred to indicate just how the world which started from progressive rearmament towards war was different from the mutually jealous empires of Czars

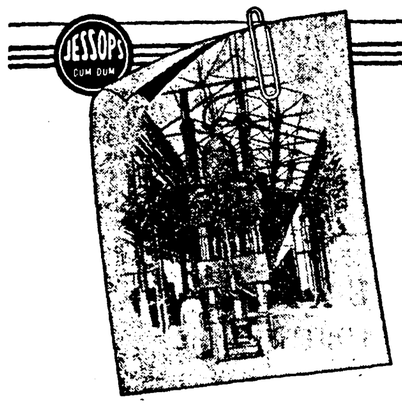
and Kaisers. There was no crazy mosaic in the totalitarian countries. Just how regimentation produced concentrated efficiency has been frequently described in accounts of Nazi Germany's economic recovery. But the strain that such regimentation produced has always been a source of weakness. The survey reinforces the conclusion that transport has been and is the Achilles' heel of Germany. The autobahnen are useless because there is no oil for vehicles and the blockade has made all seaborne imports impossible. Despite a quite early loan of Swedish rolling stock for coal traffic, the German railway system is more than ever seriously strained, and the R.A.F.'s attacks on pivotal points has added to the congestion and confusion that prejudice efficiency.



The latent transport difficulty has been accentuated by the blockade and the four-year railway programme framed in March, 1939 could yield no results. But in many other respects Nazi Germany has been a pattern rather than a warning. In regard to the adjustment of consumption to the war effort, the Nazis certainly looked ahead much farther than the British. They knew what they wanted and their experience of rationing has stood them in good stead. A point usually overlooked is that rationing has been more elastic. The allowance of meat and fats for heavy workers has been more generous than in Britain and the comparative tables reproduced in the survey indicate that to a detached neutral observer, the German rations did not seem too meagre. If Belgium and Poland are known to be very badly off and Norway's standard of living has suffered during the occupation, one is free to recognise that Denmark has fared relatively well. Not many of us are aware that European economy is definitely harnessed to the Nazi war chariot. The period of looting has been followed by one of reorganisation. Belgium's industrial production since the autumn of 1940 has been steadily rising. In adapting their own peculiar neo-mercantilist doctrine to the altered circumstances of Europe, the Nazis have shown both resource and skill. German agriculture too has been broadened, and output, if it has suffered from the shortage of phosphates, has undoubtedly benefited from the development of synthetic nitrates. These are points that are hardly illuminated in the average account of economic warfare. As Dr. Einzig showed last year the exponents of economic warfare have too long under-rated the ingenuity and resolution of the Germans.

To us who have no experience of rationing and who contemplate with unmixed alarm any suggestion that civilian, non-essential consumption should be curtailed in the interests of the country, the fourth chapter that discusses the adjustments effected in European countries is of more than usual interest. The major consequence of rationing is nearly always agricultural reorganisation. The attainment of five million acres in two years as the upper limit to arable cultivation in Britain and the retention of livestock up to 75 per cent. of the pre-war-norm are indeed achievements of the first magnitude. This chapter also makes it clear that Nazi Germany's rations up to 1941 were not so short as they were described. If Britain cut meat, fats and sugar only, whereas many things are rationed in Germany, a table constructed to set out standard rations is tantamount to the conclusion that Germany's hardships up to 1941 had been grossly exaggerated. It is true that the occupied countries must have suffered in the process of replenishing the German larder, but Germany could take the strain because she had obtained intelligent experience of rationing and had been on a war footing almost from January 30, 1933.

If rationing has led to agricultural reorganisation in Switzerland among other countries, it does not lend support to the cynical German description of the Swiss people, as 4 million prisoners whom we need not feed.' For the major conclusion reached in the survey is that despite all difficulties in the war period the neutrals are still better off and normal diet standards were best maintained in such countries as Denmark, Sweden, Switzerland and Portugal according to the survey. This conclusion leads directly to the belief that even if neutrality is at best precarious it has compensations. Though neutrality entails higher taxation in Sweden which has been compelled to resort to a special defence tax in addition to the excess profits tax. The universal trend towards higher taxation and bigger national debts is of course in line with general anticipation. But the experience of a neutral like Sweden suggests that the financial benefits of neutrality are small, while the lower standard of living is a disagreeable reminder of reduced exports and repatriated investments.

If we have deliberately dwelt on the lower standard of living enforced by the war, we do not overlook that in the U.S.A. only last year a special committee was set up to uphold and raise nutrition standards at the same time as the revised defence programme was put into effect. The contrast between this and Japan where the twelve-hour day had impaired industrial efficiency and reduced exports and consumption alike should become familiar to us because of the present struggle.

Germany's financial devices and trade policy naturally claim a large part of the survey. The new commercial agreements with surviving neutrals as with Axis dependants have a common aim, to cut out the old export subsidies, overvalue the German mark and delay the unavoidable payment to creditors. These sharp practices are exemplified in Germany's dealings with many countries. They are antagonistic to the standards laid down in the August declaration, announcing that freedom and security go together. The survey certainly leaves the impression that inter-dependence survives in a war-racked world at least in the simultaneous rise in the governmental expenditure since 1939 in Britain where it had risen by four times, by three times in Australia and Canada, by two times or more in Germany, France, Italy and Sweden and not much less than twice in the U.S.A., New Zealand, South Africa, Japan and the U.S.S.R. Similar increases in expenditure were reported by Belgium, Finland, the Netherlands and Switzerland. The implications of this rise for saving and borrowing alike are plain. Its calamitous effects on the standard of living have to be considered in relation to the spread of the war. Money rates may be depressed but the inordinate rise of expenditure will be a dangerous legacy. If the Dominions can toy even with ideas of retrenchment, other countries, notably the tropical colonies of Britain, which stand in need of continous assistance, have little chance of recovering even to such poor standards as they had attained. It is the prospect of post-war difficulties that increases the responsibilities of the Anglo-American entente. It is perhaps regrettable that their ideal of freer trade offers small satisfaction to other nations less mature and less experienced.

### Banking Regulations in Australia

Australia's reactions to the outbreak of war in the Pacific were prompt and unambiguous as may be inferred from the comments made in the National Bank of Australasia's letter for December. Increasing work and vigilance were demanded, and the need for additional war expenditure was viewed as a spur to action. The November loan went off very well as total applications on November 15 exceeded the money needed. The total for the 3½ percent 1950-57 issue amounted to £89.5 millions while the total for the 2½ percent 1945-46 issue came to £11.5 millions. About £34 millions were put up in cash for the war and conversion loan. The small investor manifested greater interest than usual, and it was stated that more than 60,000 subscribers out of the total 80,000 applications asked for £200 and under. This was rightly taken as an encouraging sign, and the next move to stimulate saving came from the additional restriction on imports from sterling countries. The decision proceeded from a desire to conserve sterling for war purposes. The curtailment of non-essential consumption was generally assumed to be salutary.

The most important development of recent months was the assumption of control over banking by the Commonwealth Government. The regulations promulgated on November 26 aimed at the direct control of trading banks in the war period. Though it has been recognised that banks have lived up to their heavy responsibilities and co-operated fully in the war effort, many urged that a need had arisen to define the activities of trading banks. While it is fair to admit that undue interference is unlikely to result from the regulations the departure in policy is significant. The Labour Government's policy is admittedly based on some of the recommendations made in 1937 by the Royal Commission on Banking. Conditions as to the grant of licenses and the preparation of balance sheets have been imposed as Regulation 5 lays down that nobody can carry on banking without authority in writing issued by the Governor-General. Regulation 6 authorises the Governor-General to grant the authority to existing banks and also to withdraw it if after enquiry and recommendation by a Justice of the High Court he is satisfied that the holder of the authority has persistently and wilfully contravened these Regulations. Two Regulations seek to define certain common duties. Regulation 7 states "in making advances a trading bank shall comply with the policy laid down by the Commonwealth Bank from time to time." A unified consistent banking policy may be taken as the aim. In seeking to restrict the diversion of credit the Government clearly intends that banks shall support the war effort to the exclusion of everything else. It has been said that the Regulation concerning investment of friends in special accounts merely defines as a statutory duty what had been already accepted as necessary. Government can count on a larger volume of funds for short-term borrowing. The special deposits will in turn restrict Banks' willingness to grant Advances and will curtail the easy credit conditions which many had deprecated. Under the new regulations the depositor will not be affected as there is a provision for retaining ample funds to permit the banks to follow the Commonwealth Bank's lending policy and also to maintain suitable liquid reserves for protecting their own position. It is clear that South Africa is not the only country committed to banking legislation in the war period. The temporary suspension of proposals in India for bank legislation does not imply that emergency legislation along Australian lines would be out of place. But conditions here do not warrant emergency measures and the maintenance of free enterprise will probably operate to the unhampered development of India's joint stock banks.

### Model for Argentina

Perhaps the best summary of an outside observer's impressions of the U. S. A. is contained in a report of an interview given by Dr. Federico Pinedo to the Argentine newspaper 'La Nacion.' Dr. Pinedo, who is the author of the plan for buying out British bondholders is one of the most distinguished citizens of Latin America. His record as Finance Minister and as creator of the Central Bank of his country, shows that he is a qualified observer. His visit to the U.S.A. last summer, to study economic and social conditions coincided with the commencement of a bigger programme of aid to the Democracies. He certainly got an impression of bubbling energy and contradicted the pessimists who cling to the view that the U.S.A. could not get a move on. His three and a half months trip from coast to coast by car over marvellous roads induced Dr. Pinedo to say that Democracy is efficient, has a future better than that of totalitarianism. Dr. Pinedo's tribute after his extensive and rapid survey will compel many to readjust their views as to the magnitude of the contribution which the U.S.A. can make to the war. A summary of the free translation provided in the National City Bank's monthly letter is alone possible here. His impressions of U.S.A. in the first year of the Third Term certainly belie the belief that labour disputes will hamper war production. Dr. Pinedo saw North and South, the Great Lakes and the Everglades too. Everywhere, he said, there is evidence of the economic strength, the richness and the exemplary push of the Americans, and there is nothing like that in any other country of the world.

After mentioning the diverse regions and their resources, Dr. Pinedo said one must take them all together and thus realise that that country is the largest agricultural nation in the world, that it is the the most advanced industrially, and that in addition it has huge mineral resources which are being adequately exploited. While it is true that Nature has been very kind to the United States in immense natural resources the drive, the audacity and tenacity of the Americans made excellent use of everything that Nature gave them. They have exploited all of their resources whreas in other countries similar resources have not been exploited or have only partially been exploited. Dr. Pinedo remarked favourably on the distribution of wealth, and said that in the United States there are millions of people who have so many material comforts. After describing the workers' possession of luxuries he added that it should be kept in mind that out of the 36 million automobiles in use in the world 30 million are in the U.S.A., that each year four to five million new automobiles are sold in the U.S.A. and that each day several thousand electric ice-boxes are sold ; that each day as much agricultural machinery is sold to the American farmers as the Argentine farmers buy in one whole year; that even though the population of the United States represents only 7 percent of the world population 70 percent of the life insurance of the world is written in that country.

He cited these things to show that the wealth of the country had penetrated down through practically all classes of the population of leisure in a country enjoying the highest standard of living. He referred also to the cleanliness, the lighting facilities, the water supply and the huge hospitals. Education has developed alongside and no country has so many foundations for research and culture. After describing the beauties of American cities, which represent the comfort and progress of the people, he told his interviewer "Please bear in mind that the many beautiful parks and comfortable homes are not seen only in certain parts of the United States. They are seen everywhere. Civilisation as seen in the U. S. A. is certainly a credit to Democracy." Dr. Pinedo concluded that there was something in the form of Gov-

ernment that created that sentiment of liberty not of total submission and afforded unlimited cultural advantages for everyone. Dr. Pinedo asked the Argentine nation that only when other forms of Government could offer comparable advantages in addition to a sense of security as regards their rights and liberties instead of utilising terror and robbery, should they think of orienting themselves on the basis of what is happening in some countries other than the United States. The tribute to the enterprise and vision of the leaders of the U.S.A. makes short work of the view that the class struggle is present and the seeds of the depression linger. The amazing positive achievement is on any view the true measure of the economic potential of the United States and Dr. Pinedo's tribute is the best corrective to such impressions as may have been generated by the adverse turn of events in the Pacific in the course of a month.

### Rising U. S. War Expenditure

In September last the U. S. Treasury aimed to procure half the year's expenditure by money raised through taxes on the basis of comparisons made with 1917-18. It was learnt then that the Treasury's goal was not ambitious. Though the total receipts for 1919 were below those of 1918 the fact that production will be reorganised and revenue system broadened to include payroll taxes suggests that the peak of 2.8 billions reported in 1918 will be easily surpassed. Federal revenue was expected to rise over 14 billions after the Revenue Act of September 1941 was passed. But the fact that war has come swiftly and suddenly must disturb the alignment of both revenue and expenditure. Every day sees the U.S. Maritime Commission raising its production limit. Defence production is like a poker game in which every time something is thrown into the jackpot. The short-term borrowing scheme has not been amended except to provide for tax anticipation notes; sales of savings bonds yielded 1,800 million dollars in six months and tax-notes produced 1,600 million dollars up to September. But these totals would not bring revenue nearer expenditure. It is clear from the President's message of January 8 that we have travelled a long way from the message given last year. That means that the ratio of receipts to total war expenditure will not be so favourable as in 1919 when 59 per cent of total disbursements came from revenue. Savings must increase at least in order to check inflation. The U. S. borrowing programme is as yet unknown though expenditure for 1941-42 will be but half the original estimate for the succeeding year. In September monthly expenditure was put at 2 billions; three months earlier it was running around one billion; three months later, it had jumped to 2½ billions. This means that expenditure this year as compared with the 1938-39 level is about five times higher. A deficit of 13 billions will take some covering and if one looks at the reported total for savings bonds sales from May when five different types were offered to the investor, it must be admitted that the Third Term will see bigger deficits without a comparable rise in savings. There is, however, the fact that national income estimated at 65 billions in 1939 is expected to go over 100 billions. The Treasury hopes to collar 58 billions out of that enormous total. This certainly means that the U.S.A. will have to cut civilian consumption to the bone. Scarcity will certainly reduce exports, and the outlook for all markets dependent on U. S. supplies is, therefore, bleak. One will readily appreciate that the Indian Government's offer to buy cars of certain makes is due to a fear that U. S. imports will not be available for some time while Canada, too, intends to cut production. The major problem will be saving though it is freely recognised that savings securities can be no substitute for taxes. Mainly because of the fact that the U. S. debt in September was over 53 billions, it must be conceded that the debt like the tax problem will be the major issue. It is therefore urged that crisis leadership must create the feeling of responsibility for the national debt. Mr. Roosevelt's cycle of deficits will be surpassed in 1942 and the U.S.A. may have to try a capital levy. Italy, Czechoslovakia and Finland have tried it not unsuccessfully. Britain, too, must prepare. In a country where millionaires sprout up like mushrooms, there may not be difficulty in getting a part of the individual's wealth for the nation. Quite soon, within a year, the existing upper limit of 65 millions for the Federal debt will be passed though it is certain that Congress will raise the upper limit once again. Majority of U. S. business firms in the last year have reported less profit because of higher taxation. The burden of taxation will increase when the Committee set up by the Revenue Act of 1941 goes into the system of getting taxes out of companies. Mr. Roosevelt mentioned that as one of the items in his current fiscal programme. Retrenchment has been recommended in respect of relief expenditure and administrative costs, though it has to be pointed out that Mr. Roosevelt is not likely to share the view. It is not surprising that Wall Street is in indifferent form after the war broke out. Taxing the wage-earner in the same way as the giant corporation appears superficially equitable and attractive, but as has been pointed out well in advance, higher taxation must not injure business that faces a post-war slump and is reluctant to invest even when inflation signs are present. Even the rise in inventories over a period prejudices the corporate taxpayer, and the main line of advance for the Treasury is to get more and more out of the lower income-groups, at least to curb private spending.

### Trade and Revenue

A recent notification specifying further restrictions on imports will be taken to mean that supplies from the U. S. A. will be scanty. The list stretches from adze to vanadium and is of more than usual interest as suggesting a departure from lease-lend procedure which was extended to cover certain categories of imports. But taken by and large it can be construed as co-operation with the conservation policy required in the U.S.A. which has reduced imports of steel scrap to Britain in conformity with its policy of retaining supplies for its own defence programme. The transition to belligerency on the part of the U.S.A. is likely to have grave effects on India's trade. It will come as a surprise to many to know that the chief source of imports in the eight months ended November 1941 was the U.S.A. Total seaborne imports from

that country into India were valued at Rs. 27.22 crores as against Rs. 25.91 crores being the value of imports from Britain. Out of the total of Rs. 131.34 crores being the value of imports for the period April to November 1941, the U.S.A. claimed Rs. 27.22 crores or over 20 per cent. If this percentage is to be drastically reduced, the consequences must be serious. Tighter import control will force up prices in India and a wide range of articles will be in short supply despite the promise of relaxation in special cases. The general purpose, however, will be appreciated. It is to curtail the consumption of imported articles. The time has come for India to spend less and save more. If the import trade suffers for the sake of the war effort there can be no criticism. The disappearance of Japan as a supplier will cause less difficulty than apprehended but a concentration of production for war purposes in the Dominions will necessarily affect India's own takings of manufactured goods. A further expansion in trade with Canada is ruled out, and as for India's trade with the Eastern Group, it will be prejudiced by the announcement that the Japanese control the Straits of Malacca. The Colonies are likely to reduce their imports as part of Imperial policy, and it only remains necessary for India to adopt the same policy. The curtailment of imports will certainly react on revenue. It may be said here that there is now a prima facie case for raising the level of import duties. India did the same thing during the last war though it will be urged that there was no protection then. If Imperial preference on existing trade treaties were to hamper such modification of tariffs to meet the paramount requirements of revenue, there is obviously need for other measures. The extension of the system of central excises may not be inappropriate. Having regard to the fact that petroleum revenue is likely to fall sharply if India's trade with Burma is interrupted a considerable increase in the excise duty on mineral oils may appear justified. But the point that merits special emphasis is that customs revenue will fall in the coming year and that the existing rates must be altered to maintain yield. The fact that new excises, e.g., on rubber tyres have appeared after the outbreak of war shows that the principle of safeguarding revenue has not been forgotten. In a country like India the Centre must rely largely on indirect revenue, and the principle of excises cannot be challenged particularly when the Provinces are prone to turn to another form of indirect taxation, the Sales Tax. The Budget will, therefore, call for special preparation as regards safeguarding customs revenue in the year 1942-43. The country then must be ready for increases in both indirect and direct taxation because the November customs revenue figures contained a warning as to what was to come. Higher tariffs and more excises appear justified, and if the jute export duty is increased at the same time. Bengal should benefit at least through maintenance of revenue around the level of the current year.

### Export Outlook

Quite recently came an announcement to the effect that India's export trade in 1941 showed considerable improvement. A big increase in trade with the Empire was recorded, and it was taken as certain that the outlook was none too bad. If one examines the trend disclosed by the November trade returns published last week, it will be seen that there is not much scope for the optimism exhibited in consequence of the so-called expansion of exports. In the eight months ended November India's exports to Britain and to the Empire showed an increase of Rs. 22 crores on the previous year. The greater increase under exports than under imports which rose by Rs. 15.7 crores naturally excites favourable comment, but due regard must be had to the shipping difficulties, present and prospective, as also the adoption of import control in nearly all the Colonies. Imports from the sterling area are discouraged in the Dominions also, and one must be prepared for a considerable decrease in trade with the Empire in the future. There is, however, the fact that Britain's war production in the third year of the war will show a very considerable increase as may be inferred from the additions to India's sterling balances in recent months. Larger exports to Britain may thus be looked for while the policy of co-operation with the Eastern Empire will sustain export trade. One must wait for the January trade returns to see how trade shapes after the war in the Pacific broke out. There is, however, the disquieting possibility that imports will fall away affecting exports in turn. For the moment the outlook is worse than obscure. Even the assurance that the new Supply Council will give its support to Indian manufactures does not generate a measure of optimism. Nor can one expect too much out of reports that the Chatfield Committee's recommendations are being carried into effect one after another.

It is known that in the eight months ended November India's despatches of manufactured articles rose by Rs. 9.75 crores as compared with the same period of 1940. The greater part of such improvement was based on larger shipments of textiles, and in this respect, the loss of Eastern markets will be neutralised by the disappearance of Japanese competition at home and abroad. In a sense, the outlook for paper, chemical, rubber, glass and other exports is better than ever. But there is rigorous import control in many lands and the shipping position may change suddenly for the worse. In respect of jute manufactures, the latter will be as before the guiding factor. The fact that exports of jute manufactures between April and November showed an increase of Rs. 28.94 lakhs only carries with it a lesson. Too much hope should not be placed in war bag orders or in the limited improvement shown in the shipments of raw jute as compared with 1940. There is, however, the fact that imports of many classes will contract and the home market will offer many opportunities. Due note should be taken at the same time of the fact that a fall in imports will affect the further development of Indian industry in wartime. If too much concern is shown in this matter just now, it is because of the difficulties experienced by existing industries as regards plant extensions etc. If the war checks Indian exports for example to the U.S.A. it will check also the expansion in imports recorded during 1941-42. The increase of Rs. 13.67 crores in the value of India's imports of manufactures as between April and November cannot be attributed wholly to the advance in prices as lease-lend had come into operation

while exchange, too, was singularly stable. But the new war will affect directly the active and favourable balance that India had come to enjoy in regard to her trade with the U.S.A. Egypt and East Africa can offer only slight compensation when trade with many countries beyond Burma is at an end. It is increasingly clear that the war will determine the course of trade to an increasing extent and the balance of trade may turn out to be less favourable than in the second year of war.

**Shellac Trade**

The shellac export trade had its full share of troubles in 1940-41. To-day, however, the position is different in view of the certainty that no supplies from Thailand or Burma can be had for some time while the demand of U. S. manufacturers is not likely to fall. It may be justly pointed out that the high stability of shellac prices over a period since the end of 1940-41 is wholly based on calculations concerning larger offtake in the U.S.A. The radical improvement in conditions and outlook after the end of 1940-41 confers interest on the survey made by the Lac Cess Committee in its last report. The decline in exports to 808.877 maunds in 1940-41 was a measure of the harm wrought by large fluctuations in prices during 1940. Total production fell to 1.2 million maunds because of poor crop conditions including a deficiency of good quality broodlac. The production of lac in 1940-41 at 1,233.375 maunds was the lowest for the five years 1936-41. The fineness in quality due to better washing and preparation was certainly a feature of 1940-41. The extension of Agmark to seedlac should afford an advantage to those who take the advice of the Committee as regards washing, packing etc.

**Defence Loan Totals**

The pace of subscriptions to the Defence loans may be said to have definitely quickened after the entry of Japan into the war. Some part of the credit must however go to the organisers of the Calcutta Defence and Savings Week. In describing the way in which subscriptions rose during November reference was made to the continuously dominant share of Bengal in respect of contributions. It is clear that Bengal must have retained its lead during December also. The latest figures show that total subscriptions to the second Defence Loan in the fortnight ended January 3, 1942 amounted to Rs. 19.447 lakhs. The good work of the first half of December was apparently neutralised by the evacuation craze, the incidence of holidays and the bullion mania. It is clear that if the pace of the first week had been maintained right through the total for the month of December alone would have been over Rs. 20 crores. There is indeed reason to believe that a proportion of withdrawals of cash must go hereafter into the Defence Loan. The depression prevailing in the stock exchanges is in many ways a favourable factor. The total subscribed since June, 1940 up to January 3 is known to be over Rs. 109.05 crores. Of this vast sum, made up in part of the first defence loan which embraced conversion of the 5 per cent. 1940-43 loan, the Second Defence Loan alone claimed Rs. 57.04 crores nearly. The total under the second loan is obviously larger than the total for the first loan which was taken off and replaced by the second. The total sales of Defence Savings Certificates up to January 3, have produced Rs. 450.49 lakhs. The total must be considered disappointing as the 3½ per cent. tax-free yield does not appeal as yet to the small saver. Interest-free loans up to January 3, amount to Rs. 265.81 lakhs. This sum means a gain of about Rs. 8 lakhs to the Government by way of interest but it cannot be considered a very good total as the very rich, as contrasted with the Princes, have so far shown no disposition to lend on special terms; even though interest is waived, the return is assured. Since the latest published total points to an increase of about Rs. 10 crores in a month, December may be set down as a good month but India will have to do vastly more in 1942 as the war is nearer and expenditure keeps rising.

**Stocks and Products**

It is good to know that inventories of U. S. manufacturers generally had risen in the third quarter of 1941. The rise should contribute to the immediate advance in war production for which the Allies hope. In the National City Bank's latest letter will be found an analysis of the major developments of the third quarter. The rise in inventories is traced to higher costs, larger turnover and uncertainties of delivery. It is not only accounting procedure that has to be modified in the face of priorities and allocations. If there are disturbing or obscuring effects on profit and loss statements it is certainly encouraging to note that the trend in inventories since 1939 has been strongly upward clearly showing that it was not the Government alone that developed an interest in strategic reserves. The price-control adopted early last year had a better effect than intended by making manufacturers turn to building up metal reserves. It is in reality a fact rather than a problem that arises from the accumulation of stocks. The effects on revenue, individual or national, can be readily disentangled, and if one can take profit indications as a guide, it may be said that corporate profits generally have been singularly stable since the final quarter of 1940 contributing directly to the building up of stocks. If the shareholder has to take account of increased taxation while the uneven expansion characteristic of the first half of 1941 persists, it is gratifying to learn that the retail sales of chain stores showed a strong rise after the summer. Larger sales induced dealers to make for stock. The improvement in manufacturing and sales is not confined to Atlas Powder and Baldwin Locomotive. Automobile sales showed no drop over the nine months period of 1940-41 selected for comparison. The sales position should have materially assisted the rise in revenue necessitated by an amended defence programme and by the lease-lend appropriations of 13 billions. The Revenue Act of September introduced higher taxation when incomes as a whole were rising. Conditions were favourable and Secretary Morgenthau's opinion that only one-third of total expenditure need be met by borrowing found more approval than expected, though only half the money could be drawn from taxes. Actual outlay it has been said, was around the 1917-20 level. But expenditure was rising right through 1941 and defence expenditure in September alone exceeded 1,360 million. If the budget deficit for 1941-42 was estimated at 12½ billions four months ago it must be assumed that the upper limit to the Federal Government's debt will soon be further modified. There is, however, the essential fact that in July-August total war production was sluggish. It should have warmed up since and the rate of saving should have risen at the same time. The fact that Canada reported sales of savings bonds at the rate of 7 to 10 millions per month must be taken as auspicious.

## GOVERNMENT OF INDIA
## DIRECTORATE GENERAL OF SUPPLY

**NOTICE.**

**Export of Rubber Manufactures from the United Kingdom**

The export from the United Kingdom of all rubber manufactures containing 50 per cent. or more by weight of rubber will hereafter be controlled by the issue of export licences. His Majesty's Government in the United Kingdom will grant licences for export of rubber goods only when it is satisfied that refusal to allow export of such goods would endanger the war effort. Applications for licences for export to India will not be considered unless an import assistance recommendation has first been obtained from the Department of Supply. The only exceptions are:—

(a) rubber belting and other rubber parts of essential machinery, for allowing export of which His Majesty's Government will not demand import assistance recommendations if they are required for replacement purposes or with a machine which has already been covered by a recommendation.

(b) tyres, about which a separate announcement will be made and which do not need recommendations for the present.

All persons who desire to import rubber goods from the United Kingdom are advised to apply to the Director-General of Supply, New Delhi, for import assistance recommendations and to place orders on the United Kingdom only after they are informed that import assistance recommendations will be issued. Applications must be submitted in triplicate in the prescribed form. These forms will be available free of charge from the following offices:—

(1) The Director-General of Supply, Department of Supply, New Delhi.

(2) The Controller of Supplies, Bombay, Calcutta, Madras, Lahore, Karachi, Cawnpore.

As export restrictions in the United Kingdom have come into force with effect from the 6th of January, 1942, licences will be necessary for export from the United Kingdom of rubber goods already on order. Applications for import assistance recommendations in respect of such orders may also be made to the Director-General of Supply, New Delhi, in the manner described above.

In no case will be Director-General of Supply issue import assistance recommendations unless he is satisfied that the goods are required for purpose essential to the war effort.

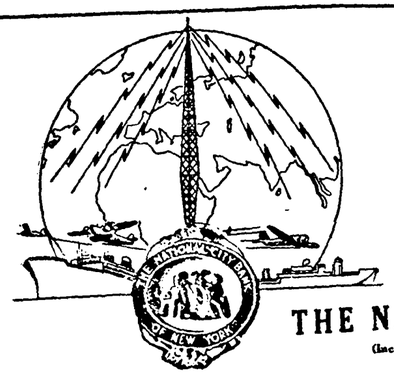
# Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please."
—(As You Like it.)

There are four questions which are now exercising people's minds. Firstly, will America be in a position to produce the planes, tanks, ships and munitions on the scale she has announced for 1942 and 1943; and, if she succeeds in producing on this scale, will it suffice to crush the formidable Axis Powers? Secondly, how are these war supplies to be conveyed to the appropriate centres if, on the one hand, Japan succeeds in securing possession of strategic places in the Far East and if, on the other, sea communications are gravely threatened by the German U-boats in the Atlantic and the Japanese submarines in the Pacific? Thirdly, while it is true that the German forces have been given a sound trouncing by Russia, will Hitler be able to replan and resume the offensive once the rigours of the winter are past? Fourthly, with these two terrific wars raging in Europe and the Far East, will war also come to India? It was a fortnight ago that President Roosevelt announced that America would produce 60,000 planes, 45,000 tanks, 20,000 anti-aircraft guns and 8 million tons of shipping in 1942; and 135,000 planes, 75,000 tanks, 35,000 anti-aircraft guns and 10 million tons of shipping in 1943. The programme thus outlined is most impressive. But will this programme be fulfilled? There has been a tendency, in recent weeks, to consider Mr. Roosevelt as one who talks big and does little. I have heard this kind of view expressed by many European friends in Calcutta. "It is time he starts doing something", is a typical remark we hear from those whose own contribution to the war is frenzied activity in this fete or that tamasha.

To understand President Roosevelt and the commitments he has made on behalf of his country, it is necessary to appreciate that the President could not move except with the march of his own people; that he led his countrymen, in gradual stages, from isolationism to unlimited support for anybody and everybody who is fighting the Axis Powers; and that, while this transition of American sentiment has taken eighteen months, the President has had to set up the organisation and install the machinery for the fullest utilisation of American resources for war purposes. Till May 1940, everyone in America, including the President, was satisfied that the war was Europe's business. As late as June 25, 1941, America made no response to the dying appeal of France. Speaking in the House of Commons on that date, Mr. Churchill said:

> "M. Reynaud, the courageous Prime Minister of France, asked me to meet him at Tours . . . We agreed that a further appeal should be made by M. Reynaud to the United States, and that if the reply was not sufficient to enable Reynaud to go on with the fight, then we should meet again . . . . On the sixteenth I received a message from M. Reynaud . . . . to say that the American response had not been satisfactory, and requesting a formal release for France from her obligations under the Anglo-French Treaty . . . . The House will naturally not expect me to say anything about the future. The situation at the present time is so uncertain and so obscure that it would be contrary to the public interests for me to attempt to pronounce upon it".



Mr. Churchill was convinced that only America could save Britain. But the biggest battle was to win America. In gradual stages, he won over Mr. Roosevelt. Then began Mr. Roosevelt's battle to win the Americans. Those who know the heterogeneous elements which make up America will have no difficulty in realising that Mr. Roosevelt had a more difficult job in winning the Americans than Mr. Churchill had in winning Mr. Roosevelt. The step-by-step strategy of Mr. Roosevelt is revealed by a study of the Defence programme as announced from time to time.

On May 16, 1940, the President sent his first emergency message to the Congress and asked for an extraordinary appropriation of one billion dollars. On May 28, the total emergency Defence programme was estimated to cost four billion dollars. The Lend and Lease Act was passed in March, 1941, and the total Defence cost amounted to forty-two billion dollars. The United States war programme as announced early this year is fifty-six billion dollars. Describing hydra-headed expansion in Defence expenditure, a writer in an American magazine makes the following comment: "At this point the recently acquired human faculty of thinking cost in terms of money was punch-drunk. To the Treasury and Budget Bureau people, to the keepers of the public purse in Congress, to the OPM people, to the Army

and Navy procurement bureaux, and, of course, to the people, a billion more or less meant nothing at all. Senator Pepper, who lives in dread of being caught with his imagination down, was saying it was going to be cheap at three hundred billions, which is a figure that approximates to the total national wealth."

What a stubbornly insular,
Stupidly callous,
Narrowly prejudicial,
Childishly shallow,
Dim-witted, fat-headed,
Mulish, obtuse,
Shortsighted, bigoted,
Fatuous goose,
Is the man who remarks
When discussion is brought
To the subject of taxes,
"A billion's a lot!"

Let us try to understand what this fifty-six thousand billion dollars means. Fifty-six thousand million are equivalent to £14,000 million. This is more than four times the war budget of Britain. £14,000 millions are equivalent to Rs. 17,000 crores, which is about fifteen times the total public debt of India. America, then, has decided to spend this colossal sum on the Defence programme. She can raise the money. The next question is whether this expenditure of colossal funds will be directly and immediately transformed into planes, tanks and guns? In this connection, one has to remember that the big American industries such as the automobile have already been changed over for munitions production. What time President Roosevelt was endeavouring to convince the American public, he was equally busy with those changes and additions and expansions that were necessary to transform civil industries into military arsenals. This transformation is now complete. And, as the new year begins, the mammoth American industries are ready and able to take up the huge defence orders.

Another point to be emphasised is that the American way of extending industrial establishments and setting up new ones has a unique tempo of its own. M. Marilo has written a pamphlet entitled "A short war through American industrial superiority;" and the following comment appears in the "Saturday Evening Post" on M. Marilo's experience:

> "He (M. Marilo) has seen the American way of new plant construction, the steel frame going up while the ground was being levelled for the floor; he has seen an aluminium plant that was started in November producing aluminium in May, whereas in Europe it would have taken eighteen months to do it; he has seen heavy electrical machines made, delivered, installed and working in ninety days, whereas in Europe they would need a year; he has seen an airplane-engine factory, covering fifty acres of ground, with a capacity of 1,000 engines a month, built, tooled, manned and brought to production in 193 days; he looked at a hill on what they told him was the ideal site for an electro-metallurgical plant, and it made him gloomy to think how long it would take to remove the hill; a week later he looked again and the hill was not there, but in place of it the beginning of a metallurgical plant, and he could hardly believe his eyes—'this being made possible' he remarks 'by the big power excavators which at the same time carry away the soil, the trees and the rocks.'
>
> He adds: 'Nothing of this kind exists in Europe'."

American opinion has passed through several stages—national defence, hemisphere defence, arsenal of democracy, then defence of freedom everywhere in the world until Hitler is destroyed. America has thus assumed unlimited liability and 'worldwide responsibility'; and the United Nations do not themselves know what they need now and what they will be needing to-morrow. Everyone is wanting everything that can be made to fight and float and shoot. And unlimited quantities of everything. The supply of everything in unlimited quantities is the grand commitment which America has taken upon herself. She has put out the money. She has mobilised her industrial power. She is determined to fulfil the programme she has let herself in for. She can. She will.

If America produces war weapons on this scale, it should definitely suffice to tip the balance overwhelmingly in favour of the powers that fight Hitler and Company. I shall mention the comparative figures of steel production in America and in the Axis countries so as to stress the superiority which the Allies will be able to command. America is already producing over eighty million tons of steel a year. The 1942 programme is ninety million tons of steel. The steel production of Germany and of the occupied countries such as France, Belgium and Luxemburg can, under no circumstances, exceed fifty million tons. In the course of 1942, American production will enable the Allied Nations to leave the Axis Powers behind in the quality and quantity of equipment. The military blitzkrieg of Hitler will, one may be sure, be beaten by the industrial blitzkrieg of America.

Will America be able to ensure that these supplies are quickly delivered where they are most needed? The new shipping for eight million tons to be produced this year is the answer to the question. The American navy was taken by surprise by the treacherous moves of the Japanese navy and of the German U-boats. In the case of Japan particularly, the initial advantage has been fully exploited. That this advantage will be only shortlived, is becoming clearer and clearer. To-day's news refers to the arrival of the Flying Fortresses from America in the Dutch East Indies. Read also the following cable:

> "A stream of United States reinforcements has been started to the South-west Pacific, a high Government official reported to-day. Hawaii and the United States Pacific coast have been fortified more formidably than ever since the attack on Pearl Harbour; and Japanese advantage in surprise has been offset by the increasing flow of long-range bombers, the official added. United States army, it was disclosed, has sped bomber forces into the threatened positions accompanied by fighters. Extensive anti-aircraft and other defences have been created. The rapid movement of mechanical materials has been made possible by extensive preparations during the past eighteen months."

It is only a question of weeks for America's industrial superiority to assert itself. The navy will keep the U-boats and submarines in their places; and, when the new tonnage of shipping is released month by month, it will carry, in increasing safety, the war supplies from America to Europe, the Middle East and the Far East—and to India.

I have exhausted the space allotted to me for this week; the two other posers must be left over for detailed answer in next week's issue. I may, however, furnish brief replies to-day.

Will Hitler be able to resume his offensive against Russia in spring?

No. Before that, the Red Army would have knocked out the ardour and spirit of the Nazi forces who can keep up only continued successes.

Will war come to India?

Not likely. Japan is more interested in East Asia—and in the Pacific. Her latest move is against Australia which may be said to rule out India.

Few official exponents of finance acquired the expertise that Sir P. R. Rau could claim. His death announced to-day leaves the Finance Department distinctly poorer. To a very remarkable academic record he united a very great career in a department where Indian talent has undoubtedly had full play. A massive intellect lifted Sir P. R. Rau early in his career very near to the top. A gift for incisive statement reflected in his case the ability to get at the core of a big file in a couple of minutes. Departmental routine or high policy found Sir Raghavendra Rau always equal to the job in hand. I remember not as a tired official but a youthful prizeman going home with a load of books away from a college day in Madras. I kept in touch with him over a long while to find that his freshness and masterly touch developed with age. His peerless knowledge of currency was perfected by administrative contacts. It is this which will create a void very hard to fill.

*(From Our Correspondent)*

New Delhi, Jan. 20.

THE Viceroy's return was closely followed by the visit of Mr. Duff Cooper who is now on his way back to England from Singapore. A good deal of political significance is attached to this visit, for it is believed that the Viceroy discussed the Indian question with Mr. Duff Cooper at great length in order that the latter may give a full acount to the British Cabinet. The Viceroy had one short meeting of his Council on Friday last which appears to have dealt with only certain routine questions. Tomorrow's meeting also is not likely to be very important as no less than three Indian Members are away on tour—and the Information Membership has not yet been filled up. At the moment, therefore, the general impression in New Delhi is that for two or three weeks more no important political development may be expected. Though messages from London indicate the possibility of "a new offer to India"—and a new Secretary of State for the India Office—there is nothing in New Delhi talks to justify this optimism. It appears, however, that the authorities are seriously considering the question of responding to the Sapru Appeal to the extent of reducing the European element in the Viceroy's Council and appointing non-official advisers in the Provinces. Even the possibility of transferring the Finance portfolio to an Indian after the next Budget and the association of an Indian Defence Member are being constantly mentioned.

* * * * *

From this point of view the appointment of General Hartley as the Commander in Chief is of great importance. He is a General of the Indian Army who has ben responsible for organising the North West Frontier defences. As the Indian Command has now been relieved of responsibility of external operations, its duties are now strictly confined to Indian limits. As the spread of Japanese aggression has brought hostilities to the very gate of India, the military responsibilities of the Indian Command have so greatly increased that the Commander-in-Chief may have little time for the duties attached to the Defence Membership, such as attendance in the meetings of the Viceroy's Council and in the Legislature etc. The time may be considered appropriate for appointing an Indian non-official as Defence Member who will relieve the Commander-in-Chief of these responsibilities. There are any number of eminent public men who will fill the position of India's Defence Member worthily. So far as I am able to gather the idea seems to be that as the Congress and the Muslim League show no inclination to get together, the present "expanded" council of the Viceroy should be further expanded in order to make it completely Indian and give it increasing powers to take decisions jointly and act on them. At present the official mind appears to be moving more in the direction of the Sapru formula than of exploring possibilities for bringing the Congress and the Muslim League for forming a National Coalition Government.

* * * * *

The Indus Commission presided over by Sir B. N. Rao resumed its sittings yesterday. What is called the Rabi case dealing with the Sukkur Barrage canals is now being heard but it is likely that the Commission will have to adjourn early in February and meet again in April for hearing the arguments in the Kharif case. Sind's claim is that the Barrage canals should be given priority to Thal, Haveli and Khairpur canals and that no part of any shortages which may occur should be borne by the Barrage canals. Sind questions the correctness of the data upon which the Anderson committee based its recommendations and contends that the shortages are neither infrequent nor small, that in some periods the supplies of the river are not sufficient even for the requirements of the Barrage canals and that if the Thal and Haveli canals are allowed to draw the supplies allotted to them there would be serious shortage at Sukkur when the Rabi crops mature. Mr. Coltman on behalf of the Sind Government is arguing at great length assisted by his Finance Minister, Mr. Vazirani, who has specially come to Delhi for the hearing.

* * * * *

It was expected that Mr. Allah Bux, the Premier of Sind, would himself come for the meeting of Provincial representatives called by the Finance Member which began yesterday, but he has been unavoidably detained. No decision has yet been taken regarding the Barrage payment question which has been the subject of discussion for some months past between the Sind Government and the Government of India. For the present the Sind Government proposes to budget for the payment in full of Rs. 75 lakhs according to the Niemeyer provisions, but after seeing the collections in the Barrage area next year the Sind Government may approach the Government of India again for suitable remission. In effect the settlement of the question has been postponed for a year. At the Finance Member's conference yesterday the main question discussed was ways and means for increasing the Defence Loan collections. The present return which averages about Rs. 5 crores a month is not enough for meeting the big increase in Defence expenditure. It has to be doubled or trebled in order to provide sufficient funds for financing Defence measures and war supplies—requiring not less than Rs. 20 crores a month. It is likely that as a result of the conference a drive for popularising Defence Loans further and also for enabling greater investments by Provincial Governments, local bodies and others will be undertaken throughout the country. Other questions discussed include allocations for civil defence expenditure.

* * * * *

Some of the difficulties now being experienced by Indian insurance companies were brought to the notice of the Commerce member at a lunch party in his honour given last week by the Federation of Indian Insurance Companies. The Commerce Member was frank and lucid in his reply. On behalf of the Government he gave the assurance that there was no intention to choke the growth of insurance business or to observe any invidious distinctions between one class of companies and another, but he warned the companies against the unhealthy race for new business through extraordinary expenditure. He asked them to conserve their resources by strict economy in expenditure and other wise measures for safeguarding their future. The Commerce Member advised the companies also to organise themselves in such a way as to reduce the interference of the Superintendent of Insurance to a minimum.

*(From Our Correspondent)*

Bombay, Jan. 21.

Appointments to the A.R.P. attract so much notice in the press that one may suspect that civil defence, not cotton is the real interest of Bombay. The trade hold-up has led to the issue of a letter by many members jointly to the Chairman. The letter has led to a reply which details the circumstances leading to the suspension of trade. The letter refers to the difficulties caused by the dislocation of transport and explains why the payment of penalty has been made optional. It has been explained that the penalty is still there, since it is only to be removed with the approval of Government, few members can object. Reference has been made to the enlargement of the usual difference between the hedge contracts for Oomra cotton in the course of a month. The E.I.C.A. was anxious to protect members and had merely asked for the suspension of penalty clauses. It has been urged that the steps adopted by the Board will not prejudice dealers or incite bears to try fresh tactics. Anyway, the Government has refused and the market is open again. While the E.I.C.A. was closed, the Mahajan association has been open. Other markets being weak cotton rates have been falling; paucity of demand and a depressed share market are no longer forces in the background as before. The cloth market in spite of a temporary revival is in poor form. Prices have been weakening over a month and it is not surprising that forced sales have led to a drop in prices. While export demand helps to some extent still it is widely recognised that the market cannot look to consuming centres. Even the rates for British goods have been scaled down during the present depression. The price structure is more rickety than ever. Merchants here are anxious and puzzled, and tax fears alone are enough to upset people who are not encouraged by visions of complete disappearance of Japanese competition.

The late Mr. Justice Ranade is the subject of a special tribute by Sir C. H. Setalvad reinforcing the speeches of Messrs. Sastri and Javakar. Sir Chimanlal is probably one of the very few men who knew the eminent Mahrashtrian. Belonging to the community of the Peshwars he was a dominant personality in the Bombay City and Sir Chimanlal remembers vividly. Ranade's brilliant career at college marked him out for outstanding success. It is recalled that Sir D. E. Wacha knew him as the most remarkable man of his set at the Elphinstone College. Entering the Civil Service, he passed through many posts. He saw service in the States before coming to the High Court. The Sarvajnik Sabha founded by Ranade was the fount and source of political life in Maharashtra. Ranade's great independence of mind resulted in marks of official displeasure but he never severed his ties with the political organisation till Tilak appeared. If his fame as a social reformer is great, he is the original pioneer among Indian economists. He certainly did much to make the List known outside his country. The Indian economic conference did well to remember that the study of economics has been directly stimulated by the famous Essays. Sir C. H. Setalvad recalls that Ranade refused more than once the Dewanship of Baroda. The Tata Institute is to be remembered among the institutions founded by Ranade who was very active in university affairs. Sir C. H. Setalvad has done well to refer to the Rise of the Maratha power which has made Maharashtra conscious of its own glories and reminded the public that history can be written by others besides professors.

This week's meeting of the Indian Central Cotton Committee will have to consider the short staple problem in all its bearings. The loss of overseas markets will certainly hit Berar most. Arrivals in the C. P. are said to be very heavy and rail transport is difficult, therefore statutory restriction of acreage is recommended by some while others ask that Government should buy cotton and store it up. What has been said by Dr. Nazir Ahmad as regards new industrial uses has not been overlooked either. What has been done in the U.S.A. deserves special attention as the short staple types must have an outlet. The difficulties as regards supply of baling hoops will be brought to the notice of the Committee. There is also a possibility that the types suited to Gujerat will be examined because there is a feeling that the variety 1027 A.L.F. does not fetch the expected premium. Resolutions concerning the suppression of malpractices, shortage of wagons and the improvement of the crop forecast are not surprising at all but some novelty attaches to the suggestion that certain American types should be tenderable against the Broach contract also another advocating that dealing in Broach April-May should begin not later than February of the preceding year.

The Stock Exchange still remains a depressed area. Business this week has been small and the Board is again up against the problem of minimum prices. The tone is impaired though giltedged responded to the large-scale buying of banks reported of late. Last week the Board of the Exchange asked Government to keep the old minimum prices in force for the February settlement. The steady decline in rates has been arrested but most mining shares here are lower than in Calcutta and brokers complain that business, if it is not helped by the maintenance of minimum prices, should not be hampered by the retention of certain restrictions. Last week over one crore went into the clearing; the settlement was tided over but that is about all to say. Forward business cannot survive if conditions remain the same and it is for the investor to say what kind of protection he wants.

The courts are now seized of a dispute arising from a demand for inspection of documents. A shareholder of the Bombay Telephone Company has asked the High Court to examine the terms originally offered to the company's shareholders by the Government. The court has asked that the company's books and audited balance-sheets should be made available to see if a proper value had been put on the assets. Mr. Justice Chagla's order will certainly give encouragement to the Madras company's shareholders. Notwithstanding the acquisition of all shares held by London, it is known that the offer hangs fire. The papers of the Special Officers who advised acquisition have also been requisitioned before the next hearing takes place in March 1942. The shareholders think that Rs. 134 is the fair price per share and argue that the Rs. 89-15 offered by Government is deliberately lower. The motion for papers has succeeded but it is doubtful whether the court can compel the Government to withdraw the old offer and make a new one or order the dissolution of the Government Telephone Board in order to help the protesting sahreholders.

Consumers are not forgotten in the new committee set up to watch prices in Bombay. The Controller has got advisers who belong to classes with incomes below Rs. 250 per month. The under-privileged should make themselves heard hereafter. Profiteering will be promptly notified because the difficulty till now was the inability of the buyer to assert his own rights. Watching the bazar is a thrilling occupation for the new committee which will have a chance to sample the rumours, learn the prices and hear about supplies. The Committee has not got any other duties. It can't say that wages are low or complain about the cost of living and demand fair prices. That is a duty allotted to other committees. The middle class spokesmen cannot do anything besides report breaches of the price control orders.

Here too rumours are rife. The wonder is how they come and how they spread. Last week the Governor of Bombay discussed this all-absorbing question. He spoke rather freely at a girl's school prize-giving and told the teachers that they at least should lend no ear to lying

*(Continued on page 126)*

# Resume of Commodity Markets

THE week is completely devoid of any interesting features in the commodity markets. The continued Japanese successes have had a definitely discouraging influence and for the most part of the week the general tendency has been downward everywhere. The strength of the jute and jute manufactures markets, so clearly noticeable at the time of last writing, has been only shortlived. The raw cotton market has shown signs of weakness since the resumption of trading on Thursday last week though there has been some resistance to selling pressure. The bullion markets have been dull while in the wheat market there are no important changes to be recorded, business passing more freely at controlled rates.

Considerable interest attaches to the Third Price Control Conference to be held in the first week of next month. There are reports that the various provincial governments are opposed to the fixation of maximum prices for commodities with which they are more intimately connected. Thus, Punjab wants a revision of the maximum price fixed for wheat while the U. P. and Bihar Governments are opposed to the fixation of maximum prices for sugar. Bengal does not like interference with the affairs of the jute trade. The problem of fixing maximum prices for cloth is beset with many difficulties. Therefore, it remains to be seen how a satisfactory solution can be reached at the forthcoming Price Control Conference.

### Jute

The jute market is now tied to the apron-strings of the goods market. The improved tone in the several sections in the jute market last week was mainly due to the sudden recovery in prices for hessian. In the absence of raw jute exports in any appreciable quantities, the jute trade is mainly dependent on local mill buying. And, unless the mills in their turn are able to do good business there will be no tendency to replenish jute stocks. Thus, the relapse in the hessian market during the latter half of the week has resulted in a setback in the quotations for jute as well.

### Jute Manufactures

That the rise in prices last week in the hessian market was purely technical is clearly brought forth by the setback in values for hessian during the last three days. With the demand for near covering over, operators are awaiting further developments. In spite of the hopes regarding the possibility of an improvement in the freight position, the outlook for exports in the next month is considered to be unsatisfactory. Hence the reason for the marketing down in values after the shipment demand for January was satisfied.

### Cotton

The Bombay raw cotton market has been rather weak. In spite of the continued strength of the New York market prominent operators sold freely earlier in the week and Broach April-May came down to Rs. 198 from Rs. 208-8 at the end of last week. There has been a slight recovery to Rs. 202 but the undertone is still quiet.

The controversy regarding the amendment to Bye-law 64 of the East India Cotton Association has ended as the Bombay Government has refused to give the necessary sanction. The amendment in question relates to the levy of the penalty for failure to tender cotton on the due date. On account of the shortage of wagons it is expected that there will be a shortage of 20,000 bales due to be delivered on Oomra December-January contract. As the committee feared that there would be an attempt at 'corner' by prominent operators, it was decided to make the levy of the penalty optional, but the Government turned down the proposals as it was believed that it would encourage unnecessarily bull activity and also affect other positions. In order to take advantage of the huge premium now offered for Oomra varieties in Bombay every effort is being made to transport cotton from upcountry centres.

### Piecegoods

The piecegods market presents a more normal appearance. There has been no panicky selling. Prominent dealers have removed their stocks to safer places than Calcutta. Prices have been stabilised. In some cases, even improvement in prices has been recorded. Business is confined mostly to ready lots and there is no tendency to enter into commitments. Most of the business has been on account of indigenous mills.

### Rubber and Tin

In spite of the fact that the International Rubber Regulation Committee and International Tin Committee will not have any important function to do, owing to the temporary loss of the major tin and rubber producting areas, it is proposed that these committees should be kept alive. Efforts are being made to increase the rubber production in India. The negotiations to conclude an agreement for increasing the reserve area under rubber have now to be abandoned as the conclusion of such an agreement at the present stage would be meaningless.

Where, to-day, steel serves the mighty war machines of the world, to-morrow it will be the strength of steel which carries the cargoes of peace-time. Now steel fills a thousand holds with cargoes of destruction. To-morrow it will hoist food and sustenance abroad, to be carried surely and securely to the four corners of a war-weary world.

# Jute and Jute Manufactures

(By Our Jute Correspondent)
Calcutta, Jan. 22.

SINCE our last report, the keen edge has gone off demand in all sections of the market and there has been much less activity. The American stock and consumption figures for last month have been published and consumption shows a gratifying increase to 750 lakhs of yards, no less than 220 lakhs greater than the previous month. It may be that this is accounted for by processors laying in stock from dealers in anticipation of possible difficulties in shipping owing to Japan's entry into the war, but it certainly puts a much better complexion on the total figures for the year. For the 12 months these amount to 7130 lakhs yards, very little less than the average for the past five years and 600 lakhs better than the 1940 figures. Stocks were down by 460 lakhs yards as compared with the end of 1940, the shortage being very marked in afloat stocks due to the restricted tonnage available in December. This will probably show an improvement at the end of this month. But an increase of 50 lakhs yards per month on the average over the previous year's consumption is a satisfactory feature and there seems no reason why this should not be at least maintained in present circumstances. It has been felt that the consumption of Jute Goods has not kept pace with the general quickening in tempo of general trading conditions in the States.

With half the Jute season gone, it is instructive to examine the position with regard to Mill purchases as compared with consumption. From July to December, mill production totalled 610,258 tons, the equivalent of something over 34 lakhs of bales of jute. During the same period Mills are estimated to have purchased 28½ lakhs of bales. That is to say, they must have eaten into their stocks to the extent of over 5 lakhs of bales. The position at the same point last year was exactly the opposite. Mills had consumed about 27 lakhs of bales and had purchased around 36 lakhs of bales, having increased their stocks by the difference. As we have pointed out before, if Mills continue working 60 hours per week up to the end of June, as seems by no means unlikely, they will consume in the seasonal year July '41 to June '42 75 lakhs bales. The recent burst of activity since the New Year has probably increased Mill purchases to 31 lakhs of bales which would leave them still to buy 44 lakhs of bales if stocks are not to be encroached upon. The most optimistic estimates do not place the quantity of jute left in the mofussil at nearly this figure and it is recognised that the bulk of the balance is of low quality. So, leaving apart what may be exported, it is fairly obvious that Mills will not be in nearly such a strong position as regards stocks of raw material at the end of this season as they were at the beginning. It is to be hoped therefore that, *pace* the Bengal Government, Providence will look kindly on the crop which will soon be going into the ground, and provide the trade with an ample out-turn as well as with good quality.

Unfortunately labour troubles still cause some anxiety. The mills to strike earlier have all been able to resume work and the workers have gone back without concessions. It was indeed difficult to ascertain what concessions they wanted, except of course the inevitable one of higher wages. But the higher earnings consequent on the longer working hours, more than compensate for the rise in the cost of living. The second batch of mills to go out more than a week ago have not yet returned. In this connection it might be suggested that some of the notices issued, or proposed to be issued, by the Mills Association to workers in connection with possible air raids, seem to be couched in somewhat ill-advised terms. One we have recently seen stresses the compensation payable in the event of death or injury as a result of raids. It would surely be less disturbing to the comparatively unlettered labour force if the point stressed were the very small chance of any injury at all so long as they obeyed instructions and kept under cover, with the matter of compensation added as a secondary consideration. To stress the latter point by itself will almost inevitably tend to "put the wind up" an already somewhat uneasy community.

There has been somewhat more doing in the Export Jute market. Dundee has been showing renewed interest, and at prices which show advances of anything from £2-5 to £3 per ton. All grades have been enquired for and sales for February shipment have been recorded in Dundee Tossa assortment at Rs. 71 and in Dundee Daisee assortment at Rs. 61, with Tossa 4s also at Rs. 61. Outport Firsts were reported at Rs. 51-8 January and Hearts at Rs. 35 for March|April. Mills at the end of last week bought Firsts at from Rs. 57 to Rs. 60, Lightnings at from Rs. 44 up to Rs. 47-8 and later at Rs. 45, Hearts at Rs. 37 to Rs. 39 and Dundee Daisee 2|3 at Rs. 59. Special N.C. Cuttings sold at from Rs. 18 to Rs. 21. Demand seems to be satisfied for the moment and buyers have withdrawn, but prices remain steady unless for low qualities which Balers are pressing for sale to get quit of their stocks. The Futures market remains dormant, the boldness of the operators there-

*HEAD OFFICE* :—BOMBAY MUTUAL BUILDING, HORNBY ROAD, FORT, BOMBAY
AGENTS ALL OVER INDIA, BURMA AND CEYLON

in being apparently confined to their speculative operations, and not to risking possible Air raids.

Very little falls to be reported in the Loose Jute market. Offerings have been limited and often unattractive following on the recent active spell. European Bottoms alone have sold at Rs. 9 and the general quotation for assortment not exceeding 20|80 Mids and Bots is Rs. 13-4 and Rs. 9. European Tossa Mids and Bots were reported at Rs. 13-8 and Rs. 9-8, and Indian Jat Tops at Rs. 14-8. Quotations are steady owing to the firmness of mofussil markets where the demand is fully equal to the somewhat meagre imports. Estimated arrivals of loose jute into Calcutta during the first half of January were only 2,01,000 B|s as compared with 4,72,000 B|s last year. The totals to mid-January from the beginning of the season are 1942, 42,16,000, 1941, 50,37,000.

The Fabrics section also has been much less active. Near demand appears to be satisfied for the time being and forward enquiry, what there is of it, is as a rule much below the levels at which Mills would be disposed to trade. Prices were fairly well maintained over the week-end with business done in eleven porters for January at rates varying between Rs. 26-14 and Rs. 27-4, and for February from Rs. 25-10 to Rs. 26-4. April|June nines were reported at Rs. 18. In Heavy Goods "B" Twills were taken at Rs. 40 Jan. and at Rs. 38 Feb|March, Liverpools at Rs. 44 March and at Rs. 43 April|June, and January Cornsacks at Rs. 40-8. Salts were also reported at Rs. 34 April. Turnover however has been small and with fresh demand failing to appear, prices at the close have been sharply marked down all round and the market closes quiet and easy.

(*Continued from page* 123)

rumours. He recalled that last month there appeared a story about the imminence of an air raid on Bombay. To give currency to rumours was both futile and discreditable said the Governor who objected to unjustified alarms. There was the familiar reference to Allied superiority in resources and their high moral purpose in waging war. The Governor also announced that A.R.P. did not imply that raids were inevitable or that Bombay was unduly vulnerable but that it was the citizens' duty to prepare. He asked people to take a sensible view and show a sense of responsibility. Like the Governor of Madras he described the rumour-monger as a pest. A part of the A.R.P. scheme is to get 2,500 beds more in the city's hospitals. The Government have to consider this but no difficulty is expected and the additional cost of equipment will be Rs. 1,75,000 only. Hospitals should benefit in many ways because they are turning out patients owing to lack of beds and if there is an emergency will do better than expected with additional equipment. The yarn merchants here are still complaining but they should be reassured by the news that the textile advisory panel will meet this week. The drop in prices does not excite anxiety because yarn is still high and official control in the interests of weavers is unobjectionable. Another conference may make no difference but it has to be remembered that some Provincial Governments have agitated. It cannot be said that restrictions of exports lead to a drop in prices. The fall in raw cotton is obviously the major factor, but points made by Mr. H. Madhavdas and others in an interview with the Joint Secretary, Commerce Department last week are not to be overlooked.

The local art show is going strong at the Town Hall; last week the Exhibition opened. Sir Cowasji Jehangir was in form and touched off the defects before dwelling on the merits. The canteens get the money usually assigned for entertainment and prizes take the form of defence bonds. A big increase in exhibits proves that the Society is winning popularity, but no gold medal for any entrant, so the judges decided last week. The Governor said that art must not be silent during the war. The exhibition does not at all trench on the war effort and the artists must have a chance to show what they are doing. The artists who show now have promised a share of the proceeds of picture sales for the war gifts fund. So everybody appears to be pleased, and the Governor too was quite complimentary about art in wartime. Talking about art I must add that ten valuable paintings on wooden panels in the Prince of Wales Museum have been shifted to a place of safety. The Trustees' decision to arrange for the safe custody of certain other exhibits is in consonance with reports from Calcutta about what is being done there about valuable books and pictures.

### Monetary Developments Reviewed

Dr. Basu of Indore delivered the Kikabhai Premchand lectures last year. They have been published as usual by the Delhi University. The subject of Dr. Basu's lectures was Recent Developments in Monetary Theory and Practice. A large subject surely, but treated with enough lightness to distinguish the lectures from the arid stuff ladled out in colleges. There is, of course, nothing final or conclusive in monetary theory and the whole host of books written round Mr. Keynes' General Theory proves it. Monetary theory acquires fresh importance to-day when the war brings inflation very near to India as to other countries. Dr. Basu's exposition is always clear and direct and undergraduates should appreciate the novelty of simplification. As has been said already monetary developments are many and great. Such judgments as are expressed by Dr. Basu in regard to gold reserves and the rate of saving will command general support. If the lecturer, in his review of European developments has over-simplified the process of development, in regard to cheap money and easy credit, he has certainly endorsed the view adopted by the "Economist" in its summary of the ten years off the Gold Standard.

It is good to find that Dr. Basu finds a place for the heretics like Silvio Gessoll in discussing how the rate of interest can be reduced further. But it is surprising to find that in describing the new theories concerning purchasing power nothing is said about Major Douglas' theories. The fact that they were tried out in Alberta indeed confers great interest on social credit. The Nazis have no theories but Dr. Schacht as an exponent of monetary control has had no equal. The great thing is that Nazi control works. If one looks at the available statistics relating to cost of living and prices, etc., one may say that Germany at war showed few signs of strain right up to the middle of 1941. It must be confessed that a fuller account of Nazi methods would have been of great interest to students. But the major factor, as everybody realises now was Germany's rearmament in revolt against Versailles.

There is nothing fresh about the deployment of arguments concerning public works as a means to prosperity. Dr. Basu summarises and dockets everything neatly enough though his arguments concerning the public debt seemingly run counter to accepted notions. Not long ago, the "Economist" could contemplate cheerfully the addition of 10,000 million sterling to the National Debt on the reckoning that the average rate for wartime borrowing is about 2 per cent and the net addition to annual debt service in the post-war period would be under 200 millions sterling. U. S. war finance will perhaps confuse more theories and the Budget Message of last week will induce many to alter their views concerning deficits. Certain parts of the published lectures would appear to suggest that wartime developments have been altogether ignored. Sterling depreciated after war broke out and its present stability was not attained without passing through a phase of uncertainty. The lectures should, however, have a decidedly stimulating effect on the general reader who will find much useful information concerning currency management and exchange control. The lectures should contribute to the popularising of knowledge outside academic circles and are welcome for that reason alone.

## INDIAN TEA LICENSING COMMITTEE

**EXPORT QUOTA 1942-43.**

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 8 of the Indian Tea Control Rules, 1938, Tea Estates desiring to be allotted an export quota for the year 1st April 1942 to 31st March 1943 are required to submit an application for such which must reach the Indian Tea Licensing Committee not later than the 1st of February 1942. Application forms have already been issued to all registered Estates, but the Indian Tea Licensing Committee will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application form are requested to apply for these, in the case of Estates situated in North India to the Joint Controller, Indian Tea Licensing Committee, 1, Council House Street, Calcutta, and in the case of Estates situated in South India to the Joint Controller, Indian Tea Licensing Committee, Coonoor.

J. J. B. SUTHERLAND,
Deputy Secretary.

### JUTE

Calcutta, Jan. 22.

RATHER easier conditions have been noticeable in the raw jute market during the past week. The relapse in the jute manufactures market has been responsible for the smaller buying by mills. It will be remembered that at the time of last writing a definitely firmer tone was in evidence with the strength of the jute manufactures market and that mills were inclined to buy more freely. Sellers also, were asking for an advance in prices. The rapid accession of strength to both the jute and jute manufactures markets gave many to understand that confidence had been restored and that with the improvement in shipments there would not be any appreciable setback in values. The recent developments in the war situation, however, have not been helpful to the markets. The behaviour of the jute market at the present moment is entirely dependent on the goods market.

In the loose jute section, only a small amount of business has been reported on account of mills. European Tossa Middles and Bottoms were done at Rs. 13-8 and Rs. 9-8 respectively. Indian Jat Middles were done at Rs. 12 per maund.

In the pucca bales section, shippers have not been quite active. Lightnings 2|3 were sold slightly lower at Rs. 45 per bale. Mills bought cuttings special N.C's from Rs. 18 to Rs. 21 per bale.

In the futures market, firmer conditions were noticeable earlier in the week and the quotation was as high as Rs. 59-4 per bale. No business has been transacted during the last three days and the quotation is reported to be nominally around Rs. 57.

MONTHLY STATEMENT

for the six months ending 31st Dec. 1941.

(*000's omitted*)

| | July\| Dec. 1941 Bales | July\| Dec. 1940 Bales | July\| Dec. 1939 Bales |
|---|---|---|---|
| Estimated Stock in Calcutta on 1st July | | | |
| carried over from previous crop .. | 14.00 | 3,50 | 1,50 |

Calculated at 82 2|7 lbs. to the maund and 405 lbs. to the bale.

**These figures can no longer be calculated as Government have ceased to issue their monthly Export Return for Jute shipped from both Calcutta & Chittagong.

### JUTE MANUFACTURES

Calcutta, Jan. 22.

THE jute manufactures market has registered a sharp decline in values during the past three days. It will be remembered that the strength of the markets at the time of last writing was due to the forced covering for near shipment. As shipment demand for January has now been satisfied and as there is considerable uncertainty regarding shipments during the next month there has naturally been some selling. Quotations are around the lowest levels for the week. 9 porters ready are Rs. 18-8, February Rs. 18-4, March Rs. 17-8, and April|June Rs. 16-8. The decline is most pronounced for forward positions. 11 porters ready are quoting Rs. 26, February Rs. 25, March Rs. 24 and April|June Rs. 21-8.

In the heavy goods section also, sellers have been keen for business and in the absence of any buying quotations have been marked down. B twills for ready shipment sold on the basis of Rs. 36-8. Heavy Cees for the same position Rs. 33-8, Cornsacks Rs. 39-8, Liverpool twills Rs. 43-8 and A twills Rs. 45.

The American Stock and consumption figures for the month of December make interesting reading. There is a sharp increase in consumption from 53 million yards in the previous and corresponding month in 1941 to 75 million yards in December. The figure for December is the highest for the whole year, the next best being the figure for March 1941 of 67 million yards. Perhaps the fears regarding the future supplies of goods have been mainly responsible for the sharp increase in consumption. Stocks afloat show a steep decline at 68 million yards against 164 million yards while stocks spot are higher at 145 million yards against 101 million yards. The figures are given below:—

| | Stocks at the end of Month. | | | | Consumption for Month. | |
|---|---|---|---|---|---|---|
| | Spot | | Afloat | | | |
| | 1941 | 1940 | 1941 | 1940 | 1941 | 1940 |
| January ... | 120 | 199 | 149 | 102 | 57 | 55 |
| February ... | 182 | 189 | 88 | 74 | 60 | 52 |
| March ... | 128 | 128 | 64 | 82 | 67 | 50 |
| April ... | 105 | 109 | 84 | 128 | 55 | 44 |
| May ... | 98 | 110 | 116 | 166 | 47 | 58 |
| June ... | 107 | 97 | 114 | 197 | 49 | 49 |
| July ... | 121 | 143 | 104 | 158 | 64 | 54 |
| August ... | 126 | 181 | 72 | 148 | 60 | 55 |
| September | 110 | 186 | 108 | 148 | 68 | 60 |
| October | 92 | 129 | 180 | 182 | 68 | 71 |
| November | 101 | 128 | 164 | 125 | 58 | 57 |
| December ... | 145 | 180 | 68 | 129 | 75 | 58 |

### COTTON

Calcutta, Jan. 22.

THERE is considerable difference of opinion regarding the decision of the Bombay Government in refusing to give sanction to the East India Cotton Association to amend Bye-law 64 making it optional to levy the penalty for failure to tender cotton on the due date for Oomra December|January contract. Immediately after this decision was known trading was resumed and there has been heavy selling by prominent operators. A substantial decline in values has been recorded. The substantial premium for Oomra varieties has resulted in a demand for all modes of transport and cotton is being rushed to Bombay by operators to take advantage of the premium. There has been a narrowing in the premium for Oomra December|January from Rs. 33 last week to Rs. 28 per candy but the premium is still substantial. Broach April|May are quoted Rs. 202-8, July|August Rs. 207-4, Oomra December|January Rs. 182-4, March Rs. 154-8, Bengal Rs. 124-4 and March Rs. 128-8.

In the New York market the reports regarding the deadlock over price control had a discouraging effect early in the week. But the continued trade buying has caused an upswing and quotations have been maintained at high levels. March were quoted 18.29 cents, May 18.46 cents and July 18.58 cents.

### SILVER

Calcutta, Jan. 22.

THE scarcity of fine silver is responsible for the higher premium demanded for ready position. Stocks in Bombay are reported to be on the small side. There are large despatches to upcountry centres. Indian mint silver ready are quoting Rs. 70-6 and First settlement Rs. 64-14.

In the London market, there are no important changes in prices to be recorded. The quotation for spot is 23½d., and forward 23 9|16d. Trade demand has been officially satisfied.

### GOLD

Calcutta, Jan. 22.

THE Bombay gold market has been rather irregular. A slightly firmer tendency was noticeable in mid-week, but the heavy arrivals from upcountry centres has resulted in a slackening in the demand for the metal. In spite of the further deterioration in the Far Eastern situation, bulls have remained inactive. There is good enquiry for sovereigns which are quoted relatively higher at Rs. 32-14. Gold ready are Rs. 46-14 and First settlement Rs. 46-8.

The London price for gold is unchanged at 168s.

### WHEAT

Calcutta, Jan. 22.

BUSINESS in the Karachi wheat market has been of larger dimensions. There cannot, however, be any appreciable increase in business with the uncertain Far Eastern situation and the poor attendance in the market. Operators have now reconciled themselves to the control rates and business is passing more freely.

It appears that the Punjab Government are scrupulously observing the ban on exports from the Punjab province. It is also feared that with the order directing stockholders to declare their stocks, the Government anticipate shortage. Export buying has not manifested itself and stockholders are to a certain extent disappointed.

In the Calcutta market there is no important change in prices to be recorded. Cawnpore ready and May are steady at Rs. 5-12 and Rs. 5-4 respectively.

Vol. XXIX. No. 4 SATURDAY, JANUARY 24, 1942 Price Re. 1

*Stock Markets to-day and to-morrow*

## CAWNPORE SUGAR EARNS HIGHER PROFITS

WITH the markets in Calcutta and Bombay closed for two days in mid-week and with the reports of fresh Japanese successes it could hardly be expected that there would be any improvement in the tone of the markets. To add to the difficulties of the market there is considerable speculation regarding the budget proposals for 1942|43. There are reports that there would be a big deficit for the next financial year and that there should be new taxation on a large scale. The atmosphere, therefore, is anything but congenial for new business.

* * *

The spectacular rise in prices in the jute manufactures market in the latter half of the year, with a relatively lower price for jute, has resulted in a substantial increase in earnings of jute companies in the last six months of 1941. It has been pointed out in these columns on earlier occasions that profits of jute mills in the half-year ended September, 1941 were running at the highest levels for the war period. The same impression is conveyed by the results of the Andrew Yule group of companies for the half-year ended November, 1941.

The aggregate profit of five companies belonging to the Andrew Yule group for the half-year ended November, 1941 is more than double the earnings for the previous half-year, the figure, before providing for taxation and depreciation, being Rs. 33,58,626 against Rs. 15,13,011. On account of the higher provision for taxation, however, it has not been possible to recommend any substantial increase in the dividends on the ordinary shares. Only four companies have been able to pay a higher ordinary dividend. In the case of the Lothian Jute Mills Company it has not been possible to step up the dividend as the increase in the provision for taxation is more than the increase in earnings.

* * *

The net profit, before providing for taxation and depreciation, of the *Delta Jute Mills Company, Limited* for the half-year ended November, 1941, is Rs. 9,12,809 against Rs. 4,74,261 for the previous half-year. The amount set aside to depreciation is unchanged at Rs. 25,000 while the allocation to Insurance Fund is Rs. 3,872 against Rs. 2,821. The provision for taxation is Rs. 5,66,327 against Rs. 1,72,199 on the former occasion. After transferring again the sum of Rs. 50,000 to Dividend Equalisation Fund the dividend on the ordinary shares has been increased to Rs. 17-8 per share from Rs. 15 per share. The amount carried forward is slightly higher at Rs. 1,57,489 against Rs. 1,46,007 brought in.

*Cheviot Mills Company, Limited*, for the same half-year, is able to report a substantially higher level of earnings. The net profit is Rs. 7,09,864 against Rs. 2,95,612 for the previous six months. After setting aside Rs. 50,000 (Rs. 40,000) to depreciation, providing Rs. 4,23,391 (Rs. 80,000) for taxation and Rs. 3,116 (Rs. 2,145) for Insurance Fund, the sum of Rs. 75,000 against Rs. 50,000 is transferred to General Reserve. The ordinary dividend is Rs. 7-8 per share against Rs. 6 per share.

* * *

For some time past there has been good enquiry for sugar shares. It is now pointed out that as a result of the threat to Java sugar supplies and the loss of the Philiopines India is the only important producer in the East to cater to the requirements of the export markets. There are already reports that there is a sugar 'famine' in Ceylon, Iraq, Iran and the Persian Gulf ports. Only the ban on sugar exports by sea from this country, under the terms of the International Sugar Agreement, which has been scrupulously kept in force much against the representations made in the country, prevents any sugar being sent out of this country to the above mentioned centres. The International Sugar Agreement is due to expire in August, 1942 and it is hoped that some concessions will be granted to this country regarding exports if she agreed to the continuation of the agreement.

* * *

While this is the position in regard to exports, developments within the country in the last season (1940-41) have been encouraging. The policy of regulation of production in U. P. and Bihar and the lower minimum prices for sugarcane in the two provinces have resulted in a considerable improvement in the position of the industry. At the end of 1939-40 there was a large accumulation of stocks. Only the lower level of production and the large offtake of sugar since July, 1941 have enabled the sugar companies in U. P. and Bihar to dispose of their large surplus stocks. The better quality of cane available and the efforts on the part of the companies to get the best out of the quota of sugarcane allotted to them have resulted in a higher percentage of recovery of sugar. The earnings for the last season, therefore, show a substantial rise.

In view of the improved conditions in the industry and the prospect of a large increase in demand for Indian sugar there has naturally been good enquiry for the popular sugar shares.

The results of the Begg Sutherland group of companies for the year ended October, 1941, bear witness to the better conditions in the industry.

After the lapse of seven years the *Cawnpore Sugar Works, Limited* has been able to report a substantially higher level of earnings for the twelve months ended October, 1941. It will be remembered that the financial year was changed to October from December last year. The net profit, before providing for depreciation and taxation, is Rs. 11,87,353 against Rs. 2,97,885 for the previous ten months and Rs. 2,74,264 for the year 1939. The amount set aside to depreciation is Rs. 3 lakhs (Rs. 1½ lakhs) while the provision to Taxation Reserve is Rs. 2,83,829 (Rs. 25,000). There is a transfer of Rs. 1,45,812 to Reserve Fund in addition. The ordinary dividend is substantially higher at Rs. 1-8 per share against As. 4 per share. Even after these substantial allocations the amount carried forward is considerably higher at Rs. 1,90,875 against Rs. 38,173 brought in. The yield on the basis of the latest dividend is 6.4 per cent. tax-free.

In view of the further restriction in production it cannot be expected that there will be any big increase in earnings but if there happens to be any increase in exports the position can be expected to improve. The directors, however, point out that the prospects for the current season are uncertain, owing to difficulties in obtaining adequate supplies of coal.

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Calcutta, January 23.*

THE Calcutta Stock Exchange has been rather quiet during the past week and business passing has been on a very small scale. The period under review is short-working owing to the fact that markets were closed on Wednesday and Thursday for *Shri Panchami*. With the further deterioration in the Far Eastern situation and the fears regarding the possibility of fresh heavy taxation it cannot be expected that there will be any improvement in prices. Prices for most of the popular counters are now quoting very much below the minimum fixed by the Committee of the Stock Exchange. Only giltedged securities have continued steady.

As pointed above, a slightly steadier feeling has been noticeable in the giltedged securities section though business passing is on a very small scale. 3½ per cent. Paper were steady at Rs. 95-1. Among terminable loans, 3 per cent 1963|65 were done at Rs. 94-1, 3 per cent Defence Bonds 1946 at Rs. 100-9, 3 per cent. Second Defence Bonds at Rs. 98 and 5 per cent. 1945|55 at Rs. 108. Among provincial loans, 3 per cent. Madras 1952 were done at Rs. 97. Money conditions have remained unchanged and the treasury bills rate has been maintained at one per cent per annum.

There have been no dealings in public bodies debentures. 5¾ per cent. *Ramnugger Cane and Sugar* changed hands at Rs. 103-8 and 5½ per cent. *Dalmia Cement* debentures at Rs. 102-12.

In the cotton section, *Cawnpore Textiles* were noted at Rs. 8-12, *Bowreah* at Rs. 412-8, *Dunbar* at Rs. 233 and *Benares Cotton* at Rs. 5-2.

Coal shares also were easier with *Bengal* quoting Rs. 361 ex-dividend, *Burrakur* Rs. 12-8, *Equitable* Rs. 35, *New Beerbhoom* Rs. 16 and *West Jamuria* Rs. 30.

In the Jute section, business has been as usual with *Agarpara* quoting Rs. 39-4, *Anglo-India* Rs. 344, *Budge Budge* Rs. 351, *Clive* Rs. 22-10, *Cheviot* Rs. 187, *Kamarhatty* Rs. 472, *National* Rs. 23, *Reliance* Rs. 53-4 and *Standard* Rs. 215.

In the Engineering section, *Indian Iron* and *Steel Corporation* have no buyers. It is reported that dealings in unofficial transactions have been recorded as low as Rs. 26-8 for Indian Irons and Rs. 15-8 for Steel Corporations. *Burn & Co.* were Rs. 342, *Indian Galvanizing* Rs. 32-9, *Indian Standard Wagon* Rs. 61 and *Jessop & Co.* Rs. 119.

Sugar shares have been steady with *Cawnpore* at Rs. 25-4, *Carew & Co.*, at Rs. 12-2, *Champarun* at Rs. 19-13 and *New Savan* at Rs. 12-2. *Purtabpore* were Rs. 11-8 and *Samastipore* Rs. 11.

In the Tea section there is very little of business to be recorded. *Belgachi* were Rs. 21-8, *Teen Ali* Rs. 15-8 and *Tengpani* Rs. 21-4.

In the Miscellaneous section, *B.I. Corporation* were steady at Rs. 5-2, *Calcutta Trams* were Rs. 14-8 and *Dunlop Rubber* Rs. 41 and *Indian Cable* Rs. 21. *Indian Wood Products* were crossed at Rs. 28-12 and *Rohtas Industries* at Rs. 160. Among Paper shares, *Bengal Paper* were Rs. 135, *India Paper Pulp* Rs. 146-8 and *Titaghur Paper* Rs. 19-6. *Aluminium Corporation* were Rs. 11-8, *Britannia Biscuit* Rs. 11-4 and *Assam Bengal Cement* Rs. 13-4.

Dealings in preference shares also have been on a small scale. *Burrakur* preferences were Rs. 149, and *Ramnugger Cane & Sugar* Rs. 135. *Steel Corporation* preferences were Rs. 110. Among jute mills preferences, *Anglo-India* were Rs. 165, *Hukumchand* Rs. 140 and *Reliance* Rs. 165-8.

## BOMBAY STOCK EXCHANGE

*(From Our Correspondent)*

Bombay, Jan. 23.

*Money.*—The rate for call money is still quoted at ¼ per cent.

*Exchange Market.*—Banks are selling T.T. at 1s. 5 31|32d. and buying three months' bills at 1s. 6 7|32d.

*Securities.*—The securities market continued to evince steadiness with fairly good investment support in evidence, the price of 3½ per cent Paper closing slightly higher at Rs. 95-6 as compared with Rs. 95 in the previous week. 1951|54 Loan were marked higher at Rs. 98-6; 1963|65 at Rs. 94-4 and 1960|70 at Rs. 109-6. 1948|52, however, remained unchanged at Rs. 97; 1947|50 at Rs. 101-4; 1955|60 at Rs. 113; 1945|55 at Rs. 108-2 and 3 per cent 1946 *Defence Bonds* at Rs. 100-12.

*Shares.*—Business in the local share market continues to be restricted. The sentiment remained bearish throughout the week under report as the operators are inclined to be cautious in view of the Far Eastern situation. Owing to a Board meeting to fix prices, trading in cash and forward did not take place on Tuesday. It is reported that the authorities of the Stock Exchange have approached the Government with a request to extend the date for revision of the minimum prices fixed to the 31st January and to allow to carry on the existing forward business for a period of 6 months to enable to liquidate or convert the forward business into cash within this time. As prices have steadied around the minimum quotations fixed, those, who have made sales, are not inclined to cover, and if the present dullness continues, there will be a move to reduce minimum quotations so that sales may be covered later on. The market remains closed to-day.

*Textiles.*—Cotton mill shares ruled weak throughout the week on lack of support. The improvement, that was noticeable towards the close of last week, was shortlived and prices were marked down. *Bombay Dyeing* have lost nearly 35 points to close at Rs. 1,150. *Central India* were done lower at Rs. 350 as against Rs. 372 in the previous week; *Century* at Rs. 370 against Rs. 400; *Colaba* at Rs. 180 against Rs. 203; *Gokak* at Rs. 240 against Rs. 274; *Kohinoor* at Rs. 470 against Rs. 503 and *Svadeshi* at Rs. 393 against Rs. 425. In the cash list, *Sholapoor* were done at Rs. 5,400; *Vishnu* at Rs. 1,555 and *Ahmedabad Advance* at Rs. 323-12.

*Hydro-electrics.*—There is nothing to report in this section, prices remaining unchanged.

*Steels.*—Steel shares were marked down in sympathy with the other sections of the market, *Tata* ordinaries closing lower at Rs. 303-8 and the deferreds at Rs. 1,620 as against Rs. 319 and Rs. 1,702-8 in the previous week.

*Banks & Insurance.*—Bank shares were steady with minor fluctuations in prices, *Central Bank* being done at Rs. 47; *Imperial Bank* fully paids at Rs. 1,552-8; the contributories at Rs. 386; *Bank of India* at Rs. 1424-8 and *Reserve Bank* at Rs. 104-12.

In the Insurance section, *New India* were done at Rs. 50.

*Miscellaneous.*—*Associated Cement*, which were done as high as Rs. 169-8 during last week following the rumours of an increase in the price of cement, have lost 11 points to close at Rs. 158 due to profit-taking. *Bombay-Burmah Trading* were again easier at Rs. 335, showing a drop of Rs. 22 over the previous week. *Belapur Sugar* were at Rs. 239; *Shivrajpur Syndicate* at Rs. 33; *Scindia Steam* at Rs. 20-3; *Tata Oil* at Rs. 52 and *Tata Chemicals* at Rs. 14-12. *Indian Iron* changed hands locally at Rs. 28-2; *Steel Corporation* at Rs. 16-9 and *Premier Construction* at Rs. 215.

## MADRAS STOCK EXCHANGE

*Madras, January 22.*

A fair turnover was reported this week in the local market, prices in most sections remaining unchanged. Planting issues met with good enquiry. Cotton mill shares were maintained around last week's levels.

*Securities.*—Giltedged securities have been steadier throughout the week under review, 3½ per cent Paper being done at Rs. 95. 3 per cent 1963|65 came to business at Rs. 93-14 s.l.; 5 per cent 1945|55 at Rs. 108 and 3 per cent 1949|52 *Defence Bonds* at Rs. 97-15. Among State Loans, 4 per cent *Mysore Loan* changed hands at Rs. 114-6 and 5 per cent *Cochin Loan* at Rs. 103. Provincial Loans were steady, 3 per cent 1959 *Madras* being done at Rs. 96-12.

*Mills.*—Prices were well maintained in this section. *Cambodia* had buyers at Rs. 10-14; *Vasanta* at Rs. 140-8; *Radhakrishna* at Rs. 200; *Madura* at Rs. 38-4 and *Mysore Spun Silk* at Rs. 10-2. Among Bombay shares, *Bombay Dyeing* came in for business at Rs. 1,152-8 Feb.; *Kohinoor* at Rs. 478-4 Feb. and *Indore Malwa* at Rs. 233-8 cash.

*Electrics.*—*South Madras Electric* ordinaries continued to be steady at Rs. 13, while *South Arcot Electric* were transacted at Rs. 100.

*Plantations.*—Rubber shares were a fairly active market and prices were marked slightly higher than in the previous week. *Cochin Malabar* improved to Rs. 9-8; *Vaikundam* to Rs. 13-8 *Kalpetta* to Rs. 24-4; *Rajagiri* to Rs. 7-14; *Coorg* to Rs. 34 and *Thirumbadi* to Rs. 2-6-6 c.d. *Velliamuttam* after a long time met with business at Rs. 21-4. Among Tea shares, *Chembra Peak* were marked at Rs. 5-3 and *Devon* at Rs. 10.

*Sugars.*—Little interest was shown in this section. Locally, *Jeypore Sugar* changed hands at Rs. 12-2 and *India Sugar* at Rs. 10-8 x.d. *Purtabpore Sugar* were transacted at Rs. 11-8; *Balrampore Sugar* at Rs. 12-2 and *Champarun* at Rs. 19-9. These are apparently as popular as South Indian Sugars.

*Banks.*—*Indo-Commercial Bank 'A'* shares had sellers at Rs. 101.

*Miscellaneous.*—*Andhra Cement* were maintained at Rs. 78, while *Associated Cement* were done at Rs. 158-2 x.d. Feb. *Spencer* ordinaries were marked at Rs. 6-6; *Singareni Collieries* at Rs. 11; *Mysore Paper* at Rs. 16-6 and *Mysore Chemicals* at Rs. 16-8. *Indian Cable* were crossed at Rs. 20-4 x.d.

# MARKET POINTERS

**E. I. C. A. Proposal Turned Down:**

The Government of Bombay informed the Board of the East India Cotton Association that they did not approve of the recommendation of the Board to amend by-law 64 in order to make the payment of penalty optional instead of compulsory in the case of sellers failing to deliver cotton against their sales in the market.

The decision of Government was welcomed by the trade and forward trading was immediately resumed after four days of strike.

• • • •

**Mills To Devote 5 p.c. of Normal Production:**

As a result of the discussion in Delhi, it has been agreed that Indian Textiles Mills would devote the 5 per cent. of their normal production to the manufacture of standard cloth for use of poor classes of people. The price will be fixed by the Price Sub-Committee of the panel of representatives of Indian Textile Mills which held its sitting on Tuesday. This Sub-Committee will meet in April later.

• • • •

**Import Of Metals:**

It has been decided, says a Press Note, that imports of all unmanufactured nonferorus metals, with the exception of copper, shall in future be controlled by the Steel Import Controller in Calcutta. It is, therefore, necessary that importers of these metals should apply for a licence to that officer before placing any orders abroad.

• • • •

**G. I. P. Railway:**

The approximate earnings of the G. I. P. Railway for the ten days ended January 10 amounted to Rs. 57,78,000, an increase of Rs. 8,32,000 over the earnings for the same period of last year.

## LONDON STOCK EXCHANGE

After remaining quiet early in the week the London Stock Exchange has been rather steady during the last two days. Giltedged securities have been firm on good reinvestment demand while Oils have firmed up on switching over from issues with far eastern interests. Teas and Rubbers were easier while among Industrials *United Molasses* recorded a sharp rise. Kaffirs were uninteresting on lack of support while Home Rails were inclined to be steadier.

Among giltedged securities, 3½ per cent. India Sterling Paper were steady at Rs. 101 13|16. British Funds were steadier with 2½ per cent. Consols at 83 3|16, 3½ per cent. Conversion at 107 7|16 and 3½ per cent. War Loan at 105¼.

## NEW YORK STOCK EXCHANGE

Wall street has been uninteresting and with a smaller amount of business passing a decline in prices is to be recorded. *U. S. Steel* were $52½ against $54½ at the end of last week, *Anaconda Copper* $27⅞ against 27⅞ and *General Motors* $32 against $32¼.

| Carry forward .. | | 1,90,875 | 3 | 11 |

The Marhowrah factory commenced operations on December 20, 1940 and continued working until April 5, 1941, while the Gauri Factory commenced on January 1, 1941 and continued until April 13, 1941.

The improved results which the accounts now presented disclose are due to a high standard of efficiency being maintained in manufacture and the treatment of canes with a higher sugar value. At the commencement of the period covered by this report the Company was carrying alarmingly heavy stocks of sugar, a position which was shared by most of the concerns situated in the United Provinces and Bihar and these did not begin to move off in any considerable quantity until last May. Since then, however, there has been a greatly improved demand; the entire stock of 1939-40 sugar has been disposed of and 90 per cent of last season's production has now been sold. The situation as regards the Company is, therefore, much healthier than it was a year ago and with a severely regulated output for the ensuing season in the United Provinces and Bihar, it is expected, that some substantial advance towards equilibrium as between production and domestic consumption will be attained by the opening of the 1942-43 season.

For the coming season, the United Provinces and Bihar Government have limited the outturn of sugar to 5,75,000 tons based on a crushing season of 80 days. A minimum rate for cane of five annas per maund has been declared, and this price is liable to be augmented by a deferred payment, based on the average market price of sugar.

The Cawnpore Refinery worked during the year and will finish melting the existing stocks of Gur towards the end of January. *Prospects for the coming season are uncertain, owing to difficulty in obtaining adequate supplies of coal.*

†For the year ended 31st October, 1938.

‡Includes for the year ended 31st October, 1939.

*(Annual meeting, 10th February, 1941 at 11 a.m. at Cawnpore)*

*Audited accounts for the year ended October 31, 1941:—*

| | | Rs. | A. | P. |
|---|---|---|---|---|
| The results for the period, after providing for taxation, show a profit of .. | | 2,38,584 | 6 | 8 |
| from which has been deducted:— | | | | |
| Depreciation .. | 1,00,000 0 0 | | | |
| Hathwa Raj Lease Reserve .. | 30,000 0 0 | | | |
| Dividend on Preference shares for the year ended October 31, 1939, declared on August 19, 1941 .. | 60,000 0 0 | 1,90,000 | 0 | 0 |
| | | 48,584 | 6 | 8 |
| to which has to be added the Carry Forward from the previous year .. .. | | 1,46,719 | 5 | 0 |
| Leaving at credit of Profit and Loss account .. | | 1,95,303 | 11 | 8 |
| This balance the directors recommend should be disposed of as follows:— | | | | |
| In payment of a dividend of 10 per cent on the Preference Shares (free of Income-tax) | 60,000 0 0 | | | |
| In payment of a dividend of Rs. 0-8-0 per share on the Ordinary Shares .. | 45,000 0 0 | 1,05,000 | 0 | 0 |
| Carry forward .. | | 90,303 | 11 | 8 |

Since the closing of the accounts, a further Preference Dividend amounting to Rs. 60,000 for the year ended October 31, 1940, has been declared and paid out of the above carry forward.

The factory commenced crushing on December 23, 1940, and continued until April 11, 1941.

The lease of lands from the Hathwa Raj has now expired and the Directors have decided not to renew this lease. There are rents to be collected from these Hathwa Raj villages and as the lands have been given up, the Directors feel that a Reserve should be created against non-collection of rents which are outstanding.

*Managing Agents.*—Messrs. Begg, Sutherland & Co., Ld.

*Authorised, Issued and Subscribed Capital*—Rs. 15,00,000 in 90,000 *Ordy.* of Rs. 10 and 60,000 10 per cent *Cum. Pref.* of Rs. 10, *both fully paid up.*

| Carry forward .. | 21,533 | 36,239 | 35,342 | 37,485 |

*(Half-yearly meeting, 6th February, 1941 at 12 noon)*

*Audited accounts for the half-year ended October 31, 1941:—*

After providing Rs. 70,874-3-3 for block depreciation there is a balance of Rs. 95,141-12-6 at credit of Profit and Loss Account, which it is proposed to deal with as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Dividend on Preference Shares of 7 percent per annum .. .. .. | 7,000 | 0 | 0 |
| Dividend on Ordinary Shares of 7½ per cent per annum .. .. .. | 66,608 | 10 | 0 |
| Carry forward .. .. .. | 21,533 | 2 | 6 |
| Total .. | 95,141 | 12 | 6 |

Owing to restricted wagon supply, raisings had to be reduced during part of the period covered by this report and this has adversely affected the results for the half-year.

Work has continued on the erection of the Aerial Ropeway to serve Victoria Colliery and, it is expected, that this plant will be in operation by June, 1942.

The cost of raising is unavoidably increasing, but it is hoped that this will be offset by the better prices now being paid for coal.

*Managing Agents.*—Messrs. Balmer Lawrie & Co., Ld.

ISSUED WEEKLY

Vol. XXIX. No. 5 SATURDAY, JANUARY 31, 1942 Price Re. 1

## Insure and Increase Nation's Strength

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

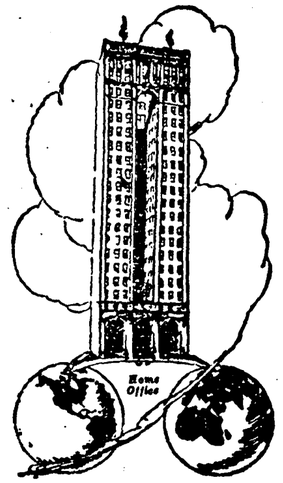
And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

**NATIONAL INSURANCE COMPANY,**
LIMITED.

**7, COUNCIL HOUSE STREET, CALCUTTA.**

Phone: Cal. 5726, 5727 and 5728.



Branch and Agency Offices throughout INDIA, BURMA, CEYLON, BRITISH EAST AFRICA AND FEDERATED MALAY STATES.

## CHANGE OF ADDRESS

On and from February 1st, 1942, the Head Office of **THE ORIENTAL MERCANTILE CO., LTD.,** will be removed to 36A & B, Pratapaditya Road, Tollygunge, Calcutta, at the back of the Southern Market.

By Order
K. C. ROY,
*Managing Director*

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

SHORT credits have been in abundant supply; and interbank call money is nominally quoted at ½ per cent in Calcutta and ¼ per cent in Bombay. The plethoric money conditions are reflected in the spurt in the tenders for Treasury Bills this week. It is, however, surprising that the average Treasury Bill rate remains unchanged and that sales of tap Treasury Bills make an extremely poor showing. Against Rs. 1 crore on offer, applications amounted to Rs. 2,48¾ lakhs, as compared with Rs. 1,43¾ lakhs on January 20. The average rate of accepted tenders is unchanged at Rs. 1 per cent per annum. Sales of intermediate Treasury Bills between January 21 and January 26 fetched a bare Rs. 6½ lakhs.

The statement of the Reserve Bank in the banking department shows a slight increase in the deposits of scheduled banks from Rs. 37.15 crores to Rs. 37.95 crores. Central Government's deposits are nearly Rs. 1 crore up at Rs. 6.60 crores. Burma Government's deposits are unchanged at Rs. 2.93 crores. Deposits of Provincial Governments, however, have risen from Rs. 4.56 crores to Rs. 5.37 crores. On the assets side, foreign balances show a decline from Rs. 43.24 crores to Rs. 42.52 crores. The most noteworthy feature of this week's bank returns is the very big rise in investments from Rs. 10.17 crores to Rs. 12.97 crores. Marked and big changes have been occurring in the Reserve Bank's investments portfolio in recent weeks; and the view was put forward in these columns that these were presumably connected with open market operations carried out by the Reserve Bank on behalf of the Central Government for the support of the giltedged market. Immediately on the declaration of war by Japan, there were substantial setbacks in giltedged prices. There has been good recovery in 3½ per cent India rupee paper. But there is considerable leeway to be made up in the prices of most other securities. So far as 3½ per cent rupee paper is concerned, it is easy to stiffen up its price through open market purchases. Even in ordinary times, the amount of floating scrip in this counter is extremely limited. In fact, more frequent are the occasions when the market is so bare of scrip that a holder of 3½ per cent paper can sell ready and buy for delivery a fortnight hence at a goodly premium. This is known as *ulta budlee*. The emergence of *ulta budlee* is the surest indication of an oversold position and of famine of scrip. In the case of 3½ per cent paper, therefore, purchases of even modest quantities of ready scrip suffice to pull up prices. In normal circumstances, 3½ per cent rupee paper acts as a barometer of the whole giltedged market. Improvement in the price of this stock is reflected in the whole range of giltedged securities. In the present abnormal conditions, however, while there has been some improvement in the prices of the other securities, they have not recovered to the same extent as 3½ per cent paper has recovered. There are reasons to think that the Government have bought these securities from the open market in order to lend suitable support.

This is all the more necessary as the second defence loan continues to be on offer through the tap. The importance of open market operations can best be realised from an understanding of the anomalous position that now prevails with respect to the second defence loan. The following Notification was issued by the Finance Department of the Government of India on January 27:

"It is notified for general information that with effect from 2nd February, 1942, the prices at which the 3 per cent loan 1949-52 announced in the Government of India Finance Department Notification No. D486-B|41, dated 25th January, 1941, will be issued are as follows:—

| Issue price on any date from | Price per Rs. 100 nominal. Rs. | A. | P. |
|---|---|---|---|
| Feb. 2, 1942, to Feb., 7, 1942 .. | 100 | 0 | 0 |
| Feb., 9, 1942 to Feb., 14, 1942 .. | 100 | 0 | 9 |
| Feb., 16, 1942 to Feb., 21, 1942 .. | 100 | 1 | 6 |
| Feb., 23, 1942 to Feb., 28, 1942 .. | 100 | 2 | 3 |

and thereafter at prices increasing by nine pies per cent weekly until further notice."

That is to say, the defence loan is being sold through the tap at prices which are based on par value on February 2. If an investor wants to subscribe for the defence loan, he will get it from the Reserve Bank or his bankers at Rs. 100 from February 2, at Rs. 100-0-9 from February 9, at Rs. 100-1-6 from February 16, and so on. But when he reads the current quotations of the stock exchange, he will notice that the 3 per cent (1949-52) defence loan is quoting between Rs. 98 and Rs. 98-2. If the investor thus realises that he can get the loan at Rs. 2 below par in the market, why would he subscribe for it at par through the Reserve Bank? His first reaction to this anomalous position is that he had better wait for the time being. So long as the market quotation for the second defence loan is somewhere below par, direct sales through the tap must be negligible. It is, therefore, urgent and imperative that open market operations should be so devised as to wipe off the discount in the market quotation for the defence loan. We have made enquiries in stock exchange circles and understand that, if anybody wishes to buy Rs. 5 lakhs or Rs. 10 lakhs of the second defence loan, his broker would be unable to carry out the order at Rs. 98 or Rs. 98-2 or even Rs. 98-4. The quotation of the loan at a discount is due not to any great selling pressure, but to the absence of sufficient buying pressure at the current level. This point deserves to be carefully considered by the Government.

The Reserve Bank return in the issue department shows only minor changes. Active note circulation in India has risen from Rs. 329.46 crores to Rs. 330.56 crores. Notes held in the banking department have declined from Rs. 11.94 crores to Rs. 10.89 crores. On the assets side, the only change is an increase of Rs. 4 lakhs in rupee coin to Rs. 31.98 crores.

## TREASURY BILLS

### India

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills were opened on Tuesday, January 27, 1942. Total amount offered was Rs. 2,48,75,000 (Rs. 2 crores, 48 lakhs and 75 thousand). Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 39 per cent. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Re. 1 per cent (Rupee one per cent) per annum.

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills will be received on Tuesday, February 3, 1942. Successful tenderers should make payment on Friday, February 6, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from January 28, 1942 to February 2, 1942, at Rs. 99-12-3 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from January 21, 1942 to January 26, 1942, amounted to Rs. 6,50,000 (Rupees 6 lakhs and 50 thousand).

During the week ended January 23, 1942, Government of India Treasury Bills for Rs. 1,22,00,000 (Rupees one crore and 22 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

# Finance Abroad

Thursday morning.

LAST WEEK in referring to recent changes in exchange rates reference was also made to the higher rates expressed in rupees for the Straits Dollar ruling of late. It is indeed surprising that such a change should be against India rather than the other way about. But there it is. Postal and telegraphic delays will be assigned as the reason for a change of minor consequence. From London little has been heard about the value of European currencies. How is the franc doing? Is it worth about 250 francs to the pound as may be inferred from the rate of 20 francs equal to one mark fixed after the Armistice by the Germans, or has it depreciated rapidly, as reported from Lisbon last year. The steadiness of sterling does not import the same steadiness in other currencies and few practical men are misled by the illusions engendered by the control.

The most recent and striking intelligence is that relating to British support in the near future for China's currency. It only seems natural for it was clear that Japan's attack on Shanghai and Hongkong would cut at the root of China's fiscal stability. The currency war in North China and Central China may not be raging bitterly but China which can offer tungsten and antimony has difficulty in sending the essential metals to the Democracies, and cannot hope to keep up the external value of her currency with her limited resources. When Mr. Hall-Patch was appointed to the Chungking Stabilisation Board in August, it was evident that Britain adhered to her policy (dating from 1935 when China went off the Silver Standard) of assisting China. Hongkong's entry into the sterling area was governed mainly by a desire to help China. If the trade links have been weakened and China's prospects of getting remittances from well-to-do emigrants are slender, the British Government through Sir H. Kingsley Wood has indicated that it will co-operate with the U.S.A. in making available necessary funds to China. It is unlikely that it will pass as in the past through the two big exchange banks with offices in China. What the credit is and how it is to be applied are not known for the information supplied by the Chancellor was quite meagre. But the assurance is there and it is of high importance to China as also to India which in spite of the freezing order will continue to retain connections with the Democracies' ally in the East.

While there has been absolutely no fluctuation in oversea bullion rates for a long time, a late rise in the forward quotation for silver suggests that London is not so dull as imagined. The exchange market in London is imperturbable. Not so the stock exchange. If the funds have been unshaken the oil group is certainly wobbling. Home industries are flat and the distemper noted last month has not disappeared. The drop of £2 in the quotation for Royal Dutch proves that the fighting in the East Indies is nowadays a market factor. By contrast Mexican Eagle is moving up. Trinidad issues are firmer and Attock Oil appears the exception to the general trend. The discount market is steady despite a brief lapse into lightness. Treasury Bills for £60 millions of three months' bills were tendered for at 1 per cent as though the original agreement made immediately after the war to raise the rate from ½ per cent to 1 per cent is now an article of faith. The Government's decision to take no treasury deposits will make banks keener on Treasury Bills, particularly, as last week's quota was even smaller than usual. Revenue in the first quarter is said to be coming in very well which is perhaps one reason why Mr. Churchill did not mention finance at all in his defence this week. The Exchequer returns are hardly of moment when the Opposition is pegging away at high strategy. But one thing is clear. A longer and more expensive war is envisaged by everybody at present. Supply councils cannot provide the money which must come from the citizen. The American citizen's duty is recognised as clear. Mr. Morgenthau asks the rich to be as dutiful as the poor, to avoid evasion and not to ask for tax-free securities. He expects to get a billion more merely by making the U. S. citizens more conscientious. But getting nine billions more by way of revenue will take some doing. There is a big shipbuilding programme; there is a big air armada to be built; ten expeditionary forces said the President this week, and if one judges by the appropriation of 321 million dollars for chemical warfare, there is no doing by halves. Experts ask for 7,144 millions for aircraft alone to make sure of a knock-out blow. As was stated last week, there is no worry about getting money in the U.S.A. At the end of 1940, the U. S. Treasury had over 20 billions in gold though the inflow of gold had been reduced. There are impounded assets both of Allies and others. There is nothing to prevent their use for essential purposes.

There has been one more notification as regards the use or entry of the Philippine currency. The usual precautions against enemy cunning have been adopted, but more disturbing is the death penalty threatened by the officer commanding the Japanese forces for refusal to take yen in return for money or goods. The Japs are going to try the Nazi game over again. They have certainly had ample experience in currency-faking in China. They are not likely to be overscrupulous in taking gold. The Philippines, by the way, had developed gold production to the point at which exports were valued at 30 million dollars. The last statement of General Tojo indicates that exploitation of the resources of occupied territories comes within the South Seas programme. That addition of looted gold will have very serious effects on the Japanese currency reserve, which had been affected by the Sino-Japanese war, is certain. Maybe it will upset prices and push up the cost of living in which case the gold will be of no help.

The entry of Iran into the sterling area is foreshadowed in a newspaper story describing conference between the Imperial Bank of Iran and the British Legation. The United Kingdom Corporation (which is not unrepresented in India) is assuming increasing importance in the supplies of wheat and sugar to Iran. Feeding the Army is the job of Britain, not of Iran, where the food position is still precarious. India is said to be a source of textile goods and materials wanted for canning factories, procured again through the Legation. The Treaty of December should be soon ratified by the Iranian Government, and Iran like Iraq, will become a member of the sterling family, largely for the sake of drawing regular imports from the countries which have guaranteed her territorial integrity.

Very scrappy news comes from the U.S.A. The motor industry's leaders like the labour Union bosses are coming out for Roosevelt and victory. In regard to the new federal unions projected in Europe nothing is known about the financial side. How is the Polish Government going to settle with the Czech Committee about currency and finance? What about Vilna? Who will have it? What will be the port for the Czechs? Danzig or Hamburg. Then again arises questions as to the position of Salonica in the Graeco-Yugoslav agreement and somebody will ask, what about Bulgaria's claims. How are these going to work? Will Greece give and territorial compensation in Albania? As ticklish as the questions about racial and religious minorities are those turning on the adjustment of the claims for *lebensraum* in the Balkans. Washington's strategy cannot provide a settlement of very difficult issues. One of the results of the Russo-Polish agreement is the expulsion of the Polish envoy from Madrid. Even more perplexing will be the question raised by the entry of the Dutch Indies into the Eastern Group. Why not get the exchange rate adjusted to suit Indian interests primarily will be the claim of a few who may urge that Indian rubber will be far more important than Sumatra's production. In regard to oil the Dutch Indies will still be the buttress of the Eastern Group which has very little oil of its own but has to rely on the Middle East.

Little is known but much can be guessed from the Rio declarations. The Axis will get nothing from South and Central America. There will be no bother about black lists and that sort of thing when commercial ties with Germany are severed. The Pan-American Conference has gone far beyond Lima and "New Deal" even Chile where the President went rather unexpectedly has not hesitated to join the other republics. Argentina has made a reservation which amounts to a promise to issue a freezing order that will apply to all non-American belligerent undertakings. But it is certain that such a clause will not prejudice Britain or the U.S.A. at any time. The isolation of Europe will be more pronounced than ever. Sweden and Portugal may be neutral, but there will be no triangular trade. The Axis has protested promptly enough, but Brazil has indicated clearly that Japan's entry has forced every South American republic to change its opinion as to the war.

## Fifteenth Year

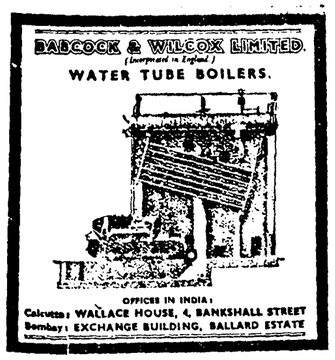
On January 28, **Indian Finance** entered on its fifteenth year. Its inauguration was due less to any deliberate design than to what may be called a sudden impulse. During the discussion of the Reserve Bank Bill of 1937, the opposition to the Bill was largely based on prejudice and on ignorance of the fundamentals and functions of central banking; and the campaign against the Bill was engineered by powerful vested interests. Sir Basil Blackett had set his heart on the creation of the Reserve Bank; and, while his regime was memorable for many far-reaching financial reforms and many outstanding accomplishments in the financial field, he believed that his reputation as the steward of India's finances must rest on India being endowed with a well-planned and well-functioning central banking institution during his tenure of office. With the self-assurance which was his dominant trait, he counted on his being able to put through the Reserve Bank Bill and brought out Sir Osborne (then Mr. O. A.) Smith as the Governor-Designate. The turbulent passage which the Bill had through the Central Legislature caused him both concern and disappointment. He was greatly concerned because he felt that, if Indian public opinion had been guided aright, it would have realised that the establishment of the Reserve Bank would have, in large part, meant financial swaraj.

It is from this point of view that he strongly urged Mr. C. S. Rangaswami to start an independent and authoritative financial weekly paper. Mr. Rangaswami had played an important part in the various stages of the Reserve Bank Bill; and he had brought about an important compromise between Sir Basil Blackett on behalf of the Government and the late Mr. S. Srinivasa Iyengar on behalf of the Opposition. Inspired—we were almost going to say, goaded—by Sir Basil, he put out **Indian Finance** as a modest venture with Mr. P. R. Srinivas as the Editor.

Both of them were amateurs in journalism. Neither of them had any model to follow with respect to what should be a genuinely financial weekly paper. It is true that there were two weeklies already in the field, but their features were, at that time, more like those of a general weekly journal rather than of a technical financial weekly. As pattern and example we had to look for ideas and plans from foreign journals.

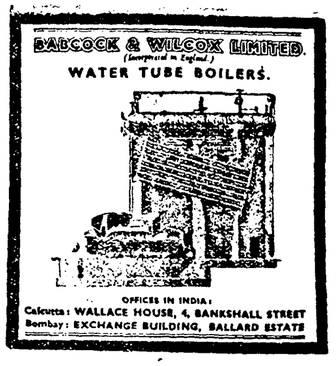
This meant that the first task of the editors was to educate themselves. Their next task was the training of the requisite staff. The third task was the organisation of economic intelligence and statistical departments and the scientific compiling of economic data and figures. Only after considerable progress had been made in these respects could **Indian Finance** venture to hope that it was competent and ready for the educating of its readers.

Between us the editors, and you the readers, there has thus, been a continuing common link and purpose, namely, educating ourselves in the mysteries of finance in general and the rites of India's finances in particular. We are grateful to **Indian Finance** for the great opportunity it provided for our own education; and, at the end of fourteen years, we think we can say that it has played some part in the education of the Indian public in the fundamentals of public finances. There is now a more widespread knowledge of financial questions, a keener economic consciousness throughout the country; and the enterprise stimulated by Sir Basil Blackett may claim to have fulfilled a large part of his expectation.



It is a fortunate coincidence that the fourteen years, during which **Indian Finance** has been in existence, marks a period during which India's finances have etsablished important landmarks. Till a decade and a half ago, the Finance Member of the Government of India was mainly concerned with levying taxes, collecting them and spending them. It was Sir Basil who introduced a broader outlook and a wider economic import into the functions and duties of a Finance Member. In the years that have followed, the Finance Member is less and less a tax-gatherer than the presiding genius over the entire economic activities and well-being of the country.

During the 'thirties, the Chancellor of the Exchequer in Britain found himself obliged to give more and more thought and attention to the creation of the machinery and the securing of the personnel for the wider economic activities which came to be associated with the Exchequer. The de-linking of sterling from gold in September, 1931, led to the establishment of the Exchange Equalisation Fund. The intricate operations that had to be put through on behalf of this Fund involved reinforcement of Treasury personnel and expansion of the Treasury's range of activities. The stupendous transactions connected with the conversion of the war loans necessitated the Treasury acquiring expertness in understanding giltedged and other conditions and in putting through extensive open market operations. These operations were greatly facilitated by the big accumulations of non-budgetary funds in the hands of the Chancellor of the Exchequer. Such funds came to be of the order of £1,000 million. This new-found power and mastery of technique have made the British Treasury increasingly self-confident as a borrower. From this have flowed such beneficial developments as continuing cheap money and progressively cheaper borrowing.



The Bank of England, too, has had to plan for big extensions and expansion in its economic intelligence section. And it has happened that the Treasury's officials have been more progressive and up to date in their handling of the several problems that have arisen from time to time. The climax to this process is that Britain's strength on the economic front in this war is impregnable. That this has been a 2½ per cent. war, is the blossom and fruit of fifteen years of progressive financial reform.

In these developments, India has been passive rather than active. It will, perhaps, be more correct to say that the Indian Government as such have been content to be passive, to allow events to overtake them rather than for themselves to go forward and meet the events; and that the role of **Indian Finance** in these eventful years has been to plead for an active policy and to indicate plans and programmes which are meant by an active policy.

**Indian Finance** made its debut while the country was in the grip of deliberately planned deflation. In the teeth of the opposition of the entire Indian public, the rupee was linked, in 1926, with gold on the basis of eighteenpence. There was no doubt that, at this level, the rupee was over-valued. To maintain the over-valued rupee, the Government had to inflict on the country repeated doses of deflation. Currency contraction was the order of the day. The money market was kept in a perpetual state of stringency. There were frantic borrowings on Treasury Bills at frenzied rates. Whereas, in 1926, Sir Basil Blackett was able to bring down the Government loan from a 6 per cent. type to a 4 per cent. type, the reverse process was set in motion because of deflation. The 1931 loan of the Government of India was a 6¼ per cent. type. The loan was kept available through the tap for five months. It hardly

# Editorial Notes

### U. S. Profit Trends

Representative corporations in the U.S.A. reported no outstanding increase in profits for the third quarter of 1941. The reason is simple. Higher taxation skimmed off the profits. For 140 manufacturing companies coming into the analysis of profits of corporations, the provision for taxation showed an increase of over 250 per cent under federal income and excess profits taxes. The higher taxation cut off 83 per cent of the net increase in income and cut the net gain in profits as compared with the first three-quarters of 1940 from 91 to 22 per cent. The Treasury is thus the principal beneficiary of the increase in industrial activity and profits. The corporate taxpayer has thus put up a due share of the billions wanted for defence, and now, for warfare. In fact it has been said that the Treasury's share of total profits for the nine months of 1941 exceeded the share made available to shareholders who had provided the capital which produced the income. The era of profitless prosperity was apparently stabilised after the introduction of an excess profits levy of 50 per cent in addition to a higher rate of income-tax. Since taxes have been modified after September last, the inroads of taxation must be more severe. The investor then can hope for nothing out of the prosperity engendered by the war. His duty is to pay more taxes, give more, and accept even the abolition of the tax exemption clause in his loans to the Government. Though the States are not likely to increase emergency taxes, certain States, e.g., California, are bound to increase the tax burden. It is this which impels U. S. opinion to argue that the scope for increasing taxes is limited though it is admitted that the wage-earner working seven days in the week is a suitable subject of taxation. The payroll tax suggested by the President will only produce equality of sacrifice. Though 350 companies representative of all sections of U. S. industry earned 12.3 per cent in 1941 on their total paid-up capital of 12 billions, the growth of profits in the subsequent months will be definitely limited by higher taxation as also advances in costs including wages. It will certainly not be surprising if the profit level is below that for the last quarter of 1940 which appears the peak of the defence-recovery period. The increase in profits over the year commencing October 1940 has been irregular. In the field of retail distribution, it is clear that the increase in profits is hardly proportionate to the growth of sales. It is again noteworthy that the recorded increase is greatest in that of steel-makers and extremely limited in the case of oil companies. Perhaps the one group to derive tangible benefit is the railroad companies, especially, Class I systems, whose freight income in the nine months ended September showed a gain of 25 per cent on the previous year while their passenger receipts also rose by 21 per cent. The increase was the reward of operating efficiency; yet the gain in net revenue was as much as 71 per cent bringing railway revenues to the highest point since 1929 though the over-all annual rate of return also was only 4 per cent.

### Trade Prospects

As it is clear that the immediate outlook for India's foreign trade is worse than obscure, something should be said about the position as at the end of November. If the total value of exports in 1940-41 comes to Rs. 198.7 crores, the total for the eight months ended November was as much as Rs. 167.2 crores. There is thus every possibility of the total for 1940-41 being maintained in the current year. Since the total value of imports for the eight months was Rs. 131.34 crores showing a strong rise on the preceding year any setback in imports would necessarily redound to the advantage of India, assuming that exports are maintained. The fact that total exports in the period April-November showed a rise of Rs. 32.9 crores on the value recorded in the same period of 1940 should not be ignored in discussing the rise under imports in 1941 and the probable shrinkage hereafter. Since one considerable source of imports, viz., Japan has disappeared, the certainty of reduction is all the greater. The actual improvements in imports in the April-November period was greater under exports than imports, and that took place, in spite of an unfavourable balance of trade emerging in the first quarter of the current fiscal year. If the progressive improvement recorded since July last does not hold the net surplus of exports will not fall short of the Rs. 42 crores recorded for the preceding year. This is of unquestionable importance as a factor in the reduction of India's external debt. There should again be little dependence on treasure exports while the export surplus remains to meet the cost of invisible imports and the Home Charges which too should be lower again through the reduction of the sterling debt.

Not many will overlook the advantage accruing from the reduction of debt and annual interest at a time when India's export trade may fall off in an unforeseen manner, despite the certainty that certain things like shellac, manganese, pig iron and mica are likely to meet with keener demand than in the past. The only point to consider here is that any worsening in export trade will not reduce the balance of trade below the relatively favourable level of 1940-41. Nor is it difficult to postulate that India will continue to extend her trade with the Eastern Group; this may be taken as certain despite certain unfavourable signs. It requires no great provision to state that inter-governmental purchases will increase even if private trade falls off. The simultaneous reduction of private imports will operate as a compensating factor. And it is only necessary to relate the reduction in overseas payments with the curtailment of consumption, especially, of imported goods to produce the conclusion that India's balance of payments will not be seriously upset by the war. Any reduction of imports from the U.S.A. may even tend to strengthen the position, though it will be urged that the favourable balance of trade maintained with the U.S.A. in the past year has only added to the sterling resources of India. The probable repayment of India's sterling railway debt is obviously dependent on the continued retention of a large favourable balance of trade. For the present the balance of Rs. 22 crores under India's exports to Britain and the Empire recorded in the eight months ended November supports the original conclusion that India will keep on gaining sterling assets. As total imports from non-Empire countries in the eight months came to Rs. 53.17 crores while the total exports were valued only at Rs. 56 crores, it will be seen that India's trade with the Empire tends to be distinctly more favourable than in the past and this part representing as much as two-thirds of the total trade is far removed from the risks of war. The Empire's war effort will result in the maintenance of demand for India's materials and manufactures. It is this last fact which must be given first place in any appraisal of trade prospects during the year 1942. Few will ignore the striking rise in exports to Russia and Asiatic Turkey during November as also in Turkey during and before November as also in exports to the Dutch Indies. The process of winning new markets to replace old ones had not been checked.

### Money and Exchange Rates

Purely financial trends in the Europe of to-day are not so full of significance as in the past. Yet it would be idle to deny that importance still attaches to fluctuations in exchange rates, variations

in discount rates and expansion of note circulation. Economic control has not reduced altogether the importance still retained by the dollar as a measure of universal value. Changes as compared with the average for 1940 point to a slight weakening of the rupee in terms of dollars while the sterling-dollar rate despite the emergence and disappearance of free sterling was unchanged. The changes up to August 1941, showed that if sterling, like the Canadian dollar, was unchanged in New York, the New Zealand pound had appreciated like the currency of the U.S.A.'s neighbour, Mexico. From the middle of 1941, in New York there was no quotation for the German, Rumanian and Japanese currencies. The slight appreciation in the Hong-Kong dollar at the time the Chinese dollar weakened abruptly, reflected the increased commercial importance of the British Colony. Until 1941, the Colony was outside the sterling area but its dollar was not like the Canadian dollar which maintained a constant value of 90.91 cents. From the table of rates it may be easily learnt that the Iraqi dinar had recovered in the U.S. exchanges while the rate for Iranian rials (5.882 cents equal 1 rial) was more than ever confusing because the effective rate in London had ceased to be 80 rials to the pound but was so many points on or off the nominal rate. The depreciation of several Latin American currencies was inevitable as the trade of these countries was upset by the war. The Peruvian sol and the Ecuadorian sucre like the Venezuelan bolivar weakened. This enabled Britain to negotiate an agreement with several countries as a group and arrange for something like a payments agreement.

The most striking feature of confusing and blurred movements is the recovery of the finnmark, now prejudiced irretrievably by the Finnish alliance with Germany. The equally noteworthy improvement in the Thai baht is now void of significance. Perhaps the only feature to which attention may be drawn is the existence of a free rate for the Australian pound as for the Argentine currency. The divergence between the official and free rates was suggestive of inherent weakness, and explains also why Australia has chosen to make use of her dollar assets as she thinks fit. Apart from the fact that the Commonwealth has borrowed in the U.S.A. there is the fact that the excess of imports has to be paid for. After all, the Dominion has to get things like mining equipment, which cannot be had from any other country, and she is not like South Africa which has a large surplus of treasure exports. Indicative again of differences in circumstances was the singular stability of Empire currencies in London from 1940. Cheap money was universal as the World Economic Survey has stressed recently. In New York the Federal Reserve discount rate was 1 per cent the average rate for the twelve Reserve Banks was only 1.21 per cent. The low rate indeed has favoured the U.S. Treasury and all classes of borrowers because the average yield on Government's obligations in August was 1.94 per cent. It is noteworthy that at the same time the average rate for Italy's borrowing was 5.36 per cent while Britain continued to borrow easily at 3 per cent.

**Changes in New Zealand**

New Zealand's war expenditure last year naturally exceeded the total reported for 1940. The returns for the first half of 1941 issued in October indicate that actuals of ordinary expenditure corresponded with the Budget Estimates and also the previous year's comparable total war expenditure rose from £6.33 million to £15 million. The revenue and other receipts earmarked for the war amounted to £10.39 million. Expenditure on social security did not rise during the second year of war, and the consolidated fund charges too were not larger. The Dominion's borrowings from the British Government for the war had been repaid by March 31, last year. It was agreed that the gap between revenue and war expenditure was by no means large and the continuance of Mr. Fraser's Cabinet in office has promoted both political and economic stability. Economic stabilisation after the rise in prices and wages recorded during 1940 became the aim of the Government which set up a Price Investigation Tribunal. It was ascertained that the cost of living had increased to a smaller extent in New Zealand than in any part of the Empire. But the trend changed after the middle of 1941 and rises in wages had to follow the rise in prices. The large increase in the wool clip and the equally large rise in the output of boots and shoes show that primary and secondary industries are prosperous. New Zealand's production of woollen manufactures has increased substantially between 1938 and 1941. Import restrictions have been advantageous to local industry. New Zealand expects to dispense with imported footwear as local output in 1940-41 was nearly five million pairs. If meat and butter exports have been hit by the war, sheep and other farmers have certainly gained through the war. The further development of factory industries and the gain in employment point to satisfactory conditions towards the end of 1941. The extension of arable cultivation in the Dominion is a mark of the changes still in progress. Conscription cannot have serious effects either on industry and agriculture though the withdrawal of exemptions may interfere with the development of certain factories.

**NORTH WESTERN RAILWAY**

**TIMELY ADVICE**

Owing to the necessity for maintaining an uninterrupted flow of essential supplies for the Land, Sea and Air Forces engaged in the Defence of India, and of coal and other materials to and from the numerous Factories and Workshops engaged on an ever-increasing scale in the production of War Material; the heavy and frequent demands in respect of the movements of Military Personnel, and an abnormal increase in the public passenger traffic resulting from the petrol-rationing, the Railway is not now in a position to cater for the travelling public as in peacetime, notwithstanding the fact that it is doing all it can possibly do to cope with the situation by bringing into use all available stock even to the extent of reconditioning vehicles which in normal times would have been condemned and cut up. The public in general is, therefore, advised, in their own interests, to bear in mind the difficulties under which the Railway is operating and to avoid all travel or to travel only when it is essential or otherwise to submit with a good grace to such personal inconveniences and discomforts, as must arise at times like the present.

**Saving for the war**

What the small saver in Britain has done is just now known. In the first year of the war savings campaign, ending in November 1940 as much as £460 million came from the small investor. The second year witnessed a better effort as £630 millions were put up. This is equal to £13 per head and this increase in saving occurred in spite of drastic increases in taxation. But the total suggests that it falls short of the £2000 millions or so needed to fill up the annual deficit. After the statement on wage policy in July, there was no place for material changes in incomes. With incometax at 10s and the usual reliefs cut, the British citizen has somehow increased savings. As expenditure is still rising, the third year will have to produce larger savings out of British citizens and the cuts in rations are as much part of financial policy as the financial expedient which put in the 2½ percent loan in October in place of the 3 percent loan. Recent reports indeed suggest that the expansion of war production in the third year of war will have to be financed by borrowing. The demands on the investor will not be lower, though institutional support will be as welcome as ever. There is no rival in the capital market to judge by the 1941 total for borrowings recently issued. For the average investor today there are only war bonds and savings sertificates. Other investments may seem eligible but the call of patriotism, now as ever, is stronger. It is again recognised that to expand the floating debt further is not desirable since banks may tend to embark on a free credit policy if they lend to Government too freely.

Though banks' investments in securities remain larger than ever, it is also recognised that control of non-essential consumption has to be taken to another stage. German policy has not been unsuccessful for the Reich has been borrowing without difficulty at a little over 3 per cent. for perfected price control prevented any rise in the cost of living and cuts in real wages readily augmented the resources available for the Nazi war effort. It is only of late that people recognise that there was a great deal of method in the Nazi madness. Economic mobilisation and regimentation still finds its most notable exponent in Germany whose superiority to Italy in regard to taxes, borrowing etc., immediately suggests that Mussolini is just sustained by his formidable ally while the Italian people, unnerved by repeated raids on Naples, are obviously looking forward to deliverance from Fascism.

The fiscal problem in Britain is now viewed as one of increasing savings. In India, too, it will soon be the same. In a sense the present stock market depression in conjunction with the needs of the Government, will aid the Government. The giltedged revival, whatever be its basis, suggests that confidence in Government's ability to borrow and repay too will be unaffected by the spreading war. In a full year the Second Defence Loan must give over 60 crores. Confidence may be slow to return, but the investor will not be slow to determine his responsibilities. Last week was held the promised conference; the savings drive must begin soon, for the slowing down of defence loan collections after the middle of December is obviously a serious matter for both the Government and the investor who is not unimpressed by the fact that 3 per cent. Defence Bonds command a very small premium.

**Fewer Strikes**

Further improvement may be said to mark the course of industrial relations in India. The statistics for the second quarter indicate that the improvement referred to continued. If the number of disputes reported showed an increase on the previous quarter, the actual number of workers involved was 64.475 which is only a little over two per cent. of the total number of workers in Indian industries. The improvement in regard to industrial peace may be indicated by a comparison with the statistics for the second quarter of 1940. The very considerable improvement recorded under both operatives and lost working hours is a sign of the efforts made to adjust wage-rates etc., to altered conditions. Yet the majority of disputes turned on wages as in the past. Only three disputes were reported by jute mills which have a very fair record in the matter of strikes generally. Though 51 out of 121 disputes reported in April-Jute failed to bring results desired by the strikers there was ready resort to the strike methods. The loss of over a million working days in the second quarter vindicates the wisdom of recent emergency enactments designed

**UNITED INDUSTRIAL BANK LTD.**

mainly to prevent interruption of essential war production.

The most serious strikes in the second quarter were in the Nagpur mills. The recent acceptance of the official recommendations should lead to decisive improvement in the C. P. industry. In regard to workers and disputes alike Bengal had less trouble than Bombay. The engineering industry experienced less trouble than in the first quarter of 1941. Only 27 out of the 123 strikes concluded went in favour of the workers but as many as 35 resulted in compromises, so that it might be plausibly argued that not all strikes were useless. If the textile industry was more often affected than others owing to recurring demand for higher wages, the trouble sprung largely from a demand for restoration of wage-cuts made during the depression, that official intervention has secured essential adjustments is known to all who are familiar with the attitude adopted towards claims for dearness allowance. Only eight disputes were in progress at the end of June, 1941. Conditions since have shown internal improvement to judge by the usual notes in the Bombay Labour Journal on strikes in India.

### Cotton Supplies

The latest crop forecast shows that in spite of various suggestions made in India, the total area under cotton in 1941-42 shows an increase. The total area at 22.269 million acres, after the increase of 1 per cent recorded puts India very near the U.S.A. in the matter of acreage, but the actual outturn and quality pull her down considerably. The total output of all types is estimated at 5,490,000 bales showing an increase again on 1940-41 when the outturn was put at 5,264,000 bales. The increase of 4 per cent in the estimated outturn must depress cotton prices, and the difficulties in the trade certainly lend support to that view. The most gratifying feature is a considerable increase in the production of American types. The increase will be of direct help to Indian mills. The decrease in the Broach crop must be put down to adverse weather in 1941. The reduced quantity of both Broach and Oomra will be of assistance to the cotton market in a difficult period, heralded as usual by crop movement coinciding with restricted transport facilities.

### Vegetable Fuel

The Diesel engine's popularity does not wane. Supplies of diesel oil in India are said to be adequate, but difficulties are likely to appear. A recent note in Burmah-Shell's newsletter disclosed that to some extent diesel oil can be replaced by vegetable oils at present. The latter have the disadvantage of being expensive, but against it, must be set the abundance of local supplies. It is recalled that Dr. R. Diesel envisaged the adoption of vegetable oils as fuel. India is still the world's biggest producer of oilseeds, particularly, groundnuts. There are many other sources of oil, and experiments have revealed the adaptability of vegetable oils to the diesel engine. The vegetable oil is not quite so economical in use as mineral oil owing to the lower calorific value of vegetable oil as a substitute. What is distinctly reassuring at present is that a substitute fuel can be had without difficulty.

## GOVERNMENT OF INDIA
## DIRECTORATE GENERAL OF SUPPLY

### NOTICE.

**Export of Rubber Manufactures from the United Kingdom**

The export from the United Kingdom of all rubber manufactures containing 50 per cent. or more by weight of rubber will hereafter be controlled by the issue of export licences. His Majesty's Government in the United Kingdom will grant licences for export of rubber goods only when it is satisfied that refusal to allow export of such goods would endanger the war effort. Applications for licences for export to India will not be considered unless an import assistance recommendation has first been obtained from the Department of Supply. The only exceptions are:—

(a) rubber belting and other rubber parts of essential machinery, for allowing export of which His Majesty's Government will not demand import assistance recommendations if they are required for replacement purposes or with a machine which has already been covered by a recommendation.

(b) tyres, about which a separate announcement will be made and which do not need recommendations for the present.

All persons who desire to import rubber goods from the United Kingdom are advised to apply to the Director-General of Supply, New Delhi, for import assistance recommendations and to place orders on the United Kingdom only after they are informed that import assistance recommendations will be issued. Applications must be submitted in triplicate in the prescribed form. These forms will be available free of charge from the following offices:—

(1) The Director-General of Supply, Department of Supply, New Delhi.

(2) The Controller of Supplies, Bombay, Calcutta, Madras, Lahore, Karachi, Cawnpore.

As export restrictions in the United Kingdom have come into force with effect from the 6th of January, 1942, licences will be necessary for export from the United Kingdom of rubber goods already on order. Applications for import assistance recommendations in respect of such orders may also be made to the Director-General of Supply, New Delhi, in the manner described above.

In no case will the Director-General of Supply issue import assistance recommendations unless he is satisfied that the goods are required for purpose essential to the war effort.

## GOVERNMENT OF INDIA
## DIRECTORATE GENERAL OF SUPPLY

### NOTICE

It was recently notified for the information of the public that the export from the United Kingdom of rubber manufactures containing 50 per cent or more by weight of rubber has been controlled by the issue of export licences since the 6th of January, 1942. Export licences will be issued in the United Kingdom only on the strength of import assistance recommendations issued by the Government of India in the Department of Supply. The procedure for applying for import assistance recommendations has already been explained in press notices. The control of exports from the United Kingdom has now been extended to all articles where rubber forms more than a negligible proportion of the finished product. All those desiring to import such articles are hereby advised to apply for import assistance recommendations to the Director-General of Supply, New Delhi, in the prescribed form, copies of which are available at the offices of:—

(1) The Director-General of Supply, Department of Supply, New Delhi.

(2) The Controller of Supplies, Bombay, Calcutta, Madras, Cawnpore, Lahore, Karachi.

BOMBAY · CALCUTTA

In last week's gossip, I set out to answer four posers which I had propounded from the point of view of the current curiosity and anxiety of the population. The questions are as follows: Firstly, will America be in a position to produce the planes, tanks, ships and munitions on the scale she has announced for 1942 and 1943; and, if she succeeds in producing on this scale, will it suffice to crush the formidable Axis Powers? Secondly, how are these war supplies to be conveyed to the appropriate centres if, on the one hand, Japan succeeds in securing possession of strategic places in the Far East and if, on the other, sea communications are gravely threatened by the German U-boats in the Atlantic and the Japanese submarines in the Pacific? Thirdly, while it is true that the German forces have been given a sound trouncing by Russia, will Hitler be able to replan and resume the offensive once the rigours of the winter are past? Fourthly, with these two terrific wars raging in Europe and the Far East, will war also come to India? I dealt with the first two, leaving the others to be taken up this week.

As regards the Russo-German war, knowledgeable students of military matters have conclusively proved that the Russian Army has gigantic arms stocks. Soviet war industry has been prepared in advance for a shift over to total war production. It has been pointed out that "in most important lines of arms and equipment, the productive capacity of the Soviet industry is far superior to that of Germany. In tanks and motor-mechanised equipment, for example, German industry can never hope to catch up with the Soviet Union." Soviet tanks have their reserve in the entire Soviet tractor production, the largest in the world, now averaging 200,000 tons a year. In wartime, Soviet industry can turn out approximately 40,000 tanks, 30,000 planes a year. As for the relative rating of Soviet strategy and German strategy, I shall content myself with quoting the following extract from an article of Max Werner who had predicted the collapse of France and the imminence of Germany's attack on Russia.

"A decisive victory can be won not only by Blitzkrieg. In the First World War, the Allies defeated Germany in the fifth year of the struggle. Franco and German-Italian interventionists conquered the Spanish Republic in the third year of war. But the Wehrmacht undertook the invasion of the Soviet Union, not to wage a sustained war there, but to win a blitz victory. Hitler's strategy against the Soviet Union knows no other variation on the theme of war. Blitzkrieg does not mean merely rapidly conducted operations—these are possible on the Eastern front too; it means swift and final victory. If the Third Reich cannot win in Blitzkreig tempo in the East, it cannot win in the East at all. Two other factors must be taken into account: One, the Red Army possesses a strong offensive potential. On the whole, the Red Army's offensive arms are no weaker than those of the Wehrmacht. In the first months of the war, the Red Army conducted its defence with the use of all offensive arms. The defensive was thought of as a means, a phase of transition towards the offensive. Its aim was to bleed the enemy white, to administer losses to him as great as possible in order to pave the way for a counter-offensive against the weakened enemy. For, the Red Army is trained for offensive action too. The goal of the Russian High Command is not a stalemate, but victory. The value of the Red Army in the anti-Hitler coalition is not limited to its powers of resistance; it extends to its potential offensive strength. During the third year of the war, the way towards an offensive of the Red Army can be opened either through the losses and the weakness of the Wehrmacht on the Eastern front—or through the pressure exerted on the Third Reich from the West."

Germany's offensive in Russia has spent its force; and her major strategy is not suited for the defensive. The Red Army has just begun its offensive; and its strategy is calculated to be as effective in the offensive as it was devastating to the enemy in the defensive. In sum, Russia must be able to accelerate the process of disruption of the retreating Nazi armies. It is in the Far East that the immediate prospect is most grave. Even here, there is heartening news of speedy despatches of reinforcement from America. In any case, America has engaged herself to produce the goods. One may be sure she will deliver the goods. Before summer, the superiority of equipment and war weapons will have shifted in the Far East in favour of the United Nations.

## NORTH WESTERN RAILWAY

**NOTICE**

The public intending to travel by rail is hereby informed that the fact that a passenger has purchased and is in possession of a ticket for a particular train does not in itself imply that accommodation will be available for him in any particular train.

Under the provisions of the existing law on the subject, a ticket must be issued on demand, but an intending passenger should, in the interest of his own convenience and that of passengers already occupying the train, refrain from undertaking the journey when his entry into a train would result in overcrowding.

With a view to assist the travelling public, the Railway will, as far as possible, endeavour to advise intending passengers of those trains which are already filled to capacity but cannot guarantee that this will be done invariably.

The public are earnestly requested to co-operate with this Administration in this matter.

GENERAL MANAGER.

## East Indian Railway

..... keep wagons moving ..... railways are operating at high pressure in not only keeping lines of communication open for the movement of troops, but for the carriage of essential war supplies .... the public are able to assist to a great extent in ensuring that wagons are always available for the vital traffic, if wagons, that have been allotted for their use, are loaded to full capacity ..... and loaded and unloaded PROMPTLY.

71-73, PARK STREET, CALCUTTA.

(From Our Correspondent)

Bombay, January 28.

PARSIS, as a rule, are not active politicians but the political consciousness of the community has never been dormant. This was demonstrated during a general meeting of the Parsi Central Association held last week. There was an appeal from Sir Jehangir Cowasji for co-operation by men of goodwill soon after he had made his independent analysis of the political situation in India. He declared that the expanded Executive council answers expectations and he was not at all sure that full responsibility at the Centre would work. The Muslim League had to be considered, not only in relation to the Congress claim for independence, but in the sharing of power at the Centre. Sir Cowasji referred to the League's opposition again in connection with what he called the tall order given by the Congress to Britain to declare India independent after the war. He referred to the fact that many Indian leaders chose to remain silent for fear of being misunderstood, but he urged that the deadlock should be broken by non-party men. Principal Davar discussed the political future of the Parsis. He asked that the members should not neglect their interests but should make prompt representations to Government on both general and specific issues. He declared that such activity would make for a democratic outlook, and under a reformed constitution it would permit the Parsis to secure adequate weightage in representation. The Parsis then are coming to recognise that the constitution will soon go into the crucible of charge. The result will cause no anxiety for the community's services in every sphere will command recognition. If there was little mention of Prohibition, it was a welcome indication of the Parsis' ability to rise above local and temporary issues at this juncture. What is essential is the end of the deadlock and the formation of a national government ready to promote the war effort. This is somewhat different from the view expressed by Sir C. Jehangir whose attack on the independencewalla was meant to indicate the strength and permanence of the Indo-British connection.

Last Saturday, the Indian Central Cotton Committee unanimously accepted the resolution of Sir P. Thakurdas asking for the restriction of cotton cultivation. One is aware of Sir P. Thakurdas' views as they were expressed at the E.I.C.A.'s annual meeting in December. The prompt acceptance by the larger, more representative body is proof of the weight of opinion on the subject of crop restriction. Measures adopted in Egypt to curtail cotton cultivation further can certainly be adduced in favour of the resolution adopted by the Indian Cotton Committee. Cast in the form of a request to Government the resolution asks for a reduction of existing acreage under short staple and fair staple by 50 per cent. It refers to the urgent need for cutting at the glut and the uncertain export outlook. Alternative crops are suggested in the national interest. Reserves of food grains appear highly necessary and the Provincial like the State Governments will have to concert measures to stimulate the growing of food grains at the same time as discouraging cotton. The experience of Madras, where the groundnut crop has been drastically reduced in 1941-42, indeed suggests that restriction programmes are not ineffective. The Indian Central Cotton Committee has also asked the Government to let the public know what is going to be done by March 1. A deputation to the Viceroy will explain the resolution. Crop restriction must come sooner than later because of the increase in the 1941 crop. At least it looks as if a million bales of cotton will be unwanted. Storage will be another problem and the early adoption of restriction is called for on more than one ground.

The Rotary Wheel keeps turning round. In India the annual District conference held last week thought of many things besides federal union. It elected a new Governor for the year in place of Dr. H. M. Desai. Post-war problems were discussed, and it was suggested that only a knowledge of peace aims could support morale. The spread of the movement was advocated and it will be interesting to watch how Mr. S. V. Mukerjee of Baroda, the new Governor of the 89th District, works out the policy of extension, not easy in a poor country like India. Rotary International has been asked to help with a contribution. The resolutions adopted last week do not run counter to accepted beliefs. The plea for the end of domination and equality of opportunity is wider than the vague promise made in the Atlantic Charter but the demand for world federation sponsored by Rotarians in India makes light of the enormous obstacles in realising the ideas possible only when the war-drum throbs no longer. The conference got its modicum of good wishes and one said openly that the Axis was opposed to Rotary ideals. The Mayor said that Bombay had benefited by Rotary's work, and his tribute to Rotary was both sincere and deserved.

The black-out is not getting less difficult. It provokes controversy as before, though the Governor's call for preparation will show the sceptics that it is needed. The A.R.P. work is in full swing but the lighting restrictions, leading to a full black-out, are not cheerfully accepted by those who argue that Bombay, if vulnerable, is not liable to visitation by hostile aircraft. The citizens are being exhorted on all sides to do what is necessary under the Defence of India Rules. Many have been told that they cannot have light and air together at present. Bombay's citizens wil find this a very hard saying indeed, but they will make note of the fact that the gleam of the water in the harbour will not induce the lone raider to dump his bombs in the water. The Police will soon take vigorous action to prevent breach of the lighting regulations. But confusion will linger, especially, when rumours still plague us. A.R.P. wardens have not yet mastered their own game, and some people still sa ythat the average householder does not know his warden who, too, is not always equipped to give essential advice. If the Police blend with the A.R.P. people, there is a certain risk of people distrusting the whole business, especially, in localities inhabited by industrial labour. The Corporation is manifesting some interest in the lighting restrictions of late. Schools are to have special arrangements in line with Government recommendations. The Congress group has come to recognise that A.R.P. is wanted—for children at any rate.

The local press teems with references to standard cloth. Different types for different garments have to be evolved soon. The textile advisory panel has thus got more work before it. Leading millowners including Mr. Krishnaraj Thackersey have agreed to go into the question. It is now admitted that the bulk of standard cloth will have to be of coarse counts. A good thing for the cottongrowers, it will be agreed. In spite of the recent fall in the price of both yarn and cloth, it is considered that Government should persevere with the plan of cheap cloth for the poor. Nobody can tell when it will be necessary to start production. Prices, too have not been determined. Licensing of retail shops to sell standard cloth will devolve on the Provincial Governments which, of course, will not refrain from collecting a vene fee. Any revival of the cloth sales tax in any form will be repugnant to millowners generally. This must be indicated well in advance and due provision must also be made for exemption from existing sales taxes. Millowners will naturally urge that when they make sacrifices for the sake of the public in producing standard cloth, the provincial governments, too, will have to make some small sacrifice of revenue. The price control conference will probably settle these details. The encouragement of textile production through larger supplies of fuel will be required at least in view of reports that Cawnpore mills are faced with a serious shortage of coal though the strike apprehensions in Nagpur will release a certain amount of coal for outside mills.

Among the Provinces acutely interested in A.R.P. expenditure is Bombay. Some attention has therefore been bestowed on the report that the old formula of "fifty-fifty up to one crore" has been modified after due discussion. The old formula stipulated that if A.R.P. costs went up over one crore, the Centre was to pay 75 per cent and the balance was to be defrayed by the Provinces. Since Bengal has already planned for a big increase this year by putting up one crore for civil defence, the slab system which is to take the

(Continued on page 170)

# Resume of Commodity Markets

Commodity markets have continued uninteresting during the week. The undertone is rather subdued. The anxiety regarding the future outlook is so great that operators and consumers alike are not prepared to take any long view. It is not surprising, therefore, that the recovery in the hessian market on the reports regarding the placing of fresh orders has not been quite pronounced. The Bombay raw cotton market also showed signs of improvement on the announcement by the Commerce Member that a special fund would be created to afford relief to the growers. The bullion markets have been rather quiet while the wheat market has been dull.

The future of commodity prices is mainly dependent on the developments during the next two months. With shipping facilities greatly restricted and little private export trade with foreign countries, it cannot be expected that there can be any substantial improvement in values. Improvement in values, if there is any, can be only with inflationary sentiment.

**Jute**

The raw jute market has been absolutely uninteresting and buying by mills has been only on a small scale. As was pointed out last week, the course of prices in the jute market is mainly dependent on the strength of the hessian market. Mills are the important consumers of the golden fibre. Sellers are keen to do business though holders of Tossa qualities are reserved.

**Jute Manufactures**

The trend of the jute manufactures market has been rather irregular. Earlier in the week rather quiet conditions were noticeable and there was only some near covering business when the fresh order for sandbags and hessian cloth was announced. Business in forward positions is practically at a standstill. That was the reason why the rise in prices on the announcement of fresh war orders was confined to the near positions.

**Raw Cotton**

The Bombay raw cotton market was inclined to be firmer on the statement made by the Commerce Member that a special fund would be created by the Government for the relief of cotton growers. He suggested that there should be a curtailment of the area under short staple and fair staple cotton and that food crops should be raised instead. As regards the funds to give relief to the growers, he said that the means with which to finance the special fund had not been decided upon. Regarding the increasing use of cotton, specifications have been suitably altered by the Supply Department. The improvement in prices in the cotton market, however, was not substantial. In mid-week, there was some selling at the higher levels and most of the gains were lost. Towards the close, the reports that an additional one anna per lb. on cotton imports had been imposed resulted in a slight rally.

**Piecegoods**

Trading in the piecegoods market has been confined to ready lots. In view of the uncertainty regarding the future of prices, buyers are not inclined to commit themselves far ahead. Mills, on the other hand, are not able to sell freely as there has been a considerable slowing down in production in the Western Presidency on account of the shortage of coal.

At the meeting of the All-India panel of textile interests held in Delhi early this week, it was decided that a scheme should be got ready to be put into effect immediately to ensure delivery of yarn to handloom weavers at reasonable prices. It was at the same time recognised that there was no need for immediate action as there has been an appreciable decline in values for yarn in recent weeks. Other questions affecting the handloom weavers and mills were also taken into consideration.

**Wheat**

The all-India first wheat forecast, 1941-42, published to-day, estimates the area under the crop at 32,108,000 acres against 32,811,000 acres last year. There is thus a decline in the area by 2 per cent. The crop has been affected by insufficient rains but its present condition and prospects appear to be fairly good on the whole.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, Jan. 29.

The placement of further orders by Government for early shipment has tightened up the ready position very much so far as fabrics are concerned and Mills are now not inclined to look at any business earlier than April shipment. The latest orders appear to be for Australia and besides cloth and Sandbags, also include some quantity of Bran Bags. With regard to the latter, Mills have something of a grievance. The order for these came on the market in the ordinary way, but the shipment required being early, no Mill was in a position to accept it. The price then offering on the open market was Rs. 51. Being unable to secure their requirements in this way, Australian importers apparently persuaded their Government to requisition the goods, which are now allotted by quota to Mills at Rs. 41-8. Naturally to provide the early shipment required, February-March, normal shipment orders will have to be deferred, so shippers will also have a grievance. If this procedure is to be countenanced or continued it might logically be carried to lengths which would virtually eliminate not only the Gunny Shipper from the Calcutta market but also the Gunny Broker.

January shipments promise to be quite satisfactory, but not sufficient to wipe out the big stock increase occasioned by the shortage of freight in December. That the U.S.A. at least is optimistic about freight requirements being met next month also, is indicated by a cable received from the New York Burlap and Jute Association in response to an enquiry with regard to the disposal of Raw Jute shipments, for which no freight has been allotted for three months past. The cable in question suggests that there are good prospects of a large proportion of the outstandings being cleared in February, and warning shippers to be ready to deliver on short notice.

Mill production will certainly show a reduction this month. Various factors influence this. First, the cold mornings which we have experienced lately always tend to slow down production. Again there have been the Mohurram celebrations for which many of the workers took not only the official paid holiday, but either a full day or half a day in addition. Proof, if such were required, that the workers are pretty well off in present conditions. Previously no pay was granted for the Mohurram holiday. Now that it is, the worker is no worse off if he chooses to take an extra unpaid day off. In addition to these factors there is the small but regular exodus of workers seeking, presumably, a safer spot than they consider the Calcutta industrial area to be in case of air raids. This exodus is not considerable, but there are few mills without a number of looms standing. Finally there are the strikes in the Budge-Budge area which have continued now for over a fortnight and still show no signs of settlement. All of which factors are estimated to reduce the month's production by at least 7½ per cent below maximum. This reduction, combined with good shipments of both hessians and gunnies, should result in a considerable shrinkage in the stocks held at the end of January. The placement of the recent further Government orders for early shipment gave rise to suggestions that it would be necessary for Mills to increase working hours to 66 per week in order to overtake them. However, it is extremely unlikely that this will be even considered. 60 hours would appear to be the maximum that the average worker can compass without loss of efficiency. There would be a sharp drop in the percentage of production gained by any extension of working hours. Nor is there any spare labour available to work extra shifts. In fact mills who find difficulty in keeping pace with their sewing commitments within the normal hours, find great difficulty in recruiting any extra sewing labour to keep their machines working overtime. So any further extension of working hours may be taken as out of question.

There is very little to report in the Export Jute market this week. With so many Press houses closed and others only working at a fraction of their capacity due to the desertion of labour, offerings are on a limited scale unless for jute actually in stock, which for the most part is low quality and not what is wanted. A few small transactions have been reported in Dundee Tossa and in Short Group Daisee. Long group Dundee Daisee assortment sold at Rs. 61 with further buyers reported at the rate. Neither has the Mill demand been so keen and only a small business has been put through in Firsts at Rs. 59 and Rs. 60 in Dundee Daisee at Rs. 60 to Rs. 62 and in Heart marks at Rs. 35. The Futures market remains dormant, so much so, that at the last meeting of the Board of Control the question was raised whether any useful purpose was being served by calling the Board meeting when there were no transactions on which to base a rate. Although the Indian members of the Board far outnumber the Europeans, it has been noticeable lately that, without the presence of the European element, there would not have been a quorum present at the Board meetings.

Loose Jute has also been a quiet and inactive market. What demand there is mainly runs on the better grades of white jute and the lower grades of Tossa, which are just the descriptions most difficult to secure up-country. European packing sold in the end of the week at Rs. 13 for Middles and at Rs. 9 for Bottoms. Sellers have since raised their prices by four annas but Buyers have not responded. Some Indian District Tossa was reported at Rs. 12 and Rs. 9 for Mids and Bots, but generally speaking buyers have shown little interest. Mofussil markets continue fully steady though in some places imports are showing up in somewhat greater quantity. Good quality of Tossa is coming forward but most of the white jute is of low grade.

After tending easier, the Fabrics section firmed up considerably when further Government orders were announced, but the turnover has been limited as most of the enquiry continues to be for early shipment, while Mills are not in a position to consider any fresh business for earlier than April. Nor does the Bazar appear to have almost anything left to sell for near. Many operators have of course unloaded their holdings and departed post haste for more distant climes, and the total Bazar commitments at the moment must be lighter than they have been for many a long day. Sales reported include 9 porters at Rs. 19 ready and at Rs. 17 to Rs. 17-6 April-June. 11 porters at Rs. 26-8 to Rs. 27 ready, at Rs. 24 Feb.-March and at Rs. 22-8 to Rs. 23-6 April-June. Wheatbags were reported at Rs. 29-8 Feb. In Heavy Goods, "B" Twills sold Rs. 36 to Rs. 37 ready, at Rs. 36-12 and Rs. 37 Feb.-March and at Rs. 36 April-June. Cornsacks have been done at Rs. 39-8 to Rs. 41 near and Cuban Sugars at Rs. 51 and Rs. 52 March and at Rs. 50 April-June. Liverpools sold at Rs. 43-8 to Rs. 44 for Feb. and Feb.-March and at Rs. 43 March. Cape Woolpacks fetched Rs. 1-14-6 for Feb.-March and Rs. 1-14 for April-May. The market closes quite steady though inactive on account of the reserve of sellers.

(*Continued from page 167*)

place of the old agreement of percentage grants-in-aid is likely to favour at least one Province. The slab system is meant to encourage local initiative though the latitude conferred on the Provinces in regard to the scope of services will encourage a certain amount of lavish expenditure, though the right to protest is reserved to the Centre. The local authorities, of course, are not concerned with the new formula, but their claim for relief will be duly strengthened by the new system of graduated grants. As the Centre's grants are payable only after the work is done the relations will presumably be that of client and contractor and will also secure the co-ordination for which there is a cry. The new formula will also silence special claims made on behalf of the deficit provinces like Assam. The need for subsidising statutory authorities like port trusts in regard to their A.R.P. work has not been recognised as yet, but the liberality displayed of late will support the belief that the port trusts will be shown some consideration, particularly, as their ordinary revenue cannot but be upset by the war.

Radio fans are not disconerted by the new warning against giving currency to enemy claims heard on the wireless. It is still openly said that all propaganda defeats its own purpose, but the spread of alarmist rumours has induced many to go slow with their wireless sets. How many think that Saigon is not a neutral centre. A too-ready disposition to quote some obscure Vichyite is a mark of deficient intelligence. To repeat what is heard is a breach of the license. Listeners clinging to sets kept in hotels and theatres are not at all likely to fare well if the licenses. Set is disseminating enemy propaganda. Appeals to listen to approved stations have appeared in consequence of the warning against false and misleading radio reports. So far confidence has not been undermined by admission that more misfortunes may befall after the loss of two ships in the Bay of Bengal, but the present condition of the cotton and other markets justifies the belief that commodities and all prices will recede further. If giltedged show a small rise, the share market is weakening even the new exchange frequently suspends business. Money appears cheap though crop movement is still in progress. Silver is no longer in large demand, but after the Reserve Bank's notice that sovereigns won't be available against gold tendered, the price of both gold bullion and coin went up.

The lucky Hajis who landed in Bombay last week were full of praise for the shipping arrangements. After touching Karachi the pilgrim ship came to Bombay. Men from distant China and remote Mangolia could be found among the disembarking passengers. The journey was safe and uneventful. Those who took gold found it easy to get saudi rials in exchange. The local rate in Jeddah is said to have been favourable. One must assume that it is a reflection of the bigger premium paid in India for sovereigns. There were not many pilgrims either from Java or Malaya. The Haj Committee was in charge of the hundreds who came off the ship. The homeward voyage was described as pleasant, and the pilgrims had little to complain about their experiences in Mecca and Medina.

**Ramie Fibre**

The existence of another fibre, a potential rival to jute, is acknowledged in the December bulletins of the Indian Jute Committee. The adoption of a new degumming process naturally confess importance on ramie fibre. Though the war in the Far East is likely to make supplies of several fibres including ramie scarce, it is clear that special encouragement given in New Zealand to flax and to fique fibre in Colombia can only have the effect of reducing the consumption of jute. It is certainly possible to relate such developments as the increasing use of cotton bags in the U.S.A. to the heavy rise in hessian prices though one may also hope for a reversal of the trend. While price problems cease to interest many for the moment, it is worth remarking that ramie does not threaten to be a serious rival. The fibre comes from a stingless nettle which grows up to 8 feet. Two types, one called rhea, are recognised but the fibre is the same. The plants are grown in China, Japan, India and many countries, but in China alone is the crop of commercial importance. Small areas are said to be under ramie in some European countries. The fibre is unsurpassed in length, strength and durability. That it has not been popular is due to the difficulty of extracting the fibre after getting rid of the gum —a difficult and rather costly process. More recently a patent has been taken out in Britain for degumming ramie fibre. According to the Jute Review the process consists of boiling the fibre in a caustic alkali solution to effect degumming. After this the fibre is squeezed by direct pressure to remove the alkaline, and then washed in water. The treatment is repeated a number of times, preferably in the same container. Ramie fibre is used for making twine, mosquito nets, tapestry and even certain woven fabrics. China exports nearly 20,000 tons of fibre in a year. The United Kingdom used to buy a fairly large part of China's exports but imports have been curtailed during the war by the intervention of the Ministry of Supply in July 1941, when an order was issued prohibiting the spinning or weaving of ramie fibre or yarn without license. The prohibition does not apply to the boiling, dyeing or finishing of ramie yarn.

**JUTE**

*Calcutta*, January 29.

With the uncertain outlook, the small-scale buying by mills and the irregular tone of the jute manufactures market, it can hardly be expected that there will be any activity in the raw jute market. The announcement of a fresh order for sandbags in mid-week caused a mild flutter in the market but there has been no broadening of interest. In the absence of any large demand by mills, sellers are eager for business and are prepared to discount rates. It will be remembered that it was pointed out in these columns last week that the strength of the jute market was mainly dependent on the behaviour of the goods market. In the absence of any large forward sales, mills are in no hurry to buy jute as they seem to be sure that they will be able to get their requirements on their own terms. Markets were closed yesterday on account of *Mohurrum*.

In the loose jute section, quotations are mostly nominal and only a very small business has been reported by mills.

In the pucca bales section, with the announcement of the fresh war orders, slightly firmer conditions were noticed. Dundee Daisee 2|3 and Tossa 4's were done at Rs. 71 per bale and Daisee 2|3 at Rs. 61 per bale.

In the futures market business is at a standstill. Only the quotation is slightly higher at Rs. 59 per bale.

**JUTE MANUFACTURES**

*Calcutta*, January 29.

With the anxiety of operators regarding the Far Eastern situation business in the jute manufactures market is on a very restricted scale. There is no tendency to enter into fresh commitments and forward sales are very poor. There is considerable apprehension regarding the availability of freight and the latest speech by the British Premier is little calculated to encourage hopes in this regard. In the circumstances, it was not surprising that the reports regarding fresh Government orders resulted only in a small rise in values.

The new war orders are for one crore sandbags and two crores yards strip hessian cloth, delivery February-March. 11 Porters ready are Rs. 26-14, February Rs. 26, March Rs. 24-10, April-June Rs. 21-14, and July-September Rs. 20-12. 9 Porters ready are Rs. 19. February Rs. 18-10, March Rs. 18-6, April-June Rs. 17-2 and April-June Rs. 16-4.

In the heavy goods section only a small amount of business has been passing. "B" twills for January shipment sold on the basis of Rs. 36-14, Cornsacks for the same position Rs. 40, Heavy Cees Rs. 33-12 and E. bags Rs. 28-8.

**COTTON**

*Calcutta*, January 29.

The Bombay raw cotton market has been definitely firmer during the past week. The strength of the raw cotton market and the reports that a special fund will be created to provide relief to cotton growers, have had a definitely encouraging effect on the market. Broach April-May are quoting Rs. 214, Juy-August Rs. 219-8, Bengal March Rs. 133-12, May Rs. 136-12, Oomra March Rs. 188 and May Rs. 172-4. The quotations at the end of last week were Rs. 202-8, Rs. 207-8, Rs. 124-4, Rs. 124-8, Rs. 182-4 and Rs. 154-8 respectively.

There has been a sharp rise in prices in the New York market during the past week on considerable buying on the inflationary theory. March are quoting 19.48 cents, May 19.61 cents and July 19.68 cents. There is a a sharp increase in the premium for the forward positions.

**SILVER**

*Calcutta*, January 29.

The Bombay silver market has been rather quiet and there is a slight decline in the rates to be recorded. The demand for ready metal has abated to a certain extent. Mint silver ready are quoting Rs. 69-13 and first settlement Rs. 64-13.

In the London market there is no change in prices, and the quotation for both spot and forward is 23½d. and 23 9|16d., respectively. Small demand has been officially satisfied.

**GOLD**

*Calcutta*, January 29.

The gold market has been uninteresting with the quotations fluctuating in narrow limits. Gold ready are quoting Rs. 46-10 and Rs. 46-6 for First Settlement. The demand for sovereigns continues to be in evidence and the quotation for the same is relatively higher at Rs. 33.

The London price for gold is unchanged at 168s.

**WHEAT**

*Calcutta*, January 29.

Business in the wheat market has not been quite on a large scale though, as pointed out last week, transactions are being more freely put through around the control rates. It is generally felt that there is not much gain in carrying over stocks with the institution of rigorous price control. Purchases are confined mainly to immediate requirements. Crop prospects in Northern India are considered to be satisfactory though beneficial rains in the U. P. have been followed by hailstorms and undue cold.

In the Calcutta market, Cawnpore ready and May are quoting Rs. 5-12 and Rs. 5-3-9 respectively. Prices for flour and flour products are at control rates and consumers' demand enables Calcutta mills to work four days a week at present. Wheat stocks with mills are not expected to last for more than a fortnight.

The war of materials!

Aeroplanes, Tanks and Anti-Aircraft Guns etc. are required in ever increasing quantities to defend our country.

Army clothing is another war time necessity and we have placed our entire plant at the disposal of Defence Service.

We regret we shall not be able to meet civilian demands at present.

BRAITHWAITE
BOMBAY PIPELINE

THE TANSA PIPE LINE.

Running over a distance of 110 miles, the Tansa Pipe Line conveys 90 million gallons of water per day for the city of Bombay. Designed and laid out by Messrs Braithwaite & Co., (India) Ltd. a total of 90,000 tons of steel were required for the completion of the work and due to the very high pressure that the Pipe can bear it has been known as "the Longest Boiler Barrel on Earth"

## Investor's Supplement

Vol. XXIX. No. 5 SATURDAY, JANUARY 31, 1942 Price Re. 1

*Stock Markets to-day and to-morrow*

## BANK PROFITS IN 1941

ABSOLUTELY uninteresting conditions have been noticeable in both the stock exchanges in Calcutta and Bombay. The developments in the war situation over the past week are little calculated to cheer up operators and investors. The British reverses in Libya and the further Japanese successes in Malaya have had a further depressing influence. With the uncertainties regarding the Central Budget it cannot be expected, therefore, that markets will stage a recovery.

It is being freely forecast that the deficit on account of the next financial year may be anything like Rs. 30 crores and that the Finance Member will be forced to increase both direct and indirect taxation.

* * *

Further restrictions on trading are to be placed by the Committee of the Calcutta Stock Exchange as from February 2, 1942. The market will open at 11 a.m. and close at 2 p.m. The present working hours are from 12 noon to 3-30 p.m. There is thus a reduction in the number of working hours in a session from three and a half to three. Delivery regulations also have been suitably altered.

* * * *

Thanks to the comparatively busier trading conditions in 1941 bank profits for that year, published during the last three weeks, show an appreciable increase over those for 1940. The rise in advances was not perhaps in proportion to the increase in total deposits, but the increase in investments and the fact that the bulk of the rise in deposits was in current accounts, enabled banks to report a higher level of earnings.

The experience of the Imperial Bank of India was not in accord with that of other banks as owing to the very low level of treasury bill rates profits for 1941 were actually lower than those for 1940.

* * *

Seven banks earned Rs. 1,68.54 lakhs in 1941 against Rs. 148.83 lakhs in 1940. Almost all the banks have maintained dividend at last levels. Whatever balance is left over after providing for higher taxation has been utilised to strengthen the financial position of banks. But for the runs on banks soon after the declaration of the war by Japan, banks might thus be said to have enjoyed a satisfactory year in 1941.

*Bengal Assam Steamship Company, Limited* has been able to report a satisfactory level of earnings for the year ended October, 1941. The net profit, before providing for taxation and depreciation, is Rs. 7,21,994 against Rs. 6,69,261 for the previous year. The sum of Rs. 3 lakhs (Rs. 2.75 lakhs) has been provided for depreciation while the provision for taxation is Rs. 1,41,600 against Rs. 1,11,250. The dividend on the ordinary shares has been maintained for the sixth year in succession at 12½ per cent. The amount carried forward is higher at Rs. 1,52.523 against Rs. 1,43,129 brought in.

* * *

The estimated mining profit of the *Indian Copper Corporation, Limited* for the year ended December, 1941 is £279,000 before deducting Indian and United Kingdom income-tax, depreciation and London expenses. The actual earnings for the year 1940 were £266,149. The improvement in earnings for the last year, therefore, is not very pronounced. In view of the small amount brought in from the previous accounts and the necessity for higher provision for taxation (both in India and the United Kingdom) the dividend of 12½ per cent (taxable), paid on the last occasion, can be maintained only with some difficulty.

* * *

Fresh war orders have been placed with the jute industry. Only on Monday this week the Indian Jute Mills Association received an order for one crore sandbags and two crores yards strip hessian cloth to be delivered in the two months February and March. This is the second order to be received since the outbreak of the Japanese war. In the last four months of 1941 orders for sandbags totalling 269 millions were placed. Delivery of 15 crores sandbags on account of the British Government was to be made in twelve equal monthly instalments beginning from October, 1941. This order was received at the end of August, 1941. The next order for 10 crores sandbags, to be delivered in ten equal monthly instalments from January, 1942 to October, 1942, was received in the last week of October, 1941. The third big order for the year was placed with the Indian Jute Mills Association in mid-November, 1941. The quantity involved was 62 million sandbags. Delivery was to be effected in equal monthly instalments—twelve million between January and March, 1942 and fifty million between April and September, 1942. Thus, sandbag deliveries alone total more than 4 crores per month at the present moment. Besides these large orders, the jute mills are manufacturing strip hessian cloth and other types of special hessian cloth, jute canvas, etc. That is the reason why there has not been any reduction in the number of working hours. The export outlook is considered rather discouraging in spite of the hopes entertained by the Committee of the Indian Jute Mills Association. To the extent mills are more busily engaged on war orders, profits will be affected adversely and the same cannot be expected to run at the record level of the latter half of 1941.

The outlook for jute shares, while by no means unsatisfactory having regard to the present depressed levels for the popular counters, can be expected to improve only with the betterment in the freight position.

* * * *

*Purtabpore Company, Limited*, another company belonging to the Begg, Sutherland group, has earned satisfactory profits for the year ended October, 1941. The net profit, before providing for taxation and depreciation, is Rs. 3,15,450 against Rs. 1,09,683 for the previous year. The amount set aside to depreciation is Rs. 1 lakh (Rs. 70,000). The sum of Rs. 30,000 is set aside to Hathwa Raj Lease Reserve in addition. The lease of lands from the Hathwa Raj has now expired and the directors have decided not to renew this lease. There are rents to be collected from these Hathwa Raj villages and as the lands have been given up, the directors feel that a reserve should be created against non-collection of rents which are outstanding. After providing the sum of Rs. 76,596 (Rs. 8,500) to Taxation Reserve, it has been possible to clear the arrears of dividend on preference shares and pay a dividend of 5 per cent on the ordinary shares. This is the first ordinary dividend to be paid since 1936.

On the last occasion, I pointed out that the preference shares were very attractive from the investor's point of view. The quotation was then around Rs. 15. In spite of the depressed conditions in the market at the present moment the quotation is now higher at Rs. 17 cum-dividend.

"WATCH-DOG."

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Calcutta*, January 30.

ABSOLUTELY uninteresting conditions have been noticeable on the Calcutta Stock Exchange during the past week and business passing has been on a very small scale. Operators and investors alike are adopting a cautious attitude and quotations for the most part of the week have been fluctuating in narrow limits. On the announcement of fresh war orders a slightly firmer tone was noticeable in the jute section but not many useful rises in prices have been recorded. For most of the popular counters there are no buyers above the minimum levels. Fresh business transacted is very poor and most of the business recorded relate to previous commitments.

The giltedged securities section has been slightly firmer though there has not been any appreciable increase in the volume of business. 3½ per cent Government Paper is higher at Rs. 95-6 while 3 per cent Paper is unchanged at Rs. 82. Among terminable loans business has been put through around last rates. 3 per cent *Second Defence Loans* were dealt in at Rs. 98-1 and 3 per cent 1946 Defence bonds at Rs. 100-12. 3 per cent 1963-65 were Rs. 94-4, 3½ per cent 1947-50 Rs. 101-2, 4 per cent 1960-70 Rs. 109-4 and 5 per cent 1945-55 Rs. 108. There have been no transactions in provincial government loans. Money conditions have remained unchanged and the treasury bills rate is the same as last week at one rupee per cent per annum.

Among public bodies' debentures, 3¼ per cent *Howrah Bridge* debentures changed hands at Rs. 98, 5 per cent *Calcutta Port Trust* at Rs. 114-4 and 3½ per cent *Calcutta Improvement Trust* at Rs. 99-8. Among industrial debentures, 5½ per cent *Carew & Co.* debentures were Rs. 104-8, 5 per cent *India General Navigation* at Rs. 102-8 and 4¼ per cent *Alexandra Jute* debentures at Rs. 100.

Only a few transactions have been recorded in preference shares. There are no sellers for jute mills shares. *Jessop & Co.* were crossed at Rs. 116 while *Steel Corporation* changed hands at Rs. 110-8. *Dunlop Rubber* Second preferences were Rs. 105.

Cotton shares have remained unchanged with *Cawnpore Textiles* at Rs. 8-12, *Dunbar* at Rs. 231, *Kesoram* at Rs. 8-9 ex-dividend and *New Victoria* at Rs. 4-9.

In the Coal section, *Bengal* and *Bhalgora* are the only two counters in which transactions have been noted, *Bengal* being dealt in at Rs. 367 and *Bhalgora* at Rs. 5.

In the Jute section, as remarked above, by far the greater amount of business has been put through. *Adamjee* were Rs. 25-12, *Agarpara* Rs. 38-8, *Delta* Rs. 414, *Gourepore* Rs. 680, *Kamarhatty* Rs. 467-8, *National* Rs. 21-12 and *Rameshwara* Rs. 9. *Reliance* were Rs. 53 and *Waverley* Rs. 3-2.

Engineering shares have not been quite in favour. *Burn & Co.* were around Rs. 348 while *Jessop & Co.* were not very much changed at Rs. 18-12. *Indian Standard Wagon* were Rs. 60-8 and *Marshall* Rs. 2.

Sugar shares have remained steady with *Cawnpore* at Rs. 24-10 and *Champarun* at Rs. 19-4. *Purtabpore* were Rs. 11-8, *Buland* Rs. 24-12 and *Raza* Rs. 25.

Only a few transactions were reported in Tea shares, *Bhatkawa* being Rs. 59, *Oodlabari* Rs. 26-8 and *New Terai* Rs. 14.

In the Miscellaneous section, *Consolidated Tin* and *B. I. Corporation* were Rs. 2, while *Alkali and Chemical* were Rs. 20-10. *B. I. Corporation* were slightly easier at Rs. 4-14 with *Dunlop Rubber* at Rs. 40-8 and *Indian Cable* at Rs. 20-12 ex-dividend. *Indian Wood Products* were Rs. 28, *Midnapore Zemindary* Rs. 66 and *Assam Saws* Rs. 3-6. Among Paper shares, *Titaghur Paper* were Rs. 19-4, *Bengal Paper* Rs. 135, *Shree Gopal Paper* Rs. 14-12 and *Star Paper* Rs. 13-8.

## BOMBAY STOCK EXCHANGE

*(From Our Correspondent)*

*Bombay*, January 29.

*Money.*—The rate for call money continued to be quoted at ¼ per cent.

*Exchange Market.*—Banks were selling T.T. at 1s. 5 31|32d. and buying three months' bills at 1s. 6 9|32d.

*Securities.*—Giltedged securities continued steady during the week, 3½ per cent Paper closing at Rs. 95-6 as against the same in the previous week. Among long and medium-dated bonds, 1948-52 changed hands at Rs. 97; 1951-54 at Rs. 98-4; 1963-65 at Rs. 94-4; 1947-50 at Rs. 101-4; 1960-70 at Rs. 109-7; 1955-60 at Rs. 113; 1945-55 at Rs. 108-2 and 3 per cent 1946 Defence Bonds at Rs. 100-12.

*Shares.*—Slightly easier conditions were witnessed in the local share market during the week under review. The latest developments in the Far East have had a rather discouraging effect on the market. The Japanese landings on the west coast of Borneo, the occupation of the main town of New Britain and the recapture of Benghazi by the Axis troops—all these factors overshadowed other developments, bringing prices near the minimum rates fixed by the authorities of the local Stock Exchange. The encouraging news from the Russian and Chinese war fronts failed to cheer up the market. Trading continues to be cautious and the closing tone to-day is somewhat quiet.

*Textiles.*—A slight improvement in prices was noticeable in this section as compared with the last week. *Bombay Dyeing* showed a rise of about 10 points over the previous week, closing at Rs. 1,160, while *Century* were slightly higher at Rs. 386; *Gokak* at Rs. 254; *Kohinoor* at Rs. 491; *Svadeshi* at Rs. 405 and *Colaba* at Rs. 181. *Central India* were, however, unchanged at Rs. 350. In the cash list, *Ahmedabad Advance* were done at Rs. 325; *Sholapoor* at Rs. 5,400 and *Vishnu* at Rs. 1,555.

*Hydro-Electrics.*—This section continued to be featureless, *Tata Power* being quoted at Rs. 1,650; *Tata Hydro* at Rs. 185 and *Andhra Valley* at Rs. 1,665.

*Steels.*—After a poor start, both *Tata* ordinaries and deferreds met with fair support and prices improved towards the close. The closing rates were Rs. 307-8 for ordinaries and Rs. 1,652½ for deferreds as against Rs. 303-8 and Rs. 1,620 in the previous week.

*Banks and Insurance.*—Bank shares were steady with *Central Bank* at Rs. 47-4; *Imperial Bank* fully paids at Rs. 1,550; contributories at Rs. 378-12; *Bank of India* at Rs. 144-8 and *Reserve Bank* at Rs. 104-8.

In the Insurance section, *New India* were done slightly higher at Rs. 50-12.

*Miscellaneous.*—*Associated Cement* remained firm at Rs. 159. *Bombay Burmah Trading* have lost again another 20 points following the latest developments in the Far East. *Belapur Sugar* were slightly higher at Rs. 246 and *Scindia Steam* at Rs. 20-7. *Alcock Ashdown* were done at Rs. 605; *Bombay Burmah Trading* new shares at Rs. 127-8 and *Bombay Steam* at Rs. 315. *Bombay Trams* were Rs. 140. *Indian Iron* changed hands at Rs. 26-8 and *Premier Construction* at Rs. 116-8.

## MADRAS STOCK EXCHANGE

(From Our Correspondent)

*Madras*, January 29.

THE Japanese successes in the South-West Pacific have made the local market very nervous and sensitive and buyers are not willing to enter the market at the current levels. Textiles and Rubbers were marked down on lack of support.

*Securities.*—This section has been steady throughout the week under review. 3½ per cent Paper reported business at Rs. 95-5, 3 per cent 1963-65 at Rs. 94-6; 3½ per cent 1947-50 at Rs. 101-2 and 5 per cent 1945-55 at Rs. 108-3. State and Provincial Loans met with a small turnover. 3 per cent 1956-61 *Mysore Loan*, after opening at Rs. 103-5, closed slightly higher at Rs. 103-10, while 3 per cent 1952 *Madras Loan* changed hands at Rs. 97-14.

*Mills.*—Prices in this section showed a sagging tendency during the week as sellers predominated. *Buckingham and Carnatic*, after being done higher at Rs. 250, closed a shade easier at Rs. 246. *Cambodia* were slightly lower at Rs. 10-10; *Sitaram* at Rs. 88 e.d.; *Pankaja* at Rs. 138-8 and *Coimbatore Cotton* at Rs. 143. *Vasanta* were, however, unchanged at Rs. 140-8.

*Electrics.*—*South Madras Electric* ordinaries met with a small turnover at Rs. 12-10 sellers.

*Plantations.*—The week under review accounted for a good turnover especially in the planting issues. Though prices opened higher, an easier tendency was noticeable towards the close owing to some selling pressure. *Cochin Malabar* closed at Rs. 9-2; *Kalpetta* at Rs. 23; *Rajgiri* at Rs. 7-14; *Nellithanam* at Rs. 1-14; *Udayagiri* at Rs. 8-2; *Midland* at Rs. 7-5 and *Tropical Plantations* at Rs. 26. Among Tea shares, *Chembra Peak* found buyers at Rs. 5-2 with sellers scarce. *Fringford* were marked above par at Rs. 11. *Highland Produce* changed hands at Rs. 22-8 and *Peermade* at Rs. 31-8.

*Sugars.*—*Deccan Sugar* small shares had buyers at Rs. 52-12, while *Travancore Sugars and Chemicals* were marked lower at Rs. 12-11. *Jeypore Sugar* had a transaction at Rs. 12-2 and *Vizagapatam Sugar* at Rs. 7.

*Banks.*—*Imperial Bank* fully paids met with good business at Rs. 1,560 x.d. *Reserve Bank* changed hands at Rs. 101-8.

*Miscellaneous.*—*Mysore Paper* were available at Rs. 15-8, showing a drop of one point over the previous week. *Andhra Cement* had buyers at Rs. 77 and Rs. 78, while *Associated Cement* were done at Rs. 155 x.d. cash. *Mettur Chemicals* ordinaries changed hands at Rs. 14, and deferreds at Rs. 4-10. *Spencer "A"* preferences were offered at Rs. 10. Among Engineering shares, *Brunton Engineering* came in for business at Rs. 10 and *Tata Steel* 2nd preferences at Rs. 138-8.

## TRANSACTIONS DURING THE WEEK

### CALCUTTA STOCK EXCHANGE

***(From 23rd Jan., to 28th Jan., 1942 both days inclusive).**

**GOVERNMENT SECURITIES:**

3 per cent 1963-65:—(23rd) 94-4; (26th) 93-6 s.l.

ISSUED WEEKLY

Vol. XXIX. No. 6 SATURDAY, FEBRUARY 7, 1942 Price Re. 1

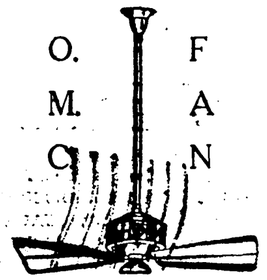
**Insure and Increase Nation's Strength**

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to



NATIONAL INSURANCE COMPANY, LIMITED.

7, COUNCIL HOUSE STREET, CALCUTTA.

Phone: Cal. 5726, 5727 and 5728.

Branch and Agency Offices throughout INDIA, BURMA, CEYLON, BRITISH EAST AFRICA AND FEDERATED MALAY STATES.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

In ordinary conditions, February represents the peak of the busy season; and this month witnesses the biggest concentration of the demand for crop finance. In the twenties, the general rule was an eight per cent bank rate in February; and, not infrequently, the Imperial Bank would avail itself of the emergency currency provisions to borrow money from the Paper Currency Reserve against commercial paper. All that is now past history. For over five years, we have an unchanged bank rate of 3 per cent. Even this three per cent for even the busy season is out of relation with actual conditions in the money market. In relation to call money rate, treasury bill discount and rates paid by banks for deposits, the official minimum should be two per cent rather than 3 per cent.

There are certain fictions and superstitions which die hard. One such fiction is the quotation in Calcutta for interbank call money at ½ per cent. During many of the weeks when this has been quoted as the official rate, you may search through all Clive Street, like Diogenes, with a lantern in hand; and you will see no borrower. It may well be that if the quotation is ¼ per cent, there will be business at this rate. But the bank bosses in Calcutta look upon ¼ per cent as a heterodox quotation.

The Reserve Bank, presumably, has a superstition about 3 per cent bank rate. Otherwise, the bank authorities would have changed the rate long ere this. The Bank of England rate is 2 per cent. And this rate obtains at a centre which is the scene of a hundred air raids and whose monetary machine has to work under numberless restrictions and inconveniences. A bank rate has a definite meaning and purpose. It is the standard for other money rates. At 3 per cent, the Reserve Bank rate in India ceased to be a standard long ago. In other words, persistence in the three per cent rate would be to deprive the bank rate of its meaning and purpose.

In the current week, as in the earlier, short credits have been again cheap, and none so poor as to want any. Interbank call money is quoting ½ per cent in Clive Street and ¼ per cent in Hornby Road, the rate being nominal at both the centres. On the weekly tender day, the amount of treasury bills on offer was Rs. 1 crore; and applications amounted to Rs. 1.78 crores. The average rate of accepted tenders is one pie lower at annas fifteen and pies eleven per cent per annum. The offer of tender bills for next week has been increased to Rs. 2 crores. February is a month during which Treasury bill maturities are rather on the heavy side. Liabilities to be met in this regard are Rs. 11.14 crores. It is the heavier treasury bill maturities which are responsible for the increase in the tender bills intermediate treasury bills sold between January 28 and February 2 amounted to Rs. 1,48¼ lakhs. Sales of tap bills are to continue at the unchanged rate of Rs. 99-12-3.

The returns of the Reserve Bank for the week ended January 30, indicate a last minute receipt of the usual inter-governmental transactions. Balances held abroad in the banking department show an increase of Rs. 12.25 crores to Rs. 54.77 crores, while sterling securities in the issue department have gone up by Rs. 3 crores to Rs. 248.63 crores. The Reserve Bank has thus gained sterling assets for Rs. 15 crores in the last week of January. It may be said, in broad terms, that this represents the sterling payment received by the Indian Government. This is confirmed by the increase of Rs. 14.20 crores in the Central Government's deposits with the Reserve Bank which have risen from Rs. 6.60 crores to Rs. 20.80 crores. That the payment from the British Government was over at the last minute, is indicated by Ways and Means advances showing as high as Rs. 7.57 crores. As on January 23, ways and means advances were Rs. 2.18 crores. It is obvious that, in the course of the week, the Central Government have had to borrow nearly Rs. 5½ crores from the Reserve Bank on ways and means account. Considering that the deposits of the Central Treasury are shown at Rs. 20.80 crores, this week's ways and means advance as well as the last week's could easily have been liquidated. That the deposits of the Central Government as well as the ways and means advances are shown at a high figure, may be taken as proof that intimation of the receipt of the sterling payment reached the Reserve Bank at the last minute.

It follows that the Central Government's deposits will be automatically cut to the extent of Rs. 7 crores. That is to say, after repayment of the ways and means advance, the cash balance of the Central Treasury will be Rs. 14 crores. Further deductions to be made in respect of the usual month early disbursements. It is, therefore, quite on the cards that next return of the Reserve Bank shows Central Treasury's deposits at round about Rs. 12 crores. In this connection, it must be added, however, that, as in earlier months, a second instalment of sterling payment is not unlikely.

As we pointed out on an earlier occasion, the sterling receipts in respect of inter-governmental transactions are now of the order of Rs. 20 crores per month. If January payments come to be round about this figure, the next week's return will still see a fairly high level of Central Government's deposits. If, as we have argued, the Government of India start February with their cash balances at or near Rs. 17 crores, the ways and means adjustments during the month must be conducted with the usual smoothness.

There is, however, a recent anxious development whose full repercussions on the ways and means problems are not yet clear. The government securities market has persisted in the lower prices in spite of considerable official support which seems to have been given. That open market operations on a fairly impressive scale are being carried out, is fully indicated by the sharp fluctuations in the Reserve Bank's investments in the banking department. Investments as on January 30, stood at the all time record of Rs. 13.38 crores, as compared with Rs. 12.97 crores on January 23 and Rs. 10.17 crores on January 16.

## TREASURY BILLS

### India

Tenders for Rs. 1,00,00,000 (Rupees one crore) of three months' Government of India Treasury Bills were opened on Tuesday, February 3, 1942. Total amount offered was Rs. 1,78,00,000 (Rs. 1 crore and 78 lakhs). Tenders at Rs. 99-12-3 per cent were accepted in full and those at Rs. 99-12-0 per cent were allotted approximately 53 per cent. Total amount accepted was Rs. 1 crore, the average rate of accepted tenders being -/15/11 per cent (annas fifteen and pies eleven per cent) per annum.

Tenders for Rs. 2,00,00,000 (Rupees two crores) of three months' Government of India Treasury Bills will be received on Tuesday, February 10, 1942. Successful tenderers should make payment on Thursday, February 12, 1942. Other conditions are as usual.

Three months' Intermediates will be sold from February 4, 1942 to February 9, 1942 at Rs. 99-12-3 per cent subject to the conditions previously announced (viz. sales can be stopped at any time without previous notice if Government think it necessary).

Three months' Intermediates sold from January 28, 1942 to February 2, 1942 amounted to Rs. 1,48,25,000 (Rupees 1 crore, 48 lakhs and 25 thousand).

During the week ended January 30, 1942, Government of India Treasury Bills for Rs. 1,53,00,000 (Rupees one crore and 53 lakhs) were sold in favour of the Issue Department of the Reserve Bank of India.

**NORTH WESTERN RAILWAY**

With effect from 1st February, 1942, most of the Cheap Single and Return Fares shown in rule 58 of N.W.R. Time and Fare Table (in force from 1st September, 1941), will be cancelled. Further particulars may be obtained from Station Masters.

GENERAL MANAGER,
N.W. Ry. Lahore.

# Finance Abroad

Thursday, Evening

Vast and unusual changes will follow the adoption of the U. S. Administration's proposalsto modify Lease-Lend. The Act of March is sure to undergo extensive changes. The original measure, which has been described by Lord Wardington as one of the most decisive steps in world history, is viewed as inadequate. But its amendment is not the concern of the Government which is going to do many things very soon. It has been said that total appropriations up to 23.4 billions have been made already. It means that the initial appropriation of 7 billions was inconsiderable as compared with the eleven months' total. The procedure laid down in the Act calls for occasional Congressional scrutiny. And the authority of the Budget Bureau too is recognised. But old methods lead to delay; so new methods are to come. Hereafter only non-warlike items will come under *Lease-Lend*.

The military supplies provided in consonance with the agreement as regards grand strategy will be sent under other heads. Separate contracts will not be needed as the U. S. A. will order and make delivery of planes, ships and other things. The direct fundamental result will be that much of the outlay on aid to the Allies will come into war expenditure. The limit imposed on spending by the Act itself will disappear. Before a year is out, the Act will have no importance, mainly because the U. S. A. is at war with Britain's enemies. This will remove the justification for the purchasing missions kept by other countries. One Supply Council in Washington will answer all purposes. The devices resorted to for getting various things under *Lease-Lend* will have no significance because food, raw materials and non-military items alone will come within the purview of Lease-Lend. It is clear that the U. S. A. will become the sole judge of Allied requirements and applications under Lease-Lend rules by unimportant applicants like India will be shelved. The W. P. B. must be behind the scheme. That is self-evident. As soon as details are known, the Indian Government will probably take steps to liquidate the official agencies set up last year. It will lead to a saving and avoid conflict with the U.S.A. which knows what is good for India and the 25 countries mixed up with her. Britain cannot grouse having regard to the assignment of 944 millions for ship repairs alone under a recent appropriation. Perhaps, the decision to take off the trimmings of Lease and Lend is due to a sizeable balance in the Treasury. Mr. Morgenthau's views expressed before the House Committee suggests that. He remarked that the U. S. fiscal position was better than in the last war. He pledged himself to voluntary rather than compulsory borrowing. He hoped and believed that defence bonds would absorb a considerable proportion of working class savings, and other forms of Treasury securities would attract unused working the U. S. floating debt is likely to follow from capital. It is possible that a big increase in the U. S. floating debt is likely to follow from the latter assurance. Banks would be told that excess reserves should go into new Treasury deposits but one must wait for details.

The most interesting part of Mr. Morgenthau's evidence relates to silver. The U. S. Secretary to the Treasury is credited with the hope that, because of the cost to the Treasury, Congress would strike all silver legislation off the books. The Silver Purchase Act of 1934 has not been renewed but it is tacitly maintained, and a modified programme of buying new-mined silver has to be kept going. Thirty or forty millions a year does not seem much against the enormous appropriations, for social security and relief. The Third Term has seen no breach in the silver programme and if one thinks of bonvoisinage agreements etc with Mexico, an extension of silver buying would seem logical. But the Treasury view is against silver and in wartime Congress may learn to change its opinion. Silver is so often a by-product, and men making money out of copper and lead may not bother now about Treasury support for silver. The words are certainly ominous for Indian speculators who have pushed up silver to incredible heights since the war with Japan gbeean. One hopes that the words appearing on Wednesday will not be lost on Bombay where ready silver still appears to command an undue premium.

Last week's reference to Allied help for China has to be amplified. The U. S. House Committee has said ditto to the Administration's proposal for putting up $500 million for China which is already eligible under the Lease and Lend rules. The President suggested the loan, and two secretaries including Mr. *Jesse Jones* recommended early compliance The Speaker had been sounded the plan has gone through. The British appropriation of £50 million is in line with Sir H. K. Wood's assurance last seek. Under new Lease and Lend arrangements both munitions and military equipment are covered. This is a wider arrangement than the loan referred to. It is clear that British help is not merely meant to stiffen the Stabilisation Fund. The terms and time are not settled but the upper limit of 50 million sterling fixed is an admission that Britain can provide some money plus the goods wanted for China's resistance. This may help China to get many of the imports closed to her by the Japanese fleet. As was pointed out previously China is the weakest member of the A. B. C. D. front and Japan by taking over Hongkong and Shanghai has dealt a big blow at Chinese economy. President Roosevelt has realised this promptly. He at any rate has grasped that money and financial policy are just a means to an end, namely, victory. The U. S. victory programme explains also the profound modifications of the Lease and Lend procedure said to be under consideration.

The most important change to mention here is that the Straits dollar is now below 2s. 4d. The change in the London rate must be viewed as a result of the siege of Singapore in progress. The absence of any change in the quotations for European currencies must be viewed against the further rise in the rupee quotation for the Straits dollar. The N.E.I. guilder is still quoting in London at 7.58|62 to the pound and in India the selling rate for T.T. in Batavia was 55¾ guilders per Rs. 100, while the buying rate for T.T. was 57½. The normal difference is existent. If it widens, it will be acounted for by difficulties and delays resulting from war. While speaking of this development, which may not be unexpected, mention must be made of a Notification permitting limited entry of Straits currency. Evacuees can draw up to $300 in pursuance of the decision to help them. The Reserve Bank has agreed to take dollars for rupees and *bonafide* evacuees certified by a Protector of Emigrants can make use of the new facility, similar to that made available not long ago for holders of currency notes of Burma Province.

The contrast between this and the Notifications concerning the Philippine and Malayan notes is plain. Here it is a case of Indian fugitives who have a claim to assistance, and there is no question of the enemy gaining anything. Only a limited amount of money will be paid out and the F.M.S. authorities will probably be asked to pay out afterwards.

The flatness of Far Eastern issues is attested by the sharp fall in Hongkong and Shanghai Bank shares. They may still be over par but the prospects must be viewed in the light of the Japanese Finance Minister's recent statement that all foreign institutions in Japanese occupied territory working with enemy capital will be closed. Many bank branches will be affected by the decision which leaves one loophole. Special consideration, it was said, would be shown to enemy banks which co-operate with Japanese financial policy. The Finance Minister said that remittances to enemy countries including areas under the control of the Chungking Government, would be prohibited. The chances of getting out with money from Malaya are therefore slimmer than before. It is known that new occupation notes have appeared. The facsimile of the $1, $5 and $10 notes published in the *Bengal Weekly* last week showed that the Japanese Government just promises to pay dollars to the holders. It is unsigned, even by the Japanese O.C. in Malaya, and is clearly modelled on the *Reichskreditcasse* notes put out by the Germans in Occupied countries. The exchange value in yen is unknown. Clearly the Japs want to use the local currency and get goods without being pestered later on by holders of yen.

## No Increase in India's Debt

As a result of the considerable repatriation of sterling debt and the substantial subscriptions to defence loans, the picture of India's Public Debt has undergone vast changes during the twenty-nine months of war. A study of these chages must be interesting, as reflecting the exceptionally strong financial position of India and instructive as providing clues to the financial statement which Sir Jeremy Raisman will present to the Central Legislature at the end of this month.

As on August 31, 1939, the rupee debt of the Government of India amounted to Rs. 427.26 crores, comprising Rs. 127.26 crores in non-terminable loans and Rs. 300.00 crores in terminable loans. The total under sterling loans on that date was £272.62 million.

We are in a position to give the corresponding figures as on October 31, 1941; the figures up to the end of October, 1941, can be verified from the statement of tthe Public Debt issued by the authorities. From our records, we should be able to give the latest figures but we must add that their complete accuracy cannot now be verified. At this point, we shall give the relevant figures as on October 31, 1941. The rupee debt on this date was made up as follows:—

| | | Rs. |
|---|---|---|
| **Non-terminable loans:** | | |
| 3½ per cent. Paper, 1842-43 ... | ... | 34,66,86,000 |
| 3½ " " " 1854-55 ... | ... | 20,43,20,000 |
| 3½ " " " 1865 ... | ... | 40,94,69,000 |
| 3½ " " " 1879 ... | ... | 2,77,12,000 |
| 3½ " " " 1900-01 ... | ... | 40,88,00,000 |
| 3 " " " 1896-97 ... | ... | 7,01,70,000 |
| Total | ... | 1,46,71,57,000 |
| **Terminable loans:** | | Rs. |
| 2½ per cent., 1948-52 ... | ... | 12,01,28,000 |
| 3 " " 1946 ... | ... | 45,14,32,000 |
| 3 " " 1951-54 ... | ... | 31,92,23,000 |
| 3 " " 1963-65 ... | ... | 60,96,36,000 |
| 3½ " " 1947-50 ... | ... | 55,94,36,900 |
| 4 " " 1943 ... | ... | 14,97,17,700 |
| 4 " " 1960-70 ... | ... | 63,30,26,300 |
| 4½ " " 1955-60 ... | ... | 9,05,63,700 |
| 5 " " 1945-55 ... | ... | 58,74,93,800 |
| Total | ... | 3,52,06,57,400 |
| **Rupee Counterparts:** | | Rs. |
| 3 per cent., 1949-52 ... | ... | 48,68,95,000 |
| 3½ " " 1954-59 ... | ... | 12,18,51,000 |
| 4 " " 1948-53 ... | ... | 4,72,66,000 |
| 4½ " " 1950-55 ... | ... | 7,39,55,000 |
| 4½ " " 1958-68 ... | ... | 5,71,05,000 |
| 5 " " 1942-57 ... | ... | 29,39,000 |
| Total | ... | 79,00,11,000 |
| **Interest-Free Loan:** | ... | 2,66,97,000 |

The total comes to Rs. 580.00 crores which includes subscriptions for the second defence loan 3 per centt. 1949-52.

The sterling debt as on October 31, 1941 was as follows:

| | | £ |
|---|---|---|
| 2½ per cent. Paper | ... | 11,046,486 |
| 3 " " " | ... | 70,684,210 |
| 3½ " " " | ... | 78,707,509 |
| Unredeemed Terminable Loans | ... | 12,780,208 |
| Total | ... | 173,218,413 |

It will thus be seen that India's rupee debt had increased from Rs. 427.26 crores on 31-8-39 to Rs. 580.00 crores on 31-10-41. The increase in rupee debt is, therefore, Rs. 152.74 crores.

So far as the sterling debt is concerned, it has declined from £272.62 million on August 31, 1939 to £173.22 million on October 31, 1941. The decrease in sterling debt is, therefore, £99.40 million. This is equivalent to Rs. 132.53 crores.

In other words, while the rupee debt has gone up by Rs. 152.74 crores, the sterling debt has gone down by Rs. 132.53 crores. This means a net increase in India's Public Debt of Rs. 20.21 crores.

This, however, does not give the full picture. We have also to take into account the changes in Treasury Bills outstanding with the public, in Treasury Bills issued to the Reserve Bank and in the deposits under postal savings accounts and cash certificates. Treasury Bills issued to the public were Rs. 33.79 crores on August 26,1939, and Rs. 22.00 crores on October 31, 1941. That is to say, the floating debt was less by Rs. 11.79 crores. On the other hand, Treasury Bills issued to the Reserve Bank increased from Rs. 37.38 crores on September 1, 1939 to Rs. 68.48 crores on October 31, 1941, or by Rs. 31.10 crores. Taking the floating debt as a whole, there has been a net increase of Rs. 19.31 crores between September, 1939 and October, 1941.

The net total increase in the Central Government's indebtedness in the form of rupee loans, sterling loans, Treasury Bills issued to the public and Treasury Bills issued to the Reserve Bank is, thus, Rs. 39.52 crores.

It is known, however, that, owing to the large withdrawals from postal savings banks and the heavy discharges of cash certificates that took place during the period of uncertainty following the fall of France, the liability of the Government in this regard was greatly reduced. Explaining these developments, Sir Jeremy pointed out, in his last Budget speech, that the figure for net repayment of post office cash certificates had to be increased in the revised estimate for 1940-41 from Rs. 1½ crores to Rs. 10 crores while, for postal savings banks deposits, he had to provide for a net outgo of Rs. 19 crores against the receipt of Rs. 2 crores taken in the budget. That is, the position was adverse to the extent of Rs. 29½ crores. In broad terms, it may be said that the Government's indebtedness in regard to postal savings banks deposits and postal savings certificates is less by Rs. 29½ crores as compared with September, 1939.

It is true that there has been a marked and progressive improvement since the crisis following the fall of France. It is also true that sales of defence savings certificates had fetched about Rs. 4 crores at the end of October, 1941. On the other hand, the budget had to provide for a net repayment of Rs. 6 crores of postal cash certificates. Taking all the factors into account, it seems reasonable to assume that the total of Government's debt under postal savings and cash certificates as on October 31, 1941 will not show any material change as compared with the position after the crisis in the summer of 1940.

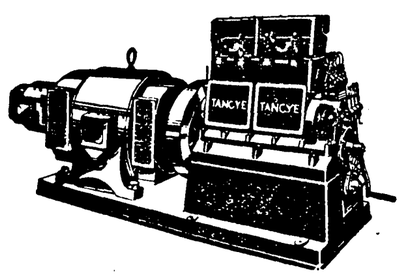
Our main conclusion is that withdrawals from postal deposits and discharges from cash certificates are responsible for reducing the total liability by Rs. 30 crores since the war began. To sum up, the position on October 31, 1941, as compared with August 31, 1939, is that, while India's debt under loans and treasury bills has increased by Rs. 39.52 crores, the liability with reference to postal savings banks deposits and cash certificates has decreased by Rs. 30 crores. The net increase in India's debt at the end of twenty-five months of war was, thus, only Rs. 9.52 crores.

We may now proceed to bring the figures up-to-date as at the end of January, 1942, though we must repeat that final verification for these figures will not be available for another three months. So far as the rupee debt is concerned, the only change to merit attention is the increase in the 3 per cent. 1949-52 (second defence) loan from Rs. 48.69 crores to Rs. 57.99 crores. The rupee debt has, thus, risen by Rs. 9.31 crores. As compared with August 31, 1939, the net increase in rupee debt is, therefore Rs. 162.05 crores. There is no change so far as the sterling debt is concerned. Taking the rupee debt and the sterling debt together, the net increase is Rs. 29.52 crores.

Treasury Bills outstanding with the public stood at Rs. 33.79 crores on August 26, 1939 and Rs. 30.04 crores on January 31, 1942. There has, therefore, been a decline of Rs. 3.75 crores. On the other hand, Treasury Bills issued to the department have risen by Rs. 4.12 crores from Rs. 37.38 crores on September 1, 1939 to Rs. 41.50 crores on January 30, 1942. Taking the floating debt as a whole, the net increase in the twenty-nine months of war is only Rs. 37 lakhs. Te net increase in the rupee debt and sterling debt is, as we have stated, Rs. 29.52 crores; and that in the floating debt is Rs. 37 lakhs. The indebtedness of the Central Government under loans and treasury bills has, thus, increased by Rs. 30 crores since September, 1939.

We have already shown how the liability in respect of postal savings banks accounts and cash certificates has been reduced by Rs. 30 crores during the period of the war. We are, thus, led to the conclusion that there has been no increase at all in the indebtedness of the Government of India during the period of the war.

This conclusion may appear astounding for various reasons. In the first place, the weekly publication of the progress of the defence loans is a constant reminder of the considerable sums that are being invested in the defence loans. The various defence loans have so far fetched Rs. 110 crores. And one naturally asks how our statement that India's debt has not been increased during the twentynine months of the war is compatible with the colossal subscriptions that have flowed into the defence loans.



In the second place, the Finance Member has been warning India that she should be prepared for a heavier military budget. This warning was given while the war was quite distant from India's doors. The war has now come to our gates. Our war expenditure must be going up by leaps and bounds. How then is it possible, one may ask, for India to have managed without any increase in her debt?

Let us try to understand clearly what exactly are the purposes for which the proceeds of the defence loans are applied. The sums raised by borrowing are needed firstly to cover the budgetary deficits; secondly, to provide for the working capital which the Government of India now require for satisfactorily carrying out their functions as agents of the British War Office for paying for war supplies and for other war commitments; and, thirdly, to provide the larger cash balances that are required because of India's troops being directly engaged in the war.

So far as the second and third are concerned we, may hazard the estimate that the working capital which the Government require for these two purposes is of the order of Rs. 30 crores. Of this amount, Rs. 12 crores were found by the delivery of one-rupee notes to the Reserve Bank. The balance has been, presumably, provided by the increased earnings of the Railways, in regard to which it may be mentioned that, while the higher earnings are only of comparatively little value to the Central budget from the revenue point of view, these increased earnings are of considerable importance to the ways and means budget of the Central Government.

What is the position with regard to budgetary deficits? The war started in September 1939. Thus, the financial year 1939-40 covered seven months of war. In spite of this, the surplus in the 1939-40 accounts was Rs. 7.77 crores. So far as 1940-41 was concerned, the Finance Member estimated a deficit of Rs. 8.42 crores against which was set Rs. 3 crores provided for the reduction or avoidance of debt. The net addition to the Government's indebtedness was thus expected to be only of the order of Rs. 5½ crores. Coming to 1941-42, Sir Jeremy anticipated a deficit of Rs. 13.81 crores. Even on the basis of the figures given in the last budget by the Finance Member, the total war budget deficit is less than Rs. 20 crores. It is quite possible that the Army budget is very much more than was estimated last February. On the other hand, other sources of revenue seem to have made excellent showing. It is not unlikely that, when the Finance Member narrates, on February 28 next, the story of the current year, he may be able to show that the increases under military budget has been largely offset by the increases under other heads.

That the ways and means machinery of the Central Government has been functioning extremely smoothly without any increase in the total net debt of the Government and functioning extremely smoothly while sterling debt for £100 million has been repaid and the ancillary operations in India, put through as and when necessary, and while the Indian Government have been carrying out large agency functions for the British War Office may be said to lend force to ur forecast that the deficit which Sir Jeremy will disclose in the revised estimate for 1941-42 will not prove more terrible than he prepared us for.

# RUBBER IN THIS WAR

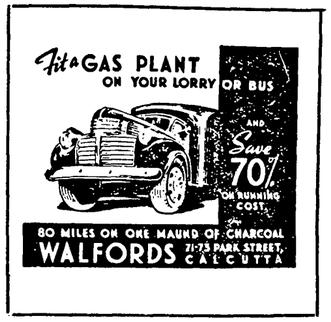
Last week's conference of rubber producers and others was by no means the first manifestation of interest in what is now considered to be a question of prime importance. The conference has met and dispersed. The very brief report in the press has only featured the Commerce Member's exhortation to maximise production for the duration of the war. It is therefore permissible, in spite of the lack of much essential information to pass in review some of the developments, not wholly fortuitous, in the rubber industry in the war period, to ascertain what the supply position in the immediate future will be, and how far India is affected by the shortage of, and demand for, rubber. Interest has shifted once and for all, away from the restriction committee. It is obvious that no Malayan Civil Servant can make a trip to London or the Hague to put up proposals for the renewal of the Restriction Agreement of 1937. After ten years, it is definitely goodbye to restriction. It is the end of restriction that confers an opportunity on Indian planters.

While figures are relevant, it is certainly open to suggest that those of a past year shed little light. The rubber problem then can be examined without undue loading of statistics. The last authoritative estimate of world production in 1942 was made in October by Mr. H. Eric Miller at the annual meeting of Harrisons and Crosfields. That estimate was made before the war and assumed the continuance of stable and satisfactory conditions. To-day large producing areas have to be left out of consideration. Stocks in Malaya and stocks afloat are not necessarily important. It is spot stocks alone that count, either in London or New York.

While the singular stability of prices like the restraint of dealings may sustain a feeling of satisfaction, it is necessary to consider the Japanese occupation of Malaya and the assault on the Dutch Indies as the supreme market factor. The Japanese thrust into Lower Burma implies the sacrifice of a certain amount of limited rubber supplies. It may be certainly said that the position has worsened after the conference. Indeed the situation to-day may be said to support what many chose to describe last year as vague apprehensions. Not long ago it was suggested that India's production of rubber would be insufficient to meet the demands of a growing rubber industry. It was suggested then that manufacturers of footwear should be in a position to make sure of adequate supplies, and it was hinted that restriction, in deference to the opinion of large foreign producers bent on exports, should have no place in India. The argument appeared before the International Regulation Committee had raised the quota from 100 per cent. to 120 per cent. In a sense, rubber restriction had come to an end before 1941 but the framework remained. Yet if India's interests as a consumer were placed against the background of restriction, it will be recognised that the probable increase in home consumption called for a readjustment of views as to the merits of restriction for another term.

The main movements in world production and stocks during the war have certainly favoured rubber producers. As against the Restriction average of about a million tons, Mr. Miller forecast 1.6 million tons. But these estimates are of little importance, though it is necessary to describe how rubber has fared in the war period. Allied control of the main sources was responsible for a sharp rise by as much as 55 per cent. in the world production of rubber between 1938 and 1940. The production in British Malaya, North Borneo and Sarawak rose from 406,000 metric tons to 604,000 metric tons. The production of India, Ceylon and Burma rose at the same time from 66,000 metric tons to 114,000 metric tons. The production of the Netherlands Indies also advanced from 303,000 metric tons to 545,000 metric tons. These figures extracted from the World Economic Survey for 1939-41 convey an idea of what is now at stake. Less than a twelfth of the production formerly controlled by Britain and Holland now remains available.

That the war has put Japan in possession of the rubber produced by Indo-China (66.000 tons in 1940) and Thailand (49.000 tons) must also be recognised. But the tonnage will be manifestly unequal to the demands of the world's third most important consumer of rubber. In the past the U.S.A. led as a consumer taking half the world's total supply and Britain came second with an average consumption of 120.000 tons in a year. These two Powers are thus liable to feel the shortage most. Proposals for conservation and salvage have appeared. Controls have been modified and interest in synthetic substitutes has been stimulated. One of the major results of the present war will be a dramatic increase in the rubber production of Latin America and Africa—cum—Oceania estimated at 40,000 metric tons only in 1940. Of more recent developments such as the deputation of Sir Walrond Sinclair to the U.S.A. in order to concert measures for limiting consumption and adding to supplies, it is necessary to speak with reserve.



While it is possible to speak of the stock position as reassuring in the light of the major changes recorded between 1939 and 1941, it is certainly possible to say that every pound of rubber will count in the scale. The changes in the quota from 60 to 100 per cent. are a measure of the war demand for rubber. In August last, the quota for the final quarter of 1941,. was raised to 120 per cent. because of a pressing need to increase stocks to the level of 1938. It is known that U. S. stocks at the end of July, 1941 amounted to 40,000 tons largely because of the policy of building up strategic reserves. The R. F. C.'s subsidiary, the Rubber Reserve Company emerged as a big buyer and made a deal for taking up 430,000 tons by the end of 1941. It was as a consequence of this that 200,000 tons had been taken by June last when the Rubber Reserve Company had become sole importer. Plans for cutting private consumption by 200.000 tons per annum had appeared by then and the contribution of reclaimed rubber had increased from 190.000 tons in 1940 to 230.000 tons, according to authoritative estimates.

These figures are of high interest. They point in the first place to an absolute increase in stocks and suggests that a year's supplies are held by the U.S.A., despite the uncertainty still attaching to stocks afloat. The increase in stocks over the war period, due in part to the cut in Europe's normal intake of rubber, put at 130,000 tons per annum, appears as a definite advantage. More recent statistics appearing in the League of Nations monthly bulletin support the view that stocks afloat invariably exceeded 200.000 tons, and point also to an increase in Malayan stocks, seldom below 45.000 tons in most months of 1941. It is noteworthy that the League bulletin merely estimates India's monthly production as somewhere around 1,400 metric tons in 1940 while giving no details as to output in 1941. The monthly production of Burma apparently fell in June, 1941 and afterwards but the total shipments for the first half of 1941 would appear to be over 6,000 metric tons. Ceylon's production is about six times larger than that of India and it may be said with fairness that the outlook for the Ceylon producer is better than for the South Indian rubber-grower in spite of the appearance of an export duty in the Colony's fiscal system.

That Japan's victory does not modify Germany's dependence on Buna is recognised. But the problem of replacing Malayam and East Indian sources is, for the moment, the higher consideration. The 400 million programme of the U. S. Government to develop synthetic rubber in the same way as Russia has done last year is designed to produce about 400.000 tons of rubber in a year. But programmes and blueprints do not always succeed smoothly and the U.S.A.'s acute need for rubber will not be reduced by the cut in automobile output for this year. While planters may not view with unmixed satisfaction any scheme to develop synthetic rubber in India as suggested in press reports they will recognise that the U.S.A. will be justified in developing plantations in Liberia and Brazil. The U. S. department of Agriculture referred last year openly to its plans to get rubber from the Amazon Valley. The New World thus will not lose interest in natural rubber though it may be as keen as Germany on synthetic rubber for the duration. The position is altogether different in India whose output was just enough to meet home consumption of 12.000 tons or so in 1941. It is the fall in acreage, and consequently in output, during 1940 and since, that provided the reason for the meeting last week. Admitting the possibility of developing production up to 17,500 tons, the maximum allowed under the I.R.R.C. scheme, it remains to be seen if supplies from Burma will not be wholly diverted to Britain. The latter possibility should prove to be a wholly favourable factor, for it will end the old dispute as to uncouponed rubber and create also conditions in which the Indian rubber-grower will be altogether independent of fluctuating oversea demand. The attainment of autarkic conditions, in this case is an ideal altogether free from blame, and it will provide the compensation essential for the many indifferent years through which the Indian planters have passed.

# Editorial Notes

**Flourishing and Active**

The growth of the textile industry in all parts of India during the year ended August 1941 is illustrated by the annual mill statement of the Bombay Millowners Association. Bombay had 64 mills with 2,789,080 spindles and 65,292 looms. Though there was a reduction of one mill, the city's mill industry was definitely stronger, as the number of millhands had risen from 104,890 to 115,903 and the consumption of cotton too showed an increase of over 25 per cent on the previous year. The city's mills consumed over a million bales of cotton, a quantity exceeding the total consumption in mills in Bombay as distinguished from Bombay City. In Bombay province last year there were as many as 137 mills with 30.3 million spindles and 69,607 looms giving employment to 140,825 people. Though Bombay had 201 mills as against 203 in the previous year there was an increase in the total number of mills in India. Two more mills were added to the 388 already existing, but the total spindleage and loomage at the end of August was lower than at the end of August 1940 although there were definite increases under both the number of workers and output. As the only complete self-contained record of the textile industry, even if spinning and weaving statistics are not provided, the mill statement is more than ever important. The largest number of mills outside Bombay are in Madras where 63 mills with a total spindleage of 1.45 millions were in existence. Of these, five were not working and five were in course of erection. Nevertheless, the total of 53 mills is much larger than the total of 26 mills claimed by the U. P.

The rapid progress of recent years has given Bengal as many as 33 mills but of these 22 were in the nature of incomplete projects. There is no information as to the equipment of many, and the paid-up capital of the majority was unquestionably small. As two mills were not working in the year there were only nine effective mills in Bengal but the total hands employed were over 25,925 and the approximate cotton consumption was returned as 165,750 bales. That cotton-growing provinces have more mills than others is only natural though Sind had none and the Punjab reported only seven mills. In the Nizam's Dominions the number of mills has increased to six as three new mills were in course of erection last August. Perhaps the most remarkable feature of the statement to which attention must be drawn is the increase of over 29.300 under the total of mill workers in India and the increase of over 570,000 bales in the total quantity of cotton consumed by mills. The increase makes the 1941 figures a record in every way. India's cotton industry is more than ever flourishing in spite of the war. As against the new-style concentration practised in Lancashire its old rival Bombay is still able to consider expansion. The increase in ring spinning continues to be a feature of the progress statement. The most important clue to the position of individual mills is the average number of working days in the year. The mode, as far as Bengal mills are concerned, appears to be 300 working days. It must be assumed that the old established mills of Bengal were as busy as the Cawnpore mills in the past year. The higher average reported by many Madras mills is presumably due to the variations in local holidays. Since the mill statement was completed mills' working hours have been increased over 54 per week by permission and both cotton consumption and textile output are running at a higher level than ever.

Information furnished as to the three mills in French India shows that they did not share at all in the prosperity that was enjoyed by the Indian mill industry. The figures relating to unused equipment confirm the belief that the mills were in a difficult position. Contrast with British India is complete as regards cotton used by the mills, one of which resumed working only in May 1941. The uninterrupted expansion of the mill industry in provinces outside Bombay suggests that other textile centres are still developing whereas Bombay has no scope for expansion. Yet the main source of textile supplies and seaborne exports also is Bombay City and Presidency where the total investment in the cotton industry exceeds Rs. 23.58 crores out of the total of Rs. 44.77 crores reported for India as a whole. The new capital that flowed into the mill industry was Rs. 115 lakhs to judge merely from the increase on the total paid-up capital of Rs. 43.62 crores as at the end of August 1940. It is certainly noteworthy that the largest increase was reported by Ahmedabad where the financial system and practices are in many ways different. Bengal is among the provinces where productive equipment showed an increase on the previous year. The most reliable guide to the state of activity is the very high proportion of spindles employed. The average number of spindles working daily (exclusive of night shifts, of course) was 9.083,046 out of 9,961,178 installed as against 8,847,326 out of 10,005,785 at the end of August 1940. The total number of looms at work rose to 184.258 as against 178,842 at the end of the preceding year. It is apparent that percentage activity for both spindles and looms was higher in Bombay City and Island than in any other centre.

**Industries and Imports**

Business conditions before the brief boom of 1941 indeed have a melancholy significance after the setback in prices over a wide front after the outbreak of war in the Far East. While a continuous rise in production distinguished the cotton mill industry in October as in earlier months, the main sustaining factor was the steady and drastic decline in imports. Though India's own textile exports for the first half of 1941-42 were remarkably large, it is evident that the real fillip to the mills was given by the advance in prices recorded in and after July. Mill consumption of cotton again reflected the expansion in output. The decline in raw cotton exports is accompanied by a rise in domestic consumption as also a striking rise in imports. Total imports for the first half of 1941-42 at 521.200 bales exceeded the quantity of 499.200 bales imported in the twelve months of 1940-41. By comparison the jute industry was languishing. Though mill output rose in September it is clear that the improvement was limited. The big war orders which brought about a revival came after September. Rising prices in the first half of the year did not assuredly reflect the depressed conditions in the industry, but followed brief and alternating changes in export demand. In September occurred a striking rise in jute exports; yet the total for the first half of 1941-42 at 438.000 tons is admittedly lower than the 528,000 tons reported in the previous year. The fall in hessian prices over October is again readily explained by the increases in stocks locally. The increase in raw jute shipments for the first half of 1941-42 was, however, a disturbing factor for the mills were required to pay higher jute prices and the hessian market had to keep in with the jute market.

The state of production like the statistics can only be guessed in regard to industries like iron and steel. Imports of protected varieties as of all iron and steel manufactures fell steadily during the first half of 1941-42. This must have been of direct assistance to the industry which must have gained also from the reduction in exports of pigiron. The fall in India's exports of iron and steel during the period is explained by the pressure of home demand in wartime. Though little is known about the tonnage raised by India's coal mines, reference must be made to the improvement in coal exports recorded during the second quarter of 1941-42. The improvement is at variance with the original trend and indicates that total exports for the first

half of 1941-42 should not be greatly below that for the corresponding period of the last year. Total exports for 1940-41 amounted to 1,943,540 tons. The trifling increase under imports into India cannot prejudice the coal industry which, however, has to recognise that the transport difficulty will determine supplies to users as also prices. Over the whole of 1941 it must be noted that coal prices were singularly stable and the rise of four annas per ton recorded in July was merely a sign of recovery. The enlargement of despatches, as distinct from raisings should, however, have proceeded from the expansion in the production of electric energy among other things. The consistent increase in India's paper production is of unusual importance. As against 115,000 cwts. in August the total for September was 157,000 cwts. (141,000 cwts. in September 1940). The increase was not independent of the decline in imports during September. Imports at 102,000 cwts. if they were larger than in August were considerably lower than the total takings of 163,000 cwts. in September 1940. India's domestic supplies of paper exclusive of newsprint exceed imported supplies. The present situation in the paper industry is illuminated by the statement while it provides ample support for the Indian investor's estimate of paper mills' shares as investments, both safe and profitable.

**Indian Sugar Prospects**

In his speech at the 31st Annual Meeting of the Indian Sugar Producers Association on Saturday, Mr. Peel-Yates discussed the immediate results of the war. The outlook was pronounced to be favourable and the formal review was distinctly optimistic. There was the essential tribute to the work of the Sugar Syndicate whose functions are competently discharged under the control scheme. Mr. Peel-Yates asked for the introduction of State Control. The fulfilment of the promise to set up an advisory board, to pass in review from time to time, the developments in a protected industry was welcomed; and if Mr. Peel-Yates recorded his opinion that it is necessary to have All-India control, he expressed what is recognised as the majority view. There has been mention already of a Sugar Commissioner to be appointed by the Central Government. The name of Mr. N. C. Mehta, a U.P. officer, has been mentioned in this connection.

The first direct reference to a probable shortage indeed confers special interest on the observations of Mr. Peel-Yates. He has recognised that sugar imports will be subject to interruption while export demand at least for His Majesty's forces abroad will rise. The elimination of surplus stocks at the end of the current season has been forecast, and the opinion of some that there might be a shortage has been quoted. The current improvement impelled Mr. Peel-Yates to express the view that the Central Government should regulate the affairs of the industry and put it on a sound basis before any post-war depression hampers the intervention particularly welcomed. The speech will naturally focus attention on current prospects at the same time as it leads to the formulation of views against what is regarded as a probable threat to its future. Among the rumours rife today is one that the Central Government which has doubled the cotton import duty without waiting for a month will not hesitate to enhance the sugar excise duty. Few can forget what difficulty was experienced in 1940 when the excise duty was enhanced without attention to the protests and pleas made. Mills had to borrow, and Governments, in turn, had to borrow too. The repetition of such melancholy events must, therefore, be deprecated on all hands. What the industry already pays in taxation appears high. Such spurious equality as may be introduced by a simultaneous increase in the import duty will not give satisfaction. One wishes that the second Tariff Board's views as to ultimate benefits and long-term policy will command more attention than in 1939. Whatever be the needs of the Government the manifest injustice of discriminatory taxation will be obvious. On the basis of views current today it would be more proper to tax industries which have obtained direct and substantial advantages from the war. It may be suggested, for instance, that there may be an excise duty on pig iron, similar to that on steel ingots. Since exports continue, it might be urged plausibly that the excise will be partially in the nature of an export duty. What must be emphasised in the period when the Budget proposals are taking shape is that increases in the already burdensome Central excises will be unacceptable, more so as the railways' surplus will be as much as Rs. 14.35 crores. The welcome recovery in the sugar industry at a late stage will again be irretrievably compromised and what has been said in the past as to the larger share of earnings taken by the State, which has invested nothing as compared with the public, will be heard.

**Wartime Training**

The demands of war industry justify the successive modifications of the scheme for training technicians. Modern warfare demands trained men in the field and factory alike. It is not, therefore, surprising to learn that the original estimate of 15,000 men to be trained by March 1942 has been stepped up to 48,000; the upper limit to be reached by March 1943. Towards this end facilities for training Army artisans have been greatly extended. This side of the defence programme is not to be overlooked when many factories are cooperating with the technical training establishments. Draughtsmen, moulders and machinists are among the craftsmen to be produced under various schemed launched after the Sargent report had indicated the pressing need to produce skilled labour for manning new factories. The existing facilities for training up 25,000 men will result in the addition of 48,000 men by the end of March 1943 as passed candidates will be replaced by fresh trainees. In Bengal alone, there are 56 centres where various establishments imparting such training for war workers carry on. The technical recruiting scheme produced 10,935 applications by the middle of November last, but a smaller proportion was accepted. The overwhelming response was greatly in excess of available seats for trainees. As 17,000 are already under training, the magnitude of Bengal's contribution (dominant under Defence Loans) will be realised. It is only lack of additional equipment that has prevented many more men from being taken on. The selection and placement of trainees is a task that devolves in part on the National Labour Service Tribunals. Training for the ordnance factories as for ground mechanics for the air force is arranged under the scheme. Trainees are like regular industrial employees in getting the benefits of the Workmen's Compensation Act. The last year saw a notable strengthening of the instructional staff. The Million-men Army of today needs many new factories. Technical training schemes are thus of vital importance. After the war a valuable pool of trained men will be available for the engineering industry. The 'civmil' plan, to which reports last month made reference, aims to procure inter-changeability in war for electricians and fitters. There are already two centres in Bengal for sending on men to the Army training centres after part of the necessary course has been taken.

**War Programmes**

The altered tempo of war effort is clearly responsible for such changes in war expenditure as have been recorded. Yet the Battle of Production as Douglas Jay called it is in its initial stage and they want a new minister probably Lord Beaverbrook to tackle it. It has been forecast confidently enough that Sir S. Cripps will go over to the Supply Ministry. Production is to expand because U. S. supplies may be diverted to the Pacific and the Russian front in the immediate future. The Chinese claim for assistance is indeed admitted by the new credit of sterling 500 millions issued on Monday. This is the largest appropriation yet made on behalf of China by the U. S. Administration. Interest in China's active resistance springs as much from a desire to uphold traditional policy as to make sure of tin, tungsten and antimony, strategic materials for the U. S. war effort. Appropriations of 39 billions in a month have been referred to in order to show that U. S. war effort is the biggest ever seen. The fact that Britain spent about 300 million sterling per month during 1941 shows on what a big scale the U. S. A. is launching out in the first year of war itself. What the ordinary revenue will be and what the deficit will be can only be known after June. How the U. S. A. is going to raise the money is not for Congress which authorises the expenditure. That Mr. Lewis Douglas is to help the Administration is certainly encouraging news for the former Director of the Budget is now reconciled to the cycle of deficits. A great cut in non-essential consumption is envisaged. This may mean that the rise in cotton consumption, almost equal to domestic production of cotton, will be abruptly arrested. On that view alone it is possible to speak of difficulties for the U. S. farmer but the general inflationary implications remain unaffected. The addition to employment and income will remain if cars are not sold and vacuum cleaners are not produced. The fact that Britain increased her tax revenue by as much as 65 percent in 1941 should be related to the probable rise in U. S. revenue in wartime. Government has often been asked to increase taxation. Proposals have not appeared but it is likely that incorporated companies like individuals in lower income groups will pay out more. That the U. S. A. can spend about eight times as much as Britain is readily recognised by all which means that even if the U. S. public debt is doubled for the attainment of victory, the actual cost will not be excessive. The Treasury had over 21 billions of gold last year and it is possible that one immediate effect is a contraction of the normal export surplus and the contraction of gold imports. This may indeed suggest that the future for gold is a trifle obscure, but Mr. Morgenthau's hint of a new international currency after the war suggests that positive measures for the redistribution of gold as well as the apportionment of commodity surpluses are within the range of the Treasury programme. What has to be emphasised as often as possible is that Mr. Roosevelt's financial policy had taken shape before the war broke out, and the transition to actual belligerency did not involve undue hardship. If Colonel Knox has spoken out against bottlenecks in shipyards it does not conceal the fact that a ship was built in a hundred days; it may be a reference due to the old barriers set up by the labour unions. The diversion of effort from relief programmes to war work must have taken place when the draft (for which the Republican Mr. Wadsworth was responsible) was made permanent. The voluntary enlistment of women has already begun, suggesting that enough manpower has flowed into the Army and the factories, now going full blast.

**Spokesmen for America**

The non-belligerent attitude of the U.S.A. last year is admirably reflected in the new series of pamphlets launched by the Oxford University Press. As in the last war, the University press does not fight shy of educating even our masters. It is indeed to be welcomed as a sign of the changing times. What is the U. S. view as regards the war? The quasi-journalistic history familiar to us to-day is not enough to measure the change in attitude. One must have something more. That is provided by the first four pamphlets in the series on America Faces The War. The first place is rightly assigned to Mr. Roosevelt's well-prepared and skilfully concealed orations beginning with his great message to Congress on the state of the union. There was nothing about the Union, but much about the war in Europe. Mr. Roosevelt's speeches take up the story of Anglo-American relations where Lord Lothian had left off. The four speeches bridge the transition from the amended Neutrality Act to Lease-Lend Legislation signifying over again that Mr. Roosevelt can carry his people with him at all times. It is the most salutary feature of American Government that in his case influence as well as power are concentrated. Gone is the invisible government to which it was long the fashion to refer. If Mr. Winston Churchill were to give us another novel of the latest crisis, the setting along with the actors would be wholly different.

The four speeches sum up America's decision to aid Democracy. Mr. Roosevelt had passed beyond the stage of half-measures. The reason for that is certainly provided by the radical changes in the U. S. citizen's attitude, typified not only in Mr. Maury Maverick's confession but in the new apology of Mr. Walter Millis. Like many other distinguished journalists Mr. Millis has much to say about the mistake of the Back to Normalcy period. But he does not gloss over the mistakes of the League of Nations between two wars. The main thesis of Mr. Millis may be said to be that of Mr. Lewis Mumford's **Men Must Act** which by way of pleading for U. S. intervention condemned appeasement. The Right point of view has come to be the same as that of the Left. Hitler and his unconscious ally, the Isolationist, have contributed to this decisive change.

## SEVENTY-FIRST REPORT

**To be submitted to the Shareholders at the Annual General Meeting to be held at the Registerd Office of the Bank, Oriental Buildings, Bombay, on Thursday, the 19th February, 1942, at 4 o'clock P.M. (S.T.)**

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1941.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1941. The Auditors' Report is also annexed.

| | Rs. | A. P. |
|---|---|---|
| The transactions for the past year, including the balance brought forward from the previous year Rs. 8,98,784-7-11 have resulted in a profit of .. .. .. | 33,11,655 | 1 0 |
| An ad-interim dividend was paid for the half-year ended 30th June 1941 at the rate of 11 per cent. per annum, which absorbed .. | 5,50,000 | 0 0 |
| Provision made for Income-Tax and Super-Tax for the year .. .. .. | 4,00,000 | 0 0 |
| Bonus to Staff .. .. .. | 1,20,000 | 0 0 |
| The Directors now propose:— | | |
| To pay a final dividend for the half-year ended 31st December 1941 at the rate of 11 per cent. per annum on the Paid-up Capital of 100 lacs, free of Income-Tax, which will absorb .. | 5,50,000 | 0 0 |
| To place to the Bank's Property Account .. | 5,50,000 | 0 0 |
| To place to the Bank's Reserve Fund .. .. | 2,50,000 | 0 0 |
| To carry forward to the next account .. .. | 9,41,655 | 1 0 |
| Total .. | 33,11,655 | 1 0 |

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3 per cent.

During the year Branches were opened at Ellis Bridge, Ahmedabad and at Karachi.

Sir Joseph Kay, Kt. having been on leave of absence returned to India in December 1941.

Mr. R. L. Ferard was invited to join the Board on 17th April 1941—he resigned his seat in September 1941, when he proceeded on military duty.

In accordance with Article 92, Mr. Ambalal Sarabhai and Mr. Dinsha K. Daji, retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appointed Auditors for the ensuing year and to fix their remuneration.

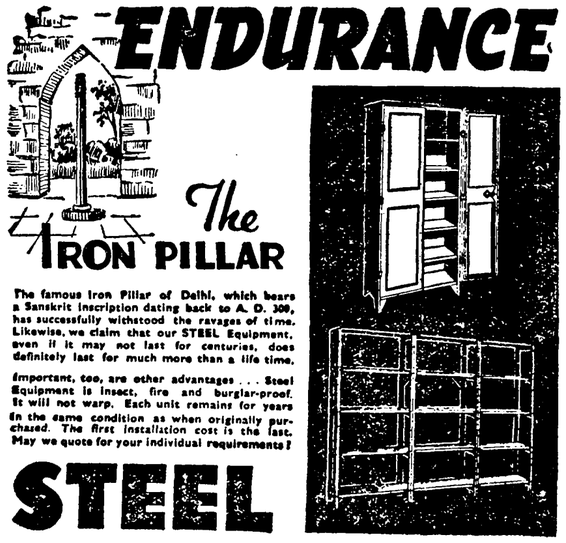
## REPORT OF THE AUDITORS

TO THE SHAREHOLDERS
OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act 1920, do hereby report to the Shareholders upon the Balance Sheet and Accounts of the Bank as at 31st December 1941.



We have examined the above Balance Sheet with the Accounts and Vouchers relating thereto of the Central Office and of the Local Head Offices and with the Returns submitted and certified by the Branch Agents, which Returns are incorporated in the above Balance Sheet, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion, the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Bank.

The audit of the Local Head Offices at Calcutta, Bombay and Madras, has been carried out by Mr. W. J. Younie, Sir Shapurji Billimoria and Mr. James Orr respectively.

W. J. YOUNIE,
S. B. BILLIMORIA,
JAMES ORR,
} *Auditors.*

*30th January 1942.*

The most engaging survey of Imperial activities provided by Mr. James Truslow Adams is in the Bryce manner without any modification of essential admiration. American admiration of the Commonwealth is apparently to be found outside the pages of the **Round Table** which seldom fails to note the significant movements and measures in the United States. It is not an easy transition from the Five Nations to the Ten Republics. But it has to be achieved to show that Mr. Roosevelt foreign policy is both intelligible. The introduction to the Monroe Doctrine and its history is performed by Mr. Grayson Kirk in the best professional manner. Some would have liked a more spirited survey but Mr. Kirk's pamphlet really succeeds in softening the angularity of TR's policy. The second Roosevelt is a far more sincere exponent of the Good Neighbour policy. The distinction is as clear as that between Ahab wanting Naboth's vineyard and the Good Samaritan who succoured an unknown traveller. The most recent consequences of playing up Uncle Sam, Good Neighbour, were to be seen at Rio. Mr. Kirk indicates that if Grover Cleveland took an unexpected line, and British opinion during the Civil War favoured the South, British policy supported by naval supremacy has played its part in building up the Monroe Doctrine. That doctrine has been affirmed and extended. To understand it in the light of grave changes in Europe is rendered easy by the learned yet light pamphlet which is certainly very good value for sixpence like the others which are available in India to one and all.

ENDURANCE

The IRON PILLAR

The famous Iron Pillar of Delhi, which bears a Sanskrit inscription dating back to A. D. 300, has successfully withstood the ravages of time. Likewise, we claim that our STEEL Equipment, even if it may not last for centuries, does definitely last for much more than a life time.

Important, too, are other advantages . . . Steel Equipment is insect, fire and burglar-proof. It will not warp. Each unit remains for years in the same condition as when originally purchased. The first installation cost is the last. May we quote for your individual requirements?

## GOVERNMENT OF INDIA
### DIRECTORATE GENERAL OF SUPPLY

**NOTICE.**

Strict export control is now being exercised in the United Kingdom of the undermentioned plastic materials:—

**Phenol-Formaldehyde—Moulding Powders.**
**Cresol-Formaldehyde—Moulding Powders.**
**Urea-Formaldehyde—Moulding Powders.**
**Synthetic Resins in the manufacture of which Formaldehyde, Phenol, Cresol or Urea are used.**
**Celluloid.**
**Cellulose Acetate Sheet and Moulding Powders.**
**Artificial Horn manufactured from Rennet Casein.**
**"Perspex" (Methyl methacrylate).**

2. In future export to India will only be permitted against a recommendation issued by the Government of India. With a view to facilitate import into India of requirements essential to the war effort, the Government of India hereby notify all concerned that applications for assistance to import any of the said materials should be addressed to the Assistant Secretary, Department of Supply, Directorate General of Supply, Licence Section, New Delhi. The application should be in the prescribed form—W.S.B. 5-C—copies of which are obtainable, free of charge, from the office of the Director General of Supply, New Delhi, and from the offices of all controllers of Supplies. It is essential to state clearly and in sufficient detail the purpose for which the material is required.

## GOVERNMENT OF INDIA
### DIRECTORATE GENERAL OF SUPPLY

**NOTICE**

It was recently notified for the information of the public that the export from the United Kingdom of rubber manufactures containing 50 per cent or more by weight of rubber has been controlled by the issue of export licences since the 6th of January, 1942. Export licences will be issued in the United Kingdom only on the strength of import assistance recommendations issued by the Government of India in the Department of Supply. The procedure for applying for import assistance recommendations has already been explained in press notices. The control of exports from the United Kingdom has now been extended to all articles where rubber forms more than a negligible proportion of the finished product. All those desiring to import such articles are hereby advised to apply for import assistance recommendations to the Director-General of Supply, New Delhi, in the prescribed form, copies of which are available at the offices of:—

**(1) The Director-General of Supply, Department of Supply, New Delhi.**

**(2) The Controller of Supplies, Bombay, Calcutta, Madras, Cawnpore, Lahore, Karachi.**

**Banking Developments**

The banking developments of the last quarter of 1941 include a fall in the total advances and discounts of scheduled banks in India after the seasonal rise had taken place. The total was up by Rs. 11.56 crores as compared with the total at the end of September. Activity in the bullion market, where record prices were touched, did not lead to any large demand for funds. Towards the end of the year the balances held with the Reserve Bank fell though total deposits as compared with the position at the end of September showed an increase. The special effects of the war can be hardly disentangled, though the reduced proportion of demand liabilities to total liabilities as also the fall under cash and bank balances by Rs. 16¼ crores may be said to argue a certain amount of strain. The experience of non-scheduled banks towards the end of December is hardly reflected in the consolidated statement of scheduled banks as on December 26. The most obvious conclusion to be drawn is that the strain engendered by the Far Eastern developments was local and temporary. It has been said that the rise in the rate for call rate during December was due largely to the demand emanating from the bullion market which is latterly quieter than expected. The prostration of the share market explains, to some extent, the reduced demand for funds. But Indian banking was on a very even keel as recent bank statements have shown. The final quarter witnessed an increase of seventeen in the number of branches belonging to schduled banks. The total was 1,421 and of this 397 were branches of the Imperial Bank and 324 were branches of the Indian Big Five. The total number of branches claimed by the Exchange Banks went up to 103 in consequence of the establishment of an office in Calcutta by the Bank of China. The number of branches belonging to 38 scheduled banks increased by 13 to 597. The increases in branches and pay offices is proof that jitters did not hit the banking system. At least four towns which were not equipped with bank facilities obtained the benefit of branch offices. The same period witnessed the addition of one new bank to the schedule. The new addition with paid-up capital and reserve of Rs. 25 lakhs was the Habib Bank of Bombay. The two others included recently in the Schedule were banks which had raised their capital and reserves to Rs. 5 lakhs. The exclusion of three Japanese banks from the schedule was the direct consequence of the war. The withdrawal had no effect on total deposits and advances as the freezing order of July had put an end to commercial intercourse with Japan and the usual notifications had been anticipated.

**Canadian Trade Changes**

In the twelve months ending June, 1941 the export trade of Canada showed an increase of over 270 million dollars. The increase was certainly more pronounced than in the first year of war and was altogether independent of the usual gold exports. It is clear then that the expansion of trade is a co-efficient of the higher industrial activity reported from the Dominion frequently. The increase occurred in spite of a considerable fall in the exports of agricultural and vegetable products. Though the year witnessed an increase in the value of wheat and flour exported by Canada, there was a considerable shrinkage in exports of both fruit and vegetables. The further increase in shipments of animal products including dairy produce is explained by the demand from the U. K. for goods usually provided by Denmark. The increase of over 28 million dollars under the head of meat and dairy produce almost cancels out the fall reported under agricultural and vegetable products. Minor increases under fish and cheese disclosed that the expansion of trade helped all Provinces not only the eastern units.

The most arresting feature, however, remains the advance in wood and paper. The total of 364 million as compared with the total of 286.6 million for the year ended June 1940 may be taken as an indication of new markets for pulp and newsprint opened up by the failure of European supplies. It is manifest that wood and paper will long constitute the single largest item in Canada's exports. The enlargement of demand for planks and boards has also been reported as a consequence of the U. S. defence programme. That Canada is having the best of both worlds may be inferred from the increase of about 75 million dollars in the value of her exports to the U. S. A. during the year ended June 1941. If the increase is not so pronounced as the increase of 152.3 million in the value of exports to the U. K. over a year, it is proof that the Ogdensburg Agreement had notably stimulated Canada's trade with the U. S. A.

Canada's enormous trade in automobiles is certainly a feature of the trade returns which show that in the twelve months ended June 1941 the Dominion's exports of cars and parts rose from 29.4 million dollars to 110.6 millions. The recent decision of the Government concerning reduced output will assuredly leave car production at a higher level than in 1939-40. Significant increases occurred in the exports of minerals and chemicals from Canada. It may be pointed out that exports to the British Empire rose from 112.6 million dollars to 173.1 million dollars during the twelve months ended June. This increase was admittedly welcome when Canada's trade with the Far East dwindled rapidly and trade with Latin America languished. The outstanding feature from another point of view was the expansion of Canada's imports from the U. S. A. The increase was obviously conditioned by the war effort and explains subsequent agreements as to pooling of resources. The increase of over 230 million dollars in a year under imports show that Canada's enormous intake of iron and steel, minerals, machinery, etc., sprang from the intensification of war effort. But the adverse balance confers interest on Mr. Ilsley's later decision to turn over all surplus dollars to Britain's benefit and make Canada forego the benefit of a large export surplus, such as must emerge, if the Dominion's trade with Britain alone is concerned. The Dominion's trade balance has not been passive in the second year of war, but it is by no means large at 112 million dollars for the year ended June. If it is smaller than the balance reported in the previous year Canada has gained in the interval, first through an increase in gold exports, as distinct from merchandise and secondly through the virtual extinction of her sterling debt. She is recently credited with a desire to write off 1,500 million dollars owing to her by Britain because of the war. This, by the way, is a Toronto's newspaper's guess or announcement. What Canada will give by way of war contribution cannot be determined by press predictions.

## NORTH WESTERN RAILWAY

**TIMELY ADVICE**

Owing to the necessity for maintaining an uninterrupted flow of essential supplies for the Land, Sea and Air Forces engaged in the Defence of India, and of coal and other materials to and from the numerous Factories and Workshops engaged on an ever-increasing scale in the production of War Material; the heavy and frequent demands in respect of the movements of Military Personnel, and an abnormal increase in the public passenger traffic resulting from the petrol-rationing, the Railway is not now in a position to cater for the travelling public as in peacetime, notwithstanding the fact that it is doing all it can possibly do to cope with the situation by bringing into use all available stock even to the extent of reconditioning vehicles which in normal times would have been condemned and cut up. The public in general is, therefore, advised, in their own interests, to bear in mind the difficulties under which the Railway is operating and to avoid all travel or to travel only when it is essential or otherwise to submit with a good grace to such personal inconveniences and discomforts, as must arise at times like the present.

The removal, this week, of the minimum prices for four leading counters in the Calcutta Stock Exchange has further underlined and emphasised the anxieties of investors. There are two classes of investors: first, those who are in constant touch with the trends and tendencies of markets as well as those who are in some way or other connected with the stock exchange; second, those who, occasionally, buy shares for bona fide investment and who otherwise do not too closely follow stock exchange developments. It is the latter class which is greatly puzzled and worried by recent events in the Indian stock exchanges. The average investor of this category holds, perhaps, a few Indian Irons, Burma Corporations and Bengal Steels—and also some jute shares or engineering shares. He sees that over 25 per cent of the original market value of these shares has melted away; he hears all manner of ominous reports that the melting process has not been halted. Will he have to see these shares sinking lower and lower? On the other hand, he realises that, to the extent that his main aim in investment was to get a suitable return on his money, his position is, far from being worse, actually much better. The dividends in most cases make better showing. On the present value of the shares, he finds to his gratification, he is getting as much as 10 per cent free of income-tax. Should he remain unconcerned by the fall in the market value and satisfied that the income on his investment continues to be quite favourable?

He propounds this question, but, without waiting for an answer, proceeds to pose more conundrums. Take jute shares, he asks, suppose Calcutta is bombed: is there not a risk of some of the jute mills being damaged? Or steel shares: is not Jamshedpur or Hirapur, which represent the heart of the war effort of the Eastern Group, likely to be the first targets for enemy raiders? Or any share: what happens if the Japanese invade India as they have invaded Malaya or as they are now invading Burma? He points to the fate of Straits rubber and tin shares and wishes to know if Indian shares are facing a like threat. For answer to these posers, I must refer the anxious investor to the last two instalments of Gossip in which the main conclusions I stressed were that American help in a hydra-headed flood might be expected in a short while; that, while the immediate future was extremely menacing, there was every reason to believe that the help would come in time and in adequate force to turn the tables on Japan; that Russia would be more than equal to deal with Germany; that, so far as India was concerned, there was more chance of Japan pursuing her southward drive to the Netherland East Indies and Australia than of her branching out westwards to India. If the investor retorts that, for one thing, these are but my personal conclusions and that, for another, they are not exactly the kind of reassurance he was seeking, I can only say that, in times of trouble and unsettlement such as the present, one should be grateful even for such crumbs of comfort.

Frankly, between you and me, is there aught of permanent, immutable and unshakeable value? Let me narrate the story of two brothers in the old Austria. Their father was surpassingly rich; and, on his death, left his fortune equally divided between the two of them. The elder was of a careful, shrewd, sober and cautious nature. He invested his share of the fortune in first-class giltedged securities and lived on the income from the investment. The younger brother was a gay Don Juan. He kept riotous company, entertained on a lavish scale, maintained a well-garnered cellar and a sumptuous table, and knew all that there is to be known about slow horses and fast women. Then came the precipitate fall in the Austrian currency. Twenty krones to the pound, soon they were hundred krones to the pound. Then one thousand, one hundred thousand, finally one million, to a pound. At the end of it all, the brother who had put all his funds in giltedged sold his securities and the sale proceeds were just sufficient to feed the brothers for a day. The prodigal brother sold out the empty champagne bottles from his cellar and realised enough to keep him and his brother for a year.

Value as such depends upon so many fluctuating factors that what is of great value to-day may be valueless to-morrow. The people who invested large sums laying cables under the seven seas for telegraphic communication in the world made, in their day, the finest investment. What is the value of these cables when wireless is the order of the day? It is the experience of industries such as steel that the machines of yesterday are obsolete in comparison with to-day's new designs. Bricks, till two months ago, had a plebian status by the side of reinforced concrete,

the latest in building construction; the need for air-raid protection walls has conferred supremest value on bricks. Glass was soaring higher and higher since war began. If you had a broken pane, the repair charge in November 1941 was five times that in November 1938. Who wants glass to-day? Everyone is removing glass or smothering it under paper bandage. When I entered possession of our present premises three months ago, I was greatly thrilled with the four gigantic mirrors that decorate the stair-case and drawing room and that were part of the equipment I got with the building. I am now insisting on the landlord removing the mirrors at once. People got panicky in Bombay when Italy joined the war; and they thought the Eastern Capital safe. Japan entered the war; and we in Calcutta are envying our friends in Bombay. Japan won't invade Madras—this was the assurance which led to my South Indian friends sending their families home. The threat to Singapore has stimulated evacuation from Madras.

The moral of all of which is that there is, at no time, nothing like static values; and that, amidst world-shattering events such as we witness to-day, there is not much purpose in straining our poor, muddled brains to gauge the shape of future values. Sufficient unto the day is the evil thereof.

There is an aspect of the war in Malaya and of the war in Burma which has received little attention. The whole of Malaya is now under enemy occupation. Singapore is facing the gravest crisis. South Burma is already occupied. The latest news is the likelihood of the withdrawal of our forces from Martaban. This brings the enemy to within one hundred miles of Rangoon.

From Chinese quarters, we learn that an offensive is being prepared against North Burma.

While it is to be hoped that Singapore and Rangoon will be able to hold out till the promised reinforcements arrive on a scale that will suffice to turn the tables on Japan, the fact remains that considerable portions of our territory have already been occupied by the enemy; and it may well be that more territory will pass under Japanese control.

From stray news that reaches us, the Japanese are as prompt in setting up new administration in the occupied territories as the Nazis have been in Europe. In setting up the administration, the Japanese seem to be aiming at impressing the imagination of the population in the occupied areas. This is the impression one has to gather from the reports that the administrators chosen for places like Penang are not Japanese but Indians.

Whatever may be the ultimate intentions and policies of Japan, it is likely that their immediate policies are designed to carry conviction to the population that they will have a far bigger say in the administration.

On the other hand, the feeling is left in the minds of the people of the occupied territories that, despite repeated demands, all that they could get from the British Cabinet was a vague promise of the examination of the question of Dominion Status after the war was over. It has to be seriously considered whether this state of affairs is not calculated to make the people lukewarm about fighting, and continuing to fight, for the recovery of their lost status.

With large chunks of territory passing into enemy hands and with nothing more than strategic outposts likely to be left in the hands of the Allies, it is of supreme importance that, what time the United Nations will be able to launch the counter-attack with adequate strength, the population in the enemy-occupied areas must strengthen such efforts through fifth column activities directed against the Japanese usurpers.

52—38

The vague political status of the occupied territories is not exactly a stimulant to fifth column plans of this nature.

From this point of view, the position has to be reviewed immediately; and the vague promise has to yield place to a concrete and precise assurance that the peoples of Malaya and Burma and India will be as free unconditionally after the war, as the people of the countries which have been ravished by Hitler.

It is with such a message that U. Saw, the Premier of Burma, undertook his mission to Britain. Here is a typical passage from an interview which he gave to David Martin, who contributes an article on this subject to the "New Statesman" and "Nation":

"Are the people of Burma to be called upon to fight for the freedom of Poland and France and Czecho-slovakia, and are they at the same time to be denied freedom for themselves?"

U. Saw did not mince words. In fact, the conversations between him and the British Government were unprecedented for their bluntness.

"What I liked about Mr. Churchill particularly", U. Saw said, "was that he was so very blunt. I was blunt also. I was purposely blunt."

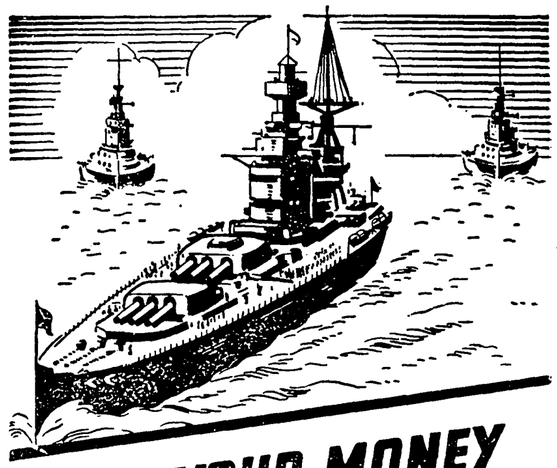
U. Saw made it clear that "if the Burmese people were convinced that they were fighting for their own freedom as well as that of the rest of the world, there can then be no question about it—Burmese war effort would be increased fourfold."

What is more, the Burmese people in the territories now passing under enemy occupation may have been depended upon to harass the Japanese as much as possible on the lines now taught to the world by the Russian guerillas and to second and support powerfully the counter-attacks that are to be launched in due course.

*(Continued from page 195)*

In our comment of the bank return of January 16, we discussed what might be the *modus operandi* in respect of these open market purchases of securities; and our view was that the Reserve Bank pays for these securities in the first instance; and that, from time to time, they are handed over to the Government whose current account with the bank is debited for their cost. This accounted for the sharp decline in investments from Rs. 11.86 crores on January 9 to Rs. 10.17 crores on January 16. Now that the Reserve Bank's investments are nearly Rs. 13½ crores, it is likely that the bank delivers the securities to the Government and reimburses itself by debiting the Government's account. The current account balances of the Central Government have thus to stand the depletion caused by open market operations. While there is this consistent denuding of funds, their replacement in the form of fresh subscriptions for the second defence loan is extremely poor. In the last week, all that the second defence loan fetched was about Rs. 11 lakhs. There is nothing surprising in this as the market is well below the rate at which the loan is available for the Reserve Bank.

Due to the addition of Rs. 3 crores to sterling securities held in the issue department, there has been an expansion of currency for that amount. Active note circulation in India at Rs. 333.19 crores is higher by Rs. 2.36 crores.



The exchange market has witnessed a livelier turnover, with the undertone steady, with bills making fair showing and with some inquiry for remittances. The buying rate for U. S. dollar bills has been reduced by one rupee; and this was not unexpected in view of the greater uncertainty of communications with America and definitely longer time taken.

Banks were sellers of T.T. on London for Ready up to six months forward at 1s. 5 31|32d., and banks were sellers of T.T. on London for Ready up to six months forward at 1s. 6 1|32d.

D.A. sight bills quoted 1s. 6 9|32d., for three months, and 1s. 6 11|32d. for four months.

Dollars were Rs. 332-12-0.

*(From Our Correspondent)*

New Delhi, Feb. 3.

THERE is still no definite information available on the subject of coming political developments. It is clear, however, from talk in New Delhi that there seems to be some understanding between the Viceroy and his Indian Members, on the basis of which consultations are in progress with the authorities in Whitehall. The last few weeks have been sufficient evidence of the expansion scheme—in the sense that the new Indian Members have been able to create a friendlier atmosphere for the Central Government, persuade the Congress to revise its policy and, generally speaking, make it easier for the Government and political leaders to get together. If all this good work is not to be thrown away, the present opportunity should be quickly and effectively utilised for taking another big step forward to conciliate public opinion. In political circles, the hope is being entertained, with a certain measure of confidence, that the Viceroy appreciates this point of view and is using his best efforts to respond in a generous spirit to the Sapru Appeal. It is now regarded as more or less certain that as soon as the Railway Budget has been disposed of, Sir Andrew Clow will go on leave prior to taking up the Governorship of Assam. In the new reorganisation arrangements, it is very likely that the Communications portfolio will be split up into two. There is also a suggestion that Sir Jeremy Raisman may be entrusted with the Governorship of the Reserve Bank. If this materialises, there will be an opportunity to appoint an Indian as Finance Member. There is also the possibility of the Home Membership falling vacant as Sir Reginald Maxwell seems to be anxious to retire as soon as possible.

* * * *

All this talk foreshadowing important changes in the Viceroy's Council is proceeding on the basis that the Viceroy is prepared to Indianise his Council completely as the second stage in the expansion scheme. Under these arrangements, six more seats may be available for non-official Indians—including the vacant Information Membership and the Defence Membership which is also under consideration. If the Congress and the Muslim League are able to come to some agreement, all these six seats may be offered to the representatives of these two parties—it is also not unlikely that some of the Indian Members now serving in the Viceroy's Council may prefer to resign and make room for the major political parties. If the Congress and the Muslim League refuse to come in, they will be filled in the same manner as the present expanded Council. For the working of the Council the Sapru formula will be adopted —responsibility to the Viceroy. In practice, however, the policy of the Council will be to conform itslef as much as possible to the wishes of the legislature. If these anticipations which are the subject of considerable speculation in New Delhi materialise, the beginning of the Simla season this year may see a fully Indianised Council at the head of the Government of India.

* * * *

The general budgetary position of the Railways is reported to have been discussed in some detail at the meeting of the Standing Finance Committee for Railways last week. The end of January sees an increase of no less than Rs. 15 crores in Railway earnings over the proportionate budget forecast this year. The increase in expenditure during the first eight months of the year—largely due to A.R.P. expenditure and rise in prices has only been a crore and threequarters. It may be safely expected that instead of the anticipated surplus of Rs. 11.83 crores for the current year the Railway Member may have as much as Rs. 20 crores. Whatever may be the Railway Member's estimates for the following year, the current year will undoubtedly show an unprecedented surplus. It does not appear that the question of the moratorium which is expiring in March next, was considered at the meeting, but the general expectation among the members is that it will be extended for a further term. At any rate there can be no question, under present conditions, of paying back the loans taken from the Depreciation Fund, for the first and most important consideration should be the urgent needs of general revenues. The benefit of the unprecedented surplus which the Railways will have this year should go to the fullest extent possible to general revenues in order to reduce additional taxation to the minimum. Even the surplus for 1940-41 came up to Rs. 18.46 crores which show an increase of Rs. 4 crores over the revised estimates.

* * * *

The Labour Ministers Conference which concluded last week was a great success. When it meets again for its fourth session its composition is likely to be very different, for the new Labour Member, Sir Firoze Khan Noon, has promised to include representatives of Labour with employers. As a result of last week's discussions two bills are likely to be ready shortly for introduction in the Central Legislature bills to amend the Payment of Wages Act and the Workmen's Compensation Act to remove certain difficulties. One of the most important subjects discussed at the conference was the Central Government's tentative scheme for the preparation and maintenance of cost of living index numbers for inmportant places in British India. It is recognised by the authorities that during the present war period the lack of some data by reference to which adjustment of dearness allowances might be possible is a factor leading to industrial unrest. As regards collection of statistics for rural areas, recommended by the Rau Committee, the Government consider that the preparation of such figures raises many practical difficulties.

* * * * *

Interesting figures are now available regarding the progress of the Defence expansion scheme. India's first million is already in the field or in training—approximately one-third of this number is at the moment serving in oversea theatres of war. Recruitment for the second million was begun, but it is difficult to say when the second million mark will be reached as it depends upon the pace at which equipment and training personnel are provided. According to present arrangements, training of officers, British and Indian, is proceeding at the rate of 3,000 per year. India's war bill may be well over 30 lakhs per day when the Finance Member presents his Budget Statement next month. It is not unlikely that during the next financial year India may have to foot a bill of nearly half a crore per day owing to the increasing cost of Defence measures. The increase in the strength of Indian artillery units has been 250 per cent. As regards the Air Force over a hundred pilots have already been trained and commissioned since the war began—not to mention the three hundred under training and many more who are in the process of recruitment.

* * * *

As many as twelve new official Bills are expected to be introduced by the Government of India during the coming session. None of them, however raised any controversial issue. Among the more important are the Coffee Market Expansion Bill to incorporate the existing Ordinance with certain agreed changes, the Indian Companies Act Amending Bill to clarify the definition of banking companies, the Industrial Production and the Indian Medical Council Amendment Bill for the appointment of visitors. There are two labour measures—the Workmen's Compensation Amendment Bill and the Weekly Holidays Bill. Others are of a minor character which are more or less formal in nature. The Motor Vehicles Act Amendment Bill is expected to be referred to a Select Committee early in the session. Owing to the absence of any lengthy or controversial legislative measures, except the General and Railway Budgets, it is hoped that the session, though it has been provisionally fixed up to the 2nd of April, will conclude before the end of the coming month.

* * * *

No information is yet available regarding the choice of a successor to the Late Sir Raghavendra Rau as Additional Secretary of the Finance Department. Three names are being mentioned in this connection—Mr. Tennant who is now Deputy Auditor General, Mr. Turner who is now Joint Secretary in the Finance Department. It is also rumoured that Mr. Sanjiva Rao, now in the Federal Public Services Commission, may be temporarily recalled to officiate as Additional Secretary.

Bombay, February 3.

The first definite hint of steadiness in the cloth market came soon after the report that China was going to take Indian cloth. As in the days of Mr. J. N. Tata, the Far East would become an important outlet for Indian textiles. War news may be depressing, but the cotton market is shaking off its gloom. Despite the fact that local stocks stand at over a million bales at present there is a belief that the cotton mill industry will go on from strength to strength. Higher prices are now asked for forward delivery of mill goods; printed and fancy goods encounter improved demand. The steadiness recently apparent in raw cotton is ascribed to the revival of speculation. The recovery in yarn and cloth prices is largely responsible for the view that trade will expand. United States advices concerning unlimited aid and full co-operation produce the feeling that all commodity prices must go up hereafter. Commodities generally are in demand though the appearance of new rules as regards wheat stocks tend to pull down normal ardour. The fear that loan stocks would be released in America obviously does not worry the cotton market after the increase in duty. There is, however, the fact that Ahmedabad mills are likely to suffer. The Secretary of the Millowners Association there sent last week a telegram protesting against the doubling of the import duty on raw cotton, merely for the purpose of creating a special fund to help the Indian grower of short staple cotton. The telegram does not object to relief, only to the method employed. It draws attention to the difficulty of the mills making fine counts and points to the probable loss of export markets.

The share market had two holidays this week. The market is very thin now-a-days and prices hardly seem to rally. Brokers are still much worried over the developments of the past month. Some of them have asked for a general meeting to consider an earlier resolution providing for compulsory delivery of shares during the next six months on the basis of a sliding scale. It has been urged that the resolution which was adopted in deference to the Government's hint fails to recognise the peculiar market conditions. It has also been told that brokers cannot take up all the shares sold already even in instalments. A longer period is desired. The President has discussed the position over again, and has expressed the view that modification of the previous decision is hardly desirable. On Monday there was no business because of this difference of opinion. Interest in forward dealings is at an ebb. To become a jobber is not at all the ambition of the average broker who has however been told that the client always comes first, besides being right.

Petrol rationing has its advocates. Mr. Kothavala's official position doubtless makes him a zealot; but who can say he has not reason to. To cut petrol out is the patriot's duty. As Mr. Kothavala put it, it is a small sacrifice in a great cause. The Commerce Department's public appeal last month showed that the private car-owner should co-operate to the limit, for the good of India's defence. Mr. Kothavala asked the motorist and every user of petrol to restrict consumption to 60 per cent of normal requirements. Bombay had a small reserve which permitted the grant of extra ration to a deserving few but the 50 per cent cut ordered by the Government would have to stay. He referred to industrial demand which could not be curtailed with the best will in the world. When the rationing scheme was introduced, it was assumed that industrial demand would come to 15.000 gallons a quarter. Actually it was over 95,000 gallons. Industrial users were not affected by the devaluation of the coupon, but some time hence, they, too, would have to reconcile themselves to a reduced ration. Having regard to the official warning against kerosene, Mr. Kothavala merely said that the use of kerosene would not ease the situation. The introduction of kerosene rationing was impossible because the villages had to be considered. His final caution against motor journeys was directed against the week-end habit which has to be broken. But what else can be done when railway services are being reduced in accordance with official directions.

Bombay certainly looks forward to the market opened up in Iran after the abolition of various monopolies. The trade with the Gulf ports was growing despite the war, to judge by stray reports reproduced in the Indian Trade Journal. The new treaty which gives Iran the right to participate in a future peace conference ensures the survival of autonomy. The Mejliss last week approved the draft treaty by 80 votes to five. It has taken a month or so for the proposals to go through but a free vote was deemed essential by the new regime in Iran. Iran is an independent ally. That is assured once for all. She can keep in touch with Vichy or Tokyo as before. The Allies have also agreed to take their troops off when the war ends. And Iran has no specific military commitments under the new treaty. Iran has spent a depressing period under Reza Shah I who should be in Mauritius by all accounts for a fairly long period. He wanted to indulge champagne tastes on an income that would not run to small beer. His people paid for it now they know that food is better than big palaces and diplomatic missions. Iran is getting from her Allies wheat, sugar and other good things. The British Legation is giving all help to develop Iran's commerce. A result of the treaty will be that oil royalties will be available for meeting the cost of imports. Iran has that guarantee. The royalties were increased after the war broke out. Something like 4 million sterling should be available in a year for adding to Iran's reserve of foreign exchange. The riyal should be much stronger hereafter. If pilgrim traffic to Meshed increases, when the new routes from India are open, there should be some gold also coming in. Temporary garrisons which will spend a lot of money will not appear as an evil except to the ultrapatriotic. The railways have been improved: new links with Turkey and Iraq have been forged, and the young Shah has not only got a new deal but a square deal.

From Baroda's Dewan came an account of the State's co-operation in the war effort. The Legislative Assembly was told that the poeple should do more by way of investing in defence loans. The investment, at once safe and porfitable, was the means of protecting freedom. Sir V. T. Krishnamachari's appeal was both timely and wise. The defence of India is certainly the concern of the States too. The Prince has certainly set an example to his people by making another donation of £50,000. The money would go for a second squadron of the R.A.F. to bear the name of Baroda. The War Gifts Fund set up in the State was designed in part to meet the cost of comforts for troops. Baroda is training technicians for wartime work. Relief measures in drought-stricken areas were referred to by the Dewan who announced that remissions had already been ordered to the extent of over Rs. 4.3 lakhs by the Government.

The womens' university in Poona was praised for its ideals and methods when the silver jubilee was celebrated. Many Princes were present and there was the full quota of goodwill messages. Professor Karve and the Thackerseys were eulogised by Sir S. Radhakrishnan who met in an oblique manner Gandhiji's charge against the Benares University by emphasising the study of English for its intrinsic importance and rejoicing that English had been made a compulsory subject in the Women's University. Much was said about woman's role but surely the best thing said was that woman should inspire man to noble living. The feminist note was struck again by Mrs. Sarojini Naidu who said that a happy world required women's co-operation. It was Mrs. Naidu who put up the vote of thanks, showing that as against the Chancellor and his Vice, it was better for a lady to thank the guests of the evening. The pupils had a field day earlier, and Mrs. Naidu shone even more conspicuously.

The retiring President told the Indian Merchants Chamber that the Government should borrow and develop key industries by borrowing idle funds. The advice to tap the money market is justified by the lowness of interest rates at present. Mr. Maganlal Ghia asked the same thing (in different words) as the spokesmen of

*(Continued on page 217)*

# Resume of Commodity Markets

Rather uninteresting conditions have been noticeable in the commodity markets during the past week. With the continued uncertainty regarding the war situation, and the difficulty in securing freight business in the several markets is at a standstill. If the jute manufactures market has been firmer during the past week it is not on account of any resumption of overseas buying. The increase in shipments and the reduction in production on account of the strikes have resulted in an appreciable rise in prices for the near positions. In the jute market, there are sellers for the inferior grades while mills are interested only in the higher grades. The Bombay raw cotton market has been rather weak during the last three days while the gold market is inclined to be firmer.

**Jute**

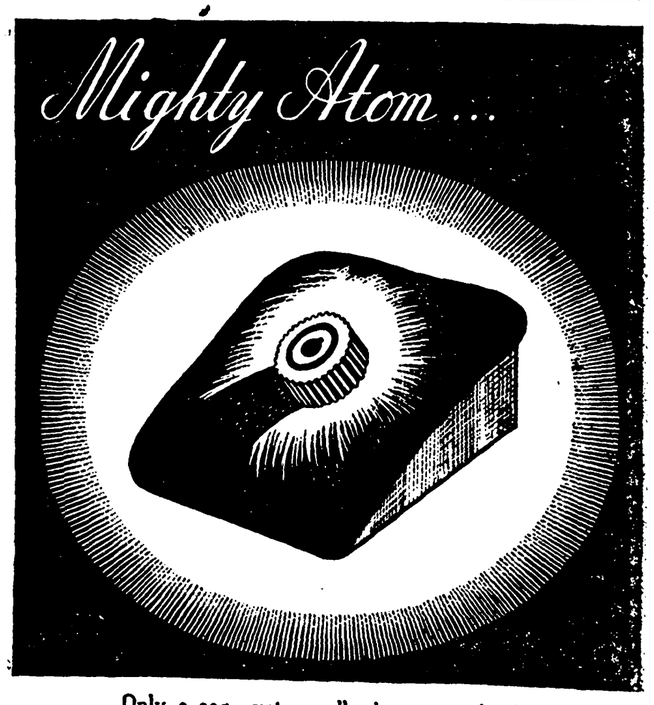
The raw jute market has been quiet and idle without any appreciable volume of business passing. Most of the jute now available is of inferior quality in which mills are not interested. Sellers for better qualities are rather reserved.

**Jute Manufactures**

The acute shortage of ready stocks has resulted in a sharp rise in the quotations for near positions. As the bazar also had disgorged its stocks earlier, ready demand cannot be met. There has, therefore, been some buying for the forward positions. The publication of the local stocks, therefore, showing a decline in stocks of hessian cloth and bags at the end of January, 1942, by 4.40 crore yards over the figures at the end of the previous month, has had an encouraging influence.

**Cotton:**

It will be remembered that the cotton market was rather firm at the end of last week and that the quotation for Broach April-May was as high as Rs. 214 on the statement by the Commerce Member in the Central Assembly that a special fund would be created to afford relief to growers. For this purpose, the import duty on cotton was raised by one anna per lb. The reports that the Government could come in the market as buyers for half million bales helped to maintain prices but the absence of any such buying and the fall in New York prices has had a discouraging influence and closing quotations are at the lowest levels for the week.



At the half-yearly meeting of the Indian Cotton Central Committee the following resolution was passed:

"In view of the necessity and urgency of avoiding any further glutting of the Indian cotton market with short and fair staple cotton hereafter, the buyers of which have been cut off from the Indian market owing to the present hostilities which may run for a period which cannot be estimated at present, the Indian Central Cotton Committee requests the Government of India to urge all Provincial Governments and States in India, especially those in areas where short and fair staple cotton is being grown, to reduce the existing acreage under such cotton forthwith by at least 50 percent. As alternative to short and fair staple cotton, such other crops may be encouraged as may suit the conditions of each area, preference being given to food grains, adequate stocks and reserves of which will continue to be a mattter of vital national importance for a number of years to come. To stimulate and accelerate such a change, Provincial Governments and States should be urged to subsidise the same by such means as may be most effective according to local conditions in such Province and State, including the supply of free or cheap seeds and the provision of funds and facilities for the sinking of new and the repair of old wells. The Committee requests every Provincial and State Government concerned to notify the public regarding the action taken by them as early as possible—not later than March 1, next."

It is pointed out that the additional duty on cotton imports is a purely temporary measure and that it is the intention of the Government to remove the duty when it is found that the amount in the fund has become sufficient to meet all the liabilities that will be incurred in pursuance of the objects for which it was created. It is understood that with the help of this fund the Government will lend support to the market should the quotations for short staple cotton drop below a certain level. Before the Government take any definite measures in this direction, trade interests will be consulted. Commercial circles in Bombay are of the opinion that the revenue from additional duty on cotton imports may not prove to be adequate for the purpose.

**Piecegoods:**

There has been greater activity in the piecegoods market during the past week. Several of the prominent dealers have come back. There is no tendency, however, to sell freely. Holders are rather reserved and are inclined to sell only in small lots as it is feared that they will not be able to get fresh supplies. Mills also are not keen sellers.

Only a cog—yet equally important in delicate mechanisms and giant machinery. The progress of industry depends upon such vital parts as these. For strength and reliability we turn to steel, of which these vital parts are made.

ALWAYS—EVERYWHERE—STEEL FOR STRENGTH

# Tit Bits of Industrial Activity

**Eggs from Bengal**

A recent press note announced that Indian eggs had reached the British breakfast table. That is hot news, for it is now clear that Chinese eggs cannot be had even if they are to the taste of everybody. Eggs in shell, or frozen, or dried remain acceptable and it is perhaps the control of home-produced eggs which has made the Briton keen on imported eggs. A year ago the first Indian consignments reached Britain. The report of the Food Ministry was apparently favourable and suggestions were received as to preservatives and containers. Two different grades were shipped, but it seems a pity that Grade A eggs can be had only from the U. P. These are most in demand, and the poultry-keeper in Bengal has been asked to note, that if Bengal leads the rest of India in the matter of egg production, she does not produce enough Grade A eggs. Better fowls and better eggs would seem to be indicated at present. The Livestock Expert has a scheme ready, and a promising export trade in eggs is waiting to be opened up.

**Kashmir Weavers**

Kashmir's silk industry is said to be busy and the filature there is known to be reeling larger quantities. The cotton weaving industry is also said to be developing rapidly and its position was only recently examined by a special committee which reported last month. It was learnt that Kashmir's imports of yarn and piecegoods from India exceeded the imports of foreign goods. The State on an average takes about Rs. 60 lakhs worth of cotton manufactures. It has been suggested that the local industry can get a bigger share of the market. A spinning mill is needed and the State has been asked to grow more cotton. All this will be acceptable to the weavers who are in a very depressed condition. Exhibitions demonstrations and better marketing—these are familiar suggestions advanced by the survey committee, which hopes that the All-India Spinners Association will do something for the cottage weaving industry of Kashmir.

**New Openings**

Zanzibar merchants are asking for balloons and canvas shoes among other things from India. The Trade Commissioner in Mombasa in his report for August said that interest in perfumery, electrical goods, biscuits and confectionery, soaps and hosiery was growing. The disappearance of Japan from Colonial markets should certainly increase the trade in Indian goods. Lots of manufactured goods, shawl cloth for turbans has been asked for specially, and another firm put in an inquiry for badges, ribbons and buttons for H. M. Forces. It seems remarkable that Zanzibar should ask for gramophones and musical instruments of Indian manufacture but this, like an inquiry for batteries for electric torches, was forwarded by the Mombasa office. Supplies from Europe and America are scarce but import control may cut at the root of new trade lines.

**Plywood in War**

How the forests help war effort has been described anew in a recent report of the Dehra Dun Institute, which is responsible not only for trying Indian timbers for aeroplane propellers made of Indian spruce and fir but for trying treatment of sleepers. Green sleepers straight from the forest takes creosote. That has been learnt and there is no difficulty in shipping sleepers. There is a new plant at Naharkhatya in Assam for this job. New resins for producing plywood and laminated wood have appeared. Plywood has various uses at the front and a rough water-proof glue was wanted. That has been produced like the prehensile wireless aerial needed for Army vehicles. Pillboxes (the ordinary type) made of bamboo have been made to satisfy the Medical Stores' demand and a new type of seasoning chamber has been devised just to speed up timber supplies. Laminated blocks were produced and kiln-drying made them fit for the job. Boots require boxes and a new type of box made of simul was provided though the one made of chir was more durable. Substitutes for bees-wax and sola pith are being examined because the war demand exceeds the supply of the natural product.

(Continued from page 215)

the Manufacturers who have deplored frequently the indifference of Government to quite feasible industrial projects. The reference by Mr. Manu Subedar to the difficulties thrown up in the way of starting locomotive manufacture proves that vested interests are still powerful. The prospect of India becoming a great arsenal of democracy is still remote. Many grievances were described by the speakers who followed Mr. Ghia. The political issue was touched upon by Mr. J. C. Setalvad who asked for courage, hope and unity. He asked also for full co-operation in A. R. P. work. The new vice-president Mr. Haridas Madhavdas asked for the adoption of the report and the only discordant note was struck by M.A.J. Noble in his diatribe against the Congress. As in Calcutta, the hardships created by an unsympathetic income-tax administration have led to open and vigorous criticism while Mr. Ghia was content to point out that delay in assessment and collection of revenue would be to the prejudice of Government which in time may be impelled to increase taxation.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

Calcutta, 5th February.

MILL Stock figures at the end of January make a better showing though the sharp increase registered at the end of December, owing to the shortage in freight during that month, has not been wholly neutralised. In the interval, Government stocks have remained practically unchanged, constituting 10.64 crores of yards at 31st January out of a total Hessian stock of 30.50 crores yards, representing 72,695 tons, well under a month's production at present levels. Commercial stocks of Hessian cloth are therefore 19.86 crores yards at 31st January as against 24.26 at the end of December, showing a reduction of 440 lakhs yards as against an increase of 1027 lakhs yards the previous month. Stocks of 8 oz|40 cloth are back to 80½ lakhs yards from 119 lakhs.

On the Sacking side, stocks also show a reduction of 125 lakhs yards from 18.44 crores to 17.19 crores. Stocks at the end of December showed an increase of 213 lakhs yards. This improvement in the stock position does away with any necessity to interfere with working hours, though when the Mill production figures for January appear, they will probably reveal that part of the improved position is due to lighter production during January and that it is not wholly due to actual shipment of goods. We have however all along emphasized the desirability of having a reasonable reserve of stock goods to meet any urgent demand that might arise. While it is improbable that almost any of the goods shown as stock are not already sold for actual shipment, they could always be temporarily expropriated for urgent requirements and replaced later.

It is regrettable to report that strikes still persist, but only in one well defined area. While ostensibly, higher wages is the demand, this can hardly be regarded as adequate reason when in other areas the labour continues to work contentedly. There can be little doubt that disaffected elements are at work to keep the dispute in being. We have pointed out that the increase in wages earnable under the longer working hours now subsisting, more than compensates for the rise in living costs, which view is supported by the light-hearted manner in which the workers have taken an extra day off on festival occasions, though thereby they may have lost a day's pay.. At the same time there is quite adequate reason for some official enquiry to be made into the rising price of foodstuffs. Stocks are believed to be ample, and if profiteering can be proved, as is alleged to be taking place, measures to control the prices in the interests of all classes of labour should be introduced. It is desirable that every effort should be made to induce labour to remain at work, and the removal of this serious cause of discontent would be an important step in that direction. Other Provinces have been impelled to take such measures, and the Bengal Government, with its much advertised interest in the welfare of the labouring classes, should not be behind-hand in giving such a matter its close attention.

The January issue of the Bulletin of the Indian Central Jute Committee contains its usual quota of warnings to the trade regarding the progress of substitute crops which are being encouraged in other parts of the world. An exhaustive article concerns the increased production, and the method of treatment, of the "Urena Lobata" fibre in the Belgian Congo. The claims for the utilities of this fibre range from cordage and sacks to artificial silk substitute suitable for clothing. The Government of the Republic of Colombia is to give financial aid to the cultivation of the "fique" fibre, a substitute for sisal, with a view to rendering the country self-sufficient in the supply of material for sacks, and even looks forward to working up an export trade in the fibre. The very latest is a claim from Japan to have produced from banana skins a substitute for Manila Hemp. While this last might almost seem to call for some comment from "Punch", there certainly is, in the other reports, sufficient reason for deterring any attempt to raise the price level of jute beyond its economic and competitive level. What is more, we should like to hope that we have heard the last, from quarters which should know better, of the "bogey" of Jute Substitutes. The accumulated evidence of the past few years proves that the Jute crop has to face up to something much more substantial than a "bogey".

Business in the Export Jute market has not been extensive, but the prices offering from Dundee have shown an improvement, amounting to Rs. 10|- per ton for ordinary Daisee marks and to as much as £1 per ton for the Short Group. Sales have been recorded in Dundee Tossa 2|3 at Rs. 72 and in 4s at Rs. 62, while in Dundee Daisee assortment business has been done in Long Group at Rs. 61 to Rs. 62 and in Short Group at Rs. 71 to Rs. 72. Some business was reported for South America in an assortment of Dundee and Outport Tossa 2|3 at Rs. 71 and Rs. 59 respectively. Mills have not been showing much interest, only limited sales of Lightnings and Hearts being reported at Rs. 45 and Rs. 35 respectively. The Jute Futures market remaining moribund, it has been notified that unless objection is raised by any member of the Board of Control, the Clearing rate will be automatically fixed again at Rs. 58.

Mills have been showing the minimum of interest in Loose Jute and only a few small transactions fall to be recorded. European Mids and Bots in assortment at Rs. 13 and Rs. 9 with Bottoms alone at Rs. 8-8. Supervised Jat Bottoms at Rs. 8 and Rs. 8-4 and Indian Jat Bottoms at Rs. 7-12 and Rs. 8. District Tossa Bots at Rs. 9 and Jat and District Tossa X mark at Rs. 6-8 and Rs. 6 respectively. The paucity of business in Loose Jute in December is reflected in the heavy falling off in arrivals into Calcutta during January. The total last month is estimated at only 4,72,000 B|s against 11.51,000 in January 1941. Total arrivals since the beginning of the season thus amount to 44,87,000 B|s against last season's figure at the same date of 57,16,000 B|s.

The position in the Fabrics section remains the same. Demand runs almost wholly for February and March with very little enquiry for April and beyond, unless at prices unattractive to Mills. The scarcity of near goods has kept prices at a high level, though at the close the tone is slightly easier owing to a diminution in demand. Business has been reported in 9 porter hessians at Rs. 19 to Rs. 20 for February, at Rs. 19-8 March, at Rs. 18 April, at Rs. 17-6 April|June and at Rs. 17 July|Sep. In eleven porters at Rs. 27 to Rs. 28 ready and Feb, at Rs. 23-4 April and at Rs. 21-4 July|Sep. The sharp discount for forward shipment is very marked. Wheatbags sold at 32 Feb|March and at Rs. 30 April.

## Two Bank Statements

Formal comment on the Imperial Bank's report and accounts will not fail to contain a reference to the further rise in Deposits to Rs. 108.92 crores as at the end of 1941. The failure of Advances to expand at the same pace is a result of the war. The advance in Deposits over a year by about Rs. 13 crores indeed suggests that the Imperial Bank more than ever is *hors concours*. The increase in Deposits is duly reflected in the pronounced expansion of Investments, mainly giltedged. The banking expansion of the war period has more than ever been a sustaining factor in the giltedged market, and one would not have it otherwise, when trade demand for funds has tapered off. Of the peculiar passion for cash manifested by depositors towards the end of the year, there is certainly more than a trace in the Bank's balance sheet. What may not be self-evident in a consolidated statement of all scheduled banks as such, at any point of time, is clearly shown by the drop in cash and bank balances as compared with the end of 1940 when the rise in cash was palpably due to the slack demand for funds. The total cash and bank balances amounting to Rs. 15.27 crores indicate that a cash ratio of 13 per cent or so was preserved in a period when the Imperial Bank had to support other banks.

The falling yield on Treasury Bills is of some importance for the profit and loss account. In the event, the gross profit for 1941 is certainly better than expected at Rs. 10,888 lakhs. Added to the larger sum brought down from the half-year ended June, the Directors have a larger sum at their disposal. This in part is due to the increase in Advances as compared with 1940 though few will fail to miss the fact that the total under Advances is lower than the total at end-June. The reasons are to be found in dull markets elsewhere. The seasonal stringency took an unusual form while it is gratifying to record that the Imperial Bank's deposits kept rising at the same time. Since the 12 per cent dividend is very well covered there is little to say about the disposition of profits.

The major influence is still strong towards expansion as is proved by the arresting rise in Deposits in the case of the Bank of India Limited. In the balance sheet published in this issue are found the essential changes of the second year of war. The total under current deposits or compared with the total at the end of 1940 are up by Rs. 4.7 crores in spite of the fall noticed under fixed and other deposits. It is certainly fortunate that a proportionate rise under Advances conferred an important advantage on the Bank, reflected duly in the balance of profits for the year 1941 which is Rs. 24.13 lakhs as against Rs. 19.59 lakhs for the preceding year. Advances having risen by over Rs. 2½ crores, As compared with Rs. 6.15 crores at the end of 1940 the total under cash etc., is shown as Rs. 5.41 crores. The rise in Investments is inseparable from the rise in Advances. Where full employment for money is not possible, the diversion into securities is only to be expected; hence the rise of Rs. 2½ crores in the total under Investments returned at Rs. 7.88 crores is not peculiar to the Bank of India.

The expansion in profits supports the conclusion as to the stability of the Indian banking system in the latest phase of the war period. The rise in Investments appears a generic feature while the rise in Advances reported by the Bank will show that the Bank of India had the direct benefit of the bullion market activity towards the end of 1941.

## JUTE

Calcutta, Feb. 5.

THE jute market has been absolutely uninteresting during the past few days. The strength of the hessian market for near positions is purely technical and as mills are not able to do business for forward positions on a large scale they are not taking any interest in the jute market. Sellers for lower grades are pressing for business.

In the loose jute section mills are buying only sparingly. Some small busines was reported in Indian District Tossa Bottom and White Jat Bottoms at Rs. 6-8 and Rs. 8 per maund respectively.

In the pucca bales section not much business has been reported but rates have been maintained. Shippers bought Dundee Tossa 2|3 at Rs. 72 per bale and Daisee 2|3 and Tossa 4's at Rs. 62 per bale.

No quotation is available in the futures market, business being at a standstill. The quotation can be said to be nominally at Rs. 59 per bale.

## JUTE MANUFACTURES

Calcutta, Feb. 5.

THE jute manufactures market has been firmer on covering for near positions. But the tight spot position has led to some buying for the forward positions. Quotations as such are higher all round. The local stock figures for the month of January are also encouraging. 9 Porters February are Rs. 19-10, March Rs. 19, April|June Rs. 17-8 and July|September Rs. 16-14. 11 Porters ready are Rs. 26-12, March Rs. 25-14, April|June Rs. 22-14 and July|September Rs. 21-4.

The increase in shipments during the last month has resulted in a decline in stocks of hessian cloth and bags at the end of January, 1942. Hessian cloth and bags were 30.50 crores yards against 34.97 crores yards at the end of 1941. Stocks of sandbags on Government account were 10.64 crores yards against 10.71 crores yards. There has thus been a decline of 4.40 crores yards in stocks for ordinary consumption, the figures at the end of January, 1942 and December 1941 being 19.86 crores yards and 24.27 crores yards respectively. Stocks of sacking cloth and bags were 17.19 crores yards against 18.44 crores yards.

| Description | 31st December 1941 Yds. | Tons. |
|---|---|---|
| Hessian Cloth & Bags* | 34,97,32,788 | 83,864 |
| Less sandbags on Government Account .. | 10,70,65,574 | |
| | 24,26,67,214 | |
| Sacking Cloth & Bags | 18,43,78,555 | 76,548 |

| Description | 31st January 1942 Yds. | Tons. |
|---|---|---|
| Hessian Cloth & Bags* | 30,50,18,270 | 72,695 |
| Less sandbags on Government Account .. | 10,63,90,846 | |
| | 19,86,27,424 | |
| Sacking Cloth & Bags | 17,19,14,074 | 72,231 |

The January figures include the returns of Gagalbhai in addition to those of members but the returns of Katihar, Naskarpara and Shree Hanuman have not been received and are excluded.

*Out of the total January hessian stock 30,53,401 yds. weighing 1,775 tons represent 40 inches 8 oz. cloth. The corresponding figures for December 1941 were 1,19,23,807 yds. weighing 2,656 tons.

## COTTON

Calcutta, Feb. 5.

IN spite of the sharp break in values in the New York market and the bearish sentiment of prominent operators, Broach April|May was firm early in the week. The reports that there would be large scale buying by Government had an encouraging influence. There was also a tendency to await the policy of the Government regarding relief to growers. During the latter half of the week, however, there has been mild selling and quotations are around the lowest levels for the period under review. Broach April|May are below Rs. 200|-, quoting Rs. 198-8, July|August Rs. 205-8, Bengal March Rs. 126-12, May Rs. 129-12, Oomra March Rs. 153-12 and May Rs. 157-12.

In the New York market there has been a sharp break in values on the announcement by President Roosevelt that government-owned commodities would be released. The quotation for March came down to 18.06 cents. There was a recovery to 18.75 cents but there has been some selling at the higher levels and the quotation is again lower at 18.30 cents. May were 18.43 cents and July 18.52 cents.

## SILVER

Calcutta, Feb. 5.

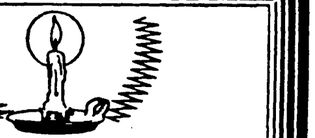
THE Bombay silver market has been absolutely uninteresting and there has been practically no fluctuation in rates. The quotation for Indian Mint silver ready is nominal at Rs. 70-1. First settlement were Rs. 64-13 and Second settlement Rs. 64-13.

The London market has been dull and idle and small demand has been satisfied. The quotations for spot and forward are unchanged at 23½d. and 23 9|16d., respectively.

## GOLD

Calcutta Feb. 5.

THE gold market has been firmer and there has been a resumption of speculative activity and also buying for hoarding purposes. The deterioration in the war situation, evidently, has had a discouraging influence. Gold ready were quoting Rs. 47-7, First settlement Rs. 47-2, and Second settlement Rs. 47-1. The rise in the quotation for ready and first settlement is as much as thirteen annas. Sovereigns are quoted Rs. 33-6 against Rs. 33 at the time of last writing.



## WHEAT

Calcutta, Feb. 5.

THE wheat market has been absolutely uninteresting and quotations have been fluctuating narrowly below control rates. The complete absence of export buying has come as a surprise to bazar operators. The outlook is considered uncertain.

In the Calcutta market there is practically no change in the rates. The wagon shortage is causing considerable anxiety as mill stocks are on the low side. There has been greater demand for flour and flour products. Cawnpore ready are quoting Rs. 5-12 and May Rs. 5-4.

ELECTRICITY
*makes life easier*
Many people do not realize what a great difference a tall standard lamp, with a 100-watt bulb, can make to their health and comfort. In fact, most of us "put up with" bulbs of lower wattage when in fact the more powerful bulbs cost no more—or negligibly more—in current, although they save our eyes by giving so much more light. For reading, sewing, drawing and other pursuits demanding concentration, powerful light is essential if you are to avoid eye-ache and ill-health.

## SHARP RISE IN MUIR MILLS EARNINGS

OBVIOUSLY the most important development of the week is the decision of the Committee of the Calcutta Stock Exchange to remove restrictions governing prices as far as *Indian Iron, Steel Corporation, Burma Corporation* and *Indian Copper Corporation* are concerned. The fact that, unofficial transactions were going on a large scale at prices much below the fixed minimum rates perhaps influenced the decision of the members of the Committee. It will be remembered that even last week Indian Irons were unofficially quoted at Rs. 26-8 what time the minimum price was supposed to be Rs. 32. Dealing in the Bombay stock exchange was reported around the former rate. It was, therefore, decided to review the position at the meeting held on Tuesday last. But complete freedom to do business in the four counters, which are amongst the most active current securities, should have a disturbing influence on other sections as well. I am not quite sure, therefore, whether the Committee was wise in doing away with minimum prices for these 'blue chips'.

The behaviour of markets during the last three days confirms suspicion. The decision of the Committee came into effect on Wednesday this week. After the lapse of nearly six weeks, business in Indian Irons was reported around Rs. 25-8 on that day. Since then, there has been further selling and the quotation for Indian Irons at the time of writing is Rs. 22-8 and Steel Corporations Rs. 14-8 ex-dividend. Burma Corporations have been sold heavily resulting in a drop in the price to Rs. 2. By comparison Indian Copper Corporations have not suffered very much, the price still being around Rs. 1-12.

Minimum prices for other counters remain in force but for many of the popular counters there are no buyers anywhere near the fixed minimum rates in view of the possibility of a further decline in rates for the chief speculative counters, which is not remote so long as the situation in the Far Eastern theatre remains serious. The removal of restrictions regarding trading in the four counters, mentioned above, has not been well-timed. Selling of Burma Corporations cannot be altogether avoided in view of the direct threat to the Company's properties but free trading in Indian Irons and Steel Corporations may prove to be disastrous. The need trol of industry can never be partial and the listed stocks will arise sooner than anticipated. It would have been therefore much better if the Committee had only revised the minimum rates for Indan Irons and Steel Corporatons later on along with the others. It is quite understandable that war danger is real but not only as far as these two companies are concerned. Rumours regarding Government control of industry have to be taken into account with great reserve since it should be definitely understood that Government control of industry can never be partial and the difficulties in the way are many.

• • •

Evidence of the vastly improved conditions in the cotton textile industry is borne out by the report of the *Muir Mills Company, Limited* for the year ended December, 1941. Cotton mills in India are working day and night and it is feared that it would be hardly possible to satisfy demand.

The net profit for the year, before providing for taxation and depreciation, is Rs. 35,77,662 against Rs. 13,93,741 for 1940. The earnings for the last year are thus nearly thrice those for 1940. As in the case of other companies, the benefit of the increase in earnings has been derived mainly by Government. The provision for taxation is considerably higher at Rs. 25,50,000 as against Rs. 6,25,000. Out of the increase in earnings, amounting to Rs. 21.83 lakhs in the case of Muir Mills the increase in provision for taxation is as much as Rs. 19.25 lakhs. The amount set aside to depreciation is Rs. 4.50 lakhs against Rs. 2.50 lakhs while the allocation to Pension and Gratuity Fund is Rs. 25,000 (same). The dividend on the ordinary shares has been maintained at 20 per cent but the bonus this time is higher at 10 per cent against 5 per cent. The amount carried forward is higher at Rs. 1,72,557 against Rs. 1,59,896 brought in. According to the report demand for cloth has been good and prices are now considerably higher than those ruling a year ago. A large proportion of the Company's plant has throughout the year been concentrated on production for the Defence services.

• • •

The increase in the export tea quota for the 1942-43 season from 110 per cent of standard output to 125 per cent, should considerably improve the prospects for Indian tea companies in the current year. As many of the important companies have a fairly high level of profit for the standard period chosen under E.P.T., it would be reasonable to expect an increase in distribution for 1942. The reports for 1941 should make a satisfactory showing. Unfortunately conditions in the share market at the present moment are such that investors will not be influenced by any favourable developments so far as industries are concerned.

• • •

Presiding over the annual meeting of the shareholders of the *Associated Cement Companies, Limited*, Sir Purshotamdas Thakurdas remarked that as the effects of stabilisation of cement prices would not be fully reflected until a full year's working had been maintained. The prospects for cement companies for the current year are described as very satisfactory and all are convinced that the arrangement between the interests will work satisfactorily. According to the Chairman's review of the position, the average price for cement is now on a reasonable basis although it is in fact somewhat less than it was before the competition started. As regards export demand though there may in the future be some falling off due to the spread of war to the Far East, there is no indication of this as yet, and the Company has a large number of orders on its books.

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

Calcutta, February 6.

THE feature of the week is the decision of the Committee of the Calcutta Stock Exchange to do away with minimum prices for four popular counters. As transactions in these counters have been going on unofficially at rates much below the fixed minimum prices it was decided that there should be no restriction on trading so far as these counters were concerned. With the removal of the restrictions a sharp decline in prices has been recorded. *Indian Iron* are now quoting Rs. 22-8, *Steel Corporation* Rs. 14-8 ex-dividend, *Burma Corporation* Rs. 2 and *Indian Copper Corporation* Rs. 1-10. Activity in other sections is on a considerably reduced scale and it is feared that with the abrupt fall in prices for the chief speculative counters prices in other sections also will be marked down. Operators and investors alike are inclined to await further developments. There is considerable anxiety regarding the Far Eastern situation.

The giltedged securities section has been slightly easier with 3½ per cent. Paper quoting Rs. 94-6. In the absence of any good support prices have shown a sagging tendency. The weakness of other sections also has been a contributory factor. Money conditions during the week have continued easy and the treasury bills rate is even slightly lower at fifteen annas and eleven pies per cent per annum. Among terminable loans, 3 per cent. 1963|65 were Rs. 94-4, 3½ per cent. 1947|50 Rs. 101-4, 4 per cent. 1960|70 Rs. 100-6, 4½ per cent 1955|60 Rs. 112-9 and 5 per cent. 1945|55 Rs. 108. 3 per cent. Second Defence Loan were unchanged at Rs. 98 and 3 per cent. 1946 bonds at Rs. 101-10. Among provincial loans, 3 per cent. Punjab 1952 were done at Rs. 97-5. Among fixed interest securities, 3 per cent. 1936|66 *Calcutta Improvement Trust* debentures were done at Rs. 91-12 while 5 per cent. *Calcutta Port Trust* 1958|68 debentures were done at Rs. 104-8. Among industrial debentures, 5½ per cent. *Dalmia Cement* debentures changed hands at Rs. 103 and 7 per cent. *Nuddea Jute* debentures at Rs. 101.

Business in preference shares is still very limited. *Dalhousie* were dealt in at Rs. 162-8, *Gourepore* at Rs. 145, *Hukumchand* at Rs. 139 and *Waverley* at Rs. 57. A small lot of *Indian Standard Wagon* were noted at Rs. 149 and *Steel Corporation* at Rs. 109-8. *Dalmia* preferences were Rs. 119-8 and *Titaghur Paper* Second preferences Rs. 109.

Cotton shares have continued idle with *Dunbar* at Rs. 226-8, *Cawnpore Textiles* at Rs. 8-11, *Elgin* at Rs. 27-10 ex-dividend and *Kesoram* at Rs. 8-11. *New Victoria* were Rs. 4-8.

In the Coal section, business has been very restricted with *Amalgamated* at Rs. 26-4, *Bengal* at Rs. 367 and *Churulia* at Rs. 1-8. *Borrea* were crossed at Rs. 15-8.

Jute shares have been uninteresting with *Agarpara* quoting Rs. 38-10, *Bally* Rs. 220, *Kamarhatty* Rs. 466, *Megna* Rs. 57-8, *National* Rs. 21-8 and *Rameshwara* Rs. 9. There are no buyers for *Howrah* and other popular counters above the minimum prices.

In the Engineering section, as pointed out above, a sharp fall in the quotations for Indian Irons and Steel Corporations has been recorded. *Indian Iron* are now quoting Rs. 23, and *Steel Corporation* Rs. 14-12. *Burn & Co.* are lower at Rs. 326. *Indian Steel and Wire Products* partly paid ordinary shares were crossed at Rs. 7.

Sugar shares have remained unchanged, *Buland* and *Raza* being quoted at Rs. 24-10 and Rs. 25 respectively. *Champarun* were Rs. 19-6, *New Savan* Rs. 11-12 and *Purtabpore* Rs. 11-4.

In the Tea section only a few transactions have been recorded. *Baradighi* were noted at Rs. 50, *Birpara* at Rs. 320, *Jutlibari* at Rs. 15 and *Oodlabari* at Rs. 26-8.

In the Miscellaneous section, *Burma Corporation* have been heavily sold and the quotation is now around Rs. 2-4. The reports that the Japanese are planning an attack on North Burma have had a depressing effect. *Indian Copper Corporation* are not very much lower at Rs. 1-10. *B. I. Corporation* were steady at Rs. 5 while *Indian Cable* were around Rs. 20-4 ex-dividend. There was some demand for *Bengal Potteries* at Rs. 11-14. *Assam Bengal Cement* were Rs. 12-8 and *Alkali and Chemical* Rs. 20-8. In Paper shares, *Titaghur Paper* were quoting Rs. 18-8, *India Paper Pulp* Rs. 140, *Orient Paper* Rs. 16-4, *Shree Gopal Paper* Rs. 15-4. *Assam Saws* were Rs. 3-8 and *Midnapore Zemindary* Rs. 66-8.

## MADRAS STOCK EXCHANGE

(From Our Correspondent)

Madras, Feb. 5.

The developments in the Far East continued to influence the course of trading in the local market, the turnover being limited. Cotton mill shares were steady, while Rubber shares met with a fair demand with a small increase in prices.

*Securities.*—This section continued to be steady, 3½ per cent Paper quoting at Rs. 95 s.l. 3 per cent 1963|65 came in for business at Rs. 94-8 and 4 per cent 1960|70 at Rs. 108-4 s.l. Among State Loans, 3 per cent 1956|61 *Mysore* were in favour at Rs. 103-8. 3 per cent 1952 *Madras Loan* changed hands at Rs. 97-12.

*Mills.*—Prices were maintained in this section, *Buckingham & Carnatic* being done at Rs. 243; *Cambodia* at Rs. 10-12; *Vasanta* at Rs. 140 and *Radhakrishna* at Rs. 195-8. *Aaron Spinning* after a long time met with business at Rs. 8, while the preferences were done at Rs. 10.

*Utilities.*—There were sellers of *South Madras Electric* ordinaries at Rs. 12-9, while the 5¼ per cent Debentures changed hands at Rs. 107. *Cochin State Power* were maintained at Rs. 7-12. *Nellore Power* had buyers at Rs. 7-2.

*Plantations.*—Rubber shares were a popular group following the improved position of the South Indian Rubber industry on account of the far eastern developments. *Velliamuttam* were done at Rs. 20-6; *Cochin Malabar* at Rs. 9-6; *Thirumbadi* at Rs. 2-4 x.d.; *Tropical Plantations* at Rs. 25; *Nellithanam* at Rs. 9-8; *Malankara* at Rs. 40-8 and *Kaipetta* at Rs. 23-3. Among Tea shares, *Vellamalai* reported business at Rs. 19-8; *Chembra Peak* at Rs. 5-4 and *Peermade* at Rs. 31-4 x.d.

*Sugars.*—*Mysore Sugar* were a steady feature at Rs. 52. *New Savan Sugar* were crossed at Rs. 11-8.

*Miscellaneous.*—*Mysore Paper*, after touching a level of Rs. 15-10, closed better at Rs. 15-12. *Mettur Chemicals* were placed at Rs. 14. Among Engineering shares, *Indian Steel Rolling Mills* ordinaries were lower at Rs. 6. *Indian Iron* changed hands locally at Rs. 25-8 for some time and *Steel Corporation of Bengal* ordinaries at Rs. 15-6 x.d. *Spencer 'A' preferences* were taken up at Rs. 10 x.d. s.l.

## BOMBAY STOCK EXCHANGE

*(From Our Correspondent)*

Bombay, Feb. 5.

*Money.*—The rate for call money continued to be quoted at ¼ per cent.

*Securities.*—The securities market remained closed throughout the week under review.

*Shares.*—The forward section of the local Stock Exchange remained closed throughout the week, and business in the cash section, too, took place only on Tuesday and to-day. The authorities of the Stock Exchange have now agreed to the proposal of the Government of Bombay to suspend all forward trading after the end of June and to reduce the outstanding business in 6 instalments by withdrawing cer-

(a) Carry preferential claim to repayment of capital. (b) Issued on 1st April, 1936, repayable on 31 March, 1960, with option of redemption in whole or in part, at any time on any interest date after 15th December, 1944, on three months' notice. (c) Issued in 1937, redeemable at 102½% on 30th June, 1952, or at any earlier date on six months' notice. (p) Partly paid. *Depreciation Fund included in Reserves. †Interim dividend. ‡Includes a bonus of 2% per annum. (f) Interim dividend of 2½ per cent on preference shares in respect of each half-year ended 31st December, 1937 has been declared. (a) For fifteen months. (aa) for the period from 1st May

(*Continued from page* 222)

tain scrips from the forward list every month. It is understood that Government have agreed to the system of compulsory carrying-over during the intervening period. It was also decided by the Governing Board of the Exchange to extend the time for payment against delivery of the shares on the forward list for the February settlement to the March Settlement and suspend the selling-out rule in respect of all unsettled contracts. The outstanding business, it is reported, will be adjusted with the making-up prices fixed by the Board. The buyers are, however, entitled to enforce delivery.

The following making-up prices for February and March respectively have been fixed by the Board for all unsettled contracts of the January settlement and the *badlee gala* for February-March settlements:—

| Name of Company | Price for February. | Price for March. |

*Textiles.*—Trading in this section was very limited and the prices of some of the shares have been slightly marked down. *Ahmedabad Advance* have shed nearly 20 points to close at Rs. 307-8 and *Sholapoor* 200 points to close at Rs. 5,200. *Vishnu* were, however, unchanged at Rs. 1,555. Among others, *E. D. Sassoon* were done at Rs. 3-11-3; *Indore Malwa* at Rs. 215 and *Western India Spinning* at Rs. 1,600.

*Electrics.*—*Ahmedabad Electric* were quoted at Rs. 176-4; *Bombay Suburban* at Rs. 175 and *Amalgamated* at Rs. 14-3.

*Miscellaneous.*—Bombay Burma new shares were further marked down at Rs. 112-8, showing a loss of Rs. 10 over the previous week. *Scindia Steam* were at Rs. 19-10; *Tata Chemicals* at Rs. 13-10; *Wimco* at Rs. 202-8 and *Tata Oil* at Rs. 49-8. *Indian Iron* came to business at Rs. 23-8 and *Steel Corporation* at Rs. 14-12.

## LONDON STOCK EXCHANGE

Bad news from both the Middle East and the Far East has had a discouraging influence on the London Stock Exchange during past week. Business has been restricted and there is no tendency to enter into any large commitments. Tea shares were unaffected by the quota increase while Kaffirs failed to maintain the initial rise in prices on Cape support. Among Oils, *Mexican Eagle* were the only bright spot on the Supreme Court decision in favour of the oil companies. Electrical Equipment shares were inclined to be firmer in anticipation of higher dividends.

Giltedged securities have been uninteresting, 3½ per cent. India Sterling Paper being slightly lower at 101¾. Among British Funds, 2½ per cent. Consols were 82½, 3 1|2 per cent. Conversion 107¼, 3½ per cent. War Loan 105 1|16 and 3 per cent. war Loan 101¼.

## NEW YORK STOCK EXCHANGE

Wall Street also was inclined to be firmer on the more hopeful Far Eastern situation earlier in the week. Domestic industrial news also was encouraging. Rails were the best feature on reports that there would be an increase in freight rates. During the last three days, however, easier conditions have been noticeable and quotations are not very much changed on balance. *U. S. Steel* were $53¼, *Anaconda Copper* $27⅜ and *General Motors* $33⅝.

# MARKET POINTERS

**Fund for Cotton Growers:**

It is learned that the fund to be created out of the receipts from the additional import duty imposed on cotton will be used for the purchase by Government of short staple cotton, should the price of these grades drop below a certain minimum. Government may step into the market and make purchases so as to withdraw the quantity that may be left unconsumed or to regulate the price, at which these types of cotton will find a sale.

It is expected that Government of India will consult certain interests like the Indian Central Cotton Committee before coming to a conclusion.

As to the steps that should be taken, the subject may also be discussed at the next price control conference.

The Government of India wish to emphasise, says a communique, that the accounts of this fund will be kept separate from the general accounts of the Government and that the imposition of the duty is a temporary measure.

Their intention is to remove the duty when they are satisfied that the amount in the fund has become sufficient to meet all the liabilities that will be incurred in pursuance of the objects for which it was created.

* * * *

**Arrivals of Jute to Mill Area Less:**

Arrivals of jute into Calcutta and the mill area during the period from July 1 to December 6, 1941 totalled 33,74,000 bales as compared with 37,17,000 bales during the corresponding period of the previous year, according to the January issue of the Indian Central Jute Committee's monthly **Bulletin**.

Exports of raw jute from Calcutta and Chittagong from July 1 to Dec. 6, 1941 and for the corresponding period of the previous year were 7,94,000 and 4,13,000 bales respectively.

* * * *

**Maximum Wheat Prices:**

The Madras Government have issued orders fixing the following maximum prices of wheat in Madras city under the Defence of India Rules on the basis of the maximum prices fixed by the Government of India for primary wholesale markets at Lyallpur and Hapur and having regard to such factors as cost of transport, distribution charges, profits, etc.—Maximum wholesale prices per Imperial maund of 82 lbs. ex-godown Madras Rs. 6-3: maximum retail price—3¾ Madras measures per Rupee.

* * * *

**Business Conditions in Mysore:**

A steady improvement in the general business conditions in Mysore State during October 1941 is disclosed in the monthly survey issued by the Director of Industries and Commerce.

(Figures in bracket relate to September, 1941).

Production of cotton piecegoods during the month under survey was 4,283,000 yards (4,133,000 yards).

The quantity of yarn spun in mills was 2,383,000lb. (2,150,000 lb.).

Production of sugar in the State amounted to 2,900 tons (2,900 tons).

The quantity of matches produced was 1,454 gross boxes (10,514 gross boxes).

The quantity of gold extracted in the mines was 24,284 fine ounces (23,774 fine ounces). The value of Gold amounted to Rs. 27,80,519 (Rs. 26,50,802).

**Insure and Increase Nation's Strength**

Financial Independence of the individual is the measure of Nation's financial strength.

In this hour of world turmoil, all Life Insurance Policy-holders should take stock of their insurance cover and ascertain just how strongly they are fortified against the unpredictable that lies ahead.

And, those individuals who have not yet made provision for their protection need do so without delay and thereby contribute towards Nation's strength.

Be advised and write to-day to

NATIONAL INSURANCE COMPANY, LIMITED.

## WORLD OF INDIAN FINANCE

Calcutta, Friday Evening.

The political situation has become graver; but the money and exchange markets have remained unaffected. It is only the giltedged market which has taken a further adverse turn. In the interbank call money market, rates continue nominal at ¼ percent in Calcutta and ¼ percent in Bombay. Short credits are in good supply and there are hardly any borrowers. Bidding was extremely poor for tender Treasury Bills offered this week. The amount on offer was Rs. 2 crores; and applications were only for Rs. 2,24½ lakhs. In spite of a more or less complete absence of competition, and in spite of the increase in the weekly offer from Rs. 1 crore to Rs. 2 crores, the average rate of accepted tenders was Rs. 1 percent per annum. Sales of intermediate bills make fairly good showing at Rs. 98 lakhs. The offer of tender bills for next week is Rs. 2 crores; and sales of tap bills will continue at the unchanged rate of Rs. 99-12-3.

There is a further expansion of currency for Rs. 10 crores against transfer of sterling securities from the banking department to the issue department of the Reserve Bank. Securities held in the issue department have increased from Rs. 248.63 crores to Rs. 258.63 crores. Rupee securities are unchanged at Rs. 41.50 crores. Rupee coin continues the downward trend being Rs. 30.84 crores against Rs. 31.64 crores. Active note circulation in India has risen by Rs. 9.49 crores. Taking India and Burma together, total notes issued by the Reserve Bank stand at the record high figure of Rs. 366.18 crores. The transfer of sterling securities for Rs. 10 crores to the issue department is reflected in a decline in the foreign balances of the banking department from Rs. 54.77 crores to Rs. 45.22 crores, or by Rs. 9.55 crores. Ways and means advances have been reduced by Rs. 3.56 crores from Rs. 7.57 crores to Rs. 4.01 crores. Deposits maintained by scheduled banks with the Reserve Bank have risen by Rs. 2.39 crores to Rs. 42.48 crores. The biggest change is in the deposits of the Central Government which have sharply fallen by Rs. 15.95 crores from Rs. 20.80 crores to Rs. 4.85 crores. This figure seems to have been possible only after a considerable advance on ways and means account, the latest figure for ways and means advance being Rs. 4.01 crores against Rs. 7.57 crores.

A fall of Rs. 15.95 crores in Central Government's deposits is not easy to explain, especially as the present expansion of currency against sterling securities is not offset by any contraction through withdrawal of rupee securities from the issue department. This decline of Rs. 16 crores has occurred in the first week of February, a month which is one of the best revenue producers. The excess of revenue over expenditure in February may be reckoned at Rs. 12 crores, that is, Rs. 3 crores per week. This means that the outgo from the Central Treasury is nearly Rs. 20 crores in the week ended February 6. About Rs. 3 crores may be accounted for by the usual month-early disbursements in respect of salaries of Government servants, etc. Rs. 5 crores may be in connection with the war supplies. There is thus a large balance to be accounted for. We may offer as a hypothesis that the conduct of war in Burma and the acceleration of preparations in India on account of the war coming to the gates of India, may have meant a precipitate increase in military expenditure. If this hypothesis turns out to be true, we are in for fairly heavy expenditure in the coming weeks. This should present a serious problem from the point of view of the ways and means budget.

The cash balance of the Central Government as on February 6 was only Rs. 4.85 crores. It would have been only Rs. 1 crore if no ways and means advance had been taken. With the cash balance at this low level, how are the Central Government to finance the heavy war expenditure which seems inevitable in the coming weeks? Further recourse to ways and means advance is possible. Another Rs. 10 crores may thus be raised. The Reserve Bank may be obliged to effect more currency expansion against sterling securities by transferring such securities from the banking department to the issue department. Only by this means can the Reserve Bank maintain a reasonable minimum of notes in the banking department. We thus seem to be faced with the prospect of endless currency expansion against sterling securities. In addition to the availability of, say, Rs. 10 crores from the Reserve Bank on ways and means account, there is also the possibility of delivering ad hoc Treasury Bills to the issue department and thereby strengthening the cash position. The third alternative is the delivery of one rupee notes to the Reserve Bank. Rupee coin has come down to the low level of Rs. 30.84 crores. It will not be out of place if the Reserve Bank was asked to take one rupee notes for Rs. 10 crores. By these three means, the Central Government can adjust their ways and means position to the extent of Rs. 30 crores. Meantime, immediate attention has to be drawn to the state of the giltedged market so as to make sales of the defence loan once more popular.

The exchange market was steady, with a fair turnover. There was some showing of bills. Also good enquiry for remittance.

Banks were sellers of T. T. on London for Ready up to six months forward at 1s. 5 31-32d., and banks were buyers of T. T. on London for Ready up to six months forward at 1s. 6 1-32d.

D. A. sight bills quoted 1s. 6 9-32d., for three months and 1s. 6 11-32d., for four months.

Dollars were Rs. 332-12.

Interbank call money is unchanged at ¼ per cent.

## NORTH WESTERN RAILWAY

The public is advised that with effect from 1st March, 1942, certain concessions, detailed below, will be suspended and temporarily withdrawn. Detailed information on this subject can be obtained from any Station Master on the North Western Railway or from the Chief Commercial Manager, Lahore.

Concessions for:—

Professional Entertaining Companies, Cinema Film Producing Companies, Cricket, Football, Hockey, ball and other Sports and Athletic Teams, Polo Teams, Pigsticking Parties, Horses and Ponies for Races and Competitions, Exhibits for Exhibition and Shows, Students attending Y. W. C. A. Summer conferences, Christmas, New Year and Easter Holiday concessions, Commercial travellers' Luggage and Samples and Fox hounds belonging to hunts.

**Indian Tea Control Act, 1938:**
**Export Licenses: Special Export Licenses.**

The attention of tea producers and tea exporters is drawn to the provisions of Sections 16 and 17 of the Indian Tea Control Act, 1938, so far as they relate to the issue of ordinary and special export licenses towards the end of each financial year.

It should first of all be noted that ordinary export licenses are valid between the 1st April and the 31st March of each financial year and special export licenses are valid only between the 1st April and the 31st of May of the year in which they are issued.

The latest date for application for an ordinary export license is 20th March, 1942 and the issue of an ordinary export license is 31st March, 1942. Accordingly, exporters and shippers are advised to apply to the Licensing Committee within the prescribed time for such ordinary export license as they may require up to the 31st March, 1942.

Failure to apply for an ordinary export license before 21st March, 1942, does not disqualify the party concerned from obtaining special export licenses to cover the balance of export quota standing to their credit in the books of the Licensing Committee, provided application is made for special export licenses before the 14th April, 1942. Accordingly, exporters are requested to apply to the Licensing Committee within the prescribed time for such special export licenses as they may require up to the 31st May, 1942.

J. M. PYE,
Joint Controller.

# Finance Abroad

Friday Morning.

It may be said that the clash of arms in Libya and the Indies has been of little effect. But there is the tell-tale weakness of rubber shares and the fall in Burma Oil stock to £2 3|16 to show clearly that the war is distinctly a factor to reckon with. There is again the revival of speculative frenzy in the bullion market. Calcutta quotes Rs. 34-12 for sovereigns and it may be asked why this premium is paid for twenty-two carat gold. Is it because the former privilege of tendering gold against sovereigns has been abolished in Bombay? Be that as it may, there is the elemental fact that gold is in keen demand. Shares and commodities are wholly neglected. It is plain, if it is perverse. Has anything happened abroad to produce such disturbing effects? The siege of Singapore is still on and the S.S. dollar is still quoted at last week's rates. There has been no enemy progress in Burma and the U. S. dollar which fixes the value of gold at $35 to the ounce is unaltered. The New York rate of T.T. on London is maintained at 4.03¾ cents and the wonder is how bullion prices here can zigzag without consideration of export parities. The limitations of official control are evidently responsible for the way in which bullion prices have moved since December. If the market cannot be controlled, dealings can be interdicted, though it will be urged that black markets will emerge rapidly.

That prevailing pessimism explains the passion for the precious metals is known universally. No comfort is drawn from the visit of Marshal Chiang to India for China is a broken reed from the financial point of view. The Chinese are deep in difficulties of their own. Last week Gunther Stein in his note on the British loan to China said that Chungking was greatly pleased because the loan of about $700 million, equal to the entire note circulation, would help China to refloat internal enterprises. Previous loans have been used for paying for imports. It is notorious that China has experienced the untempered rigors of inflation. The fall in the Shanghai dollar from 1938 testified to that. Borrowing has become difficult, and the creditor has to be assured that further inflation will not follow. Compensation has to be promised and the new loans apart from being retained as foreign exchange reserve for the note issue will also help to put up the Free Chinese Government's credit and bring out idle money. On February 15, Mr. Stein said in his cable to the M. G. there would be a settlement of accounts on the Chinese New Year Day and the ascent of prices will be regulated in relation to the Chinese people's belief that the Powers are able and prepared to help China. For the moment, the Chinese dollar is in complete obscurity. It can only re-emerge after the threat to Burma disappears. The adoption of the bullion stand and by Thailand in recent weeks has attracted less interest than usual because the *baht* is an enemy currency. One must guess that the new effort is to get away from the results of a generous use of the printing press. The one *baht* note with King Ananda's effigy has been common enough and the new game of declaring rather than putting in a minute quantity of gold as the precise equivalent of the national currency was adopted in many countries before Thailand thought about it. It is clear that the *baht* is like the Manchu Yuan and the Huasing dollar. Its link with the yen removes it from the ranks of independent and strong currencies. Japanese experts, ready to take over Thailand's gold along with her navy, must be connected with the so-called currency reform. But for Thailand's formal adoption of the bullion standard in place of the exchange standard (based on sterling in the past) there has been no move towards the yen. It is manifest that the financial side of the South Seas drive has not been uncovered so far. That it has a financial side cannot be doubted from General Hideki Tojo's exposition of war aims to the Diet last month. The Yokohama Specie Bank will inevitably take command but much will depend on happenings in the Dutch Indies.

The only item of intelligence to show that exchange control is operative has been a statement to the effect that foreigners taking up employment in India cannot hope to remit their native country. The foreign exchange required will not be made available. That must be supposed to be among the risks of employments but U. S. technicians are not likely to hanker after jobs if blocked accounts are all that they can look forward to. If a precedent is supplied by the order issued last year applying to remittance of profits by American concerns as also of film rentals, it will be said that some U. S. experts will throw up their jobs and go home. The usual official clarification shows that belligerency has made no breach in exchange control. But it will be asked what the U. S. A. is going to do about it. The answer probably is a very far-reaching and immediate departure in lease-lend policy as part of the war finance programme this year. The subject is both obscure and difficult, but the conclusion that U. S. generosity will be very strictly rationed appears warranted. *America First* is both an intelligible and popular slogan, particularly among Republicans. Mr. Roosevelt has to convince them that it is not his policy that has led to war on two fronts. They may be among the complacent people referred to when he said that realism was wanting. But realism is not wanting in the latest measures for the control of shipping. Admiral Land is the U. S. Minister for Shipping (to use the most plausible description) just as Mr. D. M. Nelson is the Minister of Production.

The Army has had a whacking appropriation of $22 billion and odd, as against $26 billion and odd for the Navy and another of $1 billion for a new War Damage fund. Such Garguantaun grants will make one wonder where the money will come from. Mr. H. L. Morgenthau has supplied the answer. It is proposed to raise the upper limit for the Federal Public Debt to $100 billion from 65 billion to which level it was enhanced previously from $49 billion and the debt at present comes to $60 million according to the Treasury Secretary. The admission that the *Third Term* like the First and Second has seen a big jump in the debt of the U. S. A. will not contribute to the Administration's popularity among the rich.

To turn to events financial, one may refer again to the reduced demands of the British Treasury on the London money market. The first quarter's revenue must be coming in a flood. Deposits from the Clearing Banks are not wanted again this week and the Treasury Bills too rate went down again. The tender for this Friday is £65 million against £60 million, but the increase will not alleviate the glut of funds mentioned. The dearth of bills and reduced demand for funds are established features. They explain why the profits of the British Banks (the Midland Bank being an exception) went down in 1941. According to Mr. (or Herr) Oswald Dutch the big British banks had a good year. The further expansion recorded in total deposits helped in a way and there has been no change in dividends in any case. The Chairmen's speeches are said to have struck a cautionary note as to postwar prospects because they feel international trade and investment will not be on the old lines in spite of the promises made in the Atlantic Charter.

The only satisfactory feature is the maintenance of the traditional strength of British banking. One must wait for the full statements to examine how banks have fared in the second year of war. But it may be said that even the drain of taxation which cuts deeply into bank profits will not upset British banking. A budget of £4½ billion will not daunt bankers and the last available note of the Trust of Insurance shares indicate that holders of bank and insurance shares interested through the units (which went up in value along with all equities) are much better off than the average holder of gilts, either old Consols or 3 per cent Defence Bonds.

A reference here to British help to Ethopia will be in order. The treaty with Haile Salaisse has been hailed as ensuring independence and assuring British friendship. The promise on his part to end slavery is independent of the British offer of help. The subsidy on a sliding scale throws no more burdens on the British treasury than the annual grant for backward colonies. The sum of £1½ million for the current year will be about 5 per cent of the Emperor's revenue. That means that it is likely to help much in re-establishing his authority over the Amharic Chiefs. The Italians with a revenue of about £23½ million claimed a balanced budget in their time but Haile Selaisse starts more or less from scratch.

## Prices and Price Control

By Dr. P. S. Lokanathan

Since the beginning of the war the price-level in India has been rising fairly rapidly, although the movement has not been steady. The Calcutta price-index which was 100 in August 1939 moved up to 114 in September as soon as the war broke out and rose to 118, 131 and 137 in succeeding months. In January 1940, the index fell to 130 and the fall in the price-level continued till July 1940, after which a definite upward movement started which has been continuing almost uninterruptedly. In December 1940, the price-index was 120, in January 1941 it was 121, in April, 127, in July, 150, and in October 1941 it was 154. Thus within two years the index of wholesale prices had moved by over 50 points, thus registering a definite rise in the price-level. Particular commodities have, of course, shown trends different from the average, but the general trend is pronounced.

During this period the volume of currency in circulation has also gone up quite appreciably. In August 1939, the value of the notes in circulation was Rs. 179 crores; in December 1939, it increased to Rs. 236 crores, while in March 1941, it amounted to Rs. 258 crores and in July 1941 to Rs. 277 crores. Besides notes, there has been a great absorption of rupee coins and small coins, part of which was in circulation, while a part was used for hoarding. It is estimated, though with a great degree of doubt and uncertainty, that the active circulation of rupee coins had increased by about Rs. 55 crores and this together with the increase in the circulation of small coins by over Rs. 7 crores constitutes a total increase in currency circulation of over Rs. 162 crores within two years of the war.

The above two sets of facts—a 50 per cent increase in the price-level and more than 50 per cent increase in active note-circulation and perhaps an equal increase in coin circulation—have given rise to the view that there has been a definite monetary inflation in India and that the higher price-level is the result of the increase in the volume of currency. Those who hold this view express a very simple and almost mechanical relation between the quantity of money in circulation and the price-level and argue that the increased prices in India are the direct outcome of the increased money in circulation and therefore are inflationary in character.

Before examining this theory closely, it is necessary to understand precisely the meaning of inflation. Inflation is one of the most difficult terms in monetary language and interpreted so differently by different writers that some have argued (e.g., Prof. Pigou), that it would be wise to abandon the use of the term altogether. But that would be far too desperate a remedy, and in any case it is almost impossible to ban the term in economic and popular discussions. Inflation, in the opinion of some, arises when there has been far too rapid an increase in the volume of currency and bank money. Apart from the unscientific nature of this kind of definition, it lacks precision, as no test is indicated by which we may trace and measure the excess or deficiency of the volume of currency. Others use inflation in direct reference to prices. Since by contracting currency it would be possible to prevent a rise in prices and by expanding it sufficiently to prevent a fall of prices, they argue that currency is inflated above what it ought to be when general prices go up and is deflated below what it would be when general prices go down. Under this the only sort of monetary system free from inflation would be one under which supplies of money are regulated solely with the view of keeping general prices at a constant level. This, of course, is an objective rather than an explanation. The important question is whether changes that occur in prices are due to the fault in money or to the fault in commodities and trade. To say that money should be used as an instrument for keeping the price-level steady tells us nothing as to whether changes in the price-level are due to monetary or non-monetary factors. Surely inflation must mean something other than the bare fact of a rise in prices.

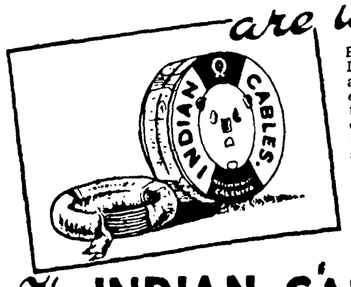
Another definition relates inflation to the rate of exchange of a country's currency in terms of foreign currencies. As long as the rate of exchange is steady and local currency does not either fall or rise in terms of the value of other currencies there can be no inflation or deflation. Provided all countries are on the international gold standaard and certain common rules are observed, it is clear, not that there would be no inflation or deflation, but that the gold prices of one country would be keeping in step with those of others and that they would be generally affected more by world causes rather than local causes. Indeed, Indian price-levels afford the most ample illustration of this fact, since so far the originating impulses to price-changes, have always been external rather than internal. But now that the world has no single monetary standard, price-levels in different countries are bound to be very divergent, and the test of movements of foreign exchange rates can afford us no real guide.

We can get a clear understanding of the meaning of inflation only when we recognise the fact that not all increases in monetary circulation are inflationary nor all increases in price-levels. In order that inflation may be said to exist the essential condition is that an increase in monetary supply should be found unaccompanied by an increase in incomes and activity or by an increase in the quantity of goods. When an increasing volume of money is offered for a limited supply of goods, inflation occurs. A rise in price-level depends upon the volume of money that is being spent, not upon the volume of money in existence. In any given situation it would be difficult to find out how much of any increase in the price-level is inflationary and how much is not. But even if there is inflation, it may be due to no act of the currency authority, and that is the case in India at present. Certain factors, e.g., great external demand for goods on account of war, may cause a disproportionate increase in prices due to an inelastic supply. In such circumstances an increased volume of money may be the result of an increased money income and of an enhanced price-level. The monetary and banking authorities would then be only allowing the supplies of money to increase in the hands of the public. The quantity of money would then be the result, not the cause, of the increased price-level and a passive rather than an active instrument.

Again in any period of great industrial activity or boom the originating cause is the desire to increase output, and the demand from entrepreneurs for money or credit increases the supply of bank money and prices go up. The cause of the increase in prices does not lie with money, although it is through the mechanism of money that the change is brought about. If the supply of money were inelastic and did not increase when there was expansion of industrial activity, prices would fall. Hence the increased money supply cannot be regarded as having inflationary effect. Only if the rise in prices that occurs is greater than is justified by the increased real income, can it be said to be inflationary.

These circumstances indicate that the old quantity theory of money has no validity and must be discarded. Indeed monetary experience during the last ten years has quite definitely established the fact that in general the quantity of money merely accommodates itself to demand and that the volume of trade and prices determines the amount of money and credit which adjust themselves to the needs of trade. As has been pointed out by D. J. Leahy, in U. S. A. during the period 1925-1933 while prices were falling, the volume of credit and money in circulation varied with no relation either to production or the price-level. A study of the monetary conditions in 18 countries by the League of Nations points to the same conclusion.

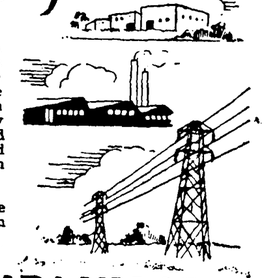
Between 1932 and 1936 there was no country which showed a decline either in notes in circulation or in bank deposits so as to justify the continued slump in prices and it was found that in the later stage of recovery, the index of volume of money showed that the supply of money always closely followed the production index and did not precede increased economic activity. The quantity and velocity of money move with or after other indices of economic activity rather than before them. The limitations of central banking policy directed to the raising of the price-level through an increase in the supplies of cheap money have been quite well established, and the experience of every country has borne clearly witness to the fact that an increase in the quantity of money does not have any appreciable effect on prices. In India the volume of money and bank deposits increased since 1932 with no effect on prices. It is hardly necessary to labour the point further. The fact is that the quantity of money is not the true causative factor of productive activity. Its influence on activity is not direct but only indirect, operating through a reduction in the rate of interest. When interest rates fall, there is greater demand for the use of loanable funds and the increased spending of funds has the effect of increasing prices. But even a considerable reduction in interest will have no effect on enterprise unless the marginal efficiency of capital or profitability is sufficiently high to induce entrepreneurs to invest. It is not money but expenditure of income that has effect on prices. If more money is created, it may have no effect on spending, and velocity of circulation may go down as rapidly as the quantity of money is enlarged.



When, however, the increased quantities of money are directly used for expenditure and investment, the quantity theory of money comes into its own and becomes valid in its baldest form. When Government uses the printing press and supplies itself with funds which are used directly for adding to resources they add to effective purchasing power by operating on the market for loanable funds. In the last war many governments adopted the system of financing themselves as for instance, when they used the printing press. Then prices went up further and further and did not lead to collapse only because there were certain natural brakes upon the rising spiral of prices.

In the present war the situation is different. Great Britain, for example, has abandoned the old method of financing the war; and its present methods are uninflationary in character. The objective of government is to provide itself with funds which are really saved by the public. It has had recourse to several expedients. High taxation of all incomes, excess profits tax absorbing practically 100 per cent of the excess profits, rationing of consumption, borrowing, etc., are all methods adopted to attain this end. Other methods of reducing consumption and the private use of capital have also been devised, with the result that the amount of inflationary finance has been reduced to small proportions. To illustrate, the national money income in Great Britain during the first 18 months of the war had increased by about 25 to 30 per cent. But about 10 per cent of the increased money incomes was due to the fact that there was increased activity of productive resources. Inflationary expansion could not have exceeded 15 to 20 per cent and has been kept under effective control.

Although there has been an increase in bank credit during the last two years by about 30 per cent, the amount of money that is being spent has not increased in any significant degree. The velocity of money in circulation has been going down as rapidly as the quantity of money has gone up. In spite of the greater volume of money, people have been spending no more than before. Most people are now carrying and holding more currency with them than usual and are allowing their cash balances to increase. Business firms are building up their balances. Government and the public between them are spending no more than the value, at present prices, of the goods and services available for consumption. So long as the funds placed at the disposal of government are balanced by funds withdrawn from expenditure of individuals and corporations, prices will not rise. This is what the government has been seeking to achieve. Advances to industry have been completely controlled, so that not merely no new capital issues are allowed but even working capital cannot be provided to industry without the consent of the government.



In the light of the above, it is clear that the true significance of the increased volume of currency in circulation in India lies in addition to incomes consequent upon demand for our raw materials and other articles needed for war purposes. Prices have risen because of the increased demand, but since the volume of production has not kept step sufficiently to explain fully the increase in money incomes, there has been undoubtedly some inflation. The shortage of goods in the face of a persistent demand for them has brought about inflation in prices. But, and this is the relevant fact, the Government have done nothing to bring this about. The increased volume of money is merely the result of inflationary forces operating on the side of demand and supply of goods. The criticism against the Government cannot be that they have done anything actively to create the present price and monetary situation, but only that they have failed to act in the face of inflationary forces which are increasing the money incomes of the people with somewhat serious repercussions on the standard of living of different classes of the people. For some classes are benefiting by the increased prices. The traders, merchants, entrepreneurs, those engaged in war industries and war contracts benefit; the masses of the population, those with fixed incomes and the lower middle classes suffer. Can and should the Government do something to control prices?

"INDIAN CABLES" are used Everywhere!

Being manufactured in India, Paramite Cables are low in cost. They are easy to instal because they are suited to Indian conditions. Their ability to give uninterrupted service has been proved in thousands of cases on file.

We shall be glad to give you facts and figures on your own job.

## GOVERNMENT OF INDIA
## DIRECTORATE GENERAL OF SUPPLY

**NOTICE.**

Strict export control is now being exercised in the United Kingdom of the undermentioned plastic materials :—

**Phenol-Formaldehyde—Moulding Powders.**
**Cresol-Formaldehyde—Moulding Powders.**
**Urea-Formaldehyde—Moulding Powders.**
**Synthetic Resins in the manufacture of which Formaldehyde, Phenol, Cresol or Urea are used.**
**Celluloid.**
**Cellulose Acetate Sheet and Moulding Powders.**
**Artificial Horn manufactured from Rennet Casein.**
**"Perspex" (Methyl methacrylate).**

2. In future export to India will only be permitted against a recommendation issued by the Government of India. With a view to facilitate import into India of requirements essential to the war effort, the Government of India hereby notify all concerned that applications for assistance to import any of the said materials should be addressed to the Assistant Secretary, Department of Supply, Directorate General of Supply, Licence Section, New Delhi. The application should be in the prescribed form—W.S.B. 5-C—copies of which are obtainable, free of charge, from the office of the Director General of Supply, New Delhi, and from the offices of all Controllers of Supplies. It is essential to state clearly and in sufficient detail the purpose for which the material is required.

## DIRECTORATE GENERAL OF SUPPLY

**NOTICE**

**Machinery, spares for machinery and mill stores for the Textile Industry, other than Jute and Hemp.**

With reference to the advertisement on the above subject which has already appeared in the Press, Government have decided to introduce import control of essential mill stores with effect from the 15th March, 1942, instead of from 15th February, 1942 as appeared in the original advertisement. It will be necessary to obtain an import licence for the following essential mill stores used in the textile industries, other than jute and hemp, which arrive in India on and after the 15th of March, 1942 :—

**Essential Mill Stores.**

1. **Bobbins.**
2. **Card Clothing and Card Clothing sundries.**
3. **Shuttles.**
4. **Picking Bands.**
5. **Machinery Cloths.**
6. **Roller Skins.**
7. **Pickers.**
8. **Tape and Banding for cotton, silk or wool spindle drives.**
9. **Healds and Reeds.**
10. **Loom Sundries (100m parts).**
11. **Card Cans.**
12. **Emery Fillet.**

It will be observed that an import licence is not necessary for belting, and ropes and bandings, as these have now been removed from the classification of essential mill stores.

### Production Indices

The general trend of industrial activity in India in October remained favourable, the main feature being an advance in the output of jute manufactures. The extension of working hours beyond the maximum of 54 per week explains the rise though it is clear that the peak of 1939-40 will not be touched again. The decline in output of cotton manufactures is expected, but the seven months' total of 2,601 million yards as against 2,390 million yards for April-October 1940, suggests that Indian cotton mills were busier than ever. The cloth market was quiet, but the decline in stocks led to a revival of buying, reflected again in a rise in prices. To this again the fall in imports to a new low record level made its contribution. Total imports for the seven months of 1941-42 are known to be 166 million yards as against 218 million yards in the previous year. A remarkable increase in exports during October assisted the improvement in the piecegoods market. The total for the seven months of 1941-42 is sharply higher at 393 million yards against 183 million yards in 1940-41. It is certainly unusual to find that re-exports exceeded total imports. The result is distinctly beneficial for the cotton mill indstry which draws comfort from the fact that there is a very substantial margin under exports in favour of the Indian textile manufacturer at present.

The highest prices for cotton manufactures in the war period were touched in November. As in previous months mills' consumption of cotton was considerably above the 1940-41 average. The total for October was 325,100 bales while export trade had tailed off lamentably to stand at 83,400 bales only. Total exports for the seven months make a better showing than anticipated at 1,258,000 bales in April-October 1940. As against the steep fall in exports of cotton, imports were running high. The October total of 87,800 bales was equal to total intake of September. Total imports for April-October came to 509,000 bales as against 327,000 bales in April-October 1940.

Conditions in the jute industry were not so brisk but a decline in hessian and sacking stocks came soon after the rise in production recorded in October. The second half of 1941-42 began better than expected as production showed an increase of 29,000 tons on October 1940. In spite of the fluctuations in exports, the mill industry was busy as an order for 129 million yards November-March delivery appeared and was followed by another for 62 million sandbags for January-September delivery. The further fall in imports of iron and steel attests the pressure of demand in allied countries while contributing to the advance in India's own production. The larger exports of pigiron from India are in a sense reflective of the expansion in India's output though the 1941-42 figures provide evidence for the argument of Sir P. P. Ginwala that instead of selling pigiron, India should set up an additional smelter and produce more steel, particularly, as her own exports of iron and steel this year have fallen away as compared with the preceding year, total exports being 20,000 tons against 84,000 tons in April-October 1940-41.

In the case of the tea industry, the end of the season was as usual marked by a big fall in Northern India's production. The total for November 1941 is, however, much higher than that for November 1940 and tea exports were also considerably higher being duly explained by the advance in the quota made in August. Total exports from April to October were up by 14 million lbs as compared with the previous year while the higher average prices paid supported the advance in production and exports alike during 1941. It is in the case of minor industries where the paucity of information is distressing that one can guess at an intensification of production. The sharp fall in imports of cement as in the complete failure of imports of sulphate of ammonia into India must have been of material assistance to Indian producers. The fall, despite the higher value recorded in the trade returns in imports of paper, is again a stimulus to the anticipated expansion of Indian production which is known to be in excess of the 1940-41 average.

### Two More Rivals

Another rival to jute is referred to in the January bulletin of the Indian Central Jute Committee. The Belgian Congo produces fibre from a plant called Urena Lobata. The fibre is said to be as cheap as jute and of better quality than jute which has many disadvantages, Claims made for the new fibre by a Belgian official include its suitability for small-scale cultivation by the natives. From the fibre can be made all the things produced from jute. It is also adapted for ropecloth manufacture, rayon and other fabrication. The cuttings can be used for paper pulp production and the waste can be used like cotton for wiping oil, grease etc. It has been said that textile manufacturers in Northern France have tried 'Urena Lobata' and other hard fibres. Suppleness is conferred by prior treatment. The Jute Committee's laboratory has also examined the urena fibre said to be coarser and stiffer than jute. Since the plant is tropical, it is not unknown in Bengal. Supplies from Madagascar, Brazil and the Congo are known to have attracted attention. As France has experimented with sisal by the use of the ionised oil process, the new fibre is likely to meet with attention there too. Another rival described is the Ecuadorian Cabuya. U. S. reports say that it is grown extensively for the fibre used for rope, bags etc. A company in Quito produces mats, carpets etc. The U. K. was the chief buyer of Cabuya in 1939 and bags were shipped to Peru, Colombia, and other adjacent countries. Imported jute bags have been displaced to some extent but cocoa and coffee are still shipped in jute bags. The Republic is said to be keen on developing Cabuya by encouraging plantations instead of depending on sporadic supplies as at present.

### Reduction in Foreign Trade

Trade in December shows clearly the effects of hostilities in the Pacific. The great fall in the value of exports can only be attributed to the shipping and other difficulties precipitated by the war. The fall is to be noticed under re-exports as well. The contraction in imports may seem unusually large but is to be explained as a continuation of the fall recorded in the previous month. The total value of exports in December was 20.96 crores while the total imports were valued at Rs. 10.95 crores. In a sense, the December returns confirm the familiar view that trade turnover would shrink substantially and swiftly on account of Japan's entry into the war. In spite of the increased value of imports from Britain and Burma in December, India's trade was disrupted by the war which soon put Thailand and Indo-China among the enemies. If the value of exports is higher than for December 1940, it will be noticed that the total value of imports is considerably less. The maintenance of an export surplus may appear difficult when imports are strictly rationed and shipping difficulties are extensive. The December figures which cover a few days of peace to cancel out the holidays, are to be interpreted with the knowledge provided by subsequent events. Hongkong which provided Rs. 15.79 lakhs worth of goods in December became an enemy-occupied territory before the end of December. If the returns indicate that India's trade with Kenya is shaping extremely well, while Zanzibar and Pemba are importing more than they export to India, the prospects in the U. S. A. are a trifle uncertain. In the nine months of 1941-42, the U. S. A. bought about Rs. 34.17 crores worth of Indian goods and shipped Rs. 28.9

**Crops In 1941-42**

Crop production will have to be planned in the next year for it is certain that Burma's rise and Australian wheat cannot be drawn upon in the event of a shortage in India. A summary view of many crop forecasts for 1941-42 season will illustrate the point that food crops as against commercial crops must receive special attention hereafter. The curtailment of production of cotton, jute and oilseeds may be widely commended as a measure enforced by the need for adding to India's production of rice, sugar and wheat. The increase of 4 percent under the 1941-42 season in the case of cotton has led to an ordinance and an enhanced duty. The production of rice in 1941-42 is not known but in view of the fact that the estimated area of 69,282,000 acres is below the total of 72.2 million acres in 1940-41, the quantity may not be larger than the 21.85 million tons producted in 1940-41. The acreage under wheat is also lower than in 1940-41 by 2 percent so that the crop may be below 10 million tons. The fall of 57 percent under jute acreage and 23 percent under groundnut is a mark of the changes produced by the war in India's export trade. The fall of 17 percent in the area under cane explains the rise in both cane and sugar prices. Admittedly the case for crop production is strengthened by the need for stimulating India's production of cereals, pulses and sugar though her exports to the colonies are directly threatened by the war.

crores worth of goods to India. Under the head of imports the U. S. A. had come to occupy by the end of 1941 the first place in India's foreign trade. There is no assurance at present that the U. S. A. will maintain trade connections to the prejudice of her own war effort. The impending modification of lease-lend plans will have far-reaching effects on India's imports, and "ergo", on her exports. Trade with China should have been reduced since December, and the only promising market left is apparently South America whose offtake of goods in the last year has shown encouraging expansion. A striking decrease in trade turnover should certainly characterise the final quarter. This will have its own bearing on the country's balance of payments but the chances of treasure exports increasing rapidly to make good any fall in merchandise are reduced by the absence of any change in the price for gold abroad.

**Milk In India**

The virtues of milk need little advertisement but for the fact that the Indian per capita consumption at 6 oz. per day, falls lamentably short of known requirements. If the consumption increases, the total annual value and production should be greatly in excess of the present annual value of Rs. 180 crores. A recently published summary of the Marketing Report indeed suggests that lack of organisation is the distinguishing feature of the Indian milk trade. The impetus to all improvement may be found in the recommendations including one for the suppression of adulteration. Even without any increase in milch cattle, it is possible to enhance milk production. Since that will at once improve health and add to the wealth, the case is unanswerable. Municipal authorities have been told that they have specific duties in regard to reform of the trade. With nearly a third of the world's milch cattle this country has not endeavoured to make milk production unusual like any other. If the supply of milk in town is apt to be defective either in volume or quality, the transport difficulty is overcome by keeping cows in towns. The highest yields are reported from the Punjab which has fewer animals. In Western India, the dependence on milch buffaloes, characteristic of India, as a whole is even more pronounced. While the quality is satisfactory at most places, the yield is poor though good herds can be built up without difficulty by selective breeding at least in the interests of health.

Seasonal variations in milk production cannot be avoided but the retention of as much as 50 per cent. of fluid milk by producers calls for a revision of policy. Though India's imports of dairy products valued at Rs. 80 lakhs in 1938-39 may suggest that the scope for making good outside supplies is limited, the adjoining countries like Burma have been large buyers of Indian butter and ghee. The distribution of production, like supplies, is irregular and if Indian milk contains more fat, individual consumption in India is just a quarter of what is consumed in other countries. A "Drink Milk" campaign is wanted and better marketing is wanted in selected districts adjoining various cities where the average individual takes more milk.

The manufacture of ghee is a major branch of the dairy industry. Standardisation of measures on the pint-gallon principle is advocated, and if prices be any

guide, milk is cheapest in the N.-W.-F.-P. and most expensive in Cochin State. The price difference in favour of buffalo milk is as marked as the relatively lower prices ruling in Northern India where the cattle are better and milk yields correspondingly higher. Indian consumers in cities as a class are forced to pay higher prices than necessary, and limited consumption is, in effect, due to high prices. The breaking of this vicious circle is likely to be a lengthy and difficult process but the means of improvement are not lacking. Co-operative marketing is one of the most obvious remedies, but India can show nothing as compared with Denmark or Ireland, where the transition from agriculture to dairying is the outstanding feature of economic history in the past hundred years.

**U. S. Tea Consumption**

U. S. imports of tea in the eleven months ended May 1941 showed a fall after the striking rise recorded in 1940. The increase under green tea, however, continued to be a feature of U. S. imports since the U. S. A. took in the period of eleven months, over twelve million lbs of green tea from Japan alone. The opportunity for India is evidently small, but Japan is known to have sent over one million lbs. of black tea also and there is certainly a chance to cut Formosa out of the U. S. markets. Formosa was the chief supplier of Oolong, and in this case, too, the position is favourable. From the U. S. statistics it is apparent that Ceylon, Java and Sumatra between them provide over 50 million lbs for the U. S. markets. The chances of displacing the Dutch Indies are assuredly to be considered bright at present. The great need for bringing up exports to the level of probable demand has been recognised in last week's decision to raise the quota by 25 percent. One of the regulating producers, the Dutch Indies, is now faced with unusual difficulties, and the end of restriction (with the quota at 100 percent) had supervened before the involvement of Dutch Indies in a new war. The addition of a hundred million lbs. of the total quantity allowed for India will provide an opportunity for Indian tea producers to modify their crop control scheme long before the international restriction agreement is due for alteration or abrogation. The U. S. A. took 87.2 million lbs of tea in eleven months showing that as a consumer of tea she ranks after Britain and India. The efforts made to stimulate consumption there, have resulted in a definite increase in tea-drinking as compared with 1937.

**Prices and Cost of Living**

From the plateau to a new elevation may be the description of the change in prices and the cost of living for industrial workers in recent months. The Bombay Labour Journal shows that the working class cost of living index for November was thirteen points over that for November 1940. The higher prices of foodstuffs were directly responsible for the increase, though it will be readily admitted that the cost of living had been falling from the summer when the riots and cyclone had pushed prices up. Actually rent, fuel etc., have remained stationary for a period. Prices in Ahmedabad up to October, showed little variation which is why the working class cost of living at 92 was still below the 1926-27 base. But the index was thirteen points above the comparable index for October 1940. The advance in prices and therefore in the cost of living for industrial workers, is proved by the movement in the Sholapur index also. In October 1941 the index rose by three points, and it was fifteen points above that for October 1940. Like the Ahmedabad index, it was below the predepression level. The rise occurred, despite a fall in the price of food, and was obviously due to the revised method of calculating the cost of clothing. Perhaps the most disturbing feature of the changes recorded in October was in Sholapur. The cost of living index for Nagpur, Madras and Jubbulpore was stationary, and in Bombay it was actually lower.

It is clear that such changes as have occurred since are not unusual or unduly large. Yet the rise in wholesale prices in October, was ominous for Bombay labour. It propelled the cost of living upward in the succeeding month. The case for price control is deducible from the changes over a year. Yet it must be admitted that the biggest change is under cotton manufactures. In this case the grant of six weeks' pay as bonus for mill workers meets the demands for adjustment. Subsequent revision of the dearness allowance by the millowners has shown that the workers' claim for higher pay was met without difficulty. It is the changes since, that have been met by the adoption of wheat control. Prices will again be to the fore this week, but the movements of 1941 will have to be related at all times to the very decisive changes in all commodity market after December. If Bombay is chosen as a representative sample, the changes are far more pronounced under manufactures than food. If price movements under metals and cotton manufac-

## NORTH WESTERN RAILWAY

### TIMELY ADVICE

Owing to the necessity for maintaining an uninterrupted flow of essential supplies for the Land, Sea and Air Forces engaged in the Defence of India, and of coal and other materials to and from the numerous Factories and Workshops engaged on an ever-increasing scale in the production of War Material; the heavy and frequent demands in respect of the movements of Military Personnel, and an abnormal increase in the public passenger traffic resulting from the petrol-rationing, the Railway is not now in a position to cater for the travelling public as in peacetime, notwithstanding the fact that it is doing all it can possibly do to cope with the situation by bringing into use all available stock even to the extent of reconditioning vehicles which in normal times would have been condemned and cut up. The public in general is, therefore, advised, in their own interests, to bear in mind the difficulties under which the Railway is operating and to avoid all travel or to travel only when it is essential or otherwise to submit with a good grace to such personal inconveniences and discomforts, as must arise at times like the present.

## NORTH WESTERN RAILWAY

With effect from 1st February, 1942, most of the Cheap Single and Return Fares shown in rule 58 of N.W.R. Time and Fare Table (in force from 1st September, 1941), will be cancelled. Further particulars may be obtained from Station Masters.

GENERAL MANAGER,
N.W. Ry. Lahore.

tures are excluded, it will perhaps be concluded that there is not a very convincing case for comprehensive price control at present. Pockets of properity may persist, but voluntary agreement, as in the case of paper, has limited the probable area suited for the operation of price control. Such changes, as arise from the transport difficulty, are not amenable to price control, but call for readjustment of railway facilities, difficult, if not impossible, to secure at present.

**Cotton Consumption**

The statistics for the first month of the new cotton year, indicates that arrivals in Bengal showed a substantial increase on September 1940. The increase is readily explained by the higher activity in the mills of Bengal. The enlarged offtake of Bengal is responsible for the larger exports recorded under the U. P. and the Punjab. There was a big jump also in imports from the C. P. and Bombay at the same time. The increase, if it is not conclusive, can be cited in favour of the argument that the mills in Bengal have definitely benefited from the war. The continued influx of Punjab cotton is a notable feature of the returns filed by the U. P. for September. Larger takings of cotton from Bombay and C. P. were reported. Total imports into the U. P. by rail and river were more than double the total for September 1940.

It must, therefore, be said that the outlook for Indian cotton at home is brighter than ever. It is the export difficulty that retards improvement in the near future. It is quite possible that the orders demand immediate execution, to support the increase in mill consumption of cotton at present. The Bombay figures also testify to an increase in consumption, though it must be pointed out that the exports will have to be excluded from consideration. It is clear however from the Bombay mill production figures, that there was a large increase in cotton consumption. During September 1941, the Bombay mills produced 39.4 million lbs. of yarn and 33.68 million lbs. of woven goods. The Ahmedabad mills produced 18.1 million lbs of yarn and 16.83 million lbs of woven goods. Total production for the whole Province came to 66.07 million lbs of yarn and 56.34 million lbs of woven goods. The raw cotton statistics do not throw any light on the 1941 carry-over. It must be assumed that the decline in exports influenced the statistical position. The current arguments for crop restriction are not obviously affected by the conclusions drawn from the larger arrivals, in a past month, of cotton into Madras and Bengal where the local mills have made as much headway as can be expected. The trend of industrial profits certainly supports the view that higher activity was a feature common to all cotton mills. As between this cotton year and the last, the only reassuring feature is that efforts will be made to develop standard cloth for the masses while augmenting yarn supplies for the handloom industry. Both should promote mill consumption up to 4 million bales while the increase in import duty will, in course, reduces India's imports of raw cotton.

**Railway Receipts**

Railway earnings after the beginning of 1941 have shown no sign of falling off. The total for the ten days ended January 10 was Rs. 44 lakhs more than the total corresponding period of 1941. The total at Rs. 364 lakhs was Rs. 71 lakhs more than that for 1940 so that the effect of the advance in rates and fares can be dissociated from the actual increase. All railways except the E. B. R., and Tirhoot-Lucknow-Bareilly Railway reported an increase in earnings. As before, the increase was most pronounced in the case of the G. I. P., and N. W. Railways. The total earnings from April 1941 mounted to Rs. 96.64 crores being Rs. 13.12 crores over the total for the same period of 1940-41 and Rs. 22.44 crores higher than that for 1939-40. Under total earnings all Railways show increases though the increase in wagon loadings on the broad gauge was 2.42 percent and on the metre gauge was 1.22 percent only. The increase under coal traffic was only 0.51 percent on the broad gauge being offset partilly by a fall of 0.76 percent on the metre gauge so that the net increase was only 0.34 percent. Increased traffic was recorded under cotton, oilseeds and grains, and the fall under Home Lines stores and materials is, probably, explained as much by traffic difficulties as by the shortage of many materials in the war period.

# DIRECTORATE GENERAL OF MUNITIONS PRODUCTION DEPARTMENT OF SUPPLY, CALCUTTA

## Import Recommendations Necessary for Import of Stockholders' Engineering Goods from the United Kingdom.

His Majesty's Government in the United Kingdom have informed the Government of India that the manufacture of articles requiring steel cannot now be undertaken in the United Kingdom unless essentiality certificates have been granted by the appropriate department of His Majesty's Government. In the case of plant and machinery of a capital nature required for import into India from the United Kingdom essentiality certificates are only granted by His Majesty's Government after receipt of import assistance recommendations to cover each individual order issued by the Director-General, Munitions Production, Calcutta or for textile plant and machinery only, by the Director-General Supply, New Delhi. In the case of smaller articles which are manufactured in quantities, and which comprise "consumers' goods" and other goods of a non-capital nature, it is not possible to issue import assistance recommendations covering the orders for each individual unit, and His Majesty's Government have intimated that they are allotting quotas for the quantities of the various classes which they are prepared to allow to be exported to India. They have also indicated that drastic reductions are to be expected in the quantities which India will be able to obtain from the United Kingdom. This has created a difficult problem with respect to those classes of non-capital goods which are essential for the maintenance of industry and essential services, and the Government of India have, in consultation with His Majesty's Government arranged a scheme under which it is hoped that the restricted supplies of essential items which will in future be available from the United Kingdom will be distributed to the best advantage for the maintenance of industry and services essential to the war effort, on their arrival in India.

Under the scheme which has now been approved, no exports from the United Kingdom to importing firms in India will be permitted unless the imports are recommended by the Directorate-General, Munitions Production. His Majesty's Government will indicate the quotas of the goods to which the scheme applies, which they are prepared to reserve for export to India, and will permit exports up to these quotas as far as supply exigencies arising in the United Kingdom from time to time permit. The Government of India, on their side, are setting up an Advisory Panel of Importers from the United Kingdom, together with working Panels for each of the main classes of articles to which the Scheme applies, and will refer applications for recommendations to import these articles from the United Kingdom to these Panels for advice. In tendering their advice as to the quantity which should be allowed to be imported the Panels will take into account the essential needs of Government Departments, public utility services, war industries and civil requirements essential to the war effort. The Panels will also advise on the allocation of these quantities between the various importing houses. The Director-General, Munitions Production, after considering the advice of the Panels, will issue appropriate recommendations to His Majesty's Government covering the import of specified quantities by the various importing houses.

In the case of certain items which may be specially intimated by His Majesty's Government, it will still be necessary to state in the recommendation the specific purposes for which they will be used on arrival in India.

The Advisory Panel will consist of the following gentlemen:—

Mr. J. Leisk,
" F. G. Watson,
" B. C. Mookerjee,
" A. Booker,
" N. W. Keyworth,
" H. G. Sale,

and a representative from Bombay, still to be appointed. Working Panels, fully representative of importers of the various classes of goods covered by the scheme will be set up. All correspondence should be addressed to the Director-General, Munitions Production, Licensing Section, 6, Esplanade East, Calcutta, and not to the Advisory or Working Panels.

The main classes of stockholders' engineering goods covered by the scheme are given in this list below:—

This list may be added to form time to time. It should be noted that His Majesty's Government have intimated that they hope to meet requirements for spare parts for existing machinery in full, and that import recommendations are not required for such spare parts.

The Director-General, Munitions Production, is issuing to all importers for stock of these classes of goods a questionnaire to ascertain the quantities of the goods mentioned above imported over the last three years. This questionnaire must be completed and returned by the 18th February, 1942.

The Director-General, Munitions Production, has fixed the dates by which applications for import recommendations for stock from importers must be returned and these dates are shown against the respective classes in the schedule below. Applications should cover requirements for the number of months stated against each class of goods. The periods vary because it is necessary for the first recommendations to be issued as soon as possible owing to the low level of stocks in India. An exact schedule of dates by which later applications must be made will be published shortly.

| | |
|---|---|
| *Class 1—Electric.* | |
| (a) Motors and Generators of any type or design up to 100 H.P. or 100 K.W. rating, together with their associated Starter and Control Gear .. .. | 20th February, 1942—3 months. |
| (b) Distribution and Power Transformers up to 250 K.V.A. of any voltage ratio and Static Condensers up to 100 K.V.A. .. .. | 20th February, 1942—3 months. |
| (c) Standard Switchgear and standard power fuse gear .. | 20th February, 1942—3 months. |
| (d) Insulators and Insulations | 20th February, 1942—3 months. |
| (e) Electrical Instruments .. | 20th February, 1942—4 months. |
| (f) Electrical Accessories .. | 20th February, 1942—4 months. |
| (g) Cables, wires and flexibles (other than winding wires) cable accessories and winding wires .. .. | 20th February, 1942—4 months. |
| *Class 2—Internal Combustion Engines.* | |
| (a) Diesel Engines of all types up to and including 100 H.P. .. .. | 20th February, 1942—4 months. |

| (a) Metal Working tools .. | 2nd March, 1942—6 months. |
| (b) Woodworking tools— | |
| (i) Saws .. | |
| (ii) Cutters .. .. | 2nd March, 1942—6 months. |
| *Class 6—Electrodes.* | |
| (a) Coated .. .. | |
| (b) Uncoated .. .. | 20th February, 1942—6 months. |
| (c) Bar and rod .. | |
| *Class 7—Pneumatic Plant.* | |
| Pneumatic plant consisting of prime Movers and auxiliary equipment .. .. | 20th February, 1942—6 months. |

All applications must be made on form WSB 5. C, supplies of which are available from—

(i) Assistant Deputy Director-General (Commercial) Directorate General, Munitions Production, 6, Esplanade East, Calcutta.
(ii) Controller of Supplies, Shahibag House, Wittet Road, Ballard Estate, Bombay.
(iii) Controller of Supplies, United India Life Building, Esplanade, Madras.
(iv) Controller of Supplies, Sunlight Building, G. P. O., The Mall, Lahore.
(v) Controller of Supplies, 15|159, Civil Lines, Cawnpore.
(vi) Controller of Supplies, Karachi, Sind.

Separate application must be submitted in duplicate for each sub-class of the classes mentioned in the schedule above.

Articles imported with the aid of import assistance recommendations issued under this scheme will be held under lien to Government for one month after their arrival in India to enable essential Government orders to be met from them. On the expiry of the lien, importers will have to dispose of the articles only to meet the essential needs for which the issue of the import assistance recommendation was held to be justified.

BOMBAY · CALCUTTA

In the last week's Editorial, it was shown that the debt of the Government of India has not gone up at the end of the twenty-nine months of war. Among the countries of the world, India has a unique record in two important respects. Firstly, the budgetary deficit of the Government of India is only a fraction of the total budget, whereas, almost everywhere else, the deficit is many times the budget. Secondly, this is the only country whose debt has not increased on account of the war. This is partly due to the fact that under the arrangement between India and the British War Office, a considerable part of our war expenditure is debitable to Britain. In the last budget statement, Sir Jeremy Raisman announced that the charges borne by the British Government on this account during 1941-42 were expected to be more than double the amount of India's war expenditure. While, with respect to the most important head of expenditure, India is getting a substantial contribution from Britain, the revenue sources of the Central Government have, under many heads, shown more favourable results than anticipated. Excise revenue will exceed budgetary estimates both under sugar and steel. The steel companies have been producing record outputs; and the sugar companies have also been working extremely well. It can be no matter for surprise if the improvement under the excise duty on sugar and steel is as much as Rs. 1 crore. Excess Profits Tax is also expected to make excellent showing. There are reasons to think that Corporation Tax and Income-Tax will be producing Rs. 2 crores to Rs. 3 crores more than the original estimate. Railways and Post and Telegraphs will make greatly increased contributions. Interest charges will show a substantial reduction. Profits on coinage will exceed all expectations, though it must be added that, so far as the revenue position is concerned, only Rs. 45 lakhs will be available from this source. But the point to note in this connection is that the ways and means budget will be helped considerably by the substantial profits on coinage both of one rupee coins and subsidiary coins. Taking all factors into account, the deficit disclosed in the revised figures may not be worse than that anticipated at the time of the budget.

This is the budgetary picture which Sir Jeremy should have visualised when making the preliminary outlines for the next budget. Usually, this first outline is disclosed at the Viceroy's Cabinet Meeting which takes place in Calcutta in January. For the year that is now drawing to a close, Sir Jeremy must have presented a fairly re-assuring picture when he furnished the preliminary details at the Cabinet meeting in January. Since then, however, the war developments have been such as to necessitate a drastic overhaul of earlier figures and estimates. The spread of war in Burma, and its approach to India must make the military expenditure go up by leaps and bounds. The precipitate decline in the deposits of the Central Government with the Reserve Bank in the first week of February, is possibly connected with such large-scale war expenditure. If war comes to India, military expenditure must surely get out of hand. The defence plans have to be adapted from time to time to meet the ever-changing war situation; and it is naturally impossible to make any forecast of the cost of unforeseeable items. In other words, while the tenor of the Central Budget was quite favourable during the first three quarters of the financial year, the approach of war to the gates of India in the last quarter may well mean a sudden and substantial worsening of the situation.

It is, therefore, my view that the first draft made by Sir Jeremy two months ago may have to be considerably modified as a result of the events in January and February. The revised budget figures are for a period which includes two months whose behaviour is not reflected in the figures and which may turn out most adverse from the expenditure point of view. Thus, even the framing of the revised estimates should present exceptional difficulties to Sir Jeremy. With the shadow of war over India, budget making for 1942-43 will mean tackling of so many unforeseeable factors that the best course for the Finance Member would be to plan the war estimates in two or three stages. That is to say, instead of the budget covering a twelve-month period, the better course would be to announce, on February 28 next, the proposals for the six months of the new fiscal year.

In forming estimates of revenue for 1942-43, Sir Jeremy will be justified in assuming substantial improvements under various heads. The saving in interest charges must be particularly appreciable. Profits from currency and from coinage must be more satisfactory. It is, however, inescapable that he will have to provide for a very much bigger war expenditure on the part of India. In simple terms, Sir Jeremy will be confronted with a large deficit in the coming months. It is quite

likely taht he has recourse to additional taxation for making up part of the deficit. It is quite on the cards that he raises the Excess Profits Tax from 66 2-3 per cent. to 75 per cent. A stiffer graduation in income-tax is not unlikely. An increase in the excise duty on steel will not be felt by the steel industry which is in a surpassingly prosperous condition. With export markets thrown open to cement and sugar, the excise duty may be increased in the one case and levied in the other case. If additional tax or new taxes are imposed, after a careful study of the intrinsic factors pertaining to each industry, there can be no validity in the objections from vested interests. All such industries as are doing exceedingly well must be prepared to bear a share of the war burden. While we welcome well-planned taxation, we must, however, utter a warning that the methods of collecting taxes must be radically improved and liberalised. The tax-payer is now treated as though he is always a tax-evader. The whole spirit of the tax administration is hurtful to the self-respect of the nation and is calculated to make the taxes themselves unpopular. The instructions given to the tax collectors now are designed to make them persecutors. All this must be changed. People will be prepared to bear the burden of additional taxation if they know that they are not going to be harassed and suspected and persecuted in addition.

Another important point I would like to stress here is that, considering that the

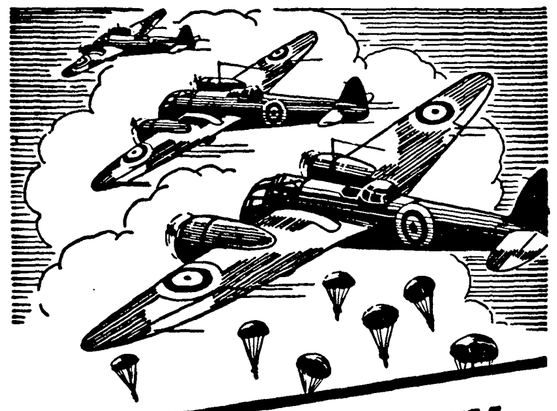
GF—252



debt of the Central Government has not risen at the end of the twentynine months of war, India need not be unduly sensitive about budgetary deficits. We can well afford a budgetary deficit because our earlier deficits have been so tiny and our general financial position so strong. The tenability of new taxes is one thing; the expediency of the taxes is quite another. There is grave political unsettlement and general nervousness among the population. If taxes are levied on too drastic a scale, and if tax collection methods continue as they are, it will further accentuate the sense of panic. Living in New Delhi and Simla, the Government may not have a full idea of the nervousness in the public mind. In such circumstances, the most satisfactory plan will be to announce a short-term budget with minimum increase in taxes.

It is also important to remember that, more than revenue, the borrowing capacity of the Government is of paramount significance in war finance in the coming months. Till recently, the Indian Government have been able to get whatever they want from the defence loans. But a serious setback has occurred since Japan entered the war. The giltedged market is today in a drooping condition; there are hardly any buyers. The defence loan is hardly realising anything. The market quotation for the loan is nearly 3 percent lower than the issue price. It appears as though the Government have already had to invest large sums for open market operations designed to support the gilt-edged market. I have already referred to the precipitate decline in the Central Government's balance with the Reserve Bank. In these circumstances, the most urgent problem for the Finance Member is to restore healthy conditions in the giltedged market, to revive public confidence in the gilt-edged outlook and to replan the defence loan on lines that will appeal to investors. As I have indicated, the higher profits from coinage, the increased earnings of the railways, and the introduction of one rupee notes provide various methods for the Finance Member to adjust his ways and means transactions. Rupee securities in the issue department of the Reserve Bank are now well below Rs. 50 crores. This is another avenue available to the Government for reinforcing their cash position. While Sir Jeremy has many such plans up his sleeve for the smooth functioning of the ways and means machinery, it is urgent and imperative that the borrowing capacity of the Government in the Indian market is reconstituted on the most favourable basis. More than the revenue-expenditure budget, the ways and means budget calls for the constant attention and manifold skill of Sir Jeremy Raisman.

• • •

Commercial safeguards are a recent development. What made the British community insist so strongly on safeguards was the unbalanced propaganda conducted at the time of S. N. Haji's Shipping Bill. That propaganda had the effect of waking up the sleeping dog. The safeguards are there; and the only course is to deal with them as part and parcel of India's constitutional status. Any discussion in the meantime has the effect of irritating the one side or the other. And all to no purpose. Lord Catto expressed himself in the House of Lords as strongly opposed to safeguards. One can understand any use in statements if he had made them while these safeguards were being discussed in the Round Table Conference. Made in the present conditions, they can only make confusion worse confounded. Here is a leading figure once connected with Clive Street, openly declaring his opposition to safeguards; and here is Sir Henry Richardson still connected in some way with Lord Catto's firm, elected as the leader of the European Group in the Central Legislature. As Leader of the European Group, Sir Henry has no option but to support safe-guards. Association with his firm should align him with Lord Catto and with the opposite view. I do not envy Sir Henry his position.

*(From Our Correspondent)*

New Delhi, February 10.

ALL New Delhi has been astir this week owing to the visit of Marshal and Madame Chiang-Kai-Shek who have arrived in New Delhi as the Viceroy's guests. To-day they had long talks with the Viceroy and other Members of Government, but as the main purpose of his visit is to discuss military strategy with the authorities here, a good part of his time wil be taken up for conferences with military chiefs. Both the Governments are determined to put forth their maximum energy in the defence of Burma, important alike to India and China. The Chinese Generalissimo took the earliest opportunity to invite Pundit Jawaharlal Nehru to meet him and will be having his first talk with the Indian leader to-night. It is understood that General Chiang Kai-shek will, after a week's stay in New Delhi, proceed on a short tour to important centres and will take the opportunity to meet Mahatma Gandhi. These talks with Indian political leaders are purely personal for acquainting himself with Indian leaders and renewing his acquaintance with them, but there is little doubt that apart from military questions the importance of taking all necessary measures to rally public support and remove political difficulties cannot be shut out of view in these discussions whatever may be their final result.

* * * *

For the present, discreet silence is being maintained in official circles on the subject of political developments. The rush of events in the Far East has swept other questions aside. Though certain important recommendations are understood to have gone from the Viceroy to the Secretary of State there has been apparently no answer yet from the London end. The only administrative change which has taken place relates to the arrangements being made to set up a separate organisation for developing and co-ordinating the existing transport resources of the country—the creation of a separate Department as urged for a long time in "Indian Finance". As foreshadowed in these columns, there is every probability of a special Membership being created for dealing with transport and allied problems. This has created great satisfaction in Assembly circles, for much of the present economic dislocation in the country in the matter of food supply and prices is due to the lack of co-ordinated control over transport arrangements. It is stated that when the new portfolio is created, there will be a re-arrangement of Departments—for instance, shipping which is now in the hands of the Commerce Member may be transferred to the new Member. The Commerce Department has already been relieved of the Petrol rationing administration.

* * * *

What is the extent of new taxation which the Finance Member is likely to ask for the coming year? There is at the moment a good deal of speculation in New Delhi. It may be recalled that in his first War Budget for 1940-41, the Finance Member came out with taxation proposals for Rs. 6.30 crores. In the supplementary Budget that year the taxation proposals totalled Rs. 6 crores in a full year. For the year 1941-42, the additional taxation imposed was Rs. 6.61 crores. The additional taxation proposals since the commencement of the war are therefore in the neighbourhood of Rs. 20 crores—the figure will be much larger if instead of estimates the actual collections are taken into consideration. As the deficit for the current year may be much more than the anticipated deficit of Rs. 13.85 crores which was left to be covered by borrowing, there is little doubt that the Finance Member will have to prepare for even a harder time next year, for the daily war bill for Defence expenditure may come up to nearly Rs. 50 lakhs. It is believed here that the Finance Member will ask for further taxation to the extent of Rs. 10 to 12 crores. According to the anticipations here there will be further increases in income-tax, super-tax and excess profits-tax rates. Certain new excise duties including textiles are said to be under consideration to make up for the loss in customs receipts. And even the salt tax is likely to be touched. Defence loan collections have only totalled Rs. 110 crores so far. As the Finance Member is aware that taxation has its limits, he has necessarily to rely on borrowing for meeting the greater part of the war bill and financing war supplies.

* * * *

The big increase in income-tax collections is undoubtedly going to benefit the Provinces to some extent most of whom are faced with deficit budgets in the coming year. Contributions from the Centre to the Provinces were Rs. 2.79 crores in 1939-40 and Rs. 4.16 crores in 1940-41. The provision for 1941-42 is Rs. 4.46 crores, but this is likely to be exceeded by over Rs. 2 crores. This will be welcome to the Provinces, for owing to the war they have increased expenditure in the shape of civil defence, additional police, new administrative establishments, dearness allowance and generally higher prices for Government purchases. The enormous scale of expenditure on Civil Defence alone may be gathered from the fact that Bengal is understood to have spent already Rs. 3 crores. One of the factors taken into consideration in fixing the allocation of expenditure between the Centre and the Provinces as regards Civil Defence was the increased amount of contributions which will go to the Provinces this year and, probably on a bigger scale, next year. Both to the Provinces and the Centre the unprecedented surplus which the Railways will have this year is the most encouraging factor.

* * * *

The two-day meeting of the Standing Finance Committee, though it dealt with a large number of items, had really nothing of any great importance to consider. For the improvement and expansion of the trunk telephone system, a sum of Rs. 39 lakhs has been provided. Another interesting item is the provision of about Rs. 24 lakhs for acquiring or erecting new office and residential accommodation in Simla. One hears a good deal of criticism, in this connection, that despite the seriousness of the war situation—and the example set by many Provincial Governments in giving up the hills exodus this year—the Government of India is still sticking to its decision to go to Simla this year and for this purpose has embarked on a large building programme in Simla. This question is expected to be raised in the Budget debates by non-official members. The Committee has also given its sanction to the expenditure involved in giving effect to the war injuries scheme of the Government of India. The development of the Delhi Polytechnic in order to add senior vocational and village industries departments, which is expected to cost nearly Rs. 4 lakhs non-recurring and Rs. 1½ lakhs recurring was agreed to. Among other proposals sanctioned are the continuance of the locust warning organisation at a cost of Rs. 1 lakh and famine relief works in Ajmer-Merwara next year at a cost of Rs. 7 lakhs. A grant of Rs. 9 lakhs to the Indian Seamen's Home, Calcutta, has also been provided for.

* * * *

Great importance is attached in Assembly circles to the Mahindra Committee appointed by the Commerce Department to examine the question of the immediate production of components or complete internal combustion engines offering prospects of immediate development with particular reference to war demands and future development of the industry in the country. According to the Government's information four firms are manufacturing these engines in this country. A number of workshops manufacturing component parts of ferrous and non-ferrous material for standard engines are reported to be scattered all over the country. The difficulty at present is said to be in obtaining special steel and other component parts, normally imported, to build complete engines. Though the move is somewhat belated, the committee consists of such distinguished men that useful results are certain to follow their investigations. Some time will be required for getting into touch with British manufacturers for necessary assistance.

*Bombay*, February 12.

THE flatness of markets has ceased to be a topic of conversation here. The decline in rates does not provoke comment as perverse or puerile, because it is felt that the pressure to sell arises from various factors manifest everywhere. The cloth market alone appears to be shaping well. The offtake may be restricted, but prices do not appear to yield. The easiness of cotton may propel prices downwards later on, but for the moment, the absence of any specific decision concerning price control helps to keep prices up. The prevailing demand for fancy goods has lifted the rates for all imported styles, notoriously in short supply, while comparable goods of Indian origin, are also much sought after. The absence of variations in yarn prices helps to lever up interest in cloth at present, though it must be confessed that the outlook is none too bright.

The public have been told that A. R. P. is their concern. It is not official in character, and steps have been taken to take into new Civil Defence Committees members of various public organisations. The masses have to be approached through non-officials invested with powers, and Bombay's citizens demand that the utmost should be done to secure voluntary co-operation from all parties. It is realised that evidence should be provided for the claim that there is no friction among A. R. P. committees or any clash between non-officials and officials. It is now emphasised that the individual citizen has to get on with A. R. P. work and the non-interventionist attitude of both Congress and League, is meant to leave the citizen free to do his duty. Mr. Jinnah's own paper, the *Dawn* has indicated that Congress co-operation with civil defence measures will not be treated as a signal to leave A. R. P. severely alone, though the League is not likely to proffer enthusiastic and active co-operation. In Poona where Mr. Symington has expressed complete satisfaction with A. R. P. arrangements there has been support. The Maharashtra Congress Committee has manifested much interest in civil defence. The scheme of civil defence does not contemplate the enlisting of official support in any form. A special committee was set up last week and some comfort has been drawn from the fact that Maulana Azad has stated that Congress is not going to obstruct civil defence work in any form.

The University has shown much interest in industrial research and the Department of Chemical Technology has much practical work to its credit. The annual gathering arranged by the University chemists included Sir S. D. Saklatwalla, who spoke on the relations between Science and Industry. He argued that the time has come to set up key industries in India in the interest of further industrial advance. He declared that the heavy chemical industry alone required intense application and he hoped that trained chemists would be available to set the industry going. As to the work undertaken by the University already, he testified and believed that general industrial progress would follow. Dr. Venkataraman suggested that the textile industry might sponsor chemical research in its own interests, and Mr. Masani, the Vice-Chancellor, thanked the industrialists for their continued interest in the research work carried out in the laboratory.

Some arguments against the scheme to finance the purchase of short staple cotton out of the enhanced import duty, have been addressed by the *Times*. How and when the Government will buy short staple cotton for which there is no market, has not been indicated. Nothing has been said about crop restriction for which there is wide support. It is urged that any uneconomic subsidy to cotton-growers through a new pool will compromise the crop restriction scheme officially recommended. The temporary freezing will leave the Government in the same plight as the Commodity Credit Corp. in the U. S. A. If the war situation does not mend and the cotton market takes a plunge, the Government will be holding a very unpleasant baby. What is the extent of help promised is not known at present. Whether the Government has any plans for stimulating the production of good crops is not known either; and the Government's estimate that Rs. 1½ crores can be had from the doubling of the raw cotton duty, appears at variance with facts. Cotton imports have virtually ceased as stocks are large and demand is small. There is no desire to import more and pay a higher duty. Shipping troubles have also to be taken into account. Ignorance of the cotton trade and its practices appears another objection to the scheme and the American saying that the cure for five cent cotton is five cent cotton is quoted to show that low prices contain the seeds of a cure.

The deadlock still invites prescriptions. The latest to assume the role of physician is Sir Shantidas Askuran, as familiar on the Turf as in Boardrooms now in the role of a physician for political distempers. His appeal to businessmen to act as go-between may not evoke immediate response; but there is Lord Catto's appeal in the Lords to Mr. Churchill's Government to alter their policy. That businessmen stand to lose more than the official classes whose patriotism is slight, and whose love of pelf is notorious, is recognised as much in Calcutta as in Bombay. Businessmen are, however, at one with politicians in asking for a declaration as to the future status of India. Sir Shantidas knows that the Expanded Council is not a National Government and he thinks that nationalist businessmen can promote harmony through a new effort. He does not contemplate a new Welfare of India League, but a less diffuse effort to create concord at least for the sake of a more vigorous war effort. The appeal is certainly in line with the speeches made at the recent annual meeting of the Indian Merchants Chamber here.

Answers to repeated requests for a more comprehensive war risks scheme have not appeared so far, but shrewd guesses have been made as to the scope and nature of the scheme to insure plant in factories. The paralysis of investment may impel an immediate decision but for the fact that the initial fund needed under a War Damage Act cannot be pulled out like a conjurer's rabbit. People in Bombay recognise that a scheme which will force an industry to pay 3 to 8 per cent as premium, will cripple enterprise and make the investor more than ever unhappy. It is not suggested that happy golucky methods can continue. The example set by Australia is there. In December last, Mr. Curtin's government had a comprehensive scheme ready and its details are not unknown in India. Administration through the existing insurance companies should be feasible. The present uncertain position, in spite of Factory A. R. P. makes it very hard for industry to get funds for working capital. Debentures too, are not worth much when the security is impaired, and the investor has at once come to realise that real property has shed its superiority abruptly. The absence of any war risks cover in Malaya is no argument for inaction. The Native Princes and their people are staying put. The losses of immigrants, whether British, Chinese or Indian, does not concern them at all. Immediate relief such as is made available by the British Act, passed in December 1940, is not of such moment as future compensation where loss arises directly from the war. A compulsory insurance scheme for certain types of factories and plant has been referred to in many papers, but owners of other types of immovable property would object to being left in the cold. Their attitude to the war effort will be probably determined by steps taken to give them, too, the benefits of any insurance scheme.

Brokers are, still a very nervous section of the community. The rules as to carry-over of forward business at approved rates were explained over and over again and the making up of prices were recommended by Mr. Shroff who has been President of the Stock Exchange for years. Voting revealed that Mr. Shroff's views commanded a larger measure of support than imagined. The arrangements to liquidate outstanding forward contracts were discussed by leading brokers and there was a hint from the President that certain shares would be out of the forward list next month should members approve. This would not affect the voluntary carry-over, and brokers would get all possible help from clients and others.

# Tit Bits of Industrial Activity

### Paper From Jute

Jute cuttings may find a new use as the Dehra Dun Institute has ascertained that pulp for making strong highclass paper can be produced. According to a recent bulletin the production of pulp will be determined by the quantity of cuttings available and the price payable by paper and pulp mills. Both bleached and unbleached types of paper can be made from jute-pulp but the price factor will settle the issue. As compared with grass or bamboo jute cuttings are admittedly expensive. It appears as though jute cuttings would be more suitable for admixture in order to impart additional strength to certain types of paper. In this event the limited market is likely to prove constant.

### Coal for War Work

Factories on war work are assured of the supply of coal as wagons will be released in order to meet their need. The Railway Board is known to have approved of the way in which priority supplies should be ensured. Firms engaged on war work will be able to retain a minimum reserve of coal and the scale has been fixed as follows. Factories or firms located within a radius of 250 miles from the coalfields will be ensured 15 days' stock while factories within 500 miles can maintain 20 days' stock of coal. As for factories situated 750 miles from the collieries, the minimum provision is 25 day's coal and as for those located at a distance of 1,000 miles and over from the coalfields, the minimum reserve is 30 day's stock. The original allocation of 20 days' stock has been modified in order to secure flexibility.

### Army Orders

The quantity of miscellaneous stores taken by the Supply Department keeps increasing. Oversea orders are not unimportant, and the Stores Directorate handles at present over a 1,000 different items. Sewing machines and cycles as also accessories and parts are sought by the Department which has developed local sources of these and other supplies. Crockery, glass and gloves are among the things taken from Indian manufacturers. In the past the Army encouraged, through rupee tenders and in other ways, the manufacture of various articles. At present, boxes, needles, rubber goods and hair combs are among the things bought locally. In the case of hair combs alone, the local production up to Army standards has been expanded to 2½ million per annum.

### Aluminium Drive

Australia has started a new drive for aluminium. Scrap is in demand and the Commonwealth Government has asked householders to give up old and unwanted vessels, etc. The Army Salvage section has set up depots to get and store the utensils before they are sent on to the furnace. Householders have been warned not to give up utensils which will need to be replaced. The other conservation plan propounded in Australia is for tinplate. The Australian Supply Minister decided to cancel all permits for the use of tinplate which is imported for packing foodstuffs needed for defence and house consumption. Exemptions are granted only to munitions plants and for the fabrication of tins of specified capacity for meat (12 oz. capacity) fruit (16 oz.) vegetables (16 oz.) condensed milk (12 oz.) malted milk (12 oz.) and not greater than 16 ozs. for full cream and 12 ozs. for dried milk, jam (24 oz.) and fish (8 oz.). Standardisation should follow in the canning industry but liberty is given to use any size for pulped and dried eggs, meat extract, fruit juice and vegetable juice.

### New Steels

The manufacture of armour plate and bullet-proof plate is by no means the only departure in India's steel production. Austenite electrodes are now being made for Government at Jamshedpur. The war effort is described in the *Tisco Review* particularly in regard to the fabrication of various alloys, etc. Experiments in welding are said to be under way and the Research Department is said to be busy devising suitable permanent magnets for telegraphic purposes. Wheels, tyres and axles will be made from acid steel in the new plant opened in November, and the Company is also engaged in exploring possibilities of producing high silicon steel sheets for motors, transformers, etc., required by the electrical equipment industry at present engaged on defence orders. Steel helmets up to British Service requirements are likely to be made as a new type of more magnetic steel was tested and pronounced satisfactory.

### Millions of Boots

To the millions of pairs of Army boots produced in India, a further addition will be made when certain plans go through. Owing to the larger demand anticipated next year, the number of machine-made boots may increase to five and a half millions per year, particularly, if standards are changed. The individualist shoemaker also will be called upon to help, and in this way about three million pairs more can be added to footwear production. Raw materials present another problem, but they should be dealt with when the plant for turning out three million pairs gets ready, while plant for the production of grindery is also to be set up according to recent reports. The ultimate result will be that India's wartime production of Army boots alone will be three times the peacetime production.

# Resume of Commodity Markets

With the anxiety regarding the war situation in the Far East, it can scarcely be expected that commodity markets will put on a different complexion. The fall of Singapore is expected any moment, though the latest reports indicate that the enemy is not having an easy task. The course of prices in the immediate future will be mainly dependent on the developments in the Eastern theatre of war.

The important features of the week are the sharp drop in quotations for Broach cotton and the abrupt rise in prices for gold. There has been no important change in prices for jute and jute manufactures. The hessian market towards the close, however, has shown a firmer tendency with the quotations for near positions well held.

The linseed market has continued steady. The British Government is reported to have had no difficulty in getting its requirements of linseed, groundnuts and rapeseed.

### Jute

The raw jute market has been absolutely uninteresting. Mill buying has been very poor. Sellers are very keen to do business and are prepared to discount rates.

At the last meeting of the Indian Central Committee it was decided that the Random Sampling Method should be recommended to the Government of Bengal in order to effect economies in expenditure in the preparation of forecasts. It was also decided to investigate the relationship between the areas under jute in different seasons and the fluctuations in prices for jute, ready and futures.

### Jute Manufactures

The jute manufactures market has remained firm with the shortage of ready goods. There is not much business passing except for some covering for near shipment. The difficulty in getting freight to export markets is reflected in the decision of the Argentine Government to establish a cotton bag factory in the cotton belt to replace jute bags owing to the difficulty in getting sufficient imports of bags for packing grain. The change-over to cotton bags may ultimately prove to be detrimental to the jute trade.

Commenting on the stock figures at the end of January, 1942 last week, it was pointed out that the reduction in the same as compared with the figures for the previous month was in part due to the decline in production in January. The figures now available indicate that total production was 1,05,318 tons against 1,15,770 tons in December, 1941, or a decrease of 10,452 tons. Production of hessian cloth and bags was 2.25 crores yards lower at 20.22 crores yards. Sacking cloth and bags also were lower at 11.76 crores against 13.02 crores yards. The decline in production was mainly due to the strikes in several mills.

### Cotton

The raw cotton market has been rather weak on bear selling. There has been an appreciable drop in values and only a late rally has resulted in losses being partially wiped out. It is reported that the Government of India may come to the help of the former by purchasing about 500,000 bales of Oomra crop. It is suggested that increasing methods of use can be found for short staple cotton. Whatever it may be, there is considerable criticism regarding the manner in which the Government propose to afford relief to the ryot. Emphasis is laid on the need for restricting the area under short staple varieties for the next season and the switching over to food crops to ensure zonal self-sufficiency, especially with the difficulties in regard to transport.

### Tea

The increase in the export quota from 110 percent to 125 percent of standard export was announced by the International Tea Committee last week. The decision to increase the quota was taken to ensure sufficiency of tea supplies in the important centres in case Java tea supplies were affected. The chief beneficiary, as a result of the higher quota, is obviously this country. The Indian export allotment of tea for the financial year 1942-43 will be 479,053,645 pounds being 125 per cent. of India's standard export figure.

# Jute and Jute Manufactures

(By Our Jute Correspondent)

*Calcutta*, February 12.

THE conditions prevailing in the market today must be bringing sharply home to Mills the inherent weakness of the policy of using the Bazar as a sump for the disposal of practically all their sales of forward goods. For, with the departure for safer climes of most of the prominent Bazar operators, there is no longer a Bazar into which to sell, and Mills are left to watch a market in which the demand is almost wholly for ready and near goods, of which Mills have none to sell, and to wait with what patience they can muster for the process of time to bring the forward months into the near position, in the hope that the ready demand will still continue. There was a time not so many years ago when the large American consumers and processors of jute goods placed orders for a large proportion of their requirements anything from six to eighteen months ahead, according to the view they took of the market. Then by degrees the *Marwari* speculative operator gradually "muscled in" on the gunny business and received no little encouragement in his efforts from some groups of mills. It was no uncommon occurrence when a large forward order came through from one of the big American consumers and was put up to a mill, for the guarantee broker to be phoned for, given the information, and told to whip round the Bazar for similar business at four annas more. On the principle that "if it is good enough for U. S. to be buying forward, it is good enough for us," buyers were soon found and the actual American consumer found the market being put up against himself. Not unnaturally he got tired of this in time and gradually abandoned the policy of buying forward to anything like the same extent. Moreover he found that, when it came to nearer goods, he could almost invariably purchase his requirements cheaper from the Bazar than he could from Mills, most of whom were committed to the Bazar for a large proportion of their production. In this manner not only did Mills lose the closer touch with their actual consumers which had previously prevailed, but these same consumers received from Mills every discouragement to continue their forward buying policy by the favour which was shown to the Bazar for the sake of an additional two or four annas on the price. Now the chickens have come home to roost. The Bazar has faded into the dust of Bikanir, the overseas consumer has got out of the habit of forward buying and Mills have got to hold their own baby and be content with a hand-to-mouth selling policy for a change. Whether this is altogether a bad thing is open to question. If it restores the closer contact between Mills and their consumers which previously subsided, it will be all to the good. And if it hammers home the lesson of what a broken reed the Bazar can be in times of stress, it will be no bad thing either.

Revised stock figures were issued as a supplement to those quoted last week. These revised figures show the reduction in commercial hessian stocks as only 386 lakhs and of sacking goods of only 86 lakhs yards. Production figures for the month of January are not yet available. The strikes previously reported still persist unfortunately and there seems no immediate prospect of settlement.

From the proceedings of the Indian Central Jute Committee it appears that the experiments in Random Sampling as a means of checking Crop estimates, have been completed to the satisfaction of the Committee and the system has been recommended to the Government of Bengal to be used in conjunction with the Forecasts. It has not been vouchsafed how the results of the random sampling compared with the last official Forecast estimates, but it would be most instructive if this information were issued to the trade. The problem of new uses for Jute is engaging the attention of the Committee. In this connection a report has been received from the Forest Research Department on experiments in the use of Jute Cuttings for paper-making. While the conclusion is that jute cuttings can be used for certain types of paper, their cost renders them uncompetitive against other raw materials for pulping purposes. The success attending their grading scheme in some of the jute districts has encouraged the I.C.J.C. to try to encourage co-operative sale societies amongst the cultivators. Co-operation has not been a signal success in Bengal in the past owing to the apparently rooted conviction in the mind of the cultivator that it is primarily a means of borrowing money cheaply. Until the true principles of co-operation can be inculcated, and the normal distrust of his neighbour eliminated, the prospect of the success of this venture, however, desirable its establishment may be, is not too hopeful.

The shipment in Jute has been almost idle and few transactions have been reported. At the end of last week there were some small sales of Dundee Daisee 2|3 at Rs. 62 and Rs. 61 for February shipment, also Dundee Tossa 4s at Rs. 61. Since then nothing has been recorded. Mill purchases have also been on a very limited scale, Firsts at Rs. 59-8 and Rs. 59, Lightnings at Rs. 42-8 to Rs. 40 and Outport Tossa 4s at Rs. 42, all in small quantity, being the sales reported. The Futures market remains dormant.

Mill have paid very little attention to the loose Jute market and the turnover has been inconsiderable. European packing sold at Rs. 12-8 and Rs. 8 for Middles and Bottoms, and business was reported in Bottoms alone at Rs. 7-8 but is not confirmed. European X marks sold at Rs. 5. There is some enquiry for Top marks, which are in limited supply, but small quantities have changed hands on the basis of Rs. 15-4 for European packing and Rs. 14 for Indian Jat. Mofussil markets continue steady with holders showing no desire to accept lower rates.

Enquiry in the Fabrics section continues to be concentrated on the earlier positions and very little business beyond April emerges. Nine porters ready have sold from Rs. 19-8 to Rs. 19-12, March at Rs. 19, April at Rs. 18, April-June at Rs. 17-4. In eleven porters, Rs. 26-8 and Rs. 26-10 have been paid for February, Rs. 25-4 to Rs. 25-8 for March, Rs. 24 for April and Rs. 23 for April-June. Even the sharp discount quoted for forward positions does not seem to attract buyers at present. In Heavy Goods there has been the usual small demand for ready "B" Twills at Rs. 37-8 to Rs. 37-12. Liverpool have been taken in fair quantity at Rs. 45 February, at Rs. 44-8 March and at Rs. 44 for February-March and Dumps at Rs. 1-15 March-April. Woolpacks sold at Rs. 1-14-6 basis. 6 by 8 Sugars were reported at Rs. 46 February-March and at Rs. 43-8 April-June.

The market closes steady but not active at the following quotations.

| | Feb. | Mar. | Apr.-June | | July-Sep. | |
|---|---|---|---|---|---|---|
| | Rs. | a. | Rs. | a. | Rs. | a. | Rs. | a. |
| 9 porters | 19 | 12 | 19 | 2 | 17 | 10 | 16 | 10 |
| 11 porters | 26 | 8 | 25 | 6 | 22 | 12 | 21 | 4 |
| "B" Twills | 37 | 12 | 37 | 10 | 37 | 2 | 36 | 10 |
| Cornsacks | 40 | 12 | 40 | 4 | 38 | 12 | 38 | 0 |
| Liverpools | 45 | 0 | 44 | 8 | 43 | 0 | 42 | 4 |

## JUTE

*Calcutta*, February 12.

THERE has been no change in the conditions in the raw jute market during the past week. In the absence of any activity in the hessian markets, mills are not taking any interest in the raw jute market. While sellers of higher grade jutes are hopeful of being able to dispose of their holdings, those with lower qualities are keen to do business. We have pointed out on many occasions in these columns, that fluctuations in prices in the raw jute market were mainly dependent on the behaviour of the hessian market. In the absence of any large export business mill buying, therefore, determines the course of prices in the jute market. And mill buying, in its turn, is dependent on the volume of forward sales that they are able to effect.

In the loose jute section, buying has been on a small scale. The market is quiet and idle with quotations unchanged. A small business was reported with balers in District Tossa at varying rates.

In the pucca bales section, some business was reported earlier in the week with balers in Dundee Daisee 2|3 at Rs. 62 per bale. Mills bought Hearts 2|3 at Rs. 62-8 per bale. During the last three days, there has been practically no business and quotations are lower for ready shipment. Balers are keen on doing business and are prepared to discount rates. Lightnings 2|3 were quoting towards the close Rs. 40 per bale.

In the futures market, there is practically no business and quotations are not available.

## JUTE MANUFACTURES

*Calcutta*, February 12.

THE jute manufactures market is inclined to be easy with the deterioration in the war situation. But for the technically sound position and the scarcity of ready goods, there should have been a slump in values. Mills are keen sellers for the forward positions, but there are no buyers in evidence. As compared with last week there is not much change in the rates to be recorded. 9 porters ready are quoting Rs. 19-10, March Rs. 19, April-June Rs. 17-12 and July-September Rs. 16-10. 11 porters ready are Rs. 26-4, March Rs. 25-4, April-June Rs. 22-10 and July-September Rs. 21-2.

In the heavy goods section, steady conditions have been noticeable with not much business passing. "B" Twills for February shipment sold on the basis of Rs. 37-12, Liverpool Twills for the same position Rs. 45, "A" Twills Rs. 47, Cornsacks Rs. 40 and Heavy Cees Rs. 35.

## COTTON

*Calcutta*, February 12.

THE Bombay raw cotton market has been rather weak during the latter half of the period under report and a substantial decline in prices is to be recorded. The weakness of the market has been mainly due to the bad news from Singapore. There was aggressive bear selling and if there has been a rally towards the close, it is only on account of bear covering. The decline in prices is most pronounced in the case of Broach April-May. After being lower at Rs. 176-8, Broach April-May are now quoting Rs. 183-12, July-August Rs. 192-12, Bengal March Rs. 122, May Rs. 125, Oomra March Rs. 144, and May Rs. 148. The quotations at the time of last writing were Rs. 198-8, Rs. 205-8, Rs. 126-12, Rs. 129-12, Rs. 153-12 and Rs. 157-12 respectively.

In the New York market, firmer conditions were noticeable earlier in the week, but there has been a reaction in the market towards the close. March Futures quote 18.28 cents, May 18.36 cents and July 18.49 cents.

## SILVER

*Calcutta*, February 12.

THE Bombay silver market has been absolutely uninteresting in spite of the strength of the gold market. As the Reserve Bank is a seller at the levels now ruling in the market, operators are perhaps not quite willing to commit themselves, in spite of the fact that the Government do not undertake to give delivery of bullion. Indian mint silver ready are nominally quoting around Rs. 70-1 with First settlement at Rs. 64-13. There are reports that there may be a reduction in the import duty on silver in the forthcoming budget.

There is also no change in prices to be recorded in the London market where spot and forward are quoting 23½d. and 23 9|16d., respectively. Small demand has been satisfied officially.

## GOLD

*Calcutta*, February 12.

THERE has been a resumption of buying in the gold market with the recent British reverses in the Far East and Middle East. On account of the discontinuance of the sale of sovereigns, a high premium is demanded by sellers and the quotation is now very much higher at Rs. 34-7. The relatively higher quotation for sovereigns has caused a diversion of demand for the yellow metal. Gold ready was quoted as high as Rs. 49 and First Settlement Rs. 48-2. There was some selling at the higher levels and the quotations were at the close lower at Rs. 48-6 and Rs. 47-14 respectively.

## WHEAT

*Calcutta*, February 12.

THE strength of the wheat markets in India in the absence of any export buying and after the reports regarding the arrival of Australian wheat in India is rather surprising. Weather conditions in the wheat-growing districts also have been none too helpful to operators. Speculative buying is conspicuous by its absence and there is practically no interest around control rates. Unsold stocks in mofussil centres are believed to stand at very low levels.

In the Calcutta market, rather steady conditions have been noticeable and quotations for Cawnpore ready and May are Rs. 5-12 and Rs. 5-4-6 respectively. Arrivals from U. P. which now total 100 tons daily, are fully taken up by mills. There is acute wagon shortage. Mills are obliged to reduce the number of working hours. It is reported that 9,000 tons of Australian wheat has arrived in Calcutta and negotiations for further imports are believed to be in progress.

Today defence begins at the Blast Furnace. Armament factories are transforming hundreds of tons of steel into weapons of war.

When peace returns once more these giants of war time will again become strongholds of industrial prosperity.

## Investor's Supplement

Vol. XXIX. No. 7 SATURDAY, FEBRUARY 14, 1942 Price Re. 1

*Stock Markets to-day and to-morrow*

## MINIMUM PRICES FIXED AGAIN

LAST week I pointed out that the Committee of the Calcutta Stock Exchange was not quite justified in removing restrictions on trading so far as the four counters, *Indian Iron, Steel Corporation, Burma Corporation* and *Indian Copper Corporation* were concerned. After further deterioration in the war situation bears have undoubtedly taken advantage of the position. Genuine selling has also been responsible to a certain extent for the sharp decline in values. On Thursday, Indian Irons were quoting Rs. 20-8, Steel Corporations Rs. 13-4, Burma Corporations Rs. 2 and Indian Copper Corporations Rs. 1-10 as against the original minimum prices of Rs. 32, Rs. 19-4, Rs. 3-14 and Rs. 2 respectively. The drop in prices has been so sharp that the authorities have again been obliged to fix minimum prices for the four counters mentioned above. The resolution passed by the Committee on Thursday reads as follows:—

"In supersession of the resolution dated February 5, 1942, it has been resolved by the Committee of the Calcutta Stock Exchange Association Ltd., in the meeting held to-day that the following are the minimum prices fixed by the Committee in respect of the above shares below which the members are not allowed to do any business. It has further been resolved by the Committee that there will be no further reduction of these minimum prices:—

"Indian Iron and Steel Ordinary Rs. 20-8, Steel Corporation of Bengal Ordinary Rs. 13-4, Burma Corporation Rs. 2, Indian Copper Corporation Rs. 1-10.

"The above rule will come into force from Monday, February 16, 1942."

It is comforting to note that the Committee has given the investing public the assurance that there will be no further reduction in the above minimum prices. If the Committee had decided on a revision of prices on the last occasion. I think, they could have avoided such a sharp decline in values. It looks as if the bears were provided an opportunity to do their worst. The position now is that there is need for revision of prices for the other counters as well as for most of the counters as there are no buyers around minimum prices. In view of the difficult conditions in the market at the present moment it remains to be seen how the Committee propose to tackle the problem.

• • •

The results of four important jute companies for the half-year ended 31st December, 1941, indicate that the jute industry was doing very well in the latter half of that year. Whether it would be possible to maintain earnings at the high level in view of the uncertain outlook is very difficult to say. This much, however, can be said. Barring any direct threat to the companies' properties prices for jute shares at the present moment discount fully the worst possibilities.

The four companies mentioned above, *Kanknarrah, Kamarhatty, Belvedere* and *New Central*, have earned a net profit, before proving for taxation and depreciation, of as much as Rs. 58,69,891 against only Rs. 26,50,680 for the previous half-year. The bulk of the increase in earnings, however, has been taken away by the additional provision for taxation and it has been possible to recommend a slight increase in the dividends on the ordinary shares.

The net profit of the *Kamarhatty Company, Limited* for the half-year ended 31st December, 1941, is Rs. 20,92,647 against Rs. 8,84,020 for the previous six months. The provision for Taxation is substantial at Rs. 15,50,000 (Rs. 1,00,000). After providing for depreciation Rs. 1 lakh (nil), the ordinary dividend is higher at Rs. 17-8 against Rs. 15 per share. The amount carried forward is higher at Rs. 2,52,235 against Rs. 1,95,199 brought in.

• • •

The net profit, before providing for taxation and depreciation, of the *Kanknarrah Company, Limited* for the same half-year is Rs. 19,50,617 against only Rs. 8,84,020 for the previous half-year. After allocating Rs. 14,00,000 (Rs. 1,00,000) to Taxation Reserve the sum of Rs. 1,00,000 (nil) is charged to depreciation. The ordinary dividend is increased to Rs. 15 per share from Rs. 12-8 per share. As a result of the large provision for taxation and the allocation to depreciation it has been necessary to draw in on the amount brought in from the last accounts.

• • •

The first balance sheet of a tea company to be published for the year ended 31st December, 1941, is again that of *Dessai and Parbuttia Tea Company, Limited*. Thanks to the higher average price realised, it has been possible to report a substantially higher level of profits in spite of the smaller crop. The net profit, before providing for taxation and depreciation, for 1941, is double the figure for 1940, the actual figures being Rs. 2,95,516 and Rs. 1,55,994 respectively. The provision for taxation is Rs. 95,000 (Rs. 40,000) while the amount set aside to depreciation is Rs. 38,000 (Rs. 35,000). The dividend on the ordinary shares is considerably higher at 25 per cent against 14 per cent. In this connection, it is relevant to point out, that the important companies have a high level of profits for the standard period and it would be possible for other companies also to declare high dividends.

The yield of tea reached a total of 973,239 lbs., a decrease of 106,071 lbs. on the quantity estimated. The average selling price for 1941 was thirteen annas four pies per lb. as compared with eleven annas eleven pies per lb. for 1940.

With the increase in the quota for the current season to 125 per cent, it can be expected, that there will be a further improvement in earnings.

• • •

Yet further progress is reported by the *Ahmedabad Electricity Company, Limited* during the year ended 30th September, 1941. The increase in the total number of units sold in 1940-41 is much more than the increase in 1939-40 and but for the further reduction in the rates charged to consumers as from February, 1941, the earnings for the year would have been higher.

(*Continued on page 264*)

# The Week in the Exchanges

## CALCUTTA STOCK EXCHANGE

*(From Our Correspondent)*

*Calcutta*, February 13.

WITH, the grave situation in Singapore and intensified activity in Netherlands East Indies stock markets have been rather weak during the past few days. But for the absence of restrictions regarding trading in Indian Irons, Steel Corporations, Burma Corporations and Indian Copper Corporations there would perhaps have been no business of any appreciable dimensions in the market. Consistent selling has resulted in a substantial decline in prices for the chief speculative counters being recorded. The reimposition of minimum prices for the four counters with effect from Monday next should have a restraining influence on bears and it is hoped that in the covering that may result a moderate recovery will be staged. It would be foolish, however, to expect that there would be any general improvement so long as there are no favourable developments in the Far Eastern situation.

The giltedged securities section has been rather weak and a decline in prices has been recorded all round. 3½ per cent Paper is nearly one and a half points lower at Rs. 93 while 3 per cent Paper also has been marked down at Rs. 79. Among terminable loans, 3 per cent Defence Bonds 1946 were quoting nearly par while 3 per cent Second Defence Bonds 1949-52 were further lower at Rs. 97-3. 3 per cent 1963-65 were Rs. 93-7, 3½ per cent 1947-50 Rs. 100-8, 4 per cent 1960-70 Rs. 107-3, 4½ per cent 1955-60 Rs. 110-2 and 5 per cent, 1945-55 Rs. 107-2. Among provincial loans, 5 per cent Bonds U. P. 1944 were noted at Rs. 102-10.

There is no change in the conditions in the money market. In spite of the increase in the treasury bills offer from Rs. 1 crore to Rs. 2 crores the discount rate is not much higher at one per cent per annum.

No transactions have been recorded in public bodies' or industrial debentures. Among preference shares, *Cheviot* were dealt in at Rs. 157-8 ex-dividend, *Banarhat* at Rs. 159, *Cawnpore* at Rs. 174 and *Steel Corporation* at Rs. 108. *Jessop & Co.* were further lower at Rs. 112. *Dalmia Cement* preferences were crossed at Rs. 115-8 and *Alkali and Chemical* at Rs. 116-8.

In the Cotton section, no business has been recorded this week.

In the Coal section, *Bengal Coal* were Rs. 358, and *Pench Valley* Rs. 34-12. Earlier in the week, *Equitable* changed hands at Rs. 35.

In the jute section also business has been on a considerably smaller scale. There are no buyers anywhere near minimum prices for most of the popular counters. *Agarpara* were Rs. 38 cum-rights cum-dividend, *Gourepore* Rs. 670, *India* Rs. 326 and *Kamarhatty* Rs. 465.

In the Engineering section, business was mainly confined to the two popular counters, Indian Irons and Steel Corporations. From Rs. 24-5 at the end of last week there has been a decline in the quotation for *Indian Iron* to Rs. 20-8. *Steel Corporation* also have recorded a decline from Rs. 15 to Rs. 13-4. Only the fixing of minimum prices on Thursday prevented further selling. *Indian Galvanizing* were Rs. 32. No business has been recorded in other counters.

Tea shares also have not been in favour with *Baradighi* at Rs. 50-4 and *Oodlabari* at Rs. 26-8. It is, however, satisfactory to note that the results for the last year are very good and that the first company to publish the balance-sheet for the year ended December 1941, *Dessai and Parbuttia Tea Company, Limited*, is increasing the dividend from 14 per cent per annum to 25 per cent per annum.

Sugar shares have remained firm with *Murree Brewery* at Rs. 15-8, *New Savan* at Rs. 12, *Purtabpore* at Rs. 11-4, *Ramnugger Cane and Sugar* at Rs. 10-4 and *South Behar* at Rs. 17-10.

In the Miscellaneous section, *Burma Corporation* and *Indian Copper Corporation* have been around Rs. 2 and Rs. 1-10 respectively. *B. I. Corporation* were Rs. 4-14, *Indian Wood Products* Rs. 28, *Indian Cable* Rs. 20-2, *Walford Transport* Rs. 1-4 and *Assam Saws* Rs. 3-8. Paper shares also were inclined to be easier with *Titaghur Paper* at Rs. 18-4, *Shree Gopal Paper* at Rs. 14-8 and *Star Paper* at Rs. 13-10.

## BOMBAY STOCK EXCHANGE

*(From Our Correspondent)*

*Bombay*, February 12.

The local share market remained closed throughout the week under review.

It is reported that, in pursuance of the plan to extinguish outstanding forward business before the end of July, the Governing Board of the Bombay Stock Exchange has decided to abolish the system of carry-over by stages with effect from the next settlement.

Forward business in *Mysore, Phoenix, Swan, Andhra Valley, Tata Hydro, Tata Power, Bombay Tram, Alcock, Bombay Steam* and *Bombay-Burmah Trading* will have to be compulsorily squared up during this month after which it will not be allowed to be carried forward.

In the following month, *Colaba, Finlay, Indian Bleaching, Morarjee, New Great, Svadeshi, Shivrajpur, Belapur Sugar, Premier Construction* and *Associated Cement* will be withdrawn from the forward list and outstanding business therein will be required to be liquidated.

The next turn will be that of *Century, Gokak, Kohinoor, Central India* and *Simplex. Bombay Dyeing* and *Tata* ordinary will take their turn in June, while *Tata* deferred will be the last to be removed from the forward list, in July, whereafter there will be no forward trading at all.

## MADRAS STOCK EXCHANGE

*(From Our Correspondent)*

*Madras*, February 12.

The nervousness following the course of war events in the Far East continued to have an adverse effect on prices in the local market during the week under report. Business has been on a very small scale as buyers are unwilling to enter into commitments. Rubber shares accounted for a fair turnover, while Textiles were more or less unchanged.

*Securities.*—The securities market here remained very steady until the end of last week when a weaker tendency was noticeable. 3½ per cent Paper, which has been quoting at Rs. 95, has now declined to close at Rs. 93-2. 3 per cent 1963-65 came to business at Rs. 93-12. 3 per cent 1956-61 *Mysore Loan* were transacted at Rs. 103-2 c.t. and 3 per cent 1952 *Madras Loan* at Rs. 97-12 c.t.

*Mills.*—The volume of business in this section was not very large as buyers still appear to be uninterested. Their reluctance to enter into commitments is understood. *Coimbatore Spinning* were done at Rs. 90; *Vasanta* at Rs. 142 c.t.; *Cambodia* at Rs. 10-10; *Rajalakshmi* at Rs. 91; *Pankaja* at Rs. 138 and *Madura* at Rs. 37-8. *Sitaram Spinning and Weaving Mills, Limited* has declared a final dividend of 12½ per cent for the year ended 31st March, 1941 as compared with 8 1|3 per cent for the year 1939-40.

*Utilities.*—*Nellore Power* were crossed at Rs. 6-12.

*Plantations.*—Rubber shares accounted for a comparatively better turn-over than any other section for some weeks past. *Travancore Rubber* met with business at Rs. 10-12; *Cochin Malabar* at Rs. 9-2; *Thirumbadi* at Rs. 2-5; *Kalpetta* at Rs. 22-14; *Udayagiri* at Rs. 8 and *Kudaganga Rubber* at Rs. 17-12. Tea shares were mostly unchanged.

*Sugars.*—There were sellers of *India Sugar* at Rs. 9-8, while *Raza Sugar* changed hands at Rs. 24-12.

*Banks.*—*Bank of Hindusthan* met with some enquiry at Rs. 24. *Reserve Bank* were done at Rs. 101 and *Imperial Bank* contributories at Rs. 373-8.

*Miscellaneous.*—*Andhra Cement* had buyers at Rs. 78-8. *Indian Steel Rolling Mills* ordinaries have further declined to Rs. 5-10 from Rs. 6. *Spencer 'B'* preference reported business at Rs. 10-2; *Indian Copper* at Rs. 1-10-6 and *Burma Corporation* at Rs. 2-1. *Tata* deferreds were bought at Rs. 1,550 cash c.t.

## LONDON STOCK EXCHANGE

The London Stock Exchange has been rather weak during the past week with the adverse developments in the Far East. There has been no actual selling pressure, however. Oils and Industrials have recorded a decline in values. Giltedged securities have been easier with 3½ per cent India Sterling Paper at 101¾. Among British Funds, 2½ per cent Consols were 82¼, 3½ per cent Conversion 107 1|16, 3¼ per cent War Loan 104 13|16 and 3 per cent War Loan 101⅞.

## NEW YORK STOCK EXCHANGE

There has been a sharp decline in values on Wall Street during the latter half of the week under review. The close has been heavy. *U. S. Steel* were $50⅛ and *General Motors* $32.

## TRANSACTIONS DURING THE WEEK

### CALCUTTA STOCK EXCHANGE

**(From 5th Feb., to 11th Feb., 1942 both days inclusive).**

*(Continued from page 261)*

The net profit for the year is Rs. 13,92,738 against Rs. 12,75,081 for the previous year. The provision for depreciation is higher at Rs. 4,12,770 against Rs. 4,75,007 on the previous occasion. The amount set aside for taxation is Rs. 1,64,888 against Rs. 2,38,502, while Rs. 75,000 (nil) is placed to General Contingencies Reserve against possible shrinkage of revenue due to A. R. P. restrictions and also other expenditure which may be incurred under the present uncertain conditions. The dividend has been maintained at 7½ per cent though the appropriation is nearly Rs. 1 lakh more on account of the increase in capital ranking for dividend for the whole year.

In order to finance capital expenditure undertaken from revenue and by means of borrowing in 1940-41, the first call of Rs. 25 per share on the 25,000 ordinary shares issued in May, 1940 has been made payable on or before 15th February, 1942, making this issue Rs. 75 called up.

* * * *

Owing to the difficult situation prevailing in Rangoon and the call for public service on resident staff it is impossible to complete estimates or undertake the preparation and issue of Dividend Warrants. The Directors of *Burma Corporation, Limited* have, therefore decided, as forecast in the Chairman's Address at the last Annual General Meeting, to postpone consideration of the declaration of a Dividend till estimates for the whole period to 30th June, 1942 are available.

*Includes Bonus of 5 per cent.
†Includes Bonus of 3 per cent.
**Includes Bonus of 10 per cent.

*Audited accounts for the year ended 31st December, 1941:—*

After providing for a bonus to employees and setting aside Rs. 25,50,000 for estimated Taxation, Rs. 4,50,000 for Depreciation and Rs. 25,000 to Pension and Gratuity Fund, the result of the year's working is a profit of Rs. 5,52,662-1-3. Adding to this Rs. 1,59,895-11-9, being the balance brought forward from 1940, there is a sum of Rs. 7,12,557-13-0 available which the directors have allotted as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Ad-interim dividend of Rs. 1½ per share on the Preference Shares, and Rs. 5 per share on the Ordinary Shares, both free of income-tax .. .. .. | 1,95,000 | 0 | 0 |
| Leaving for disposal a sum of Rs. 5,17,557-13-0 which the directors propose to deal with as follows:— | | | |
| Final dividend of Rs. 1½ per share on the Preference share, free of income-tax .. | 45,000 | 0 | 0 |
| Final dividend of Rs. 5 per share on the Ordinary Shares, making 20 per cent for the year, free of income-tax .. .. | 1,50,000 | 0 | 0 |
| Bonus of Rs. 5 per share on the Ordinary Shares, free of income-tax .. . .. | 1,50,000 | 0 | 0 |
| To be carried forward .. .. . | 1,72,557 | 13 | 0 |
| Total .. | 7,12,557 | 13 | 0 |

Demand for cloth and yarn has been good, and prices are now considerably higher than those ruling a year ago. A large proportion of the Company's plant has throughout the year been concentrated on production for the Defence Services.

*Managing Director.*—Mr. K. J. D. Price.

*Authorised, Issued and Subscribed Capital—Rs. 30,00,000 in 30,000 Ordy. and 30,000 6 per cent Pref., both of Rs. 50 each, fully paid up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid up .. | 30,00,000 | Gross Block .. | 1,01,70,928 |

| | | Total Liquid Assets .. | 86,63,293 |

### MADRAS TELEPHONE COMPANY, LIMITED

Year ended December.

| | 1941 | 1940 | 1939 | 1938 |
|---|---|---|---|---|
| | Rs. | Rs. | Rs. | Rs. |
| Gross receipts .. | 9,34,002 | 8,35,183 | 7,85,038 | 7,77,372 |
| Working expenses including commission, etc. .. .. | 2,56,453 | 2,48,996 | 2,35,508 | 2,21,109 |
| Net profit .. | 6,77,549 | 5,84,859 | 5,49,530 | 5,56,263 |
| Allocation to funds including depreciation | 1,28,687 | 1,23,432 | 1,75,885 | 1,88,633 |
| Provision for taxation | 1,94,351 | 1,44,317 | 1,01,769 | 85,571 |
| Dividend amount .. | 3,75,000 | 3,00,000 | 2,70,000 | 2,70,000 |
| Dividend per cent .. | 12½ | 10 | 9* | 9* |
| Carry forward .. | 39,548 | 60,036 | 42,927 | 41,051 |

*Includes a Bonus of 1 per cent.

*(Annual meeting, 3rd March, 1942 at 10 a.m. at Madras).*

*Audited accounts for the year ended 31st December, 1941:—*

The net revenue of the Company, after charging Rs. 1,28,686-13-0 to Depreciation, is Rs. 3,54,511-7-10. To this should be added the balance of the Appropriation Account of Rs. 60,036-5-3, making a total of Rs. 4,14,547-13-1 which the directors recommend to dispose of as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Dividend at the rate of 12½ per cent, free of income-tax .. .. .. | 3,75,000 | 0 | 0 |

leaving a balance of Rs. 39,547-13-1 to be carried forward.

*Development.*—During the year, 519 New Exchange Lines, 339 Extension Lines and 46 Private Lines were connected and 264 Exchange Lines, 126 Extension Lines and 1 Private Line were reliquished, the net gain being 255 Exchange Lines, 213 Extension Lines and 45 Private Lines.

An increase of 7.65 per cent in Exchange Lines and 13.25 per cent in Extension Lines and 80 per cent in Private Lines is an indication of the demands made on the Service in War time.

*Automatic Service.*—Unfortunately, due to war conditions, none of the new apparatus on order was shipped during the year, with the result that the Central and Mount Road Exchanges are full and are working over normal capacity, while the Mambalam Exchange is now almost full.

*Overhead and Underground Plant.*—Has been maintained in a high state of efficiency. The greatest difficulty is being experienced in obtaining supplies of materials of all kinds. Development has, therefore, now been practically stopped, and in a few cases, subscribers have had to forego the use of their connections to make available lines urgently needed for Military, A. R. P. and other important services.

Revenue receipts has increased by Rs. 98,819 during the year.

The percentage of working expenses to net revenue are as follows:—

| 1938 | 1939 | 1940 | 1941 |
|---|---|---|---|
| *33.69 | *38.65 | *39.10 | *40.90 |

*Includes Income, Super and Excess Profit Taxes.

*Secretary.*—Mr. J. A. Rowland Knox.

*Authorised Capital—Rs. 50,00,000 in 5,00,000 shares of Rs. 10 each. Issued—Rs. 3,00,000 in 3,00,000 shares, fully paid up.*

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
|---|---|---|---|
| Capital paid up .. | 3,00,000 | Gross Block .. | 39,89,162 |
| Reserves .. | 16,64,943 | Depreciation .. | 76,064 |
| Current debts .. | 32,45,738 | | |
| Carry forward .. | 39,548 | Block (net) .. | 39,13,098 |
| | | Stores and Spares .. | 81,918 |
| | | Outstandings .. | 66,470 |
| | | Investments .. | 6,15,547 |
| | | Cash balances .. | 5,73,196 |
| Total .. | 52,50,229 | Total .. | 52,50,229 |
| | | Total Liquid Assets .. | 13,37,131 |

### BENGAL ASSAM STEAMSHIP COMPANY, LIMITED

Year ended October.

*(Annual meeting, held 13th February, 1942).*

*Audited accounts for the year ended 31st October, 1941:—*

After providing Rs. 3,00,000 for depreciation there is at the credit of Profit and Loss Account the sum of Rs. 4,23,523-4-11 from which the directors recommend the payment of dividend on the Preference Capital at 7 per cent per annum and 12½ per cent on the Ordinary Capital, leaving a balance of Rs. 1,52,525-4-11 to be carried forward.

All essential repairs have been effected during the year and the fleet is in good order.

*Managing Agents.*—Messrs. Andrew Yule & Co., Ld.

## IMPERIAL BANK OF INDIA

| | Year ended December. 1941 | 1940 | 1939 |
|---|---|---|---|
| | Rs. | Rs. | Rs. |
| Deposits .. .. | 1,08,91,89,667 | 96,03,17,484 | 87,84,16,475 |
| Cash .. .. | 15,26,86,877 | 24,82,80,725 | 11,09,02,600 |
| Investments .. | 64,39,64,492 | 48,57,34,128 | 38,03,51,263 |
| Loans and Advances, etc. .. .. | 38,88,28,082 | 32,30,88,324 | 48,27,70,000 |
| Net profit .. .. | 76,66,047 | 78,03,672 | 77,02,887 |
| Allocation to funds .. | 2,47,600 | 3,81,400 | 8,94,600 |
| Dividend amount .. | 67,50,000 | 67,50,000 | 67,50,000 |
| Dividend per cent .. | 12 | 12 | 12 |
| Carry forward .. | 45,29,050 | 38,60,603 | 31,88,331 |

*Audited accounts for the half-year ended 31st December, 1941:—*

The net profit of the Bank for the year after making usual and necessary provisions, amounted to Rs. 34,55,027-7-4 which, with Rs. 45,61,922-8-6 brought forward from the last half-year, makes a total of Rs. 80,16,949-15-10. Provision for taxatiin continues to be a major item which must be made before the profits are declared. The directors have disposed of the above amount as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Payment of a dividend of 12 per cent per annum, free of income-tax .. .. | 33,75,000 | 0 | 0 |
| Transferred to Pension Funds .. .. | 1,12,900 | 0 | 0 |
| To carry forward to next account .. | 45,29,049 | 15 | 10 |

The Reserve Bank Rate and the Imperial Bank Advance Rate remained unchanged at 3 per cent and 3½ per cent respectively throughout the half-year.

Following the usual seasonal lull, the demand for bank finance quickened appreciably in December coincidently with the culmination of the crisis in the Pacific.

The average yield on Government of India Treasury Bills during the half-year was Re. 0-11-5 per cent per annum as compared with Re. 0-13-6 per cent per annum during the corresponding period of 1940.

*Managing Director.*—Mr. W. Lamond.

Synopsis of the balance sheet as at 31st December, 1941:—

| *Liabilities.* | Rs. | *Assets.* | Rs. |
