Joint Action

WHILE Mr Churchill td with the President in Washington, Mr Edelas conducting conversations in Moscow with the lets of the Russian State. These simultaneous conferences symbolise well the new necessities of world war. Both eat down the aggressors and to secure a world in whithere will be no more aggression, unity is the Allies'rst objective. The fact that it is an obvious objective is not make it an easy one. There is constant centrifug pressure on the Allied front. Strategically, the temptatis to regard each front as a separate war ; politically, it to carry into an era of world planning a narrowly nationlist outlook. The success of the Washington and Mosc talks will depend on whether they have countered the divergent tendencies and laid the foundations of clearer understanding.

In the general strategy of the tr, the first necessity is to get into perspective the Allies'all round shortage of way materials. The long lead of Jain and Germany has not yet been made good. It follows tat supplies are short is between the various fronts. Thagh Mr Churchill's explanation to Congress of the shortcomings in the Allies' Far Eastern defence does not necessarily clear the Government of the charge of miscalculation. It does explain why miscalculations can so easily occur.

It would have been much better, I freely admit, if we had had enough resources of all kinds to be at full strength at all threatened points. But considering how slowly and reluctantly we brought ourselves to large-

scale preparations and how long these preparations take, we had no right to expect to be in such a fortunate position.

Shortages, uncompensated by any joint planning, may make for accusations of bad faith and will certainly leave dangerous gaps. Without a view of the war as a whole, how is Australia or indeed the United States to judge whether Britain has skimped Singapore to defend the Channel? Without frank consultation, how can the Russians be convinced that it is impossible for Britain to stage costly military diversions? The problem of the gaps is even more obvious. It is only when the military resources of the British Empire, the United States and Russia are viewed as a whole that effective allocation becomes possible. The resources that are necessary to safeguard Great Britain against invasion are a function of the amount of German military material the Russians can lock up on the Eastern front ; and this calculation in its turn determines the reinforcing of the Far East.

The unanswered query of Russia's reactions to Japan's entry into the war is best viewed from this standpoint. If Russia does not possess the resources to risk an attack in the Far East—bomber strength, fighter protection, ground forces for aerodrome defence and the rest—then, to launch an offensive there might jeopardise the front against Germany. The Soviets, perhaps, find themselves vis-à-vis Japan, in roughly the same position as were the British last summer when they were faced with the desir-

5L

N42.142

ability and the impossibility of "opening a second front." The advantages of attacking Japan are so obvious to the cause of total victory in a war which the Russians recognise to be indivisible that Russia's continued neutrality can mean one thing only—the incapacity of the Russians and of their allies to supply the necessary war material.

In the longer perspective of the post-war settlement, the significance of the Washington and Moscow talks will depend on the extent to which they point towards more permanent collaboration. It is useless to spend efforts in building vast international governments until there is some substance to put into the institutions. The Allies are only taking the first hesitant steps towards a unity which, scientifically and technically, may well be necessary already, but which is politically still a very distant goal. What is essential is that these steps should be in the right direction.

There is every reason, for example, to urge the British and American Governments to undertake at once the joint discussion of their post-war policy. The war effort itself suffers at the moment from lack of any really compelling picture of what the English-speaking peoples have in mind when they speak of a "durable settlement." Joint discussion is essential, first to ensure that each of the two nations has a definite foreign policy (that in itself would be an improvement on the inter-war period), and secondly to ensure that, as far as possible, both countries have the same policy. The discussions will naturally range over both the political and the economic field. In the former—the political organisation of a peaceful world—it is perhaps Britain which, by nearness to the seat of danger and (let it be hoped) by greater willingness to bear the continuing burden of enforcement, will have the initiative and will solicit the support of the other partner. But in the economic field the roles are reversed. It is the United States which, by the dominant size of its national economy and the cast of thought of its governing circles, has already taken the lead and invited the co-operation of Great Britain. Both countries have their lessons still in part to learn. It is not sufficiently recognised in the United States even yet that there is a political price to pay for that security and stability which alone will make a reasonable economic order. And it is quite inadequately realised in Great Britain that certain cherished economic ideas will have to be modified—within the margin of possibility—if the political co-operation of the United States is to be secured. Both these points are made in the Atlantic Charter. The detailed examination and specific embodiment of its clauses should begin at once.

The actual fact of day-to-day contact in the conduct of the war can also be used to lay the basis of a more permanent association. This is not the time for elaborate

constitution-making which will be suspect on both sides of the Atlantic, but where there is a common need, let the appropriate institution be set up, stabilised, strengthened and as far as possible rendered permanent. Defence, economic policy, transport, to name only a few, are already creating such needs. Constitution building, in this narrower but more practicable sense, can begin at once. The report from Washington that the setting up of a joint Anglo-American War Council is under consideration shows, perhaps, that it has already begun. Moreover, all these processes of discussion and joint action should be constantly dramatised for the benefit of public opinion. The spectacle of a British Prime Minister addressing Congress has an emotional significance far outweighing the actual text of the address. The emotional content of all manner of contacts and joint action can, with skilful handling, be made to play a great part in creating the demand for common institutions which must precede their creation if they are to have any vitality or lasting effect.

The relations between the English-speaking world and Russia should, where possible, follow the same lines—the working out by joint consultation of a common policy, and the creation, through wartime necessities, of permanent organs of collaboration. The difficulties are inevitably greater, for neither in history, culture, language nor contemporary tradition is Russia as near to Britain and the United States as they are to each other. Yet Mr Eden's visit to Moscow, where the discussions were "full, frank and sincere" suggests that one of the main obstacles to collaboration—lack of confidence—can be overcome, while Russia's willingness to sign the Atlantic Charter is, at the very least, a pointer towards a measure of uniformity in the Allies' political and economic views.

The canvas is narrowing, the frontiers are closing in. For the multitude of separate sovereignties of the last century, there have been substituted five great power centres, Germany and Japan, Britain, Russia and the United States, two of which are at war à l'outrance with the other three. In the hour of victory, the effective power centres will be only three in number, and while it is a first principle of their policy that every peace-loving state shall be associated with their decisions, ultimately it is on their agreement that it will depend whether the world is to know "a new birth of freedom" or to plunge on in a vicious downward spiral of war without end. Such, ultimately, is the stake of the talks at Washington and Moscow. To the utmost limit, subject only to the full maintenance of principle, collaboration must be secured. It is the only guarantee that the peoples of the world will ever, to expand Mr Churchill's noble peroration to Congress, "for their own safety and for the good of all, walk together in majesty, in justice and in peace."

Europe grew up round the League of Nations. Mr Butler has an illuminating chapter in which he explains the way in which the machinery of the League was worked. He is not depressed by his experience, which, since he was Director of the ILO, was very close. He regards the League as the first experiment in international control and order. Small wonder, therefore, that it did not survive its first hesitant application to the virtually insoluble problems of Europe after the last war. But it will have vindicated itself if the limitations which it brought to light are taken into account in the creation of a new system. Of these, the most obvious is the fact that without effective power behind instruments of international government, it is almost as though they were non-existent—worse indeed, for they discredit by their ineffectiveness the whole conception of international law. At Geneva there was at no time a strong coalition of Powers determined to enforce the law, and this negative, even pacifist, attitude of the member-states frustrated from the first the really quite adequate machinery.

The hesitations and general ineffectiveness sprang not only from the narrow nationalism of the Powers but also from deep psychological errors in the contemporary mentality of Europe. There was, for example, a radical misconception of the problem of power. The idea that power, that is to say military power, could be effectively linked with the preservation of law and the creation of security was hardly even a possibility for the statesmen and journalists of the inter-war years. Both in this country and in America, the idea had penetrated too deeply that arms were inseparably connected with tyranny and that the whole problem of armaments was distasteful and slightly disreputable. The progressives deprecated the production of guns by private firms working for their own profit; but they did not support an increased production by the peace-loving states. Collective security, which was and is the only sane policy of defence, came to be divorced from the idea of military power, either by the Conservatives who wanted the national armaments without the collective system, or by the League of Nations men who thought that the new commonwealth could be run by persuasion or by a token force. The truth is, of course, that neither was right. A proper policy of security demands the collective action of strong Powers. The antithesis between rearmament and security was a false antithesis. France and Great Britain desperately needed both. Dr Brogan confesses at one point in his book to having seen the error of his own past ways. There are very few indeed who wrote on foreign affairs in the inter-war period who would claim to have been completely clear-headed.

If Great Britain's conception of the general framework of Europe was mistaken, so too were many particular British reactions, habits, customs and attitudes. Those who went abroad became fantastically naïve both about the information they received and the sources of that

information. How otherwise would it have been possible to pull so much wool over the eyes of so many visitors to all the dictator states? Take the case of Russia, for example. Here the only sources of information were subject to political surveillance and, in addition, the whole tradition and civilisation of the country were alien and strange. Any kind of information should have been received with the utmost caution. Instead, there was nothing the Intourist guide could tell the innocent traveller which was not most solidly believed. Germany is an even more astonishing example. In spite of all the Nazis did to de-civilise Germany, English visitors continued to be surprised and impressed by the energy and activism and constructional work of the Third Reich. Thanks to this ready gullibility of the British, Germany was able to get away successfully with the persecution of the Jews, the abolition of trade unions, the building up of a large army, even the rape of Austria. As Dr Brogan puts it:

The more formidable the Germans grew, the more important the positions abandoned, the more complete the Nazi control of Germany became, the more a readiness to see the good side of the Nazis became fashionable! The government of gangsters of 1934 became the government of Herr Hitler, who had restored the self-respect of the German people, by 1936.

British gullibility towards Germany sprang from a radical ignorance of Germany's immediate past and of German history in the last two hundred years. Mr Butler defines thus the two fundamental mistakes which were made after the last war and which may well be made at the end of this: "The first was the supposition that the Kaiser led the country into war against the will of the people"—for the Kaiser, Hitler should now be substituted—"the second was the supposition that German society and German psychology had been radically changed by the disappearance of the Imperial régime, that contrary to all his past teaching and tradition, the German had been converted into a democrat"—now for the Imperial régime the Nazi system must be read. Believing in this total change of heart, the average Englishman was inclined to attribute the discontents of Europe to France's determination to hold Germany down. And there was even a touch of resentment in his attitude towards the Frenchman who, he felt, did not see so clearly the change of heart. Thus another illusion entered in: that France—unfortunate, frightened, disintegrating France—was really the potential aggressor and the chief exponent of the militarist spirit on the Continent.

Gullibility with regard to Russia sprang from an equal ignorance of history, but was doubled by the popular Left-wing thinking of the last two decades. It is to the illusions created by ideological thinking on the Left that Dr Brogan devotes most of his attention and anger. The Communists he sees as a body of people who have emitted a dark smoke screen of categories and slogans and myths

Towards a Sounder Foreign Policy—I.

Inter-War Delusions

THE people of this country, who found themselves immersed in war within little more than twenty years of the last peace treaty, must obviously be the last to maintain that British diplomacy in the inter-war years has been an unqualified success. Its one aim and purpose was after all, to prevent war, and now, once again, the country is not only involved in war but fighting the same enemy in company with most of the same allies. The basic problem facing the Government and people of Britain is twofold: to learn from the inter-war years what errors to avoid and then to apply the knowledge to the conditions prevailing at the end of this struggle. Otherwise yet another war will have been won to no purpose. It is to this problem of what has been done wrong and of what can be done right that Mr Harold Butler and Dr Brogan devote themselves in two recent books.* The

two works complete each other admirably, for while Mr Harold Butler deals more with the external sequence of events, Dr Brogan is busy tracking down fallacies and prejudices and hypnothesising their roots in the minds and wills of the people. Both writers are concerned with errors and fallacies, Mr Butler with their results, Dr Brogan with their origins. And the two books, read together, give an outstanding picture of the facts and fancies which were woven together to make up British policy between the wars. If the next peace is not to be another repetition of temporary lull and recurrent fighting, the same errors must not be repeated. As Dr Brogan puts it: "Ignorance is not the only cause of our present plight but it is one of them, and ignorance is, after all curable. It will not help us much if our hands are clean and our heads empty." The dissipation of illusion is the first step towards better policy and a more effective British rôle in international affairs.

Some of the most luxuriant fallacies about inter-wa

War-time conditions have proved the advantages of appointing the "Royal Exchange" as Executor and Trustee under a Will. This ensures a permanent and expert administration and can be associated with a private co-trustee.

the perspective wavers; dates and characters will not fit; and the catchwords of the 'thirties jostle with the opinions of the 'sixties as perplexingly as iron and bronze in the Homeric poems. Trollope had a scrupulous sense of time, and therefore of change in time. Dickens had none. It is idle to ask, as one of his earliest reviewers did, "When did Weller, Senior, live?", because Dickens did not know. He did not even know at what age he himself went to Chatham or how long he lived there.

A critic who, with the Annual Register in his hand, tried to date the novels by their political or economic allusions would find himself entangled in as many interpolations and transpositions as a German scholar might have recourse to in distinguishing the strata of the Iliad.

The historical student, therefore, must go warily with Dickens. "He did not care" to get the pieces into a true pattern, and many of them he flung or shoved about with impatient aversion. None the less, his novels, taken together, are a historic document of considerable significance for the light they throw on one persistent mode of political feeling in England. The reaction against Eldon, against Sidmouth, against the Duke of Newcastle and the old criminal law, bred in large classes, especially in that part of the middle class which was just inside the franchise and only just on the fringe of political influence, a sense of resentment, a disaffection, an angry, and sometimes virulent, intolerance of the existing order in all its aspects: its unreason, its corruption, its cruelty, above all its unfairness. By a selection of particulars, every social system can be made to appear vicious or absurd, because it has to be directed by human beings, and among them some are bound to do absurd and vicious things; and with these particulars the disaffected worked. The logical Radicals found their remedy in the precept and practice of accountability, and they were right; against some kinds of folly, and some kinds of corruption, publicity is the only, but also the adequate, defence. Carlyle and his oddly mingled train fixed their hopes on the Prophet and the Hero, and sometimes, as Mr House truly says, Dickens deviated that way too. But not for long. And

not for long could he follow any one way. Wholly without historic sense, he could not feel the grandeur of the historic growth about him. Nor could he so far master his discontents as to build with them—as Ruskin could—the framework of a better order. Once more, that infallible finger is laid by Bagehot on the weakness at the heart,

deficiency in the masculine faculties, in the reasoning understanding, and firm, far-seeing sagacity. It is these components that stiffen the mind, give a consistency to the creed and a coherence to its effects, which enable it to protect itself from a rush of circumstances.

And with Dickens the circumstance might be the starting point of a rich and glorious effusion of fancy, or a dreary and dreadful exhibition of self-righteous, denunciatory sentiment. No "broad perfection" here, but an inextinguishable flame, and, in it, unfused intractable masses of anger and pity, and the burnt-out slag of topical, conventional emotion.

Bagehot's contrast of Dickens with Chaucer keeps working in one's mind. No one would be at a loss if he found the three corners of his railway carriage occupied by the Franklin, the Man of Law and the Shipman. They would be talking of the agricultural call-up, Regulation 18B and the turn-round of freighters, and the new-comer could join in. But the world of Dickens is plotted by co-ordinates of its own, with its own untranslatable idiom. Estella, indeed, seems to have a dream-footing in two universes at once. But the rest of Dickens' people? Could any of them have ridden to Canterbury? They would have vanished as they issued from the gate of the Tabard, and to keep them company we must have vanished with them. But perhaps in the darker corners of Southwark, we might have stepped aside to let Bill Sikes and Nancy pass. And where the road has Sea Reach in sight—not far from Gad's Hill—Master Geoffrey and his companions might have paused for a friendly word with Abel the Hermit, expiating the errors of his own youth by a constant helpfulness to young pilgrims who had lost their way.

NOTES OF THE WEEK

The Economist

The paper shortage gets worse rather than better and with this week's issue of *The Economist* further changes have had to be made to save space. The most striking of these is, of course, the entirely new departure of beginning the leading article on the outside page. The decision to do this has been more unpleasant even than the decision to dispense with the grey-and-crimson cover two years ago. But the alternatives were either still further to reduce the volume of matter in the paper, which would have made it less complete, or to reduce the size of type throughout, which would have made it less legible. We feel confident that our readers will endorse the choice that has been made, and they can be assured that the cover will be restored at the earliest possible moment. As it is, it has been possible to confine the reductions to some of the records and statistics (which are, in any case, becoming scantier as the controls spread) and to certain small cuts throughout the paper which will be perceptible only to those who have to wrestle week by week with the make-up problem of fitting the various sections in. It may even prove to be possible to give slightly more space to certain sections which are of particular interest in wartime.

Mr. Curtin Goes to War

The Australian Prime Minister is evidently a man who does not very much mind what he says. He has shown that he is very sensitive to what other people say about Australia, but his recent remarks about the United Kingdom's part in the grand strategy of the war were, at least, ungracious. His first statement (which has had to be "explained") was to the effect that the British Government could not be relied upon to give the Pacific theatre of war its proper importance and that Australia, without regard to "traditional links or kinship" with Great Britain, would

look elsewhere; "the United States and Australia must have the fullest say in the direction of the democracies' fighting plan." It is a pity that Mr Curtin's choice of language is so erratic. It is a pity, too, that he gets belligerent when there is no quarrel. There is as much criticism in London as in Australia of the unpreparedness of the Empire in the Far East, and it is safe to say that there is as much realisation of the vital importance of the Malayan front. There has never been the slightest wish to leave Australia unconsulted or neglected. The Dominions have never been willing to create an Imperial War Cabinet in which all the British nations could share in the decisions and the responsibility, and the consequence is that it is the United Kingdom Government that has to do the work, subject to such consultation as time and distance permit. Nothing would please the British people more than for the Dominions to take the fullest share of responsibility—including that of co-operating with the United States. Indeed, what is alarming in Mr Curtin's statement is not what he says about Great Britain or the United States or Malaya, but what he reveals of his own state of mind. What happened on December 7th, he says, was not the extension of an existing war but the beginning of a new one. Does this mean that in his view Australia's real danger is only now beginning?

Alert in Malaya

Like Australia, Singapore is waking up to hard realities, and the awakening is a bitter one. Through a censorship which, ever since the war started, has been a by-word for strictness among journalists, a stream of cables has steadily recorded recriminations and criticisms about defence policy. Like Plymouth, Singapore has been caught unprepared by bombs. It has been inundated by refugees. The whole of Malaya, beyond Singapore, was as unready for invasion as France behind the Maginot Line. It is true that the

natural indignation of the Malayan plantocracy and the business men of Singapore, against the Legislative Council, the local Civil Service and Imperial strategy, would have greater weight now—as in the case of the irate politicians of Australia—if they themselves had been more percipient and more insistent about precautions, and less disquieted by the prospect of direct taxation, before the Japanese attacked. It is true, too, that Mr Churchill has explained away the loss of the *Prince of Wales*, the *Repulse*, Northern Malaya, Penang and, presumably, by implication, Ipoh and beyond by reference to the supplies needed to win the victory which has not yet been quite won in Libya; and there is an Australian force in Malaya still to meet the advancing Japanese. But it is equally true that the inadequacy of the defences of Malaya so far has inevitably been a grave shock to opinion out there and here in Britain. It is hard to believe that Mr Churchill and his advisers, judged at any rate by their speeches, did not believe that what had been done in Malaya was enough for safety. To beat General Rommel and lose Singapore would not only be disastrous, it would be nonsense; and it is wasted time for the authorities, in Britain or in Malaya, to pretend that there has not been miscalculation, as well as undoubtedly straitened resources and bad luck.

The task in Singapore and Malaya now is to make the best of a bad job. In Singapore itself, there has been a call from many quarters for Mr Duff Cooper's War Council to take over the civil administration, which is criticised as incapable of undertaking defence and security. Both in ARP and measures against fifth columnists the city seems to have been lax until the eleventh hour. Martial law has been proclaimed, though the civil government is to go on; and civil defence is under the directorate of the president of the municipality and a brigadier from Malayan Command—with a committee under the War Council in supervision. Moreover, the aid of the Chinese in Malaya is now to be accepted in all defence tasks. More than once in the past General Chiang Kai-shek's offers of seasoned troops to aid British defence in the Far East have been refused. Probably there is no bitterer realisation for these peculiar British communities in the Far East than the growing one that, if Hongkong, Penang, Ipoh and the rest are to be recovered and Burma saved, the greatest weight in the fighting on land will be exerted by the armies of China.

The War Fronts

The general picture of the war remains unchanged. In the west, it is going better for the Allies than ever before. In the east, it is going uniformly badly. The continued advance of the Russians is the pivot of the western scene. Round Moscow, the Germans have been compelled to give ground in every sector. In the Crimea, far from achieving the capture of Sevastopol, they have been thrust out of Kerch and Teodosia by a brilliant Russian land and sea offensive launched across those same straits of Kerch which were to have been Germany's gateway to the Caucasus. The Russians are winning—have indeed won—the first major victory of the land fighting of this war. It remains to be seen whether the Battle of the Marne or the 1918 retreat is the correct analogy. The amount of ground recaptured is not yet very sensational—the Germans have weeks' fierce fighting. Everything turns on their powers of adapting themselves to winter conditions. The "wool-gathering" in Germany, the frank broadcasts to the German people on the hideous sufferings at the front, are not necessarily pointers—as so many optimists would believe—towards immediate collapse. Indeed, the openness with which the German people are confronted with their disasters suggests a confidence in their staying power which the spokesmen at Singapore, for example, do not appear to have in the British public. In Libya, too, although Benghazi has fallen and the fighting has now reached the Gulf of Sirte, Rommel's armies which a week ago were "scattered remnants" have counter-attacked vigorously and are still showing a great deal of fight. Let there be no chicken counting, least of all when the chickens are German. The Far Eastern situation can only be described as being in a state of deterioration. The fall of Hongkong after prolonged and gallant resistance was, obviously, inevitable. The analogy of Tobruk bore no reference to the situation, since the British had not command of the sea round the

island. The really disturbing question is the fate of Singapore. The Japanese are continuing their purposive investment of the base. To the north, Ipoh has fallen and the advance continues. The process of bottling up still further the Straits of Malacca has begun with a heavy Japanese air raid on the airport at Medan, the capital of Sumatra. To the east, Sarawak's capital has fallen and, with renewed Japanese attacks and landings on the coast above and below Manila and the withdrawal of the Philippine naval forces from Lingayen, it looks as though Manila itself will be lost. After it was declared an open town with blackout and defences removed, Manila was mercilessly bombed. Washington reports that reinforcements are on the way and that the American fleet is not being idle; but the danger is that to reinforce so exposed a position—thousands of miles from the nearest American base, and even more isolated since the Japanese capture of Wake Island—might well be more costly than is warranted by the strategic advantage of holding the Philippines.

Representative Government

The Home Secretary has set up a committee of Members of Parliament to advise him on the making of new electoral rolls and the redistribution of parliamentary seats for the next general election. This step in no way means that a war or armistice election has been decided upon; it is a routine precaution which is obviously necessary because of the growth and movement of the population, which have made the present registers of voters and the arrangement of constituencies, already antiquated before the war, very much out of date. Nevertheless, it must now be recognised that the suggestion which was made some time ago by several Ministers, of all parties and including Mr Churchill, that there might be no election until three years after the armistice, has fallen on very stony ground. Among most interested voters, and at the various party headquarters, it is generally assumed that there will be an early peacetime appeal to the electorate. Behind the scenes, positions are being taken up, not only by the parties themselves, but also by their factions which, in the Conservative party at least—standing as it does in the same dangers as the Liberal party at the end of the last war—may represent the immediate issues more than the formal alignments do. Whatever the protagonists, Churchill v. Baldwin—not the men but what they have stood for—is still the main bout to be settled by the professionals in the political ring when it is opened again. More fundamentally, the most important question which must still be placed before the people for their decision—the proper balance of order and freedom, of corporate effort and individual enterprise, in the dynamic democracy which the people at large, very vaguely but very earnestly, desire—cuts across all the formal party frontiers. The need is for a representative House of Commons, representative not only of numbers and their geographical location, but also of the needs, the aspirations, the talent and the intelligence of the whole com-

More than a century's accumulated business experience and conservative progress form the background of the comprehensive service which the Westminster Bank is able to place at its customers' disposal.

The Bank's vast resources, its constant touch with current affairs and its extensive system of branch offices in England and Wales and agents elsewhere, combine to enable it to offer a wide range of facilities, details of which will gladly be given on request by the manager of any branch.

WESTMINSTER BANK

munity. Except that it has had the wit to raise up and follow Winston Churchill, the present Parliament is representative in neither sense. It is senescent, in both its own and its Members' years of life; and it is mediocre. The mechanical first steps which Mr Morrison is taking to provide for a new House when the time comes are essential. But they will do nothing in themselves to meet the need for a more representative Parliament in the deeper sense; that is the task of the parties and the people. The real question is why able men do not enter Parliament. One of the answers is financial. In pay and expenses, they would be losers; and the payment of election expenses by the state, with a proviso to restrain freak candidatures, would kill two birds with one stone, by opening the door to talent and by preventing the way from being blocked by nonentities picked only for their ample means.

Washington and the Free French

On Christmas Day, the Allied peoples were surprised to hear that a small Free French force had taken over the islands of St Pierre and Miquelon, lying just off the coast of Newfoundland. Thereafter they were still more surprised to find the action strongly condemned in Washington, and Admiral Muselier's forces referred to as the "so-called Free French." There appeared to be singularly little justification for this hostile attitude, since the inhabitants warmly welcomed their liberators and the change of allegiance meant the loyal and unquestionable adherence of some strategically important islands to the Allied cause. It was at first thought that Canada and London shared the State Department's displeasure, but reports of Canadian assistance on the one hand and Mr Churchill's emphatic references to France, the subservient and the free, in his speech to the Canadian Senate and House of Commons on the other, left the United States as the only critic. This much can be said for the attitude of Washington. The Free French have pooled their resources in the common effort, and one of the conditions of its effective working is that no one should walk out of turn. Again, a violent change—if violence is the *mot juste*—in the western hemisphere, accomplished without the prior consent of the United States, is a violation of the Munro Doctrine. Nevertheless, the displeasure of the State Department sprang primarily from the fact that American diplomacy is still hoping to keep Vichy from total surrender to the Axis. The fruits of their labour so far have been the steady rise of Darlan to power, the dismissal of Weygand, and ever closer economic collaboration. Nevertheless, so long as there is no open German occupation of North Africa, they go on hoping—indeed, the colonial empire which has so often been supposed to be Vichy's main bargaining counter with Germany, has turned out to be its principal instrument for pressure on the English-speaking world.

Straight Words to Vichy

If the Americans could react so unfavourably to the Free French action, the British attitude towards the Free French in the last year is in part to blame. Nothing illustrates so painfully the lack of positive thought in diplomatic circles about the responsibility of Britain to Europe, and the necessity of securing in Europe a firm basis of friendly collaboration. The handling of the French problem has suggested over and over again that, if anything, the Free French were a rather embarrassing liability instead of a gallant band of helpers in the common cause. Mr Churchill's remarks on Vichy and on General de Gaulle in the course of his Ottawa speech may, therefore, mean more than a judgment of history on Vichy and an appreciation of the Free French. They may, perhaps, mark the beginning of a more positive attitude towards the future and organisation of Europe. Mr Churchill for the first time specifically excluded Vichy, as a quailing régime, from a place "as a nation in the counsels of the Allies and at the conference table of the victors," and at last described "the men of Bordeaux, the men of Vichy," in language from which the maddening diplomatic discretions of the last year were banished. "They lay prostrate at the feet of the conqueror," they fawned upon him." The ban on Vichy must now be firmly extended to all the quailing régimes. The delays which marked the British declarations of war on Roumania and Hungary, which still prevent a firm attitude to Bulgaria, suggest a state of mind to which appeasement is still sweet, and into which the realities of the European situation—the division not so much between nation and nation as between quislings and faithful men—have still not penetrated. It is to be hoped that Mr

Churchill's Ottawa speech is the first stage in a campaign to blow away all the cobwebs.

American War Organisation

The fortnight that has passed since the last brief chronicle appeared in *The Economist* of the steps that the United States is taking towards total war has been filled with a steadily widening stream of legislative and executive actions, and it is again possible to give only the briefest summary of their nature.

The First War Powers Act, signed by the President on December 18th, confers on him powers even greater than those exercised by Woodrow Wilson. In particular, he is empowered to reorganise the executive branch of the government as he sees fit; to remove all restrictions on contract letting (such as the peacetime requirement of competitive bids); and to control the whole banking system.

After considerable argument about the lower limit of age for conscription, both Houses of Congress agreed on an Act which provides for the registration of all men between 18 and 64—a potential reservoir of 40 million men—and for the liability for conscription of all men between 20 and 44. This liability will fall on approximately 20 million men, but the enlistment of 4,000,000 is the present goal, with a further objective of 7,000,000. The President is empowered to grant deferment by age or other groups. An insurance policy of \$5,000 is automatically granted to every enlisted man, with the possibility of applying for a further \$5,000. Volunteering for the Army is to be suspended as soon as the present rush is over.

The White House Labour-Management Conference, after some days of deadlock over the closed shop issue, reached an agreement whose main heads are—no strikes or lockouts; peaceful settlement of all disputes; creation of a special War Labour Board to arbitrate disputes. On the President's decision, applications for a closed shop will not be debarred, and will therefore be subject to arbitration. The task of providing man-power for industry is to be concentrated in the US Employment Service. The immediate expectation, however, is of increased unemployment owing to the shutting-down of civilian industries.

The Senate Banking Committee has approved an amending Price Control Bill which would transfer the power of price control from the contemplated Board to a single Administrator and confer on him the power of licensing traders and of buying and selling commodities. Price fixing orders have been issued for many textile goods.

A first outline of the financial problems of war is beginning to appear. The total of appropriations for defence (including the commitments of the RFC) is now \$74,444 millions. Expenditure on construction for defence purposes in 1942 is estimated at \$11,250 millions. Total war expenditure in the fiscal year July, 1942-June 1943, is estimated at \$50 billions, or very nearly four times the rate of recent months. The Treasury is believed to favour a plan for a tax on all incomes to be deducted at the source, but there is support in Congress for the alternative plan of a universal sales tax. A Joint Congressional Committee has recommended reductions in non-defence expenditure amounting to \$1,301 millions, chiefly affecting relief agencies and public works.

The production of tanks, which is said to be 840 units in December, will be 2,800 a month by the end of 1942. Machine tool production is to be doubled.

Production capacity for synthetic rubber is to be tripled, to 120,000 tons a year, by early 1943. (Normal consumption is about 500,000 tons a year.)

All supplies of tin are subject to allocation, and an order is to be issued limiting the uses of tin and tin-lined cans.

The output of 100-octane fuel is to be raised from 40,000 barrels a day to 120,000 barrels by early 1943.

The Economic Defence Board has been renamed the Board of Economic Warfare. An Office of Defence Transportation has been created under Mr Joseph Eastman.

Chinese Policy

The recent visit of General Wavell to Chungking and the appointment of Mr T. V. Soong as Foreign Minister both draw attention to the key part which China has played for four years, and is destined to continue to play, in the Far Eastern war. The appointment of Mr T. V. Soong, who is still in Washington, does not indicate any lack of appreciation of the outstanding ability of Mr Quo Tai-Chi, but is designed solely to confer adequate status on China's representative at the Washington conversations. It must be emphasised that Mr Quo Tai-Chi, in his new appointment of chairman of the Supreme National Defence Council, is still in a position to influence the formation of policy. In Chungking, General Wavell's discussions with General Chiang Kai-shek have covered such pressing military considerations as the Allied use of Chinese man-power; the supply to China of Allied equipment and the immediate problems of defending the main supply route: the Burma Road and Rangoon. The Chinese Government,

for their part, are offering some 250,000 seasoned Chinese troops for the defence of Malaya. It is apparent that the main contribution that the United States can make, and is already making through the operations of the American Air Squadron in defence of the Burma Road, is that of air support. It is particularly fitting that Mr T. V. Soong, who from the outset of the China "Incident" favoured unqualified resistance and has attacked appeasement wherever he saw it, should take control of foreign policy at the moment when the Far Eastern conflict has merged into the European struggle. Now he can face the British and American authorities in Washington as an equal and not as a suppliant. The two wars meet in Malaya and Burma, where Chinese man-power and Anglo-American equipment are complementary assets.

Iranian Route

The outbreak of war in the Pacific, and the consequent difficulty of supplying the USSR through Vladivostok, lends added importance to the route via the Persian Gulf. Further potential significance is provided by news that the United States is building a Middle Eastern base in Eritrea. Internal communications in Iran have made considerable progress in the last ten years, and the roads now rank among the best in the Middle East. The railway system, however, consists in little more than the main Trans-Iranian line from Bandar Shapur on the Persian Gulf to Bandar Shah on the Caspian Sea. This line, which was fortunately completed in 1938, was constructed mainly in order to render Iran independent of her neighbours through the provision of direct rail access to the sea. Consequently, no link was contemplated with the Russian rail system. So far, a high proportion of the freight intended for Russia has had to be transferred to lorries over the mountainous section of the haul, but it is expected that further development of the line and the arrival of two cargoes of rolling stock from Great Britain will shortly enable the journey to be made without interruption. Work has now started which will link the short branch line from Teheran to Kazvin with the Russian system at the point where a line runs across the frontier from Tiflis to Tabriz. The establishment of this link, which requires the sacrifice of certain preconceived ideas regarding Iranian detachment, is undoubtedly necessary to the adequate supply of the Soviet war machine. From the Iranian standpoint, there can be little doubt that the present development of the railway system will do much to assist a renewed policy of modernisation after the war. For the moment, the presence of foreign officials, whether British or Russian, can hardly prove congenial to a country which in recent years has been outstanding in its endeavour to extirpate foreign influence. The co-operation displayed by the Iranian authorities is correspondingly far-sighted; no doubt it implies a recognition that a German occupation would be less considerate and less temporary.

General Post

Commanders come and go in wartime as the battle fluctuates. It is a process of trial and error, in the British and German armies alike. But the latest British appointments, unlike the self-promotion of Hitler, suggest that the recent period of experiment, marked by the shuffling in November of the Imperial General Staff and several Commands, has now come to an end. There was a snap change in Libya in December; it was no shot in the dark, but the quick practical decision of the man on the spot, that led General Auchinleck to replace Lieutenant-General Cunningham by Major-General Ritchie at the crisis of the Libyan campaign. Lieutenant-General (now General) Pownall replaced Air-Marshal Brooke-Popham as Commander-in-Chief in the Far East after the first disasters in Malaya; but the change had already been decided upon before Japan went to war. What is happening is that the picked and proved commanders are taking up their stations as the war spreads. The appointment of Lieutenant-General Hutton, Chief of the General Staff in India, to be GOC Burma, is a case in point. Burma is now in the front line of Indian and Chinese defence. Its outworks in Malaya have been breached; and responsibility for its defence has been assumed by General Wavell, whose command already ran from Iraq and Iran to India and Ceylon. Last week, General Wavell went to Chungking and talked with General Chiang Kai-shek and Major-General Brett, of the United States Army, about the defence of China and Burma. The announcement of Lieutenant-General

Hutton's new post was a considered move in a plan to defend more than 800 million people against attack. It is only because Malaya is so linked with the sea and island strategy of the Pacific that its command is separate from the Indian bloc behind; and, now that the hinge has been broken at Penang and Point Victoria, it is arguable that the skill and experience of General Wavell, who knows the mind of the Russian and Chinese commanders, and has a large and growing army in India and the Middle East proper, should have been stretched out to Singapore. Liaison is the key to victory, not only tactically between sea and air forces in naval operations, and between land and air forces in assault and in defence of fortified lines and airfields, but also strategically between commander and commander, and between country and country. In battle and in manoeuvre, the enemy strikes at the joints; in Malaya, Burma and India, whatever the demarcation of commanders' responsibilities may be, the seasoned troops of China and the small, sturdy, effective forces of the Dutch East Indies, who complain of a lack of co-ordination, are vital allies. The ex-CIGS, Field-Marshal Sir John Dill, is to remain in Washington to work with the American military authorities; not only the plans for victory, but also their detailed execution in the field, must be done by Allied neighbours in harness.

After Mr Gandhi

It is very difficult to make out what effect the meeting of the Working Committee of Congress has had upon the chances of political co-operation in India. At the meeting, a three-cornered struggle apparently went on between those who favoured participation, on terms, and those who did not, with Mr Gandhi and his followers, as pacifists and passive resisters, the third party. Sympathy in their struggle against aggression was expressed by the Committee with "the peoples fighting for their freedom" and, specifically, with the peoples of Malaya, Burma, the East Indies, Russia and China, but not with those of Britain, the British Dominions, the United States—or India; and British rule was characterised as "an arrogant Imperialism which is indistinguishable from Fascism." The ostriches' heads are still below ground. The one tangible upshot so far has been the resignation of his leadership by Mr Gandhi, which ends the confusing anomaly of a far from pacifist political party being headed by a believer in non-participation in all wars. Even now, as often before, it is not clear that the Mahatma has really gone, for "Congress will render him full assistance in the prosecution of his mission, including the offering of civil disobedience." For the rest, the result is even more wrapped in riddles. It appears that Congress is prepared to participate in the war if the Government will give them an "adequate" share in its conduct and if Dominion status within a fixed period is pledged. This seems to be a return to the less intransigent position adopted earlier in the war, before the demand grew for independent government and a new constitution at once. It is a thousand pities that there is no normal contact or common meeting ground between the Nationalists and the Government. It is fatuous to call the Government "Imperialist," but more justifiable, in the strange set-up of Indian society, to call it "arrogant." But it is hard to see how the Government can set up an immediate National Government of the sort that Congress appears to want. On the face of it, the Congress demands are still not viable, if only because of the determination of other parties not to be ruled by Congress, war or no war. But, equally obviously, a new and powerful leaven of moderation has been at work in the counsels of Congress; there are new potential allies there; and it is the duty of the Government to go to the limit of practicability

in offering a compromise. Nor is it simply a question of finding an accord in the war effort. The departure of Mr Gandhi is the exit of non-violence. The fact must be faced that non-violence is rejected by Congressmen who oppose the war as well as by those who are ready to support it; and 1942, with the war rolling nearer to India, promises either co-operation or conflict.

Official Intelligence

The news that there has been a change in the Public Relations Officer at the War Office—Colonel Walter Elliot has been replaced by Major-General E. F. Lawson—inspires some general thoughts about the functions and duties of this curiously modern breed of bureaucrat. It is obviously an excellent idea, well attuned to democratic practice, that the departments, Service and civil, should explain to their masters what they are doing and why; and the aberrations of military spokesmen, in London, Cairo and Singapore alike, are a clear pointer to the new man at the War Office of the primrose path to be avoided and of the straight and narrow path to be pursued. There has been too much over-rosy painting of the strategical chances of the Army in the field, and by contrast too little attention to the tactical excellence of individual military operations. The RAF bomb an airfield and the BBC, advised by the Air Ministry news service, is ecstatic; a mobile column of soldiers wrecks another airfield at great hazard, and the comment, also on the basis of an official hand-out, is routine and muted. But the errors of public relations work go wider than this. In nine cases out of ten, these official press agents deem it their duty to hand out boosts, puffs or "good news," while what the newspapers, the BBC and the people really want is facts and figures. The position now is that a newspaper man rarely pays any more attention to a departmental hand-out than he would to an advertisement for a patent medicine or a patent food; and the mere reader or listener regards every *communiqué*, apart from rare ones from the Admiralty, with an extremely critical eye or ear. Civil departments speak through their public relations officers of unending record achievements, while at its nadir, in Malaya, military publicity has reached the stage where, with a crazy logic, "the situation is unchanged" means "the enemy is still advancing." Publicity of this sort defeats its end, and exasperates, by monstrous iteration. No one is blameless; the civil departments are as bad as the Services, the Dominions and Empire offices not a whit better, with their monotonous and uncomparative lists of great deeds done in field and factory. Probably those people who demanded the enlistment of commercial advertisers and professional methods were, after all, wrong. Advertisement has only relative values. It knows no facts as the public wants them; and it is only on the basis of facts and figures, of exposition rather than of justification, excuses or "writing-up," that this parade of public relations can be justified by its results.

The New Divide

On January 5th, the new National Health and Pensions Insurance scheme comes into force, and from that date non-manual workers will be compulsorily insured up to an income limit of £420 a year instead of £250. A similar rise in the income limit for unemployment insurance came into force in September, 1940, and the delay in bringing National Health into line is merely another example of the strictly departmental way in which the social services are administered. But is there any greater virtue in the new dividing line than in the old? It was obviously a silly anomaly that allowed manual workers to continue in insurance whatever their earnings, whereas the black-coated worker was thrown out as soon as his earnings exceeded £4 16s. 2d. a week, but the anomaly is still there, although in the latter case the limit is now £8 1s. 6d. The distinction in the treatment between manual and non-manual worker arose from the normally more precarious nature of the former's earnings; moreover, many employers of black-coated workers continue to pay their salaries when they are ill. But, in wartime, it is the manual worker who has the advantage, and the middle-aged and elderly clerk who finds the struggle hardest; and the new provision, together with the increased rates of sickness and disablement benefit, is certainly welcome. It is, however, just as anomalous to draw the line between £421 and £419 a year as it is to draw it between the presumed precarious wage and the certain salary. There can be no social justice in a system which fixes a point below which the State is

allowed to relieve distress, while above it relief is dependent upon charity, any more than in the flat-rate payments by which State relief is dispensed. Once again, the only conclusion to be reached is that the basic principle on which the social services should be administered is the establishment of a social minimum coupled with family allowances.

The Higher, The Fewer

"While the development of a tin-smelting industry in the United States is against the economic long-term interests of the British Empire, military considerations alone count at the moment." Possibly this passage in a sober and representative newspaper just before Christmas escaped much notice in the holidays. Actually, it is worth close attention because it is so naively typical of the narrow nationalism that makes a mockery of economics. The strategic point is, of course, well taken. Even while Malaya was still intact, the world was greedy for more tin for war-making. Now, with Japan and the United States in the battle and Malaya split by the invader, every source of smelted tin is doubly precious. But it is not only in wartime that abundance is preferable to restriction. In the long term that this dictum talks about, more tin is surely preferable to less tin. There may be empirical grounds for controlling the output of raw materials, including tin ore, to steady prices and save producers from catastrophe in depressions. There can be none, on any grounds, for maintaining a deliberate bottleneck in smelting, by which primary producers, the British Empire and the whole world, all alike, are poorer; in any term, long or short, the fact that the British Empire is a vast consumer of tin is not unimportant, to say the least. The development of a tin-smelting industry in the United States, or anywhere, might, of course—the Japanese invasion apart—embarrass particular Malayan tin-smelters, which is probably what the statement means; but that is a different matter. Perhaps it is not too fanciful to suggest that this identification of a single vested interest with the entire British Empire and, by logical inference, with the world at large, reflects an attitude which has played no small part in creating the short-sighted complacency which has been shown up in such a lurid light lately in the far-flung eastern outposts.

Shorter Notes

In the absence of any satisfactory machinery for enabling the Dominions to take part in allied decisions, the tendency so far has been to strengthen representation in the different centres by the appointment of men of Cabinet rank. The latest appointment of this sort is that of Mr Walter Nash, Finance Minister in Mr Fraser's Government, who will be the first New Zealand Minister in Washington.

Two raids show that Britain has daring and efficiency to compare with any of the belligerents. Just before the beginning of the Libyan campaign, a small British party, landed by submarine far behind the enemy's lines, made a sensational raid on Rommel's headquarters and were able, after forty days in the desert, to rejoin their base. The other raid, on the island of Vaagsö off the Norwegian coast, was a very pretty piece of work. The German garrison was wiped out and all important installations were wrecked. While the Navy landed the Army on the island, the RAF kept all German aircraft from the scene by heavy bombing of enemy air bases as well as fighter protection. *Admiral's omen.*

The "nationally important cat" is now assured of his place in the sun. Damaged supplies of dried milk will in future be allocated to lean, keen cats, who justify their existence by exterminating warehouse and other vermin. In this matter the Ministry of Labour lags behind the Ministry of Food, but cat registration may well follow. In the Army it has long been customary to place aggressive cats, as well as operational dogs, on the strength.

A new stimulus to what is now generally known as Britain's paper chase is a competition between the local authorities, with prizes for those that collect most paper per head of their population. Such attempts to encourage the saving of waste paper may be applauded, but it is to be hoped that the Waste Paper Recovery Association will not fall into the old error of the National Savings Committee and look upon subscriptions to the nation's store of waste paper as more important than a steady curtailment in the consumption of new paper itself.

THE WORLD OVERSEAS

Argentine Democracy and Neutrality

(From Our Buenos Aires Correspondent)

December 3rd

AN ominously sharper edge to the long prevailing Press criticism of the Castillo Cabinet's conduct of both home and foreign affairs is one result of the Government's decree banning meetings of the popular and nation-wide democratic movement, *Acción Argentina*, which was to have held 3,000 public meetings throughout the country on November 29th.

The movement is a non-party one operating under the slogan: "For the triumph of democracy inside and outside the country," and it enjoys wide support among acknowledged leaders in the political and cultural fields as well as a large popular following. Its programme expressly repudiates electoral abuses; "the Government's policy of isolation as regards other American countries"; and the attitude of the Foreign Minister, Dr Ruiz Guiñazu, which it considers "intemperate and inconsiderate" towards the Chamber of Deputies Committee for the Investigation of Anti-Argentine Activities, but "tepid and vacillating towards the diplomats directing the campaign of Nazi penetration" and "the activities of the Fifth Column which is preparing for the country's surrender." On the other hand, the movement declares its "adhesion to Great Britain and her Allies in their fight for civilisation and liberty, to the United States in their policy of constructing an American front which will decide the war, and to the peoples oppressed by foreign powers or by their own authorities controlled by foreign powers." Finally, *Acción Argentina* expresses its "unity with the world in condemning the mass assassinations of civilian hostages."

In banning the projected meetings at which these affirmations were to have been made, the Minister of the Interior, Dr Culaciati, stated: "The offence to the authority charged by the Constitution with the management of foreign affairs obliges the prohibition of assemblies of a character evidently conspiring against the public welfare and orderly government." The ban, in the enforcement of which provincial authorities were requested to co-operate, was not enforced by the Governor of Entre Rios Province, on the grounds that he had assured himself of the democratic aims and the legality of the meetings projected within his jurisdiction. His rejection of the Federal veto, which closely follows a recent Supreme Court ruling on the unconstitutionality of police powers to prohibit assemblies in closed premises, makes it clear that *Acción Argentina's* intention to obtain a Supreme Court decision on the ban will raise a constitutional issue of high importance affecting the rights of assembly and free speech.

Besides the many accusations of high-handedness levelled at the Federal Government over this incident, the examples set by Great Britain and the United States of the importance which democratic government attaches to these rights have been repeatedly cited. Illustrating the rising temper of the Press, *La Nación* claims that "for many months the Government's policy has failed to satisfy the country," while the Socialist *Vanguardia* warns the Government that in banking on the people's tolerance it is playing with fire.

Nazi Intrigues

The parliamentary "Committee for the Investigation of Anti-Argentine Activities" has now published the fourth and fifth sections of its report. In this, it claims that local German educational authorities have helped Nazi penetration, and that the Argentine branch of the *Arbeitsfront*, which was dissolved by Government decree some years ago, is still active in the guise of the German trades union,

of which many technical employees of the State are members. The public agitation for energetic action by the Government, caused by the publication of these reports, is a factor which *Acción Argentina* has zealously capitalised in its campaign.

The embarrassment in which Acting President Castillo's Cabinet finds itself by its efforts to walk the tight rope of the strictest neutrality and, therefore, by its policy of regarding the Reich as a friendly power, is likely to be further aggravated should the findings of Judge Vasquez (who is reported to be studying the evidence of the Investigating Committee) set the seal of a constitutional judgment on the Committee's charges. In a statement to the German Ambassador, the Foreign Minister formally dissociated his Government from the opinions expressed in Congress last September, when the Chamber of Deputies passed a practically unanimous vote of censure on the German Ambassador as a result of the Committee's earlier reports. Congress is now in recess, but the work of the Committee goes on. In some quarters, it is considered possible that before the Chamber of Deputies has a further opportunity of discussing its Committee's report, there may be developments in the case laid by the Committee before Judge Vasquez, which is now *sub judice*.

That Argentina's democratic system is consistent with neutrality is a principle which no body of opinion in this country to-day would contradict. That, on the other hand, her neutrality should be maintained at the expense of her

democratic institutions is a possibility which is perturbing public opinion more and more; it is envisaged in a manifesto just issued by *Acción Argentina* in answer to the Acting President's recent Press statement—referring to the ban on the movement—that “the Government will not tolerate the intervention of a corporation of citizens in the direction of its foreign affairs, which under the Constitution is the sole prerogative of the nation's executive power.” Disclaiming any pretension to intervene, but expressing astonishment that there should be any attempt “to deprive citizens of the right to express opinions as to the use, discretion or orientation of the constitutional mandate,” the manifesto goes on to state: “If our neutrality were to be maintained at the cost of our sovereignty or of the fundamental principles which govern our democracy, *Acción Argentina* would be belligerent . . . but meanwhile there is nothing to warrant such an attitude.” It is worthy of note that a cardinal point of the movement's policy since its inception a year and a half ago has been strict respect for the neutrality decreed by the Government.

Substitute Motor Fuels in Sweden

[BY A CORRESPONDENT]

December 20th

BLOCKADED by both Great Britain and Germany, Sweden has been isolated from most of her normal oil supplies. Though certain quantities of refined products have been received this year from Roumania, imports of petroleum have been far below the pre-war level. With a normal consumption of around 1,500,000 tons of petroleum products a year—nearly half of which consisted of petrol—Sweden has no crude oil production, and the Government has therefore been faced with considerable difficulties in the endeavour to make good the shortage of liquid fuels. The problem has, however, been tackled energetically and with a remarkable degree of success. As accumulated stocks have dwindled, stringent restrictions have had to be imposed on the use of petrol, lubricating oils and other products for all but the most essential purposes; but, by means of the fullest exploitation of various substitutes produced at home, it has been possible to keep all necessary road traffic in operation.

One alternative motor fuel has for many years been used in small quantities in Sweden. This is “sulphite” alcohol, which is obtained as a by-product from the wood-pulp industry. When blended with petrol this makes an excellent fuel, though it cannot be used by itself for automotive purposes. Production of “sulphite” alcohol suffered a temporary decline last year owing to the loss of markets for the wood pulp, but this has now changed. Various experiments have been made with a view to increasing the yield of alcohol from the raw material, and Government subsidies have been granted to manufacturers of the product. Output capacity is now between 35,000 and 40,000 tons of alcohol a year, a quantity which, though small in relation to pre-war petrol consumption, is very useful in present circumstances. Among other alternatives of minor importance, mention may be made of methane gas, manufactured from sewage and garbage. Though the quantities so far obtained are small, methane is an extremely high quality motor fuel (with an anti-knock quality much above that of ordinary petrol) and offers considerable prospects.

Of greater potential importance than alcohol or methane is the country's growing shale-oil industry. The crude oil distilled from shale is capable, after treatment, of yielding a good quality petrol, and a considerable increase in supplies from this source is likely before long. Under the encouragement of the Government, considerable progress

in the treatment of shale has been achieved by Swedish technologists. The state shale-oil plant at Kinnekulle (in Vaestergoetland), which came into operation early this year, has an annual capacity of about 15,000 tons of crude oil and also turns out a certain amount of first quality sulphur and other valuable by-products. A new plant is at present under construction at Kvarntorp (Naerke province), where abundant supplies of the raw material are obtainable. This has a capacity double that of the Kinnekulle works, and is expected to be in full operation by next June. Other shale-oil plants have also been planned.

Producer-Gas

The greatest progress has, however, been made so far in the field of producer-gas—a mixture of gases, consisting principally of methane, hydrogen and carbon monoxide—obtained by burning solid fuel in a suitable generator. Though appreciably less efficient than the petrol engine, this method of propulsion offers extensive possibilities in a country like Sweden, where timber supplies are abundant. A Government company was formed in the summer of 1940 to foster the production and use of generator appliances, and remarkable progress has been recorded. Just after the outbreak of war, there were only a few hundred producer-gas vehicles in Sweden, and by September, 1940, the total had risen to no more than 6,000. Now, however, there are well over 70,000 such vehicles, of which about 40 per cent use wood as the basic fuel. When it is recalled that there are no more than 150,000 producer-gas vehicles in the whole of German Europe, the magnitude of the Swedes' achievement will be appreciated. Against a pre-war total of 65,000 petrol and diesel engine commercial vehicles, Sweden now has at least 45,000 operating on solid fuels. Producer-gas propulsion is not so easily adaptable to the needs of the private car, and many of the country's 155,000 motor cars are no longer on the roads. But some 26,000 have been converted to the use of solid fuels; and experiments are also being made with the use of producer-gas appliances for fishing vessels, stationary engines and other purposes. In the development of alternative motor fuels, Sweden can justly claim to be in the van.

Change Over in America

[FROM OUR NEW YORK CORRESPONDENT.]

December 13th

THE past week has been so completely preoccupied by the succession of military events occurring in such rapid sequence that it is impossible to make more than the most superficial comment upon their economic accompaniments. Of these, the most recognisable was a sharp break in the stock market on Monday and Tuesday. By Wednesday, the market steadied and on Thursday and Friday it rallied; it closed on Friday night only slightly lower than it was two weeks earlier. The volume of trading was relatively high, but not absolutely; and the net movement of the week could hardly be described as more than a flurry.

There was even less movement in the bond market, although this was caught in what might have turned out to be a vulnerable position. In the previous week, the Treasury had offered \$1,000 millions of 2½ per cent bonds, 1967-72, and \$500 millions of 2 per cent bonds, 1951-55, allotments to be made Monday (December 8th). On this offering, comparable issues then selling at a premium weakened slightly; and on Monday and Tuesday there was some pressure on the market. The Reserve Bank statement indicates that some support was provided; but the small figure of Reserve Bank purchases (\$12 millions) at Tuesday's close indicates the extremely moderate character of the selling. Greater price changes appeared in corporate and municipal obligations. Altogether, the security markets weathered a crowded week without anything like the disturbance that characterised the opening day of September 1939.

In the organised commodity markets there was even less to record, as a considerable measure of control already existed and was promptly invoked.

In production, there was an immediate decision to make the seven-day week general in defence industries, but it is not clear how much of a departure this marks from existing practice, or how much it will increase the actual hours worked. As late as August, the working week averaged only 41 hours, although in machinery it was 45, in non-ferrous metals and products 43, and for durable goods as a group

42.6. Since August there has probably been some step up in the average hours worked. One feature of the week was the total disappearance of strike news.

Changes in the Canadian Government

[FROM OUR OTTAWA CORRESPONDENT]

December 14th

THE death of Mr Lapointe has been followed by some other changes in the King Cabinet. For the vacant Ministry of Justice Mr Mackenzie King has brought in Mr Louis St Laurent, KC, of Quebec City, and his selection commands almost universal approval. Mr St Laurent has been for many years one of the leaders of the Bar of Quebec; he is free from extreme racial prejudices; he is popular with all classes of his own community, and his only serious defect, his complete lack of political experience, may not prove a drawback. Mr Pierre Casgrain, KC, the Secretary of State, has become a Judge of the Superior Court of Quebec, and Mr Mackenzie King has taken the opportunity to transfer to his post Mr McLarty, who has been a notorious misfit in the Ministry of Labour. The latter has been given to Mr Humphrey Mitchell, an Englishman by birth, who was a trade union leader and sat in Parliament for a term as a CCF member. For some years past, he has been in the civil service and last month was named chairman of the National War Labour Board. Mr Mackenzie King has also given an undertaking that further Cabinet changes in the near future will fully restore the due proportion of Quebec's representation in the Government.

The Government has also made some disclosure of a plan for the more effective mobilisation of Canada's manpower. Its basic principle is that the authority conferred by the National Resources Mobilisation Act of June, 1940, will allocate some kind of war service to every adult Canadian who is physically fit. It is to be called a system of “selective national service” and will be operated by a number of boards. At present, the scheme has not been fully worked out, and some weeks may elapse before the full details are announced. But women as well as men will be affected and no class will be exempted. A farmer's son, for example, will not be automatically exempted from any other kind of war service on account of his existing occupation, and if it is found that a munition worker could be more useful in the fighting forces, he will be sent there. Special efforts will be made to bring more women into industrial war work. At present, it is estimated that some 575,000 Canadian workers are engaged in war industries and that of these about 75,000 are women. It is calculated that the war industries will require during 1942 to increase their labour force by at least 100,000, and it is hoped that more than half this number will be women. But the Government has evidently made up its mind to defy the agitation for the removal of the present limitations upon military conscription.

The new price ceiling has been in operation since December 1st, and, although the Wartime Prices and Trade Board has been inundated with a flood of complaints and protests, it seems to be working with less friction than was feared. In its administration the Board is applying a certain measure of flexibility and, without allowing any departure from the fundamental principles of the scheme, is making adjustments to obviate proved hardships. It has already had the effect of stabilising prices, for during the first week of its operation the wholesale price index of the Bureau of Statistics recorded its first noticeable decline for many weeks by falling from 93.9 to 93.6.

A bulletin recently published by the Bureau of Statistics places the total value of the principal field crops produced in Canada in 1941 at \$649,058,000, a fall of \$33½ millions on the figure for 1940. The chief factor in the decline was a very sharp reduction in the production of wheat, with the result that, although the average price per bushel received by the farmers was 53 cents, compared with 52 in 1940, the total value was lowered to \$161 millions, compared with \$287½ millions last year.

War Shipments

Canada's export trade in November was very satisfactory. The value of domestic exports was \$162½ millions, compared with \$117½ millions in November, 1940. Exports to Great Britain were valued at \$60½ millions, compared with \$52½ millions; but very substantial supplies, destined for

British armies, were sent to places other than the United Kingdom and account for exports to Egypt being valued at \$10½ millions, which is a fivefold increase over the figure for November, 1940, while exports to India at \$3½ millions were double last year's figure. Altogether, Canada probably exported for British consumption goods to the value of about \$70 millions, but this figure falls far short of the monthly quota which would be required to fulfil the official forecasts last spring to the effect that Canada would send Britain during the current fiscal year about \$1,500 millions of munitions, raw materials and foodstuffs. Eight months of the fiscal year have now elapsed, and the total value of Canada's exports to Britain in this period has been roughly \$482 millions. Even if an additional \$100 millions, a very generous estimate, is allowed for Canadian exports shipped to Egypt, India and the Straits Settlements for British consumption, total exports would still be less than \$600 millions, whereas, to make good the forecasts, about \$1,000 millions of exports should have been shipped to Britain during this period. Difficulties about shipping are not accepted as a completely satisfactory explanation of the discrepancy between promise and performance.

Tax Reserve Certificates

The new Tax Reserve Certificates are designed to be used in payment of Income Tax (other than Schedule E), Surtax, National Defence Contribution, Excess Profits Tax, Land Tax and the Contribution under Part I of the War Damage Act, 1941.

The Certificates will earn Interest at 1% per annum if so used.

The Interest earned will not be subject to Income Tax, Surtax, National Defence Contribution or Excess Profits Tax.

Sums applied in purchase of these Certificates, to the extent to which they are accepted in satisfaction of tax payable by a trade or business, will be treated for E.P.T. purposes as capital employed in the business, in the same way as if they had been retained in the business and applied in due course in direct payment of the tax.

A Leaflet giving full details of the issue, together with the Prospectus can be obtained from your Banker.

Empire Balances in London

THE accumulation of sterling funds by Empire countries has gathered steady momentum during the past year. The reasons for this acceleration are the inevitable curtailment of British exports to Empire countries and the gradual reduction of the most readily marketable holdings of longer-term Empire securities the repatriation of which has provided the main check on the expansion of these sterling assets. Though complete data of sterling funds held for Empire countries are not available, a fair guess can be made both of the outstanding amount and the rate of accumulation of these funds.

The appearance of Canada among the large-scale accumulators of sterling is a comparatively recent phenomenon. The essential facts about it were given in a speech by Mr. Ilsley, Canadian Minister of Finance, in Ottawa on November 6th last. The United Kingdom's total deficit of Canadian dollars from the beginning of the war up to March 31st last had been about \$795 millions, of which \$250 millions had been met by transfer of gold (subsequently retransferred by Canada to the United States), \$337 millions by repatriation of Canadian securities and the balance of \$208 millions, or £46,600,000, by the accumulation of sterling balances. Since March 31st the last factor has become increasingly important in providing the counterpart of Canada's favourable balance with the sterling area. In the seven months to October 31, 1941, the British deficit was \$613 millions, of which \$175 millions was met by sales of British-owned Canadian securities and other capital items and the balance of \$438 millions, or £98,100,000, by the accumulation of sterling balances. On October 31st these sterling balances amounted to about £147 millions. For the financial year ending March 31st next they are accumulating at an estimated rate of between \$800 millions and \$900 millions—say of £190 millions—per annum. By the end of next March, therefore, sterling balances held here on Canadian account will amount to approximately £235 millions. The growth in this item is not shown in the figures of the Bank of Canada. As from May 1940, the Bank's gold and foreign exchange holdings over and above short-term requirements and working balances were sold to the Foreign Exchange Control Board. The sterling funds in question are reputed to be invested here, in the main, in the form of Treasury bills through the "tap" and bearing interest at a nominal rate of interest.

In the case of India, the accumulation of sterling funds and the indentations in this curve caused by debt repatriation operations can be followed from week to week through the returns of the Reserve Bank of India, in whose keeping

the floating external assets of the country are entrusted. In the twelve months to December 19th the sterling balances and securities of the Reserve Bank rose from £141 millions to £210 millions. In this period Indian sterling debt amounting to about £90 millions was repatriated. It follows that in these twelve months India's credit balance with the United Kingdom was accumulating at the rate of about £159 millions per annum.

By the end of this year these sterling assets will be drawn upon to the extent of about £167 millions to finance the massive debt repatriation announced last week and the purchase by the Indian Government of four British-owned railway undertakings.

The part played by Malaya in earning dollar revenue for the Empire and its parallel accumulation of sterling cannot, for lack of regularly published information, be described with great accuracy. Last October, however, the Governor of the Straits Settlements gave some interesting information on this subject. He pointed out that in the first year of war the net sales of U.S. dollars by the Malayan Exchange Control to the Bank of England amounted to \$97 millions and that a further \$135 millions had been sold in the following eleven months ended July 31st last. These are net figures, arrived at after providing for Malaya's dollar requirements. Since the direct balance of payments between Malaya and the United Kingdom has, over this period, been in favour of Malaya, it may be assumed that at least the full counterpart of these net sales of dollars has been accumulating here as sterling investments of the Malayan Exchange Control and of the Board of Commissioners of Currency for Malaya. On this score alone, the sterling assets of Malaya must have amounted to about £60 millions at the end of last July and had over the previous year been increasing at the rate of about £3,500,000 a month. This, however, is not the complete picture, since a considerable part of Malaya's sales of tin and rubber to the United States have been financed in sterling through American registered accounts in London. Sterling thus gained is, from the London point of view, the equivalent of dollars, and it is evident, therefore, that the outstanding amount and the rate of accumulation of Malayan sterling reserves must be well in excess of the above figures. By now these reserves must total at least £100 millions. Following the extension of hostilities to the peninsula, a temporary diminution or cessation in the rate of accumulation of these reserves must now be expected.

South Africa has chosen an appropriately unique method of investing its surplus balance of payments with the United Kingdom. It has repatriated or repaid long-term Government sterling debt amounting to £39 millions since the outbreak of the war. In addition a far more important, but not readily calculable, total of debt has been repatriated by the transfer from British to South African ownership of shares in South African enterprises—mainly gold mining companies. Even these important capital operations have left a considerable net surplus in the South African balance of payments with the United Kingdom. This balance has not been allowed to accumulate in London in the form of sterling. On the contrary, these South African London funds, which at the outbreak of the war amounted to about £2,000,000 and had risen to £9,000,000 by June, 1940, then dwindled to £500,000, to recover again to over £11 millions this October in preparation for the £30 millions sterling debt repayment, which, when completed, will probably have reduced the sterling assets of the Reserve Bank to small dimensions again. In other words, the Reserve Bank only keeps in London the minimum required for its short-term requirements. The surplus in South Africa's balance of payments is, for the time being, invested in gold. This gold is repurchased from the British Treasury, which, by existing arrangements, purchases the whole of the South African output

of the metal. Over the twelve months to October 24th last, the gold reserve of the Reserve Bank had risen from £39,800,000 to £50,800,000. South Africa is, therefore, playing no part in the accumulation of Empire sterling resources in the London market. The Union is seizing every opportunity of repatriating debt, and the proposal in the last Union budget to impose a tax on income derived from South African investments by non-resident shareholders must be interpreted in the light of this policy.

Eire, New Zealand and Australia participate in the accumulation of Empire sterling funds, only on a much smaller scale. The excess of UK assets over liabilities of Irish banks amounted to £81,077,000 for the September quarter of this year, compared with £66,300,000 for the corresponding quarter of 1940.

In the case of New Zealand, the latest available comprehensive figures are those for last July, when the London funds of the Reserve Bank and trading banks amounted to £NZ30,000,000, or £24,000,000, having risen from £20,500,000 since July, 1940. More recently, the sterling balance of the Reserve Bank alone has increased from £12,500,000 at the end of July to £13,900,000 on October 13th.

The Commonwealth Bank of Australia, which now holds virtually the whole of the Australian sterling reserve, found its London funds increased from £47,500,000 to £57,500,000 over the year to June last. Since then there has been a sharp decline, the last complete figures available being for September 15th, when the total had fallen back to £42,100,000.

These figures and estimates can be summarised in the following composite picture:—

STERLING FUNDS OF EMPIRE COUNTRIES
in £ millions

Country	Latest Data	Total	Increase on Year	Sterling Debt Re-deemed	Credit Balance of Payment with U.K.
Canada.....	Oct. 31	147	140	50	190
India.....	Dec. 19	210	69	90	159
Malaya.....	July, 1941	60	37	...	37
Eire.....	Sept., "	81	15	...	15
South Africa...	Oct., "	11	10	30*	40*
New Zealand...	July, "	27	2	...	2
Australia.....	Sept., "	42	-20	...	-20
Total.....		578	253	170	423

* Plus amount represented by South African purchases of securities in the London market.

The foregoing discussion will have made it evident that the figures are of differing accuracy and completeness. In certain cases, particularly that of Malaya, they understate the accumulation of sterling balances. Allowing for such understatement and for capital movements such as the repatriation of South African equities, the financing of the budget deficit over the past year has been helped to the extent of rather more than £500 millions by the investment of sterling funds by Empire countries.

Finance and Banking

The Turn of the Year

The money market experienced no appreciable stringency over the turn of the year. The position was helped by considerable open market purchases of bills and by heavy ways and means borrowing by the Treasury at the Bank of England. The banks had withheld their payments of Treasury deposits—of which £40,000,000 were due this week—until Friday, the first working day in January, while the bulk of the maturing deposits fell due in the first part of the week. Similarly, the incidence of Treasury bill payments and maturities helped to ease the cash position in the first part of the week and to transfer to the shoulders of the Treasury the real task of effecting the required expansion of the cash basis over the turn of the year. The magnitude of that expansion is fully revealed by the Bank return, which was made up at the close of business on December 31st. This shows the position at its most distended, bankers' deposits having risen over the week by £81,679,000 to £219,864,000, while Government securities at £240,603,000 are at a record figure and £75,520,000 higher than a week previously. Of the expansion in Government securities £66,000,000 is accounted for by ways and means advances and the balance represents open market purchases for account of the Bank. The size of open market operations was, probably greater than this figure would indicate, since the special buyer was acting for public departments as well as for the Bank. The post-holiday reflux of notes has been slightly more than counterbalanced by year-end currency requirements and the circulation is £481,000 higher at the new record of £751,725,000.

Open Market Technique

The means chosen by the authorities to help the money market over the turn of the year indicate an interesting variation in the technique of open market policy. Owing to the factors already mentioned special help has had to be given to the market on a considerable scale—its magnitude being indicated by the rise of £83 millions in the securities held by the Bank of England over the last week of the year. There has been no desire on the part of the authorities to force the market into the Bank and compel it to borrow or rediscount at the penal official rates. Instead the agents of the Bank of England have been prepared to buy bills from the market at the open market rate of 1 per cent. In accordance with its customary practice, the firm in question began its special purchases by insisting on bills of short maturity—the dates chosen rang-

ing up to January 15th. It was soon found that the market did not hold sufficient of these early January bills to provide the basis for the required amount of open market assistance. Most of the bills in question had been sold previously to the banks. It was then discovered that some of the clearing banks were prepared to swap maturities with their discount market customers, returning the early January bills to these houses in exchange for the longer-dated maturities which, for the time being, the agents of the Bank of England were not prepared to buy. Both in 1939 and 1940, the general practice in open market operations was for the Bank to buy the short-dated bills direct from the clearing banks, thus providing them with the funds required to buy the longer-dated bills from the market. The variation introduced this year leads to the same result, but honours the pre-war tradition which forbade direct bill transactions between the central and the other banks. With the approach of the year-end, however, it was found that even this device did not provide the necessary volume of short-dated paper for the authorities and by Tuesday of this week the agent of the Bank of England was prepared to take late January and February bills from the market.

Financing India Loan Repatriation

The financing of the considerable repatriation of India's sterling debt announced last week is a problem which falls into two parts. In the first place, there is the provision of the sterling required to repay British holders of the securities which have either been vested or are being redeemed. In the second place, there is the problem of finding the rupee counterpart of the external debt thus repatriated. The first part of the problem will be solved by drawing on the steadily mounting sterling balances and investments of the Reserve Bank of India. On December 19th last, these assets amounted to 270.8 crores of rupees, or £203,000,000, exclusive of the gold reserve of 44.4 crores, which, at the present market price of gold, is equivalent to another £66,000,000. As the payments for the vested stocks will not begin until March 2nd next, while the 3½ per cent loan to be redeemed will not be repaid until January 5, 1943, and as the total nominal amount involved is only £151,000,000, it will be seen that the new repatriation operations lie well within the scope of India's available sterling resources.

If the precedent of the previous vesting operation is followed, the immediate rupee counterpart to the repaid

direct loans and guarantees, will have been liquidated before hostilities cease. Meanwhile, holders of the 3½ per cent stock will find that they can sell at a very remunerative figure, since this is now a money market short, and there is some evidence that the recent recovery in the Funds is due more to this prospective redemption than to anticipation of the vesting payments, due to commence on March 2nd.

More Conversions

Although there are not, for some years, municipal maturities on a scale comparable with those converted or paid off in the spring of 1941, next April brings three optional maturities which are to be dealt with promptly. Notice has been given to repay £1,500,000 Bradford, £850,000 Portsmouth and a small amount—£270,000 according to the latest figure available—of Wigan stock, all 5 per cent 1942-52, repayable April 1st. Outright repayment is to be effected by Wigan, but Portsmouth is offering the right to convert the whole and Bradford two-thirds of the amount falling in. The new stocks offered are 3½ per cent 1972-82, whereas those issued in last year's conversion were 3½ per cent 1960-70. That is to say, the credit of the municipalities has improved sufficiently, over a period of some eight months, to permit of a lengthening of the maximum life by some ten years to a figure of over 40 years. Securities of this life are comparatively rare, and although they are, perhaps, less popular than those of 20-25 years, there should be no difficulty in finding applicants. In any event, the Treasury will advance to the municipalities any sums required to pay off holders who do not accept conversion, in so far as funds are not already available for this purpose. A further operation on the same lines as the above is the offer to convert up to £814,000 of the £1,000,000 British Guiana 5½ per cent stock 1942-72 into a new stock. This has the same maturity dates as the municipal issues, but the interest is only 3½ per cent. In this case, six months' notice is given, and any stock not converted will be repaid July 1, 1942, from which date interest, at the reduced rate, will run on converted holdings. A sinking fund is to be established under the control of the Crown Agents for the Colonies. The interest cut is particularly severe in this case, and the establishment of a 3½ per cent basis for a 40-year loan of this type will mean the passing of another milestone in the downward revision of the rate of interest and a further narrowing of the margin between British Government securities proper and other gilt-edged stocks. It remains to be seen whether the effects of the India vesting and repayment, coupled with the partial redemption of municipal and colonial stocks, will suffice to push up the Funds and so restore the yield margin.

Malayan Dividend Problems

A minor, but troublesome, problem has arisen in connection with the extension of war to the Pacific, and with special reference to Malayan tin and rubber companies. A number of these, which had declared dividends shortly before the entry of Japan into the war, have now decided not to make the payments. Under existing practice, shares are marked ex dividend on the Monday after declaration and the seller bases the price which he is prepared to accept on the expectation of receiving the dividend declared. At one time, it was usual to mark the more speculative types of share ex dividend only after actual payment, but this meant that in respect of any shares dealt in between the time the company closed its books for the dividend payment, and the date of marking ex, the seller received the dividend and had to transfer it to the buyer, whose liability for income and surtax might be very different from that of the seller. This proved to be a much greater nuisance than the occasional failure of a company to pay a dividend

declared and the procedure of marking ex before payment became general. The exceptional circumstances of the moment clearly call for some special action. But it would be unwise to abandon the present practice. In the cases of payments declared and cancelled, there is no choice but to cancel the ex dividend marking—a difficulty arises where payment is deferred instead of being cancelled, and, in any case, the seller suffers a minor injustice. As to future cases, it is reasonable to suppose that no responsible company management will declare a dividend until it is clear that the payment will be made, even if the deterioration in the Pacific position continues. If this can be taken for granted, the Committee need take no action, but it is deferring a final decision until it has been possible to obtain a complete view of the probabilities.

New Capital in 1941

The following analysis of offers of stock through the "tap" and to the market in 1941 shows an increase in the aggregate, including those by permission to deal, from £1,088,717,000 to £1,509,803,200. Whereas the total of British Government issues was £426,742,200 higher at

Hotels, Theatres, &c.	Nil	Nil	60,100	530,000
Docks, Harbours and Shipping	22,500	Nil	530,600	Nil
Manufacturing and Miscel.	908,900	247,500	11,532,800	1,038,500
Total	1072,359,800	1500,841,200	1088,717,000	1509,803,200

£1,497,527,300, the total of all other capital flotations was, however, £5,656,000 lower on the year. The greatest predominance of British Government issues occurred during the second quarter. In the last quarter, the total of Government loan rose from £348,140,265 to £383,416,535, a figure which is still some £55,000,000 below the second quarter

total. The issues to public utility companies which were a notable feature of the third quarter were not maintained in the past three months, when the introduction of £5,200,000 nominal Harland and Wolff £1 "A" ordinary shares was the most striking event. During the same period, Wiggins Teape issued £34,380 of 7 per cent cumulative preference stock and Manbré and Garton £50,000 of 3½ per cent debentures. Of the £1,038,500 shown in the tables on page 18 as issued by manufacturing and miscellaneous companies during the past year, the past quarter accounted for £453,787. Among Government issues, the whole amount was raised by small savings and other issues on "tap." Sales of 2½ per cent National War Bonds realised the greatest sum, amounting to £172,125,039, while 3 per cent Defence Bonds produced the lowest total of £36,804,010. The year's results indicate that the capital market has satisfactorily fulfilled its function of excluding the private borrower unless supported by official blessing, while the increase in loans to the Government of rather less than one-third is probably in line with Treasury expectations.

Two Motor Results

Both the *Rover* and *Standard* reports show a considerable rise in gross earnings last year. Total earnings of *Standard Motor* in the twelve months ending August 31st rose from £326,735 to £463,981 and those of *The Rover Company*, in the year to August 2nd, from £242,723 to £326,955. In both cases, the drop in the previous year, due mainly to the necessity of adapting production to war output, has been approximately made good. The *Rover* accounts show a jump in depreciation from £77,284 to £200,934, which, despite a reduction in tax provision from £90,000 to £70,000, is responsible for a decline in equity earnings from £65,903 to £45,323, representing 14.5 against 18.4 per cent. Thus, the dividend which is maintained at the 15 per cent, to which it was reduced from 17½ per cent in the previous year, is under-earned. Since there is no transfer to war contingency reserve against £10,000, the carry forward is reduced from £55,506 to £54,029. The *Standard* dividend is raised from 15 to 20 per cent, against 25 per cent in 1938-39. ARP provision is up from £7,859 to £43,184 and war damage contribution requires £29,809 against nil. Despite the provision of an additional £50,000 for taxation, making £150,000 in all, equity earnings have risen from £71,458 to £85,162, representing 23.6 against 17.2 per cent. In the absence of any transfer to reserve, the carry forward is raised from £84,496 to £97,658. The *Rover* war damage contribution of £17,783 is drawn from contingencies reserve, leaving the balance sheet total of the fund at £42,217. It appears that the *Rover* company is charging against current profits such contingencies as special obsolescence, to meet which the *Standard* company a year ago took £145,000 from reserve. In the case of both com-

panies, there is an increase in debtors and current liabilities. The *Standard* balance sheet shows a further rise in stocks from £760,914 to £883,301, while the *Rover* stocks are somewhat lower at £359,808 against £378,851. The increase in cash holdings from £91,348 to £177,170 is accompanied by a reduction in investments from £199,317 to £20,948. *Standard* cash holdings are up from £32,702 to £124,987. Clearly, the movements in liquid assets of both companies are determined mainly by the flow of war production on which each is engaged, and the latest changes possess little absolute significance. The *Standard* 5s. stock at 16s. 9d. offers £5 19s. 5d. per cent. The *Rover* 8s. shares yield £7 5s. 5d. at 16s. 6d.

BA Western Debenture Payment

The demand for the products of Argentina's pastoral industry, coupled with Government payments for carriage of wheat to the ports, had so far improved the fortunes of the Argentine railways as to permit BA Western to announce in November the liquidation of tax arrears and the bank overdraft, while the recent accumulation of sterling balances under Argentine control has facilitated the transfer to this country of peso profits. Even so, the decision of the directors of this company to meet six months' arrears of interest on 4 and 5 per cent debentures to July 1st last comes as something of a surprise. Under a scheme of moratorium sanctioned by the Court on July 7th last, the company is entitled to postpone payment on 4 and 5 per cent debentures and on the newly issued 5 per cent Three-Year Notes until July 1, 1943, with power of extension until 1945. The payment requires a gross amount of £216,887 and will leave note interest alone in arrears prior to January 1, 1942. Aggregate gross receipts in the 26 weeks ending December 27th show an improvement of Pesos 3,790,000 over those for the previous year, and there is reason to hope that expenses—in particular the cost of fuel—will have been sufficiently strictly controlled to permit some improvement in net profits during the current year. It is improbable that, in the absence of a German attempt to invade the South American continent, traffic receipts will be adversely affected by the spread of the war to the Pacific, since Argentina has already felt the full effect of the merchant shipping shortage. To some extent, Argentine markets may even benefit, since there may well be a movement to supply the United Kingdom increasingly from these sources rather than from the United States or from the Dominions. It is, however, not yet clear whether the Argentine Government will continue to buy cereal crops, and, still less, to transport them to the coast. If it does the railways should continue to show improved results and there is a good prospect that BA Western will not need to avail itself of the moratorium terms to the full. The 4 per cent debentures now stand at 50 and the 5 per cent issue at 52½, both ex dividend.

INVESTORS

should
TRANSACTION THEIR BUSINESS
through a Member of

THE STOCK EXCHANGE

A list of Members who act as Brokers and the Official Scale of Commissions may be obtained on application to the Secretary, Stock Exchange, London, E.C.2. All Contracts must be completed in accordance with the Rules and Regulations of The Stock Exchange. Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the control of the Committee.

"The Work of The Stock Exchange" may be obtained on application to the Secretary: price one shilling post free.

Industry and Trade

Progress of Road Haulage Scheme

On October 20th the Ministry of War Transport issued details of its new road haulage scheme, which envisaged an increase in the fleet of lorries under the direct control of the Ministry, and the creation of an organisation through which Government traffic in excess of the capacity of the Ministry's fleet of hired vehicles could be allocated to hauliers. To this purpose the Ministry of War Transport proposed to set up an area organisation of control, the operation of its fleet, and to act as a clearing house for traffic, and the road haulage industry agreed to form a parallel organisation to allocate the traffic passed to it by the Ministry. Details of the second part of the scheme have been completed, and according to a *communiqué* issued on December 22nd by the Ministry of War Transport, the hauliers' organisation, to be known as "The Hauliers' National Traffic Pool," is now to be set up. It will consist of a committee composed of the members for the time being of the Road Haulage (Operations) Advisory Committee. The Pool may appoint to act on its behalf, and under its direction, area and sub-area management committees, but these appointments will be subject to the approval of the Minister. Participation in the traffic allocated by or on behalf of the Pool is to be open to all owners of vehicles licensed to carry for hire with reward under an "A" or "B" licence or a corresponding Defence Permit marked "A" or "B." The allocation of traffic will be at the discretion of the Pool. In exercising its discretion the Pool must have regard primarily to the efficient and economic handling of traffic, and, within these limits, ensure a fair distribution of traffic between registered hauliers. While some time will elapse before the scheme is in full operation, it is a big step forward in the war-time control of road transport.

Building Labour

In common with other industries, building has lost a large part of its labour force. But, in contrast with factory trades, in which work is continuous, man-hours in the building trades may be lost while individual firms are moving from one contract to another. In the building and civil engineering trades, the shortage of labour has frequently led to the retention of workers on contractors' pay-rolls, even when no work was available for them. Though this practice has been of advantage to the individual firm, whose labour supply has thus been assured, it has meant that others have unnecessarily suffered a shortage. The Minister of Labour, in consultation with the Ministry of Works and Buildings, has now made an Order by which it is hoped that the industry's labour force will be used continuously. By the Order, building workers may not be transferred from one site to another without the authority

THE CUNARD STEAM SHIP COMPANY, LIMITED

FIVE PER CENT. MORTGAGE DEBENTURE STOCK
NOTICE IS HEREBY GIVEN that the last date for accepting Transfer Deeds in respect of the above Stock will be noon on 17th January, 1942, when the Transfer Register will be closed for the purpose of preparing the Warrants for payments of Principal Moneys and final Interest due 2nd February, 1942.

By Order of the Board,
H. J. FLEWITT, Secretary.
Offices: Cunard Building, Liverpool. 29th December, 1941.

UNIVERSITY OF LONDON LEON FELLOWSHIP.

Applications are invited for the Leon Fellowship for Research (preferably in the fields of Economics or Education) for the Session 1942-43. The Fellowship is of the value of £400 a year, and is tenable in the first instance for one year. It is not essential that candidates should be members of a University. Selected candidates will be required to attend for interview. Further particulars should be obtained from the Academic Registrar, University of London, at 42 Gyles Park, Stanmore, Middlesex, and applications for the Fellowship must be received at that address, not later than 1st April, 1942.

of a National Service officer. Those workers over whom a firm has no exclusive claim must therefore be discharged when work on a site is completed, and the labour exchange immediately informed. Some exceptions to the rule are made. Key workers and those in special classes of trade may be moved. Men who have been employed continuously for the last eighteen months are regarded as permanent staff, and are exempted. The provisions of the Order do not apply to local maintenance and jobbing builders. Application must be made before January 31st by jobbing builders for general permission to move their men within a specified area. The Order comes into force on January 12th.

Wages of Idle Miners

Since the application to the coal mining industry of the Essential Work Order the cost of the maintenance of unfit and unsuitable miners has been the subject of negotiation between the industry and the Mines Department. From the outset the Government has accepted a considerable measure of responsibility under the registration scheme for the re-employment of ex-miners in an effort to increase production, but in some districts the proportion of men found unsuitable was over 40 per cent of the total number offered by the Ministry of Labour. The industry has now been informed of the terms of the arrangements which have been made. The Ministry of Labour and National Service is to pay "the reasonable loss of earnings and travelling expenses" of ex-miners who have not been re-engaged, the colliery owners are to pay the guaranteed wages to unsuitable workmen up to the date of their discharge; and after the expiration of notices terminating employment the whole cost of the maintenance and re-transfer of unsuitable and redundant miners is to be borne by the Government. It is not known how many workmen are affected; they probably number some thousands, but the main feature of the arrangement is that these men are to be maintained, not on the basis of the unemployment benefit on which unemployed workmen would normally have had to depend, but on that of the much higher amount represented by the guaranteed wage provisions of the Essential Work Order. The guaranteed wage comprises not merely the standard rates plus percentages, but also such flat rate additions as those represented by the cost-of-living war wage additions and the attendance bonus of 1s. per shift. In one of the most important of the coalfields of the country the minimum wages now guaranteed range from £3 12s. 8d. per week for a day wage labourer to over £5 per week for a pieceworker. In the exceptional conditions under which the problem arose, the action of the Government in conceding this advantage to the ex-miners may be amply justified, but it can hardly be reconciled with the payment of the guaranteed wage contingent on a workman being "capable of and available for work" during the "normal working hours." The collieries will act as agents of the Mines Department in the payment of the wages to the unemployed ex-miners, reclaiming from that Department the sums paid out by them.

Synthetic Rubber for America

The outbreak of war in the Pacific has prompted the Government of the United States to plan a rapid expansion of the synthetic rubber industry. To begin with, the capacity of the industry is to be increased to yield synthetic rubber at the rate of 120,000 tons per annum by the end of 1942 or early in 1943. As a number of concerns have already gained experience in the production of synthetic rubber, the programme of expansion should not be impossible of fulfilment. Synthetic rubber has been produced for some years by Dupont de Nemours, under the trade name of "Duprene"; the Goodrich Tyre group has manufactured "Ameripol" on a commercial basis for nearly two years; the Standard Oil Company of New Jersey has developed production on the basis of the German "Buna" patents; early last year the Reconstruction Finance Corporation financed the erection of four plants under the management of Goodrich, Goodyear, Firestone and U.S. Rubber Cor-

poration. Last year's total output amounted to some 15,000 tons, and, on the basis of the programme already in an advanced stage, production would have reached the annual rate of 40,000 tons in 1942, and of 55,000 tons early in 1943. An output of 120,000 tons per year, which is almost double Germany's estimated current rate of production, is expected to cover about one-fifth of American war-time needs of rubber. Experts in the United States hold that, on the basis of large-scale production, they will be able to reduce the cost of producing synthetic rubber to about 25 cents per lb., which is roughly the current price of fine plantation rubber. In contrast to the United States, British industry has done little to prepare for the large-scale production of synthetic rubber.

America's Oil Supplies

Mr Harold Ickes, Federal Petroleum Co-ordinator, has assumed full control over American oil production; he will set production quotas for particular fields and may be expected to take every precaution to ensure, not only that the nation's crude oil resources are used as economically as possible, but also that the principal finished products are made available in the quantities and localities desired. For the time being there should be no difficulty in securing adequate supplies of crude oil; but, as was explained in an article in *The Economist* of November 8th, there is now very little surplus capacity available in the refining branch of the industry. Shortage of steel is the main difficulty—the industry's steel requirements for 1942 were officially estimated a few weeks ago at almost 6,000,000 tons and may now be greater—and for this reason the desired expansion of refining capacity may be difficult to achieve. More urgent than ever is the need for a speedy increase in facilities for the manufacture of 100-octane aviation spirit, but the capacity for the production of high-grade lubricating oil and of other special products may also require extension. That vigorous action is intended may perhaps be assumed from the decision to reduce the octane rating of branded petrols sold in the United States in order to conserve tetra-ethyl lead, an essential constituent in aviation petrol. Anticipating a tight supply position, the Ethyl Gasoline Corporation had already made arrangements to allocate tetra-ethyl lead for non-essential uses on the basis of purchases in the past twelve months; but the pressure of demand from ordinary refiners should now be relieved. How long it will be before some restrictions are imposed upon the use of petrol, and possibly of other oil products, for other than essential purposes, remains to be seen. Although the motor car is rightly regarded by many Americans as a necessity, some restriction on its usage would be reasonable in the national interest; public opinion is certainly far more favourably disposed towards such action than a month ago. The rationing of tyres, which is to come into force on Sunday, should do something to limit pleasure motoring and so help to conserve oil products.

Japan's Chemical Industry

In view of the importance of chemical products in war, Japan has made strenuous efforts in recent years to expand her facilities for the production of chemicals. The growth of the industry is shown by the fact that in 1939, when Japan's total industrial output was valued at 24,360 million yen, its chemical industry ranked fourth in importance after metals, machinery and machine tools, and textiles, with an output of 4,160 million yen and a labour force of 135,000 workers. The industry is subdivided into 22 groups, each represented by one organisation; more than 40 Government laboratories, universities, private plants and scientific societies issue research reports. There are shortages of several basic materials, such as coal, salt and sulphur, and of certain dyestuff intermediates, dyes, drugs, and explosives, as well as of manufacturing equipment. The decline in the quality of coal has more than offset gains in production. Thus, coal of 1937 quality averaged 6,300 calories, that of 1940 vintage only 5,600 calories. And this coal "bottle-neck" is harassing producers of aluminium, magnesium, calcium carbide, synthetic rubber, aluminium sulphate, calcium cyanamide, caustic soda, etc. Difficulty in obtaining foreign salt is hampering the alkali industry, and sulphur shortage has led to a decline in

sulphuric acid production to about 70 per cent of capacity. The output of carbon disulphide has declined from a normal monthly average of 7,000 tons to 3,000 tons. The Pulp Supply Adjustment Association reported in 1940 that Japan is far from self-sufficient in pulp for rayon and staple fibre. Some achievements, albeit costly, of the Japanese chemical industry deserve notice. Japan is utilising Empire alumina for a minor proportion of her aluminium production. Potassic fertiliser is made from alum shale; output was running at the monthly rate of 750 tons last year. The resulting product has a low potash content of 7 per cent, compared with 20 per cent for the orthodox kind, and is expensive to produce. The Empire's output of metallic magnesium, estimated at 4,500 tons a year, comes mainly from brine, though, of late, Manchurian magnesite has been employed as a raw material. Acetone is now produced by direct synthesis from calcium carbide, whereas formerly it was imported largely from the United States. Substitute coke for electrodes is replacing natural petroleum coke hitherto obtained from America and the DEI, and artificial cryolite for the natural material secured from Greenland. In 1940 was set up the Explosives Manufacturers' Industrial Association to ensure smooth distribution of glycerol, ammonium nitrate, potassium nitrate, borax and other raw materials required for producing military explosives. Some progress has also been made with the production of synthetic fuel, but performance has fallen short of the five year plan which envisaged an output at the rate of 2 million metric tons in the Japanese Empire by 1941; it is unlikely that the aggregate capacity of plants building or scheduled for completion in 1941 exceeds 500,000 tons per annum. Some 21 plants are believed to be under construction or in operation, including 12 in Japan, 2 in Sakhalin, 2 in Korea and 5 in Manchukuo. While its chemical industry is by no means able to supply all Japan's requirements indefinitely, its output, added to existing stocks, may be equal to needs for many months to come.

COMPANY MEETINGS

TARRAN

INDUSTRIES, LIMITED

• DIVIDEND OF 10 PER CENT.

The seventh annual ordinary general meeting of Tarran Industries, Limited, was held at the registered offices of the company, Clough Road, Hull, on the 30th ult.

Mr Robert G. Tarran, MIOB (chairman and managing director) said that the item of £22,500 under the heading of investments in subsidiary companies included a 50 per cent. interest which the company had taken in Solid Cedar Homes, which was actively engaged. As in previous years, the whole of the undertaking of Tarran Industries had been fully employed on behalf of the national effort, with the notable exception that they had now successfully completed two outstanding municipal contracts—for the Bolton Corporation the new Technical College, which was one of the finest in Lancashire, and for the Leeds Corporation the largest block of flats in Europe. The latter, a formidable undertaking, was constructed on the Mopin system of construction for the first time in Britain. These two undertakings had enhanced the company's reputation in the building and civil engineering world.

FUTURE OPPORTUNITIES

They were at the present time energetically engaged on large contracts, while the future held out tremendous opportunities for their particular organisation, especially in the post-war period. The policy of the company in directing much of its finance, organisation and activities into the manufacturing side of the industry proved to be one of great foresight and had much assisted the stability, continuity and progress of the company. The factories, which were well spread, were collectively fully employed, and there was every prospect of them continuing to be so to the end of the war, when turning over to normal production after victory was assured, would be as simple as was turning from pre-war production to war-time production. During the year every possible precaution had been taken in connection with preserving the company's assets against destruction by enemy action. Dispersal arrangements had been carried out in such a manner that should one of the largest factories be involved in total destruction, although it would affect production in some part for a month or two, they would be able to continue to take the load in the dispersal factories and within three months be in full production again.

The building industry was getting a great deal of prominence at the moment through the department under the direction of Lord Reith. One felt strongly that much better results could have been obtained if a greater use had been made of the practical brains and experience of leaders who had been trained, not only in the theory of construction but in the actual practice and craft.

COMPANY'S FAVOURABLE POSITION

New systems of construction were coming into the forefront and sound sectional buildings would play a great part in the building programme of the future if any attempt were to be made at reconstruction and alleviation of slum clearance. He was satisfied that with the increasing research which was being constantly carried out in connection with the Tarran system of construction and the opportunities of putting it into practical application the company was placed in the forefront of those things which were new in the building industry, as was the already established associate company, Solid Cedar Homes.

Coupled with research work, a new laboratory had been equipped with lecture rooms for apprentices and students. It was hoped that through this medium, plus practical experience of the joiner's bench, the mason's banker, the bricklayer's trowel and the drawing board, they would keep an advanced mind on development and create a wealth of practical and technical management to ensure the continuity of their industry.

Lt.-Col. C. D. Burnell seconded the motion, which was adopted. A dividend at the rate of 7 per cent. per annum on the paid-up ordinary share capital for the year ended September 30, 1941, less income tax at 10s. in the £, making a total of 10 per cent. for the year, was declared.

GOODE DURRANT AND MURRAY,
LIMITED

The forty-third ordinary general meeting of this company was held, on the 29th ultimo, at Woodberry, Hindhead.

Mr J. Hewitt (the chairman), who presided, said: It gives the board great pleasure to be able to present such an improved balance sheet and to record such an improvement in the company's financial position.

Your directors are able to report the receipt from CTC Bazaars (South Africa), Limited, of a further 12s. in the £ on the trading debt, bringing total receipts now accounted for to 15s. in the £. The remaining 5s. has since been received, and also the entire amounts of the private debts in the same connection, together with accrued interest in full. The reserve, therefore, for interest already made in previous years and the reserve to cover our liability as guarantors are no longer required. Accordingly, this amount of £58,940 has been brought into profit and reserved for taxation.

Out of our trading profit of £71,125 we have been able to pay five years' arrears of dividend on the 7 per cent. cumulative preference shares at a net cost of £47,884, to write off the loss brought forward of £13,746, and carry forward £9,494.

The report was adopted.

ELECTRIC & MUSICAL INDUSTRIES,
LIMITED

MR. ALFRED CLARK'S STATEMENT

The following information from a statement circulated by the chairman, Mr Alfred Clark, was in the hands of shareholders at the annual meeting of Electric & Musical Industries, Limited, at 363 Oxford Street, London, on the 31st ultimo.

At the invitation of the directors, Sir Alexander Aikman, CIE, and Mr Oliver Lucas have joined the board.

In April last, Sir Robert McLean was appointed managing director of the company.

The directors were glad to report that the profit of £126,581 enables them to recommend a resumption of dividend payments on the ordinary shares and to increase the carry-forward by £25,178.

The total turnover has increased during the year under review.

Normal business has been progressively curtailed by increasing limitations placed by the authorities upon both manufacture and sales; the company has endeavoured to secure the equitable distribution to the trade of the limited amount of goods which we are able to manufacture.

Export trade from Britain and from subsidiary companies and branches outside the British Isles has been handicapped by difficulties of transport and the closing to us of more of the continental European countries.

The increase in stocks amounting to £396,000 reflects the company's activities under the changed conditions of war. The items cash and investments in Government securities show a total £249,000 higher, but the amount in hand is none too large for financing the volume of current work.

Facilities continue to be given to encourage war savings by employees. £100,000 of the company's funds have been invested in National War Bonds. Allowances continue to be paid to dependants of employees who have joined the Services.

The chairman stated that while he would wish to be in a position to discuss the question of the company's future prospects, it is, of course, not possible to give any forecast of the immediate future, dependent as it is upon the war. Shareholders will, however, not lose sight of the position of the company, equipped, as it now is, to meet those problems with which it will be confronted inevitably when peace is restored. Such plans as can be made at the present time to meet the anticipated difficulties of the change-over lie ready to be acted upon promptly when the moment arrives.

The directors expressed their thanks to all employees for the spirit shown during the Battle of Britain, and especially to the managing director, Sir Robert McLean.

The report and accounts were adopted, the payment of the preference and ordinary dividends approved, the retiring directors

re-elected, and the auditors reappointed, and the proceedings terminated with a vote of thanks to the chairman.

EXTRAORDINARY GENERAL MEETING

After the ordinary meeting resolutions were passed at an extraordinary general meeting converting the whole of the issued shares into stock, transferable in units of £1 in the case of the preference stock and units of 10s. in the case of the ordinary stock.

OROVILLE DREDGING COMPANY,
LIMITED

HEAVY TAXATION PROVISIONS

The thirtieth ordinary general meeting of Oroville Dredging Company, Limited, was held, on the 31st ultimo, at Motcombe, Dorset, Mr F. W. Baker (the chairman) presiding.

The following is a summary of the chairman's statement, which was circulated with the report and accounts:—

Turning to the accounts, investments remain unchanged at the book cost of £369,778. Loans to mining companies and accrued interest stand at £82,109, as against £104,087 last year—a decrease by repayments less accrued interest of £23,978.

Dividends received from the company's holding of shares in Bulolo Gold Dredging, Pato Consolidated Gold Dredging and Pato Mines (Colombia) amount to £91,413. Other credits amount to £8,678. From the total credits of £100,091, after debiting all charges in London, including income-tax and provision for Excess Profits Tax, the balance to the credit of profit and loss account is £41,007. Adding the balance from the previous year and deducting the dividend paid in December, 1940, and the interim dividend in April, 1941, a balance of £141,623 is carried forward at September 30, 1941.

DIVIDEND OF 25 PER CENT.

The directors recommend a final dividend for the year of 6d. a share, less income-tax at 8s. 8d. in the £, making, with the interim dividend, 25 per cent. for the year.

In my remarks last year I foreshadowed that taxation in the future—owing to the obligations that would fall upon us resulting from the war—would seriously affect net profits, which is clearly evidenced by the fact that out of the total income received by this company and its subsidiary, Pato Mines (Colombia), amounting for the year to £171,785, £90,937 has had to be provided for taxation purposes, representing more than one-half of the total income of the two companies.

The directors' report gives full information of our interests in Pato Mines (Colombia), Pato Consolidated Gold Dredging, Nechi Consolidated Dredging, Asnazu Gold Dredging, Bulolo Gold Dredging and other interests. I should like to state, however, that the operations of our several interests are continuing very satisfactorily, particularly at Pato Consolidated Gold Dredging, and I am glad to be able to report that the new hydro-electric plant at Asnazu is now in operation, and that the new larger No. 2 dredge has been completed and is now in active operation so that satisfactory results from this property may be looked for in the future.

A LARGE GRAVEL DEPOSIT

Before closing my remarks, I would like to refer to the great disappointment our company has received owing to the refusal by the Foreign Exchange Control Board to allow Oroville to provide half the cost of drilling the large gravel deposits adjoining Pato Consolidated, which are under option to this company and Placer Development. The cost of this operation was estimated at \$100,000, to be borne equally, and expended over a period of two years by this company and Placer Development, with the result that an understanding to which Treasury consent has been secured has been made with the Placer Development Company under which that company undertakes to bear the entire cost of drilling, re-ceiving as consideration a proportion of the vendor interest receivable by this company should the option, in due course, be taken over by Nechi Consolidated Dredging.

The report and accounts were unanimously adopted.

WANKIE COLLIERY COMPANY,
LIMITED

INCREASED SALES

The annual general meeting of the Wankie Colliery Company, Limited, was held, on the 30th ultimo, in London, Sir John R. Chancellor, G.C.M.G., G.C.V.O., D.S.O. (chairman and joint managing director), presiding.

The review of the chairman, which was circulated with the report and accounts, stated, inter alia, that in the profit and loss account sales of coal, coke, bricks, fireclay, etc., were £600,919, an increase of £61,613. Rents and sundry receipts in Africa had increased from £18,889 to £19,353, and bank interest and other receipts in London from £331 to £544. Including £23,217 brought forward, there was a total available of £222,782. From that had been deducted £117,000 reserved for income-tax, leaving £105,782, out of which the directors proposed payment of a dividend of 5 per cent., leaving £22,657.

Coal sales, which amounted to 1,169,734 tons, showed an increase of 54,617 tons. The principal increases were in sales to the Rhodesia and South African Railways and to Southern Rhodesian customers, mainly the Electricity Supply Commission and the municipalities. Sales to the Southern Rhodesian Mines and to the Congo had, however, decreased by 18,359 tons. Coke sales, which were 75,571 tons, compared with 66,401 tons last year, and showed a substantial increase.

In accordance with the wishes of the Government, figures for reserves and development, etc., were not given. The directors wished to assure members that the position in regard to those matters was satisfactory.

Their water requirements continued to increase in almost exact relationship to increased coal output. To meet that additional consumption further water rights had been obtained.

The supply of labour was plentiful throughout the year, the employed strength at August 31st being 4,044, compared with 3,667 in August, 1940.

The report and accounts were unanimously adopted, the retiring director re-elected, and the auditors reappointed, and a vote of thanks to the chairman and directors closed the meeting.

S. SMITH AND SONS (MOTOR
ACCESSORIES) LIMITED

INCREASED TURNOVER

The twenty-seventh ordinary general meeting of S. Smith and Sons (Motor Accessories), Limited, was held, on the 31st ultimo, in London.

Mr Walter Henderson-Cleland, M.C. (the chairman), said that the balance-sheet bore more evidence of the company's increased turnover. The profit on trading, before charging depreciation, showed an increase of some £25,000 over last year. Depreciation on the basis which they regarded as prudent called for another £5,000, and an increase in the claims of the National Exchequer resulted in a decrease in the net available figure by some £29,000. Excess Profits Tax fixed a limit beyond which everything was taken away. Below that limit half went in income-tax and out of the net remainder there were many items which a prudent business man must write off. The result was that only a small proportion of their gross earnings appeared as net profit after providing for taxation and, although they passed some of the taxation burden to the shareholders when paying dividends, the charge on their profit and loss account was still very heavy.

He had indicated in his speech last year that shareholders might have to face a reduction in dividend at the end of the next financial year. He was sure that shareholders would agree that in suggesting a reduced dividend the directors were taking the only wise and proper course.

He wished to pay a tribute to the loyalty and untiring efforts of the whole of the management, the staff and all employees, both male and female, for the excellent work they had done and were doing at the present time. Their managing director, Sir Allan

Gordon-Smith, in addition to all his responsibilities here, had undertaken further work of great national importance, and was now Deputy Controller of Construction and Regional Services at the Ministry of Aircraft Production.

The report was unanimously adopted.

BROOME RUBBER PLANTATIONS, LIMITED

The eighth annual general meeting of this company was held, on the 30th ultimo, in London, Mr F. C. Rycroft presiding.

The chairman, in the course of his speech, said: As announced to the Stock Exchange and Press over the week-end, the directors do not propose to proceed with their recommendation that a final dividend of 7½ per cent. be declared to-day. The board made their decision to recommend the payment of this dividend on December 6th, the day before the war in the East started. Malaya had not then been invaded by the Japanese. Since the report was issued the position in Malaya has become serious, and it was therefore necessary for the directors to reconsider their recommendation regarding a final dividend. I need hardly say that it is as great a disappointment to the directors as it will be to the stockholders, but in all the circumstances I am sure you will appreciate the vital importance of conserving our cash resources for the time being.

The report and accounts were unanimously adopted, and it was unanimously resolved that the directors' recommendation regarding the payment of a final dividend of 7½ per cent. (less income-tax at 10s. in the £) be submitted for consideration to an adjourned meeting of which due notice will be given.

FIRST GARDEN CITY LIMITED

NET REVENUE MAINTAINED

Addressing the shareholders of First Garden City, Limited, on the 31st ultimo, Mr Eric Macfadyen, M.A., J.P., the chairman, after referring to the loss sustained by the company through the death of Lieut.-Colonel Franklin Thomasson, the last survivor of the original board of directors of the company, said:

My review of the year's activity must necessarily be brief. Property development has been almost at a standstill; and in common with other similar undertakings the absence of particulars of our public utility services robs the accounts of many details for which interested shareholders have been accustomed to study them; and comment upon which in normal times constitutes the backbone of the chairman's speech.

Our net revenue has been maintained in spite of an unprecedented burden of taxation, and after due provision for such taxation we were left with a distributable balance of £12,468 10s. 9d., compared with the corresponding amount of £13,009 13s. 8d. for 1940.

No company with interests such as ours has more successfully surmounted the difficulties of the war up to now—thanks to the technical competence and conscientious service of our executive officers—and none can face the future with more sober confidence. We have therefore decided to recommend to you the repetition of the 5 per cent. dividend which has been paid with such regularity now for many years.

The report and accounts were unanimously adopted.

RECORDS and STATISTICS

STOCK EXCHANGES London

Note: all dealings are for cash

ACTIVITY since the holiday has been slight, prices in most sections remaining steady, but with the vesting of the Indian loans, the gilt edged market witnessed some re-investment demand. A general advance in long-dated issues at the reopening was followed by an improvement in irredeemable issues the next day. In the foreign bond market, Brazilian issues enjoyed small but persistent gains, and Chilean bonds were strong on interest prospects. Elsewhere, on Tuesday Egyptian Unified advanced 2 points, but the 5 per cent China loan of 1913 fell 1½ points. Prospective dividends and yield considerations attracted buyers to the home rail market, where junior issues advanced steadily in the first half of this week. In the foreign rail market, the payment of the BA Western debenture interest encouraged demand for senior Argentine issues. Although there was little increase in turnover based on the Prime Minister's Ottawa speech and the success in the Crimea.

Prices in the industrial market were hardly affected by the small turnover, although brewery issues registered some small gains on the weaker beer announcement. Aircraft and motor shares moved within narrow limits, while the heavy industrial and shipping groups were without interest. In the textile group Patons & Baldwins fell back, but among tobacco issues, events in the Far East led to small losses for BAT, although Imps were in demand. Elsewhere, Brazilian Traction jumped fully 1½ points, and both International Nickel and Murex advanced. The kaffir market was dull throughout, Cape

selling on Tuesday leading to small but widespread losses. Persistent selling occasioned numerous declines in the tin market, while among many other losses for rubber shares, Malaya General fell 2s. 6d. on Tuesday. Apart from some buying of Ultramar, which advanced sharply on the successful test results, the oil market was dull, but leading issues remained mainly unchanged.

New York

In the absence of major developments, Wall Street tended to extend the holiday over the week-end, and although a slight advance marked the close of the previous week, markets were quiet. Trading at the reopening was more active, and on Tuesday the long anticipated rise developed, steady re-investment buying occasioning a strong and general advance, which was later interrupted by the news from Manila.

GOVERNMENT RETURNS

For the 11 days ended Dec. 31, 1941, total ordinary revenue was £52,132,000, against ordinary expenditure of £54,674,000, and issues to sinking funds of £310,000. Thus, including sinking fund allocations of £7,799,000, the deficit accrued since April 1st is £2,281,994,000 against £1,963,257,000 for the corresponding period a year ago.

tin.—(4) Discussions continue between the Metal Exchange and the Ministry of Supply on the solution of the tin market's problems. Before the holiday the Ministry suggested paying £259 10s. per ton for requisitioned tin, but reports have since been circulated that Ministry sales to consumers were made at a provisional price of £275. On December 8th, the last day on which dealings took place in the open market, the price of tin, standard cash, was £250-£260 per ton.

American Metal Control.—The United States Government assumed control, on December 27th, of all imports of antimony, cadmium, chromium, copper, graphite, cyanite, lead, mercury, rutile, tungsten, vanadium, zinc and zircon. The Metals Reserve Company and other Government agencies will deal with the imports.

Rubber Control.—The use of rubber in the manufacture of a large number of articles was prohibited from December 29th, and from January 5th the manufacture of certain other articles is to be permitted only under licence. Wearing apparel, toys, and domestic appliances are included in the former ban; hot-water bottles and sports equipment come into the latter. The control of rubber is now undertaken by a Rubber Control Board, appointed by the Ministry of Supply.

Cadmium and Nickel.—Two new non-ferrous metal Orders have been made, prohibiting the acquisition of cadmium and nickel except under licence. Scrap metal is exempted from the provisions of the Order, which came into force on January 1st. A maximum price of 5s. 4d. a lb. has been fixed for cadmium.

Timber Control.—The Control of Timber and Lumber Order comes into force on January 1st. Its primary purpose is to provide uniform prices for national stock imported timber, ex wharfingers' yard, in place of prices varying with the cost of transport from the port to those yards. The general level of prices remains unchanged, but certain adjustments have been made to remove anomalies and facilitate the substitution of one timber for another.

COMMODITY AND INDUSTRY NEWS

Raw Cotton Licensing.—From January 1st, licences issued to nucleus cotton spinners and waste spinners enable them to use the quantity of cotton necessary in the ordinary course of business without limiting them to definite amounts. This step is taken to secure maximum possible production from the labour available, and to relieve spinners of the necessity of planning production in accordance with specified licensed quantities. The use of certain growths of cotton may be restricted in accordance with the potential supply position.

Agricultural Wages.—The wages of inexperienced agricultural workers have been raised in consequence of the increase in the national minimum wage to 60s. per week for regular adult male workers in agriculture. Minimum rates of 50s. per week and 1s. 3d. per hour overtime for adult males, with lower rates for youths, have been fixed for the first two months of employment. Female workers are to be paid 90 per cent of the county minimum during the first month, subject to overriding minimum rates of 36s. per 48-hour week for those over 18 years and 30s. for those under 18, when employed by the week or longer period. Minimum hourly rates for boys and girls during school holidays are fixed at 8d. for boys over 16, and 6d. for those under. The corresponding rates for girls are 7d. and 5½d. Board and lodging allowance for adult male workers is fixed at 21s. for a seven-day week, with lower rates for younger workers. The Order embodying these changes came into force on January 1st.

A Case of Gravity.—The average gravity of beer was reduced by five per cent from January 1st. The stronger beers are those mainly affected, but ordinary beers retain their present strength. Labour shortage in the malting industry and the consequent need to eke out malt supplies is the reason for the reduction. Beer prices are unchanged.

Tomato Prices.—Maximum growers' prices for tomatoes have been fixed for the

1942 crops. The year has been divided into five periods. Existing prices remain in force until a date to be announced. During the second period, which ends on June 14th, growers will receive 18. rd. per lb.; from June 15th to August 2nd, 11c. per lb.; from August 3rd to November 1st, 9d. per lb.; and from November 2nd until the end of the year, 18. rd. per lb.

Equipping the Alliance

THE outline of what it means, in the twentieth century, to bring in the new world to redress the balance of the old is daily becoming clearer. The figures that Mr Roosevelt gave Congress on Tuesday are breathtaking. In the present year, 60,000 aircraft, and next year 125,000, will be made; the monthly rate is thus to be 5,000 in 1942, and 10,000 in 1943. Of all the estimates of German production that have been bandied about in recent years, the highest credible figure was 4,000 a month, and this was probably an exaggeration by at least 1,000. Within a very few months, the Allies will be outproducing the enemy by at least three and perhaps four to one.

The American production of tanks is to be 45,000 this year and 75,000 next year. Stalin has estimated that the Germans had 30,000 tanks to attack Russia last summer, and if it can be assumed that this was the accumulation of two and a half years, that gives a German output figure of 1,000 a month. The American production alone, without counting the British, will be from four to six times the German. The production of anti-aircraft guns is to be 20,000 this year and 35,000 next year. Here there is even less to serve as a basis of comparison. But it may well be that these are the most astonishing figures in the list.

The fourth pair of figures that Mr Roosevelt gave was of merchant ships ; 8,000,000 dead weight tons are to be built this year, and 10,000,000 tons next year. This is the equivalent of about 5,000,000 gross tons in 1942, and 6,000,000 in 1943.- Since shipping losses at their worst were around 600,000 gross tons a month, and for many months now have apparently been 200,000 tons a month or less, it is obvious that there is going to be a growing supply of shipping available, not merely to keep the munitions industries of all the Allied nations going, but also to move their armies across the face of the earth.

Of any formal political organisation to link the allied nations together there is as yet no indication. Indeed, so long as Mr Roosevelt has to remain in Washington, Mr Stalin in Moscow and Mr Churchill in London, it is difficult to see how any assemblage meeting face to face can take the big decisions. It is on planes rather lower than the highest that formal organs can be most useful. Military collaboration, for example, already exemplified in Sir Archibald Wavell's appointment as Supreme Commander in the South West Pacific, is to be carried further both in London and in Washington, where Field-Marshal Sir John Dill is to remain.

There have also been reports of an Allied Supply Executive to be set up in Washington, frequently coupled

Allowance is made for net interest accrued, and for redemption for fixed interest stocks and for changes in interim dividends for ordinary stocks.

with statements that this means "the end of Lend-Lease." The actual task of management and control of munitions production is necessarily a matter which each nation must arrange for itself. What can be made in each country depends on the delicate balancing and adjustment of the supply of machinery, which can be moved from country to country only in limited degree, and of labour, which cannot be moved internationally at all. Indeed, it has been argued with great force that even the nation is too large a unit for production management and that more discretion and elasticity should be allowed to regional managements. It is not practical for production in Lancashire to be run from Washington, or for the output of Ohio to be managed from London; production can be standardised or specialised between nations only within comparatively narrow limits. What can be done, of course, is co-ordination of programmes—that is, agreement on what shall be made in each country. But a great deal had already been done on these lines in the months before America entered the war. The process will doubtless now go further; but it is not new in principle. The machinery of consultation—operated through the British Supply Council in Washington and Mr Harriman's organisation in London—may need reinforcement, but not replacement.

As for the abandonment of Lend-Lease and its replacement by "an international pool of supplies," the President has already denied that this is to happen. Indeed, the suggestion that Lend-Lease and a pooling of supplies are two very different things betrays a certain ignorance of what has been happening in the past ten months. The suggestion may, of course, be a circumlocutory way of saying that all question of eventual repayment will now be dropped. But that is a matter on which only Congress can speak, and Congress has not yet shown any sign of wishing to change the present arrangements. In any case, Lend-Lease has been operated

from the start, by both parties, as an ingenious device to permit the pooling of supplies. For many things, there has been no "Lend-Lease production" in the United States separate from the general American production of the same things; the goods to be supplied under Lend-Lease were to come out of the general output of the country. The process of pooling will now doubtless go further, and there may be further progress with the difficult technical matter of deciding on common types of equipment. But here again there is no new principle to enunciate. Lend-Lease already meant a full industrial alliance between the two countries.

But if production cannot be reduced to a single world-wide programme, there are other aspects of the economic front that can with advantage be placed under a strong central direction. The provision of raw materials, for example, is already just as international as munitions production is necessarily national. It has been reported that there is to be an Allied raw materials executive, and though the report is not yet confirmed, this would obviously be a sensible development. Another necessity that will shortly appear will be for a joint organisation to ensure the supply of civil necessities to countries other than the great manufacturing centres of the world. Only a few weeks ago, export policy was still being discussed in the framework of competition between suppliers to secure markets. Even at the time, that was an imaginary picture, and when the American production programme begins to expand, it will soon be painfully apparent that the real problem is not to share the markets but to share the burden of supply. There will be a field for detailed collaboration here.

All these developments are on the right lines. Almost every day necessity is proving to be the mother of invention in the creation of new machinery for performing the duties to which, at last, the whole of free mankind has been summoned.

The Use of Land

POST-WAR government and post-war reconstruction are the same thing. The idea of a grand Ministry of Reconstruction after the war directing policy for trade, employment, agriculture and finance is unreal. These will be, in the main, the tasks of existing departments—the Board of Trade, the Ministries of Labour and Agriculture, the Treasury, the Ministries of Health and Works and Buildings, the Board of Education and the Ministry of Transport. It is an agreed programme for these departments to carry out, and an effective means of consultation between their heads, that is wanted, not a new department; a Cabinet of Reconstruction, not a Ministry. This is not to claim that the existing framework of administration is completely satisfactory. Properly, one of the main preoccupations of reconstructors after the last war was with the machinery of government itself. New departments, such as the Ministries of Health, Transport, Pensions and Labour, were set up then; and there are still gaps now. The treatment of wartime hardship has only underlined the need for a Ministry of Social Security services. The distribution of wartime rations has at least suggested the need for a peacetime Ministry of Food. It is a chief indictment of the indiscriminate lumping together of all kinds of reconstruction in a single grandiose province that it hides the need for a separate Ministry to plan the use of land effectively.

Actually, the need for a central planning authority has now been recognised, expertly, by the Barlow Commission just before the war and the Uthwatt Committee last year and officially by Lord Reith in the House of Lords a year ago. But some confusion remains about the functions of such an authority. Lord Reith, who in addition to being Minister of Works and Buildings, appears to be Minister-elect of Planning, has spoken of it "proceeding on a positive policy for such matters as

agriculture, industrial development and transport," which would seem to fly too high to be feasible. A Ministry of Planning which was no less than a compendious Ministry of Reconstruction under another name would prove impracticable and a failure.

So far, whatever its intended duties, the Ministry of Planning is only putative. Three Ministers, Lord Reith, Sir John Anderson and Mr Greenwood, are concerned with reconstruction. All three are sympathetic and well-meaning; Sir John Anderson has a firm grasp of the administrative issues involved; and Lord Reith, as Minister of Works and Buildings, is in touch with the physical, bricks-and-mortar, issues. Their joint task, with their advisers, is threefold: to sort out the problems and take expert counsel; to provide for consultation with the departments on the solutions; and to secure a practical Ministry of Planning, set up at once.

The land is the theatre of all activity. It is fixed in extent, and agriculture, industry, transport, housing and recreation compete for its use. Projects to plan its distribution among these claimants are neither new nor revolutionary; by-laws to restrain the insanitary or anti-social use of land are age-old; and for several generations the rights of landowners have been restricted by regulation, with compensation, or removable by the public acquisition of their property, at a fair price. The view of Sir Daniel Hall, expressed in his recent book on "Reconstruction and the Land" that "agriculture can only be placed on a sound and progressive footing if the State obtains the control of the land that ownership confers," is a common view among impartial experts. The function of a Ministry of Planning would be, by a continuance of established methods, to prevent reconstruction from being impeded by private ownership.

The starting-point of such a Ministry's work would be the powers already established by the Town and Country

Planning Acts, which enable local authorities to "zone" the land in their area—that is, to determine the use, agricultural, residential, commercial, industrial or recreational, to which it shall be put when developed—and to lay down standards of "density" or space for building. It is only by the application of these powers, nationally and regionally as well as locally, according to a national plan, that post-war policies for agricultural development, industrial location, road-building, housing, health, hygiene and social amenity could be put promptly into practice. Town and country planning has largely failed up to now for three reasons: there has been no national plan for land-use; there has been no national planning authority; and the financial adjustments made necessary by changes in land values due to planning have proved insoluble on the basis of local compensation or local purchase. The minimum programme for the future should be the correction of these existing defects. The national planning authority has been conceded in principle, and when constituted, it will presumably produce a plan for the whole country. Nothing has yet been said about the difficult matter of adequate finance; but it is clearly an essential part of any scheme that is to be effective and, in default of a far-reaching reform of local government finance as a whole, it must come from the Exchequer. With this proviso, it is possible to see the first outlines of a more satisfactory system of town and country planning emerging.

But a reform of this scale, a tidying-up and streamlining of the state of affairs that already exists (on paper), would leave untouched the basic defect of all planning as hitherto officially conceived: it is wholly negative. The use of negative and prohibitory powers often gets no further than choosing between alternative and almost equally bad uses of the land. Even where town planning has been most energetically applied, it is rarely possible to say that it has secured a good use of the land, but merely that it has prevented the land from being so shamelessly misused as elsewhere.

Once the attempt is made to develop negative planning into positive direction, the question of the ownership of land immediately comes up. It is, in any case, a question that arises in so many urgent connections—the rebuilding of the towns, housing, the reconstruction of transport, the improvement of farming methods—that it is bound to be on the agenda of practical politics from now until it is settled. It would be a very great pity if sides were taken on arguments of abstract principle. It will awaken very little response to advocate nationalisation because "the land is the people's" or "property is theft" or because there is some store of wealth in the ownership of land which is not tapped by the existing methods of direct taxation. On the other hand, it would be equally foolish to oppose the nationalisation of the land merely because it is Socialism. The Uthwatt Committee was not a

Socialist body, nor was the Government which nationalised coal royalties or commuted tithe.

The arguments for and against the nationalisation of the land are purely those of common-sense. Would it simplify or obstruct the task of making the best possible use of the land? It is impossible not to be impressed by the detailed and authoritative arguments for nationalisation. Without it, the use of land is determined by buying and selling, by the price-mechanism of the market in land. The most expert dictation of all land-uses by the most wise and omnipotent planning authority cannot supersede this mechanism. But the land market does not and cannot take national and social desiderata into account. It is possible to have good living standards while making the most remunerative use of the land; but it is equally possible to have chaos and ugliness. Moreover, there is the question of equity; when roads are built, public services extended, industries encouraged, housing subsidised, agriculture supported or planning schemes carried out, individual landowners, haphazardly, are the gainers; and calculations as between one piece of land and another for taxing betterment are as difficult as for assessing compensation—as Mr Lloyd George and Snowden discovered. There is soundness in the view that "unearned increment" should belong to the community; but the taxgatherer has great difficulty in collecting it.

These arguments, however, if they are closely examined, will be seen to apply—or at least to apply most strongly—not to all the land of the country but only to that which is affected by the planning activities or the economic policy of the state. Over a period of time, the two things are the same. But to nationalise all the land of the country might result in the community undertaking the immense burden of managing a great deal of land for which it had no plans, in order to reap the advantages of common ownership on the small fraction that was affected by immediate plans. If all the land were nationalised immediately after the war, at least 90 per cent of it would, as a matter of practical necessity, have to be handed back, not for ownership but for management, to the present owners or occupiers.

This may well point the way to a solution. The principle of nationalisation should be accepted. A declaratory Act could be passed, asserting the intention of the State eventually to purchase all the land of the country and laying down principles of valuation which would, in effect, freeze the value of land (apart, of course, from improvements). The purchase of specific parcels of land could then be undertaken as replanning progresses and as the machinery for managing it is built up. Whether this is the right solution or not, it is essential that the two extreme solutions should be avoided. Planning must not be held to ransom. Nor must the energies that should be given to it be diverted to a gigantic task of estate management.

The Wealth of the Indies

THE strategic and economic importance of the Dutch and British possessions in Malaya and the Malayan Archipelago is no novelty. But it is doubtful whether the full stature of this part of the world is realised even yet. Strategically, the long peninsula and the line of islands serve a double purpose. They form a land bridge to Australasia and a barrier between the Pacific and the Indian Oceans. If the land bridge is broken, air communication with the Antipodes is broken off; and if the enemy secures control of the bridge, he enjoys the easy approach it provides. At present, the Indian Ocean is the only one where Allied naval supremacy is entirely unchallenged, and through it run many of the most vital supply lines of the war. If the gate at Singapore is burst open, the naval problem is infinitely complicated.

From the economic point of view, too, the importance of the Malayan Archipelago is insufficiently realised even now. For example, how many Englishmen or Americans realise that the population of the Dutch islands alone is several millions more than the total population of the whole British Colonial Empire, within a few millions of that of the Japanese islands, and more than half that of the United States? If Malaya and the Philippines are included, the population exceeds 100 millions. And, though these vast numbers are barely industrialised, their homelands are endowed with a rich profusion of natural wealth. Not every part of the Archipelago, however, is equally rich. The following paragraphs give a brief survey both of the proportions of Malaysia's production and of its geographical location.

Oil.—Oil is the principal mineral product at present produced in the Malay Archipelago. Although the output represents only 3 per cent of world production, the capacity of the wells is large enough to meet the needs of the Far East. In 1938 the production of crude oil totalled some 8,300,000 tons. Much the most important sources of supply are to be found in the Dutch islands. In 1938, the two main oil centres in Sumatra, the Palembang-Jambi district in the south of the island and the Medan district in the north, together produced some 4,600,000 tons; the fields of western Java, east of Batavia, and of eastern Java, between Surabaya and Rembang, furnished nearly 1,000,000 tons; a similar quantity was produced in the Balikpapan region of Dutch Borneo, another 750,000 tons in the island of Tarakan, off the east coast of Borneo, and 82,000 tons in Ceram in the Moluccas. The exploitation of the oilfields is shared between subsidiaries of Royal Dutch-Shell, Standard Oil of New Jersey, and a combine of the Netherlands Indian Government and the subsidiary Royal Dutch-Shell; in 1939 their proportions of the total output were 56½ per cent, 27 per cent, and 16½ per cent respectively. The remainder of the

Archipelago's output comes from British Borneo; in 1938 700,000 tons were produced in Brunei and 200,000 tons in Sarawak.

Large refineries have been erected to turn the crude oil into refined products in the proportions in which they are required. The largest refineries are in the Palembang district of Sumatra, and their range of products includes aviation spirit. Java, too, has facilities to refine its crude oil output, and there is a fairly large plant in the Balikpapan district of Dutch Borneo, and a smaller one in Sarawak in British Borneo.

Tin.—Next in importance among mineral products comes tin, which is found in Malaya and in the Dutch islands of Banka, Billiton and Simeu, off the east coast of Sumatra, the continuation of the ore belt which runs through Thailand and French Indo-China into southern China. Malaya's output of tin in 1940 amounted to 85,384 tons, compared with 44,563 tons produced in the three Dutch islands, to which Banka contributed the greater part, with Billiton second and Simeu third in importance. Together, Malaya and Netherlands India produced some 55 per cent of the world's total output in that year. Malaya's tin ore is smelted on the island of Penang and in Singapore; Banka has its own smelter, but the ore from Billiton and Simeu, formerly treated at Arnhem in Holland, has recently been smelted in Malaya.

Bauxite.—The exploitation of bauxite is a comparatively recent development in the Malay Archipelago, but there are large deposits, both in Johore in Malaya and in the Dutch island of Bintan opposite Singapore. Johore's exports, mainly to Japan, rose from 36 tons in 1936 to 55,751 tons in 1938, and production in Netherlands India, which exceeded 200,000 tons in that year, also assisted the latest aggressor in building up his aluminium industry.

Other Minerals.—In addition to oil, tin, and bauxite the Malay Archipelago produces many other minerals. There is little coal produced in Malaya, and even Netherlands India raised only 1,781,000 metric tons in 1939, of which 1,222,000 tons came from two Government mines in Sumatra. On the other hand, Malaya's output of iron ore, formerly exported to Japan, has grown steadily in recent years. Total exports in 1938 were 1,616,000 tons, Trengganu contributing 950,000 tons, Johore 550,000 tons and Kelantan 160,000 tons. There are also large but virtually unexploited iron ore deposits in Dutch Borneo and Celebes. Trengganu and Kelantan in Malaya produce small quantities of manganese ore deposits; exports of 31,970 tons in 1938 were sent to Japan. Java also works manganese ore deposits but output scarcely exceeded 10,000 tons a year before the war. Malaya possesses important wolfram deposits in Kedah and Trengganu, but its output of scheelite, which is found in Perak and Selangor must have declined since 1939 as a result of the exhaustion of the rich Kramat Pulai deposit. The output of wolframite in the Netherlands Indies, though still small, has made rapid headway in recent years; produc-

tion in 1939 was 3,500 metric tons, against 400 tons in 1938. Similarly, development of the low-grade nickel ore deposits in Celebes began only a few years ago; in 1939 output was 23,500 tons of ore. There are other mineral products in the Malay Archipelago, but production is generally small.

Rubber.—Of the crops produced in the Malay Archipelago, rubber is the most important. Last year exports amounted to 1,130,000 tons, equivalent to 81 per cent of the world's total shipments. A further 8 per cent came from Thailand and French Indo-China, so that nine-tenths of the world's supply came from the Far East. The remainder was produced in Ceylon, Burma, Africa, and Latin America, mainly Brazil. Production in Malaya and in Netherlands India is approximately equal in magnitude. Malaya (including Brunei and Labuan) exported 540,000 tons in 1940, North Borneo 18,000 tons, Sarawak 35,000 tons, and Netherlands India 537,000 tons. In Malaya, rubber is grown throughout the Peninsula, but Johore, Perak, Selangor, Negri Sembilan and Kedah are the chief producing areas. In Netherlands India it is produced mainly in Java and Sumatra.

Sugar and Tea.—Netherlands India is among the world's leading sugar and tea growers; Java is the main centre of both crops. Its output of sugar in 1938 was 1,375,000 metric tons; exports were 1,071,000 tons, or about 5 per cent of the world's total exports. Tea exports in 1939 totalled 162 million lb., equivalent to some 18½ per cent of world exports.

Other Crops.—There are a multitude of other crops

produced for export on the rich soils of Netherlands India. They include copra and palm oil, spices, tobacco, fibres, coffee, tapioca, cinchona bark and quinine. Netherlands India provides some 90 per cent of the world's supply of quinine and pepper, three-quarters of its capok—a fibre which does not absorb moisture and is used, among other purposes, in life-saving apparatus—one-third of its copra and nearly one-fifth of its palm oil.

Apart from its strategic importance, the possession of the Malay Archipelago, or even of certain parts of it, would give Japan some of the vital materials it lacks, especially oil and ores, though the destruction of equipment and of stocks would prevent the aggressor from deriving immediate advantages. To the Allies, the loss of some of Malaya's products would involve serious inconveniences, though not immediately, thanks to the accumulation of substantial stocks. While the disappearance of pepper from the table would hardly cause hardship, rubber, tin and quinine, which are derived in large quantities from the Archipelago, are essential in war. The Government of the United States has been wise in its decision to expand the capacity for the production of synthetic rubber, but it would take a great deal both of time and of effort to make synthetic rubber an adequate alternative to the natural product. Rubber yields when attacked, but it is very tenacious and full of rebound. The military defence of the rubber countries might take it as a model.

Towards a Sounder Foreign Policy—II.

Diplomats and People

LOOKING back on the inter-war years with eyes disillusioned and enlightened by the following catastrophe, many people see today that the conduct of foreign affairs during that period was frustrated by a fatal dualism. On the side of the Government was the Foreign Office, representing the old diplomacy abroad and jealously guarding its secrecy at home. On the side of the people, a vast busy multitude of enthusiasts of all sorts wrote and talked and lectured and joined groups; for them foreign policy had ceased to mean the conduct of relations between sovereign states and had become something quite different called international relations.

The interaction of these two systems was fatal to both. The Government, compelled to modify its traditional discretion with regard to foreign policy and yet unwilling, for fear of unpopularity, to lay bare the naked truths of power diplomacy, was driven into plain deceit. The people, abandoning the national for the sublimely international plane, abandoned with it all sense of national responsibility in terms of defence expenditure and military preparedness and relied instead upon a self-operating collective system which did not in fact exist. The result was ineffectual leadership on the one hand, a ferment of irresponsible idealism on the other. Seen under the awful clarity of the disasters this dualism brought about, the first necessity for a sounder foreign policy is to establish contact between a sound national leadership and an enlightened public opinion, and then to devise appropriate methods, or even institutions, for ensuring that the contact be maintained.

There is, however, agreement on one thing at least. Diplomacy is the art of avoiding conflict, and the people are passionately interested in foreign affairs because they are afraid of war. Even in the hour of greatest delusion, all sides agreed on wanting peace. Now, in the light of the painful examinations of conscience which the war has entailed, it is possible to see rather further than this underlying objective of peace. It is possible to draw one or two inescapable conclusions about the price that must be paid for peace. There are no automatically functioning systems of international law and order. If there is to be law in international society, then there must be overwhelming force behind it; and the other nations are not necessarily going to supply the force, or if they do,

use it to uphold the law. If the British people want law, they must pay the price—in taxation, in military training, even in service overseas—that the maintenance of order has always entailed. There must be no more pacifism.

Again, whatever the happy, sea-girt conditions of earlier times, the day when the Channel was sufficient barrier "against infection and the hand of war" is done. If the United States cannot extricate itself from the chain of circumstance whose first link was forged in Poland, how much less can Britain hope to hold itself safely aloof from the Continent. And since events across the Channel can determine the ultimate issues of peace and war, it would be obvious lunacy to throw away all chance of moulding them towards peaceful ends. There must be no more isolationism.

These, and perhaps one or two other great principles, should be woven into the fabric of popular thinking as inextricably as was the command of the seas or naval supremacy in an earlier generation. If any legislative act could reinforce them, then at the end of the war might come the time to register the basic agreement of the nation in a formal Act or Declaration which, even if it could not bind future generations, might make an imaginative impact on them comparable only to that of the Monroe Doctrine in American political thought, or of Magna Carta and the Bill of Rights in the English.

Since one of the chief conditions of useful discussion is some agreement on first principles, a National Declaration of this sort, embedded in the consciousness of rulers and people alike, could be a first step towards solving the problem of a necessary interaction in democratic foreign policy between the leaders and the led. It would to some extent commit the parties and the politicians, and it would provide a firm basis of agreement from which the self-education of the public could take its start. But it would be only a first step. In the relations between diplomacy and public opinion, the quality of both sides is in need of radical improvement. The inter-war period is one long illustration of the inadequacy of diplomats whose Europe had changed but little since the Congress of Vienna, and who were out of touch both with the struggling, emergent instruments of international government and with the explosive forces at work among the masses which were soon to sweep all the

tentative experiments away. The British diplomat encountered by Mr Harold Butler in the Balkans who "got other people to talk the language for him" was as remote from the politics of Geneva as from those of the Communist cell or the Nazi *Braunhaus*. It does not follow that Britain must be represented abroad either by professors or by thugs, but the training of a diplomat should enable him to recognise and deal with both types. For this, a veritable revolution is needed in the recruitment, promotion and retirement of the diplomatic service.

The mass of the people can plead that they were deplorably led by their statesmen; but they were even more deplorably misled by a great many other men, and here the blame is squarely theirs, for it was the nature of their appetite that encouraged so many quack practitioners. They wanted simple generalisations, so thousands of little orange books appeared with the whole confusion of Europe neatly docketed in black and white—or rather black and red. They wanted the "inside stories," so hundreds of hack journalists, who knew no more of European history than a child of seven, gave them inside stories of everything, from Fritz von Thysen to the Pope of Rome. They wanted "social significance," so columnists and social gossip writers left the round of parties and celebrities to pontificate about the future of Europe and the state of world history. Above all, they wanted everything to be easy—easy headlines to read, easy stories to digest, easy supermen to gape at, easy villains to chill the blood. And while Europe tottered on to war and every dictator turned the most complicated ideological somersaults, that is exactly what they got.

It is far simpler to diagnose the malady than to suggest remedies, for, in the problem of raising the standard of critical intelligence among the people, lies the chief challenge to democratic government in a modern mass state. Of the various possibilities, the simplest would be the continuation in peacetime of the Ministry of Information, charged with all information services by writing or by word of mouth. Provided there were no compulsion to believe in or prohibition to write against the Ministry's information, then, strictly speaking, such a solution could be compatible with a free society. Actually it is a solution which would rightly prove repugnant and suspect to a great majority of free people—if their allergic attitude towards the work of the present Ministry of Information is any guide. However high minded the intentions of those who first set up such an official government propaganda service, it would either be completely ineffective, or else it would constitute so vast a social control that its abuse would be far more dangerous than its absence.

At the other extreme is the solution of unlimited private enterprise in the supply of news and views about foreign policy; but this is the anarchic regime of the interwar years the remedy of whose abuses is a condition of sound foreign policy. Nor is it really possible to imagine

that a solution could be found on the lines of a professional organisation of foreign policy experts. An Association of Foreign Commentators, on the lines of the British Medical Association, might lay down conditions of enrolment—educational requirements, study of history, residence abroad, apprenticeship and training—and list and publicly disown unlicensed practitioners. The disadvantages of this system are obvious enough—professional competition, the squeezing out of talent, the creation of a crusted vested interest. If its impartiality were guaranteed by public control, other evils would follow—the penalisation of the able but unorthodox, the premium set on timidity and conformity.

Another expedient is the provision of information by institutions which, although licensed by the State, are not state run. The BBC is an example of an institution of this intermediate type. On a smaller scale, the Royal Institute of International Affairs is another. The post-war fate of the Ministry of Information might be to continue in the form of an institute under independent governorship and removed from state administration. The difficulty of such a solution is that hitherto such institutions, in order to avoid the charge of making propaganda, have put all points of view—which is no solution of the problem of leadership. Another difficulty is to preserve within so heavily organised a framework any inspiration or originality of approach or any power of new insight into the flux of foreign affairs.

The problem is, then, one of the greatest difficulty. But it must be solved if there is to be any prospect of a well-secured peace. There is, of course, no ideal solution. So much depends upon the quality of the people who seek information; but it is possible to envisage a mixed system in which a variety of institutions and different individual practitioners all play a part. It would perhaps be legitimate for the state itself to do direct propaganda for the principles enshrined in its Declaration since the pre-condition of any such a Declaration coming into being is widespread popular agreement. Public but independent institutions and formally recognised experts could guide the public through the problems raised by applying the basic principles to any given situation; while the unlicensed practitioner, speaking as a citizen with a right to free speech, but not as an expert with a right to respectful hearing, could raise the doubts or queries and new ideas without which the system would grow stagnant and the people bored.

Democracy is by definition the kind of government that does not seek the easy way out, and the creation of a sound and sufficiently united public opinion is its main problem. Yet, in comparison with the amount of intelligence, and the amount of money that has been spent in bedevilling men's minds, is it fantastic to hope that equal wit and equal outlay can contribute something to their enlightenment?

NOTES OF THE WEEK

Unity of Command

One of the first decisions taken by Mr. Churchill and Mr. Roosevelt in Washington—the appointment of General Wavell as supreme Commander of the South Western Pacific battle zone—is a welcome symbol of the unity of mind which prevails between the Allies and the ability to give that unity practical expression. There are few fronts where national divisions are so diverse as in this great new theatre of war. The frontiers of General Wavell's command do not extend to Free China or to any zones in Thailand or French Indo-China the Chinese may occupy in the event of an offensive against the Japanese armies of occupation; all Allied troops in these areas will be under the command of General Chiang Kai-shek. Chinese forces defending Burma and Malaya will, on the other hand, fight under General Wavell's command. Doubtless this arrangement was decided on during the Commander-in-Chief's visit to Chungking. The American forces in the Philippines, under the local command of General MacArthur, fall within

the general area controlled by General Wavell. So, too, do the Dutch forces in Netherlands India and the Empire forces defending Singapore. The new command covers the northern coasts of Australia, and the Australians' special position is to be recognised by a permanent liaison between General Wavell's headquarters and the Australian Home Command. An encouraging feature of the new arrangements is that not only are the different national groups properly co-ordinated, but the three services—land, air, and sea—are brought under unified control. With General Pownall as Chief of Staff, Major-General Brett, Chief of the United States Army Air Corps, as Deputy Supreme Commander and Admiral Hart of the United States Navy in command, General Wavell has able assistants from all three services. Given the difficulty and diversity of the area, it would be difficult to conceive, in so far as structure is concerned, of a better working arrangement. General Wavell's heavy task lies in the legacy he inherits, or, to use his more picturesque phrase, the baby he has been given to hold.

The Battle Fronts

The news from the Far East is, as usual, uniformly depressing. Manila has fallen and the Japanese are having a discriminatory fling against all the white races they have found there, Axis peoples not excluded. Sarawak is evacuated. There have been new landings in North Borneo. In Malaya, the British forces are in steady retreat and new landings are reported to have given the Japanese the aerodrome at Kuantan, some 190 miles from Singapore. Other landings on the west coast above Kuala Selangor threaten the left flank of the British forces. There is as yet no sign of important reinforcements and it is perhaps significant that the supreme Allied headquarters is to be established in the Dutch East Indies. From the other fronts, the news is less discouraging. The Allies in Cyrenaica are continuing their mopping up operations round Jedabia. Both sides are presumably massing their machines for the next stage in the attack. In Russia, the German bulge round Mojaik has been punched a little flatter by the Russian recapture of Maloyaroslavets. Now the Red Army has reached the outskirts of Mojaik and thus in a month's fighting it has retaken practically the whole area captured by the Germans in their November offensive. In the north, the Russians have pushed forward to Schlüsselburg outside Leningrad and the Finns are watching nervously the definite signs of increased Russian activity in the Karelian peninsula. In the extreme south, the recapture of Kerch and Feodosia has been consolidated and the Russians are apparently trying to repeat the coup on the west coast at Eupatoria. The initiative remains everywhere with the Russians and the next weeks will give decisive evidence whether the Germans can—as they claim—establish a line, or whether the straightforward Russian counter-offensive can be boldly developed into devastating thrusts deep into enemy occupied territory.

Chinese Victory

It is now clear that the Chinese have won a victory of considerable importance at Changsha. Not only has the attacking Japanese force, variously estimated at between 60,000 and 100,000 strong, been forced to retire toward its base at Yochow but a high proportion has been trapped by the Chinese attacking its flanks. Adopting a strategy which has served them well on former occasions, the Chinese permitted the attacking force to advance until it reached the suburbs of the threatened town and then attacked in strength on either side of its lines of communications. Japanese losses are estimated at between 30,000 and 40,000. It appears that successful destruction of roads prevented the Japanese from bringing south certain mechanised forces based on the Yang-tze valley. The victory is important since it ensures that the Japanese are still unable to use over its full length the Canton-Hankow railway which runs through Changsha. It is also important because it demonstrates once more the supreme importance of arming the Chinese forces. Military skill which can successfully pit an army with primitive equipment against a modern mechanised power commands the admiration of the world. There is a strong probability that General Chiang Kai-shek's armies, supplied with arms, could roll back the Japanese invader as devastatingly as the armies of Stalin are turning the Germans out of Russia. This was true before Japan entered the world war. To-day, the necessity for such a policy is ironically underlined by Allied inability to hold the Japanese, with or without arms, and by the Chinese loan of a strong force, well armed with scarce Chinese equipment, to assist General Wavell in the defence of Burma.

De-Concentrating Cotton

The effects of war in Russia and the Pacific are not confined to military supplies, ships and rubber and tin. They extend to cotton. The cotton industry has been so successfully concentrated that its output had in any case, fallen below current requirements. As long as three months ago, the spinning section was unable to process the cotton ration allocated to it by the Controller; and to stem the outflow of labour the Essential Work Order was then applied to all nucleus mills in spinning. Now the situation has changed again. There has been a growing demand for clothing for Russia. First sanctions and now open hostilities have deprived India and the colonies of essential supplies of Japanese cloth and clothing. Hostilities in tropical condi-

tions mean a heavy demand on American and British resources for cotton uniforms. In spite of a drive to increase the labour force, the personnel of the mills is inadequate for the work at hand and expected. The position has grown steadily worse as prospective requirements have expanded; and, by the end of the year, it was evident that very drastic action was required to step up production. On January 6th, the Essential Work Order was applied to the weaving section, and cotton was scheduled as a "vital war industry." It has been placed on a par with the munition factories to whom women and men may be "directed." Mr Tomlinson, Parliamentary Secretary to the Minister of Labour, pointed out on Monday that the position is so serious that, once the nucleus mills are fully staffed, mills that have been regarded as redundant will probably be restarted. In so far as the difficulties of the industry are simply due to the understaffing of nucleus mills, they could have been prevented by the earlier application of the Essential Work Order. But in so far as they have been caused by the increase in demand due to strategic causes and the need for adjustment to the extended war, they almost certainly could not have been foreseen when concentration was carried through. They do not condemn the policy of concentration, but rather reflect the difficulties of forecasting demand in the context of a world war. At some stage, all industries producing essential goods are vital industries.

Control of Rubber

The possibility of the loss of rubber supplies from the Far East, which produces some 90 per cent of the world's total output, finds Great Britain without adequate preparation. True, stocks of crude rubber have been accumulated, but the steps taken to ensure adequate supplies have been less far sighted in Great Britain than in the United States. Across the Atlantic, the reclaiming of rubber has long been an important industry, and the increase in the ratio of reclaimed to virgin rubber consumption from 29 per cent in January to 44 per cent in October, 1941, suggests that the output of reclaimed rubber has been increased. In this country the reclaiming of rubber has never become an important industry; in 1939 consumption was only 10,407 tons, compared with the absorption of 122,715 tons of virgin material. Nor has the need for producing synthetic rubber, which is now being developed on a large scale in the United States, ever been given sufficient consideration in this country. In part, this state of affairs must be ascribed to the fact that the British Empire is the world's largest producer and the United States the largest consumer of rubber. But the natural inclination of British rubber interests to deplore the expansion of the reclaiming industry should have been overruled when war broke out. The Government could hardly expect a Rubber Controller drawn from the industry to prevail over the influence of the producers of crude rubber. The replacement of the Controller by a Board which, besides Sir George Beharrel (chairman of the Dunlop Rubber Co.) as chairman and Sir Walrond Sinclair (chairman of the British Tyre and Rubber Co., and of India Rubber and Gutta Percha), the former Controller, includes a director of the Rubber Regenerating Co., and is

leavened by persons from other industries, suggests that the need for a change has been recognised—though, characteristically, the major influence is still with the trade. There can be no two opinions concerning the policy that must be pursued by the Board. Besides curtailing unessential consumption, the facilities for reclaiming rubber should be expanded; the possibility of manufacturing synthetic rubber must be given serious consideration; and, if shipping is available, rubber trees may have to be tapped more intensively in certain regions, even if this involves a reduced yield later on. These are unpleasant necessities. There is plenty of evidence from many industries—and from America as well as from Britain—that trade interests are apt to see the unpleasantness much more clearly than the necessity. It is a thousand pities that an independent and energetic Controller has not been appointed.

The Return of the Statesmen

Mr Eden and General Sikorski have both returned from Russia, and they bring with them news of the identity of purpose which unites the Allies not only in the immediate objective of defeating Hitlerism but in the problems of political reorganisation which will follow victory. Both statesmen were insistent upon this second aspect of their conversations. After remarking that the identity of view with regard to the conduct of the war mentioned in the official communiqué was "literal and absolute truth" Mr Eden went on to say that he attached "as much importance to the discussions which we had upon the organisation of peace and security after the war" and that "closer political collaboration between us can and will be realised." General Sikorski went further and spoke of reaching with M Stalin "definite conclusions which mean action." There is, naturally enough, no more specific information about the scope of the Allied conversations and agreements, but it can be assumed that the general framework of the settlement discussed was in line with both the Atlantic Charter and the Declaration of Washington with its reference to the defence of "life, liberty, independence, and religious freedom" and the preservation of "human rights and justice." It is unfortunate that Mr Eden should have damped the effect of his confidence in the building of a better settlement by a curious return to the eighteenth century doctrine of sovereignty in which the state, no matter how vicious, could deal as it would with its own people. History has shown that, sooner or later, governments based upon arbitrary dictatorships and a terrorist secret police carry their aggressions over from their own citizens to other nations. After the experience of the last twenty years, the internal regimes of the nations cannot be a matter of indifference to their neighbours. The real task of the final settlement is to devise a Europe, and indeed a world, which acknowledges all President Roosevelt's freedoms—of speech and of worship as well as from want and from fear.

Good Neighbour Policy?

General Sikorski's statement on his return from Russia, coupled with last week's report of a Soviet loan to the Polish Government of 100 million roubles, are evidence that one of the most critical of European problems is on the way to solution. They provide substance for the hope that M Stalin intends to recognise and assist a free, strong and independent Poland; and that General Sikorski fully appreciates the necessity of a realistic, and so of an eastward-looking, policy if yet another partition of Poland is to be

avoided in the future. His statement that "the Poles have so far been known as a romantic people in policy. Now, however, we enter this sphere of real politics when only facts count, and new facts must be created" suggests the abandonment of the Poles' old Ukrainian dream of a restored *Recz Pospolita* in return for "compensation" elsewhere, the form of compensation being presumably one of the "new facts." National prejudice apart, the security of both countries demands a good neighbour policy. It is in the interest of Soviet Russia to make Poland an effective barrier against any future *Drang nach Osten*. It is in the interest of Poland to ensure that a war on two fronts will never again be a practical possibility. These are real considerations, of more moment for the future of each country than any difference of opinion regarding political and religious institutions. And it is concentration on real considerations which has enabled the Soviet and Polish Governments to agree on immediate problems of military organisation and, it is rumoured, on more distant problems of frontier definition. It is probably about as easy for the lion and the lamb to lie down together as it is for a soviet and a feudal-capitalist state to live side by side on terms of mutual trust and respect. In whatever other spheres it may be necessary to reject a policy of non-interference in the domestic affairs of a foreign power, there can be no doubt that the future stability of eastern Europe depends absolutely on the pursuit of a united foreign policy, unhampered by ideological differences, by Russia and Poland.

Saturnalia

The ghosts of a more abundant past still walk. Tantalising advertisements for scarce commodities peer from hoardings and magazine pages—mere reminder and robbers of E.P.T. The New Year sales conjure up, improvidently, the illusion of by-gone plenty. It may be that, if goods are rationed, no harm is done if buyers squander their coupons in a crowded hour and a still more crowded shop. It may be that the cheapness of bargains is real, a powerful magnet in wartime. But, on the morning after, there are no more coupons—and no more goods. Many of the unrationed goods on offer, like rubber hot water bottles, are virtually irreplaceable. It may be natural to scramble to obtain them cheaply, and to hoard them. But it would be better sense to husband them and to spread their distribution more evenly over the year and the population. The truth is that sales fit in badly with savings campaigns and war economy. Spending is Lord Kindersley's enemy, both the fact and the propensity. Sales combined with temporary reduction of Warships' and Weapons' Weeks must keep down the savings figures; and there is no probability that they will soar again correspondingly when the sales are over. In one sense, it may not matter whether half a year's shopping is done in six months or six days. But it does matter if spending in spasms tends to restore the spasmodic tempo of production which made the dressmaking, millinery, clothing, and textile fabric trades in normal times so seasonal, alternating between undue idleness and the employment of an undue number of workers and machines. The textile trades are heavily burdened again with war requirements, and the only way to make the best use of labour and equipment is to even out the replacement of civilian stocks steadily over the year. It may be, of course, that the shops will have to stand empty after this burst of selling until their turn comes round. But there will be pressure for quick replacements in exchange for coupons. War economy means eking-out goods, labour and industrial equipment; and sales, which themselves need extra staffs, are opposed to this in both spirit and letter.

Sauce for Goose and Gander

It would be a blow, not only to the name of British sincerity, but also to British chances of success in future battles, if it became established that "scorched earth" is a proper policy for Russian peasants but not for the guardians of British investors' assets. The extent of the destruction that has been left undone in the path of the invaders of Malaya is disputed; and mines, plantations and stocks are not easily wrecked. But, in some circles in the City of London, a ready defence has in any case been found for leaving rubber and tin—and, presumably, other commodities of interest on the Stock Exchange—undestroyed. One argument will come ironically to Russians. It is that, since the Japanese will be driven out of Malaya eventually,

and since when they go they will destroy what they cannot take away, it would be aiding the enemy to scorch the earth before they arrive. The Russians' task now, as they advance, would admittedly be easier if they had not scorched the earth when they retreated; but the point is that, if they had not done so, they very likely would not be advancing now. Another argument of the apologists for the omissions in Malaya—which, whatever the precise truth, gave the Japanese invaders many mines, plantations and roads and, in Penang, shipping and food, all intact—is a little more plausible, but not a whit less disingenuous. It is that the Japanese already have enough raw rubber and tin, and that it was easier and enough to destroy the tin smelters and the dredges, if this indeed was done. This ignores entirely the total character of modern warfare. Extra rubber and tin in Malaya is bound to be an advantage to the Japanese as the war threatens their other sources of supply in Thailand and Indo-China; and it is only very probable, and not ordained as immutable and certain, that Japan will be cut off for the rest of the war from the other members of the Axis, who hunger for rubber and tin. The policy of scorched earth, by nature and definition, is not a selective policy. It brings in the methods of the locust to impede the enemy, and makes his every battlefield a desert. France had not the courage to use it, and the question raised by events in Malaya and by sophistries in the City is—has Britain?

Food Front in 1942

Lord Woolton's review of his policy in 1941 contains the frank and interesting admission that it was impossible to ration some goods which were in short supply because there was not enough to go round; and the decision to meet this difficulty by the introduction of group and point rationing, lumping scarce goods of a similar kind together in a single ration, was probably the most important development in food policy last year. The successful maintenance of the basic diet, in a year in which Hitler reckoned on winning the Battle of the Atlantic, is a matter for some congratulation, as Ministers have shown no hesitation in pointing out. Thus, an investigation carried out last November by Mr T. Schultz, of the Oxford Institute of Statistics, reached the conclusion that it was then possible to provide a basic "human needs" diet for a family of five, of which three members were children, for approximately the same total expenditure—33s. a week—as in March last. He also estimated that, although the constituents of the diet had changed in various respects, there had been no necessary reduction in nutritional value. Yet it would be unfortunate if the Ministry of Food were to come to regard the maintenance of the present type of diet as an end in itself. Outside the English-speaking nations, the characteristic diet is always one of cereals, potatoes and other vegetables, to which meat, eggs and cheese lend varying flavour. It is the duty of the Ministry of Food to make it clear to the nation that Anglo-American middle-class standards of food are unique and that the change over to what is a "peasant" diet need imply no disastrous loss of calory or vitamin content. Here, there are two provisos: that the unfortunate shortage of oatmeal in recent months can be remedied, and that the British public can learn to cook vegetables without wholesale destruction of vitamins—a matter now coming to be of first-class importance. In 1942, it is the battle of the Pacific which mainly threatens the national diet. The public should be told promptly and authoritatively that this struggle almost certainly implies, not merely lower rations, but a change over to a rather different type of diet—a type of diet which is regarded as normal by the vast majority of mankind.

Mr Tanner Protests

The President of the Amalgamated Engineering Union, Mr Jack Tanner, believes that the views "expressed" by *The Economist* on December 20th (page 746) were a "travesty" of the engineers' case for higher wages. Their case, Mr Tanner suggests in a letter (published on page 38 of this issue) was not primarily based on the wartime increase in the cost of living or on the rise in taxation, but on the need to maintain the "efficiency" of key war workers. Mr Tanner presumably knows better than anyone else what he argued before the National Arbitration Tribunal; but it must be confessed that, if this was indeed his case, he was strangely ill-reported in all sections of the

Press. This clarification of his attitude, with the explicit statement that engineering workers should not "be singled out to enjoy a peacetime standard of consumption," is, of course, to be strongly welcomed. But it may still be that the President of the AEU is being somewhat disingenuous. If his argument is that the "efficiency" of the members of his union is impaired by the increased cost and scarcity of necessities, then unless he can prove that there is distinct hardship or that engineers are worse off than other parallel workers, which over the whole range of engineering earnings does not appear to be the case, the discussion goes back to where it started. The wartime supply of goods is strictly limited. Any other group of workers might make the same claim as the engineers to higher wages, and unless they will be satisfied simply by having more money which they cannot spend, which is absurd, the claim of one section to a bigger share of goods can only be granted by giving another section—a less well-paid section—a smaller share; and costs and prices, now and after the war, will in any case be inflated. Mr Tanner's case for complete rationing to ensure a juster distribution of goods is, of course, quite valid; and, so long as rationing is "weak or incomplete," as he puts it with some over-emphasis, there may be too many individuals in the higher grades of income with too much purchasing power. But it is still not unreasonable to describe the process of sectional bargaining represented by the engineers' and other wage claims as an internecine scramble for advantage, which was *The Economist's* contention. Mr Tanner's final point—"An increase of wages for an increase of production"—was sufficiently met by the statement that "If more output is required, pay by results, by higher earnings, not by higher wages which are as likely to mean less output as more."

Vichy Looks Up

Germany's discomfiture on the eastern front is having the inevitable repercussion in the west. Marshal Pétain's New Year broadcast has had a bad reception in Berlin—naturally so, for it included the emphatic refusal of the old Marshal to see France brought back into the conflict; it not only gave the routine criticism of the Free French, but also attacked the out and out collaborationists of Paris; and it laid the blame for the failure of the Monthoire policy on Germany's refusal to return France's labour force in the shape of the prisoners of war. Darlan, too, is piping another tune and after the rumours and counter rumours of a week back when it seemed that Pétain was to be superseded by the ambitious Admiral, he has come out with an Order of the Day in praise of France's "sole leader" and "symbol of honour." The truth is, of course, that neither the ugly temper inside France—there has been machine-gunning of crowds in Paris and a high Vichy official has been murdered—nor the fluid state of the Russian campaign permit the collaborationists to push forward with their schemes. Marshal Pétain, whose attitude ever since the day he first became convinced of Britain's inability to win has been nakedly opportunist, is recovering a little daring in face of American intervention and the Eastern defeats. If Hitler is still determined on a winter campaign in the Mediterranean, he must do it without the active collaboration of the men of Vichy.

INDEX TO VOLUME CXLI

Shortage of paper makes it impossible in wartime to follow the normal practice of distributing to every reader a copy of the Index to *The Economist*. Copies of the Index to Volume CXLI (July to December, 1941) will be available early in January, and will be sent, free and post free, on application.

As our records have been destroyed will those of our readers who have applied for previous indexes kindly repeat their instructions?

THE ECONOMIST - Brettenham House - London, W.C.2

Letters to the Editor

The Cost of Agriculture

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of December 27th Lord De La Warr credits me with estimating £100 millions as the amount of the reliefs to agriculture in 1938-39. The figure given in my book "Reconstruction and the Land" is approximately £41 millions. From this Lord De La Warr deducts £17 millions for derating, and wishes also to deduct the cost of agricultural education, which is not included in my estimate. By some slip he takes this figure of £17 millions as the total remaining, instead of £41 - £17 = £24 millions, the remainder that would thus be obtained. Lord De La Warr may be justified in ruling out derating as a relief to agriculture since it is a direct gift to the owners of the land, but then a similar argument might be applied to nearly all the subsidies to agriculture.

A. DANIEL HALL.

[Sir Daniel Hall's letter provides an opportunity of explaining in greater detail the various figures of assistance to agriculture which prevail in current controversy. The first is Sir Daniel's own figure of £41 millions for 1938-39. This was made up as follows:—

Sugar beet subsidy	£1,730,000
Sugar beet, remission of excise ..	1,520,000
Wheat subsidy	9,290,000*
Barley subsidy	800,000*
Oats subsidy	2,320,000*
Fat cattle subsidy	4,500,000*
Milk subsidy	1,556,500†
Bacon subsidy	150,000
Land fertility scheme	1,300,000*
Ploughing-up subsidy	500,000*
Drainage	400,000*
Livestock improvement	100,000*
Rating relief	17,000,000
	£41,166,500

* Approximate. † Including £605,000 for cheap milk schemes.

The cost of the cheap milk schemes and the ploughing-up subsidy can properly be deducted, as their object was something other than relief to agriculture. This leaves £40,061,500. It should be noted that this total does not include the cost of the Ministry of Agriculture or of the Development Commission, State subsidies to agricultural education, or grants for small holdings. The inclusion of rating relief is, admittedly, a moot point. If the intention is to show the extent to which agriculture is assisted to a greater extent than other industries; only the final quarter of the rating relief should be included. But if, as is far more often the case, the intention is to show the relief that has been accorded to agriculture by the community at large, then the whole remission of rates must be shown; the money has had to be found by somebody else.

In another passage of his book, Sir Daniel Hall says, "It is estimated that the £250 millions of [British agriculture's] annual output could have been obtained in the world's market at £60 millions less cost to consumers." This £60 millions, added to the previous figure of £40 millions, makes the figure of £100 millions, mentioned in *The Economist* of November 29th. It was this figure that Lord De La Warr was quoting in the issue of December 27th; it is the cost to the community in 1938-39 of maintaining agriculture "in subsidies, remission of taxation and prices above the world level."

But the farmers were not satisfied with the conditions of 1938-39, and an attempt was made in the article of November 29th to calculate the additional cost of acceding to their wishes. The major item would be the cost of a system of guaranteed prices for farm produce. The answer, of course, depends on the prices that would be guaranteed and the quantities to which it would apply. It was calculated three years ago that the cost of guaranteeing prices

not much above the average of the decade 1928-37 for the average quantity produced in those years would be over £25 millions, not counting milk, sugar beet, hops or potatoes. The guaranteed price for wheat would be 8s. 3d. per cwt. on 32,700,000 cwt. But the actual guaranteed wheat price at the outbreak of war was 10s. per cwt. (on 36,000,000 cwt.), and if comparable prices had been guaranteed for the other crops, the cost in a representative pre-war year would have been very nearly £50 millions a year. This is the figure that is relevant to a calculation of the cost of acceding to the farmers' wishes. Finally, there is the cost of the wartime increases in labourers' minimum wages, which can hardly be put at less than £40 millions a year.

If all these figures are added up, the total is "not very much short of £200 millions." There may well be some overlapping between the different items (e.g., payments for wheat and fat cattle are included both in the £41 millions and in the £50 millions; or guaranteed prices might enable farmers to absorb some part of the increase in wages). But against this there is the certainty that the farmers would probably not be satisfied with the prices, and would certainly not be satisfied with the quantities, on which the £50 millions was calculated.

The figure of £200 millions is not the measure of the actual cash burden on the Treasury. It is not a measure of the present wartime burden of agriculture, since imported food is now dearer. It is not a measure of what would be the post-war cost, unless it be assumed that world prices are exactly the same after the war as before. It is not a measure of the sums that would accrue to the farmers, since much would be passed on in higher rents. It is not the minimum cost of a reasonable agricultural policy. But it is what it was originally stated in *The Economist* to be: a measure of what would have been the cost to the community if the policy for which the farmers are now asking (including the new wage-level) had been in force in the late 1930's.—EDITOR.]

Engineers' Wages

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of December 20th, under the heading "Ostriches Among the Engineers," you publish a note on the recent claim put forward by the engineers for an increase of wages. I am surprised that a journal of the standing of *The Economist* should print such a travesty of the case I presented to the National Arbitration Tribunal. It is true that glancing references were made in that case to the official cost-of-living index and to rationing—in the one case in order to refute the employers' contention that the official index is a valid measure of the real costs which obtain; in the other, to criticise the weak and incomplete system of rationing which has the effect of reducing the consumption of the hardest working and least leisured sections of the community. But I made no claim whatever that wages should be increased in order to counteract the effects of the purchase or other taxes, nor did I anywhere suggest that engineering workers should be singled out to enjoy a peacetime standard of consumption in a war economy.

On the contrary, I specifically stated that the men on whose behalf I was speaking claimed no exemption from the sacrifices which war exacts. My arguments were based upon the fact that, so far, it is the section of the population of whom the greatest efforts are demanded which is called upon to bear the brunt of the sacrifices and shortages, and that to allow key war workers to fall below a standard of living which will guarantee their efficiency to fulfil the gigantic task of increasing war production which is required, is not merely false economy but criminal folly. An increase of wages for an increase of production: that was, and remains, my case. I have yet to be shown that it is an unsound one.—Yours faithfully,

JACK TANNER,

President of the Amalgamated Engineering Union.

THE WORLD OVERSEAS

Manpower in France and the Low Countries

[BY A CORRESPONDENT]

December 29th

HITLER's conquest of France and the Low Countries provided him with a windfall of industrial labour such as he could not hope to secure in most other parts of Europe. The Nazis could choose whether to employ the French, Dutch and Belgian workers in their native countries—on German account—or whether to transfer them, as "free workers" or prisoners of war, into German agriculture or industry.

Germany took about 1,800,000 French prisoners of war, and only about 400,000 of them have so far been repatriated, while the vast majority are "employed on useful work" in Germany's interest. The bulk of the prisoners consist of farmers and agricultural workers; in spite of this, in the spring of 1941 almost half of them were reported to have been transferred to industrial plants, though a larger number was employed on harvesting during the summer months.

As a result of this large-scale transfer, a serious agricultural labour shortage arose in France, owing partly to the lack of animals, machinery and other labour-saving devices. Mass unemployment developed, however, in French industry and commerce, and more especially among those formerly employed in armament works. It reached its peak in November, 1940, when more than a million people were registered at the labour exchanges, two-thirds of them in the Paris region. This figure did not include the numerous unemployed foreign workers in France or those French workers who had been temporarily stopped or who were working short hours only. Moreover, it is estimated that 200,000 unemployed did not bother, at that time, to register for work, as they had no title to receive any relief pay and no hope of getting a post through the labour exchanges. By October, 1941, however, the authorities had succeeded in reducing the number of those living on the dole to about 211,000, most of whom were unable to do regular work.

An obvious remedy against industrial unemployment has been the dispatch of a large number of workers to the villages. Owing to the low wage-level in agriculture, many of the adult industrial workers returned to the towns after a short period, but there was a very large number of juveniles who were persuaded to choose an agricultural career. Moreover, every youth of 20 years of age has now to take part, for at least eight months, in the newly-created "Labour Service," and this semi-military organisation is largely occupied on agricultural work, in addition to road-building and general reconstruction work. In the occupied zone, 300,000 prisoners of war, on temporary leave, have also helped in agriculture this summer, while in the south a large proportion of the Spanish refugees, numbering about 350,000, have also been compelled to work on farms.

Short time is still largely in force in the textile and other consumption goods industries, while certain other industries are now working overtime because of the shortage of specialised industrial labour. It has recently been decreed that the law providing for a maximum working week of 48 hours is to be suspended in the whole of the metal industry. The labour shortage in building and road-building is illustrated by the fact that the Todt organisation and other German concerns are employing about 54,000 Belgian and Dutch workers in Northern France. Even more serious is the labour shortage in coal-mining, where over 30,000 workers have been lost as prisoners of war or as a result of the emigration of foreign workers. The *Koelnische Zeitung* has recently pointed out that the lack of food has resulted in a decreasing output per miner. A further adverse factor is the large-scale use of substitutes in French industries. Not only does the production of

artificial textile fibres, wood-gas, etc., require additional labour, but many of the substitutes are uneconomical in use and therefore cause an extra expenditure of labour in the factories where they are made into manufactures.

The number of French workers in Germany, apart from prisoners of war, was only 25,000 on April 1, 1941. But an increasing number have been sent to Germany during the last few months, and, at the end of November, the 100,000th worker was reported to have left for the Reich. Most of these workers are metal-workers, agricultural labourers or building operatives, and their departure has certainly added to the prevailing difficulties of French industry. Germany will, however, probably try to continue this procedure, since in the German view France can make good these losses by mobilising her "invisible" labour reserves. But it is rather doubtful whether the Reich will succeed in enticing a very large number of additional skilled or semi-skilled workers to move from their homeland, where most of them have found some sort of employment now. On the other hand, it would hardly be possible to use any "invisible reserves" for a net increase in French industrial output, since French industry is already suffering from a very severe shortage of raw materials.

Belgian Manpower

The problem of securing additional Belgian labour for the Reich is probably still more difficult. In Belgium, the number of unemployed was probably nearly 700,000 after the invasion, including 500,000 registered with the labour exchanges; these figures compare with an average total of 334,000 registered unemployed in 1939. In October, 1941, a bare 70,000 elderly men and women were still registered as unemployed. It should be taken into account, however, that able-bodied people now receive no dole, but are asked by the labour exchanges to take up "relief work" for a remuneration of 85 per cent of the ordinary rates; it is quite conceivable, therefore, that there is still a considerable body of unregistered unemployed. On the other hand, one of the main factors contributing to the apparent reduction of unemployment has been the "voluntary" emigration of workers to Germany and German-occupied France. Belgian factories have frequently been asked, in recent months, to dismiss young childless workers and to engage more elderly men instead, while those dismissed had practically no other alternative but to accept work in Germany. But such expedients the number of workers transferred has swollen considerably; the number of those in Germany increased from 87,000 in April to about 210,000 in October, 1941, in addition to about 30,000 in Northern France.

The only western country with a fairly large reservoir of still untapped labour is Holland. The number of unemployed, which was estimated at 500,000 after the invasion, has been reduced to about 110,000 during the last six months or so; about the same number of people are now on the dole as in April, 1940. But the burgomaster of the town of Oss, in occupied Holland, revealed last summer that "thousands" are not registered for employment because they openly refused to work for Germany, and that a great many others do not ask for registration, in order to avoid an offer that they should be sent abroad. Of those employed in Holland itself, 85,000 are on public relief work or in the Labour Service or occupied on the repair of war damage. Short-time work is so widespread that the Dutch railways are now issuing special three-day workmen's tickets.

Holland differs from France in so far as no prisoners of war were sent to Germany, and from Belgium in so far as the process of moving workers to Germany has recently been a little slower. The number of Dutch workers in Germany increased from 90,000 in the spring to only 132,000 in the autumn of 1941, while there are another 24,000 in Northern France. It is quite likely, however, that the number will soon be increased to at least the same size as Belgian émigré workers.

There are still some considerable untapped resources of

general labour in Holland, but this is not the case with the more urgently needed categories of labour. Some months ago the Amsterdam Labour Exchanges arranged trainee courses for the aircraft industry, and offered agricultural posts for juveniles from 12 years of age onwards. There is also evidence of a shortage of mineworkers.

The labour resources in the western countries will, therefore, hardly make up for the loss of German industrial workers caused by the Russian campaign, and there are few alternative resources in other German-occupied territories.

America's Price Level

[FROM OUR NEW YORK CORRESPONDENT]

December 17th

In the middle of December the BLS wholesale price index, at 93, stood at the same figure as in December, 1929. The highest month of 1929 was July, at 96.5. From this figure the index descended continuously to 59.8 in February, 1933—the month of the bank panic. From this level (which held for the first four months of 1933), there was a rapid and continuous rebound that reached 71 in December, 1933, 77 in December, 1934, 81 in December, 1935, and 88 in March-April, 1937. From this there was a continuous sag to August, 1939, at 75. This was followed by a small rebound in the autumn of 1939, but heaviness (or stability) persisted, and a year later, in August, 1940, the index was still 77. From this point, the rise has been almost continuous to the figure of 93 now current. While it is not disputed that a part of the upturn in prices in 1936 and early 1937 was of a speculative and unsubstantial character, it seems arguable that the subsequent decline (to the summer of 1937) was in part attributable to economic pressures before the outbreak of war in 1939; and that the first year of the war in Europe (except as it occasioned a brief immediate speculative flurry) did not exercise any upward influence on the price structure. It may, indeed, have acted as a depressing influence. Yet the conspicuous fact is that for the three years 1938-39-40, the characteristic of our prices was stability—the average being 79 in 1938, 77 in 1939, and 79 in 1940, with the index of December, 1940, standing at 80.

The initiation of our own defence programme in the summer of 1940 was rather quickly reflected in prices, and this influence has been cumulative all through 1941.

GROUP INDICES OF THE BLS			
	June, 1940	Feb., 1941	Oct., 1941
Raw materials	71	74	90
Semi-manufactures ..	80	82	90
Manufactured goods ..	81	84	94

The rise in raw material prices is principally attributable to agricultural products.

GROUP INDICES OF THE BLS			
	June, 1940	Feb., 1941	Oct., 1941
Farm products	66	70	90
Foods	70	74	90
Other	82	84	94

The rise in farm products and foods is more than double that of the non-agricultural, non-food index. Yet, on the 1926 base, both farm products and foods are relatively cheap. In the years since 1929, the urban public has become accustomed to very cheap agricultural products, and the abrupt change in the past year has come as something of a shock.

Within the non-agricultural groups, there has been less spread in prices in the year, or in the past year and a-half, than might have been expected. Textile products have

shown the most extreme rise—from about 72 in June, 1940, to over 90. Building materials were high in June, 1940, at 92; their subsequent rise to about 107 is not much above the average. The same is true of hides and leather—from 100 to 115—incidentally, the highest group in the index. Except for farm products and foods, or raw materials other than the common metals, the characteristic of the past eighteen months has been the uniformity of the rise.

Except in the metals, the statistics do not clearly indicate the effects on price of either priorities or "ceilings." This is partly because negative evidence never shows well in statistics; partly because, until recently, price "ceilings" have been few, and are still not common; and partly because the priority system, while older and wider than ceilings, is still relatively a novelty on any comprehensive scale.

So far, rationing has had no part in our price policy, although our price policy has of itself already become a kind of rationing. But as yet it does not show clearly enough to be described. Apparently, the first rationing to be imposed will be on automobile tyres. Sales of new tyres have been temporarily prohibited; and when the prohibition is lifted it will be replaced by rationing under a sort of priority scheme.

Latin America Loses Japan

[BY A CORRESPONDENT]

January 5th

THE loss of their European markets forced the Latin American countries into a wild scramble for whatever markets were still open. As the months went by, the United States' good-neighbour policy greatly stimulated sales to North America, but there remained some important commodities that had still to seek an outlet elsewhere. Of these, cotton was the most important, and Japan proved far and away the most promising market; nearly all the Latin American states have increased their Japanese sales.

This trade will now cease, whether or not all the American republics declare war on Japan. The following table will give some indication of the quantitative and relative importance of the expected loss:

EXPORTS TO JAPAN				
Country	Period	1940	1941	% of all Exports
Uruguay (mill'n pesos)	Jan./July	1.6	1.7	2.2
Argentina (mill'n pesos)	Jan./Sept.	16.0	38.0	3.5
Brazil (thou. contos)	Jan./Aug.	197.0	269.0	6.4
Chile (million pesos)	Jan./July	11.0	27.4	6.5
Peru (million soles)	Jan./June	4.4	51.1	20.8

The same tendency has been shown by most of the Central American states. In 1939, Nicaragua, for example, exported goods to Japan to a value of córdobas 40,000 (less than £2,000), but the following year her sales rose to córdobas 192,000, and for 1941 the figure promises to be considerably higher. An exception is Mexico, which would no doubt have largely increased her sales but for her decision a year ago to suspend the shipment to Japan of oil and its derivatives.

Except in the case of Peru, for whom Japanese purchases of cotton are of particular importance, none of the big South American countries stand to lose as much as 10 per cent of their total export business. But in times of difficult trading the loss of "marginal" orders can be very serious, and in the present instance almost the whole decrease will fall upon cotton, the one commodity which can look for no outlet in the United States.

Poland's Needs

[BY A POLISH CORRESPONDENT]

January 1st

IN the twenty years before the present war, Poland strove hard to restore her economic and social fabric and enable her population of 35 millions, exhausted by a war lasting nearly six years (the 1914-18 and Polish-Soviet wars combined), to attain a better standard of living and to exploit the potential resources of the country. Poland was then greatly impoverished, stricken with famine, pestilence and

unemployment and deprived by the invaders of practically all raw materials and capital assets. Yet, by the outbreak of this war, Poland had largely extricated herself from these economic and social troubles, although the Polish standard of living still continued much below that of the western countries.

Despite Poland's participation in the victory over Imperial Germany, the assistance rendered by France, England and the USA, though valuable, proved inadequate. When large sums were being pumped into prostrate Germany in order "to put her on her feet again," Poland in the post-war period received only scant attention from the Allied countries in terms of investment and working capital. Thus, after the losses and destruction caused by the 1914-18 war and its sequel, Poland took over her national economy under extremely adverse conditions. The acute shortage of capital is best illustrated by the fact that, as late as 1929, the official discount rate was 8.6 per cent, and of private banks 12.2 per cent, only dropping to 4.5 per cent and 8 per cent, respectively, in 1937.

Poland's currency circulation, as late as 1935, did not exceed £1 12s. per head of the population, and savings deposits were approximately 18s. per head of population. The consumption of sugar, coffee, tobacco, coal and cotton was one of the lowest in Europe, and foreign investments were only about £5 per head of population. Poland's foreign trade was largely circumvented by the system of quotas, clearing accounts and other restrictions gradually imposed by European and overseas countries. Poland herself was one of the last European countries to introduce monetary and trade restrictions.

After this war, Poland will have to face even greater economic difficulties than after the last war. Her impoverishment, owing to Nazi totalitarianism, will be even more complete, and the need for fresh working capital and raw materials, in addition to medical and social assistance, will be more pressing than ever. The mass transfer of population by the Nazis, and the large-scale confiscation of foodstuffs, raw materials and even private belongings, will render her situation more acute. Poland will have to turn to her western Allies for help.

The experience of the past 20 years has shown that Poland is a profitable client for Great Britain and her colonies, although her volume of trade was never large (imports, 1,254 million zlotys—25 zl. to £1—and exports 1,196 millions in 1937). The British Government and private firms lent Poland capital for railway equipment after the last war and also sent textiles, leather, foodstuffs, oats, wool, copper, medical supplies and sanitary materials. But the total Polish Government indebtedness to foreign countries was £84,814,416 on October 1, 1937, and only £6,765,000 of this sum was due to Great Britain. As a predominantly agricultural country, Poland chiefly exported foodstuffs to Britain—such as bacon, eggs, butter, sugar, starch, flax and timber—and imported from Britain textile machinery, cotton and wool, chemicals and manufactures.

Relations Between Spain and South America

[BY A SPANISH CORRESPONDENT]

ECONOMIC and cultural relations between Spain and South America have always been strong, and so far they have survived the growth of nationalism in the South American Republics, their industrial development, the Spanish Civil War and the reorientation of trade brought about by the war and the British blockade. Yet these factors involve a change in the nature of the relations if they are to remain as important in the future as they have been in the past, when South America was part of the Spanish Empire.

In the last few years, Spain has seen its exports to South America decline because of European and United States competition, while its own competitive strength has suffered from the Civil War, which reduced the merchant fleet, dislocated industry, paralysed agricultural production and greatly diminished the holdings of foreign exchange. These factors alone are responsible for Spain's shortages. Great Britain has not injured trade between Spain and South America by the blockade. On the contrary, Great Britain has always been ready to grant navicerts for the import of foodstuffs and other articles into Spain, and, in fact, has done so on such a generous scale that the Spaniards cannot find the necessary ships to carry the

goods. Great Britain has even allowed the diversion to Spain of a large amount of cereals originally intended for British consumption.

As an essentially agricultural and mineral continent, South America exchanges raw materials and foodstuffs for industrial and highly-finished products. Accordingly, Brazil sends to Spain coffee and cotton; Chile sends nitrates; Bolivia tin; Venezuela petrol; the River Plate Republics (Paraguay, Uruguay and Argentina) meat, cotton, hides and cereals; Peru cotton; Mexico chick peas, etc. Spanish exports to South American countries include textiles, iron, wines, olive oil, shoes, hemp-soled sandals, tinned goods and cider. Catalonian cloth, especially, has found a very good market in these countries. Spain's present main needs are cereals and fertilisers, which South America is able to produce and send in plenty. Its export trade should be directed to South America and the British Empire in order to obtain in exchange these products which she so badly needs. So far, the Nazi New Order has not proved of any practical help to Spain, because, as is well known, Germany's promise of foodstuffs has not been fulfilled.

As the United States now accounts for a great part of South America's foreign trade, because of the blockade, and as South American manufacture is becoming more and more important, Spain should organise and improve its commercial propaganda in these countries. The country would also do well to adapt its exports to the taste of the South American consumer and attend more carefully to the marketing of goods in order to avoid waste due to defective packing and other shortcomings. These improvements are all the more necessary since in the last few years the South American Republics have shown a tendency towards acute nationalism and independence which in the economic sphere tends to lead to self-sufficiency policies.

Cultural Relations

Cultural relations, like economic ones, date from the colonisation of South America. In 1513, Royal Charters decreed the foundation of schools in all towns and the compulsory instruction of the natives. Convents, seminaries and colleges conducted by religious orders, and Spanish

missionaries taught the Spanish language, literature and history. Popes and kings gave a great impulse to the introduction of universities in Spanish America. Charles V and Philip II granted them the same rights and privileges as those already enjoyed by Salamanca, Spain, and especially the University of Salamanca, greatly influenced Spanish America until the latter achieved its independence. Ever since then, however, Spain and South America have made extensive plans for cultural intercourse, and provision has been made for the exchange of professors and students, works of art and music, although Pan-Americanism is influencing culture in the western hemisphere, and the American continent is rivaling Europe for pride of place in the cultural sphere.

The outstanding features in Hispano-American literature in modern times have been the appearance of the so-called "Gaucho" poetry, the "Americanismo" and the modernist movement. The poetic and epic works of the "Gaucho" poetry were based on material afforded by the life of the "Gaucho," or horseman of the plains. The "Americanismo" stresses nationalism. In fact, it is a natural effort towards a Latin American solidarity without distinction of frontiers.

German Europe

The Organisation of Europe

By conquest, Germany's war economy has been extended into a European war economy. But the unification of the different economies which made up pre-war Europe has not been achieved. The incorporation of Austria, Czechoslovakia and Poland into the administrative and organisational system of Germany was simple compared with the task of harnessing the economic resources of the other European countries. The method of economic penetration which had been used in the Balkan countries had only limited scope in Western Europe. A purely military administration of the occupied countries can produce only very limited results. Racial and national facts make outright incorporation impracticable. So "collaboration" remained the only feasible method.

But effective collaboration depends on a similarity in economic organisation which does not exist. State control and State planning in Germany depend on a highly centralised economic organisation, on compulsory marketing in agriculture, compulsory associations of employers and workers in industry and commerce, the regional framework of the Ministry of Economic Affairs and the co-ordination of military and economic organisation. No other European country had developed these features. There were some restrictions on civilian production and consumption, and some countries had controlled raw materials. Here and there, attempts had been made to control prices and wages. But in most of the European countries, peasants, farmers, industrialists and workers could combine and operate freely.

Almost everywhere, of course, the traditional systems of European organisation broke down under the impact of the campaigns and the subsequent occupation; and in some countries direct military administration was unavoidable, army detachments taking over all stocks of raw materials and even factories. But this method could not supersede the entire economic administration of those countries. In most cases, German State and private concerns acquired banks, insurance institutes and industrial undertakings in

As for the spiritual and diplomatic spheres, besides the traditional "Fiesta de la Raza" which takes place each October 12th in Spain and in the Spanish American countries to celebrate the discovery of America, other friendly gestures have been made, some as recently as the present year. The Chilean Government agreed to commemorate in 1941 the discovery and deeds of Almagro, and the Peruvian Government decreed on May 31st last that the remaining months of 1941 should be devoted to commemorating the fourth centenary of the death of Pizarro, the discoverer of Peru and the founder of Lima. Spain officially sympathised with this measure and decided to participate in these cultural observances, and a special commemoration took place on June 24, 1941, at Trujillo, Pizarro's birthplace. Another important Hispano-American event took place this year which was instigated by Spain. In Bilbao, an exhibition of arts and crafts was held in the ship *Cabo de Hornos*. The vessel was bound for Argentina and all the works of art aboard were offered for sale to South American people—in fact, this artistic argosy was intended to bring about a closer rapprochement between Spain and Ibero-America.

the occupied and dependent countries. But private concerns were later stopped from doing this. Instead, large-scale Continental companies, such as the *Kontinentale Oel AG*, in which Germany holds majority interests, were established.

Events in the occupied and dependent countries after the occupation were not very different from what happened in 1933-34 in Germany. The democratic organisation of workers, employers and peasants were either prohibited or put under the control of special commissars. Where a totalitarian political movement was in existence, such as the Quisling party in Norway, the Mussert party in Holland or the Rexists in Belgium, representatives of these parties were made controllers or commissars. Attempts to introduce Labour Fronts after the German model were not very successful; but various employers' federations acquiesced more readily; and the peasants were often ready to accept a centralised organisation on the style of the German *Reichsnaehrstand*. Politically, the Germans hoped that the occupied and dependent countries would "spontaneously" begin a "national revolution" similar to the Nazi revolution. Actually, they had to be forced to set up German-style economic institutions, simply to solve the problems arising out of the occupation and the German demand for manpower and industrial capacity.

Without regard to the peculiar situation of the different countries, the German system of rationing and the control of finance, prices, wages and dividends was introduced. But there was no political and economic background for such measures in these countries as there had been in Germany, which was highly centralised before Hitler. The occupied countries were simply poor and ground down. They had lost their trade connections with overseas countries. Most of them were forced to pay the costs of German occupation. They had to repair war damage, and they lost the manpower transferred to German agriculture and industry. The problems of Germany's own war economy were repeated in a more pronounced form in these countries—the shortage of raw materials and manpower, excessive liquidity, rising prices, speculation and scarcity of foodstuffs.

The Germans encouraged direct discussions between industrialists in Germany and in the occupied countries, which did result in some collaboration between whole sections of the industry, i.e. motor car, textile, chemical and light metal industries. These modern industries were sufficiently centralised in all countries for direct collaboration, mainly by sub-contracts placed by German concerns, especially in France, Belgium, Holland and Norway. Collaboration in South-Eastern Europe was confined mainly to agriculture; and here the German system of cultivation programmes, fixed prices and compulsory marketing has made progress, because the way had been prepared by pre-war economic penetration.

The real difficulties of the German war economy in Europe became plain when it was obvious that the war against Soviet Russia would be protracted. The blockade and continued large-scale fighting demanded greater numbers of men for the fighting services and more war material. The first result in Germany was a further concentration of industry and the tightening of control measures. In German

Europe, the ineffectiveness of simply trying to export Germany's system of organisation was recognised, and there was a new drive for industrial collaboration. In France, further collaboration was difficult because of the multiplicity of small firms. The control of prices and wages had proved practically impossible. In the occupied zone, the Germans reintroduced military factory commissars. Inspectors-General were appointed as liaison officers with the employers' organisations. Darlan himself is now at the head of a newly formed committee for the co-ordination of industries; and a director for the allocation of raw materials has also been appointed. All these measures are intended to encourage the concentration of industries, which is necessary for closer Franco-German collaboration. German influence is visible in a programme of standardisation in the iron and steel industry. Sugar-beet growers and sugar factories have been compulsorily organised with fixed production quotas and fixed prices.

Before the attack on the Soviet Union, German papers used to claim that France and other countries had worked out the new principles of organisation without German pressure. Lately the tone has changed. Germans are warned not to impose German organisation on other countries. The reason is obvious. Industrial production in all the European countries outside of Germany is below the level of 1938. In Holland, Belgium and France, much industrial capacity is idle because of lack of raw materials and workers. In Germany, the present organisation was developed in accordance with a gradual shift of Germany's trade from overseas countries to European countries. In the occupied countries, old-established foreign trade relations were abruptly severed. Germany was not able to replace former imports but demanded increased exports—which is reflected in the steadily growing clearing debts in occupied and neutral countries. Now the Germans are casting round for new and more suitable ways of harnessing their European dependencies effectively.

Banks.—The general expansion of German banks into occupied and dependent countries ended some time ago. Here and there German firms are still establishing banks for special purposes, such as the *Aero-Bank, S.A.*, in Paris, which was founded by the *Bank der Deutschen Luftfahrt AG*, Berlin, and confines its activities to the aircraft industry. In the occupied parts of Soviet Russia the necessary banking activities are mainly carried out by *Reichskreditkassen*.

Cheap money and excessive wartime financial liquidity have created a number of problems for the banks which have resulted in renewed discussion of rationalisation. The president of the Control Board of Banking Institutions has published statistics showing that the number of German banks at the end of 1940 amounted to 41,984, against only 34,438 in 1919, not including post office savings banks, which were introduced in 1938-39. Representatives of the commercial banks doubt the accuracy of these figures. There has been a considerable concentration of commercial banks since 1932, when several hundreds of private Jewish banks were either liquidated or absorbed. On the other hand, the last of the commercial banks which had been brought under the control of the State during the economic crisis 1930-33 was re-privatised a short time ago. It seems, however, that the Government now intends to compel the rationalisation of banks for the purpose of more effective financial control.

Traditionally, a large number of different banking institutions compete even in small towns and villages. Branches of the big banks, county district banks, local and district savings banks, credit co-operatives and post office savings banks are to be found side by side. At the same time, the influence of the State-owned banks has increased considerably. To the claim of the Control Board that there is a superfluity of banks, the private banks reply that the numerical increase is the result of the incorporation of new territories. But this is not the real problem. Exceptional liquidity has caused an increase in deposits at the same time as the demand for advances has fallen. This and cheap money have naturally affected the earnings of the banks, and the banks have been busy "hunting for prospective debtors." They are not only offering loans at unusually low rates of interest, but they also promise all kinds of services free of charge, and the financial authorities have repeatedly issued warnings against the cut-throat competition. The Government is naturally anxious to prevent the diversion of credits from investments in Treasury bonds and bills to non-essential activities, and when the boom in share prices was at its height, the banks were forbidden

to advance credits for dealing in shares. There is no doubt that some critics of the present position understand rationalisation of the banks in the sense of nationalisation. Wartime planning has reached such an extent in Germany that the relative freedom of the banks, which is largely the result of excessive liquidity, constitutes a danger.

Rationalisation, as it is contemplated at present, aims at establishing "the right number of banks at every place," in other words, at establishing one bank for each different group of the population. There is no doubt that this re-organisation would end "cut-throat" competition. It would probably, at the same time, free some personnel for war service. It is, however, no solution of the fundamental problem.

Shipping Companies.—Germany's two leading shipping companies, the Hapag (*Hamburg America*) and the Lloyd (*Norddeutscher Lloyd*), in which the State held majority interests, have been re-privatised. The shares held by the State have been acquired by Hamburg and Bremen investors. At the same time, a new shipping company has been founded jointly by the two companies. The official explanation of the move is of some interest. It is stated that the re-privatisation is intended to revive the interest of the shareholders in the development of the companies. For some time, Hamburg and Bremen shipping circles have been promised some compensation for the loss of trade during the war. First, they were promised a decisive influence in the shipping industry of Rotterdam and Antwerp. But the companies seem to have been more interested in getting back control over their share capital, since a number of smaller shipping companies had been actually absorbed by the *Reichswerke H. Goering*. It seems possible that the Government now wants to show that its general policy is not directed towards nationalising private firms.

Aluminium.—From Hungary, Norway, Italy and Sweden there come reports about expanding aluminium capacity. Italy's output, which amounted to 40,000 tons in 1940, is expected to reach 50,000 tons in 1942, and 60,000 tons in 1943. Norway's output, now depending on a native substitute for bauxite, will be increased from 31,130 tons in 1939 to roughly 40,000 tons. The most important expansion, however, is reported from Hungary, where new capacity amounting to 10,000 tons annually is under construction. In Norway and Hungary, German concerns hold majority interests in the new firms. Sweden aims at an annual capacity of 5,000 tons.

Timber Supply.—During the forestry year 1940-41, Germany imported 7 million standards instead of the 12 millions expected. The felling quota had to be reduced from 150 per cent of the felling done in 1934 to 125 per cent. A further reduction will be necessary during the current year. Internal timber resources have been reduced indiscriminately because of the steadily rising demand from the substitute industries; but transport difficulties have prevented substantially greater imports. There have been many signs lately that timber supplies are strained. In 1940 violent autumn storms destroyed large tracts of forests. The shortage of fuels has increased the demand for firewood; and the expansion of the use of generator gas as a substitute for motor fuel has created a considerable demand for suitable wood. The industry reports a marked shortage of workers and at one time contemplated the suspension of new felling. During the winter, prisoners of war employed in agriculture will be used to fell and transport timber. Since the beginning of the campaign against Russia, large supplies of timber have had to be diverted for the manufacture of huts.

War Damage Anomalies

THE War Damage (Extension of Risk Period) Act, 1941, projected the "cover" provided by the original War Damage Act from August 31, 1941, to the same date in 1942, but left the question of contributions for that second "risk period" to be decided by Parliament. So far, the Chancellor of the Exchequer has been unable to give even an approximate date for the introduction of the necessary Bill. Indeed, a measure covering public utility enterprises (including the railways) for the first period has still to be tabled, and presumably will have the prior call on Parliament's time. The dual delay may be more than coincidental; for some of the problems besetting the Parliamentary draftsmen are common to both measures, and the virtual impossibility of differentiating widely, in the matter of rights and responsibilities, between the public utilities and property owners in general presupposes at least one fundamental change in the law as it now stands.

Truth is progressively revealed, and it is quite clear that the Treasury's mind underwent an evolutionary change after the passing of the first War Damage Bill, early last year. The basic principle from which the authorities started was that the cost of making good war damage should be shared equally between all classes of property owners and the State. But the necessity of thinking of a number, in order to arrive at some datum figure for assessing contributions in pounds, shillings and pence, resulted in a departure, in practice, from this principle, so far as owners under Part I of the Act were concerned, to an extent which was not realised at the time. The Act, as it reached the Statute Book, imposed on them an obligation to contribute the first £200 millions of "compensation." The next £200 millions was to be contributed by the State, and all damage in excess of £400 millions was to be shared equally. Some months later, it was officially announced that, for the public utilities, the fifty-fifty method of division would operate, whatever the amount of damage. What would appear to have been inadequately appreciated, at that time, was that equal sharing beginning at zero was by no means the same thing as equal sharing beginning at £400 millions. Property owners, however, large and small, have been quick to perceive the distinction, and to impress their point of view on the authorities. Their contention has been, and is, that the basic figure under Part I has been proved by experience to have been pitched far too high—so far, at least, as the first "cover period" is concerned.

The Damage Done

The value of property destroyed or damaged is, of course, an official secret. But it is possible to arrive at a limiting figure without telling the enemy more than he could deduce for himself. There appears to be no doubt whatever that the total damage bill to last August was not merely less than £400 millions, but was actually well below £200 millions. The figure of £170 millions has been unofficially published as the result of a process of estimation in which each constituent figure was deliberately put on the generous side; it may be that the truth is £150 millions or even less. Whether the true total is a score or so millions less or more hardly affects the property owners' main contention, since, even if it were as much as £200 millions, they would still be bearing the whole burden of providing compensation.

The reason for the authorities' unduly sombre view of possibilities, when the original Bill was framed, are fairly easy to understand. Hostile air activity was then at its zenith, but its intensity diminished greatly in the spring and summer of last year. Again, a remark let fall by the Chancellor during the debate on the Bill suggests that the authorities were working on a figure of £10,000 millions

as the value of properties covered, whereas the appropriate total was nearer £6,000 millions for "bricks and mortar" alone—excluding site values, which are largely insusceptible to war damage. The authorities may also have had insufficient regard to the distribution of brick and mortar values throughout the country. Districts other than boroughs and county boroughs, for example, account for appreciably more than half the total, and their global percentage of damage has been extremely small. Incidentally, the London area, including all the Metropolitan boroughs, is estimated to contain not much more than 10 per cent of the bricks and mortar of the whole country, and approximately five-sevenths of the London total is suburban.

Owner and Mortgagee

The property owner's complaint against the present law is that it treats him harshly, not only under this but a number of other headings. He almost alone in the Tenant-Owner-Mortgagee triangle has both had no relief from his pre-war obligations in the event of enemy damage, and has also had a new obligation—the payment of contributions—thrust upon him. Under wartime legislation, a tenant can disclaim his lease if war damage renders his premises unfit, and his obligation to pay rent thereupon ceases. The owner, however, remains responsible for the full payment of mortgage interest and any agreed capital repayments. If, in due course, compensation is made by way of a Value payment, the mortgagee receives his share directly, in the absence of agreement between the parties to the contrary. The mortgagor-owner (who has been receiving no income from the destroyed property in the meantime) receives the balance, plus interest on the whole sum at 2½ per cent per annum, against the rate of 4 per cent, 5 per cent, or even more, which he has been paying throughout on his mortgage. Whether the ultimate payment be on a Cost of Works or Value basis, the mortgagee has obtained, gratis, a Government guarantee of his security, with the right to undiminished income in the interim. Only in what is probably a minority of cases is he called upon to share in payment of any one of the five annual contributions of 2s. in the £ of the Schedule "A" assessment on the property imposed by the War Damage Act. That burden falls squarely on the unfortunate mortgagor, who, by a crowning stroke of irony, is not even allowed to charge the amount of the contribution as an expense for taxation purposes against his income from other sources.

War demands inescapable sacrifices from all classes of the community, individually and collectively. In this instance, however, it certainly would seem that a disproportionate share has been concentrated on a single group, and that the principle underlying the whole of our war damage legislation—that the inevitable loss should not be permitted merely to rest where it happened to fall—has not been duly observed. The original proposal that the State should bear half the loss was, presumably, intended to mitigate this inequality. But even so, there is no reason why the other half of the burden should not be equitably shared. The forthcoming introduction of a War Damage (Amendment) Bill affords an opportunity for adjusting the burden more equitably and, in the light of the facts set out in preceding paragraphs, the changes which might be made seem reasonably clear. In the first place, so long as the total damage to be provided for falls far short of £400 millions, there can surely be no case for piling Pelion on Ossa by imposing a fresh set of contributions, in respect of the second period, on top of the four annual payments which owners have still to make in respect of the first. Either one of two courses of action would be preferable. The first would be to continue to collect the contributions for the first period, but

to extend that period until the total of damage reaches double the total of contributions. The second would be to suspend the collection of contributions when they have reached half the amount of damage done in the first period, and to collect contributions for the second period at a much lower rate. In any event, major repairs and all Value payments must necessarily be postponed until after the war, and the proceeds of annual owners' contributions alone more than cover the cost of such reparations as are physically capable of being carried out during the war. It would not be unreasonable to ask the Government to treat war damage contributions as it treats EPT, by merging all damage suffered into a single continuous account for the war's duration. The authorities, again, would be giving property owners in general no more than they have already promised the public utilities, if they were to allow the cessation of collection of contributions when the total collected was equal to half the damage actually suffered. As an *ex gratia* matter, owners who were unable, through war causes, to pay contributions in full might be permitted to postpone anything up to, say, 50 per cent of their liability until the main contribution period was ended.

The case for demanding a share of contributions from the mortgagee is more debatable, since it cuts across accepted ideas of contractual relationship. But it may be argued, with some force, that a contingency which this country has not had to face since the years following 1066 justifies unprecedented action, provided it can be justified on broad grounds of equity. Unilateral variation of contract terms has already been applied to the wartime relations between landlord and tenant, and in the Government's requisitioning policy. It does not seem unfair to suggest that where a mortgage has implicitly recognised a quasi-partnership status by making a loan for a fixed term of years on a property, he should bear some part of the burden laid on it through a contingency which neither he nor the borrower foresaw. An owner who finances his investment by a temporary and fluctuating bank loan or overdraft—secured,

partially or wholly, by an equitable rather than a legal mortgage—may, however, be regarded as having himself assumed all risks incidental to ownership.

If, therefore, it were considered right and proper that liability for war damage contributions should follow the line of beneficial financial interest, and mortgagees as a class should be liable to contribute, the appropriate "test" would seem to be the existence, or otherwise, of a definite mortgage covenant. This test would bring in all specific mortgages, debentures, debenture stock and fixed or floating charges, but would exclude loans by overdraft or other temporary accommodation where no legal mortgage had been taken. And it would follow directly from the premises here enunciated that the mortgagee's contribution should be assessed in terms of his annual interest receipt. Even if the annual rate of contribution remained as high as 2s. in the £, his total contribution would be no more than one-half per cent where the rate of mortgage interest was 5 per cent. As a safeguard against unfairness in extreme cases, the mortgagee's share might be limited to a fixed maximum proportion, say two-thirds, of the total war damage contribution.

Amendment of the main Act on these lines would naturally encounter considerable opposition from mortgagees, particularly those, like the Building Societies, to whom the war has already bequeathed a legacy of formidable problems. Yet the principle *fiat justitia, ruat cælum*, has a peculiar and literal significance when applied to the results of enemy air activity. Equity and expediency alike dictate the widest spread of unavoidable risk. The payment of a moderate insurance premium by mortgagees for the maintenance of their security, against all the assaults of the enemy, can hardly be represented as other than fair and just, by contrast with the present position under which the borrower alone is penalised for failure to foresee that an international calamity might impair what has been traditionally regarded as among the safest of all forms of investment.

Finance and Banking

Sluggish Note Reflux

The position in the money market is gradually returning to normal after the temporary disturbances of the year-end. Most of the banks have once more become buyers of bills and the short loan supplies have proved fully adequate for the needs of the market. The banks have been helped by the reduction in the Treasury deposit payments expected of them this week, the amount required being no more than £15 millions, or equal to the nominal amount of maturities. It had been expected that a much larger contribution would have been demanded by the Treasury, given the substantial ways and means advances that had to be repaid to the Bank of England this week. The extent of these repayments and of the maturity of bills bought in the open market before the turn of the year is indicated in the reduction of £63,740,000 in Government securities and of £3,096,000 in other securities revealed by the latest Bank return. The credit basis has been correspondingly contracted, bankers' deposits being £64,120,000 down on the week, while public deposits show a reduction of £1,608,000. Bankers' deposits at £155,745,000 retain some of their year-end inflation and reflect a thoroughly comfortable money market position. There has as yet been little help to the credit position from the reflux of notes which can normally be expected at this time of the year. For the past week the net return of notes amounts to a mere £1,897,000, as compared with the expansion of £34,878,000 in the preceding four weeks. The sluggishness of this reflux of notes from holiday circulation is further indication of the continuing upward secular trend of the demand for currency.

Bank Clearings in 1941

In so far as they can be taken at their face value, the figures given in the annual return of the Bankers' Clearing House indicate an increase of 7.4 per cent in the total of cheques, bills and other instruments paid at the Bankers'

Clearing House in 1941, compared with 1940. It is interesting to compare this rate of increase with the expansion in clearing bank deposits for the year. Taking the data for the first eleven months of 1941 and 1940, the average for last year was 18.2 per cent higher than that for 1940. The grand total of clearings for the past year is given in the return as £43,011,222,000, and, in the customary tables which accompany the return, it is compared without qualification with the clearing data ranging back to 1868 and plotted in a graph showing the continuous line of clearings over the past 73 years. It should be realised in the first place that what is given in the return as the total amount of bills, cheques, etc., paid at the Clearing House during the year falls considerably short of the amount in fact cleared. Since the beginning of the war, the Clearing House handles the greater part of the inter-branch clearings of individual banks. But whereas some banks include such clearings in their return to the Clearing House, others do not. Inter-branch clearings probably account for as much as a third of the total clearing of every bank, and the diversity of practice among the banks in making their returns of such clearings to the Clearing House inevitably makes moonshine of the aggregate returns. In the second place, it should be realised that the considerable changes in clearing machinery made since the beginning of the war (of which the directing of inter-branch payments through the Clearing House is only one) completely break the continuity of the series of clearing totals and that there is no comparability between the pre-war and subsequent totals. These qualifications should not, however, seriously affect the comparability of the figures for the last two years. Split up in quarterly periods the Clearing House and Provincial Clearings show the following changes:—

	Clearing House		Provincial Clearings	
	1941	% Change on 1940	1941	% Change on 1940
First quarter	10,372,898,000	+7.8	383,420,000	+4.3
Second "	10,279,508,000	+7.6	348,611,000	+0.6
Third "	10,753,079,000	+16.7	367,895,000	+6.8
Fourth "	11,605,737,000	+29.1	371,002,000	+7.4
Total	£43,011,222,000	+7.4	£1,470,928,000	+4.5

It will be seen that the increase in clearings compared with 1940 became more pronounced in the latter part of the year both in the case of the Clearing House and of Provincial Clearings. This evidence on the changes in credit circulation corresponds roughly with changes in the estimated currency circulation, which, compared with the four quarters of 1940, rose by 15, 15, 12, and 19.5 per cent in the respective quarters of 1941.

Chilean Bills Renewal

Money market houses are beginning to earn the reward of the patience with which they have nursed Chilean Treasury Bills which were placed in London about twelve years ago and which have been in total or partial default since 1931. There are some £2,300,000 of these bills outstanding, of which £1,600,000 were originally placed through N. M. Rothschild and Sons and the balance through the then Anglo-French Banking Corporation. The bills in question fell due on November 27th last, and negotiations for their further renewal have been in progress for some months past. The terms finally agreed between representatives of the Chilean Government and of the issuing firms provide for a twelve months' renewal, i.e. until November, 1942; for payment of interest at 1 per cent, of which $\frac{1}{2}$ per cent will be made on May 27th and $\frac{1}{2}$ per cent on November 27th next; and for an amortisation payment at the rate of 2½ per cent on the face value of the original bills to be made on November 27th. These terms, which holders have been recommended to accept, represent some improvement on those applying to previous renewals of these bills and on those originally proposed by Chile when the negotiations for the latest renewal began. This improvement may to some extent be attributed to the strengthening of the Chilean exchange position which has occurred in recent months—a phenomenon which is gradually affecting

the whole of South America, and which may be expected to gain momentum now that the United States is at war.

Thailand Joins the Yen Bloc

The slide of the Thai currency from the sterling to the yen group, which began last August with the grant of important Thai credits to Japan, reached its final destination this week with the formal announcement from Bangkok that the baht had now been linked to the yen. *The Economist*, commenting on the grant of Thai credits to Japan last August, referred to them as "the first significant indication of Thailand's financial submission to Japanese pressure," and suggested that they pointed the way to an ultimate linking of the Thai currency with the yen. These comments drew a protest from Bangkok, and *The Economist* was asked by the Thai Legation in London on November 26th last to correct these aspersions on Thai neutrality and to assure its readers that "there is no connection between the baht and the yen" and that "Thailand has maintained and will continue to maintain her independence financially, economically, and politically." Events have now fully confirmed the correctness of earlier estimates of the situation. With the freezing of Thai assets in Great Britain and the United States, the bulk of the exchange reserve which provided the backing to the baht note circulation has become immobilised. The total of such immobilised assets has been announced in Bangkok as 217 million bahts, of which 184 million bahts or about £17 million, was in the form of sterling and the balance of 33 million bahts, or \$12 million, in US dollars. The greater part of these assets represents the holdings of the Government note issuing authority, whose exchange reserves at the end of the March, 1941, quarter amounted to 135 million bahts. In addition there were at the time the equivalent of 97 million bahts of gold in reserve. The credits granted to Japan last August will have begun the admixture of yen to the exchange reserve, which until then had been held almost exclusively in sterling and US dollars. The Thais may rest assured that any

deficiency in their reserves caused by the British and American freezing orders will soon be more than made good by their increased holdings of Japanese yen. Under the "Co-prosperity" scheme in which the Thais are now partners, the country's balance of payments with Japan is certain to move very much in favour of Thailand, with yen balances piling up on Thai account as the counterpart of the tin, rubber, rice and other materials which Thailand will from now on be compelled to export to Japan alone.

* * *

The Rothschild Succession

A unique company registration was announced this week as part of the mechanism for ensuring the continuation of the banking business of Messrs. N. M. Rothschild and Sons in the event of the sudden and simultaneous death by enemy action of the two existing partners. A company with the title of Rothschilds Continuation, Limited, has been formed with a capital of £100. Its function will be to carry on the business of the banking firm in the event of the sudden death of Mr. Lionel and Mr. Anthony de Rothschild, the two sole existing partners. The capital of the new company is divided into two shares, one going to each of the Rothschild partners. The holder of each of these shares has the right to appoint up to three directors of the new company. The functions of the company, should it ever be called upon to assume them, would be purely temporary, and would cease when new partners assumed control. The City has since September, 1939, witnessed many precautionary steps designed to meet and provide for the potential hazards of war; but few have equalled the meticulous ingenuity and preciseness of this arrangement to ensure the succession and continuity of a great merchant banking firm.

War Risks at Sea

The dramatic extension of the war to the Far East did not take the London marine market completely by surprise, although underwriters will doubtless have to meet a number of "shock" losses arising in the period of adjustment to the changed conditions; this phase includes the diversion of ships already at sea from the more hazardous routes, the organisation of precautionary measures to counter the new menace and the upward revision of rates to take care of the greater hazard. Rate increases are necessarily substantial, although by no means of a panic character; they must, of course, be regarded as experimental, and future movements will depend on such considerations as the possibility of organising convoys as well as the general development of the war situation. Illustrative of the rates put into effect on and after December 18th by the Government War Risks Insurance Office for cargoes shipped to and from the United Kingdom are the following examples: Dutch East Indies, 140s. per cent (against 80s. per cent); Australasia, 110s. per cent (against 80s. per cent); India and the Straits, 100s. per cent (against 80s. per cent), and the South American Pacific Coast, 100s. per cent (against 80s. per cent). The Government Office insures practically all goods shipped to and from this country, but does not cater for other voyages, with the exception of certain cross voyages in British ships. A large demand for war cover on cargoes is thus left open to private enterprise, and this is met by the London and New York markets. Rates in the London market are governed by the so-called "advisory" schedule of the Institute of London Underwriters; the latest revision of this schedule dates from December 11th, and, when comparable, rates are generally higher than those of the Government Office, although lower than those now ruling in New York.

Investment

Reviving Activity

The investing public is already showing signs of recovering from the immediate effects of war in the Pacific, and, although the conflict there continues to develop adversely for the Allies, the principal movements in prices no longer consist exclusively in the marking down of Far Eastern securities. In a sense, this was to be expected. The index of *The Investors' Chronicle* shows falls of 27½ per

and for railways is once more in evidence. The fall, at the worst, was only some 4 per cent for industrial equities, according to the figures of *The Financial News*, as compared with a net rise of over 13 per cent on the year. The more comprehensive figures of the *Actuaries' Investment Index*, which, excluding financial equities, show a drop of just over 1.6 per cent on the month, compared with a net rise of 22.6 per cent on the year. Apart from oil shares, the heaviest individual decline, according to this index, was 4.6 points in building materials, which does little more than wipe out the improvement experienced in November, while the next largest are in iron and steel and the very important miscellaneous section. As against these, there are a number of improvements, and quite a considerable proportion of the net decline is accounted for by the fall in building material shares, which can scarcely be attributed to the entry of Japan into the war. The moral seems to be that holders of industrial equities have been very little affected so far.

* * *

Small Business in Funds

The change in the yield on equities on the month is almost negligible, but this lack of response in the total is largely due to the fact that a cut in dividends on gas stocks occasions a fall in yield of almost 1½ points, which is sufficient to outweigh a number of appreciable rises. These are large enough, in the cases of building materials, iron and steel and motors, to suggest that a resumption of buying is not impossible. Two developments of some interest have occurred in fixed interest security prices on the month, namely, a continuance of the sharp advance in senior securities of investment trusts and a considerable rise in the price of industrial preferences. The margin between these and industrial debentures is now rather narrow, but there seems still room for a reduction in that between both these classes and trustee securities in general. It is possible that a reduction in these margins is a necessary preliminary to a really sustained rise in the last-named. Whether this is so or not, there is a moderate demand for the Funds, with considerable hardening of prices. There is more business in industrials, and there is some evidence that buying is becoming more selective. The fighting speech of President Roosevelt, and good news from

investment by a limited number of private individuals, but this state of affairs ought to be remedied by further restrictions on the volume and value of goods obtainable.

National Secrecy Certificates

Lord Kindersley's novel suggestion that the Briton's innate reserve is at the root of current hoarding of bank notes and also of a general preference for Savings Certificates, among other forms of small savings, may well be true. The sting of income tax to the new taxpayer often appears to lie as much as in the fact that full disclosure must be made of his financial position as in the brute necessity of handing over earnings to the Government. Investment in National Savings Certificates, which carry interest at 3.35 per cent tax free, avoids the necessity of revealing all resources, and it is very possible that this fact does as much as the high rate of interest to recommend them to the small man. Thus, it is also possible that when the maximum holding is attained, the reticent saver, unable to find a further tax-free state security, turns to hoarding. Lord Kindersley suggested that the theory might be tested, and the solution found, in the grant of permission to hold further savings certificates beyond the existing maximum; the additional certificates would carry a lower rate of interest—say 1½ per cent—but they would retain their special tax-free appeal. This ingenious proposal once again raises the question, in an acute form, of what the aim of the national savings campaign really is. It can never be made sufficiently clear that mere totals of national savings in themselves indicate literally nothing more than the cost of the interest payable on them from public funds. The aim of war finance is not to build up the national debt; it is to sterilise current expenditure. If this can be done more cheaply by hoarding than by the purchase of certificates or the deposit of sums in the Post Office savings bank, the country is the richer by the amount that the hoarder is the poorer. It is true that funds are more effectively sterilised when they are invested than when they are hoarded, since it is slightly less easy to place them again in circulation. But on this score, the only truly effective sterilisation is through taxation or forced savings, which block funds for ever, or for the duration, whichever is shorter. What is needed at the moment is not so much a new form of Savings Certificate as a new form of bank deposit, interest free but subject to notice of withdrawal.

Montreal Committee in Being

The special committee of the Stock Exchange, appointed in connection with the Montreal debt plan, has now brought its labours to a conclusion which, even the most exacting standards must grant, is highly satisfactory. Tuesday last brought a meeting of a very influential British Stockholders Committee, which proceeded to appoint an executive body who have already started work on drawing

up concrete proposals for submission to the general body of stockholders. The actual amount of holdings in this country is understood to be some £9,000,000, and, although some forty large holders are represented on the main committee, the number of small holders is very substantial. The Executive Committee includes two members of the Stock Exchange—*ex officio* and not as stockholders—Mr. G. Tyser, acting both for the Public Trustee and Lazard Brothers, and, *inter alia*, representatives of the Ecclesiastical Commissioners and ICI Pension Funds. The banks have sent no representative, despite the interest of their trustee departments, and, while individual insurance concerns are represented on the main committee, the British Assurance Association is not, since it sent a representative to the Canadian Committee. As there is no reference to the Investment Trust Association they have probably no holdings. The presence of two members of the Stock Exchange on the committee is a natural consequence of the whole movement having been originated by that body, and it is clear that—however future committees for similar purposes may be formed—the inclusion of members of the market will be a logical and beneficial arrangement.

Chilean Debt Service

The news that the funds available for the service of the Chilean debt permit the raising of the interest payment only from 30s. 9.36d. to 31s. 1.92d. per cent came as a disappointment to the market, which had been hoping for better things. Actually, the yield of nitrate and iodine sales fell by approximately a million dollars, and only about three-quarters of this fall was made good by higher receipts from copper profits. In consequence, the year's contribution is lower, and it is only by using up balances under-distributed in respect of 1940 that it is possible even to maintain the payment. In the case of copper, receipts are based only on the profits of 1940, and, as there is known to have been a marked improvement in sales last year, holders of Chilean bonds have some ground for expecting better results a year hence. The market, if disappointed over the small increase in interest, is mystified at sinking fund operations. The figures published show that there should have been some 4½ million dollars available for redemption, but that only some 3 million dollars, nominal value—the stock is quoted at around 14 in New York—have been repaid, together with modest amounts in Swiss francs and sterling. There is no explanation whatever as to what has occurred to a sum of about 4 million dollars. Evidently, it is a matter of prime importance to bondholders that the sinking funds should be used to the full, since to do so would raise prices very materially. There seems to be a case for special representations to the Chilean Government, preferably in co-operation with the U.S.A., which is the largest creditor and the best placed to make its needs felt.

The Ex Dividend Rule

It is satisfactory to find that the Committee for General Purposes of the Stock Exchange has decided not to make any alteration in the rule relating to the marking of stocks and shares *ex dividend*. It has, in fact, restricted its action to an official announcement that the cancellation of a dividend, declared or recommended, shall automatically tender void the *ex dividend* mark and that any deduction made under Rule 132 shall be refunded. The rule quoted empowers the buyer to deduct the dividend from the price paid in appropriate circumstances, and this he will no longer be entitled to do, or if he has done it he must make a payment of the sum deducted. This is merely an official statement of the position as it was understood to be. There remains only the question of the position in which the company, having declared a dividend, decides to defer payment instead of cancelling the declaration. It is to be hoped that this case will not arise, for it would mean a great deal of work in order to recover a sum which must, in every case, be very small compared with the price movements of shares likely to be affected.

Fewer Failures

Last year the total number of business failures declined even more steeply than in 1940 by 1,963 against 1,665 to 1,020. This represents the ninth successive annual fall, and

demonstrates clearly that in terms of stability, business has never looked back since the trough of the depression was passed in 1932. The figures are especially remarkable since they refer to a year in which a large number of small concerns, particularly those in the retail trade, have been forced to go out of business in the national interest. In by no means every case has the necessity of closing down a business been accompanied by compensation. The Government has still relied on the "salutary" effect of bankruptcy to assist in the elimination of the least fit, and this no doubt explains the existence of even 1,000 odd failures in a year in which business is assumed to have been working with increasing singleness of mind for the war effort alone. *The Economist* profit figures, analysed on page 55, show the same trend as in the previous year. A rise in gross profits from £380,861,000 to £394,775,000 illustrates a general expansion in turnover, while a further reduction in net earnings from £198,230,000 to £176,239,000 indicates that increasing taxation is effectively removing the possibility of war profiteering, at least from the investing public. The two sets of results reinforce last year's conclusion, that the conditions under which this war is being conducted discourage the creation of mushroom concerns, and at the same time protect the reasonably efficient from the full effects of disasters due primarily to the war. The result is to create a greater stability in results of individual concerns, and a much smaller diversity between them, than was generally anticipated.

Turner and Newall Accounts

Details of the Turner and Newall profits in the year to September 30th last were already fully disclosed in the preliminary statement discussed in *The Economist* of December 20, 1941. The full accounts are chiefly interesting for the information which they provide of technical progress and adaptation to war conditions. The consolidated statement shows a rise in the surplus of liquid assets over current liabilities from £4,275,274 to £4,800,155. The increase is

effected mainly by a jump of more than £1,000,000 in cash holdings to £2,808,733. The chairman, Sir Samuel Turner, states that the increase follows abnormal depletion in the previous year which was due to heavy outlay on raw materials and investment in National War Bonds. Consolidated stocks for the group, despite certain shortages of raw materials, are up from £3,286,863 to £3,332,968, although those of the company are reduced from £2,111,516 to £1,970,730. The total of surplus and reserves is increased from £3,400,343 to £3,463,683, and that of creditors, including taxation, from £3,797,761 to £5,370,576. The directors state that a total of £460,074 was written off buildings and equipment of the group as a whole, inclusive of additional depreciation. The specially created stock reserve now amounts to 25 per cent of stock normally carried, but the directors state that the weight of taxation—in the year to September 30th last the entire group was liable for EPT at 100 per cent—makes it impossible to increase the reserve further.

Sir Samuel Turner's survey conveys an encouraging picture of the development of technical progress which, under stress of war conditions, has evolved the use of Everite pressure pipes as a constructional substitute for wood, of a new compound, Nicold, based on peat, as a substitute for corkboard, and a new method of milling raw asbestos. The use of asbestos cement for roofing is being extended. The company's subsidiaries in the U.S.A. and India are working near capacity, and are clearly to be called upon to expand output still further in the future. Export trade still suffers to some extent through the loss of the European market, but American and Empire demand have made good much of the loss. Possession of its own mines renders the concern at least partially independent of outside supplies of raw materials, though it has, of course, been hampered by shipping difficulties in the past year. Some improvement is evidently expected, as the Rhodesian mines have this month increased their output. The accounts reinforce the market opinion that the concern is a sound and profitable investment in war and peace alike. The £1 ordinary stock, at 70s., yields £3 11s. 5d. per cent.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

iron and steel makers. The rebate system and other commercial arrangements remain under the supervision of the British Iron and Steel Federation and its affiliated associations. The Federation apparently has reserved the right to re-introduce the delayed payment of rebates after the war, but if any measure of control continues it is hard to see how this will be necessary or even possible. Now that trade enactments can be given the full force of law, through the Control, commercial "sanctions" are no longer needed.

Cadmium

Cadmium has been added to the list of metals controlled by the Ministry of Supply's Non-Ferrous Metals Control. On January 1st all sales and acquisitions (except those by consumers whose requirements do not exceed 10 lb per month) became subject to licence. The maximum price of 5s. 4d. per lb, delivered consumers' premises, which has been fixed, appears comparatively low, in view of the normal pre-war price of between 4s. and 5s. per lb cif; it was as high as 7s. 3d. per lb in periods of intense industrial activity. Although no official reason for introducing control measures has been given, it is obvious that it is due to the adverse influence of the Pacific war on the tin position. Normally cadmium is widely used for electroplating and for the production of numerous alloys, especially cadmium-copper alloys and alloys with low melting points. The addition of cadmium to copper increases the strength of the copper up to 50 per cent without materially reducing its electrical conductivity. Consequently, cadmium-copper alloys are used for such purposes as tram and trolley bus wires, telephone flex, high voltage transmission cables and welding electrodes. Some minor uses of cadmium are in the production of pigments and alloys for jewellery making. Cadmium has proved the best available substitute for tin, especially in certain solders and bearing metals. Hardly any cadmium is produced directly, it is rather recovered as a by-product of the production of zinc and lithopone. The fact that control in this country has just been introduced after 28 months of war indicates that supplies are not short. The Allies, in fact, control roughly two-thirds of the world output, which was 9,000,000 lb in 1938, the last year for which comprehensive world production data are available. In 1941 production was estimated at roughly 13,000,000 lb. The United States supplies nearly half the world output, followed by Mexico and Canada, who together cover 15 per cent of world supplies. Other important producers within the Allied sphere of influence are Australia, Britain and South West Africa. Germany, Norway, Belgium, France and Poland have been producers of some importance, but Belgium and Norway obtained their cadmium almost entirely from imported zinc ore.

Co-operative Turnover

The sales of the Co-operative Wholesale Society for the nine months ended October 11, 1941, were £103,652,744, a decrease of 2 per cent compared with the corresponding period of 1940. Supplies from Society's own productive works rose by 1½ per cent to £33,777,557. The directors report that coupon rationing for clothes has improved distribution, and they are pressing the Ministry of Food for the registration and rationing of foodstuffs in short supply. Groceries and provisions accounted for £74,479,388 of the sales. Goods to the value of £3,531,522 were supplied to the Ministry of Food. There were decreases of 19 per cent in drapery, 23 per cent in men's wear and 32 per cent in furnishing and hardware. Sales of boots and shoes advanced by 4 per cent. Supplies of milk to the distributive societies rose to £7,596,373, an increase of 63 per cent. The output of the Society's own butter, margarine and soap works showed a striking similarity in the percentage comparisons. The value of the 560,673 cwt.

DOMINION OF CANADA

FOUR PER CENT. REGISTERED STOCK, 1953-58.

For the purpose of preparing the Interest Warrants due 1st March, 1942, the BALANCES will be STRUCK on the evening of the 2nd February, 1942, after which date the Stock will be transferred ex-dividend.

EDWARD POPE, Manager.

47 Threadneedle Street, E.C. 2. 1st January, 1942.

CITY OF WINNIPEG

FOUR PER CENT CONSOLIDATED REGISTERED STOCK, 1940-60.

For the purpose of preparing the Interest Warrants due 1st March, 1942, the BALANCES will be STRUCK on the evening of the 2nd February, 1942, after which date the Stock will be transferred ex-dividend.

For the BANK OF MONTREAL,

EDWARD POPE, Manager.

47 Threadneedle Street, E.C. 2. 1st January, 1942.

of margarine was £1,471,254, representing an increase of 4½ per cent, both in quantity and value. Similarly, the decrease in the production of butter was 39 per cent in the weight and value, the respective figures being 134,315 cwt. and £1,012,702. From the soap works the supplies were 41,233 tons, a decrease of 2½ per cent, valued at £1,961,014. Thus the stabilisation of the prices of butter and margarine by the Ministry of Food has evidently been followed by the CWS in connection with its soap trade.

Trade Unions and Membership

Figures of trade union membership in Great Britain and Northern Ireland are given in the December *Ministry of Labour Gazette*. Salaried and professional workers' organisations are included in the figures where their objects include negotiating conditions of employment. Members of trade unions serving with the Forces are included. At the end of 1940, total membership was 6,542,000, an increase of 312,000 over the previous year. Male membership rose by 3.9 per cent from the end of 1939 to 5,460,000. Female membership increased more sharply, a rise of 11.3 per cent bringing the total to 1,082,000. The engineering and metal industries and local authority services accounted mainly for the addition to the male members, while among women the marked increases in the distributive trades, transport

NUMBER AND MEMBERSHIP OF TRADE UNIONS

End of Year	Number of Trade Unions	Membership (in thousands)			Percentage inc. (+) or dec. (-) in Membership of Previous Year
		Males	Females	Total	
1929	1,133	4,056	802	4,858	+ 1.1
1930	1,121	4,049	793	4,842	- 0.3
1931	1,108	3,859	765	4,624	- 4.5
1932	1,081	3,698	746	4,444	- 3.9
1933	1,081	3,661	731	4,392	- 1.2
1934	1,063	3,854	736	4,590	+ 4.5
1935	1,049	4,106	761	4,867	+ 6.0
1936	1,035	4,495	800	5,295	+ 8.8
1937	1,031	4,947	895	5,842	+ 10.3
1938	1,023	5,127	925	6,052	+ 3.6
1939	1,006	5,258	972	6,230	+ 2.9
1940	988	5,460	1,082	6,542	+ 5.0

services, Government service and clothing industries augmented their numbers. The total number of unions, which has been declining steadily since 1929, fell again during 1940, from 1,006 at the end of 1939 to 988. During 1940, 22 unions with a total membership of 4,700 were dissolved; seven unions with an aggregate membership of 4,800 were amalgamated with others during the year. The number of new unions formed during 1940 was 11, with an aggregate membership of 800. The accompanying table shows the changes in the number of trade unions and trade union membership at the end of each year from 1929 to 1940. In 1920 trade union membership reached its record total of 8,348,000. At the end of 1913 membership was 4,135,000.

Earnings of Agricultural Workers

The October issue of *The Farm Economist*, published by the Agricultural Economics Research Institute, examines the actual earnings of agricultural workers during the year ended September 30, 1940. Unfortunately, the sample on which the statistics are based is small, consisting of the earnings of some 146 men, over 21 years of age, employed on 32 farms. If the farms and the grades of workers are fairly representative of agriculture as a whole, the accompanying table can be taken as a rough guide

ANALYSIS OF EARNINGS. (Year ended September, 1940)

Type of Worker	No. of Workers	Average Cash Income for the Year		Proportion of Workers receiving		Average Total Earnings per Year		Difference between average total Earnings and Contract Rate
		at Contract Rate	Cash Earnings	Rent-free Cottage	Other perquisites	£ s. d.	£ s. d.	
Foreman	No. 4	£ 138 2 11	£ 138 0 1	75	75	£ 146 18 0	£ 135 15 1	10 15 1
Cowmen	27	126 19 9	130 14 10	52	93	137 6 11	110 7 2	27 10 9
Other stockmen	20	120 4 0	123 19 7	20	35	127 2 6	6 18 6	16 14 0
Horsekeepers	32	117 2 4	120 2 1	44	25	124 6 10	7 4 6	7 4 6
Tractor Drivers	19	108 4 7	121 3 9	21	5	123 8 5	15 3 10	14 15 10
Daymen	44	103 16 10	107 1 5	11	2	107 19 1	4 2 3	103 16 10
Average	146	114 10 2	119 6 1	30	31	122 13 9	8 3 7	114 10 2

to the range of earnings, and it gives some indication of the difference between minimum rates and actual income.

The weekly minimum rate rose during the period, by several stages. In the counties in which the 32 farms are situated the rate rose from 34s. 7d. per week to 38s. on May 26, 1940. It rose again on July 1, 1940, to accord with the national minimum wage, which was then fixed at 48s. The minimum wage is, of course, specified for a 48-hour week; cowmen, horsemen and stockmen normally work longer hours, and their contract rate is correspondingly higher. The table shows that the daymen, who number about one-third of the sample, receive the smallest sum above their minimum wage—£4 2s. 3d. per annum, while foremen, owing to greater perquisites and presumably through overtime, make £18 15s. 1d. more than their contract rate. The average is £8 3s. 7d. above an average contract rate of £114 10s. 2d. These statistics suggest that the differences between actual earnings and wage rates are not as wide in agriculture as in industry generally; but the comparative smallness of the numbers considered must be borne in mind.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: All dealings are for cash.

DESPITE further Russian successes and the latest political developments, events in the Far East continued to restrict the volume of business. The tone throughout the market, however, was distinctly firm. Quiet conditions ruled in the *git* edged market, and little more than routine business occasioned numerous small improvements in the early part of the week. In the *foreign bond* market, Brazilian bonds were in demand, persistent advances reflecting shortage of stock. Chilean issues recovered the previous day's losses on Tuesday, when Chinese bonds also improved sharply. After marked activity in the *home rail* market before the week-end, small losses for some junior issues were registered in the early part of the week. Senior issues, however, continued to attract demand. Among foreign rail issues, Argentine senior stocks advanced strongly on steady buying. In midweek the scheduling of the cotton industry caused a general advance in "cheap" textiles.

In the *industrial* market, brewery shares enjoyed moderate support, while aircraft and motor issues moved within narrow limits, Fairey Aviation easing on the lower dividend. Several small improvements were realised in the heavy industrial group, while textile issues were in demand. Shipping shares were firm, and tobacco issues, after some earlier weakness, were steady on Tuesday. In the *miscellaneous* group, Brazilian Traction and International Nickel advanced strongly in the early part of the week, and on Tuesday, United Molasses gained ½. In the *kaffir* market, Cape buying occasioned numerous small advances for both dividend paying and developing mines at the beginning of the week, and later the market was encouraged by working profit results. Tin issues continued their downward trend, despite a few slight improvements on Tuesday. In the *rubber* market, persistent sales continue to depress prices. The *oil* market was distinctly firm, and in the absence of selling pressure prices generally continued to advance strongly, South American issues being well supported.

New York

JAPANESE successes and the lack of any incentive led to quiet conditions on Wall Street, prices generally moving within narrow limits. President Roosevelt's speech on Tuesday provided a temporary stimulus, but profit-taking sales resulted in numerous small losses at the close. Later, the budget announcement left prices barely steady.

COMMODITY AND INDUSTRY NEWS

PROPERTY in Bulgaria, Finland, Hungary, Roumania and Japan owned by persons and companies of British nationality can now be included in the register of British property in enemy territory. On January 6th, 391 additions were made to the "black list" of traders in neutral countries. During November the Ministry of Food undertook 2,400 prosecutions, of which 2,228, or 92.8 per cent, were successful. The International Rubber Regulation Committee has suspended publication of its monthly *Statistical Bulletin* owing to the impossibility of including in it various key statistics. While no statement has yet been made on the future of the tin market, the Ministry of Supply has been selling tin to consumers at the provisional price of £275 per ton, delivered works.

Tin Statistics.—The *Statistical Bulletin* of the Tin Research Institute for December is the last which will appear. Publication has been suspended owing to lack of information available in present circumstances. No world production figure is given for November. United States deliveries were 8,353 tons in November, against 8,000 tons in October. The total for January to November, 1941, was 135,642 tons, compared with 106,139 tons in the corresponding period of 1940. United Kingdom tin consumption was 2,899 tons in October, against 3,047 tons in September; in the first ten months of 1941 it was 24,879 tons, against 24,904 tons in the corresponding period of 1940. There are no figures of world stocks of tin for November.

Molybdenum and Tungsten.—The Control of Iron and Steel (No. 18) Order, which came into force on January 5th, varies the existing control orders by removing from their scope molybdenum and tungsten metal, except in powdered or sintered form. Other forms of these metals will in future be dealt with by the Ministry of Aircraft Production. The quantity and value of tinplate, terneplate, etc., which can be purchased without licence has not been reduced, but instead consumers will be permitted to purchase 13 double boxes in a month from any source, instead of being confined to 39 double boxes in a quarter from stock-holding merchants only.

Wheat Prices.—The monthly prices of millable wheat have been amended to

encourage farmers to accelerate delivery of the home crop which remains unthreshed. This policy has been adopted in view of the need to conserve shipping during the next few months and still enable the necessary stocks of threshed wheat to be maintained for economic feeding of the mills. On the new scale the maximum price of 15s. 9d. per cwt. to grower, ex farm, will be paid in February and March instead of in April, May and June. Prices are prescribed until July.

Fish Transport Levy.—The liability to pay the Ministry of Food a transport levy of 6d. per stone on a first-hand sale of fish was transferred from the seller to the buyer on January 9th. Provision has been made for reducing by 6d. per stone the maximum price applicable on first-hand sales of fish subject to price control, except herrings and mackerel. Other minor alterations are made in the prices of some kinds of fish.

Food Control.—Maximum prices for home produced and imported oatmeal, oat flakes and oat flour remain unchanged under an Order which comes into force on January 12th. The Order allows a retailer to pre-pack ready for retail sale, but only the prices specified on a sale of loose products may be charged. Maximum prices have been fixed for saccharin. From January 12th chocolates and sweets

may not be sold at more than 1s. 8d. per lb., unless they have been classified in a product group. Chocolates will be no more than 5s. per lb. and sweets not more than 4s. per lb. The price of about 90 per cent of sweet products will be 2s. 8d. per lb. or less.

Inquest on Production

THE ardour with which the grand debate on munitions production is continuing cannot be regarded as anything but a great benefit to the war effort of the country. It is true that spokesmen for the Government, not excluding the Prime Minister, have shown a certain peevishness under criticism and attack. This is understandable; for there is much in the criticism that is widely off the mark, and little that shows any appreciation of the great achievements of the past eighteen months. But whether the fault is the critics' or the Government's, it is none the less a pity that the discussion has reached the stage of asperity. Nothing could be a clearer indication of the will to victory than this universal interest in the forging of its instruments; and, together with a certain amount of nonsense, a very great deal of sound sense is being talked.

Unfortunately, the discussion necessarily proceeds in a vacuum. There cannot be any precise public knowledge of what is really happening to production. There are, of course, certain indications. Thus it is no secret that the output of finished weapons is, and has been for many months, increasing very rapidly. As one after another of the new factories comes into operation, production is climbing towards its maximum—at a time when German output is undoubtedly falling off. The great machine tool bottleneck has been very largely broken, and labour supply is increasing—though with difficulty. Of the Prime Minister's four stages of production, the first two—

nothing at all and very little—have been left far behind; the country is well into the third—quite a lot—and in some items approaching the fourth—all you want. It is probable that, on any fair basis of comparison, the current rate of output is well above the highest reached in the last war. Another cross-check can be derived from the American programme. Even before the Japanese attack, American production was, in many lines, verging on the stage of quantity production. Moreover, it is obvious that the very high figures of production in 1942 given by the President last week would have been inconceivable if the pre-existing plans had not already provided for a very large output. To judge by estimates of expenditure, American production in the latter half of 1942 would, in any case, have been at about half the maximum rate that the President now ultimately envisages for his victory programme. But it was authoritatively stated in October that it would be late in 1942 before American production caught up with combined British and Canadian production. These facts make it reasonable to guess that present British production, on the average of all items, is between one-third and two-fifths of what American production will be when the President's programme has been achieved. In any discussion of what is wrong with British production, it would be very foolish to ignore what a very substantial achievement there has been.

In the absence of quantitative measures of output, it is

only natural that a number of misconceptions should have gained currency. There is, for example, the very widespread assertion to the effect that British industry is working 40 per cent below its capacity. The authority most frequently quoted for this figure is Mr Bevin's statement in the House of Commons that output would have to increase by that proportion. But, of course, that is a very different thing. Even the most perfectly organised and completely efficient production programme could not approach its maximum output other than gradually. To show that output must, and will, be greater in a few months' time establishes precisely nothing, one way or the other, about its present efficiency. Nor does evidence of under-employed machinery, of which there is plenty, establish a conclusive case when the greatest bottleneck is labour supply. Moreover, what is meant by "100 per cent of capacity?" If it is a purely theoretical concept, unattainable in practice, like 100 per cent efficiency in a steam engine, then it may well be that the present output is 40 per cent below capacity—but in those circumstances, the figure ceases to be a criticism. But if it is seriously suggested that it would be possible immediately, in present circumstances, with the present supply of machinery, materials, skilled workers and competent managers, to increase output in the ratio of 60 to 100, then the figure is certainly a wild exaggeration.

In justice, these facts should be recorded. But when everything has been said for the defence, it is obvious that in an undertaking as vast as the conversion of half the nation's industry, there must inevitably be a formidable list of muddles, stupidities and inefficiencies. What is perhaps more serious than the occurrence of such defects is a certain stiffness of the joints in the official machine when it comes to devising methods of putting them right. Where there is so much smoke of complaint, there must be some fire of mistakes, and it would be very wrong-headed of the Government departments concerned to deny it. But the critics and defenders are at cross-purposes on the general nature of the remedy. The critics tend, to far too great an extent, to argue as if some simple overall remedy, such as changes of ownership or the increase of money incentives, would make a magical difference. The defenders insist to too great an extent that, while detailed improvements can be made, there is little more that can be done from the centre.

The trouble seems to lie between the two extremes. There are no simple remedies for a very complex situation. On the other hand, the production Ministries have

never sufficiently addressed themselves to methods of production. They have never completely outgrown the mentality of order-placing departments and, in spite of their recruitment of experienced industrialists, they are still prone to leave questions of industrial practice and methods to their contractors. What could be done from the centre is to ensure that the best practice becomes universal, that experiments are made in methods of increasing the efficiency of production, and the results made known to, and if need be, enforced upon, the whole of industry. To give only one example—there is a certain amount of evidence that output per worker is higher where there is a factory council. This evidence should be analysed, and if it is conclusive, a policy of factory councils should be made universal. The provision of materials is now a centralised matter; labour supply and machine tool supply are handled in common for all the production departments. But matters of industrial technique are still left to be decided, or left undecided, by each Ministry or each branch of a Ministry, independently.

Something of this nature possibly lies behind the renewed demand for a single, or supreme, Ministry of Production. If so, it would be as well to make more precise what it is suggested that such a Ministry could do. If it were to be merely a few more layers of bureaucratic control, it would do more harm than good. Rather than a Ministry in the accepted sense, what is wanted is a Production General Staff, manned largely by production engineers (borrowed, if need be, from the United States), charged with constant research and experiment in methods of production and endowed with sufficient authority to enforce its decisions. That, indeed, should have been the role of the Production Executive. But that body has, from birth, suffered from two defects. Since it consists of the Ministers responsible for production, with one of them—the Minister of Labour—in the chair and without a neutral referee, it has been a battleground rather than a place of decision. And, secondly, its staff has never been more than secretarial. What is needed is not so much a Ministry of Production as a neutral and authoritative chairman and an expert staff for the Production Executive.

Mr Churchill will have to give his attention to this problem when he returns. Rumour has it that he has been doing so already. Perhaps the gigantic scale on which supply problems have obviously been discussed in Washington will have convinced him that in these matters even a good performance by British industry is not nearly good enough.

Imperial Allies

THE disasters in the Far East have disquieted the whole Empire. In London, before the agreements in Washington about production and strategy, a political revolt was possible. Even now, with General Wavell in the Indies to turn the tide, the critics at Westminster will not be satisfied until Mr Churchill himself has met them. In Canberra and Singapore, false promises, faulty defences and failures in the field are bitterly resented. There is nothing surprising or unreasonable about these reactions. They are the natural consequences of defeats for which no section of public opinion in the Empire was prepared. It is right that there should be the strongest possible pressure for the earliest restoration of the balance, in the air and at sea, in the Far East. The explanation that the Far East was starved to feed the Middle East must be heeded; but, until Singapore is saved and Rommel beaten, it cannot close the question.

What is surprising is that one of the most common of the remedies which the critics have put forward, in Britain and overseas, to right the matter is an Imperial War Cabinet. The obvious solutions—abler commanders, speedy reinforcements and more production—have, of course, been called for, and to some extent carried out. The united Anglo-American-Chinese-Dutch command in

the South-West Pacific is belated, but essential. It is when criticism takes the form of this demand for some sort of Imperial War Cabinet that scepticism is invited. The demand is not new. In this country, it has repeatedly been made as an instrument of Imperial Federation and, recently, as a means of co-ordinating the Imperial war effort and of symbolising Imperial solidarity. During the war, so long as their troops or territories have not been directly menaced, the various Dominions have been little more than academically interested in assuming an independent rôle in the making of war policy. Events in Greece and Crete first made Australia conscious of its separate responsibilities; the temporary weakening of the British naval shield in the Pacific has brought that consciousness to a head. Now, like Singapore, the Commonwealth feels naked, alone, neglected and on its mettle.

Understanding of the position of those who ask for equal participation by all the Dominions in the making of war policy does not necessarily imply agreement with all their proposals. It is precisely because the Dominions are independent nations and equal in status with this country that the proposal for an Imperial War Cabinet is almost certainly not practical politics. The decisions of an Imperial War Cabinet, however and wherever it

might be set up, could not bind the Government and Parliament of Australia without reference back to them and their explicit agreement, any more than the decisions of a Supreme Allied Council could bind the Executive and Congress of the United States. The Dominions are sovereign states separated from London by long stretches in time and space. The only Dominion statesmen who could possibly go to Downing Street with power to act would be their Prime Ministers; and their Prime Ministers, or any other Cabinet representatives of similar weight, could not be spared in wartime from the direction of home affairs. Representatives they could send to the common council table as observers; mandatories with authority to commit their countries they could not.

The cry of the revolting American colonists in the eighteenth century was "no taxation without representation." It offered no solution, except complete self-government or separation, because representation was physically impossible. The cry is now "no strategical decisions without representation"; and distance and Dominion status make the solution of an Imperial War Cabinet equally impracticable. The problem is not one of the parts of an Empire, but one of Allies, sovereign and independent. It must be solved in the same way as inter-Allied strategy. That strategy must be made in broad outline by consultation across the oceans. It must be executed, not by a common administration, but by separate Allied Governments in their own countries and by unified commands on each battle front. Neither Mr Curtin nor President Roosevelt can join Mr Churchill's Government, or *vice versa*. But General Wavell, whose appointment has been agreed by all the Allies, can move English, American, Australian or Dutch forces in his area at his discretion.

The task then is not to set up an Imperial War Cabinet, with responsible representatives from each Dominion and even India, to override or replace the War Cabinets in London or Canberra—just as, in the wider field of Allied strategy, the task is not to override or replace the executive agencies of Britain and the United States by a single Anglo-American administration. The task is rather to tighten consultation between the equal and independent Allies. By telephone, cable and wireless, consultation is already carried on continuously, and with especial closeness at crises. In London, there is an American Ambassador; in Washington, there is a British Ambassador of Cabinet rank; in Canberra, there is a British High Commissioner, an ex-Minister; in London, again, there is an Australian High Commissioner, an ex-Premier. The physical and personal framework of consultation between the Allied Governments exists. The problem is to strengthen and clothe that framework; to transmute the High Commissioners in London and the Imperial capitals into men of Ambassadorial status in the countries where they are stationed and of Cabinet rank in their own countries; and to furnish them with able and expert staffs to preserve a constant liaison between the war departments

of the two Governments. In Cairo, Mr Lyttelton is the projection of the British War Cabinet; his organisation is the microcosm of the British Government abroad; and every Allied and Imperial Ambassador or Commissioner might be furnished with the same work of functional liaison. This, incidentally, is broadly the solution proposed by Sir Earle Page, who came from the Australian Government to London in order to find ways and means of working out policy "against the background of general Empire interest." Consultation between Ministers, he argues, is too slow, it is while the plans are being worked out, lower down, that liaison is most needed.

In particular, there is undoubtedly room for a much closer and more detailed liaison between the High Commissioners in London and the various departments. There is no more reason, in wartime, why every contact between London and Canberra should be funneled through the Dominions Office than there is to restrict contact between London and Washington to the Foreign Office and the State Department. Each of the Dominions should have its own observers stationed in each of the British Government departments that concern it. By this means the apparatus of information and consultation could be expanded. But the fundamental dilemma must remain: central decision is not compatible with diffused responsibility. It may be doubted whether any of the Dominions—or Britain—is ready to surrender part of its sovereignty to some central body; it is certain that some of them are not. In these circumstances, an Imperial War Cabinet could neither replace the admittedly cumbersome mechanism of consultation at a distance nor prevent the occurrence of cases in which decisions have to be made without it.

There is no magic in machinery. Insofar as what has happened in the Far East was due to faulty policy, and not to a total insufficiency of supplies over all the battlefronts, it can only be remedied, not by new committees or Cabinets, but by new and abler men. Moreover, if an Imperial War Cabinet or Supreme War Council, in London, Washington, Canberra, Singapore or Batavia, representative of and responsible to the Imperial or Allied Governments, did contain such men, they would be hamstrung by distance and their terms of reference. When *The Economist* has spoken, loosely it must be admitted, of an "Imperial War Cabinet," it has meant a body of statesmen in London from all the Empire, chosen by Mr Churchill, as men of ability and not as representatives. Men of the required timbre, unoccupied in the administration of their own countries, may be no easier to find in the Dominions than they are in Britain. The point is that it is not representation but ability that is wanted, not a constitutional formula or new method of procedure, but a successful policy; and it is only by the wit of the independent Allied Governments and the closeness of their consultation that the failures of the past can be turned into the victories of the future.

Justice and Revenge

THE Allies have again met in council, for the first time since they assembled to ratify the Atlantic Charter. On this occasion, their agenda was not the nations' hopes of a better future, but their concern with the grim facts of to-day, with the agonies that are being inflicted hourly upon Europe by its Nazi overlords, and on Russia by the invading armies. M. Molotov's long indictment of German atrocities gave impetus to the meeting, but the Poles are reported to have been most active in securing its assembly, and the British and American Governments have given their support. General Sikorski presided over the assembly, which was formally opened by Mr Eden.

A conference to consider Germany's misdeeds and to devise just measures of retribution is certainly valuable. It may clear Britain and America—the two nations who have physically suffered least—of the charge of showing an infuriating readiness to forgive the injuries Germans have done to other peoples. But the main task of the assembly was far more vital. By facing the problem of retribution, it was in a position to lay the foundations of a functioning system of international law in post-war Europe.

There are three essentials for any rational or fruitful discussion of Nazi atrocities. First, the allocation of guilt must be measured by accepted canons of law. Secondly, punishment must fall on those who are guilty in a moral and not in a racial sense. The Nazis have made racial scapegoats; the allies must not fall into exactly the same error. There are men and women inside Germany whose indictment of the Nazis would be as long and painful as M. Molotov's. They, too, must be allowed justice—a step which might at the same time establish the revolutionary but just principle that a government's treatment of its own subjects is the concern of international society. Finally, the means of judging the guilty and imposing punishment must be justly and realistically devised. The institutions necessary to ensure justice must be planned, the obligations of upholding them squarely accepted or the impossibility of preventing indiscriminate reprisals must be frankly admitted.

None of these principles is easy, especially in the light of what will almost certainly be the post-war mentality of Europe. It is very natural that, when the Nazi system crumbles, Europe will face the likelihood of the most frightful massacre in its history. But it is useless to pretend that massacres can have any but unhealthy consequences for international society. It is not so much their effect on the massacred; those who massacre are scarred and warped. Europe's fabric of order and decency is already torn to shreds. Licensed murder on the side of the victors would destroy it further. It is the task of the Allies to face this awful contingency and to canalise vengeance into legal channels, as, in most countries, private vendettas have gradually given place to national law. They must envisage a system which will incorporate and maintain the principles of legal trial, legal guilt and appropriate legal institutions.

The canons of law exist. Clause III of the two Hague Conventions of 1899 and 1907—both of which were signed and ratified by Germany—covers the behaviour of the conquering power in occupied territories; and other clauses cover such issues as the imposing of collective punishment for individual acts—a temptation to which the Allies must not succumb when it is the turn of the Germans to be arraigned as criminals. These conventions might be strengthened by adding to the general provisions of international law a clause making the maintenance of certain basic human rights—chief among them due process of law—the concern of the entire international community. The allotting of responsibility must as far as possible be carried on before international tribunals according to the proper methods of judicial procedure—the receiving of evidence, counsel for the defence,

impartial judgment. Finally, the execution of the penalty—be it death, imprisonment, or fine—must not be left to the plaintiffs. It, too, must be brought into the framework of law and supernational action—a point which raises the urgent but delicate problem of policing an international community.

In other words, to deal with German atrocities in the only way which will prevent an appalling prolongation of suffering and a further undermining of Europe's social structure, the Allies must devote themselves in all earnestness to the creation of a functioning international legal system with courts of law whose duties cover, not only relations between states, but the fundamental rights of man. The Allies have proclaimed their determination to set their handling of the problem of German atrocities on an "unassailable legal basis." To neglect the implications of such a basis is to court certain failure, and then to cloak it with lip service to justice and law.

Much good may come of this Allied conference. Yet it is surely a disturbing thought that the Allies have not met for six months, and that the thing that brings them together now is not reconstruction or joint planning for a co-operative European order, but simply the question of atrocities and retribution. It is as though a doctor confined himself to the symptom of delirium and declined to probe into the nature of the disease itself. German atrocities are the fruit of a vile political system. That in its turn is in part the fruit of anarchic social and economic conditions—mass unemployment, mass despair, mass revolt—which have had their searing effect on many European nations and have combined with the fatal German penchant for excess to produce the unbelievable brutalities of the Nazi system; while a first duty is clearly the punishment of the guilty, it would be a disastrous break with the best penal practices of civilised society if all attempt to deal with the problem of the rehabilitation both of the criminal and of the misled were set aside.

General de Gaulle gave a wise reminder of the real purpose of the Allied meeting when he spoke of concerting "essential measures so that a renewal of such crimes should be made impossible." The Allies are, after all, pledged to build a Europe sufficiently different from the Europe of 1914 and 1939 to give some hope of avoiding total war and its fearful consequences. Punishment of the criminal is a necessary and important step in the process, a step significantly omitted last time. But it is only one step. Prevention and cure must come after. Do the Allies intend to confine their co-operation to this negative basis? Are there to be no conferences at which the basis of a joint policy for Europe will be worked out? The peoples of the world are looking towards just retribution; it is right and proper that they should. But they are looking far beyond it to the hope of peace and order which only effective planning and joint action can secure. Are the Allied statesmen to prove unequal to this wider task?

AMERICAN SURVEY

appears this week on pages 66 to 69. It is hoped to make this a permanent weekly feature of *The Economist*.

This new section will attempt to give a brief review of the major aspects of public affairs, political and economic, in the United States. It will incorporate contributions from our Correspondents in the United States as well as material written in London.

In the present state of communications across the Atlantic, it is not easy to secure an adequate flow of information. What is prompt is scanty; and what is detailed is delayed. In particular, correspondence arrives very irregularly. For the defects in "American Survey" that will follow from these causes, the indulgence of readers is asked.

NOTES OF THE WEEK

Hiatus at Singapore

Mr Duff Cooper has been unfortunate—or badly treated—though he may not have been the best man to do the job that he has not been allowed to begin. After only a few weeks as Resident Minister at Singapore, his appointment has been terminated. It should be emphasised that no blame for the many military and administrative shortcomings in Malaya can be attributed to him. Before his appointment, presumably to do in Singapore the work of co-ordination in supply, political and propaganda matters which Mr Lyttelton is doing in Cairo, Mr Duff Cooper had no jurisdiction; his mission was merely to report. After his appointment, he had no time. General Wavell, whose appointment as Commander-in-Chief in the South-West Pacific area apparently made the departure of the Resident Minister "necessary," has strong views about the catholic and comprehensive nature of a commander's functions—not without good reason; and it is probably more than a coincidence that, just as General Wavell left Cairo when Mr Lyttelton arrived, Mr Duff Cooper left Singapore when General Wavell came to Java. But the political problems of Singapore remain, as well as its military dangers. No clear report has come out, but quarrelling and recriminations are obviously going on, with past maladministration as the background and with the Governor, the Colonial Secretary, the military command, the civil

servants, the non-official community and the journalists as protagonists. Through the haze of partial information, it is not a pleasing picture; and it does not seem easy for some Britons in Malaya to regard Chinese or Malays as allies instead of coolies. It had been hoped, in Australia as well as in Singapore, that Mr Duff Cooper's War Council might step in and restore good sense and good government—and good information, instead of the spurious "good news" which has been their staple. Now it will be General Wavell's job, from a headquarters a long way off, to call a plague on all their houses; and presumably his solution will be to hand the control of administration over to his own commanders—which, if they can be weaned from the mentality which has led them, day after day, to put out the most infelicitous *communiqués* of the whole war, may indeed be very appropriate in a city which is very quickly ceasing to be a seat of government and becoming a fortress under siege. Nevertheless, Singapore must feel deserted. The Commander is in the Netherlands Indies; the Admiral in charge has left to reorganise the Far Eastern fleet; Mr Duff Cooper has gone. And, if Singapore and any part of Malaya is saved, it will still be necessary for General Wavell and the British and Australian Governments to find another Duff Cooper and another Supreme Council to put this house in order.

Far Eastern War Front

The chronicle of disaster in the Far East continues. With the British forces' withdrawal down the Malayan west coast, the invaders have reached open country, which is more suited to mechanical warfare and they undoubtedly possess heavy superiority in this type of equipment. The abandonment of Kuala Lumpur, the second largest city of Malaya, was rendered inevitable by the forcing of the Slim river on January 7th. At this engagement, the Japanese made good use of tanks and are now thrusting forward beyond Kuala Lumpur. Another disturbing feature of the Kuala Lumpur battle was the Allies' lack of air support. This can perhaps be made good more rapidly than the tank shortage. Otherwise, the fate of Singapore is likely to become extremely hazardous. The Japanese are showing some signs of a drive to open up a new front. There have been Japanese raids on Rangoon, and British air raids launched from Burma have been harassing the enemy in Thailand. Sooner or later, Southern Burma is bound to enter the battle zone, if only on account of Japan's need to close the Burma Road. Sharp frontier conflicts are reported, and it would be in Japan's interest to launch the campaign before any sizeable Chinese reinforcements can arrive in Burma. With the American resistance in the Philippines unrelieved and unreinforced and the new Japanese attacks on the Dutch East Indies, the maritime war zone, too, has a rather unhealthy look. It is clear that Japan has comfortable command of the seas between the islands, a fact rather ominously confirmed by Admiral Hart's arrival in the Dutch East Indies by submarine. In fact, the one promising feature in the whole war zone is the very successful Chinese campaign round Changsha and the increased military activity in Hupeh, Honan, Anhwei and Kwangtung.

Battle of the Indies

Japanese ability to launch an invasion on the Dutch East Indies while the Battle of Malaya is still in progress demonstrates once more how grossly Japan was underestimated by the democracies. Striking south, Japanese forces captured the island of Tarakan off the east coast of Dutch Borneo last weekend. Since then, the northern peninsula of Celebes, Minahasa, has been the object of fierce fighting, in the course of which the Japanese claim the capture of the aerodrome at Menado. The present battle is of incalculable importance from the strategic as well as from the economic standpoint. Netherlands India at present forms a vital barrier to enemy raiders with designs on Allied shipping in the Indian Ocean. It also forms an important link between Singapore and Port Darwin. The Japanese have struck at the centre of the link, seeking no doubt to divide the Allied forces and, in particular, to prevent contact between the two main Dutch naval bases of Surabaya in Java and Amboina in the Moluccas. The immediate economic gain from the rich Tarakan oilfields will, no doubt, be small, since the Dutch appear to have scorched their earth scrupulously and efficiently, but the Japanese successes already constitute a serious threat to the important oil wells at Balikpapan in Dutch Borneo. The extent to which active Allied support is being given to the Dutch in their gallant defence is not clear. It is known that for some weeks the United States navy has been co-operating with Dutch naval units in the defence of the Indies and that, in the first week of the New Year, Admiral T. C. Hart, commanding the US Asiatic Fleet and the allied navies in the south-west Pacific, arrived in the islands. There have recently been reports that both American and Australian bombers have assisted in operations off Borneo, and Mr Curtin is reported to have pledged substantial Australian aid to the Lieutenant Governor-General, Dr van Mook, who arrived in Canberra for discussions some ten days ago. Meanwhile, the Dutch have effectively helped themselves. The list of successes disclosed by Mr Piet Kerstens, newly appointed Minister of Economics and Shipping, who recently returned from Batavia, is impressive by any standards. He claimed no less than 16 Japanese naval and merchant vessels, of which two were cruisers, as definitely destroyed since the outbreak of the war in the Far East. Since his statement, a direct hit on one more cruiser off Tarakan has been claimed by a Dutch bomber. The Dutch are fighting an all-in war for territory whose defence is vital to the whole of allied strategy.

Perspective on the German Retreat

The Russian advance in the main Moscow centre has now been continuing for over a month and brilliant progress has been achieved. In the northern sector, the important junction of Rzhev is threatened. In the centre, although Mozhaisk is still strongly defended, the Germans' position grows daily worse under the threat of encirclement from north and south. General Zhukov's forces have made a penetration of well over 100 miles and have advanced into the province of Smolensk. Germany's northern and southern fronts are threatened too. Activity on the Karelian peninsula is increasing while, in the south, behind Kharkov, the Russians claim to have recrossed the Donetz river for the Germans, and were it not for the ineradicable British habit of seeing victory round almost every corner and of suiting their efforts to their hopes, it would be unnecessary to do more than rejoice with the Russians and accept the German discomfiture. As it is, there is need for a careful assessment of the German position and its relation to the front. First, it must be remembered that the retreat began when the Germans failed to take Moscow, and a shortensary. There are no natural defences in the great Russian plain, and once the decision to retreat became inevitable, the Germans could argue that it was in their interest to put a large zone of thoroughly scorched earth—if their main forces and the advancing Russians. If a calculation of this kind was made, it is possible that the fighting action designed to keep open the Moscow-Smolensk line as long as possible. A decisive factor is of course morale.

The German armies are tasting retreat—and under appalling conditions—for the first time. Much depends on whether the German soldiers feel they are part of an orderly withdrawal. The German High Command claim that the Russians are falling into a trap by advancing in winter, losing valuable equipment in return for useless land while extending their lines before the spring offensive. That is as may be, but in any case it is a very pleasant change to hear the Germans explaining away retreats.

RAF Regiment

The plans for defending aerodromes, in this country but not yet (for some reason) overseas, have been announced, and they are not new. The Aerodrome Defence Force becomes the RAF Regiment, dressed in RAF blue off duty and in khaki battledress on duty, and with seconded Army officers in their regimental khaki. Major-General Liardet, who has been an inspector of aerodromes for over a year, becomes Commandant of the Regiment and Director-General of Ground Defence in the Air Ministry; but he is responsible to the War Office and HQ Home Forces. His predecessor as Director-General of Ground Defence, Air Commodore Sanders, will be his assistant. Mr Attlee, announcing this scheme, said that, while Army responsibility must remain, because aerodrome defence is logically and actually part of the defence of the surrounding country, the RAF had been made the local agent. RAF station commanders will have control of their defending units, and station ground staffs will be a further line of defence. To the layman, the arrangement must appear a compromise and confused. He may even suspect that the motives which caused the War Office to snatch back the Commandos from their independent position in liaison with the Navy have been at work again. The first line of defence for aerodromes is aircraft, and that is the job of the RAF. At any rate, it is obvious that the new body, whatever its name and status, should be at least as well selected, instructed and equipped as the Commandos themselves. The type of organisation adopted for aerodrome defence is only a means to an end. The end is the defence of aerodromes and, for that, three things are needed: adequate methods of defence; adequate defensive equipment; and adequate training. The RAF Regiment will go through infantry training, weapon training, and then tactical training for their special job. It is to be hoped that as they proceed through the course they will find the necessary weapons, tanks, guns and anti-aircraft guns, and the needed effective tactics. This will be the test, and not the adumbration now of new titles or new combinations of uniform.

The Lost Blitz

The general feeling that the bombing offensive against Germany provided for the autumn and winter of 1941-42 has gone astray is not simply due to lay ignorance and lack of understanding. It is due to the weight and continuity of attack which were promised, quite gratuitously, in the speeches of Ministers last spring and summer. When Sir Archibald Sinclair says (as he did in a speech in the City last week) that, even with the advent of Russia as an ally and before the entry of Japan as an adversary, British air resources were stretched to the utmost over all the fronts, he is giving one sound reason why the Blitz against German cities, which was promised, never happened—and one which was just as obvious when the "we'll give it them back" speeches were made. When he points out that it is difficult to bomb the Germans as hard as they bombed Britain because Germany and German Europe are a much more widely spread target than this island, he is confirming what a number of sceptical commentators said when these promises were first given. Remarkably bad flying weather and the improvement of defences have played an important part. But the fact is that, even allowing for this, the bombing of Germany has not been so intensive as it had officially suggested it would be; and the real trouble is that those in authority do not seem prepared to admit openly that their strategical plan in the air is not quite what the public has been allowed to believe it to be. It is not, very rightly, based on reprisals which, unless they are also sponsored by sound military considerations, are largely waste; nor is it based on the exaggerated belief in the efficacy of bombing as a separate weapon which was

thoroughly exploded by the failure of the *Luftwaffe* in the autumn and winter of 1940-41. It appears to be based, as it should be, on co-operation and the use of air power as an auxiliary, not autonomously—as an aid to the blockade by the bombing of shipping, key factories and communications and as artillery and a protective cover for land and sea forces. It is true, as Mr Churchill said in America, that bombing will play a great part in the defeat of Germany, but not in isolation; and it does no justice to the valuable work which is being done night and day by the RAF to allow it to be believed that it is falling short of some grandiose and impracticable target. It would smooth away a lot of bewilderment and some irritation about the fact that Germany has not, after all, been wrecked and blasted this winter, if a few of the more misleading Ministerial words on this subject were now well and truly eaten. When the point is put to them, no people are in a better position than the British to understand that wars are not won by bombing.

Overseas Remittances

It was perhaps more than a coincidence that the Chancellor of the Exchequer's announcement that the ban on remittances to emigrants in countries outside the sterling area would be relaxed was made on the day after President Roosevelt's Budget message. For the only justification for allowing the loss of dollar exchange—however small—by concessions to private individuals is the heavy new financial burdens which the war will now place upon the American hosts of these emigrants. From the moment the question of sending children overseas was mooted, the Government very wisely refused to allow any remittances to children and adults evacuated under private arrangements to the United States and Canada, primarily because of the need for conserving dollars, and also because such a concession might have led to a rush on shipping on behalf of the children of the rich to the detriment of the Government's own evacuation scheme. Now, however, the fact that the United States is at war, and will eventually be compelled to reduce its standard of living because of the enormous war effort it has undertaken, outweighs the dollar consideration, though the remittances allowed are limited to amounts that can hardly do more than cover the bare cost of living—if that. For each child under the age of 16 at the time of departure the maximum sum allowed is £3 a month and for every adult responsible for children £10 a month, sums which will leave little or nothing over for clothing and other necessities. (The procedure for making the payments is explained in a Finance Note on page 78.) No remittances can be made to adults not in charge of children—very rightly, since such adults, who ought never to have gone, should be regarded as part of the common stock of manpower and available for war work. In fact, the new arrangement is another illustration of the American people's change-over from the position of generous helpers to that of working allies.

Lower Rations

The first of the expected cuts in food rations have come. From January 12th, the sugar and fat rations reverted to the quantities available weekly before November 17, 1941, namely, $\frac{1}{2}$ lb. of sugar and $\frac{1}{2}$ lb. of fats, of which not more than 2 oz. can be butter. It was, of course, clear from the day that Japan entered the war that cuts would have to be made and more than a month has gone by before the inevitable first step has been taken. This delay may have been due to the fact that the necessary re-allocation of shipping quotas between the Allies and their departments, leaving less space for the British Ministry of Food, has only just been completed, though the need for cuts might wisely have been anticipated. In any case, the claims on shipping made by the war in the Pacific will increase in coming months; and it cannot be too strongly urged that Lord Woolton should, so far as possible, hold stocks intact and take any cut out of current consumption. It is a sign of providence that the normal cheese ration is to be reduced by 1 oz. to 2 oz. on February 9th, although priority cheese rations are rightly to be maintained. Since stocks of cheese are apparently somewhat restricted, it is possible that still further cuts in the normal rations, and in the allowance to caterers, will be necessary if these priority claims are to be

met. On this and other long-term matters, Lord Woolton has so far been silent. It would be fairer and more expedient to warn the country as a whole that further cuts in a variety of rations are more probable than possible—the present tea ration, for instance, cannot enjoy any long expectation of life in existing circumstances—so that the present level will not continue to be taken for granted.

Calling Up Women

The 1920 age-group of women registered last Saturday and will be called up, concurrently with the 1921's who registered last year, under the new National Service Act. Registration, however, took place under the Registration for Employment Order, and many of the women who registered are not liable to conscription—if, for instance, they are married or mothers—but only to direction; their registrations will be kept separate at the employment exchanges. Single women and widows without children, on the other hand, will be regarded as liable for service under the new Act; but they will not be called up if they are already working in agriculture and forestry; civil defence; the cotton industry; munitions, including work in canteens and hostels; some positions in national and local government; NAAFI; timber production; and public utilities and transport; or if they are religious sisters, teachers, veterinary surgeons, doctors, dentists or members of hospital and nursing services. The next stage, provided that a woman has not declared herself a conscientious objector, is the consideration, by the district manpower boards, of applications for deferment, either from the employer or from the woman herself, because of her present work or on the grounds of exceptional hardship—in the latter case, the procedure is slightly different from that for men, and the question of hardship will be decided before medical examination. Finally, when deferment, hardship and conscientious objection have been decided—against the applicant—the options between the various forms of national service—the auxiliary forces, civil defence and industry—take effect. Women who are turned down for the forces on medical or other grounds will be given the opportunity of serving in NAAFI; if they refuse this, they are in the same position as women who have chosen industry or civil defence and will be summoned for interview by the employment exchange. At this stage, there is little comment called for on this somewhat elaborate procedure except to ask that it be made as effective as possible in spite of its elaboration. Already there is considerable waste and duplication, because the 1921 and earlier age-groups, who registered last year, must—or should—have had the tests of deferment and hardship already applied to them when they were interviewed. It now seems that those who then escaped the net are to have further tests; and, presumably, the employers and the women themselves will have to produce more cogent reasons why they should not be called up—or directed—if the new manpower policy is to mean anything at all. Otherwise, it will again be a case of merely picking a few here and there instead of gathering in the wide harvest which the nation needs.

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

Diversion in Africa

With the fall of Bardia and Sollum, only Halfaya remains upon the British lines of communication to interfere with the rapid bringing up of supplies to the new front line beyond Benghazi. This is fortunate, for it seems likely that the first phase of the battle for Tripolitania is about to open. Rommel's forces are deployed on a short 70-mile front between El Agheila—the maximum point of the British advance in 1941—and Marada, and so far they have put up a very stubborn rearguard action, defeating all attempts to encircle them and cut them off from the possibility of reinforcement from Tripoli. The British forces have a tremendous task before them, for it is their job to make of North Africa what Spain was to the campaigns of Napoleon, a "running sore," a constant irritant, a perpetual diversion which draws men, tanks and aircraft away from the main European front. It is still too early to say whether Hitler has determined to organise the diversion on an heroic scale. His decision must depend upon the extent to which stabilisation is possible in Russia. But there are signs of preparation in the Mediterranean, and Malta, in particular, has been subjected to an air offensive so heavy as to suggest the preliminaries of an invasion.

Indian Paralysis

Time and the opportunity are slipping away in India. Every week proves that an increased number of Indian politicians, of all groups, are anxious to co-operate in the war. On all sides, there is a feeling, which found some voice in the December meeting of the Congress Working Committee as well as, widely, in the Press, that some interim settlement, in the face of the new Japanese danger, should be possible. But those who have the decision in their hands are coming no closer. Under the confused and contradictory verbiage of the latest resolutions of Congress, the old impracticable proposals seem intact; and, correspondingly, the leaders of the Moslem League are still talking of partition, instead of national unity. Mr Amery has spoken; and, in effect, he sees no new way in which the deadlock can be broken, in spite of the tide of national sentiment that the Japanese aggression has set in motion. The Viceroy is silent and apparently as isolated from what is going on as the old Chinese Emperors, the Sons of Heaven. Without discussions, there will be no settlement, and without meetings, no discussion. The preparations for defending Indian territory go forward by decree; and the expansion of India's armed forces and arms output, is an astonishing contrast to India's utter inability, from the Viceroy downwards, to help itself politically.

The Rio Conference

The Pan-American Conference at Rio de Janeiro was to open on Thursday of this week. The Conference derives from the resolutions accepted by all the republics at the Havana Conference in 1940, when it was resolved that an act of aggression against one American republic by a non-American power should be considered an act of aggression against all. There is a certain amount of humour in the situation, since it can hardly have been envisaged at Havana that the United States would appear in the rôle of protector but of victim. The Havana resolution did not specify, save in the vaguest terms, what action should be taken by the republics not directly affected. As things stand at present, there seems to be a direct relation between the way in its support. Thus the Caribbean and Central American republics (with the exception of Mexico) have declared war on the Axis. Mexico, Colombia and Venezuela have broken off diplomatic relations. Brazil, Peru, Bolivia, Paraguay and Uruguay are apparently prepared to join in measures of economic warfare and in surveillance of Axis agents. Chile and Argentina dissent. Chile's presidential election rather than from her German popularity, and it is possible that her vote will be cast with the Minister, has flatly declared that he will not agree to any measures of pre-belligerency. This attitude is, in part, Argentina's traditional opposition to United States leadership in South America. But in part also it is something peculiar to the present political situation in Argentina. The Castillo Government is bent on maintaining a stiff

neutrality with what can only be called de Valera's defiance of the opinion of its neighbours—and, unlike Mr de Valera, it is at odds with the legislature and very doubtful of popular support, especially on this issue. The apparent temper of the United States delegation, which is led by Mr Sumner Wells, is to waste no time on conciliating this opposition, but to take decisions by a majority vote. From the strategic point of view, the most important republic is Brazil, followed by Peru, Colombia and Venezuela. It is on them that Mr Welles will concentrate his attention.

Feeding the People

From the moment communal feeding was first mooted, private caterers went in fear of the competition they might suffer. They have been consistently hostile to canteens. But when the so-called "British restaurants" were started, their cries of unfair competition became louder than ever. It is true that in large towns British restaurants attract the same customers as the light refreshment caterers, and that, owing to the use of voluntary labour, their low rent charges, if rent is paid at all, and the fact that they only have to cover costs, they can give better value for money—that is, provide cheaper meals. The purpose of these restaurants, however, has been rather lost sight of. They were designed to provide facilities for feeding the public in the event of their own cooking or feeding arrangements being destroyed by enemy action—as many homes and cafés have been. They now serve rather different purposes. They are used by people who formerly lunched in their own homes or off sandwiches, and particularly by the new wartime recruits into industry. In some districts, particularly suburban and country districts, they have won a popularity and success which could not have been achieved by the commercial caterer working on "business" lines, and the Minister of Food, after meeting a deputation of caterers' representatives, has undertaken that an inspection will be made in any area in which it is proposed to start a British restaurant, on application by the caterers in the area. Permission will be given only if a British restaurant is considered essential in the area, because there are insufficient alternative places for the preparation of meals other than people's own homes. This decision should alleviate the anxiety felt by so many small caterers who are afraid of being deprived of their livelihood (there is no method of compensating them), simply because it has become fashionable for local authorities to set up British restaurants. There will be some assurance that money, effort and food will not be wasted in any area merely to emulate a neighbour. On the other hand, communal feeding has two purposes which should not be forgotten when the caterer complains: economy of staff and equipment; and cheapness. The aim of wartime food policy is to feed the people; and the price of meals and the efficient use of food, labour and facilities are as important in terms of social justice and wartime expediency as any vested interests, however well founded.

Hungarian Vortex

The prospect of German diplomacy at grips with the Hungarian problem provides much ironic entertainment for the Allied Powers. The agreement of stable frontiers between Hungary and her neighbours presents difficulties for which there are no ideal solutions under the New Order any more than there were under the Trianon Diktat. The immediate purpose of Ribbentrop's visit to Budapest, promptly followed by that of Ciano, remains a matter for speculation. Its wider implications are clear. Germany requires from Hungary a greater contribution to the Axis cause in terms of both food and soldiers. It also requires more evidence that Hungary is willing to play the German game in Central Europe. Hungarian policy, now as formerly, lies in the pursuit of strictly nationalist aims—involving friction of a more or less severe nature with the Axis satellites, Roumania, Croatia and Slovakia—and the contribution of minimum resources to the feeding of Germany and the conduct of the Russian campaign. This conflict of purpose provides the opportunity for endless bargaining and old-fashioned diplomacy. The acuteness of the German need may force Ribbentrop to concede, at least nominally, that Hungary shall assume a position of subordinate leadership over the Central European puppets. Whether Hungary can combine this ambition with permission to replace Italian garrisons in Balkan occupied territory, as an alternative to taking the

Russians, is far more doubtful. German resources in Europe are now severely strained, but she is still in a position to bring considerable pressure to bear on dependent Governments. Ciano's visit raises even more interesting possibilities. It is barely eight years since Hungary and the defunct Austria, under the leadership of Mussolini, formed an offensive counter-bloc to Nazi expansion under the Rome Protocol system. Austria is now out of the picture, but it is difficult to believe that in Hungary and Italy the ambition to bargain with Berlin on a collective basis is extinct. Germany will certainly find it more difficult to exploit her stronger allies by diplomatic methods than to crush the occupied countries by brute force. The first opposition to the New Order may well come from within: from Italy and Hungary, and even from Vichy France.

Milk-O

Now that the corner of the winter has been turned, it is time to form some estimate of the measure of success attending Lord Woolton's courageous but complicated scheme for the rationing of liquid milk. The scheme as it stands at present has, of course, numerous drawbacks, the chief being that treatment of the normal adult consumer varies in too great a measure between the domain of one roundsman and another. It is not clear to what extent each roundsman's sphere of delivery is a self-sufficient unit, but there is no doubt that there is very little evening-out of surpluses between roundsmen in the same district, and next to none between different regions. The decision to bring producer-retailers into the scheme was a big step in the right direction and will do much to make the country surplus available for the benefit of the townsman. The greatest success of the scheme is the certainty with which most priority classes have been supplied, although the grant of extra milk in cases of illness has worked far from smoothly, largely on account of a short-sighted decision in the first place to withhold from the public details of the ailments for which extra milk might be granted. Supplies of condensed milk and dried milk powder appear to be adequate to the demand. But this is mainly due to the somewhat high price at which tinned milk is retailed and to the inability of the Ministry of Food to popularise dried milk. Since powdered milk—together with the national loaf—is one of the most satisfactory ventures of the Ministry, its only drawback being that a little skill is required in its mixing, it is unfortunate that its properties are not more widely appreciated. Finally, the scheme has only just entered the winter months in which the hardest weather can normally be expected. It is all too probable that two pints a week for the normal adult would be by no means general in the event of heavy snow and severe frost.

Industrial Health

At the end of November, the British Medical Association presented the report of its committee on industrial health in factories. Briefly, this recommended the appointment of medical officers—either whole-time or part-time, according to the size of the factory—and an efficient medical liaison system between the factory and outside medical services, including the patient's own doctor. Obviously, the object of the BMA's report—the reduction of illness which, through common ailments alone, costs industry so much in real and money terms—is the right one. But it is not nearly so certain that the means proposed to achieve it are the best; and, in a pamphlet published by the Fabian Society, Dr Hermann Levy has made some searching criticisms of the recommendations. First of all, he shows how impracticable is the BMA's proposal that the general practitioner should achieve a better acquaintance with industrial medicine by "improved medical education, continuous interchange of information during a patient's illness, and a closer association between the medical profession and industry." A doctor's training, he points out, is already expensive enough without adding to it the cost of studying industrial medicine; nor has he the time—under the present system of remuneration—for undertaking any specialised work such as physio-therapy. Moreover, there is the danger that a faulty diagnosis—so important in the case of industrial accidents and disease—can be made even more easily from a spurious specialised knowledge than from ignorance. Let the panel doctor, says Dr Levy, remain the family doctor, whose function is to diagnose and treat ordinary cases, but who should be able to suspect, though not to diagnose and

still less to treat, more serious developments. The latter should be left to real specialists in industrial medicine, and here again Dr Levy differs from the BMA in his conception of the nature and functions of these doctors. The BMA regards them as the servants of the employers who, through the "interchange of information," should be able to learn a case history from a patient's panel doctor. This, as Dr Levy shows, would make the latter suspect to his patient who would rightly resent his own medical adviser being indirectly an adviser to his employer as well. Whether the solution favoured by Dr Levy, that the industrial doctor should be the employee of a mutual compensation fund—and therefore responsible to both employers and workers—is the right one will probably not receive general acceptance, because at present sick workers often regard their insurance societies as too prone "to cheat" them of their rights. But—and it is Dr Levy's own chief conclusion—whatever system for promoting industrial health is proposed, it must be related to a reformed system of national health insurance and workmen's compensation. That the BMA failed to recognise this destroys most of the value of its report.

Question Time

There has been some suggestion that question time in the Commons should be abolished or curtailed. The argument is that too many Members are mere exhibitionists; that constituents put too high a value on the mere asking of questions by their representatives, and expect too much; and that they are the worst way of doing business with the departments because the civil servants are put on the defensive, anxious to excuse or explain themselves, rather than to tackle the matter raised. There is, of course, some substance in these allegations. But the argument is still an exercise in perverted ingenuity; and it is not without significance that it comes in the main from men who tend to be sure that Parliament has no function in wartime and nearly sure that it has none in peacetime either, men who usually equate democracy and inefficiency and, *per contra*, totalitarianism and efficiency and who, like the late Mr Neville Chamberlain in foreign affairs, want to put domestic politics on "a practical business footing." The fact is that the reverse is the case; question time is probably the most valuable hour of Parliamentary time in war conditions, and might well be extended. Mr Churchill has called the House the Grand Inquest of the nation, vigilant to ring the alarm bell. It is at question time that the coyness of Ministers and departments about misdeeds, mistakes, bungling and mismanagement is assiduously, and on the whole successfully, assailed. At question time, Ministers can be induced to make plain what is obscure and reasonable what has appeared unreasonable for lack of information. Parliamentary questions are the great sanction against recalcitrant and inflated officials, for non-committal departmental answers can never be more than a temporary playing for time. In wartime, the function of the Commons to scrutinise policy and elicit information, on behalf of the people, is more important than ever. It is their only function that has remained intact; and it cannot be replaced by backstairs bargaining, simply because the whole object is to bring publicity to bear upon the management of the nation's affairs.

Shorter Note

Mr Roger Liversidge, whose appeal against his detention under Regulation 18B was dismissed by the House of Lords last November, when Lord Atkin gave his famous dissenting judgment, has now been released.

AMERICAN SURVEY

The Sinews of American War

THE figures contained in the President's Budget message on Wednesday of last week were, in their way, as stupendous as the figures of the production programme that he had given on the previous day. In the first seven years of Mr Roosevelt's administration, the expenditures of the Federal Government fluctuated between \$6 and \$9½ billions, and there were plenty of voices raised in those years to the effect that spending at such a rate was ruinous. In the year 1940-41, under the first impact of re-armament, expenditure rose to \$13½ billions, and for 1941-42, the last estimate before the Japanese attack foresaw an expenditure of \$24½ billions, of which \$18 billions was to be for defence. As recently as last summer, when Lend-Lease was already an accomplished fact, authoritative discussions of the economics of defence* were envisaging the problem in terms of eventual maximum expenditure of \$25 or perhaps \$30 billions a year. Mr Roosevelt's figures belong to another world. In the fiscal year July, 1942-June, 1943, he estimates a total Federal Government expenditure of about \$59 billions, of which \$53 billions will be for war purposes. In addition, Governmental agencies whose expenditure is not included in the Budget will spend \$3 billions, making a total defence expenditure of \$56 billions.

Comparison with Britain

To translate these astronomical figures into terms that can be compared with the British war effort is no easy task. The only thing that can be said with any certainty is that to apply to them the official exchange rate of approximately \$4 = £1 is gravely misleading. At this rate, \$56 billions equals £14,000 millions, and since the expenditure of the British Government on war purposes in the United Kingdom in the current year is slightly over £3,200 millions, it would appear that the American effort in 1942-43 was going to be rather more than 4½ times as great as that of the United Kingdom in 1941-42. But this is rather too much to believe. Mr Stacy May, of the OPM, revealed in October that American production, on the schedules as they then existed, would not overtake British and Canadian combined production (of which British is probably over 80 per cent) until late in 1942; it is surely improbable that approximate equality could be converted into a superiority of 350 per cent so quickly. The peacetime non-agricultural working population of the United States is a shade less than twice that of the United Kingdom, and even when allowance is made for higher output per head and for a smaller proportion of men in the forces, it is impossible to reconcile this comparison with a ratio of output of 4½ to 1.

On general grounds, it might be assumed that the true ratio of potential industrial productivity of the two countries was more like 2½ to 1. And this figure is confirmed, though in a somewhat speculative way, by estimates that have been made, independently of each other, on both sides of the Atlantic, on the relative cost of the production of munitions in the two countries. These estimates tend to show that, in the special field of munitions production and war costs this divergence from the more usual ratio is, of course, the small extent to which the processes of mass production, which lower the costs of general industry in America, can be applied to the production of munitions. (The same phenomenon, though for different reasons, exists between Britain and Germany; one Reichsmark buys more, relatively to £1, of war goods than of peace goods). If the figure of \$56 billions is divided by 8 instead of by 4, the resulting

sterling equivalent is £7,000 millions, or about 2½ times the current British expenditure in the United Kingdom. This accords better with observable fact. It seems fairly safe to conclude that the American war effort is planned to be, in physical terms, between 2 and 2½ times the British.

How is this vast conversion of the national economy to be achieved? At the time of the Japanese attack, the American national income was running at the rate of about \$95 billions per annum, while defence expenditure was probably running at about \$18 billions a year. This \$18 billions is now to increase to \$56 billions—that is, by \$38 billions. Where are these resources to be found? The American national income is probably not yet at its maximum—certainly not in a contest of total war. Allowing (as the President did in his estimates of expenditure) for only a slight rise of prices, it may be guessed that the ceiling for national income is at about \$110 billions. If so, \$15 billions out of the needed \$38 billions can be found out of increased production. Drafts on capital are most unlikely to reach the British dimensions. There is no possibility of a heavy adverse balance of payments, nor will there be import difficulties compelling a reduction in stocks of commodities. A policy deliberately designed to make the maximum draft on capital accumulations might well, according to Professor Harris, yield \$10 billions or even more. In actual fact, a figure of \$5 billions is probably the maximum that can be expected. If so, the required \$38 billions will have to be made up by a reduction of \$18 billions in the expenditure of the public—a somewhat stiffer dose of restriction than has in fact been imposed in Great Britain (though the American standard of living, being higher, leaves more scope for reduction).

The Standard of Living

Without in the least impugning the patriotic resolution of the American people, it may be doubted whether they will, in fact, impose on themselves an even sharper restriction of consumption than the British people have. One reason for this is the greater difficulty, within the constitutional and geographical framework of the United States, of setting up really effective controls of consumption. A much more important reason is that the British people were compelled to make an economic virtue of physical necessity. If it had not been for the shortage of shipping, which made it necessary to begin restriction with the common necessities of life, it is very doubtful indeed whether the political resolution would ever have been found to restrict these basic commodities, which absorb so large a part of the community's expenditure. The argument, therefore, concludes with two alternative explanations of the President's figures. Either they will not, in fact, be attained, or else they will be reached only with the assistance of a considerably larger rise in prices than has been allowed for in these estimates. If, for example, there is, say, a 15 per cent rise in the general price-level between now and the average of the fiscal year 1942-43, then national income might well rise to \$125 billions and war expenditure of \$56 billions could be accommodated with only a comparatively slight reduction of consumption.

In any case, it is apparent that Mr Roosevelt is not making the mistake of successive British Chancellors of the Exchequer and setting his sights too low. It is equally apparent that he is determined squarely to face the necessity for some reduction in the proverbial American standard of living. The primary weapon for achieving this purpose will, of course, be taxation. Unfortunately, the cabled reports of this part of the Message are both cryptic and contradictory. But the President appears to have suggested that the existing taxes which, on the latest estimate, were expected to bring in about \$12 billions in the current year, will automatically produce \$18 billions in 1942-43. He further proposed that the total yield of taxation should be increased

from that figure to \$27 billions by the imposition of new taxes. He recommended to Congress, in addition to increases in excise duties, a system of taxes on wages and incomes to be deducted at the source at the time they arise. He also recommended sharp increases in social security contributions, which, in the American system, are a variety of graduated tax on the lower incomes. This programme will take some swallowing. There is known to be considerable support in Congress for relying in the main on a general sales tax.

But if taxes are to be raised in the proportion the President desires, it will be necessary to try every device at once. Even so, as in Great Britain, it will be found to be very difficult to push taxation beyond the point at which it mops up the increase in incomes above their pre-war level—that would be just about achieved if the yield were, in fact, raised to \$27 billions. Any reduction in consumption below the pre-war level has to be left to be accomplished by increased savings and by more direct methods of restriction.

Thus, though the details differ, the problems of a war economy in the two countries are strikingly similar in their general proportions. And in both the formula for their solution is the same. The first essential is to see the task life-size. The second is to summon up the political courage to tackle it promptly and honestly.

clear up the existing confusion of responsibilities, and Mr Nelson has been emerging as the man for the job. A former executive of the mail order house of Sears, Roebuck, he has business experience without the drawback of believing in "Business as Usual"—on the contrary, he is one of those who earliest and most forcefully advocated the thoroughgoing mobilisation of American industry. It is not quite clear, however, from the cabled reports how far in the right direction the new step goes. Mr Nelson will have final authority within the Board's competence, which will certainly cover the allocation of materials between war and civil purposes and within each category, and may cover certain questions of labour supply. But the basic difficulty in the supply position hitherto has been the fact that the War and Navy Departments have never surrendered their exclusive right to place the actual contracts for production, and to do so, what is more, through the agency of uninformed staffs. All the series of external bodies, the NDAC, the OPM, the SPAB, have had powers to control the factors of production but not to organise the production itself. Whether Mr Nelson's War Production Board will be a replica of Mr Baruch's War Industries Board of the last war will depend on the decision that the President has reached on this very vexed question.

* * *

The Price Control Bill

The figures of the President's production programme, as is demonstrated in the article on the preceding page, make it quite clear that the United States will soon be in the stage of potential inflation—that is, the stage in which inflation will become actual unless drastic steps are taken against it. The control of inflation is essentially a political rather than an economic matter; it turns on whether the will can be found to impose sufficient sacrifices of consumption on the public. It is for the light it sheds on this political problem, rather than for its actual provisions, that the Congressional adventures of the Price Control Bill are of interest. The Bill started months ago as a draft emanating

American Notes

A Production Dictator?

It was announced from the White House on Tuesday that the President has decided to appoint a new War Production Board. It will have the same membership as the SPAB—but with one significant difference: Mr Donald Nelson, who was Executive Secretary of the former Board, is to be chairman of the new Board, with a final right to decide. This is clearly a step in the right direction to

* Two of these may be mentioned as of particular value and interest. The first is Professor S. E. Harris's "The Economics of American Defence" (New York: W. W. Norton), an extremely full and well documented, if somewhat confusing, discussion of all aspects of the problem. The other, "Essential Facts for Fiscal Policy," is published by the National Industrial Conference Board.

from Mr Leon Henderson's office. It was weakened in long hearings by a Committee of the House of Representatives and further emasculated by the House as a whole, shortly before the Japanese attack. The first effect of the declaration of war was to lead the Committee of the Senate, where the Bill was then lodged, to stiffen it up again. The two chief points at issue were that control of prices and the power to issue regulations, which the House had put in the hands of a five-man Board, were restored to a single Administrator; and that the limitation on the fixing of agricultural prices was made less outrageously favourable to the farmers. This week, however, there has been a revolt of farm Senators and the Bill as passed by the Senate provides that farm prices may not be fixed below a figure 25 per cent above their present level, or the average of the years 1919-1929, whichever is the higher, and that the Secretary of Agriculture, rather than the Price Administrator, must do the fixing. The Bill is now in Conference of the two Houses and if it is not substantially amended, a veto is said to be in prospect. It is doubtful whether, in an economy subject to the enormous pressures that will soon become apparent, the mandatory fixing of prices would, in any case, serve much purpose, except as the coping-stone to a far-reaching policy of consumption control. But if Congress behaves in this way over price legislation, what prospect is there of any such policy, even though much of it might be achieved by purely executive order? The reduction of civilian consumption—including that of the farmers—will not, of course, be averted; it will merely be secured by the hard path of inflation.

Civil Defence

There has been a minor political storm over the organisation of Civil Defence. In the somewhat embryonic form in which it has hitherto existed, the Office of Civilian Defence has been administered by Mr Fiorello La Guardia, who has doubled in that rôle and as Mayor of New York City. Mr La Guardia is an able and colourful figure, but he is not beloved of politicians. A titular Republican, he is seen with disfavour in his own party because of his open alliance with the New Deal (Mrs Roosevelt is one of his chief lieutenants in OCD), while the Democratic machine dislikes him because for more than eight years he has pre-empted their great stronghold in New York. There is also room for disinterested criticism of the attempt to occupy two posts, both of them of critical importance, which have to be exercised 220 miles apart, and several influential New York newspapers, including the *Times* and *Herald Tribune* have called on the Mayor to resign his OCD office. This week, Congress took a hand. A Bill extending the powers of the OCD and providing increased funds for it was amended to remove control from Mr La Guardia and vest it in the War Department. In an effort to head off this transfer, it was announced on Friday of last week that Mr James M. Landis, former chairman of the SEC, and present Dean of the Harvard Law School, had been appointed "executive" of the OCD, Mr La Guardia remaining a Director. It remains to be seen whether this will soften the Congressional heart. Another matter under discussion is whether the appropriation for civil defence work shall be unlimited or restricted to \$100 millions. The necessity, of course, arises only along the coasts, but even there the distances are so great and the possibility of heavy raids so comparatively small, that it will be difficult to know where to draw the line. At present wardens are being enrolled, gas masks and fire-watching apparatus are being provided and the public are being instructed. But neither evacuation nor the construction of shelters is, wisely, being contemplated on a British scale.

Steel Supplies

The rated annual crude steel capacity of the United States is 89,000,000 net tons of 2,000 lb., equivalent to nearly 80,000,000 long tons. It is about twice as large as that of the countries under German control, nearly twelve times as large as Japan's and about five and a half times as large as Great Britain's. Last month, steel ingot output was at the rate of 86,000,000 tons of 2,000 lb. According to present plans, the crude steel capacity will be increased to 93,000,000 tons by 1943 and to 99,000,000 tons by 1944. An investigation carried out by *The Iron Age* suggests, however, that actual output will be limited by the

supply of scrap and pig iron to 80,000,000 tons in 1942, 86,000,000 tons in 1943 and 87,000,000 tons in 1944. In 1940, when 67,000,000 tons of crude steel were produced, the industry consumed 40,173,000 tons of pig iron and 33,761,000 tons of scrap. In the current year, 49,748,000 tons of pig iron and 44,750,000 tons of scrap were expected to be available to the steel furnaces to yield 80,000,000 tons of crude steel. The possibilities of making up the deficiency of 9,000,000 tons between estimated actual output and rated capacity by the increased use of pig iron are limited. Can it be made good by using more scrap? The three main sources of scrap are the steelworks themselves, the metal-processing industries, and the stock of iron and steel accumulated in buildings and other structures since the beginning of the steel age. Supplies from the first source are in direct proportion to the actual output of steel; according to the calculations of *The Iron Age*, they are expected to yield 23,750,000 tons this year. Supplies from the remaining two sources are estimated at 21,000,000 tons. Like the volume of scrap produced by the steelworks, the quantity available from the metal-processing industries is a function of output. But the third source of supply is elastic, and the quantity forthcoming from obsolete and disused steel products depends in a large measure on prices. According to *The Iron Age*, the average price of steel scrap on December 9th was \$19 17 per long ton, against \$21.33 a year earlier and a peak of \$17.58 reached in 1929. The view has been expressed, probably not without justification, that the present scrap shortage is due partly to the limitation on prices enforced by the Price Administrator, which is reducing the incentive to collection. In view of the enormous quantities of steel products accumulated in the United States, it should not be impossible to make good a large proportion of the deficiency by a vigorous scrap collection campaign, accompanied, if necessary, by some increase in prices.

Steel for War

The total size of steel-producing capacity, however, is only a very rough guide to the magnitude of the potential output of munitions. The decisive factor is not total output, but the proportion of it that can be devoted to the war effort. This varies from country to country. The following analysis of the distribution of finished steel products in 1940 by companies responsible for 98 per cent of total production provides some indication of the magnitude of steel supplies that could be transferred to the production of war equipment in the United States:—

DISTRIBUTION OF FINISHED STEEL CONSUMPTION IN 1940			
(In thousands of tons of 2,000 lb.)			
Steel converting and processing industries	2,929	Agricultural equipmt.	920
Jobbers, dealers and distributors	6,687	Machinery and tools	1,885
Construction industry	4,968	Automobile industry	7,185
Shipbuilding	940	Aircraft industry	48
Pressing, forming and stamping industry(a)	2,160	Railways	3,777
Container industry	2,985	Mining and oil	1,132
		Miscell. industries	2,136
		Export	8,099

(a) Chiefly furniture and other household equipment.

The reduction in the manufacture of motor vehicles appears to offer the largest scope for economy, but several millions of tons can also be saved by the prohibition of unessential civilian building, by the curtailment of the output of household equipment and of exports. Shortage of tin will in any case reduce the demand for steel for tin plate. Economies in the consumption of steel for mining and railway equipment are limited in view of the need for an expansion in the capacity of plant. The shipbuilding, engineering, and aircraft industries, on the other hand, will require enormous additional supplies if President Roosevelt's war production programme is to be realised. Together, these three industries only consumed 2,873,000 tons of finished materials, or 6 per cent of the total output in 1940.

Increased Note Circulation

Following the precedent of other belligerent countries, the note circulation in the United States took a sudden upward leap after the declaration of war. On December 4th

the Federal Reserve notes in circulation amounted to \$7,730,140,000. By December 18th the total had risen to \$8,014,330,000, an increase of 3.5 per cent, which compares with an increase of 4.5 per cent in the circulation in this country over the fortnight following the last pre-war Bank return. Since that first rush for liquidity, the note circulation in America has followed more normal seasonal trends, rising to a peak of \$8,202,080,000 on December 26th and declining to \$8,178,760,000 on January 8, 1942. The original rush for additional currency was financed partly by drawings on member bank reserve balances, which fell by \$688,490,000 over the fortnight to December 18th—a movement also accounted for by the building up of Government deposits with the Reserve Banks from \$320,560,000 to \$925,260,000 over this period. The effect on the credit position of this twofold impact of increased demand for currency and immobilisation of additional funds in Treasury accounts was to some extent offset by the appropriate purchases of securities, the Reserve Banks' holdings of Government securities rising by \$55,640,000 over these two weeks. In view of the steep expansion in the American national income which is now proceeding, a corresponding, though it is to be hoped not parallel, movement in the note circulation must be expected. The impact of that movement on the credit position will provide interesting material for analysis. It must be realised in the first place that there will be no countervailing influence from further massive arrivals of gold. Moreover, excess member bank reserves have been reduced since the latest increase in reserve requirements on

* Owing to errors in cable transmission, the figures for this item in the table printed each week in the "Records and Statistics" section of *The Economist* have been incorrect. The defect has now been remedied.

November 1st. But they are still higher than at any time before 1939* and sufficient to support an expansion of nearly 40 per cent in the credit structure.

Shorter Notes

For a nation that has suffered severe unemployment for over a decade, the aspect of economic mobilisation that is hardest to credit in advance is the appearance of a labour shortage. It is a sign of the times that a conference has been summoned by the Federal Security Administrator, Mr McNutt, to consider ways and means of increasing the labour supply.

For the first time in recent years, United States merchandise imports from Latin America are now larger than exports. This is directly due to the war, as the two great normal imports, sugar and coffee, have remained at about the pre-war level. The increased imports have been such things as copper, wool, hides and skins, manganese, tungsten and other minerals.

Results of recent Gallup polls are as follows:—"Should single women between ages of 21 and 35 be drafted for training in wartime jobs?" Yes, 68 per cent; no, 26 per cent; undecided, 6 per cent. "Should the U.S., Britain, Soviet Russia and their allies form a joint war council to plan all war operations against the Axis?" Yes, 80 per cent; no, 10 per cent; undecided, 10 per cent. "If such a council were formed, should it control the armies, navies and air forces of all the united nations?" Yes, 68 per cent; no, 15 per cent; undecided, 17 per cent.

THE WORLD OVERSEAS

Europe versus America?

(By a Correspondent)

ON December 11, 1941, Germany and Italy declared war on the United States. Finland, Roumania, Hungary, Bulgaria and the three European "colonies" of the Axis, Slovakia, Croatia and Albania, followed suit. To the Reichstag, Hitler emphasised that his "peaceful policy" towards America had been frustrated by President Roosevelt. The actual decision to extend the conflict to the Western Hemisphere hardly calls for comment in view of the character of German-American relations during the past eighteen months. It is, however, necessary to clarify two points of the speech, especially since they are recurrent in Nazi propaganda throughout the world. First, does this antagonism towards the United States result exclusively from the course the war has taken and America's attitude during the war, or was it part of the original Nazi plan? Secondly, is there any evidence, outside the speeches of Nazis and quislings, of a "new Europe united as never before" which has embarked on "a war of revolution between the powers of the future and of the past" and has entrusted Hitler with the leadership in this "European war of secession," to direct "its defence against unprovoked attack from outside" (the quotations are from Hitler)?

The original concept of Hitler's foreign policy consisted of two main elements: "the revisionist policy" directed against the Treaty of Versailles and its signatories; and the Greater German (or pan-German) policy directed towards the establishment of the Third Reich as the leading power of Europe and of the world. This is common knowledge. What has been too often overlooked, however, is the fact that the Nazi "revisionist policy" was not confined to the "wrongs" inflicted on Germany by the peace-makers of 1918, but extended to the "wrongs" inflicted on all Europe. This policy required the total abolition of all the peace settlements and the re-establishment of Europe, with the Reich as its dominating state, as the "mother-continent of the world" and the chief centre of world power.

Old Antagonisms

This viewpoint must be understood when considering the Nazi attitude towards America. It was the basis for two antagonisms; antagonism towards the Power whose joining with the Allies in 1917 decided the last war against Germany and paved the way for Versailles; and antagonism towards the Power which, by succeeding to the world authority for France, possessed by Europe, has damaged the vital interests of the Reich, the strongest European state. Germany, it is maintained by the Nazis, cannot exercise the international influence due to her, if Europe (read German Europe) is reduced to the rôle of a secondary continent.

Visibly, Nazi policy was mainly directed against a European system dominated by France; and there was a deliberate attempt to appease America, first by stressing the apparent similarities between the methods employed by Roosevelt and Hitler in 1933 to deal with the economic crisis, and then by the appeal for collaboration between "the young Third Reich" and "the big Power of the New World." But the gap between one state built on individual freedom and the "melting-pot" and the other race was unbridgeable, even for a time. This was also responsible for the failure to use the memory of the wars between the United States and Britain for the benefit of Nazi Germany. Reminders of the German support given to Washington's armies during the War of Independence and of the fact that von Steuben, before he went to America, was aide-de-camp to Frederick the Great were

ineffective; and the attempt to obtain America's consent to the policy of "German Europe" in exchange for Hitler's recognition of the Monroe doctrine also failed.

Now, since the second half of 1940, all pretence has gone. The contention that "the aim and meaning of the war has grown with each stage of the fighting" (*Berliner Börsenzeitung*, October 26, 1941) is misleading as far as the real Nazi attitude towards America is concerned. This issue was decided long before the war; and the anti-American policy of 1941 is not the result of the events of 1940 or 1939. It is the execution of E. Nonnenbruch's formula set down in 1924 (the year when Hitler started work on *Mein Kampf* and the Nazi "brains' trust" was busily helping him), which ran: "Europe under German leadership will be able to force America—and Russia—into a new world framework." German anti-American propaganda during the past eighteen months has used Nonnenbruch's thesis without a single new point.

Failure of a Crusade

Thus to speak of the Nazis' originally peaceful intentions towards America is fallacious. Is the claim to speak for Europe and to be charged with the defence of "the European front" any more justified? Has there been any continental recognition of German leadership? Only seven European states have associated themselves with Hitler's war against America, even if the decisions of Finland, Hungary, Roumania, Bulgaria, Slovakia, Croatia and Albania are taken as independent acts—which seems hardly probable, in view of the character of these states and their dependence upon the Axis. Sweden, Denmark, France, Switzerland, Turkey, Portugal and Spain have remained outside the conflict. The USSR, Britain and the free governments of occupied Europe are fighting against Germany; and not even a majority of votes in the reduced Europe which the Germans have overridden can be collected for German or Hitlerite leadership.

The fact is that there is no anti-American front in Europe, and very little anti-American feeling. The general attitude towards America seems to be very much the same as before. Historical, cultural and economic ties, particularly strong between Northern and Western Europe and the United States, have not been forgotten. The power of attraction which America and all America stands for exercise on the minds of men in closed Europe is greater today than ever—if it is judged against the background of all the attempts of the German and German-controlled press and propaganda to counteract it. It should not be forgotten that the European idea of a "united Europe" has been widely influenced by the model of the United States. The bogey of American (and British) interventionist and imperialistic intentions in Europe has won no response.

The Nazis are trying their utmost to reverse this situation. The struggle to make Nazism the recognised *Weltanschauung* of Europe is more strenuous than ever. But disorder, sabotage, riots and the execution of hostages in Norway, France, Poland, Czechoslovakia, Serbia and Greece do not bear witness to a Nazi-minded Europe. The Nazis claim that "economic and moral isolation has been a most valuable help in fostering the new spirit of European co-operation" (*Deutsche Allgemeine Zeitung*, July 7, 1941); but the new spirit has failed to make an appearance. The attempt to create enthusiasm among the peoples of Europe for the opportunities the occupied Russian territories might offer as a European colony had failed completely before the German armies had started their retreat. Europe, in fact, is fighting neither Russia nor America. No "European front" exists under Hitler's command. It is the German Reich, led by Hitler, that is waging war against the United States, in accordance with the first principles of Nazism.

Vichy's Finances in 1941

[BY A CORRESPONDENT]

January 6th

DURING the past year, Vichy's Minister of Finance was able to plan his Budget only for periods not longer than three months ahead. The officially published quarterly figures give the following totals for the full year: expenditure on the Ordinary Budget amounted to about 96 milliard francs and was more or less evenly distributed over the four quarters of the year (22-25 milliards per quarter); and expenditure on the Extraordinary Budget amounted to 37 milliards, of which about 26 milliards were spent during the first half of the year and only 11 milliards in the second half. The latter figures are interesting, since the Extraordinary Budget consisted of two items: (1) the cost of "liquidating the war" and (2) public works and measures to fight unemployment; the sharp cuts in these expenditure items reflect, therefore, the failure of the public works programme which was announced by Vichy with much self-advertisement some time ago. The main reason for the reduction was the acute shortage of raw materials, which prevented most of the plans from being carried out. All in all, 8 milliard francs were spent on public works and on measures to relieve unemployment.

Thus total Government expenditure amounted to 133 milliard francs. Against this, state revenue brought in 68 milliards; the deficit was, therefore, 65 milliard francs. To this, the burden of the indemnity paid to the army of occupation should be added. It amounts to 146 milliards a year, if calculated at the 400 million francs per day rate, and 122.5 milliards at the combined rate of 400 millions up to May 10th and 300 millions per day for the rest of the year. (It is not clear whether the reported agreement on the reduction of the daily contribution has actually taken effect.) The total deficit for 1941 thus amounts either to 211 milliards or to 187.5 milliards.

The figures reveal what an outstanding importance the problem of the public debt has acquired for France. The anomaly of the situation is that the proportion of the annual expenditure which is to be covered by borrowing is far higher in France than in any of the belligerent countries. The principle underlying the financial policies of the belligerents is that payment for the war should be made as much as possible out of current income. The expenditure of a belligerent country grows enormously, but so does its national income; there is more scope for raising taxation to keep the balance between taxation and borrowing. France, on the other hand, has to meet high expenditure although the national income has sharply decreased compared with the pre-war level. Taxation covers one-fourth of the state's expenses, and about 75 per cent must be met by borrowing.

A Financial Paradise

In the meantime, the economic misery of France takes the outward appearance of a financial paradise. Money is abundant, and the Government finds no difficulties in obtaining credit. All the factors of France's economic disintegration work towards the setting free of great masses of capital. The impossibility of replenishing stocks, which have been sold out or requisitioned, and raw materials has brought much of the industrial machinery to a standstill. Shortage of foodstuffs makes even small savings increase. Money, with productive investment closed to it, flows to the banks and thence to the Minister of Finance. The pump of *Kreditbeschaffung* sucks money, and more and more money, out of the emaciated body of the idling nation and produces the "miracle" of the lowest interest rate France has known for decades. The rate on Treasury bills was reduced three times during the year. In January it was fixed at 2 per cent, in March at 1½ per cent and in September at 1¼ per cent. Similarly, the discount rate of the Bank of France was lowered from 2 per cent to 1½ per cent. The advances of the Bank to the Government remained during the whole year at about 60-65 milliards; the maximum limit of 70 milliards was not reached. Even the special indemnity account with the Bank shows only a moderate increase in advances; between January 1st and September 11th, it rose from 85 milliards to 130 milliards, and in November it dropped to 120 milliards. Thus, only 35 milliards of the contribution to the army of occupation was obtained from the Bank by more or less direct money creation. In fact, the easy supply of credit has slowed down

the pace of currency expansion. During the second half of 1940, the currency in circulation rose by 44 milliards (from 174 milliards at the time of the armistice to 218 milliards in December, 1940). In October, 1941, it stood at 252 milliards, the increase for nine months being 31 milliards only. Compared with its pre-war level, however, the circulation has been doubled.

Another feature of this delusory financial paradise has been Vichy's conversion policy. The supply of credit enabled the Finance Minister to carry out large-scale conversions. In May, a series of 6 per cent *Crédit National* loans was replaced by one 4 per cent security. The conversion was an indubitable success; there was almost no demand for cash reimbursement, and the sum converted was 11.5 milliard francs. In October, an operation on an even larger scale was undertaken by the Caisse Autonome d'Amortissement, which consolidated about 20 milliards of various medium-term loans incurred by the Popular Front Governments at onerous rates, as well as some defence bonds subscribed during the year. To convert all these, the Caisse issued 4 per cent securities with a period of redemption extending to fifty years. No doubt, under normal conditions, debt consolidation on such a scale would have been a considerable financial achievement. Vichy's obsequious Press consequently made the most of it, and some wits even went so far as to proclaim "a new era of France's deliverance from financial slavery." No doubt, too, the funding of a considerable part of the public debt has improved the technical position of the state's credit. But Vichy's yes-men have overlooked the fact that the operation has affected only a fraction of the yearly addition to the nation's debt and that the resulting reduction in the debt service (about 450 million francs per annum) is equivalent to no more than the occupation costs of 1-1½ days. They have also glossed over the trifling fact that the economy has been largely made at the expense of the small rentier by a Government that has driven itself into utter *Finanzknechtschaft* to Germany.

A Stock Exchange Boom

The plethora of money caused a boom on the Stock Exchanges, which was maintained almost throughout the year. State securities as well as industrial shares were affected by it. But, whereas the boom in the gilt-edged market was welcome to the Government, the upward tendency of equities met with severe official counter-measures, because it threatened to divert capital from investment in state securities. In June, the general index of Stock Exchange quotations was 243, whereas the equities index reached 270 (1939=100).

To deter capital from investment in industrial shares the following steps were taken: the daily price movements for equities were restricted to 3 per cent; a 33 per cent levy was decreed on Stock Exchange profits; and only cash transactions were permitted. In addition, dividends were restricted to 6 per cent. The prohibitive policy, however, proved a handicap to concerns whose activities were considered essential by the Government, and in the second half of the year there was a relaxation of the restrictions. The levy on equity sales was reduced from 33 per cent to 20 per cent, and stocks which had been in the seller's possession for more than a year were exempted altogether. The boom, however, was not effectively stopped. There were, of course, some ups and downs in the trend; in July, for instance, the offer of stocks was very heavy owing to the sale of equities and gilt-edged by Jews, who were barred from the Stock Exchanges, and to some big new issues (the *Compagnie Nationale des Chemins de Fer* made a 4 per cent issue of 4 milliard francs in June). But these were no more than momentary fluctuations which soon gave way to a new leap in prices. In August, the Minister of Finance turned on the screw again and limited the daily changes in quotations to 1 per cent of the price of an equity.

The main reason for the sustained boom seems to have been—apart from the general background of money abun-

FOR SALE—ECONOMIC JOURNAL, Sept. 1934, to Dec. 1941, issues inclusive; also **ECONOMIC HISTORY Annual Supplements**. All in excellent condition.—Offers to SMITH, LAUREL MOUNT, WORMIT, DUNDEE.

dance—the public's distrust of France's currency. Whatever might be said about the miraculous qualities of the state's financial machinery, nothing could explain away the fact that the currency circulation was twice as big as it had been two years previously, and that production had dwindled to a fraction of its normal size. The official statistics of prices provided fragmentary hints only; they admitted that, compared with 1939, meat had gone up in price by 50-60 per cent, dairy products by 70 per cent, iron by 60 per cent, textiles by 105 per cent and rubber by 165 per cent; these are the indices of the official prices for rationed goods. They are much below the unofficial prices, and also much below the general price level for unrationed goods. But even these odds and ends of official statistics show that the anxiety of the French public is not quite baseless. The investor feels that the currency of his country is eventually bound to be crushed by the burden of a tremendous public debt. The less he believes in the stability of the Vichy regime, the less he feels confident about the future value of Government securities, and the keener he grows, in spite of all the restrictions, to make "real" capital investment, that is, to buy industrial shares.

Eire's Food Policy

[FROM OUR DUBLIN CORRESPONDENT]

December 27th

THE problems relating to the increase of tillage have provided scope for much controversy among farmers and politicians since the foundation of the Irish Free State exactly twenty years ago. While all parties are agreed that an increase of tillage is desirable, differences of opinion exist regarding the best means of securing the result. The Cosgrave administration, which held office from 1922 to 1932, believed that the healthiest method of encouraging tillage was by an intensification of the livestock industry. The development of mixed dairy farming, it was argued, would bring an increase in tillage as one of its consequences without deflecting the agriculture of the country from its natural channels. In 1928, the Economic Committee reported that the area under wheat should not be artificially increased by means of a guaranteed price. Since 1932, when the present Government took office, a policy of agricultural protection has been pursued, and the area under wheat, even before the war, was considerably expanded.

The war has brought an end, for the time being, to differences of opinion on agricultural policy. The utmost expansion of home-grown food, for man and beast has

Crop	1939 Acres	1940 Acres	1941 Acres
Wheat	255,300	305,200	491,000
Oats	536,700	680,900	778,900
Barley	73,800	132,300	169,300
Rye, Beans and Peas	2,100	3,500	4,600
Total Corn Crops	867,900	1,121,900	1,443,800
Potatoes	317,200	366,700	437,500
Turnips	141,400	151,000	158,700
Mangels	85,500	93,400	96,800
Sugar Beet, Cabbage, etc.	67,700	93,800	116,300
Total Root & Green Crops	611,800	704,900	809,300

German Europe Food Rations

Food rationing, introduced in Germany on August 28, 1939, became general in Europe during 1941. The peoples of the continent have to rely on their own current production of foodstuffs, which tends to decline in quantity and quality the longer the war and the blockade last. Normal deficiencies grow more pronounced because of the shortage of workers and fertilisers; livestock breeding and dairy farming cannot be maintained because of the lack of overseas feeding stuffs. Germany takes the agricultural surpluses of the Danubian countries, Holland, Denmark and Italy. Continental self-sufficiency is impossible without the resources of the Soviet

become an acute necessity under the threat of a complete cessation of imports. Every farmer has been compelled to till a minimum fraction of his holding, and guaranteed prices have been fixed for wheat, sugar beet and other crops. That the response of the farmers to these measures has been remarkably satisfactory is shown by the figures at the foot of the preceding column.

The wheat crop this year is estimated to amount to 290,000 tons, which is the greatest amount produced since 1846. The quantity of food produced this year is the largest in the whole history of Ireland. In spite of the increase in the area under cultivation and the shortage of fertilisers, the yields have been good. While the yield of wheat has been less than usual, yields of barley and oats have been up to average and the yield of sugar beet has been unusually good. Eire is now completely self-sufficient in sugar. In spite of the increase in wheat production and the increase in the percentage extracted in the manufacture of flour, 80,000 tons of imported wheat were needed this year to supplement the home supply. To be independent of any imported wheat is the outstanding aim of agricultural policy in the coming season.

Farmers are being encouraged to produce the whole 370,000 tons of wheat which are necessary if the wheat loaf is to be maintained without the admixture of any other cereal. They are further being encouraged to increase the production of several other crops, for example potatoes, oats and barley. The compulsory tillage area has been raised to one quarter of every holding, and the guaranteed price of wheat has been raised from 41s. to 45s. a barrel. The realisation of the full tillage programme will not be easy. The late harvest has delayed the preparation of the land for winter sowing, and there is a shortage of implements and of fertilisers. Phosphates, potash and sulphate of ammonia are not procurable, and the supply of all available artificial fertilisers is less than one-third of normal. Reliance has to be placed on the elimination of waste in the use of natural manures and on the substitution of seaweed in the maritime districts. It is possible to grow one or even two crops of wheat on freshly broken grass land without any fertilisers. To the extent that the accumulated reserves of fertility in the soil are thus being drawn upon, the country is living on its capital. The experience of these years emphasises the mutual interdependence of intensity of cultivation and a heavy load of livestock on the land.

No Shortage

Ireland has experienced no food shortage during the war. White bread is no longer procurable, but the bread made from the high extraction flour is quite palatable and wholesome. The price of bread is kept down by a subsidy amounting to about £2,000,000 a year. Butter, eggs and vegetables are reasonably plentiful, and, of course, meat is abundant. The Irish farmers have risen to the occasion very creditably, and the non-agricultural population is greatly indebted to their efforts. The increased production of foodstuffs has prevented the urban dwellers from experiencing some of the worst sufferings of wartime and has released shipping space for imports of industrial raw materials, the supply of which is essential to maintain employment in the towns. In addition to these benefits, the agricultural producers have provided the country with practically all its visible exports, and these constitute the principal means of payment for the abundant imports which render possible a varied consumption and reasonably high standard of living in Eire.

Union. Germany's food rations have not been changed greatly since the beginning of the war; and the occupied and dependent countries, including Italy, have gone short. Food requirements and food habits differ from country to country. The diet of the peoples of industrial countries contains a higher percentage of high quality foodstuffs, such as meat, fats, and fruit. In agricultural countries, cereals are predominant. Climatic conditions are also important. In Southern Europe, the normal consumption of butter and meat is considerably smaller than in Central and Northern Europe. The average consumption of particular foodstuffs is very different in different countries; and a comparison of quantities may be misleading. Within each

country there are similar differences; the food consumption of industrial and agricultural workers differs.

The German system of rationing is extremely differentiated. Besides rations for normal consumers there are rations for children (in four age groups), for "heavy" workers, "heaviest" workers, and for night workers or workers whose working hours are exceptionally long. The differentiation is most marked in the case of bread, meat and fat rations. The present rations are as follows:

	GERMAN RATIOMS (ounces per week)		
	Normal Consumers	Heavy Workers	Heaviest Workers
Bread	79.0	127.0	162.0
Meat (including bacon and meat products)	14.1	28.2	35.3
Fats, total	8.8	13.4	25.0

The bread ration for children under six years of age is 39 ounces; children aged six to ten years receive 60 ounces; there is a similar differentiation in fat rations for children. The sugar, and cheese rations are the same for all categories of consumers, amounting to 8.8 and 2.2 ounces a week, respectively. All other foodstuffs, except potatoes and vegetables, are distributed according to current supplies; each week, certain foods, such as marmalade, jams, artificial honey, rice, apples, oranges, etc., are distributed in exchange for special coupons in the foodcard. Liquid milk is kept for children and expectant mothers. There is no fixed ration for eggs. Potatoes and vegetables are not rationed, but customers must register with retailers for supplies. There are separate regulations for the agricultural population; these so-called "self-suppliers" are entitled to greater rations of bread, meat and fats. The extra coupons for heavy workers are distributed by the factory management; and in restaurants rationed foodstuffs are only supplied in exchange for coupons. Thus there is legally no possibility of obtaining supplies "off the ration."

Contrast with Britain

In contrast, in Britain, of course, most of the rations are the same for all consumers. The total meat, bacon and meat products ration amounts, on an average, to 24 ounces against the 14.1 ounces of the normal ration in Germany; the 28.2 ounces of the heavy German worker and the 35.3 of the heaviest. But British workers get extra supplies off the ration in their canteens and in restaurants; all "feeding out," in fact, is unrationed. The British fat ration is only 8 ounces against 8.8 ounces in Germany which however, includes cooking oil; and the British sugar ration is slightly smaller, 8 ounces against 8.8. There is no equivalent to the British points system for tinned foods in Germany, where tinned and other foods are distributed according to special announcements on extra coupons in the food card—and there is no information about the average quantities distributed. There is little doubt that the total consumption of foodstuffs per head in this country is higher than in Germany, and the quality is very much higher. It is probable that this country's greater average consumption of meat, fats and cheese in peacetime compared with Germany's peacetime consumption has been maintained.

A comparison of the rations of all European countries is difficult. Accurate data are only available for bread. The present bread rations (which include flour) are as follows:

	BREAD RATIOMS (ounces per week)	
	Normal Consumer	Heaviest Worker
Germany	79	162
Denmark	75	132
Norway	58	120
Holland	71	142
Belgium	56	112
France	58	86
Poland	49	55
Greece	47	...
Italy	50	100
Finland	49	106
Spain	20	43
Sweden	65	97

In Hungary, bread cards have been introduced in Budapest and other big towns. In Slovakia, Roumania, Bulgaria, and the parts of Yugoslavia, all cereals are requisitioned, but no rationing system has been introduced, and no information is available. The quality of the bread differs widely. Almost everywhere, it is adulterated; in

northern countries, potato-flour is usually mixed with it, and in the Balkan countries and in the south maize or rice flour. In some southern countries, the extremely small bread ration is supplemented by flour and rice rations. The bread situation in all these countries is worse than in Germany. Their rations are far below normal standards, and it is hard for consumers to make up these small rations by an increased consumption of potatoes.

Information about meat, fat and cheese rations in the various European countries is scanty. In occupied countries, the rations are frequently nominal. The following figures suggest the differences in rations between Germany and other European countries:

	NORMAL RATIOMS (ounces per week)	
	Meat	Total Fats
Germany—present ration	14.1	8.8
Germany—ration in 1916	8.8	4.0
Denmark	(x)	12.3
Norway	(y)	8.6
Holland	2.5	7.0
Belgium	8.6	3.7
France	8.8	(z)
Poland	...	4.4
Finland	2.5	1.3
Sweden	17.6	8.8

(x) Meat is rationed by meatless days. The number of meatless days per week is changed according to supplies.

(y) Meat is rationed by butchers, who allocate to customers quantities which are supplied irregularly.

(z) The meat ration is nominal and fat is supplied irregularly. There are no fixed rations.

In Italy there is no uniform system of rationing. The rations are fixed for each district. Meat is generally rationed by four meatless days and the average fat ration is roughly 3.3 ounces.

The table reveals the interesting fact that the present rations in occupied countries are almost everywhere below Germany's rations in 1916. In the summer of 1941, Germany reduced the normal meat ration from 17.6 ounces to 14.1; and the additional rations for heavy workers were reduced correspondingly. But Germany's own rations compare favourably with those of 1916.

During 1941, all European countries including Germany were compelled to reduce their food rations as a result of poor harvests in 1940 and 1941. At the same time, the exportable surplus of dairy products in Holland and Denmark grew smaller. In 1940, Germany could have supplied occupied countries from stocks; but in 1941 even Germany was forced to draw heavily on reserves. Production could have been maintained in the absence of large scale fighting; but the winter campaign in Russia requires additional supplies which cannot be made up by current production; and some further reduction in rations can hardly be avoided. It must be assumed that Germany will ruthlessly deplete the foodstuffs of occupied countries with the purpose of maintaining at least the present bread rations at home.

Fixed Prices for Armaments.—The most significant event at the turn of the year was the introduction of fixed prices for public orders, particularly armament orders. It appears that the calculation of prices on a cost-plus-profit basis had prevented the desired increase in efficiency; and, in spite of the profit and dividend stop, whose aim was the reduction of prices, the Government has still been paying "excessive" prices for armaments. From now on, the Government will pay fixed prices, irrespective of the differences in the costs of production in different factories. The new prices will probably be fixed according to the costs of production in factories of average efficiency.

The economic journals make it clear that inefficient factories will have to work without any profit, whereas the most modern factories will be able to make differential profits. It is hoped that this method will create a kind of *Ersatz* competition and at the same time reduce the costs of armaments. The cost-plus-profit calculation created a great number of different prices for the same standardised manufactures, which made effective control of prices very difficult. During 1939 and 1940, additional output was largely achieved by price increases, which were the result of bringing the entire productive capacity into war employment. During 1941, state expenditure increased at an alarming rate, and war profiteering could no longer be avoided. The system of skimming off excessive profits produced inadequate results; and prices are now to be directly fixed to prevent profiteering.

If the new method were made general in industry a new wave of concentration would be the result. The more efficient factories would make differential profits and would expect preferential treatment in the allocation of raw materials and labour. Employers will be more ready to accept the new system of fixed prices because of the gradual introduction of efficiency or lower wages (*The Economist*, December 20, 1941). The point is that the German Government is now forced to make a new drive by all means for greater efficiency.

Registration of Shares.—The long-expected decree for the control of dealings in shares (see *The Economist*, November 8, 1941) was published on December 15, 1941. It empowers the Minister of Economic Affairs to order investigations into all shares purchased since September 1, 1939. If necessary, the registration of these shares may be ordered by the Minister. At the same time, the Minister may issue regulations for the sale of these shares, as well as for the re-investment of the realised capital. Joint stock companies will be ordered to disclose in their annual reports all shares acquired since September 1, 1939. The decree will remain in force until December 31, 1942.

The official commentary to the decree speaks of the

necessity of strict measures, because repeated warnings against speculation have been left unheeded by the investing public. If the boom in share prices could not be arrested the politically dangerous impression would have been created that there was considerable profiteering on the bourses. The new decree also aims at preventing the creation of new centres of economic power by companies acquiring shares. A short time ago, the banks were compelled to conduct all transactions in shares through officially registered brokers, and the turnover in each share must now be published daily. There is no doubt that the new measures have stopped speculation. But it is doubtful whether registration will be enough to stop the upward trend in share prices so long as the main cause is excessive liquidity.

Civilian Consumption.—The Monopoly for Alcohol reduced the December allocation of alcohol for civilian consumption from 25 per cent of the peacetime consumption to only 10 per cent. The explanation of this drastic reduction is the greater demand of alcohol for industrial purposes. It is, however, known that the allocation of potatoes for the distillation of alcohol had to be reduced because of a smaller potato crop in 1941. At the same time, the manufacture of electric radiators, electric stoves, and electric heating apparatus has been prohibited.

Letters to the Editor

Vansittartism

TO THE EDITOR OF THE ECONOMIST

SIR,—My attention has been drawn by many of my friends to your issue of December 27, 1941. In this you print an anonymous article entitled "The Rise of Brutality," which casts many aspersions on myself. Your anonymous correspondent repeatedly attacks "Vansittartism" without making any effort to define it, except in terms of falsehood. He insinuates, for example, that I have given a more literary expression to the doctrine that "the only good German is a dead German." He proceeds to suggest that I took advantage of "the period of agonising fear and uncertainty of last summer to canalise resentment into the easy channel of a racial myth." This again is a complete falsehood. My knowledge on the subject of Germany and German policy has been accumulated over a period of more than 40 years, and though I do not in the least object to being written off as a "gifted pamphleteer," by your anonymous correspondent, I am a good deal more than that. It is completely untrue that I have canalised resentment into the easy channel of a racial myth. I quoted Tacitus in *Black Record* as an entertaining literary illustration, but of course I really date the trouble from Frederick II, and still more from the middle of last century. I do not think or talk of race. There is no such thing as a pure race. What I do speak of is the German nation and its many miseducated generations and the ghastly results of that systematic miseducation which has been nationwide. These are simple and incontestable facts. No myth is involved. Your anonymous correspondent goes on to suggest, again without the slightest warrant, that I am suggesting that "the Germans are to be for the British what the Jews are for Nazi Germany." Such insinuations are beneath contempt.

I venture to make three suggestions to you: (1) Will your correspondent abandon his anonymity? (2) Will he give a perfectly clear definition of what he means by "Vansittartism," and precisely why? (3) Will he kindly base his estimate on what I have said and not on what has been said about me by pan-Germans and pro-Germans? I shall then be better able to decide whether he deserves further attention, for anonymity and distortion are subtle but unworthy methods.

Yours sincerely,

VANSITTART.

[Lord Vansittart must be aware that all articles in *The Economist* are anonymous. We took our correspondent's use of the term "Vansittartism" to be an "entertaining literary illustration" of a tendency of thought for which, whether or not it has now outrun his own views,

Lord Vansittart's writings have certainly been the inspiration. As was indicated at the time, the ascription of the article to "A Correspondent" indicated a lack of complete agreement with it on the part of *The Economist*; but we cannot agree that it was unfair to Lord Vansittart.—EDITOR.]

War Damage Anomalies

TO THE EDITOR OF THE ECONOMIST

SIR,—In the article entitled "War Damage Anomalies" in your issue of January 10th, there is a discussion of the position of the owner *vis-à-vis* the mortgagee in relation to the War Damage Act, 1941. Your concluding sentence stresses the equity of mortgagees being required to pay a moderate insurance premium for the maintenance of their security against damage by the enemy and contrasts "the present position under which the borrower alone is penalized" by failure to foresee one of the consequences of an international calamity.

I should be glad if you would allow me to add that building societies (whose aggregate mortgage asset of £678 millions accounts for no inconsiderable slice of the country's house property) are under the War Damage Act required as mortgagees to share in a very material degree the burden of contributions falling upon most of their ordinary mortgagors—i.e., in broad terms, the owner-occupier type of mortgagor. In this class of mortgage, the societies as mortgagees have a liability to indemnify (again in broad terms) where the mortgage exceeds one-third of the value or purchase price, the extent of the mortgagee's indemnity rising, in the highest range of indemnity, to the figure of two-thirds of the net contribution—which is precisely the maximum figure you suggest as the mortgagee's proportion under the proposals which your article mentions.

Many thousands of building society borrowers have benefited considerably by this very real sharing of the burden of insurance as between owners and mortgagees, while by extension the payment of these indemnities already represents a heavy financial liability upon building societies.

Yours faithfully,

L. F. GREGORY,

Acting Secretary,

The Building Societies Association.

January 14, 1942.

[The sentence to which Mr Gregory refers was loosely expressed; the point is that the borrower always bears at least his fair share of the liability, the mortgagee only in certain circumstances, and then usually not in proportion to his beneficial interest. But if this is the position between owners as a class and mortgagees as a class, it is also true that within the class of mortgagees, the building societies receive the least favourable treatment.—EDITOR.]

REPUBLIC OF CHILE

SERVICE OF THE EXTERNAL DEBT RELATING TO THE YEAR 1941 (LAW No. 5580, 31st JANUARY, 1935)

The Caja Autonoma de Amortizacion de la Deuda Publica de la Republica de Chile, in accordance with the provisions of Article 6 of the Regulations of Law No. 5580 of 31st January, 1935, approved by Supreme Decree No. 3837 of 24th October, 1938, declares that in the year 1941 it has received the following revenues to be applied to the service of the External Debt:—

Profits of the Chilean Nitrate & Iodine Sales Corporation ...	\$2,472,794.68
Balance of the previous year	\$ 166,572.32
Income-tax of the Fourth Category and additional tax on the Copper Companies	\$6,583,478.88
Balance of the previous year	\$ 82,400.60
Quota of the duties on petroleum for the Nitrate Industry (Article 7 of Law No. 6155 of 6th January, 1938) ...	\$ 74,043.19
Quota of the duties on petroleum for the Copper Companies (Article 7 of Law No. 6155 of 6th January, 1938) ...	\$ 106,546.92
Total	\$9,485,836.59

Fifty per cent. of this revenue or the sum of \$4,742,918.30 will be applied to the payment of interest at the rate of U.S.\$1.558 per hundred dollars nominal capital, Sw.Fcs.1.558 per hundred Swiss Francs nominal capital and £1 11s. 1.92d. per hundred pounds nominal capital. Out of the remaining 50 per cent. of the revenue received, bonds have been redeemed to the nominal amount of U.S.\$3,113,000, Sw.Fcs.18,500 and £1,300, and have been withdrawn from circulation.

After making the above-mentioned redemptions, the balances of bonds of the External Debt are as follows:—

£27,761,171
U.S.\$167,095,500
Swiss Fcs.108,709,500

The last named balance has been further reduced by Sw.Fcs.29,000. This reduction corresponds to Swiss Franc Bonds redeemed extraordinarily by the Municipality of Santiago in the year 1941. Deducting this amount from the figures given above, the actual balances of bonds of the External Debt in circulation are as follows:—

£27,761,171
U.S.\$167,095,500
Swiss Fcs.108,680,500

SANTIAGO, CHILE. 30th December, 1941.

THE BUSINESS WORLD

Competition in Insurance

(By a Correspondent)

IN insurance a highly competitive market is not in the best interests of consumers. The essence of insurance is security, and the failure of an insurance company is a far more serious matter than the failure of an ordinary commercial concern. For one thing, the inability of an insolvent company to meet its obligations inevitably brings distress to many thousands of homes. Moreover, in insurance, the failure of one company does not merely involve a transfer of demand to the remaining companies, as is normally the case in trade; it imperils confidence in the structure as a whole. So much is this the case that insurance companies have been known to make financial sacrifices in order to assist a competitor in difficulties, and this not from any altruistic motives, but from the realisation that bankruptcy might have serious repercussions on their own position.

A certain stability of the insurance background must, therefore, be regarded as necessary and desirable, and this provides the essential justification for rating agreements among insurers; the point is reinforced in some branches by the advantage, in the interest of accurate classification, of collating statistics from as large a body of experience as possible. Actually, collaboration among insurers, where it exists, goes far beyond the formulation of rates and extends to such matters as the drafting of uniform policy conditions and encouragement of risk improvement. Yet a measure of competition with the offices acting in combination is desirable, not so much to prevent excessive profits as to ensure that costs are kept at a minimum, as well as to stimulate rating refinements and experimentation with new ideas.

Tariff and Non-Tariff

The popular division of insurers into two groups, bearing the respective labels "tariff" and "non-tariff," whilst substantially correct, represents, of course, an over-simplification. Tariffs are confined to fire insurance and certain classes of accident insurance, notably motor and workmen's compensation; rating agreements are not a feature of life assurance, nor, in normal times, are they much in evidence in the marine market. Furthermore, while the tariff group may be fairly homogeneous in certain respects, the non-tariff group is composed of a number of elements bearing quite distinctive characteristics. As to the extent to which tariffs govern the fire and accident insurance markets, it is not easy to form an estimate. One difficulty is that the figures published by companies cover their world-wide transactions, and do not reveal the proportion of home business; moreover, no figures are available for Lloyd's underwriters. Of world-wide fire premiums written by British offices aggregating £51 millions, however, offices working on tariff lines at home account for £48 millions, or 94 per cent, whereas of world-wide motor premiums aggregating £32 millions, the corresponding figure is £21 millions, or 66 per cent.

There is one outstanding reason for the smaller effectiveness of tariff rates in motor insurance. In fire insurance, sums to be insured are frequently very large, and, at the same time, the risk of total loss is not inconsiderable. Accordingly, many fire insurances have to be shared between a large number of companies, thus creating a community of interest in the adequacy of rates, forming a basis for agreement. No such underlying motive to co-operate exists in motor insurance, for there are few motor risks which cannot be absorbed by an individual company or by a not unduly large Lloyd's syndicate, with, perhaps, the assistance of reinsurance in the professional market.

Within the dimensions of an article of this nature it is hardly possible to attempt an exhaustive classification of the various forms which non-tariff competition may take. The more important features can, however, be broadly

traced. Considering, first, competition from first-class non-tariff companies, it is apparent that, since these companies offer a standard of liberality in claim settlements and service to the public comparable with the tariff offices, they cannot economise to any great extent either on losses or expenses. To a large extent, however, these companies thrive on the imperfections of tariffs. A vigilant non-tariff underwriter will perceive that here and there the tariff does not take adequate account of each and every factor in the situation, so that, by concentrating on the better risks in any classification and ignoring the others, it is possible to work at lower rates. No doubt motor insurance, by reason of the importance of the human element, lends itself to this form of competition to a far greater extent than does fire insurance, and this provides a supplementary reason for the lesser power of the motor tariff by comparison with that for fire insurance. Clearly this form of competition obliges the tariff companies to be continually on the alert for ways of improving classifications, and this necessarily redounds to the benefit of the public. At the same time, there are limits beyond which refinement in a rating system which has to be applied independently of judgment factors cannot go, and if the necessity of a tariff as a background to the rating system is accepted, there must likewise be recognised a limitation to the utility of this form of non-tariff competition. In any case, the game is one which can be played only by the few, when the hands of the many are tied.

The next distinctive group is formed by Lloyd's underwriters, whose work, in the non-marine market, falls into quite a special category. Lloyd's charge premiums often considerably lower than those of both the tariff and first-class non-tariff offices, and they are able to do this partly because they do not maintain country-wide organisations; also, since policyholders do not recognise distinctions between one Lloyd's syndicate and another, as they do between one company and another, the individual underwriter is not concerned with considerations of goodwill to the same extent as the first-class offices, and for this reason Lloyd's do not need to be quite so generous in the settlement of claims. Nevertheless, in addition to their marine business, they also play a useful part in other fields, since they offer low cost with security, and at the same time constitute an admirable field for experimentation with new and unusual forms of cover.

There remains a miscellaneous group of offices, small in size relative to the tariff and first-class non-tariff concerns, of which perhaps the most efficient are those which can effect economies by specialisation. This miscellaneous group also includes those offices, now happily few in number, which only attract business by very low premium scales, and bring discredit on the institution of insurance by settling all claims for the minimum possible outlay and delaying their payment for the maximum length of time.

Competition in Life Assurance

The foregoing will serve by way of description of the fire and accident insurance market. In life assurance, side by side with a complete absence of rating agreements, there exists a multiplicity of offices, large and small, proprietary and mutual, and offering a great variety of contracts. It might, therefore, be expected that competition would be exceptionally severe, but actually this is not so. The primary reason is that life assurance is sold rather than bought; the question at issue, in most cases, is not whether assurance shall be effected with company "A" or company "B," but whether it shall be effected at all—and here the personal and persuasiveness of the salesman are all important. But there exist contributory factors in the absence of uniformity in policy provisions, in medical standards, and especially in

methods of bonus distribution. It is by no means an easy matter for the prospective policyholder to evaluate the respective merits of the life contracts offered by a number of offices.

Marine insurance, by way of contrast, provides an example of a market which is "perfect" in the sense of the classical economists, in so far as all the buyers and sellers are gathered together in one place, and the "commodity" sold is homogeneous. Until recent years there has not been much collaboration in rating matters and the processes of adjustment in the size of the market, necessitated from time to time by changes in demand, have been painful in the

extreme. More recently, there have been indications of a change in outlook.

Enough has been said to show that the insurance market is one of considerable complexity, and that a case can be made out in many of its branches for a certain restraint of competition. But immunity from competition in rates or conditions of insurance should carry with it the obligation to pay particular attention to those benefits which the public, as well as the profession, can only draw from co-operation—matters such as research and propaganda in accident prevention, standardisation and intelligibility of accounts and the whole subject of public relations.

The Government in Foreign Trade

TO say that the bulk of British overseas trade is now transacted by the Government may be a trite and obvious observation in view of the vast, monopolistic operations of the Ministries of Supply and Food and the flow of Lend-Lease material reaching this country. But there is another aspect of this Government encroachment on the field of overseas trade which, though less generally known, is more significant and perhaps more permanent than the direct bulk operations of the Ministries. It is to be found in the activities of the United Kingdom Commercial Corporation and its various offshoots. After some christening difficulties (there was strong Scottish opposition to the original proposal to call it English Commercial Corporation), the UKCC was registered early in April, 1940, with a capital of £500,000 wholly subscribed by the Treasury. It was given very wide powers, to wit "to carry on a general trading business . . . as merchants, concessionaires and financiers . . . in any part of the world." At its inception it was expected to transact its main business with the Balkans, where German economic penetration had to be countered by operations which obviously lay beyond the scope of normal, private commercial enterprise. But in the words of the Chancellor of the Exchequer (then Sir John Simon) "it was not intended that the company should supplant existing channels of trade, but, on the contrary, that it should make use of them to the fullest extent." The capital was raised to £1½ millions in August, 1940, and again to £3 millions in July, 1941.

Geographical Subsidiaries

The scope of the Corporation's operations has both grown and contracted with the fortunes of war and with changes in British export policy. Its eviction from the Balkans, other than European Turkey, has, of course, been complete. On the other hand, it has found more than compensating scope for its activities in the Near East, especially since military activity has barred the Axis road to Syria, Iraq and Iran. There were at one time ambitious plans for extending its activities to South America, but changes in export policy have hitherto kept them back, though there is always a chance of their later development. For the most part the UKCC has undertaken its operations in the various countries with which it trades through special subsidiaries. The first of these was UKCC (Spain) registered in October, 1940, with a capital of £10,000. The last was UKCC (Portugal), registered last November with a capital of £50,000. Other subsidiaries have been established for trading with Turkey, Palestine, Egypt, the Sudan, Iran, Iceland, Syria and Iraq. In all cases except two, the names of the subsidiaries follow the pattern set out above for Spain and Portugal. The two exceptions are the Arctic Trading Corporation, which trades with Iceland, and the Irano-British Trading Company. In addition to its subsidiaries, the UKCC has direct representatives in New York, Buenos Aires and India. There remains to be mentioned an important member of the family, the English and Scottish Commercial Corporation which was registered a few days after UKCC with a nominal capital of £100. In June, 1940, the capital was raised to £1½ millions and there have been two subsequent increases (the last was announced early last month), carrying the total to £6 millions, or twice the capital of the UKCC. Early in the life of this family it was found convenient to centralise in a non-operating company the financial activities arising out of the business of the whole group. It is this function that is performed by ESCC and requires such substantial capital resources. It should, however, be realised that these figures of nominal and subscribed capital bear no relation whatsoever to the resources that the group can command or to the business that it is transacting. The

potential of available resources is virtually unlimited, since the group has behind it the great borrowing power implied by its Treasury backing.

The UKCC and its subsidiaries have been called upon to play a highly elastic role. Detailed description cannot, for obvious reasons, be attempted at the moment. But a broad outline can be given without revealing any information of which the enemy is not already in possession. In the first place, it should be emphasised that, as was announced at the Corporation's inception, it is not its objective to displace the normal existing machinery of import and export trade. It is true that this machinery lies derelict between Great Britain and some of the countries with which the UKCC now transacts considerable business. But that would have been its fate whether or not the UKCC had appeared in those markets. Foreign trade under war conditions obviously calls for a new and highly adaptable technique. Where such trade is most highly competitive, the competition is usually of a political character; it involves bidding against hostile Governments, as may be seen in Turkey, Spain and Portugal to-day. Under those conditions trade means pre-emptive or subsidised buying and equally subsidised selling. For such operations, which are largely divorced from the competitive level of world prices, the normal channels of foreign trade will not serve. An organisation such as the UKCC, through which can be mobilised the financial and economic power of the country, is required. Serving in this capacity, the UKCC has acted as the highly effective spearhead of our trade offensive, acting in close collaboration with the Foreign Office and the Ministry of Economic Warfare and ultimately under the broad directive of the War Cabinet. In all these operations the Corporation uses the customary trade channels to the fullest possible extent.

Allied Trade

The methods applicable to markets where trade has become essentially political are not necessarily those that must apply, even in time of war, to countries such as Egypt, Iran and Palestine, where by reason of the blockade or treaties of alliance the enemy is not in the running. There the activities of the UKCC need only supplement the normal import and export trade machinery, and in many instances can be canalised through it. Direct intervention in those countries is only required where subsidised operations are called for, as, for example, in buying up the surpluses of commodities produced by friendly countries which owing to war conditions are cut off from their normal export markets. Even in such cases, the UKCC will, as far as possible, utilise the normal foreign trade machinery. In such countries as Egypt, Iran and Iraq the UKCC, therefore, handles but a small fraction of the trade with this country. Where it intervenes, it often does so in a manner that helps the private trader, obtaining for him advantages which otherwise might elude him, for example, obtaining the necessary priorities for materials, getting cargo space (which is becoming more and more the crux of all overseas trade operations), and even providing special insurance cover against financial risks analogous to those covered by the Export Credits Guarantee Department.

The methods of finance chosen by the UKCC vary with every country with which trade is conducted. In some of these cases trade with the sterling area is financed through a centralised clearing machinery such as Special Accounts. Finance in those cases is provided through these accounts and through whatever method the Treasury may choose to settle balances arising on either side of the clearing. In other cases normal methods of finance are utilised and bank credits are to some extent used, though it is evident from

the experience of the discount market that acceptance credits have played very little part in such financing.

The scope for the further development of the UKCC's activities in wartime is obviously considerable. It is already the agent for large-scale Government operations which, for one reason or another, are not handled by one of the Ministries. For example, much of the trade in raw materials with Soviet Russia is handled by the UKCC. There may be a good case for its continued handling of such trade which even under normal peace conditions will have to be conducted with a Government monopoly on the other side of the counter. The absorption of surpluses and the building

up of stocks of foodstuffs and raw materials as reserves for post-armistice distribution are other spheres for the activities of the UKCC—acting in some of these cases in collaboration with one or other of the commodity reserve corporations formed with the financial help of the Reconstruction Finance Corporation.

Finally, it should be pointed out that the organisation is not one which has been grafted from outside on to the existing markets. It is true that there is a small Civil Service nucleus in it, but the bulk of the personnel has been drawn from banking and the various trades in which the UKCC is mainly engaged.

Finance and Banking

Heavy Tax Payments

Heavy tax payments and the promise of their continuance have dominated the money market position during the week. The Exchequer return covering the first ten days of January indicates a record inflow of revenue averaging over £10,200,000 a day. It is true that over the same period expenditure exceeded revenue by £26,754,000, but this deficit would be well within the current inflow of extra-budgetary sources of income. Though the banks were not called upon to make any Treasury deposit payments and should have benefited by maturities to the extent of £15 millions, they have found their cash position appreciably affected by the large revenue transfers they have had to make. The Bank return shows a reduction of £21,985,000 to £133,760,000 in bankers' deposits, a movement which gains emphasis from the fact that over the week a further £6,115,000 of notes have returned from circulation. The authorities have utilised the whole of the resources drawn from bankers' deposits to repay Government debt at the Bank, and Government securities show a fall of £32,310,000 over the week. Public deposits are down by £2,955,000 to the low level of £6,664,000. The banks have been very diffident buyers of bills and in general have limited their purchases to February and March bills. On the other hand, they have been ready lenders of money to the market and at no time have the supplies of credit been inadequate for the needs of borrowers. The banks' readiness to make loans rather than buy bills is an indication of their desire to keep specially liquid at present, in view of the need to make further heavy tax payments in the near future and of possible conversion of deposits into tax reserve certificates by their customers.

Private Remittances to America

The banks have this week received detailed instructions on the method to be followed in effecting the remittances to evacuees in the United States for which Treasury sanction was recently granted. These remittances, up to £3 a month for children who were under 16 at the time of departure and up to £10 a month for adults who left in charge of children and who are still responsible for them, must in each case be effected from one source only and may be made on a monthly or quarterly basis. If more

than one resident in this country contributes to the remittance to any one evacuee, the contributions must be pooled before they are converted into dollars. The concession is to have effect retrospectively from January 1st last. The details are to be handled by the Children's Overseas Reception Board who will make a register of all recipients. The total expenditure of dollars involved by the concession is small, and the decision of the Treasury must be regarded as having other than financial grounds and not as an indication of any considerable easing of the dollar position.

Irish Bank Profits

The leaner times that have fallen on Irish banking are reflected in the reduced dividends declared by three out of the four Irish banks whose results for 1941 have so far been announced. They are those of the Provincial Bank of Ireland, the Munster and Leinster Bank and the Royal Bank of Ireland. Though the Northern Bank has maintained its dividend, its net profits have fallen from £65,819 to £50,169. The disparity between the experience indicated by these reduced profits and distributions and that of British banks can be readily understood. In the first place neutral Eire has hitherto felt few of the benefits and many of the disadvantages that a world at war disseminates. There has been little stimulus to industrial activity such as has occurred in belligerent countries, while shortage of supplies and loss of markets have hit trade in Eire as severely as in this country. Secondly, the expansion of bank credit has been far smaller in Eire than in Britain, and the Irish banks have in consequence found little compensation in increased resources for the inordinately low level of earnings on the greater part of their assets. The appreciable expansion in the Irish banks' London funds indicates the lack of investment opportunities in Eire. Thirdly the level of costs in Eire has risen as steeply since the beginning of the war as in this country, though this movement should now be considerably checked by the wages and prices standstill which came into operation last year. The deterioration in the ratio of costs to earnings of Irish banks should from now on be to some extent remedied by the increased scale of charges for keeping current accounts operation. The first proposal to increase these charges met with a storm of protest which caused the whole matter to be referred to an official committee of investigation. That

committee, on which the banks' customers were adequately represented, has agreed that the banks' proposals were reasonable, and they have been sanctioned without material alteration.

Barclays Bank Capital

Barclays Bank is following the precedent set recently by Barclays Bank (Dominion, Colonial and Overseas), and is proposing to convert its shares into stock. This step is primarily intended to save the considerable clerical labour involved in checking numbers of shares in share registers, transfers and certificates. An incidental advantage of the move may be to increase the marketability of part of the capital, since the proposal is to fix £1 as the minimum amount of stock of each class which will be transferable, as compared with the £4 fully-paid denomination of the "A" shares. The proposal and its primary intention, as voiced by the chairman, namely "to eliminate the necessity of checking definitive numbers of shares in registers, transfers and certificates," brings with it a faint but interesting echo of the Banking Companies' (Shares) Act of 1867, commonly known as "Leeman's Act." This measure, which was intended to put a stop to bear sales of bank shares and stock—sales which had done great damage in the panic of 1866—provided that contracts for the sale of bank shares or stock should be null and void unless the numbers of the shares or names of the registered holders were set forth in the contract. The proposal to convert shares into stock does not run counter to this Act, since it will still be possible to set forth the name of the transferor in contracts for the sale of the stock to be created. But the declared purpose of the change is perhaps the most categorical rebuff which this moribund piece of legislation has yet received. Although the Act became a dead letter from the time of its enactment, and has consistently been ignored by the Stock Exchange, it should not be forgotten that it remains on the Statute Book and that it was successfully pleaded in 1882 to cancel a purchase of shares of a bank which suspended payments

subsequent to the date of the contract, thus leaving the seller liable to pay the calls made in respect of the uncalled liability. Bank suspensions and speculation in bank shares may no longer be the commonplaces which they were in the 60's and 70's, but there are milder reasons which might cause the act of 1867 to be invoked by a sharp-witted buyer or seller of bank shares or stock. Either the Act should be enforced in Stock Exchange practice or—the preferable alternative—it should be expunged from the Statute Book.

Alexanders Discount Results

The first of the discount companies' balance sheets to be published this year is that of Alexanders Discount Company. In so far as it can be said to represent general experience, it indicates another successful year for the market. The net profit shown before deduction of tax on the dividend amounts to £165,616, compared with £166,570 for 1940. In large measure that profit must have been derived from business in bonds. The holdings of investments at the end of the year amounted to £18,220,000, compared with £13,637,000 at the end of 1940. The whole of the investment holding now consists of British Government securities. The net holding of bills, of which Treasury bills now constitute the overwhelming majority, fell slightly over the year, from £25,509,000 to £24,104,000. The exceptional stability of discount and short money rates, and the minute margin of profit available during the whole of the year both on running bills and reselling them to the banks, must have kept the profits on the discount side of the business to very small proportions. The average profit on bills during 1941 cannot have worked out at more than 1½d. per £100 every quarter for bills taken up and run or resold. On this assumption, the running of a portfolio of £24,000,000 for the year would not have yielded a profit of more than £2,000—a figure which, even allowing generously for profits on results, puts into perspective the ratio of discount market profits now extracted from bills and bonds respectively.

Investment

Investment Buying

There are already signs that the latest activity of the more speculative investor, the buying of cotton shares, has passed its zenith for the time being, while there is little or no recovery in business in South American securities. Instead, fixed-interest securities seem to be coming to the fore, while there is a considerable recovery in industrial equities. The fixed-interest index of *The Financial News* continues to establish new records, while the equity figure is within 2.2 per cent of the maximum. Apart, however, from the fact that there has been, occasionally, considerable solid investment buying of trustee securities, other than Australasian, and of railway and industrial debentures and preference stocks, there is no very definite indication to be extracted from the rather increased volume of orders as to what the direction of price movements is likely to be. The rise in the Funds may owe something to the renewed talk of a change in the terms of issue of 2½ per cent National War Bonds or of 3 per cent Savings Bonds, or of both. This talk is based primarily on the fact that it will very shortly be six months since the last change was made by the Chancellor; that six monthly reviews have been made so far and that, therefore, another is due. Doubtless the Treasury is as anxious as ever to depress the rate of interest, but whatever the future may hold, the usual indices do not show as marked a fall in yields on leading Government securities over the past six months as in either of the two preceding periods. In particular, the large step taken in giving the latest series of National War Bonds a maximum life of some ten years has militated against their popularity, and it seems doubtful whether it will prove feasible to step down the terms offered next month. It would possibly be easier to adjust those of the 3 per cent Savings Bonds, but the whole matter is complicated by the approach of the Budget and a certain doubt as to the future yield of savings, both large and small.

Cotton Textile Prospects

The resumption of the rise in cotton textile shares, during the past few days is a tribute to the belated recognition that the industry has, in present circumstances, a vital part to play. Official action has been taken to reduce the

most acute bottleneck in the industry, that of labour, and it is far from clear why this was not done sooner. As it is, cotton is, presumably, assured of its share of the most suitable new labour available, up to the limits which the authorities have in mind, but it is far from probable that old hands, who have left, can be attracted back, while it is almost certain that new recruits will be both less efficient and more exacting in the matter of amenities than those who have grown up in the business. From the standpoint of the investor, these matters can be adjusted by alterations in the sale prices fixed, but there has not so far been much evidence of an undue tenderness for his interests. Presumably, a somewhat reduced yield per unit on a larger output may be expected. The vital question is how much larger that output will be, and somewhere behind the labour bottleneck is that of supplies of raw cotton, both in absolute amounts and in the qualities required. It may be a tantalising prospect for the shareholder in an industry which has been almost chronically depressed for a couple of decades to see half the world crying out for yarns and materials which nobody can supply. But there is very little prospect that Lancashire can be put in a position to fill the gap until the shipping position is improved out of recognition. Official needs and those of a, possibly reduced, ration for the public must be met. Probably Lancashire, rather than India, will supply part of our allies' requirements outside this country, but a halt must be called far short of the total world demand by shortage both of shipping and of labour.

Contrasting Results

The reports of cotton textile concerns now appearing cover a period when there was some expansion of business, but the position is complicated by the effects of concentration, of which little is said in individual reports. The full accounts of *The Lancashire Cotton Corporation* to October 31st, on the one hand, and of *Amalgamated Cotton Mills Trust* and *Horrockses, Crewdson* to end August, on the other, show results suggesting very different experiences. As was disclosed in a note in *The Economist* of December 27th, the former has secured a fair increase in profit after all charges. *Amalgamated* shows a fall, after

taxation of subsidiaries, from £414,537 to £294,794, while *Horrockses, Crewdson*, a much smaller concern, barely maintained total income, after providing for EPT, and half the balance, after covering depreciation, is absorbed by war damage contributions, which a year before called for nothing. Even so, the profit suffices to eliminate the adverse balance on profit and loss account, so that the ordinary shareholder is within sight of a dividend for the first time for at least a decade, should earnings be maintained. The principal change in this company's balance sheet is a rise of some £177,000 in cash, partially offset by a fall of £43,000 in debtors, but in the case of the *Cotton Corporation* there is, in addition to these movements, a slump of £866,000 to £720,000 in stock, which reflects the excess demand over the group's production. In the case of *Amalgamated*, the company's own tax is reduced from £503,727 to £458,334, and a further £50,000 is saved by omitting any appropriation to contingencies, with the result that it is possible to repeat the tax free payment of 8½ per cent. It is probable that *Horrockses* have been disturbed by concentration, but *Amalgamated* have suffered from war damage, while all have had to face rising costs and stable yarn margins. In any case, the industry has ahead of it a difficult period of adjustment before it is finally placed on a sound basis, and whatever the demand may be between now and the conclusion of hostilities, there is no guarantee that this country can expect a larger share in the total market after than before the war. *Lancashire Cotton* ordinary shares of £1 at 25s. 6d. yield £5 17s. 8d. and *Amalgamated* rs. ordinary at 2s. 9d. some £3 2s. 8d. tax free.

Canadian Pacific Prospects

The final net figures of the Canadian Pacific Railway for last year are not yet available, but the gross figures of twelve months, with the net for eleven, form a reasonably sound basis for making a guess as to what will be theoretically available from railway operations. If the December experience of the Canadian National could be taken as a guide, it would be safe to count on a rise in net railway receipts of some 13 million dollars minimum over 1940, but a more conservative figure is safer. This, however, leaves out of account the other income of which the determining factor last year was receipts from steamships. What will have happened to this item during 1941 is anyone's guess, but it is fairly certain that the CPR, like other shipping companies, will decide that replacement costs are likely to be heavy and will accordingly wish to make substantial provision for them in advance. There is very little guidance on this matter in the review of the year by Mr R. C. Vaughan, President of the CNR, who merely mentions that the group's ships have played their part in the Atlantic and elsewhere. He does, however, point out that, while no rise in charges is in sight, the railways are faced with greatly increased costs in 1942 for wages and material. The likely to be available for the ordinary stockholder, have times unexpected. Instances which readily recur to the memory are depreciation of the "Soo" line investment, and of holdings in the USA. Writing off of lines abandoned has been another important item and now there is the likelihood that shipping, if not railway, earnings may be devoted to providing for fleet replacement. In the circumstances, it is a tribute to the confidence of the British investor that the price is such as to give a yield of some 5 per cent on a dividend of 2 per cent.

The Paper Muddle

After a lapse of two months, during which the existing practice has been followed, there is a further direction as to the use of paper for brokers' and jobbers' price lists. As was pointed out in *The Economist* of November 22nd, to insist upon payment being exacted for these lists would not materially lessen the demand, while it would add to the labour involved. It has now been decided that the lists may be distributed free, provided that the weight of paper involved is not more than "three-twentieths" of that distributed in similar lists in the corresponding period of 1939. So far so good. But the statement refers specifically to "any advertising circular which consists solely of a list of stocks or shares together with the usual particulars relating thereto." This certainly covers the

publications which are essential to the continued conduct of the market, but it leaves completely on one side the possibly small, but certainly influential, amount of weekly or monthly letters issued by jobbers and brokers, dealing with a large variety of subjects, some of national, but mainly of sectional, interest. These have certainly already been cut to the required 15 per cent, but neither the authors nor the Committee appear to have any idea of where they stand. This is a poor result for two months of deliberation.

Company Notes

Philip Hill Segregation

Following the example set by the Charterhouse Investment Trust, as long ago as March, 1939, Philip Hill and Partners are now effecting a functional division of their enterprise. Originally, it was intended to carry on the business of an issuing and finance house, which called *inter alia* for the holding of substantial amounts of investments. In the changed conditions of a closed capital market, the opportunities for issuing are negligible, but the investments remain. It is now intended to retain the major part of these, which are of a semi-permanent character, in the existing parent company, to be re-named the Philip Hill Investment Trust while the remainder will be transferred to a subsidiary whose business, for the time being, will be to trade in these and other stocks. The advantage of this procedure is presumably that an investment trust, unlike a finance company, can distribute dividends without providing for unrealised losses on its investments, although it cannot distribute even realised capital profits. Evidently, in a period of uncertainty, this is a more convenient arrangement in respect of stocks which are regarded as long-term investments. How long it will be before any semblance of freedom is restored to the capital market is a matter of guesswork, but that there may be opportunities for profitable trading is not improbable. What it is important to realise is that the arrangement is a matter of machinery only and that it in no way alters the value of an investment in the parent concern, which will continue to depend upon the sagacity of those responsible for its administration. It would, however, seem desirable that, in so far as may be, a clear statement of the valuation of holdings both in the parent investment trust and in the subsidiary finance company should be made available to shareholders.

Bowater-Lloyd Accounts

Accounts of the Bowater Lloyd group for the year to September 30, 1941, show that, as in the previous year, all the three manufacturing companies have decided to pass preference and ordinary dividends. The sales company, *Bowaters and Lloyds Sales*, which is controlled by *Bowater's Paper Mills*, suffered only a moderate reduction in income from £95,564 to £92,451. Ordinary shares receive a total payment of 22½ against 27½ per cent, the cash bonus being cut from 1s. 6d. to 6d. per share. As in the previous year, dividends are not completely covered by available earnings, the earned rate amounting to 20.9 against 25.0 per cent. Reductions in profits of the three operating companies, *Bowater's Mersey Paper Mills*, *Edward Lloyd* and *Bowater's Paper Mills*, which control the two former concerns, are moderate, and the decision to refrain from meeting even preference dividends is dictated only by a determination to preserve liquid resources against further restrictions on the use of paper. All three companies have made substantial transfers to dividend reserve to cover arrears of cumulative preference charges. But *Bowater's Paper Mills'* transfer is considerably reduced by an appropriation of £50,000 to cover undetermined tax liability. The balance sheets of the operating companies show a general reduction in stocks and investments in Government securities, while £203,130 to £885,240, and in creditors, including *Bowaters and Lloyds Sales Co.*, is due to the introduction of a centralised invoice system for the use of the company's agents. War damage contributions are met from profits by the sales company, but by transfers from supplies by the manufacturing concerns. Until raw material resources are restored the directors are undoubtedly wise to conserve resources. There is, however, little prospect that present difficulties will injure earning capacity in the long

BAT Dividends

The BAT preliminary statement shows net profits of £4,087,565, against £4,865,442 in the year to September 30th last. After meeting preference dividends, equity earnings amount to £3,502,565, against £4,280,442, equivalent to a tax free rate of 14.9 against 18.0 per cent. The announcement of a final payment of 1.25 per cent., tax free, gives a total tax free distribution for the year of 14.58 against 17.92 per cent. There is no transfer to reserve, so that the carry forward is raised from £2,300,266 to £2,388,157. The following table shows three years' earnings and allocations:—

	Years ended September 30,		
	1939	1940	1941
Profit after tax	5,165,453	4,865,442	4,087,565
Prof. dividends	585,000	585,000	585,000
Ordinary stock (tax free):—			
Earned	4,580,453	4,280,442	3,502,565
Paid	4,543,029	4,254,307	3,414,674
Earned %	19.3	18.0	14.9
Paid %	19.17	17.92	14.58
To Contingencies	£500,000		
Carry forward	2,274,131	2,300,266	2,388,157
† From 1938 carry forward			

The announcement that the first interim for 1941-42 will be reduced from 3.75 to 2.08 per cent, tax free, was expected by the market, and the initial fall in the price of the £1 ordinary stock was quickly corrected. It is impossible to judge from the published figures whether the setback to net profits is due exclusively to additional tax liability, or whether there has also been some fall in gross revenue. In view of the loss of income from the American subsidiary, temporarily pledged to the Reconstruction Finance Corporation, it is probable that there has been some fall in total earnings. The company's sales are worldwide, excluding this country and the U.S.A. While further areas are now closed to it, there is no certainty that the expansion in demand, so characteristic of this country, has been a general experience. The £1 ordinary stock stands at 84s. 4½d. ex dividend, against 86s. 3d. cum dividend, before the announcement, at which price it yields £3 9s. 1d. per cent, tax free, on last year's payment.

Further Bank Dividends

The following table, which analyses earnings and dividends of *Williams Deacon's* and the remaining "Big Five" banks—earlier results and those of the discount companies

were discussed in *The Economist* of January 10, 1942—shows that all equity payments have been maintained in 1941. Figures of disclosed profits, which have been rendered comparable by the deduction of tax on dividends from the 1940 earnings of the *National Provincial* and *Williams Deacon's*, all suggest that taxation alone is responsible for declines in the amount earned for equity. Thus, in every case the rate of earnings is higher than in the previous year.

Year ending December 31st	Disclosed Profits	Earned for Equity†		Dividends	
		Amount	Rate	Final	Total
Lloyds Bank ("A" shares):					
1940	1,383,807	1,342,485	16.2	6	12
1941	1,274,199	1,237,593	16.8	6	12
Midland Bank (shares):					
1940	1,933,093	1,933,093	21.3	8	16
1941	1,969,288	1,969,288	25.8	8	16
National Provincial (shares):					
1940	1,093,227	943,227	17.3	7½	15
1941	1,057,783	907,783	19.1	7½	15
Williams Deacon's ("A" shares):					
1940	193,063	193,063	19.0	6½	12½
1941	184,170	184,170	21.0	6½	12½

† Before bank premises allocation.

The *Midland Bank* is the only concern where the actual amount of equity earnings, after taxation, is above the 1940 level; and there is, in consequence, a possibility that profits approximate to the EPT level. The general stability of earning capacity in the face of war conditions is, of course, due mainly to the considerable expansion in bank deposits last year. It is a matter for congratulation that all the eight English banks—and incidentally most of the Scottish—now present their profit figures on a comparable basis.

Houlder Line Reserves

Full accounts of Houlder Line for 1941 show a decline in income from £206,906 to £101,261. It has only been possible to maintain the ordinary dividend at the 7½ per cent, paid throughout the last decade, by reducing the transfer to fleet replacement account from £104,500 to £35,368 and by approximately halving the allocation for repairs and renewals at £23,402. After these charges, equity earnings amount to £21,607, against £35,906, providing cover of 7.8 against 11.3 per cent for the ordinary distri-

COMMONWEALTH BANK OF AUSTRALIA

(Guaranteed by the Australian Government) Branches and Agencies throughout Australia.
Banking and Exchange Business of every description transacted. Bankers to the Government of the Commonwealth of Australia, the Government of the State of Queensland, the Government of the State of South Australia, the Government of the State of Tasmania, Commonwealth Savings Bank of Australia, 3,804 Agencies at Post Offices in Australia.

CITY OF JOHANNESBURG

THREE AND A-HALF PER CENT. INSCRIBED STOCK, 1952.

NOTICE IS HEREBY GIVEN that in order to prepare the dividend due 1st March next, the BALANCES of the several accounts in the above-mentioned Stock will be STRUCK on the night of the 31st January, and that on and after the 2nd February the Stock will be transferable ex-dividend.

Forms of Request for the purpose of forwarding Dividend Warrants by post to Banks or other Agents may be obtained on application to the Bank.

For Barclays Bank (Dominion, Colonial and Overseas)
C. D. ALCOCK, Manager.
Circus Place, London Wall, E.C. 2. 8th January, 1942

bution. The carry forward is £982 higher at £40,580. The chairman, Lord Essendon, points out that the decline in income is due to loss of vessels through enemy action as well as to the operation of the Government requisition scheme. The loss of fleet is also reflected in the fall in the balance sheet value of ships from £922,000 to £373,000, and by the rise in Fleet Replacement Account from £200,000 to £900,000 through inclusion of the difference between war risk valuation and the written down balance sheet figure. The surplus is for the present largely devoted to raising the total of investments from £719,000 to £1,419,000 of which £1,112,000 is held in Government securities. The directors reveal that the company has secured a licence, and placed a contract, for the construction of a modern, fast, refrigerator vessel, payments for which require substantial current cash holdings. These are in fact raised from some £44,000 to £139,000. It is estimated that a substantial proportion of Fleet Replacement Account will be required to write down the new vessel and that, consequently, the balance sheet total is not adequate to the needs of the company's post-war construction programme. There is £76,500 standing to the credit of Houlder Line on Government Tonnage Replacement Account.

Dalgaty Improvement

The full accounts of Dalgaty and Company, the important Australasian and East African pastoral and merchanting concern, for the year to June 30th show a rise in gross profits from £1,109,871 to £1,162,520, a new record. Expenses and taxation are higher, and although the exchange loss is reduced, the net figure is up only from £147,682 to £157,915. Since the allocation to staff funds is £5,000 lower at £15,000, the increase in equity earnings, at £117,915 against £102,682, is even more striking. The ordinary shareholder received 7 per cent as in the previous year covered by earnings, grossed up for income tax at 7s. 6d., of 8.4 against 6.8 per cent. The whole of the surplus goes to raise the carry forward from £121,844 to £134,759. These results are the best since 1936-37. The report does not throw much light on trading results, but it is evident that the wool agreement, coupled with the bumper New Zealand clip, is an important factor. Until well after the date of the accounts, Australia was enjoying a mild boom, which is reflected in the balance sheet in a drop in advances on land from £7,078,850 to £5,782,677 and a rise in cash and debtors by some £417,000 and £146,000 respectively. There is also an important increase in investments from a mere £5,864 to £212,614. Evidently the company is in a sound position to face current problems, but on these the report is silent. The ordinary shares of £20—£5 paid—stand at 90s., at which they yield £7 19s. 1d. per cent. The high yield—the shares recently stood at 106s.—is a reflection of an actual loss of some business owing to the Pacific war. It does not perhaps fully discount further possible losses, but the shares are strongly held, and over a period of years the average yield has probably not been much above half that now obtainable.

Industry and Trade

The Railways Look Ahead

The decision of the railway companies to appoint a commission charged with the task of enquiring how the efficiency of the undertakings can be improved by schemes of post-war reconstruction or reorganisation is to be welcomed. The choice of Sir Ernest Lemon, vice-president of the LMS, and one of the ablest officials of the industry, as the commission's full-time chairman is the measure of the importance attached to it by the railways. The commission will be concerned largely with ways and means of improving the technical efficiency of the railways and with adapting their facilities to post-war needs. Its scope, therefore, is very considerable. On the purely technical side, the commission will no doubt investigate the possibilities of new equipment, and the arguments for and against an extension of main-line electrification will probably be on its agenda. But the commission may be expected also to inquire carefully into the results of the closer collaboration between the four main-line railways, imposed upon them by the exigencies of the war, and will consider the relationship between the railways and the other means of transport. The findings of the commission are sure to be of considerable

Henekeys' Profits

The full accounts of Henekeys for the year to October 13th show a rise in gross income from £66,511 to £76,747 and in equity earnings from £32,009 to £34,253. The transfer for income tax and NDC is more than doubled at £12,500 against £5,600. Grossed up at the higher standard rate of income tax, the rate of equity earnings rose from 19.8 to 23.1 per cent, providing ample cover for the total payment maintained at 15 per cent on ordinary and "A" ordinary capital. Dividend equalisation reserve receives £2,000, as in the previous year, and general reserve £5,000 against £3,000, bringing the balance-sheet total of the fund to £131,000. The carry forward is raised from £10,446 to £10,699. These surprisingly good results are interesting, more for the light which they shed on the vintner's business in general than from the investment angle. The company has, of course, been handicapped during the past year by the ban on the import of wines and spirits and the restriction on the production of whisky. To some extent, profits are due to a depletion of stocks, which are down from £122,398 to £94,516, and are, for the present, in the main irreplaceable. But there can be little doubt that the ability to maintain profits with no greater reduction in stocks is due mainly to the substantial rise in the prices of wines and spirits last year, an increase which is reflected in the jump in total cash holdings from £15,794 to £35,984. Future earnings depend in the long run on the possibility of importing fresh stocks; in the short run, they depend on a skilful sales policy capable of maximising receipts from present holdings. In the absence of price control, there seems every probability that the dividend can be maintained in the current year, but this will depend upon how far existing stocks, valued at cost or under, represent pre-war—or even pre-blitz—holdings. That they do so in part can be inferred from the directors' report.

Apex (Trinidad) Accounts

The full accounts of Apex (Trinidad) Oilfields add little to the analysis of profits contained in the preliminary statement which was discussed in *The Economist* of December 27, 1941. The balance sheet shows a decline in stocks from £210,201 to £196,137, which, coupled with the reduction in all classes of debtors from £326,393 to £250,055, accounts for the rise in cash holdings from £235,767 to £394,570. The total value of fixed assets after depreciation is up from £782,966 to £801,760, since capital expenditure increased from £269,082 to £287,325. The liabilities side of the account shows a rise of some £6,000 in creditors to £68,217. Tax reserve is up from £260,914 to £310,953, while general reserve, after the latest transfer from profits of £30,000, stands at £430,000. There are, of course, no details of drilling and production, but it may be assumed that development is being expedited in view of the threat to the Asian oilfields. The 5s. shares, at 29s. ex dividend, yield £5 3s. 5d. per cent.

interest, though they will have to be considered against the general economic background.

A New Scrap Campaign

As a result of the entry of the United States into the war, exports to this country of steel materials are likely to be curtailed still further. In particular, exports of scrap the Atlantic, which, as a Note on page 68 shows, is preventing the full utilisation of America's steel-making capacity. The deficiency must be made good, mainly by an expansion in the use of domestic scrap. Hence a new scrap campaign was duly launched this week with the usual exhortations to farmers, blacksmiths and householders to WVS will be engaged in the preparatory work, and it is hoped that clergymen, commercial travellers, insurance agents and others with an opportunity to observe the existence of scrap will make a note of it and inform the Ministry of Works and Buildings (or its local representative), which

has been charged with the collection. There will be sweeps by counties, beginning on January 21st, with Essex, Wiltshire and Cumberland. So far as the larger accumulations of material in disused pit-head gear, bridges, rail tracks, machinery and other forms of scrap is concerned, these are to be ascertained by a national survey, and an Order to be issued shortly will require the owners of quantities exceeding three tons to disclose them. Even the national survey is not a new device, since Mr Herbert Morrison, during his period of office at the Ministry of Supply, faithfully promised to have one carried out. The successive scrap campaigns have become somewhat of a farce; they have a habit of getting stuck, and the production of steel, in which scrap is the most important ingredient by weight, has remained below the capacity of the steel furnaces. But the position is now too serious for making fun of the latest version. If supplies are not increased very substantially, and not merely for a few months, the output of war equipment must suffer. There must be a weekly or monthly target high enough to keep the steel furnaces in operation at full capacity; and steps must be taken to ensure that it is attained with regularity.

Science in Industry

Discoveries in the laboratory can be likened to the findings of Royal Commissions in that, if they are not disregarded altogether, there is usually a long interval before the former are applied in the factory and the latter reach the Statute Book. In the present war, however, whose outcome depends so largely on the quality of equipment, the scientist must play a rôle of considerable importance. It is scarcely surprising, therefore, that many of the scientists who attended the conference of the Association of Scientific Workers last week-end expressed impatience at the frequent neglect of their work and at the delay in using their discoveries. Several speakers deplored the lack of provision for the pooling of information and of contact between the design departments of the Ministries and those in charge of production. Sir Daniel Hall, who presided at the conference, was undoubtedly right when he suggested that the real problem for men of science was to find within the machinery of Government the appropriate method of using the expert. As in the last war, scientists have already made important contributions to the solution of many difficult technical problems, and often at short notice. Their suggestions at the recent conference deserve the closest consideration.

Unemployment in December

With each publication of the unemployment figures there is speculation whether the minimum has been reached. Though the numbers of unemployed are fewer each month, the decline from the previous month, not unexpectedly, is growing smaller. On December 8th, there were 188,354 persons registered as unemployed on the employment exchanges of Great Britain, a drop of 10,748 from November 17th. Of the 162,224 wholly unemployed, which compares with 171,984 on November 17th and 541,900 on December 9, 1940, 84,235 were men, 8,108 were boys, 62,058 women and 10,823 girls. The number of persons temporarily stopped was fewer than on November 17th by 2,751. Their number was 13,261, which compares with 141,848 on December 9, 1940. Unemployment among persons normally casually employed fell from 11,106 in November to 9,869 in December; in December, 1940, there were 21,531 in this category. Over the year, unemployed women appear to have been reabsorbed faster than men. There were 248,068 men and 244,166 women wholly unemployed on December 9, 1940, but on December 8, 1941, there were still 84,235 men and the relatively smaller number of 62,058 women. On the other hand, the decline in number of persons temporarily stopped has been greater in the case of men than of women. Whereas a year ago there were 82,435 men and 53,952 women temporarily idle, last month the corresponding figures were 4,356 men and 7,957 women. This may be ascribed partly to the application of the Essential Work Order to coal mining and to outdoor occupations, such as building and the handling of cargoes in ports, which employ chiefly male labour.

Compensation to Coal Mines

On September 25th last year the Board of Trade issued an Order providing for the granting of excep-

tional financial assistance to necessitous colliery undertakings, and this week it has formally sanctioned the adoption of a new principle in the payment of compensation under the Coal Mines (War Levy) Scheme of December, 1940. In its original form this scheme authorised the payment of compensation at a maximum rate of 3s. 6d. per ton (the actual rate has been 2s. 6d. p.r. ton) to colliery undertakings which had suffered loss of trade in consequence of the war to a greater extent than the average loss of trade sustained by the industry as a whole. Claims were determined irrespective, on the one hand, of whether the individual undertakings concerned were making profits on their reduced volume of trade, or, on the other, of the extent to which their financial difficulties might have been due to causes other than that of loss of trade owing to war conditions. Since the scheme has been in operation it has been found that the compensation payable to the more necessitous collieries has not been enough to keep them out of financial difficulties and to maintain their outputs, while quite a number of collieries have been receiving substantial compensation although they showed good profits. It is the aim of the changes made by the recent Orders to remove both these anomalies. By the September Order the Central Council may, in addition to compensation, give such further assistance as it may deem necessary, in view of the present emergency, to maintain production, while by that issued this week the amount of compensation is to be determined in future by the relation of the financial condition of the undertakings concerned to that of the industry as a whole. Until September 30th last year, a colliery was entitled to assistance at the rate of 2s. 6d. per ton on the difference between its actual and its notional supply, i.e., the quantity it would have supplied had it retained the same proportion of the total supply of the industry as in the corresponding period of 1939. From October 1, 1941, however, the right to and the amount of compensation will be regulated by the difference between the credit balance of the individual undertaking during the period of impairment and a figure representing between 80 per cent and 100 per cent (as the Central Council may determine) of the credit balance of the whole industry. A colliery will not be eligible for any assistance if its actual supply is greater than its notional supply, or if its rate of profit per ton is in excess of that of the national average, unless it can show that the amount arrived at by multiplying its actual supply in the impairment quarter by its rate of profit per ton is less than that obtained by multiplying its notional supply by the national rate of profit. It is expected that these arrangements will assist the more necessitous collieries to carry on. The levy for the current quarter remains unchanged at 2d. per ton.

Cotton Importers and Distributors

When the cotton futures market in Liverpool was closed at the end of March, 1941, a company, Cotton Importers and Distributors, Ltd., was formed under Government auspices to carry on the work of distributing raw cotton supplies to the trade. The company consisted of members of the Liverpool and Manchester Cotton Associations; directors were appointed by ballot. The Government allocated a sum of £500,000 for the services to be rendered by Liverpool and Manchester firms during the ensuing twelve months. During the past two weeks discussions have taken place between the Cotton Controller, Mr Frank Platt, and the directors of CID, and it is reported that important changes are about to take place. It is understood that the Controller has decided to abolish the dual control; this will involve the winding-up of CID, and merchants will be remunerated on a commission basis for work done. Some firms may suspend business for the duration of the war. The proposed change has caused some

ROYAL BANK OF CANADA

DIVIDEND No. 218.

NOTICE is hereby given that a DIVIDEND of 2 per cent., being at the rate of 8 per cent. per annum, upon the paid-up capital stock of the bank, has been declared for the three months ending 28th February, 1942, and will be PAYABLE at the bank and its branches on and after 2nd March, 1942, to shareholders of record 31st January, 1942.

E. B. McINERNEY, London: Manager.
By Order of the Board.

6 Lothbury, London, E.C. 2. January 15th, 1942.

concern among raw cotton merchants in Liverpool and Manchester, but the system in force during the past nine months has not been satisfactory and some revision of the arrangements has become necessary. The work of the CID has not been easy; for example, spinners have complained of having to gather relatively small numbers of bales from numerous districts, a consequence of the dispersal of stocks.

Canned Food Storage

Canned food now plays a more prominent part in the average diet than it did in peacetime when a greater variety of fresh foods was available. Fears of future shortages tempt the housewife to keep stocks of canned foods longer than in peacetime. There has been discussion on the durability of these preserved foods, and the

Food	LIFE OF CANNED FOODS		Effect of Longer Storage
	Storage Life		
Fish, meat (sausages, meat rolls, galantines, tongues, soups)	Over 5 years		—
Hams	6 months	Usually sound, if can not bulged	—
Honey, jam (lacquered cans)	3 years	Appearance less attractive	—
Vegetables	2 "	Appearance does not deteriorate	—
Baked beans	Over 2 yrs.	Appearance less attractive. Damaged parts of lacquer may be attacked	—
Fruit, soft or stoned	1 year	—	—
Condensed milk—			
Unsweetened	3 years	—	—
Sweetened full cream	6-9 months	Becomes sugary, but not objectionable	—
Dried milk powder	A few weeks	Depends on moisture, butter fat content and method of packing	—

Ministries of Food and Health have now given useful guidance in listing the length of life of various foods in cans, summarised above. Cans are made of tinplate, but articles such as acid fruits, which might corrode the tin coating, are packed in lacquered cans. The temperature and degree of humidity of storage places affects the external condition of the can and of its contents; dampness may lead to rusting and perforation may eventually follow. The length of time which foods will keep appears to have been wisely estimated somewhat conservatively by the Ministries. For example, sardines are better when kept longer; there are vintage sardines which are at least seven years old. No times are given after which it may be definitely unsafe to consume tinned foods, but it may be that deterioration sets in at widely different times, even for the same food, according to the packing of the tin and storage conditions. Where one or both ends of a can are bulged and cannot be pushed back to their normal position, the can is "blown" and should not be used; nor should cans with rust holes, punctures or defective lids. The Ministries' announcement does not mention foods packed in glass, but it is well known that these do not last as well as canned foods. It is urged that the date of purchase should be written on the label, but the date of purchase is no guide to the age of the food. It would be more sensible if the date, or at least the season, of packing were printed on the label of the container.

Non-Pacific Tin

In recent years South-Eastern Asia has been responsible for roughly two-thirds of the world's tin production,

FAMOUS SINCE 1795

OTARD'S
COGNAC BRANDY

and the United States, Great Britain and Russia for a similar proportion of world consumption. These facts in themselves indicate the seriousness of the Japanese threat to Allied tin supplies, even if stocks of tin in the United States and Great Britain are substantial and considerable quantities of tin are still being shipped from the Eastern producing areas, and in particular from the Netherlands Indies. The conclusions to be drawn from the present position are twofold. On the one hand, tin must be saved as far as possible by the exclusion of unessential consumption, by the recovery of secondary tin and by large-scale substitution of other metals and non-metallic materials for tin. On the other hand, supplies from non-Pacific sources must be raised to their maximum with the least delay; virtually the whole of these are either directly controlled or otherwise (chiefly by existing delivery agreements) available to the Allies. Production in these areas is shown below:—

	NON-PACIFIC TIN PRODUCTION in Long tons		Standard Tonnages	
	Peak Production	1940	Old Agreement	New Agreement
Belgian Congo	12,392(e)	12,392	13,200	20,178
Bolivia	46,338(b)	37,940	46,490	46,678
Nigeria	10,855(d)	10,257	10,890	15,367
Cornwall	3,271(b)	1,500*		
Other Africa (f)	1,613(a)	1,500*		
Australia	3,329(c)	3,300*		
Other America (g)	2,071(c)	2,500*		
Portugal & Spain	1,910(d)	2,000*		
(a) 1928. (b) 1929. (c) 1938. (d) 1939. (e) 1940. (f) Chiefly South Africa. (g) Argentina, Mexico and Peru. * Estimated.				
† Not member of regulation scheme.				

The table indicates that production in non-Pacific tin producing areas reached about 71,400 tons in 1940, against their combined peak production in recent years of 81,779 tons. Consumption in the United States, Great Britain and Russia amounted to roughly 145,000 tons last year and may be reduced to 100,000 tons this year by the exclusion of all non-essential consumption. Even so a large gap remains between prospective Allied requirements and the tonnages available from the non-Pacific producing countries in 1940. It is most unlikely that the gap of, say, 29,000 tons can be bridged by increased production, but it can certainly be narrowed by a determined effort.

Amongst the smallest non-Pacific producing areas the output of Portugal and Argentina is rising slowly, but prospects for a material increase in the immediate future are slight. Cornwall could double its output to roughly 3,000 tons a year, provided that funds and labour are made available by the Government. The main contribution to a sizable increase in non-Pacific tin production, however, must come from Nigeria, the Belgian Congo and Bolivia. Amongst these, Bolivia is meeting with difficulties. The Bolivian mines are situated high up in the Andes at elevations around 15,000 feet above sea-level. Climatic conditions prevent the employment of foreign labour, and native labour has been short since the Chaco war. Moreover, technical equipment requires replacement, a fact which increases some difficulties as the Bolivian mines are lode increase in Bolivian supplies, though not immediately. Prospects appear much more favourable in Africa. The Belgian Congo has not been seriously hampered by the regulation scheme in its developments, which are chiefly of recent date. Ore reserves proved over great stretches of the Colony from Katanga in the south along the great lakes to Ruanda-basi tonnage of the Colony under the new scheme has been raised to over 20,000 tons in proof that development has outpaced recent production. Equipment will be needed by the Congo mines and should be provided without delay. This year the Congo may supply 15,000 tons, and if the material help is forthcoming, this figure may be raised to 20,000 tons next year. The Nigerian tin mining industry which is centred on the Bauchi plateau, 700 miles from the coast, has solved unusually difficult water and power supply problems. In recent years, however, little has been done to raise its capacity. If additional mining equipment is provided, production can be rapidly stepped up to an annual rate of about 20,000 tons. As Nigeria's tin mining industry, like that of Malaya, is mainly engaged on the exploitation of alluvial deposits, it appears logical that, wherever possible, equipment from endangered Malaya areas should be dismantled and shipped to Nigeria.

MR EDWIN FISHER ON URGENCY OF NATIONAL SAVING

RETIREMENT OF MR L. D. LEWIS

The following is the statement by the Chairman, Mr Edwin Fisher, on the report and accounts for the year ended December 31, 1941, to be submitted at the forty-seventh ordinary general meeting of the shareholders, to be held at the head office of the bank, 54, Lombard Street, London, E.C.3, on Monday, January 26th, 1942:—

For the convenience of shareholders, it is intended that the proceedings of the annual general meeting shall be formal in character, and accordingly, instead of my customary address, this brief statement on the bank's affairs for the year ended December 31st last is being circulated with the report and accounts.

THE LATE MR BLAND AND MR FORRESTER

It is with a deep sense of loss that we record the death of Mr Francis Lawrence Bland. That he was invaluable to us is no exaggeration. With a profound knowledge of banking, he was possessed of great administrative ability which found full scope both in the bank and in the county of Suffolk. He had also gifts of understanding and human sympathy which gained for him a special place in our affections and in the affections of countless others with whom he came in contact. We deplore his death, but deem ourselves fortunate in having had among our number a man of such rare attainment.

We also record with sincere regret the death of Mr Peter Forrester, who joined our board in 1920, when The Union Bank of Manchester Limited, of which Mr Forrester was then the managing director, became affiliated to Barclays Bank Limited. During a long banking life, for he entered the Bank of Liverpool some 60 years ago, he became a noted authority on commercial banking in Lancashire, and The Union Bank of Manchester, over whose fortunes he watched for so many years, owed much to his foresight, ability and shrewd judgment. Barclays Bank too, in its turn, derived benefit from his wide experience, and we would wish to place on record our appreciation of the valuable help which he gave us on all occasions.

CHANGES ON DIRECTORATE

Mr Frederick George Hugh Clayton, who was elected to the board in 1906 and was therefore one of our senior directors, has decided to relinquish his seat upon the board on the ground of ill-health. We regret the reason which has led him to take this step. Happily for us he finds himself able to continue to represent us upon the local board at Newcastle-upon-Tyne, so that we shall still have the benefit of his knowledge and advice in connection with our banking interests in that district.

Mr Walter Osborne Stevenson has been appointed to a seat on the board and, at the annual general meeting, shareholders will be asked to re-elect him. He is well known to you, having been a general manager of the bank for a number of years. He retired from this position at the end of last year, after 41 years of banking service. The wide knowledge and experience of foreign and overseas banking which he brings to the board will be of great value. Mr Frederick Cecil Ellerton, who was one of our assistant general managers, and who has been in close association with Mr Stevenson for many years, has been appointed a general manager of the bank.

You will also be asked to confirm the appointment to the board of Mr George Colville Hayter-Hames, C.B.E. As a local director at Exeter, he has represented our interests in Devon with conspicuous success, and I am confident that he will prove to be a most useful member of the board.

It is appropriate that I should make reference to the retirement at the end of last year of Mr Lewis Davies Lewis, who was one of our loyal band of assistant general managers. He had been with us for many years, having joined the London and Provincial Bank Limited in 1898, and he had held his important appointment since 1919. We take leave of him with genuine regret and wish him all happiness in his retirement.

During the year 47 members of our staff have lost their lives in the service of their country and their names are recorded in the report of the directors to the shareholders. These names are held in honour and we pay tribute to their memory. We also regret that there are 14 members of the staff on active service reported as "Missing," and that altogether 67 of our men are known to be prisoners of war.

Before making any detailed reference to various items in the balance-sheet, a few general remarks by way of introduction may be permitted.

EFFECT OF INTENSIFIED WAR EFFORT

What I have to say is purposely confined to the domestic affairs of the bank—to my mind an appropriate course to take in these times. The balance-sheet as at December 31, 1941, reflects, as is only natural, the influence on financial conditions of the intensified war effort of the country, which has been so marked during the past twelve months. The year was notable for a great increase in our current, deposit and other accounts and, on the other side of the balance-sheet, for a marked rise in the amounts lent to the Government in the form of Treasury deposit receipts and longer-term British Government Securities. There has been, however, a heavy decrease in our total of bills discounted and a further falling off in our advances to customers. We have had to solve many staff problems connected with the calling-up of our men for service with the Forces and to deal with the difficulties occasioned by damage to our premises from enemy action. The country has experienced a great decrease in enemy bombing for several months, but certain of our branches sustained damage in air raids during the year. Where this happened, the interruption to the smooth conduct of business was reduced to a minimum and the special arrangements made to cope with such disturbances were again found to work with smoothness and efficiency.

CONVERSION OF SHARES INTO STOCK

As you will see from the notice of meeting, we are proposing to convert our "A," "B" and "C" shares into stock. This step will save a great deal of clerical labour by eliminating the necessity of checking definitive numbers of shares in share registers, transfers and certificates. It will not be necessary for shareholders to send to us their present certificates for alteration. The board propose to fix £1 as the minimum amount of the stock of each class which will be transferable.

It would also seem to be an opportune moment for adopting the common form of transfer for our "A" and "B" capital. The use of a special transfer form is required by Article 19 of our articles of association and therefore a special resolution to vary this procedure is necessary. Accordingly, an extraordinary general meeting of the shareholders has been called for Monday, February 9th next, so that the alteration can be carried out. The transfer arrangements relating to the "C" capital, which is reserved for

January 17, 1942

the staff of the bank, will not be disturbed. I have little doubt that these proposals will meet with the approval of the shareholders.

THE BALANCE-SHEET

The total of our current, deposit and other accounts has attained a record figure of £645,185,397, against £546,914,676 at the end of 1940. This further expansion conforms to the general pattern of banking figures during the past twelve months.

Due recognition can well be given to the great service which the banking system of this country renders in mobilising the credit resources of the country in a manner which enables them to be utilised for the benefit of the community in peace or war. The network of branches covering all parts of the country collects the deposits of the public and the system which has been developed by care and experience enables these deposits to be utilised for lending to the Government and to trade and industry, and thus facilitates the employment of workers and the production and marketing of goods. At the same time, the depositor knows well that his deposit will be available for him to use at any time.

One further word on the subject of our increased deposits. It would be idle to pretend that the rise in our deposits has not helped our earning power, but the extent to which we have benefited should not be allowed to get out of true perspective, for when we come to examine the increased cost of administration, the special war-time expenditure and the heavier taxation which has to be borne, it is perhaps not surprising that there has been a diminution in the net profit, as will be seen from the figures to which later reference is made.

EXTREMELY LIQUID POSITION

In view of the increased importance of Treasury deposit receipts as a means of financing the floating debt requirements of the Government, it is not surprising that the total of our bills discounted is lower at £40,343,437, against £61,822,742 twelve months earlier. Of the total of bills discounted at the end of 1941, no less than £32,080,000 consisted of Treasury bills. Nevertheless, our specially liquid assets, comprising cash in hand and with the Bank of England; balances with other British banks and cheques in course of collection; money at call and short notice; bills discounted; and Treasury deposit receipts, total £315,694,392, a ratio of 49 per cent. of our current, deposit and other accounts. It will be seen, therefore, that our position is extremely liquid and that we are favourably placed to deal with any eventualities that may arise.

ADVANCES AND INVESTMENTS

If we turn to the other earning assets, it will be noticed that our advances total £174,234,477, representing 27 per cent. of our current, deposit and other accounts, whereas our investments (excluding those in subsidiary banks) total £168,219,936, representing 26 per cent. of those accounts. Time was when we looked to lend 50 per cent. of our deposits in the form of advances, a percentage which, in more spacious days, was considered a fitting proportion to be lent in this way. It is not that bankers have become more niggardly or less willing to lend. Circumstances have come into play which are so well known to you that they need not be referred to in detail. It is true to say that, as a result of the war, industry as a whole is more fully occupied than in peace time.

On the other hand, certain businesses which are less essential for the prosecution of the war are doing less work. Moreover, many transactions are now financed by the Government in one way or another, with the result that trade and industry need less of our money by way of banking advances and this money, instead, must find a resting place in the more prosaic field of investment. Compared with a year ago, our investments have risen by £46,745,081, the increase being more than accounted for by larger holdings of British Government securities, mainly through subscriptions to the new Government issues.

It is some solace to us that, compared with our investments, our advances are still in the lead, but the margin is a slender and narrowing one, and we hope that after the war our advances will be found in the ascendancy.

AGRICULTURE

In spite of the great activity in agriculture, due to the measures taken to increase the home production of food, there has been some falling off in our advances to farmers. This decline betokens

the better times which farmers are experiencing. Easier conditions for the industry have made the farmer less dependent on borrowed money than formerly, for he is getting better prices for his produce. It is well that this should be so. It is also satisfactory that the wages for these agricultural workers have been brought more into line with the wages earned in other industries, seeing the national importance of agriculture and the necessity to make conditions sufficiently attractive to stay the drift of labour to the towns.

It is natural, if it may seem unfair, that the importance of agriculture in times of war should receive an emphasis which is denied to it in peace. We may hope that the lessons learned—a balanced programme and an agricultural policy suited to our particular needs—will be remembered, so that the efficient farmer may be assured of conditions which will enable a proper relationship to be kept between the costs of production and the prices of farm products. The decrease in our loans to farmers does not result from any change in the policy of the bank, which remains ready and willing to afford all assistance in its power of a banking nature to those who are exerting every effort to increase our home-grown food supplies.

IMPORTANCE OF NATIONAL SAVING

By heavy taxation of income, by the drive of new savings, by rationing and by price control, the Government has been able to keep in check the dangers of inflation. No small part of this success has been due to the energy and leadership of those directing the National Savings Movement. We must, however, at all times be alive to the possibilities of inflation, which are ever present, and in this connection one has only to look at the high level of banking deposits and at the mounting total of the note circulation.

The rise in the note circulation is no doubt very largely due to higher amounts paid out in wages to individual workers and to the great increase in the numbers of people employed, which is shown not only by the fall to an insignificant level of the total of persons registered as unemployed, but also by the bringing into active employment of those not previously engaged in industry. Part at least of the increase in the note circulation may represent additional money in the pockets of the people which would be better employed if invested in National Savings Certificates or some other Government security, and it is the duty of each one of us to see that money does not lie idle to the detriment of the war effort.

DUTY OF CITIZENS

We, as citizens, should continue to give every support to the Government by providing funds, through savings, to equip the fighting forces with the weapons they need and our efforts in this direction, coupled with the other measures which the Government has taken, should enable this country to emerge from the war without having to face the very serious difficulties which inflation on a large scale would assuredly bring in its train.

The new Tax Reserve Certificates, which have recently been offered by the Government, will help to absorb the funds accumulated by customers of the banks in the shape of credit balances in readiness to meet Government taxation. These resources were not previously free for diversion by customers into Government securities or other forms of national saving, and the new security should assist in ensuring a more even flow into the Exchequer of what, in effect, is money earmarked for meeting taxation demands.

NET PROFIT AND DIVIDENDS

The net profit of the bank for the year ended December 31st last, after payment of all charges and after making provision for all bad and doubtful debts and for contingencies, amounted to £1,353,302 13s. 3d., which compares with the figure of £1,525,665 16s. for the year 1940. The sum of £546,704 5s. 6d. was brought forward from December 31, 1940, making a total report, the directors have allocated for the profit for the year £200,000 to contingency account and £150,000 to premises reserve account for deferred repairs and reinstatement).

Interim dividends at the rates of 5 per cent. on the "A" shares and 7 per cent. on the "B" and "C" shares, less income-tax in each case, were paid on August 8th last, amounting to £520,734 os. 8d. The directors now recommend the payment of final

January 17, 1942

dividends of 5 per cent., making 10 per cent. for the year, on the "A" shares, and 7 per cent., making 14 per cent. for the year, on the "B" and "C" shares, less income-tax, involving a sum of £520,734 os. 8d., and leaving a balance of £508,538 17s. 5d. to be carried forward. That is what we propose and I hope that shareholders will feel satisfied with the results which we have been able to show, having in view the increased taxation which the gross profit had to bear.

VALUATION OF PREMISES

Our premises stand in our balance-sheet at £7,937,665 and are conservatively valued. Where the premises happen to be leasehold, provision is made annually so that the cost to us is extinguished by the time the lease runs out, or earlier. The figure compares with £7,952,334 in the balance-sheet for the previous year. In the interval, capital outlay has been, of necessity, reduced to a minimum. We are not, therefore, proposing to make a general allocation towards reduction of premises account on this occasion. It is clear, however, that in war-time it is not possible to carry out such a complete programme of maintenance as that to which we are accustomed, and consequently we have thought it prudent to set up, out of our profit, the premises reserve account which I have mentioned, so that it may be available when time permits, for purposes of repairs and reinstatement.

In cases where premises have sustained war damage, the appropriate claims for compensation are being lodged with the War Damage Commission, but inasmuch as at this stage we can make only a conjecture of the amount of compensation to be received from the War Damage Commission towards the cost of reinstatement of the premises after the war, the existence of a reserve account of the nature I have described will, I feel sure, meet with the approval of the shareholders.

STAFF PROBLEMS

Staff matters have occupied our attention to an increasing extent during the past year. We are concerned to see that our internal organisation is able to meet the calls made upon us for the release of man power for other purposes and at the same time to maintain at a high level of efficiency those services upon which so much of the successful conduct of the war industries and the general life of the community depend. Since I last made my report to the shareholders, we have released for service with the Forces a further large number of our staff. At the end of 1941, 5,261 of our men were serving with His Majesty's Forces or were absent from the bank on other full-time National Service. Many more are waiting to go under arrangements made earlier in that year with the Government authorities concerned. In place of the men who have left us for other forms of National Service, we have engaged mainly women staff, and a measure of the efforts which have been made to meet the new situation is afforded by the fact that, with so large a proportion of relatively new staff in the bank, the number of men and women employed is smaller than before the war, in spite of the increased work undertaken for the Government, the large expansion in the credit balances kept with us and the growth in the number of current accounts of Customers on our books.

CLOSING OF SOME BRANCHES

The solution of these staff problems would not have been possible without some exceptional measures. It has been part of our policy to close branches wherever possible, in order to effect some economy in staff, and since the outbreak of the war we have closed no fewer than 470 branches, although some of them, it is true, have been closed for us through enemy action. Of those voluntarily closed, the majority are small offices, and while a number of staff have been freed in this way, the effect of this saving can be easily overestimated because, although a branch or sub-branch may be closed, the banking business carried on at that office has to be done elsewhere and staff must be available to undertake the work. We shall proceed with this programme of concentration wherever possible.

The closing of branches may cause some inconvenience to customers, but I am sure they will appreciate the exceptional circumstances which make it necessary. Our aim is to afford a banking service which is at all times efficient, able to adapt itself to changing conditions, and with branches staffed by men and women imbued with the desire to make the bank they represent

TRIBUTE TO MANAGEMENT AND STAFF

In the eventful year through which we have just passed, there have been difficulties to face and new problems to be solved in the conduct of our business. It would be strange if it had been otherwise. That the difficulties have been surmounted successfully and the problems overcome speak volumes for the energy and loyalty of the staff, men and women, permanent and temporary, for it is on them that the day-to-day burden has rested, but no tribute would be complete without a special acknowledgment of the part played by the general managers and all those others associated with them in the administrative work of the bank. What they have done has been invaluable. I offer to all, on behalf of myself and the board of directors—and, I feel sure, also on behalf of the shareholders—our grateful thanks and appreciation.

ALEXANDERS DISCOUNT COMPANY, LIMITED

MR COLIN F. CAMPBELL'S STATEMENT

The annual general meeting of Alexanders Discount Company, Limited, will be held at their offices in London on Wednesday, the 21st inst.

The following is an extract from the statement to the shareholders by Mr Colin F. Campbell (the chairman), circulated with the directors' annual report and accounts:—

I regret to say the offices of the company were twice damaged through enemy action during the early months of the year, when the management and staff were again called upon to work under very great discomfort and inconvenience. It will be remembered that the offices were first damaged in November, 1940, when a messenger of the company lost his life. One-half of the members of the staff are now on active service with the armed forces of the Crown, and so far as we know they are all well. We send to them our best wishes for their safety and good health.

SATISFACTORY RESULTS

The results of the past year may be considered in every way satisfactory. The volume of business was again very considerable. The bank rate stood at 2 per cent. throughout the year. Rates ruling for money continued without much change, and the same may be said of those for bills, which were dealt in at a fraction over 1 per cent., the differences in Treasury Bills week by week being only a few pence. The bulk of the business transacted was in Treasury Bills, while the supply of commercial bills is still small.

The gross profits for the year, after making provision for taxation and a transfer to contingencies, are shown in the profit and loss account at £438,012 5s. 9d. before providing for rebate. The amount brought forward from last year was £160,570 os. 6d., making a total of £598,582 6s. 3d., as mentioned in the directors' report. From this rebate has been provided to a total of £211,379 13s. 1d., and after deducting this amount and also current expenses and interim dividends (together £338,395 13s. 8d.) an amount of £260,186 12s. 7d. remains to be dealt with.

Interim dividends on the preference and ordinary shares were paid as usual in July, and it is proposed at the forthcoming meeting to pay a dividend on the preference shares at the rate of 6 per cent. per annum, and on the ordinary shares at the rate of 20 per cent. per annum, these being the same as in the previous year, and to carry forward to the next account £169,186 12s. 7d., against £160,570 os. 6d. brought in a year ago.

The balance-sheet calls for no special comment. Bills discounted are slightly less than they were a year ago and, as I have stated, are almost wholly composed of Treasury Bills. The securities, which now consist of British Government issues entirely, are more than £4,000,000 in excess of the total disclosed in the balance-sheet of 1940, and they are all short-dated.

Our thanks are once again due to Mr Newcomb and to his successor, Mr Bowie, for the careful manner in which the affairs of the company have been conducted throughout the year, and in

fact to all those who have been associated with them in carrying on the business.

REMUNERATION OF DIRECTORS

Shareholders will observe that a special resolution is to be submitted at the ordinary meeting, dealing with the remuneration of the directors. Under the original article, the directors were entitled to their remuneration free of income-tax, but the Finance Act,

1941, introduced legislation to modify the remuneration payable in such cases. It is considered that the matter would best be dealt with by providing that the directors should in future bear the income-tax personally on such remuneration as they receive, and the proposed new article would have this effect. The gross remuneration of the directors would then amount to a sum slightly below that which they received in the year ended December 31, 1940.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: All dealings are for cash

EVENTS in the Far East continue to exert a restrictive influence on the markets, but the advance in most sections is being maintained. In particular, re-investment support and shortage of stock in the gilt-edged market occasioned numerous small improvements, which on Tuesday became a general advance with gains of $\frac{1}{2}$ and upward. In the foreign bond market, Brazilian stocks enjoyed steady support, but Chilean issues fell immediately before and after the week-end. A rise of 2 points for the 5 per cent. loan of 1912 on Tuesday reflected the strong demand for Chinese bonds. A little profit taking resulted in

numerous small losses for junior stocks in the home rail market, but on Tuesday prices remained steady. Senior issues, however, continued to advance on persistent support. In the foreign rail market senior Argentine stocks were in demand before the week-end, but in the early part of this week lack of interest led to many small declines.

Turnover in the industrial market was moderate, buyers tending to hold off pending developments. Brewery issues, however, were strong on provincial support before the week-end, although Guinness fell $\frac{1}{2}$ s., but the higher prices were later maintained. Albion Motors were prominent in the aircraft and motor group, but movements in the heavy industrial section were without interest, although Allied Iron rose $\frac{1}{2}$ s. on Tuesday. Shipping issues

were dull and neglected. After early advances on the Government's announcement to schedule the industry as a "vital war industry," textile issues suffered an all-round decline on profit-taking in the middle of the week. Quiet trading in the tobacco group led to small losses at the re-opening, but on Tuesday Carreras gained $\frac{1}{2}$ s. Among miscellaneous issues, Dunlop Rubber fell $\frac{1}{2}$ s. on Tuesday, when Brazilian Traction lost $\frac{1}{2}$ s., but Turner and Newall improved slightly on balance. The kaffir market reacted sharply to rumours of a possible restriction on gold production, and a steady offering of non-producers by the Cape on the Friday was followed by some weakness in dividend payers in the early part of this week, losses of $\frac{1}{2}$ s. being general. Small purchases in the tin market occasioned a few small improvements, Nigerian issues being especially in request, but each day saw further declines for Far Eastern shares. The decline in rubber issues continues, with losses of $\frac{1}{2}$ s. for Sungei Krian and Saping in the early part of the week, but non-Malayan producers were in demand, Malayalam rising sharply. After earlier gains in the oil market, the Japanese assault on the Dutch East Indies led to numerous losses on Monday, but the following day prices recovered lightly on renewed buying.

GOVERNMENT RETURNS

For the 10 days ended Jan. 10, 1942, total ordinary revenue was £102,046,000, against ordinary expenditure of £128,801,000, and issues to sinking funds of £357,714. Thus, including sinking fund allocations of £8,156,701, the deficit accrued since April 1st is £2,309,106,000 against £2,022,151,000 for the corresponding period a year ago.

COMMODITY AND INDUSTRY NEWS

THE diamond sights which were to have been held in London early this week have been postponed by Government instruction. The Ministry of Supply has arranged for the distribution of turpentine, pine oil and rosin for approved uses, through its agents, the United Kingdom Naval Stores. At a meeting of the Rubber Control Board last Tuesday, the conservation of rubber supplies was discussed. Tin continues to be supplied by the Non-ferrous Metal Control at the provisional price of £275 per ton, delivered works, plus extras, if any. A deputation of the Metal Exchange met the Chancellor of the Exchequer and the Minister of Supply on January 14th.

Spinners' Overtime.—Considerable satisfaction has been expressed at the decision of the Government to place the cotton industry on the list of trades engaged on vital war work. During the last few weeks there has been delay in fixing up Government contracts in cloth owing to the shortage of yarn. The spinning section of the Lancashire cotton industry has agreed to work four hours a week overtime from January 6th until the end of March, in order to increase production. The extra four hours, which was agreed between employers and operatives, is expected to yield an increase in production of 8 to 9 per cent. Time and a half is to be paid for the overtime.

Milk Prices Adjustment.—The Ministry of Food has decided to grant a retrospective increase in milk prices for the months of April to September, 1941, at the rate of an extra halfpenny per gallon, in response to application by the Milk Marketing Board and the National Farmers' Union. When the Ministry of Food announced prices for the year from April 1st last, it undertook to review the prices during each summer and winter half-year. It agreed to make appropriate adjustments where the average increase in costs exceeded the average increase in returns, as compared with the same period of 1938-9.

Clothing Coupon Quiz No. 2.—A number of changes have taken place in clothes rationing since the first Clothing Coupon Quiz was published by the Board of Trade last September. Some coupon

ratings have been altered, additional articles have been rationed and new arrangements made in certain cases. The first edition is therefore now out of date. The second edition, published last Thursday at 2d. per copy, is on the same lines as the first. More information has been squeezed into the original 24 pages by reducing page margins. The clearness and legibility of the pamphlet is not, however, impaired.

Export and Import Control.—Under a Board of Trade Order (H.R. and O., 1942, No. 35), which came into force on January 11th, export licences will be required in the case of all goods consigned to the Straits Settlements and to the Malay States. An Order (S.R. and O., 1942, No. 40) has also been issued revoking all outstanding export licences for various Far Eastern destinations. The Order applies to all export licences with the exception of certain general licences held by the Crown Agents for the Colonies and a number of other official and semi-official organisations. The Open General Licence permitting importation without separate licence of essential oils from the British Empire and certain other sources, was revoked from January 15th. Separate licences are now required for goods despatched after January 15th and imported into this country after March 15th. Turpentine will also be subject to licence on importation from any country except Eire.

Crepe Rubber.—The manufacture of boots and shoes with crepe rubber soles and heels was prohibited from January 14th, unless the crepe was cut before that date. This ban is causing great anxiety among manufacturers; it is estimated that crepe is used for almost half the production of women's and children's footwear. Many manufacturers are believed to hold large stocks, which they accumulated in anticipation of a shortage.

Control of Paper.—The Minister of Supply has made a direction relaxing the provisions of the Control of Paper (No. 36) Order in various ways. Posters relating to auction sales are permitted, but may not exceed ten in number. Stockholders may distribute free a limited number of cir-

culars of lists of stocks and shares. Labels printed before August 16, 1940, or if the paper is made from waste paper or straw, before April 13, 1941, may be used. Hair sachets may be produced out of paper which was acquired and specially cut and prepared for the purpose before November 12, 1941.

Whisky Production Cut.—A further cut of 10 per cent. in the production of malt whisky will be imposed during the calendar year 1942. Licences to purchase Scottish barley sufficient to enable malt distillers to produce their quotas will be issued shortly. The quota will now be one-third of the output in the year ended September 30, 1939, less 10 per cent. It is announced that no grant of licences for the production of grain whisky will be made at present.

ALEXANDERS DISCOUNT COMPANY, LIMITED.

24, LOMBARD STREET, LONDON, E.C.3.

Established 1810.

Telephone: Mansion House 8151 (3 lines).

Telegrams: "Alexanders, Stock-London."

CAPITAL (Authorised)		£1,800,000.
Subscribed	£1,800,000.	
£200,000 in £2 (fully-paid 6 per cent.) CUMULATIVE PREFERENCE SHARES.		
£1,600,000 in £2 ORDINARY SHARES (£1 paid).		
Paid-up, Preference Shares	£200,000.	
Paid-up, Ordinary Shares	£800,000	
Reserve Fund	£1,000,000	

DIRECTORS:

GEORGE CLEVERLY ALEXANDER. COLIN FREDERICK CAMPBELL (Chairman). ERIC GORE BROWN, D.S.O., O.B.E., A.D.C.
 ROBERT ALEXANDER. MARK DINELEY. FRANK NEWCOMB.
 SIR AUSTIN EDWARD HARRIS, K.B.E.

JOINT MANAGERS:

EDWARD JOHN BOWIE. ANTONY MACNAGHTEN.

ASSISTANT MANAGERS:

C. C. DAWKINS. E. P. B. BAGGALLAY.
 Secretary—P. C. TONG.

SEVENTY-FOURTH REPORT OF THE DIRECTORS.

To be submitted to the Shareholders at the ORDINARY GENERAL MEETING to be held at the Offices of the Company, 24, Lombard Street, in the City of London, on Wednesday, the 21st day of January, 1942, at Two o'clock in the Afternoon.

The Directors beg to submit to the Shareholders the statement of the affairs of the Company for the year ending 31st December, 1941. The Accounts, including the balance brought forward from last year, and after provision for bad and doubtful debts, taxation, and contingencies, show a gross profit of £598,582 6s. 3d. After deducting current expenses and interim dividend, there remains a balance of £280,186 12s. 7d.

Out of this sum the Directors have transferred £5,000 to the Staff Pension Fund and recommend the payment of a dividend on the Preference Shares at the rate of 6 per cent. per annum, and on the Ordinary Shares at the rate of 20 per cent. per annum for the final half year, making 17½ per cent. for the year, carrying forward to next account £169,186 12s. 7d.

Mr. Frank Newcomb has resigned from his position of Manager, which post he held for 32 years. The Directors have accepted his resignation with great regret and they wish to record their high appreciation of his most successful management during this long period of time. They are glad to be able to state that Mr. Newcomb is retaining his seat on the Board.

Mr. Edward J. Bowie and Mr. Antony Macnaghten, who have been in the service of the Company since 1912 and 1924 respectively, have been appointed Joint Managers.

The Members of the Board retiring by rotation are Sir Austin Edward Harris, K.B.E., and Mr. Mark Dineley, who, being eligible, offer themselves for re-election.

The Auditors of the Company, Messrs. Price, Waterhouse & Co., who retire in accordance with the Articles of Association, offer themselves for re-appointment.

The following Resolution will be submitted to the Meeting for passing as a Special Resolution:—

"That existing Article 80 of the Company's Articles of Association be deleted and the following Article substituted therefor:—

"80. The Directors shall be paid for their services out of the funds of the Company an annual sum of £6,400. If and whenever the number of Directors is more than five each additional Director shall be paid for his services out of the funds of the Company at the rate of £1,200 per annum. In addition the Directors shall be entitled to receive such further remuneration as the Company may in General Meeting from time to time determine. This Article shall have effect as from 1st January, 1941."

The Dividends will be payable on and after 22nd inst.

24, LOMBARD STREET, LONDON, E.C.3.
 12th January, 1942.

By Order of the Board,
P. C. TONG, Secretary.

COLIN F. CAMPBELL, AUSTIN E. HARRIS, GEORGE C. ALEXANDER, Directors.

AUDITORS' REPORT.

We report to the Members that we have obtained all the information and explanations we have required. We have examined the Securities and Bills in hand and verified those in the hands of Depositors. In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us, and as shown by the Books of the Company.

Mr Churchill's Return

THERE cannot be any doubt of the warmth and sincerity of the welcome that the Prime Minister received on his dramatic return from an historic visit. The British people have watched Mr Churchill's progress and listened to his speeches with affectionate pride. Future historians will discern a whole crop of symbols in this visit and its results; and though the shape of the new order of affairs is still vague and nebulous, the blindest or most cynical of contemporaries knows that he is in the presence of historical events. The Prime Minister is the master of those events; and no leader of a war government in British history, not Mr Lloyd George nor William Pitt nor Chatham nor even the first Churchill himself, was ever quite so sure of his place as Mr Winston Churchill.

But that does not mean that there is not plenty of dissatisfaction, or that it is confined to a malcontent minority.

There are a lot of serious difficulties to be faced and the rump Cabinet (for that is what it is without Mr Churchill) has not been making very noticeable progress in confronting them. At no time since May 1940 has there been so much criticism to be heard on every hand. It is not dangerous criticism, in the sense of endangering the stability of the Government or impairing the fundamental unity of the nation; it betokens an intensification, rather

than a slackening, in the will to victory; but it is of a breadth and strength such that a wise Prime Minister will pay the most careful attention to it.

The foremost subject of dissatisfaction is, naturally enough, the disasters that have overtaken British arms in the Far East. It is not that the judicial temper of the British people breaks under misfortune and if the story were merely one of a bold gamble that failed to come off, there would not be so much anger in men's voices as they discussed it. Mr Churchill himself has demonstrated that the worst disasters will be patiently borne if they are explained with candour. That is just what has been missing in this episode. There have been the misleading communiqués from Singapore. There has been equal disingenuousness in London. There has been the shameful treatment of Air Chief Marshal Sir Robert Brooke-Popham, who was allowed to slip into the rôle of a scapegoat because nobody in London had the moral courage to reveal that he had been protesting for months the inadequacy of the forces that were sent him. Mr Menzies has exposed that device, just as he has exposed the falsity of the view that it was only the needs of the Middle East that prevented proper reinforcements being sent to Malaya. "Service chiefs in London," he said, "took a more modest view of the requirements of air

defence in Malaya than those on the spot. . . . This was characteristic of the almost chronic underestimation of our enemies in which we had indulged ever since the war began." The Far Eastern milk is now well and truly spilt, and there is no use crying over it. But there is equally little use pretending that it is only hard luck that has lost all but one of the Malay States and is now threatening the supremely important nodal point of Singapore itself. The public will expect the brutal truth from Mr Churchill.

Another hope that has become an almost universal expectation against his return is that he will do something to increase the efficiency of the Government machine. This is a topic that has been aired so frequently that it requires no re-stating. There has, however, been an accumulation of fresh evidence. The peculiarly unsatisfactory "solution" of the problem of defending aerodromes is an almost perfect example of what happens when the word "decision" becomes synonymous with "compromise." The long dispute over who shall be supremely responsible for production is another example of what happens when the forceful figures are departmental heads, contestants not commanders. In spite of all that the Prime Minister has said against it at one time or another, it is difficult not to believe that Mr Lloyd George's version of the War Cabinet was more effective than Mr Churchill's. It is difficult not to believe that there are five or six men in public affairs in this country who, brought together in a real War Cabinet and given, each of them, powers of decision (not of "co-ordination," that blessed word) over the different fields of the war effort, could in short order straighten out some of the prevailing muddles, settle the disputes and inspire the whole framework of government with some of the energy and decisiveness that seem to have been dissipated since the summer of 1940. It is reported in some of the organs of the press that Mr Churchill, following that magnanimity which is one of his most endearing characteristics, will seek to "protect" his colleagues and refuse to allow any of them to be made scapegoats. But this would be to misconceive the necessity. Nobody (except perhaps a few ambitious politicians out of office) wants heads on a charger; but there is a demand that the best men should be put in a position to get on with the job. The Prime Minister's task is therefore twofold. First, to choose the best men, some of whom can be found in the Cabinet and some outside it. Second, to concentrate authority and responsibility, to put an end to compromises, to cease the "co-ordination" of irreconcilable policies, to make of his Government an organ of decision. Without any hostility, in no spirit of captious criticism, the Prime Minister is being asked to do this by every shade of opinion in the country.

European Federations

THE agreement signed last week by the Governments of Yugoslavia and Greece embodies proposals for co-operation closer than any previously envisaged in the various schemes for confederation in Eastern Europe. The terms of the treaty are more precise than the arrangements already agreed on between Poland and Czechoslovakia, and they fill in very fully one corner of the wide plan of a federated state stretching from the Baltic to the Aegean, outlined last November by the representatives at the International Labour Conference of Yugoslavia, Greece, Czechoslovakia and Poland. The new agreement proposes a union in which Greece and Yugoslavia will retain their sovereignty, but will meet together for political, economic and military action through three joint bodies—a Political, an Economic, and a Military Organ served by a Permanent Bureau. The tasks of these organs will be to secure a common foreign policy, a common foreign trade policy, together with a common plan for national economic policy and a Joint General Staff to plan the defences of the union. The two states look on

There is a third subject on which public opinion is dissatisfied. Mr Churchill has always held that for his Government to concern itself with anything not directly necessary for winning the war would be a dissipation of its energies, and he has given this as his reason for refusing to take more than a very much muted interest in the general subject which can be stated at its lowest as post-war reconstruction, at its highest as the regeneration of democracy. This is Mr Churchill's blind spot. Primarily, he is a strategist, a man of arms. Magnificently as he has caught the spirit of the British people, he has failed to appreciate the military necessity of an inspiring political programme. He is the man of 1940; without a change of heart on this point, he will be a little less than the man of 1942. If nothing else brought conviction, it is surely impossible to overlook the lesson of last summer, when hundreds of thousands of ordinary British men and women, from all parties and from all walks of life, showed themselves ready to work just as hard—some would say harder—for Soviet Russia as for democratic Britain. Why? Not—or not solely—because of Russia's magnificent resistance, for other countries, their own included, have magnificently resisted. Not out of any love for Communism, which they have never embraced. The basic lesson to be drawn is that if democracy is to conquer, it, like the Soviet system, must convince its own people, and others too, that it is on the march, that it has not finished what it has to say to mankind, that it is young and vigorous and awake. To create such a feeling would be worth to Mr Churchill—now, in 1942—divisions of soldiers and squadrons of aircraft. But as things stand, reconstruction has been put in charge of a Minister who would not be entrusted with anything really important. There is no authority behind the handful of committees. Time is wasted in endless quarrels over departmental jurisdiction and in elaborate studies of what ought to be details. So far from inviting the assistance of the people, officials are forbidden to join in discussions with gatherings of outside experts. The exclusive rights of the Civil Service are asserted, and advantage is not even being taken of the talent temporarily enrolled in the Service. This is not the way to kindle a fire; it is the way to discourage all those who have fire in their hearts. Perhaps the examples of Russia and America will have convinced the Prime Minister that, in ideas as well as on the field, attack is the only form of defence. If he is to be the instrument of leading the British people to a new age of greatness he must change the whole tone of the Government's attitude towards the reconstruction of democratic society. He should put it in the hands of a man forceful and respected enough to drive and insist and compel attention. The nation will not cease to retreat on foreign fronts until it resumes the advance at home.

their union as the nucleus of a wider federation to which other states "ruled by governments freely and legally constituted," will later adhere.

The two agreements—Polish-Czech or Yugoslav-Greek—represent a notable step forward in the process of consolidating the fluid national structures and anarchic political and economic conditions to the east of Germany. It should not be thought that these states had no political obstacles to overcome, and no hatchets to bury in making their gesture to the future. One of the stupider incidents of the inter-war years was the lasting hostility between Poles and Czechs. The Yugoslavs and the Greeks were divided over the question of Macedonia. Any agreement that reduces the amount of racial friction in Europe is by that fact alone a contribution to the building of a peaceful post-war system. A welcome sign that the drafters of the treaty have taken a realist approach can be seen in the provision that a joint commission shall be established to co-ordinate efforts towards "a reciprocal rapprochement of public opinion" in the two states. In

general, too, the provisions are much more concrete and more convincing than the fleeting arrangements established under the Balkan and Little Ententes, both of them ominous examples of the fragility of political frameworks to which no element of decision, power, or economic substance has been given.

The two treaties are therefore beyond question to be welcomed, but chiefly as an earnest of more that is to come. In their present form, it may be doubted whether they go far enough to fulfil the purpose for which they are designed. The motive behind the creation of an independent federated bloc from Baltic to Aegean, either in one or two different confederations, is fundamentally a security motive. The national states have seen that their divisions, their squabbles, their economic and military weakness, have made them the easy prey of a neighbouring Great Power. They are looking round for means to prevent the menace recurring. Very naturally, it is a defensive spirit that breathes through the recent treaty, with its "consultation at all times when vital exterior interests of the Union should be menaced," or its armed forces with a mission "to defend the European frontiers of the states of the Union." The problem is, given this defensive purposes, do the arrangements outlined go far enough? It is clear that they do not.

In the military sphere separate staffs are to continue with a representative over-all General Staff. This division must remain a source of weakness, for however well co-ordinated in strategy and armaments, the armed forces and the commands remain separate. At a crisis, it should be possible to secure a single supreme commander, but he would then be faced with problems of co-ordination, while his unified, hard-hitting opponent had already taken the field. If the Eastern bloc is to operate as an effective armed Power, it needs a single army, not merely the occasional and partial co-ordination of separate national armies.

Even so, it is doubtful whether, on a basis of national economics that are to be no more than co-ordinated, such a bloc would possess the industrial potential necessary in total war. This economic weakness would be equally operative in time of peace when the goal of economic policy is higher living standards. Some areas—Russia, for example—have natural resources rich and diversified enough to enable them to raise themselves by their own bootstraps. But the complete pooling of the industrial and mineral resources of the whole area from Poland to Greece would be required to support the heavy industry of a Great Power—and even then a very substantial and extended plan of development, imposing sacrifices on the consuming public in Five-Year Plan style, would be necessary. But though the Yugoslav-Greek treaty speaks of the elaboration of a common economic plan, there is clearly no intention of pooling wealth unconditionally.

In the political sphere, what can be done in a limited solution of this type to solve the weary old problem of Hungary and Bulgaria? Will they feel any loyalty to the

confederation which establishes the predominance of the states with which they have so recently and so selfishly been at war? Again, is it not obvious that the creation of a loose confederation of a strongly defensive type on Germany's eastern frontier may well rouse all the worst instincts of a future Germany, which may again combine a feeling of "humiliation" at encirclement with the certainty of being able to knock the encirclers out? So long as national states have their own Foreign Ministries, some of them will tend to have, from time to time, ambitious, wrong-headed, appeasing, timid Foreign Ministers and divergent foreign policies. An effective federation must have not merely a common army and a common industry, but a common foreign policy, decided by majority vote.

To write in this way is not to criticise the search for security, nor to despise the promise of better things that comes from the federal movement. It is simply to suggest that a weak federation will be a snare and a delusion, and that very much more needs to be done before the proposed federations can be regarded as strong. It is part of the new realism in international affairs to realise that diplomacy, like war, is a game of power, and that any weakness anywhere is a standing temptation. The interest of the Great Powers in Central European and Balkan federation is to create an area of strength rather than of weakness, and they will be well-advised to stand firm on the point that the degree of assistance and support they will give will be directly proportionate to the inherent strength of the federation. The Great Powers will have the right to insist, for their help will be needed. Politically, even a strong unitary bloc reaching from Warsaw to Athens would still seek diplomatic and military support from the Great Powers. Economically, its progress might well depend on the extent to which Lend-Lease principles are continued into the post-war period. America and Britain would certainly, Russia would probably, have no interest in being committed to a structure that was not internally strong. This is, of course, to pose to the statesmen of Eastern and South-Eastern Europe a problem of infinite difficulty. But the difficulties are not overcome by ignoring their existence. An alliance, even a permanent alliance, between weak sovereign states is not a strong and viable Great Power.

Nor is the creation of a new Great Power the end of wisdom and policy. It is perhaps a pre-requisite to any stable organisation of Europe that all should meet on approximately equal terms of power, and that there should be no tempting little morsels to attract the aggressor and obstruct the defenders of peace. But merely to even up the strength of the contending sovereignties does not by itself go very far towards solving the problem of peace. Any designs for Eastern Europe and the Balkans, any designs for Germany—indeed, any designs for the British Isles themselves—must be so drawn up that they will eventually fit into place in what the Atlantic Charter called "a wider and permanent system of general security."

The House of Commons

A NEW House of Commons is being planned to replace the old bombed Chamber, and a much abler Commons than the present will be needed to fill it worthily. Most people now agree that the mediocrity of the Parliaments of the thirties played no small part in bringing about the perils of the early forties. An article which appeared in *The Economist* last August on the poor quality of Members of Parliament, and its causes, aroused a remarkable response, almost unanimously in agreement. Plainly, there is something wrong.

To say that the present House of Commons is unrepresentative may mean one of two things. It may mean that the numerical balance of the parties does not reflect the division of opinion in the electorate. That may well be true, since the present House was elected on what the Prime Minister of the day has since confessed to have been a falsified issue; but its truth could only be established by a General Election. In the other meaning of the word, the House is almost certainly unrepresentative. The great men of the country, the leaders of the different walks of life, are not, as in Victorian days, to be found on its benches. Some of them, indeed, are there, but more of the leaders of British life are not. The members of the House, in their personal capacities and irrespective of party, are not adequately representative of the best in the people. The MP does not get a tithe of the respect he used to get. The most successful Ministers of wartime have, by and large, been found outside Parliament. To find a remedy for this fatty degeneration of the Commons is vitally important.

There is no lack of advertised cures. Broadly, the would-be doctors fall into three classes: the defeatists, the "gadgets," and those who, like *The Economist*, hold that the simple solution is to make politics a *carrière ouverte aux talents*. The defeatists are like the Chinaman who burned down his house in order to roast his pig, or like that other well-known figure, by tradition a German, who threw away the baby with the bath water. They would cure the ills of Parliamentary government by bleeding Parliament of its rights and responsibilities. They would take government "out of politics," as the saying is, by looking for Ministers, as a permanent practice, anywhere but among politicians. They would pay the merest lip-service to the "talking shop" by finding safe Parliamentary seats for their choices. As "practical men" they demand "business men's government"; they forget that there never have been clearer examples of business men's governments than those set up by the Parliaments of 1931 and 1935. There is always room for Ministers with special talents or experience who are not normally in politics; but their membership of Parliament must be as real as their responsibility to Parliament. A constitution in which the Executive is separated from the Legislature is subject, at best, to deadlock, as so often in the United States, at worst, to dictatorship. The peculiar virtue of the English constitution is that it is at once vigorous and supple, strong and responsible. This arises from the close and subtle relationship between Cabinet and House of Commons, whereby each is in part responsible to the other, and in part its master. This basic principle could be infringed only at the greatest risk.

These "practical" men would do well to read, or re-read, Mr. Churchill's recent speech to the United States Congress. The Prime Minister made it plain that, first and last, he is a Member of Parliament. A lifetime at Parliament he is responsible; and upon Parliament he depends. The Parliamentary system is no ideal system. It is not suited to every country; but it has become English by experience and by growth. The remedy for its decline is not to make Parliament weak, but to make its membership strong. It is the rehabilitation of Parliamentarians, rather than the reform of Parliament, that is

wanted, so that their "talk" may be informed and pertinent again, and their choice of men and measures shrewd.

The "gadgets," with their fancy solutions, are just as far astray. There are, for example, the earnest advocates of "proportional representation." In practice this would almost certainly weaken both Government and Parliament; the parties would be multiplied into fluid factions; and the sniffling party groups would risk being matched by equally shifty politicians. There are the advocates, too, of what is called "functional representation," in place of the present representation by geographical constituencies. This would merely make bodies like the Federation of British Industries and the Trades Union Congress even stronger in the defence of their vested interests than they are at present. It is largely because so many Members are no more than mouthpieces for outside interests that Parliament is so poor. There are also those who say that representative institutions would be perfect if only there were no parties—and who forget that, if there were only one party, either the divergences of view would be transferred to its internal machinery, or else the party leader would become an irresponsible dictator.

Neither the Parliamentary system nor party politics is responsible for the present state of affairs. The existence of two or three cohesive parties, no fewer and no more, is essential for strong, stable and popular government. They are needed to frame policies and to organise support; to put the issues of government before the electors, for their decision; and, according to the electors' choice, to govern or to oppose. It is the present parties, not the party system, that are at fault. It is their choice, or rather the choice of their caucuses, that enrols the feeble and the old. It is the party organisers, not the Parliamentary system, who pick third-rate men of ample means or long service to misrepresent the electorate. It is true that democracy, if it is to survive, requires strong government, and that strong government implies party discipline. The duty of Members is to support the leaders they have chosen in policies they have approved. But it is carrying the argument for party discipline entirely too far when the party machines make a rubber stamp out of hack politicians and call it popular and representative government.

The remedy is simply to find ways and means of improving the quality of Members. The task is to bring into Parliament the "representative" men who lead by their virtues in other walks of life—where those walks themselves have not become blocked by the same weeds of money, snobbery and seniority that are strangling Parliament. The reasons why these men do not go into Parliament need no research or argument; they are well known. It is too hard for them to pass through the eye of the party needle; either they must buy their seats, or they must serve a lifetime in a trade union. Even when they are in, the Parliamentary career is unattractive to able men; either they work blindly at dull routine to put in their hours of service, or they make no progress towards office; and the financial rewards of full-time service are no compensation for the time they waste and the outside earnings they sacrifice.

There is a double need: to make the best men of the community, in every walk of life, want to be Members of Parliament; and to make it possible for them to be elected. The second half of the task is perhaps the easier, because the way has long ago been shown by the law and practice of elections. The State already pays some of the candidate's election costs, and the law already limits what he can spend out of his own pocket. The logical course would be to pursue both policies until they meet in the middle; for the State to pay all necessary expenses, and for the law to prohibit a candidate from spending a penny of his own. This would, of course, require a tightening up of the provisions against freak candidates. But this

would not present very great difficulties; it could be achieved by requiring every candidate to be nominated by a tenth of the electors.

The other half of the task is more complex. The financial objection to a political career could be got over by increasing the standard salary, and possibly making an allowance for expenses. But it is not every Member who is, or should be, dependent on his salary for his living. The great advantage of the House of Commons has always been that it combined a nucleus of full-time politicians with men who were leaders in other walks of life, and it would be ruinous to turn it into a purely professional assembly. The solution would seem to be to pay according to attendance at meetings either of the House or of its committees. The professional could then make a living, and the part-timer could combine two professions without subsidising either one by the other.

Even so, however, the able and busy man will not try to enter the House unless the work he would find to do there were interesting. At present it consumes a great deal of time, but most of it is deadly dull. The Select Committee on National Expenditure, and its sub-committees, provide an example of a way in which members could use

The Book Case

THE supporters of the claim of the book trade for more paper are like Midshipman Easy: they display too much zeal. Undoubtedly, they have a good case. In peacetime, the problem of publishers is to sell books; now it is to produce books at all. It is easy to understand the bewilderment of the publisher who, having conscientiously served the community for many years, as middleman for genius and handmaiden of progress, now finds himself subject to restrictions which cut his business down to a minimum. Printing and publishing have suffered severely since the war started from the shortage of paper and skilled labour, and from the requisitioning or bombing of printing and bookbinding works. The claim that the book trade is "an integral part of the mental and spiritual life of the nation" is incontestable—if for "the book trade" is read simply "books." Where the spokesmen of the trade err, publishers and authors, is in alleging that the wartime restrictions under which they labour are merely due to a Philistinism which despises books; their cause is not helped but hindered by acrimonious attacks on "the average Englishman's distrust of the intellect."

It is on these economic grounds that the latest claims for allocating scarce supplies of labour, plant, materials and fuel between various claimants; and, in that sense, simply because these resources are scarce, the book trade is "just another industry." Its spokesmen can claim, probably with good reason, that its requirements are not set high enough on the list of national priorities. They are entitled to suggest in addition, like the spokesmen of any other industry, that the economic decisions taken by the authorities may be mistaken. But they must nevertheless realise that more paper, more workmen, more machinery, or more petrol for books must mean less of these, or less shipping space, for other things. They should not ignore the hard fact that, in wartime, a course which is admittedly undesirable may still be inevitable.

It is on these economic grounds that the latest claims for a larger allocation of paper, the reservation of specialised labour, and an extra petrol ration for the delivery of books must be examined. Book publishers heartily dislike being compared with the producers of other commodities; but the comparison is a matter of fact, not of argument. Like other producers, they are suffering from the restrictions which wartime necessity imposes. The only question is whether they have a better case for relief, in terms of the supplies available, than their comrades in distress. Unfortunately, every commodity they use is one of which the nation finds itself particularly short. For instance, Mr. Stanley Unwin, who tends to speak for the trade, is asking for an extra 2,000 tons of paper a quarter; and he says

their special knowledge, acquire experience of administration, and influence policy, without interfering with the Cabinet's responsibility. If every Member were appointed to at least one such Committee, and as many more as he could find time and inclination to attend, the work of a Member of Parliament would compete in interest and in opportunity for service with that of any other profession.

These suggestions are not, of course, a code of Parliamentary reform. They are intended only to illustrate the thesis that an effort must be made to raise the personal calibre of Parliament if democratic government is to be reinvigorated. It is not the English Constitution that has been found wanting in the last ten or twenty years. The blame belongs to Englishmen who have taken no proper pride in their own English institutions, and have left Parliament to the jobbers and the hacks. This war has been dramatised as a struggle between democratic and totalitarian systems; and it is as important for England now, as it was for the United States eighty years ago, that "this nation, under God, shall have a new birth of freedom." And this will not be until both the best men and the best Ministers are to be found in Parliament.

that "even this small tonnage could be manufactured from home-produced material, so that no question of shipping space is involved." But it must be obvious that the only way of giving more paper to the book trade is to redistribute the present allocations of paper between all the various users of paper. Rightly, Mr. Unwin may claim that the use of paper by Government departments is less desirable than the use of paper for books; that does not make it any less necessary. If an extra 2,000 tons of home-produced paper is to go to the book trade, either 2,000 tons must be deducted from the rations of other users or another 2,000 tons must be imported. It is a question of simple arithmetic, and not primarily of cultural values. Books compete in their demand for paper, not only with Government departments, business houses, and with the newspaper and periodical press, but also with the war industries. Paper is used for charge cases and other munitions, and for food containers; and, although none of the "munitions" uses has the powerful claim, in the context of civilised society, that books have, most of them must unfortunately have a better claim in wartime.

There is one peculiar fact about books which tends to be overlooked in these discussions. Mr. Unwin himself recently admitted it in his "complaint" that people in this country beg, borrow or steal books, but do not buy them. Actually, it is a very fortunate thing that books have this capacity to be "consumed" by many more than one consumer. They are durable goods as well as consumption goods. One copy of a book read by ten different readers is equivalent to the production of ten copies of the same book if each copy is only read by one person; and one obvious easement of the present stringency would be to adopt every possible means of increasing what might be called "the velocity of circulation" of books. For each existing book to be read by more people may be only an interim and unsatisfactory solution; but it is a solution of the cultural and educational difficulty to which the authors and publishers themselves so earnestly draw attention. It would be only logical if those who base their arguments so strongly on the unique position of books in the life of the community were to adopt the slogan "Don't buy books, borrow them."

It is at this point, however, that the fact emerges that it is not so much a case for books that is being made as a case for the book trade. The publishers are, among business men, high-minded and conscientious people; but they are not in the business for their health. They must sell their wares—which is an additional reason for treating this question on strictly economic, rather than more abstruse, lines. And when all has been said about the

January 24, 1942

lisingenuous way in which the case for more books has been put before the public, it is still probable that the core of the case itself is sound. Its spokesmen make three points in particular. First, they say that wartime conditions have increased the demand for books, just as it has done for tobacco and alcoholic liquor—in both of which cases the extra demand has been very largely satisfied. Secondly, they say that, because of this increased demand and the diminished supply, there is an actual shortage of books. Thirdly, they say, quoting the present Minister of Information, that “books are our best export.” At the least, these are plain reasons why every request for relief by the book trade should be examined carefully and sympathetically—bearing in mind always, however, that it may be physically impossible to do anything about even the most justifiable requests. To take only one or two examples: the fact that over 400 volumes of the 970 in the Everyman's Library—which Mr. Priestley declares has probably done more for education than some universities—cannot be supplied is unfortunate, though it does not prove that extra paper and extra labour could be found for their reprinting; it is also unfortunate that many of the set books for school examinations are not obtainable, though this again does not prove that close co-operation between examiners and publishers could not ease the stringency somewhat.

In a number of ways the book trade could probably strengthen its case and its position at one and the same time by more energetic measures of self-help. Publishers are asking the Government to discriminate in the distribution of paper between its different users; and they might possibly do more discriminating themselves in the allocation of their ration. The table opposite shows the decline which has taken place in different categories of books published since 1937. But the numbers given in this table are not numbers of books but numbers of “titles”; they give no indication of the way in which paper, in fact, is being distributed between one kind of publication and another. Obviously one “title” under the heading “fiction” will consume vastly more paper than one title under the heading “translations” or “editions de luxe.” In actual fact, such discrimination as has been exercised in the book trade since the outbreak of the war has been in favour of fiction and against educational books. Until publishers have reduced the more ephemeral and less worthy of their wares to an irreducible minimum, their

claim for more preferential treatment by the Government is to that extent weakened. Having done this, they could with more justification point out that the hungry sheep look up and are not fed. At present, there are complaints from the trade about certain new restrictions, involving severe limitations of the size of type and margins and weight of paper, “which will sadly limit the prestige of British books abroad.” No one will deny that the debasement of book production and fine printing is a pity from almost every point of view, but, in wartime, all luxuries must go. The art of producing fine books will not atrophy with non-use.

Nor, indeed, will the art of writing. It has already been pointed out in this article that the peculiarity of books is that they last. Too often the trade's case for more books turns out to be an argument for more new books. Now is surely the time for the nation to live primarily upon its capital stock of books, upon its classics and its libraries; and it is with the request for more paper to make up destroyed supplies of these that most sympathy must be felt. In the case of new books, the demand is most cogent when it is for export; and even then it can only carry weight if it is the Government's view that such exports are necessary for the prosecution of the war effort. War is hard times; books can and do make the bleak house less bleak. Every support should be given to every reasonable demand of the book trade which can be physically satisfied; no support at all can be given to special pleading which confuses the issue. With discrimination in their arguments, the publishers may win a great measure of support and some success; without discrimination, they merely stand in their own light.

NOTES OF THE WEEK

Malaya: No Change

Although General McArthur's forces are effectively resisting renewed Japanese attacks on their lines in Luzon and the situation in Borneo and the Celebes has deteriorated, the real centre of the battle is still Malaya, and here, with Japanese armies encroaching daily upon the outer defences of Singapore, the crisis has come. The fighting is developing ominously along the west coast of the state of Johore, where the British are beginning to pay for their folly in abandoning Penang inadequately “scorched” to the enemy. Japanese guerillas, taking advantage of the shallow waters and swampy coastline, and using their own barges and a number of light craft taken from the harbours of Penang, are landing by night and establishing pockets of activity behind the main British line. If this infiltration should develop unchecked, the position in the centre of the British line round Gemas would be rendered untenable and the Japanese already claim the cutting off of British forces behind Maur. Such a setback would be doubly disastrous, for the Australian forces' resistance at Gemas and Maur has been singularly successful—in contrast to the long chronicle of unmitigated defeat. With the ring closing in on Singapore, the British defences must presumably be improving. The lines of communication are being reduced to almost nil and reinforcements—in men and materials—mainland can be saved. The question is now whether Singapore is a Hongkong or a Tobruk. Meanwhile to the north the Japanese, aided by Siamese forces, have launched new attacks across the Burmese frontiers. Tavoy, a port

on the Indian Ocean at the mouth of the Tavoy river, has fallen and Siamese troops are active further north at Myawaddi, about 150 miles due east of Rangoon. Burma has been reinforced, it is true, but the treachery of U Saw cannot but give rise to uncomfortable questionings about the reliability of the administration and of the population. The trouble is not that the people generally prefer Japanese to British overlordship; it is that nothing has been done to weld them into any community of interests, with the British raj.

The Fall of Mozhaik

The German rearguard action at Mozhaik is at an end. On January 19th the Russians completed the recapture of the town and the Germans are withdrawing towards Vyazma on the road to Smolensk. The crucial stage in the winter campaign is likely to open now. The resistance at Mozhaik was clearly a delaying action to enable the Germans to consolidate defensive positions further west, pre-secured the outposts and their assault on the main line must begin. There is news of great activity the length of the front from the Valdai Hills to Kharkov; heavy artillery is being brought up and it may be that the Russians are planning their first offensive on a grand scale. Some observers claim that with the fall of Mozhaik Hitler's “winter line” is already pierced. But since no one has any exact information on the whereabouts of this winter line, or indeed about its

January 24, 1942

nature, depth and extent, it is safer to assume that “the road to Smolensk” is no more open than was “the road to Moscow” in July and that the Russians have weeks of tough fighting ahead. The climax of the Russian winter is approaching with frosts below 50 degrees night after night. The Germans are making no secret of the appalling sufferings of the men at the front, and Russian successes are being used—it is impossible to say with what effect—to spur the German people on to greater effort and greater sacrifice. For an almost brutal frankness in reporting hardships and dangers, the German official reports are unique of their kind—a fact that is oddly at variance with the current belief in the German people's inability to face reverses. The explanation lies, perhaps, in the *Sturm und Drang* atmosphere of the whole Nazi experiment. The men on whom Hitler relies to sustain morale at the front and to discipline civilian morale at home have been trained in a tough school. They are ideologically prepared in a way in which only the Bolsheviks were towards the end of the last war. It is an interesting sidelight on their mentality that the Russians are reported to be making very little use of prisoners for political indoctrination. Eight years of totalitarianism have produced the fanatic on the one hand and the intellectually numbed on the other. The former type shepherds and bullies the latter—it may be even through the inferno of a Russian winter.

Hitler's Generals

The death of Field Marshal von Reichenau—from a stroke while returning from the front—must be a serious embarrassment to Hitler, coming as it does so soon after the dismissal of von Brauchitsch and the resulting shake-up in the German High Command. It is reported that von Reichenau was on his way back to Berlin to take over supreme command under Hitler. He was one of the first generals in the pre-Hitler *Reichswehr* to see the possibilities in the Nazi movement, and since his adherence to the Nazi cause his career has been one of steady advancement. He fought brilliantly in Poland and Flanders and was responsible for the capture of Kiev, Poltava and Kharkov. It is thus extremely unlikely that his recall was connected with dismissal or disgrace. Since von Brauchitsch went, all the chief commands in Russia have been in a somewhat fluid state. Von Leeb in the Leningrad sector is safe, for he has his entrenched positions and is fighting a defensive campaign. But von Bock is reported sick after failing before Moscow; von Rundstedt failed before Rostov, and Guderian, the tank expert, has “congestion of the lungs.” If von Reichenau was intended for supreme command under Hitler, who will the Führer fall back on now? It is against this background of military failure and dismissal that the general's fit of apoplexy must be read rather than in a Phillips Oppenheim atmosphere of murder, suicide and fierce internecine feuds. The whole conception of an Army and a Party divided against each other is unlikely in the light of Germany's recent history. Hitler has destroyed the hegemony of the German Army as completely as he has destroyed the old hegemony of the Prussian State. After the extreme *Gleichschaltung* of the last eight years, Army and Party stand and fall together. If inspired reports, probably of Axis provenance, endeavour to give the illusion of division, it is for reasons best known to Goebbels himself. The only important division to which the reports are relevant is a division in *Allied* opinion over the question of “peace with the generals.”

Westminster Calling

Not unnaturally, Mr Churchill found when he was away that the people of the United States and Canada would welcome the chance to hear his most important speeches to the House of Commons. Too often the Prime Minister is set the wearisome task of broadcasting in the evening a speech he has delivered earlier in the day in Parliament. He proposed on Tuesday that, in certain cases, a record should be made of the earlier version, which could then be broadcast at home and overseas at the most appropriate hours. His suggestion was that a start should be made experimentally, with his statement in the three-days debate on the war situation; and he made it plain that it would be for the House to decide, separately in every instance, whether a record should be made and how it should be used. The mechanical advantages of this proposal are so

large and so obvious that the Press and the public were somewhat surprised when, in deference to Parliament's doubt about it, Mr Churchill withdrew his motion. But the peculiar privileges of Parliament and the rights of Parliamentary minorities are the pediments of the arch which, as he has only recently admitted, is the main support of Mr Churchill himself. The main objection of Members was that, by this procedure, too much weight would be given to the views of the Government and too little to those of its critics—as tends to happen already, for lack of space or time, in the Press and on the wireless. This objection applies especially to the forthcoming war debate, which will be, and should be, a highly critical and controversial occasion. Parliament is, first and foremost, a debating chamber, not a rostrum; the Government's responsibility to the people is to their representatives in Parliament. Mr Churchill himself admitted that broadcasting would not be appropriate “during a period of party government”; and it must be admitted that, although Mr Churchill now leads a National Government with national backing, the stuff of Parliament is still the questioning, the criticism, the free debate and unfettered argument of party days.

Indian Front Line

It is Mr Churchill's view, voiced on his return to the House of Commons, that “the raising of far-reaching Indian constitutional issues at a time when the enemy was near the gates of India” would be disadvantageous. Undoubtedly, this is no time for reconstruction or experiments—though it is perhaps unfortunate that the Prime Minister's first and eagerly awaited statement on the Indian problem should have had to be a *non possumus*. On the other hand, the “far-reaching issues” are already raised; there are no sleeping dogs to let lie. It was a moderate member of Congress, Mr Rajagopalachari, reputedly the unsuccessful advocate of participation in wartime government by coalitions at the recent meeting of the Working Committee, who said a week ago:—

Declare India and Burma free and the battle line will be there automatically. If Britain must keep India and Burma as dependencies, then a price must be paid, namely peace at any price with Japan.

In Burma, U Saw, the ex-Prime Minister, who was arrested last week, apparently carried this attitude to its logical extreme—and beyond. When he was refused Dominion Status in London, he turned to Tokyo. It would be scare-mongering to suggest that Indian Nationalism is also on the point of becoming a fifth column; Congress itself has only recently spoken strongly against Japanese aggression. It would be irresponsible, too, to pretend that India or Burma could be declared “free” at this moment, in any sense that would satisfy the Nationalist politicians. But there is food for more than thought in Mr Rajagopalachari's further remark that “there is no alternative for wise statesmanship and correct strategy but to make the people of the land responsible for their own defence.” In Malaya a grave omission was the exclusion of the Malays and Chinese from responsibility for the safety of the community; and there

Export
and
Import
Banking
on

SKANDINAVISKA BANKEN

are signs of the same trouble in Burma. In India, it is true, a great army has been raised, and Indian troops have fought magnificently in two continents. But it is upon their exclusion from political responsibility that the Indian politicians have taken their stand. It may be argued that, to a point, they have chosen to be excluded; but it is precisely because the enemy is near the gates of India that no effort should be spared to find a way out of the deadlock.

* * *

Self-Determination

In more places than India, the entry of Japan and America into the war has had a double and opposed effect. On the one hand, it has increased solidarity and the support for the war; on the other, it has emphasised the determination of the opposition to oppose. Even neutral Eire, where the circumstances are quite different from the rest of the Empire, is a case in point; the determination of the Irish Government to remain neutral has been matched by the increased support of individual Irishmen for Britain. South Africa is another. Adopting the same line as Congress in India, that is, that the prelude to policy should be complete independence, Dr Malan moved in the Union Parliament that a "Christian Nationalist" Republic should be set up, and was beaten by 90 votes to 48. Forty-eight votes is a large fraction of the South African Parliament, and it was augmented when General Smuts' motion, approving the declaration of war against Japan, Hungary, Rumania, Bulgaria and Finland, approving the continuance of South Africa's membership of the Commonwealth of Nations and disapproving the raising of fundamental constitutional issues in wartime, was carried by 81 votes to 56—a majority of 25. At the beginning of every session, the Opposition divides the Union Parliament on the major issue of the war—until now on the question of neutrality. On the outbreak of war in September, 1939, the Government's majority was 13; in January, 1940, it was 22; in August, 1940, it was 17; now it is 25. This increase does not start to measure the increase in South African support, in deed and word, for the war; but the Independents are a very real factor, here as elsewhere in the Empire. For the future of the Government, these figures—and the recent arrests of South African policemen for subversive acts—are portents, and symbols of problems to be solved.

* * *

Canadian Conscription

It is reported without any detail that the Canadian Cabinet has decided to hold a referendum of the Canadian people to decide whether or not conscription should be introduced. There is obviously a plain anomaly in the fact that, while Britain and the United States both have conscription for military service, Canada has not. On the other hand, it is important to remember that the Dominion both in terms of manpower and of war output, is contributing by voluntary means a proportion of its resources which compares favourably with the contribution of any other partner in the Grand Alliance. Conscription is a difficulty in Canada, not because there is any greater reluctance there than in any other particular nation to take a full part in the war effort, but because there are special reasons in the history of Canadian politics which make conscription a controversial issue. The National Resources Mobilisation Act of June, 1940, was a limited measure of conscription; it covered all manpower and all property, with the exception that no man could be sent outside the Dominion for military duties except with his consent. Canada is a federal country; and among the French minority of the Dominion

there exists a reluctance, usual among minorities, to be compulsorily driven by majority decisions. Conscription broke the Canadian Liberal Party in 1917; and the opposition to conscription is still strongest among French Canadian Liberals. Until now, there has been little pressing need to apply compulsion to military service. Voluntary enlistments in the army total something like 250,000; and some 10,000 are in uniform under the National Resources Mobilisation Act. But more drastic measures are probably necessary now. Canada's army now consists of six divisions; and the problem is whether the Dominion can support a large overseas army out of this formation without complete conscription. It is, of course, possible for the Government to use its compulsory powers under the existing Act more stringently; but the fact remains that, with the area of the war vastly extended now and in the near future, more men will be needed for service overseas. It is presumably for these reasons if, after long and difficult discussion, the Cabinet has decided to appeal to the electorate directly for a mandate to use the willingness of Canadian manpower in the most effective way. It is doubtful whether this step could do anything but strengthen the powers of the King Government. The pitfall which confronts any government of Canada at the present time is not the accusation of acting too drastically, but the suspicion of failure to mobilise the nation's resources in the most apt and most rapid way possible.

A Grave Blunder

Mr Benjamin Greene is a Quaker; he was once a member of the Labour party; and is reported to have had some connection later with another political group. He was interested in German refugees, but was an appeaser and supported the Chamberlain policy at Munich. In May, 1940, he was detained under Regulation 18B and here an almost unbelievable story begins. In an affidavit by the then Home Secretary, charges were embodied that Mr Greene had communicated since the outbreak of war with people in Germany, with helping men whom he believed to be German agents to evade arrest, and desiring the establishment of a Nazi regime in Britain with the help of German armed forces. Under the weight of these tremendous accusations, sworn to by a Secretary of State, Mr Greene has been in prison for nineteen months and would probably be there still but for the detection of a careless mistake made in 1940 by the Home Secretary. What happened was this: two forms had to be served by the Home Secretary, one for Mr Greene's detention and another for his information. In the first form the Home Secretary quoted one part of 18B and specified hostile association, but in the second he cited another part—conduct prejudicial to the safety of the State. This did not make much difference, but in an application for Habeas Corpus it was emphasised by counsel, and Mr Justice Humphreys suggested another inquiry by the advisory committee. Mr Greene's solicitor demanded the name of the man with whom Mr Greene, according to the Home Secretary, had conspired. He was a man named K— and the solicitor found, interviewed him and obtained from him a statement that there was no truth in the charges. Someone must have gone to the police with a basinful of lies; a Home Secretary had swallowed them and regurgitated the mixture as an affidavit. By worrying the Home Office with this statement, the solicitor first secured Mr Greene's release and then obtained an official withdrawal of the three chief allegations against him. The significant things in this episode are (1) that, if the former Home Secretary had not carelessly confused conduct prejudicial with hostile association, Mr Greene would probably be in prison to-day; (2) that, if Mr Greene had not applied for Habeas Corpus, the carelessness and inaccuracy of the Home Secretary would not have been made public; (3) that if the decision to hold or release had lain with an independent tribunal the worthlessness of the evidence concerning K— would have been exposed not in the November debate in the House of Commons, the must give each case his personal attention and not leave it to departmental routine. To what extent did the former Home Secretary give this case his personal attention before the arrest? Who saw the informer? Did the Home Secretary see the witness, question him and assess his credibility? If he conned himself to documents, by whom had they been prepared? Was it somebody in the

Home Office or someone associated with the police? Are there others still in prison who have not enjoyed Mr Greene's luck, but are nevertheless as innocent as he? The case against an independent tribunal—a case which *The Economist* has hitherto accepted—rests on the assertion that as much care is taken behind the scenes to see that justice is done as could be taken in a court of law.

Argentina Decides

At the end of the first week's deliberations, the Foreign Ministers of the twenty-one nations represented at the Rio Conference succeeded in reaching a decision on the main issue. On the ill-important question of whether the American continent as a whole should sever diplomatic, commercial and financial relations with the Axis powers, Argentina, and possibly Chile, had hesitated to adopt a pre-belligerent attitude. A definite decision on the issue, which was formalised as a motion for severing relations, introduced by Mexico, Venezuela and Colombia, was required by the week-end. If Argentina had opposed the motion it appears she would have had to do so in isolation. The Acting President, Senor Ramon Castillo, had let it be known that he was willing to impose certain controls on financial dealings and communications with the Axis powers and possibly to permit the use of the navy for convoy duties. But he apparently remained unwilling to commit Argentina to co-operate with her neighbours in the anti-Axis front: No doubt Axis circles were too shrewd to interpret a possible abstention as a diplomatic victory. Nationalism, as opposed to national socialism, is sufficiently well developed in Argentina to prohibit concurrence in United States leadership except under duress. This has been injudiciously supplied by the Axis powers. The threat to declare war against nations supporting the motion could in itself carry little weight. The Axis declares, or rather wages, war when conditions are favourable. If forced into declaring war by the motion of the Rio Conference, there is ground for believing that the occasion will not be of Axis chosing. An agreeable by-product of the Conference is the reported settlement of the Ecuador-Peru frontier dispute.

The Rights of Women

The question whether women may enter the consular and diplomatic services must await the end of the war. Mr Eden has told a women's deputation that nothing can be done now because recruitment has been suspended and will not be resumed until peacetime. Obviously, no public service should be confined to men, or to any other section of the community; women should be admitted where suitable. But those who sponsor the admission of women retain the old feminist habit of lop-sided thinking—possibly because they are mostly women MPs who tend, quite irrationally, to be treated as representatives of women instead of as representative, like every other MP, of their respective constituencies. It is not as women that women have a right to enter the consular and diplomatic services but, like every other candidate, as potentially good consuls and diplomats. The national interest requires the further emancipation of women, not because women consuls and diplomats—or MPs or higher civil servants—are specially needed, but because it is desirable that the field of choice should be widened as much as possible, and undesirable that any class of citizen should be excluded by irrelevant considerations. The women's spokesmen tend to stand too much upon their rights as women and too little on their rights as citizens; and in their understandable assaults on the attitude that relegates women exclusively to the home, they are in some danger of going to the other extreme and suggesting that it is a higher mission to be a consul or a diplomat than it is to be a wife and mother, which is just as false doctrine.

The New Army

It has been a national misfortune that the ATS was allowed to fall so low in the public's, and its own, esteem as it had done until recently. Even now, too much attention is being paid, by those who are very properly trying to restore the high status that this essential service ought to have, to points which are really distractions and mostly irrelevant. The people who so frequently and so vociferously deny charges of immorality in the ATS, for instance,

might remember that the adage *qui s'excuse, s'accuse* has deep roots in popular psychology. It is accepted by all sensible people that the ATS are no more immoral than the women of the nation from whom they are drawn, and that the disciplined life of the Army almost certainly makes them less so. The defenders of the ATS would do well to look less towards the scurrilous gossips outside the Army and more towards the women's working and living conditions within. Most of all, the tone of any force is set by its conditions. When Mr Bevin and Captain Margesson inform anxious questioners in the House that energetic steps are being taken to improve conditions in the ATS, they are not oversteating the truth. Adequate standards of accommodation have been laid down and are being increasingly applied. What is too little allowed for, however, is the recent obstructive attitude of men officers, in cases where women and men are working and living in close proximity, which impedes the translation of these standards into actual practice. The higher command of the Army is conscious of the need for more and more women in the Army. Officers of lower rank and NCO's are often not so convinced; some of them still resent the intrusion, and some are still bewildered by it; others are not exactly eager to be released by the women for more active service; few are ready to put themselves out to secure the material conditions for the women that are laid down and which, in very many cases now, can only be secured through them; and a small number are outspokenly hostile to the whole business. In a number of units, the women officers themselves, who vary very much in quality, could do more than they are doing to press the claims, under Army Orders, of their troops. But the solution really lies in the hands of the Secretary of State for War and the generals. All that is needed is a firm instruction through commanders to all officers, restating categorically that the most rapid recruitment of women is in the interests of the nation and the exigencies of the Service, and making it plain that any opposition or obstruction, active or passive, to the relevant orders and instructions is a grave offence against discipline.

The Middlemen

The new Price Controlled Goods (Restriction of Resale) Order, issued by the Board of Trade, seeks to outlaw yet one more species of racketeer. In the past, it has been possible for goods, whose wholesale price and profit margins were controlled, to change hands any number of times, with a consequent increase in the cost to the consumer. In future, unless a special licence is secured, the middleman may buy goods only from an importer or from the manufacturer who has in fact manufactured the goods. Thus, the intermediary is, in fact, debarred from selling the goods except by retail, and only one middleman's margin can be added to the wholesale price. It is still possible, of course, for goods to change hands any number of times, but the price is not to be raised to the public. This measure was obviously necessary to protect the public against evasion of price control. The only doubt is whether it goes far enough. Its efficacy will depend entirely on whether the grant of special licences is sufficiently strictly supervised. The problem could be solved more effectively by an extension in the control of retail prices themselves, though the obvious difficulty here is the heterogeneous nature of many goods retailed by the same name. Outside the black market, profiteering in food has largely been eliminated. In the sale of furniture, household goods of all sorts, wines and spirits and flowers, it has scarcely been checked. In the case of luxury goods,

of course, there is no material deprivation, only a threat to the general price level; but, luxuries or necessities, it is not tolerable that it should still be possible for individuals to feather their nests because the country is at war.

Concentration of Schools

The amalgamation of Haileybury College and the Imperial Service College, coming on top of last year's Public and Other Schools (War Conditions) Act, which authorised the alienation of endowments, is further evidence of the growing financial difficulties of the public schools. Like civilian industry, these schools have found themselves over-capitalised on account of their restricted turnover; but, unlike industry, their difficulties are not due to the war, though they have certainly been accentuated by it. They are the long-term result of a falling birth-rate and lower incomes. In these circumstances, the only long-term solution for the public schools—in the absence of any far-reaching reconstruction of education in this country—is to attract more children by considerably reducing fees, as well as by lowering costs by amalgamation. Unfortunately, the amalgamation made for Haileybury and the Imperial Service College fix the fees for the joint school at the higher level. At present, according to Paton's List of Schools, the fees at Haileybury for boys of non-Service families are £150 a year and £109 a year for sons of clergymen—there are, of course, a number of scholarships up to £100 a year—and for the Imperial Service College they are £115 for direct descendants of Service officers and £135 for others. After the amalgamation, the fees will be the Haileybury ones, though boys at present at the Imperial Service College will continue to pay their present charges, and its endowments will be used, with the consent of the Board of Education, to found a limited number of bursaries for sons of regular officers and Civil servants. Thus the scheme aims at restricting entrance to the new school to the same class of boys and at the same price, ignoring the fact both that the children of this class are slowly becoming fewer and that the ability to pay fees on this scale is diminishing rapidly. In these respects, an amalgamation such as this helps neither the wider cause of educational reform nor, in the long run, the public schools themselves.

Southern Rhodesia and the African

It was reported last week that Mr J. H. Smit, Minister of Finance and Commerce in the Southern Rhodesian Government, had resigned, because, according to the cabled information, the Government was becoming too Left Wing. Party labels certainly have different meanings overseas—for instance, a so-called "Labour Party" was formed last summer in Northern Rhodesia, which is restricted in membership to Europeans and aims at the withdrawal of the official policy that native interests are paramount. But it is difficult to see how the most extreme dissident from Sir Godfrey Huggins's policy could accuse him of Left-mindedness. In a country like Southern Rhodesia or South Africa, where a minority of white settlers rule over many times their number of coloured people, the political description—Right or Left—can only have a useful meaning when it refers to the policy of the Government towards the natives. Judged by this standard, the policy of Sir Godfrey Huggins is undoubtedly Right Wing, though he himself appears to believe quite honestly that he is taking a Centre attitude. Thus, in the debate on the Land Apportionment Bill last June, he said that it would appeal to moderate opinion, that it would not please those who believed the African was created to work for them at a small wage or those "living abroad" who thought there were no differences between black and white. Sir Godfrey Huggins has declared himself a believer in "parallel development"—in not contaminated by the African, until such time as the counterpart. Expressed in economic terms, this means restricting native farming to reserves; fixing one price for native-grown maize and another, higher, one for maize grown by Europeans; and in urban and industrial districts, where segregation is impossible, keeping the native, as the employee of the white man, in a state of permanent inferiority. In certain respects, it is true, the native under Southern Rhodesian rule is better off than his fellow in the neighbouring British colonies. In recent years, the Govern-

ment of Sir Godfrey Huggins has addressed itself energetically to the provision of social services for the natives and to teaching them better methods of agriculture. But the spirit behind its native policy is far behind that followed in the British colonies. Sir Godfrey Huggins must travel a long way further to the Left before his aim of amalgamating the two Rhodesias and Nyasaland can be achieved.

The Blockade Again

There is strong pressure on the Government from many quarters to relax the blockade in favour of Greece. Powerful emotional arguments can, of course, be brought forward to support the demand that food be sent. The Greeks are facing starvation. Their physical sufferings in this respect are greater than those of any other European nation. Their claim upon Allied support is perhaps greater too, for they fought the good fight throughout a whole winter, and today thousands of Greek merchant sailors are carrying on the struggle on the high seas, bringing food to the Allies—but not to their own countrymen. The British Government has already done a certain amount to relieve the distress. Food supplies, in part financed by British and American charity, have been shipped from Turkey to Greece. Now, however, it is a question of using Allied food stocks and Allied shipping directly to feed the people in German-occupied Greece. It is essential that the British public should realise that if, as is likely, the decision to relax the blockade is taken, the step represents a complete break with the principles of economic warfare so far adhered to in this war, that the arguments are emotional, not rational, and that the relaxation will create a most dangerous precedent. The principle is after all obvious. It is that an occupying Power is responsible for the feeding of the country it occupies. No one in his senses can, at this stage of the war, accept the view that the British blockade, not the German occupation, is responsible for the famine in Greece. It is equally fantastic to suppose that the Germans could not feed Greece if they would. Only recently an Italian foodship was seized by the Germans in the Piræus itself; Greek labourers working on German public works are given adequate food; and the total provisioning of Greece with grain would require a monthly outlay of only one-seventieth of Germany's known reserves. The Germans are merely trying out a hideously cruel form of blackmail, which, if successful, could be equally well adapted to Norway, the Low Countries, or France. One would have thought that all this ground had been fully covered and the principles established a year ago, when Mr Hoover had his schemes for feeding Europe. But some people apparently will never learn.

Moscrop v LPTB

An important case affecting trade union rights came before the House of Lords recently. One of the terms of the settlement of the London bus strike in 1937 was that, in appeals by an employee of London Transport in disciplinary matters, the employee could be accompanied or represented by an official of the Transport and General Workers' Union. The union would not, however, allow their official to appear for anyone who was not one of its members. Mr Moscrop, a bus driver, left that particular union at the end of 1937, and became a member of the new National Passenger Workers' Union in 1938. In 1939, he was reported for failing to pick up a passenger at a certain point, his plea being that it would have been dangerous to stop there. He was cautioned, and his first appeal was dismissed. He then abandoned his appeal to the disciplinary board, because the LPTB would not allow him to be represented by an official of his—the National Passenger Workers'—union, and accordingly brought an action challenging this refusal. His claim rested upon section 6(1) of the Trade Disputes and Trade Unions Act, which makes it illegal for a public authority to impose any condition upon its employees whereby some, whether members of a trade union or not, are placed at a disadvantage compared with others. In the Divisional Court, Mr Justice Morton held that the agreement come to with the Transport Union did not impose a condition within the meaning of this section of the Trade Disputes Act; but the Court of Appeal decided in favour of Mr Moscrop. The House of Lords, however, allowed Lord Maugham said that Mr Moscrop was not contending for any rights for himself; he was merely contending for equality compared with members of the Transport Union

and was seeking to obtain it, by a declaration that a particular clause of the 1937 agreement between that union and LPTB was void. Lord Maugham could not, however, agree that section 6(1) of the Trade Disputes Act made the agreement void. In his view, it prohibited the imposition of a condition of a prescribed kind by a public authority on its employees; it did not prohibit employees, or a trade union on their behalf, if it were strong enough, from imposing conditions on the authority. The agreement with the Transport Union conferred a privilege on members of that union, but it left the rights of non-members exactly as they were, and there was no question of conferring certain rights on one class of employees and lesser rights on another. Moreover, on the wider issue of Mr Moscrop's action, Lord Maugham could not agree that it was rightly brought. The plaintiff was claiming no private right, but was seeking to deprive others of a right which did not interfere with his own; nor had he suffered special damage from the alleged breach of section 6(1) of the Trade Disputes Act. He could not, therefore, sue "without joining the Attorney-General."

Commanders

General Wavell has gone to the Netherlands Indies to take up his South-West Pacific command. General Sir Alan Hartley replaces him as Commander-in-Chief, India; and General Auchinleck, commander in the Middle East, takes over Iraq and Iran from General Wavell's former extended command. These changes are thoroughly reasonable. On the fighting flanks of India, the two most successful British Generals of the war, Generals Wavell and Auchinleck, are in charge. But the problem of the joints and hinges remains. No sooner had General Wavell moved east than the Japanese moved west, cutting across Burma. India is unattacked, but remains the pivot of Middle and Far Eastern defence, the source of manpower and the source of materials. It is necessary to demarcate the zones of command, but it is even more needful to co-ordinate the measures of the commanders; and Imperial defence in the east will stand or fall by the concerted skill with which British, Australian, New Zealand, Indian, Chinese or American forces are brought to bear at all the threatened points in sufficient numbers—and with sufficient air and sea support.

Shorter Notes

The diplomatic reshuffle made necessary by Sir Stafford Cripps' departure from Moscow has a very satisfactory appearance. Sir Alexander Clark Kerr, an excellent ambassador to China, who maintained Britain's fundamentally friendly relations even through such awkward times as the closing of the Burma Road, takes to Moscow a great reputation, together with inside knowledge of the Chinese situation. The despatch to Chungking of Sir Horace Seymour, Under-Secretary of State superintending the Far Eastern Section, is an earnest of the importance Britain attaches to its latest ally.

The Archbishop of Canterbury has announced his resignation from the Primacy on the ground that he must make way for a younger man to meet the "great tasks of reconstruction" that lie ahead. Much speculation will be roused over the question of his successor, but to a large body of opinion, Christian and secular, the Archbishop of York, pre-eminent in the Episcopate for his energetic and practical work on the problems of reconstruction, would be an excellent choice.

Last year 915 persons were killed and 2,883 were seriously injured by accidents at coalmines, compared with 923 and 3,237 respectively in 1940.

In answer to a question in the House of Commons, the Prime Minister said that since the beginning of the war there have been 47 uncontested and 26 contested by-elections, which, with the exception of that for Cambridge University, have not changed the numerical strength of the

different parties since September, 1939. (At the by-election for Cambridge University in February, 1940, Dr A. V. Hill, Independent Conservative, was returned in the place of the late Sir John Withers, Unionist.)

The following table gives the number of civilian casualties in air raids since September, 1940:—

	Killed	Injured and Detained in Hospital	Total Serious Casualties
Total Sept.-Dec., 1940.....	21,669	30,556	52,225
1941:—			
January.....	1,550	2,021	3,571
February.....	793	1,068	1,861
March.....	4,298	4,794	9,092
April.....	6,131	6,900	13,031
May.....	5,520	5,207	10,727
June.....	406	461	867
July.....	501	447	948
August.....	169	136	305
September.....	217	269	486
October.....	262	361	623
November.....	89	155	244
December.....	34	55	89
Totals to date.....	41,639	52,430	94,069

Of those killed in December, 13 were men, 14 were women and 7 were children under 16.

Important evidence of the growing scope of the United Kingdom Commercial Corporation, and of the leading role played by British constructional engineering in Turkey, is provided by the conclusion of fresh contracts with the Turkish Ministry of Public Works last week. The UKCC is to build a jetty and carry out other improvement on the harbour of Alexandretta and to complete work on the jetty at Mersina.

AMERICAN SURVEY

Congress and the War

(By a Correspondent)

THE United States is at war; her position as a Pacific power is at stake; her long immunity from danger at home, based on geographical isolation and on the weakness of her neighbours, is in danger. And all of the lower and one-third of the upper house of Congress will be elected on the first Tuesday after the first Monday in November of this year, whether the Axis star is waning or waxing, whether the ABCD powers are still battling in retreat or carrying the fight to the enemy. Nearly five hundred politicians will have their careers at stake; men who have made a really first-hand study of what the American public thinks it needs will face another testing-time more serious than any Gallup poll. And since members of the Congress of the United States are men, not angels, the temptation to see the national needs, the national dangers, in terms not incompatible with the local political necessities of Buncombe County will assail the candidates. No doubt, at this moment, patriotic zeal, patriotic anger and respect for a suddenly awakened public opinion are helping the men who must run in November to forget the imminence of the ordeal; but as the state of war becomes familiar, as genuine grounds for criticism of the Administration develop, as the public memory grows blurred, many politicians will turn again to the business of mending their fences.

Congress and Foreign Policy

There are in the American political situation some possibilities of danger. In Britain, the Government in office was forced by events to take over the foreign policy of the Opposition. This made for national unity; and the stupid refusal of the Labour Party to see the necessity of conscription made it easier for the Chamberlainites to sleep without too many nightmare recollections of what was said between Munich and Prague by the politicians who had slumbered on the nicest seats that money could buy. But there is no such easy balm for the majority of the American opposition party. They may now be silenced by the event. A few of the more obstinate may hint or openly state that it is not the fault of Hitler or Admiral Yamamoto, but of "that man in the White House." But if Mr Roosevelt was right, how right he was and how wrong they were. And if he was not right, what courage it will need to tell the old old story of the God-given immunity of the United States to a people first stunned and then infuriated by the news from Pearl Harbour. For, since 1939 and before 1939, the majority of the Republican party in both Houses of Congress has opposed Mr Roosevelt's foreign policy, has helped powerfully to create the illusion that there was no danger, no crisis, and has done so with an effectiveness that no number of blundering Bundists or Coughlinite conspirators could have remotely approached. Not all Republicans have been equally blind. In Congress, men like Senator Austin and Representative Wadsworth have not put party considerations or parochial interests before the general welfare; but it is a just verdict to say that either the Republican party has had no foreign policy at all or it has had a policy which, for blindness, need concede no superiority to that of the majority of the British Press and Parliament in the days of "peace in our time."

It is true that, outside Congress, Republican opinion has not been so pugilist as on Capitol Hill. The way in which the candidacy of Mr Wendell Willkie was forced on the party in the summer of 1940, the courageous line taken by such young Republican leaders as Governor Stassen of Minnesota; the rôle of such great Republican papers as the *New York Herald Tribune*, absolve the party as a whole from the charge of unintentionally aiding the enemies of the Republic. It is not, however, the Republican party as a whole that will be tested, and therefore tempted, in November, but the Republican Senators

and Congressmen. And most of those Senators and Congressmen have good reason for wishing that the electors should not think back, but look forward. They must keep off the great issues or give general support to the President—and run on local issues, capitalising local discontent, promising general panaceas. The President, like Mr Churchill, can only give blood, sweat and tears. Candidates for office with no direct administrative responsibility, elected to a body that is designed to control (in the French sense), not to support, the executive, will be tempted to modify general acceptance of the grim truth with nice little concessions, not very important, not very dangerous taken separately, but amounting in the aggregate to at least a hand-brake put on the American motor engine.

It would be false to make this danger a mere matter of party politics. There is a large Democratic majority in each house. Yet Congress refused to follow the lead of the leader of the dominant party in the matter of the fortification of Guam, in the pre-war amendment of the Neutrality Act, and only by one vote kept in being the United States conscript army which is now in numbers, training and organisation so far behind what is required for total war. Just as it should never be forgotten that the present House of Commons is the house of "peace in our time," so the record of this Congress should equally not be forgotten. It is a better record, because Mr Roosevelt is a great leader, with far more foresight than Mr Chamberlain and with more prestige as an electoral wonder-worker than any President has had since Andrew Jackson. But, despite that leadership, enough representatives timid enough or silly enough to destroy the national defence were nearly found.

Confusing the Issue

Already there are signs that the obvious necessities of the times can be hidden from congressional eyes. To vote-getters, the war seems a heaven-sent opportunity to do something for the American farmer. That inflation is a military as well as an economic danger, that bogus price control is giving aid and comfort to the enemy, is probably seen more clearly in any part of the United States than on Capitol Hill. Yet even from that slight eminence the attempt to make of one of Mr Roosevelt's servants, the Secretary of Agriculture, the censor of another, the Price Controller, may seem odd. Of course, as the President is reported to have said, that does not matter, since he can dismiss either or both of them. And the President may veto the Bill; but a dead bad Bill is no substitute for an unenacted good one.

Danger, the pressure of public opinion, the discovery that there really is a war on, and that the American people want to get on with it, will do a lot to educate Congress. And the President, who has not always been the most tactful of leaders, the most magnanimous of victors, can do a great deal to make the public realise that politics, like business as usual, is a luxury to be eschewed at the White House as well as at the Capitol. But war cannot fail to make the President more than ever a quasi-dictator. All dictators, even democratic dictators, limited by law as to the duration and extent of their powers, benefit by informed and authoritative criticism. The Senate, at least, is well organised to be a forum and a censor. Its war-time choice is clear: it can either invigorate and invigilate, or interests. But to carry out its duty, the big and little interests. But to carry out its duty, the Senate will have to forget its resentment at its eclipse by the President. And some Senators will have to live down what they were saying only a few weeks ago. On December 13th, with the United States already at war, the *Nation* published a

communication from a leading Republican Senator rebuking Mr. Wendell Willkie and setting forth the doctrine that the duty of an opposition is to oppose in a startlingly candid form. "Whoever may be right on the question of foreign policy, it is obvious that a party kills itself and removes any excuse for its existence when it adopts the principles of its opponents. If any credit for this war ever goes to anyone, which I doubt, it will go to Franklin D. Roosevelt, and not to Wendell L. Willkie." The author of this dictum was a leading aspirant for the Republican nomination in 1940; his father was the first civilian Governor-General of the Philippines, Secretary of War, and the only man in American history to be both President and Chief Justice. If Senator Taft could write in this way on the very eve of the great assault on America, should we be too harsh on politicians who have had less intellectual and social advantages? Fortunately for Senator Taft and for the Senate of which he is a very useful member, he is not a candidate this year. He will not have to explain, or explain away, his blindness. But others are less fortunate. They will in the next few months have, as President Eliot of Harvard once said of the elder Henry Cabot Lodge, ample opportunities for future service. If American public opinion continues to be critical without being too harsh, these opportunities will be taken.

American Notes

The Production Chief

The terms of the Executive Order appointing Mr Donald Nelson as chairman of the War Production Board make it clear that his powers will be very broad. As well as "exercising general direction" over the procurement and production programme, he is to "determine the policies, plans, procedures and methods of the several federal departments, establishments and agencies in respect to war procurement and production, including purchasing, contracting, specifications and construction; and including conversion, requisitioning, plant expansion and the financing thereof; and issue such directives in respect thereof as he may deem necessary or appropriate." This would appear to be wide enough, and if anything has been omitted it does not leap to the eye. The Office of Production Management is to be disbanded and its functions merged with those of the new WPB. Mr W. L. Batt is to take charge of its most important division—that of requirements and materials—and there are to be other divisions for planning, production, purchasing, labour (under Mr. Sidney Hillman) and civilian supply, under Mr Leon Henderson, who also remains as Price Administrator. Mr Knudsen, Director-General of the OPM, has been appointed Director of Production in the War Department, and it may be that he will feel happier there than as chief of the OPM. Nobody has ever questioned his abilities as a production engineer; it was in the wider spheres of programmes and planning that he met with criticism. An indication that the existing methods of the War Department have not been abandoned is given by the fact that it has been necessary to raise Mr Knudsen to the rank of Lieutenant-General.

Atlantic versus Pacific

It is only natural that the United States should be tempted to place supreme emphasis on the Pacific hostilities. Japan has long been regarded as America's traditional and predestined enemy. It is in the Pacific that America has felt the most violent impact and suffered her greatest humiliations of the war. The west coast states have for years been obsessed by the Japanese menace, and have felt a sense of grievance that it was not properly appreciated along the eastern seaboard. The Allies' reverses, in the Pacific, which coincide with a flood of stories that Germany was being crushed in Russia, have led to a number of expressions of disagreement with Col Knox's view that Hitler's destruction must come before anything else. Anxiety lest the Pacific be neglected has been reinforced by reports that Australia, the Netherlands and China have made vigorous representations to this effect. Former Isolationists have been quick to exploit this state of feeling. The Hearst press insists that the Pacific war must be considered the most important because of its "threat to western civilisation" and that everything should be concentrated on it. General Hugh Johnson, another former Isolationist, has taken the same line. Both General Johnson and Mr Hearst have been critical of Mr Churchill for stressing the import-

ance of Europe at the expense of the Pacific. Lend-Lease has also been a target for criticism by former Isolationists. Lack of air power in the Pacific has been blamed on the supply of equipment to Britain and Russia, and the rubber shortage has been similarly attributed. The *Chicago Tribune* has been prominent in putting forward these arguments. It is interesting that former isolationists have apparently been able to transpose their former views into a war setting by continuing to play down the European aspect of the struggle, while former interventionists like Col Knox are unanimous in stressing the critical importance of the European theatre. There is undoubtedly a danger that the United States may be led to take too narrow a view of its rôle in the conflict, and that the threat of Japanese raids on the west coast may immobilize forces that might better be employed elsewhere. The emphasis which the President continues to lay on the world-wide character of the struggle suggests that he is conscious of this, and will devote his unparalleled gifts to seeing that the American people maintain a clear perspective on the relative importance of the different fronts.

Labour Peace?

Nothing perhaps represents a graver potential threat to the American production programme, and even more to the national unity, than the prospect of continued labour troubles. It is, therefore, all to the good that the truce of the last few weeks should be used to build up as solid a structure of harmony as possible before the inevitable disagreements recur. The names and powers of the President's National War Labour Board have now been announced. It consists of twelve members, two each from the AFL and the CIO, four employers and four representatives of the Government. These four are the chairman, Mr W. H. Davis, chairman of the previous National Defence Mediation Board, now disbanded, and three highly respected figures from the academic world. The new Board will have much wider powers than the old; in particular, it will not have to wait for an invitation before intervening in a dispute, and its findings will have the binding character of arbitral awards. It is also proposed to recruit a panel of mediators to assist in composing disputes, and names as eminent as those of Mr Wendell Willkie, former Chief Justice Hughes, Mr Al Smith and Mr James Farley have been mentioned in this connection.

The new Board will have to face two main problems. The first will arise from the fact that applications for a "closed shop" were not ruled out by the conclusions of the Labour-Management Conference from which the Board sprang. Such applications are, by their nature, susceptible of mediation or arbitration only with great difficulty. If they are pressed in large numbers, the Board will have a rough passage. The second problem is the continued rift in the labour movement between the AFL and the CIO. An attempt to compose this quarrel has come from a most unexpected quarter. Mr John L. Lewis himself, in letters to the presidents of both organisations, has suggested a merger, and it had been reported that, with the assistance of Mr Dan Tobin, the teamsters' leader and a power in the AFL, he had worked out a complete compromise plan. Unfortunately, there is more than a little suspicion that Mr Lewis's plan is more concerned with his personal rehabilitation than with labour peace. Having led the CIO out of the AFL nearly a decade ago, he has within the past year lost control of the CIO, chiefly because of his anti-Roosevelt views on home and foreign policy. His new suggestion has met with a very cool reception from Mr Philip Murray, his former lieutenant and successor as president of the CIO. However, there is no doubt that the rank and file of labour, and even more the union workers, desire reunion. A recent Gallup poll showed only 9 per cent of "leaders" in either federation, and only 25 per cent of AFL members and 19 per cent of CIO members opposed to fusion. There are certainly few things that would contribute more to industrial harmony.

Expansion in Engineering

The rate of increase in the output of munitions will depend, in no small measure, on the capacity of the engineering industry to produce plant and equipment, especially tools. True, the curtailment in the manufacture of civilian goods, such as motor cars and refrigerators, will now free

for war work a large proportion of existing plant and machinery. Again, output can be speeded up by the more intensive use of available machinery. According to the census of production taken in 1937, there were then 956,000 workers employed in the manufacture of machinery, excluding transport equipment. The industry has been expanded rapidly last year; the total value of machinery produced in 1941 was estimated by the *Domestic Commerce Weekly* at the record level of \$11 billions, which exceeds the previous peak by \$4 billions. Machine tool makers in the narrower sense are only one branch; they employed 47,266 workers in 1937 in 292 establishments; while complete data for 1941 are not yet available, the number of workers at 79 plants, which employ about two-thirds of the workers in the industry, was 69,000 last September. The rapid expansion of the industry last year is reflected in the sharp rise in the value of its output, from \$423 millions in 1940 to \$823 millions in 1941. But if it is to supply the tools required for the defence programme, its output will have to be increased still further. At present, efforts are being made by the industry to increase the number of workers on the second and third shifts. This source offers considerable scope, for an analysis of the position of 79 important plants last September showed that only 24.9 per cent of the industry's labour force was then engaged in the second shift and 7.5 per cent in the third.

British and American Taxation

Reference was made in a previous "American Survey" (November 15, 1941, page 596) to the difficulty of comparing the burden of taxation in different countries. The table attached to this Note has been compiled in an attempt to make the comparison on as fair and accurate a basis as possible. Care has been taken to ensure that the figures for the two countries in respect of each item are strictly comparable—that is, that they include the same things and exclude the same things. The only fair method of comparison is as a proportion of the national income. Figures of taxation and expenditure per head have, how-

	United States			United Kingdom		
	1938-39	1940-41	1941-42	1938-39	1940-41	1941-42

Defence or war	9	47	194	40	206 ⁽¹⁾	263 ⁽¹⁾

General Notes.—Government Revenue and Expenditure includes, for both countries, such things as social insurance contributions, compulsory war damage contributions, etc., but excludes self-balancing revenue and expenditure, such as Post Office. State and local figures are entered after deducting contributions to or from central funds. Conversions have been done at the average rate of exchange prevailing for the period; * denotes that the figure is approximate.

Notes.—(1) Average of two calendar years concerned. (2) Estimated from official figure of £4,415 millions for calendar year 1938. (3) Estimated from official figure of £4,500 millions in nine months April-December, 1940 (i.e., annual rate of £5,000 millions). (4) Latest available estimate. (5) Includes only estimated expenditure in the United Kingdom. Figures of total expenditure (all approximate) would be—

	National only	National and Local	War Expenditure
	£mm.	£mm.	% of Per head (\$)
1940-41	3,970	4,190	55.5
1941-42	4,820	5,050	64.5

ever, also been given; but they should be used with caution. No attempt has been made in the table to calculate the figures for the year 1942-43 given in Mr Roosevelt's Budget message of January 7th. But if the estimates of

revenue and expenditure are realised and the net national income, as suggested in the article in *The Economist* last week, rises to \$110 billions, tax revenue will amount to about 33½ per cent of net national income, total expenditure to about 66½ per cent and war expenditure to about 51 per cent. These percentages, it will be noticed, lie close to those for the United Kingdom in 1941-42.

Metal Price Policy

Following protracted negotiations with the producing companies, the Price Administrator agreed last week to raise the price ceiling on lead from 5.85 to 6.50 cents per lb. This move follows an increase by 1 cent to 8.25 cents per lb. in the zinc price in October last. Simultaneously, a metal premium scheme has been announced, which will come into force on February 2nd for a period of 30 months, and will raise the prices to be paid by the Government for all copper, lead and zinc produced by domestic mines in excess of the 1941 output. For copper the premium is 5 cents and for lead and zinc 2.75 cents per lb. The reason for the higher copper premium seems to be connected with two facts. On the one hand, the copper price has not been raised since September, 1940, when it was only slightly above the pre-war level. On the other, there are a number of disused United States copper mines which could hardly produce at less than 17 cents per lb. The increase in the lead price ceiling confirms that the rise in the zinc price last October was no exception, but represented a departure from the Government's policy, pursued since September, 1940, of keeping metal prices unchanged despite increased production costs. Naturally, copper producers are putting forward demands that their basic price, too, should be raised as their production costs have increased to the same extent as those for lead and zinc. So far, however, no negotiations towards this end have been initiated, and the high premium for additional production of copper makes it doubtful whether any increase is intended. At the same time, the new premium scheme shows that the Government is as unwilling as in the past to stimulate production by general price increases. United States metal production last year was very near its peak, and the tonnages which can be produced in excess of the 1941 output should be expected in tens of thousands rather than in hundreds of thousands of tons, although the premiums are high enough to bring virtually all of the disused high cost mines into production. This policy of controlling prices by ceilings, which have at least a slight relation to average production costs and of stimulating production by premiums, will save the country enormous sums. In the last war, when the Government stimulated a maximum production effort by leaving prices largely to themselves, copper advanced above 27 cents per lb. on the average of 1916 and 1917, zinc was quoted at over 13 cents in 1915 and nearly 13 cents in 1916, while lead averaged nearly 8.80 cents in 1917.

Shorter Notes

As a first instalment of his victory programme, the President has asked Congress to appropriate a further sum of over \$28 billions for defence. A sum of \$12,525,872,474 is asked for the Army, \$9,041,373,090 of it for the Air Corps and \$15,961,945,021 for the Navy. It is also asked that up to \$4 billions of the joint total should be made transferable under the lend-lease programme. Other appropriations asked for are \$7 millions for the inter-American highway, nearly \$6 millions for counter-espionage work.

Some figures on the rubber position have been released by Mr Jesse Jones, the Federal Loan Administrator and Secretary of Commerce. The normal pre-war consumption of the United States was about 600,000 tons a year, and the country could "get along with" 450,000 tons a year. There is about 600,000 tons of raw rubber on hand and enough used rubber to produce 600,000 tons of reclaimed rubber. Existing plants will be producing at the rate of 90,000 tons a year by the end of 1942, and plans are being laid to increase this figure to 400,000 tons a year—a more than threefold increase on the plans of a few weeks ago, themselves an expansion on what was previously envisaged. Imports of about 50,000 tons a year from sources other than the Far East are envisaged.

THE WORLD OVERSEAS

Latin America and the Axis

(From Our Buenos Aires Correspondent)

December 14th

JAPAN'S attack on the Pacific outposts of the United States opened a new phase in the relations of the peoples of Latin America with the world at war. In signing Article XV of the Havana Declaration, their Governments, together with that of the United States, had undertaken to regard "any attempt on the part of a non-American State against the integrity or inviolability of the territory, the sovereignty or the political independence of an American State" as "an act of aggression against the states signing this declaration." During a week of unwonted diplomatic activity in all capitals south of the Rio Grande, official interpretations of this undertaking have ranged from declarations of war against Japan—and later against Germany and Italy—by Central American and Caribbean Republics to Argentina's precisely worded decrees, according to the United States non-belligerent status, while maintaining her own neutrality towards Great Britain, Germany, Italy and Japan.

Apart from the declarations of war by Costa Rica, Cuba, the Dominican Republic, El Salvador, Guatemala, Haiti, Honduras, Nicaragua and Panama, which are now explicitly allies of the United States, the measures taken by Latin America differ in form rather than in principle. Argentina, Brazil, Bolivia, Chile, Mexico, Uruguay and Venezuela have accepted the principle of regarding the United States as non-belligerent—this move has been called the lowest common denominator of continental solidarity, but it is no less significant on that account. Waiving as between the affected parties the regulations of international law governing relations between neutral and belligerent, it offers among other advantages the use of ports and territorial waters unhampered by considerations of neutrality. The principle was first mooted last June in simultaneous Notes sent by Uruguay to all other American Governments; this expressly referred to Article XV of the Havana Declaration and invited examination of defence problems which would arise "should any American country be involved in war with nations of other continents." The Uruguayan suggestion that such an American country should be accorded non-belligerent status was warmly received by most Governments, notably those of Brazil and Mexico; but the Argentine Government replied that it "considered unnecessary the ratification of the clear and precise agreements in force" (referring to the Havana Declaration). It is recalled that in June, 1917, the Uruguayan Government decreed that no American country, which in defence of its rights found itself at war with nations of other continents, would be treated as a belligerent. In view of the general adoption of this attitude towards the United States after the outbreak of hostilities in the Pacific, it is interesting to note that Uruguay's energetic Foreign Minister, Dr Guani, has not only extended it to those other American republics which have declared war on the Axis, but has also broadened its application to extra-continental nations fighting on the side of the United States.

The republics in the proximity of the Canal Zone have fully recognised their strategic importance. Colombia and Mexico have severed diplomatic relations with the Axis Powers. Colombia is mobilising, and Venezuela's President, General Medina, has declared that all the necessary steps will be taken to protect his country's valuable petroleum supplies, while the Central American and Caribbean republics already at war are organising a defence bloc. Mexican armament factories have been placed at the disposal of the United States, and sweeping measures providing for the use of Mexican ports and territory by the United States armed forces are reported to be imminent. An important aspect of Mexico's co-operation is the aban-

donment of internal political dissensions in the interests of a united front against Axis aggression. President Camacho's appointment of the former President, General Cárdenas, as commander-in-chief of the armed forces has proved exceedingly popular. With the closing of the political ranks, from extreme Left to extreme Right, with few exceptions, it seems likely that President Camacho will achieve a degree of national unity unheard of in recent times.

The Magellan Straits

The question of fortifying the Magellan Straits has been the subject of consultations between Argentina, Brazil and Chile. In Buenos Aires, it is pointed out that this channel, almost a thousand miles long, which by virtue of treaty provisions has never been fortified, offers Japan the only practicable access from the Pacific to the Atlantic and is close to Argentina's Patagonian petroleum wells. In its sparsely populated and almost undefended neighbourhood, German residents predominate. Argentina's fleet has already intensified its patrol of southern waters, and Argentine military and naval missions have just arrived in Washington to obtain equipment, up to a reported value of US\$70 millions, under Lend-Lease. In the discussion of Chile's defences, attention has been called to her undefended Easter Island where von Spee's squadron refuelled in 1914 before Coronel. Chile has called up naval reserves and is showing great interest in the protection of the Magellan Straits. Her long and vulnerable Pacific coast line is perhaps the reason why the Foreign Minister, Dr Juan B. Rossetti, is among the most ardent advocates of an early Pan-American Congress to discuss continental defence.

Brazil's Foreign Minister, Dr Aranha, when in Buenos Aires on his way to Chile in November, declared in a press interview that Brazil would unconditionally stand by any American nation attacked by an extra-continental Power. When asked whether his visits to Argentina and Chile indicated a revival of an ABC understanding, he replied that the Panama and Havana agreements had been signed by every nation of the continent, most of whom had signed bilateral treaties of all kinds; he therefore saw no reason to reduce the American alphabet to three letters. Referring to the air and naval bases under construction in the north of

Brazil, he declared that these would be unhesitatingly placed at the disposal of any American country, if continental defence so required. Subsequent events have proved that President Vargas, Brazil's "strong man," fully supports his Minister's advocacy of a united American front against aggression. Two days after the Japanese attack on Pearl Harbour, he struck a heavy blow at the important German interests operating in Brazil by blocking all funds of non-American belligerents (assurances of sympathetic treatment for British interests were given). A few days later, the suspension of the Condor and LATI air services from South America to Europe was announced, owing to the refusal of the Standard Oil Company of Brazil to supply fuel in spite of contractual obligations to do so. These services, operating from Santiago via Buenos Aires, Rio de Janeiro and Dakar to Rome and Berlin, were the last remaining Axis-owned lines in the Western Hemisphere. With their demise, a notorious traffic in "diplomatic" passengers will cease, while the Axis-controlled countries will be deprived of a direct air mail service to South America. The United States Pan-Air system, which covers all Latin American countries, has arranged to take over the routes in Brazil abandoned by the Condor services.

Safeguarding Resources

Peru, which of all the Latin American republics has been the most susceptible to Japanese trade and cultural influences, and where there is a Japanese community of 22,000, has assured the United States of "all possible support." Measures already taken include the blocking of Japanese funds (a move also made by Argentina and Uruguay). Ecuador, where eight months ago Japanese petroleum engineers were required to establish residence in Quito, the capital, has now taken further measures to prevent sabotage. The Pacific seaboard from northern Chile to the Panama Canal is a vital link between the copper, nitrate, tin and tungsten resources of Chile, Bolivia and Peru and the arsenals of the United States. The Bolivian Government, which was already engaged in suppressing local Nazi activities, has now declared its readiness to undertake the armed protection of the country's mines. Paraguay, where there is a powerful German community, is demonstratively anti-Axis and immediately sided with her neighbours in expressions of solidarity with the United States.

The economic basis of continental defence has been laid in a succession of "Reciprocal Trade Treaties" concluded by the United States with Argentina, Brazil, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Guatemala, Haiti, Nicaragua and Venezuela. Negotiations are now in progress for similar treaties between the United States and Chile, Mexico and Uruguay, and numerous bilateral trade agreements have been arranged between the Latin American countries. Interest now centres on the conference to be held next month at Rio de Janeiro, where the Uruguayan Government has announced its intention of raising the whole question of the treatment to be accorded to Powers aiding the Axis and those siding with the United States, particularly in regard to the application of maritime neutrality laws. In an article condemning the Japanese aggression, which it claims to be "in harmony with the nocturnal devastation of the peaceful cities of Belgium, Holland and Denmark," *La Prensa* of Buenos Aires comments on the forthcoming conference as follows: "The Lima assembly laid the foundations of solidarity, that of Panama assured and co-ordinated neutrality, that of Havana established the rights and obligations arising therefrom; the next must organise a united defence. That will be its principal mission."

Portugal's Budget Estimates

[FROM OUR LISBON CORRESPONDENT]

January 1st

AN admirable exposition of Portugal's financial equilibrium precedes the estimates published on January 1st by the Minister of Finance. Estimated receipts are calculated to yield some £790,000 more than in 1941, while expenditure is put at £840,000 higher. The comparative table of receipts, in thousand contos (a conto is approximately £10), reads as follows:—

	1941	1942
Direct taxation in general . . .	751.5	757.9
Indirect taxation	720.5	748.0
Industrial taxation	94.0	105.5
Yield of sundry services	131.8	145.9
Domínio privado	142.6	147.8
Yield on capital	11.7	12.2
Recoveries and replacements . .	135.9	133.7
Receipts	65.9	81.9
	2,053.9	2,132.9

The actual sums allocated to the various Ministries are not stated, but a table showing the increase, or decrease, in thousand contos, is published. The main items are:—

General charges	+ 23.0	Foreign Affairs	+ 1.5
Finance	+ 1.4	Public Works	+ 6.1
Interior	+ 4.0	Education	+ 9.4
Justice	+ 1.5	Economy	+ 1.2
War	+ 8.4	Colonies	- 1.0
Marine	+ 2.7		

These are the net final estimates for increased outlay, after taking into account certain receipts which are not embodied in the budgetary estimates, and the result is that the actual expenditure authorised will be increased not by £840,000, but by £530,200.

Extraordinary expenditure is put at 723,000 contos for 1942, against 740,000 contos in 1941; it is noted that over 60 per cent of this sum has gone on items of national defence.

Rising prices and higher circulation of money marked 1941, neither the State nor banking credit being responsible for the latter. A greater internal purchasing power, arising out of the extraordinary value of sundry products, together with an inability to expend the proceeds owing to the decline in imports, provides the explanation. Emphasis is laid on the fact that it is the first duty of the State not to aggravate this situation by an excess of expenditure. It calls for measures bearing on both public credit and on taxation, and the placing of a 3½ per cent consolidation loan and the proposed tax on wartime profits indicate the line to be followed. The latter measure is still under discussion. Public opinion is well content with the figures and the straightforward explanations which accompany them, though some people grumble at the presentation of a surplus rather than a reduction in direct taxation.

Measures Against Profiteering

Though Portugal has suffered less than any country in Europe from wartime restrictions, prices have risen in many lines. There are goods of which the supply may have temporarily fallen below current market needs; there has been some disorganisation in the means of rapid distribution; and there has been a little hoarding by would-be profiteers—all of them factors tending to increase living costs, especially those of the working classes, whose margin is necessarily small. Prompt official action has, however, done much to scotch the evil. Enforced publicity for what the Government deems warrantable prices, wholesale and retail, backed by widespread and summary prosecutions of large numbers of proved offenders, has effectively checked further abuses. In a country of some six million inhabitants, largely peasant stock, measures of this sort, if conscientiously carried out, are likely to be successful. Coupled with the enforcement of decrees controlling exports, they have certainly restored popular confidence which looked like being shaken a few months ago by exaggerated rumours about shipments to Spain. Some small-scale smuggling there may be, but it is now obvious that the amounts involved are so small that their effect on Portugal's general economy is virtually nil.

German Europe

German Manpower

A TENDENCY to use German statistics uncritically should be guarded against. Some results of the German census taken in May, 1939, have been published during 1940 and 1941. According to this, Greater Germany's population amounted to 79.4 millions in the Old Reich, Austria and the Sudetenland (not including the 150,000 inhabitants of Memel); at the beginning of 1941, the population of Greater Germany plus the incorporated territories in the East and West amounted to roughly 92 millions, but, according to former estimates, the German-speaking population of the incorporated territories numbered only 4.1 millions. In May, 1939, the census recorded in the total of 79.4 millions 39.8 millions gainfully employed persons, or *Erwerbspersonen*; and if partially employed pensioners are added the total is 41 millions. The total of gainfully employed persons in agriculture amounted to 10.9 millions, or roughly 27 per cent. This figure of about 40 million workers should not, of course, be compared with employment statistics in Allied countries—for example, with the numbers of persons insured against unemployment in Great Britain. The term *Erwerbspersonen* in Germany is a collective term for employers, independent artisans, independent farmers, family helpers, civil servants, members of the professions, salaried personnel and wage earners. Thus the total cannot be compared with the total of industrial and agricultural workers in other countries, but only with what, in the British census, is called "persons gainfully occupied"—and even there there are some discrepancies. The detailed figures of the German census have not been published yet. But in the grand total of 41 millions gainfully employed persons (including part-time pensioners); there were probably about 24.5 million workers in the usual English definition of insured workers; this was the figure published in May, 1939, for the total number of workers insured under sickness insurance.

For agriculture, detailed figures were published in June, 1941:—

	(thousands)
Independent owners	2,371
Family helpers	6,200
Administrative personnel	214
Workers	2,130
Total	10,915

The family helpers, a peculiar feature of peasant farming, are mainly the wives and daughters of the peasants, who would not be included as workers in the statistics of other countries, but who comprised 76 per cent of this total. Apart from agriculture, then, there were roughly 30 million gainfully employed persons—in the German definition. No details of their distribution have been published. But, according to former censuses, at least 10 per cent or even 12 per cent were employers, independent artisans and small shopkeepers; another 3 per cent were family helpers, again mainly wives and daughters of independent artisans, who are not counted in other countries. The remainder were civil servants, probably in May, 1939, about 2 millions, workers in industry and commerce, and well over a million domestic servants; by inference, the census figures for May, 1939, suggest that the total number of soldiers was some 1.3 millions—who were not included among the gainfully employed persons.

In May, 1939, then, on this basis, the German labour force probably numbered roughly 24.5 millions, and only this figure is comparable with the number of gainfully employed workers in other countries. It is, of course, true that the large numbers of independent artisans and family helpers were a considerable labour reserve; and it is quite possible, in spite of the demands of the forces, that the total number of workers now employed in the enlarged Greater Germany is not much smaller than in May, 1939; 1.5 to 2 million women and old-age pensioners may have been brought in and the number of foreign workers must be 4 millions. But the point is that a colossal process of transfer and re-training has been necessary, independent artisans have been changed into wage-earners by closing down independent shops and so on. The labour force employed at present in Germany is very different in composition, mobility and

efficiency from that employed in May, 1939, and no estimates of present production can be made simply by comparing mere numbers.

Labour Front.—The German Labour Front, the compulsory organisation for German workers, has developed into a big business concern. It combines 42 building societies which own 63,000 flats. The organisation controls a number of rapidly growing insurance companies with subsidiaries in Hungary, Belgium and Holland. The total value of 8.5 million life insurance policies amounted to Rm. 4,500 millions. This means that one-third of the total number of German policies are with the companies owned by the German Labour Front. The *Bank der Deutschen Arbeit* has grown into the fourth biggest German bank; in 1940 it reported total assets of Rm. 2,000 millions.

Cinemas.—Before the war the total number of cinemas in Germany was 6,700. After the incorporation of territories in the east and west, this number increased to roughly 8,000. Shortly before the war only one-third of the total seating capacity was used. Since 1939, however, cinema attendance has considerably increased; the total number of tickets sold in 1940 is estimated at 840 millions against only 396 millions in 1938-9. It seems that, during 1940, newsreels were the greatest attraction; at least, that is the official explanation of the increased attendance. The production of feature films is inadequate at the moment; the German and Italian film industries have to supply practically the whole continent.

Letter to the Editor

Insurance Competition—Lloyd's

TO THE EDITOR OF THE ECONOMIST

SIR,—Your correspondent says that individual underwriters, being less concerned with considerations of goodwill, need not be so generous in settling claims as the companies. I ask his attention for the following points:—

(1) If underwriters were less generous in their settlements than their competitors could they within fifty years have built up from nothing their present very large fire and accident connection? In particular, could they through two years of war have maintained their American accounts? If the American public has continued, as it has continued for twenty-eight months of wartime, to insure at Lloyd's in the London market at rates which are often the same that they can get from insurance companies, then there must be some very good reasons for sticking to Lloyd's; and one of those good reasons is the excellent service that underwriters give in the generous settlement of claims.

(2) Has your correspondent much personal experience of collecting claims at Lloyd's or is he accepting hearsay statements without knowing both sides?

(3) The greater part of my life I have been a broker doing business with companies and underwriters, and I have had a hand in collecting thousands of claims, non-marine and marine, from both sides of the market. I can remember only two non-marine claims at Lloyd's in which the policyholder, in my opinion, was treated ungenerously. I can remember hundreds in which the treatment was extremely generous. I have no complaint whatever against companies in this respect, but I do recall two fire claims in which underwriters and companies were independently interested, in which underwriters behaved more reasonably than companies. I obtrude my own experience only because I imagine it is wider than your correspondent's.

(4) Companies draw their income from thousands of agents and direct clients. The loss of any one of them is *per se* of little moment. Underwriters get all their business from a comparatively small number of brokers. Does your correspondent really think that an underwriter sets less store on the goodwill of one of, say, fifty brokers than a company places on the goodwill of one agent out of ten thousand?—Yours, etc.,

INSURANCE BROKER.

THE BUSINESS WORLD

Profits, Prejudice and Production

FEW things in the field of economic statistics are more difficult than the accurate reporting of industrial profits. The very word "profit" is a term of art, the implications of which are very different to the accountant, the economist, the tax-inspector, and the shareholder. For the accountant, it means a balance which satisfies the requirements of the Companies Act of 1929. For the economist, it means a residue of income after making all provision for maintaining capital intact—usually a very different thing. The tax-inspector's definition is often further from the economist's even than the accountant's, while the shareholder—almost as powerless as the economist in these matters—reads with dumb gratitude, dismay or indifference, the profits figures which his directors "after making suitable provision for all foreseeable contingencies" have thought fit to disclose.

No two companies' profits are, therefore, strictly comparable, on the published figures alone. Yet it is these figures, with their irregular accounting dates and periods, delayed several months before publication, which must be aggregated and assimilated if any account of total industrial profits is to be drawn up. The result is bound to be imperfect. The most that can be looked for, in its preparation, is consistency of treatment of the material, such as it is—and some is very good, and much of it improving. This, *The Economist* has striven to do for more than thirty years, pressing meanwhile for improvements in the reporting of profits by companies. There is, in some quarters, however, a deep-rooted suspicion of all profits figures. Profits are a roughish thing—they vary with the length of the accountant's foot. Directors make their allocations to hidden reserves; they treat taxation charges arbitrarily, making no attempt to observe a standard practice in this and many other items, like depreciation. Even EPT standards, for the most part, are not disclosed to shareholders. In the absence of facts of this sort, it is hardly

surprising that industrial workers should greet "with a roar of laughter," the self-evident proposition that, under a régime of 100 per cent EPT, the profit motive in industry has disappeared.

The shortcomings of the available profits figures can be admitted, without destroying the very strong evidence (reiterated in these quarterly articles since the early months of the war) that industrial earnings as a whole have not been inflated in war-time, and that industrial shareholders, as a whole, are receiving considerably smaller net dividend warrants. EPT at high rates is, of course, prone to produce extravagance, and even inefficiency—but income-tax inspectors have rigid ideas about allowable expenses. And industrial shareholders, now reduced to the level of *rentiers* at best, and risk-bearers at worst, will share none of the gusty mirth of the ranks of labour in the present situation. All the available figures point to the effectiveness of the control over profits. The best general test is perhaps *The Economist* index of profits. With all its statistical defects—and these are readily conceded—the index has shown a steady downward trend throughout 1940 and 1941. The latest figure of 100.8 for the fourth quarter of 1941 shows that the general level of industrial earning power, after taking account of EPT and increased standard income-tax, has been reduced to somewhere near the average level of the twelve months ended June, 1936. As Table I below shows, profits under war-time control have been considerably lower than profits in the rearmament period.

A qualification—though it imparts delay rather than distortion to the results—must be mentioned regarding the 1941 figures. Last year, we received 2,041 company reports, compared with 2,270 reports in 1940, and 2,342 in 1939. For obvious reasons, the time lag between the earning of profits and their publication is tending to increase. The rough mean peace-time interval of six months has prob-

ably been extended by between one and two months. But though this has reduced the number of reports received in 1941, it has distributed them much more equally among the four quarters, and has thus tended to smooth out a distortion to which the peacetime figures were subject.

Table II, at the foot of page 110, compares the profits of the 1941 companies with their previous years' earnings, and also gives the corresponding figures for fourth quarter companies. These figures are similar in pattern to those discussed in these quarterly articles over the past two years. The 1941 companies, after providing for EPT, the bulk of their depreciation, and some part of their standard income-tax, showed an increase in total disclosed profits of rather over 3 per cent, to £391.4 millions. Their net profits, after meeting a substantial part of their taxation charge (though not the whole) fell by more than 10 per cent to £175.7 millions. The corresponding movements for fourth quarter companies were a rise in total profits of approximately 4, and a fall in net profits of nearly 8, per cent.

It may be argued (though the facts are not available for proof) that such figures are contrived to give an appearance of reduced profits at present by setting aside undue hidden allocations to depreciation and other reserves. Even if this were so, however, it would be quite wrong to suppose that such hidden reserves would represent a tax-free postponement of dividends from present to future. Any excessive allocations to depreciation or contingency reserves—"excessive," that is, in relation to the strictly defined allowances permitted by the income-tax rules—are written-back to profits before EPT and income-tax are assessed. Such provisions may, of course, be made in some cases, and the considerations prompting them may conceivably have a deleterious effect on war production. But they are not "costless" from the taxation standpoint, and the greater probability is rather that, under the present taxation régime, many companies must be in some difficulty to provide satisfactorily for the future, and at the same time to satisfy the reasonable expectations of their shareholders.

Table II shows the equivalent gross profits derived from net profits, as shown in annual reports, by the necessary, and laborious, adjustment for income-tax, where this is deducted from reported profits. These figures form the basis of the distribution and dividend record set out in Table III. There has not been much change in distribution policy between 1940 and 1941. In each year, ordinary shareholders received slightly less than two-thirds of the profits available for dividends, before charging income-tax. Preference shareholders received a somewhat higher proportion of the total, and also a higher average rate of payment. But, for ordinary shares, available gross earnings were reduced from 13.2 per cent to 12.4 per cent, and the average rate of payment from 10.9 per cent to 10.6 per cent. In terms of net returns, after income-tax, there can be no question that the equity shareholder last year was appreciably poorer than in 1940.

The final table shows (reported) total and net profits by industrial groups for 1941. Although several of these groups show an increase in total profits, it is significant that the two typical armament groups—coal, iron and steel, and motor-cycle and aviation—reveal a fall. It is a less satisfactory reflection on the development of our war effort that the main consumption groups—breweries and distilleries, shops and stores, and food, confectionery and drink—show such conspicuous stability. It may, however, be doubted if their total profits will be so well maintained in the current year. Nor can rubber shareholders, who enjoyed an appreciable increase in net profits last year, expect anything but unrelieved hardship during 1942. The increased net profits of shipping and telegraph companies last year represented not so much high earnings due to war, as depressed earnings in the standard EPT years. Such results, however, are exceptional, as is the rate of increase in total profits of such groups as textiles and miscellaneous companies.

The figures cited in this article point conclusively to the effective control of profits and dividends by the wartime financial machinery. They are not in themselves conclusive evidence of the equitable distribution of wartime sacrifice between the main participants in the national income. That proof must wait until the next Budget White Paper, which, it may be hoped, will bring up to date the estimates first introduced last year. If, in the meantime, these figures help to allay the suspicion that war is a good thing for industrial companies and their shareholders, they should tend to increase war production. That end, and not the pursuit of sectional interests, is still the vital aim.

Finance and Banking

Loans in Demand

The market has found itself hard put to it this week to satisfy its loan requirements. Although the £70 millions of Treasury bills tendered for last week were under-allocated to the extent of £5 millions, and the banks have this week had to make no Treasury deposit payments, the drain on bank cash has been persistent and heavy. The main factors in this movement have been the transfer of tax moneys to Government accounts and the recovery in subscriptions to Government issues, including the new Tax Reserve Certificates. The position has been further tightened by continued repayment of Government debt at the Bank of England and by the fact that clearing banks have this week begun their January making up. As a result the banks have been very diffident buyers of bills, and, on occasion, the market has had to have recourse to the Bank of England agent, who has been ready to buy the shorter-dated bills—ranging up to end-of-March maturities—in order to allow the market to take up the new bills for which it tendered last week. Judging by the Bank return, which shows a reduction of £2,375,000 in Government securities, these special purchases must, in the main, have been made for public departments and not for account of the Bank. Apart from the lack of any appreciable outlet for bills with the clearing banks the market has found the supply of non-clearing bank money dwindling appreciably. As a result, some borrowers have found it necessary to go to their clearing banks for bond money. The Bank return reflects this more stringent position in a reduction of £7,689,000 in bankers' deposits. The counterpart to this movement is to be found in an increase of £8,358,000 in public deposits, restoring these to the more normal level of £15,022,000. The return of notes from holiday and year-end circulation continues, a reduction of £3,026,000 in the active circulation taking place in the week to Wednesday last.

The Discount Market's Year

The results of the three discount companies for 1941 show that the market has just emerged from a satisfactory and prosperous year. The changes in the main balance-sheet items over the year and a comparison of the profits with those for 1940 are given in the following table:

	In £000's	Union Discount	National Discount	Alexanders	Total
Bills and Short Bonds.....	End 1940	46,460	32,059	25,509	104,028
	1941	54,101	36,234	24,104	114,439
Investments.....	1940	19,439	18,564	13,637	51,640
	1941	21,919	15,165	18,220	55,304
Net Profits*.....	1940	342	267	167	776
	1941	375	277	166	818

* Before deducting income tax on distributed profits.

It will be seen that, on the basis of a capital structure which has remained unchanged over the year, the scale of operations has expanded appreciably and that net profits have responded appropriately. The combined bill and bond portfolio of the three companies has risen by 9 per cent. Their aggregate net profits, shown before deduction of tax on the dividends, were 5.4 per cent higher than those shown for 1940. The nature of the discount companies' operations can no longer be ascertained with precision, now that it has become the general practice to combine the bill portfolio and the holding of short-dated bonds in one balance-sheet item. The precise moment at which an investment becomes eligible for hobnobbing with the bills seems to vary somewhat with the idiosyncracies of the various firms of accountants who audit the discount companies' accounts. But it will not be far from the truth to suggest that as a general rule the line between investments and short-dated

bonds appears to be passed when there are three years to go to the nearest maturity date. Thus Conversion 2's and, with a little stretch, Conversion 5's would qualify, though the latter with their 1944-64 dates must, in these uncertain days, jostle rather uncomfortably with the three months Treasury bills which are their balance-sheet companions. It should be noted that this balance-sheet classification carries no weight with the clearing banks in their judgment of collateral for money market loans. To them the bills eligible as collateral for 1 per cent money must have less than six months to run. Any other security, however it may be treated in the borrowers' balance-sheets, only ranks for 1½ per cent loans. This, however, does not at present disturb the discount houses unduly. As far as may be judged from the experience of the clearing banks, it is only a negligible proportion of the discount market's bonds which is normally financed by loans from these institutions. It is only when money is in short supply that recourse has to be made to this comparatively expensive accommodation. Normally the bulk of the discount market's short and medium bonds is financed with non-clearing bank money which is generally available at 1 per cent and, on occasion, may be borrowed "overnight" at ½ per cent. If this is borne in mind, and if it is realised that even at current prices the yield on the bonds held by the market ranges between 2 and 2½ per cent, the explanation of the increase in discount market profits last year is self evident.

The True Bill Holding

Any attempt at segregating the bills from the bonds with which they are combined in the discount companies' balance-sheets must, for the outsider, be largely a matter of guesswork. The only public clue to the problem is that provided by the evidence on the volume of Treasury bills issued to the discount market syndicate and outstanding at the end of the year. That figure was around £300,000,000 at the end of 1941. The clearing banks—whose year-end figures are as yet incomplete—are likely to show a bill holding of about £165,000,000 at the close of the year, leaving some £135,000,000 as the total of bills held by non-clearing banks supplied by the discount market (including the substantial sales made to the official buyer in the closing days of the year) and the portfolio of the market itself. In the light of these indications, the aggregate holding of bills and short bonds of the three companies alone, namely, £114,439,000, must include a proportion of bonds which at least challenges comparison with that of bills.

United Kingdom Gold and Dollar Resources

The December issue of the Federal Reserve Bulletin contains a detailed commentary on the evidence on gold and dollar resources of the United Kingdom placed before a committee of the House of Representatives by the United States Treasury in connection with the hearings under the second Lend-Lease Appropriation Bill. The main relevant figures were given in *The Economist* of November 22, 1941, but the detailed evidence includes some highly interesting additional information. The estimates of United Kingdom gold and dollar resources on September 1st last provide the first official intimation of the amount of dollars

tied up in trusts in the United States held for British beneficiaries. Of direct and miscellaneous investments of \$785 millions on September 1, 1941, a sum of \$290 millions was represented by such trust holdings which "are established under United States law, and hence may be unavailable to the British Government." To compel the trustees concerned to hand over the funds would involve the enactment of legislation in the United States, the constitutionality of which would be so doubtful that it would certainly be appealed to the Supreme Court.

Coupon Banking Accounts

Lord Wardington, in his address to shareholders of Lloyds Bank, has given the first authoritative account of the new rôle the banks will be called upon to play in the operation of the clothes rationing scheme. It will be readily understood that the scheme, involving as it does the issue of some 3,000 million coupons a year, and their peregrinations, in several intermediate stages, from the buying public to the manufacturer, presents formidable problems of organisation and handling. But for the utilisation of the banks in solving these problems, a vast new department of the Board of Trade would have had to be created and staffed by a considerable personnel. By the scheme which has been evolved, the banks have undertaken to open coupon accounts for every trader affected by the Consumer Rationing Order. The coupons will first reach the banks from the retailers and will be credited to coupon accounts opened in the names of these firms. At that moment the coupons will cease to be currency and will become credit transferable by certified transfer orders as between retailers, wholesalers and ultimately manufacturers, in whose names coupon accounts will also have been opened. That credit will be cancelled as the coupons reach their ultimate destination, while the supply will be fed by purchases in the shops. It will be the banks' responsibility to ensure that the outstanding volume of coupon credit is, in effect, no greater than that indicated by the coupon currency put into circulation by purchases at the shops. This means, in the first place, some method of counting and checking; secondly, as Lord Wardington pointed out, "no overdrawn" on coupon accounts. It may be assumed that the banks will receive a modest remuneration for operating these accounts.

Erlangers' Acceptances

Interesting evidence not merely of the survival, but the vigour of the domestic acceptance credit is provided by Erlangers' balance sheet for December 31st last. The feature of the balance-sheet comparison covering the year 1941 is the increase of acceptances from £2,222,733 to £2,687,282. The rise in this total is explained as being "almost entirely due to an increased demand for facilities on the part of the company's clients in the United Kingdom, practically all of whom are now engaged on work essential to the war effort." These figures may well appear minute in the scale set by the clearing banks' totals of loans and advances, but their trend is none the less a significant indication that the acceptance houses are bringing their own specialised contribution to the task of financing war industry.

Investment

A Reduced Tempo

There has been little change in stock market conditions. The principal sections to improve have again been trustee securities and leading debentures just outside that class. In the past few days, however, the accent has moved from the junior stocks, within these categories, to long-dated or irredeemable Government stocks and similar first-class municipal securities. This seems to be solid investment buying, which is the more satisfactory in that it corresponds with a period when a heavy influx of taxes is being used, in an exceptional degree, to pay off debt, and so results in a temporary reduction in the amount of money available. Elsewhere, there have been occasional spurts in speculative counters, especially South American bonds, but these have been of little importance, and, on the whole, both industrials and other sections of equities have

tended to sag. There has, indeed, been a considerable reverse in oil shares. The explanation of this state of affairs lies largely in the seasonal character of tax collection, but it owes something to the course of the war. In the Far East it is impossible to detect any favourable factor, which is likely to be of importance in the immediate or early future. The market and the investor had, perhaps, resigned themselves to that some time back, and there are even those who are making preparations to take up Malayan tin and rubber shares when they feel that the bottom has been reached. What is, possibly, of more immediate importance is the fact that, both in Russia and in Libya, the conflict has reached a critical stage. So far the course of events has been sufficiently favourable to the Allies, but the tempo of the advance has slackened in both theatres. If Rommel can be thrown out of North Africa, and, even more, if

Leningrad and the Crimea can be definitely freed, and the position west of Moscow consolidated before the spring, then the outlook is excellent. But if Germany succeeds in holding on at all or any of these points, it is far from clear how valuable the gains, so far made, will really prove to be. So, at least, the market argues, and, in the existing temper of the country, there is perhaps nothing so likely to benefit the stock market as good news of a more definite character from one or both of these fronts. There is some evidence that it may be coming from the Russian. It is a fairly safe guess that news of this sort would more than outweigh further adverse developments in the Pacific.

Conflicting Trends

Important as seasonal and military factors are in determining the course of business from week to week, there are more fundamental underlying causes of the investor's uncertainty, to which reference has been made in *The Economist* more than once. It is possible that the surplus of incomes, individual and corporate, available for investment is actually declining. Such a surplus nevertheless exists and a large part of it must be in the hands of trustees, companies and others who find themselves virtually compelled to put it into gilt-edged securities, other than those now on tap. But the net amount so placed appears to be very moderate, and it is a fact that there are considerable sales of these stocks. The proceeds are used for a large variety of purposes, but some of them go into equities. These purchases appear to be dictated as much by fear of what may happen to the level of interest rates or the value of money, or both, as by hopes that, at some distant date, industrial concerns will be relieved from some of their present burdens and shareholders will again be allowed to receive a larger reward. It is to be hoped that these expectations will, in a reasonable degree, be realised, but it is greatly to be regretted that month follows month and nothing is done to lessen the danger of a potential inflation. This point has been the main theme of more than one of the leading bankers in their recent annual statements. The need for a real wages policy has been urged in *The Economist* on several occasions, but nothing is done. To buy equities in the hope of escaping the full consequences of a possible inflation, caused by swollen payrolls, may be an act of faith, but it is the only course open to the investor who favours action. It is the conflict between this view and that of the investor, who is concerned mainly with a fixed cash income, which is responsible for the very moderate changes in a very wide range of prices at a time when the near future is extremely uncertain. There can be little doubt that, if the inflation bogey were laid, fixed interest stocks would assume the lead in a more definite manner, given the acute uncertainty as to what level of industrial profits will be permitted for a number of years to come.

Viscose Valuation Clue

The figures on British dollar assets given in the Federal Reserve Bulletin are commented on in a Finance Note on page 113. But they also contain one point of considerable investment interest. This appears to have particular reference to the value of the Viscose Corporation, Government and Courtaulds. It will be recalled that the earlier figures, given in some detail in an article in *The Economist* of November 22, 1941, showed a book value of USA of some 785 million dollars on September 1, 1941. The new evidence also gives realised values, and while the realised value has fallen only by \$115 millions, as is known, the only large operations involved are the Williamson Tobacco Corporation. It has always been stated to be realised on a sale of the underlying assets, and it is not easy to see how, the sum having once been fixed, there could be any difference between the original and the final figure. In the absence of any other information, the evidence suggests strongly that the whole of the difference of \$35 millions arises from the fact that the Viscose holding was disposed of for much less than the valuation placed

upon it. If this argument is sound, the lapse of time since the Viscose contract was implemented makes it uncertain that \$35 millions represents the whole difference. It is substantially less than the figure advanced by Courtaulds in their statement of June last, and the fact that the total realised fall is notably below the gross receipts on the Brown and Williamson loan and the Viscose sale suggests that some part of the funds may have been transferred prior to the date of the earlier figure quoted in evidence. The correct inference to be drawn from these figures is not very clear, but they are the first hint of what the original valuation may have been.

War Damage in Malaya

Representatives of Malayan enterprises have now formed a committee to look after their interests in the matter of war damage. As with so many other aspects of Malayan activities, this question had not been seriously tackled until too late for a fully fledged scheme to be in operation when invasion commenced, but it is far from clear that, had the Government been less tardy, most of the damage would have been covered. When a whole country is invaded, it is evident that a mere spreading of the burden of war damage may leave the individual burden very heavy if the damage done is, in fact, extensive, and it is all Lombard Street to a China orange—at their pre-war values—that outside assistance will be expected. Indeed, when every allowance is made for any shortcomings of the local Government and of the trading and productive interests, there remains a case in equity for a general pooling of all damage among the Allies. Consideration of the war damage scheme in operation in this country suggests, however, that its objects are less to give compensation at once to all those who suffer damage than to provide a means of financing such reconstruction as is necessary for the continued prosecution of the war. In Malaya, that need can scarcely be said to exist, since virtually the whole area is now beyond our control. There can be no question of payment of compensation now, and this appears to be realised by the committee. It is very doubtful whether any valid conclusion can be reached at this early stage as to the nature or extent of the damage, and until that is known it is not profitable to discuss a method of dealing with it. This lack of certainty is extremely unfortunate for shareholders and others concerned, but they are no worse off than many others. They can in all probability look forward to some measure of compensation or reparation, or both, but they can scarcely hope for a cut-and-dried scheme in the near future.

Montreal Committee's Programme

The executive committee, representing British holders of the Montreal stocks, has opened its campaign with a letter to holders in which it sets out three claims—the right to be consulted, the right to oppose an arbitrary and unilateral alteration of the terms of the contract under which the loans were made, and the right to be heard and treated separately from other bondholders. British holders have not been consulted. The British Insurance Association, which alone was approached by the Canadian committee, is interested in less than 10 per cent of the total British holding of sterling stocks, and the offers made show a complete disregard for the terms of the prospectuses under which the money was raised. (In this connection, it may be pointed out that in not in dollars, the service of them costs Montreal 8 per cent tember, 1939) Whether the claim to separate—not necessarily different—treatment is granted or not, the committee's grounds for objecting to the suggested terms stand. They are, substantially, those already set out in *The Economist*, but they warrant restatement. The committee is ready for any compromise which arises reasonably from a permanent change in the position of the borrower, and to which he has not contributed deliberately or carelessly. What they are not prepared to accept is that a debtor, who pass the burden on to a creditor, who has a valid contract and who, moreover, lent money, for the most part, for productive expenditure. There have been far too many cases, over the past decade or so, of defaults in which the will to pay was more conspicuously absent than the power to

January 24, 1942

so, but the defaulters have not been British. There can be very little doubt of Montreal's ability to meet the bill in full, and it would be a poor augury for the future if the premier city of the oldest Dominion were to be the first to extend this unwholesome practice to the Empire.

BAT Investments

The full accounts of British-American Tobacco for the year to September 30th last provide no information relating to profits which was not contained in the preliminary statement discussed in last week's *Economist*. The most striking feature of the balance-sheet is the jump in the excess of liquid assets over current liabilities, excluding inter-company items, from £4,354,064 to £8,228,231. The decline in stocks from £5,143,665 to £4,842,554 is moderate, although it is probable that the reduction in volume has been greater. A sum of £3,053,125 against nil has been invested in British Government securities, and cash holdings are up from £3,391,920 to £5,653,790. All classes of creditors have risen only by some £2,500,000 to £12,230,628, and debtors are up by some £1,800,000, but the balance is achieved by a reduction of some £5,000,000 in investments in subsidiary companies. These large changes are, presumably, a reflection of the pledging of the Brown and Williamson Tobacco Company's investments, and of the receipt by BAT of £6,250,000 from that concern. The £1 ordinary stock, at 82s. 6d., ex dividend, yields £3 10s. 8d. per cent, tax free.

Tobacco Results

Results of two tobacco holding companies, *Tobacco Securities Trust*, which is itself controlled by BAT, and *United Tobacco Companies (South)* indicate that, in both cases, net earnings were approximately maintained last year. In the case of *Tobacco Securities Trust*, which also carries on the business of an investment trust, the preliminary statement for the year to October 31st gives net profits of £432,216, against £498,910. As in recent years, the ordinary capital received 16 per cent and the deferred capital 4.5714 per cent, both less tax at 7s. 5d. Earned rates are virtually unchanged at 16.1 per cent on the

ordinary capital and 5.0 per cent on the deferred capital. Gross income of *United Tobacco Companies (South)*, in the year to September 30th, is reduced from £1,100,336 to £1,067,225, mainly on account of a fall of some £23,400 in income from subsidiaries. The bonus on ordinary and deferred capital is reduced from 7½ to 6½ per cent, making a total of 36½ against 37½ per cent, free of South African income-tax. Equity earnings amount only to 36.1 against 36.7 per cent, but the fact that the payment is under-earned is due solely to the allocation of £35,000 for creation of an Employees' Pension Fund. Before this provision, equity earnings stand at 36.7 per cent. The carry forward is reduced from £452,805 to £444,304, after inclusion of £5,773 reserve for depreciation of investments written back. The balance-sheet shows a rise in stocks from £1,919,222 to £2,258,343 an increase which may well reflect a price rise only. Cash holdings are down from £507,317 to £342,593, and investments of £106,967 have been liquidated. The liabilities side of the account shows creditors, including taxation, some £225,000 higher at £837,884. The results of both companies display an ability to maintain distributable profits despite higher costs and taxation. The 10s. ordinary shares of *United Tobacco*, at 87s. 6d., yield £4 3s. 10d. per cent, free of South African income-tax. The £1 ordinary stock of *Tobacco Securities*, at 62s. 6d., yields £5 4s. 8d. per cent, less tax at 7s. 5d.

Motor Transport Results

Full accounts of *Tilling and British Automobile Traction* for 1941 show a rise in gross income from £628,198 to £694,963. Taxation is almost doubled at £106,216, but there is an increase in the amount of equity earnings from £547,837 to £561,974. Ordinary shareholders receive 6½ against 7 per cent tax free, equivalent to a rise in the rate less tax from 12.2 to 13 per cent. The rate of equity earnings amounts to 7.1 against 7.9 per cent tax free, equivalent to 14.2 against 13.7 per cent less tax. As in the previous year, £50,000 is transferred to general reserve, so that the carry forward is reduced from £158,347 to £150,321. The only significant change in the balance sheet is the repayment of a loan to an associated company of £25,000.

HOLT & CO., Kirkland House, Whitehall, London S.W.1.

January 24, 1942

Cash holdings are up from £206,170 to £310,077. *National Omnibus and Transport*, which, like *Tilling and BAT*, is a holding company controlled by *Thomas Tilling*, suffered a fall in income from dividends from £182,223 to £163,625—approximately the level of 1939—due solely to the incidence of taxation, presumably EPT, on the profits of the three operating companies. Provision for income tax is up from £65,000 to £73,000, leaving equity earnings reduced from £99,136 to £72,538. Ordinary shareholders receive 5½ against 7 per cent, tax free, being a reduction from 12.2 to 11 per cent, less tax, and the rate of cover is down from 7.9 to 5.8 per cent, tax free, equivalent to 11.6 against 13.7 per cent, less tax. General reserve receives £5,489 against £10,000, and the carry forward is reduced from £31,958 to £30,257. The balance-sheet shows investments in associated companies unchanged at £1,615,597, while the temporary deposit from an associated company is increased from £110,000 to £150,000. General reserve stands at £114,511, and cash holdings are nearly £25,000 higher at £259,941. In the absence of publication of the accounts of the operating companies, or even of consolidated balance sheets, it is impossible to explain the discrepancy in the fortunes of the two intermediate holding companies. It may be assumed that the two companies controlled by *Tilling and BAT* enjoyed both more favourable operating conditions and a more favourable EPT standard than those controlled by *National Omnibus and Transport*. In both cases, allowing for the difficulties of wartime business, the results appear to be satisfactory.

Venesta Dividends

Full accounts to June 30th last of Venesta, the important manufacturers of plywood and chests, show a decline in gross income from £428,506 to £344,194, which is still some £85,000 higher than earnings in 1938-9. Since bad debts, due to the loss of the company's subsidiaries in the Baltic countries and German occupied territory, were fully liquidated in the previous year, it is possible to restore ordinary dividends to the 10 per cent declared in the three years 1936-8. In the interval, ordinary capital has received only one interim payment of 4 per cent, in 1938-39. Equity earnings amount to £170,791 against the previous year's debit of £373,468. The ordinary payment is covered by an earned rate of 66.3 per cent and general reserve receives £120,000 against a draft of £350,000. The total of the reserve fund is raised from £100,000 to £220,000, while the carry forward stands at £82,141 against £75,292. The setback to total income is no doubt due both to the loss of foreign markets and to the shortage of raw materials. The balance sheet shows, however, an encouraging increase in stocks from £534,281 to £769,030. Debtors and creditors are both substantially higher, and the surplus of liquid assets over current liabilities has risen from £755,540 to £916,404. Investments in subsidiaries are still valued at £259,752, a figure which, as the auditors point out, cannot be checked in view of recent developments in the Baltic. Possibly, its value is less hypothetical since Russia became

an ally. Taxation reserve shows a reduction from £46,114 to £12,253, and here the auditors express an inability to vouch for its adequacy. Since profits are shown after tax, except tax on dividends, the investor is, moreover, unable to judge for himself on this question. The £1 ordinary shares, at 25s. ex dividend, yield £8 per cent, less tax at 9s. 9½d.

Liebig's Extract of Meat

The latest accounts of Liebig's Extract, for the year to August 31, 1941, disclose no figure for profits before taxation and, consequently, show no sum comparable with the gross total of £983,467, including an unspecified transfer from contingencies, earned in the previous year. Profits, after provision for income tax and EPT and for reserves against subsidiaries and exchange, amount to £317,697 against £332,165. Expenses are up from £84,573 to £91,574 and equity earnings are consequently reduced from £182,192 to £165,323. The tax free rate of earnings is down from 9.1 to 8.3 per cent, rates which are, however, equivalent to an improvement in less tax earnings from 15.8 to 16.6 per cent. A cut in the total tax free payment on ordinary shares from 10 to 8 per cent, equivalent to 16 against 17.3 per cent less tax, permits a rise in the carry forward from £191,327 to £196,650 against a draft of £17,808 in the previous year. The balance sheet shows substantial reduction in livestock and produce from £1,178,326 to £781,144 and in British Government securities from £499,253 to £249,885. Advances to subsidiary companies have almost doubled at £1,466,716, while cash holdings are up from £215,516 to £669,455. Among liabilities, creditors and provisions, no doubt including taxation, are up from £652,099 to £1,232,673, while the reserve fund is unchanged at £1,000,000. It is clear that the company's total revenue rose substantially last year. The directors indicate that sales, including those on military and Government account, reached record levels. Unfortunately, production on this increased scale took place under conditions of increasing cost. The depletion of stock has most probably been made good since the date of the balance sheet. It is likely that the recent outbreak of war in the Pacific will so add to shipping difficulties as to complicate imports from Argentina, and that restrictions of raw material supplies will prove the main difficulty in the current year. The £5 ordinary shares, at £15 ex dividend, yield £2 13s. 4d. per cent tax free.

Apex (Trinidad)

In a note on page 82 of *The Economist* of January 17th, it was stated that the yield on Apex (Trinidad) shares at 29s. was £5 3s. 5d. This was correct, but it should have been made clear that tax was deducted at 6s. in the £ only, so that the return is equivalent to £7 4s. 10d. with tax at the full rate.

Industry and Trade

Strengthening the Regional Boards

A corollary to the need for transforming the Production Executive into an effective Production General Staff, suggested in *The Economist* of January 17th, is the desirability of strengthening the regional boards of the Production Executive. A multiplicity of competing departments cannot achieve real unity among their subordinate local officers, lack the executive power vested in them during the last war, and they are circumscribed from above and often concerned. As a result, they cannot exercise the requisite degree of control over the factories in their regions. Moreover, the weakness spreads beyond departmental boundaries. When departmental officers meet the representatives of employers and trade unions as members of a regional board, they lack a definite plan to the test of which all suggestions must be brought. This partly explains why schemes put forward by the Production Executive have come to such uneven fruition in different parts of the country. One example of this state of affairs is the variation in the

efficiency of the capacity exchanges. Another is the comparatively slow progress hitherto made with the setting up of joint production committees. In factories where they exist, these committees have proved of value as channels for suggestions from the workers, and also as a means of explaining to them the causes of inevitable hitches and delays. They have thus contributed to the maintenance of morale and often to an increase in output per man. Unfortunately, there is reason to believe that the trade unions frequently look upon them with disfavour as the trade-marked merchandise of the shop stewards' movement, and employers, too, sometimes discourage their establishment. It is understood that proposals for joint production committees have even been obstructed by regional boards. The weaknesses of the boards can only be cured by strengthening their authority and their technical staffs—rationing of technical ability may be necessary—but effective decentralisation can only be achieved if the boards are made the agents of a strong Production General Staff with a definite policy and executive power at present lacking in the Production Executive.

January 24, 1942

Official Intelligence

While a partial and selective statistical blackout has been necessary in order to prevent the enemy from securing information that would assist him, the almost complete ban on statistics is rendering difficult the task of discovering and criticising weaknesses in the war effort on the home front. There is no excuse, however, for the lack of information concerning the tentacles of the vast administrative machinery set up by the Government to draw Britain's resources into the war effort. Lack of knowledge about the existing activities and whereabouts of the innumerable agencies and branches set up by the Government often renders it very difficult for the small manufacturer, for example, to establish the contacts he requires. Altogether a good deal of time is being lost by the public in attempts to trace the departments or officials of the various Ministries. The Ministry of Labour has been among the first to lift the ban from its activities by issuing a booklet with full details of its functions and departments. The Ministry of Supply, too, has published a directory setting out particulars of its organisation in the North Midland Area. Again, the Ministry of Information has compiled a *Regional Bulletin of Information*, showing where inquiries can be made on a number of subjects. The improvements in the official intelligence in certain areas throws into relief its absence in others.

Production of Hematite Ore

Hematite iron ore is the raw material for one of the most important ingredients in the special steels required for the production of war equipment. While in the past this country has been able to draw substantial tonnages of this material from overseas, it now has to rely much more on its own supplies, which are mined in Cumberland. Unfortunately, there is reason to believe that the rate of domestic output is unsatisfactory and that not enough is being done to expand it. Conflicting explanations are put forward, one of which is that a number of working places have been exhausted or are nearing exhaustion. Three of the leading public companies directly or indirectly interested in the mining of hematite iron ore are Millom and Askam Hematite Iron, Barrow Hematite Steel and United Steel Companies. The chairmen of the two first mentioned concerns pointed out in their latest addresses to shareholders that development work was not neglected. Sir Andrew Lewis, chairman of Millom and Askam, said that a big boring programme was being conducted "with a view to increasing our iron ore reserves and the possible development of iron ore tonnages in this time of national need." Similarly, the Hon. Robert James, chairman of Barrow Hematite, pointed out that "we continue to explore for further ore deposits, in which we have not been altogether unsuccessful." There is no published evidence of the activities of United Steel Companies. In spite of the seemingly encouraging statements of the chairmen of two of the leading concerns in-

terested in the exploitation of hematite iron ore deposits, it appears that, taking development as a whole, the position is far from satisfactory, especially as the prospective shortage was not entirely unforeseen. In view of the vital importance of hematite, this state of affairs calls for an investigation and drastic remedies.

Retail Trade in November

The average daily value of retail sales last November, published by the *Board of Trade Journal*, shows a reduction of 1.2 per cent from the returns for the corresponding month of 1940. In October, sales were 12.1 per cent smaller in value than a year earlier. The accompanying table shows that sales of food showed no departure from the previous trend. On the other hand, the fall in the turnover of other merchandise, compared with the previous year's figures,

PERCENTAGE CHANGES IN RETAIL SALES FROM PRECEDING YEAR			
		Food and Perishables	Other Merchandise
1940 October		- 5.2	+20.9
November		- 0.3	+ 1.3
December		+ 0.8	- 6.7
1941 January		+ 5.8	- 8.8
February		+ 3.5	+ 1.8
March		- 2.1	- 2.1
April		+ 0.9	+ 2.9
May		- 4.3	- 2.4
June		- 3.1	+ 6.8
July		- 6.7	-15.9
August		- 1.9	-10.8
September		- 0.8	- 8.2
October		+ 0.2	-23.5
November		- 0.4	- 2.3

was considerably smaller in November than in the four preceding months. There was a reduction in the sales of all the items listed, with the significant exceptions of household piece goods, and furnishing and fancy goods, many of which, though in reduced supply, are not yet rationed on a *per capita* basis. An analysis of sales on a geographical basis, given on page 131, shows that the improvement of trade in London over last year's level has continued, and that turnover elsewhere was again smaller, except in Scotland.

Cotton Trade Difficulties

The cotton industry has suffered many vicissitudes since the outbreak of war. The supply of cotton yarn and manufactures has continued to decline month after month, and the industry now finds itself falling 15 to 20 per cent short of the output of yarn required for essential purposes. The Cotton Board has this week issued a *communiqué* in which it explains how this position has arisen. The main cause is the shortage of labour, which arose as a result of the changes in the demand for the industry's products not being fore-

forms. Probably well over £1,000 millions was derived from the Exchange Equalisation Account and other public departments at negligible net cost. A further £1,200 millions or more was raised from Treasury deposits by banks and Treasury bills placed with the market, at a rate slightly over 1 per cent. The remainder came from the public, either as individuals or through institutions, at an average of about 2½ per cent., by subscription to the various Government issues.

FINANCIAL AND MONETARY MANAGEMENT

On the face of the figures, then, the covering of the budget deficit in the manner described has been a great achievement in combined financial and monetary management. It is far superior to anything we have known hitherto, and in no small degree is due to the better understanding of the function of floating debt and short-term issues as a necessary part of the monetary system.

Anyone whose memory is long enough must have been struck by the differences between the internal financial measures adopted in the two great wars. Most evident for us, as shareholders in a bank, is the more extensive and more active official control over financial operations; the capital market is rigidly reserved for Government borrowings and in few other approved issues; foreign exchange transactions are regulated in the utmost detail; the Government itself provides direct finance for a large volume of essential war production and lays down the general lines the banks should follow in making advances to their customers.

MORE DEFINITE POLICY

Added to this is a more definite and explicit monetary policy. Here, as in the controls just mentioned, the closest co-operation has come to be maintained as a matter of course between the Treasury and the Bank of England and between the central bank and the commercial banks. The task of financing "total war" requires a standard of executive action not easily attained by men brought up in the rightly precautionary methods of the civil service; but the qualities of understanding and judgment, so well represented in that service, have been brought with conspicuous success into close and constant alliance with the inventiveness and adaptability which have become characteristic of the central bank. Our own part is largely a technical one; but whenever difficulties have arisen in carrying out directions—difficulties which sometimes call even for modifying the directions themselves—our representations have always been received at the Bank of England and in the Government departments concerned with unfailing attention and resourcefulness.

All this, however, is only part of a highly creditable record. Not only has the war so far been financed at an average rate of less than 2 per cent., but the trend of rates has been downward—a striking contrast with experience in the last war. The downward movement has been confined to those securities which are taken up mostly by financial and other institutions; the small individual saver is lending to the Government on terms no less favourable to him now than at the beginning of the war. The distinction, however, is fully justified by its psychological value in encouraging maximum personal savings.

INFLUENCE OF CONTROL METHODS

Then again, while we must not overlook the influence of other measures of control, the methods adopted for financing the war have helped to minimise inflation. Indeed notwithstanding the growth in the volume of money and the upward course of prices, it may properly be concluded that there has been little inflation so far, the rise in prices being attributable to non-monetary causes which it would have been almost impossible to offset by monetary means. In any event the rise in the cost of living index number to date has been much less marked than in the corresponding period of the last war, notwithstanding the incidence of the purchase tax.

The experience gained in the past ten years in currency policy has contributed materially to this advance, which has carried us a long way on the road from a supposedly self-regulating system to one of continuous management. We have only to look at the results in order to see how great has been the improvement upon the methods practised in the last war. Although this time again a huge creation of national debt has been inevitable, the proportion of Government expenditure which has been covered in that way is smaller, and the current rate of change falling on the Exchequer

vastly reduced. Moreover, the instrument of taxation has been used more with the conscious purpose of diverting to the Government a large part of the purchasing power which, if left in private hands, might be used to bid against the Government for limited supplies of goods and services. Another means towards the same end has been the device of "compulsory saving," which defers purchasing power until a time after the war when it may perform a valuable economic and social function.

POST-WAR PERILS

So far, then, the record is satisfactory; but we must not forget that there may be many post-war perils ahead of us. Last time the worst excesses of overspending, inflation, speculation and capital expansion came not during, but shortly after, the war, with disastrous consequences that are still remembered. The risk of a similar catastrophe after this war may be all the greater in that restrictions have been more severe. Accordingly there should be no hasty abandonment of necessary controls of finance, particularly of the capital market and of foreign exchange transactions. The natural predisposition to get rid of all restrictions as soon as the war is over must be resisted. We must profit by experience in using to the full the essential driving force of individual enterprise in the post-war conditions the general shape of which experience may help us to foresee. If we are wise in our perception of the proper limits within which freedom and control should respectively operate, a financial system can be evolved which will be a powerful factor in the creation and maintenance of national well-being.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED

The 83rd ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held on the 15th instant in London. Sir Charles Stewart-Wilson, K.C.I.E., deputy-chairman, in the course of his speech, said: Our gross earnings have reached a record in the history of the railway and exceed last year's receipts by over 107 lakhs. This, however, is not altogether a matter for congratulation as the savings are largely the result of enforced reductions in special replacements and renewals which will have to be made up later.

Our share of surplus profits amounts to Rs.13,33,747. Negotiations are in active progress in India regarding our liability to Excess Profits Tax there. Till this important matter is settled, about 10½ lakhs of our surplus profits have to be retained in India to meet possible demands. In this country I am glad to say that the Indian Revenue Authorities have agreed to 6 per cent. profits standard under Section 27 (2) of the Finance Act, 1940.

Mr Duncan, our agent and general manager, and our staff, both European and Indian C.I.E. in India and in London, have all done excellent work under very unusual difficulties. I feel sure that you will wish me to convey your thanks to them.

The report was unanimously adopted.

BRITISH RUBBER ESTATES OF JAVA LIMITED

The annual general meeting of the British Rubber Estates of Java, Limited, was held, on the 20th instant, in London, Mr T. Taylor presiding in the absence of the chairman of the company, Mr James Davenport.

The following are extracts from the statement of the chairman which was circulated with the report and accounts and take as read:—

Trading last financial year was more satisfactory than for the previous one, a result reflected in the 5 per cent. dividend—paid technically as an interim in order to get it out of the way, though clearly there will be no final.

The year's earnings are distributed. They are roughly as follows: To the NEI Government, £47,729; to the British Government, £23,000; to members, £17,974.

In fact the profits of industry go primarily to the Exchequer and the proprietors have only a secondary interest. It seems impossible for companies such as ours to create sufficient reserves for future contingencies.

The report and accounts were unanimously adopted.

LLOYDS BANK LIMITED

PROFITS PERMIT MAINTENANCE OF DIVIDEND

GROWTH OF LIQUIDITY

COMPARISON WITH LAST WAR PERIOD

FIRMER CONTROL NOW EVIDENT

LORD WARDINGTON'S STATEMENT

The annual general meeting of Lloyds Bank Limited will be held, on 30th instant, at 71, Lombard Street, London, E.C.

The address of the chairman of the bank, the Rt. Hon. Lord Wardington, which would normally have been delivered at the annual general meeting was, as last year, posted to the shareholders with the annual report and balance sheet on January 22nd in order to shorten the business of the meeting.

In his address, Lord Wardington stated: My Lords, Ladies and Gentlemen, there are a great many subjects which a bank chairman might be tempted to discuss in these present difficult times. In looking to the future we may all agree, as no doubt we do, with the general principles laid down in the famous Atlantic Charter, but the business of a banker is concerned primarily with the practical application of principles and the effect which they may have on his daily work. Any working out in detail of general principles is not possible at the present time, as we cannot see what will be the prevailing conditions at the end of the war, or to what extent we may be able to count on the co-operation of other countries, or to what degree they may be content to waive some of their individual sovereign rights for the common good of all.

In all questions concerning currency and exchange control, the right of access to raw materials, self-sufficiency ambitions, fiscal policy—in all these and many other matters there must be a ready and loyal recognition of the necessity for some international agreement and control, and of the fact that we shall all be neighbours, independent if you will, but all interdependent and incapable of taking individual action without some repercussion on the fortunes of others. It is easy to generalise, but this is outside a banker's duty, and as it is not possible with our present knowledge to dogmatise about the practical application of general principles, I propose to confine myself to facts about our own bank's position. I may, however, express a hope that before any precise scheme or schemes are officially announced, those who will be concerned to a greater or less extent in putting them into force may be brought into consultation as to the necessary machinery for so doing.

CHANGES ON DIRECTORATE

During the year we have appointed as directors Lord Teviot and Air Commodore Harald Peake, and, in addition, our two chief general managers, Mr R. A. Wilson and Mr Sydney Parkes. We feel that we have been very fortunate to obtain the services of these experienced gentlemen, as it will be realised that in war time it is not always easy to find available those individuals whom we would like to see on our board. I would like to say a special word in connection with the last two. We have on previous occasions sometimes elected a chief general manager on his retirement, but only once before a chief general manager whilst still in active service. In present circumstances we have found it particularly useful to have at our immediate disposal two such experienced bankers when questions of importance are apt to arise which require a quick decision.

The directors who are temporarily absent from their bank duties in His Majesty's Forces or on account of special work on behalf of the Government are Viscount Bearstead, MC, Captain C. E. Benson, DSO, and the Hon. R. H. Brand, CMC, DCL. The Hon. W. L. Runciman, AFC, is making a world tour in the interests of civil aviation.

NEW JOINT GENERAL MANAGERS

We have appointed Mr E. Whitley-Jones, Mr A. H. Ensor and Mr W. R. Bown as joint general managers, to take the place of Mr W. G. Johns, who, we regret to say, died last March, and Mr G. D. Gold, who retired last year.

Within the last few days we have heard with great regret the news of the death of Mr R. K. Blair. He became a member of our board in 1929 as a representative of our affiliated bank, the National Bank of Scotland. He was at the time of his death the chairman of the Scottish Bank, and I should like to express our great sympathy with his colleagues in that institution, who I know will miss him very much both on personal and professional grounds. These feelings we in Lloyds Bank share to the fullest extent.

THE STAFF

In regard to our staff generally, you will be interested to learn that 4,010 are serving with His Majesty's Forces or on full-time Civil Defence. They are constantly in our thoughts while engaged in their dangerous duties in all parts of the world, and we pray for their safe return. We know they are performing their duties with credit, and many occupy positions of considerable responsibility.

Several have been decorated or mentioned in despatches for courage and resourcefulness in action against the enemy. Unhappily, 55 have been killed, eight others have died on service, while 17 are reported as missing and 62 are prisoners of war. Our deepest sympathy goes out to all their friends and relations who have suffered so much anxiety and sorrow on their account. The absence from these causes of so many necessarily imposes added burdens on those who have been carrying on the work of the bank, often under difficult conditions and under similar dangers to those which confront their comrades actually under arms. I can speak most highly of their work, which has enabled the bank to play its essential part in the life of the nation. It must also be remembered that they have been often called upon to undertake entirely new duties, to some of which I will refer later, and, further, that these are quite apart from the sacrifices made by so many in their fire-watching and similar activities.

I have had the privilege of inspecting on more than one occasion the ARP fire-fighting and first-aid parties in the Lombard Street building, and was much struck by the keenness, efficiency and patriotic spirit of those engaged in these duties. When you also consider the circumstances of danger, discomfort and inconvenience in which the work of the bank has often had to be carried on, you will realise that I have outstanding reasons for asking the shareholders, as I propose to do, to pass a very special vote of thanks to the staff for their loyalty and devotion during the last year.

PROFITS AND DIVIDEND

The net profit brought in, after making all necessary and proper provisions, is £1,274,199, a decrease of £109,608. We have had much larger resources at our disposal during the year, but a substantial proportion of them continue to be employed at a low rate of interest, whilst our overdrafts, which earn a higher yield, have continued to shrink, and our expenses, particularly our salary bill, have again largely increased. Our published figure of profits you will see enables us to recommend the same dividend as last year and to put on one side £350,000 against any contingency, and at the same time to increase slightly the amount carried forward.

BALANCE SHEET

The salient points of our balance sheet are that during the year we have lent £95,000,000 more to the Government—£65,000,000 on treasury bills and treasury deposit receipts and £30,000,000 in further investments in National War Bonds. These increased assets, after allowing for the further shrinkage of £12,000,000 in our overdrafts, find their counterpart on the liability side of our

balance sheet in the greatly increased total of current, deposit and other accounts, which stand at the record figure of £581,000,000. These, quite briefly, constitute the principal changes in our figures during the past year.

TREND OF BALANCE SHEET CHANGES

It seems to me, however, that a broader survey than this is required in times when banks are operating under such abnormal conditions. The traveller may easily lose himself in a forest if he has no compass to guide him, because he cannot see the direction in which he is advancing. It is important that we should endeavour to recognise, even if we cannot altogether control, the trend of the changes that are taking place in the structure of our balance sheet under the influence of war-time conditions.

The figures of our own bank illustrate my point, but you will understand that they are typical of the figures of the other great clearing banks of this country.

	Deposits (in millions)	Increase for Year	Percentage to Deposits		
			Liquid Assets	Invest- ments	Over- drafts
June, 1939	396		30%	27%	42%
Dec., 1939	434	+ 9.6%	39%	25%	37%
Dec., 1940	491	+ 13.1%	43%	28%	29%
Dec., 1941	581	+ 18.3%	50%	28%	22%
Dec., 1914	118		41%	14%	50%
Dec., 1915	131	+ 11.0%	29%	33%	42%
Dec., 1916	152	+ 16.0%	39%	27%	37%

CURRENT DEPOSIT AND OTHER ACCOUNTS

In our last half-yearly balance sheet before the outbreak of the present war, Lloyds Bank showed a total of current, deposit and other accounts amounting to £396,000,000. This was employed as to 10 per cent. in keeping our traditional cash reserve, and as to another 10 per cent. in bills, mainly treasury bills, which, with the 7 per cent. lent out as money at call and short notice, and other items, made up a little more than the 30 per cent. of liquid assets at which we aimed.

At that date we had 27 per cent. of our deposits in investments and 42 per cent. in overdrafts. Both these figures reflected in some degree the effects of the previous war and the subsequent trade depression. The volume of our investments even then was larger than we needed, and our overdrafts lagged below the figure at which we should have preferred to see them. Any stimulus to increased borrowing that could be discerned at that time was due rather to the beginning of our armament programme than to any improvement in the normal trading activities of a nation at peace.

By December, 1939, that is to say after four months of war, our deposits had risen by £38,000,000 to £434,000,000, an increase of 9.6 per cent. The greater part of this increase, as well as the £6,000,000 by which our overdrafts had fallen, went into our liquid assets, mainly into treasury bills, and our proportions then were: liquid assets, 39 per cent.; investments, 25 per cent.; overdrafts, 37 per cent.

At the end of the first full war year, that is to say by December 31, 1940, a further 13.1 per cent. on the year, or £57,000,000, had been added to our deposits, and in the balance sheet before you the increase for the twelve months to December 31, 1941, of £90,000,000 is at the rate of 18.3 per cent.

PROPORTION OF LIQUID ASSETS

To complete the picture, during these two full war-time years the proportion of our liquid assets has risen from 39 per cent. to 50 per cent., and of our investments from 25 per cent. to 28 per cent., whilst our overdraft ratio has fallen from 37 per cent. to 22 per cent. Altogether, since the outbreak of war, our deposits have increased by 46.7 per cent.

Nearly half our assets are now in such a liquid form that they contribute only 1 per cent. to our ever-growing expenses. It may seem to some of you that this is not altogether a satisfactory state of things, and that some portion of our liquid assets might with advantage to our profits be transferred to higher yielding investments. This is quite true, but I ought to point out that our investments for the first time in our history stand at a higher level than our total overdrafts, and that the total of £163,000,000 at which they appear in our balance sheet is such a large figure that even a moderate percentage fall in this value would represent quite

a substantial sum. Considerably less than a quarter of our total resources are lent to our trading and manufacturing customers—and that for destructive rather than productive purposes.

COMPARISON WITH THE LAST WAR

That, in retrospect, is the course we have followed since the outbreak of war. Looking back on it, we see it as a fairly straight line. But if we go back to the figures of the last war we find that they did not follow so straight a course. Although our deposits showed a consistent increase in 1915 and 1916 of 11 per cent. and 16 per cent., the percentage of our liquid assets, on the other hand, in those years showed first a decrease of 12 per cent., followed by an increase of 10 per cent.; our investment ratio began with an increase of 19 per cent., followed by a decrease of 6 per cent.; while the proportion of overdrafts showed a decrease of 8 per cent., followed by a decrease of 5 per cent. It will thus be seen that in the last war changes in our figures were of a fluctuating and inconsistent character, whereas since the beginning of this war they have been uniformly in the same direction. We think we can see here evidence of a surer purpose and a firmer control in the national finances.

THE NECESSITY OF SAVING

To what extent we may experience further increases in our deposits largely depends on the willingness of our depositors to lend their surplus balances to the Government. Savings groups all over the country, on which members of our staff are patriotically giving their willing service, have been urging the public to withdraw their balances with the banks to the greatest extent possible and invest them in the various forms of savings loans which the Government has put at their disposal. This is a patriotic duty as well as an advantage to the individual. So much has been said already on this subject that I almost hesitate to dwell on such a well-worn theme. It is, however, impossible to exaggerate its importance, and I would like to add my testimony to the paramount necessity of saving everything possible and of refraining from entering into the harmful competition of trying to buy consumable goods, the quantity of which is limited and the price of which tends to increase with every fresh competition to buy, while the effect is to diminish the purchasing power of the pound.

If, however, the pounds are saved, purchasing power will be maintained and after the war, when we are again producing consumable goods instead of weapons of war, we may hope to be in a position to buy what we want at a less cost than would otherwise be possible. Everyone recognises the disadvantage and dangers of inflation, and it is essential for everyone in his own interest and that of the State to see that he does not contribute by any action of his own in bringing it about. It is true that whether a depositor invests his balance himself or leaves it in the hands of his bank, the treasury in either case gets the benefit of the money, as the bank in the latter case will invest it in treasury deposit receipts or other forms of Government loan; but as long as the balance is left in the books of the bank at the disposal of the depositor, the temptation and power to draw it out and spend it always remain.

TAX RESERVE CERTIFICATES

The scheme of tax reserve certificates recently announced by the Chancellor of the Exchequer will have the effect, I have no doubt, of inducing the earlier transfer from the banks of moneys accumulated for the payment of taxes, and will serve as some check on the velocity of increase in our deposits. This is all to the good and will be of advantage to the treasury and the taxpayer alike. I feel convinced that many firms and individuals will be anxious to avail themselves of the facility now offered to them.

COUPON BANKING ACCOUNT SCHEME

In addition to the other multifarious duties which the banks have undertaken in connection with the war effort, we have recently agreed to operate an entirely new service of a somewhat novel character, which, we believe, will be welcomed not only by the Board of Trade, to whom the conception of the scheme is due and with whom the banks have co-operated in working out the detailed procedure, but also by large numbers of our customers who are concerned with the manufacture, merchandising and retailing of goods to which the Consumer Rationing Order, 1941, applies.

Under this Order the public have to surrender coupons for all purchases of clothing and footwear, and these coupons have to be passed back from the shops through all the various branches of the trade—the wholesaler, the maker-up, the manufacturer—before each in turn can replenish his stocks.

SAVING OF LABOUR

When one considers that at 66 coupons a year per head of population an issue of close on three thousand million coupons is involved, which at present have to be counted and checked, not once only but three or four times on their journey from the ration books of the public to the textile mill or the tannery, one can appreciate the amount of labour involved in the mere handling of the coupons.

The scheme which has been evolved and which it is hoped shortly to bring into operation will greatly facilitate the transfer of coupons between traders by reducing to a minimum the irksome labour of counting and recounting the coupons and by obviating disputes and claims for coupons lost, stolen or destroyed. The coupons themselves will, in fact, only pass from the retailer to his banker and thereafter will be replaced by certified transfer orders. The banks will operate for every trader affected by the Order a separate account in which the currency will not be pounds, shillings and pence, but clothing coupons. I need hardly say that no overdrafts on these coupon accounts will be permitted.

CLOSING OF UNESSENTIAL BRANCHES

Another matter in which both our staff and our customers are interested is the closing of unessential branches. We have since the outbreak of war closed altogether 360 offices—some of them as part of a mutual arrangement with other banks, some without such arrangement. Our policy in this connection is dictated by two main objects in view—to maintain those banking services which are essential to the war effort and at the same time to release as many men as possible for the fighting services, and to reduce expenses. Our experience in pre-war days when we have amalgamated two of our branches in the same town has been somewhat disappointing. The hoped-for economy in staff has frequently been found in actual practice illusory. The combined business required a number of staff not far short of the total of the two separate branches. It should be remembered that the bulk of our clerical staff is engaged in the handling of cheques which are, in effect, part of the national currency.

It is essential that the circulation of cheques should be maintained without impediment; any breakdown in the system would cause grave inconvenience and a further large increase in the Note circulation. It must also be remembered that before two branches of any size can be amalgamated one of them has generally to be enlarged to accommodate the other, which frequently prevents any saving in expense as far as premises are concerned. It is a saving in expense as far as premises are concerned. It is a saving in expense as far as premises are concerned. It is a saving in expense as far as premises are concerned.

CONVERSION OF ISSUED "B" SHARES INTO STOCK AND ALTERATION OF TRANSFER PROCEDURE

As will be seen from the annual report of your directors and the two resolutions of which notice has been given, we have decided to recommend the conversion of our issued "B" shares into stock and to dispense, in the case of both "A" and "B" shares, with the provision under Article 46 of our Articles of Association requiring seven days' notice to be given of any proposed transfer.

The conversion of shares into stock units is a procedure which is finding growing favour among public companies because, by the elimination of definitive share numbers, it effects a saving of unnecessary labour in the preparation, checking and registration of transfer deeds. We are able to convert our "A" shares as they are not fully paid.

The provision of Article 46 requiring notice of any proposed transfer of our shares involves an unnecessary duplication of work. The procedure is cumbersome and we think we can safely dispense with it. The proposed alteration in no way interferes with the right which the Directors have in their absolute discretion under Article 47 to decline to register any transfer of partly paid shares.

We are also taking this opportunity of removing by resolution of the board the somewhat irksome rule that separate deeds are

required for transfer of "A" and "B" shares. In future, transfers of "A" shares and "B" stock may be included in one deed. All these three changes will, we feel, be approved by shareholders and will be appreciated by stockbrokers and others when dealing with our shares.

BURMA CORPORATION LIMITED

ORE RESERVE POSITION

MR MARMION'S SPEECH

The annual general meeting of Burma Corporation, Limited, was held, on the 31st ultimo, in Rangoon.

Mr M. L. Burnet (vice-chairman) presided and read the speech prepared by Mr Marmion, the chairman of the company, in the course of which he stated: The year has been an active one and we have disposed of the whole of our production of lead and silver without difficulty. The arrangements made in regard to copper matte continue to run very smoothly and have resulted in the realisation not only of stocks that had accumulated but also of our normal production. Our hopes have also been realised in regard to nickel speiss and we have succeeded in making a contract for the disposal of a considerable portion of our accumulated stocks and, at the buyers' option, of our normal production for an extended period. As to zinc concentrates, after completing a large contract with the Ministry of Supply, we are left without a market for our production. But here again we exerted ourselves to develop fresh outlets for this product in another form and to a very limited extent our efforts have been rewarded.

After dealing with the accounts and remarking that to save materials and labour it might be necessary in future to consolidate the two annual dividends into a single payment in respect of each year, the chairman continued: The year's operations left us with estimated reserves in the mine 280,993 tons below the estimate at June 30, 1940, with a moderate all-round decline in assay values. You already know that our development work has been completed and that, as stopes are worked out, we find, on re-assessing the ore reserves remaining, there has been a large tonnage of what we have called "excess ore" that has been extracted beyond the limits of the areas originally taken as containing the whole of our reserves. This excess ore has been brought into our reserves progressively since 1938 as stopes have been completed, and it has been possible to arrive at a close estimate of the tonnage remaining, so that despite the absence of developments, the reserves have not reflected the depletion which would result if there had been no excess ore to set against the tonnage extracted in any year. In the year 1939-40, for instance, 473,568 tons were extracted, but owing to the bringing in of the excess ore estimated to have been mined, together with a small tonnage from development work, the depletion at June 30, 1940, was reduced to 196,753 tons. I dealt very fully in my address on December 31, 1940, with the adjustments in tonnage and grade which the inclusion of this excess ore necessitates so as to arrive at a closer estimate of the reserves remaining in the mine.

EXCESS ORE

As regards the year under review, I may say that the same method of assessing the tonnage and grade of ore reserves remaining in the mine has continued and includes the tonnage of excess ore estimated to have been mined from all stopes completed to June 30, 1941. The influence of excess ore upon our reserves, since we undertook the re-assessment in 1937, has been substantial and the tonnage so far included begins to approach the total which, as I then indicated, might ultimately accrue from this source.

The chairman then referred to the excellent services rendered by the staff and to the retirement of Mr E. Hogan Taylor and Mr Ponsford and concluded his remarks as follows:—I am pleased to announce that we propose to appoint Mr Henry Ponsford, who is so well known to you as our former secretary, to be a member of the board. I am confident that you will welcome this appointment as much as we do, for Mr Ponsford has a wide experience and an intimate knowledge of our affairs which ought not to be lost to the corporation.

The report and accounts were unanimously adopted.

WESTMINSTER BANK LIMITED

EFFECTS OF UNPRECEDENTED WAR EXPENDITURE

GROWTH OF DEPOSITS

PROGRESSIVE INCREASE IN RATIO OF LIQUIDITY

DIVIDENDS MAINTAINED

THE HON. RUPERT E. BECKETT'S REVIEW

The annual ordinary general meeting of the Westminster Bank, Limited, will be held on the 28th instant.

The following is the statement by the chairman, the Hon. Rupert E. Beckett, which has been circulated to the shareholders:—

Following the procedure which was adopted last year it is my intention to give, in the form of this printed statement, the information upon the year's accounts to which the attention of shareholders should be particularly directed. The proceedings at the meeting will therefore be confined to the submission of the customary resolutions to the shareholders present and to any discussion arising thereon.

CHANGES ON DIRECTORATE

Before commenting upon the figures I must refer to changes which have taken place in the directorate of the bank. The board have lost by death two of their colleagues—the Hon. Francis N. Curzon and the Marquess of Willingdon. Mr. Curzon joined the directorate of Parrs Bank as long ago as 1914 and had therefore served as a director for the long period of 27 years. Lord Willingdon joined the board in 1936, and though his term of office was short he served with distinction. In March of last year Dr. W. H. Coates, a director of Imperial Chemical Industries, Limited, was elected to a seat on our board. Soon after his election he was requested by the Government to undertake an important mission overseas, and it was not until January 1st this year that he was able to assume regular duties at the bank.

We welcome Dr. Coates and are pleased to have his co-operation as one of our directors. It is with regret that I report the death, while in the active service of the bank, of one of our general managers, Mr. John Harriss, who faithfully served the bank over the long period of 41 years. To fill the vacancy thus created the directors have appointed as a joint general manager Mr. L. P. Meredith, who had been an assistant general manager for some years past.

In my statement to the shareholders last year I drew attention to the great changes brought about by the war in the country's economic life, and the year 1941 has but served to accentuate two of the main factors to which I then alluded. There has been an acceleration of the extraordinary war expenditure of the nation and necessarily, therefore, an increase in banking resources.

WAR'S EVER-INCREASING DEMANDS

With regard to the first of these factors, it is inevitable that war, in this scientific age, with its high degree of all forms of mechanisation, must make ever-increasing demands upon the nation's resources, and Government war expenditure is, after all, only one side of the triangle of man-power, machines and money. The payment out of the Exchequer for the past twelve months to the end of December last was £4,654 millions, and if we add to that the £4,011 millions expended for the 16 months to the end of 1940, we arrive at the colossal figure of £8,665 millions to the end of 1941.

It is of interest to note, by way of comparison, that the total Votes of Credit for the last war, inclusive of considerable loans to the Dominions and Allies, was approximately £8,400 millions. This unprecedented war expenditure is the outstanding and all-pervading background against which financial and banking operations must be viewed in order to see them in their true perspective. The economic and social implications of such gigantic expenditure on war, not only in this country but all over the world, are of profound significance, and the problems raised thereby will demand the attention of the finest brains for many years to come.

DEPOSIT LIABILITIES

As a corollary to such expenditure there was an increase in the deposit liabilities of the clearing banks, during the year to November last, of no less than £507 millions, compared with an increase of £437 millions for the previous 15 months. Increased resources created in war-time and by war expenditure should, and in fact must, be made available in one way or another to the Government, and towards the end of last year the Treasury authorised the issue of tax reserve certificates by subscriptions for which certain tax liabilities could be anticipated, thereby making immediately available to the Government money which would not otherwise be paid until the tax payments became due. These certificates carry interest at the rate of 1 per cent. per annum, free of income tax and surtax. There are indications that a liberal use will be made of this facility and, if this proves to be the case, then the growth of bank deposits will be correspondingly slowed down.

The deposit liabilities of this bank at the end of the year show an increase of some £60 millions, and certain alterations have taken place in our assets in consequence of this increase. Treasury deposit receipts at £109½ millions show an increase of £59½ millions over the corresponding figure for last year, and this, of course, provides a high degree of liquidity, notwithstanding a diminution in our bill portfolio of £20 millions. The liquidity items in the bank balance sheet gives a ratio to deposit liabilities of no less than 46.61 per cent.

INTEREST BEARING ASSETS

The main interest-bearing assets, namely, advances and investments, which respectively exhibit ratios of 24.84 per cent. and 31.67 per cent. to deposit liabilities, have, during the year, changed places for the first time in banking history in their order of precedence. Hitherto the ratio of advances to deposit liabilities was always higher than that of investments. The rise in investments, common to the clearing bankers, has been perhaps the most interesting banking change during the year. The two forces which have operated to produce this result are:—

- (1) the subscription by the banks to Government war issues; and
- (2) the decline in the demand for banking accommodation for purposes outside the war effort—a quite natural and healthy feature of the nation's commercial and industrial life which must be geared to maximum war production and, furthermore, evidencing the effort to prevent the development of unnecessary inflationary tendencies.

In the past year the increased resources obtained from an increase of £60 millions in deposits, together with a reduction of £18 millions in advances, viz., £78 millions in all, have found employment in a net increase in the liquidity resources of £42 millions and an increase in investments of £36 millions. Similar alterations in distribution are common to all banking institutions.

CHANGES SINCE 1938

The table on the following page shows the changes which have taken place in the composition and distribution of the items of the bank's assets year by year since pre-war days.

It will be observed that the ratio of liquidity items to total deposit liabilities has grown progressively over the past four years as follows:—

1938	32.22 per cent.	1940	43.16 per cent.
1939	36.33 per cent.		

Item	1938		1939		1940		1941		Changes between 1938 and 1941	
	£ millions	Ratio to Deposit Liabilities	£ millions	Ratio to Deposit Liabilities	£ millions	Ratio to Deposit Liabilities	£ millions	Ratio to Deposit Liabilities	Increase £ millions	Decrease £ millions
Deposit Liabilities	346.2	...	366.4	...	410.1	...	469.9	...	123.7	...
Cash and Balances with Bank of England	37.0	10.71	37.6	10.27	45.4	11.09	49.2	10.47	12.2	...
Balances with and cheques in course of collection on other Banks	12.7	3.68	16.3	4.45	18.4	4.48	23.9	5.09	11.2	...
Money at Call and Short Notice	20.8	6.01	34.0	9.29	28.6	6.97	22.5	4.79	1.7	...
Bills Discounted	40.9	11.82	45.1	12.32	34.6	8.43	13.9	2.96	...	27.0
Treasury Deposit Receipts	...	...	...	...	50.0	12.19	109.5	23.30	109.5	...
Total of Liquidity Items	111.4	...	133.0	...	177.0	...	219.0	...	107.6	...
Ratio of Liquidity Items to total Deposit Liabilities	...	32.22	...	36.33	...	43.16	...	46.61	...	...
Advances	134.1	38.74	141.4	38.60	134.5	32.80	116.7	24.84	...	17.4
Investments:—										
(a) British Government	110.2	31.84	100.2	27.38	107.2	26.13	143.7	30.58	33.5	...
(b) Others (including those in subsidiaries)	4.9	1.42	6.0	1.64	5.5	1.34	5.1	1.09	0.2	...

The corresponding reduction in the ratio of the two main earning assets of advances and investments has of necessity affected adversely our profit and loss account: the change in our banking structure brought about by this alteration in distribution of assets has an important bearing upon the earning power of the bank. Net earnings are also adversely affected by material increases in costs and by increases in the rate of income tax and by national defence contribution.

ALLOCATION OF PROFIT

After providing for rebate and taxation, and appropriations to the credit of contingency accounts (out of which full provision for bad and doubtful debts has been made), the net profit for the past year amounts to £1,189,696—a shrinkage of £120,933 as compared with last year's figure. This result may, in view of the heavy

taxation, be considered satisfactory, and your directors have been enabled to declare dividends at the same rate as last year, viz., 18 per cent. on the £4 shares (£1 paid) and the maximum of 12½ per cent. on the £1 shares (fully paid), while making the allocations, customary in recent years, of £300,000 to officers' pension fund and £100,000 in reduction of the bank premises account, at the same time recording a small increase of £12,734 in the carry forward to £563,863.

As shareholders are aware, our foreign auxiliary, Westminster Foreign Bank, Limited, has all its trading branches in Belgium and in France (in enemy or deemed enemy occupied territory), and I can add nothing to the statement which I made last year.

The figures for our affiliate, the Ulster Bank, Limited, are before you, and the profit for this year is £132,494 as against £134,616 for the previous year. The progress of this healthy business is considered quite satisfactory.

NATIONAL PROVINCIAL BANK LIMITED

EXPANSION OF BANKING FUNDS

WARTIME PROBLEMS

SATISFACTORY RESULT OF YEAR'S WORKING

MR. COLIN F. CAMPBELL'S STATEMENT

The one hundred and ninth annual general meeting of the National Provincial Bank, Limited, will be held, on the 29th instant, at the head office, 15 Bishopsgate, London, E.C. 2.

The following statement by the chairman, Mr. Colin Frederick Campbell, has been circulated to the shareholders:—

In view of the continuance of conditions which prompted me to circulate my observations with the report and balance sheet last year, I am taking a similar course this year. The proceedings at the annual general meeting on January 29, 1942, will be confined to the necessary business to be transacted.

BOARD OF DIRECTORS

The only change I have to report in the constitution of the board of directors is the election of Mr. M. R. Hely-Hutchinson, MC, MP, whose wide experience will be of great value to the bank. We have also appointed Mr. Ashley S. Ward a local director of the board at Sheffield, where his specialised and extensive knowledge of the business of that city will be highly appreciated by us.

MANAGEMENT AND STAFF

During the year the numbers of our management and staff were further depleted by releases for military and other Government service. A total of 2,848 men, or 43 per cent. of the pre-war male

staff, were serving with the armed forces at the end of the year. Of this number 943 held commissioned rank. Further awards for gallantry in action have been earned in addition to those I announced a year ago. There have, of course, unhappily been casualties both among serving members of the staff and those who remain with us, but I am thankful to say that the number suffered so far represents a very small proportion of those exposed to the risks of war. I know that shareholders will join me in wishing a safe return to all those members of our staff engaged upon active service.

In common with other industries, we must anticipate the release of more staff, both men and women, as the expansion of the armed forces gathers momentum. We are indeed fortunate in the spirit in which those who carry on with varying responsibility the daily duties of serving our customers. In addition to what is often an exacting day's work at the bank, practically every member of the staff, male and female, has undertaken duty of national service, involving much of what would otherwise be leisure time.

It is not unlikely that this country may have to face difficulties and restrictions greater than those of the past two years, and we as bankers may be called upon to strain our organisation to an even greater degree than has so far prevailed. Whatever demands may be made upon us, our shareholders and the public generally can rest assured that we shall spare no effort to maintain and continue the service to the public so far as is humanly possible.

THE PUBLIC AND BANKING SERVICES

I would like also to pay a tribute to those on the public side of the counter—our customers. The difficulties in carrying on an efficient banking service which the war necessarily imposes upon us have been immensely lightened by the kindly understanding of those we serve. We know that real inconvenience has often been caused, and I would assure them that our one wish is to be able to restore and improve as soon as possible the amenities they previously enjoyed.

Perhaps I may be allowed to add that I have learned in my office as president of the British Bankers' Association that our own experience of the willing co-operation of our customers is similar to that of all the other banks, and I extend to these customers our thanks for the sympathetic manner in which they have put up with inconveniences of various kinds.

Before commenting on the accounts, there is one more matter to which I attach great importance, to which I would like to allude. With the virtual disappearance of unemployment among all sections of the public and the general, and in many cases very substantial, rise in money incomes, the field open to banking activities has been greatly extended. I venture to think that there are many who are beginning to appreciate the services offered by the joint stock banks, which, in fact, are unsurpassed in any other country in the world. I have heard it said that banks exist principally for those who are assumed to be well off, but I take this opportunity of assuring those who perhaps have only recently been possessed of money incomes beyond their immediate needs that the banks will gladly undertake the safe custody of their holdings of cash, attend to their purchases of War Savings Certificates, and in general offer them a complete banking service.

THE STATEMENT OF ACCOUNTS

The enclosed statement of accounts reveals a general expansion of figures, but alterations in individual items over the year have been mainly a continuation of trends with which I dealt a year ago. On the liabilities side of the balance sheet, deposits show a considerable increase of £85,000,000. The counterbalancing increase on the assets side is spread between cash, Treasury deposit receipts and investments, which show increases respectively of £9,000,000, £79,000,000 and £23,000,000.

In ordinary peaceful circumstances expansion of bank figures may generally be regarded as a reflection of increasing industrial and trading prosperity. The case is very different in time of war, which must always be an impoverishing process. There is a tendency to forget this elementary fact and to interpret swollen figures as an indication of greater national prosperity. As far as banking is concerned, I can assure you this is not the case. It is true, of course, that our gross revenue from Treasury deposit receipts and investments has shown a sharp rise, but this has been partly offset by reduced income from bills discounted and particularly from our main source of revenue, viz., advances. Loss of income under these heads, together with the rising expense of supplies and overheads and the cost of the additional deposits, have, to a great extent, counterbalanced the increased income from our holdings of Government securities.

PROFIT AND LOSS ACCOUNT: DIVIDEND

When all factors are taken into consideration, I think we may regard the results of the year's work, which shows a net profit of £1,057,783, as satisfactory. After payment of dividend at the rate of 15 per cent. per annum, and after allocations of £100,000 to bank premises account, £150,000 to pension fund, and a special £100,000 to war contingencies fund in view of the many uncertain factors with which we may be faced in consequence of the war, the amount carried forward is £543,113.

It will be observed that in the report the dividend declared is stated net, i.e., less income-tax; this represents the actual cash payments to shareholders. In former years dividends have been stated gross, i.e., subject to income-tax. The effect of this change is that the income-tax recoverable by deduction from the dividends has now been charged before arriving at the profit shown by the account.

Although the rate of dividend declared is expressed as at the rate of 15 per cent. per annum on the paid-up capital of the bank, it should be realised that the shareholders' interest in the bank

is a much larger sum than this item. Were the dividend expressed in relation to the paid-up capital the reserve and internal funds accumulated in past years, the rate would be a very moderate one.

THE OUTLOOK

I have referred above to the pronounced trend towards expansion of banking funds. There is no deep mystery about this. Experience of the last war taught us that large-scale continuous Government financing by borrowing from the banking system engenders continuous growth of deposits. The main justification of this type of financing is based upon the necessity of bridging the gap between national expenditure and other types of revenue, but there are obvious dangers attached to it. No great harm need necessarily result from an increase in purchasing power provided the excess is not spent in consumption of the limited supply of commodities. There is, however, good reason to think that more than is desirable in the national interest is still being spent in this way. There is urgent need for every individual to curtail still further his or her consumption of goods and to lend savings direct to the Government, and in this connection I trust that what I have already said as to the increased money incomes of large numbers of the community may reach some, at least, of those for whom it is intended.

The momentous political and military events of the past year are fresh in the minds of all of us. The Allied nations have achieved a number of successes to set against reverses sustained particularly in the Far East. The outlook a year ago was indeed obscure, and we are thankful that a great deal of uncertainty has since been dissipated. We now know exactly where we stand *vis-à-vis* the leading nations of the world, and we have the further knowledge that the combined resources of our Allies and ourselves should become overwhelming as the war progresses.

APEX (TRINIDAD) OILFIELDS, LIMITED

GOOD PROGRESS MAINTAINED

The twenty-second ordinary general meeting of Apex (Trinidad) Oilfields, Limited, was held, on the 21st instant, in London.

Mr Walter MacLachlan (the chairman), in submitting the directors' annual report and accounts for the year ended September 30, 1941, said that the oil profits and other revenue for the year amounted to £586,329, and, after providing £235,112 for amortization of wells and £15,750 for head office expenditure, the net profit for the year was £335,467. The balance brought forward was £131,073, and the total to be dealt with was thus £466,540. The reserve for taxation had called for £131,000, as compared with £190,000 in the previous year, and they had transferred £30,000 to general reserve in respect of capital expenditure. They recommended the payment of a final dividend of 17½ per cent., making a total dividend of 30 per cent. for the year. As a result of Dominion Income Tax Relief, tax was deducted from the total dividend for the year at 6s. instead of the standard rate of 10s. in the £.

The sales of most of the products from their deliveries of crude oil to Trinidad Leaseholds, Limited, were now dealt with through the Petroleum Pool. The estimated realisation prices showed a slight decrease as compared with the previous year, which should be made up when the final realisations were available. Under the existing circumstances, he was sure shareholders would share the directors' satisfaction with the result of the company's operations during the past year and with the dividend now recommended. Conditions prevented him from submitting a full review of their operations and developments and from dealing in more detail with their production and operating results for the year. He could, however, assure shareholders that all the operations on their property had continued to make good progress during the year, that their results had continued to prove successful and that the conditions with regard to the property remained in every respect satisfactory.

They continued to operate under their sales agreements with Trinidad Leaseholds and United British Oilfields of Trinidad to their mutual satisfaction.

The report was unanimously adopted.

MARTINS BANK LIMITED

TREND OF WARTIME OPERATIONS

FURTHER GROWTH OF DEPOSITS AND INVESTMENTS

OPTIMISM IN YEAR'S OUTLOOK

Mr Frederic Alan Bates, chairman, has issued the following statement to shareholders of Martins Bank, Limited, preparatory to the one hundred and eleventh annual meeting to be held on the 27th inst.:—

In view of prevailing conditions and the general desire that proceedings at annual meetings of shareholders should be curtailed, I do not propose to deliver an address at the bank's forthcoming annual meeting on January 27th this year. I am therefore circulating this statement with the directors' report. The usual resolutions will be submitted at the meeting.

Before dealing with the accounts and the business of the bank, it is my sad duty to refer to the death of three members of the board—Sir Richard Durning Holt, Bart., Mr G. E. B. Bromley-Martin and Mr J. J. Ritchie. Sir Richard Holt and Mr Bromley-Martin were deputy chairmen, Sir Richard having been chairman in 1937-38. As head of his firm of Alfred Holt and Co., managers of the Blue Funnel Line, and as chairman of the Mersey Docks and Harbour Board, he had a world-wide reputation. Mr Bromley-Martin had been the bank's London managing director since 1918, when the Bank of Liverpool acquired Martins Bank. He took a prominent part in arranging the amalgamation, and subsequently gave most valued and wholehearted service to the combined banks' interests in London. His memory will be revered. Mr Ritchie had served the bank as an official and director for more than sixty-two years. He retired from the position of deputy general manager in 1919 and acted on the board for twenty-two years. The loss of the ripe experience, judgment and ability of these three directors is deeply regretted by their colleagues.

Mr R. M. Holland-Martin, C.B., and Mr A. Harold Bibby, D.S.O., have been elected to the positions of deputy chairmen. Sir William Clare Lees, Bart., O.B.E., a member of the Manchester board for the past eight years, was elected to the general board in April last. His knowledge of Manchester affairs will give additional strength to the representation on the board of that valuable side of the bank's business.

Sir Harold Mackintosh, Bart., a member of the Leeds board, is to be congratulated on his appointment as a vice-chairman of the national savings movement under Lord Kindersley. For the present he will have less time to give to the affairs of the bank, but his great organising ability will be at the service of the country.

On his retirement in May last from the position of Leeds district general manager, Mr Herbert Holt was elected to the Leeds board.

STAFF

Another year of war has been experienced with increasing momentum of the national effort. This has affected the bank in all its activities, both in relation to staff and to banking business. First, I refer to the officers and staff. Last month certain new appointments were made among the bank's executive officers. Mr J. M. Furniss, general manager, became chief general manager, Mr James McKendrick deputy chief general manager, and Mr F. A. Moore and Mr Frank Joyce joint general managers. Mr Joyce will continue to be stationed in London. It gives me pleasure to acknowledge the high executive ability of these officers in their conduct of the bank's affairs. The place of the bank in the work of war brings new pressing duties and additional burdens to the shoulders of all the officers and staff, and I am glad to pay my tribute to their service and standard of duty throughout the year in circumstances which have often been difficult.

To date 1,028 members of the staff have joined the forces. Ten have given their lives for their country, three are missing, and 14 are prisoners of war. To the relatives of those who have made the great sacrifice, or are missing or prisoners of war, the sincerest sympathy is extended in their bereavement or anxiety. Nor must I omit to record that a number of the staff have received decorations or been mentioned in despatches for gallant and distinguished

service in various parts of the world, on land and sea and in the air. To replace those in the forces, men, youths and women have been engaged on a temporary basis, the majority being women. More of the staff will be called up in a short time, so that the problem is by no means easy, bearing in mind the necessity for assuring the efficient functioning of the banking system. To help to solve it many branches have been closed, and this process is being continued. At the same time, an endeavour is being made to give customers as full a banking service as possible. The whole staff is working zealously to that end.

TAX EFFECT ON PROFITS

It will have been noticed from the published announcement of profits and from the report which accompanies this statement that the now common practice of showing profits after deduction of tax on shareholders' dividends has been adopted. The change is purely one of accountancy which does not affect the final result, but shows more clearly the incidence of taxation on the bank's earnings. The net profit for 1941 is £587,248 against a net profit for 1940 (adjusted to the basis now adopted) of £641,427, but the decrease is more than accounted for by taxation. Additional earnings from larger resources have been offset by expenses in respect of grants-in-aid given to the staff where the higher cost of living presses most severely by war damage contribution and insurance, and in other directions due to the war.

The amount brought forward from last year is £347,771, which with the profit of £587,248 makes £935,019 available for distribution this year. The usual interim dividend of 7½ per cent. was paid in July last. It is proposed to pay a final dividend for 1941 at the same rate, making 15 per cent. for the year. The two dividends will take £312,003 net after deducting income-tax. There has been transferred to staff pension fund £100,000, and, following last year, with the uncertain times in mind, a further sum of £150,000 has been placed to reserve for future contingencies, leaving £373,016 to be carried forward.

BALANCE-SHEET

Reviewing the balance-sheet, I draw attention to the figure of deposits, which has risen during the year by £34,290,000 to £157,600,000, due to heavy Government expenditure on war production, and to increasing prices and pay rolls. It is too early to estimate the full effect of the new tax reserve certificates, but the result may well be the slowing down of the increase in bank deposits.

Investments, a high proportion of which is in short-term securities, have increased by £13,480,000 and now stand at £58,940,000. From time to time surplus funds are invested in new Government loans and in the war-time item of Treasury deposit receipts. £28,000,000 of the latter are held, as against £9,000,000 this time last year.

Advances have decreased by some £5,600,000. Notwithstanding that engineers, machine tool makers, contractors and others engaged on war work are extremely busy and take considerable accommodation, their demands do not offset the decrease in advances in other directions due to the contraction in business not considered essential to the prosecution of the war and to less finance being required in connection with imported commodities. In all essential industries the bank is very ready to help, and adopts a generous attitude to applications for advances to customers engaged upon war work. Business and turnover continue to be very active.

Liquidity has been maintained. Cash in hand and at the Bank of England stands at £17,621,000, or 11.14 per cent. of deposits, the total of quick assets comprising cash, money at call, balances with other banks, Treasury and other bills and Treasury deposit receipts being £66,351,000, that is 41.96 per cent. of deposits.

Premises stand at £2,867,000, an increase of £22,000 on the year. While some damage from enemy action has been sustained, I am glad to say that the bank has been fortunate in this respect. Where repair work has been possible it has been carried out, and the business has not suffered. In the case of the few branches in which damage was heavy, it was found possible to operate at neighbouring offices, with occasional timely help from banking friends, for which I express warm thanks. The minimum of inconvenience was caused to customers, owing to the various precautions taken, which worked well in restoring the organisation at offices placed temporarily out of action. I acknowledge with thanks the extreme consideration of customers and their readiness to be helpful. No change has been made in the book value of damaged premises. The precise money value of the damage cannot yet be exactly ascertained, but it is a small figure in relation to the total value of the bank's properties, and in any case the amount is recoverable under the War Damage Act.

I have confined my observations to the domestic affairs of the bank, the sound position of which fully justifies optimism in the outlook for the new year. While serious thought is needed in considering the future of the country's trade after the war, it should be clear to all that the nation's life in its various aspects, industrial, commercial and social, must be solely directed for the present to the one aim of a concentrated effort to win the war in the shortest time possible. There are very few activities which are not now controlled or indirectly affected by control, a condition of things criticised at times, naturally, but on the whole accepted willingly. In these circumstances, forecasts of the future or reviews of the trade of the country generally appear out of place. The year that has just closed brought many anxieties to the nation, but also much for which to be thankful, and there are sure grounds for firm confidence in victory.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: All dealings are for cash

CONTINUED Japanese successes, contrasting with moderate advances in Russia and Lybia, still constitute the dominant influence in the markets, and with buyers holding off, pending clarification of the situation, industrial equities, mining and oil shares are all easier. In the *gilt-edged* market, however, renewed investment support at the re-opening occasioned numerous small gains for irredeemable issues, while the following day some short-dated stocks advanced slightly. Steady demand for South American stocks in the *foreign bond* market was reflected in persistent gains for Brazilian and Chilean bonds, although the latter eased slightly later on profit-taking. Mexican bonds were in demand, while Peruvian Corporation senior stocks improved at the re-opening. Details of the new agreement and revived dividend hopes brought buyers to the *home rail* market. Junior *GW* ordinary rising 1 point among numerous other advances. The following day, however, quiet conditions left prices unchanged although senior issues showed some slight improvement. Among foreign rail issues, a strong demand for Antofagasta 5 per cent preference stock, on the report of larger demands for Chilean nitrate from the United States, raised the price 7 points in three days. In midweek Antofagasta lost 1½ points, while home rail junior issues came in favour again. Argentine stocks were, however, without interest.

External influences militated against any development of business in the industrial market, and most sections showed small declines. In the aircraft and motor group, De Havilland and Rolls Royce moved against the trend at the re-opening, while changes in heavy industrial issues were within narrow limits. Some scattered selling of brewery shares was reflected in losses for Bass and Mitchells and Butlers among others, while the tobacco group, apart from Carreras, was generally easier. Small declines among textile shares were general, and Cunard led a modest fall in the shipping section. Among miscellaneous industrials, Murex was in demand in the early part of the week, while International Nickel reflected some

slight support. Later industrials were quiet and irregular.

Lack of interest in the *kaffir* market led to dull conditions and a strong downward trend developed. Losses were moderate, but became rather widespread. The decline in Far Eastern *tin* shares was halted by some light buying on Monday, but the following day Mawchi and Renong eased on Japanese penetration to Tavoy. Buying of Nigerian issues continues, and Cornish mine shares have come into favour. The *rubber* market remained dull, although the downward trend was not so pronounced. Quiet conditions prevailed in the oil market, but the Far Eastern developments, particularly the Burma thrust, occasioned a steady decline, especially among the leaders, Anglo-Iranian and Burmah each losing ½ on Tuesday after earlier, but smaller, losses. Attack was in favour, however, while, under speculative buying Ultramar rose 1s. 9d. at the re-opening, only to fall back 1s. next day.

New York

Slow trading and a generally subdued tone reflected the total lack of incentives on Wall Street. While some buying of railway stocks induced a slightly firmer trend throughout the market in the early part of this week, initial gains were not maintained as turnover declined.

Shorter Comments

Bank of Ireland.—Net profit year ending December 31st £323,680 (£338,666), contingency reserve £100,000 (same), div. 12 per cent. (same), carry forward £148,037 (£145,037).

National Bank (London and Dublin).—Net profit after tax for half-year ending December 31st £86,739 (£85,696). Contingency reserve £10,000 (same), div. 10 per cent. (same), carry forward £42,465 (£42,890).

Provincial Bank of Ireland.—Net profit year ending December 31st £56,835 (£69,281), contingency reserve £20,000 (£24,000), div. 11 per cent. (10), carry forward £41,201 (£40,138).

Munster and Leinster Bank.—Net profit year ending December 31st, £106,788

(£118,175), contingency reserve £22,500 (£25,000), div. 24.4 per cent. (20.9) free of Irish tax, carry forward £36,858 (£40,070).

Radio Rentals.—This company has completed negotiations for the purchase of the entire share capital of Rentertainment.

Canadian Pacific Railway (\$000.).—Gross earnings in week ended January 14th \$3,609 (\$3,305), aggr. gross earnings January 1st-14th \$7,375 (\$6,445).

Bengal-Nagpur Railway.—Gross earnings to March 31st, 1,200 lakhs (1,093), net 509 lakhs (391). Company's share of profits 13 lakhs (5), less 9 lakhs put to contingent Indian tax reserve. Div. 4 per cent. (same).

Brazilian Traction and Power Co. (U.S.\$000s.).—Gross earnings in November \$3,682 (\$3,314), net earnings \$2,013 (\$1,700). Aggr. net earnings Jan.-Nov. \$21,050 (\$17,421).

BA Pacific Railway Co.—An interim payment on the 4½ per cent. cons. deb. stock equal to six months' arrears up to January 1, 1937, is announced. A payment of £136,300 by the above company to the Argentine G.W. Railway will enable the latter to pay off six months' arrears to April 1, 1937.

National City Bank of New York (\$000s.).—Total resources on Dec. 31st \$3,082,860 (\$3,095,466). Cash \$985,161 (\$1,364,825), Govt. Secs. \$1,137,544 (\$860,974), loans and discounts \$618,811 (\$544,312). Deposits \$2,878,821 (\$2,908,438), surplus \$77,500 (\$64,500), undivided profits \$17,891 (\$15,776).

Standard Oil of California.—Third quarter's operating income \$18,281,909 (\$10,662,154), total income \$19,457,525 (\$11,525,490). Depn. \$4,955,675 (\$4,730,649), tax \$2,436,000 (\$300,000), net profit \$11,843,132 (\$6,360,675), equal to 91 cts. (49) per share.

COMMODITY AND INDUSTRY NEWS

Form Filling Reduced.—One of Mr. Frank Platt's first tasks as Cotton Controller has been to examine the question of forms and licences issued from the Control office. He has decided to abolish certain returns. Arrangements are being made, from February 2nd, for licences to deliver and use yarn to be issued by the Control once a week on one form instead of a form being issued for each individual order. From the same date the form giving spinners' weekly sales of yarn will be suspended. It will soon be possible for deliveries of yarn against single small orders to be made without waiting for the approval of the Control. Small weights multiplied by several thousands make a serious total in a period of shortage, and it is regretted that it is impossible to ignore them yet. Spinners will therefore have to make returns which will cover a full week's delivery for this type of yarn. Manufacturers and others who would issue a number of approval certificates which lead to the issue of a licence to deliver or use yarn will soon be permitted to accumulate these forms and apply for a single licence to cover them all. It is also hoped that shuttle books (deliveries of yarn against Government contracts) will be completed up to January 31st next and returned for the last time to the Control. For the time being this elimination will only be applied to the spinning section; the position of the doubling section will be reviewed later. Considerable satisfaction has been expressed in trade circles at the decisions reached and it is probable that further action will be taken to reduce the number of forms to be filled in.

Export Licensing.—A Board of Trade Order (S.R. and O. 1942, No. 36) which comes into force on February 3rd extends export control to cover mechanical lighters, vegetable adhesives, asbestos, felspar and talc (including statite and soapstone), iron dust, cores, barium minerals (barytes and witherite) and certain other chemicals. Licences will in future be required to export any of these goods to all destinations. The existing requirements for the export of toys are superseded by the provision that licences will in future be required where the toys contain more than 10 per cent by weight of metal and yarns, wholly or partly of wool or animal hair, respectively. Applications for licences to export mechanical lighters and toys containing more than one-tenth by weight of metal will not normally be granted. The control over caps, capsules and sprinkler toys (wholly or mainly of metal) is extended to cover such goods when fitted to unfilled containers. The export of gum damar and flourspar will in future require licences for all destinations.

Export of Woollen Tissues.—From February 1st the Open General Export Licence of November 21, 1941, which permitted ex-

portation of woollen tissues to certain specified destinations without specific licence, is to be revoked. From then, export licences will be required to export woollen tissues to any overseas country. The Board of Trade has appointed a committee to advise the Board on matters arising out of this scheme of export licensing. The committee has eleven members: Mr. R. G. Bailey is chairman and Mr. Herbert Hey, J.P., vice-chairman. Mr. D. G. Price will act as secretary of the committee.

Office Machinery.—The Board of Trade have made a Supply of Office Machinery (Restriction) Order (S.R. and O. 1942, No. 29) to cover dictating, accounting, adding, calculating and punched-card machines, whether new, reconditioned or second-hand. From January 21st, therefore, no person may supply or acquire any such machinery, without permission. Persons wishing to acquire office machinery of the above kinds for their own use should submit their requirements to their suppliers. The suppliers will notify the Directorate of Office Machinery of these requirements, and the Directorate will then authorise the release of machines, in approved cases, as far as supplies will allow. Persons wishing to acquire used machines either for immediate resale or for reconditioning and resale may apply to the Directorate for a general licence authorising them to acquire such machines. The Directorate will not normally be prepared to issue licences to persons who were not regularly engaged in buying and selling machines of this kind before September 1, 1939, and who are not in possession of adequate facilities for reconditioning and servicing. The approval of the Directorate of Office Machinery will be required before any machines so acquired are disposed of or before any machines of the above-mentioned kinds are broken up.

Coffee Purchases.—During the next few months the Ministry of Food will be importing 6,000 tons of East African and 3,000 tons of Indian higher quality coffees. The first arrivals are expected about March or April, and it is hoped that they will be supplemented by small shipments from Aden and Jamaica. These imports represent just over seven months' consumption of coffee at the estimated pre-war rate, but the Ministry announces that the 9,000 tons covers only part of its buying programme. Allocations will be made to the trade in accordance with the scheme described on page 762 of *The Economist* of December 20, 1941. Prices will be adjusted in relation to quality. Coffee will be divided into three qualities, X, Y and Z—Z being the lowest. All registered dealers must keep their regular customers supplied to the full proportionate extent for the Ministry's allocations.

Utility Corsets.—Maximum margins and prices for corsets and brassières of general

utility have been approved by the Board of Trade, on similar lines as for other types of utility clothing. Manufacturers' overriding maxima vary from 2s. 6d. to 13s. 6d. for each corset or suspender belt, and from 1s. 11d. to 5s. 9d. for brassières. For wholesaler's, the maxima are from 3s. to 16s. 2d. and 2s. to 6s. 11d. Retail prices range from 4s. 6d. to 24s. 2d. for suspender belts and corsets, and from 3s. to 10s. 4d. for brassières.

Canned Fruit and Vegetables.—Two new Orders have been made, amending the maximum prices of certain kinds of canned fruit and vegetables, consolidating the regulations dealing with the canning, bottling and freezing of these foods, revising the minimum filled weights and incorporating the canning and weight schedules. No changes have been made in the regulations requiring the licensing of manufacturers, but after April 1st the canning of fruit and vegetables not specified in the schedules is prohibited. The Orders came into force on January 19th.

policy that was to be followed in the Far East, about the measures that would be taken to increase the effectiveness of the Government machine, and about the Cabinet's intention to treat with the seriousness it deserves the problem of reviving the energies of democracy. Of these, Mr Churchill has so far dealt only with the first, and with that one but partially: he has made it plain that the Government attaches no secondary importance to the Far Eastern theatre of war, and is doing what can be done to repair the situation there. But he was not entirely convincing about the reasons for that situation arising. He gave cogent reasons why very little could have been done to garrison Malaya; he did not establish that as much was done as could have been done.

Of the other two necessities, he said nothing, or nothing positive. Yet both are important and urgent. It is not entirely fair of the Prime Minister to confuse the demand for reconstruction of the Government with a hunt for scapegoats. Responsible opinion does not want scapegoats. Those who are outside the Governmental machine realise that they do not possess, and in wartime cannot be given, the information necessary to form a judgment on personalities. Many ministers who enjoy a public reputation as wonder-workers may, in fact, be dangerously slapdash in their methods. Others who have little Parlia-

mentary repute may be most effective. The demand is more for the importation of new blood than for the expulsion of old; and in any case the major wish is for a change of method rather than of men. In a strategic context, Mr Churchill laid down the principle that "action to be successful must rest in the fewest number of hands possible." What is asked is that he shall apply that principle to his own Government, and place the power to act in the hands of men capable of decision and free to decide.

The Prime Minister had even less to say about the equally vital matter of helping the people to construct for themselves an inspiring faith to carry them through the bitter second half of this long war. "Now," as Mr Churchill said, "that we can breathe more freely," the last excuse for inaction on this most vital front has gone. If, as rumour has it, Sir Stafford Cripps is to join the Government, it is very much to be hoped that this will be his assignment. It is a task for energy, for faith, and (so prehensible are the obstructive interests) for burning radicalism. In the short run, there is nothing more important. In the long run, there is nothing more important: what shall it profit a nation if it shall gain the victory and not recapture its own soul.

The United Nations

THE details were made known on Tuesday of the most comprehensive system of international association the world has yet seen. The students of post-war leagues and federations would do well to study it; the Axis states no doubt are already giving it their most close attention. The problem is to mobilise the resources of all the United Nations and to concert their use in production and on the battlefronts with the maximum of effect. The Allies are sovereign and independent states, including the Dominions, and will remain so; and the prerequisites for a successful plan, which will avoid the discord which can be the bane of any alliance, are three. First, there must be consultation in the making of policy. Secondly, there must be agreement upon the policy decided. Thirdly, there must be power to act at the places where that policy is executed; there must be military and economic "commands."

Inevitably, policy will be worked out in the capital cities, and by the governmental agencies, of the Great Powers, in Washington, London, Moscow—and Chungking; this is equally true of alliances in war and associations in peace. The need for continuous consultation between these states, and with the other, often distant Allies, is obvious. In the economic field, there already existed a machinery of consultation between Washington and London before the United States went to war. A White Paper this week announces the strengthening of this machinery by the setting up of three Anglo-American Boards to deal with the assignment of munitions, the adjustment of shipping resources and the utilisation of raw materials. For each Board there will be parallel committees in Washington and London, which will maintain liaison with the diplomatic and production departments of the two Governments; they will confer with representatives of the USSR, China and such others of the United Nations as are necessary to attain common purposes and provide for the most effective utilisation of the joint resources of the United Nations.

This structure is less than the Allied Supply Executive that had been forecast in some quarters; but it closely follows the lines of practical possibilities. As has been pointed out in *The Economist*, production cannot be organised internationally, and any attempt to make Mr Nelson in America and the Production Executive in London answerable to a joint body could only create confusion. What can be done is to agree on programmes and on the allocation of finished weapons. The first task

is still unprovided for, and it is still the chief thing to be filled in the arrangements for unity. The task is to be the province of the new Assignments Board, of whom Mr Harry Hopkins and Lord Beaverbrook are the leaders. The two other newly created boards concerned with the use of shipping, which include Admiral Land, Sir Arthur Salter Leathers; and with the distribution of raw materials, which falls to Mr W. L. Batt, Sir Clive Baillie Beaverbrook. It is perhaps worth mentioning that the new structure does not replace the Lend-Lease Lend-Lease has never been a method of production or pooling resources; it is a legal device and it will remain unless or until some other method of providing funds for governments other than that of the United Nations.

In the military sphere, there will be a Combined Chiefs Committee in Washington, to provide work of grand strategy within which the Boards and Committees for economic affairs. Three American and three British chiefs make up this Combined Committee, which will collaborate closely with Russia and China with the rest of the Allied and associated Powers.

Any divergence of views within the Combined Chiefs Committee will be adjusted by President Roosevelt and Mr Churchill, as heads of the United States and the United Kingdom Governments. It is important that these Boards and Committees, economic and military, are not executive bodies with power to make decisions out of policy, and the sole right to decide on the case of Britain and the United States, whose resources are the core of the Grand Alliance. To-day collaboration in matters of supply and production should be slight. In the military sphere, there has been continuous collaboration on the Atlantic and in Iceland for many months, and of American troops in Northern Ireland in accordance with grand strategy; so, too, is the successful policy of joint aid to Russia and the Middle East.

Agreement with Russia, which must be its own battles on its own Russian front, and its own decisions, is secured, first of all, by the

between Mr Churchill (and Lord Beaverbrook) and Premier Stalin—indeed, the strongest bonds of the whole alliance are the personalities of Roosevelt, Churchill and Stalin. The details have been worked out by the interchange of military and economic missions between Moscow, London and Washington; and the new Boards and Committees in London and Washington should provide more permanent channels of consultation. China, too, must largely fight its own battles on its own soil, distant from the centres of Allied decision. But China is also an indispensable and powerful partner in the Grand Alliance; and it is to be hoped that, in the organisation of General Wavell's South-West Pacific Command and in liaison with the economic Boards and the Chiefs of Staffs Committee, consultation and agreement with the Chinese Ally can be fully attained.

These two problems of consultation and agreement are, strangely perhaps, at their most acute in the case of certain of the British Dominions, whose anxiety to be consulted in the making of policy and in strategic decisions has grown as the Japanese danger has advanced. Mr Churchill has always been willing to meet their wishes, though, rightly, he has not found it easy to believe that the barriers of time and space which lie between Canberra and London can be surmounted by any simple device. At present, consultation is carried out continuously by High Commissioners on both sides—just as consultation through Ambassadors remains the normal channel of communication between the other Allies—and, in emergencies, it is done by personal contact, by telephone or telegraph, between Prime Ministers. Now this machinery is to be strengthened in two ways: by the formation of an Imperial War Cabinet, which will be the British War Cabinet enlarged by the inclusion of accredited representatives of the Dominions, who will take part in "the formulation and direction of policy" and have access to the Defence Committee; and by the setting up of a Pacific Council, "on the Ministerial plane," comprising the United Kingdom, Australia, New Zealand and the Dutch East Indies or the Dutch Government. The work of this Council will enable the British Commonwealth to act as a whole and form plans for appropriate measures in defence, foreign affairs and supply.

It will sit either in London or, as Australia and New Zealand prefer, in Washington.

Plainly, this Council fits in well with the larger framework for inter-Allied consultation and policy-making. It will be a valuable aide, not only to the Combined Chiefs of Staff Committee in Washington, but also to the Anglo-American economic Boards. The Imperial War Cabinet does not fit in so well; it differs from any other of the arrangements—there are no British Cabinet Ministers in Washington or American Cabinet Ministers at Westminster. Its justification is that the Australian and New Zealand Governments, believing empirically that their interests have probably been neglected in

previous London decisions, both desire it. Whether in fact their representation in the British Cabinet can make much practical difference, except psychologically and in day-to-day knowledge of what is going on, may perhaps be questioned. The British Cabinet will still be responsible to the British Parliament. The Dominion representatives will still be responsible to their distant Parliaments; they will be able to consult, but not to decide. They will have no power to bind their Ministerial colleagues in Australia or New Zealand without reference back, unless they are sent as plenipotentiaries—which seems precisely what the Dominion Governments, whose natural concern is that they as a body should be consulted at every crucial stage, do not wish or propose to do. The Imperial War Cabinet will be welcomed as a symbol of Commonwealth solidarity; but it cannot be expected to perform miracles.

The third stage of alliance—action, after consultation and agreement—is the most important; it is the end, the others the means. And action is always local, at a single place or in a single region. In the economic field, British factories must be directed by a British production executive, and American factories by an American executive, both according to a co-ordinated Allied programme; these executive agencies must be the economic "commands." Policy-making and policy-executing, of course, do overlap; the Anglo-American Boards will not only co-ordinate priorities and allocations for munitions, shipping and raw materials, in parallel, from London and Washington; they will be directly interested in their application by the appropriate departments and agencies of the British and American Governments. In the same way, in the military sphere, the Combined Chiefs of Staffs Committee will have a direct interest in the execution of its plans.

But real executive responsibility will rest, and must rest, with the Governments of the separate United Nations, at the one end of the scale, and with the commanders in the field, Allied or inter-Allied, at the other. On the Russian front, Premier Stalin and his generals have the power and the responsibility; on the Middle Eastern Front, power and responsibility are shared by Mr Churchill's Cabinet and General Auchinleck; in China they are the Generalissimo's; in the South-West Pacific, they belong to the Supreme Commander, General Wavell, and behind him the Governments who have approved him; in the South-East Pacific, the new Anzac zone, between Australia and the United States, they belong to American commanders and President Roosevelt.

Mr Churchill has said that General Wavell "will not be overburdened with instructions." This might well be the motto of the Grand Alliance in action; to consult and to agree by the means of this great flexible framework of co-ordination—and then to get things done. Most of all, this means finding the right men to apply the right plans in the right places. Co-ordination is not an end in itself; it is a means to victory.

War-time conditions have proved the advantages of appointing the "Royal Exchange" as Executor and Trustee under a Will. This ensures a permanent and expert administration and can be associated with a private co-trustee.

The Gap Again

AN article in *The Economist* of January 3, 1942, set out such information as is available on the sources from which the men and materials needed to fight the war have hitherto been drawn. The main table of that article, in which its argument was summarised, is worth reprinting (the more so since, in the version originally printed, the minus sign was inadvertently omitted from the final figure):—

NATIONAL INCOME AND EXPENDITURE IN REAL TERMS
(100 = Net national income at factor cost in 1938)

	1938	1940	1941-42
Net national income at factor cost	100	109½	112½
Consumption	77	69	63
Government expenditure	19	73½*	74*
Investment (or Disinvestment)	4	-33*	-24½*

* It should be remembered that the 1940 figure of Government expenditure includes payment, out of capital assets, for many things which in 1941-42 are obtained on Lend-Lease terms.

An alternative way of setting out the same facts is to say that, since 1938, increased Government expenditure has absorbed resources of manpower and materials equal to 55 per cent of the total net income before the war. This 55 per cent has been provided, as to 12½ per cent by increased output, as to 28½ per cent by drafts on capital (1938 investment plus 1941-42 disinvestment), and as to the remaining 14 per cent by reduced consumption. All these figures are in real terms—that is, they are not influenced by changes in the value of money.

The first question that must be asked in any approach to the Budget of 1942 is what changes are to be made in the figures of a table like that above in moving from 1941-42 to 1942-43. Government expenditure is, of course, the dominant element. Is it, first of all, likely that the real resources required by the Government in the year that begins on April 1st next will be larger than in the year that is now drawing to a close? The answer is certainly yes. Men and women have been called up to the armed forces and munitions industry in large numbers throughout the past twelve months. The proportion of materials allowed to be used for civil consumption has been steadily restricted. Even if there were to be no further increase from the position reached now, in January, 1942, the average of real Government expenditure in 1942-43 would be considerably higher than the average for 1941-42. But it is to be hoped that there will be an increase from the present level. The output of munitions will certainly rise in the course of 1942; and while that does not necessarily imply a higher utilisation of resources (since, when all the factories are built, there is a steep rise in the ratio of output of munitions to input of resources), it is almost certain that the end of the Government's claims on men and materials has not yet been reached. In the notation of the table, the rate of Government expenditure may well be 80 or more now, and it may be as high as 85 on the average in 1942-43. These, it should be added, are not in any sense estimates; but they are indications of the range of possibilities.

To some extent, the increased Government expenditure can come out of increased national income. As bottlenecks are cleared, organisation is speeded up and the last reservoirs of idle resources are drained, the total production of the nation will doubtless increase still further. But it would be optimistic to suppose that the whole of the Government's needs could be met from this source. Perhaps a net national income in 1942-43 of about 115 or 116 per cent of 1938 (in real terms) is as high as can be secured in practice, and, if so, its increase will provide only the smaller part of what the Government requires.

Drafts on capital are a second possible source. But so far from expecting an increase in the coming year in the contribution that can be expected from this quarter, there is some reason to expect a decrease. Even since the enactment of Lend-Lease there has been some utilisation of dollar assets of a capital nature, which must now be almost completely exhausted. Expenditure in Canada seems likely to continue to increase (and will be paid for

out of the generous gift of \$1,000 millions recorded in a Note on page 139), but the volume of supplies that can be obtained on credit from other parts of the world may well be less than hitherto, if only because of the geographical extension of the war. At home, the largest factor in domestic disinvestment has probably been the non-replacement of trading stocks, which must now be at or near the minimum point. Moreover, it may be that the volume of essential maintenance, repair and replacement of fixed plant is slowly increasing as time passes. On all these matters, the layman can do no more than guess. But it seems very unlikely that a greater volume of resources will be obtainable in 1942-43 from the various methods of drawing on capital than in 1941-42, and it may be difficult to maintain the level then reached. The conclusion is inescapable that if (as must be hoped) the scale of Government utilisation of resources is to increase, the scale of popular consumption must be cut down still further. To state the task in approximate numerical terms, it may be that the physical volume of consumption, which had been reduced from 77 in 1938 to 63 in 1941-42 (that is, by about 18 per cent), will have to be further reduced to 57 or even to 55. This would be a further cut of about one-tenth of the 1941-42 consumption or perhaps about one-twentieth of the present (January, 1942) rate of consumption. In money terms at present prices, consumption in 1942-43 ought to be something like £400 or £500 millions lower than in 1941-42.

It may be assumed, on last year's precedent, that this is the way in which the Chancellor of the Exchequer is approaching his problem—with, of course, the advantage of estimates instead of guesses. His next problem will be to decide how this reduction in consumption is to be brought about. This carries the argument back to the old familiar lines. The consumption of the people can be reduced by taxation, by savings, or by direct physical limitations such as rationing or limitations on production. Or it can be reduced by inflation which, in spite of a persistent public belief to the contrary, is not a way of avoiding the restriction of consumption but a particular—and a particularly obnoxious—way of imposing it. Hitherto, British financial policy has made use of all four methods. Inflation has been permitted, though the endeavour has been to keep it within bounds. To do this requires that the volume of available purchasing power in the hands of the public shall not greatly exceed the possibilities of spending it. In Sir Kingsley Wood's own metaphor, there is a limit to the weight of water that can be held back by even the most solid dam. For this reason, though stricter physical controls—more rationing and more shortages—have a part to play in the further restriction of consumption, they cannot be left to play it alone. They must be assisted by measures of taxation, or by increased savings, to mop up the purchasing power that they set free. There are several signs that the dam is being strained already. It was argued in these columns at the time of the last Budget that the Chancellor of the Exchequer had not succeeded in completely closing the "gap," or in reducing it to the £100 millions or so which he was prepared to contemplate. In the ensuing ten months, many of the contingencies that were then apprehended have come to pass, as well as some unexpected ones. Expenditure has been higher than the estimates: wage rates have been increased. The volume of expenditure already spilling over the dam into black and grey markets, and into markets that are apparently considered to be white, such as those for tobacco and beer, shows the pressure that is already generated. If in the coming twelve months the national income is to increase (because of higher output, and higher wages) by several hundreds of millions, while the quantity of goods and services to be purchased is to be reduced by several hundreds of millions of pounds' worth, the dam will be in serious danger of bursting wide open.

For these reasons, the painful necessity of still further

taxation in the forthcoming Budget must be faced. It is, of course, much simpler to say this than to point out to a harassed Chancellor where he can find additional revenue. Two suggestions that were made in *The Economist* a year ago may be repeated, in spite of the fact that the Chancellor rejected them in his last Budget speech. One is for a tax on excess incomes of all kinds, as well as on excess profits. The Chancellor's strongest argument against it was the equitable argument that two men earning the same amount could not be taxed differently merely because one of them earned less before the war. It is an objection of real substance, but it would disappear if the whole of the tax collected were treated as a post-war credit. It would be necessary, for administrative reasons, to limit the tax to persons who made returns for income tax before the war, but this again would be reasonable if the tax were treated as compulsory savings. The second suggestion was for an excise tax—an extension of the Purchase Tax—on services. The Chancellor's objection was that many services are necessities—he mentioned rent and rates, railway, bus and tram fares, gas, electricity and water, entertainments, hotels, restaurants, etc.—and would have to be exempted. But with the exception of rents and rates (which are hardly services in the usual sense), all these are things of which the consumption should be reduced. And are

any of them more necessary than clothing, which is subject to Purchase Tax? The Chancellor may have been right in suggesting that the yield of a Service Tax would be less than was suggested. But he was surely wrong in completely rejecting the proposal.

There are a few other suggestions that can be made. The reduction of the surtax limit to £1,500 was forecast two years ago, and should be carried through this year, in default of a reorganisation of the whole of the direct taxes. A duty on advertisements would be justified in peacetime and doubly justified in war. But, however many such devices and expedients were listed and enacted, their combined yield would probably not amount to a great deal in the context of war finance. If a substantially larger sum has to be raised in taxation, the main reliance must be on the old standby of direct taxation. But with the standard rate of income tax at 10s. in the £, the question must be very seriously asked whether the present system of direct taxation will bear any further increase without damaging reactions on the productive effort of the community. Indeed, it has been argued that, so far from an increase being possible, some reduction of the present effective combined weight of income tax, surtax and EPT is necessary as an incentive to greater production. These are questions that will be examined in a subsequent article.

Rio and After

THE Pan-American Conference at Rio de Janeiro was faced with two problems, the first, to establish a united front to Axis aggression, the second, to organise the resources of the Americas for collective defence. Of the two questions, the first was naturally the more vital, since the effective pooling of resources depended upon unanimity of political attitude. The result is, on the whole, satisfactory. The 21 Republics have agreed to assert and maintain American solidarity against a non-American aggressor. They have provided for common action for mutual protection. They have "recommended" a severance of diplomatic relations with Germany, Italy and Japan; and they have adopted the principle that they will only resume relations by a common agreement.

The political importance of this measure of solidarity is obvious, especially if it is compared with the 1917 reaction to a very similar situation. Then there was no joint conference; only eight countries—Brazil, Costa Rica, Cuba, Guatemala, Haiti, Honduras, Nicaragua and Panama—followed the United States into war; five others—Bolivia, San Domingo, Ecuador, Peru and Uruguay—broke off diplomatic relations with Germany, while the seven remaining neutrals included three of the most powerful American states, Argentina, Chile and Mexico.

At Rio de Janeiro in 1942, the atmosphere was radically different. Some of the republics came to the Conference with their minds already made up. The Central American and Caribbean republics, for example, had already declared war against the Axis powers, while Mexico, Colombia and Venezuela had broken off diplomatic relations. Other States, such as Brazil and Peru, showed their readiness to break off diplomatic relations from the start of the Conference. Paraguay and Bolivia broke them off immediately after it; and no praise can be too high for the courageous stand taken by Uruguay, whose stand was the timely expression of a long-sustained sympathy for Great Britain and for the cause of democracy, which neither the course of the war, nor the intrigues of the Nazis have been able to shake.

The republic's resolute attitude springs largely from the patient work of the present United States Administration and its predecessor in pursuing a "Good Neighbour Policy" and gradually stilling the suspicions which were raised by the expansionist period of United States foreign policy in the decades before the last war. It is significant that at the Rio Conference, Mr. Sumner Welles made no attempt to press a United States policy. He was content to let the Latin American States settle the vital ques-

tions between themselves, and his confidence in the outcome has been justified. Any signs of undue pressure from Washington would inevitably have been resented, and would very probably have made complete co-operation impossible of achievement. As it was, the Conference was a real success for the "Good Neighbour" policy.

The changing character of modern war has also played its part. It is not merely a question of a far more scientific exploitation of Fifth Column activity, but of the actual physical possibility of total war. The Japanese attack on Pearl Harbour, across thousands of miles of ocean; the tactic of air landings on undefended coasts; the passage into popular language of such a conception as "The Straits of Dakar"; the lessons taught by the fate of a divided Europe—all these combined to increase the republics' realisation of the necessity of joint action and pooled defence.

Psychologically, the way for the Rio decisions was cleared by the earlier meetings at Panama and Havana, where a great variety of joint agencies—such as, for example, the Permanent Inter-American Neutrality Commission—were already set up and the possibility of future joint action fully discussed. At the same time, the co-operation between the United States and the British Empire, two sovereign independent blocs, which led to such arrangements as Lend-Lease and the leasing of bases, showed how far the pooling of resources could go without raising any question of infringing sovereignty. Independent sovereignty has always been the stumbling block in the United States' relations with its less powerful neighbours. Thus inter-American relations from Havana to Rio are the first concrete proof that the arrangements worked out in London and Washington are capable of universal application.

Yet in spite of the increased sense of solidarity and the increased need for it, the Rio Conference did not go so far as it might have gone. The resolution calling for an immediate, unanimous breaking-off of relations had to be modified. Instead, the resolution recommending the severance of relations was passed. Unity of action gave place to unity of recommendation. Of the two States responsible for watering down the decision—Chile and Argentina—only Argentina did so from a real preference for neutrality as such. Chile, with thousands of miles of Pacific coastline and Japan's amazing naval ingenuity to consider, viewed rather dubiously strong diplomatic action unaccompanied by equally strong defensive action. Her quarrel was not that the resolution to

break off relations as such went too far, but that unless it was accompanied by a far more definite pooling of American military resources, it would offer a provocation which Chile alone had not the strength to meet.

The real core of opposition was centred as usual in Argentina, and it is likely that if Uruguay, Brazil and Chile had been prepared to follow an Argentine lead, Dr Castillo, the Acting President, would have held out for neutrality and have opposed even the recommendation to sever relations. The opposition of Argentina to United States leadership is very old and very strong. The republic values highly its close links with Europe. It fears that a pooling of its political, economic and military resources with those of the rest of the hemisphere will permit the United States once and for all to establish its pre-eminence and to create an economic interdependence from which Argentina could not hope later to escape. This traditionally suspicious outlook is aggravated at present by the clash between the Argentine Executive and Legislature. The opposition has crystallised round the question of foreign policy, the democrats and radicals demanding stern measures with the Nazis as well as the reassembly of the Legislature, the President trying to preserve relations with the Axis and to keep the country in the present "state of siege." Dr. Castillo has therefore felt compelled to take a strong line on Argentina's relations with the Axis in order to suppress popular opposition at home. It is the measure of the determination of the other Latin American states that he has been compelled to modify his attitude. The result is a typical compromise, Argentina modifying her extremist attitude in order to avoid isolation, the others the strength of their resolution to secure unanimity.

With the political framework of decision and action settled on the whole satisfactorily, the result of the Conference will tend to turn on the second problem, the co-ordination of economic and military resources. The South American republics have faced very severe economic difficulties as a result of the loss of European markets, but the enormous expansion in the United States armaments programme is to a large extent solving the problem of surpluses. Hitherto the problem has been to find anything in South America that the United States wished to buy in bulk. To-day the problem is exactly reversed. The problem is to find United States exports. Up to the end of 1940, Latin America's total adverse trade balance with the United States was \$106,700,000. It is estimated that the 1941 figures will show an export surplus of some \$250,000,000. It is at this point that the linking-up of Latin America's needs with the whole new Allied machinery of pooled resources and allocated supplies becomes vital. The basis of the new exchanges is obvious. Latin America's defence position is weak. In return for vital raw materials, such as tin, copper, aluminium and rubber, the United States can give—and has given—not only finished armaments, but interest free loans for defence works and for improved communications.

With the political front decided, this process of "getting mixed up together" can go forward unhindered. Thus a new area of joint action and joint decision, where common responsibility is combined with full independence of sovereignty, has come into being. New worlds are growing up to counter the "new orders" of the old. Not only hemisphere defence, but a great political experiment depends upon the outcome of Rio.

NOTES OF THE WEEK

Americans in Northern Ireland

American troops have landed in Northern Ireland. Although their arrival is a symbol of greater things to come, when the time for a general offensive against Hitler's western defences is ripe, the purpose of the present force is defensive. Their station is beside the supply depots and port facilities which Americans have already been building under Lend-Lease and their task is to ensure the steady flow of munitions and goods through the democracies' Atlantic sea lanes. Their arrival adds to the ring of American garrisons—in Newfoundland, in Iceland, in the West Indies—which are defending the Atlantic link. The welcome given them has naturally been warm and enthusiastic with only Mr De Valera striking a discordant note. Mr Roosevelt will not be the only one to be "surprised" at the Eireann Prime Minister's protest that he had not been consulted. The arrival of the Americans was a strategic arrangement in a war from which the Irish have in the most solemn and formal way dissociated themselves. Moreover, the continued presence in Dublin of the eyes and ears of the Axis in the shape of the Legation staffs would in any case debar the discussion of vital strategic decisions before they had been successfully put into effect.

Return Match?

The battle of Libya again hangs in the balance. After some weeks of regrouping and reinforcing his army, Rommel has again taken the field and a deep thrust has brought him to Msus, 150 miles north-east of El Agheila. The analogy with last year's advance and retreat was so obvious and so alarming that a first reaction was to expect to see the Axis forces advance rapidly to the old Sollum line. With the heavy bombing of Malta serving the same purpose of screening convoys as did the battle of Matapan last year, it was possible to believe that Rommel had been very heavily reinforced at a time when the Far East would undoubtedly be making onerous calls on the Allies' Middle Eastern resources. However, it seems that Rommel's reinforcements were not so great as was feared at first. He has arrived at Msus after a fierce tank battle with only about one-third of his original force, and it is possible that, like the daring diversion into Egypt at the height of the Sidi

Rezegh battle, the new drive was designed to prevent an Allied advance rather than to attempt sudden reconquest. The harrying by British aircraft of a large convoy and the sinking of a 20,000-ton liner-supply ship in the Central Mediterranean may discourage the Axis forces still further. But the present turn of events is yet another warning that until the British hold the North African coastline from Cairo to Tunisia, any conquest in the desert will be insecurely held.

Far Eastern Front: The Good Side—

The Japanese have opened their seventh front in the Far East. When, on January 23rd, an enemy convoy was sighted off Rabaul, the Australian base in the Bismarck Archipelago, and the landing of some 10,000 troops followed, the Japanese were already fighting in China, in Burma, in Malaya, in the Philippines, in Borneo and the Celebes. Their lines of communication stretch now throughout the South China Sea, and their main supply base is still Japan, some 2,000 miles away from the chief area of operations. That such a dispersion of effort and commitment is potentially dangerous cannot be questioned. The problem is, whether the United Nations can begin to strike at the enemy's long sea lanes, and hold the advance of his land forces before he has deprived them of bases from which to launch the counter offensive. Hitherto, the answer, week by week, has been a decisive and depressing negative. At last, however, in the eighth week of the campaign, there are signs that the Allies' prospects on land and on sea are a little brighter. True, it is not much more than a rift in the uniformly heavy clouds of war, but it may be a pointer to clearer sky ahead. On the Chinese front, the Japanese have suffered a setback in the Kowloon area. In Burma, Chinese reinforcements are "streaming into" the country, and in very heavy losses. The advance in Malaya, though not checked, has been slowed down. General MacArthur has firmly established his forces in the Bataan peninsula, from which the Japanese have so far been completely unable to dislodge them. Finally, in the Macassar Straits, a Japanese convoy, unloading at Borneo's oil port, Balikpapan, has been mercilessly attacked by Dutch and American aircraft, and by American destroyers and cruisers. Not only are the results of the attack very satisfactory—with a dozen ships

sunk or severely damaged—but this is the first indication that the United States Asiatic fleet is operating in South China waters. Yet in spite of these more hopeful happenings, it would be folly to paint the Far Eastern war front in anything but very dark grey colours, or to dismiss the Prime Minister's warning that worse tidings may be still to come.

—And the Bad

From three areas in the Far East the news is, on the whole, worse. The Japanese drive on Moulmein, in Burma, the important harbour at the outlet of the Salween River, is making some progress. The British have taken up positions east of Kawkaik, which is only 45 miles from Moulmein, and 100 miles from Rangoon, across the gulf of Martaban. The danger of this move both to the Allied land and sea defences is obvious. If the valleys of the Salween and Sittang are overrun, the Burma Road supply route can be cut long before it reaches difficult mountain country. If another harbour is secured on the Indian Ocean, the sinkings in the Bay of Bengal—two have already been recorded—are certain to increase; and should attacks in these waters become widespread, the United Nations would be deprived of their last relatively submarine-free passage. In Malaya, the fall of Batu Pahat on the west coast of Johore, and heavy landings at Endau on the east coast, presaged a great struggle on a long front some 65 miles from Singapore, to secure the transversal road which runs from Batu Pahat to Mersing. Now the Japanese have succeeded in crossing this road in the West. There is fighting on the coast road below Senggarang and, in places, the front is now only 50 miles from Singapore. The defenders are undoubtedly putting up an increasingly stiff resistance, and there are welcome signs of increased air support. But the outlook is dark. Finally, the Japanese attack which is developing in the New Guinea zone is an immediate menace to Australia. North Australia is not thickly populated, nor is it heavily defended. And the Torres Straits between New Guinea and Cape York is only 75 miles wide.

Canada's Gift

All through the war, the British need for United States dollars and the political consequences that have flowed from it have been allowed to obscure in the eyes of the public the very similar need for Canadian dollars. In the financial arrangements between London and Ottawa, there have already been two phases, and the statement made by Mr. Mackenzie King on Monday inaugurates a third. In the first phase, which lasted from the beginning of the war to about the end of 1940, the United Kingdom requirement of Canadian dollars (which amounted for the slightly longer period to March 31, 1941, to \$795 millions) was financed as to about 40 per cent by sales of British assets in Canada, as to 20 per cent by Canadian accumulation of sterling (i.e., by loan to the United Kingdom Government) and as to the remainder by the shipment of gold. During 1941, the second phase, the main reliance has been on Canadian accumulation of sterling—that is to say, Canada has been content to take payment in sterling for the excess of her exports over her imports, and to leave the sterling on deposit in London. This, however, is not an entirely satisfactory solution, since it involves the constant re-investment of large sums in British floating debt. The accumulation has now reached \$700 millions, or about £160 millions. It has now been agreed that a further list of Canadian securities held in this country shall be requisitioned and repatriated. This is expected to provide about \$295 millions towards the reduction of the debt; the remaining \$400 millions will be left as an interest-free loan for the duration of the war, with the questions of its ultimate repayment, and of the rate of interest it shall bear, left for decision after the war. For the future, Canada will supply munitions of war, war materials and foodstuffs entirely free of charge up to an amount of \$1,000 millions, which is expected to last for another twelve months. The effect of the whole transaction is, then, that the Dominion of Canada is giving the United Kingdom about £225 millions and is lending, free of interest for the duration, a further £91 millions. In the context of Canadian finance, these are very large figures; together they amount to about the same amount as the total revenue last year of all Canadian governments, Dominion and Provincial, together. Mr

Mackenzie King's offer is, in its way, the most generous financial transaction between Governments that the war has yet produced.

Obligation to Serve

The obligation of all citizens, not serving full time, to do part-time war service is now being made explicit. After February 16th, under a new Defence Regulation, members of the Home Guard will no longer have the right to give a fortnight's notice of resignation; and all part-time civil defence workers, including special constables, are to be given a fortnight's opportunity to resign, after which they will be regarded as enrolled for the duration. This is only the beginning of the process of translating the obligation into actual fact. Detering those who have voluntarily joined from leaving is the easier part; they are not deserters. The more important task outstanding, in equity and in view of the vast and growing strain on the nation's resources of manpower, is to make sure that there are no abstainers—with provision, of course, for hardship or unfitness. As well as laying down that members of the Home Guard may be ordered to do up to 48 hours of training and duty in every four weeks, the new Defence Regulation empowers the Army Council and the Minister of Labour and National Service, on the advice of the Commander-in-Chief, Home Forces, to introduce compulsory enrolment in the Home Guard in areas where there is a shortage of members. If Home Guards or civil defenders resign during the period of grace allowed them before they are compelled to stay in, they will be liable to this compulsion or, in many urban areas, for compulsory firewatching. The point has almost been reached, but not quite, where every male citizen must prove that he is a member of one or another defence force. It would make the position plainer, and more logical and more effective, if power were taken to compel, directly, for civil defence, as well as for firewatching and the Home Guard—and if at least those women who have no family ties were included as well as men. These part-time duties are not alternatives to war work, but additions—and should apply equally to all citizens.

Towards a Basic Ration

The extension of the scope of points rationing is wholly to the good. With the grant of four more points per head, dried fruits and the majority of cereals and pulses were included in the system from January 26th. The new move renews the hope that the Ministry of Food is working towards a situation in which, without undue delay, the sale of all forms of food fit for human consumption is controlled by some form of rationing. This achievement would carry with it two striking advantages. First, every consumer in the country would be assured of a minimum share of foodstuffs in terms of nutritional value, with an appreciable element of choice in the exact make-up of this basic diet. Secondly, when coupled with a corresponding extension of retail price control, it would be possible to estimate, within very broad limits, the maximum outlay of any consumer on food. From the budgetary standpoint, the fact that a rough limit was set to individual food expenditure would remove a source of inflationary pressure. The increased ease with which both average and normal total weekly expenditure on food could be estimated would greatly facilitate the calculation of the cost of living in various walks of life. The authorities are to be congratulated on having so largely maintained the consumer's right, as rationing has been extended, to select any shop at will—a privilege which will do much to encourage efficient retailing and to prevent the development of monopoly interests in retail trade.

The Rubber Crisis

There is every sign that the country was taken very largely unawares by the disappearance, or threatened disappearance, of its rubber supplies. Stocks had not been built up on an adequate scale; there is no production of synthetic rubber; and reclamation has been undertaken only on a minimum scale. When the crisis was realised,

a revised Rubber Control was instituted. *The Economist* has protested against the decision to entrust this control to a body on which rubber trade interests are predominant. As has been argued in these columns with tireless iteration, the practice is utterly wrong in principle and completely reprehensible. That protest having been made, however, it is only fair to point out that the rubber industry—an expression that is used somewhat indiscriminately to cover growers and manufacturers—is being most unjustly belaboured in some organs of the press. It was no part of the industry's duty to accumulate emergency stocks in pre-war days—for the absence of such accumulation, of rubber and other commodities, the culpable lethargy of the Board of Trade is responsible—and since the outbreak of war the shipping shortage has militated against the importation of more than was currently needed. Still less was it the rubber industry's fault that there is no synthetic production. There will be no peacetime case for synthetic rubber until it is as cheap as natural rubber; and if there was a security case, it was for the Government to voice it. Experiments might have been made, and if the fact that they were not made is blameworthy, the fault rests with the lack of enterprise of the chemical industry (a near-monopoly) and with the consistent obstruction of domestic refining by the petroleum cartel. Only on the score of reclamation can a case be made against the rubber industry, and even that is not strong. But if the industry had been less tightly organised at its manufacturing end, and if there had been less integration between manufacturers and growers, it is hard to believe that reclamation would not have gone at least as far as in the United States. As with so many other defects of the British economy that the war has revealed, the fault lies in part with the Government's addiction to inaction and in part with industry's addiction to monopoly.

A Travesty of Justice?

Mr Shinwell is in the van of the critics who are crying out for more production, and as MP for a mining constituency he is well placed to know the importance of coal in industrial manufacture and transport. Nevertheless, Mr Shinwell regards the punishment of the miners of Betteshanger Colliery, Kent, for going on strike illegally three weeks ago, as a "travesty of justice." Last November, special allowances for extra work were introduced at this pit by the management, and were rejected by the men, who adopted a "go-slow" policy at work. The allowances were sent to arbitration and approved; but on January 9th about 1,500 miners went on strike, without giving the twenty-one days' notice required by Defence Regulation, thus making themselves liable to a maximum penalty of three months' hard labour, or a fine of £100. Three men, president, secretary and committee member of the local branch of the Kent Mineworkers' Association, the leaders who misled the men, have been imprisoned with hard labour, one for two months and two for one; just over a thousand others have been fined £3 or £2, with two months to pay. Mr Shinwell calls this "harsh." But the law was never more patently broken. The country has been deprived of 2,000 tons of coal a day by the strike, and between November and January still more output was lost by "ca' canny." It is impossible to be dogmatic about the adequacy or inadequacy of the allowances, or about the wisdom of the management's attitude. But these are not the crux. The allowances were arbitrated upon; and, if the men were still dissatisfied, they could have given due notice to the Ministry of Labour of their intention to strike, giving three weeks for a settlement. As it was, they "went slow," and then struck without notice. It is probably an anomaly that strikes in essential war work should be possible at all, and certainly wrong that this sort of illegal stoppage should occur. Mr Shinwell might reflect on the likely fate of strikers in Russian war industries—or in our own armed forces. Meanwhile, it seems that Mr Grenfell, Secretary of the Mineworkers' Federation, have secured a settlement at Betteshanger.

Advance to Kholm

The week has brought the Russian armies the most important success achieved so far. Striking westwards from the Va'dai Hills, they have advanced some seventy miles to recapture Kholm and Toropets. This blow threatens the

Nazis' control of the railway running north to south behind the Smolensk front, leaves Vyazma in a dangerous salient, and threatens the army besieging Leningrad with loss of contact with the main German forces. It seems very unlikely now that the Germans can hold until the spring the line Orel—Kursk—Kharkov. If they cannot, it is difficult to see clearly where the next stable front can be fixed. After the great Russian advance, the fighting has come to something of a standstill on account of a sudden fall in the temperature. It is probable that the Germans counted on a prolonged and general immobilisation through the deepest period of winter, whereas the Russians are giving them no respite except in exceptional frosts which, in any case, only last for a few days, not weeks. Nevertheless, the German forces are fighting very stubbornly and have been able each time to move back a mass of their heavy equipment and their armoured vehicles. In spite of the setbacks, their penetration into Russian territory is still very deep, and there are many reports from inside Germany of feverish preparations for a spring offensive. Sir Stafford Cripps, on his return from Russia, gave a useful commentary on the general situation. The Russian armies are growing in strength and some nine million men are under arms. Their enterprise and fighting spirit spring in part from their fine collection of able young generals. The general staff confidently expects a vast German attack in the spring, but with the new armies and war production doubled and trebled in the territories to the east, they look forward confidently to the total defeat of Germany in the autumn and winter of 1942-43. Nevertheless, they do not underestimate Germany's powers of recuperation. The animal is wounded, not disabled, and, while the Russian numbers are satisfactory, it cannot be said that they are all satisfactorily equipped. The help of Britain and the United States is wanted to the greatest extent possible if the advantages gained now are to be retained in the tough fighting ahead.

Restraint of Women

After February 16th, women between the ages of 20 and 30 seeking work may do so only through Ministry of Labour exchanges or employment agencies approved by the Ministry; and employers may not engage women of these ages, except through the exchanges. The restriction does not apply to women seeking employment in agriculture, forestry, nursing or teaching, with the Women's Services, as voluntary workers, in work to which Essential Work Orders apply, or to women who have living with them children of theirs under the age of 14 years. The women in these age groups have registered, but not all have yet been interviewed. Unless they are already in essential work they are liable to be conscripted, if single, for the Services, or directed to factories. The restriction can help to keep track of these women and to ensure that they do not go from essential into unessential work. But if conscription and direction into war work were not firmly applied, the restrictions would have the odd effect of keeping some girls in non-essential work. Employers will be forced to seek staff among women younger than 20 or older than 30, unless they can show that their requirements are essential for the war effort. For manual work other than domestic work, the labour exchanges have long been recognised as recruiting centres. In non-manual work, they have dealt mainly with people to whom the Unemployment Insurance Act applies; and in this field they were overshadowed by commercial employment agencies. There was a snobbishness which tended to prevent employers from applying to labour exchanges for pay commercial agencies for finding them employment. Some of these agencies do their work well and built up reputations for sending the right people to the right jobs; but many are merely agencies for the exchange of names and addresses. If the Ministry of Labour is to take over the entire placing of these younger women, the exchanges will need to emulate the best type of commercial agency; the exact requirements of the employer must be ascertained; the qualifications of those seeking work must be assessed; if need be by trade tests. The Supplementary and Central Registers must deal with those women qualified to be in agencies better able than the exchanges to place people with certain technical qualifications, and provision is made to approve them. Provided proper control is exercised, it would be well to take as much advantage as possible of the experience of these agencies. On the wider economic significance

of these measures, it is somewhat puzzling to find the freezing order confined to women, and to women of certain age groups. There are numbers of men between the ages of 20 and 30 who are medically ineligible for the armed forces, and not in reserved occupations, free to choose their employment. If the object is to guide labour into essential work, it would surely be more logical and more effective to apply it to all workers, men and women, of all ages.

Mr Benjamin Greene

So much indignation and alarm have rightly been aroused by the case of Mr Benjamin Greene that it is only fair that publicity should be given to the Home Secretary's defence. The facts of Mr Greene's detention and release were given in a Note in *The Economist* of last week, page 100 (it is regretted that owing to printer's errors a number of misprints occurred which are corrected on page 142). On the day of going to press, Mr Morrison, who has assumed the unenviable position of whipping boy in this matter, although he was not responsible for Mr Greene's detention in the first place, was asked in the House of Commons whether proceedings would be taken against the person or persons upon whose evidence Mr Greene was detained. In a written reply, the Home Secretary stated that Mr Greene was not detained on the evidence of a single person. "There was undisputed information derived from various sources that he had hostile associations, and these associations were of such a character that it was necessary to exercise some control of him." Even now, after his release, as the Home Office's letter to Mr Greene made clear, the order for his detention has only been suspended, not rescinded, and he is still subject to certain restrictions. If it is true that there was "undisputed information of hostile associations," this might well have been enough to cause Mr Greene's detention in the frenzied and indiscriminate days of May, 1940, without the three chief charges against him, which have now been definitely withdrawn. But, beyond any doubt, it is these which must have weighed most heavily with the advisory committee when it first considered his case and recommended his continued detention. Now, after serious bungling, he has been released. The question at issue now is not whether Mr Greene should or should not be completely whitewashed by the public. What is disturbing—and profoundly disturbing—is that both the former Home Secretary and his advisory committee should have allowed themselves, on the three most serious charges, to accept, apparently unquestioningly, the evidence of a single person which has since proved to be completely unsubstantiated.

Sliding Scales

Sir Walter Womersley has announced that pensions and allowances payable by the Ministry of Pensions to widows and children of men killed on war service, and to persons disabled through war service, will be raised from the first pay-day in February, to meet the increase in the cost of living since the last adjustment. This, as the Minister must be fully aware, is the thin end of a wedge. The thick end is the raising of all Government pensions—and possibly all allowances too—to correspond with the rise in the cost of living, a step which in equity is little more than a corollary of the present concession. On the score of cost, it might be pleaded that a rise should be permitted only in instances where hardship would otherwise result; but, against this, it must be pointed out that there are some cases above the poverty line where Government pensions have been reduced when the cost of living has fallen; and if this cut is not at least made good, such pensioners are placed in a position where any reduction made in the fat years must make them increasingly hard up when the lean years come. This discrepancy between the remuneration of civilians and members of the fighting forces, which is growing in size and in political import. It is common for industrial wages to be regulated by a sliding scale linked to the movements in the cost-of-living index. Since the fighting man is insulated from the cost of living, except where it affects his amusements, there is little case for nice adjustments in his own pay; but the cost of living still vitally affects, not only his bereaved dependants, if he is killed, or himself, if he is disabled, but also his family while he is well and serving. And his family is in most cases worse off than his civilian neighbour's. Even in the narrower case of the disabled pen-

sioner, it has hitherto not been adequately recognised that payment to disabled persons is not only inadequate compensation, but also a gross waste of public money, unless it is accompanied by all possible remedial treatment, extending to occupational therapy and instruction, where possible, in new and suitable trades. This was promised by the Minister of Labour in a wartime scheme announced last October. Last week, he promised further developments and stated that comprehensive measures for the "rehabilitation, training and resettlement of disabled persons generally" are being prepared for introduction as soon as possible after the war.

Polish-Czech Federation

The agreement for a Polish-Czechoslovak Confederation signed last week by the Foreign Ministers of the two countries goes a little bit further than the Greek-Jugoslav Pact. While each country is to retain its separate national existence, the parties to the Confederation, in which Poland and Czechoslovakia are anxious to include all European states with which their "vital interests . . . are linked up," pledge themselves to pursue common political, social, military and economic policies. In the military sphere, the Confederation is to have a common general staff, with, in the event of war, a unified supreme command. This should, of course, be already appointed in time of peace. A common foreign policy is to be accompanied by a common foreign trade policy and the eventual conclusion of a Customs Union. Postal services and communications are to be developed in a common plan and, in the educational and legal spheres, degrees, diplomas and court sentences are to be regulated. It is interesting that the Confederation does not envisage *laissez-passer*, but agrees also to regulate the right of domicile and the right to exercise gainful occupation. The terms of the agreement also contain a guarantee to the citizens of the Confederation of normal democratic rights

including the controversial issue of freedom of association. The success of the Confederation, as with the Greek-Jugoslav Union, can scarcely be estimated from the terms of its constitution. It must clearly depend on the goodwill with which it is operated and on its ability to wield power in dealing with the outside world. There is no doubt, for example, that a great opportunity for practising the principles of the agreement was missed when Poland and Czechoslovakia chose to conduct separate negotiations with Russia. Non-etheless, the agreement provides the outline of a scheme which intelligence and determination could work, particularly if co-operation with the, possibly extended, Balkan Union were practised through some form of federation of progressive federations. The enthusiastic comment which the agreements have aroused in Turkey is a good omen for the future. The pacts are, in fact, on lines similar to those advocated by M. Falihi Atay of *Ulus* and M. Yalcin of *Yeni Sabah* in the spring of 1941.

General Smuts on Trusteeship

Last week, General Smuts made a statement on South Africa's native policy which promises a big step forward from the principles which have hitherto inspired it. "We want," he said, "to take a holiday from old ideas which have brought nothing but bitterness and strife to our country, and try to the best of our ability to fashion a variegated but harmonious race pattern in South Africa." Of the two courses which, General Smuts said, previously governed native policy—complete equality or permanent European "top-dogism"—South Africa has so far chosen the latter, though recent legislation has been framed in a more liberal spirit. Even General Smuts himself has in the past favoured intensive white settlement from the highlands of East Africa to the Union, which would serve as a sort of bulwark for the protection of European civilisation on the African continent. Both in the Union and in Southern Rhodesia, in fact, the desire to prevent European civilisation from degenerating has weighed more heavily than the desire to improve the civilisation of the African. It is not certain whether General Smuts's new statement implies a far-reaching change in Union policy, though he expressly renounced the principle of segregation. But it does seem likely that native welfare problems—housing, education and nutrition—will be energetically tackled, for General Smuts said that in these respects South Africa's policy had been "shamefully deficient" and quite contrary to the principle of trusteeship. Thus, the Union seems committed to the policy which, in the British colonial empire, is summed up in the Colonial Development and Welfare Act. There is, however, a certain danger lest South Africa should regard development and welfare as synonymous with trusteeship. It is not, of course, a danger which is confined to South Africa, for there have been signs that the Colonial Office tends to regard the issue as a choice between giving the colonies bread or the vote. But in colonial policy the other side of trusteeship, the spiritual side, has for so long been enshrined that, provided it remains paramount, the weighting of the scales on the material side is both necessary and desirable. In South Africa this tradition is absent, and it will be a further test of General Smuts's statesmanship if he can combine his new deal for the natives with a truly new order for both African and European.

Changes in the Air

The fiction, in wartime, of an independent BBC with an independent chief in charge of broadcasting policy is apparently to be abandoned. The director-general, Mr F. W. Ogilvie, has resigned, and is to be replaced by two joint directors-general, who will presumably be, less reluctantly than Mr Ogilvie, caretakers for the Ministry of Information, which in wartime is inevitably responsible for broadcast news and propaganda. One of the new directors-general, Sir Cecil Graves, is an old hand at Broadcasting House. He was Mr Ogilvie's second-in-command. The other, Mr Robert Foot, was put into the BBC from the Gas Light and Coke Company some time ago as a business expert. Mr Foot is reputed to believe that wartime economies could be achieved in programmes by the use of more records, and by putting out the same items on the Home and Forces services. It is hard to see what relevance purely financial paring of this sort has to war economy,

for it is a virtue of broadcasting, as of the cinema, that so much valuable entertainment can, in theory if not in practice, be provided for the expenditure of so little physical resources. The fact that the over-cautious and negative attitude of the BBC, even before the war, tended to produce poor and stuffy programmes, in almost every category, cannot alter the apprehension that the new prospect is more dismal than ever. British broadcasting has always been a great sufferer from its own monopoly, created and maintained because of expediency, never principle. Twenty years ago, the reason was lack of wave-lengths, which has remained; now it is the exigencies of war. And, at every stage, as a medium of all kinds of entertainment, the broadcast service has been the poorer. Even now, in wartime, there is no justification for the entertainment side of broadcasting, or indeed for any side apart from security restrictions, being crippled by the control of any Government department, MoI or Treasury; and, in peacetime, the first aim should be the introduction of some element of competition—and competitive efficiency.

Shorter Notes

President Roosevelt celebrated his sixtieth birthday on Friday of this week. Most fortunately, this opportunity for saluting him comes within a few weeks of the revelation of his full stature as a statesman. The United States might so easily, at this crisis in world history, have had a President who saw the truth less clearly or one whose leadership of his people was less patient and wise.

The Government has decided to lift the blockade to the extent of sending 8,000 tons of wheat to the Greeks. There is no question either of their need or of their deserts. The doubts expressed are all of the "thin end of the wedge" variety. What is to prevent the Germans from setting about the systematic starvation of the Norwegians, the Belgians or the Dutch? And if help from Britain is refused to these peoples, what play will Goebbels make on Britain's "discrimination" between her Allies?

The occupation of Portuguese Timor in December by Dutch and Australian troops hardly caused more than a passing stir among the Portuguese public, in spite of Germany's attempts to fan the indignation professed by a small section into a general blaze. Nevertheless, it is very welcome that, after discussions with Great Britain, the Portuguese Government has sent Portuguese troops to undertake the defence of the Portuguese part of the island, and that all possible cause for disagreement has been removed.

Himmler has replaced Dr Frick as Minister of the Interior and Heydrich, the "butcher" of Prague, is to succeed Himmler as head of the Gestapo and the SS. Thus the control of the entire civilian population is centred in the hands of Hitler's two most ruthless fanatical lieutenants.

Owing to the extremely difficult conditions under which printers are working in wartime, errors and misprints are bound to creep in. Last week's errata include:—

Page 97.—The first sentence of the second paragraph of *The Book Case* should read: "In fact, the problem is an economic one, a question of allocating scarce supplies of labour, plant, materials and fuel between various claimants."

Page 100.—In the Note *A Grave Blunder*, the sentence beginning "Hackled in the November debate..." should read, "Heckled in the November debate in the House of Commons, the Attorney-General said 18B meant that the Home Secretary must give each case his personal attention and not leave it to departmental routine." In the same Note, in the sentence, "If he *conned* himself to documents, by whom had they been prepared?" the italicised word should read "confined."

Page 106.—In the last column of the table in the Note *British and American Taxation*, Government expenditure, expressed as a percentage of the national income of the United Kingdom in 1941-42, should read 67.4 for total expenditure and 50.5 for war expenditure.

AMERICAN SURVEY

The Auto Arsenal

IN any assessment of the productive strength of the United States in a modern mechanised war, the fabulous automobile industry must come at the top of the list of resources. A country that can and does produce over 4,000,000 new passenger cars and over 1,000,000 trucks and commercial vehicles in a year is obviously in a far better position to produce tanks and aircraft than any other. As with any other country, total war will strain every sinew even of the gigantic American economy. But the scope of the ultimate programme and the speed with which it can be attained will both be decided by what happens in the automobile industry. Rightly, Detroit is taken to be the very centre of the arsenal of democracy; and the conversion of the industry to all-out war production is being tackled as the first job of the new War Production Board. The production of passenger cars and light lorries for the civil market, already curtailed, is to be suspended entirely at the end of the present month (though there is talk of keeping one small plant open to supply essential needs). Heavy trucks and buses will continue to be produced in February—indeed, at an accelerated rate—but this production also is to finish by February 28. The whole industry is thereafter to be considered as a single productive unit. Mr Ernest Kanzler, of the Ford organisation, has been appointed head of the Automotive Branch of the WPB, with supreme authority to direct the gigantic conversion operation. Mr William Knudsen has testified to a Congressional Committee that the process of conversion is, at the majority of plants, to be completed within five or six months.

The size of the automobile industry in relation to that of other manufacturing trades in the United States is reflected in the following table, based on the results of the 1937 census of production:—

OUTPUT OF AUTOMOBILE AND OTHER INDUSTRIES IN 1937

	No. of Plants	Avg. No. of Wage Earners	Wages Bill	Cost of Materials, Fuel, Contract Work	Total Value of Output	Value Added by Manufacture
		000's	\$000,000's	\$000,000's	\$000,000's	\$000,000's
Automobile Industry—						
Bodies and parts	936	285	440	1,275	2,080	805
Motor vehicles	131	195	316	2,394	5,096	702
Total	1,067	480	756	...	...	1,507
Machinery (excluding transport equipment)	9,961	956	1,376	2,424	5,892	3,467
All Manufacturing Industries	166,794	8,569	10,113	35,539	60,713	25,173

On the basis of the value added by manufacture, the output of bodies, parts and finished vehicles in 1937 was as much as 43 per cent of that of the whole of the rest

of the engineering industries (excluding transport equipment) and 6 per cent of that of all manufacturing industries in the United States. In that year, the industry employed half as many workers as engineering and 5½ per cent of the number of wage-earners in all manufacturing trades.

Hardly less important than the automobile industry's munitions potential is the economy in scarce raw materials that can be achieved by the suspension of the production of cars and lorries for unessential civilian purposes:—

RAW MATERIALS CONSUMED BY AUTOMOBILE INDUSTRY IN 1939

	U.S. Total Consumption	Consumption by Automobile Industry	
		Actual	% of Total
Finished Steel (net tons)	33,122,000	5,993,000	18
Iron, malleable "	565,000	286,000	51
" grey "	6,839,000	948,000	14
Rubber (long tons)	592,000	473,000	80
Plate glass (thousand sq. ft.)	157,000	117,000	75
Leather, upholstery "	39,820	27,077	68
Aluminium (net tons)	217,000	21,000	10
Copper "	801,000	110,000	14
Tin "	88,000	10,000	11
Lead "	667,000	228,000	34
Zinc "	626,000	76,000	12
Nickel (thousand lbs.)	88,000	20,000	23
Cotton (bales)	7,371,000	734,000	10
Glycerine (thousand lbs.)	150,000	18,200	12
Lumber, hard (thousand board ft.)	4,019,000	175,000	44
" softwood "	...	104,000	...

If the automobile industry can convert into war equipment proportions of the total supply of raw materials similar to these, its potential contribution to the munitions programme of the United States will be appreciably higher than is suggested by figures of employment alone.

The industry is, of course, no newcomer to munitions production; nearly two years have passed since it was first called upon by a Government in a hurry. A violent controversy has raged ever since, and is still raging, over the methods that have been followed. The critics have been led by the CIO union for the industry, the United Automobile Workers. They have urged that it was possible to convert the existing automobile plants into aircraft factories, to employ the same machines and the same labour with a minimum of transitional dislocation. This was the basis of the famous Reuther Plan, put forward by Mr Reuther, Vice-President of the UAW. The managements, however, decided otherwise and the Government, with Mr Knudsen in a key position, concurred. The automobile industry has contributed experience, skill and general "know-how," but it has set about planning to do its war production in specially built, newly equipped factories. All over eastern Michigan, these gigantic new plants have been going up, Chrysler's Tank Arsenal, Packard's aero-

Incorporated with limited liability in the U.S.A.

engine plant, Ford's gigantic bomber plant. But the automobile factories themselves have continued, until the present, to turn out civilian cars and trucks.

For this mode of procedure, the industry, and Mr Knudsen in particular, have been strongly attacked and accused of excessive selfish addiction to "Business As Usual." But their defence is not negligible. For one thing, they have urged, the extent to which automobile plants can be converted to munitions production has been greatly exaggerated. In recent years, the trend has been strongly towards single-purpose machinery and the great factories are full of machines designed to do, and capable of doing, only one particular job. Not more than 5 or 10 per cent, it was believed, could be converted. Moreover, at the time the vital decisions were taken, the size and shape of the problem were not appreciated in Washington any more than in Detroit. In the summer of 1940, the industry was given only about \$300 millions in defence orders to set alongside the \$4 to \$5 billions of its civil output.* It seemed entirely reasonable to set up a small and specialised munitions industry without disturbing the main automobile industry. This was, moreover, in line with the dominant philosophy of that time, which saw rearmament as a useful means of finding work for the unemployed, who were still regarded as America's most serious problem.

The Problem of Conversion

The picture of two automobile industries, peace and war, existing side by side, might have been realised, had it not been that both of them grew at an entirely unexpected pace. Armament orders piled up. The \$300 millions of June, 1940, had reached nearly \$1 billion by December, 1940; by September, 1941, it was \$3,530 millions, with more to come. More than half of these orders were for aircraft and aircraft engines; the remainder was almost equally divided between motor vehicles, on the one hand, and guns and ammunition, tanks, marine equipment and other stores, on the other hand. In October last, six companies were reported to be manufacturing, or scheduled to manufacture, aircraft engines, two were making propellers, four, together with their affiliated concerns, were assembling bombers, and a number were producing aircraft parts. One concern was producing 28-ton tanks, another tank transmissions and a third tank engines, and two more were negotiating to undertake the manufacture of 30-ton and 60-ton tanks.

Meanwhile, the civil automobile industry had been expanding almost as fast. The combined output of cars and lorries during the first eight months of last year, at 3,588,000 units, probably a record, showed an increase of 31 per cent over the returns for the corresponding period in 1940. In July output was 92 per cent and in August 94½ per cent larger than during the corresponding months in 1940. But by then the available resources of materials were no longer sufficient to satisfy the voracious automobile industry as well as the plants manufacturing war equipment. Output was therefore restricted by the Government, not without some resentment among some members of the industry; in September, factory sales of cars and lorries were 11 per cent smaller than a year earlier, and since then production has been tapering off rapidly as a result of official intervention.

Whether more could reasonably have been done than has in fact been accomplished is very difficult to assess. The automobile industry cannot fairly be criticised for not waking up to the necessities of defence earlier or faster than the United States Government. Nor can it be blamed for failing to impose a sacrifice of civilian convenience (at its own expense) on a public that believed it could have limits within which conversion is possible, that seems to have been decided against the managements, since the basis of the present programme is 100 per cent conversion within six months. As in Great Britain in the early months of the war, the possibilities of converting peacetime plant to war-countries, it is almost certain that the reason is to be found in the presence in dominant positions of business men, with their conscious or unconscious preoccupation with "Business As Usual." Labour, and particularly Mr Reuther, can claim to have been right on this issue—or, at least not so wholly wrong as they were told they were by the experts—and this claim was made the basis of a demand during December that the unions should be directly represented on the body that was to have the final voice in managing the affairs

* These figures and some other facts in this article are derived from articles in the November, 1941, issue of *Fortune*.

of the industry. The OPM yielded to this demand to the extent of setting up a committee of five labour representatives and an equal number representing the managements to draft plans for the industry's conversion to war work. But the committee failed to reach agreement. The management representatives wished to confine its power to recommendations, leaving control in their own hands; they pointed out that there was no way to give Labour an equal voice in pooling the industry without socialisation. In order to smooth out the controversy, a sub-committee was established on January 10th for advisory purposes. This committee has seven members, three representing labour and three for management, with Mr Cyrus Ching, formerly of the US Rubber Co., as chairman. But this body is advisory only; Mr Kanzler does not share his executive powers with it.

The Public Sacrifice

The way is now clear for the change-over to war production of virtually the whole of the world's largest mass-production industry; its output of machines of war is to reach \$5 or \$6 billions in the present year—more than twice what was expected before Pearl Harbour. The sacrifice of convenience that is being imposed on the American people should not be underrated. Even in Great Britain, with its far smaller distances, the public has shown a very strong desire to keep its cars on the road and to accord motoring a much higher place in the scale of necessities than might seem reasonable on *a priori* grounds. In America, the automobile is far more of a necessity—a physical necessity, not merely one of convention—than in any European country. As cities have grown and industrial districts have spread, public transport facilities have not been provided, because the workers travelled between home and work by car. The whole Los Angeles region, now vital as an aircraft manufacturing centre, would come to a standstill if private cars were stopped. A recent survey reached the conclusion that the annual private car mileage that could be classed as "necessity" amounted to nearly 3½ times the total passenger mileage of all other forms of transport combined.

A stoppage of passenger-car production does not, of course, mean a prohibition of passenger-car use. There are some 27,000,000 cars on the roads of the United States, of which some 4,000,000 are Government and commercial vehicles. In recent years, about 2,000,000 a year have been scrapped, and this figure is not likely to be reduced, however great the efforts made to keep cars running, as, owing to the very large production at the end of the 1920's and the very small production in most of the 1930's, an unusually high proportion of the cars on the road are old—it is estimated that 5,000,000 are over 10 years old. The spare parts do not exist for patching up these cars. Moreover, the existence of a stock of cars is of comparatively little assistance in meeting new demands for transport owing to shifts in the population. Stocks in dealers' hands plus the unsold production of recent weeks provide a fund of approximately 650,000 new cars. This stock has been frozen and a rationing scheme will go into effect on February 2nd. Buyers will be limited to the following categories: (1) Physicians, surgeons, visiting nurses and farm veterinarians; (2) Firemen, police, public health officers, mail carriers; (3) Persons who had bought cars on January 2nd but had not taken delivery.

Thus, as in Great Britain, the private car-owner will not be able to buy a new car. He will have growing difficulty in having his existing car repaired. There is the strictest rationing of tyres and, in some parts of the country, petrol rationing is a possibility. To an extent that is difficult for a European to realise, there is a very large transport problem in the making in the United States. There is some irony, but more logic, in the fact that the first sector of the American standard of living to feel the effects of war is that of which the American has always been proudest.

Investment in 1941

[FROM OUR NEW YORK CORRESPONDENT]

January 2nd

THE capital markets of 1941 reflected, as would be expected, the cross currents of the year. For the stock market, the trend was gradually downward. January and February brought a marked decline of over 10 per cent in the averages; from March until the end of May there were four months of general stagnation, followed by a rally from early June to mid-July, which, at its peak, did not quite regain the early January figure. The remainder of the year saw a continuous, but gradual, decline to the end,

the net drop of the index from January to December being about 20 per cent—the lowest year-end for seven years. This occurred despite the fact that production rose steadily and rapidly throughout the year, that commodity prices rose considerably, and that the banking data were generally of the type called "inflationary." In short, common stocks hardly lived up to their reputation either as mirrors of industrial activity or as hedges against inflation.

New capital issues also reflected, as usual, the public aversion to common stocks. Flotations totalled about \$2,400 millions, against \$3,000 millions in 1940; of this total over \$2,000 millions were bonds. Local government borrowing, as usual, was about \$750 millions, a figure which approximates the annual retirements in that field. Such corporate financing as occurred was, as usual, mostly in the form of bonds carrying an extremely low coupon rate, generally 3 to 3½ per cent.

The Treasury offered five long-term issues during the year, of which the first (\$1,100 millions, 7-9 years, at 2 per cent, in March) was entirely refunding; the second (\$1,000 millions, 11-13 years, at 2½ per cent, also in March) was about half refunding; the third (\$1,500 millions, 14-16 years, at 2½ per cent, in June) about half refunding; the fourth (\$1,600 millions, 25-30 years, at 2½ per cent, in October) entirely cash; and the fifth, a cash offering in December of 25-30-year bonds at 2½ per cent (\$1,000 millions) and 10-year bonds at 2 per cent (\$500 millions). Altogether, by bonds and notes, the Treasury obtained about \$5,000 millions from the capital market in 1941, at a rate no higher than 2½ per cent, and the bulk of it for long term. Of this, approximately half was taken by the reporting member banks and the remainder by the public—mostly, it is presumed, institutional or quasi-institutional in nature. In addition, the public—in this instance largely individuals—took some \$2,500 millions of defence bonds and stamps, following their introduction in May. Another \$1,500 millions was realised from tax anticipation notes, sold largely to corporations, although available to individuals.

To sum up, in 1941 the borrowings of the Treasury were close to \$10,000 millions, of which about one-quarter was bank credit, and three-quarters—about \$7,000 millions—were "savings." Adding the corporate and local issues, the visible public investments of the year was about \$9,000 millions—the largest for any year since 1929. This figure is the equivalent of some 10 per cent of the national income. While it may be indicative of national savings, it should not be taken as identical. There was undoubtedly a substantial sum of business saving that went directly into plant and equipment; there was a very large sum, especially in the early months of the year, invested in residential building. On the other hand, at the beginning of the year, it was believed that there was a good deal of idle cash accumulated from previous years; and this, if invested in some form that could be tabulated would swell the total of apparent current saving. Finally, it appears that the public (individual and institutional, apart from the banks) split its 1941 investments four ways—about \$2,500 millions for marketable Government issues; about equal amounts for defence bonds and for new corporate issues; and a rather similar sum for such personal investments as homes, etc. These figures are far from being statistically precise, but they give an impression that is probably not far wrong.

American Notes

Roosevelt Counters Lewis

With the branding of Mr John L. Lewis's peace proposals as an "Isolationist plot," designed to rehabilitate himself and seize control of the whole Labour movement, the way was opened for counter measures by the President. Despite the Lewis fiasco, a strong demand for labour unity continues. The new moves envisage co-operation, but a merger is seen as undesirable in that it would certainly involve much jockeying for position among Labour leaders and might create more difficulties than it would solve. The CIO and AFL have accepted the proposal that each should send three representatives to a joint committee to meet with the President to maintain inter-organisational peace during the war. Mr Lewis's name is not mentioned among the candidates for the CIO delegation, which is reported to include Mr Murray, president of the CIO, and Mr Hillman,

now in charge of labour for the War Production Board. The first meeting with the President is expected to take place on February 15th, and it is hoped that a formula will be arrived at speedily in order to prevent jurisdictional disputes between the two organisations. There has been some press criticism of Mr Roosevelt for "attempting to be his own Bevin." It is certainly unfortunate that so many decisions rest on the President, but in labour questions it is particularly difficult to think of any other man who would be welcomed by both sides and who has sufficient prestige to produce an early agreement.

Price Control and the Farm Lobby

Popular disapproval of farm *bloc* pressure has prompted a compromise on the Price Control Bill, which now has been passed by both House and Senate. The O'Mahoney amendment, establishing fantastically high "floors" for farm prices, has been rejected, but the Bankhead amendment, giving the Secretary of Agriculture a virtual veto over limitations of farm prices, has been retained. The new minima for farm prices are 110 per cent of "parity" or the prevailing prices last October 1st or December 15th, whichever are the higher. The retention of licensing, a single administrator, and the elimination of the price review board reflect Administration views, but the exercise of a veto by the Secretary of Agriculture may mean that the final decision on farm prices, like so many others, reverts to the President. At the end of the year farm prices, in relation to costs, were about 99 per cent of "parity"; during 1942 farm prices are expected to average about 25 per cent over 1941, due to higher consumer incomes and continued purchases for Lease-Lend shipments, and farm income will, it is estimated, stand at about two billion dollars over 1941. This will be partially offset by higher costs. The 11 per cent increase in the cost of living is due largely to rising food and clothing costs, particularly in the lower-priced commodities, which means that the lowest income groups have been the hardest hit. Historically, the American farmer has always lobbied for a higher price level to lighten the burden of farm indebtedness and increase farm incomes, and because of its election on a geographical rather than a population basis, the Senate exaggerates the agricultural interest. Two farmers' organisations have disclaimed any desire to set unduly high prices, and it may be that farm Senators have gone farther than their constituents would have wished them to. Farm profiteering at the expense of the rest of the community can only be detrimental to morale and production and may create an even greater agricultural crisis after this war than that of the thirties. As was pointed out two weeks ago, the essential goal is an orderly and equitable reduction of civilian consumption all round rather than a struggle by competing interests to increase their share of a diminished national pool.

Remember Pearl Harbour

Unpreparedness and sheer dereliction of duty at Pearl Harbour, an amazing lack of co-ordination between the Army and Navy, and lack of foresight and drive in Washington are all emphasized by the Roberts Commission's investigation into the success of the Japanese attack. Although a plan of defence against air attack had been drawn up at Colonel Knox's instigation, it is clear that neither in Hawaii nor in Washington was the possibility of heavy air raids taken very seriously. Messages from Washington directed attention to the likelihood of sabotage and submarine attack, implying that aggressive Japanese action would probably be undertaken in the Far East. Out of a desire to avoid provocation, Japanese cables in code were not interfered with until December 7th, with the result that the Japanese had the most precise information about the absence of long-range reconnaissance, the location of airfields, and the berths of naval units. On the other hand, the American authorities were completely ignorant of the fact that Japanese carriers were at sea. In Hawaii itself Lieut.-General Short relied on the Navy's patrols far off-shore, without troubling to discover that they were flown on weekdays only, and then purely for training purposes. The Navy assumed that the Army was operating an adequate aircraft warning system, while in fact this was only a makeshift affair and shut off each morning at seven. The Japanese naturally timed their attack for after seven on a Sunday.

It is hard to escape the conclusion that, professionally, the Army and Navy were hardly on speaking terms. Bad luck prevented the receipt, in time, of a warning sent from Washington just before the outbreak of hostilities. The Commission reports an insufficiency of material at Pearl Harbour, but basically the disaster was due to failure to use the material at hand, to complete mental unpreparedness and misconception of the character of Axis methods, not only in the officers on the spot, but in official circles in Washington and in public opinion. It is reported that Admiral Kimmel and Lieut.-General Short may be court-martialled, but another urgent necessity is increased co-ordination between the Army and Navy, which President Roosevelt has reported to be well in hand. Pearl Harbour was a tragic disaster, the effects of which will continue to be felt for some time. But in serving to awaken the United States to its danger, and in underlining the shortcomings of yet another democracy's preparations for total war, it has had its uses.

America's Foreign Born in Wartime

The United States is unique in the degree to which its population is made up of foreign born. Over 14 million, about 10 per cent, of the American people were born outside the country, and, of course, the number of "second-generation" Americans is far greater. Of particular interest at the present time is the number of those who might, owing to their foreign birth, be sympathetic to the Axis, and, on the other hand, those whose instinctive sympathies lie with the countries of their birth either fighting German aggression or suffering German occupation. The table below divides the main groups of foreign born into those of Axis or anti-Axis origin. The figures are derived from the 1930 census, but there has probably not been much significant change since then.

		(000's)		
Axis			Anti-Axis	
Germany	1,609		Great Britain	1,402
Italy	1,790		Nor., Swed., Den.	1,122
Japan	71		Poland	1,269
Hungary	274		Czechoslovakia	492
Austria	371		Russia	1,154
			Canada	1,278
	4,115		France	135
			Jugoslavia	211
				7,063

In addition, there were about three-quarters of a million Irish from the twenty-six counties. The legal status of the 14 million foreign-born varies. Some are naturalised citizens; others have taken out naturalisation papers and are in process of becoming citizens (the United States requires a five year interval between the first application and the grant of citizenship); others have never bothered to take out papers. All three groups are affected by measures recently adopted or before Congress. Registration of all enemy aliens in the United States, Puerto Rico, and the Virgin Islands has been ordered by Presidential Proclamation. This will affect all the 71,000 foreign-born Japanese, who have not been eligible for citizenship. After a date to be fixed, aliens will be required to carry identification cards. The new registration will be more detailed than that conducted in 1940 and will include photographs and other information. Certification of enemy aliens will begin first on the West Coast, where most of the Japanese are concentrated. A Bill passed by the House and now before the Senate provides that naturalisation papers may be revoked if the citizen's conduct "establishes that his political allegiance is to a foreign state or sovereignty." The same Bill contains provisions for relaxing residence requirements for naturalisation in favour of aliens in the U.S. Armed Forces. Large scale revocation of naturalisation is unlikely.

The number of American residents of Axis origin is no clue to the magnitude of the fifth column menace, as a large proportion of the Germans and Italians are unquestionably loyal. Observers are struck by the eagerness with which aliens are volunteering for civil defence work and the forces. One notable example is that of Frank Capra, the well-known Italian-born film producer, who has announced that he will make no more pictures for the duration, and is shortly to join the Signal Corps. A group of Japanese-

Americans in California has started a drive to buy an anti-aircraft gun, and all over the country they are organising the purchase of Government Bonds. The degree to which the United States has been able to secure the undivided loyalty of its foreign-born groups is a test of the success of the "American way of life" and it seems unlikely that it will have failed to any considerable extent.

National Income

Net national income during 1941 is estimated by the Department of Commerce to have reached the record-breaking total of \$92 billions, \$9 billions more than the previous high of 1929). In the current fiscal year (ending June 30th), it is expected to total \$100 billions. The wholesale price level in 1941 was still below that of 1929, though towards the end of the year it was approaching the 1929 average. Income payments to individuals (a concept slightly different from that of net national income) have increased rapidly, and in October were at the rate of \$95 billions a year, an increase of 25 per cent over August, 1940. The average rise in wages and salaries was 27 per cent for the first nine months of 1941, largely due to additional employment and increased hours of work, although average hourly earnings have increased 14 per cent. Earnings of large industrial corporations, in spite of heavier costs and taxes, were 31 per cent higher than in 1940, but the increase in dividends has not been proportionate. Durable goods industries averaged profits 40 per cent higher than in the first nine months of 1940; aircraft equipment companies led the way with an increase of 87 per cent.

Shorter Notes

The President's plan for outside "umpires" for the War Labour Board has been abandoned, and instead 24 associate members have been appointed to assist the Board. It is reported that eight are labour organisation officials, eight represent industry and eight are non-partisan.

A further appropriation of \$300 millions has been asked for to aid workers displaced through the conversion of industry to war production. It is proposed to make grants up to 60 per cent of normal earnings, with a maximum of \$24 a week. The Treasury is considering a plan to alleviate income-tax burdens on those thrown out of work through conversion of industry.

The Interstate Commerce Commission has granted the railroads a 10 per cent increase in passenger fares and is considering similar increases in freight rates. The main reason for the application by the railroads was the increase in wages granted last month to the Railway Brotherhoods. Rationing of pleasure travel is under consideration.

Gallup Poll on President Roosevelt's administration:—			
Result:—	Approve	Disapprove	Undecided
(a) At present date...	84%	9%	7%
(b) Early Dec. (before Pearl Harbour) .	72%	19%	9%

Orders for 24 prefabricated escort ships are turning Denver, Colorado—1,200 miles from the sea—into a ship-building centre. The ships are to be exactly alike, and standard parts from twelve steel firms will be assembled at Mare Island Navy Yard, near San Francisco.

A Federal Daylight Saving Bill has become law, and clocks will be advanced by one hour from February 9th. It will presumably still be open to states and municipalities to add another hour in the summer if they wish, but such action is perhaps unlikely. At midsummer the day in the United States is appreciably shorter than in the British Isles.

THE WORLD OVERSEAS

Trade with Germany

(By a Polish Correspondent)

THE statement in the Atlantic Charter about universal access to international trade and raw materials and the Allies' intention, stressed by Mr Eden, of not seeking to ruin Germany economically are unexceptionable, as they stand. But they will need the most careful interpretation. It will be necessary to guard against any repetition of those practices in German trade which, before the war, made German trade policy simply an instrument of power politics.

It is very dangerous to say that, when the Nazi politicians have been beaten, German business men can then be left to get on with the job of normal trade relations. If the preliminary commercial understanding reached in the spring of 1939 by the Federation of British Industries and the *Reichsgruppe Industrie* at Dusseldorf had not been abandoned, a great export cartel would have been the result, which would have strengthened powerfully Germany's economic grip on Eastern Europe. Caution is always needed in regard to Germany before treating organisations of German traders as independent entities ruled by motives of efficient trading and subject to usual business standards. German trade development has tended, before Hitler, to be intertwined with Germany's political expansion, of a deplorably aggressive type. Ultra-nationalist movements and associations have not only been financed, but even founded, by leading industrial, shipping and banking concerns. From the late twenties, they readily bore the financial burden of supporting the Nazi party. As long ago as September, 1914, prominent business men, such as von Thyssen and von Reckberg, were urging the annexation of the French iron-ore district of Briey. This *Raubritter* (Robber-Knight) attitude of Germany's industrial leaders was no less apparent in 1911, when the Mannesmann Concern's Moroccan concessions almost caused an armed conflict, than it was in 1936, when the *Frankfurter Metallgesellschaft* was defending its Spanish concessions, obtained from the Gil Robles group, against the Leftist Government. German banks were supporting various subversive activities in South-East Europe, when the Hitlerites were nothing but a handful of ridiculed adventurers; and with no less money or determination, they supported the Nazi Putsch in Austria in 1934 and the Fascist uprising against President Vargas in Brazil in 1938. The Nazis, Funk, Clodius, Wohltat and the rest, followed on a well-beaten path.

Offensive Sweeps

Moreover, even apart from the usual political background of German trade policy, its usual methods scarcely make it a factor fitting into the free and natural exchange of goods and services. Most of Germany's successes in international trade have been directly or indirectly due to taking advantage of monopoly or quasi-monopoly conditions, existing or artificially created. The remarkable cheapness of German exports was largely the result of British, Dutch and Swiss acceptance houses supplying German banking and trade concerns with cheap money used by them to pay for their imports of primary produce; and a large portion of those short-term credits used to be redistributed by Germany amongst her needy neighbours at a profit. The difference in the rate of interest not only strengthened the German balance of payments, but also enabled Germany to exercise a strong pressure on both suppliers and competitors in Eastern Europe. German re-export policy was based on hindering direct trade relations between the East and South-East of Europe, on the one side, and overseas countries, on the other. Extensive export subsidies, from state funds or by industrial levies, also accounted to no small extent for the cheapness of

German goods. This was felt painfully by British competitors. The German exporter's adaptability was in part only due to skill and salesmanship; Germany's export successes were due primarily to the centralisation of German industries, to the support given by the German Government, and to the efficient and widespread net of German agents and representatives abroad. A Danubian, Polish or Baltic exporter had little more chance against a German competitor, represented by strong German export cartels, under the Weimar Republic, than when the Nazis set up huge basic combines successively swallowing German manufacturing industries. Even the highly capitalised and experienced exporters of Western Europe were hardly a match for the German battering-ram—being unable to cope with the ingenious trade agreements policy, with its "Aski" and "blocked" marks, clearing and compensation arrangements forced upon weaker partners, its fictitious long-term credits, and so on. And in any commercial deal, the Germans tended to insist on a German or German-controlled shipping line, carrier, broker, insurance and storage company, while on the financial side trusteeships, control and supervision, exchange transfers and operations had to be entrusted to German banks and agents.

The Victims

Eastern Europe was, of course, most exposed to all devices. Those people who may still cling to the notion of Germany as an economic link between that ill-fated part of Europe and the West should realise that Germany's trade policy was, and is, simply aimed at deepening the economic isolation of the East and South-East of Europe. This was undoubtedly the object of artificially raising prices in that region when they were already far too much above the world level; of purchasing their raw materials and foodstuffs through clearings and dumping them half-price in sound currency countries; of forcing these weak economic units to grant long-term credits to Germany, or to surrender goods against deliveries of German machinery at some uncertain future date—thus depriving them simultaneously of their selling and purchasing power in international markets. These tricks are now only too well known; but it is important to characterise the German "economic mission" in Eastern Europe, with its meretricious appeal, as involving a minimum of collaboration with a maximum of exploitation. Another striking example of the dangers of German trade was furnished by Soviet Russia, for which Germany as early as the days of Rapallo tried to become "sole agent" for the whole world. In practice, however, the German concessionaires, commercial agents and technical experts met with much scepticism.

It is well known, too, that German economic domination recently loomed over Latin America, with Mexico, Brazil, Chile and several small coffee-exporting countries particularly affected. German minorities played their assigned rôle and the process of political disintegration was advancing. Indeed, Britain's blockade, though causing substantial inconveniences, nevertheless saved Latin America's economic independence and political integrity.

The slogan "Beware of German Trade Habits" should be heeded by all those who are planning a better and more prosperous future for the world. The goal should be free and peaceful trade with Germany. But German commercial regeneration will have to be part of Germany's entire regeneration, political, cultural and social. The idea that there are honest and well-intentioned German traders just waiting to step into the shoes of their Nazi or militarist usurpers is belied by history.

Price Stop Policy in Europe

(BY A CORRESPONDENT)

PRICE stops after the German model have been introduced in the occupied countries. The Germans discovered, however, that these countries lacked the centralised administration and organisation which made the German system reasonably successful in maintaining an arbitrary price level for consumption goods. Even in Germany, price fixing became a complex affair under the conditions of a planned war economy. Yet effective industrial collaboration with the occupied countries needs some uniform price stop and costing system as a substitute for the relatively free market prices before the occupation. The occupied countries have accepted the price stop as well as price commissars, but the system has produced no visible results.

It is interesting to note that, even in totalitarian Italy, where various attempts to introduce a *blocco dei prezzi* principle have been made since 1937, no adequate machinery has so far been developed. A host of ministries, committees, and corporations have been entrusted with the control of prices. But their efficiency varies, and some of them have yielded far too often, according to the Italian press, to the demands of agricultural and industrial producers for higher prices. As a result, most prices have risen considerably and permanently for a number of years.

Early in July, 1941, the secretary of the Fascist party was entrusted with the co-ordination of price control in the food-producing industries, and he intends to take the costing methods of every economic unit under his control; similar measures have indeed been used for price control in Germany itself. It is doubtful, however, whether he has yet succeeded in building up a stable control machinery; the *Tribuna* newspaper complained, late in 1941, that maximum food prices are often ignored by the individual shopkeepers, and *La Vita Italiana* mentioned that the price of a certain food varied by as much as 20 per cent, "owing to the abuse and defiance of price control on the part of certain industrial producers, and also of certain retailers." Furthermore, some important exemptions from the price stop principle have been granted quite recently; the price of olive oil was increased by 50 per cent; prices for tobacco and tobacco products by about 30 per cent; and prices of salt (for industrial and agricultural use) by between 25 and 100 per cent.

The price stop principle was introduced in France immediately after the outbreak of war, but the official cost-of-living index still rose by 40 per cent between September, 1939, and September, 1941, and it is probable that the actual price increases have been even larger than indicated by the figures. A comparison between the official price reports on which the cost-of-living index is based and the available price data from Paris stores shows the latter prices to have risen more quickly in most cases. It is known, moreover, that the Paris price increases have been appreciably smaller than in the provinces. Wholesale prices have risen more steeply than retail prices; for instance, textiles have more than doubled; feeding stuffs have trebled; and prices of copper, lead and scrap-iron have risen by about 50 per cent.

Price Rises in the Balkans

The price structure of south-eastern Europe has been adversely affected by the various political ups and downs since 1939. Price indices are only available up to the summer of 1941; at that time, compared with August, 1939, the price level had risen by the following percentages:

	(Per cent increases)	
	Wholesale Prices	Cost of Living
Roumania	136.5	90.0
Hungary	45.2	29.6
Bulgaria	41.5	31.2

The actual price increases are probably larger than these official calculations. As for other south-eastern countries, the increase in wholesale prices was over 50 per cent, in the same period, in Slovakia; the Belgrade cost of food has risen, according to the *Pester Lloyd*, by 35 per cent, and that of clothing by 45 per cent; and in Greece, prices are also reported to be continuously rising.

Various measures to control prices have been taken in all south-eastern countries since 1939 or early in 1940. An "elastic" price stop was introduced in Hungary in 1939; Rumania, after various experiments, decreed maxi-

mum prices and maximum profit margins in March, 1941; maximum prices, though only for certain goods, were also decreed in Yugoslavia during 1940. But, as the Rumanian Minister for Economic Affairs has pointed out, it has sometimes been necessary for the Governments to allow price increases, since otherwise individual producers would have operated at a loss.

In recent months, the Balkan administrations have taken, on Germany's advice, more rigid measures of control, particularly in Roumania, where the price increases have been most threatening so far. A price stop has also been introduced for numerous commodities in Bulgaria, while the Hungarian Government has decided to employ large numbers of detectives for the control of prices. Martial law for speculators and profiteers has been proclaimed in Serbia, and a new Croatian Minister of Trade has proclaimed that everything his predecessor has done to control prices has been on much too small a scale.

Failure in Scandinavia

The price regulations of the Scandinavian countries have also been a complete failure. A price stop order which was issued in Finland in October, 1940, was so ineffective that a new general price stop had to be introduced in November, 1941. The cost of living in the summer of 1941 was more than 40 per cent above the 1938-39 level; wholesale prices of industrial raw materials had even doubled in the same period. The upward movement continued at least up to October, 1941, when, for instance, the prices of milk and butter were considerably increased.

The Norwegian price level is perpetually rising, though a price stop order was introduced immediately after the German invasion. Up to July last the Oslo cost of food index had risen by 35 per cent above April, 1940, and by 50 per cent above August, 1939; fuel prices had risen by more than 100 per cent since the outbreak of war.

A less rigid price control is in force in Sweden and Denmark, where a general price stop is regarded by the Governments concerned to be incompatible with a smooth industrial and agricultural production. Denmark uses a great variety of measures to control the price-level; these include maximum prices, maximum profit margins, standard prices, and price control councils whose permission is necessary before a price increase is put into effect; the latter technique is also common in Sweden. Both countries have failed, however, to stabilise their commodity prices. During the first two years of the European war, the wholesale price indices rose by 85 per cent in Denmark and by 56 per cent in Sweden; the respective rises in the cost of living were 50 per cent in Denmark and 30 per cent in Sweden; these prices were spread fairly equally over the whole of the period, that is, before and after the German onslaught on Scandinavia.

Shortages in Eire

[FROM OUR DUBLIN CORRESPONDENT]

January 1942

THE Minister for Supplies has prepared for a widespread extension of rationing. Hitherto, official rationing has been confined mainly to petrol and other mineral oils, tea, sugar, cocoa and coal; but, in order to be in a position to apply any extra rationing that may be necessary, a special register of the population is being prepared, and ration books will be available for distribution at short notice. Unfortunately, it now appears that, contrary to earlier expectations, an acute shortage of cereals may be experienced, and the rationing of flour and bread until after this year's harvest is almost certain. The output of wheat was estimated at 290,000 tons, but the actual amount available is only 190,000 tons. As the total requirements of the country amount to 370,000 tons and as 40,000 have already been imported, this means that 140,000 tons of wheat still have to be imported if normal consumption is to be maintained. This unforeseen large importation of wheat will completely tax the capacity of Irish shipping until after the harvest, and imports of other commodities may be expected to be drastically reduced. The amount of oats and barley available are also less than the amounts estimated, and it will not be possible to offset the short supply of home-grown wheat by an admixture of other cereals. Malting has been temporarily stopped pending an investigation into the whole cereal situation. The principal causes of this disappointing situation are over-optimistic statistics of acreages and yields

and the withholding by farmers of part of their crops. The Government has made a further strong appeal to farmers to render available whatever crops are in existence and to increase output in the present year. Farmers, however, are agitating for a higher price for wheat than the present price of 45s. a barrel, which is officially considered quite remunerative.

The fuel situation shows little sign of improvement. However, it is satisfactory that so much of the winter should have been surmounted without an acute shortage of the principal fuels. Imports of coal have been greatly reduced, and there is no reasonable ground for expecting any increase in the near future. The limited quantity of coal already in stock is being preserved as an iron ration, and will not be released except in an emergency. Turf production has on the whole been satisfactory, and there is no shortage of turf in the country. Indeed, it is a curious thing that many people have not taken up their ration. Much of the turf that has been on sale has not been very dry or very good, but there is every reason to believe that the quality will improve in the light of the experience of the present season. A large amount of timber has also been rendered available, mainly from State forests. Luckily, it has been possible to postpone the rationing of gas in Dublin, which would have been the cause of acute inconvenience to the whole population. The British Mines Department is supplying a regular quantity of coal to the Irish gas undertakings, which, though very small compared with pre-war supplies, is sufficient to ensure a continuous supply of gas for heating and cooking in the larger urban areas. The Government has addressed an appeal to the public for the utmost economy in the consumption of gas.

Half-an-Ounce of Tea

Other commodities which threaten to be in very short supply, owing to the extension of the war, are tea, paper, soap and candles. The tea ration has again been reduced, to half-an-ounce per person per week, but it is hoped that this amount may be increased soon. Large quantities of tea have been purchased in India and are on their way to Ireland through the United States, but with the prevailing conditions both in the Pacific and in the Atlantic the arrival of this tea is by no means certain. The paper situation is extremely serious. The most that can be expected this year is about one-fifth of the normal pre-war imports. The future supply of newsprint is by no means assured, and the quantity that can be produced by the Irish mills will only relieve the situation to a very minor degree. The outlook for the Irish newspapers is alarming, and some of the leading Dublin dailies have announced increases in their prices, which have been postponed pending official investigation. The possibility of importing the raw materials for candles and soap in the future must be regarded as remote, and the quantities of these articles available for distribution will continue to be extremely limited.

New Puppet Government in the Protectorate

[BY A CZECHOSLOVAK CORRESPONDENT]

January 27th

THE re-organisation of the puppet Government in the Protectorate of Bohemia and Moravia, which was carried out on January 19th, abolishes one of the last traces of the so-called autonomy and degrades the Ministers to minor clerks of the German administration.

The appointment of the German Nazi, Dr Walter Bertsch, as Minister of Labour and Economics puts the entire economy of the Protectorate under direct German control. He had already gained a reputation for plundering to the occupied countries when he acted as collaborator to the Reich Minister of Economics, Funk. The Czech Quisling, Colonel Moravec, has also become a Minister, he is in charge of "Popular Culture," although few people would call him either popular or cultured. The offices of Prime Minister, Public Works, Social Welfare, and Health have been abolished, and the former Prime Minister, Dr Krejci, is now chief of the Cabinet and Minister of Justice and Education. The Ministries of Industry, Commerce and Trade have been transformed into a Ministry of Agriculture and Forestry under M Hruby, while Dr Kamenicky has become Minister of Communications and Dr Kalsuf Minister of Finance.

The official language at Cabinet meetings will in future

be German, and even the word "Protectorate" has been replaced in official documents by "the former Czech Provinces." All these measures are intended to simplify the administration under German control and to adapt it to the German model. The fact that a German takes part in the meetings will prevent any further attempts to evade German orders. The hope has also been expressed in Berlin that, after the reconstruction of the Government, the Protectorate will become Germany's best armament workshop after the Rhineland.

One of the reasons for the inadequacy of the former administration was, in the eyes of the Nazis, the complete failure of the collection of warm clothes and skis for the German troops fighting in Russia. The appeals for voluntary sacrifice addressed to the Czech public by Czech quislings had been of such little success that the German authorities had to threaten with the death penalty all those who sabotaged the collection. The Czechs distributed surreptitiously their surplus clothing among poorer countrymen in order to be able to prove to the Germans that they had none to spare. In Prague there were 41 collecting centres, but special collecting commissions consisting of armed quislings and SS Troops had to visit households and even shops. The Czechs burnt their skis rather than deliver them to the Germans. They could not dispose of them in the country as the transport of skis on the railways or by other means was forbidden.

Forced Labour for Children

A single common authority has been substituted for the individual trade unions, which is under the leadership of another quisling in Vaclav Stoces. He had created a single editorial office which publishes thirteen of the former trade union papers, while another thirteen have been suppressed. Heydrich has ordered all Czech children to register at the German controlled labour exchanges as soon as they leave school. The German authorities will decide what work each child is to take up and will do so "according to the requirements of the labour market." All youth clubs have now been incorporated into the Hitler youth movement and have been told that they are expected to switch over to the German language in the near future.

Voice of the North

There are times when we need some guidance to focus the happenings of the world to our own daily lives. Why not look for that guidance in *The Yorkshire Post*? Its fearless criticisms, its forthright and independent opinions and its responsible judgments have earned it the respect of all who read it regularly.

Letter to the Editor

The Rise of Brutality

TO THE EDITOR OF THE ECONOMIST

SIR,—In my previous letter I stated definitely that your correspondent's article on Vansittartism was based on a series of definite falsehoods, and I invited him or you to substantiate them by anything I have said or written. You decline to do so, and you are wise, because you could not do so.

What your footnote to my letter says is this: "If a man writes he must expect to be misrepresented, and we cannot agree that this attitude is unfair." For my part, I cannot agree with this attitude.

In the interest of clean controversy, I therefore repeat my challenge. If you will not meet it, the least that you can do is to withdraw the three flat untruths on which your anonymous correspondent based his article.

I should add that I am not a reader of *The Economist*, and, therefore, could not be aware that all your articles are anonymous. If, however, that is your principle, I withdraw my suggestion that your correspondent should come into the open, but I maintain my legitimate request that he should define and substantiate it.

Yours faithfully,

VANSITTART.

[There is no justification for Lord Vansittart's indignation. Only two words were attributed to him in the article in *The Economist*. These two words were "butcher birds," and it is to be presumed that Lord Vansittart was not referring to them as "flat untruths." For the rest, the article made certain statements about the effect of Lord Vansittart's writings, and about an attitude of mind to which the name of Vansittartism was applied. The first point—the effect of Lord Vansittart's writings—is one on which it must be said, with respect, that other people are perhaps better able to judge than Lord Vansittart himself. As for "Vansittartism," if Lord Vansittart wishes to be convinced (a) that there is a school of thought answering to the description of it in our correspondent's article, and (b) that it takes its inspiration from his own writings, he need look no farther than the leading articles and correspondence of the Sunday newspaper in which his own signed contributions also appear. And if, when he has convinced himself, he would publicly and specifically disown the opinions which he now so indignantly repudiates, he would be adding to his great services to the country.—EDITOR.]

Books and Publications

Shorter Notices

"Butterworth's Emergency Legislation Service." King and Moore's Excess Profits Tax Supplement. Butterworth and Co. (Publishers) Ltd. 5s. Original work together with cumulative pocket supplement, 45s. Postage 1s.

The cumulative supplement to Butterworth's Emergency Legislation Service is prepared in two parts. The first provides explanatory addenda relating to those parts of the original work which covered NDC and EPT legislation. The second part brings the work up to date by summarising the relevant sections of the Finance Act, 1941, and subsequent Excess Profits Tax Regulations. As in the original work, a preliminary note is followed by textual reproduction of the relevant clauses of the legislation in question and critically annotated. The supplement completes a production which is unquestionably the most full, lucid and informative presentation of EPT legislation which has yet appeared.

"Financial Post Survey of Mines, 1941-42." The Maclean Publishing Co. Ltd. \$2.00.

The sixteenth annual edition of the Financial Post Survey of Mines is now the most comprehensive review of Canadian mining activities on the market. It provides details of ore reserves, earnings, dividends, prices and directorships for the whole field of Canadian mining and furnishes indispensable information at a time when

Canadian mineral resources are being developed with increasing intensity in response to the demands of war output.

The Financial Post Survey of Corporate Securities, 1941
The Maclean Publishing Company of Great Britain
9s.

The 1941 edition provides an invaluable guide to Canadian securities, covering the capital, profit and dividend position of 1,500 companies in a wide investment field.

German Europe

Insurance Survey

CHEAP money has created difficulties for Germany's insurance industry. Successive reductions in the interest rate have diminished the income of companies from investments, but premium tariffs in life assurance have remained almost unchanged. Since the beginning of the war, insurance companies have had scarcely any alternative but to invest their capital in Treasury Bonds and Reich Loans. Even a considerable increase in total investments did not prevent a fall in the investment income of the life companies, which was particularly marked in 1940.

The average yield on investments of the leading company Allianz decreased from 6.2 per cent in 1932 to 4.98 per cent in 1936, 4.86 per cent in 1939 and 4.64 per cent in 1940, when interest yields on investments amounted to roughly 25 per cent of the premium income. This explains why the Reich Control Board of the insurance industry gave permission for an increase in premiums for new contracts. From January 1, 1942, the tariffs will be calculated on the basis of the altered interest position. At the same time, the companies will continue to reduce the distribution of bonuses to policy holders; there is no doubt that the cost of insurance will increase for the holders of old policies, although the tariff for old policies will not be increased.

The following comprehensive figures of life assurance business were published a short time ago, showing a considerable increase during the war:

LIFE ASSURANCE (OLD REICH)

	Number of Policies in Millions	Value of Policies in Million Rm.
1938	35.98	29.77
1939	38.30	33.51
1940	41.86	36.21
1941 (1st quarter)	40.97	37.02
1941 (2nd quarter)	42.65	37.80

The total income from premiums in 1941 may be estimated at Rm.1,600 millions. Over the whole period, the number of policies increased by 18.6 per cent and the total value of policies by 26.6 per cent. Detailed figures show that the number of policies exceeding Rm.1,000 declined, although the total value of all policies increased so considerably. The average value of policies below Rm.1,000 also showed an increase. There is hardly any doubt that the rationing of civilian consumption is at the root of this striking development; group insurance in factories, for example, was officially favoured for the purpose of mopping up purchasing power. The number of group insurance policies increased from 9.13 millions in 1938 to 11.38 millions in the second quarter of 1941.

During 1940, life companies invested Rm.1,300 millions in Treasury bonds and Reich Loans. In 1941, the annual investments may have reached at least Rm.1,500 millions. A detailed analysis of the leading companies shows that new investments in 1940 in securities, mainly Reich loans, exceeded the total increase in investments, which at first sight seems impossible. The explanation is that a considerable number of mortgages and loans on policies were paid back during the year, and the companies had no opportunity of investing capital in mortgages, because of the standstill in private building; greater financial liquidity also reduced the demand for loans on policies. Under the pressure of the general policy of cheap money, the companies were forced to reduce interest on mortgages to the general rate of 4½ per cent.

The fire, accident and marine insurance companies were not able to maintain their activities at the pre-war level. All leading companies show reductions, but some were compensated by expanding into occupied and dependent countries. According to a survey published by the *Essener National Zeitung*, there are at present 30 German companies operating in France, 40 in Belgium, 44 in Holland, 5 in Roumania, and 10 in Greece. German companies operating in Scandinavian countries number from 5 to 14. In the Balkan countries, particularly in Croatia, there is some competition between German and Italian companies. A Vienna company was able to secure the portfolios of two companies domiciled in Zagreb. The company *Danubia*, affiliated to the Vienna Mutual Insurance Society, acquired

interests of Roumanian companies in the territories ceded to Hungary, and the same company opened a branch in Bucharest. The most interesting fact is that Hamburg insurance companies are now entrenched in the Balkans, which is a result of the growing interest of Hamburg in Balkan trade as a substitute for lost overseas trade. Italian companies domiciled in Trieste have been able to get permission to operate in Lower Styria, that is, the part of Yugoslavia incorporated in Germany. German companies situated in Cologne took over the business of French companies in Alsace-Lorraine and of Belgian companies in the Eupen-Malmedy district.

In accordance with the general policy of increasing the capital of joint stock companies, facilitated by the limit on dividends, twelve insurance companies increased their capital of Rm.72.6 millions by Rm.45.28 millions, or 62 per cent; the new capital was mainly supplied from reserves. The percentage of outstanding capital, a peculiar feature in Germany's insurance business, was at the same time considerably reduced. It is explained that greater capital is necessary because of the expanded business in occupied and dependent countries. There were, however, no capital increases by life companies.

Iron Savings Extended.—Originally the "iron savings" scheme (*The Economist*, November 29th, page 654) only applied to regular weekly wages and to Christmas bonuses. In future, holiday pay and any bonus or other additional pay may be saved under the scheme, in addition. Facilities have also been introduced which allow of a temporary suspension of commitments under the scheme in certain circumstances, for example, during a period of sickness. At an emergency, such as death, marriage, or the birth of a child, it will be possible to withdraw from the "iron savings" account as much money as is needed for the extra expenses. A worker who saves under the scheme not only reduces the taxable amount of his wages, but also his contributions to social insurances—which means that his benefits from the insurances are also reduced; and it is possible for the worker to elect to pay higher contributions in order to get the higher benefits.

Interchange of Workers.—The interchange on loan of machine tools and factory space was practised very early in the war in Germany. Recently, even workers have been lent by one factory to another. The Minister of Labour, however, has forbidden the loan of workers as "undesirable," socially and financially; it seems possible that the labour exchanges may have lost some of their control over the allocation of labour. Where an exchange of workers is necessary, it must be sanctioned by the labour exchange; and the workers must make a new contract. If a manager refuses the exchange, the compulsory labour service law can be used for the transfer.

Crop Failure.—The Finnish harvest in 1941 was a complete failure. Weather conditions were unfavourable; snow and frost began earlier than usual. Mobilisation reduced the number of horses and workers; and a shortage of fuel oil for agricultural machinery is reported. The harvest of bread grain amounted to 530,000 tons against 630,000 tons in 1940; the normal harvest before the war was about 750,000 tons. In 1938, the oats harvest amounted to 830,000 tons, and in 1941 to only 486,000 tons. The potato crop was also disappointing.

Roumanian Exports.—The Bucharest paper *Bursa* reports that total exports of cereals during the period January/October, 1941, amounted to 250,000 tons against 1,078,000 tons during the corresponding period in 1940. There was no export of wheat. Exports of maize fell from 552,000 tons in 1940 to 118,000 in 1941. There was, however, a slight increase in exports of pulse, oilcake, and bran. Exports of cereals to Germany fell from 610,900 tons to 181,200. Italy received 16,600 tons against 164,700 tons in 1940; Bohemia-Moravia 3,500 tons against 23,200 tons; and Switzerland 22,500 tons against 23,200 during the first nine months in 1940.

THE BUSINESS WORLD

The Banking Position—1

The Growth of Liquidity

THE feature which, above all others, distinguishes the trend of British banking figures during 1941 is the persistently increasing liquidity of the position they reveal. The ratio of the clearing banks' "quick assets" (i.e., cash, short loans, bills and Treasury deposits), to net deposits (i.e., total deposits less items in transit and cheques in course of collection), rose over the year from 39.9 to 45.3 per cent. It was in the early months of 1939, the period of the Treasury bill famine which accompanied the abnormal losses of gold by the Exchange Equalisation Account, that this ratio sank below the arbitrary but traditionally significant safety line of 30 per cent. The recovery to over 45 per cent (and the trend is still steeply upward) may, in its first phase, have been a highly welcome phenomenon to the banks; but from some points of view the pendulum is now swinging too far in the other direction. It is, however, well-nigh inevitable that this tendency towards excessive liquidity should occur in a period of expanding credit, contracting civilian industry and growing intrusion of direct Government finance into war industries and commodity markets. In these conditions, bank advances inevitably contract—as they have done during the past year—and the banks will be left to utilise the resources liberated by these repayments as well as those brought into existence by credit expansion in one form or other of Government paper.

This, however, would not of itself make for excessive liquidity, since the banks could, in theory, have converted into longer-term Government securities a larger proportion of the funds made available to the Government in the first place by way of six-months Treasury deposits. As will be seen by comparing the aggregate clearing bank balance sheet figures for the end of 1940 and 1941, loans and advances fell by £99,000,000 last year. The whole of the resources thus liberated may be said to have gone into investments, which during the year rose by £227,000,000. Over the same period Treasury deposits increased by £444,000,000. To some extent this was merely in replacement of Treasury bills and money market assets, the bill portfolio and short loans having fallen by £112,000,000 over the year. But the banks could have maintained a liquidity ratio well above the traditional minimum and yet have exercised to a greater extent their right to convert Treasury deposits into one or other of the longer-term tap issues of the Government. Lord Wardington explained that, in the case of Lloyds Bank, the obvious temptation to do so had been resisted in recognition of the capital risks inevitably involved in unduly expanding the holding of investments of more than short currency. Incidentally, Lord Wardington and Mr Edwin Fisher, at Barclays meeting, both confirmed the general impression that the increase in the banks' investments consisted in the main of the new Government issues and, in particular, of National War Bonds. Sir R. Noton Barclay at the District Bank went further and announced that his bank would be taking up further amounts of Government stock in the course of the Warships Weeks campaign which will soon be in full swing.

Mr McKenna justified the exceptionally high figure to which the Midland Bank's ratio of liquid assets had risen by another argument, namely, the need to maintain such abnormal liquidity in view of a prospective reduction in deposits in the post-war period, to whose problems he devoted part of his speech. Though in his view "there has been little inflation so far," it is in the immediate post-war years that we must look (as after the last war) for the being sown. Hence his request that, while the essential force of private enterprise should be used to the full, there should be no hasty abandonment of the necessary financial controls, particularly of the capital market and of foreign exchange transactions.

To these two explanations of the banks' liquidity policy

another and perhaps more decisive reason can be added. Any other course and, in particular, larger conversions of 1½ per cent Treasury deposits into 2½ per cent National War Bonds would have met with official disapproval of effectively deterrent character. As Mr McKenna pointed out, "it is rightly no part of Government policy to help the banks make additional profits." To have encouraged the banks to maintain no more than their normal ratio of liquid and low-earning assets in the face of the substantial expansion in bank credit which has been engineered by the authorities would, in fact, have been to step banking profits right up to their EPT standards. In fact, no charge of profiteering against the banks can be sustained. The net profits of the clearing banks (other than Glyn Mills, Cutts and the National Bank), shown before deduction of income tax on dividends, totalled £13,345,000 for 1941, compared with £12,981,000 for 1940. The increase of 2.9 per cent compares with an expansion of 18.4 per cent in the average level of bank deposits in 1941, against the 1940 average figure. The redistribution of assets, in particular the trend to-

Total assets	3,049.8	3,239.2	3,357.6	3,421.4	3,458.5	3,582.0

wards increasing liquidity and the reduction in advances, the most remunerative type of asset, largely explains the discrepancy between the rise in the banks' total resources and the expansion in their earnings. For the eight clearing banks in question, the gross earnings for 1941 (assuming a return of 1 per cent on bills and short loans, of 1½ per cent on Treasury deposits, of 2½ per cent on new investments and of 4 per cent on the repaid loans and advances), should have been some £5,000,000 or 9 per cent higher than those for 1940. Higher costs have all but absorbed the whole of these additional gross earnings. But even so, super-net earnings for last year must have been in general very close to, and in some cases above, the EPT standards indicated by disclosed profits in the base years. The supervening evidence of published bank profits can, however, be very deceptive. It can be stated that the banks have not been called upon to pay EPT in respect of 1941. The deduction to be drawn from this is that the understatement of published profits in the standard period 1935-37 must have been greater than in respect of the past year. This, coming out of the peculiar circumstances created by the war. Two bank chairmen, Mr Rupert Beckett at the Westminster Bank meeting and Mr Colin Campbell at the National Provincial Bank meeting, went out of their way to exhort depositors to take up more Government loans, including the new Tax Reserve Certificates, an exhortation which, if followed, must have the effect of curtailing the banks' resources and earnings potential.

The banks composite balance sheet at the end of 1941 has come to present a picture in which Government paper is now the overpoweringly dominant feature. That dominance will assuredly grow as long as the war lasts. Investments had, by the end of 1941, come to employ 30 per cent of the resources deposited with the banks. Another 24.2 per cent was represented by Treasury deposits, while bills and short loans (representing Treasury bills directly or through collateral to the virtual exclusion of all other paper) provided another 9.3 per cent between them. This sum total of 63.5 per cent compares with a corresponding figure of 45 per cent at the outbreak of the war. This distortion in the normal structure of banking assets has far

from reached its peak. Advances have been falling steadily. Ousted by investments from the first place in the ranking of banking assets, they seem destined within a few months to yield second place to Treasury deposits. At the end of the year these deposits were within £49,000,000 of the total of advances and were gaining fast on them. These changes in the composition of bank assets provide some measure of the revolution which has occurred in the course of translating the banks' functions from a relatively free peacetime economy to the effectively controlled war economy of to-day. It is a revolution which raises many points and questions about the future of banking in this country. These will be discussed in a second article.

London Property Companies

THE stocks of the London property companies were, in time of peace, a favourite medium of the more conservative type of investor. The term "property company" covers almost as many different types of enterprise, as its first cousin, the "finance company," and in the 1920's and '30's the list of quoted stocks was considerably augmented by the creation of numerous property-owning offshoots of large-scale enterprises in trades like printing, retail distribution, etc. The type of concern, however, which comes to the mind of the average investor when the term is mentioned, specialises in the ownership and management of residential, office and shop property, let out usually on short or medium, rather than long, leases, and fairly sharply localised in one or more districts in Greater London. The capital of the best known of these companies generally runs into several millions, and it is usual to find that the Articles of Association give the directors power to borrow at least up to the amount of the issued share capital, and sometimes up to three or four times that total. Thus, normally, the capital structure includes a substantial total of debentures, amply secured in the case of these concerns on well-managed properties, a moderate total in one or more higher yielding preference issues, and, finally, a block of ordinary shares large enough to have a relatively free market and sound enough to rank in peacetime among low-yielding equities. Some of the companies are mid-Victorian registrations, others amalgamations of concerns with a considerable history and not a few are of quite recent creation. They form, as a whole, a distinct group of substantial, well-managed and, normally, prosperous concerns, whose interests may include everything from a worker's dwelling to the most expensive type of West End luxury flat, and they have tended to expand in numbers and individual stature with the growth of the Metropolis, particularly during the last twenty years.

The war, inevitably, has presented these companies with unique and formidable financial problems. Even if not a single bomb had fallen on London, their revenue would have suffered through the general desire of tenants—particularly those whose position invested them with a certain freedom of choice—to vacate a densely populated area. Air warfare, when it came, resulted in the physical destruction or impairment of some properties—though not, as a rule, on a scale sufficient to reduce earning power really disastrously. Both these difficulties were foreseen, and in most cases those concerned would admit that their effect, up to now, has been, if anything, rather less than might have been feared. The worst blow has come from an unexpected quarter; for the companies, with their diminished revenue, have been made liable for the payment of relatively heavy contributions, for at least five years, under the War Damage Act, while they have been denied relief from their debenture and mortgage obligations. The impact of all this has fallen, of course, primarily on ordinary shareholders, who, in effect, are bearing, in addition to their own wartime losses of income, the special burden of maintaining the post-war integrity of the debenture-holders' security.

The result, in terms of reduced profits and dividends, is shown below, for a representative list of London property companies. Total receipts of five of these, reporting to various dates in 1941 (excluding Artizans and General Dwellings, whose 1941 report is not yet available), were £1,565,000 in 1939, £1,447,000 in 1940 and £1,053,000 in 1941. The first of these years was, in every case, clear of the war; the second was, broadly, half war and half peace; and the third was a war year, which included the greater

* After charging £14,000 NDC, reserve in 1939, £10,000 in 1940, and £3,000 in 1941.

† Earned rates before charging transfers to Repairs and Maintenance Reserve were equivalent to 14.0% in 1939, 13.3% in 1940, and 6.3% in 1941.

part of the period of heavy enemy bombing. As the ratio between the three totals was 100:92.5:67.3 it is clear that, broadly speaking, gross earnings were only slightly reduced in the "quiet" months following the war's outbreak, but fell to about two-thirds of the immediate pre-war level in the "blitz" period. The effect on earnings available after paying debenture interest, however, was more serious, owing to the existence of a fairly heavy corpus of fixed interest obligations. The totals for the five companies were £777,000 in 1939, £626,000 in 1940 and £288,000 in 1941, or 100:80.6:37.1. Thus, for the latest year, earnings available for all shareholders, preference and ordinary, were only about one-third of those for the pre-war year. It is hardly surprising, therefore, that all the companies shown in the table have reduced their ordinary dividends since the war, and that four out of the six passed them altogether last year. Actually, one company has ceased to pay its preference dividends, and another has made no preference declaration since September, 1940.

In these conditions, the question of capital "gearing" has obvious importance for shareholders. In fact, the proportions of debenture, preference and ordinary capital to the total vary widely between different companies, as the next table reveals.

CAPITAL STRUCTURE

Company	Capital Outstanding			Per Cent. of Total Capital (at par), represented by			Earnings Cover for Deb. & Pref. (1941) (No. of Times Covered)†	
	Deb.	Pref.	Ord.	Deb.	Pref.	Ord.	Deb.	Pref.
Artizans & Gen.	Nil	1,180,570	1,758,660	...	40	60	...	4.2
Assoc. London	980,345	600,000	400,775	50	30	20	1.3	0.9

† By "cumulative" calculation.

It will be seen that, while Artizans & General has no debenture capital, London County Freehold has as much as 61 per cent (at par value) in debenture form and in two other instances the proportion is around 50 per cent. On the other hand, two companies—Artizans & General and City of London—have their capital predominantly in equity form, while in two other cases the proportion of equity capital is as low as one-third and, in one case, as low as one-fifth of the total (including debenture stock). For investors, this factor is at least as important as that of the geographical situation of properties in relation to the potential intensity of enemy attack. As the last two columns of the table show, the "cover" for debenture interest—and still more for preference dividends—in the latest year, varied considerably between the different companies. And, as the ordinary earnings and dividend figures set out in the first table suggest, the equity shares of the highest geared companies are most vulnerable to the depressing effects of war-time.

The prices and current yields of the issued stocks of the companies are given in a final table.

‡ Only half-year's dividend paid to Sept., 1940.

"Income risk" considerations have clearly depressed the value even of the debenture stocks of the large property companies. Although the trend of general interest rates has been downwards since the war, there is no single debenture stock in the table which, to-day, is not standing considerably below the lowest market price of 1935-8, and the

fall from the highest figure of those years is anything from 20 to 50 points. In view of the wide differences in the extent to which the earnings of individual companies could fall further, without "uncovering" any part of the annual debenture service, a policy of selectivity on the part of investors is evidently called for.

Broadly, however, those who take a relatively favourable personal view of the risk of large-scale renewal of enemy bombing will probably conclude that property company debentures, as a long term holding, can be acquired a good deal more cheaply during the war than they are likely to be when peace returns. For the specialist in wartime securities with a strong peace-time "recovery appeal," however, the ordinary stocks hold out somewhat intriguing possibilities. They are purchasable, to-day, at something between one-quarter and one-half of their par value. Their prospects of receiving a dividend so long as the war lasts, in cases where payments have already been suspended seem, frankly, negligible. But their rehabilitation when the war is over is exceedingly probable, having regard to the strength of the demand for property which will arise immediately on the cessation of hostilities—provided the companies can keep their finances reasonably liquid in the meantime.

The proviso is particularly important, because it is unlikely that the bottom of the fall in revenue has yet been seen. The interruption of enemy air activity has brought an increased enquiry for lettings of available property of the smaller and medium types. There have, as yet, however, been few signs of a tendency on the part of the more wealthy class of tenant to return to the Metropolis from which he departed many months ago. The companies, moreover, are going more than halfway to meet the contemporary demand for short tenancies, in order to keep their hands as free as possible if property values change at all violently with the first return of peace.

On the other hand, the immediate cash position is being helped by the Government Order which stringently limits the amount of decoration and repairs which can be carried out. A good deal of internal decoration is effected normally, by landlords primarily to meet the aesthetic wishes of tenants—particularly incoming tenants. Much of this is, in effect, a species of "sales expense," and, if it is omitted during the war, it may never have to be incurred at all. Current receipts are also helped by incidents like the falling in of leases with a "dilapidations" clause. But the need of the companies to conserve their liquid resources must nevertheless remain pressing, quite apart from their obligations under the War Damage Act—that two-handed engine at the door which, unfortunately, does not stand ready to smite once and smite no more, but is scheduled to make contact in each of the next four years. Thus, the ordinary stocks of London property companies, with a few exceptions, have a definite lock-up character, while the war lasts. Their prospects during and after the post-war reconstruction period, however, stand out clearly.

Finance and Banking

Official Assistance for the Market

The money market has again had to endure a difficult week. Until Wednesday the banks found themselves short of cash owing, in the main, to a continuation of heavy tax payments. As some of the clearing banks were making up this week, they almost suspended their purchases of bills from the market. The market, for its part, had a moderate amount of bills to take up. Last week's tender was for the reduced total of £65,000,000 of Treasury bills, and even this was under-allotted to the extent of £5,000,000. The syndicate only obtained a 17 per cent allotment, but even this task necessitated some official assistance, which was provided by purchases of February and March bills. Some indication of the magnitude of these operations may be provided by the Bank return, which shows an increase of £14,710,000 in Government securities. By Wednesday evening the cash position had been considerably eased, and the total of bankers' deposits appears in the latest return at £145,450,000, an increase of £19,379,000 on the week, and a figure which certainly does not tally with the market's experience of short loan conditions in the earlier part of the week. By Thursday the credit position had eased considerably.

Conversion of Treasury Deposits

Some information about Treasury deposits and the other forms of Government short-term borrowing was given by the Chancellor of the Exchequer in reply to questions in the House of Commons this week. He pointed out that since July 1, 1940, when the system of Treasury deposit receipts was initiated, approximately £269,000,000 of such deposits had been repaid prior to maturity to enable the banks to subscribe for National War Bonds and Savings Bonds on their own account and on behalf of customers. The clearing banks' investments have over this period risen by some £362,000,000, and it would seem that a considerable proportion of these subscriptions to new Government loans was effected by the conversion of Treasury deposits. Sir Kingsley Wood added that the amount required from the banks by way of Treasury deposits and from the market by way of Treasury bills was fixed by the Treasury in consultation with the Bank of England. Day-to-day fluctuations in the Exchequer balances are, Sir Kingsley Wood explained, "ironed out" by means of Bank of England Ways and Means advances. In present conditions, he said these advances "are in substance automatic" suggesting that their extension is a far more normal occurrence than it was in pre-war days.

Banks and the Press

British banks have been notoriously shy of publicity—not because they have had anything fearsome to hide, but rather by reason of their obsession with the fear of infringing that sternest of banking rules: the secrecy of their customers' business. With the integration of the banks in comparatively few powerful units liable to receive the shafts of political criticism, this protective barrier of silence and unapproachability has had to be broken down. But behind it there has too often remained an inarticulateness which has given undeserved impunity to the most irresponsible criticism of the banks, and which has left unsatisfied reasonable public curiosity about their activities. Fortunately, all this is changing—albeit slowly. The banks are learning the gentle art of public relations. Last year the Bank of England startled the City by establishing a special department for the collection and dissemination of information, an innovation which has already given the Press ample cause for satisfaction. This week comes the news that five of the clearing banks have established a Banking Information Service which will be directed by Mr Arthur Barber, until recently a director of the firm of Glyn Mills and Company. The move is in the right direction, and the Press can but wish it well.

Danish-German Exchange Rate

An exchange movement adverse to the Reichsmark had been unheard of and undreamt of in German-occupied Europe until news came from Denmark at the end of last week that the Danish currency had been appreciated by 8 per cent in terms of Reichsmarks. The whole of the trade between Denmark and Germany is centralised through a clearing account, and the alteration in the rate at which this account is operated provides an indication of its hopelessly unbalanced condition. The position of German-Danish trade is described with telling objectivity in the last report of the Bank for International Settlements. "Danish exporters," it is stated, "are paid directly through the clearing and the foreign claims taken over by the National Bank. A large surplus of exports of agricultural

products to Germany has led to a piling-up of clearing claims against which imports have not been made. In March, 1941, there were net foreign exchange and clearing assets of 513 million kroner against all countries, compared with a net debt of 36 million a year before. The item 'Sundry debtors,' which includes the claims on the Reichskreditkassen for Kassenscheine redeemed by the National Bank and also the financing of occupation costs, has grown in a similar measure. Together the two items have risen by over 1,000 million kroner during the year to March, 1941." The BIS report only takes the story up to March 31st last. By September last Germany's clearing debt to Denmark had risen to 704 million kroner and the "Sundry debtors" to over 800 million kroner. By now the combined debt owing on these two counts alone by Germany to Denmark must be running in the neighbourhood of 2,000 million kroner. In the face of this staggering progression, with its measurement of the extent to which Danish economy is being bled by the occupying power, the decision of the Danish authorities to move the clearing rate in their favour by 8 per cent is a meek enough gesture. It is none the less significant as the first indication of revolt in occupied Europe against the economic domination of Germany, of which the over-valuation of the Reichsmark has been one of the most effective weapons.

South African Gold Sales

Insufficiently detailed reports of Mr Hofmeyr's 1941 Budget speech, in which he announced the terms of the new agreement for the purchase of South African gold by Great Britain, have caused a generally erroneous impression of this agreement to prevail here. It was by this agreement that the Bank of England, acting on behalf of the Treasury, undertook to pay 168s. per fine ounce for South African gold delivered in South Africa, the producers being given the full market price less realisation charges. The impression conveyed by Mr Hofmeyr's remarks at the time was that the whole of the South African gold output was covered by this agreement. When, therefore, it was seen that the

Full particulars may be had on application.

Reserve Bank of South Africa was increasing its gold holding, it was assumed that the Union was utilising its creditor balance of payments with the United Kingdom, after allowing for capital items, to repurchase its gold from the Bank of England. This, it now appears, is not the case. The monopolistic position enjoyed by the Bank of England as buyer of South African gold applies only to the gold exported from the Union. The Union authorities, in other words, have first pick. The distinction is of some importance

Investment

No Change in "Tap" Loans

The markets during the past week have presented a picture of reasonable activity unaccompanied by any considerable change in most prices, except in a few instances where company results, such as those of Woolworth, have drawn attention to the changed position of a given section of industry. It is possible to argue that the increased successes in Russia have almost balanced the ill news from the Pacific and Libya and that there is really very little to "go for." Incidentally, the maintaining of the volume of business is very strong evidence that the call for sweeping changes in the Government is restricted to political circles, and that the public at large neither supports it nor believes in the success of the agitators. There are few things so liable to paralyse investment business as a political upheaval. One section of securities which has suffered heavily during the past few days, and that as much from the clamour of politicians as from the actual developments on the ground, is Australasian stocks, most of which are now hard on their minima. This fact alone will tend to divert investment into the remaining securities of trustee status, and the Canada vesting will also cause a further demand, which will fall mainly in that section. Further, the statement of the Chancellor that there is to be no change in the terms of the "tap" issues in the immediate future may mean a slackening in the demand for this type of security and a transfer of buying power to the market. On the whole, it is probable that events will combine to bring about a further slight advance in fixed interest securities as against equities, and this movement may be slightly accentuated by the stress which the Prime Minister, and other official spokesmen, have laid on the troubles to come and the resultant strengthening of the view that the duration of the war must be more considerable than was commonly thought probable by the public.

Payments to Canada

Simultaneously with the announcement of the Canadian decision to deal with the bulk of this country's debts to Canada, either by a loan, free of interest for the period of the war, from that country, or by an outright gift of materials, there is announced the decision of the Treasury to take over two other blocks of Canadian securities held in this country, whose value is, according to a Canadian estimate, some £65,000,000. Under a new Restrictions and Returns Order, holders of Dominion of Canada 2½ per cent stock, 1947, and of twenty-one stocks of railways in the Canadian National system are required to register their holdings forthwith. These stocks are all sterling securities. They, together with a long list of dollar stocks of the Dominion already registered, are to be vested in the Treasury at prices based on those of Monday last with the addition of some eight weeks' interest to March 23rd, which is the first date of payment. The usual arrangements are made for lodging stocks either at the Bank of England, or for stocks already registered, in Montreal, and for making payment, at the tap. It is evident that the stocks to be taken over make a considerable contribution towards meeting the huge payments due to Canada on a strict accounting basis and the case that there remain other stocks of considerable value which have not been taken over. In fact, the Dominion Government has only taken stocks for which it is itself responsible, and holders of other securities will naturally ask themselves whether it will not be their turn next. Evidently, the operation of acquiring stocks, which would presumably have to be realised instead of cancelled, is more

in practice, since it is quite conceivable that South African gold once sold to this country might not be available for resale to the Union. In fact, the vast bulk of the gold produced in South Africa has been sold to the British authorities, as may be seen from the fact that whereas South African gold output from the beginning of the war to the end of 1941 amounted to £260,000,000, the Reserve Bank's holding over that period has risen by £28,000,000 only.

complicated, but, in view of the size of the loans which Canada is likely to have to make, it is not impossible that these remaining shares, which are much more widely held in this country, may in fact be taken over. Meanwhile, the new vesting order may be expected to strengthen the demand for stocks of trustee, or near trustee status on this side.

Insurance Share Index

The accompanying table shows the position of *The Economist* index of insurance shares at December 31, 1941, with comparative figures at six-monthly intervals since the end of 1939. The calculations are based on the investment of £1,000 in each of twenty-four representative securities in 1913. Whereas up to June, 1941, insurance shares displayed a measure of recovery from the low prices of 1940 below the general run of industrial concerns, in the

Average	2,989	2,164	2,474	2,525	3,041

last half of the year the reverse applies. The index shows an appreciation between June 30, 1941, and December 31, 1941, of some 11 per cent, or nearly twice the average for variable dividend securities. This appreciation is common to all the component shares of the index, and seems to indicate a restoration of insurance shares to popular favour.

An Equitable Scheme

The submission of a fresh scheme for meeting arrears of preference and preferred ordinary dividends by the Fine Cotton Spinners and Doublers' Association is interesting from more than one point of view. It suggests that, despite the difficulties of wartime production, the board sees a reasonable prospect of fairly stable earnings, and it demonstrates the soundness of the opposition to the earlier scheme submitted in 1938, which, nevertheless, secured the assent of holders of almost two-thirds of the preference capital. The earlier scheme, severely criticised in *The Economist*, suggested the cancellation of arrears of interest and the substantial allotment of equity shares. The new scheme provides for the satisfaction of eight years' arrears of preference dividend, amounting to 8s., by the payment of 2s., tax free, in cash, and 2s. in funding certificates, bearing interest at 5 per cent. The arrears of preferred ordinary dividend are to be cancelled, and that class of capital converted into ordinary shares, but, as compensation, holders receive in all £210 of ordinary for every £100 of their present holdings. This is

achieved by writing down existing holdings of ordinary by 25 per cent. The net effect is that existing preferred ordinary holders receive some 38 per cent of the equity. This seems to be a simple, businesslike and equitable arrangement, and the general body of preference shareholders should be grateful to those who opposed the much less attractive scheme of 1938, which experience has shown to be at least as unsatisfactory as was anticipated at the time. The directors, in submitting the scheme, express their belief that profits will be substantially reduced by controls for a period of years, the comparison being, presumably, with those of 1940-41. For that period, 15.8 per cent was earned on the ordinary capital, equivalent to almost 14 per cent on the new capital under the scheme. The effect of the announcement was to raise the quotations for the preference and preferred ordinary by 2s. to 19s. and by 3s. 3d. to 14s. respectively, while the ordinary for each share, while ordinary shares are reduced by only a few pence to 6s. 6d. In view of the terms put forward, there seems a grave disparity in the quotations for these two classes. The price of the preference gives a return on the full 5 per cent dividend of just over five guineas per cent.

Company Notes

Woolworth Pay Less

The preliminary results of F. W. Woolworth for 1941 show for the first time a reversal of the upward trend in net profit before tax. The setback is sharp, from £7,958,160 to £6,404,759, which just exceeds the level of 1937. The fall is equivalent to 20 per cent on the ordinary capital, but, fortunately for holders of that class, there is a welcome relief in a drop from £4,310,910 to £3,557,206 in the tax provisions, and the dividend is maintained, while the cash bonus is cut from 15 to 5 per cent, making 55 per cent in all, against 65 in each of the three preceding years. The transfer to building reserve is unchanged at £250,000, and £275,054 added to the carry forward, raising it to £7,057,795. The earnings for the ordinary shares amount to 69 per cent against 78 per cent for 1940 and 87.2 per cent for the preceding year. Looked at in another way, of the total available for distribution, one-fifth has been retained this year as compared with one-sixth twelve months ago. In the absence of anything more nearly related to turnover than the net profit, it is difficult to be certain as to the reasons for the fall in that figure, but the fact that taxation represents only some 10 per cent, or £355,000, more than the full standard rate of 10s. in the pound on disclosed profits, whereas a year ago this provision showed an excess of some £910,000, suggests strongly that there

was a sharp decline in assessable profits and that a great part of the difference was due to a heavy charge for EPT in 1940, which has largely been avoided in the year just ended. It is tempting to suggest that, if the whole of the difference in net profit were due to the fact that £1,500,000 was paid in EPT for 1940 and none last year, the figures would square up fairly closely, but it is futile to attempt to tread the maze of allowances and tax appropriations with no better guide than the figures given.

Whatever the reason, it is clear that earnings were less, and it is probably a fair inference that turnover was also down. If it was not, then the management would have achieved even more remarkable results than those of 1940, when, in face of the beginning of restriction and two months of purchase tax, they secured a rise in pre-tax profits of £345,550, which was converted into a decline, after tax, of almost £1,000,000. It is reasonable to assume that the wide geographical spread of the business enabled it to benefit to the full from any expansion in purchasing power which was allowed to become effective. It is also probable that this type of store will have continued to attract custom away from those where a substantial part of the price was paid for *cachet*, or service. But, like all other shops, the Woolworth stores must have suffered from shortage of goods to sell and difficulties in obtaining staff to sell them. This state of affairs will, in all probability, become worse during the current year, but there are no signs that inability to supply is occasioning any loss of goodwill. The investor appears to regard the setback as temporary. The 5s. units fell about 3s. 6d. on the news to 55s. 6d., which is still above the level of a year ago, and the yield is some £5 os. 8d. per cent less tax. A year ago the return was 17s. 6d. per cent higher.

Imperial Tobacco Dividends

The preliminary statement of the Imperial Tobacco Company for the year to October 31st reveals that the final payment on ordinary capital will be maintained at 7½ per cent tax free, but that the bonus will be halved at 2½ per cent tax free, making a total of 17½ against 20 per cent tax free. General reserve receives £500,000, as in the three previous years, and the carry forward is raised from £1,620,937 to, approximately, £1,666,000. Thus, it is possible to estimate that net profits, after all tax except that on preference dividends, are down from £8,872,829 to £7,970,805 and that equity earnings amount to £7,118,596 against £8,020,620. The rate of tax-free earnings is reduced from 21.4 to 19.0 per cent, equivalent to 38.0 against 37.2 per

cent less tax. The management has felt able to raise the ordinary distribution, less tax, which is up from 34.7 to 35 per cent. The ability to maintain distributable profits suggests that whatever rise there has been in costs of manufacturing and wholesale distribution has been fully offset by the increased sales. If this state of affairs continues, the outlook is good. It appears to be the settled policy of the Government that both beer and tobacco are essential in very large quantities to the successful prosecution of the war, a view which is not uninfluenced by the very high proportion of the total price which goes in Customs and Excise. It is therefore explicable that the price of the shares has risen by over 30 per cent on the year to 133s. 1½d., at which they yield £5 7s. 2d. per cent, subject to tax, compared with some 7 per cent a year ago.

* * *

Orient Steam Improvement

Orient Steam Navigation, an affiliate of P. & O., shows a rise in total income, including £13,157 profit on sale of investments, from £580,285 to £599,301, a record for the decade to June 30th last. The increase is, in part, due to higher investment earnings. Depreciation received £300,000 against £400,000, while £50,000 against nil was transferred to pensions reserve. After meeting preference charges, equity earnings were almost £70,000 higher at £167,041. The ordinary shareholders receive the customary 5 per cent tax free, equivalent to 10 against 8.7 per cent tax free, and tax-free earnings are up from 9.4 to 16.0 per cent, equivalent to 32 against 16.3 per cent less tax. The company is able to transfer £100,000 to general reserve, against nil in the previous year and a withdrawal of £25,000 in 1938-39, and to raise the carry forward from £65,946 to £80,944. The balance sheet reflects the payment of insurance claims in respect of lost steamers. Thus, debtors are down from some £2,229,000 to £703,000 and investments are up from £1,394,000 to £3,947,000. Cash holdings are some £160,000 lower at £216,000. Reserve for replacement of ships stands at £1,258,000, including £410,000 on Government tonnage replacement account, while general reserve, after the transfer from current profits, stands at £1,900,000. The chairman, Mr I. C. Geddes, points out that the whole of the company's fleet is under Government requisition, an arrangement which places a very definite upper limit on earnings. The company has not been liable for EPT up to June 30th last, and provision has already been made for part tax liability in the current year. The post-war reconstruction prospects, as the chairman indicates, must be significantly affected by the scale of demand for first-class accommodation, which, for the present, remains a completely unknown factor. The £1 ordinary shares, at 30s., ex-dividend, yield £3 13s. 4d. per cent tax free.

* * *

Boot and Shoe Earnings

Recent reports of boot and shoe manufacturers in 1941 show a remarkable stability of net earnings. The latest accounts of five representative concerns are analysed in the following table. Only one company, *Bignells, Ltd.*, suffered a fall in gross income, which, at £37,682 against £44,551, permits equity earnings of 6.1 against 7.5 per cent, still covering the ordinary payment maintained at 6 per cent. *William Timpson* shows profits of £197,895 against £202,002, after payment of EPT in each case. Here, equity earnings are reduced from a rate of 29.8 to 25.6 per cent, but the dividend is maintained at 15 per cent. The largest rise in gross earnings is realised by *Lotus* with a jump from £149,054 to £221,810. Since tax provision is up from £77,404 to £157,000, there is a reduction in the earned rate from 12.8 to 11.1 per cent, but the directors feel able to raise the ordinary payment from 9

to 10 per cent. There is also a ½ per cent rise to 9 per cent in the ordinary dividend declared by *L. J. Weber and Phillips*, whose gross earnings are up from £19,118 to £27,201, with an increase in the earned rate from 9.6 to 12.4 per cent. The preliminary statement of *John White (Impregnable Boots)* shows a reduction in net profits from £52,114 to £36,652, but the ordinary dividend is maintained at the 17½ per cent to which it was raised from 15 per cent in 1939. Thus, despite three out of four reductions in equity earnings, for which higher tax liability must largely be held responsible, none of the companies has been obliged to

reduce its ordinary dividend and none of these payments has been underearned. No doubt, the trade continued to receive adequate, if not generous, supplies of raw materials last year. Reductions in stocks in the balance sheets of the four companies are by no means general. Production on Government contract has probably assumed greater relative importance, especially since the advent of clothes rationing halfway through the year in question. But the unchecked rise in retail prices should have done much to offset a possible reduction in turnover, particularly for those concerns which, like *Lotus*, have both manufacturing and distributive interests.

* * *

British Industrial Plastics

The preliminary figures of British Industrial Plastics for the year to September 30th last show a small rise in gross profits from £163,069 to £169,124. After meeting preference dividends, equity earnings are down from £29,385 to £14,507, a fall which is due partly to the rise in tax provision from £56,500 to £71,200, and partly to an increase in the total of general expenses, and sums written off research patent charges and experimental outlay from £60,325 to £70,180. The earned rate, at 6.5 against 10.3 per cent after ARP, provides narrow cover for the ordinary payment, which is reduced from 8 to 6 per cent. The carry forward is raised by less than the amount of the surplus from £5,681 to £6,288, but the nature of the allocation is not disclosed in the preliminary statement. It is possible that this relates to ARP expenditure, or some cost which should be charged against profits, in which case equity earnings are, of course, less than the estimated 6.5 per cent. The most striking fact about the preliminary figures is the smallness of the rise in gross profits. The group owns an imposing array of patent rights, and there should be ample opportunity for increased sales of many products in substitution for glass, china and other wares, of which neither the finished products nor the raw materials can now be imported. Probably, shortage of material is the main difficulty, although it is possible that profit margins have been considerably reduced. The 2s. ordinary shares, at 3s. 4½d. ex dividend, show little change on the result, and give a yield of some £3 11s. 1d. per cent, which appears fully to discount any improvement likely to mature for some time to come.

Joint Production Committees

The movement towards the extension of factory committees consisting of workers' and management representatives is gathering force. A conference of shop stewards in Birmingham last Sunday suggested that committees should be set up in every factory. Moreover, the trade unions, hitherto not too favourably disposed towards the movement, have now decided to support it. On Saturday last week, a plan for the organised and recognised establishment of shop committees, with full co-operation between workers and employers, was outlined to some 200 branch delegates of the TUC. Mr A. Conley, a member of the executive, pointed out that the scheme had been submitted to the engineering industry, that it was applicable to the trade union movement generally, and that it had been brought before the Cabinet. There are indications that the negotiations between labour and management in the engineering industry, and between the TUC and the Government, are likely to be successful, and that the establishment of joint production committees may be made obligatory in engineering workshops. It is to be hoped, however, that recognition by the trade unions will not in any way impede the proper functioning of the committees. The committees' job is to seek means of increasing production, by acting as a channel for suggestions from workers and for explaining to them the causes of inevitable hitches and delays; the usual function of the unions, on the other hand, is to protect the rights and improve the position of workers. True, the trade unions must be represented on the committees, for unsatisfactory production is often due to causes, such as dissatisfaction with piece-rates, whose elimination is their concern, in the framework of collective bargaining. But it would be regrettable if the committees should lose the character given them by the spontaneous democratic—and local and personal—initiative that called them into life.

Mechanisation of Agriculture

The mechanisation of agriculture has made rapid progress since the outbreak of war. Owing to the scarcity of labour and the need for a big increase in the acreage under cultivation, additional farm machinery has been essential. The extent of mechanisation is revealed by the fact that the number of tractors on farms in the United Kingdom has been doubled since June, 1939, when 52,000 were in use. There has also been a big increase in the number of tractor ploughs, disc harrows, corn drills, artificial manure distributors, binders, threshing machines, potato diggers, milking machines and of the whole range of barn machinery. Transport on farms has also been increasingly mechanised by the provision of tractor trailers and lorries. But many farming operations, such as the harvesting of corn, potatoes and sugar beet, and the movement of farmyard manure from yard to field, are still inadequately mechanised. While the greater part of the new machinery has been supplied by the British agricultural engineering industry, substantial quantities—much of it specialised equipment—have hitherto been obtained from the United States, Canada and Australia. But imports are expected to be reduced as a result of the extension of the war to the Pacific and the consequent conversion of the manufacturing facilities of the three countries to the production of war equipment. At the same time, the extension of the war has considerably accentuated the strain on Allied shipping tonnage and has rendered the increase of domestic food production more urgent than ever. The possibilities of expanding the output of agricultural machinery in this country are limited, but steps have been taken to use the agricultural engineering industry's resources to the best advantage. The industry has formed a Joint Standing Committee, able to speak for all manufacturers, to improve methods of consultation and collaboration. Moreover, the Ministry of Agriculture has set up an Agricultural Machinery Development Board, composed of leading farmers, manufacturers and engineers, to guide and direct the improvement of existing and new machines. To ensure the distribution of new tractors to those farmers and contractors who need them most urgently, the Ford Motor Company has agreed to collaborate with the Ministry. But equally urgent as the provision of as much as possible of the right kind of new machinery is the need for using existing implements more intensively.

Control of Rayon

The rayon industry has been nominally under the control of the Ministry of Supply ever since the outbreak of war, when an official Rayon Control was established with headquarters at Macclesfield. In practice, little control has actually been exercised, for rayon producers have been able to deal with the allocation of supplies to customers by voluntary arrangements. Wood-pulp for rayon is allocated to the industry in bulk by the Paper Control, but it is shared among rayon producers on the basis of a voluntary scheme. Certain chemicals are handled by other controls, and the utilisation of cotton linters by the acetate branch, and to a smaller extent by viscose producers, is supervised by the Cotton Control. In recent months there has been an increasing pressure on rayon yarn supplies, owing to the disappearance of silk and the shortage of cotton and wool for civilian purposes. It has, therefore, been found necessary to revise the methods of distribution and to exercise closer control. The actual approval of individual orders for rayon and rayon mixture woven cloths for both home and export trade will be in the hands of the Cotton Control, but the rayon producers will distribute the yarn for those orders through the Rayon Allocation Office created by them. The fact that this system has to be worked by the Cotton Control illustrates the very close connection between the two fibres. It would have been unwise to set up another organisation, for the rayon weavers are almost all also weavers of cotton cloth, and used to the methods employed in that trade. The new arrangement should have little effect upon the course of trade, but it will ally rayon more closely to the war effort by reducing the export of goods to any market other than those approved by the Control. Production for the home trade will be similarly directed into the most essential channels.

Retail Wage Agreement

The agreement on wages and conditions of employment reached by the National Joint Industrial Council for the Retail Furnishing and Allied Trades is the third arising from the Retail Distributive Trades Conference. The trades covered are: Furniture and furnishing, ironmongery and turnery, china and glass, hardware, electrical goods, cycles and accessories, sports goods, radio, oils, paints and wall paper. The agreement is similar to the two preceding ones. These were concerned with the food and drapery trades and were described in *The Economist* of July 5th and October 4th, 1941, respectively. The weekly rates of pay prescribed are for a working week of 48 hours, exclusive of meal times, subject to an allowance of twenty minutes free from overtime payment for the purpose of clearing up the shop. Two weeks' holiday with pay is to be granted, except that where a shorter holiday has been the custom two weeks need not be given during the war. Wages of branch managers start at 70s. per week and of manageresses at 58s. in London, and the rate rises according to the weekly turnover in the shop. Male shop assistants, central warehouse staff, van salesmen and cashiers in London are to be paid 21s. 6d. a week at the age of 16, rising to 65s. at 25. Women's rates rise from 19s. 6d. at 16 to 43s. at 24. The rates for male employees, other than those specified, including porters, but excluding craftsmen, mechanics, productive staff and transport workers, will vary from 20s. 6d. at 16 to 60s. at 24. In all cases, "Provincial A" rates, which apply in towns with a population of more than 10,000, are 3s. a week less than in London, and in all other places ("Provincial B") 5s. less. Fourteen employers' organisations and three trade unions are represented on the Joint Industrial Council. This agreement will come into operation on February 2nd, but will not prejudice the payment of higher wages. The number of employees normally engaged in the trades covered by it is estimated

to be between 250,000 and 300,000. Three other national joint industrial councils are negotiating agreements, for hairdressing, including beauty specialists, the meat trades, and retail bookselling, newsagencies, stationery, tobacco and confectionery. A joint committee of the six industrial councils is considering the question of transport workers engaged in the distributive trades. All these agreements lay down standards of employment for trades which have lagged behind others in setting up machinery for negotiations between employers and employed.

* * *

Cotton Trade Wages

After the outbreak of war the employers and trade unions in the Lancashire cotton industry began to discuss wages policy; it was agreed that rises and falls in wages should be governed by the cost-of-living index of the Ministry of Labour. Apart from this arrangement, an immediate advance of 12½ per cent on pre-war wage rates was granted. As wage rates have been advanced by 22½ per cent by the operation of the sliding scale scheme, they are now 35 per cent higher than in September, 1939. Some surprise was therefore expressed in trade circles this week when it became known that the Northern Counties Textile Trades' Federation, which represents all the operatives in the weaving branch of the industry, had applied to the Cotton Manufacturers' Association for a joint meeting to discuss a general advance in wages. The trade union representatives will apparently contend that the earnings of their members have been affected by alterations in the construction of cloths, and that during the change-over their earning capacity does not come up to standard for several weeks. The leaders of the operatives do not wish to interfere with the present sliding scale system of fixing wages, but it is being urged that some special concession should be granted to meet the particular circumstances and to bring the wages of the workpeople more into line with earnings in other industries.

Allied Rubber Supplies

The Japanese occupation of some of the world's most prolific rubber-producing areas in the Far East has reduced the supplies available to the Allies. Together, French Indo-China, Thailand, British Malaya and British territories in North Borneo, produced 702,000 tons of rubber in 1940, equivalent to one-half of the world's total output of 1,390,000 tons in that year. The remaining Far Eastern sources of supply are large, and so long as they remain accessible to the Allies, no difficulties will arise. But although Java and Sumatra, the two largest remaining sources, are probably not in immediate danger, the possibility of an interruption of shipments from them cannot be safely left out of account in Allied plans. In 1940, shipments of rubber from non-Pacific areas, mainly from Ceylon, Brazil and Africa, amounted to 140,000 tons, or about 10 per cent of the world's total. Possibilities of expansion are limited, though increased tapping in some of the areas may raise the quantity available to 160,000 tons or even more. But this quantity can satisfy only a small proportion of Allied needs. According to the *Statistical Bulletin* of the International Rubber Regulation Committee, the United States and Great Britain together consumed 795,000 tons of crude rubber and some 200,000 tons of reclaimed rubber in 1940. In the same year, Canada, Australia and South Africa imported 80,000 tons. Russia's imports averaged about 30,000 a year between 1936 and 1938. The combined consumption of the Allies therefore amounted to about 1,100,000 tons, of which 200,000 were reclaimed rubber. It may be possible to satisfy their vital needs with 700,000 tons a year. But even then the deficiency would remain substantial and, on the basis of the output of reclaimed rubber in 1940 and of crude rubber in non-Pacific countries, it would amount to about 350,000 per annum. Steps have been taken to bridge the gap; the output of reclaimed rubber is to be increased and facilities are to be provided in the United States for the production of 400,000 tons of synthetic rubber a year. In fact, the consumption of reclaimed rubber in the United States rose rapidly last year and exceeded the annual rate of 300,000 tons in October; supplies of waste rubber are large enough to permit a further increase in production. Moreover, stocks of 600,000 tons, and Great Britain also holds substantial reserves. A shortage of rubber for vital Allied needs is therefore unlikely pending the completion of the synthetic plants in the United States.

The Oil of the Indies

Japan, though possessing large stocks, is very poorly endowed with mineral oil; it is therefore of the utmost importance that the aggressor in the Far East should be deprived of the fruits of his conquests. Evidence of Dutch determination in this matter is provided by their destruction, announced on Thursday of last week, of the oil wells and installations in the Balikpapan region of Dutch Borneo. The object was to forestall any attempt at a seizure by the enemy—and the subsequent landing of Japanese troops in the area proves that the precaution was timely. It followed the invasion in the previous week of the island of Tarakan, off the north-east coast of Borneo; its rich oil wells were also rendered useless before the garrison was overpowered. It is to be hoped that the work of destruction was carried out with similar thoroughness in Sarawak and Brunei, the British protectorates which were overrun by the Japanese last month. If so, considerable time must elapse before his ill-gotten conquests can bring any appreciable relief to the enemy's oil position. It seems likely that his attempts at restoration will be directed in the first place to Tarakan, for its crude oil can be used as fuel oil—the major item in Japanese oil consumption—without the necessity for refining. Crude oil from British and Dutch Borneo, on the other hand, must be treated, and the destruction of the refineries at Lutong and Balikpapan has deprived the Japanese of the local facilities. If they were able to obtain any crude oil from these sources, the Japanese would thus have to transport it to their own country, where they have a considerable surplus of refining capacity. Six months would probably be sufficient for a partial restoration of production at Tarakan—assuming that the enemy is left in undisturbed possession—but a considerably longer period would almost certainly be required for the rebuilding of refineries, even if the necessary equipment and materials could be provided. Allied losses in British and Dutch Borneo represent an annual output of about 2,750,000 tons of crude oil, together with a corresponding refinery capacity. Strategically, this loss is unimportant to the Allies, for Sumatra and Java have a combined output of well over 5,500,000 tons a year, which is more than sufficient to supply all their local requirements. The principal producing fields are in the Palembang-Jambi and Medan districts of Sumatra and near Surabaya in Java; the main refineries are at Palembang (Sumatra) and Tjepoe (Java). The loss of these sources of production would be a much more serious matter, for they supply the bulk of Australian and New Zealand oil requirements.

* * *

Secondary Tin

The loss of tin supplies from Malaya and the threat to other Pacific mining areas has prompted the Ministry of Supply to initiate a drive for the recovery of tin from waste products. As in the case of rubber, plentiful supplies of new tin from British-owned mines, but also the high labour cost of recovery, largely explain why reclaiming has played a less important role in Great Britain than in Germany and in the United States. During the five years preceding this war Germany recovered between 6,000 and 10,000 tons of secondary tin per year, a large part from imported material. In the United States secondary tin recovery has recently fluctuated between 25,000 and 30,000 tons per year; it rose to 33,222 short tons in 1940, against 29,160 tons in 1939. There are no returns for this country, but industrial reports indicate that the quantity recovered in recent years may have to be counted in hundreds rather than in thousands of tons. The comparatively large output of secondary tin in Germany and in the United States has not been obtained mainly by the de-tinning of used containers. In the United States, where the Bureau of Mines has for many years past compiled regular surveys of the recovery of secondary metals, new tinplate clippings, tin pipes, foil, scruff and dross, pewter, bearing metals, residues, condensers, and a number of tin alloys have always been the chief works recovered only 4,844 short tons of secondary tin (both in metallic form and as chemical compounds), which is slightly less than 15 per cent of the total quantity recovered. In order to secure this output, the de-tinning works used 268,269 tons of new tinplate clippings, and only 4,963 tons of old tin containers. The relatively small importance of old containers in the recovery of secondary tin does not diminish the need for their collection, for they also provide scrap for the steel furnaces; but it is a reminder that the collection of other tin scrap should not be neglected.

COMPANY MEETINGS

DISTRICT BANK LIMITED

EFFECTS OF WARTIME CONDITIONS

RECORD FIGURES

DANGER OF INCREASED PUBLIC SPENDING

SIR R. NOTON BARCLAY ON POST-WAR PROBLEMS

The one hundred-and-twelfth annual meeting of shareholders of District Bank, Limited, was held on the 30th instant at the head office, Spring Gardens, Manchester.

Sir R. Noton Barclay, the chairman, presided.

The following is the statement of the chairman, circulated with the report and accounts:—

I am repeating last year's procedure and sending a copy of my annual statement with the accounts. At the request of the Government a number of our directors have undertaken special responsibilities which are making heavy demands on their time and energy. I know you will join with me in extending to them our good wishes in their exacting duties.

In the administration of the bank I have some recent changes to report. After long service Mr Robert Crerar, one of the joint general managers, has retired on pension, and we wish him health and happiness in his well-earned retirement. Mr W. F. Lonsdale, an assistant general manager and manager of head office, has been appointed a joint general manager, and he is succeeded as manager at head office by the sub-manager, Mr Clifford Butterworth.

THE BALANCE SHEET

The annual report and balance-sheet are presented in the third year of war, and the accounts indicate the abnormal conditions. With remarkable consistency the resources of all the banks have increased throughout the year, and we find ourselves with record balance-sheet figures of nearly £141 millions. On the liabilities side deposits are increased by over £25 millions, a large part of the increase being the direct outcome of the war, although the circumstances giving rise to this are by no means uniform or static. Last year I mentioned several reasons for the increased lodgments, and these causes still obtain, though delays in postal services are now of less importance, while the effects of the Government's war disbursements have become more pronounced.

Gradually the action of the authorities has dominated the situation, and it now looks as if Government disbursements, rather than the other factors to which I referred a year ago, will continue to expand banking figures. Our deposits come to us from a very wide and growing public, as is indicated by the progressive increase in the number of our accounts as well as from important trading units possessed of more liquid resources. These resources have expanded as a result of Government expenditure, a general reduction of trading stocks, and an accumulation of funds as provision against taxation liabilities. It is anticipated that in future this last-mentioned factor will exercise less influence than hitherto by reason of the method offered by the new Tax Reserve Certificates for dealing with such funds.

CHANGED DISTRIBUTION OF ASSETS

A year which has increased balance-sheet totals by approximately 22 per cent. naturally produces notable changes in the distribution of our assets. An outstanding feature of this war-time situation is the item Treasury deposit receipts, the total of which is more than double that of last year. Broadly speaking, this higher figure indicates an earmarking for the Government's use of much of the increase in our assets. These receipts, some of which mature almost every week, the maximum life being six months, are included in our short assets, bringing them to a total of nearly £63 millions, representing the high ratio of 48 per cent. of deposit liabilities.

Investments, which, as usual, are shown in the balance-sheet at much below their market value figure at £48,852,551, being

over £15 millions up on last year. Our effective help to the Government through short, medium, and long-term securities approaches £86 millions or 66 per cent. of our depositors' money.

SUPPORT FOR SAVING SCHEMES

In this connection I should mention that the bank has given every assistance in its power to the local War Weapons Weeks held in the early part of 1941 and is now doing the same as regards the Warships Weeks by taking up stock and by encouraging customers to invest their savings in Government securities currently on tap. Beyond this, support for the war effort, though perhaps less direct, is afforded by loans and advances to industrial concerns for war production, and in this connection, subject to sound banking practice, we, of course, do what is in our power to assist all customers engaged in work of national importance.

Despite this, however, our lendings have declined and reasons put forward by me for the lower figures of last year—namely, a curtailment of the trade of non-essential industries through the restriction of supplies Government finance for bulk purchase of raw material, and repayment of private advances, still hold good as explanations for our present reduced totals. Since an important factor in the reduction of customers' borrowings is the repayment of loans relating to non-essential work the residue of our lendings is more and more directed to the war effort.

PROFIT AND LOSS ACCOUNT

The net profit for the year ended December 31st last, after payment of all expenses and after providing for bad and doubtful debts, contingencies, and taxation, amounted to £417,285, which is a reduction of £28,733 as compared with the figure for 1940 and is fully accounted for by increased taxation. I think you will agree this is a satisfactory result having regard to the increased expenses we have had to meet. As you are aware, we make up the pay of men who are called up for service to the salaries they were receiving when in the bank, and to take their places it has been necessary to engage a great number of temporary clerks. Expenses have also increased in other directions. Against this our earnings have expanded to some extent from increased resources, though, as much as of the latter is lent to the Government on short term, the average percentage yield on our assets records a marked decline on last year. Also in war-time we have to forgo much profitable business by reason of exchange regulations and by our having to decline accommodation for non-essential purposes.

To the profit for the year is added the amount brought forward from last year, £298,329 7s. 5d., making a total of £715,614 9s. 8d. The directors have appropriated £80,000 to pensions and annuities fund and £60,000 to bank property account. The interim dividend for the half-year ended June 30, 1941, on the "A" and "C" shares at the rate of 18½ per cent per annum, less income-tax, and on the "B" shares at the rate of 10 per cent. per annum, less income-tax, absorbed £129,836 5s. 8d., and the directors recommend final dividends for the year at the same rates, which will leave a balance to be carried forward to the next account of £315,941 18s. 4d.

FINANCE AND TRADE

I will touch upon the general situation within a few paragraphs. First, the underlying reasons I have already mentioned for the increase in bank deposits prompts me to digress for a moment on the vexed question of war-time inflation. No war, least of all this present one, so stupendous in its expenditure,

can be waged without a measure of inflation. Granted that to some extent the trend of bank deposits indicates inflation, as does that of the note issue, too much anxiety and foreboding can be read into these movements if proper allowance is not made for the vastness of our war production, and for the requisite finance, which, provided it is proportionate to the additional output, is not inflationary. Again, inflation can become a bogey if due consideration is not given to the many emergency needs for cash and bank credit which never really enter into spending.

EXPENDITURE ON CONSUMABLE GOODS

With these reservations, however, I will pass on to what is really disconcerting—namely, the present volume of spending on consumption goods, a condition plainly indicative of an excess of purchasing power still in the hands of the public, but, be it noted, a limited public, bearing in mind that far-reaching controls now restrict the spending of large numbers of people, also of many business concerns. The growth of spending is largely the result of the substantially increased cash incomes of wage earners, and these expanding figures, and their effect on consumption and prices, indicate that the problem has been created owing to the absence of a well-considered real, as distinct from monetary, wages policy. Unless some definite action to control wages is promptly taken inflation is inevitable, bringing in its train hardship to all classes, and not least to wage earners themselves. It is to be hoped the recent announcement that a Government committee has been appointed to consider wages policy indicates that this problem will now be boldly faced.

In the narrowing of the home markets, in the restrictions on exports and the necessary concentration of production, many industries have suffered greatly. Nevertheless, while those concerns engaged on what, under present circumstances, must be regarded as non-essential industries are most adversely affected, and in many cases are gradually being brought to a standstill, others, employed on Government requirements and production vital to the life of the nation, are enjoying a period of unwonted activity.

EXPORT TRADE PROSPECTS

For the time being it is inevitable that our export trade should be greatly restricted, and, as in the last war, this will largely stimulate local production in our overseas markets. Therefore, while immediately on the termination of hostilities we may look for great activity in order to make good the ravages of war, and replenish depleted stocks, it would seem likely that when trading conditions once again become normal we shall be faced with great difficulties in finding adequate outlets for our productions.

The promulgation of the Atlantic Charter, however, gives substantial promise for this more distant future, as, provided the economic clauses therein are fully implemented, we can hope for such an expansion of world trade as may absorb the output of industry, not only speedily but continuously, so that producers in all countries may look forward to an enduring demand for their products.

SERVICES OF OFFICIALS AND STAFF

It is with deep regret that I have to inform you that some of our staff have lost their lives while on active service. I know you will join with me in paying homage to their memory, honouring their great sacrifice, and extending to their relatives our sincere sympathy. Others of our employees have been reported missing, and more are prisoners of war. Our solicitude extends to each gallant man and to those anxious ones who are near and dear to him.

The continued call-up of men for active service, the training of those who take their place, and the proper observance of the numerous and complicated war duties required of the banks by the Government, places greater responsibilities and worry on those who remain, and particularly on those in authority. To release still more men we are continuing our policy of closing offices, and are reducing the hours of attendance at many others. In dealing with these problems every consideration is given, so far as circumstances permit, to the convenience of customers.

All members of the staff are to be congratulated on the skilful

execution of their difficult tasks. In the continued efficiency of our services we are justified in taking considerable pride, and to both the permanent and temporary staff I have pleasure in expressing our sincere appreciation. Beyond this I should, as last year, like to add a word of commendation and thanks to those who so loyally and conscientiously guard our premises by undertaking fire-watching duties, a work often done at great inconvenience, and which is worthy of all praise.

The report and accounts were adopted and the retiring directors were re-elected.

Messrs. Halliday, Pearson & Co., and Mr. Leslie Shaw, the retiring auditors, were re-appointed.

After the usual vote of thanks the proceedings terminated.

MIDLAND BANK LIMITED

ANNUAL MEETING OF SHAREHOLDERS

The ordinary general meeting of shareholders of the Midland Bank, Limited, was held on the 29th ult. at the head office, Poultry, London, E.C. 2.

The Right Hon. R. McKenna (chairman) presided and, after referring to his statement circulated with the annual report, and reproduced in these columns on January 24th, moved the adoption of the report and audited statement of accounts. The motion was seconded by Mr S. Christopherson (deputy chairman) and carried.

The following resolution was then moved by the chairman, seconded by Mr Christopherson, and carried:—

“That the meeting records with deepest regret the death on active service of 57 members of the staff, the posting of 10 others as missing and of 27 as prisoners of war, and the death by enemy action of 17 civilian members of the staff, and desires to express its sense of the loss the bank has sustained and its sympathy with the relatives.”

Further resolutions were carried, authorising the payment on February 2nd of a dividend of 8 per cent. actual, less income-tax, for the half-year to December 31st last; re-electing the Right Hon. Lord McGowan, K.B.E., and Sir Bernard D. F. Docker, K.B.E., as directors; and re-appointing Messrs Whinney, Smith and Whinney as auditors for the ensuing year.

BARCLAYS BANK, LIMITED

ANNUAL MEETING OF SHAREHOLDERS

The forty-seventh ordinary general meeting of Barclays Bank, Limited, was held, on the 26th instant, at the head office of the bank, 54 Lombard Street, London, E.C. 3.

Mr Edwin Fisher (the chairman) presided.

Mr P. J. Diboll (the secretary) read the formal notice convening the meeting and the report of the auditors.

With the concurrence of the shareholders present, the report and accounts and also the statement by the chairman, which had been previously circulated, were taken as read.

The chairman moved:

“That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1941, duly audited, be received, approved and adopted, and that a final dividend of 5 per cent., making 10 per cent. for the year on the ‘A’ shares of £4 each fully paid, and a final dividend of 7 per cent., making 14 per cent. for the year, on the ‘B’ and ‘C’ shares of £1 each fully paid, less income-tax in each case, be declared, payable on the 9th proximo, to the shareholders registered in the books of the company on December 31st last.”

Mr W. M. Goodenough (deputy chairman) seconded the motion, which was carried.

The resolution, of which notice had been given, to convert into stock on February 10, 1942, the issued and fully-paid ‘A,’ ‘B’ and ‘C’ shares and any shares issued in the future, when fully paid, was proposed by the chairman, seconded by the deputy chairman and carried.

The retiring directors were re-elected and the auditors, Messrs Kemp, Chatteris, Nichols, Sendell and Company and Messrs Price, Waterhouse and Company, were reappointed for the ensuing year.

A vote of thanks to the chairman for presiding at the meeting was unanimously accorded, and the proceedings terminated.

BANK OF MONTREAL

CANADA'S WAR EFFORT

The one hundred and twenty-fourth annual general meeting of the Bank of Montreal was held on the 1st ultimo, in Montreal.

Mr Huntly R. Drummond (president of the bank), in the course of his address, said:—The bank lent Mr Spinney, our joint general manager, to the Government to organize its Victory Loan campaign and you all know its brilliant success was largely due to his organizing ability. In consequence, they have again requisitioned his services to organize the whole task of raising money in this country, in which he is now engaged.

When we say that business in Canada has reached a level unparalleled in the history of this country, we do but scant justice to the effort which has been put forth. Since the onset of the war an industrial and economic revolution has occurred in this country.

More and more our Government is entering the realm of business by building or financing the plants which our war effort is calling into existence. In the present circumstances a detailed review of business activity is not necessary. The Government has imposed ceilings on both prices and wages, necessary steps to avert inflation which proved so disastrous after the last war.

You will agree with me that the people of Canada are ready—more, they are eager—to make any sacrifice the Government calls for in their will to victory.

GOVERNMENT CONTROLS

When the war is over and Government purchasing disappears, it is essential that Government controls and regulation be removed with all possible speed, accompanied by the fullest amelioration in taxation that is allowable, for, if we are to continue in a system of free enterprise for which we are fighting, it is to private initiative that we must look for resumption of normal activities.

Through its taxation the Government has conscripted capital in all business enterprises; it controls the credit situation through the Bank of Canada, curbs instalment buying, limits the production of some goods such as automobiles, radios, etc., forbids wage increases except as the cost of living rises, and doubtless will have to go even further along similar lines.

Your bank pays in all taxes as much as it does in dividends; in other words, for the first six months of the year we work for Governments, the last six months for ourselves.

While Canada's foreign trade has increased to record levels, it has been conditioned almost entirely by the war. During the second full year of the war our exports rose to \$1,450,000,000 from \$1,130,000,000 during the first year; while imports were \$1,310,000,000, as compared with \$992,000,000. These figures do not include exports of non-monetary gold, which have amounted to more than \$200,000,000 in each of the years mentioned.

Democracy gives us great privileges but not for nothing; every privilege has its corresponding duty; to keep the privileges we must be prepared to sacrifice everything except ultimate freedom itself. Freedom is worth sacrificing everything else for.

THE GENERAL MANAGERS' ADDRESS

Mr Jackson Dodds, as joint general manager, speaking on behalf of himself and Mr Spinney, said, *inter alia*:—Important changes in the balance-sheet are as follows:—Total assets amount to \$1,046,600,000, compared with \$961,300,000 a year ago, the increase having occurred mainly in loans and discounts and in investments. Quick assets total \$706,000,000, or 72.78 per cent of all liabilities to the public. Current loans and discounts in Canada at \$253,500,000 are \$36,000,000 higher. Deposits by the public at \$814,100,000 are \$64,000,000 higher than a year ago.

In reviewing the part which we have played since the outbreak of war, the provision of additional credit is the most conspicuous feature of our operations which appears upon the balance-sheet. The plain fact is that our very ability to provide credit rests directly upon the knowledge of every one of our depositors that a deposit in this bank is as good as cash in his pocket. This a simple principle is the whole basis of bank credit. If it goes, a bank's ability to extend credit goes with it.

Elementary as the facts just mentioned may be, it is well to recall them just now, when the banks are faced with unusually heavy responsibilities, and when there are already signs that the more specious brands of so-called monetary reform are being relabelled with a view to the time when they will be advertised as remedies for our post-war problems. It will be clear from what

has been said that people who formulate theories concerning the use of bank credit, but who ignore the underlying fact that banks have to pay cash to their depositors when they ask for it, are simply building castles in the air upon non-existent foundations.

The 1941 wheat crop in the Prairie Provinces, officially estimated at 282,000,000 bushels, is the smallest produced since 1937. Canada's carry-over continues substantial. Our vast wheat reserves undoubtedly are regarded with satisfaction by the British Government as an important war contribution from Canada.

The report was unanimously adopted.

MARTINS BANK LIMITED

VITAL IMPORTANCE OF SAVINGS

Mr Frederick Alan Bates, MC, AFC, DL, chairman, presided over the one hundred and eleventh annual meeting of shareholders of Martins Bank Limited, held, on the 27th instant, at Liverpool.

The chairman said that in his statement which accompanied the directors' annual report he had reviewed the affairs of the bank and he had little to add.

There was, however, one subject upon which he would touch—the outstanding and most urgent necessity for every one individually, as well as companies and firms, large and small, to save systematically to keep down expenditure and to lend to the national Exchequer. The war will, in the end, be won, Mr Bates added, by our armies and navies and our air forces, but you will agree with me in the need for emphasis of the vital importance of the savings of the people to the economic health of the country.

The increasing circulation of money due to war production is providing the capacity for everyone to do his share of investment in Savings Certificates or other forms of security on issue by the Government, not only for the immediate requirements of the national effort, but in the interests of the people themselves in building up a bulwark of financial security for the future.

The chairman then moved the adoption of the report and accounts and declaration of a final dividend of 7½ per cent., making 15 per cent. for the year.

Mr A. Harold Bibby, DSO, DL, one of the deputy-chairmen, seconded, and the motion was approved.

Col. J. G. B. Beezley proposed the re-election of the Hon. David Bowes-Lyon, Mr E. R. Bowring, Mr H. Mancknells Walton, and Sir William Clare Lees, Bart, as directors. This was seconded by Mr W. Sutcliffe Rhodes and carried.

The auditors, Messrs Harmood Banner and Son, Liverpool, Messrs Peat, Marwick, Mitchell and Company, London, and Messrs Thomas Bowden, Sons and Nephew, Newcastle-upon-Tyne, were reappointed.

LLOYDS BANK LIMITED

The eighty-fourth ordinary general meeting of this bank was held, on the 30th instant, at the head office, 71, Lombard Street, London.

The notice convening the meeting and the auditors' report having been read, the chairman, the Right Hon. Lord Wardington, said that he assumed that the report and accounts which had been circulated would be taken as read as usual and that, as his address to shareholders had also been circulated, he did not propose to take up the time of the meeting by reading it.

The report and accounts were adopted, the usual business transacted and a resolution passed converting the issued and fully paid-up “B” shares in the company into “B” stock.

The proceedings ended with votes of thanks to the chairman and directors and to the staff.

Every year many hundreds of Companies publish Reports of their Annual General Meetings in *The Economist*, thereby reaching thousands of investors in the quiet of their own homes.

In time of war the value of this practice is greatly enhanced because *The Economist* provides valuable information which is not otherwise available to investors, who therefore read it more carefully than ever.

Full particulars of the charges for inserting these reports may be obtained on application to The Reporting Manager, *The Economist*, Brettenham House, Lancaster Place, W.C.2.

NATIONAL DISCOUNT COMPANY, LIMITED

DIVIDEND AND BONUS MAINTAINED

SIR SIGISMUND MENDEL ON AVOIDANCE OF INFLATION

The ordinary annual general meeting of the National Discount Company, Limited, was held on the 23rd instant at the offices of the company, 35 Cornhill, London, E.C.

Sir Sigismund Mendl, KBE, chairman of the company, presided. The secretary (Mr Wilfred Shepherd) having read the notice convening the meeting and the report of the auditors,

The chairman said: Gentlemen,—I will begin by stating briefly the results of the year. You will see by our profit and loss account that the gross profits for the year amounted to £235,208, a reduction of £7,393 on last year. As our profits are shown after providing for all forms of taxation, the small diminution may be considered satisfactory in view of the increase in the rate of income-tax from 8s. 6d. to 10s. To this has to be added a balance brought forward from last year of £202,719, making a total of £437,927. After deducting expenses amounting to £54,693 we propose to carry £383,234 to the reserve fund, to maintain the dividend and bonus at the same rate as last year, and to carry forward the sum of £237,101. This results in the carry-forward being increased by the sum of £34,382.

I should like to take this opportunity of pointing out to the shareholders that the additions to the reserve made in recent years from the annual profits constitute a basic factor in contributing to the credit of the company and to the intrinsic value of the shares, a factor which may stand us in good stead in the future.

BALANCE-SHEET FIGURES

With regard to the balance-sheet, the total, as compared with the previous year, shows an increase of just over £1,000,000, and now amounts to £57,500,000. The allocation of £50,000 to the reserve has increased that fund to £1,300,000. Deposits and other accounts amounting to nearly £51,000,000 show a small expansion over the previous year. Bills rediscounted are also slightly higher at over £4,000,000. On the assets side of the balance-sheet, cash at bankers shows a small increase. Investments at £15,000,000 are down by £3,500,000. This reduction is due to certain of our investments, owing to their early maturity, being included in the item "Bills and Short Bonds Discounted." The total of this item at over £40,000,000 is an increase of about £4,000,000 over the previous year.

The board has decided that it would be in conformity with other companies of this character for the interim dividend to approximate more closely to the final one than is the case at present. Therefore, subject to no exceptional circumstances arising between now and July, we propose to pay an interim dividend next summer of about the same amount as the final one we shall hope to pay at the end of the year, excluding, of course, any bonus.

CHANCELLOR'S SUCCESSFUL POLICY

In contrast to the general field of national events in 1941, the country's financial history is of a somewhat uneventful character, dominated as it necessarily has been at every turn by increasing war expenditure of well-nigh astronomical proportions. The successful policy of the Chancellor of the Exchequer in obtaining his money at low interest rates from all investors has continued throughout the year, and the money market has accordingly experienced an even lower level in the rates of Treasury bills than in 1940 and one providing nothing beyond the most meagre remuneration to companies like ourselves in respect of our holdings of bills.

The average rate of discount on Treasury bills during the year was £1 os. 1.55d. per cent., and as the cost of carrying these bills has been 1 per cent., you will appreciate that it is chiefly from our holdings of short-dated Government bonds and our operations in this market that it has been possible to attain the results which the board now present to the shareholders.

I referred last year to the inevitable increase in taxation in view of the large gap between subscriptions to the various Government loans and expenditure, and, as you know, the rate of income-tax was raised to the record rate of 10s. in the last Budget. We have also seen in 1941 a considerable increase in the various forms of rationing and in the control of goods and other measures to restrict consumption.

I ventured last year to indicate to you the view that, with the object of avoiding the ever-present danger of inflation, some restriction on spending power in the form of compulsory savings might become necessary. There is evidence in the last Budget that a step in that direction has been taken in the provision whereby the taxpayer receives a deferred credit to set against the reduction of his personal allowances. This is the thinnest possible end of the wedge, but will serve as a useful precedent if further restrictive measures appear necessary.

After all these restrictions have been applied, however, there still remains a gap between expenditure and taxation, plus savings, which must be bridged if the dangers of inflation are to be successfully faced and kept at bay. Too much stress cannot be laid on this very real peril to each and every class and individual, and more especially to the weekly wage-earners to whom it would be almost immediately manifested by a decline in the real, as compared with the nominal, value of their incomes, however much the latter might have apparently risen as indicated by the customary financial barometer of an increase in the circulation of currency.

IMPORTANCE OF FACING FACTS

The Chancellor of the Exchequer himself and many notable economic experts have been at pains to dwell on this aspect of our war-time economy, and all possible support should be given to the authorities in their efforts to drive home the vital and essential facts of the situation. Those facts are that increased monetary circulation, unless and only in so far as it is the result of increased production, which while we are at war is mainly of a non-permanent nature, must be carefully and constantly scrutinised and defended against the evil spectre of inflation ever lurking in the background.

You will, I think, agree with the board that the results of the year's operations in 1941 reflect much credit on the skill, assiduity and efficiency of the management, and that the best thanks of the shareholders should be, and I am sure they will be, given to Mr. Bate and his colleagues in the manager's room for the success they have achieved.

The report and accounts were unanimously adopted.

THE NATIONAL BANK LIMITED

SOUND AND LIQUID POSITION

The annual general meeting of the National Bank, Limited, was held at 13, Old Broad Street, London, E.C., on Thursday, the 29th inst., when Mr M. J. Cooke, chairman, presided. Before dealing with the business of the meeting, the chairman alluded with deep regret to the loss which had been sustained by the death of the Earl of Kenmare, who had been a director for over 30 years and had always taken a great interest in the bank's affairs. His geniality and ability was greatly missed at the board room table.

Proceeding with a review of the accounts, Mr Cooke referred to the increase of over £3,000,000 in the total deposit, current and other accounts, as compared with the figures of a year previously, and mentioned that this upward movement, which had been experienced by bankers generally, was in part due to the accumulation of funds which could not be employed in trade and commerce in prevailing conditions. The decline in normal business activity also accounted for the fall of £685,000 and £105,000 respectively in advances and bills discounted, and necessitated the increased deposits being partly diverted into Government securities which were higher by £2,364,000, although corporation, etc., investments showed a slight reduction.

The rise in the deposits resulted in a larger proportion of the bank's funds being kept in an immediately available form, and accordingly cash in hand and money at call showed increases of £533,000 and £1,111,000. The ratio of liquid assets to demand liabilities was 63 per cent. The remaining figures in the balance-sheet did not call for any special comment.

It was proposed to pay a dividend at the rate of 10 per cent. per annum, less income-tax, transfer £10,000 to contingencies account, and carry forward £42,464.

The chairman having alluded to the satisfactory increase in the number of the bank's customers, stated that good progress had been made in spite of the difficulties of the times and his review showed that the bank was in a very sound and liquid position.

The report and statement of accounts were unanimously adopted.

TURNER AND NEWALL LIMITED

GOOD DEMAND FOR GROUP'S PRODUCTS

NEW INSULATING MATERIAL

SIR SAMUEL TURNER'S ADDRESS

The annual general meeting of Turner and Newall, Limited, was held on the 23rd instant, in Manchester, Sir Samuel Turner, the chairman of the company, presiding. The secretary, Mr John L. Collins, read the notice convening the meeting and the report of the auditors, Messrs Deloitte, Plender, Griffiths and Company.

Before beginning to deal with the report and accounts for the last financial year, the chairman referred to the sad loss which the board has sustained in the death of Mr W. Norman Roberts, which occurred on December 6, 1941. Mr Roberts had been associated with the company from its early days and was a director from 1928 until his death. The chairman mentioned that his interest in the business was always a vital one, and was maintained even during the last few years of his long and serious illness borne with such exceptional courage and patience.

The chairman dealt with the accounts at some length as usual, and then stated that he would give a brief review of the company's activities during the year, although it would be appreciated that under to-day's conditions it was not possible for him to attempt to give his normal detailed survey. Accordingly, Sir Samuel Turner first referred to the mining companies in South Africa and Canada, and mentioned the fact that production at the mines in Southern Rhodesia and Swaziland which was somewhat curtailed as from October 1, 1940, had now been increased, and also mentioned a new method of milling raw asbestos evolved by the companies' technicians which has been operated already with great success at the Havelock Mine in Swaziland and has also been tested at the mines in Southern Rhodesia, where it is hoped it will be similarly successful.

ACTIVITIES IN U.K.

Dealing with the manufacturing companies situated in the United Kingdom, the Asbestos Textile Companies, namely Turner Brothers Asbestos Company, Limited, J. W. Roberts, Limited, and Ferodo, Limited, were referred to, all of whom had been fully occupied during the year, and in particular reference was made to the satisfactory development in the demand for "V" type rubber belting in the case of Turner Brothers Asbestos Company, Limited, the increased deliveries by J. W. Roberts, Limited, of their speciality Limpet Sprayed Asbestos to the home market, particularly in connection with work in ships, and the fact that important development work in connection with Ferodo non-metallic brake blocks for railway rolling stock had been completed and that these blocks are now being used on an increasing scale by British railways.

Turners Asbestos Cement Company had been busily engaged during the year in the production of the various materials required by the Government building programme, and, as in peace-time, asbestos cement roofings, notably Everite Bigsix corrugated sheets and Turnall Trafford tiles, continue to be in heavy demand for buildings of every kind; an additional factory has been acquired which is already producing asbestos cement roofing materials, and which it is anticipated will be very helpful and economical both in war and peace in supplying the large demand for roofing materials. The fact that certain asbestos cement materials, and in particular Everite pressure pipes, can be used as an alternative to timber in many ways was also mentioned.

The Washington Chemical Company and The Western Chemical Company (Paisley), Limited, had during the year been employed at a maximum output on production of chemicals, and an interesting minor development is the manufacture of an activated chalk which is used as a reinforcing agent in rubber materials, such material previously having to be obtained by the rubber industry from abroad. Newalls Insulation Company had been very busy during the year, and the chairman mentioned that they are now beginning to utilise, for refrigeration insulation purposes, a new product manufactured at Washington from indigenous materials, which has, for the purpose in question, the virtues of corkboard plus certain others; this material, which is identified by the registered name of Nicold, is based on English peat, and

reports issued by the National Physical Laboratory establish its thermal efficiency as fully equal to corkboard, and demonstrate that it is lighter in weight.

EXPORT BUSINESS

The chairman next referred to the company's export trade, and said:—

As was the case during the preceding year, our manufacturing companies operating in the United Kingdom have been rather handicapped in their export activities by the fact that almost all markets on the Continent of Europe are closed to them. Nevertheless, I am very glad to be able to say that export trade to the remaining markets of the world has been increased to a very satisfactory level, and indeed, in one or two cases, total exports have actually reached pre-war levels, notwithstanding the non-availability of European markets.

Shipping difficulties have naturally affected export trade to some extent, but on the whole, such difficulties have been less than might have been expected. Although the Government's attitude towards the maintaining of export trade has been necessarily somewhat modified during the year, we have no reason to feel that the curb on export activities is likely to affect our products, and we anticipate being able to maintain a substantial volume of export business, pending resumption of full activity in this respect after the war.

The chairman then referred to the manufacturing companies situated abroad, namely Keasbey and Mattison Company, Ferodo and Asbestos Incorporated and Asbestos Cement, Limited, and the substantial progress made by them during the year and then continued as follows:—

The pension scheme of the group has now completed its fifth year, with satisfaction to all concerned, and an actuarial valuation of the fund discloses a small surplus, which I consider is a very satisfactory feature, in view of the fact that the fund was so recently begun.

With regard to the Robert Turner Fund, the directors again recommend the contribution of £10,000 to the Turner and Newall Welfare Trust, Limited, for account of the trustees of this fund, which, as you know, is being built up to deal with exceptional cases not adequately covered by the pension scheme itself.

DIVIDEND POLICY

The dividend recommended by the board of 12½ per cent. for the year on the ordinary stock compares with a figure of 15 per cent. last year. I am sure that you will realise that under to-day's conditions there is necessarily a big margin between actual available profits and those which would have been available had we been operating on the same scale under peace-time conditions.

As it is however, although we are producing to what is effectively our maximum capacity, gross profits actually earned are affected by increased costs, which cannot always be reflected in increased selling prices, and net profits by taxation, as you are well aware. Under all the circumstances, your directors feel that you will consider a dividend of 12½ per cent. for the year to be satisfactory.

THE FUTURE

Forecasting even the immediate future in the middle of a war, is a task which I do not propose to attempt, and I am sure that I shall have your full approval in refraining from making any such effort. Difficulties there are, and will be in plenty. Shortage of labour, increased costs, delays in obtaining delivery of essential materials, necessary time spent on adjustments to comply with various Government Regulations—all these exist to-day, and will continue until after the war. It is, however, a function of management to deal with these and other problems in such a way that the operation of the business is not impeded, and to that end your directors will continue to strive.

We always endeavour, in determining our policy, to plan some

years ahead, and we are not abandoning that practice just because to-day's conditions do not permit a forward policy to be immediately operated. The fact that we have done this consistently in the past has enabled us to satisfy the urgent needs of our country right from the beginning of the war, and we are gratified to have been able to make this important contribution to the war effort.

Research, which we regard as a most vital part of our operations, continues with full vigour and, given a return to relatively normal conditions, will contribute in no small degree to the future strength of the company.

In conclusion, I would like again, on behalf of the board and on your behalf, to express to the officials and employees of our various undertakings, both in this country and abroad, our thanks for, and appreciation of their efforts, and to convey to them that we are satisfied that these efforts will continue unabated amongst present difficulties, to the ultimate benefit of all concerned.

The usual resolutions were then passed, approving and adopting the directors' report, the accounts for the year to September 30, 1941, and the balance-sheet as at that date, and authorising the payment of the ordinary dividend of 8½ per cent., making 12½ per cent. for the year, subject to income-tax, following which Messrs H. Rupert Turner and G. Stirling Newall, the retiring directors, were re-elected as directors of the company.

Messrs Deloitte, Plender, Griffiths and Company, chartered accountants, were reappointed as auditors for the current year.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED RECORD VOLUME OF TRADE

The annual general meeting of Liebig's Extract of Meat Company, Limited, was held, on the 29th instant, in London.

Mr Kenneth M. Carlisle (the chairman) said that the balance of net profit available for distribution was £215,000 in comparison with £232,000 in the previous year. The reduction failed to reflect in true perspective the trading profits of the group of companies, which, notwithstanding reduced margins owing to rising costs of production, had nevertheless been large, nor the volume of trade in which they had been engaged during the past year, which had surpassed all previous records, but it did connote in no uncertain measure the levies of taxation and the provision it had been considered necessary and prudent to make against eventual liability in that connection on the profits earned.

It was not without considerable disappointment to them that in a year in which the tide of the company's trade and earnings had swept to the highest flood mark attained in its long history the surplus actually left available for distribution, after providing for taxation, should figure at the lowest ebb touched since the crisis year of 1931.

SERVING THE NATION'S INTEREST

The directors had considered that not only would the wider interests of the nation best be served by expanding production to the maximum compatible with capital resources and the supply of raw materials but that they would be discharging the paramount duty of every citizen to assist in every way by contributing as largely as possible through the medium of excess profits tax towards the promotion and finance of the war effort. The company should stand to benefit in the long run from the wider custom which was being created. The insistent demand for the output of all their factories evinced the popularity of their products and it was felt that they were not only providing a public want in the present circumstances of meat rationing but were also building up a goodwill which would assuredly afford a more extended scope for their business in the future.

The reduction in the dividend from 10 per cent. to 8 per cent. tax free would have found shareholders not unprepared, for he had sounded a note of warning at the last two meetings to the effect that it would probably not prove feasible to maintain the same rate of dividend free of tax if there should be an increase in the income-tax.

The home front, the most important in respect of both volume and value, had been surveyed briefly in his address at the general meeting of Oxo, Limited, held at the end of December. Their overseas canning factories had again been fully engaged, to the limit of their capacities and in consonance with the supplies of cattle and other raw materials available, mainly in the production of canned meats and other foodstuffs for military and Government

requirements. They had had difficulties and setbacks to contend with in connection with delays and shortages in the deliveries of packing and other materials, but on the whole had come through well.

FARMING RESULTS

On the farming side of their business results had, as was customary, been patchy, but, when regard was had to the wide-spread areas covered and the variable climatic conditions under which operations were conducted, irregularity in performance was only to be expected. Generally speaking, conditions had been unpropitious due to excessive rainfall, but in the aggregate improving values of livestock and an active market had contributed towards offsetting the rather disappointing calving and mortality returns of some districts. The estancias had as usual fulfilled the useful function of supplying cattle for the factories.

In conclusion, he paid a warm tribute to the members of their staff at home and overseas. To their loyal collaboration they owed much, and without their wholehearted and efficient support in the many difficult and trying situations which had inevitably arisen in the course of the year production could not have reached the high level achieved or distribution been carried out with such regularity.

The report and accounts were unanimously adopted and at subsequent extraordinary meetings resolutions were passed approving the conversion of all the issued and fully paid capital of the company into stock and the adoption of new articles of association.

UNION BANK OF AUSTRALIA, LIMITED

GROWTH OF GOVERNMENT CONTROL

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 26th instant, in London.

Major-General Sir John H. Davidson, KCMG, CB, DSO (the chairman), said that last year he had referred to various measures of control adopted by the Commonwealth and Dominion Governments. Since then Government control had been extended to almost every phase of activity.

Apart from the licensing of banks—a measure which had been a requirement in New Zealand for several years past—those regulations, according to official pronouncements, had been designed to secure effective use of the country's financial resources and to avoid uncontrolled inflation, and mainly provided that new and additional advances in future would be made to the public only in accordance with the policy laid down by the Commonwealth Bank from time to time, while a portion of the surplus "investible funds" of the trading banks were being deposited with that bank at a rate of interest which had not been determined.

No investment in Government securities could now be made without the consent of the Central Bank. What effect those regulations would have on the trading banks depended on the spirit and manner in which they were administered. In that connection he would like to draw attention to the fact that the net return to the shareholders on their funds in this bank was in the neighbourhood of 2 per cent. He trusted that the Australian authorities would bear that in mind when considering the imposition of burdens on the various categories of the community.

The net profit of the bank for the year was £188,129, to which must be added the amount brought forward, £159,809, making £347,938, which compared with £354,309 last year. They had declared a final dividend of 4 per cent., making 7 per cent. for the year.

The report and accounts were unanimously adopted.

RADIO RENTALS, LIMITED

DEMAND EXCEEDS SUPPLY

The fifth annual general meeting of Radio Rentals, Limited, was held, on the 26th instant, in London.

Mr H. F. Hunt (the chairman), who presided, said that the trading profit had again increased and amounted to £159,291, to which must be added commissions and interest receivable, amounting to £318, making a total of £159,609. From that figure must be deducted the amount written off stock of £88,017, depreciation of sundry assets, increased to £5,732, and directors' fees and com-

(Continued at foot of page 167)

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: all dealings are for cash

UNFAVOURABLE news from the Pacific and Libyan war zones was not entirely offset by Russian gains and there was a slight contraction in the volume of business with, however, few price reductions. Re-investment demand on the further acquisition of Canadian securities has scarcely commented on the Premier's speech offered no new incentive to business. Thus, turnover in the gilt-edged market was of negligible proportions, some little selling being offset by fresh buying before the week-end, while on Tuesday some small and scattered losses effected the total absence of buyers. Among Dominion stocks, Australian issues were offered, and in the absence of demand, prices in some cases fell to minimum levels. Profit taking was general among South American bonds in the foreign bond market, Brazilian and Chilean loans being the chief sufferers, but declines were generally small. Chinese bonds were also sold, the 5 per cent, 1912, loan falling 2 points on Tuesday. Some slight selling in the home rail market before the week-end gave place to rather steadier conditions in the reopening, but movements were of little interest. Canadian Pacific preference shares advanced 2½ points on the Treasury requisitioning order, and 3½ in midweek, when there were a number of advances in some railway stocks.

Conditions in the industrial market were heavy and prices continue their downward trend, although occasional dividend announcements served to relieve the general inactivity. Thus the reduction in the Woolworth bonus resulted in a loss of 2s. on the announcement for the shares, which occasioned a decline in other leading chain store issues. The aircraft and motor group reflected mild activity in narrow movements, but brewery issues were lower where changed. Changes in the heavy industrial group were negligible. Small losses for shipping shares were general before the week-end, but the tone in the early part of the week was steady. Apart from the announcement by Fine Cotton Spinners of the proposed capital reconstruction, on which the senior shares improved, there was little of note in the textile group. Leading issues in the tobacco group fluctuated within narrow limits, but Imps improved ½ on the maintenance of the gross dividend. Among miscellaneous shares International Nickel and Brazilian Traction fell ½ and ¾ respectively on Tuesday, when Dunlop lost 9d. Phillips' Rubber Soles, however, advanced 2s. A rather better feeling later failed to produce higher prices.

As elsewhere, activity in the kaffir market was slight, and dividend-paying issues

were slightly easier. The tin market was generally steady, but Australian mining issues were lower on small selling. Apart from a loss of 2s. 6d. for Sungei Krian on the previous Friday the rubber market attracted little attention, and in the dull conditions prices were slightly easier. The oil market fluctuated with the tone of the war news, and the previous Friday's losses were recovered at the reopening, Shell rising 3½, Burmah 2½ and Anglo-Iranian 3½. The following day, however, both buyers and sellers held off and the leaders all eased 3½ among other small losses.

New York

SENTIMENT on Wall Street before the week-end derived some encouragement from the war news, but trading generally remained slow and restricted. Far Eastern naval successes were reflected in an expansion of business at the reopening, and with the market practically sold out, prices advanced. Good earnings announcements the next day provided additional support, but profit-taking later led to some irregularity. Apart from advances in motor issues, the market in midweek was dull with small declines.

RESULT OF TENDER

Bristol Corporation.—Tenders for £500,000 bills payable July 30, 1942, opened January 26th. Total applied for £3,450,000. Allotted £500,000. Tenders at £99 9s. 11d. receive 25 per cent. Accepted tender rate £1 0s. 4d. per cent per annum.

CONVERSIONS AND REPAYMENTS
Great Southern Railways.—Holders of £637,892 4 per cent Debenture Stock due for repayment March 31, 1942, are given the option of repayment on due date or conversion in whole or in part into a similar issue redeemable at par March 31, 1947.

Shorter Comments

The Burnley Building Society.—Annual report shows total assets Dec. 31, 1941, £15,269,529 (£15,164,251). Balance of income £308,329 (£378,187). Mortgage business dormant. Only £241,555 advanced on selected securities. Reserve fund unchanged at £800,000. General contingencies reserve £60,171. Special war contingencies reserve £90,000. Due on mortgages £12,565,409 (£13,456,062). Due on deposits, etc., £3,930,245 (£3,811,712). Due to shareholders £10,285,102 (£10,356,688).

Shell Union Oil Corp. (£800s).—After providing \$9,900 (\$3,800) for Federal income tax, 1941 earnings totalled \$21,300. It is proposed to put \$4,000 to special reserve, leaving net earnings \$17,300.

(Continued on page 170)

official announcements might be obtained without interruption. The demand for their service far exceeded the number they were able to accommodate.

They had recently completed negotiations for the purchase of the entire share capital of Rentertainments, Limited, which was the second largest radio rental company. At this stage he was unable to give details of the transaction, but would express the opinion that the acquisition of a subsidiary company trading on similar conditions to their own would enable them to amalgamate the two services to the satisfaction of all the subscribers and to the benefit of the company.

The report and accounts were unanimously adopted, and the final dividend of 6 per cent., making 10 per cent. for the year, was approved.

BANK OF ENGLAND, NATIONAL PROVINCIAL BANK, LIMITED.

ONE HUNDRED AND FORTY-SECOND REPORT,

Submitted to the Shareholders at the Ordinary Annual General Meeting, on Friday, the 23rd January, 1942, at the offices of the Company.

Dr. PROFIT AND LOSS ACCOUNT for the Year ending 31st December, 1941 Cr.

To Current Expenses, including Salaries, Audit Fee, Profit Sharing to Staff, and all other charges.....	£45,223	By Gross Profit for the Year, after making provision for rebate, taxation and contingencies	£235,208
" Directors' Remuneration	9,470		
" Balance carried down.....	180,515		
	£235,208		£235,208
To Reserve Fund	£50,000		
" Interim Dividend—			
"A" Shares	£10,583		
"B" Shares	25,950		
" Final Dividend—	36,533	By Balance brought down	£180,515
"A" Shares	10,583	" Balance from Previous Year	202,719
"B" Shares	37,484		
" Bonus—			
"B" Shares	11,533		
" Balance carried to Balance Sheet	59,600		
	237,101		
	£383,234		£383,234

The Subsidiary Company has not traded during the year, and has made neither profit nor loss.

On behalf of the Board,
S. F. MENDEL,
H. S. H. GUINNESS, Directors.

W. SHEPHERD, Secretary.

BALANCE SHEET, 31st December, 1941

Capital authorised—		Cash at Bankers	£1,700,792
270,000 "A" Shares of £2 10s.	£675,000	Investments—	
270,000 "B" Shares of £7 10s.	£2,025,000	British Government, Trustee, and British Corporation Securities	15,169,817
	£2,700,000	Bills Discounted, and Short-dated Bonds, etc., including Bills Re-discounted, per contra, less provision for Rebate of Interest	40,297,794
Capital Issued—		Loans and Sundry Amounts receivable	277,360
169,333 "A" Shares of £2 10s.	£423,333	Freehold Premises (at approximate cost)	100,000
230,667 "B" Shares of £7 10s.	1,730,002	Subsidiary Company—	
	£2,153,335	Shares	
Capital paid-up, viz.—		Less Loan	
"A" Shares—Fully paid	423,333		
"B" Shares—£2 10s. paid	576,667		
Reserve Fund	£1,000,000		
Deposits, secured and unsecured, contingency and other accounts, and provision for accruing expenses	50,880,743		
Bills Re-discounted (not including Treasury Bills)	4,063,328		
Profit and Loss Account—			
Dividend and Bonus	59,600		
Balance at Credit	237,101		
	296,701		
	£57,540,772		£57,540,772

On behalf of the Board,
S. F. MENDEL,
H. S. H. GUINNESS, Directors.

W. SHEPHERD, Secretary.

We report that we have obtained all the information and explanations which we have required. We have examined the Securities representing Investments of the Company in hand, those held against Loans, and all Bills discounted in hand. We have also proved the Cash Balances, and verified the Securities and Bills in the hands of Depositors. In our opinion the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information, and the explanations given to us, and as shown by the Books of the Company.

The Next Spring

JANUARY is at an end. In some two months' time the campaigning season will be on the threshold. All over the world, generals and politicians are already seated at their green baize tables poring over maps and assessing complicated tables of statistics. Somewhere in Germany—high up in the Bavarian Alps perhaps, or behind closed doors in Berlin—some such conference is certainly in progress, with Hitler in the midst of a somewhat depleted circle of generals, planning the next move in the world struggle of his creating. And it is important to remember that the strategic initiative still rests with him.

It is still Hitler's decision that will decide the shape of the 1942 fighting in Europe. Yet his freedom of action is far more limited now than in the spring of 1941. The power of decision remains, but the factors influencing the decision are far more constraining. Above all, the timetable is no longer Hitler's to determine. Some sort of decision must be achieved before the flow of American armaments and the equipping of vast American armies tip the scale. The American arsenal will be working at full stretch by 1943. It follows that the year 1942 is the utmost limit Hitler can allow himself. He not only needs a decision. He needs it now.

The kind of decision is itself limited. Ideally for Hitler

it would be a knockout blow which would leave the Nazis victorious. Short of that it would be the achievement of a defensive position within "the citadel of Europe" so strong that no external alliance of powers could hope to storm the defences. There is only one other alternative—total defeat. It is legitimate to suppose, therefore, that all Hitler's plans are concentrated on achieving either a knockout blow or an assured defensive position during 1942.

The most widely made guess at Hitler's next move is probably the spring offensive against Russia. The Russians expect it, and it fits in well with the tactics employed by Rommel in the Western Desert—that of retreating until the enemy has reached the utmost spring of his offensive, and then attacking with newly brought up reserves. Yet a renewed advance in Russia would have little bearing on either of the two great problems for 1942—total victory and total defence. To seize Leningrad, Moscow, Rostov, the Caucasus would not end the war—even in Russia; and it would have little or no effect upon the American arsenal still flooding out its supplies to its advanced base in Britain. There are circumstantial—perhaps suspiciously circumstantial—reports from Germany which tell of the building of a triple and quad-

rupe defence line across Poland and the massing of a vast armada of planes and gliders. Is it so certain that Russia will have to bear the brunt of the next attack?

Some will protest that even to hold the citadel of Europe Hitler will be compelled to strike again to the east. The Maginot Line concept of static defence has not proved workable, and effective defence demands attack. But the German version of the Maginot Line has yet to be tested, and although the German army available to hold such a line would be less by the lost millions of 1941 and by the divisions employed elsewhere, the Russian army, too, has been very seriously damaged by the year's hammering, and it is very far from certain that it could overrun strong enemy defences at the end of an advance across hundreds of miles of "scorched earth."

Hitler cannot win Victory in Russia. A strong defensive position in Europe can possibly be achieved without further campaigning in Russia. These are two facts that must be set against the possibility of further heavy fighting in the east. There is only one battlefield where a local victory for the Nazis would carry with it any hope of total victory in 1942, and that is in Great Britain itself. The deterrents are, of course, enormous. The attempt at invasion was not made in 1940 when the *Luftwaffe* had not been depleted by the Russian campaign, the Axis shipping position was healthier, the British army was ludicrously small, and the defences of this island were embryonic. The undertaking to-day would be formidable. It might ensure not decisive victory but decisive and total defeat. Contrary to popular imaginings, Hitler is not given to the hopeless gamble. There is good reason to suppose that in an invasion of Great Britain—or of Eire as a preliminary—the odds would be against the Nazis.

Thus total victory may have to be removed from the German agenda altogether. There remains the attempt at stalemate, at an unassailable position in Europe in which Hitler can neither attack nor be attacked. Such a

position demands that all the entry points into Europe be sealed up. To the east would be the Polish defences. To the west, the 21 miles of the Channel are less of a protection than the 3,000 miles of the Atlantic would be if the British Isles could be overrun; but the coasts of France and the Low Countries could be made immensely strong. The widest gap in Hitler's defensive wall may well be to the south-west, in French North Africa, the Western Mediterranean and the Iberian Peninsula.

There is certainly some sign that Africa is among Hitler's immediate preoccupations. For some time past strong units of the *Luftwaffe* have been massing in Italy, and Goering has paid a visit to Rome. Again the reinforcements that have reached Rommel are evidence that even at a time of strained resources the African campaign stands very high on Germany's list of priorities. The extension of Allied control to the coasts of Morocco would provide a large trans-Atlantic expeditionary force with entry ports, bases and airfields perhaps more advantageous and less vulnerable than any in the British Isles. The extension of full Axis control from Libya to the Atlantic would create new possibilities not only of squeezing out the British Navy at the eastern end of the Mediterranean, but of vastly increasing the deadliness of the U-boat attack on Britain's Atlantic lifeline. And on the most optimistic view—from the German standpoint—complete control in North Africa, coupled with a thrust through Turkey, might give Germany control of the Middle East, solve the oil problem, and open a new front on Russia's vulnerable flank.

These and many other considerations are being weighed and discussed round Hitler's council table. His enemies must weigh the issues as carefully as he. There must be no unpreparedness, no false security, no innocent astonishment this time. Every front is potentially the locus of the next attack. Every front must be ready at full stretch to receive it. Only thus will 1942 be a year of decision, not for Hitler, but for the United Nations.

A War Cabinet?

THE present House of Commons has seldom, if ever, been so representative of national sentiment as when it supported Mr Attlee's motion of confidence in the Government last week by 464 votes to 1—with, it has been reckoned, 27 deliberate abstentions, mostly by Labour Members. None of Mr Churchill's modest disclaimers or expressions of loyal trust in his colleagues could alter the fact that it was a vote of confidence in him, not in them—and in him personally, rather than in his methods of Cabinet government. Speech after speech in the debate made this plain. The vote was valuable, for it told the world that Mr. Churchill himself was unshaken and unshakable, which in this country was taken as a truism before the debating started. But, in itself, it altered nothing. It certainly did not put an end to the sober and widespread demand for new men and new methods.

The last words of the debate came from Admiral Sir Roger Keyes: "Until he overhauls the war machine and the War Cabinet, victory will be delayed and the issue cast a few minutes later as the opinion of the House. Nor speech on Tuesday, he left the way open for 'Ministerial improvements.' In his closing speech on Thursday, with the remark that 'it would be disastrous to lose that is the essential counterpart of a consistent and unswerving purpose,' he announced that an office, similar to that of Mr Donald Nelson, who has been appointed 'to supervise the whole field of American production,' must be created here. In other words, strong in the support of the House, Mr Churchill conceded the case of his critics

for a Minister of Production. In effect, he conceded more; he admitted the thin end of his critics' most substantial wedge. By acknowledging that a single Minister was needed with the power of decision over an entire sector of policy, he conceded, in strict logic, the case for "a War Cabinet of persons free from administrative duties and with authority unquestionably superior to that of all executive Ministers," which Sir William Beveridge had lucidly stated in *The Times* a few days before. It seemed that the debate was not an end, but a beginning.

The aftermath, however, threatens to be disappointing. On Wednesday night, after a week's delay, it was announced that Lord Beaverbrook was to be Minister of War Production. Sir Andrew Duncan becomes Minister of Supply again; Colonel J. J. Llewellyn replaces him as President of the Board of Trade; and there is a consequential shuffle of junior Ministers. What Lord Beaverbrook's precise functions will be, and what his relations will be to the "executive Ministers" in charge of the production departments, and especially to Mr Bevin at the Ministry of Labour, have been left to be stated in the Commons by the Prime Minister. Whether, in fact, his appointment will prove to be the first step towards setting-up a real War Cabinet now seems doubtful.

For the entire week between the end of the debate and the announcement, rumour was busy. For a few days, Sir Stafford Cripps was confidently named to replace Lord Beaverbrook at the Ministry of Supply; then the return of Sir Andrew Duncan was forecast. Almost certainly there has been great argument. It is easy to decide that there shall be a Minister of Production, but

much harder to find the right man for the job and persuade the other executive Ministers to accept his supervision."

It may be that these delays and difficulties have been due to the fact that the "flexibility of mind" of Mr Churchill's Ministers is not equal to his own—which is what the critics have consistently argued. The present Cabinet is a nice balance of party claims which would be "upset" if any Minister apart from Mr Churchill were given any great power; this situation, in fact, is the inescapable reason why the appointment of a Minister of Production, or Defence, should involve a recasting of the personnel and duties of the whole Cabinet, which only holds together because the Prime Minister does, or tries to do, all the work of decision. Sir Stafford Cripps, it is gossiped, would not readily serve under Lord Beaverbrook, nor Mr Bevin under a "supervisor," without guarantees. On the other hand, Sir Andrew Duncan, who by no means set the Thames alight when he was at the Adelphi before, was apparently quite willing to come back; and he is on the best of terms with industrialists. These reports may not be true, but they are probably suggestive of what actually happened.

It would be unfair, however, to attribute the delay and the disappointing nature of the final decisions solely to the desire of Ministers or of party representatives not to yield territory. Mr Churchill has probably not selected the right man to exercise powers of decision over all war production and, at the same time, to command the acquiescence of his colleagues. If the Prime Minister were picking a War Cabinet from scratch, he would hardly select Lord Beaverbrook to balance the claims of all the various order-placing production departments and to impose the highest standards of manufacturing technique upon war industry. These should have been the functions of the Production Executive—if any committee of equal Ministers, including both Mr Bevin and Lord Beaverbrook, could have been an organ of decision—and they should certainly be the new Minister's double task. By temperament and from his record, Lord Beaverbrook is an individualist, a fighter, a "lone wolf." Put in charge of a department, he will wrest materials from all rivals to make now aircraft and now tanks; he will engross the nation's aluminium or paper as the need arises; he will push up the output of this or that product, as required, with scant deference to the programmes of other and less dynamic people. By nature he is a "partisan"—a guerrilla. He will not sit easily in the seat of judgment, with no axe to grind.

There are occasions when to turn poacher into game-keeper may be sound policy, and Lord Beaverbrook's boundless determination and energy are hard to match in any other Minister. But the hand-to-mouth Dunkirk days, when all that could be done in the face of the enemy's massive superiority was to call him in to plug up this or that hole in the nation's starveling defences, have gone. Output in all branches is climbing to a peak as new fac-

tories come into work. The production of weapons, by any standards, is immense. Supplies are not enough to provision all the fronts anything like adequately, it is true. The Prime Minister made that plain in last week's debate. But that is because, without the American supplies which will not come forward in bulk for the best part of another year, they cannot be enough. What is wanted from the Minister of Production is to make the best of what this country can do meanwhile, to make the most of its maximum effort, not by electrical exhortations or manhandling methods, but by organising (and insisting upon) a smooth flow of orders to the factories and a smooth flow of finished goods from them. The Minister's first task is to get rid of the conflicts, compromises, delays and indecisions which clog the present inter-departmental organisation; his second to see, with the aid of a staff of experts, that technical inefficiency does not block production. It must be admitted that, if there are Ministers who did not readily see Lord Beaverbrook in these rôles, they may well be justified. A Minister of the temper, experience and reputation of, say, Mr Oliver Lyttelton would almost certainly have been a better choice.

Mr Churchill, of course, did not start from scratch. Lord Beaverbrook is in possession at the Ministry of Supply and probably he, least of all, would be disposed to serve under a higher commander. Moreover, Lord Beaverbrook is the lynch pin, on the British side, in the new joint Boards for allocating munitions and raw materials. He is the personal link, in matters of production, between this country and Premier Stalin. His vested claim to this further preferment is high, and the Prime Minister probably felt that his claim was too high to be resisted. Actually, Lord Beaverbrook's special status is one good reason why he should not be Minister of Production—or Supply. He cannot make all the decisions in all the places, any more than Mr Churchill can. It is no disparagement of Lord Beaverbrook's great gifts to suggest that it would have suited his temperament and his contacts much better if he had been made Minister Extraordinary or Ambassador-at-Large to deal with inter-Allied supplies in all the Allied capitals.

Mr Churchill has been given the virtually unanimous vote of Parliament. He has the virtually unanimous support of the people. By his own confession, he feels the weight of his burdens heavy upon him. He is in a position to pick the best Ministers, regardless of party or personal considerations. With the appointment of an able, resolute, judicial and informed Minister of Production, he could have started upon the process of establishing at his side, and always loyally under his leadership, men with the authority and the capacity to answer some of the vital questions, on all aspects of policy, which so far he has devotedly tried to answer in every case himself. Until now, he has been Minister of Everything: with a real War Cabinet he could become Prime Minister again.

The Income Tax

DISCUSSION of the budgetary problem in two previous articles* has carried the argument up to the painful conclusion that a still greater effort to tax the income of the people will be needed in the coming year than has been made in the year that is now moving through its last quarter. One or two suggestions can be made for new forms of taxation; but, as always, the main recourse must necessarily be to the old standby, direct taxation. It is hardly possible, however, to suggest that the income tax should merely be "put up" in the usual fashion. The British income tax (which will have existed continuously for a hundred years this spring) is one of the most successful, elastic and fruitful methods of taxation ever invented. Any close study of Parliamentary democracy in other countries will reveal how much of its stability and soundness the British community owes to the solidity of its finances—and for that the greater part of the credit should go to what Gladstone (though he disliked it) called the "colossal engine of finance."

But precisely because it has such a long record of useful service to its credit, the income tax is beginning to creak at the joints. It is remarkable enough that any fiscal instrument designed by William Pitt and revived by Sir Robert Peel should have lasted so long in conditions of peace; it would be miraculous if it did not show weaknesses when applied to the problems of financing a total war. It was designed for a "standard rate" of a few pence in the pound but the structure still survives with the standard rate at 10s. in the pound. There is, of course, no absolute reason why it should not be higher still—say 12s. or 12s. 6d.—and one should beware of the temptation to say that such rates are impossible merely because they are unprecedented; after all, not very long before the war, 6s. was thought to be the maximum conceivable. Nevertheless, a rate of 10s. in the pound is a sort of watershed; it may be guessed that, even in wartime, a number of psychological resistances to payment would arise if the State appeared to be taking away more than half of the ordinary standard income. The only way of increasing the yield of the income tax, other than an increase of the standard rate, would be to reduce the various personal and other allowances. But to do this would merely penalise the earned income as against the unearned, the married man as against the bachelor, the father as against the childless.

Not only is the income tax, as at present conceived, at or near the limit of its weight; its levying at the present rate is beginning to reveal a number of serious defects. These can be roughly grouped under two heads. First, now that income tax has become (as it should) an all but universal tax, affecting virtually every citizen with an income, the disadvantages of the system by which each income is individually returned and assessed, and the tax is collected at a considerable interval of time after the receipt of the income on which it is assessed, are becoming very obvious. The well-educated professional man, who has been filling up income tax forms all his working life, approaches each year's ordeal with some trepidation, and there are very few who really understand each detail in the process of assessment. When the same procedure is imposed on the ordinary wage-earner the result is, at best, bewilderment, at worst angry resentment. Nobody who, in these recent weeks, has helped an ordinary, intelligent manual worker to make his return can have failed to wonder if there is one in a hundred who understands what it is all about. When the difficulties of the return have been surmounted, the method of collection is puzzling. It is called "collection at the source"; but that means that tax on the income of 1941 is collected at the source of the income of 1942. As is well known, this year's great

extension of the net of income tax has led to a very great strain being put upon the Inland Revenue. The state of affairs can easily be exaggerated; there is overwork and delay, but, as yet, nothing more than that. But it must be remembered that the present experiment is being made in the most favourable possible circumstances. Incomes are rising, and there is a strong patriotic motive for paying taxes. If there are difficulties in these conditions, what will happen when incomes start falling? If there is anything in the nature of a post-war slump the attempt will have to be made to collect tax on the high earnings of wartime from the low earnings, or the zero earnings, of slump. In short, if the system is not breaking down now, it will assuredly break down in peacetime.

The second great defect of the income tax is connected with the vexed question of the incentive to effort. It has been argued with great force in recent months that the present system of income tax provides very little incentive to the wage earner to work overtime or to the professional man to undertake more work, while income tax with EPT provides a similar lack of incentive for corporate business. This argument was accepted, so far as it applies to EPT, in the last Budget, and concessions to meet it were made.† But it applies almost equally to income tax, and unfortunately the present income tax might almost have been specially designed to impinge with maximum severity on the incentive to greater effort. For, when a man is contemplating whether or not a little extra effort is worth the net sum that it will earn, he is concerned with the rate of taxation that will be levied on the extra income produced by the extra effort, not with the average rate he pays on his whole income. From the point of view of incentive, in short, it is the *marginal* rate of taxation that counts, not the *average* rate. If a man is earning £5 a week and wondering whether to earn £6 a week, it is missing a point to tell him that, even at the higher income, the rate of tax he will pay, averaged over his whole income, will only be 9.8 per cent (assuming him to be a married man with one child); the fact remains that nearly one-third of every extra pound goes in taxation. Similarly, the man with an income of £2,000, contemplating an increase by greater effort to £2,200, will raise his *average* rate of tax only from 40.1 per cent to 42.0 per cent; but the rate of tax on the *marginal* £200 will be 61 per cent. In wartime, the perfect tax system would tax normal income (i.e., income gained without undue effort) heavily, and leave the rewards of extra effort to be lightly burdened (in Germany, some overtime pay is exempt from taxation). British income tax does the exact reverse. A man may pay only 5 per cent on his standard wages, but 29½ per cent on his overtime pay; 20 per cent on his normal salary, but 45 per cent on any extra earnings. A man has to have an income of between £3,000 and £4,000 before his average taxation amounts to the standard rate; but for *extra* income, the standard rate† applies right down to incomes of as little as £5 a week. It is no exaggeration to say that still higher sums could be drawn from direct taxation with less deterrent effect on the incentive to effort if this fundamental defect of the present system were corrected. The system reaches the height of absurdity when it is combined with the requirement of joint returns for husband and wife. This has the

†It might be added parenthetically that the concessions were not well designed for their purpose. The circumstances in which a partial repayment of EPT is to be made after the war are so conditional, and the amounts to be repaid are so uncertain, that no auditor would include the right to such repayment among the assets of a business. If this post-war concession were reformulated in a way which, without increasing its cost to the Exchequer, provided companies with something that they could enter on their profit-and-loss statements, its effectiveness would be far greater.

‡Or more accurately nine-tenths of the standard rate, since the earned income allowance is deductible.

* "The Shadow of the Budget," January 3, 1942; "The Gap Again," January 31, 1942.

effect that the husband's *marginal* rate of taxation applies to almost every penny of the wife's earnings.

It is eighty-nine years since Gladstone said that the income tax "is not adapted for a permanent portion of your fiscal system unless you can by reconstruction remove its inequalities," and if the new conception of the income tax as a universal direct tax is to remain (as, on general grounds, it should) reconstruction has become an urgent necessity. For the smaller incomes, the attempt should be to construct a tax that would not require individual assessment and delayed collection; and for higher incomes, the tax can best be made progressive by a progression of rates rather than by a complicated combination of allowances with a high "standard rate." The first step in this direction might well be to go back to the original simplicity of income tax. When reimposed by Peel, it was a simple tax of 7d. in the £ on all incomes over £150. The figures would have to be altered; but it could be made a simple tax of, say, 2s. in the £ on all incomes over £78 a year (30s. a week), and if this were done, the tax could really be collected at the source on all wages and salaries—that is, it could be collected at the time the income arises. This would, at one stroke, cut out millions of returns and assessments. Such a tax would, of course, need to be supplemented. In the first place, there would have to be a system of family allowances in cash; but that not only presents no great administrative difficulty, it is highly desirable in itself. Secondly, there would have to be a supplementary direct tax for all higher incomes; this could be done by bringing the surtax, with its progressive scales, down to a lower limit of, say, £250 a year. Surtax, and income tax on incomes other than wages and salaries, would, of course,

have to be individually assessed and collected, but the problems involved would be no more than those of the income tax before the recent extensions of its scope. And, finally, in order to retain the convenience of deducting tax from dividends, etc., it would be necessary to quote a special rate—say 25 per cent in peacetime and 50 per cent in wartime—for this purpose. Deduction of tax from dividends is, at present, only a first approximation, as the gross amount enters into the individual assessment of every surtax-payer, while owners of smaller incomes can claim repayment, and similar provisions in the new structure would therefore impose no new administrative burden.

These few sentences are not, of course, intended to be more than an indication of the direction that reform of the income tax should take. The two main essentials are to devise a tax on small incomes that does not involve individual assessment and to abolish the misleading and effort-detering standard rate. Hitherto in this war the Inland Revenue has not shown itself to be a very enterprising or imaginative department; it has preferred to undertake the burden of overwork for its subordinate grades rather than that of hard thought at the top. Unless some such scheme of reconstruction is already in the making (of which there has been no hint), the Chancellor cannot, of course, expect to receive any help from this source for his problem of the present year—and the difficulties of transition must not, in any case, be overlooked. But there is a double urgency in the need for such a reform. Without it, the raising of more revenue during the war will be very difficult; and with it, British public finance could face the problems of the post-war era with its "colossal engine" in working order.

Australia's War Effort

PACIFIC strategy is dominated by time and space, and a great advantage necessarily rests with the side that can best surmount the obstacles they impose. On a small-scale map, a Japanese invasion of Australia looks easy. But the main supply base for men and munitions must be in Japan itself, and from Yokohama it is some 3,000 nautical miles to Darwin and 4,470 miles to Sydney. If, however, the Japanese can solve the supply problem that these distances involve, they can make time and distance tell against the defenders. From Sydney to England is 12,350 miles round the Cape and 11,500 miles through the Mediterranean; the distance to San Francisco is 6,470 miles and to Panama 7,700 miles. All possible aid has been promised to Australia by both the British and the American Governments; but geography compels the Commonwealth to find first aid from its own resources.

It has always been the legitimate pride of Australians to present their island continent as a whole. In point of fact, however, almost the whole of the resources of the Commonwealth, human and material alike, are concentrated in one corner of the country. The total population was estimated at 6,962,000 at the end of 1939, and more than four-fifths of this is to be found in the south-eastern strip, roughly from Brisbane to Melbourne, with the immediate hinterlands of the coastal cities. The total number of inhabitants aged 15 to 64 is only about 4½ millions, and the male population aged 20 to 49, from which fighting men can be recruited, barely exceeds 1½ millions. According to the census of 1933, there were then 2,870,000 "breadwinners" in Australia (exclusive of pensioners), 2,240,000 men and 631,000 women. Some 20 per cent were employed in agriculture and related activities, 32 per cent in mining, manufacturing and in the constructional trades, and the remainder in transport, commerce and in Government and other services.

But small though Australia's population is in relation to the size of the country or to those of Great Britain and Japan, her potential contribution to the winning of the war against Japan is considerable, and much greater than

in 1914-18. Twenty-five years ago the Commonwealth possessed virtually no industries. But during the interval between the two wars, and especially during the past decade, she has built up a sizeable manufacturing capacity which has formed the nucleus for the development of an important and growing armaments industry. The Commonwealth, moreover, is in the advantageous position of producing at home many of the raw materials required for the production of war equipment. Australia is self-sufficient in coal and iron ore, in lead and in spelter, and small quantities of many important steel-alloy and non-ferrous metals are also produced, such as wolfram, molybdenite, copper and tin. The Commonwealth's share of the world's total output of these materials is small, though in the case of zinc it amounts to nearly 10 per cent, but production is nevertheless important in relation to Australian needs. The principal manufacturing centres are in New South Wales and Victoria; in 1938-39 these two States employed three-quarters of the total number of factory workers in Australia.

As the foundation of her armaments industry Australia now has a substantial steel-producing capacity, based on local raw materials. In 1913, she produced no more than 13,000 tons of crude steel; but in 1939 output amounted to as much as 1,170,000 tons, against Great Britain's annual capacity of 14,500,000 tons, and Japan's of some 7,000,000 tons. The iron and steel industry is located in the Broken Hill district in New South Wales; coal supplies are mined in the same State, but the ore has to be brought from South Australia. The growth of the iron and steel industry has been accompanied by the development of engineering and other steel-processing trades which are being adapted to the manufacture of war equipment. Less attention had been paid, before the war, to precision engineering, such as the manufacture of machine tools; but although the growth of munition-making capacity must depend, to a large extent, on imports of plant and equipment, Australia is now herself producing a large variety of machine tools. As a result of these preparations the Commonwealth is already making a wide

range of mechanisms, including not only small arms, motor vehicles, ships and light equipment, but also aircraft, guns of many calibres, shells, and even tanks. An indication of the growth of Australian production is the increase in the numbers of factory workers. Between August, 1939, and May, 1941, the number of workers in Government factories rose from 12,000 to 52,000, and those in private factories from 534,000 to 605,000; the majority of the new recruits to private factories are engaged on war work.

In spite of many achievements, however, the overall rate of industrial mobilisation in Australia has been considerably less than in Great Britain, and only a comparatively small proportion of the military potential of the country has yet been developed. True, there has been a marked decline in the imports of certain consumers' goods, such as motor-cars; but hitherto only petrol and paper have been rationed. The rationing of petrol presumably arose largely from the shortage of tankers, for Australia has to rely on imports for nearly the whole of her requirements, totalling more than 2,000,000 tons before the war. But the decline in imports has been accompanied by a marked increase in the domestic production of many articles of consumption. A Federal inquiry showed that between August, 1939, and August, 1941, the value of retail sales rose by 35 per cent in Sydney, by 45 per cent in Melbourne, and by 26 per cent in Brisbane. Since the official indices of retail prices for these towns rose by only about 10 per cent during this period, there must have been a substantial expansion in the volume of sales. Moreover, private building has been maintained at a high level in Australia during the first two years of the war; the average monthly value of building permits granted (exclusive of Government works) was £A2,353,000 in the year ended June, 1939, £A2,206,000 in 1939-40, £A2,342,000 in 1940-41, and £A2,173,000 in July-September, 1941.

Australia's general war effort is revealed by the size of her war Budgets. Thus, Commonwealth war expenditure rose from £A55 millions during 1939-40 to £A170 millions in 1940-41 and the second Budget for 1941-42, introduced by Mr Curtin's Government last October, provided for an outlay of £A221 millions. Of the esti-

mated cost of the war in 1941-42, £A59 millions are to be spent overseas, against £A43 millions in 1940-41. These figures are very large for Australia, but they are less impressive if they are compared with the national income. According to the *Monthly Summary* of the National Bank of Australasia, the Commonwealth's national income was £A800-850 millions in 1938-39 and is expected to reach the rate of £A1,000 millions in 1941-42, one-half of the increase of 18-25 per cent being ascribed to the rise in prices. If these estimates are accurate, the proposed war expenditure of the year 1941-42 (including overseas expenditure) amounts to about one-quarter of the national income, compared with over 60 per cent in Great Britain (about 50 per cent at home and over 10 per cent overseas) and over 35 per cent in Canada. Since the average income per head in normal times is much the same in Australia and Great Britain, a straight per head comparison is not misleading. Australia's war expenditure in 1941-42 will be about £A23 per head at home and £A8½ overseas; that of the United Kingdom will be about £stg.65 at home and £stg.18 overseas.

These facts, it is hardly necessary to say, are not cited in any critical spirit; it is for each of the United Nations to decide for itself what its contribution shall be, and there are well-recognised obstacles to the rapid conversion of a pastoral and agricultural economy to industry. But the figures that have been cited tend to show that the greater effort for which Mr Curtin has called can be expected to elicit a substantial response. The British Government has undertaken to buy large amounts of the wool and wheat that cannot be exported; but it would be an obvious waste to continue to devote resources of manpower to the production of surplus commodities if they can be used more directly for the war effort. A sterner restriction of consumption goods and service industries would release manpower both for the armed forces and for the munitions industry. Even with the maximum effort, Australia cannot stand up to Japan unaided. But even the maximum assistance from Great Britain and the United States cannot remove her from the front line or from the necessities which it imposes.

NOTES OF THE WEEK

Backs to the Wall

The general strategy of Japan's attack in South China waters is obvious. It is to knock out of action all the possible air and naval bases from which the United Nations could launch a counter offensive, and by a succession of stunningly rapid blows, thrust the enemy out of the islands encircling Japan, and clear "East Asia" for ever. The three immediate objectives are naturally the three most important Allied bases, Amboina, Surabaya and Singapore, and this week has undoubtedly been one of great Japanese achievement. The news from Amboina, the second Dutch base in the Netherlands Indies, is confused, but the Japanese have launched a violent attack upon the island, and it is unlikely that it can be held for long. To the west of the Molucca group, the main attack upon Java and the base at Surabaya has begun. The Japanese apparently control Banjermassin on Borneo and Macassar on the Celebes, both points only some 400 miles from Surabaya. Now mass air-raids have begun—a heavy attack on the naval installations at Surabaya, and raids all along the northern coasts of Java. More Japanese ships have been sunk in the Macassar Straits—bringing the total up to something like 17 ships sunk and 24 damaged—but many have forced the passage and have appeared in the Java Sea. The last and greatest of the bases, Singapore, is no longer a base, but a beleaguered outpost. On January 31st the Argyll and Sutherland Highlanders who had fought the whole gruelling fight from the Thai frontier, were piped across the Johore Causeway, the last men to enter the fortress; then the Causeway was breached, and the defenders settled down for the grim struggle to make Singapore another Tobruk. After a short lull, heavy Japanese raiding began, and it is disheartening to learn that once again the defenders will be deprived of fighter

air support. Most of the island's aerodromes are within range of enemy artillery mounted on the Straits of Johore. There is a sharp division of opinion about the possibility

of using Sumatra as an air base. It appears that the coast is swampy and airfield construction would be technically very difficult. The defenders of Singapore must presum-

ably have envisaged the possibility of losing the whole mainland, and explored every alternative possibility of air defence. It would be intolerable if Singapore were to prove another Crete when adequate forethought could have prevented it.

MacArthur's Stand

General MacArthur's gallant stand on the Bataan Peninsula continues, although the enemy has vastly increased his pressure and the American forces have been compelled to give some ground. Over the week-end, picked Japanese troops made violent attempts to dislodge the American defenders, but they were thrust back onto the beaches and into the sea. The importance of General MacArthur's resistance can be properly assessed only against the general background of the South Seas war. Everywhere—from Moulmein in the north to Rabaul in the extreme south—the United Nations stand with their backs to the wall, fighting against terrific odds and trying to preserve in the face of a far more numerous enemy the bases at which reinforcement, it is to be hoped rather sooner than later, will arrive. In this extremely critical situation, if the Japanese were to inject another 200,000 men into their aggressive effort, one or other of the Allied bastions might be compelled to surrender. By keeping so many picked troops cooped up in the Philippines, by compelling the Japanese to use valuable transport to reinforce them, General MacArthur is defending Singapore, Batavia, Surabaya, and even perhaps North Australia, as effectively as if he were fighting at their gates. His is an essential part of the vast rearguard which stretches through the arc of the Indies and is waiting tensely for decisive help. There is still little sign of it, though General Wavell has said that "great reinforcements" are on the way. The main difficulty is, of course, control of the seas. In the narrow waters round Singapore and the islands and in the open waters between the Philippines and Japan, the Japanese Navy is supreme. However, the United States Pacific fleet's heavy raid on the Marshall and Gilbert Islands bases, besides providing the British public with their first knowledge that the British-protected Gilbert Islands had passed to Japan, was a welcome sign of greater things to come. If the United Nations can, in Admiral Nimitz's words, "bring the war to the enemy's front door," he will be compelled to spend less of his time at other peoples'.

China is not Anxious

The news from Burma is grave. Moulmein has fallen, and although the enemy's attempts to cross the Salween River have so far been thrust back, an attack in force will be launched at any moment, and, judging by the speed of the Japanese advance from the Thai frontier, it does not look as though the defenders have strength enough to resist a major offensive. The interests threatened in this new drive are not only those of Burma and the Empire. Free China sees its old enemy drawing closer and closer to its line of supply through Burma. A sharp thrust across the Salween and Sittang rivers would cut the route from Rangoon to Mandalay, and thus check the main flow of supplies along the Burma Road. Upper Burma is also threatened, for there are reports of Japanese troops at Chiengmai, where they are attempting to bridge the Salween River in its upper reaches. The Chinese are not unduly anxious yet. They have scored further successes in the Canton area and they claim that the Japanese are being compelled to withdraw thousands of trained troops from China to fight in the south. They have war stocks for about a year and are confident that the United Nations will have struck back before China's supplies have run really low. The British loan of £50 millions and the American loan of £125 millions may not be used entirely for the purchase of outside supplies. The fate of the Burma Road is not decided yet. But the Chinese need the money badly for internal stabilisation. A Victory Loan, with the Allied credits for guarantee, would bring in much of the surplus purchasing power in Free China and help to counteract its biggest internal problem—the sky-rocketing cost of living.

Empire War Cabinet

No further news has been given about the nature of the Empire War Cabinet announced by Mr Churchill last week. Australia and New Zealand will be represented;

Canada will not. Mr Mackenzie King, Prime Minister of Canada, believes that the present methods of consultation with the British Cabinet are sufficient and satisfactory; and he will only seek representation if this ceases to be so. Membership of the Cabinet in London will, admittedly, improve consultative relations with the Pacific Dominions. But the point is whether it will lead to the right decisions being made at the right time—which is the Dominions' aim. The crux of the difficulty that will attend this very proper attempt to give the Dominions their rightful voice in the determination of war policy has been stated by Mr Fraser, Prime Minister of New Zealand. The Dominion Ministers, he pointed out, will not be plenipotentiaries. They will have to consult their Governments before putting their views or casting their votes on matters of major policy. Mr. Fraser believes that this obstacle to swift decisions can be got over; but the obvious danger is that, by the presence of Dominion members, Cabinet decisions will not be expedited but inhibited. The War Cabinet of the last war is no parallel. General Smuts and Sir Robert Borden were not plenipotentiaries, it is true; but neither were they representatives or delegates. They were members in their own right, by virtue of their personal status and abilities. The fact is that, by no magic, can the same decisions be made in different places at the same time. A real Imperial War Cabinet will not be possible until the Dominions are ready to be bound by its decisions.

Shopkeepers on Trial

In May last year, a committee was appointed by the Board of Trade "to examine the present problems of the retail trade in goods other than food." Since then, two interim reports have been put out. The first proposed that the problems caused by the wartime shrinkage of retail trade should be limited by controlling the opening of new shops, and resulted in the Location of Retail Business Order issued last autumn. The second, published this week, describes the problems brought about by reductions in supplies, the regulation of standard qualities of goods, the control of prices, the rationing of consumers, restrictions on transport, and the withdrawal of labour. The details of this valuable description, and the issues it raises, cannot be dealt with in a short note. The main question that emerges is not the old one whether retailing should be "slimmed." In fact, retailing is being slimmed, and the question is whether the process can be controlled to prevent individual hardship, and to maintain some basis of equity in a development which "strikes blindly and is no respecter of persons." Inevitably, some trades, some areas, and some shops are much harder hit than others by wartime events and the curtailment of supplies—without regard to the trader's degree of efficiency. Unlike industry, retailing cannot turn over as an apparatus to war work; and stocks and reserves are running out. "Our Survey reveals a bleak prospect for shopkeeping in 1942." At this stage, the committee makes no recommendations. Trade associations are now to be approached to ascertain exactly how far the enforced shrinkage has gone; and the committee will go on to consider, in consultation with trade associations and trade unions, various remedial measures—such as the temporary

"marriage" of businesses, the temporary withdrawal of traders according to schemes, and compensation. In effect, this second interim report is a plea, by force of the facts it records, for compensation for wartime victims—by the "industry" or by the State. Unfortunately, the committee does not appear to see the obvious danger that both the process of "slimming" and any remedial measures, unless drawn with the utmost care, may hasten still more the conditions of quasi-monopoly in retail trade which are already extensive. It is sound sense to look to the retail trade associations for information; it is dangerous to rely on them for policy. The only "remedial measure" introduced so far, the Location of Retail Business Order, simply embodied the "distance limit" which has always been a repressive practice in the hands of the associations. It is the duty of the Government to see that the consumer does not suffer arbitrarily with the unfortunate shopkeeper.

Co-ordinating Criticism

Criticism of production, like production itself, has discovered that it cannot be departmentally confined. Hitherto, the Select Committee on National Expenditure has divided its task of examining "the current expenditure defrayed out of moneys provided by Parliament for the defence services, for civil defence and for other services directly connected with the war . . ." among a number of sub-committees, each of which was concerned with the expenditure of specified Departments. There has always been a co-ordinating sub-committee to co-ordinate the work of the other sub-committees, but the Select Committee now feels that it should be given wider power, so that what are called "horizontal" subjects, such as labour, which affect several Departments, are properly covered. The Select Committee therefore recommends that the membership of the co-ordinating sub-committee should be extended. In the past, it has consisted of the chairman of the full Committee and the chairmen of the various sub-committees; now it is proposed that in addition there should be five members at large, who would not be members of any sub-committee as such, but would be entitled to attend any of them at any time. The new and enlarged co-ordinating sub-committee would have power, not only to review, co-ordinate and direct the work of the sub-committees, but also to alter their terms of reference, to nominate and discharge their members and to appoint additional sub-committees. This, it might seem, would be giving the co-ordinating sub-committee powers equal to those of the Select Committee itself; but it is expressly provided that any action taken in respect of the new powers—altering the terms of reference and the membership of the sub-committees and so on—must be approved by the full Committee within twenty-one days. Moreover, one of the points at issue last autumn, when four members of the Committee asked to be discharged, is not affected by the new procedure. The co-ordinating sub-committee will still have the power, first granted in May, 1940, of addressing a memorandum to the Prime Minister in cases where the national security is involved; but the practice, as Sir John Wardlaw-Milne said in the debate on the four members, is for the co-ordinating sub-committee to advise on publication or not, but for the Select Committee itself to make the decision. The Select Committee's invaluable work of criticism will be strengthened by the new procedure, but its democratic basis will not be impaired.

Libya and Egypt

If the British have the reinforcements to bring up in Libya, then it should still be possible to prevent a repetition of last year's reverse. Rommel has so far been unable to advance eastwards from Msus, and his columns have swept up the coast roads of Libya, recapturing Benghazi and Barce and forcing the British to evacuate Derna. The German forces have thus exposed a long and apparently vulnerable flank and are relying on supply lines which could perhaps still be cut below Benghazi. This risk-taking is Rommel's usual strategy—and a very successful one. It can be countered only if the British reserves are on a scale to meet the new attack. In the air, superiority has been attained and kept. But on the ground, Rommel's tank reinforcements have been large enough for British columns once more to be retreating in the face of "greatly superior forces." It is unfortunate that the Egyptian Government should have staged a political crisis at this crucial point.

Great Britain has everything to gain from political stability in the rear of the fighting, and the Sirry Pasha Ministry did very faithfully observe the Anglo-Egyptian Treaty which regulates the status of British forces on Egyptian soil. It is not, of course, the Treaty that is in question in this crisis. It is an uneasy manoeuvring for position between the Government Coalition, the self-excluded Wafdist party and the King's personal advisers, who favour a much wider interpretation of the Royal prerogative. The storm blew up over Sirry Pasha's decision to break off diplomatic relations with Vichy without first consulting the King. King Farouk made it clear that the Ministry no longer enjoyed his confidence; Sirry Pasha accordingly resigned; and now the King and his advisers are casting round for a new Cabinet. It is possible that they will turn to the Wafd, though the Wafd probably feels more bitterly about the encroachments of the Royal prerogative than does the outgoing Ministry. The Wafd agrees in principle to the Treaty it signed, since for the time being they recognise it as the only safeguard of Egyptian independence. Unfortunately, they have been using Sirry Pasha's loyal observance of the treaty as a weapon in domestic politics, accusing him of subservience to British interests. Clearly, this embroilment of the issues and general atmosphere of intrigue and uncertainty is a fine spawning ground for Axis rumours. It is to be hoped that Britain's, and Egypt's, chief interest—a loyal and stable Cabinet—will be achieved with all speed.

Danger to India

In the House of Lords on Tuesday, appeals were made by all sections of opinion for measures to end the political deadlock in India. It is well known that in India itself, although the Japanese aggression has made support for the United Nations more articulate and more widespread, fear of actual attack, in the light of the weaknesses shown in Malaya and elsewhere, has created an unmistakably uneasy and disturbed situation; and further withdrawals in Burma would heighten the disquiet. It would be an exaggeration to say that a process of disintegration has begun. A great Indian army is being trained and equipped, and war output is mounting. Pandit Jawaharlal Nehru himself, heir to Mr Gandhi's leadership of Congress, has said that Congress would resist invasion by all the means at its command and would have no truck with the aggressors; "at present, when we know that danger may be imminent, it would be preposterous and cruel to advise people to offer passive resistance against war." But the Congress policy of non-co-operation remains unchanged, not because of the pacifism which is upheld by Mr Gandhi, but because of Britain's refusal to make India "free"; and in the present state of unsettlement this negative attitude is a menace to good order in an emergency. The view of the Government, voiced by the Duke of Devonshire, is that the Viceroy's promise of 1940 that India will be given independent government after the war, if the contending Indian parties can agree on a constitution, is the limit of concession; at present, he argued with justice, Congress wishes to rule a "free" India, and the Moslem League is ready to fight to prevent that happening. Most speakers in the Lords, including Lord Hailey, believed that the attitude—"there is nothing we can do; it is up to them"—is "unfair." At any rate, it is not realistic. Events are not standing still. One speaker said that India was in danger of becoming a "second Ireland." In fact, it is a second Ireland already, on a continental scale—and, at all costs, there must be no 1916 there. The Indian Nationalists are, admittedly, even more intransigent than Irishmen. But it is hard to see why more could not be done in the directions suggested in the Lords: a personal appeal by the Prime Minister; the sending out of a negotiator of eminence and understanding to bridge the unhappy gap between British and Indians; and the promotion of an even more Indianised Executive Council still nearer to the status of a provisional government.

Unrest in South Africa

The spreading of the war has shaken up and troubled politics in more countries than India and Burma—and Eire and Egypt. There has been a wave of violence in South Africa. Mines, power houses and communications have been attacked by dynamite and fire on the Rand, at Victoria Falls and elsewhere in the Transvaal. Officials, including policemen, have been arrested for subversive acts. The

Union Government regards these events as part of a long-planned campaign to wreck South Africa's war effort; and special courts have been set up to administer death or other heavy penalties to saboteurs and their abettors. It is said that there has been Nazi inspiration from Portuguese East Africa. Actually, if this is an enemy wrecking plan, it seems extraordinarily futile, for the war effort has suffered no appreciable damage whatsoever. Even if sabotage had done little harm to the war effort, except insofar as valuable metal in the form of valuable machinery may be shipped in valuable vessels to replace damaged equipment. In any case, a few fanatics cannot coerce or intimidate an entire community. The Opposition in South Africa is large, it is true, but it consists of a number of layers. There are those who favour neutrality, those who favour neutrality and independence and those who are outright rebels, members of the Oxtagon group and other extreme factions. But the rebels are a very small minority, and the main Opposition group are totally opposed to their aims and methods; Dr Malan himself, leader of the Nationalist Opposition, has just publicly accused an Oxtagon "commander" of incitement to murder. General Smuts's majority, on the other hand, is as solid as the Opposition is split. Any violent disorder in a country at war is dangerous. It must be stamped out. There will be widening recriminations. But the tide of events and opinion in the Union is still with the Prime Minister—and the war.

Hitler Feels the Pinch

The Russians are thrusting at the Germans the length of their vast front. Last week the main advance was to the north of Smolensk. This week it has been the turn of Timoshenko's southern army. A heavy attack south of Kharkov has brought the Russian advance guard to within 60 miles of Dnepropetrovsk and has smashed a threatening bulge into the Germans' Kharkov-Taganrog line. This new front is still extremely fluid, for while the Germans are counter-attacking strongly at Artemovsk, another 60 miles to the east of the Russians' most westerly advance, Russian troops are reported to have made a thrust southwards towards the shores of the Sea of Azov, a manoeuvre which, if successful, would cut off important German forces at Taganrog. These new Russian successes are not, of course, decisive—the Germans have in every case succeeded in withdrawing their heavy equipment—but they have completely shattered the German plan for a static winter front, with heavily defended strong points and good rest centres for the troops well to the rear. There is evidence to show that divisions have had to be hastily sent from rest billets to the front, and any calls on fresh reserves made now must have an unfavourable effect on the spring offensive, wherever it is launched. The constant pressure on the front has also prevented any winter demobilisation, and Hitler's war factories are feeling the strain in terms of man-power. The keynote of Hitler's Sportpalast speech on January 30th was "Work, work, work." Not only are there tremendous losses to make good, but there are fewer hands to work the machines.

Just Reward

The Restoration of Pre-War Trade Practices Bill was read a second time in the House of Commons this week; there was no division, and only one voice was raised against it. In order to make possible the maximum mobilisation of industrial man-power—and woman-power—for the war effort, the trade unions have voluntarily surrendered a great many of the rights which they had previously won in decades of hard bargaining. Since the war started, only one-fifteenth of a day per year per worker has been lost by trade disputes. It is right and proper, and the Government's pledge, that the unions' rules for the demarcation of different grades of labour, their regulations to prevent the lowering of the status of skilled artisans by dilution, and the rest, should be reinstated when the war is over. Under the Bill, pre-war practices must be restored and maintained for at least 18 months after the war, during which time the machinery of collective bargaining will have the chance of working out new conditions where necessary by mutual consent between employers and employed. The trade unions, however, will have to beware of the impossibility of going two ways, backwards to 1939 and forwards to 1942, at once. One

"trade practice" has not been suspended during the war, the practice of bargaining for the highest possible wage. Its steady success has been largely responsible for the continued industrial peace during the past two and a-half years. Industrial costs have been continuously inflated; and there is a possibility, to say the least, that in the export trades at any rate the unions will have to make a post-war choice between high wages and high employment. There should not be the dislocation and mismanagement in economic policy after this war that succeeded 1918. *Experientia docet*—or should do. But the post-war world will not be the world of 1939. The trade unions would do well to embrace the lesson of war economy itself, and press for a National Minimum for all families, regardless of the respective bargaining power of different unions. And, when their spokesmen are inclined to speak as if only trade unionists had made war sacrifices, they might remember that there is no proposal to restore the pre-war practices of any other section of the community.

Juvenile Earnings and Registration

The earnings of young workers have been put in their proper perspective by the Chairman of the Council of the National Association of Boys' Clubs. He agrees that a number of boys are receiving "excessive" earnings—excessive, that is, in relation to peacetime earnings and to the rise in adult earnings—but he considers this number to be only a very small proportion of the total number of boys in employment. Moreover, not all boys by any means who receive excessive earnings are either actual, or even potential, young delinquents. "Not infrequently" the high earnings are used in a legitimate and praiseworthy way for the support of the family. He agrees, in fact, with the view recently put forward in Parliament by Mr Kenneth Lindsay, and endorsed by the Parliamentary Secretary to the Ministry of Labour, that what should be controlled is not so much excessive earnings as the excessive hours of work by which those earnings are obtained. The wages of young people should not be controlled separately from the wages of adults. If they do a man's job they, like women, are entitled to the rate for the job, and it would be a retrograde step to compel or encourage employers to pay them less. In the recent agreement with the building industry, by which boys receive certain percentages of men's wages, it is implicit, according to the Government spokesman in the recent debate, that they should not be given men's jobs. The question has been given fresh importance by last Saturday's registration of boys of 17. Many of these and of those who will register later already belong to some form of youth organisation, whether of a civilian or military character. But it will be impossible to persuade those who do not to join the Home Guard or the ATC when their long hours of work make them too tired to take part in such activities. Boys, in fact, should not be boys for the purposes of registration any more than for wage control. They should be treated instead as part of the national

More than a century's accumulated business experience and conservative progress form the background of the comprehensive service which the Westminster Bank is able to place at its customers' disposal.

The Bank's vast resources, its constant touch with current affairs and its extensive system of branch offices in England and Wales and agents elsewhere, combine to enable it to offer a wide range of facilities, details of which will gladly be given on request by the manager of any branch.

supply of man-power; they should be considered capable of serving the nation in one or more ways—in factories or in youth organisations or in both—and excessive hours of work should be stopped because they reduce the value of the boys' work for the nation as well as impairing their physique. It follows that in the registration of young people the education authorities should act in close contact with the labour exchanges, or their work will be largely valueless.

Men and Women

A committee of four junior and male Ministers, the Parliamentary Secretaries to the Admiralty, the War Office, the Air Ministry and the Ministry of Labour, has been set up to report on conditions, clothing, equipment and welfare in the women's Services. The immediate fury of women MPs that this inquiry should be conducted by men is quite as understandable as the doubt, which was also expressed in the Commons, whether Ministers in the Service Departments are best fitted to investigate Service conditions. But the danger is that this sex question will be allowed to obscure the real issues; there is no reason why men Ministers should do the job worse than women MPs would. The point is rather that, men or women, they should do the job properly. More and more, it appears to those in or close to the ATS, at any rate, that what is wanted is simply the faithful application of the instructions and standards already laid down for the care and accommodation of the women. It should be emphasised that this is not by any means to suggest that the women should be "mollycoddled." What is asked is, not frills, but that the women should be given the rations, the fuel, the accommodation and the elementary conditions to which they are entitled. It is not suggested that the women should be treated better than the men they are assisting or replacing, but only that they should be treated the same as the men are, or should be. It is a military question, not, primarily, a sex one—except that the women do need some extra amenities. The fact is that the Army, at any rate, seems incapable of seeing that its routine regulations about these matters are uniformly carried out locally—either for men or for women; its system of inspection, confronted with the traditional skill of local commanders in window-dressing, seems largely ineffective. The new committee is to hear reports from the heads of the women's Services. If it does no more, its members will merely spend their time uselessly in that "twilight world" between what is supposed to be and what actually is, in which Professor Laski claims that Government departments dwell perpetually. It is wrong to say that more manpower is wasted in training and looking after the women than is released by their recruitment. In fact, the waste of manpower rather arises from the obstinate refusal of so many men officers and NCO's either to see that the women dependent on them are fed and housed properly or to understand that they are capable of doing their work without constant interference and duplication by their male colleagues.

Popular Front President

The election of Don Juan Antonio Rios, the Popular Front candidate, to be President of Chile is no mere nomination of a titular head of State. The Chilean Constitution of 1925 was designed to give the Executive, in the person of the President, considerable authority *vis-à-vis* both Chamber and Senate, which before, as after, 1925 proved their political incompetence by fantastic instability and constant Cabinet-breaking. This Constitution—which gives the President independent authority by virtue of universal popular election—made it possible for the late President Aguirre Cerda to carry on a steady and successful policy of much-needed reform, first in spite of the strong

opposition of a Conservative Congress, and later in spite of the volcanic disagreements between the Communist, Socialist and Radical wings of his own Popular Front. The election of Don Juan Rios and the unsuccessful candidacy of General Ibanez, the Right Wing choice and once already Dictator of Chile, are welcome signs that the late President's policy will be carried on, both at home and in the foreign field. On July 4th the Foreign Minister promised Chile's contribution to joint defence of the American continent, and the Administration has pressed for closer defence consultations. Anxiety about defence—springing naturally from Chile's long, undefended Pacific coast-line and entirely inadequate military resources—was the key to Chile's hesitations at Rio. The Chilean delegation felt bound to link the question of a breaking off of relations with the possible Axis counter-action to such a move. In their attitude there was nothing of Argentina's preference for maintaining relations with the aggressors and dislike of United States leadership. On the contrary, Chile has welcomed the prospect of joint defence talks in Washington and the election of a Popular Front President is held to presage the severing of relations with Germany, Italy and Japan.

Canada's Gift

The account given in *The Economist* last week of Canada's financial generosity was, it appears, slightly inaccurate. As stated, there is to be a gift of \$1,000 millions and a loan of \$700 millions. But the proceeds of Canadian securities to be mobilised from residents of the United Kingdom, estimated at \$295 millions, are not to be used in reduction of the debt; they will be available for further purchases. This, of course, increases the magnitude of the accommodation that has been provided and should correspondingly enhance the gratitude that is felt for it.

Shorter Notes

The week has brought the satisfactory settlement of two outstanding problems—Great Britain's relations with Abyssinia and Anglo-Russian relations with Iran. The two treaties, which have been signed after prolonged negotiations, differ notably from Axis and New Order documents in that the independence of the less powerful contracting party is to be fully preserved.

The German decision to wage peace on Norway and to appoint Major Quisling as prime minister—vacant since the German occupation in April, 1940—should not be dismissed as an idle gesture. No doubt the Nazi Government hopes to save manpower by forcing the traitor Norwegians to do more of the work themselves. Moreover, the manoeuvre is a method of bringing indirect pressure to bear on Sweden, who will now be expected to recognise the Government of the new "prime minister" as that of a free and independent country no longer under enemy occupation.

Mr W. W. Wakefield, MP, has been appointed director of the Air Training Corps in succession to Mr J. F. Wolfenden. The necessary certificate has been given by the Prime Minister, under the House of Commons Disqualification (Temporary Provisions) Act, to enable Mr Wakefield to retain his seat in Parliament. A certificate has also been given in respect of Commander King-Hall who has been appointed public relations adviser in the Ministry of Aircraft Production.

According to a written parliamentary answer, local price regulation committees received 617 complaints in October, 1941, and 732 in November. First place is contested by the London and North Midland committees, London receiving 128 complaints in October and 179 in November, and the North Midland committee 154 and 146 respectively. Since the latter is generally regarded as the most active of the committees—it announced forthwith its willingness to co-operate with the Board of Trade's new price control order—it is possible that the number of complaints varies with the energy and efficiency shown by a committee.

POST-WAR AGRICULTURE

The recent article in *The Economist*, together with the ensuing correspondence from Lord De La Warr and Sir Daniel Hall, has been reprinted as a pamphlet. Price 6d. (post free 7d.)

Orders should be addressed to the Publisher, *The Economist*, 15 Lancaster Place, London, W.C.2.

AMERICAN SURVEY

The New Deal and Monopoly

WHETHER in conditions of continuing peace the Roosevelt Administration would have solved the economic problems which it inherited from the great depression must remain for ever a subject of unresolved dispute. How, after the preliminary confusions of the New Deal, it would have eventually proceeded to the task it is perhaps possible to surmise from the report of the Temporary National Economic Committee which was set up in 1938 by Congress at the instance of the President, and completed its labours only last year. The report*, which is a document of major importance, would have excited much immediate interest and dispute, had it not been overlaid by the swift rush of world events, and it may be that the outcome of these events will not merely defer its recognition, but destroy its relevance and value. On the other hand, the report may be a significant prognostication of the post-war social and economic ideology of the USA, and for this reason it deserves immediate notice, particularly because it is a maturer version of one side of the New Deal, and embodies the changes that have occurred in New Deal thinking since the early days.

The Committee's terms of reference required a full and complete study and investigation with respect to the concentration of economic power in, and financial control over, the production and distribution of goods and services. Its composition was unique in that it was made up of equal numbers of legislative and administrative members of the Federal Government, under the chairmanship of Senator O'Mahoney. That is to say, Senators, Congressmen and government officials sat side by side—an innovation which might be usefully tried for some British Royal Commissions. Working with *subpoena* powers, it elicited important evidence in public hearings, and also initiated research and the compilation of data, the results of which were published in 43 monographs.

That the President's message to Congress which initiated the enquiry not merely set the tone for the investigation, but anticipated its conclusions, is shown by the enthusiastic incorporation of the message in the body of the Final Report. It is hailed there as a declaration of faith in the free economic institutions of the United States, and as a challenge to this and to coming generations of Americans to maintain and perfect their economic instrumentalities to ensure that level of well-being essential to the maintenance and growth of political and cultural democracy. Thus to quote from the President's message is almost to summarise the report.

The Doctrine of Competition

The President began with two broad utterances which, he declared, were simple truths. First, that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point when it becomes stronger than the democratic state itself. And, secondly, that this liberty is not safe if the business system does not provide employment and produce and distribute goods in such a way as to sustain an acceptable standard of living. In elaboration of this theme he asserted, with statistical demonstration, that the heavy hand of integrated financial and management control lay upon large and strategic areas of American industry, and that the small business man was being driven into a less and less independent position in American life. Private enterprise was ceasing to be private enterprise, and was becoming a cluster of private collectivities. Masquerading as a system of free enterprise after the American model, it was, in fact, becoming a concealed cartel system after the European model. This industrial empire-building had taken from American business much of its traditional virility, independence, adaptability and daring—without compensat-

ing advantages. It had not given the stability it promised. Business enterprise needed new vitality and the flexibility that comes from the diversified efforts, independent judgments and vibrant energies of thousands upon thousands of independent business men. Belief in private initiative implied acknowledgment of the right of well-managed small business to expect to make reasonable profits. Concentration of control of any given industry into a small number of dominating corporations destroyed this opportunity. One of the primary causes of the present difficulties was the disappearance of price competition in many industrial fields, particularly in the basic industries. Managed industrial prices meant less employment as well as exploitation of other enterprises and of the community in general. Generally over the field of industry and finance there must be a revival and strengthening of competition if the traditional system of free enterprise was to be preserved and made workable. The justification of private profit was private risk. "We cannot safely make America safe for the business man who does not want to take the burdens and risks of being a business man." The President insisted that big business collectivism in industry would compel an ultimate collectivism in government; that a half-regimented, half-competitive system was unworkable. The remedies for private monopoly were either the diffusion of economic power or public control. The enforcement of free competition was the least regulation business could expect.

The report of the TNEC is an echo of this message. Its approach and its conclusions can be epitomised in the principle of action enjoined by the President—the enforcement of free competition. The Committee avows its faith in free enterprise and declares that every recommendation which follows is intended to keep enterprise free. The object of Government should, it asserts, be to protect and stimulate private enterprise rather than to supersede it. It advocates the maintenance of free competitive enterprise by effective suppression of the restrictive practices which have always been recognised as an evil. It insists that the free competitive system offers the best opportunity for the widest participation in the gains of increasing technology achieved through a reduction in the price of goods, the stimulation of new enterprises and the extension of existing ones. It is emphatic on the necessity for the encouragement and stimulation of new enterprise. The Government should actively encourage new enterprise, since the basic remedy against curtailed production for selfish ends is to be found in the development of competing firms and industries. The market must be kept free. Private groups should not have the power to fix prices. Government protection is actually called for, not in declaring and imposing reasonable prices, but in restoring price competition. The theory of free enterprise is competition, low prices and volume of output. "It will avail us nothing to carry a gigantic defence programme to a successful conclusion if in so doing we lose sight of the basic philosophy of our American economy—a competitive system of private capitalism."

Attack on Monopoly

To implement its conclusions, the Committee recommends a number of positive measures, some of which had already been mooted in the President's message. Its study of the factors and devices making for monopoly led it to recommend stricter enforcement of existing anti-trust laws and legislative revision to extend their scope and powers. This revision would entail drastic changes in the patent laws, more adequate supervision and regulation of the activities of trade associations, and direct powers to prevent in advance the promotion of any corporate merger or consolidation which was judged to threaten the effectiveness and vigour of competition in an industry. The tax instrument could also be usefully employed for the deliberate encouragement of new independent enterprise. While the President expressly disclaimed any crude campaign of

* Final Report and Recommendations of the Temporary National Economic Committee. 77th Congress, 1st Session. Document No. 35.

trust-busting reminiscent of the first Roosevelt, it is significant that the Committee thinks it worth while to reproduce as an appendix the recommendations of the Industrial Commission of 1898-1902, which, the Committee points out, was facing similar problems in a different environment. It is also an interesting reflection of the association of contemporary political developments with these economic problems that anything which savoured of the cartel was anathema to the Committee as an alien device of German origin.

Consciously or unconsciously, the Report constitutes a complete reversal of some of the earlier policies of the Rooseveltian New Deal. Then it was thought necessary and desirable that the Government should intervene to secure fixation of prices and to establish industrial self-government for that and other ends. The first version of the New Deal largely consisted in intervention to restrain the competitive system. The AAA and the NRA, with its "codes of fair competition" were designed for the purpose of guaranteeing "parity prices," "reasonable returns" and "adequate protection" against unfair competition, unpredictable changes in demand and over-rapid developments of technique! But both Big Business and the New Deal learned their lessons from the NRA. Business did not like the Government regulation that went with the codes; the New Deal did not like the steep rise of prices that followed the suspension of free competition. Neither side was sorry when the Act was thrown out by the Supreme Court. The Committee itself did not emphasise the contrast between its own doctrines and those of the NRA; but some of the evidence specifically recognised that the earlier manifestations of cotton-ploughing, hog-slaughtering, and blue-eagling were inconsistent with the principles of free enterprise so vigorously enunciated in the report. "The NRA which operated to afford industry the opportunity to engage legally in price-fixing and restriction of productive activities further increased the load of trade restraints which our free enterprise system had to carry."

Whether the Committee was too optimistic in its belief that a return to free competition is possible and whether its views will survive the war need not be discussed here. The important thing is that on the eve of the war the progressive elements in the United States committed themselves in this emphatic way to the principles of free enterprise. The implications of this fact are not sufficiently appreciated on this side of the Atlantic. There is, as always, a tendency to think of American politics in European terms and, since the New Dealers constitute the Left, to assume that they have collectivist leanings. But that would be a severe mistake. The New Deal conception of the economy of the future leaves plenty of room for Government regulation and for planning of the wide framework within which business operates—particularly for planning of the trade cycle. But the mainspring of the economy is still to be private enterprise and free competition. It would be an equal mistake to write this off as a reversion to old-fashioned habits of thought. It is nothing of the sort. In working out the economics of democracy, Britain has at least as much to learn from America as America from Britain; and one of the first of the lessons to be learned, or relearned, is the virtue of maintaining trade and production free of all restriction.

Currency Expansion

[FROM OUR NEW YORK CORRESPONDENT]

December 27th

THE outstanding phenomenon of the year-end was the new record of currency in circulation—\$11,220 millions. This is nearly three times the money in circulation in the 1929 boom, although the price index is lower; and the increase for the year, \$2,400 millions, was over half the total in circulation in 1929. The proportion of currency to demand deposits was extremely low in 1929; now, on historical comparisons, it is rather high. All sorts of reasons are given for this phenomenon, of which the easiest and least plausible is hoarding. While there is probably some hoarding, two other factors are much more influential. The severe restrictions put upon the use of cheques in the past ten years compel the use of currency in settlement of transactions that in the 20's would have been paid by cheque; secondly, the increase in incomes in the war boom has come mostly to groups neither accustomed to using

cheques nor able to make much use of cheque accounts. Indeed, one of the most conspicuous changes in the monetary habits of the American people in the past fifteen years has been the substitution of currency for cheques.

Christmas trade was slightly higher this year than last. For the entire country, the week of December 20th was 7 per cent above the corresponding week of 1940; but such an average included the Richmond district (14 per cent above) and San Francisco, which was up only 1 per cent. These figures take no account of the price increases. On the other hand, it must be remembered that the country indulged in a sort of buying spree last summer, and this seems to have depressed subsequent retail trade.

The Automobile Manufacturers' Association estimates that in 1941 total sales of passenger cars numbered 3,750,000 and of trucks 1,070,000. This slightly exceeded the 3,692,328 passenger cars actually sold in 1940, and considerably passed the 777,026 trucks sold that year. The Association also estimates the total number of motor vehicles registered in this country on December 31, 1941, at 28,875,000 passenger units and 4,850,000 trucks. These figures give some impression of the incidence of the tyre rationing announced for 1942. There is approximately one passenger car for each four persons in this country, and statistically one per family—although this is very different from the statement that every family has a car.

As a result of the heavy seasonal adjustment, industrial production and other indices registered a sharp increase in November over October. Without seasonal adjustment, most of these showed little change or a recognisably seasonal decline.

BUSINESS INDICES

1935-39=100 for industrial production and freight car loadings
1923-25=100 for other series

Adjusted for seasonal variation

	Nov., '40	Oct., '41	Nov., '41*
Industrial production (total)...	134	163	167
Manufacturers (total).....	137	169	173
Durable goods	120	207	212
Non-Durable goods	120	138	142
Minerals.....	118	130	129
Construction contracts (total)	111	145	138

Durable goods	114.6	142.3	...
Non-Durable goods	113.8	123.6	...
Factory payrolls (total).....	116.4	166.6	...
Durable goods	125.1	191.1	...
Non-Durable goods	106.6	139.2	...
Freight car loadings.....	116	127	135
Department store sales.....	100	105	115
Department store stocks.....	71	97	...

* Preliminary.

Only two of these indices attract any special notice. One is the marked decline in residential building compared with a year ago. This is most likely a direct reflection of the priority system, which in this respect has become a kind of rationing. The other series is the change in the relation of department store stocks to sales, in comparison with a year ago. As both sales and stocks are value figures, one should be somewhat hesitant in drawing inferences. A year ago there was strong reason to believe that stores were understocked with reference to their current and prospective sales, but so positive a statement could not be made to-day.

American Notes

Price Control—in Part

A first step—if a halting one—toward necessary war-time controls was taken last week when the President signed the Price Control Bill. Except for the provisions concerning agricultural prices, the President termed it satisfactory and workable. The Act gives power to the Administrator, Mr. Leon Henderson, to fix prices and rents, buy and sell commodities, license businesses, and regulate or prohibit speculative or manipulative practices likely to raise prices. Violators of the Act may be fined \$5,000 or sentenced to two years in prison, or both. Licences may be suspended only by the courts. In six months' time, non-commercial consumers will be able to sue through civil action for treble the amount of any illegal overcharge. In general, prices will be based on those of October 1, 1941. The controversial agricultural price

clauses forbid the Administrator to set farm prices below 110 per cent of parity, market price on October 1, 1941, or on December 15, 1941, or the average price during the period July 1, 1919, to July 30, 1929, whichever of these is the highest; to put a price ceiling on any farm product without the approval of the Secretary of Agriculture; to regulate prices at which the Commodity Credit Corporation may sell its stocks; and to regulate prices of commodities under marketing agreements, such as milk. The selling policy of the Commodity Corporation may help to keep down certain prices, and the Secretary of Agriculture this week announced his intention to keep farm prices from going much beyond parity. However, as parity is not fixed, but varies with the cost of living, a spiral may easily be established.

On the average, parity prices have already been reached; further increases will inevitably create a demand for higher wages. Already the executive board of the CIO has recommended its constituent unions to demand substantial increases, on the ground that the rise in the cost of living has wiped out a large part of the recent increases in wages. The fact that the Administration itself was opposed to including wages in the Price Control Bill reflects labour's political power. The omission of wages and the dangerously favourable agricultural provisions are two very serious loopholes in view of the degree to which wages and agricultural prices determine all other prices. Experience with price control in this country has shown the difficulty of enforcement at a time of shortage of goods and a plethora of purchasing power. Fortunately the Price Administrator has been given the right to ration goods at retail. It is plain that this power will need to be exercised, and accompanied by much heavier taxation and a vigorous savings campaign before the danger of inflation can be said to have been eliminated.

Family Quarrels

The entry of the United States into the war could not have been expected to blanket for long the vigorous differences on national policy and international relations, particularly the shrill comments of the former isolationists. Their new line is to emphasize the importance of the Pacific at the expense of the Atlantic theatre of war. The disaster at Pearl Harbour has aroused a host of recriminations, some of them oddly at variance with the critics' former views. The President is being attacked for having sent to Britain and Russia material badly needed in Hawaii and the Philippines; the dispatch of the AEF to Northern Ireland is (with a fine disregard of practical possibilities) contrasted with the lack of reinforcements for General MacArthur. This point of view would be more impressive if the same voices had not been raised two months ago in denunciation of the entire defence program, arguing that nothing but the President's policy could involve the United States in the war. Britain has received a generous share of criticism springing from the natural feelings of irritation and frustration at the course of events in the Far East, and in Libya. Some of it is reasonable and well informed, but it is accompanied by an irresponsible outcry from other quarters, notably the Hearst press, which has revived the fantastic canard that Britain deserted the French and consistently exploits and neglects the Empire. One writer is reported to have denounced the "British concept of the war" on the grounds that "the British, strictly speaking, are not in the war." These antics of the lunatic fringe are exasperating, but unimportant, and too much disappointment should not be felt at the revival of opposition in wider and more influential circles. Complete harmony is impossible and undesirable. The Administration shows no sign of being unduly persuaded by irresponsible clamour and its ably presented concept of the American rôle in the war is supported by the vast majority of the American people.

Limitation on Propaganda

Further evidence is provided this week of the importance which the United States Government attaches to the control of propaganda and information. A Bill introduced by Senator Summers and signed by President Roosevelt lays down additional regulations applicable to those who "prevail upon, indoctrinate, convert, induce or in any other way influence any section of the public within the United States with reference to political or public interests, policies,

or relations of the governments of foreign countries." It also applies to persons collecting information for a foreign principal. Since 1938 agents of foreign principals have been compelled to register themselves and describe their activities. The present Act requires that copies of all surveys of public and press opinion compiled for foreign Powers must be filed with the Library of Congress, and full details must be given of the people and organisations receiving the reports. It appears merely to carry the existing regulations a trifle further and write into the law practices already being followed. Whether the law will greatly restrict the activities of the Allied Powers in the United States will depend upon the way in which it is interpreted. If it is to be strictly administered, certain difficulties might arise. It is curious that the Bill should be passed at a time when the number of countries able openly to distribute and collect information has been so greatly restricted and is confined almost entirely to friendly Powers. It is possible that the Bill is directed at the few remaining neutrals who might be used by the Axis Powers, but it is more likely that the Act is purely an expression of the deep-seated desire of Americans to form their own opinions and avoid the risk of being influenced even by their friends. An exaggerated estimate of the subtlety of British propaganda during the last war and a wholesome respect for the German Propaganda Ministry in this have both greatly contributed to this frame of mind.

Washington the Workshop

All visitors to Washington are impressed by the crowded streets, the difficulty of obtaining accommodation, the scarcity of homes which leads to federal employees being installed in stables, theatres, blocks of flats, and even in tents. Mr. Palmer, Defence Housing Co-ordinator, is reported to have testified that 85,000 new workers are expected in Washington this year, and some at least are accompanied by their families. In the last decade, Washington has grown faster than any other American city of comparable size. The expansion now is far greater than it was during the last world war. The case of Washington is not very different from that of many other cities which are suffering from the defence boom. But Washington is the nerve-centre of the entire country, and more and more important in the war effort of the United Nations. The degree to which the city is physically inadequate to sustain the vast influx of workers is likely seriously to affect the prosecution of the war. The glaring shortage of office accommodation is being partially met by the erection of temporary buildings, some of them next to "temporary" buildings dating from the last war. President Roosevelt has hinted that he might be forced to take over buildings and hotels under his authority granted in the War Powers Act. The emergency goes farther than this, however. There is a desperate shortage of residential housing at prices that most Federal employees are able to pay. As a result some workers have to sleep in shifts in the same beds. Private building is flourishing, while slum clearance is almost at a standstill owing to the demand for any sort of accommodation. Transport is becoming increasingly inadequate. Schools are overcrowded and hospital facilities strained to the utmost. The Government has hardly begun to tackle the problem. Some Government agencies are moving employees outside the city limits, and to other cities, but so far this is a mere trickle compared with the flood of workers entering Washington. Defence housing agencies are working on about 4,000 dwelling units. More drastic is President Roosevelt's threat that the non-essential population may have to be asked to leave. If Washington is to become an efficient workshop for democracy and total war, it seems likely that some such clearing of the decks will be necessary.

Morgan Shares in the Market

The public marketing in New York of 16,500 shares of the capital stock of J. P. Morgan and Company Incorporated is an event of which the significance will not be lost on bankers the world over. It marks the final breaking down of that barrier of privacy and reticence which was begun with the legislation severing the banking and security business combined by the former private banking firm. Thereafter the separate banking business operates under the laws of the State of New York. The shares, which were offered at \$206 each, represent 8.05 per cent of the total issued and outstanding, thus giving a valuation of \$41,214,500 for

the whole capital stock of the firm. The company, which was incorporated in April, 1940, earned \$12.15 per share (excluding realised security profits) for the year 1941, and \$20.45 per share including such profits. It paid an initial dividend of \$1 per share last June and of \$1.50 each in September and December. The company owns a substantial stock interest in Morgan Grenfell and Company of London which is carried in the books at \$3,886,000, a figure some \$1,000,000 below the value at current exchange. Thus does the harsh light of day break upon the affairs of a firm which before 1940 symbolised all the mystic aloofness of the international private bank.

End of the Silver Lobby?

Mr Morgenthau, giving evidence on the Bill to finance the Treasury Department for 1942-43, asserted that he would "be glad to see Congress strike all silver legislation off the books" and in particular condemned the provisions of the Monetary Act of June, 1939, which fixed the heavily subsidised price of 71.11 cents per ounce at which domestically mined silver is now purchased by the Treasury. It has required the demands of a war economy to reveal the defects of American silver policy and to endow the Administration with sufficient courage to challenge the domestic silver interests, the most strongly entrenched and certainly most vocal lobbyists in Congress. There seems to be no immediate need to repeal the provisions of the Silver Purchase Act governing the purchases of imported silver. Mexico and Canada are the producing countries mainly concerned. In the case of Mexico the American purchases of silver are one of the main props of the national economy and to remove them at this juncture would be very bad politics. The United States purchases of Canadian silver—largely by-product metal—provide a useful element in the US-Canadian balance of payments. Their continuance should be judged in the light of Allied economic strategy, and the test should be whether Canadian labour and material engaged in the production of silver could be more usefully employed. That should also be the test for silver mining in the United States. Meanwhile, new uses are being found for silver. There is talk of using it instead of tin as a lining for cans, and it is to replace nickel in the 5-cent coin of that name.

Cotton Consumption and Supplies

According to the United States Bureau of the Census, the country's domestic cotton consumption (i.e., the quantity used by mills) reached 887,000 bales in December. This figure is 37,000 bales higher than in November and 112,000 bales higher than in December, 1940, but remains 67,000 bales below the monthly maximum reached in October last. This figure brings the total for 1941 up to 10,575,000 bales, against 8,028,000 bales in 1940 and 7,423,000 bales in 1937, which was the highest annual consumption figure before the outbreak of war in Europe. Although consumption in 1941 fluctuated materially from month to month, it showed a steadily rising tendency. This tendency will most probably be maintained in 1942, as the prospective reduction in the manufacture of export materials should be fully counterbalanced by the increased needs for uniforms for the United States Army and Navy. In fact, United States experts expect that the country's cotton consumption in the current cotton season (which ends on July 31st next) will be only slightly below the 11,000,000 bales mark. In the last five years preceding this war United States consumption did not cover more than roughly half the world's total consumption of American cotton. Last year, however, this share increased to over four-fifths, and it is likely to rise further to more than nine-tenths in 1942, as the country's exports, despite certain lease-lend supplies, are not likely to be very much higher than 1,000,000 bales in the 1941-42 season, against 1,066,000 bales in 1940-41 and 6,175,000 bales in 1939-40. According to the latest official crop estimate, the current cotton crop will not be higher than 10,976,000 bales—i.e., the smallest total since 1935, so that new supplies will be roughly 1,000,000 bales below this season's requirements. The carry-over from last season, however, amounted to no less than 12,970,000 bales, almost the whole of which was held in the United States. The question of quantitative supplies, therefore, does not cause any difficulties, but the question of quality appears more complicated. An unusually large part of the new crop cotton ginned so far is below

strict low middling quality. There have been suggestions that the Government should release higher-grade cotton from its loan holdings and acquire lower quality cotton instead, but, so far as is known, the loan holdings themselves consist largely of lower-grade staple.

Shorter Notes

Correction.—An unfortunate mistake in the Note entitled "Remember Pearl Harbour" last week substantially changed its meaning. In the sentence printed as "It is reported that Admiral Kimmel and Lieut.-General Short may be court-martialled, but another urgent necessity is increased co-ordination between the Army and the Navy . . ." the italicised words should have been "a more urgent necessity."

Price Administrator Henderson has been given power to ration retail goods, and has announced that the sugar ration may shortly be cut to three fourths of a pound per head per week. Ration books have already been designed. Sugar supplies this year are 5,300,000 tons as compared with 7,989,000 tons last year.

The President has signed the \$12,500 million War Department Appropriations Bill. Congressional action has been completed on the Naval Supply Bill which now carries an appropriation of approximately \$26,500 million.

The Secretary of Labour has announced that civil non-agricultural employment rose to an all-time peak of 40,940,000 in December, representing an increase of 2,800,000 over the preceding year and 5,000,000 over December, 1929.

The War Production Board has announced an intensive programme to empty automobile "graveyards" of between 4 and 5 million old cars within six months in order to speed up the collection of iron and steel scrap.

Mr Stimson, the Secretary of War, last week announced unified commands for American Forces in three war zones. Operations in Hawaii and the Eastern Caribbean will be under Navy control, while the Army takes over the Panama Canal Zone.

Admiral Land, Chairman of the Maritime Commission, has testified before a House sub-committee that the rate of allied ship construction has finally caught up with sinkings. He declared "the United States has the world licked right now" on standard cargo ships and tankers and that by January 1st, keels had been laid for 308 ships, 178 ships had been launched and 129 had been delivered and placed in operation. 400 additional ships will be ordered before July 1st, added to 995 now under contract.

The Attorney-General, Mr Biddle, has specified 86 areas from which enemy aliens are to be excluded. They cover army establishments and principal war construction and repair plants and yards. Two are in the Los Angeles and San Francisco districts in California, from which it is expected that several thousand Japanese and Italians will be moved. If necessary, they will receive some kind of government assistance.

Four nation-wide radio networks will broadcast at their own expense a series of half-hour weekly programmes "dramatising and interpreting the wartime resources and activities of the government" to the United States and the whole world. They will begin on Saturday, February 14th, and short-wave broadcasts in many languages are being planned. The programmes will utilise the talents and facilities of all four networks.

THE WORLD OVERSEAS

Persian Economy

[BY A CORRESPONDENT]

THE Anglo-Russian-Iranian Treaty was signed at Teheran on January 29th after prolonged discussions. The integrity and independence of Iran are guaranteed, and its economic existence safeguarded. The preamble to the Treaty states that it is based on the principles of the Atlantic Charter. The Allies obtain the use of military sites, the ports, roads and railways, and are responsible for their maintenance, improvements and extension. Iran will reap the benefit of the new technical installations and vastly increased rolling stock; and will not be asked to fight against any foreign Power or to bear the cost of works "which are not necessary for the needs of Iran." The Allies jointly undertake to safeguard Iran as far as possible from the privations and economic difficulties of wartime. Foodstuffs, depleted by German purchases, are being supplied, and production and trade can now be stimulated by commercial agreements and reciprocal tariffs. Britain and Russia can extend their markets for Iranian surplus products and absorb those previously taken by the Axis Powers. Iran will presumably be eligible for assistance under the Lend-Lease Act, and may, like Syria, be admitted to the sterling b.o.c.

Although six times the size of Great Britain, Iran has a population of only about 10,000,000. Except for the fertile Caspian provinces, the country is a great desert plateau, walled in and crossed by high mountains. Communications, improved by Reza Khan, have long been backward. Motor transport is now installed on all the main roads. A Russian built narrow-gauge line, 85 miles long, joins Transcaucasia to Tabriz; and the new standard gauge railway from the Persian Gulf to the Caspian, 868 miles, was completed in 1938. The branch from Teheran to Kasvin is now being extended to Tabriz, and further links to the Western Caspian and to Meshed are projected. The railways have already greatly increased services, while the Gulf ports are being improved by the British and those in the Caspian by the Russians.

Only about one-third of Iran is cultivable, and that almost entirely by irrigation. Vast areas are sterile from lack of water. Yet the country has been almost self-supporting in grain crops, and has even exported rice to Russia. In 1936-37, wheat production reached 2,160,000 metric tons, barley 882,000 tons, rice 398,000 tons, fruit of various kinds 205,000 tons, and beet 136,000 tons. All could be increased by more irrigation, and there are suitable areas, in particular, for growing more rice, cotton, fruit, beet and even cane sugar. Silk for export is produced in Gilan, and tobacco and opium—the latter much declined—have made valuable Government monopolies. The Elburz slopes are covered with valuable deciduous hardwoods. Great numbers of horses, mules, donkeys and camels assist inland transport, and sheep and goats provide wool, skins and casings. Lead, copper, zinc, manganese, cobalt and even coal have been found. The production of the Anglo-Iranian Oil Company, now about 12,000,000 tons annually, is the mainstay of Iran, to whose exchequer it has brought vast sums in royalties. In industry, the factory system is just beginning, and has already been applied to carpet-making in the large cities.

The Growth of Trade

All foreign trade in Iran is a Government monopoly, and its pre-war value can be judged by the 1938-39 statistics. The exports were valued at £31,800,000, and imports at £17,330,000, both being about £6,000,000 greater than in 1934-35. Of the exports, oil formed 92 per cent by value, carpets 4.1 per cent, raw cotton 3.4 per cent, wool 2.6 per cent, gums 2.1 per cent, others being casings, hides, silk, opium, rice, fruit and fish products. The United Kingdom bought over £9,000,000 worth of petroleum, oils and carpets. Russia spent £3,000,000, mainly on raw cotton, wool and rice, and Germany £2,500,000 on many

diverse products, including cotton, fruit, oils, casings and skins. Carpets were also sold to India, Russia and Turkey, silk to France, opium to China and Japan, and fruit to India. Dr. Schacht's visit to Teheran in 1936 secured a trade agreement between Iran and Germany for £3,000,000 annually. Since the war, Germany has been buying up Iranian grain and paying for it by exports of machinery, especially of the electrical type, for the growing textile industries.

Of Iran's imports for 1938-39, cotton goods, metals and machinery formed 34 per cent by value, sugar and tea 12 per cent, and motor equipment 8 per cent. The United Kingdom claimed £5,400,000 in the first of these, Russia £4,000,000 mainly in cotton goods, and Germany £3,000,000 in iron, steel and machinery. Some cotton goods came from Japan and India. Sugar was supplied by Russia, Egypt and the Dutch East Indies, tea from India.

It is evident that Iranian trade was increasing prior to the war. Reza Khan's rehabilitation of the country, including the construction of the Trans-Iranian Railway, was carried out by internal taxes and monopolies, without recourse to foreign capital. The external debt is under £1,000,000. Little difficulties should be experienced by the Allies in providing all the present needs. The present value of Iran's surplus products is probably less than half that of the immediate pre-war days, and all should easily be absorbed in Allied markets.

Fighting Inflation in Egypt

[FROM OUR ALEXANDRIA CORRESPONDENT]

December 14th

FOR the past two or three months the Government has been devoting most of its energy to counteracting the rapidly rising cost of living, and to mitigating the growing scarcity of a number of articles.

The main problem to be tackled was that of wheat. Having failed last year to enforce any appreciable curtailment of the acreage under cotton, the authorities have had to cope since the summer with a short wheat crop. Egypt, which for the last few years had been turning into a wheat exporting country, has now been compelled to import a certain quantity of wheat, but strong steps have recently been taken to restore its self-sufficiency. The acreage devoted to cotton growing has been drastically reduced to a quarter of Egypt's total cultivated area, and a subsidy will be paid for all land authorised to grow cotton but planted to wheat. A proclamation under martial law authorises the requisitioning of land wanted for the better irrigation of wheat areas. Standard bread may now be prepared containing 15 per cent of rice flour, which will absorb most of the rice export surplus. To dispel any misgivings regarding the effect of an eventual overproduction of cereals, the British authorities have announced their readiness to purchase all quantities beyond the country's ascertained requirements, at the price fixed by the Egyptian Government for the home market.

From now on, there will be also two meatless days a week, and on other days restaurants may not serve more than one course of meat.

The British forces in Egypt have had little to do with the present relative scarcity of foodstuffs, as the armies defending the country purchased only 2 per cent of the cereal crop, and all the vegetables they consume could be grown on slightly over 600 acres. In fact, only a year ago, local farmers were clamouring for an increase in British purchases in order to bolster the market for their produce. In order to cut short all fifth column attempts to blame the forces for the present shortages, a mixed Anglo-Egyptian committee has been set up to determine the surplus quantities of Egyptian produce, to which the British military authorities will henceforth confine their purchases.

SIMPLIFIED PRODUCTION

Cadburys feel it may be of general interest to publish the following facts.

As compared with pre-war :

PRODUCTION at Bournville of Chocolate and Cocoa has fallen by only 13% and a considerable proportion of this is for Service requirements

BUT

LABOUR used in the manufacture of Cocoa and Chocolate has been reduced by 40%

AND

FACTORY SPACE released is more than 20%

PAPER AND CARD used for wrapping purposes have been reduced by 50%

How has this been done?

The answer is *simplification*. We have stopped making Assortments and have concentrated on the manufacture of Cocoa, Moulded Chocolate, Bourn-vita, Filled Blocks and Chocolate Biscuits.

Before the war we made

99 LINES — 237 PACKINGS

This has now been reduced to

16 LINES — 29 PACKINGS

☐ We submit this record of our experience to show how by simplification it is possible to produce the maximum amount of goods with the minimum of labour, space and materials.

ISSUED BY

CADBURYS
OF BOURNVILLE

Official Action

Further measures taken by the Government to combat inflation include the extension of price fixing; severer penalties for offenders; the control of distribution; a ban on the export of most foodstuffs; and exhortations to economy. This is no mean task in a country where state intervention, outside the sphere of cotton, was almost unknown, and where the administration has few data to rely upon for its planning. Nevertheless, more foresight might have been shown in some cases. Petrol, which was the only article to be rationed early in the war, is now in excess of demand. Contrariwise, the failure to mint enough quantities of nickel coin during the past two years, when the note circulation almost doubled, recently caused a temporary but acute shortage of such coin and much inconvenience.

The rise in the cost of living has resulted in an agitation for higher wages and salaries. It has just been decided to grant a bonus of from 10 to 25 per cent to minor officials, while several classes of workers have already obtained some compensation.

In order to meet the cost of these higher salaries, all specific custom dues on imported goods have been increased by 50 per cent. But the volume of imports will decline as a result of the introduction of quotas for the larger part of the country's imports. This latter measure, as well as the launching of an anti-waste campaign among the troops, aims at saving shipping space, and it may be added, in this connection, that larger Army orders are now being placed with local industry.

Exchange Position in Portugal

[FROM OUR LISBON CORRESPONDENT]

January 8th

A CERTAIN amount of anxiety and no little curiosity was caused when, on December 26th, it was learned that the Banco de Portugal had announced its intention of suspending, for the present, all buying of foreign exchange. Rumours were many and varied; the most widely credited was of an imminent change in the rate between the escudo and sterling; indeed, it was even said that when the suspension of purchases was at an end the rate would be 95 against the current 99.50. That has been disproved, and the suspension removed by a resumption of purchases for all general business, both private cheques and export bills, with the proviso that special operations covering important amounts—the figure of £25,000 has been freely mentioned in financial circles, but is not officially named—must be referred to the Bank of Portugal before the transaction is concluded. It should be emphasised that there has been no real uneasiness in banking and commercial circles, and the delay in making an official statement coincided with the holiday period of the year-end.

In the statement presenting the Budget estimates for 1942 there appeared the following table, showing the volume and value of Portugal's foreign trade from 1936 to October, 1941, the year 1937 being omitted:—

(In 000's; tons and contos)

	Imports		Exports		Value per ton (in escudos)	
	Weight	Value	Weight	Value	Im-ports	Ex-ports
1936	2,137	1,994	1,661	1,026	933	618
1938	2,398	2,300	1,540	1,139	960	740
1939	2,299	2,077	1,472	1,336	903	908
1940	1,899	2,441	1,140	1,619	1,285	1,420
1941 (to Oct.) ..	1,305	1,819	636	1,936	1,393	3,044

The Portuguese Government is much preoccupied with the danger of inflation, since prices have already risen for most of the essential foodstuffs and clothing of the people, with, as yet, comparatively few corresponding increases in wages. It is a position doubly difficult, inasmuch as it has coincided with winter and cold weather. It can be very cold in Portugal, and although there is abundance of wood

for fuel, the labouring classes in the towns have no heating facilities, and are often forced, if they use wood, to cook outside the door of their room on a brazier. Charcoal obviates this, but is relatively dear. These matters are causing some discontent, and the Government is, somewhat unreasonably, blamed for circumstances which it was scarcely within its power to prevent, without taking measures that would have been deemed excessively arbitrary six months ago. Control of both wholesale and retail dealers is now being tightened up very sharply.

The Baltic Countries Under German Rule

[BY A CORRESPONDENT]

January 30th

THE Russians are striking back towards the Baltic again. But the Baltic states, meanwhile, are still tightly under the German heel. An article in *The Economist* on November 22nd last year (page 616) described Germany's organisation of its new province, Ostland. In the economic field, all hopes of the Baltic middle classes for a speedy "desovietisation" have been disappointed. It is true that Dr Rosenberg was reported to have proclaimed the reintroduction of private property as his foremost duty in Ostland. Moreover, the *Dresdner Bank*, as early as October, founded a special bank for financial operations in Lithuania, Latvia, and Estonia; and two other big German banks, *Commerz Bank* and *Bank der Deutschen Arbeit*, have likewise opened special branches in Riga and other Baltic towns; and, according to the German press these activities are mainly designed to make possible the restoration of private property in the Baltic states. But the scope of this restoration is limited.

First of all, nobody is to have a legal claim to any private property lost during or after the incorporation of the Baltic states into the Soviet Union in the summer of 1940. The German authorities act on the assumption that no private ownership existed when the Reich took over those territories and that, since German soldiers liberated the population, the Reich has become the legal successor of the Soviet state. The Reich is prepared, however, either to grant or sell at low prices movable property to industrious citizens to enable a certain amount of private industrial activities in urban districts; but these activities will be restricted, at least "until conditions are much more stabilised," to handicrafts, small industries, retail trade, and so on.

In Estonia, industrial life has been hampered by the results of the Russians' scorched earth policy. It has been stated, for instance, that of 352 Estonian steamboats, with a total tonnage of 219,000, only four, with a tonnage of 10,000, had been left behind. Similarly, only 33 out of 111 locomotives; 750 out of 3,400 goods trucks; 700 out of 2,000 narrow-gauge goods trucks; 36 out of 350 passenger carriages; and between 350 and 500 out of about 2,500 motor lorries were saved for the present administration.

In the southernmost parts of the Baltic, however, the "scorched earth" policy was less successful, owing to the swift overthrow of the Soviets in Lithuania and Latvia. The Lithuanian food supply has, therefore, been more ample so far than in many other Nazi-dominated countries. The weekly rations for Aryan Lithuanians in the early part of November were 100 ounces of bread, 13½ ounces of meat, and 7 ounces of butter; Jews receive half the ordinary rations. There is, however, a more serious shortage of clothing and footwear, and very little fuel has been available since the occupation. Among other restrictions, there is a general curfew, from 10 p.m. to 6 a.m., in Vilna, and nobody, except Germans, is allowed to move into Kowno, because of an appalling shortage of living accommodation. There are more than 250,000 Jews in Lithuania and Latvia, who have now been crowded together in special ghettos, organised on the same lines as those in Poland; the Jews are allowed no private means exceeding 100 Reichsmark, nor personal possessions, with the exception of household utensils for "indisputable personal use"; everything else has been confiscated by the Gestapo.

German Europe

Financial Problems

A GERMAN professor recently suggested, in an article, the abolition of depreciation accounts for the duration of the war in order to reduce the price of manufactures. He argues that depreciation accounts in wartime are an economic fiction because they cannot be spent on making depreciation good in physical terms. The labour necessary for the production of capital goods is either mobilised or engaged in direct war production; nor will the accumulated depreciation accounts after the war find any capital goods available. Depreciation accounts, therefore, should no longer form part of current prices. The press has declined to follow the professor; but it is recognised that he is right when he argues that war production cannot be maintained without wasting assets. Depreciation is part and parcel of war economy. Weapons, ammunition and equipment are dead losses; and production without renewal inevitably means the gradual depletion of capital. These losses

are roughly represented by the national debt, which has been increasing at an alarming rate during recent months; and the net effect of the professor's suggestion is that there should be a drastic reduction in prices instead of a piling-up of debts. It is perhaps worth noticing that this suggestion was made just after the introduction of "iron savings" for wage-earners and the blocking of capital reserves with the Treasury for the duration of the war.

The problems arising from excessive purchasing power became more pressing in Germany in 1941. It is argued in the economic press that the excessive purchasing power of the wage-earning classes is not actually the real problem. Complete rationing, increasing prices for unrationed goods and the system of "iron savings," together with an effective wages-stop, not only keep purchasing power within limits, but also prevent spending. The real danger, it is contended, arises from the excessive purchasing power for capital goods represented by increasing depreciation accounts, hidden reserves and rising liquid reserves. The actual renewal of plant and machinery is almost at a standstill.

This discussion about depreciation accounts and inflation, together with the tremendous increase in the cost of the war—the national debt by March 31st will have risen to Rm. 140,000 millions from Rm. 89,650 millions on March 31st last year—makes it clear that there is some uncertainty about the future method of financing the war. The continued accumulation of debt by the state is seen as a grave danger for the post-war economy. Financing the war by taxation only, on the other hand—if it were possible—is regarded as “a kind of requisitioning which would impair the efficiency of workers as well as employers.” There are circles within the Nazi party who would prefer requisitioning; but the economic administration has insisted that the credit and loan mechanism must be maintained.

Dr Funk, the Minister for Economic Affairs, recently admitted that the Reichsmark had been “depreciated.” Money in circulation had increased, but the available quantity of goods had decreased. Total banknotes in circulation increased from Rm. 10,910 millions at the end of August, 1939, to Rm. 19,320 millions at the end of December, 1941. Dr Funk claims that this money will regain its original value after the war, when additional goods at low prices and in great quantities will be exported to Germany from the new raw material producing territories. The same opinion is expressed with regard to the supply of capital goods for Germany's industry. Foreign countries incorporated into Germany's New European Order, it is hoped, will supply some of the capital goods to cover the accumulated purchasing power. Meanwhile, the mixture of taxation and borrowing, the official argument runs, must be maintained; in particular, the depreciation accounts will be continued, for they are a measure of the extent of renewals that will be needed when war production stops.

Railways in 1941.—The total earnings of the *Reichsbahn*, the German state-owned railway company, amounted to Rm. 9,000 millions against Rm. 7,600 millions in 1940. Increased traffic, according to the annual report, accounted for the greater part of the increase in earnings. During the year, the company acquired a number of private railway companies, as well as railway lines in incorporated territories, mainly in Yugoslavia. The actual territory which is now served by the *Reichsbahn* is five times greater than the territory served in the Old Reich. Under war conditions, wear and tear of rolling stock, locomotives, tracks, and buildings has been considerably increased. Normal repairs have not been possible; but special allowances have been made for greater depreciation. The total debts of the company, amounting to Rm. 4,000 millions, hardly changed, and total assets amount to Rm. 40,000 millions. During the year, a number of passenger trains were taken off. The carriage of civilian commodities was diverted to inland waterways. Permission was given to exceed the normal loading capacity of goods trucks; and the turn-round of goods trains was again speeded up.

Retail Trade.—Statistics of retail turnover were suspended at the beginning of the war. Recently, the press was compelled to explain why retail shops were almost empty, although semi-official announcements from the retail trade organisation said that, during 1940, turnover could be maintained and that, during the first six months of 1941, turnover even exceeded the figures for the corresponding period in 1939. There is no doubt that, in spite of the price stop, retail prices have increased considerably during the war. The clothing index, for example, rose by 24 per cent between August, 1939, and November, 1941. Un-

rationed goods, particularly semi-luxuries, showed even greater increases; and no attempt was made to enforce the price stop because of the restrictions on production. Price increases are obviously one of the main causes of the maintained money turnover.

In addition, the fighting forces have bought great consignments of retail goods in the large stores. Another influential factor is that, during 1940 and the first months of 1941, the trade sold a number of commodities manufactured from new materials, such as kitchen utensils made from glass or earthenware. Black-out material and ARP goods were new articles in great demand in the ironmongery trade. In the clothing trade, customers preferred the higher priced goods. In short, it is easy to see why the value of turnover was maintained until the beginning of 1941; and the increases in prices and the bulk purchases of the *Wehrmacht* explain why the shops are now almost empty.

Clothing Cards.—The issue of clothing cards in France was instituted last month. It seems that the manufacture of clothing is at a very low level. Normally, France imported roughly 90 per cent of its total demand for textile fibres; home-grown flax and hemp provided roughly 40 per cent of the total demand for these two fibres. During 1941 the manufacture of rayon and cellwool increased by 65 per cent to 50,000 tons; but this quantity covers only one-sixth of the total demand. Further expansion of the manufacture of artificial textile fibre is hampered by the lack of building material and workers.

In Sweden, a clothing card has been issued which contains 120 coupons for men, 110 for women, and 100 for children. The coupons are valid for 18 months. Silk and artificial silk, as well as clothing containing cellwool, remain unrationed. Household linen and furnishing materials, however, are rationed. The total quantities available for each person are roughly equal to the German rations. In Denmark, a system of standard clothing is being introduced. Standardised underwear is manufactured in three qualities. Working clothes and men's suits appeared in standardised form during Christmas. The suits contain 10 per cent of Danish wool, 5 per cent of cellwool and 85 per cent of regenerated textile waste.

Banks in the Balkans.—German banking interests in the Balkan countries are particularly strong in Roumania. The *Deutsche Bank* acquired 75 per cent of the capital of the *Banca Commerciale Romana* in Bucharest, which was in Franco-Belgian hands. The *Dresdner Bank*, the *Commerzbank*, and the *Reichskredit AG* own majority interests in other Roumanian banks. In Bulgaria, German banks' had hardly any influence until, at the end of 1941, the *Dresdner Bank* and the Bulgarian Commercial Bank in Sofia concluded an agreement for the purpose of financing German-Bulgarian foreign trade transactions. The Sofia bank is the oldest Bulgarian bank, with many branch banks and interests in other Bulgarian banks and insurance companies.

A new way of expansion for German banks has been found in occupied Greece. So-called working committees have been formed between German and Greek banks. This has the advantage that the Germans can work there without investing capital. Such working committees have been formed between the *Deutsche Bank* and the *Banque Nationale de Grèce* and between the *Commerzbank* and the *Banque d'Athènes* established jointly the *Société Financière Greco-Allemande*. In Yugoslavia, German and Austrian banks already held interests before the war. In Croatia, the *Dresdner Bank* acquired the former Yugoslav Bank by using the capital interests of a former Czechoslovak Bank. In Hungary only, the *Dresdner Bank* holds direct interests in the *Merkur Bank AG*. German banking interests have thus adapted themselves to different conditions in different countries. French and British interests have been completely taken over.

Perlon-Silk.—The *I.G. Farben*, the German chemical concern, claims to have begun the manufacture of a new artificial textile fibre called Perlon-Silk, which is equivalent to the American nylon. The first product of the *I.G. Farben*, the *PeCe-fibre* manufactured from a basis of acetylene, could only be used for technical purposes; it is acid-proof but cannot be ironed, and is thus not suitable for clothing.

THE BUSINESS WORLD

The Banking Position—II

The Grip of Gilt-Edged

THE survey of the banking position which appeared in *The Economist* last week was primarily concerned with the growth of liquidity and its immediate impact on profits. The analysis of changes in the structure of banking assets brought out another feature of the position, namely the new dominance of Government paper and, in particular, of medium and long-term investments, which by the end of 1941 represented 30 per cent of the total resources of the banks. This is a feature of the position to which greater long-term significance must be attached than to the growth of liquidity. The latter phenomenon will no doubt disappear in the normal course of post-war developments. Either there will be some funding of floating debt via public loans and budgetary surpluses and the banks' holdings of liquid investments will decline *pari passu* with their deposits—a prospect which Mr McKenna seems to envisage—or else there will be some direct funding of the banks' holdings of floating debt assets. In either case the problem of excessive liquidity will have been solved. It is questionable whether the course of events that Mr McKenna expects will happen any more than it did after the last war. On that occasion the post-war contraction of bank credit was almost negligible. The deposits of English joint stock banks (other than the Bank of England), which totalled £992.6 millions at the end of 1915 and had risen to a peak of £1,974.9 millions at the end of 1921, then declined to a low of £1,806.8 millions touched at the end of 1925. There was a steady recovery from this modest recession and by the end of 1930 the total had touched a new record at £1,976.8 millions. This contrast with the monetary background of the 1921-25 trend of bank credit suggests that we may after this war avoid even the modest credit contraction which marked the period of currency deflation and exchange appreciation after the last war. This time we shall not, let us hope, be pursuing the hard and ungrateful quarry of a traditional and overvalued gold parity for the pound sterling. If the alternative solution of the liquidity problem be chosen, namely the direct funding of part of the banks' liquid assets into a more permanent form of Government debt, it is to be expected that the operation will be effected on special terms which will (a) protect the banks against withdrawals of deposits by endowing the funding security with special discount or marketing facilities and (b) protect the community by giving the funding security a rate of interest little, if at all, in excess of the figure of 1 to 1½ per cent on which the massive expansion of bank credit during the war will have been created.

Even without allowing for such direct funding of liquid assets, it is evident that the banking system in this country will emerge from the war with something like half of its resources invested in Government securities. For the banks, therefore, the future trend of gilt-edged values or of their converse, the rate of interest, is a problem of major importance. Lord Wardington recently implied that some limitation had been placed on the expansion of bank investments out of regard for the capital risk involved. Yet, unless a revolutionary change occurs in the mechanism of war finance, it is difficult to escape the conclusion that another two, or perhaps three, years of war will bring the banks' stake in the gilt-edged market, both in absolute figures and in relation to their total resources, appreciably above the levels indicated by the end-of-1941 balance sheets. The growth is taking place at this very moment with the banks pledged to participate extensively in ensuring the success of the Warships Weeks campaign.

The bulk of the war addition to the investment holdings will have been made on a yield basis of 2½ per cent. Allowing most generously for the undervaluation of investments in bank balance sheets and for other hidden reserves available to meet depreciation of investments, it must be evident

that a return of interest rates at the end of the war to the levels that were considered “normal” before 1932 would jeopardise the position of wellnigh every bank balance-sheet in the country. It follows that British bankers, whether or not they relish the prospect, have acquired a potent and growing vested interest in the retention after the end of the war of such financial and industrial controls as will prevent an active demand for capital from disturbing the present levels of interest rates and gilt edged values. This is merely to state a fact and not to discuss the merits of an attempt to insulate the rate of interest from the powerful upward influences that will be affecting it during the period of post-war reconstruction. The banks cannot escape from this dilemma by lightening the burden of their investments after the end of the war. There will be a long queue of would-be sellers in the gilt-edged market when that time comes, and in that queue the banks' priority will rank well below that of industrial concerns which during the war years have been compelled to place the larger part of their depreciation allowances in Government securities and will, after the war, ask to use them for their rightful purpose of plant renovation and other capital expenditure.

If the problems of capital supply in the reconstruction period are to be solved by the continuation of control over the new issue market, and by maintaining a form of rationing and of priority restrictions over the capital goods industries and even over a large sphere of the consumption goods industries, the banks will inevitably find themselves drawn into the vortex of these peace-time controls. Their freedom to deal with their investments will be curtailed. Their loan operations will have to dovetail into the wider policy governing the direction of new investment in the reconstruction

The Bank undertakes general banking business and with its numerous branches offers special facilities in Canada, Newfoundland and the United States.

period. Moreover, when the complicated objectives of reconstruction have been substituted for the comparative simplicity of the present objective of "winning the war" it may be found that this co-ordination of bank loan policy will require guidance more direct and specific than the negative injunctions to discourage unessential production which now keep the banks in line with Treasury policy.

Even if we accept this prospect of temporary extension and possible intensification of control over bank loan policy in the immediate post-war years, there is no reason to see in it a first step towards complete regimentation and ultimate nationalisation of the banking system. On the contrary, an extension of control, designed to integrate banking policy with the general economic policy of the country, can be regarded as the alternative to nationalisation. A competitive banking organisation has given this country what is unquestionably the best banking service in the world. As long as commerce and industry remain free they can best be served by a free banking system and there can be no doubt that the element of competition—perhaps tempered in such

matters as the rates offered for deposits—will continue to bring out qualities of efficiency and service which bankers would find it more difficult to provide were they to become civil servants. The co-ordination of banking policy within the general framework of post-war reconstruction will call for maintenance of the closest co-operation between the banks and the authorities. The war years will have provided admirable experience for such co-operation and will have created some machinery for implementing it, in particular by improving the liaison between the Bank of England and the commercial banks. In the process of further improving that machinery it seems reasonable to anticipate the direct representation of the joint-stock banks on the Court of the Bank of England. Their exclusion from a body whose catholicity of interests increases with every fresh appointment no doubt owes its origin to the period of direct competition between the Bank and the joint stock *parvenus*. But that is an era which came to an end over half a century ago and a breach with the tradition to which it gave rise is long overdue.

Finance and Banking

Credit More Abundant

The position in the money market has eased considerably this week. The clearing banks have released some of the funds immobilised by the making up which occurred in the two previous weeks, and though they have again been called upon to make substantial transfers of tax payments, they have shown far greater readiness to make loans and buy bills from the market. With the banks' purchases now extending to April maturities, no further special assistance has been needed by the discount market. The credit position has been helped this week by a net repayment of at least £15,000,000 of floating debt, this being the excess of Treasury bill maturities over the £60,000,000 allotted on Friday of last week. In addition, for the fourth week in succession no payments of Treasury deposits were required from the banks. The Bank return showing the position as on Wednesday last reveals a drop of £17,678,000 in bankers' deposits. This still leaves their total at the adequate level of £127,772,000. To relate the reduction in bank cash to the easing in the money market position this week it is necessary to bear in mind, first, the fact that the banks are no longer concerned with their monthly making up, and secondly the considerable contraction which has occurred in bank deposits as a result of the issue of Tax Reserve Certificates. The contraction of bank cash has been further helped by an increase of £3,975,000 in the note circulation over the week. The Treasury has used its net receipts to repay debt at the Bank, Government securities having fallen by £8,990,000. Other securities are down by £6,726,000, reflecting the maturity of non-Treasury paper taken from the market in recent weeks.

Debt Changes in January

The latest National Debt return shows the position up to Saturday, January 31st, and as the previous return coincided with the end of the December quarter, the comparison between the two last statements covers exactly a monthly period. The net amount borrowed in this period was £59,787,000, the smallest monthly increase in the National Debt since the beginning of the war. The main single source of debt revenue was provided by the new Tax Reserve Certificates which yielded £83,200,000 last month, bringing the amount issued up to the end of the month to exactly £100,000,000. With other long-term Government issues yielding a net figure of about £95,000,000, it was found possible, after covering the deficit, to repay floating debt to the amount of £117,100,000. The main reduction was in Ways and Means advances from the Bank of England, which fell from £66,000,000 to £9,250,000. It should be noted that since June last there has only been one occasion on which the monthly debt return has been free from Ways and Means advances from the Bank. Treasury deposits were repaid during the month to the extent of £47,000,000. The net receipts from this source were £30,000,000, and the actual reduction in the volume of these deposits over the month suggests substantial encashments of them by the

banks, probably to finance their customers' applications for Tax Reserve Certificates. The increase of Treasury bills issued through the tap has flattened out considerably in recent weeks. The last comparison must cover a two-monthly period, since the previous return (for December 31st) did not show the position on a Saturday. Since November 29, 1941, the tap bills have risen by £13,955,000 only. The new arrangements made with Canada and the disappearance of any sterling accumulation by Malaya will in future tend to insulate the tap bill issue from the influence of accumulating Empire balances in London.

Financing Expenditure

The following table summarises the Exchequer returns of the financial year to January 31st, and shows the respective shares of revenue and borrowing in meeting expenditure:—

£000		£000	
Total ordinary expenditure...	3,898,832	Total ordinary revenue.....	1,561,079

		Miscellaneous receipts (net) ..	
			£3,908,130

The items shown as net are given after allowing for repayments and receipts.

More Credits for China

The British Government has this week announced its willingness to lend China a further £50,000,000 while from Washington comes the news that, subject to Congressional approval, an American loan of \$500,000,000 is to be granted to the same country. China is already a recipient of Lend-Lease aid from the United States, and this week the British Government has undertaken to make available on similar terms all the munitions and military equipment which it is possible for us to supply. Since the capacity of the Burma Road is more than occupied with the military supplies from Britain and the United States, it may well be questioned what useful purpose the monetary dollar and sterling loans will serve. Especially is this so now that all the free markets in which the support of the Chungking currency was previously provided are in Japanese hands. The only conclusion is that the grant of these credits is a mark of the confidence which the lending nations have in their Chinese ally and a pledge of their readiness to render China all the help which it lies in their power to give.

Investment

Industrial Equities Advances

After a partial recovery from the low level of business, as judged by bargains marked, immediately following on the entry of Japan into the war, the market turned idle in the second half of last month, and the falling off in

FIXED INTEREST AND EQUITY SECURITY MOVEMENTS (July 1, 1935=100)

Financial News indices of 20 fixed-interest securities (converted to new base) and 30 ordinary shares

business was accompanied by a slight recession in prices for industrial equities. This is shown by the chart prepared from the indices of *The Financial News*, whose equity index touched a temporary peak of 81.4 on January 12th, falling to 80.4 on the last day of the month. There is, nevertheless,

an improvement against the end of last year, and this is reflected in the fuller figures of *The Actuaries' Investment Index*, which has more than recovered the December decline, with the result that the aggregate price index for industrial equities, at 62, stands at the highest since August 1, 1939. It is to be noted that ordinary shares of insurance companies and investment trusts are substantially below the level of that time, although bank shares are slightly above it. The month's recovery in the equities contained in this index was very evenly spread, although exceptions have to be made of marked rises in home railways and cotton shares, of slight falls in aircraft and coal shares, and of stability in motors and shipping. There has been an accompanying drop in yields to below 5 per cent for the first time since 1937. The month has also brought a further fall in the yields on every principal group of fixed interest securities, and a further slight narrowing of the margin between the yield on 2½ per cent Consols, on the one hand, and home corporations, industrial debentures and industrial preferences, on the other. This is a sufficient indication that the effects of the entry of Japan into the war, and her rather startling initial successes, have been restricted almost entirely to securities whose earning power is based solely, or at least very substantially, on the Pacific area.

Tin and Rubber Outlook

It is a rather surprising feature of last month's movement, that even oil shares improved. But this is a very minor consolation for those with large interests in Australasian, Chinese and Malayan enterprises. It is not easy to compile a representative index for this very substantial mass of investments, and it is far too early to attempt to assess the damage to which many of them may be exposed. It is, however, at least clear that Malayan companies can expect no more revenue until the war in the Far East is

won and reconstruction is well under way. It is certain that tin companies will lose some of their main asset, the tin in the ground, and that considerable damage has been, or will be, done to plant and equipment. Unless, however, the search, which has been in progress for decades, for a substitute for tin in the canning industry succeeds under the pressure of wartime shortage, there is likely to be a huge demand for tin as soon as hostilities cease. At first sight, there appears to be a less favourable case for rubber. It is stressed that America is to erect synthetic rubber factories to supply a very large part of the war needs of the Allies, and it is argued that these will serve to satisfy peacetime demands. It may be doubted whether there is much in this. The secular trend in the use of rubber was pronouncedly upward before the war, and this despite the impoverish-

ment of most countries by a policy of economic nationalism and the relatively high price of the commodity under a scheme of restriction. Without being unduly optimistic, it is permissible to assume that the post-war world will not repeat all the blunders of the period from 1919 to 1939, and that even when the re-stocking boom is over—and it may last for years—there will be a largely increased demand for rubber. It is to be hoped, however, that both these industries will have it made clear to them that the price of official assistance, either in rehabilitation or in price policy, must be the cutting out of every avoidable expense. Prices of leading Malayan tin and rubber companies have fallen by 33 to 50 per cent since the end of November, so that the prospects of ultimate capital appreciation, at least for those with low costs and sound management, are already considerable.

A Public Utility Conversion

The process of levelling down rates of interest is carried a step further by the offer of conversion terms by the North-Eastern Electric Supply Corporation for the £2,202,000 of 5 per cent debenture stock outstanding. This is the first public utility to take advantage of the lifting of the ban on optional maturities of this class, announced some two and a half months ago, and the terms are of considerable interest. The old stock, repayable at 102 on three months' notice, is to be redeemed on May 1st, and holders are offered a 3½ per cent stock, also at 102, in exchange. This, like the maturing loan, is repayable finally in 1980 at par, but repayment will, in fact, be by a sinking fund, and the price will be 102 for the first five years and 101 for the next. The yield to final redemption in 1980 is a shade over £3 13s. per cent. There is in this case no Government guarantee to provide any cash necessary to repay holdings not converted, and that office falls upon the issuing house, in return for a small fee. The corporation has two other debentures in issue, ranking *pari passu* with the existing 5 per cent, namely, a 3½ per cent stock finally repayable 1964 and a 3½ per cent stock due 1972. The yields to redemption on these are approximately £3 11s. 9d. and £3 14s. respectively,

ESTABLISHED 1824
SCOTTISH UNION AND NATIONAL
 INSURANCE COMPANY
 ASSETS EXCEED £17,500,000
 FIRE LIFE ACCIDENT MARINE

 and 45, Pall Mall, S.W.1.

which makes the new issue appear fully priced. A mere calculation of the yield to final redemption leaves considerations of possible earlier repayment on one side, and, with the return on home corporations at only some £3 6s. per cent, it is probable that there will be a fair demand for this stock in an industry which must continue for many years to enjoy an upward trend. No recent figures of earnings are available, but, for 1940 and several years earlier, the whole interest charges of the corporation were covered some two and a half times by earnings.

Spinners' Scheme Criticised

In dealing with the scheme submitted by Fine Cotton Spinners in *The Economist* of January 31st, a detailed analysis appeared unnecessary, since it seemed both sound and suited to the position, except possibly in that it failed to make any provision for writing down assets. It now appears that the scheme is opposed on the ground that it is unduly generous to holders of the preferred ordinary capital. The fact that the directors think it desirable to substitute, for the junior class of preferential capital, equity holdings, and the substantial amount of the latter given in compensation indicate clearly that the board sees no possibility of a return to the prosperity which the group enjoyed up to a decade or so ago. The board expressly state that they anticipate a fresh decline in profits, although they are careful to say nothing of post-war prospects. It will almost inevitably be the case that when the war ends a very large part of the world's population will be in need of a new wardrobe and new furnishings. But it will also be the case that most of them will be poorly equipped to pay for them, and that Lancashire is no more likely to have a monopoly of supply than in the years of the pre-war depression. Even if it should prove to be the fact that British industry, and that of the Americas, is in better shape than that of Europe, Japan and India, there is no reason to suppose that the advantage will be more than temporary. It cannot be denied that the preferred ordinary shareholders are entitled to receive, in priority to the equity holders, 5 per cent on their present holdings, and on their arrears of dividend: that is to say, £72,850 per annum. They receive that, under the scheme of the board, when distributable profits amount to almost exactly £195,000. If they are higher, they do better; if lower worse. This is equivalent to some 5 per cent on the old ordinary capital, and the market's anticipation is a dividend at half that rate. The matter is one on which there is room for more than one opinion, but, if this is a fair estimate, the scheme as presented can hardly be called unduly favourable to the holders of preferred ordinary capital.

Widespread Default

The Report of the Council of Foreign Bondholders for 1941 makes melancholy reading. The spread of the war has brought about the inevitable cessation of payments by Greece and Yugoslavia as well as the default of Japan, who possessed an unblemished and punctilious record. By a curious anomaly, the British bondholder, however, received certain token payments, which had previously been agreed to, in respect of the Hungarian External Debt for the year to October 31, 1941. In South America, the position is relatively unchanged, no fresh defaults having occurred, but no further settlements having been reached. Improvements in sterling balances have, however, notably increased the capacity to pay of a number of Latin American countries. For the successor states to the Ottoman Empire, with the exception of Transjordan, the story is equally melancholy, while the external debt of China is in total default for the second year in succession. The Report reinforces a conclusion which must by now be generally appreciated by the foreign bondholder, that investment in the state or municipal loans of foreign countries demands world peace and international prosperity as indispensable conditions of fruitfulness. This form of investment is of all forms the most speculative, since it implies a bet on the future of the world as well as an assessment of the internal economy of the country in question. It is clear that, outside Turkey and Latin America, the bondholder can entertain no hopes of improvement until the world is at peace again. With regard to South American defaulters, the Council has made representations which have been, and promise to be, ineffective.

seems that if the Council is to achieve its aims it must, in co-operation with U.S. interests, impress upon official quarters the need to support the rights of the bondholder.

Compulsory Marking

A questionnaire, addressed to all members of the Stock Exchange, on the subject of reforming the registration of business done, gives a very fair idea of the scope of the changes envisaged. The whole matter has a technical side which bristles with complications, and it is not surprising that, on some of the points, opinion is known to be divided. From the standpoint of the investing public, the interesting questions are those relating to the marking of all bargains, and the classification of the marks according to the time they occurred. If the committee should decide to insist on a general marking of bargains, plus a splitting into at least two sessions, the public would be a step further forward. The difficulty is, however, that, under war-time conditions, it will not be easy to find the additional labour, while, if it is done, the information cannot be widely disseminated so long as the size of the daily paper is so rigidly restricted. The latter consideration is not a complete reason for postponing the step, but the former may well prove so. There is, of course, every reason why a committee, which has a name for energy, should proceed now to investigate improvements which can only become effective after the war. But it might be wished that, if this step is to be deferred until peace comes, it were a rather bolder one. In addition to brokers and the investing public, to whom it would be of interest, there is that small but important body of statisticians to whom an index of Stock Exchange turnover—even in terms of nominal values—would be of great service for a variety of inquiries. Owing to the number of shares quoted and to the variety of dealing units, the

task is more complex than that of compiling the corresponding Wall Street figure, but it is difficult to believe that it could not be achieved without unreasonable expense or delay. The hope that it may emerge as a by-product of a scheme of centralised accounting is doomed to disappointment, since, whatever its advantages, this is at present too controversial a matter to be practical politics in any but a very emasculated form.

Company Notes

R. A. Lister Progress

Net earnings of R. A. Lister, the leading manufacturers of agricultural machinery, have been well maintained at £131,517 against £139,293 in the year to September 30th last. The figure for the latest year is struck after an undisclosed appropriation for war damage as well as after tax, contingencies and depreciation, as in the previous year. Equity earnings are reduced in amount from £88,552 to £80,605, but there is a rise in the rate from 21.4 to 23.0 per cent, the highest level in the past ten years. Ordinary shareholders again receive 16 per cent; the transfer to pensions reserve is raised from £2,500 to £10,000, while that to general reserve is £10,000 lower at £15,000. These appropriations still necessitate a slight draft on the carry forward, which is £395 lower at £70,468, against a fall of over £5,000 a year ago. The company's productive activities are, of course, vital to the conduct of the war, and in the sphere of agricultural equipment, which by no means exhausts the range of output, demand reached record levels last year. The company's balance sheet shows an increase in the excess of liquid assets over current liabilities from £1,052,853 to £1,160,913. The main increase is in cash

holdings from £250,068 to £496,604, while £71,969 has been invested in British Government securities, a movement which may indicate higher sales last year. There is also a moderate rise in stocks from £667,698 to £729,107, which may be accounted for almost wholly by the rise in prices. The company is clearly in a position to maintain ordinary dividends in the near future in the absence of any fortuitous disaster. The £1 ordinary shares, at 67s. 6d. ex dividend, yield £4 14s. 10d. per cent.

Prospects of BAT

The more obscure aspects of the latest balance-sheet of British-American Tobacco, which was discussed in *The Economist* of January 24th, have now been in part elucidated by the speech of the chairman, Sir Hugo Cunliffe-Owen at the annual general meeting. The two main problems which the accounts presented were the cause of the decline in gross income, the scale of which is indicated by the fall in the tax free rate of equity earnings from 18.0 to 14.7 per cent, and the balance-sheet fall in the value of investments in subsidiary companies by £5,246,333 to £2,401,458. The fall in gross income, neglecting the obvious influence of higher taxation on net earnings, was due almost entirely to the loss of income from the company's American investments. In order to retain control of the American subsidiary, BAT obtained, as was explained in *The Economist*, a loan of \$40,000,000 from the RFC which was transferred to the British Treasury. The loan, Sir Hugo explained, carried the condition that no dividend could be received from the American company for a period of five years, or until \$10,000,000 of the loan is repaid. BAT suffered the deprivation of income for only half the financial year ending September 30th last, so that the effect on income will be more severe in the current period. Moreover, the company must suffer substantially from the loss of its important interests which have passed into enemy hands in the Far East since the entry of Japan into the war. In the circumstances, the announcement that interim dividends for 1941-42 may be expected, subject to no increase in taxes, to total 8.32 against 13.34 per cent, free of British income-tax, appears to be fully up to market expectations. Interim payments, incidentally, are, after March 31st next, to be made half-yearly. The decline in the balance-sheet value of investments in subsidiaries arises out of bond redemptions from part of the proceeds of the above-mentioned loan, while the decline in the company's leaf stocks is occasioned by larger shipments to subsidiaries. Cash holdings at the date of the accounts stood at £2,261,869, but Sir Hugo points out that, since end-September, £2,500,000 has been invested in Tax Reserve Certificates. In the current year, it is clear that there must be some further reduction in gross income. Whether the equity surplus will be still more steeply reduced depends on the course of taxation in

this country and in the dominions. The £1 ordinary stock at 80s., yields £3 12s. 11d. per cent, tax free.

Investment Trust Results

Recently issued results of a number of important investment trusts show that revenue was well maintained in 1941. Of the six trusts, whose profits are analysed below, only *Great Northern Investment Trust* made a reduction in the ordinary dividend, which amounts to 5 against 6 per cent. In three cases, payments were maintained, and *London Stockholders Investment Trust* raised the ordinary distribution from 2 to 2½ per cent. *Scottish Stockholders Investment Trust* was not able to resume dividends on the ordinary capital, which has received no payment during the past decade, but there is a moderate rise in gross revenue from £47,976 to £50,475. *London Stockholders* shows an improvement in gross income from £36,210 to £37,948 and in the rate of equity earnings from 3.3 to 4.4 per cent. *Debtenture Corporation* suffered the largest fall in total income from £233,055 to £218,915, with a reduction in the earned rate from 11.9 to 11.1 per cent, while both *Great Northern Investment* and *River Plate and General* show moderate reductions on gross income and equity earnings.

† Deferred stock. * Not disclosed. § No stock on offer.
‡ After charging one year's arrears of preference dividend.

That no general reduction has occurred in earnings or dividends is, of course, mainly a reflection of the delay in the impact of wartime difficulties, as experienced by operating companies, on the incomes of investment trusts. It is also a demonstration of the security which the spread of well-chosen portfolios affords the private investor. Most trusts have suffered some loss through the Treasury requisition of dollar securities. There is evidence that liquid funds so provided have mainly been invested in domestic issues, although in some cases they have been devoted to redeeming debentures. The depreciation of the market value of investments against book value is much reduced in all disclosed instances. The failure to provide an estimate of depreciation in a number of cases cannot be too strongly deplored.

Anglo-Chilean Nitrate

Anglo-Chilean Nitrate has suffered severely from the effects of the international disturbance to markets. The accounts for the year to June 30, 1941, show a reduction in total income from £861,821 to £518,538, the lowest level since 1935-36. The decline is due in part to the replacement of a net credit item for exchange difference of £20,603 by a debit item of £103,388 and provision for exchange suspense of £64,004. Of the debtor exchange difference, only £14,709 is charged against income, making a total exchange debit of £78,714. The remainder, £88,678,

is covered by transfer from reserve created at June 30, 1940, from unrealised differences in exchange. Total earnings for funded debt amount to £373,224 against £664,006, after transfer to general renewals reserve of £117,022 against £123,512. The directors point out that there has been a substantial fall in total world sales of nitrate and iodine, for which the closure of European markets has been largely responsible. Moreover, production and labour costs in Chile rose during the year. It is a point of some importance that the company has now eliminated the 1933 nitrate stocks, so that in future sales will be based wholly on new production. It is also satisfactory that the latest payment to creditors of US \$507,938 will eliminate this form of indebtedness in accordance with the Readjustment Plan, 1936. The directors have made no provision against the finding of the Supreme Court of Chile in the action pending with the Sales Corporation concerning distribution of profits between the companies during the past seven years. The balance sheet shows a decline in the surplus of current assets over liabilities from £394,782 to £228,568. Funded debt is reduced from £3,911,565 to £3,075,114 and total reserves are up from £2,800,460 to £3,400,147. The future outlook depends almost exclusively on shipping possibilities and on the extent to which the United States' scale of priorities favours imports from Chile or the expansion of home production of synthetic nitrates. It is unfortunate that prospects should be impaired through the progress of the war when the company has at last cleared off accumulated stocks and indebtedness to creditors.

Industry and Trade

Petrol Needs Test for Lorries

An important modification in the petrol rationing scheme, designed to secure a further economy in motor fuel, will come into force next month. Colonel Llewellyn, then Parliamentary Secretary to the Ministry of War Transport, stated in the House of Commons on January 28th that the basic ration for goods vehicles is to be abolished from March 7th. Equivalent at present to 16 gallons of petrol or 10½ gallons of heavy oil per ton of unladen weight for every four-weekly period, the basic ration had already been cut twice during 1941. In the effort to save motor fuel, moreover, the grant of supplementary allocations to operators of goods vehicles on proof of need had been considerably tightened up, especially in the case of retail delivery vans. All issues of fuel for goods vehicles will in future be at the discretion of the Regional Transport Commissioners, and operators will presumably be required to furnish full particulars of the purpose for which the petrol is required before they are granted supplies. This brings goods vehicles into line with buses and coaches, which have received no basic rations since last September. Although the abolition of basic rations will not, in itself, reduce the consumption of any particular operator, it should do much to ensure that the fuel issued is in fact used for essential purposes. In particular, it will encourage retail traders to rationalise their delivery services by proceeding as quickly as possible with the formation of local delivery pools. The Ministry of War Transport is to be congratulated on this change in policy, but it will have to ensure that essential transport services are not strangled with red tape. Apart from the special case of taxi-cabs—which in the London area receive a flat allocation of 90 gallons a month and in the provinces a basic allowance, supplemented according to the horse-power of the vehicle—the private motorist will thus be the only remaining recipient of a basic ration. The question inevitably arises how long he will be allowed to enjoy this privilege. In contrast to the operation of commercial vehicles, which is the concern of the Ministry of War Transport, the rationing of the private motorist is administered by the Petroleum Department, which has hitherto been reluctant to rely solely on a needs test in allocating motor fuel. So long as there are no restrictions on the licensing of cars, and motorists continue to pay heavy taxes, the abandonment of this policy will be difficult. But it is anomalous, to say the least, that commercial users can obtain motor fuel only by furnishing proof of their need, whereas the private motorist can claim a minimum ration, provided only that he can afford to license his car.

Shop Stewards and Works Councils

Once it had decided to support the establishment of joint production committees, the TUC lost no time in pressing forward its plans. Agreement has now been reached between the TUC, the employers' organisations, and the Government, and it has been announced that the formation of committees in engineering factories will be provided for by an amendment to the Essential Works Order. The successful conclusion of the negotiations has been welcomed by the Engineering and Allied Trades' Shop Stewards National Council. But, not unnaturally, shop stewards are somewhat apprehensive concerning the constitution of the labour representatives on these committees. In a statement issued last week by their Council, they consider that "any attempt dictatorially to appoint workers to joint production committees . . . is a dictatorial step which would wreck the usefulness of such committees because such appointment would bring the whole idea under grave suspicion by the workers and, far from helping output, will be an obstacle to production." In their view, the shop stewards are the "natural representatives" of the workers, for they are democratically elected by them and are the "officially recognised representatives" of the trade unions in the workshops. The shop stewards are undoubtedly right in insisting that the successful functioning of joint production committees depends in no small measure on their free election—though it should be made clear by what criterion—size or method of ballot—an election is deemed to be "free."

Producers' Milk Prices

In February of last year the Ministry of Food fixed the price of milk to producers from April, 1941, to March,

NORANDA MINES, LIMITED

DIVIDEND NOTICE.

Notice is hereby given that an interim dividend of One (\$1.00) Dollar per share, payable in Canadian funds, has been declared by the Directors of Noranda Mines, Limited, payable March 17, 1942, to shareholders of record at the close of business, February 20, 1942.

By Order of the Board.

J. R. BRADFELD, Secretary.
January 30, 1942. Toronto, Canada

BAY HALL TRUST LIMITED.

Summary of the Directors' Report for year ended 31st December, 1941, and of the accompanying Statement by the Chairman, Sir Charles Hambro, K.B.E., M.C.

DIRECTORS' REPORT:

The gross revenue amounted to £111,016. After charging Debenture Interest, Income Tax, Directors' Fees, Management and General Expenses amounting to £40,503, the net profit is £70,513. Adding £71,329 brought forward, the total available for appropriation is £141,842 and a dividend of 6½ per cent. is recommended which will absorb £65,897 and leave £75,945 to be carried forward.

In November, 1941, £14,600 of Debentures were lodged in exchange for 7,300 fully paid Ordinary shares of £1 each and the shares were allotted in December last, thus increasing the issued Ordinary capital by £7,300 to £1,013,175 and decreasing the amount of outstanding Debentures by £14,600 to £773,650, as the Accounts show.

At market prices on December 31st, 1941 (or where no market price existed at valuations by the Directors at that date amounting to £229,510), the Share and Debenture Holdings and British Government Securities had an aggregate value of £2,050,999, as compared with their book cost of £1,877,630.

CHAIRMAN'S STATEMENT:

The gross revenue for 1941 was £1,855 in excess of, but the net profit was £4,630 lower than, 1940, the decrease being wholly due to higher taxation. Dominion Relief amounts to 2s. 3d. in the pound so that the net income tax deduction will be 7s. 9d.; the proposed dividend is, therefore, equivalent to 7.9 per cent., less tax at the standard rate of 10s. 6d.

Turning to the Balance Sheet, the debenture conversion has resulted in an increase of Premium on Shares Account by £7,300, which now stands at £47,175. Realisation Reserve Account amounts to £14,583 against £9,741 at end of 1940, but these figures are not strictly comparable because that Account was credited with £10,000 last year. On the Assets side, Share and Debenture Holdings and British Government Securities, amounting to £1,877,630, are higher by £91,179 as a consequence of further investment of funds, which is reflected in the lower cash position.

At the end of 1941, the value of our investments showed an indicated appreciation of £173,000 over book cost. Bearing in mind there was a depreciation at the end of 1940 of £69,000, this represents an improvement of over 12 per cent. in the value of these assets and is most gratifying in all the circumstances.

Over 98 per cent. of the investments, including British Government Securities, taken at the valuations at December 31st last, are situated in United Kingdom, South Africa, and other parts of the British Empire. Similarly measured, but excluding British Government Securities, about 93 per cent. of the investments are in Ordinary stocks and shares and the balance in fixed interest bearing securities.

Copies of the full Report and Accounts can be obtained on application at the office of the Company, Princes House, 95, Gresham Street, E.C.2.

1942. For January, February and March of this year, producers were to receive 2s. 4½d., 2s. 3½d. and 2s. 0½d. per gallon respectively. These are basic prices, from which in most cases charges for transport have to be deducted and to which premiums for special grades of milk or services may be added. The prices were based on estimates of the probable rise in costs of production which were made last year. The Ministry of Food announced last week that the prices for the first three months of this year are to be raised by 1½d. per gallon. This will not prejudice a further review of milk prices at the end of March, in accordance with an undertaking given by the Minister of Food at the time the prices were originally fixed. This undertaking was honoured last month, when as a result of a review of costs during the summer months of last year, a retrospective increase to producers of ½d. per gallon was granted. The increase of 1½d. per gallon for the first three months of this year appears to be of the nature of a token payment in respect of the advance in the weekly minimum wage of farm workers to £3 from January 1st. According to a statement issued by the Ministry of Food at the end of last week, "the Government's consideration of the question of a general adjustment of agricultural prices, in the light of the recent increase in the minimum agricultural wage, is being pressed forward." It is well known that the pressure exercised upon the Government for a sizeable upward revision of the prices of farm products by the spokesmen of the farmers is very strong. It is to be hoped that the Government's counter-pressure will be equally strong, and that it will resist some of the farmers' demands. If it fails to do so, resistance to demands for yet higher minimum wages in individual counties will be reduced; and once a breach is made by the "infiltration process," it will not be long before a further general retreat will have to be made by the Government by a yet further increase in the national minimum wage.

A Council for the Rayon Industry

Co-operation amongst the rayon producers has been a long time in coming. The rapid development of the industry, the secret nature of some of the processes, the great financial boom, and the slump which followed in the early 'thirties, all conspired to retard co-operation. It was not until just before the war that the viscose and acetate producers came together, and then only because they considered their interests threatened by legislation for the cotton industry. Since the outbreak of war the rayon industry has witnessed the successful development of the Cotton Board, a statutory body set up by legislation and covering every section of the cotton trade, including operatives. The rayon industry has now established a Rayon Council, which goes far beyond co-operation amongst producers, and extends to all users of rayon yarn, but does not include operatives. Its avowed object is to provide "a common meeting ground where matters affecting the industry may be discussed." The industry, in fact, has followed the example of many others by closing its ranks.

Utility Clothing

Last September, the Director-General of Clothing announced a scheme which aimed at providing an adequate supply of clothing, in the lower ranges of prices, with prices fixed at every stage of manufacture and sale. This clothing bears a characteristic label and is known as "utility" clothing. Specifications for cloths from which the clothing may be made are laid down, and lists of clothing which are most needed are scheduled in about twelve groups. Maximum prices are fixed at each stage of sale, overriding the percentage margin of net profit which may be added to the costs of production or purchase price. A new Order, the Utility Apparel (Maximum Prices and Charges) Order, which came into force on February 2nd, brings together the provisions relating to maximum prices which may be charged for utility clothing and contains the complete list of the overriding maxima for the various kinds of garments. In addition, it makes provision for the maximum prices to be charged by composite businesses which it has been found difficult to fit into the framework of existing Orders. Manufacturers compute their maximum prices by adding to their costs of production and sale a percentage margin of net profit which varies from 4 to 7½ per cent, according to the kind of garment made. Wholesalers may add 20 per cent

to the price paid by the first purchaser, if they have a regular selling organisation for supplying the retail trade and carry substantial stocks in a warehouse. Other wholesalers may add only 5 per cent to the price paid to the manufacturer. The retailers' margin will remain at 33½ per cent. These mark-ups are the totals permitted, regardless of the number of hands through which the garments pass on their way from the manufacturer to the consumer. Standards of quality are laid down, but styles are left to the individual producers. It is hoped that a utility label on a garment will provide a guarantee of quality and workmanship and that prices will not reach the maximum in all cases.

Wholesale Prices in 1941

The control of the prices of basic materials has been fairly effective in 1941. The *Economist* index of wholesale prices showed an advance of 7.5 per cent between December, 1940, and December, 1941, and the more comprehensive Board of Trade's index recorded a rise of only 4.9 per cent during this period. Similarly, the Ministry of Labour's cost of living index has been effectively stabilised since the spring of last year and, on January 1, 1942, was only 4.2 per cent higher than a year ago. The movements of the wholesale prices of individual commodity groups between August, 1939, and December, 1941, and between December, 1940, and December, 1941, as recorded by the Board of Trade, are shown in the table below:—

	Increase between December, 1940, and December, 1941	Increase between August, 1939, and December, 1941
	%	%
Food and tobacco	4.2	6.5
Coal	6.9	38.7
Iron and steel	1.2	41.3
Non-ferrous metals	0.6	23.2
Cotton	11.1	74.9
Wool	2.9	67.5
Other textiles	14.7	70.7
Chemicals and oils	5.8	39.5
Miscellaneous	6.9	79.6
All articles	4.9	58.9

The rise in the prices of cereals was chiefly responsible for the advance in the index for food and tobacco last year. Higher rayon prices caused a substantial advance in the index for other textiles. The prices of iron and steel and non-ferrous metals remained virtually unchanged; but that of coal was raised, mainly to compensate for wage advances. The comparatively small advance in the prices of basic materials testifies to the efficiency of price control; it would be interesting to know the average rate of increase in the prices paid by the supply Departments for war equipment.

Leather in the War

The chief raw materials for the leather industry are hides, calfskins and sheepskins, of which more than half were imported in peace-time, and goatskins, which came entirely from overseas. The Leather Control was faced with the task of increasing supplies to meet war needs, and early in the war imports actually exceeded the peace-time level. The Imported Hides Pool was formed in October, 1939, as a voluntary organisation of traders, and was, until recently, independent of the Control. All offers of, and negotiations for the purchase of, imported hides pass through the Pool, and certain prices are controlled. All native skins and pelts are received from the Ministry of Food slaughter-houses; tanners buy them through registered markets. Transactions are made only under licence and prices have been raised by the Control. The footwear requirements of the Armed Forces dominate the leather trades. The necessary supplies are reserved within quarterly periods and manufacturers are supplied under licence. The preparation of upper leather is assisted by firms who were previously engaged in making leather for other branches of the trade. Service requirements of leather for other purposes absorb substantial quantities. Flying suits, leather jerkins, heavy leather driving gloves, straps and packings for guns, and cases for delicate precision instruments, all make demands on leather stocks. The Service demand for harness, saddlery and farriers' aprons is now relatively small, but mechanisation has multiplied demand in many directions. Straps, belts and pouches of leather which used to be supplied to the soldier in the field have

now been replaced by webbing. Leather is of importance also for a number of industries engaged in war work. The list of descriptions ear-marked by the Leather Control for essential purposes has expanded considerably, shrinking the quantity of leather available for the manufacture of civilian footwear and for repairs. A director of civilian footwear was appointed by the Control in June, 1941; he was later transferred to the Board of Trade. Upper leather was rationed to manufacturers last year, and at the beginning of this year a formal scheme of rationing sole leather was introduced. The manufacture of civilian footwear has decreased, and distribution is subject to the clothes ration. Other civilian uses of leather have been reduced by Limitation of Supplies Order. Until recently the Leather Control was not very strict; it preferred to work in co-operation with existing trade organisations and through organised trade channels.

Tea Supplies and Requirements

The tea export quota for the season beginning on April 1st has been fixed at 125 per cent of the basic exports, against 110 per cent in the current season. In theory, the new quota will release 1,010,535,000 lbs from British India, Ceylon and the Dutch East Indies, the three

TEA EXPORTS OF REGULATING COUNTRIES
(in millions of lbs.)

Season	British India	Ceylon	Dutch East Indies	Total

* Export Quota.

countries adhering to the regulation scheme. Although this quantity exceeds the previous record export by more than 100,000,000 lbs, it could be shipped in normal circumstances, though at the expense of some deterioration in average quality. At present the necessary shipping space cannot be guaranteed, and it is by no means certain that Nether-

lands India, for example, will be able to fulfil its quota. Although the requirements of the British Empire, the United States and Russia can be met with a supply of 750,000,000 lbs, the quota has probably been increased to permit shipments at a high rate as long as possible, and to enable consuming countries to accumulate stocks against an emergency. Provided shipping is available, there will be no shortage, even if exports from Netherlands India becomes impossible, for the new quota permits British India and Ceylon to ship some 793,000,000 lbs, 43,000,000 lbs in excess of the estimated needs of the Allies, and a further 35,000,000 lbs can be secured from East Africa.

Feeding Stuffs Rationing

After a year of feeding stuffs rationing to animals, the Feeding Stuffs (Rationing) Order, 1941, and the various amending Orders since made, have been consolidated in a new Order, which is also directed against fraud and the misuse of ration documents. Rye and rye products are included in the cereal coupon and feeding bonemeal (ground bone) containing more than 30 per cent albuminoid, is added to the list of rationed proteins. Molassed feeding stuffs other than compounds are added to horse-feed rations. Some feeding stuffs are derationed. Provisions relating to the supply of mixtures other than compounds or concentrates are modified. Ration documents in the possession of a livestock keeper who has ceased to keep any class of livestock for which they were issued, must be returned by him to the authorities. Producers and approved buyers of feeding stuffs, other than growers, may not feed rationed stuffs to their own livestock unless the appropriate ration documents are immediately surrendered. The list of rationed feeding stuffs issued in directions on September 30, 1941, remain in force. For most mixtures the buyer is now required to surrender coupons to correspond with the value and kind of rationed stuffs in them. The Order, which came into force on February 1st, does not affect ration documents and individual licences issued under the 1941 Order, but all directions issued before the one of September 30, 1941, and all general licences, are revoked.

WILLIAMS DEACON'S BANK LIMITED

BANKING PROBLEMS IN WARTIME

EXPANSION OF DEPOSITS

MR G. P. DEWHURST'S STATEMENT

The annual general meeting of Williams Deacon's Bank, Limited, was held on the 29th ultimo, in Manchester, Mr G. P. Dewhurst, the chairman of the bank, presiding.

The following is the statement prepared by the chairman, which was circulated in advance of the meeting:—

From the report in your hands you will have seen that, apart from certain changes in our directorate, we have suffered a sad loss by the death at the age of 81 of our old friend and colleague, Frank Deacon, the last of his family, and grandson of the John Deacon who in 1826 was admitted into the partnership of Williams Deacon and Co. Though little seen in the City of London during the last few years of his life, he will long be remembered there as a fine type of the old private banker, and a keen and indefatigable supporter of a number of religious and charitable objects. To H. W. Haldane, who has relinquished his seat on our board, I would like on behalf of my colleagues to offer our grateful thanks for his unremitting devotion to the affairs of the bank during his term of office, and in like measure to his successor, Kenneth Murray, a very hearty welcome to our board.

INCREASE IN RESOURCES

Turning now to the balance-sheet and statement of accounts, we have, in common with all other banks, to report a very considerable expansion in our current, deposit and other accounts, with a corresponding increase in the amounts lent to the Government in the form of Treasury deposit receipts and subscriptions to their various bond issues; our increased resources have thus promptly been made available to the Treasury, though the revenue therefrom has been largely discounted by a reduction in our advances to customers, heavier taxation, increased overhead charges, and special war time expenditure.

While Government spending and consequent borrowing have been the main factors in the growth of bank deposits, full time employment, higher prices, liquidation of stocks and substantial accumulations of cash for taxation requirements have all tended in the same direction. In the meantime, however, the placing on tap by the Treasury of Tax Reserve Certificates will have the effect of drawing on these accumulations and, while helping to maintain a more even flow of revenue into the Exchequer, should at all events retard the rate of increase in bank deposits.

Further, it is possible, and I feel eminently desirable, that depositors may elect to lend their surplus balances direct to the Government rather than through the medium of the banks; the immediate result to the Treasury is the same, but direct lending does remove the opportunity of hasty withdrawals for unnecessary spending on the part of the individual, and gives him the certainty of a return on his capital at a time when he will need it most and when the scope of its purchasing power will be wider than it is now.

The actual figure of the bank's deposits appears at £62,314,800, which is an increase of nearly 11½ million, or 22 per cent. in excess of last year.

THE ASSETS

On the asset side of the sheet, Treasury deposit receipts now amount to 13½ million, which is an increase of 8 million on the year, and these, together with our cash, balances with other banks, money at call, and bills discounted, constitute a total of £32,502,300 or over 52 per cent. of our deposits. The other important feature to note here is an addition of over five millions to our investments, which now stand at £20,060,812. Advances show the relatively small increase of £540,000 on last year's totals, for while the usual trade demands for accommodation have obviously been reduced, every possible assistance has been given to applications from customers engaged on Government or vital war work. Bank premises account has benefited to the full amount of the year's allocation from profits, and now stands at £957,000.

The extreme liquidity of banking resources brings its own problem, the difficulty of their effective employment, and to achieve this by merely increasing the total of investments would mean that a comparatively moderate fall in values would have a disproportionate effect on figures.

PROFIT AND ALLOCATIONS

Turning now to the figures of Profit & Loss, the net profit for the period covered by the Accounts, after making the usual provisions, has been declared this time after deduction of Tax on dividends payable to our shareholders. Our figure of profit therefore emerges at £184,169 19s. od., which, on the face of it shows a reduction of £8,893 compared with the previous year's profit adjusted to the new basis. On the other hand, allowing for the fact that the tax deducted from shareholders' dividend was more this time, the strictly comparable figure of profit would show a slight increase, a result with which we have every reason to be satisfied, considering increased taxation, expenditure on salaries to those in the Services and to our temporary staff, war-time allowances and war damage insurance. This profit, with the balance of £148,423 12s. 3d. brought forward from last year, gives us a total of £332,593 11s. 3d. now to be dealt with.

After transferring £30,000 to bank premises account and £100,000 to reserve fund, we are in a position to pay a dividend at the rate of 12½ per cent. on both our "A" and "B" shares, and carry forward to next year's accounts £85,406 1s. 3d., as against £148,423 12s. 3d. brought in.

HANDLING OF CLOTHING COUPONS

An interesting innovation has recently been suggested to the banks by the Board of Trade for facilitating the handling of clothing coupons. At present every coupon deposited by the public with the retailer has to be passed back through the various processing trades until it ultimately reaches the original producer, and it is to short-circuit these channels that the banks are to be asked to open a separate coupon account for every trader concerned, the currency being in coupons instead of pounds, and these coupons will only pass once from the retailer to his bank. If we realise the number of coupons involved and the vast amount of work entailed in handling them, the scheme has much to recommend it, but we cannot ignore the fact that it will place considerable further work on the bank staffs, which, I am afraid, can only be regarded as one of the many extra duties incidental to the war.

STAFF CONTRIBUTION TO NATIONAL EFFORT

With regard to our staff, we now have nearly 400 members serving with H.M. Forces in various branches of the Services, and some 60 more are waiting to go by arrangement already made with the Ministry of Labour, and I much regret to have to report the following casualties, namely—one killed, one missing and three prisoners of war. To their relations and friends we take this opportunity of offering our sincerest sympathy.

To meet the gaps caused by these withdrawals in our personnel beside closing a number of branch offices, a large temporary staff has been engaged, and to these, and to our permanent staff alike, we would wish to express our best thanks and keen appreciation of the splendid manner in which they have performed their duties in the bank, and, what is more, have willingly devoted their spare time to the various forms of Civil Defence. In other words, the troubles and difficulties of an exceptional year have been surmounted and the work of the bank carried on in its best traditions. And finally, to our general manager, Mr Thomson, the assistant general managers and other officials of the bank, our special thanks are due for the extremely efficient manner in which they have discharged the duties and responsibilities of their respective positions in these anxious times.

The report and accounts were unanimously adopted.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED

THE AMERICAN ASSETS

SIR HUGO CUNLIFFE-OWEN'S STATEMENT

The thirty-ninth annual general meeting of the British-American Tobacco Company, Limited, was held, on the 2nd instant, in London, Sir Hugo Cunliffe-Owen, Bart., the chairman of the company, presiding.

The chairman, in the course of his speech, said: Taking the assets side of the balance-sheet first, you will have observed that investments in shares and bonds in subsidiary companies at cost or under, amount to £24,011,458, showing a reduction of £5,246,333. This reduction is almost entirely accounted for by the redemption of bonds and shares in a subsidiary company in the United States of America.

Loans and current accounts with subsidiary companies (less provision for doubtful accounts) have increased during the year by £88,059. This represents additional advances to subsidiary companies for the purpose of carrying on their business. Investments in shares and bonds in associated companies, at cost or under, and loans and current accounts with associated companies (less provision for doubtful accounts) together show an increase of £156,192 over the corresponding figure for last year. Apart from the purchase of a small number of shares in an associated company, the balance represents increased advances to associated companies in the normal course of business.

You will notice that, during the year, we have invested £3,053,125 in Government securities. This is in addition to purchases of Government securities by subsidiary and associated companies in this country, to which I referred in my speech last year. During the year under review the value of stocks of leaf, manufactured goods and materials, at cost or under, has decreased by £301,112. This is due to larger shipments of leaf tobacco from our stocks to associated companies in various parts of the world. Cash at bankers (in England and abroad), in transit and at call has increased during the year by £2,261,869. Since the end of the year under review, however, your company has purchased Tax Reserve Certificates to the value of £2,500,000.

This brings me to the last item, namely, profit and loss account. This account shows a net profit for the year, after deducting all charges and expenses and providing for taxation, of £4,087,565, a decrease of £777,877. The directors recommend the distribution on February 12th next of a final dividend (free of United Kingdom income-tax) on the issued ordinary stock of 3d. per £1 of stock, amounting to £296,972, leaving £2,338,157 to be carried forward.

POSITION IN U.S.A. EXPLAINED

In the early part of last year your directors were advised that it would be necessary to dispose of investments in a subsidiary company in the United States of America, in order to provide His Majesty's Government with additional U.S. dollar funds. It was subsequently agreed, however, that provided we could obtain by some other means an amount of U.S. dollars equivalent to what we could expect to realise from the sale of the American business under the conditions then existing in the United States, we would not be compelled to divest ourselves of all interest in the company.

The value of the American business as a going concern was assessed by experts in the United States at \$40,000,000. After protracted negotiations, our subsidiary company in the United States was successful in obtaining a loan of \$40,000,000 from Reconstruction Finance Corporation, which is, in fact, a corporation sponsored by the United States Government. This loan was used by our subsidiary company firstly to repay a loan of \$15,000,000 from one of the New York banks. The balance of \$25,000,000 was used to redeem all outstanding bond issues, and to purchase outstanding preference shares and certain other investments owned by your company.

As a result of the transaction your company received the sum of \$25,000,000, which was placed at the disposal of the Bank of England in exchange for an equivalent amount in sterling. Your company still continues to own directly and indirectly the whole of the ordinary capital of the American subsidiary company. One of the conditions of the loan by Reconstruction Finance Corporation was that our subsidiary company in the United States

could pay no dividend on their ordinary shares for a period of five years, or until at least \$10,000,000 of the loan had been repaid, whichever is the later.

It is to this fact that the reduction in your company's income for the past year is largely due. However, as the agreement was only made in the middle of your company's past financial year, the full effect of the restriction on the declaration of dividends by the subsidiary company has not been reflected in the accounts under review. While the temporary loss in income is regrettable, it is well to remember that your company has received, as a result of the deal, a sum no less than would have been received had your subsidiary company in the United States been sold outright, yet your company still continues to own the same interest in the ordinary shares that it held before.

INCREASED TAXATION

Apart from the loss of income from the United States, to which I have referred, we have again had to suffer the effects of substantial increases in taxation in this country, and, indirectly, the effects of substantial increases in taxation on our subsidiary and associated companies operating in various countries abroad. Not only have income-taxes been increased, but excess profits taxes have also been enacted in various countries, which largely preclude our obtaining the benefit of increased earnings of our subsidiary and associated companies. In view of all these circumstances, I think you will agree that the results for the past year cannot be considered unsatisfactory.

I feel sure you would like me to say something with regard to the prospects for the current financial year. In spite of the difficult conditions that have prevailed in China for some long time past, the business of your associated companies in China was well maintained up to the time of the declaration of war by Japan on this country. The occupation of China and Hongkong by the Japanese Forces means that we no longer have any contact with, and for the time being can receive no dividends from, your associated companies in this area.

I am sorry to say that this means a serious loss in income to your company which must continue until such time as normal intercourse with China is resumed.

In view of all the foregoing, and taking into account the further temporary loss in income from your company's investments in the United States of America, to which I have previously referred, you will not be surprised that your directors have decided to declare the first interim dividend (free of United Kingdom income-tax) for the current financial year at the reduced rate of 5d. per £1 of stock.

DIVIDEND POLICY

In the past your directors have been in the habit of declaring interim dividends quarterly, but, with a view to economy, especially necessary at this time, your directors propose, instead, that interim dividends declared shall be payable half-yearly in future. The intention is to declare a second quarterly interim dividend payable on March 31st of this year; a third interim dividend payable on September 30, 1942, in respect of the six months' period from April 1st to September 30, 1942, and half-yearly thereafter.

Any interim dividend declared for the period October 1st to March 31st in each subsequent year will be paid on March 31st, together with any final dividend which it may be decided to distribute out of your company's profits during the preceding financial year. You will note that this distribution of interim dividends half-yearly instead of quarterly will still ensure that you will receive such dividends within the tax year, as previously. While it is impossible to forecast what contingencies may arise in future and subject to any further increase in taxation in this country, your directors anticipate that profits will be sufficient to justify the declaration of an interim dividend at the rate of 5d. per £1 of stock on March 31, 1942, and a proportional one—that is to say, 10d.—on September 30, 1942.

The report and accounts were unanimously adopted.

BANK OF NEW SOUTH WALES

AUSTRALIA'S WAR EFFORT

At the ordinary general meeting of the Bank of New South Wales, held at the head office, Sydney, on Friday, November 28, 1941, the chairman, Sir Robert W. Gillespie, President of the Bank, moved the adoption of the report and balance-sheet.

The following are extracts from his address:—Australia can look back with pride upon an ever-increasing flow of war materials, not only for its own needs but for those of the rest of the Empire and of our Allies. Australia has virtually full employment to-day, and urgently needs greater production of war materials and further enlistments in the Forces.

Certain sections of the community have criticised the banks and called them war profiteers because they benefit from credit expansion by receiving additional deposits. Bank profits are, in fact, extremely low when compared with those of other Australian businesses. The banks proved their good faith by voluntarily entering into an agreement with the late Government to limit profits and to give full co-operation in checking inflation and aiding the war effort generally. It is now proposed to determine the relationship by regulations, nominally to achieve the same ends. There are many sound reasons, based on national interest, why the banks should not be subjected to rigid political control. We are not in agreement with the Government on this matter, but we shall not allow this to influence our readiness to contribute to the war effort.

AUSTRALIAN INDUSTRIES

The war has proved a very powerful stimulus to Australian industry. This year has shown an impressive increase in the production of arms and equipment for the fighting forces. The old problem of unemployment has given way, at least temporarily, to one of finding men for jobs. Regulations have restricted the extension of non-essential undertakings to a large extent, but little co-operation exists between the various controlling bodies, and no well-defined system of priorities has been designed to release the maximum resources for our most urgent needs.

At this time last year, after a year of war, a certain amount of stability had been restored to the primary industries by British contracts to purchase large quantities of Australian produce. Early this year, however, the increasing seriousness of the shipping shortage made vital changes necessary in the contracts and led to temporary confusion. I drew attention last year to the need for reorganisation if primary producers were to contribute their utmost to the war effort. Change in methods of processing many products has been necessary in order to supply Britain's urgent needs. In every case emphasis has to be placed on reducing bulk.

Despite the reduction in available shipping, Australian overseas trade in the second year of the war was maintained at a high level. Higher average prices of both imports and exports to some extent concealed the fall in volume. In none of the last three years has the surplus of exports over imports been sufficient to meet overseas interest payments, and yet London funds have risen. A substantial addition was made to the funds by the British Government's purchases of export commodities, but a greater addition is derived from the provision in Australia of a wide range of materials for Empire and Allied Governments. It is expected that London funds this year will increase sufficiently to enable Australia to do without financial assistance from the British Government in providing for war expenditure abroad.

NEW ZEALAND

New Zealand has had some creditable achievements in the second year of the war. Symptoms of inflation are even less evident than a year ago, and the rise in prices has been definitely slowed down. The big increases in taxation introduced with the 1940-41 Budget probably helped to bring spending power more into line with goods available for consumption. New Zealand's contributions of manpower to the fighting forces have been made at great sacrifice to the industrial organisation.

There has been less movement in trading bank figures in the past year than for some time. The effects of war finance in New Zealand have been very different from Australia. In New Zealand employment and wages were already at a high level before the war and the financial policy pursued had made deposits high.

Full copies of the speech may be obtained from the London office of the Bank, 29, Threadneedle Street, London, E.C. 2.

DALGETY AND COMPANY, LIMITED

THE WOOL POSITION

The adjourned fifty-seventh annual general meeting of Dalgety and Co., Limited, was held on the 5th instant at 65-68, Leadenhall Street, London, E.C.

Major-General Sir John H. Davidson, K.C.M.G., chairman of the company, presided.

The following is an extract from the statement by the chairman which had been circulated with the report and accounts and was taken as read:—

The recent extension of the war by the wanton attack made by Japan on America and the British Empire has brought hostilities to the doorstep of the Commonwealth and the Dominion. The war effort in both these countries and Great Britain has been accelerated and will no doubt be further intensified. Apart from the numbers, efficiency and valour of the men already on active service, the Commonwealth in its recent Budget has voted the immense sum of £220,000,000, while the Dominion has voted £NZ70,000,000 for war purposes during the current year. It is our task to facilitate the war effort to the utmost degree. While taxation is a heavy burden and may yet rise, it must be nearing saturation point. There is, however, still much that can be done by the people both at home and overseas in the restriction of spending and ensuring great increase in lending to the Government for the prosecution of the war.

As regards the business of the company during the past year, you will realise that my remarks must be restricted. Fair prices have again been obtained by growers for their wool, due to the purchase by the British Government of the entire clips from both Australia and New Zealand. Last year's Australian clip has been estimated at 3,611,923 bales, of which practically the whole amount has been disposed of, and the gross value was £A60,937,986. It is not expected that there will be much change in the Commonwealth wool production this season. In New Zealand last year's production was estimated at 948,163 bales, which was a record, and the value of the wool realised was £NZ17,273,081. It is predicted that there will be little change in the 1941-42 production, so that a satisfactory clip is again to be expected. The company secured its due proportion of wool disposed of, and in 1940-41 we sold in Australia, New Zealand and London 663,165 bales.

PROBLEMS OF ACCUMULATIONS

Last year reference was made to the probability of accumulations due to the loss of Continental markets and the bearing this would have on marketing problems after the war. That danger still remains. The strain on shipping has created a serious storage problem, and in Australia this has had to be met by the provision of stores erected by the Commonwealth Government. Shipments have been on a smaller scale than in the previous season, when it was found possible to lift the bulk of the clips of Australia and New Zealand.

Fortunately, great relief has been afforded by the United States of America, where, in addition to the wool which is being shipped for storage under what is termed the Strategic Plan, large quantities have been purchased by commercial interests, much of which has already left the Commonwealth. In fact, America has largely taken the place of the lost Continental and Japanese markets, and this may well continue under present circumstances. Australia, too, is using considerably more wool, not only for her own Army requirements, but also for those of the Armies of India and the Near East. Wool also figures among the supplies which are to be sent to Russia, which may prove another important outlet. The situation regarding stock accumulations in the countries of origin is therefore better than at one time might have been hoped. In East Africa our business still continues to expand satisfactorily.

The directors have decided to recommend a dividend on the basis of profits actually earned during the year, and to carry last year's surplus provision to reserve in view of the profound difficulties and uncertainties and the rising costs and taxation.

The report and accounts were unanimously adopted; the proposed final dividend of 4s. per share, less tax, making 7 per cent. for the year, was approved, and at a subsequent extraordinary general meeting a resolution was passed altering the articles of association with reference to the remuneration of the directors.

THE NATIONAL BUILDING SOCIETY

ANNUAL GENERAL MEETING—30TH JANUARY, 1942

POINTS FROM THE CHAIRMAN'S SPEECH

"The accounts now before you represent the ninety-second issue in an unbroken series, and they show how successfully the organisation has been adapted to preserve effectively the business of the Society.

"The aggregate of investment in shares and deposits exceeds £29½ millions. Over £800,000 in new share subscriptions have been received during the year. The total for share withdrawals was lower than the figure for any other year during the past decade. Mortgage repayments have been well maintained, amounting to £3,200,000.

"The financial position of the Society has become more liquid. Cash at the Bank exceeded £700,000, while investments are now well over one million pounds. . . . Our most considerable contribution to war finance is the very large proportion of our revenue paid in taxation. In these circumstances, interest rate reductions were announced, the interest paid on share accounts being reduced to 2½% per annum, free of income tax. . . . The gross equivalent yield is five per cent. for those shareholders liable to tax at the full standard rate.

"Reserves have been increased to the very respectable total of £2½ millions. To turn to the main support of the funds invested with us, those 58,700 carefully selected mortgages in all parts of Great Britain and Northern Ireland. . . . we welcome the security of the War Damage Act, 1941.

"We realize the paramount duty of maintaining our organisation, with all its strength and experience, to provide an essential element in post-war reconstruction. The application of our knowledge and training to the creation of more satisfactory living conditions for the community as a whole is a task upon which we shall be proud to be engaged."

CONSOLIDATED AFRICAN SELECTION TRUST, LIMITED

STATEMENT BY THE CHAIRMAN (MR. A. CHESTER BEATTY)

The adjourned seventeenth annual general meeting of Consolidated African Selection Trust, Limited, is to be held on the 10th instant, at Selection Trust Building, Mason's Avenue, London.

The following are extracts from the statement by the chairman (Mr. A. Chester Beatty) circulated with the report and accounts:—

The net profit for the year ended June 30, 1941, was £351,357, compared with £418,011 for the preceding year. The directors recommend a final dividend at the rate of 3d., free of income-tax,

Shorter Comments

Trinidad Leaseholds.—Directors announce final dividend of 10 (7½) per cent for year to June 30, 1941, making 15 per cent unchanged on the year.

Bengal and N. Western Railway.—Gross earnings for half-year 210 lakhs (202), working exes. 92 lakhs (92) net earnings 118 lakhs (110). The company's share of net earnings after Indian tax and other exes. £361,350 (£372,134). Div. 18 (16) per cent.

U.K. and Argentine Trust.—The auditor's report for 1941 shows certificates issued: £2,452,650 nominal capital 4 per

cent "A" Certs (£2,839,350 a year ago). 5½ per cent "B" Certs. £2,504,635 (same). £5,367,075 "C" Certs. (same). Deposited in trust £5,367,075 nominal British Govt. 3 per cent Conversion Loan (same). £6,030,700 (£6,417,400) of Argentine Govt. 4 per cent. Sterling Bonds, 1933. Balance of assets on cash and securities at cost £168,764 (£169,000). Forward £58,319 (£48,471).

Brazilian Traction. (U.S.\$000s).—Gross earnings December, 1941 \$3,748 (\$3,356). Net earnings (before depreciation and amortization) \$1,983 (\$1,715). Gross earnings 1941 \$42,770 (\$37,738). Net earnings \$23,034 (\$19,136).

Mount Lyell Mining and Railway.—Total revenue year ended September 30, 1941, £1,154,401 (£1,098,424). Mining and other expenses £806,325 (£754,265). Depreciation £63,018 (£64,446). Profit £169,318 (£183,095). Dividend 8½ per cent (10). Taxation £54,996 (£50,018). To reserves £300,000, making total Reserves £1,598,301. **Canadian Pacific Railway** (\$000s).—Gross earnings for December \$21,204 (\$16,336). Net earnings \$5,091 (\$4,806). Aggregate gross earnings in 1941 \$221,446 (\$170,965). Agg. net earnings \$45,958 (\$35,639). 10 days' gross earnings to Jan. 31st \$7,127 (\$4,964), agg. gross earnings in January \$18,660 (\$14,685).

(Continued at foot of column 3, page 204)

per 5s. unit of ordinary stock. This will make a total for the financial year of 6d., free of tax.

The market in gem stones continues to be restricted, but the demand for diamonds suitable for industry has expanded and we are making every effort to maintain our output in order to ensure adequate supplies for the war needs of our country and Allies.

Our reserves of proved diamond-bearing ground are ample to enable us to meet all likely demands for many years, and indications in our undeveloped areas are such that we may expect large additional reserves will eventually be developed.

The Diamond Trading Company's sales for 1941 were substantially higher than for the previous year. The benefit from our participation in the amount of these sales will be reflected mainly in the accounts for the current financial year. I believe that our profits for our financial year ending on June 30, 1942, will be at least as good as those for the year ended June 30, 1941.

ORIENT STEAM NAVIGATION COMPANY, LIMITED

RESERVES STRENGTHENED

The adjourned forty-second ordinary general meeting of Orient Steam Navigation Company, Limited, was held, on the 29th ultimo, at 122, Leadenhall Street, London, E.C. Mr I. C. Geddes presided.

The following is from the statement circulated with the accounts:—The amounts due at the time of the previous balance-sheet for recoveries under insurance policies in respect of lost steamers were received during the year. Pending the time, when new ships can be built to replace those lost, the money has been put into Government War Loans. We have also invested in this way any surplus cash from the reserves made for depreciation and other matters. The investments in the present balance-sheet accordingly show a considerable increase on the previous year's figures; and there is a corresponding increase in the income from investments included in the profit and loss account.

We estimate that we are free from liability for excess profits tax for the period from the start of the tax up to June 30, 1941. We have, however, made provision for a part of the income-tax that will fall on us next year on account of this year's profits. We have also set aside a further £50,000 to strengthen the pensions reserve fund and £100,000 to general reserve.

Under present conditions of service, the opportunity to keep your ships up to the same high standard as in peace-time is lacking. When, however, the ships are returned to us there will be an accumulation of deferred repairs which under the terms of hire are an obligation of the owner; we have made some provision for this.

Peace-time requirements.—When the time comes for the reconditioning of ships, it seems inevitable that an impoverished world will require less first-class accommodation than that provided in our ships when they were laid down. Then, too, air travel is another factor which may affect the flow of first-class travel by sea. It is very necessary that Government should give guidance as to how far they intend to weigh the scales in favour of air. Government policy will depend, not only how we reconstruct our ships, but also our outlook on future building.

The report and accounts were adopted.

COMMODITY AND INDUSTRY NEWS

Cotton.—The market for cotton yarn and cloth has been rather quieter. Spinners and manufacturers have no difficulty in selling and disposing of the present limited production, but buyers have displayed rather less enterprise and trade has been adversely affected by various uncertainties which exist. On the export side there is some apprehension about the effect of present inaccessibility of many markets in the Far East. It is being suggested that the Far Eastern quotas should be transferred to markets which are accessible, but no official announcement has yet been made. In the circumstances, to a large extent, operations have been confined to Central and South America, Canada and South Africa, with occasional small lots for Egypt and West Africa. Demand for the Ministry of Supply has been persistent in a variety of fabrics. A few more sales have been reported in utility cloths for the home trade. Spinners of yarn have continued to ration supplies. Most of the orders booked have been to meet the requirements of Government work. The Control of the Cotton Industry (No. 28) Order, which came into operation on February 5th, amends the provisions in regard to the method of arriving at the raw cotton basis for American-type yarn prices, but present prices remain in effect unchanged.

Tea Dealings.—The Minister of Food has made an Order, which is to be published shortly, under which no wholesaler or retailer will be permitted, except as otherwise provided in the Order, either to supply or obtain tea without a duly authorised permit. This Order, the Tea (Restriction on Dealings) Order, will come into force on February 9th. Its general effect will be to tighten up the system of tea allocation.

Imports With Enemy Content.—The Board of Trade has made the Import (Certificates of Origin and Interest) Order, which reduces the percentage of enemy content allowed in the goods covered by certificates of origin and interest from 25 to 5 per cent. These certificates, signed by a British consular officer, state that of the cost of the goods described, not more than the permitted percentage was derived from materials grown or produced or from work done within enemy territory, and that no person who is an enemy has any interest in the goods described. The new Order comes into operation on April 1st, and affects imports of many kinds from Liberia, Liechtenstein, Portugal, Spain, Sweden, Switzerland and Turkey.

Raw Wool Prices.—The present issue prices for wool and tops for the home civilian trade are to remain unchanged until June 30th. The Wool Control has made no announcement on future prices for the export trade. These are fixed until April 15th for yarn for export and until June 15th in the fabric export trade.

Poultry Foods Rationing.—In view of the limited supply of maize available for feeding purposes, maize and maize products and compound chick rearing foods are now obtainable only against chick food coupons. Manufactured and imported maize meal may continue to be supplied against ordinary ration coupons. Not more than 40 per cent of the value of chick food coupons may be taken in maize, either as maize meal or in the form of maize products included in compounds.

Hand Knitting Yarn.—The Board of Trade announce that the period during which hand knitting yarns measuring less than 100 yards per ounce may be sold at 4s. per coupon has been indefinitely extended. The period was due to end on April 30th. The temporary rating of 8

ounces per coupon for yarn containing 16 per cent or less of wool and for yarn sold retail at less than 4½d. per ounce, applies only until February 28th, as originally announced.

Use of Gold.—The Board of Trade have made an Order (The Limitation of Supplies (Miscellaneous) (No. 14) Order, 1942) which revises the conditions in which manufacturers may supply controlled goods containing gold. Since January 1st registered persons have not been allowed to supply controlled goods of class 15 (jewellery, and goldsmiths' and silversmiths' wares) of their own manufacture if the metal content of these goods includes 37½ per cent, or more, by weight of gold. The prohibition will in future apply to goods consisting of or containing any gold finer than 9 carat, and it will extend not only to class 15 but also to class 14 (fancy goods, including cigarette cases, cigarette holders, fountain pens, etc.). The prohibition also extends to goods of these classes manufactured by unregistered persons. In future therefore manufacturers may use 9 carat gold, but no finer, in the making of these goods. The new Order also corrects two small errors in the Limitation of Supplies (Miscellaneous) (No. 13) Order in the list of goods excepted from control in class 12. The first item of this list will now read: "Cinematograph film of standard width of 1½ ins. in lengths exceeding 100 feet."

INDUSTRY

impair the symmetry of the scheme. The Admiralty has "contracted out" over a wide portion of its field of production. Coal, it seems, may not be included with oil and electricity among the new Ministry's ancillary duties of supervision. The responsibilities of executive Ministers and their right of appeal to the Minister of Defence (Mr Churchill), or to the War Cabinet (Mr Churchill again) remain unimpaired. Lord Beaverbrook has "direct access" to the controls administered by the Ministry of Supply and the Ministry of Aircraft Production. He will "direct" the various regional organisations and capacity clearing centres. But the administrative relations between the controls and the departments up to now responsible for them are not to be upset. The area boards have been under the Production Executive for some time; and the substitution of a Minister of Production is not to "affect the relations between departments and their regional officers." All this may reasonably be no more than a recognition of the fact that the Ministry of Production is, very properly, not to be a giant administrative department. But, admittedly, it may portend something else less desirable. Clearly, areas of sovereignty have been formally marked out and hedged round by safeguards. It remains to be seen how far formality will in fact become friction and conflict. It must be admitted that the upshot might be capable, in that case, of fatally crippling the new order; but there is no reason to pre-suppose this. Ministers must remain responsible for what they administer. As Mr Churchill has pointed out, it is not a question of legal status, but of good will; and if the good will is lacking the contestants should not be Ministers of any kind.

Perhaps the most sobering doubt about the new arrangement is the fact that Lord Beaverbrook cannot be in two places at the same time. His first function is to take "prime responsibility for all the war production" in this country; his second is to handle all discussions with the United States about munitions and raw materials. The Prime Minister contends that these two functions are inseparable; and it is true that Anglo-American production must be more and more intimately dovetailed. But the real question is whether, physically,

the two functions are not incompatible. Mr Churchill, by way of analogy, adduces Mr Donald Nelson, the Production Supervisor of the United States. But Mr Nelson is not his country's representative on the combined Boards set up here and in the United States to deal with munitions assignment and raw materials. Production can be decided internationally. It can only be controlled and directed nationally; and it is a whole-time job. As it is, Lord Beaverbrook will go on his travels again; and it may well prove to be an invidious position for all concerned that Sir Andrew Duncan, the new Minister of Supply, who (in addition to his own heavy departmental duties) is to speak for Lord Beaverbrook in the Commons, will be his deputy when the Minister of Production is away.

It can only be said at this stage that the new Ministry may work well; there is no insuperable reason why it should not. If anything is really in question, it is the Minister, not the Ministry. Apparently Mr Churchill is now wholeheartedly behind the arrangement which his critics have wanted for so long. The most surprising revelation in recent discussions is that the Prime Minister has wanted a Ministry of Production all along. He remembers with satisfaction the combination of supply and aircraft production in his Ministry of Munitions during the last war. As indeed his critics might have reminded him sooner, it was a comprehensive, authoritative and centralised Ministry of Supply that Winston Churchill urged upon the Chamberlain Government in the dead days before the war. The Prime Minister told all this to the House on Tuesday. It seems that the Production Executive was never more than an expedient compromise, made necessary by the fact that in the winter of 1940-41 Lord Beaverbrook was too ill to take on the large job. Now he is well again, and there is a Minister of Production, as everyone, it appears, has wished, on both sides of the Atlantic. The difference between Mr Churchill and those who are still, on what must be recognised as very good grounds, sceptical is that, to him, Lord Beaverbrook is the only possible choice, while, to them, he is a gamble.

Middle Eastern Outlook

THE Middle East still lies outside the actual zone of conflict, but each fighting season must make its immunity more precarious. The area it covers offers Hitler too many strategic and economic advantages for anything short of decisive defence or previous defeat to hold his armies back. It is one way to India—if the Japanese threat develops, one prong of a gigantic pincer movement; it opens up a vulnerable Russian flank; its oil could float the Axis war effort almost indefinitely. Even though the direction of Hitler's spring offensive is still in doubt, it would be folly to minimise the possibility that control of the Middle East is the next objective.

The situation there is obviously far healthier than towards the end of last winter. In Iraq, the Rashid Ali Government were preparing for their *coup d'état*, Dentz was intriguing with the Axis disarmament commissions

in Syria, and in Iran the momentum of German influence and propaganda was gathering force. Had all these crises come to a head simultaneously and been backed by strong German intervention through Turkey, it is almost certain that Axis troops would at this moment have been at the frontiers of India. Nowhere would they have found effective opposition. The Allied armies were far distant and outnumbered, the local governments and peoples riddled with treachery and subversion.

The position to-day is very different. The Turkish army is still intact, and since December last has been officially in receipt of Lend-Lease material. The Government has strongly reaffirmed its defensive alliance with Great Britain, and at the reopening of the Kamutay last autumn President İnönü flatly referred to the "independence of the Balkans" as one of the cornerstones of Turkish foreign policy. In Syria, the Free French have replaced the craven men of Vichy, independence has been formally granted to the Syrians and the Lebanese, and a friendly Syrian President, Sheikh Taj Addin-el-Husni, is co-operating warmly with the British and French authorities. In Iraq, the Government of General Nuri-es-Said is busy liquidating the Rashid revolt. A widespread purge has cleared the army, the administration and the teaching profession of pro-Axis elements, and the five ringleaders of the *coup d'état* have been condemned to death by an Iraqi court-martial. In Iran, the long awaited treaty between Iran and the two occupying Powers, Great Britain and Russia, has at last been signed, and according to its provisions the Allies are to maintain garrisons in the country, use its communications, and employ its labour force for as long as the war lasts. Finally in Egypt, an

end has been put to the vacillations of the young king and the machinations of his advisers, and a strong popular Wafdist government, pledged to loyal maintenance of the Anglo-Egyptian Treaty, has come into power.

This surprising change for the better is due in part to Hitler's, in part to the Allies', action. It is difficult to believe that if the Nazis had devoted all their resources in May and June last year to backing the intrigues of Rashid Ali, General Dentz and Reza Shah Pahlevi, the Allies would have been able to prevent Axis control of the whole region, still less to secure control for themselves. It was Hitler's decision to attack Russia that entailed the Nazis' abandonment of all their hopeful quivering elements in the Middle East. Yet, even though this decision was crucial, it remains true that thereafter the action of the Allies shaped the course of events. Great Britain's active intervention in Iraq and Syria, and the Russo-British intervention in Iran, have been followed by the Russians' long resistance and their great winter counter-offensive.

Nor has the Allies' increased influence been due only to the power factor. In all the Middle Eastern countries the Allies have provided models of how Great Powers should deal with less powerful neighbours. In Iraq, for example, the armistice terms went out of their way not to bruise Iraq's sense of independent sovereignty. No attempt was made to trespass on internal administration; the Iraqis were left to clean out their own traitors; the army was not compelled to abandon its arms and equipment; and little or no pressure was put on the Prime Minister, Jamil Madfai, General Nuri-es-Said's predecessor in the period immediately after the revolt, to take action against malcontents which would give credence to Axis tales of aggressive British imperialism. Again, the treaty with Iran provides in the most meticulous way not only for the safeguarding of Iran's sovereign independence but for the country's total immunity from any of the unpleasant consequences of occupation. No charges are to be levied for all the vast work of improvement which is being carried out on Iran's ports and means of communication, and, in the event of hostilities, the Iranian army is to provide only for the maintenance of internal order. All the fighting is to be done by the two Allies. The comparison with the fleeing of Europe under the "new order" and the millions of Axis satellites sent to die on the battlefields of Russia is too obvious to need greater emphasis.

The position is thus incomparably better than a year ago. But it would be folly to suggest that all is well. Until Hitler is decisively defeated, the most unsettling factor in the Middle Eastern situation is the fear of backing the loser. This fear plays straight into the Nazis' hands, for in the hour of victory they can be guaranteed to be ruthless to former opponents, whereas the British can be guaranteed to be magnanimous. The Iranian Government's long hesitation before signing the Anglo-Russian-Iranian Treaty was due not only to the delays entailed by

the moving of the Russian Foreign Commissariat to Kuibyshev but to the Iranians' overmastering fear last autumn that Germany's advance in South Russia was irresistible, and that the Panzer divisions would very shortly make their threatening appearance on the Caucasian frontiers of Iran.

Axis propaganda plays on these fears, and adds other suspicions and anxieties. A new propaganda centre has been established at Athens, where dissident Syrians and Iraqi are collected, and whither, it is rumoured, Rashid Ali and the Mufti of Jerusalem are to be sent. In this propaganda, two lines are particularly effective, the first that Britain has "let Russia in," the second that British—and French—imperialism is using the emergency to undermine the independence which it "grudgingly" granted to the nations of the Middle East. In Turkey, the rumours circulated at the time of Mr Eden's visit to Moscow—of Russian control of the Straits, of a "bolshévised" Europe—were so vivid and disturbing that diplomatic *démarches* were necessary to reassure public opinion. Again in Iran, the presence of Russian forces is linked with the Persians' deeply-rooted fear of Russian expansionism, and Britain is blamed for both. The line of British and French imperialism is played more vigorously in Syria, Iraq and Egypt. And in Syria, at least, the situation in part assists Axis propaganda. The extreme Syrian Nationalists appear to be no more reconciled to Free France than to Vichy. The appointment of Sheikh Taj Addin is resented on the grounds of his friendliness with General Catroux, the Free French Commander-in-Chief, and the Nationalists support M. Atassi, who was President in 1939 when the Syrian constitution was suspended.

There are only two ways in which these disintegrating factors in the Middle Eastern position can be met. Fear of Hitler's victory can be countered only by defeating the Axis and by effective local defence. This depends in part upon world strategy, where the outlook is balanced between Russia's successes and the United States' entry into the war, on the one hand, and the British reverses in the Far East and Libya, on the other. It also depends upon the amount of men and materials that can be pumped into the Middle Eastern defence zone. The United Nations have been hard at work throughout the winter perfecting a strong defensive line from Alexandria to the Caspian. It has yet to stand up to the test of battle.

The other centre of disturbance—fear of Russia, fear of British imperialism, fanned by skilful Axis propaganda—can only be countered by positive and effective propaganda on the part of the United Nations and a much more concrete and detailed demonstration of how the framework of international relations established in the Atlantic Charter will work out for the nations of the Middle East. The United Nations have yet to devise their "new order." They cannot rely for ever on the unattractiveness of Hitler's version.

Shopkeepers in Distress

THE second interim report of the Board of Trade Committee on retail trade is a disappointing document. The account it gives of the ills to which war-time shopkeeping is heir is admirable. "The governing facts," limited and dwindling supplies, restrictions on the price and quality of goods and the withdrawal of labour, are lucidly stated with their likely implications for all the different classes of shopkeeper. But this is a description in the most general terms, which might have been written at any time during the last eighteen months or two years without any appreciable research. There is no evidence that any clinical scrutiny has been made of specific cases of dislocation and hardship; and the Committee, after nine months, is not yet able to recommend remedies. The trade associations, meanwhile, have apparently been more eager to oppose wartime restrictions than to assist in making them operate fairly and efficiently.

A process of contraction has been going on for a long time and on a large scale, without any alleviation. It is only by the curtailment of supplies for civilians that the physical transfer of materials, plant, labour and transport facilities to war purposes can be effected. The measure of the contraction that must already have taken place in retailing is the present immense output of munitions and the great size of the armed forces. It has been carried through by attrition, distress and bankruptcy. When this Committee was set up last May, it may still have been mainly a problem of expediting the release of labour and resources from the retail trades. Since then, however, the devil has taken the hindmost among the shopkeepers. It is, of course, still imperative to ensure that the civilian "ration" of necessities is sold and distributed, as well as manufactured, by as few hands as possible. That is why no plans for "concentrating" retail trade can be entirely too late. It is true, too, that the natural disposition of the individual shopkeeper, in default of any guidance or guarantees about the future, to "hang on," until he is finally crushed by the weight of dwindling turnover, falling profit margins, and immovable rates and taxes, is a considerable and serious cumulative drag on the release of resources for war-work. But, while compensation for shopkeepers in 1940 would have been an instrument of war economy, in 1942 it will partake of a relief measure.

It is, of course, quite true that concentration cannot be applied to retail trade as it can to manufacturing industry. In industry, factories employing fewer than 20 persons were left out of the concentration schemes. In the non-food trades, which are the Board of Trade Committee's concern, there are perhaps 300,000 shops employing a million and a quarter persons—a remarkable and important reservoir for wartime manpower and womanpower. Establishments employing only a handful of persons represent something like nine-tenths of the total establishments and conduct perhaps half of the trades' total turnover. But the fact that concentration on the model of industry is difficult, if not impossible, in shopkeeping is not an argument for doing nothing.

Wartime Restrictions

This is not to suggest, of course, that retailing has been spared from official control. The reverse is rather the case. In a very real sense, the contraction of retail trade has been deliberately contrived; the trouble is that its consequences, in human terms, have been left unguided—with results that cannot be fully known until exact researches have been done. Supplies to retail trade have been restricted; first, by the raw material controls which, as soon as the war started, restricted supplies to manufacturers; secondly, by the Limitation of Supplies Orders of 1940 which imposed quotas upon civilian suppliers; and, thirdly, by the rationing of consumers for

clothing and furnishing fabrics which was introduced last year. The quality of supplies has been consciously influenced, in the clothing and footwear trades, by the introduction of standard "utility" goods, relatively inexpensive to buy and not costly in the use of labour for their manufacture. Prices have been controlled; in 1939, it was laid down that only the extra costs due to war, including those due to the fall in turnover, could be added to the pre-war prices; and in 1941, the control was made more rigid when the Board of Trade was given power to fix maximum prices or maximum margins through the whole process of distribution from the manufacturer to the retail shop. It is estimated that, under the rationing scheme, only half the clothing available before the war is now forthcoming. Only two-thirds at the most of the pre-war supply of footwear (leather and rubber) is available. Only one-eighth of the yardage available before the war for household linens and blankets is now supplied. Supplies of china, earthenware and glass are one-fifth of pre-war supplies and those of toilet preparations one-quarter. In 1942, there will be no new wireless sets for civilians. The supply of stationery has been cut by three-quarters. The only outstanding exception is the case of tobacco and cigarettes, where more supplies are being handled by retailers than before the war. By the two National Service Acts of the war, nearly two-thirds of the men in retail trade are liable to be taken away and, including the Registration for Employment Orders, well over one-third of the women; it is estimated that one-half of the labour force of retail trade is now subject to calling up for service with the armed forces or for war-work, and there is no reservation, only deferment in individual cases.

The Incidence of Loss

The control of prices and quality, in its latest stages, has considerably restricted the ability of retailers to adapt themselves to the more stringent conditions of wartime. The Committee describes the Control of Prices Act of last year as "a clear notice to retailers that prices cannot be unreasonably loaded with increases in expenses due to the declining volume of turnover." The shopkeeper, by the strict control over his margins, and by the pressure upon him to sell inexpensive standard goods in the case of clothing and footwear, is robbed of what the Committee calls his "freedom to manoeuvre," his adaptability. From the beginning of the war until last year, he was able to make adjustments in his business, to go to new sources of supply, to seek out new customers, to adapt his price schedules, to draw upon his stocks and his financial reserves. Now, these cushions have very largely gone. His fixed items of expenditure, rent, rates and overheads remain, but, in the new imposed price structure, his total profits are necessarily falling away; he is being squeezed out by a process which, as between individual shopkeepers, is simply hit-or-miss.

Nor does this process fall equally upon all classes of shopkeepers. The Committee estimates that half the country's retail trade in non-food products is done by what they call unit shops, independent businesses with one owner or a few employees; and wartime changes hit small shopkeepers very differently from the department stores, the multiple shops, the chain stores and the co-operatives, each of which groups probably handles ten per cent or more of the country's non-food turnover. The department stores can concentrate their business within their own structure by closing down departments. The chain stores can close down branches. For the "unit" shops, it is simply a problem of survival; in Glasgow, where an independent enquiry has been made, more than one-quarter of the small non-food shops have already been closed down by *force majeure*. The prob-

lem as the Committee sees it is the problem of the small shopkeeper. What can he do? If he amalgamates with one or more of his competitors, there is the problem of the rent and rates which may still have to be paid upon his premises and of his re-entry into business when the war is over. If he closes down—"withdraws" as the Committee puts it—there is the immediate problem of relief for his liabilities and the eventual problem of his reinstatement. Until now, his tendency has been to hang on until driven out. There has been no relief in the law for him to have recourse to, until his capital has run out and he has become virtually insolvent, in which case the Liabilities (Wartime Adjustment) Act is available. The problem as the Committee leaves it is—what can be done about this situation? And the Committee is inclined to rely for its solution upon "voluntary agreement and co-operation among the retail traders themselves" whereby compensation could be provided by those who remain in business.

It should be emphasised that no argument on this matter should be simply a plea for "the small man." The problem is in the first place one of efficiency in war economy, and if it is demonstrable that the large stores can deliver the goods in wartime with the least use of manpower and other resources, then the small shopkeeper must be permitted to depart. There is a case for suggesting that the variety and local contacts of small shopkeepers are of especial virtue in wartime, but none for suggesting that they have any right to impede the war effort. Nor should the discussion be permitted to degenerate into a mere plea for shopkeepers, as such. Shopkeepers are citizens among many others. If the question of compensation for wartime losses and hardships is raised, the whole community is equally affected; and Mr. Churchill has laid down that to introduce general compensation would "open up a field to which there would be no bounds." Shopkeepers are not the worst-off members of the community. Soldiers and other members of the armed forces are the worst off, the worst paid, in the most danger and with the worst prospects. But shopkeepers and shop assistants, being very numerous, are very representative of a basic problem of wartime economy which has not yet been settled in any way. As potential soldiers or war-workers, shopkeepers bulk very largely; as returning citizens after the war, they will be equally numerous. They are representative of a national problem, a double problem, a problem firstly of wartime mobilisation and, secondly, of peacetime demobilisation. Is it possible to help them, and other citizens in a similar plight, now and when the war is over?

The Case for Compensation

It is a question, therefore, of seeing this particular problem of war economy through to its ultimate implications. We must know what we are doing. While the war is on, there is, and always has been ever since the war started, a sound case for compensating individuals for

wartime losses and hardships due to circumstances over which they individually have no control. After the war, those who have served will want work and a decent living. In the case of retail trade, within the strait-jacket of wartime restrictions, the big shops, the multiples and the chains are better off than the small shopkeeper; and the trade associations are apparently content that this should be so. In numbers of members, the associations are stronger than before the war, because they are looked upon as the only guardians of the shopkeepers' interests; but the majority of their individual members, the small shopkeepers, are individually very much weaker. The result is that the pressure towards quasi-monopoly, which was so evident before the war, is being much expedited, by the exigencies of wartime. There have been several signs of this—the pressure of trade associations to make maximum prices minimum prices also, and the demand of trade associations to restrict entry into the various retail trades. It may be that, in retail trade as in industry, the mechanism for wartime efficiency must inevitably smack of monopoly. But this problem should be faced by those who, like this Board of Trade Committee, are asked to report upon wartime problems. Have they, in other words, plans which will be fair to both the individual and the community, while the war is on; and have they a picture in their mind of the process of postwar unscrambling?

It would be unfair to let it be supposed that the Board of Trade Committee has no constructive proposals. As long ago as last July, it was plain that their wish was to see retail trade concentrated or "telescoped" by voluntary agreement, so that those traders who gained would compensate those who lost. They favour co-operative schemes for maintaining the shrunken structure of wartime retailing and for making possible its expansion again when plentiful supplies are available. The great mistake of the Committee is to leave it to the trade associations to decide what should be done. This is a decision which should be made only by the community through its Government. The Committee has proposed, in fact, that the Liabilities (Wartime Adjustment) Act or its principles should be made applicable to shopkeepers before they are destitute. Let the Government and not the trade associations consider this and make the decision—remembering that a remedy which leaves creditors to hold the baby, instead of debtors, is hardly a palliative, and certainly not a cure. Let the Government adumbrate the sort of schemes which it shall be incumbent upon the retail trades to accept. Above all, let the Government decide, for shopkeepers and for all citizens, how the burden of wartime losses shall be borne and how the opportunities of peacetime trading after the war shall be shared. There would seem to be two overriding conditions which the Government should consider in making their choice; first, the determination to root out inequity, so far as is humanly possible, while the war is on; and, secondly, the intention to restore the freest possible trade in commodities when the war is over.

Trouble in Argentina

IF the election of a Popular Front President in Chile should lead—as is generally expected—to the breaking off of diplomatic relations with the Axis Powers, Argentina will be left the only American State to maintain normal contact with Germany, Italy and Japan. This isolationism does not spring from any particular ideological sympathy for the aggressor States. It has its roots partly in an external circumstance, the political and industrial predominance of the United States, partly in an internal one, the political tension inside Argentina. Of the two, the latter is more important, since its nature—an acute divergence between popular opinion and the Government on the question of co-operative pan-Americanism versus isolated neutrality—prevents the Government from reacting fully to the remarkable

increase in American solidarity between the two wars or even to its own improved relations with the United States.

These have been chiefly in the economic sphere. Much of the old political hostility, which made the Argentina of President Irigoyen in the last war the coolest and most unco-operative of neutrals, still remains. Argentina has, it is true, attended the regular Pan-American Conferences which are implicitly under the auspices of the United States, but the Government's intention has been on most occasions to water down the resolutions for strong Pan-American action and to counter the undoubted leadership of the United States by a rather truculent show of independence. The Rio conference was no exception. The trouble is that neither inter-American confidence, nor the example of neighbouring countries, nor even the forbear-

ing "good neighbour" policy of the United States can settle Argentina's biggest political grievance—that of not being the leader of Latin America. All the other reasons for hostility towards the United States—fear of encroachment, desire to maintain close links with Europe, trade ties—are probably subsidiary to this psychosis of "near-Great Powerhood," a national aberration that has had curious effects in other Latin countries, nearer home.

In the past economics have buttressed Argentina's aloofness from the United States. Although the country bought and sold substantially there, the percentages were far smaller than those of other Latin American States. Until 1940 not more than about 10 per cent of Argentina's exports went to the United States in exchange for about 20 per cent of her imports. To the basic difficulty that Argentina's principal exports—grain and meat—directly competed with the strong farming interest in the United States were added a number of aggravating factors, for example, the United States embargo on Argentine meat or the exchange control regulations introduced by Argentina after 1931 (and still maintained with various modifications) designed to secure that Argentine imports should be taken from countries where exchange was available to pay for them—an arrangement which was satisfactory to Great Britain, Argentina's principal market, but less so to the United States.

The war has radically altered this situation. Europe in 1939 was taking about three-quarters of Argentina's exports and supplying about 60 per cent of its imports. By 1941, the continent, with the exception of Britain, was virtually cut off, although Argentina did manage slightly to increase its trade with Spain. This entailed a serious fall in economic activity and the piling up of huge surpluses of the staple commodities such as wheat, maize and linseed. The Government countered the crisis by increasing the country's trade within Latin America—largely as a result of a new trade agreement, Brazil's share in Argentina's imports has doubled since 1939—by encouraging increased industrialisation; by using its Grain Board to hold the surpluses and pay the farmers fixed prices; and finally by greatly expanding its trade with the United States. In 1939, the share of the United States in Argentina's imports was 17.2 per cent, in its exports 12 per cent; the corresponding percentages for 1941 are approximately 27.8 and 36.1 per cent.

The change for the better in Argentine-United States relations occurred late in 1940. Until then, Argentina's enforced reliance on the United States for all manner of essential industrial goods had produced a debit balance of \$31 millions. In September, the Argentine Government suspended all exchange permits for United States imports. This crisis proved the point of departure for easier relations. The Government negotiated two large dollar loans (\$60 and 50 millions) through the United States Export-Import Bank and the Currency Stabilisation Fund—a useful piece of legislation which the Argentine Congress subsequently blocked. Meanwhile the vastly increased needs of the defence programme in the United States were solving the problem. During the first ten months of 1941, Argentina's exports to the United States rose by 126 per cent. At the same time, rearmament was swallowing up the raw materials once available for United States exports. Argentina's purchases fell heavily, and by October, 1941, the country's credit balance was over \$53 millions. Under these conditions it became possible to envisage a trade treaty. For the first time in many years both countries needed each other's products. In May, 1941, negotiations were announced, and the treaty was signed in Buenos Aires in October. Though this treaty

POST-WAR AGRICULTURE

The recent article in *The Economist*, together with the ensuing correspondence from Lord De La Warr and Sir Daniel Hall, has been reprinted as a pamphlet. Price 6d. (post free 7d.)

Orders should be addressed to the Publisher, *The Economist*, 15 Lancaster Place, London, W.C.2.

does not solve the problem of grain surpluses, it provides a much larger market in the United States for a wider range of Argentine products, while on the Argentine side, it envisages the end of discrimination against dollar purchases.

Thus the Castillo Government has been far from unco-operative in the economic sphere. Its opposition to a closer understanding with the United States and to strong Pan-American solidarity is political and deeply involved in the domestic troubles of the regime. Dr Castillo, the Acting President, is bent on maintaining the Conservative ascendancy in the Government, in face of strong evidence that the country no longer has confidence in his party. It cannot keep office given the present state of public opinion without recourse to the "management" of elections (the process in the crucial provincial election of Buenos Aires is described in detail on page 224). Nor can it legislate in face of the determined opposition of the Radicals and Socialists in Congress. The reply of Dr Castillo has been to suspend Congress, to set up a semi-totalitarian control over publications and meetings, to make wide use of police powers, and finally to declare "a state of emergency" which gives a formal legal covering to arbitrary acts.

This suppression, both of the opposition and of public opinion generally, has an immediate bearing on the problem of co-operating with the United States and of breaking off relations with the Axis. The opposition and wide sections of the public are united in calling for "hemispheric defence," active solidarity with the United States, the end of diplomatic relations with the aggressors, and a thorough purge of the widespread Nazi activities in Argentina. These four points are the main planks in the opposition platform. It follows that Dr Castillo's Conservatives have tended to take an obstructive line on each of these points. They cannot afford to modify their policy for fear of playing into the hands of the opposition. It is probably untrue to say that they are themselves totalitarian by choice. For example, they have allowed Sr. Damonte Taborda to conduct his sensational investigations into Nazi activities. They have no objection to the democratic system, provided they can monopolise its advantages. But their position is challenged, and this fact alone makes them obstructive to the opposition's programme of clearing the Nazis out.

The fact remains that their policy of neutrality, isolation, and tolerance to Axis activities is profoundly unpopular. Unhappily the opposition itself is too ineffectual to benefit by this state of affairs. Apart from dislike of the Nazis and support for the democracies, the Radicals and Socialists have no programme and are split both between each other and among themselves. Their successful attempt to block the United States credit until the Government had "clarified its internal and international policies" also tended to discredit them with the public, and their lack of unified leadership has made it possible for Dr Castillo to introduce a semi-dictatorial regime with very little popular opposition.

The situation is clearly dangerous. Argentina is yet another example of a democracy going by default for want of sufficient inner cohesion and of parties trailing off into emasculated dictatorships for lack of a dynamic and realistic leadership and policy. So far Dr Castillo's regime is not actively Fascist. But other elements in the country, notably—and ominously—in the armed forces are in close touch with the Nazis, and are pressing for full-blooded national socialism. A military *coup d'état* was only just nipped in the bud last September, and the malcontents in army and air force have on the whole retained their office. If nothing is done to revive democracy, the drift dictatorwards seems inevitable, and the threat both to the American continent and to the Allied cause of the establishment of a Nazi bridgehead on the River Plate need not be underlined. It has not come to this yet, and there is no evidence that Dr Castillo is working for it—the Conservatives are as little anxious to lose their jobs to the Fascists as to the Radicals—but the dangerous possibility remains. Argentina is a country to watch closely in the next crucial months of world war.

NOTES OF THE WEEK

Quo Warranto?

The machinery for inter-Allied collaboration in the struggle against the Axis is taking shape; but, to the lay eye, its outlines are still somewhat blurred. Where Russia and China fit in is still uncertain. When Mr Churchill came back from the United States last month he announced that, in addition to the Anglo-American Boards for allocating munitions, shipping and raw materials, there would be an Anglo-American Combined Chiefs of Staffs Committee in Washington and a Pacific Council, preferably in London. It was known that Australia and New Zealand, on the other hand, preferred Washington to London for the Pacific Council. Last week-end, the tale was carried a stage further, when President Roosevelt announced that "two Pacific Councils" had been set up, and was announced that a Pacific Council had been set up, and was starting work, in London, with representatives of Ministerial status from Australia, New Zealand, Great Britain and the Netherlands—not the United States or China. Meanwhile, it had been announced in Washington that the Combined Chiefs of Staffs Committee spoken of earlier by Mr Churchill had begun work, with service representatives from the United States and Great Britain and with the specific duty, among others, of maintaining liaison with China, the Netherlands East Indies, Australia and New Zealand. At the same time, the view was expressed by the War Department that Washington is properly the "command post" for Pacific operations, just as London is for European and Middle Eastern operations. In default of more explanations, it seems likely that it was the Combined Chiefs of Staffs Committee, in its Pacific aspects, that the President was referring to, when he spoke of "two Pacific Councils." In spite of the fact that Australia and New Zealand are both represented in the London organisation, it seems certain that the decisions are going to be made in Washington. They cannot very well be made in the Pacific Council in London, because the United States is not represented there. It is all very confusing. In fact, there is no Pacific Council representing all the Pacific Allies, and insofar as there is an organ of Pacific decision in Washington, Australia and New Zealand are not represented in it. Possibly it is lack of information that makes the prospect so obscure. Even the status of General Wavell, Supreme Commander in the South West Pacific, is hidden by something very like a cloud. Mr Churchill said that the General would not be bothered by outside instructions; now, President Roosevelt announces that he only has control over the tactical use of the forces at his disposal. If there is any centre of decision in this *galère*, apart from the personal authorities of Mr Roosevelt, Mr Churchill and Premier Stalin, it appears to be in the Combined Chiefs of Staffs Committee, which—significantly enough in view of the debate whether war output should be directed by service chiefs or civilians—is announced as having "taken under its wing" at any rate the American committee of the Munitions Assignment Board.

Imperial Representation

It is difficult to decide how far the project for an Empire War Cabinet has been affected by the institution of the Pacific Council "on a Ministerial plane." At any rate, Mr Churchill made it plain last week that the Empire War Cabinet will in fact make little or no difference to the process of consultation and decision on war policy among the constituent nations of the Commonwealth. So long as decisions are made in London, their making could only be affected by the new procedure if the Dominion representatives were plenipotentiaries and the Dominions were willing to be bound by the decisions arrived at in London. And they are not willing to be so bound. Actually, Mr Churchill said that the position of Sir Earle Page now, since the Empire War Cabinet scheme was accepted, is precisely the same as it was in previous months when he attended as a distinguished visitor. That is, he discusses and expresses his opinion, but he cannot commit his Government, and must refer back before he can explicitly accept any decision. As such, the Empire War Cabinet cannot be

an organ of decision—though the British War Cabinet, which is its substantive body, preserves its national authority intact.

Grave News from Singapore

The only possible reactions to the news from Singapore are pain and bewilderment, pain that there should apparently be so little the British forces can do to check the irresistible Japanese advance, pain that so many Asiatic peoples should be exposed defencelessly to merciless attack, pain that their loyalty and enthusiasm should have been called on so late; and bewilderment that an island apparently so strongly reinforced should be threatened so speedily, that official statements should have been so hopelessly misleading about the true situation, and, finally, bewilderment about the next step in a campaign in which one by one the United Nations' advance bases are being filched from them. The tragic story of the last few days is soon told. After heavy artillery duels, the Japanese seized Ubin island at the eastern end of the Johore strait. The same night they landed in force on the swampy western coasts. Japanese landings continued all the next day, and the defenders were compelled to give ground and more ground. Virtually without air support, they were submitted to the unceasing onslaught of Japanese dive-bombers, and, as so often in British campaigns, individual heroism and a thousand deeds of nameless bravery could not compensate for inferiority in everything else. So quick has the Japanese advance been that one may well question whether General Wavell had not previously decided that the island was untenable, and the various public statements were merely designed to deceive the enemy. The real reinforcements may be in Sumatra and Java, and the trial of strength may still be to come. But there must be a limit to retreat.

"according to plan," and "falling back to prepared positions." It was perhaps not unreasonable to hope that the Johore Straits represented that limit. In any case, one limit there is that has most definitely been reached—the patience of the public with statements designed to allay their fears and totally confuse their judgment.

Far East: Other Fronts

The Japanese have crossed the Salween River and taken the important coastal town of Martaban. This news is grave, for it means that the enemy has succeeded in crossing the defence line of the Salween at its widest and most obstructive point. The barrier of the Sittang still remains, but the Japanese now have undisturbed control of two useful bases opposite Rangoon. Activity is increasing further north, where Chinese troops have been successful in action on the Thai frontier. But the chief threat to Burma does not lie in the north, where the Salween River runs through deep gorges in the mountainous Shan States. In the Netherlands Indies, after a week of heavy fighting, the defenders are still holding their own. The Japanese have raided Surabaya several times, and the Dutch admit damage to naval installations. Raiding, too, has started on Batavia. The Lieutenant Governor-General, Dr van Mook, in contrast to the more optimistic and less reliable statements of some of his allies, admits that the situation is "touch and go," but there are some encouraging features. Amboina still holds out. The Dutch rearguard at Balikpapan has fought so vigorously that the Japanese are only now beginning their advance southwards to Banjarmasin (which they claimed to have captured a week ago). And it is possible that Macassar is still holding out. Clearly the Japanese are not yet ready for a general offensive, and every week gained increases the hope of reinforcement. Finally, in the Philippines, the undaunted stand of General MacArthur and his Americans and Filipinos carries on in the face of unbelievable odds.

Visit to Delhi

The visit of General and Mme. Chiang Kai-shek and his suite to New Delhi, where they are the guests of the Viceroy, is an event of first class importance. The chief purpose of the visit is, of course, to continue the staff talks initiated last December by General Wavell's visit to Chungking. Since the loss of Malaya, the integrity of Burma has become the first military concern for both China and India, and it must be presumed that joint-defence plans for the Burma Road are being completed. It is by no means clear why the Chinese forces in Burma have scarcely been used against the enemy. These seasoned and well-armed contingents can ill be spared from service in China and it is well known that nothing would please the Chinese authorities more than to see them thrown into battle at the first opportunity. Moreover, the Chinese continue to demonstrate their ability to defeat the Japanese, given anything approaching equality of equipment. The recent recapture of Waichow and Poklo, with a consequent threat to the Canton-Kowloon railway, is an important success. It is vital and expedient to permit China to play that leading part in the extended war against Japan which General Chiang is willing and anxious to undertake. The meeting at Delhi must eliminate any breath of suspicion that China is not considered as a first-class ally. In actual fact, her military record against Japan begins to look a great deal better than that of the ABDA powers. General Chiang's visit has a further and equally vital significance. The Generalissimo lost no time in seeking a meeting with Pandit Jawaharlal Nehru, who visited Chungking two years ago, and it is possible that he will see Mr Gandhi as well as other Indian political leaders. Indian public opinion has been deeply stirred by the gallant Chinese struggle against Japan and both nations prize the cultural affinity between their civilisations. There are grounds for hope that the current deadlock between the British authorities and Congress may be eased through willingness on both sides to co-operate fully with the Chinese.

Agricultural Prices

There are all the signs of a first-class quarrel behind the scenes over the new schedule of prices to be paid to farmers for their produce. There undoubtedly was a pledge,

or at least an understanding, that the farming community would be compensated for the effect of the recent increase in the minimum wage for agricultural labourers. The question is whether this means that the full cost of the increased wages must be added to prices, regardless of the fact that, before the rise in wages, farmers' profits were, on the average, higher than at any time since the last war. Should the Treasury, as trustee for the community, secure the continuance of these profits at the public expense? (The fact that, over a certain level, farmers' profits are subject to EPT is, of course, irrelevant; they are only in the same position as all other profits.) The Ministry of Agriculture's case is that high prices and high profits are necessary to secure production. This, if true, would be a serious argument. But is it true? The sequence of events in recent months has been that the more efficient farmers have been enabled to make high profits and, by bidding for labour in a seller's market, have pushed the rate of wages up to £3 a week, a level subsequently endorsed by the Wages Board. If they are now compensated for the full effect of the higher wages, will they not bid the rate up to £4? This likelihood is at least as large as the opposite one that a reduction in the average level of profits will cause some of the less efficient farmers to reduce their production.

Canadian Vote of Confidence

Four by-elections have taken place in Canada and Mr Mackenzie King's Government seems to have won a notable victory. The Liberal Dominion Government is confronted with opposition from two sides. There are those, in the Liberal party as well as among the Conservatives, who believe that the conduct of the war is lacking in energy and decision; and there are those, mainly among the Liberals of French Canada, who are opposed to the introduction of conscription for overseas service. Thus, Mr Mackenzie King is assailed at once for doing too little and for proposing to do too much. The conscription issue has been a potential bone of discord ever since the war started. At present, Canadians can be conscripted for home service, but not to go abroad. Recently, Mr Mackenzie King announced that a plebiscite would be held, by which the people of Canada would be asked to give his Government a free hand to increase the size of the armed forces and the scale of war production. This was interpreted by one group of his critics as an act of indecision, handing to the people the responsibility which should be taken by the Government; the other group interpreted it as a dictatorial decision to use mere force of numbers to conscript all Canadians of whatever creed or locality, including the French minority, to serve anywhere. From the Government's point of view, these were the issues before the electors in the by-elections, two in Quebec and two in Ontario; and, from this viewpoint, the Government did well. In Quebec East, the leader of a new anti-conscription group was soundly defeated by the new Minister of Justice; in Welland, Ontario, the new Minister of Labour was returned; Mr Meighen, who has been re-elected leader of the Conservatives and is forthright in his denunciation of the Government's lack of drive, was defeated. This does not mean that the political scene in Canada is now clear. The Minister of Labour was returned on a split vote, in which his Conservative opponent polled 10,000 votes to his 12,000 votes and a Co-operative Commonwealth Federation Candidate as many as 6,000. Probably most significant of all, Mr Meighen was defeated in a straight fight also by a Co-operative Commonwealth Federation candidate. The fact is that, in spite of the incapacity of any political opposition to shake Mr Mackenzie King, and in spite of the quite remarkable dimensions of Canada's present war effort, there is a not insignificant lack of faith in Mr Mackenzie King and his colleagues as the most suitable war leaders. This tendency is most sharply reflected, perhaps, in the rise of the Co-operative Commonwealth Federation, which is a Socialist or Labour group and has already won a striking success in British Columbia.

Australia Mobilises

Strong measures for mobilising Australia's resources were announced by Mr Curtin this week. Some of them are familiar to this country. For instance, all employment is henceforward only to take place through the Government labour bureaux, and employees in vital industries

cannot be dismissed or leave their jobs without Government consent. Others go much farther. The sale or investment of capital, except in war loans or officially sanctioned issues, is forbidden, in order to prevent hedging against the effects of war by purchases of real estate, stamps, etc. Moreover, profits are to be pegged at a maximum of 4 per cent on capital (paid-up capital and re-invested reserves), and profits exceeding this rate will either be passed on to the consumer by price reductions or will be taxed. Others, again, are of interest in that they show how Australia is tackling the problem, still unsolved over here, of prices and wages. The prices of all goods and services are to be pegged, with the present levels as maxima. Similarly, wages will be pegged at their present levels for the duration. In theory, these measures would exclude the fear of inflation; that the Government itself realises that they cannot be complete is shown by the proviso that wages will continue to be adjusted to the cost of living. The most serious gap in the machinery of control, however, is the continued absence of rationing or other restrictions on consumption. Great Britain learned long ago the futility of controlling the prices of goods in short supply without restricting the amounts that can be bought, and it is difficult to understand why Mr Curtin, who is prepared to go so notably far in so many respects, should have stopped short of a measure which, above all, would benefit Australian workers. It may be that this further essential instalment is still to come. Or it may be that no shortage of consumption goods is expected, in which case Australia's war effort will still not match the resolutions and resources of the Australian people.

Nest-Eggs

The Government has shown commendable speed in the preparation of its latest patchwork scheme for the improvement of Service pay and allowances, and it would perhaps be ungracious to minimise the extent of the concessions announced this week. The men's first concern is for their families; psychologically, as well as practically, the decision to reduce by 3s. 6d. a week the compulsory allotments from the pay of serving men claiming dependants' allowances is important; and the increase in the allowance for each child by 1s. per week is welcome if not unimpressive. The total cost of these two concessions is estimated at £22,500,000. The men's second concern is for their future; and perhaps the most interesting of the concessions is the announcement that all "other ranks" are to receive a post-war credit—without prejudice to the grant of a war gratuity—of 6d. per day or approximately £9 a year (and 4d. a day or £6 a year for serving women). This nest-egg is intended to remove the post-war discrepancy between the financial position of the civilian worker and the fighting man; but it is doubtful whether the actual sum conceded will significantly do this. The civilian is at liberty to build up two sorts of post-war credit, one in the form of voluntary saving and one compulsorily accumulated through receding part of income tax. A post-war credit of approximately £9 per annum accrues under the income-tax credits scheme to a bachelor earning rather less than £125 yearly; to a childless married couple earning approximately £190 yearly; or to a married couple with three children earning between £350 and £400 yearly, assuming that no investment income is possessed in any of these cases. If the Service nest-egg is designed to even out the financial discrepancy with any arithmetical accuracy—which, of course, it is probably not, in any precise manner—it must assume the total remuneration in cash and kind of the average ranker to be so much less than the rate of earnings quoted above as to permit £9 to be the equivalent of both the post-war credit from income tax and the annual average total of voluntary savings at that rate of remuneration. Thus, the new grant, if conceived logically, implies that the total worth of Army pay to the single man is less than £2 a week, although it also assumes a marked rise in the remuneration of married men with children. The announcement contains a further obscurity. The current cost to the Exchequer is estimated at £32,500,000; but this sum is to provide post-war credit. Civilian nest-eggs, whether acquired through forced or voluntary saving, rank as revenue for the Treasury. Service nest-eggs should not rank as expenditure, since they, too, represent no current charge whatsoever. They are a gift which is immediately and automatically re-lent. In any case, this tinkering with the problem of Service pay does not come near to solving the basic inequity. The

nation has decided not to hold down the pay of civilian workers. The corollary is that, for the sake of justice and good order, it must decide to raise the pay of its serving millions—even if it costs, say, £200 millions a year, less than 5 per cent of total Government expenditure.

Placemen

The first year of the House of Commons Disqualification (Temporary Provisions) Act is approaching its close; unless it is renewed before March 6th it will then expire, and a not inconsiderable body of members will then presumably find themselves unseated. Last week's debate on the report of the Select Committee on Offices or Places of Profit under the Crown, which was fully summarised in *The Economist* of November 22, 1941 (page 618), showed that the House is perfectly willing to renew the Act, without in any way modifying its distaste of the principle underlying it. Somewhat incomprehensibly, however, the Government has not agreed to all the Select Committee's recommendations for amendments. It is prepared to limit the number of certificates that may be given in any particular period, but it is not willing to alter the form of the certificate to state that it is also in the public interest that a Member, appointed to an office of profit, should remain a Member of Parliament. Nor has it agreed to limit the period of exemption from disqualification unless it is extended by Order-in-Council or resolution of the House. Possibly this last recommendation would, as Mr Greenwood suggested, have led to undesirable debates on the action of a public servant, but such a difficulty would surely not be insuperable. More regrettable, however, is the Government's apparent reluctance to draft legislation embodying the Select Committee's peacetime recommendations—though legislation of some sort is promised. In this reluctance it finds itself with Mr Maxton as bedfellow, for Mr Maxton, a member of the Committee, was opposed to legislation on the ground that Parliament would probably be completely altered by the war. He countered Mr Pethick-Lawrence's assertion that Queen Anne is not dead with a prophecy that the post-war world might see a Parliament in which the vegetable, meat, poultry and butter controllers would be required to take their seats. Mr Maxton was undoubtedly right in declaring that the time will come for a restatement of the principles dividing Government and Opposition. But Parliament's control of the Executive, which it was the real object of the Select Committee to reaffirm, will be as firm a principle after the war as it has been since the reign of Anne.

The PPS

On one point in the debate on places of profit under the Crown there was some marked divergence of opinion. This was the position of Parliamentary Private Secretaries. The Select Committee decided that they could not be included in any proposed legislation, because they have no legal status or even existence, but it recommended that the num-

ber of these curious creatures should be limited. The House of Commons did not seem able, last week, to decide whether they should be suppressed, restricted or left alone. One view is that these posts give promising back-benchers an insight into government; another that the voting strength of the Government is increased by the number of these batmen or errand boys—to use some of the more opprobrious descriptions; yet another that though the PPS is bound to his Minister and the Department, he is not tied to the whole team of Ministers. Even a fag may turn; and on crucial issues a PPS, if he is worth anything at all, should be relied upon to exercise his own judgment, and put his membership of Parliament first. But what is undesirable is that he should be treated as a junior Minister, and shown confidential papers belonging not only to his Minister's Department, but to others as well. This practice must clearly limit his independence, and it is time for a restatement of his position and duties. If the functions of a PPS were clearly defined, it should not be beyond the constitutional ingenuity of the English to graft him into the machinery of Government without weakening the independence of Parliament.

Germany's New Tone

The Germans have changed their tone about the Russian front in the last week. The earlier insistence on the intense hardships and difficulties and on heavy Russian attacks has given place to a new note of optimism. Some reports speak of the end of a static front and the likelihood of an early beginning to the spring offensive. The Russians are twitted on having used up precious men and materials before the testing time has really come. The Germans have even risked the publication of a definitive "winter line" map which blandly omits the three great Russian salients at Velikiye Lugi, Kirov and Gavrillovka. The purpose of all this is obscure. In fact, the Germans have at least two months more to wait before large scale movements can begin again, and at no point do they appear to have recovered the initiative. Nevertheless, it would be dangerous to dismiss the changed tone as whistling in the dark. In spite of the Russians' superhuman efforts, the Germans have so far achieved what must at one time have seemed the impossible, maintained a vast army, unprepared for winter war, intact and firmly on the defensive, through the hideous cold of a Russian winter. That the strain has been almost more than the executive officers concerned could bear is perhaps illustrated by the rising toll of death and disease among Hitler's more responsible executives. This week, the death in a flying accident of Dr Todt, the great Nazi road and fortification expert, has been announced. Many German soldiers will remember him not so much as the man who built the Siegfried line, but as the man who got 60 million warm garments out to the Russian front.

Soap Rationing

Soap rationing, when it came, was generally a surprise, and the Ministry of Food must, on the whole, be congratulated on having kept its secret. Buying for stock immediately prior to the announcement was on a small scale, and in no way comparable with the buying before the false report of soap rationing last summer. The new rationing, which came into force on February 9th, permits a weekly purchase of 4 oz of scrubbing soap or 3 oz toilet soap or soap flakes, or 6 or 12 oz of soft soap or soap powder according to quality. Shaving soap and shampoos are excluded from the ration for the present. The weakness of the scheme is undoubtedly the fact that it penalises those who do their laundry at home. Laundries require a permit for the purchase of soap, but are not rationed. It is not yet clear whether the washerwoman who takes in laundry from her neighbours will be eligible for such a permit. If she is not, the system also bears hardly on her and on her customers. The great difficulty is that it is the poorest members of society who do their washing at home. Incidentally, the shortage of laundry girls prevents most laundries from taking on new customers. Industrial workers in dirty occupations must also, in the interests of hygiene, be allowed access to extra soap. Probably this need could be met most effectively by an issue at the place of work analogous to the extra food rations obtainable at canteens by heavy workers. Soap rationing is a necessary and inevitable step. Indeed, it is impossible to understand why, in view of the

economy in shipping space which it procures, it was not introduced when the yellow ration books were first issued twenty-eight weeks ago. But there is no doubt that equity requires an amendment which allows those who do all their washing at home to apply for an extra allowance. Even at the cost of a cut in the basic issue, this need and the special needs of workers must be met.

Time and Output

If there is any experience of the last war which has not been lost in the present one, it is the fact that hours of work cannot be indefinitely and indiscriminately lengthened without endangering both the quantity and the quality of output. It was this fact that led to the setting-up of the Health of Munitions Workers Committee during the last war, and later to the formation of the Medical Research Council and the Industrial Health Research Board. The latter body has devoted much work and energy to this problem of hours since September, 1939. Its latest report on hours of work, lost time and labour wastage reaffirms, against the background of a detailed statistical inquiry by sampling, that increased output is dependent upon the well-being of workers in the widest sense, both outside and inside the factory, and that only with a strict consideration of health factors, accident prevention and a reasonable adjustment of the hours of work can an increase be achieved. Otherwise "more work" will simply mean less efficiency and qualitative deterioration. With certain reservations, the conclusion of this inquiry is that the time lost by sickness, injury and absence varies directly with the weekly hours of work; it is usually reasonably low when the hours of work are less than 60 a week, but is higher, and sometimes quite excessive, when the hours are between 60 and 75. One important factor emerges. When hours of work are suddenly increased at a time of great emergency, as was the case in May, 1940, an initial spurt of extra effort on the part of the workers will raise weekly output immediately and substantially. There have been similar exertions with similar results in invaded Russia. But, the report emphasises, this is usually followed by a fall in both hourly and weekly output, which continues at a varying rate until the hours of work are again reduced; and the chief cause of this fall is, of course, the additional fatigue and strain caused by long hours of work. During the period of decline after the 1940 spurt, the amount of time lost through sickness, injury and absence without permission rapidly increased, and workers tended to become listless and stale. The remedy adopted, wisely, was a reduction in hours. On the basis of these researches, the Board believes that weekly hours of work, over an extended period, should not exceed 60-65 for men and 55-60 for women.

Halt in Libya

After a fairly rapid retreat eastwards, the British have established a new defence line in Libya, at Gazala, where the escarpment ends and the coast road passes between the hills and the sea. Here the enemy, to advance further, must either attack on a narrow front or else undertake a wide encircling movement to the south. There have been reports of patrol activity at Merklil, and Rommel is perhaps testing out the terrain in this sector. An attempt should bring him into collision with the British forces formerly holding Msus, but nothing has been heard of them since Rommel's columns swung off on to the coast road. The position has thus been stabilised to some extent. The next bout in the campaign depends, as usual, upon reinforcements. The British position is frankly a mystery. Rommel's advance has been, in part, due to his great superiority in fire power. Against his heavy tanks, the British have so far only been able to set "light forces" of infantry. It cannot be supposed that the military authorities hoped to hold Cyrenaica, let alone advance to Tripoli, with only light mechanised units. Where has the heavy British material gone? Rommel's position is clearer. His heavy reinforcements have been shipped across the Mediterranean in convoys protected by the Italian fleet German submarines, and the *Luftwaffe*, stationed in Sicily. Only one of these convoys was seriously interfered with, and it very foolhardily made its way from the Ionian Sea to Tripoli. And even this convoy was only attacked by aircraft. The Mediterranean fleet has suffered severely in the last nine months. Crete was the first severe blow, and there have been others, for example, the loss of the warship *Barham*, and the December raid on Alexandria by Italian "shock naval units."

Vichy at it Again

Rommel has also received considerable assistance from Vichy. This has not perhaps taken the form of regular convoys from Marseilles to harbours in Tunisia and Tripoli, but valuable material—oil, wine, wheat, olives—has been sent across the Tunisian frontier and week by week a stream of armaments and transport vehicles are coming from the French factories to feed the Axis forces on every front. The fact that the United States is reported to have undertaken to begin once again—on a modified scale—the provisioning of North Africa gives the last touch of incongruity to Vichy's involved and discreditable situation, and the favour extended to the perfidious administration of an obviously irresponsible octogenarian is one among many things that passes comprehension in this war. Whether Vichy's extra help is part of a wider attempt to bring the rest of Latin Europe into the conflict remains to be seen. That new pressure has been exerted on Vichy, Madrid and even Lisbon appears certain. It is the reaction that is in doubt. Madame Pétain has gone to see Franco and Dr Salazar is meeting the Caudillo at Seville. Are these joint discussions for defence or offence?

Trouble in Tangier

The riots in Tangier last week-end mark a climax in a long crescendo of intrigue and tension. Nor was the serious bomb outrage which occurred on the previous Friday, and resulted in a number of British deaths, the first explosion in recent weeks. The demonstrations on the latest occasion were, however, on a different scale from any earlier disturbances. Hotels and offices were sacked, and much glass broken, including the windows of the British Consulate-General. The declaration of martial law by General Uriate, who commands the Spanish forces, appears to have been both belated and ineffective, while the attitude of the Spanish police throughout the incident leaves connivance as the sole explanation. It is not quite clear why the Spanish authorities should permit the Germans to stage such an obvious frame-up. Moorish sentiment, both in the Spanish and French Protectorates and in the former International Zone at Tangier, is fanatically anti-European. It is in normal times, and for obvious reasons, less anti-British than anti-French and anti-Spanish. The spirit of Abd-el-Krim is not dead and the Spaniards play with fire if they permit the precarious existing order to be upset in the interests of Germany. Anti-British feeling in Tangier may conceivably be exploited by Hitler to bring to a head the obstinately dormant antipathy between the British Government and the Government of General Franco. In the long run, it is Moorish nationalism alone which can profit from last week-end's excesses. A strong protest has, of course, been lodged with the Spanish authorities by the British Consul-General. It is more than improbable that General Franco will be deceived by this elaborate manoeuvre any more than by the incident of Fernando Po or the Vichy Government by the incident of the *St. Denis*.

Jamaica's Constitution

It is almost a year since the Government announced its proposals for a new constitution for Jamaica. Since then, it has been made quite clear that they displeased both the reactionaries and the People's National Party, which consists of the political progressives. The latter objected to the over-riding powers given to the Governor and to the separation of the legislature from the executive. But power lay in the hands of the reactionaries whose influence in the Legislative Council, owing to the very unrepresentative nature of the present constitution, is predominant; and last August the Council rejected the proposals, demanding instead a bi-camera legislature such as exists in Barbados, where an oligarchy, proud of its three hundred year old constitution, is steadfastly resisting popular pressure for social and political reforms. The Colonial Office is to be congratulated that it has not allowed the conflict of opinion in Jamaica to stop the progress of reform in that colony. Last month, Lord Moyne sent the Governor new proposals, which reaffirm the principle that adult suffrage must be the foundation of reform. They also make good one of the most serious omissions in the original scheme by abolishing the property qualifications for membership of the Legislative Council, substituting instead a deposit of £150 as in this country. The fears of the People's National Party about the Governor's over-riding powers are said to be based on a misapprehension; he is given no new power, but his existing powers must be redefined in the light of new circumstances.

Lord Moyne has not, on the other hand, accepted the demands of the PNP for executive responsibility. A certain number of elected members of the Legislative Council will be admitted to the Privy Council (which, however, will continue to be an advisory body only), and the enlargement of the Legislative Council will facilitate the development of advisory committees which were recommended by the West India Royal Commission in order to initiate the elected members into the business of administration. But there is no question, yet, of giving the colony responsible, as well as representative, government. Whether this new approach by the Colonial Office will solve the deadlock is uncertain. It has, however, asked the Governor to proceed at once with the necessary steps, such as the holding of a census, on which a new electoral register based on universal suffrage can be prepared; and a general election will then be held instead of waiting, as was announced last March, until after the war.

Ministry of Planning

The Government's promise to set up a central planning body has now been carried out. Lord Reith's Ministry of Works and Buildings now becomes a Ministry of Works and Planning. It will exercise the functions hitherto possessed by the Ministry of Health under the Town and Country Planning Acts; and it now remains to transform the new body into an Authority with positive powers. The Ministry of Health has had little more than the negative duty of approving schemes submitted by local authorities, themselves hampered in their planning of the use of land by lack of financial facilities to obtain control over its disposition. The outlines of the new powers that the Ministry of Planning needs are being worked out by the Uthwatt Committee, which has already recommended public acquisition of development rights in bombed areas, slum areas and undeveloped land; and the Committee is now at work on the key problem of compensation. In fact, the only way to make the new Ministry capable of ensuring, authoritatively, that "the national policy of urban and rural development is carried out as a single whole" is for the State to decide now to assume ownership, by purchase, of land where and when development is planned.

Shorter Notes

Barely a week after he assumed the democratic office of Prime Minister, Quisling has assumed the powers of a dictator. By a decree published on February 7, the authority of the King and Storting is vested in the minister president subject to ratification by the head of the Department of Justice for legislation at variance with the constitution. Presumably the Storting, even under German occupation, continued to have a definite nuisance value. Now that the Quisling Government enjoys the status of a puppet rather than a subject power, it is important to create the fiction that it is the free and democratic element which is in the minority.

In an article entitled "Australia's War Effort" on page 177 of *The Economist* last week, it was erroneously stated that the Commonwealth's iron and steel industry was located in the Broken Hill district in New South Wales. In fact, the main steel mills of the Broken Hill Proprietary Company, Ltd., are at Newcastle, a deep water port some 70 miles north of Sydney; the company also operates a large steel plant at Port Kembla, about 60 miles south of Sydney.

AMERICAN SURVEY

The Growth of Lend-Lease

THE President's third quarterly report to Congress on Lend-Lease operations, copies of which have now reached this country, covers the period to November 30, 1941—just seven days before the Japanese attack. The subsequent developments have not affected—or have not yet affected—the framework of Lend-Lease; but they have manifestly transformed the whole character of the problem of supplying material aid from America to the other United Nations. November 30th is, therefore, a convenient stopping-place for a survey of Lend-Lease while it still retained its original character as an aspect of pre-belligerency.

The workings of Lend-Lease have never been properly understood in Great Britain—or, indeed, in the United States. There is still a tendency to speak and think as if the Lend-Lease Act authorised the President to make dollars available to Britain and other nations, with which they could continue to buy what they needed in the United States. In recent weeks, for example, it has frequently been stated on both sides of the Atlantic that Lend-Lease was now to come to an end "because the two countries have now decided to pool their resources." Actually, it is the essence of the whole plan that no money passes. As Lend-Lease, gradually extends to cover the whole of British requirements in the United States, the British purchasing programme will be wound up. The decision to pool resources was not made in December, but in March; and Lend-Lease is not an alternative to pooling, it is the instrument of pooling.

Nor, save in a formal sense, is there any distinction in the American Government's production programme. When

the defence of the United States. The two Appropriation Acts of March and October prescribe the financial limits within which this can be done. OLLA exercises such of the President's powers as he has delegated to it. The formal procedure is that the British (or other would-be beneficiary) representatives in Washington submit to OLLA a "requisition" for the goods they require. This requisition must set forth the use to which the requested article or service is to be put and the reason why it is needed. OLLA then examines the requisition to see whether it complies with the conditions of the Act, two of which are that "the defence aid requested must not be obtainable, as a practical matter, by payment therefor in American dollars or other currency available to the requisitioning country" and that "the requested Lend-Lease aid must be of the most economical and efficient type suitable for the intended use." When the requisition has passed these tests, it is sent to the "procurement agency" (i.e., the War Department, the Navy Department, the Department of Agriculture, etc.) for execution. In the early months, the machinery proved to be extremely slow and cumbersome. Every document had to go to the President and each stage of the procedure was dealt with separately. A number of simplifications have been gradually introduced. The President still exercises all powers of policy-making, but Mr Stettinius, the Administrator, has power to sign the documents. Items are not treated one by one, but lumped together in a programme. Authorisation to procure, allocation of funds and authorisation to transfer are now usually granted simultaneously. The result has been to cut a great deal of red tape, though complaints of delay are still to be heard.

On November 30th, the Act had been extended to 33 countries, counting the British Empire as one. Every Latin American country appeared on the list, as well as China, Egypt, Belgium, Free France, Greece, Iceland, the Netherlands, Norway, Poland, Russia, Turkey and Yugoslavia. Czechoslovakia has since been added. Although, as has been emphasised from the start, the relations between the United States and these beneficiaries are strictly physical and non-financial, the progress of operations under the Act is necessarily reported in financial terms. As with all American Governmental production statistics, two sets of figures are presented. The first refers to the successive stages of authorising expenditure; the second set of figures refers to the actual production and delivery of goods. The first measures what is going to be done; the second what has been done. The following table gives figures of appropriations (i.e., funds provided by Congress), allocations (i.e., the value of production programmes, adopted) and obligations (i.e., contracts placed) up to November 30th:—

	(Millions of Dollars)		
	Appropriated	Allocated	Obligated
Ordnance and ordnance stores	2,650	2,215	947
Aircraft, etc.	2,710	2,040	1,727
Tanks and other vehicles	847	628	316
Ships	1,628	1,303	713
Misc. military equipment	431	311	70
Production facilities in USA	1,977	757	427
Agricultural and industrial commodities	3,043	1,665	930
Servicing, repair of ships, etc.	341	167	109
Services and expenses	325	95	3
Administrative expenses	20	5	1
Total	12,972	9,186	5,243

"Lend-Lease aid" says the report, "cannot be adequately reflected by figures alone. It includes the repair of hundreds of ships and the 2,000,000 tons of American shipping that have been made available to carry defence goods. It includes the shipways that will produce Lend-Lease ships and the training of airplane pilots for Lend-Lease countries. It includes the goods which have been completed and the facilities that are being expanded to produce more goods. It includes the raw materials and machine tools that have made it possible for the Lend-Lease countries to step up their production of war material." So far, however, as the

the Lend-Lease Act was passed nearly a year ago, the funds that had been appropriated by Congress for armament production were still comparatively small. The Lend-Lease appropriations were the means of placing additional orders and in that sense—but in that sense only—it could be said that there was a Lend-Lease production programme on top of the domestic programme. But the beneficiaries of Lend-Lease have not had to wait for the maturing of the contracts that were placed with the Lend-Lease appropriations. In actual delivery, if not in contract-placing, there has from the start been a substantial degree of merging of the Lend-Lease and domestic categories. This merging is growing. Since Pearl Harbour there is a new policy which largely dispenses with the need for specific Lend-Lease appropriations. Each of the two gigantic Appropriation Bills passed by Congress in recent weeks contains a provision that the materials to be manufactured may—up to a stated total—be transferred under Lend-Lease.

The Office of Lend-Lease Administration (OLLA for short) thus neither buys nor sells anything. The original Act took the form of providing that the President might authorise the War and Navy Departments (and others) "to manufacture . . . or otherwise procure . . . any defence article" and "to sell, transfer title to, exchange, lease, lend or otherwise dispose of" these articles to the government of any country whose defence the President deems vital to

aid actually provided can be represented in money figures, the facts are given in the following table:—

	Millions of Dollars	Total to November 30, 1941
Defence articles transferred	723	723
Articles awaiting transfer or use	140	140
Articles in process of manufacture	92	92
Servicing and repair of ships	79	79
Rental and charter of ships, etc.	92	92
Production facilities in USA	75	75
Miscellaneous expenses	1	1
Total	1,202	1,202

It is this table that is represented in the chart reproduced opposite. The report gives actual quantitative figures for a number of non-military goods transferred. The largest items by weight are 719,834,984 pounds of grain and cereal products, 548,091,424 pounds of fruits and vegetables, 535,742,451 pounds of meat and fish products, 30,546,999 barrels of petroleum products and 1,361,492 tons of iron and steel.

The value of Lend-Lease goods actually exported up to November 30, 1941, was \$595 millions. The difference between this figure and the \$723 millions of goods transferred is to be explained by (i) the fact that ships are not "exports"; (ii) the use of Lend-Lease goods in the United States; and (iii) the building up of stocks at the ports. The

report includes an interesting chart, reproduced here, of exports to the British Empire and Egypt, with the comment that "the black area may be expected to increase rapidly, whereas the shaded area will tend to decline. The important consideration is to keep total exports at steadily increasing levels." It can, incidentally, be deduced from this chart that exports to the British Empire and Egypt must make up more than 90 per cent of the Lend-Lease exports to date.

The tendency has been noticeable both in British and in American opinion to consider Lend-Lease as a purely temporary and outmoded expedient, and to measure its value by the relatively moderate amount of goods actually transferred up to date. But this would be a profound mistake. The slow beginning is due to the fact that armament production in general in America is still at a comparatively early stage. No other device could have provided goods any more quickly. The merit of Lend-Lease, which lies in the fact that it avoids the creation of purely financial indebtedness and puts the relations between nations on a basis of reality, is one that will grow with time. Lend-Lease has not been superseded, the probability is that it will not be superseded, the certainty is that it ought not to be superseded.

Budgeting for Defence

[FROM OUR NEW YORK CORRESPONDENT]

January 13th.

THE Budget message for the year 1942-43 proposed total expenditures of \$59,000 millions, compared with estimated expenditures for the current fiscal year of \$31,000 millions and actual expenditures for the year 1940-41 of under \$13,000 millions. Receipts for the year 1942-43 were put at \$16,500 millions, compared with estimated receipts

for the current fiscal year of \$12,000 millions and actual receipts for the year 1940-41 of \$7,600 millions.

For the item of national defence, the proposal for the year 1942-43 is \$53,000 millions; the estimate for the current fiscal year is \$24,000 millions; the actual expenditure for the year 1940-41 was \$6,300 millions.

Budget figures of this magnitude are, of course, far beyond the intellectual comprehension of the individual. Their presentation, however, focused individual thought on a number of related themes more readily grasped. Among the public there has been from the first a confusion of thought identifying a "war programme with a spending programme. That is, the war effort was considered a prosperity effort on a magnificent scale. The "pork-barrel" is one of the oldest of American institutions, and in and out of Congress there is a persistent disposition to regard defence appropriations in this traditional aspect. This attitude did not vanish with the declaration of war; but there is evidence that it is receding.

The first evidence came in the opposition to certain features of the price-fixing legislation that would have made farmers special beneficiaries. This legislation was described by the President as a Bill to compel inflation, and the Press has generally been outspoken in its criticism. Yet, as a matter of fact, the claims of the farm pressure group were as valid as—even more valid than—the claims of other pressure groups that have made successful exactions during the past year. The outcry is a symptom of a hardening of public opinion.

A second sequence of the Budget message is an increased emphasis in discussion of the effect of advancing prices on the war effort. The rapid rise in prices over the past year has made the public realise that \$50,000 millions will buy only about \$40,000 millions of services and materials at the prices of a year ago; and with prices rising rapidly (as they have been in recent weeks) there is an increased realisation that the sum appropriated is significant only as it is related to the amount of materials and services which the appropriation will buy.

Third, the comparison of the budgeted sum with the estimated national income has increased the number of persons who realise that the allocation of half the national money income to defence means the allocation of half the national physical output to defence. In short, a nation cannot allocate half its national output to defence and maintain "business as usual." For many months it has been verbally unfashionable to speak of business as usual; but such is the dichotomy of the human mind that people could simultaneously condemn the slogan of "business as usual" and personally follow the motto of "business better than usual."

Nothing would be easier than for Congress to pass the Budget appropriations, even though these are half the national income. But to translate these appropriations into half the national output is another matter. At the present time, the human and material resources of this country are approximately fully employed, and not above a quarter of that effort is related to the war programme. While there is still some potential expansion left in the economy, for all practical purposes it can be ignored, and any increment of the war effort will derive from diversion or subtraction from the present civil consumption. This is, in substance, the task to which the President has appointed Mr Donald M. Nelson.

This appointment is compared with that of Mr Bernard M. Baruch as head of the War Industries Board in 1917. Actually, in 1917-18 nothing like half the national output went into the war effort, and the task assigned is proportionately greater.

American Notes

Pollyanna Limited

There could be no better proof—if proof be needed—of the wholeheartedness of the American war effort than the recent outcry in the American press against complacency and "pollyannaism" in certain quarters. While it must be granted that America entered the war at a more strenuous moment than Britain, it does credit to the American people that within two months of their declaration, they are already on their guard against undue optimism and are demanding to be told the worst. A warning against overconfidence by Mr Batt, head of the Materials Division of the War Production Board, has been widely welcomed. Leaders in many newspapers and most of the well-known

columnists are almost overcritical of American "lethargy" and over-optimism. The Administration is under fire on this score; Mr Jesse Jones in particular has laid himself open to attack by suggesting that consumer sacrifices need only be temporary. This tempting doctrine appears to have aroused great indignation. It is also argued that communiques from the Pacific war zone lay too much emphasis on isolated acts of gallantry and fail to present a comprehensive and balanced account of the situation. The comparative immunity of the United States from attack and the consciousness of vast economic resources are not conducive to a great sense of urgency, and it is all the more heartening that the American people are so thoroughly alive to the sacrifices which they will have to make and the trials that lie ahead.

It is a little less fortunate that the mood of strenuous endeavour is also resulting in widespread drawing of invidious comparisons between British and American efforts. This tendency is, of course, being actively fostered by the ex-isolationists and by such constant Anglophobes as Mr Hearst and Col McCormick. There is said to be something called "the Churchill strategy" that concentrates all the available troops and supplies in the British Isles and starves all other theatres of war. There is, of course, nothing remarkable in a wave of criticism of the effectiveness of British arms—the same criticism is to be heard in England. British stock has slumped before and will rise again. But it is a great pity that, as between one United Nation and another, there should be any comparisons of determination, courage, sagacity or foresight. Fortunately, the great sound mass of American opinion (much larger and much sounder than is commonly supposed) is taking no part in the clamour, which does its authors little credit and is, in the main, a conscious or unconscious attempt to forget how very wrong they have been in all their judgments on the war.

Labour Issues

The disputes that have already been referred to the new War Labour Board involve a number of key war industries. Negotiations between the Steel Workers Organising Committee (CIO) and the Bethlehem Steel Corporation have broken down over the questions of wage increases, the closed shop, and the "check-off" (i.e., the demand that union subscriptions should be collected by the employer by deduction from wages.) Bethlehem, together with the three other companies affected, employs about 200,000 workers. This group, known as "little Steel," has been notoriously more obdurate in its dealings with labour than "big Steel," the U.S. Steel Corporation. The Automobile Workers Union has also placed an appeal with the Labour Board, having been unable to convince management that double pay for Sunday work should continue. Labour relations have also been strained at Youngstown Sheet and Tube Company and at the Wright Aeronautical Corporation. None of these disputes has reached the strike stage, but on the Pacific Coast welders walked out of San Francisco shipyards, demanding autonomous union status within the AFL, and interstate bus transportation was tied up by an AFL strike against the Greyhound Lines for higher wages for maintenance employees. So far the issue of the union shop has not been very much to the fore, although this was left open when the Board was established, much to the disappointment of management representatives. It is suggested that the policy of the Board will be to create industry agreements similar to that establishing the War Emergency Maritime Board, which will make binding decisions in all the industry's labour disputes and will pass on proposals for labour training. Obviously such agreements will be more easily reached and will work better in industries with a background of good relations between managements and well established unions, than in those where unions are still fighting for recognition, such as copper mining. Co-operation by both the AFL and CIO with the government in regional production conferences has been announced, and labour representatives have formed a committee to advise the Office of Civilian Defence. An encouraging light on labour's state of mind is provided by two recent Gallup polls. Asked what they considered the most important problem organised labour faced, 54 per cent of union leaders questioned and 48 per cent of members answered to increase production. In another poll 55 per cent of union leaders questioned and 58 per cent of union members agreed that the government should have

the right in war-time to dictate wages and hours and tell workers what jobs they should hold.

New Taxes

The Administration's tax proposals now seem likely to include something in the nature of a general sales tax, although there is disagreement on the form it will take. It has been reported that opposition by retailers and labour may result in the substitution of a tax on "value added" by industry for the more conventional sales tax, though more recently the case for the retail sales tax has been said to be gaining ground in Congress and the Treasury. In addition to raising new revenue, the purpose of such a new tax would be to reduce consumer purchasing power, and in particular to limit the increases due to defence spending. The tax on value added would be levied on the output of manufacturers less cost of materials and services purchased—in other words, on the sum of payrolls, interest payments, rents and profits. Credit would be allowed for social security payroll taxes, and small enterprises would be exempted for administrative reasons. A rate of between 5 per cent and 10 per cent, to yield about \$3,000 millions is suggested. A third proposal is the reportedly unpopular "withholding" tax, under which a percentage of pay would be withheld at source for the Treasury. It is thought that the adoption of the "value added" tax might make possible a lower rate for the withholding tax. It certainly would be easier and cheaper to collect than a retail sales tax, but it is hard to believe that it would be much more equitable, as foodstuffs would probably be excluded in both cases. Both taxes will "soak the consumer"—and most painfully and unfairly in the lower income brackets. The argument that a sales tax is preferable to the withholding tax because the former at least "leaves the payer of the tax with some choice as to how much he pays" seems singularly ill-taken. The vast majority, laying out their income on necessities, have little control over their spending. In any case, it can hardly be a virtue of a wartime tax that it allows some tax-payers to avoid it. Given the defence programme, real purchasing power in the hands of consumers will decline. The tax policy adopted will determine whether the reduction will be just and orderly, or whether it will be accomplished through inflation. The programme accepted will be an interesting and accurate reflection of the degree to which Congress is willing and able to face the disagreeable realities of total war.

Teapot Tempest

Accusations of frivolous activities against the OCD—the Office of Civilian Defence—have provided an apparently welcome relief from the sombreness of the news from the Far East. Mayor La Guardia's resignation from the Directorship has concentrated Congressional attacks upon Mrs Roosevelt and the appointment of two of her friends, Mr Melvin Douglas and Miss Mayris Chaney. The new director, Mr Landis, announced that Mrs Roosevelt will continue as head of the Community and Volunteer Participation Division and that Mr Douglas would head the Arts Council of the Information Division. The House of Representatives voted the OCD \$100 millions for the purchase of gas masks and other equipment, but inserted a provision forbidding the use of OCD funds for "instruction in physical fitness by dancers, fan dancers, street shows, theatrical performances or other public entertainment." Mrs Roosevelt has offered to answer Congressional questions regarding "sinecure" jobs, and has defended the reorganisation of the department. Mr Douglas and Miss Chaney have announced that they are serving the government without salaries, and not for \$8,000 a year and \$4,600 as charged. The existence of an Arts Council, an Information Division, a Bureau of Children's Activities, and a Physical Fitness Division suggests that, while the appointments of Mr Douglas and Miss Chaney may have been perfectly sound, the necessities of civilian defence have been rather broadly conceived. Public opinion can be relied on to see to it that excessive energies and funds are not absorbed in such activities to the detriment of more essential work.

Machine Tools

The War Production Board last week announced that machine tool production in 1942 will have to reach at least \$1,500 millions—perhaps \$2,000 millions—if the President's

victory programme is to be realised. Even the more modest figure is twice the large output of 1941 and fifteen times as large as that of a normal pre-war year. Two years of steadily expanding output have greatly increased the industry's capacity, but it is reported that doubts are felt whether the utmost effort in 1942 will raise output above \$1,300 millions. There are only about 200 firms in the industry, and in 1941 they produced over 200,000 machine tools, more than 20 per cent of the number in operation in the United States in 1940. During 1940 the labour force expanded from 78,100 to 110,000; average hours are 52 per week compared with about 42 in all durable goods industries. Nearly all manufacturers operate two shifts, and over half are on three. The increase in the efficiency of the units produced is roughly estimated at three times the pre-war level. Even so, in December the industry's orders amounted to under \$600 millions. The chief difficulty is that probably about half of these were concentrated on the producers of "critical" machine tools—horizontal and vertical boring mills, planers, turret lathes, milling machines, internal grinders, radial drills.

The shortage of skilled labour is the most serious obstacle to further production increases, but complaints are also heard about the need for working capital to finance the larger output. The Government has agreed to pay 30 per cent down on new orders to meet needs for more working capital. Some companies have lost sub-contractors to the Army and Navy and it is alleged that sometimes essential work is held up by unnecessarily large orders from defence contractors. In other instances, delivery of produced units has been held up two or three months because the necessary tooling had not been built. Training of labour is being pushed under Government and private auspices; the fact that about half the labour force has been trained since 1939 suggests that the labour shortage should not be insuperable in time. The Production Division of the WPB is making a careful analysis of each manufacturer of critical tools to insure that the maximum possible man-hours are obtained on each shift and to spread sub-contracting to the fullest possible extent. It is improbable that any possible production of machine tools would completely satisfy the demand at this stage, but attention to bottle-necks in production added to economy in use should go far towards filling essential requirements.

Over the Gold Peak?

A scarcely perceptible movement in the weekly returns of the Federal Reserve Banks is perhaps the most momentous of the changes revealed by the figures of the past four months. It is the decline in the total monetary gold stock from a peak of \$22,796,000,000 touched on October 29, 1941, to a figure of \$22,738,000,000 recorded on February 5th last. The steep increase in this item went on almost uninterrupted until the end of October. The curve then flattened for a fortnight, and since then there has been a gradual decline, interrupted by two or three weekly hesitations, but nevertheless unmistakable. It is too early to claim on the basis of this evidence that the international gold tide has at long last turned away from the United States, but a four months' break in an underlying trend which has persisted for close on a decade is of sufficient moment to attract the closest attention. The most important sources which have of late years fed the stream of gold flowing to the United States, namely the accumulated reserves of British countries, have now run dry. Current production may still find its way to the United States, but even this may be a somewhat dwindling stream over the months to come. On the other hand, a fully belligerent America will inevitably tend to curtail its exports to the remaining open markets—mainly the South American republics—and will be increasing its purchases of primary materials in those countries, both on its own and on Allied account. Already the unsold surpluses of South American countries of which so much was being spoken and written up to last summer are beginning to vanish like magic. If the balance of payments of the United States is to turn adverse there is no reason why it should not find its counterpart in exports of gold. Evidence of such movements from the United States cannot now be obtained since the Department of Commerce has since May, 1941, suspended the publication of bullion export statistics by countries of destination. As evidence of the direction in which US gold may be trending it may be noted that imports of gold into Argentina during the first ten months of 1941 exceeded exports by 11,395,000 pesos as compared with net exports of 190,204,000 pesos in the corresponding period of 1940.

Coke for Furnaces

The planned increase in the output of the steel industry in the United States, and the intention of raising non-ferrous metal production to its potential maximum will materially affect the country's coke requirements. A special investigation into the distribution of coke in the United States, recently completed by the Bureau of Mines, showed that in 1940 no less than 69.2 per cent of the country's coke supplies was used by furnaces, while an additional 3.4 per cent of the total went into foundries. As recently as the middle of November last the Bureau of Mines pointed out in a report to the Defence Departments that so far supplies of coke had been sufficient to meet the increased demands of the armament programme. Production in the first nine months of 1941, the latest official figure then available, was 47,980,000 tons, an increase of 16 per cent on the year. Production of coke (excluding coke produced in gas retorts, which is of no interest to the metallurgical industry) in the whole of 1941 was estimated by the Bureau of Mines at 65,000,000 tons, or 14 per cent more than a year before and 8.5 per cent more than in 1929, the previous record production year. Although the 1941 output exceeded that of the peak year of the last war (1918) by 15 per cent, a further combined increase by at least 25 per cent will be needed in the next two years to secure adequate coke supplies for the steel and non-ferrous metal production programmes. At the end of 1941 the potential annual coke producing capacity of United States coke-ovens (both the by-product and bee-hive types), according to official data, was approximately 72,000,000 tons, which is only just over 10 per cent more than last year's actual production. Moreover, the capacity estimate included ovens with an annual capacity of between 2 and 3 million tons in need of repair or adjustment in order to reach the scheduled maximum output. It is obvious, therefore, that a major expansion in the number and size of coke-ovens will be needed. Actually, a substantial expansion programme of the US coke-oven industry was initiated in 1940. At the end of that year no less than 492 coke-ovens were under construction, and an additional 73 ovens, which had been abandoned years ago, were reconditioned. The annual capacity involved was 3,000,000 tons. Figures for the end of last year are not available so far, but it appears from industrial reports that the rate of expansion has been almost doubled in 1941.

Shorter Notes

Correction: It was mistakenly reported in the British press last week that the President had signed the bill to restrict the propaganda and information activities of agents of foreign principals. So far from this being true, the President has vetoed the Bill. This will avoid the uncomfortable situation that would have arisen if such bodies as the British Information Services were to be more hampered in their activities now that they represent one of America's allies than they were when the United States was still formally neutral.

Under the sugar-rationing plan household sugar stocks must be revealed, and those who have hoarded sugar will not be allowed to purchase their weekly three-quarters of a pound until their stocks are exhausted. Falsification of reports will be punishable by penalties up to \$10,000 fine and ten years imprisonment. The nation's school teachers are to supervise registration and issuance of ration books. Household and industrial sugar consumption is to be reduced by one-third. Sugar prices have increased by almost one cent a pound and a ceiling on retail prices has been threatened.

The War Department has announced that it proposes to expand the Army Air Force to 2,000,000 officers and men, half of this to take place this year. A complete Air Course is to be given to cadets at the West Point Military Academy, to save the additional year now required for training after graduation.

The President has met with the CIO and AFL committee to plan labour's co-operation in the war effort. The CIO representatives are President Murray, Mr Thomas of the United Automobile Workers, and Mr Julius Emspak of the United Electrical Workers. The AFL group includes Mr William Green, Vice-President Tobin, and Secretary-Treasurer George Meany. The move is generally considered as a rebuff to John L. Lewis.

THE WORLD OVERSEAS

Restraint in Argentina

(From Our Buenos Aires Correspondent)

January 7th

BEFORE the outbreak of war between Japan and the United States, Acting President Castillo had frequently stressed Argentina's neutrality as the keynote of her foreign policy. This was the theme of his opening message to Congress last May, which was described by a disappointed press as lacking in vigour. In October, he declared that: "Foreign problems should not disturb us, simply because Argentina is and can only be Argentina. For the rest it is a question of different ideals and differing interests." In a strongly worded editorial article on December 9th entitled "War Reaches America," *La Prensa* described these words as disconcerting, citing them as evidence of "a policy of very recent date . . . which is out of tune with true Pan-Americanism and which is, in fact, its negation." The article continued: "It is a policy—if such it may be called—which attempts to remove Argentina from America and from the world, to place it where?" Deploing that there should be in South America those who are indifferent or deaf to the implications of the war's expansion, the article stated that, though these are known to be very few, great danger lies in the fact that they include men in public places. Argentina's decree, declaring the United States non-belligerent, while expressly maintaining her own neutrality towards Japan, was issued on December 9th, when the Acting President cabled its contents to President Roosevelt together with a message qualifying the aggression as "unjustified and lamentable." *La Prensa*, in a subsequent editorial, claimed that both decree and cable were the coldest of all the expressions of solidarity emanating from Latin American countries, and added: "Without a shadow of doubt, the telegram is very far from being in keeping with Argentine public sentiment; it is a colourless document, diplomatic to an extreme, lacking all emotion. Truth compels us to say so."

These typical press comments on the Cabinet's reticence regarding Argentina's relations with the Axis Powers, and the extent to which she is willing to co-operate in hemispherical defence, are a fair indication of popular feeling, which widely approved the warm unofficial messages of support cabled to President Roosevelt by President Ortiz, who handed over his office to Vice-President Castillo owing to ill-health, and by the former President, General Justo. The latter's message significantly stated: "The people of my country stand solidly beside the great northern democracy and its illustrious President." Ignoring a popular appeal to convolve Congress, which is in recess until May, the Government decreed on December 16th a state of emergency and suspended the constitutional guarantees throughout the country "in view of the international situation." Newspapers were simultaneously advised by the police that they must refrain from comment on this measure, as also from all tendentious appreciations of the international situation and any publication calculated to disturb internal political peace. The popular Buenos Aires evening paper, *Noticias Gráficas*, promptly appeared with a blank column on its front page headed: "No evil may be spoken of anyone."

An outcome of the measure which has, on the whole,

been taken calmly, is the disappearance from the public platform of *Acción Argentina*, a vigorous movement embracing anti-totalitarian opinion of all shades. At the same time, the measure has had the effect of subduing comment on the manipulation of the Buenos Aires provincial elections in the interests of the country's present Conservative Government. This province, whose political support is of the utmost importance to the Federal Government, had been "intervened" (that is, the Provincial Government's powers were taken over by a Federal official) after notorious financial mismanagement during the term of the Conservative, and reportedly pro-Fascist, Governor Fresco. Before polling took place on December 7th, a sensation was caused by the discovery of a large stock of completed voting papers in an unauthorised printing establishment. The Conservative Party's victory, after widespread disturbances at the booths, was branded unanimously by the responsible press as fraudulent, and the existing tension between the Government and the national Opposition, the Radical Party, has increased considerably. The latter now points to a list of fraudulent elections which have taken place within a year covering three important provinces. On the eve of the declaration of a state of emergency, *La Prensa* condemned the frauds as damaging to the country's prestige in the eyes of the world, and supported the widespread conviction that they had been engineered by totalitarian elements, stating: "The attempt against popular suffrage and addiction to the dictatorships have much in common."

Fifth Column Dangers

According to Deputy Damonte Taborda, Chairman of the Committee of Investigation into Anti-Argentine Activities, who recently visited the United States, where he consulted the reports of the Dies Committee, Argentina stands in greater danger from Fifth Column activities than any other American country. Nevertheless, in contrast to the reported throttling of German propaganda in other nations of the western hemisphere, no expression of Government policy has yet been made as regards the disclosures contained in the reports of the Committee of Investigation. The Trans-ocean news agency which they condemn continues to function, and the local German-inspired and German-financed newspaper, *El Pampero*, although it has prudently abandoned much of its scurrility since the police warning was issued to the press, continues to appear and to voice as stridently as ever its distrust of the United States in the interests of Argentine "nationalism."

The restraint imposed upon the press, coupled with the fact that Congress is in recess and that arbitrary powers have been given to the police under the state of emergency, probably explains why the steadily rising popular voice, condemning deference to the Axis Powers and expressing exasperation with the present Cabinet's policy, has sunk to a murmur. Nevertheless, the warm tributes to Mr Churchill's recent declarations in the United States Congress show the deep interest with which the people of Argentina are following the gearing of the western hemisphere to meet the threat to its greatest Power. *La Prensa*, a fervent advocate of the freedom of international trade, has followed up its panegyric on the Atlantic Charter with an editorial dealing with the prospects of reconstructed post-war trade. It recalls that when Argentina complained of the effects of the Ottawa Agreement and the 1930 American tariff, it was pointed out that she had invited reprisals by her own high tariffs established in 1930-32. Claiming that the Ottawa Agreements and the United States tariff were no small factors in causing the world crisis which culminated in the war, the paper makes a spirited plea for the consideration now of post-war trade problems, with good will between all the democracies.

Starving Greece

[BY A CORRESPONDENT]

February 9th

ONCE again Greece has found her economic life particularly vulnerable to the impact of war. Two-thirds of all Greeks are normally employed in agriculture, but mainly in the cultivation of a few specialised crops, such as tobacco, grapes, and olives, which are exported in large quantities, while there is a deficiency of most of the ordinary foods. The area under cultivation was increased by 50 per cent during the 1930's, and the output of tobacco, raisins, etc., has declined, but about 40 per cent of necessary foodstuffs still have to be imported from abroad.

Moreover, the most valuable agricultural industries are concentrated in a few districts; for instance, most of the tobacco cultivation and cattle breeding and much of the grain production is carried out in the two fertile northern plains. Of these, Macedonia has been ceded to Bulgaria, and Thessalia was greatly devastated in last year's warfare. In addition, numerous fugitives from the territories ceded to Bulgaria and Albania have fled to other parts of Greece and must be fed there. Two-thirds of the olive oil—for which Greece has no refineries—is produced in Crete and other remote islands; many of the vineyards are in the Ionian Islands, which are now claimed by Italy.

Most of the goods traffic in Greece is seaborne in normal times, and this has naturally almost come to a standstill. The inadequate road and rail system has further deteriorated through the destruction of bridges and tunnels during the war; it is difficult to find the necessary fuel to drive trains and cars, while most of the draught cattle have been slaughtered.

Whatever stocks were available when the Greek resistance collapsed have been either requisitioned by the army of occupation or "bought" by foreigners with valueless German Treasury notes, which are supposed to be redeemed when the war is over. Axis soldiers, on leave in Greek towns, have been provided with large sums of this "money," which has to be spent in the country itself. The existence of these notes, coupled with the great discrepancy between supply and demand, has naturally produced a strong pressure on the general price level. Wage rates had to be raised by between 110 and 140 per cent between July and November, 1941, alone. The wheat price, which was 8 drachmas per oke (2.8 lb.) in 1940, was fixed at 27 drachmas in 1941, but this was considered insufficient by many farmers, who managed to sell their produce privately at higher prices or in exchange for goods instead of money; the Government threatened them in vain with heavy penalties, including the death penalty, for non-delivery of wheat.

Bread is in normal times the main constituent of the very simple Greek diet; an adult normally consumes 27 oz per day, and his ration was not very much smaller during the war with Italy and Germany. Last December, however, after reductions in the previous months, the official bread allowance reached the low level of 2½ oz; and it has been reported from Corinth and other places that, in fact, no bread or flour has been given to holders of ration cards for many months. The 1941 olive crop, according to an announcement of last August, was then considered sufficient to provide everyone with 11 lb of oil until the end of last year and with adequate quantities during the first half of 1941, but even Axis observers have stated that only very small quantities have in fact been distributed. Even in normal times, almost no other fats are consumed by the Greek masses. The Athens population received small portions of meat on rare occasions during the first six months of the Axis occupation, but these seem to have amounted to less than 1½ lb per head altogether; this is the more remarkable since large numbers of livestock have been slaughtered because of the lack of fodder.

The Blackest Markets

Shops in Greek towns are practically empty, partly because it does not pay for the shopkeepers to sell in their premises at the controlled prices. Unlike other countries, in Greece the black market is not confined to luxuries or semi-luxuries, or even to large-scale transactions in other merchandise, but extends to all kinds of goods that a trader can obtain, including potatoes, onions, tomatoes, soap, etc., which are sold at exorbitant prices. The prices of vegetables and olive oil sold in this way are about ten times as high

CROOKES' HALIBUT LIVER OIL

THE SUPPLY POSITION

The Crookes Laboratories regret that Crookes' Halibut Liver Oil will no longer be readily obtainable in capsules, but only in liquid form. This is due to priority demands of national importance.

In the interests of national health the Crookes Laboratories have taken every precaution in their power to ensure adequate supplies of Crookes' Halibut Oil in all parts of the country. Thus the public may rest assured that their needs of this vital source of Vitamins A and D are being safeguarded as far as circumstances permit.

THE CROOKES LABORATORIES

MAKERS OF CROOKES'

HALIBUT LIVER OIL

LIQUID, per phial, enough for 16 days—2/-

as the official prices, according to the Belgrade *Donau-zeitung*; and potatoes and onions, for instance, sell at three to four times the ordinary prices. The authorities have so far been completely powerless in face of this widespread illicit traffic; the ordinary policemen are unwilling to stop it, and even high Government officials have been convicted for black market activities. The Government is now trying to form a special corps of "incorruptibles" to supervise the black markets.

There is a shortage of many other goods, and a general control of the distribution of raw materials has been instituted by the Ministry of Economic Affairs. The scarcity of coal can be judged from the measures introduced to curtail the electric power consumption in Athens; these include a reduction of current in factories by 50 per cent, a reduction in the number of trams and buses also by 50 per cent, and of underground trains by over 70 per cent; private customers using more than a certain amount of electricity have to pay a surplus charge amounting to five times the ordinary rates.

Pauperism greatly increased last year, and the authorities have found it necessary to protest against the growing "nuisance" of beggars in the cities—among whom there are numerous veterans of the war. Another Government decree limits the number of school lessons to three per day, since the children are physically unable to attend school for longer hours. Already last year there was an increasing mortality rate, according to numerous reports, and various diseases as well as direct starvation have been widespread in recent months.

Palestine in the Third Year of War

[BY A CORRESPONDENT]

February 2nd

RECENT reports from Palestine give an encouraging picture of the national economy under the stress of war. In September, 1939, it was feared that the country, which had made extraordinary progress since the first World War, in spite of internal strife, would be seriously affected. Its export trade depended in great measure upon a single crop—citrus fruit; and its imports, on which its young industries had been built, were several times greater in value than its exports. Both imports and exports were threatened by the outbreak of hostilities; and when Italy entered the war and the Mediterranean became, if not *mare nostrum*, at least *mare semi-clausum*, the position was for a time very grave. The export of oranges and grape fruit was cut down to a tithe of the pre-war figure, and there were fears both for the food supply of the population, and for the maintenance of the industries. The Government came to the help of the orange-growers and the manufacturers. It arranged for loans to keep the established groves in cultivation; and it established a War Supply Board to assist producers in solving their supply problems, and in bringing Palestinian industry into the large organisation of the Eastern Supply Council.

Latest figures from Palestine show an encouraging increase in agricultural production for local food supply, and in industrial production both for home and export. Dairy, vegetable and grain farming have made steady progress since 1939. Thus, the imports of butter fell from

746 tons during the first half of 1940 to 437 tons during the first six months of 1941; but there was no rationing in Palestine. The milk yield increased by over 10 per cent on the previous year. The increased cultivation of vegetables by Jewish settlers is still more marked. The Jewish farmers have also doubled their cereal crops since the outbreak of war. The area under grain cultivation rose from about 40,000 acres in 1938-9 to about 70,000 acres last year.

Reducing Arab Indebtedness

At the same time, the position of the Arab cultivators has greatly improved. Never since the British occupation has there been such a lively demand for the products of the fellahin. Prices have risen to a remarkable extent for grain, olive oil and dairy produce. While the cost of production for the more scientific agriculture of the Jews has risen substantially, the costs of production for the fellah, who works his holding with the help of his own family, are little affected. Peasant cultivators, therefore, enjoy the high prices received for their products to the full; and they are now in the unprecedented position of being able to reduce their burden of debt with comparative ease. It is estimated that a peasant who harvests 4 or 5 tons of wheat now receives between £30 and £40 a year more than before the war; that is a very considerable sum for the Arab cultivator. During the last few months there has, indeed, been a serious rise in the cost of living in the towns, owing to the higher price of food, for which an outbreak of profiteering was partly responsible. It is stated that a ton of potatoes bought in Syria for £17 was sold in Palestine shops at four times that price. The Government and the Jewish bodies have taken steps to stop the speculation.

It is estimated that the annual value of the output of the Jewish factories is fifteen million pounds, and the number of Jews engaged in manufacturing between forty and fifty thousand. The value of non-Jewish industrial production, including foreign-owned as well as Arab enterprises, is estimated at between three and four million pounds. The removal of the threat of invasion of Palestine last year restored the confidence of investors; as a result, a number of new Jewish enterprises have sprung up, while factories that were previously closed have been reopened. The expansion is illustrated by the figures of the linking-up of new industries with the Palestine Electric Corporation. In 1941 they were nearly double the total for 1939.

The war has involved in Palestine, as in England, the introduction of controls, licences and Government supervision generally. But the assistance of the War Supply Board in obtaining raw materials for the factories has been increasingly recognised. And the Government was instrumental in organising a Palestine Industrial Exhibition in Cairo last August, which was welcomed as an impressive demonstration of the position and possibilities of Palestinian industries in the economic life of the Middle East. Besides the output of munitions, textiles and a great variety of consumers' goods for war purposes, which is the principal development, the war has led to the expansion of a few highly skilled industries for which Jewish workmen are specially qualified. Diamond cutting, in which, before the war, Jews were prominent at Amsterdam and Antwerp, has found a new home in Tel-aviv. The manufacture of scientific instruments has been successfully established, and also the manufacture of pharmaceutical and chemical products, for which the minerals of the Dead Sea offer special facilities.

German Europe Changes in Command

SPECTACULAR changes in the German military command have been followed by a reshuffle of important positions in the economic administration. The price commissar, Josef Wagner, who had held this office since 1936, was replaced by Dr Fischboeck; no explanation was given, and Hitler did not even offer the customary thanks. A few days later, Hitler created a new office, and appointed the motor-car expert, Jakob Wehrin, to be Inspector-General of Motor Transport. Hitler explained that he was in need of quick and reliable information about motor transport.

Wehrin has overriding powers to gather the necessary information, and is responsible directly to Hitler. This means that the new Inspector-General is superior to Major-General von Schell, the special commissar for motor-car production and transport. At the same time, Ministerial Director Dr Mansfeld was made Secretary of State in the Ministry of Labour, in place of Dr. Syrup, who was put on the sick list. Dr Mansfeld, it was explained, will intensify the search for labour for the war industry. On January 30th, the anniversary of Hitler's coming to power, Ministerial Director Gunther Schulze-Fieltz was appointed Secretary of State in Dr Todt's Ministry; a few days later Dr Todt, who

combined more offices than any other man in Germany, was killed in an air-crash.

These changes are too numerous to be without significance. It is safe to assume that they mark the beginning of a process of adapting Germany's war economy to the new conditions created by the protracted large-scale military campaign against Soviet Russia. In 1942, Germany's problem is the manufacture of munitions and weapons for a progressively growing *Wehrmacht* by the use of progressively fewer workers. Until the attack on Soviet Russia, Germany's military effort and her economic effort seemed to be well balanced. Long intervals between successive short campaigns, and the conquest of almost the entire Continent of Europe, enabled war production to be distributed over the industry of all Germany and German Europe.

Yet, even before the attack on Soviet Russia, there were disturbing signs of the growing tension which is probably unavoidable in an economy planned for maximum production. Excessive liquidity created an alarming boom in share prices, which was only stopped by a complicated system of profit and dividend stops. The influx of foreign workers hastily trained women and unskilled labour, together with the cost-plus-profit system for public orders, led to a gradual reduction in the efficiency of industry. In spite of the large booty gathered during 1939 and 1940, German economy was beginning to draw on its capital. Under these circumstances, the Minister of Economic Affairs, Dr. Funk, the price commissar, Wagner, and other Ministers, pursued contradictory policies. Wagner tried to mop up excessive purchasing power by the profit and dividend stop, and by gradually reducing the profit margin which employers earned by the cost-plus-profit system. Dr. Funk adopted the policy of frightening speculators by the threat of the registration of shares, which was finally introduced at the end of 1941. The Minister of Finance imposed new taxes; but by the system of "iron savings" the wages tax was slightly reduced; and at the same time, efficiency wages were introduced which actually reduced wages. During the autumn of 1941, public discussion of economic policy was almost unrestricted. Big business appeared to be demanding greater freedom from bureaucratic restrictions, while the price commissar, Wagner, and other influential old Nazis, seemed to want the abolition of profits, of the bourses, and, generally speaking, of private business.

The first sign of an actual change in policy was the introduction of fixed prices for armament orders, which was gradually to replace the cost-plus-profit system. This favours the most modern factories and the most integrated concerns. The process of concentration in industry will be accelerated, because the obsolete and inefficient factories will no longer be able to make any profit at all. The cumbersome control over costing, painstakingly built up by Commissar Wagner, becomes superfluous, and the mopping up of excessive profits, which are now termed differential profits, is no longer necessary. The leader of the Industry Group has stated that industry is well satisfied with the new principle of fixed prices, which allows a just profit to the efficient firm. Yet Price Commissar Wagner, who introduced the new principle, has been replaced by Dr Fischboeck; the main task of the new price commissar is confined to controlling the prices of civilian goods. It is evident that the new principle of fixed prices by itself would put an end to the dispersal of public orders over the whole of industry. Indeed, the concentration of industries, which was halted after the conquest of Poland, has now been made the foundation of the production programme for 1942. In western democratic eyes it seems to be a victory by big business over the Nazi idealist, Josef Wagner. But, in simple fact, it means that Wagner's main work, the cumbersome control of costing, has become superfluous.

The magic principle of the programme for 1942 is rationalisation. The system of fixed prices and rationalisation brings into new prominence the so-called self-governing economic organisations, particularly the Industry Group, under its president, Wilhelm Zangen. The Industry Group will assist the Government in fixing prices for public orders, and will be responsible for the formation of so-called "rationalisation shock troops." These shock troops, composed of engineers, will introduce new methods.

But the great number of workers mobilised for the expanded forces cannot be replaced by concentration and rationalisation only. Additional workers are wanted. The number of foreign workers employed in Germany already exceeds two millions, not including prisoners of war. The reserves of unemployed German women are almost exhausted, and the importation of greater numbers of foreign workers must certainly reduce the effect of industrial collaboration with occupied countries. There seems to be no

prospect for further voluntary recruits for work. It is known that Dr Syrup, who was replaced by Dr Mansfeld, used his powers to conscript labour sparingly; Dr Mansfeld, on the other hand, is said to be in favour of conscripting labour on a large scale. The German press indicates that conscription may even be extended to occupied countries. There is no doubt that the new governments of Bohemia and Moravia and Norway will introduce conscription if they are asked. The main reserves which Dr Mansfeld is about to mobilise, however, are Russian prisoners of war and Russian civilians. The German press hints that at least one million Russians will be employed. If Dr Mansfeld should succeed, the number of foreign workers employed in Germany may increase to something like 5½ millions, or nearly one-quarter of the total workers employed.

There is no doubt the Nazis are inaugurating a stupendous effort with these changes in the commanding positions. The original programme of complete concentration has been adapted to the present situation; but private industry has been given some measure of self-control and freedom to retain all profits made under the system of fixed prices. Yet the maximum effort can hardly exceed the overall production of 1941 simply because no actual increment of resources is visible.

The Capital Market.—An unusually long period elapsed between the announcement that the registration of shares was intended, and the actual issue of the decree, which then left it to the Minister of Economic Affairs to announce supplementary decrees or Orders. The first supplementary decree was formulated in vague terms, and ordered only the registration of a small part of share transactions. It seems obvious that the Minister intended to keep the capital market in suspense. Actually, the announcements were sufficient to arrest the upward trend in share prices.

Factory Discipline.—The Labour Trustee for Saxony, on January 16, 1942, issued a significant order with the purpose of strengthening factory discipline. The order is based on the wages decree of June, 1938, which introduced a system of warnings and fines against offences relating to the maintenance of order and safety in factories. In Saxony, managers are now empowered to impose fines on workers who absent themselves from work, who are not punctual, or leave their places before the end of the working-day. The Labour Trustee explained that the decree is not only in the interest of the employer, but will also benefit the workers. Dr. Ley, the leader of the German Labour Front, began at the same time a campaign for reducing absenteeism caused by sickness, and appealed in numerous meetings for more work.

Tobacco Rationing.—After local experiments with control cards for smokers, the Minister for Economic Affairs has decreed the introduction of "smokers' control cards" for the whole Reich. Men over 18 years of age and women over 25 may apply for these cards; but the cards constitute no right to a specified number of cigarettes, cigars, or quantity of tobacco. The cards contain coupons for each day, and the tobacconist distributes rations according to his supplies. Sales of tobacco without coupons is prohibited. Women are entitled to only one-half of the rations supplied to men. Local experiments have shown that cigarette queues disappeared, but non-smokers have begun buying tobacco and cigarettes for resale to heavy smokers.

The supply situation deteriorated during 1941. Tobacco production in the Balkan countries, the main source of supply for Germany, fell because of the campaign in the spring of 1941. Transport difficulties and the increased demand of the *Wehrmacht* strained the supply situation. Compared with 1939, the cigarette quota for 1942 was reduced by 14 per cent.

Loan to Roumania.—Germany has granted a Rm. 600 millions loan to Roumania for the purpose of assisting reconstruction and the armament programme. The January meeting of the German-Roumanian Industrial Committee discussed the expansion of Roumania's chemical, paper, iron and oil industries. It seems that the greater part of the loan will be used for Roumania's oil industry, and for improving communications. Germany promised the supply of railway material. During the last two years 52 new industrial companies were founded, and German capital holds interest in 19 of them. During 1940 and the first eight months of 1941, Germany supplied 895 tractors, 2,261 seed-drilling machines, and 29,515 ploughs.

THE BUSINESS WORLD

The Banking Position—III

The Banks in Transition

THE two preceding articles in this series have dealt with two aspects of what is substantially the same matter—the extent to which the banks are being led to place increasing proportions of their total assets in short-term, low-interest Government securities. Formally, this is leading to a great increase in the banks' liquidity. But this may be a temporary phenomenon, lasting only until there is some form of funding. And, in any case, is only in the legal sense that the floating debt of the Government can be said to be a liquid form of asset for the banks.

It was argued a week ago that the volume of bank credit—that is, the total resources of the banking system—is unlikely to recede very far from the maximum figure it will touch at the end of the war. Credit is often created, and it is being created now; but it is seldom destroyed, and never without extremely unpleasant consequences. After the last war, in spite of deliberate deflation, a 50 per cent fall of prices from their post-war peak, and long years of industrial stagnation, only about 8½ per cent of the credit existing at the peak was ever withdrawn. After this war it may be supposed that more conscious attempts will be made to keep prices up, interest rates down, and employment at a maximum, and that the further creation of credit is more likely to find a place in official policy than its destruction. This being so, there is no likelihood that the banks will be able to reduce their holdings of gilt-edged investments by selling them to their depositors.

There remains, however, another possibility. Is it not possible that there will be a brisk demand for advances from the banks, which will enable them to shift some of their assets back into this more remunerative form, without any painful shrinkage of the whole credit structure—indeed, possibly with some further expansion? This question brings up the third important aspect of the changes that have been taking place in bank balance-sheets. The total of advances has been falling, in absolute figures, since the beginning of the war. But this is merely an intensification of a tendency that has long been in evidence. Between the end of 1928 and the end of 1938, the national income in money terms rose by some 15 per cent and the deposits of the English joint-stock banks by 16 per cent.

But the loans and advances of the Clearing Banks actually declined over the same period by some £23 millions. It is not only in war-time that a declining demand for bank advances is in evidence; it is a trend of some standing. Nor is the phenomenon confined to this country. It can be observed even more strikingly in the United States.

It appears, then, that the banks' holdings of gilt-edged securities are rising, both absolutely and relatively, while their advances are falling, relatively for some time past and now absolutely. These two phenomena are not, of course, independent of each other; one is the cause of the other. Traditional banking practice might lead to the assumption that it is the fall in advances that causes the rise in investments. But this can hardly be accepted. The banks have not bought investments because they could find nothing else to do with their resources—or, rather, this has only been the last link in the chain of causation. The real impelling force has been the decision of public policy that they must buy investments—first of all to push interest rates down, and subsequently to provide funds for war expenditure. It is much nearer the truth to say that the rise in investments has been the cause of the falling demand for advances. When the banking system creates credit at the instance of the authorities, the created credit lodges somewhere. Somebody holds the increased bank deposits. That "somebody" is, in very large measure, the industrialist, the merchant, the business firm which would otherwise have had to ask for accommodation. The creation of credit makes the business world more liquid and enables it to meet its own requirements of working capital.

This fact—for such it seems to be—leads to some interesting reflections on the effects of an increase in the quantity of money available to the public. According to the accepted doctrines, of almost any school, the public is said to have fairly definite views about the quantity of money it chooses to hold. Monetary theory is—or was—largely built up on the concept of a stable relationship between the national income and the quantity of money, or on the alternative concept of a velocity of circulation of money which might, indeed, vary from good years to bad, but tended always to come back to its norm. If the public was presented with increased quantities of money, then sooner or later it would discover that it was holding too much relatively to its income; it would spend the excess, and prices would be driven up until the desired relationship was restored between income and money holdings. Hence all the prophecies that the present creation of credit, if it is not causing inflation at present, will surely do so later. Hence, also, the desire to collect savings in funded form and the belief that they cannot safely be left in cash.

But what actually happens appears to be very different. The following figures compare the totals of deposits of the English and Scottish joint-stock banks with Mr. Colin Clark's estimates of net national income at market prices:—

	Net National Income at Market Prices (per annum) (1)	Total of Deposits (2)	Col. (2) as % of Col. (1)
	(£ millions)	(£ millions)	%
1894-1903	1,666	682	40.9
1904-10	1,940	795	41.0
1911-13	2,241	896	40.0
1924-29	4,274	2,115	49.5
1930-34	4,050	2,259	55.8
1935-38	4,805	2,599	54.1

Before the last war, there appears to have been a very stable relationship. But in the period 1924-29, when the war-time changes had been absorbed, the ratio had altered. Had the public been determined, as before the war, to hold no more than 40 per cent of its income in money, either some £400 millions of bank credit would have had to be destroyed, or else prices would have been pushed up until the national income was nearly a quarter higher. Similarly, in the period 1930-34, when the national income was shrinking and credit was (in the later years of the period) being deliberately expanded, the public appeared to be willing to accept a substantially larger volume of liquid cash. Even in the years of rapid recovery after 1935, the ratio hardly fell.

This pattern of behaviour seems to be so persistent and so well established (it could be illustrated even more clearly from American figures) that its continuance after the present war may perhaps be assumed. The credit now being and shortly to be created, that is to say, will not be used to finance a rise in prices and a consequent rise in the money national income (or, at least, not all of it will be so used). The public will passively accept it as a permanent addition to its cash holdings. And one of the consequences will be that business will have even less necessity to have recourse to the banking system for its working capital. The demand for advances will continue to decline.

If this forecast is correct, then the banks are not passing through a period of temporary abnormality, but are undergoing a permanent change of character. The original conception of a bank was of an institution that collected the savings of the public and used them to finance the short-term capital needs of industry and commerce. The description has long been partially, and is now very largely, inaccurate. On the liabilities side of their balance-sheets, British

and American banks do not nowadays so much collect the savings of the public as hold its current cash. (To the extent that deposits have come into existence as the result of deliberate credit creation, it is particularly misleading to think of them as savings.) On the assets side, the banks are increasingly becoming not so much providers of short-term capital to business as providers of long-term funds for the Government.

This change in their functions, now likely to be carried much further, will, of course, have considerable repercussions on the banks' structure and operations. One alternative course of action would be for the banks to seek means of investing their resources in long-term capital for industry, which would raise, of course, very difficult and dangerous questions of liquidity and solvency. In any case, it is probable that the banks will have to change their ideas of how they earn their expenses and profits. When over half their assets were lent out as advances, and a large part of the remainder invested in securities and bills yielding anything up to 5 per cent, it was perfectly natural for the assets to carry the whole cost of the business and leave something over for the payment of interest on deposits. But if the assets are to be predominantly in Government paper and earning an average of, say, 2 per cent, this will no longer be a possibility. It may be necessary to recognise in practice that the current account depositor is not nowadays doing the bank a service in depositing his money so much as accepting from the bank the service of handling his current funds. It may be necessary to secure, by a gradual transition, that the liabilities, rather than the assets, carry the costs of the business. And that may conceivably lead to the further conclusion that those costs have been allowed, in the recent decades of lavish expansion, to rise to a higher level than can be permanently justified.

THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL - - £3,000,000

RESERVE FUND- £3,000,000

Head Office: 38 BISHOPSGATE, LONDON, E.C.2

London (117/122 LEADENHALL STREET, E.C.3)

Branches: 28 CHARLES II STREET, HAYMARKET, S.W.1

Manchester Branch: 52 MOSLEY STREET

Over 40 Agencies and Branches throughout the Far East, &c.

Drafts granted on Agencies and Branches. Bills of Exchange bought and received for collection. Letters of Credit and Travellers' Cheques issued, and every description of banking business transacted. The Bank also undertakes Trusteeships and Executorships.

Circulation Creeping Up

The banks have again been preoccupied this week with the tasks of effecting substantial transfers of tax money and of adjusting their cash position accordingly. They have in consequence been poor buyers of bills from the market, and in the early part of the week the special buyer had to come to the assistance of the market by way of purchases of March maturities. The supply of these in the hands of the market must now be running dry. Bank cash has been further affected this week by continuing heavy applications for Tax Reserve Certificates, though in this case the impact of the resulting payments has probably been countered by corresponding encashments of Treasury Deposit Receipts. Another influence on the credit situation has been the continued expansion in the note circulation. For the week to last Wednesday this amounted to £3,113,000, carrying the outstanding volume of notes to within £2,000,000 of the high record reached at the end of the year and reducing the amount of unissued notes in reserve to £30,717,000. The effect of this and of an addition of £2,858,000 in Public deposits is seen in a reduction of £5,454,000 in bankers' deposits at the Bank of England.

* * *

Bank Investments over £1,000,000,000

The clearing bank returns for January mark another milestone in the rise of bank investments. They have crossed the £1,000,000,000 mark. At their new level of £1,007,747,000 they are £9,109,000 up on the December 31st figures and some £408,000,000 higher than at the outbreak of the war. Last month's further expansion in investments derives special significance from the fact that it occurred within a considerably contracted volume of bank credit. Deposits show a fall of £107,353,000 compared with December 31st totals. Of this figure £28,328,000 is accounted for by a decline in cheques in course of collection and transit items—a normal movement after their inflation over the turn of the year—and the true fall in deposits therefore amounts to £79,025,000. This is a seasonal movement connected with heavier tax payments and consequent repayment of floating debt by the Government. On this occasion, however, the seasonal trend has been accentuated

COMBINED STATEMENT OF LONDON CLEARING BANKS

by applications for Tax Reserve Certificates on the part of the banks' customers. These have eaten into deposits and, as was suggested by the last National Debt return, the payments for these Tax Certificates have to a large extent been financed by the banks through recalling Treasury deposit receipts. Since the TDR's are only £19,500,000 down as compared with the December 31st balance-sheets, and since it is known that the maturities for the month of January exceeded payments by some £75,000,000, it is evident that a considerable part of the recalling of these deposits must have occurred towards the end of the month and after the banks' individual statements were made up (their dates vary between January 20th and 29th). On this reasoning the impact of Tax Reserve Certificate subscriptions on deposits and TDR's should be even more apparent in the February statements. Last month's withdrawals of deposits were

wholly balanced by letting liquid assets run off. Apart from a contraction of £35,743,000 in the basis of bank cash from the abnormal level to which it had been swollen at the end of 1941, short loans were recalled to the extent of £23,734,000, bills ran off by £14,039,000, and Treasury deposits, as already stated, fell by £19,500,000. The exceptionally low figure of £117,582,000, to which short loans have been reduced, has not been equalled since 1934, and provides interesting commentary on the exceptionally difficult conditions experienced in the money market during the final days of January. Equally significant is the fall in the bill portfolio to £157,041,000, a figure not equalled since the beginning of the publication of monthly clearing bank returns after the last war. In contrast with this general decline in liquid assets, advances made a slight recovery last month, from £806,718,000 to £811,767,000, probably a seasonal movement connected with temporary bank assistance in meeting customers' heavy tax payments. The liquidity ratio has thus suffered somewhat, the proportion of quick assets to net deposits (deposits less items in transit, etc.), falling from 45.3 on December 31st to 43.5 per cent in January.

* * *

Floating Debt Policy

Events of the past few weeks in the London money market have revealed some friction in the smooth functioning of the machine. The banks have felt the customary seasonal impact of tax payments, which on this occasion has been severe in itself and moreover accentuated by the heavy initial subscriptions for Tax Reserve Certificates. In addition, with the Warships Weeks campaign slowly working up to its climax, they are naturally keeping exceptionally liquid. In meeting calls on their cash and preparing for further stringency between now and the end of the financial year, the banks have been refraining from all but the most selective and hesitant buying of bills from the market. By the January making-up period the banks' bill holding had fallen to about one-fifth of their Treasury Deposit Receipts. The point has been reached at which for some weeks past the discount market has found the true outlet for bills with the official agent of the Bank of England rather than with the clearing banks. It is evident that the combination of the Treasury's floating debt policy and the predilection of the banks for TDR's as opposed to bills has led to a position in which the banks' endeavours to maintain their cash ratio in times of exceptional movements of funds must involve disturbingly heavy proportional changes in their short loans and bill portfolio. These two items are still the truly elastic element in the assets structure and to subject them to the considerable deflation that has occurred over the past six weeks reacts harshly on the money market. Treasury Deposit Receipts are not a comparably elastic instrument. They can only be encashed without penalty in exchange for subscriptions to one of the Government's new issues and such an exchange will aggravate and not cure a taut cash position. A bank can stop buying bills or recall loans from the market, but it can hardly refuse to pay over its part of the quota of Treasury Deposits asked in any week by the Treasury. In the circumstances, it is certainly a defect in the traditional mechanism of credit control that the volume of Treasury Deposit Receipts should have come to represent so overwhelming a proportion of the banks' quick assets. Perhaps the intention of the authorities and of the banks may be to change the traditional mechanism and substitute for it more direct permanent relationships between the central bank and the clearing banks. The position will repay careful watching from this angle.

* * *

AEF Expenditure in Britain

The arrival of United States troops in Ulster has already raised a number of interesting exchange problems for which, however, experience with the Canadian forces has provided some precedents. As in the case of the Canadian troops in this country, the Americans will be paid in sterling at the official rate of exchange. The necessary arrangements have been made by the respective Paymasters. But since there is as yet no hint of exchange control in the United States, there will be no obstacle to American soldiers here receiving remittances in dollars from relatives and friends in the United States. Already Ulster has seen some of the

dollar pocket money which the troops brought over with them. The fear that the expenditure of such dollars may feed a black market in dollar bills and that the American soldiers may find it possible to obtain in some such market a better rate of exchange for their dollars than that provided for them by their own paymaster organisations need not be taken too seriously. If any such market shows signs of developing, the authorities on this side will know how to nip it in the bud.

Life Assurance New Business

Following successive heavy reductions in 1939 and 1940, sums assured by new life policies in 1941 displayed a marked recovery. The 1941 figure represents an increase of 20 per cent on that for the previous year, although it remains nearly 40 per cent below the pre-war (1938) level. A wide range of fluctuations in the experience of individual offices is covered by the all-over expansion. It is noteworthy, especially, that the industrial-cum-ordinary offices, with a combined increase of 35 per cent, fared well by comparison with the purely ordinary offices, which had a combined increase of only 10 per cent. This phenomenon was also a feature of the two previous years, and is largely due to the higher levels of wages and earnings. But the

trend has not been uniform among the offices in the two groups, and it is clear that other influences have been at work. One factor is the varying treatment of the war risk on civilian lives. The majority of offices include this risk at an additional premium, but a few cover it without extra charge, and—at the other extreme—there are some which decline to accept it at all. Again, a number of offices have endeavoured to attract a share of "patriotic" saving by offering endowment policies under which the sums assured are payable in savings bonds in lieu of cash. And one or two offices owe their large totals in substantial measure to the encouragement given to new "group" assurances. Behind these differences of policy lies a fundamental divergence of outlook on the desirability of transacting a large volume of new business at the present time, with the net interest yield on new investments less than 2 per cent, and the future trend unpredictable. Until the rate of return improves, new policies written on the without-profit plan must necessarily be unremunerative, and for this reason many offices consider it wise to progress slowly. From the point of view of existing participating policyholders, there is much to be said for this attitude, since any loss on new assurances will in most cases involve a reduction in the profits available for distribution at the next bonus valuation.

Investment

Reaction Continues

The combination of financial influences with the news of continued retreat at Singapore, and in Libya, has led to a further modest falling off in Stock Exchange turnover, and with it a sagging in prices. If the market reaction to the events of the past few weeks differs at all from that of previous occasions, when considerable reverses have been experienced in the field, it is that the decline in business, at least as judged by total bargains marked, has been less than might be expected. This is due in part to seasonal realisations, but it is evident that the bulk of these have been promptly taken up, for industrial equities, although weak, are not appreciably below the December minimum. Another factor of some importance is the large size of tax collections this year despite the scaling down due to the spreading out of wage and salary payments, and the relatively modest Government disbursements, a combination of events which has led to some contraction of the supply of money in the hands of many institutions and some individuals. There has, of course, been the usual seasonal decline in short term borrowing, but this does not release money for longer term investment. Heavy tax payments will, of course, continue for some time to come, but normal supply disbursements should increase, while there are tens of millions to be paid out under the India vesting order on and after March 2nd, and a similar amount for Canadian stocks three weeks later. This month and next are to witness an impressive series of Warships Weeks, which are doubtless calculated to absorb some of these vesting monies. That they will take all is, however, impossible and it is reasonable to look for some improvement in market conditions next month provided there is no countervailing influence. The outlook for equities in general continues, however, to be none too cheerful. Every week makes it more abundantly clear that the standard of life in this country as regards food, clothing and services

is higher than is consonant with total war. There is great unwillingness in high places to curtail any of these, but further restrictions must come and they will bring lower profits for a substantial portion of manufacturing and distributive trades. Against this, there is some reason to hope that concerns engaged mainly on war work will succeed in maintaining profits, after tax, at or near 1941 levels. But nothing better can be expected. This seems to mean a decline in the general level of industrial equities, unless there is a further fall in the rate of interest sufficient to offset the smaller net return. Recovery, when it comes, should, therefore, be at the fixed interest end of the scale, but it is not excluded that it will also affect shares which have suffered a heavy fall and which will be bought for long term capital appreciation.

* * *

Chain Stores out of Favour

One of the major movements among British equities in the past two or three weeks has been the marked weakness of chain-store prices. The fall, which, it will be seen from the following table, is fairly severe, has not affected chain stores dealing principally in foodstuffs, nor has it touched more than very lightly the big stores of London and the provinces, so far as these are represented. It appears to have been initiated by the cut in the Woolworth payment, and to have been accentuated by the results of Boots Pure Drug, but there is a tendency to see in it a reflection of fears as to possible ill-effects, for this type of enterprise, of the extension of concentration to retail trading. Actual results so far announced are in line with what should have been expected from the progressive limitation of public spending. And, when it is remembered that further cuts seem inevitable, it is scarcely necessary to look further to justify prices which, at their new lows, still give yields well within

Industry and Trade

Fuel Economy

The facts that oil has to be imported and that restrictions have been imposed on its consumption have encouraged the view among many consumers that it is in the national interest to change over to domestic fuel wherever possible. True, ships to bring oil to this country are scarce; but coal-miners are also scarce, as is the labour and materials required to convert oil-burning plant to installations using domestic coal and its derivatives. Apart from emphasising the need for strict economy in the use of all fuels, wartime economy must ensure that supplies of all kinds of fuel are used in the most advantageous proportions, given existing installations. Indeed, any large-scale change-over from oil to coal would be uneconomic in present conditions. Accordingly, the Board of Trade has now decided to control plant conversions more effectively. In a statement issued to industrial consumers this week, the Board of Trade announced that no conversions must take place except on the advice of the Government departments concerned. In the case of a consumer executing contracts for one of the Supply departments, he must consult the Ministry concerned which, when necessary, will approach the department of the Board of Trade responsible for the type of fuel to which conversion is contemplated. Other consumers must apply directly to the authority concerned. These are: the Mines Department for coal, the Petroleum Department for liquid fuel, the Directorate of Gas Supply for gas, and the Electricity Commission for electricity. In the case of coal, the approach must be made through the Divisional Coal Officers and in the case of electricity through the local supply undertakings. The Government is also making an effort to increase the use of pitch, of which substantial quantities are still available. These measures suggest that at least in one respect the Government is now taking a broader view of the implications of a wartime fuel policy. Meanwhile, the basic petrol ration for private motorists has been cut by one-sixth for the three-monthly periods ended next April and June.

Rise in Unemployment

The smooth downward trend of the unemployment curve has been broken for the first time since October, 1940. For January 12th, a rise is recorded in the number of unemployed on the registers of employment exchanges in Great Britain. The total rise from December 8th is small, amounting only to 6,494 persons, the total number unemployed being 194,484. There were 170,862 persons wholly unemployed, compared with 165,224 on December 8th. Of these, 87,943 were men, 12,272 were boys, 56,101 women and 14,546 girls. The corresponding numbers on December 8th were 84,235, 8,105, 62,058 and 10,823. In the category of "temporarily stopped," only among men were there substantial rises, the number being 7,214 against 4,356; the figure for boys rose by four to 74. There were 7,047 women and 401 girls temporarily stopped on January 12th, against 7,957 and 878 on December 8th. Fewer persons normally in casual employment were unemployed: 8,946 men, 5 boys and 299 women, against 9,506, 17 and 346 respectively in December. There were no girls in this category in either month. The increases in the number of men wholly and temporarily unemployed were mainly due to severe weather conditions which restricted outdoor employment on the day the count of unemployed was taken. The increases in the number of boys and girls recorded as unemployed was largely due to the registration of school-leavers at the end of December. The rises occurred in the London, Eastern, Midlands and Northern areas.

Road Transport After the War

Early last month the railway companies decided to appoint a Commission charged with the task of enquiring how the efficiency of the undertakings can be improved by schemes of post-war reconstruction or reorganisation. A com-

mittee with a similar task in so far as road transport is concerned, and including representatives of haulage contractors, ancillary users and passenger vehicle operators, was set up last month by Associated Road Operators, one of the trade organisations of the industry. But, in contrast to the railways which collaborate in matters of general policy, the road transport industry has no well-knit central organisation that can speak for the industry as a whole. There are, indeed, a number of organisations, including, apart from the Associated Road Operators, the Standing Joint Committee, the Commercial Motor Users' Association, the National Road Transport Employers' Federation, and others. Attempts to organise the industry as a whole have so far been unsuccessful.

Activity at the Shop Counter

The downward trend in the average daily value of retail sales, as recorded by the Bank of England, continued last December when they were 4.6 per cent smaller than in the corresponding month of 1940. Food sales, as the accompanying table shows, were only slightly down on the year, but the fall in the turnover in other merchandise was again proportionately much more marked. Had it not been for a substantial increase in the sales of the piece-goods and furnishing departments, amounting to 16.7 per cent and 28.7 per cent respectively, the fall in non-food sales would have been considerably bigger. One of the reasons for the

PERCENTAGE CHANGES IN RETAIL SALES FROM PRECEDING YEAR			
	Food and Perishables	Other Merchandise	
1940 November	- 0.3	+ 1.3	
December	+ 0.8	- 6.7	
1941 January	+ 5.8	- 8.8	
February	+ 3.5	+ 1.8	
March	- 2.1	- 2.1	
April	+ 0.9	+ 2.9	
May	- 4.3	- 2.4	
June	- 3.1	+ 6.8	
July	- 6.7	- 15.9	
August	- 1.9	- 10.8	
September	- 0.8	- 8.2	
October	+ 0.2	- 23.5	
November	- 0.4	- 2.3	
December	- 1.9	- 7.4	

increase in the sales of piece-goods and furnishing materials is the fact that they contain many items that are not yet rationed on a per head basis. But since their manufacture is limited by restrictions on raw material supplies and by quotas, and as old stocks are running down, the increase cannot be maintained indefinitely. During January-December, 1941, average daily retail sales were 3.8 per cent lower in value than during the first eleven months of the preceding retail season, when, in turn, they were 3.6 per cent higher than in 1939. Food sales showed a reduction of 1.6 per cent and turnover in other goods one of 6.9 per cent. If prices can be effectively controlled, the fall in the value of non-food sales may be more marked this year than last.

Value of Non-Food Retail Sales

The Second Interim Report of the Retail Trade Committee, discussed on page 212, contains an interesting statement showing the value of retail sales in the main categories, other than food and drink, in 1939, including repairs. While the Committee set out in detail the reduction in new supplies brought about by restrictive measures, it did not attempt to estimate the aggregate value of turnover in 1941 or in the current year. In view of the absence of data concerning stocks, and because of the difficulty in forecasting the movement of prices, an estimate for 1942 is fraught with difficulties; but even an approximation would have been useful. As is shown in the preceding Note, the average daily value of non-food sales in February-December, 1941, as recorded by the Bank of England, was only 6.9 per cent smaller than during the corresponding eleven months in

1940; moreover, since turnover in February-December, 1940, was 5.1 per cent higher than during the corresponding period in 1939, the value of non-food sales last year was almost as high as two years earlier. The Bank of England

ESTIMATED VALUE OF SALES IN 1939

	£ millions	% of Total
Clothing —		
Women's, girls' and infants' wear and dress materials	240	20.0
Men's and boys' wear	140	11.7
Boots and shoes	85	7.1
Total All Clothing	465	38.8
Other Articles —		
Furniture, household textiles and hardware	225	18.8
Tobacco and cigarettes	180	15.0
Books, newspapers, periodicals and stationery	120	10.0
Drugs, perfumery, photographic and optical goods	50	4.2
Sports and travel goods	40	3.3
Household stores	40	3.3
Miscellaneous articles	80	6.6
All other articles	735	61.2
Total Sales	1,200	100.0

returns are derived mainly from the larger undertakings, and their experience is not necessarily a guide to the movement of sales in the small shops, which considerably exceed the former in number, though not in turnover.

Retail Prices in 1941

Both *The Economist* and the Board of Trade's indices indicate that the rise in the wholesale prices of basic materials was comparatively small in the past year; the one recorded a rise of 7.5 per cent between December, 1940, and December, 1941, and the other, which is more comprehensive, one of 4.9 per cent. According to the Board of Trade's calculations, the wholesale prices of food and tobacco rose by 4.2 per cent, against 22.4 per cent in 1940, and those of other industrial materials and manufactures advanced by 5.3 per cent, compared with 21.0 per cent in the preceding year. The comparatively small rise in the wholesale prices of basic materials has assisted the Government in its policy of stabilising retail prices. The Ministry of Labour's index of the cost of living for January 1, 1942, was only 2 per cent higher than a year earlier. Changes in the component indices are shown below:—

INDEX OF THE COST OF LIVING (July, 1914=100)

	Jan. 1st, 1941	Jan. 1st, 1942	% Change
Food	172	163	- 5.2
Rent	164	164	...
Clothing	330	400	+ 21.2
Fuel and light	223	230	+ 3.1
Other items	222	233	+ 5.0
All items	196	200	2.0

The increase in the price of clothing has been substantial, but the difficulty of price control should be lessened by the introduction of the utility clothing scheme and the price regulations attached to it. The sharp rise in clothing prices and the smaller advances in those of fuel and light, and of miscellaneous items, has been partly offset by the 5.2 per cent decline in the index of food prices (changes in the prices of the commodities included in the index are shown on page 239), which probably involved an increase in the subsidies paid by the Government.

Nickel

Statistical information on nickel has become scarce since the outbreak of war, but in a recent report on the industry, Mr Robert C. Stanley, President of the International Nickel Company of Canada, stated that production last year was running far beyond anything experienced in the past. According to the United States Bureau of Mines, the highest world output of nickel before the war was reached

in 1937, when 120,100 metric tons, or twice as much as in 1929, was produced. Of this total no less than 102,015 tons were produced in Canada and 11,600 tons in French New Caledonia. Since then both countries have raised their output. According to information published in the United States, New Caledonia (now a part of Free France) produced 17,500 tons of nickel in 1940, and probably a still larger tonnage in 1941. In Canada, the International Nickel Company is engaged in the execution of a new expansion scheme, aimed at raising its capacity by another 25,000 tons a year. Moreover, the Falconbridge Nickel Mines, Ltd., the only other Canadian producer, has apparently made good the loss of its smelting plant in Norway. Outside the two chief producing countries, no important developments appear to have taken place since the outbreak of war. Brazil is preparing an extension of its production in Minas Geraes and Goyas, but so far shipments have remained insignificant. The Petsamo deposit in Finland is approaching the production stage; the installations have been repaired, and Swedish reports recently stated that small quantities of ore derived from development work have been shipped to Germany. In Greece, which produced 1,336 tons in 1939, the Germans are endeavouring to raise production, but the possibilities of expansion are limited by the smallness of the deposits. Burma, which produces some nickel speiss as a by-product from lead-zinc mining in the north of the country, has had difficulties in disposing of its output, which formerly went to Germany. While the Allies control almost the entire world output of nickel, the Axis countries are extremely short of supplies. The United States introduced priority regulations for nickel in March, 1941, and the Ministry of Supply has been controlling its distribution by a licensing system since the beginning of this year. Government control of the use of nickel, together with the expanding output in the two chief producing countries, should ensure adequate supplies for the Allied munitions industries.

Departmental Replies to Criticism

The forty-first Report from the Select Committee on National Expenditure, issued last week, is concerned with the Departmental action and comment in respect of ten of the reports submitted by the Committee. It covers a wide range of subjects, including civil defence, labour in the aircraft industry, conditions at ports, the allocation of manpower in the Army, coal, shipbuilding and repairs. Departmental comment suggests that some of the information secured by the Committee was not entirely accurate, and that some of its recommendations are impracticable. In its twentieth Report the Committee suggested further investigation of the design and speed of merchant ships and closer consultation between the Admiralty, the Ministry of War Transport, and the Classification Societies; the Admiralty, in its reply, took the view that present arrangements were satisfactory, and that complaints concerning the speed of ships had proved to be unfounded when put to the test in individual cases. Moreover, the adoption of the Committee's suggestions in the twenty-fourth report that valuable economies in fuel might be secured if it were found practicable to close down home broadcasting at an earlier hour, and that substantial relief to the demands on electric power stations could be given by the suppression of the news broadcast at 8 a.m., does not appear to be justified in the light of the facts. If broadcasting stopped at just over 0.5 per cent of the total consumption during the five winter months from November to March. The news bulletins at 8 a.m. and at midnight are outside the peak demand for electricity, and their discontinuance would have no perceptible effect on fuel consumption. But many of the Committee's suggestions have undoubtedly been of value; even if they have not been original, they have probably tended to speed up improvements and the correction of defects.

FAMOUS SINCE 1795

OTARD'S
COGNAC BRANDY

COMPANY MEETINGS

GENERAL MORTGAGE BANK OF PALESTINE, LIMITED

POSITION STRENGTHENED

The twentieth annual general meeting of the General Mortgage Bank of Palestine, Limited, was held, on 8th instant, in the Bank's office at Tel-Aviv.

Mr S. Hoofien, MBE (the chairman), in putting the directors' report and accounts for the year 1941 before the meeting, said that although, naturally, under prevailing circumstances, new business was not to be expected, results had still been most satisfactory. Arrears were lower than last year, and whatever small enemy activity there had been had caused only insignificant losses to the Bank's borrowers, and only in one case was there a small loss to the Bank. He was glad to be able to say on this occasion that in the 20 years of the Bank's existence no loss had ever been sustained through any forced sale.

There had been a liberal allocation to the contingencies fund, and after making provision for arrears of interest it had been found possible to add a further sum of £15,000 to the reserve fund, which now stood at £115,000. A final dividend of 4½ per cent. on the ordinary shares and 3½ per cent. on the preference shares was proposed, thus bringing up the total dividends on these two classes to 7½ per cent. and 6½ per cent. respectively.

The time had come, the chairman stated, to look forward into the future, and to formulate plans satisfying post-war housing needs. By the time new building activity would be possible the current needs of at least five years would have accumulated, quite apart from the needs of such immigration as would then again have to be expected. While in the past housing was considered by the local administration to be the private business of each and every individual, one might hope, Mr Hoofien continued, that the magnitude and urgency of the problem as it would present itself soon after the war would open the administrators' eyes to the necessity of possessing a public policy in the matter. Popular housing would call for finance under conditions more generous than the Bank which had to find its means in the ordinary market would be able to grant. There would, however, remain a wide field for ordinary private building which would give the Bank extensive business opportunities.

The report and accounts were unanimously adopted.

JUTE INDUSTRIES, LIMITED

TAXATION AFFECTS PROFITS

The twenty-first annual general meeting of shareholders of Jute Industries, Limited, will be held in the board room of the Association of Jute Spinners and Manufacturers, 5, Cowgate, Dundee, on Monday, 16th February.

The following is the statement by the chairman (Mr J. Ernest Cox) which was circulated with the report and accounts:—

As you will remember, it was my practice in pre-war days to make a full and comprehensive statement on the accounts, cover-

ing the salient features of the preceding year, and an attempt to forecast the probable trend of business in the succeeding twelve months. To do so under present circumstances would be unwise for reasons which will, I feel sure, be obvious to all.

The reduction in profit is occasioned by the increase in the rate of excess profits tax and income tax, and, in addition, the heavy cost of War Damage Insurance.

In place of charging to revenue the whole of the difference between book value and proceeds of machinery disposed of during the year, as has been our custom, your directors have thought it right to charge the appropriate amount for depreciation to reserve for depreciation and obsolescence, and a sum of £7,714 has accordingly been debited to that account.

It has not yet been possible to adjust with the Inland Revenue Authorities our capital or profit standard for EPT purposes, but we are advised that the provisions we have made are sufficient.

During the year £20,000 was invested in 2½ per cent. National War Bonds as a contribution to the war effort.

With this short explanation, I would ask shareholders to accept the report and accounts as presented to them without further comment.

The business of the meeting, to be held in Dundee, will be purely formal.

WANDSWORTH AND DISTRICT GAS COMPANY

The annual meeting of the Wandsworth and District Gas Company was held, on the 10th instant, on the company's premises at Wandsworth.

Mr Frank H. Jones, MInstCE (chairman and managing director), presided, and first referred to the loss which the company had sustained through the death the previous night of Mr R. M. Chart, who had been a member of the board of the old Mitcham and Wimbledon Company and had joined the Wandsworth Company in 1912.

Continuing, he said that the proprietors would be aware that details and figures regarding the company's operations during the past year might not be published or disclosed. Proprietors could be assured, however, that in view of the prevailing circumstances the results were as good as could be expected, and the directors recommend the payment of a final dividend of 2 per cent., making 4 per cent. for the year. The company had carried out its obligations in the supply of gas in its very large area, and had done so consistently throughout the year.

As regarded the working of the company, the works and district had been properly maintained and, subject to certain restrictions, they were carrying on. They had brought a lot of women into the company, both in the office and in the works. The office had gone on well, and thanks were due to the whole of the staff for their efficient and untiring work during the year.

The payment of the dividends was approved.

The chairman proposed a vote of thanks to the staff, and Mr G. F. Page, JP, seconded the vote, which was unanimously approved. A vote of thanks to the chairman and directors concluded the meeting.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: All dealings are for cash

In view of the Japanese assault against Singapore, the markets failed to maintain the slight improvement registered at the close of the previous week. As usual, however, the principal effect was the withdrawal of buyers and some precautionary marking down of prices. Quiet conditions prevailed in the gilt-edged market both before and after the week-end, but as the news from Singapore worsened, slight selling occurred. Local Loans and both Consol issues losing ½ on Tuesday, while other issues were generally quoted ½ lower. The advance in Brazilian issues in the foreign bond market was attributed to small sinking fund pur-

chases and the improvement in the exchange position. Chilean bonds failed to hold the previous Friday's gains on Monday, when Mexican issues also eased slightly. Peruvian Corporation stocks were offered the following day, when among European issues, the Czech 8 per cent loan improved ½ point. External events militated against business in the home rail market, where, in the early part of the week, junior issues suffered small losses, the decline extending to many preference issues on Tuesday, when losses in the latter were restricted to ½ point. The submission of a memorandum to the Argentine Government by the railway companies served only to underline the difficulties of the companies, and in common with other sections, the foreign rail market displayed some weakness. Elsewhere, Canadian Pacific stocks weakened in the early part of the week, the ordinary

issue losing ½ on Monday and a further ½ the next day. In midweek the feature was the weakness of Australian shares on dividend limitation, the implications of which are still obscure.

The downward trend of prices was particularly marked in the industrial market. Brewery shares were generally lower on small realisations, with many losses up to 1s. The aircraft and motor group started the week on a steady note, but on Tuesday declines were general. Rolls-Royce and De Havilland falling ½ among other smaller losses, Raleigh Cycle Holdings, however, gained the same amount. Heavy industrial issues were generally easier, but losses were slight apart from a decline of ½ for Indian Iron on Tuesday. The stores group was

THE ECONOMIST

If he tried to resign his office, the nation would issue an Essential Work Order to keep him on the job. But there is more and more insistence that those things that are manifestly wrong should be put right.

What are these things that are manifestly wrong? First and foremost among them is the military conduct of the war, especially in so far as it concerns the Army. The British people have been wonderfully patient under the long string of disasters and disappointments. But they are getting very tired of always losing—and usually losing so badly. In the whole history of the war, the British Army has not a single success of any importance to its credit—unless it be the very Pyrrhic triumphs of Dunkirk or the very temporary gains in Libya. True, it has had a great deal of bad luck—but the good general does not have bad luck. True, it has been short of equipment—but production is now very large. True, shipping is scarce—but it could have been much less scarce if the imports of food had been reduced as drastically as the situation has demanded for several months past. And in any case, all of these excuses in combination do not explain what happened at Singapore. The dispatch from Batavia in Tuesday's *Times* was the most terrifying document that has appeared in print for many years. "Soft" troops, unenterprising commanders, outwitted strategists, an incompetent administration, an apathetic native population—these are not the signs of a gallant army betrayed only by bad luck; they sound uncomfortably like the dissolution of an Empire. In Libya, after the first brilliant attack, the British army appears to have exhausted its resourcefulness, while Rommel thrives on reverses. The War Office's comments on the Beveridge Report—discussed in a later article—reveal an almost incredible dilatory rigidity in the higher command.

The tale of evidence need not be counted further. It is enough to say that if this army is to win the war, it will be by virtue of sheer weight of equipment only—in 1944 or 1945, or later. Drastic reform is needed at every stage of the Army, to make an intelligent use of the citizens in the ranks, to select officers by something other than social status, and to bring new blood and fresh minds into the higher command. It is quite useless to say that a thorough house-cleaning in the Army cannot be carried out in the middle of a war. If it is not done, we may never emerge from the middle of the war.

It is not the armed forces alone that require the reformer's zeal. Nowhere in the world is a scorched earth policy more necessary than in Whitehall. With rare exceptions, the present process of government is one of interminable delays resulting in ridiculous compromises. The faculty of decision has been lost. The blame for the costivity of Whitehall cannot wholly be laid at the politicians' door. More than any one other thing, the system of committee government is probably responsible. Much of Lord Beaverbrook's effectiveness is due to the fact that he has no truck with committees and there would be a very great deal to be said for a rule that the responsibility for every decision, great and small, should be laid clearly on an individual, who must take responsibility both for the promptness and for the correctness of his decision.

It is this necessity for sharpening the responsibility of individuals that lends particular urgency to the composition of the Government—to the removal of the incompetent and to the promotion of men who can decide. The Prime Minister will be very unwise if he says anything more about scapegoats. He must surely realise that no one, anywhere down the line of authority, will feel strong enough to remove his incompetent subordinates until the example has been set at the top. The continued presence in the War Cabinet of men of less than the highest competence guarantees protection to incompetence in every corner of the Government machine. And as for the need to import men of decision, one needs only to look around at the enormous problems that are being allowed to drift. India has now become not the least urgent of these. It is really almost beyond belief that, with the Japanese in Burma, nothing can seemingly be done to break the paralysis that has overtaken British

policy. *The Economist* has never pretended that there are no difficulties attending the next step in India, or that the direction in which it should be taken was clear. But the next few weeks may be the last chance that British policy will have to contribute anything to the future of India.

These are gigantic problems that have been handled in a sentence or two—the efficiency of the army, the workings of the civil service, the composition of the Cabinet, the negotiation of a settlement in India. But can any man deny that they must all be tackled? And can any man assert that they are being tackled now? Indeed, it is the willingness or the ability to tackle gigantic problems gigantically that is most lacking and most needed. No progress will be made with the war until what is so inadequately called reconstruction—it would be better called regeneration—is not merely admitted to a place in the Government's programme but given the first priority. It is one of the most disheartening signs of official blindness that reconstruction is thought of entirely in terms of the future, as something that will be possible if the victory is first won. But the antithesis between present and future, between "during the war" and "after the war," is a wholly false one. Unless there is drastic regeneration in the present, there will be no future. As things are going now, there never will be a post-victory phase. For at the moment, Britain is losing the war. Hitler may be losing it too, Russia may be winning it and America may be preparing to win it—but Britain is losing it. It is true that the specific things that need to be done to win the war and the specific things that need to be done to win the peace are not the same. But the spirit and the men that are needed for the one can carry through the other. If regeneration for victory is seriously tackled, regeneration for peace will follow. If regeneration for peace is deferred and ignored, there will be no regeneration for victory. And the new and better Britain will come about almost by itself if we do what is now necessary to see that there is any Britain at all.

It is a base libel to represent Britain as a tired but dogged sexagenarian, with no prospect after successful defence save an honourable retirement. Both literally and symbolically, Britain is a man in the prime of life. The largest generation of Englishmen ever born is now just entering on its forties, and there are more men and women in this country to-day—more absolutely and relatively—in their thirties and forties than ever before. In every walk of life there are men and women of this generation who can lead the nation. They can be found in the forces and in the civil service. They are held back now by the habits of timidity and indecision, the fruit of the two conservative decades, that afflict those still in authority over them. If the Prime Minister can find means to release this generation—the generation that has produced the Nazi planners and the brilliant Soviet generals—he will be releasing the energies of England for a policy not of defence but of attack, on every front, spiritual and material.

In the circumstances, it is inevitable that the transformation of the Government into a real War Cabinet of men free and able to decide, which is now so clearly portending, should take the form more of excluding some individuals than of bringing in any new blood. Sir Stafford Cripps is the only newcomer whose inclusion suggests itself. For the rest, the team must necessarily be chosen from the successes of the present administration—from Mr Bevin (who has recovered in his second year much of the ground he lost in his first), Lord Beaverbrook (whose energy outweighs his defects), Mr Eden, Sir John Anderson, Mr Lyttelton. But the new Cabinet, whenever it is formed, will be wise if its members regard themselves largely as trustees for the new men who must be found to take their share in carrying the burdens of leadership. They will be wise, too, if they bear always in mind that Government reconstructions achieve nothing unless they lead to far wider reconstructions.

Mr Churchill has always claimed, with obvious sincerity, that he is the servant of Parliament and the people. If he now proves that claim he cannot but add to his present authority and his future renown.

Neutral Iberia

THE fact that the Iberian Peninsula is still out of the war has, on the whole, very little to do with the internal situation in Spain and Portugal. The fate of the two countries through the first two and a half years of the war has been decided in Berlin, not in Madrid or Lisbon, and their continued neutrality springs from the fact that on all calculations of interest made so far, Hitler has preferred to see them non-belligerent. The question is therefore whether at this turning point of the war the same arguments and the same balancing of advantage still hold good.

What would Hitler gain by the occupation of the Iberian Peninsula? If, as seems likely, the next stage in the war against Britain is to be a gigantic effort on the part of the Axis navies to destroy Britain's lines of communication, to break the link between America and these islands and between America and Britain and Russia, then there is some reason to suppose that control of Lisbon and of other bases along the Iberian coast, coupled with the occupation of the whole westward bulge of North Africa, would give the Germans new and advantageous bases from which to attack the Atlantic sea lanes and the supply line to the Persian Gulf. The economic advantages would be slighter. Germany already receives a very high percentage of Spanish exports and, according to arrangements reached in the autumn of last year, a yearly contingent of skilled Spanish workers from the mining, building and metal industries is to be sent to Germany to help make good the Reich's labour shortage. Economically, Spain is already in the "New Order" and it is doubtful whether actual occupation would do very much to increase output and speed up supplies to Germany.

There are, on the other hand, certain economic advantages to be secured in Portugal, whose trade has not been forced into a "New Order" framework. Portugal has continued to sell widely to North and South America and to Great Britain, and the Portuguese Government has had to engage in a diplomatic balancing act to keep the demands of the two sets of belligerents roughly equal. Cork goes to the United States and to Germany. Wine and sardines are shared between the belligerents and Germany; Britain and the United States all made arrangements last year to give Portugal enough tin-plate to secure the canning of the 1940 catch. Germany and Great Britain compete for rosin and turpentine. Olive oil goes to Brazil and Italy. The real battle, however, has been raging around the strategic minerals—tin and wolfram. The United States, Great Britain and Germany have bid

against each other, forcing the price up, with the result that the output of wolfram has increased from about 300 metric tons in 1937 to getting on for 1,000 tons in 1940, and over the same period the output of tin ore has risen from 1,763 to 2,329 metric tons.

Given these advantages and the undoubted simplicity of the military operation, it is perhaps surprising that the Nazis have untidily left a corner of Europe outside their formal "New Order"; but there are good reasons why Hitler should hesitate. First among them is probably the importance of Portugal as a link with the New World. The belligerency of so many American nations does not alter this factor: on the contrary, it rather enhances its significance. Paid agents from both North and South America can enter Europe and report to German headquarters more speedily and simply through the comparatively open port of Lisbon than by any other means. The place has become a great clearing house for international information, a centre of espionage and a meeting place where thousands of invaluable contacts can be developed or maintained. If the doorway were closed, this type of connection with the New World would cease—much to Germany's disadvantage.

This immunity does not apply to Spain, and if there were a German occupation of part of the Iberian Peninsula, it is perfectly conceivable that Portugal's neutrality would be "respected." But Spain has its own problems. At present the Germans are getting quite a lot of useful economic collaboration without incurring any economic responsibilities. Were they to occupy Spain, they would be taking charge of a country whose food problem is probably as serious as that of any other European country, except perhaps Greece. The 1941 wheat harvest of 31,445,000 tons, an increase of 45 per cent on the 1940 harvest, is still well over 10 million tons short of the pre-Civil War average. Bread is severely rationed, and although shipments of grain from the Argentine have slightly relieved the position, a large percentage of the Spanish people are desperately under-nourished.

The shortage of food-stuffs is having disastrous effects upon the Falange's attempt to build up a more stable economy on National-Syndicalist lines. Those who have any land or any property have been engaged in a wild scramble to defeat the price control regulations and to sell their precious foodstuffs at maximum prices in the country's teeming black markets. The poor, who are deprived of food by this disgraceful profiteering, remain sullenly opposed to the whole régime and refuse their co-operation in nearly all forms of civic life. In an attempt to modify this paralysing situation, the Spanish Govern-

ment has gone so far as to introduce the death penalty for such offences as food hoarding, profiteering, cornering, black marketing and similar offences. The law came into force on November 1, 1941, and within a week the first two offenders had been shot.

This state of affairs directly affects the Germans' problem. Not only would they, in occupying the country, have to shoulder some of its economic problems, they would also have to count on the possibility of a strong reaction against their entry and a renewal of the chaotic conditions of the Civil War. The old struggle is not yet liquidated. There are still thousands of prisoners. From time to time, there is even sporadic fighting in the high Sierras. Control of German Europe is at this moment taxing to the full Germany's police power. It might well be straining it too far to add to it control of the haughty, rebellious, xenophobe and passionately resistant Spanish people.

To this problem is linked another, whether in fact the Germans could count upon the connivance, or at least the passivity, of the two Iberian Governments. In Portugal the problem would be one of simple physical powerlessness. It is reported that in the event of a German invasion of the Peninsula, Portugal would make no attempt to stand on her completely inadequate frontier defences, but the Government would retire to one of the Portuguese colonies or islands and rely upon the British Navy to preserve some measure of Portuguese independence. In Spain the position is different. There is no alliance with Britain. There is no sympathy with Britain: on the whole Great Britain and the United States represent all the things the Franco régime claims to be fighting against. The tone of the Spanish press is consistently and bitterly hostile. There is in Spain, too, a War Party in the shape of the extremist members of the Falange. These men take the view that a German victory is essential to the survival of Falangism in Spain. They do all in their power to stress the identity between National Syndicalism and National Socialism, and it is through them that fervent contact is maintained with Berlin. Their attitude was summed up by the Spanish Ambassador to Berlin, Count Mayalde, when he said last autumn, "We Spaniards stand by the side of Nazi Germany because we know that the profound transformation in the political economy and social order which the Falangist revolution is effecting in Spain cannot succeed without the definite triumph of German National Socialism."

Were these men in control of the Spanish state, then undoubtedly there would be little or no opposition to

the entry of German troops. But there is strong evidence that their views are not shared by General Franco. Governmental, as opposed to Party, control of the press has been tightened up in recent months and it is significant that Count Mayalde's statement was censored in *Alcazar* and *Informaciones* after the type had been set up, and the incident was followed by a press campaign to stress the independence of the Spanish revolution from any foreign ideology and from any possible outcome of the world struggle. The attitude of the Caudillo towards the world war appears to be that by fighting the Civil War and now perhaps by despatching between 15 and 20 thousand young Spaniards to the Russian Front, Spain has made all the contribution to the victory of the Axis which it can reasonably be called upon to make. It is now content to await the outcome of the struggle in confident expectation that its earlier efforts will not be forgotten when the time comes to divide up the spoils of victory.

This expectation is a final embarrassment in Germany's dealings with Spain. The Spaniards make no secret of what they expect—French Morocco. Such high officials as General Aranda have openly demanded the transfer of sovereignty, and the Spanish press has followed with extreme hostility such projects as the trans-Saharan railway, which, it claims, is calculated to bind Morocco still more closely to the French Empire. Nor has it escaped the attention of Spanish observers that Germany is providing much of the money and materials for this French venture. If Germany were to demand occupation, the use of air-fields and bases, or a joint attack upon Gibraltar, there is only one bribe that could conceivably tempt the more responsible Spanish elements and that is a definite guarantee of the future status of French Morocco; and as long as Vichy is useful to Hitler—and there is evidence that Vichy is very useful—it would be difficult for the Germans to give that pledge.

As with every other potential battle-front, the fate of the Iberian Peninsula depends upon the decisions that are being taken or have already been taken in Berlin this winter. The real deterrent might well be that by invading the Peninsula, the Nazis would make unavoidable a counter-invasion by the British and Americans of all Portugal's island bases and Spanish and Portuguese colonies in Africa. New bases such as these, well held and resolutely used, might counteract the very advantage—increased striking power at sea—which Hitler could hope to find in Iberia. But Hitler's reasons are not always those of his adversaries. It is impossible to be too vigilant.

Waste of Men

THERE is a limit to our manpower of all kinds, male and female; and the limit is very near. The Beveridge Committee which has just published its second report is not primarily concerned with the broad question of the total allocation of manpower between the factories and the fighting forces, nor even with the question of the widespread wasteful employment of young and able-bodied men in sedentary and non-combatant duties in the Services. Its specific concern is with "industrial misfits," with the use of men with rare skill in Service duties which do not require that skill; and it finds that the extent to which engineering skill is unused in the forces, above all in the Army, is "disturbing and surprising." It is only in its final paragraphs that the Report, published on Tuesday, touches the wider issue.

In order to obtain, without damaging repercussions, the skilled men they need, the Services must be economical, not only of skilled men, but of men without special skill, but of good physique. It is not justifiable in war for a fighting service to use fit men for clerical or menial work or for anything within the power of weaker men or women.

The Committee calls for a scrutiny of the use of all

manpower in the Services as "an indispensable measure of war."

The Army bears the brunt of the Committee's indictment. There are "few misfits" in the Navy. The Royal Air Force is not so free from misfits as the Navy; but "it has nothing comparable in scale to the misfits and misapplications that appear in some parts of the Army." The Army's task is not only harder, but much harder than that of the other two Services, but "our investigation has shown a continuing failure to use men of engineering skill." In interviews at various Army headquarters with men chosen from trade union and employers' lists—admittedly with the deliberate intention of bringing to light misfits and misuses—well over half of the men possessing "skill for which there is strong unsatisfied demand" were not being used at their trade. The headquarters interviews were supplemented by interviews at Army stations covering, this time, not a biased selection, but all or a fair sample of the engineers in each unit examined; nearly two-fifths were not being used as engineers. Four out of every five skilled men selected from the Royal Engineers for interviews at headquarters were not being used as skilled men; half

of those seen from the Royal Army Service Corps, the Royal Corps of Signals and the Royal Artillery were, apparently, being wasted.

The cases cited in the report are not, it is true, representative. But they are facts, and they make astonishing reading. An electrical instrument tester, mustered as an electrician, has spent nine months digging and cooking. Another man who served as an electrician in the Regular Army and then in a dockyard is used as an odd job man and gardener. Another, mustered as a coppersmith, has never at any time done any coppersmith's work in the Army. Another electrician "experiences difficulty in being allowed to go on a course while he is needed as batman." A sheet metal worker is "sweeping barracks." A fitter with garage, motor fitting shop and turbine experience is his unit's "sanitary man." Four men, all fitters, turners and erectors who served their time with the GWR, are graded and used as "learners." A tool fitter is employed as a bricklayer's labourer. The sample, it is true, was very small; but there is no reason to believe that it was not representative.

This is a heavy charge. Many of these misfits represent the "cream of industry." Every man of this type withdrawn from munitions work represents a blow to the war effort; and the Army is not making use of them. Some of them should never have been allowed by the Ministry of Labour to reach the Army. Under the German system, where a man's workbook is his industrial identity card as well as his passport into the forces, none of them would have been "lost." Territorials, reservists or not. But the proposal for a real National Register in this country was killed politically. There must be engineers in the Army to maintain the machines of war "continuously in action under all conditions," and the Army's requirements have been "substantially enlarged" since last summer. But after its inquiries, the Committee's view is that the reservoir of unused engineering skill already in the Army is larger than its requirements, except for the armament artificers. The problem is to comb out the Army itself.

The Army has been unfortunate in this war. In the field, the gallantry of its men and the fine improvisations of some of its commanders have been quite unable to outweigh its lack of equipment and preparation. Nor is it quite true to say that the Army has had upwards of two years to put its house in order. Dunkirk was a disastrous setback, and the months after June, 1940, were months of great danger and inevitable makeshifts. The Army has grown more than the other Services—and much more than the munitions industries; "its rate of growth has been subject to violent fluctuations"; and an industrial concern which had expanded as rapidly might well have had many glaring misfits. At the outset of the war, it took in Territorials with no reference to their industrial skill but only to their volunteering. And the machinery of transfer in the Army, which is not a centralised Service like the Navy and the RAF, but a combination of corps and units with "strong local associations or sectional traditions," is complicated. "The moral is that stronger steps are needed to deal with a more difficult problem"; and it is hard to escape the impression that both the attitude and the organisation of the Army have been seriously at fault.

The Army's attitude is illustrated by the apologia, appended to the Committee's report, which it has taken the War Office three and a half months to prepare. In the height of total war, it is a document which reflects nothing but discredit upon those responsible for it. The Committee made two main proposals; first, the enlistment of men, not into this or that corps, but into the Army as a single Service, to be received, examined and sorted at common centres, and only to be posted to their definite corps when it is clear that they are required and will be used; and, secondly, the establishment of a Corps of Mechanical Engineers, so that, as in the Navy, engineers may be set to "catch, test, train and use" engineers. To the first proposal, the War Office's considered reply is that enlistment for corps is a "major feature of pre-war army organisation" and "based upon feelings of

local sentiment and tradition"; "to attempt such a change at the present juncture might be dangerous." The second proposal, the setting-up of a Corps of Mechanical Engineers, is in the hands of a committee of three senior members of the War Office; it is doubted whether major changes in organisation can be undertaken during a war. The question of necessity, it seems, does not arise.

The problem is to waste no skill and waste no men. The Army wastes both. Its local and sectional organisation tends to place men in irrelevant pigeon-holes. It creates the very difficulties of selection, training, cross-posting and re-mustering which impede economy of manpower. Its outlook is parochial; commanding officers are reluctant to lose men for other duties; local facilities for trade testing and trade training are, not unnaturally, very limited, to say the best; there is "a general, almost pathetic ignorance" among the men about measures to assist them to re-muster. It is an old Army story. It takes an unconscionable time for reforms of any kind to be accepted at the top; and it takes even longer for them to percolate, as effective practice, to the bottom. Local commanders are too busy or disinclined to apply new-fangled notions; sometimes, they are just not interested. This applies to the effective use of women in the Services almost as much as to the proper use of skilled men. Often it applies to the bread-and-butter matters of board and lodging as well; and the Army's system of control and inspection from above is astonishingly ineffective. Nor is it simply a question of the diehard Regular as against the more open-minded officer recruited from business or industry. Diehard Regulars there are at every level of the hierarchy, stubborn and inflexible. But many of the most striking cases of local lack of adaptability have occurred in Territorial units, often raised *en bloc* by firms and business houses. The best commanders may well be the intelligent amateurs, but the worst are the unintelligent amateurs. It is a question of intelligence and, by and large, of youth, not of status. Russia's army leaders, for instance, are both young and intelligent. Efforts have been made, the Committee admits, to make better use of skilled men in the Army. Two Army Council Instructions of October, 1940, and March, 1941, set up machinery to test and re-muster them. But within the Army's present framework of organisation, and with the present attitude and capabilities of many of its officers and NCOs, even the best of intentions tend to run to waste in the sand. The Army seems constitutionally indisposed to learn new ways and oddly unable to get them put into practice when it has learned them.

The Beveridge Committee has put two specific projects of reorganisation forward; and apparently they have both been burked and shelved. But it remains imperatively true that

the first claim on the services of engineers is of that service or industry or organisation which can use their rare skill most fully for a national purpose. If one branch of the Army cannot use them, they must go to another that can, or be released to industry. Difficulties or not, the Army authorities must secure this somehow, or help to lose the war. It is, in the main, the marginal use of men that is bad, the specialised use of a small elite and the grafting on of technicians and women. The Army does depend on trained fighting men in the last resort, and with the more military aspects of the Army the Beveridge Committee is not concerned. Indeed, it could be argued that the particular defects now uncovered arise because the Army is too military. It cannot see the problem of a trained, equipped and maintained army and its industrial background as a single whole. Industrial considerations are regarded as irrelevant civilian fancies, separate and admitted grudgingly. But the problem goes deeper even than this. Primarily it is a problem not of engineers but of soldiers. It is a minority problem, because the core of the new mechanised Army is keen and able. But there is a crying need to comb out, not only those who are misfits because of their skill, their youth or their physical fitness, but also the incompetent, the intransigent, the apathetic and the stupid—to weed out wasters as well as waste, at every rank.

Dead Hand?

WHAT is wrong with the civil service? War necessarily increases the burdens resting on the executive machinery of government; it brings thousands of men and women, almost by definition selected from the most competent, into Government departments; and many thousands who are left outside have much more to do with the civil service than would normally be the case. There seems to be a fairly general agreement, shared even by some permanent civil servants and argued with intensity of feeling by nearly all the "temporaries," that something is wrong. What is it? And how can it be put right?

One thing at least is perfectly clear. The civil servant, especially of the higher grades, is quite exceptionally hard-working. The old days of leisure when the civil service, like the fountains in Trafalgar Square, "played from ten to four" went long before the war. For many years now, virtually all senior civil servants have been bearing a burden of toil and responsibility well above the average for the community; and for the past thirty months ordinary hard work has risen to a frenzy of unremitting devotion to the desk. In every Government department there are men who are killing themselves with work. Whether there is a proper economy of effort is another question—an upper limit to hours worked might be of advantage not merely for its effects on health but also as a means of compelling a distinction to be made between the more and the less important—but at least it must be said to the honour of the service that its diligence and its devotion are beyond praise.

The criticisms of the service tend to take two opposite and contradictory lines. Both, of course, concern the function of bureaucracy, and of individual civil servants, in the democratic state. But one school holds that the civil servant is playing too big a rôle, the other that he is playing too small a rôle. Lord Hewart with his phrase "The New Despotism" was one of the first champions of the former school, and though his objection was the somewhat professional one of a lawyer, there are others who have more recently joined him in accusing "the bureaucracy" of taking too much power. This was Lord Perry's thesis in a speech in the House of Lords some months ago and in a pamphlet subsequently issued*. Sir Roger Keyes's dark hints in the House of Commons about the "dead hand" in Whitehall, which exercised a power greater than the Prime Minister's, fall under the same head.

The second charge commonly levelled against the modern civil service is that it is inefficient; that so far from reaching out for more power, it is incapable of adequately performing its duties even on the present scale. It is claimed that the civil service practises a form of administrative 'canny'; that its members shirk responsibility as individuals; that they shelve vital decisions and employ their energies most effectively in inhibiting decisive action. Unlike the business man, who is said (on somewhat scanty evidence) to be energetic, shrewd and ruthless, the civil servant is pictured as a smooth-spoken clerk, procrastinating and timid.

Of these two charges, there can be no doubt which is the more telling. Most of those who have had intimate contact with the civil service would completely deny the truth of the first. Extension of the functions of Whitehall, both before and during the war, has taken place, often tardily, at the express behest of Parliament. The creation of a Ministry of Supply (an immense extension of bureau-reporting) and the generalisation of conscription, pro-

In order to get widespread support among the skilled men they need, members, were delayed until, not only of skilled men, but of good physique, their favour were those of for a fighting service to use fit to say that the work or for anything within the to the absence of an or women.

The Committee calls for a scrutiny. (No. 9 in the

adequate bureaucratic machine. The great growth in recent years of cartels and monopolies is largely due to the fact that the civil service, while seeing the necessity for some organisation of industry, shied away from the prospect of doing the job itself.

But if it is not true that, despite Lord Hewart's portentous warning, the civil service exhibits a dangerous lust for power, it is true that the bureaucratic machine is dangerously hampered by indecision and a tendency to play for safety. Confirmation of this can be obtained from the pages of a recent (and most readable and informative) study† of the senior civil service by one of its recently retired members, Mr. H. E. Dale. Mr. Dale is inclined to trace the deficiency to a decline in the quality of entrants into the service and especially in the quality of those who remain in it long enough to reach high rank. In peace time, the number of civil servants in a position to exercise real influence on policy is very small. Mr. Dale puts the total at no more than 550, including all professional civil servants from the rank of assistant secretary upwards, principal private secretaries to Ministers and specialist advisers. In reality, so great is the concentration of functions, that the number of those who really count is probably much smaller, perhaps hardly extending outside the 20 or 30 men at the top. These are the men who could, theoretically, exercise that supreme power feared by the critics of bureaucracy. Mr. Dale affirms that "they do many more things than forty or fifty years ago; but in reality they do no more without the authority of Parliament and Ministers." He suggests that the highest officials are now less able to get across their opinions and to bring effective influence to bear on the Government than they were at the close of the last century because of an impoverishment in personal qualities. And this, in its turn, he ascribes (to put it in words rather blunter than his own) to the fact that the civil service is no longer recruited so nearly exclusively from the type of man who was educated (and his father before him) at Eton and Christ Church.

It is tempting to dismiss this view with contempt, as unworthy of a democratic age—just as the famous statement that officer-material was to be found only among public schoolboys was rejected by an angry House of Commons. It ought not to be true in a democratic country; but, in fact, it is uncomfortably near the truth. The quantitative growth in secondary and university education has increased the competition in the civil service examination and doubtless excludes many public school boys who, forty years ago, would have passed into the service without difficulty. But the men from secondary schools, though they can beat the public schoolboy at an examination, often do not have the qualities of breadth of mind, of self-reliance and confidence that are needed at the top of the civil service or of any profession. What is infuriating about Mr Dale's book is not that he states this truth—for it is a truth, or very nearly so—but that he is so complacent about it. The reason he gives for the difference is the palpably false one that the secondary school boy is over-driven in youth and exhausted in middle age—instead of the real one that he grows up in an atmosphere of social inferiority and is never allowed—especially in Mr Dale's world of schools and ties and clubs—to forget it. And Mr Dale's remedy is, apparently, to restrict entry to the "right" type of man, instead of to set about removing the inferiority. He ignores the fact that the Foreign Office, which is still recruited on his principles, is not noticeably superior in efficiency.

This is the basic defect of the civil service. But it is also the basic defect of the whole of the British social structure, as at present constituted, and the remedy obviously cannot be sought within a purely service framework. There are, however, two further suggestions,

† "The Higher Civil Service of Great Britain." By H. E. Dale. Clarendon Press, 12s. 6d.

specific to the civil service, that can be made. The first is that there should be much more two-way movement between the civil service and the community it serves. Conditions have changed radically—not least in the scope and character of the functions of government—since Gladstone laid the foundations of the service. It is no longer true that an educated gentleman, trained since youth to the habit of administration, can deal with all the problems of state by inspired amateurism in a Trappist atmosphere. The problems are vastly larger and vastly more technical.

The border-line between policy and administration becomes, every year, harder to draw. More and more, Government is reaching out—and should reach out—into the intricacies of economic life. It cannot really be maintained that men taken into offices straight from the University can properly cope with problems such as these. In wartime, the civil service takes able and experienced men from wherever it can find them, and at any age. It should do the same in peacetime. And once in, they should not be kept behind locked doors. The precedent set by the Ministry of Labour in requiring its officers to have experience of Employment Exchanges might be followed in other departments. The aim should be for every civil servant of the administrative grade to serve a regular turn in the outside world. Without losing its qualities of integrity and judgment, the civil service must become more expert and practical.

The second suggestion relates to the organisation of the work of the service. At present, functions are concentrated, but responsibility is diffused. In each great depart-

ment of state, the pyramid still ascends to a single man at the top, and if the permanent head of a large department is to do no more than keep himself informed of what goes on, he must spend his whole time reading, with no opportunity to think or to plan or to exercise judgment. So overloaded is the senior civil service that even the most important matters can secure only a fraction of the attention of any official of high rank. On the other hand, an individual rarely, if ever, decides anything. All but the smallest matters are settled in committees, which means that they are first delayed and then compromised. For good administration in peacetime—and a hundred times more so in wartime—this state of affairs should be reversed. Functions should be specialised but responsibility concentrated. Each officer's task should be clearly defined and not too extensive; but within that field, the responsibility for reaching a decision—and the right decision—should be squarely on him. A committee—that is, a committee with powers of decision, as distinct from a purely consultative committee—should be taken as a confession of weakness.

It is perfectly evident that, for as far ahead as can be seen, the state is going to play a very large part in the national life. Before any elaborate structure of hopes can be built on state intervention, the nineteenth-century concepts on which the civil service is founded will have to be revised. Fortunately, there are many hundreds of men and women from all walks of life who now have intimate knowledge of the service and its ways. The task is to take advantage of their knowledge, to pool their criticisms and not to be afraid of reform.

NOTES OF THE WEEK

Writing on the Wall

Singapore has fallen—within a week of the first Japanese landing. Outclassed as much as outnumbered, the British forces were driven back from the coasts to the city and then surrounded. There was little or no military evacuation. The Japanese claim to have captured 60,000 men—15,000 British, 13,000 Australian and 32,000 Indians—as well as a lot of valuable war material. This stupendous failure, coming at the end of two months' uniformly unsuccessful campaigning, has left the British people dazed and shaken. How could things go so desperately wrong? Why was it impossible—after all the hopeful, backslapping statements of recent weeks—to hold out longer than a bare week? Singapore calls for a fundamental re-examination of the British position. There must be some certainty that the mistakes made in the Far East are not a universal feature of the British war effort. Every lesson must be ruthlessly learnt, every weakness repaired while there are still some bases upon which Britain's military power can rest. The faults in the Malayan campaign seem to fall into two categories, the errors and mistakes of the civilian administration and the ineptitudes of the military. On the civilian side, the fact that stands out above all others is the indifference with which the native peoples watched the struggle. Clearly the British Colonial system of planters and civil servants had struck no roots and roused no loyalty. In the hour of testing, it was proved that no bonds held together a community of interest and resistance. The Asiatics did not feel it was their war. Quite apart from the depressing effect of this on morale, it had serious economic consequences. The workers faded away from the war zone. Soldiers had to be diverted from fighting to do a labourer's job. The approach of immediate danger only increased the unwillingness of the native peoples to take any part in the war; defence at Singapore was crippled by this non-co-operation.

Against this background of native indifference and official incompetence, the military failures had all the more disastrous effect. There was from start to finish a shortage of material—the British campaign which is fully equipped has yet to be fought. But there was also faulty use of what equipment there was. The Japanese land, sea and air forces co-operated with mechanical precision. The British effort appeared to show all the weaknesses of dual or even triple control. There was also an obvious stiffness and unadapta-

bility in the approach of the British strategists. The use the Japanese could make of apparently unsuitable approaches—rivers, swamps, thick forest—does not appear to have been properly assessed. In fact, it hardly seems to have impinged upon the consciousness of the local commanders, for the trick which at each point turned the British line in Malaya—infiltration from the swamp-ridden western shore—was practised yet again and with final effect on the island of Singapore. This unimaginative strategy and failure to get full use out of what equipment there was sprang in the last resort from defective and uninspiring leadership. If does not appear that the local commanders showed any powers of rallying their tired and dispirited men. The drive, the energy, the dynamism were all on the side of the Japanese. The disturbing fact in this picture is that, apart from the one problem of faulty colonial policy, there are no errors and incapacities that might not equally be present on any other battle front. Singapore suggests that the changes needed in the conduct of the British war effort are fundamental enough to be called revolutionary. New men, new methods, new weapons and new ideas—these may well be the condition of Britain's survival.

Through the Narrows

When three heavy German warships passed through the Straits of Dover undestroyed en route from Brest to Heligoland, the whole world was aghast. Now it appears that it was a famous victory—for the Allies. In Brest, Mr Churchill said in the Commons on Tuesday, the *Scharnhorst*, *Gneisenau* and *Prinz Eugen* were a constant menace to the Atlantic and Mediterranean trade routes, requiring constant naval and costly air attention. In home waters, it seems they are not so dangerous. The Prime Minister suggested that their flight through the Channel represented the surrender of a strong point after ten months' relentless bombardment. It had not, perhaps, been realised that, in Brest, these warships were a continuous high seas threat. That much-bombed harbour was regarded by most people on the basis of *communiqué*, as a prison for the vessels, rather than a strong point or *point d'appui*. Their astonishment and perturbation when the escape took place was as much due to the small effects of 4,000 tons of bombs, diverted from other targets, as to fear of the consequences. Nor indeed can the consequences be written off so lightly. More than ever this is a sea war. Whether the three war-

ships have gone into hiding or not remains to be seen. But it is certain that they have now joined with the rest of Hitler's Navy to make a powerful fleet; and the French fleet is still at large. In all the seven seas, the calls upon the great but shaken Anglo-American navies is unexampled, and the presence of a Western Axis fleet on the British flank, close to the supply route to Russia and not yet out of range of the Atlantic, is no light matter. It was a famous victory, but a committee of inquiry, under Mr Justice Bucknill, is already at work to find out why it was allowed to happen.

Draco Antipodensis

There can be no complaint that Mr Curtin's plan of economic control is insufficiently drastic. Its nine points cover a wide range and cut very deep. In brief summary, they are:—

1. The sale or investment of capital is prohibited except by permission or for such obvious purposes as investment in public loans. This is intended to eliminate speculation and concentrate capital transfers on immediate war needs.
2. Prices of all goods and services are to be pegged, with present prices as a maximum.
3. Profits, exclusive of taxes paid, will be pegged at 4 per cent on capital, defined to include reserves invested in the business.
4. Interest rates for different classes of investment will be fixed, but without altering the rates paid on any Commonwealth securities.
5. Wages will be pegged at their present level, though there is to be "a margin of tolerance . . . to permit the completion of existing negotiations and an adjustment of wages considered to be reasonable in relation to the level of wages in comparable industries." Wages are to continue to be adjusted in accordance with changes in the cost of living.
6. Transfers of labour are to be under Government control.
7. Absenteeism is to be a punishable offence.
8. The Government is to have power to proclaim any area under military control.
9. Speculation in commodities will be prohibited.

It has since been announced that the manufacture of a long list of non-essential goods is to be prohibited in Victoria and South Australia and possibly in other states later. This programme reflects the political composition of the Government that has introduced it. Thus both capital and labour have their freedom of movement removed, but capital also suffers a severe loss of income, while labour is told only that it cannot have much more. But this is a matter of equity that the Australian people can be left to adjust. A more serious objection would be that many of the items on the programme will require a vast amount of interpretation and of administrative control. The first test of Mr Curtin's plan will come when the detailed regulations are issued. And the second test will come when they are enforced. In the meantime all that can be said is that it is a valiant effort to make up for lost time.

Java in Danger

Before Singapore had fallen, the attack on Sumatra had begun. After a preliminary skirmish with many hundreds of parachute troops dropped in the great oil centre of Palembang, the Dutch defenders had to meet a Japanese landing in force at the southern end of the island. The invaders now control Palembang and the oilfields, and are astride the Malacca Straits. If the Japanese hold is maintained, the economic loss to the Allies is serious, for over 60 per cent of the Netherlands Indies' oil output comes from the Palembang area and this percentage includes aviation fuel, of which the Japanese have been exceptionally short. However, by a drastic "scorching" of the oil installations unequalled even perhaps in Russia for deliberate self-sacrifice—\$25 millions worth of damage was systematically done—the Dutch have deprived the invaders for many months to come of any hope of securing supplies from their temporary possession. The chief danger is therefore strategic, not economic. If the Japanese can keep control in Sumatra, they can block up the main supply route from Europe and India to the beleaguered Dutch islands. Java is the new storm centre of attack and now it is threatened from Sumatra and Singapore to the north-west, Banjarmasin in Borneo to the north and Macassar to the north-east. The loss of the Imperial army in Singapore leaves the Dutch virtually alone in defence of the last Allied citadel. The Empire can give some air support—though this is still radically insufficient—but the

moving up of reserves from either west or east is desperately handicapped by the Japanese control of the China and Java seas. Yet the next phase turns on the problem of reinforcements. The Dutch cannot hold up the flood alone.

Burma Base

Singapore was not taken from the sea; and it can be retaken from the land—unless the Japanese and the Germans between them can overrun the whole of Eurasia. Nevertheless, any hope of a speedy and effective counter-offensive against the Japanese in the South Seas depends upon maintaining Burma as a base. There are no direct road or rail communications from the valley of the Irrawaddy over to the Brahmaputra; and if the Japanese were to capture Rangoon, the sea link would be cut; even now it is precarious. Burma is also the last land link with Free China, for it is doubtful whether an alternative road route through Assam is far enough advanced to take the traffic of the Burma Road. The defence against Japan thus hinges

on Burma. Are there to be the same errors in assessing the enemy's strategy and in making full use of equipment and terrain? There are ominous signs—for example, the continuous British retreat in the south, where the enemy, after crossing the Salween river, has now succeeded in crossing the river Blin. More hopeful is the successful activity of the RAF and the RAAF over Rangoon. Each attempted Japanese raid has been devastatingly attacked and beaten off. The position in the air thus seems definitely healthier. Again, the fact of Chinese reinforcement and the promise of more to come is a cheering factor. The Chinese have proved themselves in their four-year struggle. It is to be hoped that no lingering prejudice will prevent the British authorities from co-operating to the full with—and indeed learning from—their new allies.

Death or Dishonour

Sir William Jowitt has somewhat drastically suggested that persons convicted of operating in the black market should be compelled to face a firing squad. This view appears to overshoot the mark. It would be a thousand pities if the problems of war were used to justify a wanton regression in penal standards. Yet, it must be remembered that the extension of the death penalty, however distasteful, is not in itself an abrogation of the rule of law or an assimilation of British justice to Hitlerian standards. The essential difference between British and Nazi justice does not lie in mildness as against severity of punishment; it is that the former relies upon conviction, after trial, by an impartial jury and allows the right to be expertly defended, while the latter relies on summary, arbitrary conviction and on the evidence of informers and agents provocateurs. The real case against extension of the death penalty is that it is

irrevocable. It is true that the imposition of fines for black market offences, even of fines assessed at three times the cash value of the transaction, is not, and cannot be, effective. Any form of financial levy can be shifted, in whole or in part, on to the ultimate consumers, and can probably be insured through some system of risk pooling. Imprisonment cannot be dodged, and this is the remedy which must be applied if black market crimes are to be rooted out. Profiteering in and cornering of foodstuffs are serious forms of sabotage, calculated to affect morale as well as to inflict material damage. It is quite plain that the imposition of a fine is not an adequate deterrent. There is every reason to believe that imprisonment and forthright prosecution would suffice to stop the racket. The imposition of a death penalty would result in juries failing to convict.

Determining Needs

When the Determination of Needs Bill was introduced into Parliament a year ago, it caused a minor revolt among certain members of the Labour Party who were aggrieved because the principle of a means test was not completely abolished. The Act, however, did mark an important step forward in the administration of the social services. It established the principle that those in distress, whether from unemployment or from old age, were the responsibility primarily of the state, not of their relatives and in-laws. Thus, instead of comparing the needs and resources of all the members of a household before arriving at the sum to be paid to an applicant for state assistance, the Assistance Board now compares the needs and resources only of the applicant, his wife (or her husband) and dependants—that is, mainly children too young to earn their own living. Although, as the Board's report on the first six months' working of the Act points out, the change in procedure only affected about one-third of the pensioners with supplementary pensions and a rather smaller proportion of unemployed, it is an important change; it placed the assessment of needs on much the same basis as assessment for income tax reliefs. But the drawback of income-tax—its extreme complication, especially for persons with low incomes—also applies to the determination of needs. The regulations embodying the principle of the Act have clearly been generously drawn up and liberally administered; moreover, the Board, on its own initiative, has reviewed all cases which might be affected by the new procedure, even though the pensioner or unemployed had not himself taken any action—and has refrained from reducing the payments in the few cases where the strict application of the regulations would have involved a reduction. Nevertheless, the fact that non-dependent members of an applicant's household are expected to contribute at all towards the household expenditure—even though the maximum assumed contribution is only 7s. a week—must introduce invidious comparisons between the payments to one pensioner or unemployed person and another. The increases in payments, too, which result from the new regulations, are very small. Only in one-tenth of the pension cases have they amounted to more than 5s. a week and over half are under 2s. 6d., though in the unemployment cases nearly 12 per cent receive increases of more than 10s. The Board's report, in spite of the favourable light it throws on the administration of state assistance, merely strengthens the belief that the best principle would be the establishment of a minimum below which no one could fall, whether old, unemployed, sick or disabled.

The Disabled

The anomalies between one form of state assistance and another are again thrown into relief by the details of the bigger pensions for the war disabled and war widows and orphans. The pension for a totally disabled man has been raised from 34s. 2d. to 37s. 6d., the increase being exactly in proportion to the rise in the cost of living since 1915 when the disablement pensions of the last war were settled. For a woman, the increase is from 24s. 2d. to 27s. 6d. A totally disabled man will now receive 9s. 2d. for his wife, 7s. 1d. for his first child and 5s. 5d. for his other children, compared with 8s. 4d., 6s. 3d., and 5s. respectively. Pensions for war widows have been increased from 22s. 6d. to 25s. for widows over 40 or who are incapable of self-support, and from 15s. 6d. to 17s. 6d. in other cases. Is there any reason why the eldest child of a totally disabled soldier should receive less than the eldest

child of a serving soldier, who receives 8s. 6d.? Or why the second child of a serving soldier should receive 6s. 6d. and his subsequent children 5s., while the second and all other children of the totally disabled soldier receive 5s. 5d.? Moreover, the position as between disabled persons themselves is again anomalous. A man totally disabled by sickness or accident at work receives no allowance for his dependants under national health insurance or workmen's compensation. In the latter case, as was revealed by a recent case in the Court of Appeal, he may have to refuse an amputation because there is no obligation on his employers to provide him with an artificial limb. An injured soldier in similar circumstances can be assured by the Ministry of Pensions of the best artificial limb that medical skill has devised. The TUC has accepted the suggestion of a Ministry of Social Service, which would administer one inclusive scheme for all who are unable to earn their living—though, somewhat strangely, the TUC excludes workmen's compensation from the scheme's scope—and has included it in the proposals it has made to the Beveridge Committee. But even if the Government accepts the principle, there appears no likelihood of any action being taken until after the war, whereas the need for reform is more urgent now than ever before.

The Generalissimo Sees for Himself

General Chiang Kai-shek's visit to India has touched the springs of native enthusiasm. Admiration for Chinese military prowess has become even more marked as the fall of Singapore and Japanese successes in Burma bring the enemy nearer home. There is also general satisfaction that the Generalissimo has had numerous and frank conversations with leaders of Indian opinion, including Mr Gandhi himself, Pandit Jawaharlal Nehru, and members of the Viceroy's Executive Council. It is also most fortunate that a meeting has been arranged with Mr Jinnah, the influential leader of the Moslem League. Yet, it remains doubtful whether anything short of the realism induced by increasing military danger can serve to link the uneasy triangle composed by the British Raj, the Congress Party and the Moslem League. All sections of opinion recognise in General Chiang Kai-shek a powerful mediating influence, outside and above the passions of Indian politics. Yet it is to be feared that the extremists of all sorts are using his visit as an occasion to demand concessions rather than to make them. For the immediate future, the physical integrity of India and its ability to assist the Chinese people are the sole relevant considerations. Mr Nehru has hinted that the present Government is incapable of arousing national enthusiasm and a unified, vigorous will to victory. The blunt truth is that at the present juncture the heterogeneous opposition cannot afford to let it fall. Nor can the British authorities afford to miss any opportunity of displaying good will on their part. In this connection, it is satisfactory that the Government of India has been invited to select representatives to attend the Empire War Cabinet and the Pacific War Council. This decision implies recognition of dominion status in fact, and an indication that its grant in law will not be unreasonably withheld or delayed when the war is over.

The Other Fronts

In Russia and Libya the picture is the same—a pause full of intense activity and preparation. True, the Russian lull has lasted now since the end of January, whereas in Libya it is only eleven days old. In Russia, too, the lull is likely to last some weeks yet, for the frozen grip of winter has immobilised the front and all the various Russian doings—guerilla raids into White Russia, patrols, local action—are simply designed to give the Germans no respite during a time in which they had counted on rest and recuperation. In Libya the lull will not last much longer; there is every sign that a major offensive is in sight. The British still hold a strong line at Gazala, but reports suggest that Rommel has been able to bring up considerably greater reinforcements than the British command. He has the advantage of a shortened line not only in Libya but across the Mediterranean. British supplies must on the whole be shipped *via* the Cape, and as a result of Singapore's fall, a new and uncomfortable situation is likely to develop very soon on the Indian Ocean. Difficult days lie ahead in North Africa; only in the air have the British real superiority. Here the performance of the new Kittyhawk fighters in destroying 20 and damaging 10 enemy planes without loss to themselves has been this week's little candle in an exceedingly naughty world.

Japanese Gains

It is still too early to assess the full economic implications of the fall of Malaya and Singapore and of the deep penetration of the Japanese into the Dutch East Indies. For example, the only two sources of oil supplies still available to the Allies in the Far East are in Java and Burma. While Burma's output of more than one million tons per annum is adequate for local and Chinese needs, Java will probably have little to spare for Australia and New Zealand, which will have to be supplied from the United States or from the Gulf of Persia. The loss of rubber, tin and other minerals will be inconvenient to the Allies, but not serious enough to hamper the production of war equipment. Japan, on the other hand, will now be able to repair many of the weak spots in her armour. The oilfields now occupied in Sumatra, Borneo and Tarakan are capable of meeting her needs twice over. She has access to many times her own requirements of rubber and tin ore. The occupation of the island of Bintau, south of Singapore, will provide her with the bauxite necessary to maintain and expand the output of aluminium. Her meagre iron resources can again be supplemented from the deposits in Malaya. In Celebes she will be able to replenish her scarce supplies of nickel. The immediate benefit which Japan will derive from her conquests depends, except in the case of crops, on the extent to which plant and equipment have been destroyed. If all the oil refineries have been completely wrecked, it will take many months before Japan will be able to resume operations. But it would take comparatively little time—perhaps a few months—to restart the production of crude oil, which could be treated in the refineries in Japan itself. Again, if the tin smelters at Penang and Singapore were destroyed, the possession of tin ore would be of little use to Japan, whose own refining capacity is small. But since the extent of the damage done to plant and equipment is not known, it is impossible, at this stage, to assess the short-term gains of Japan. If the Japanese occupation lasts a year or more, however, a large part of the fabulous wealth of Malaysia will be available to Japan's war industries.

Child Labour

Nothing could be more short-sighted than the promulgation of the General Emergency Order of December 23, 1941, for Potteries which raises the maximum hours per week to be worked by young persons under 16 in that industry from 47 to 53 with a minimum of 48. The Order has been agreed to by representatives of both labour and employers on the ground that the extension of working hours will release labour for the war effort. It would be inappropriate to question the sincerity of the parties to the agreement, but it is strikingly evident that the decision is misguided. An eight-hour day worked on six days in the week in an industry where conditions are far from ideal and where there is a particular danger of silicosis and lead poisoning is almost certainly too much for children under 16 years of age. To increase working hours further is a great folly implying definite overstrain for a section of the

rising generation and justification in terms of the war effort implies much muddled thinking. If it is necessary, in order to win the war, to employ juvenile labour on all work which it can perform efficiently, so releasing every adult in the country for skilled work, heavy work or the forces, the employment of child labour must still be regulated so that immature powers are not exhausted. But there is as yet no inkling that a stage has been reached in the mobilisation of labour when every man and woman is fully employed on essential work and when further output can be obtained only by drawing on juvenile reserves. When this stage is reached, the use of child labour can be justified only in essential industries, however broadly these are classified. It is quite true that the pottery industry released so much labour by the concentration scheme that there is at present a serious shortage of pottery both for the home market and for export. But that is no excuse for allowing working hours which are directly contrary to the advice of the Industrial Health Research Board and a Home Office Memorandum in the early months of the war. It is to be hoped that Mr Bevin will re-examine the matter, and will prove as staunch a defender of the interests of young persons—who ought in any case to be still enjoying the benefits of Mr Butler's care—as he is of the rights of adult workers.

Waiting and Working

Nothing is more wasteful of manpower than defence against air attack. The air weapon probably does more harm to the war effort of belligerent countries by the hundreds of thousands of able-bodied men it immobilises, in static anti-aircraft batteries, searchlight units, balloon crews, observer corps and the several branches of civil defence, than by actual destruction. In the Services, the gradual, possibly too gradual, policy is to replace men at these waiting points, so far as possible, by women and older men. In civil defence, it has now been decided that unpaid part-time members will be permitted to enrol in the Home Guard and receive Home Guard training. They will remain members of the civil defence services, and will only be called upon for military duties if fighting is imminent in their neighbourhood, and if they can be spared from civil defence. Similarly, the Home Guard is to assist in general civil defence and fire prevention duties. This plan for eking out manpower follows the recent decision to employ male wholtime workers of the civil defence services, including the National Fire Service, on the construction, adaptation or improvement of shelters, posts, stations and watertanks. Obviously, they have been confined to these self-regarding tasks because they will not be taken away from their places of duty; equally obviously, the usefulness of this arrangement to the war effort will be very much restricted. It should not pass the wit of enterprising and ingenious engineers and manufacturers to devise means by which simple machinery could be installed accessible to some at least of these civil defenders, so that they—men and women, incidentally—could fill in their time by making munition parts. It is in small workshops that the margin of output for victory is to be found.

Landlord and Tenant

An individual wartime grievance, which has perhaps been voiced more than any other, is the requisitioning of premises by the Government. Last spring and summer, a fresh crop of requisitioning, the result of the air-raid period, renewed the agitation and complaints of hardship, and an official investigation into requisitioning and compensation was carried out. The Landlord and Tenant (Requisitioned Land) Bill, which was introduced in the Lords and received its third reading in the House of Commons last week, gives legal effect to some of the recommendations of Mr John Morris, KC, who made the investigation. Its main object is to give tenants who are actually in occupation of requisitioned premises, whether for business or residential purposes, the right to disclaim their leases. This can only be done if the tenants are actually using the premises at the time the requisitioning takes place. Thus the Bill would not have applied in a case such as that of *Swift v. Macbean*, which was heard recently. In that case, the defendants had taken a house in Cornwall for the duration, but last March the house, which was then vacant, was requisitioned and the defendants, who were offered in compensation £25 a year, against the £163 16s. which they had agreed to pay, denied further liability

Shorter Notes

Lord Woolton hopes that the non-priority adult will receive another half-pint of milk a week from the middle of March, but he has given a warning that there will be no more unlimited supplies of milk during the war, even in the summer months—a blow which is hardly unexpected. It is difficult to understand, however, why he is so reluctant to rationalise the retail distribution. Not only is this desirable from the point of view of releasing manpower, but it would help to spread the supplies of milk more evenly over the country as a whole and enable all non-priority adults to have a fair share.

The following table gives the number of civilian casualties in air raids since September, 1940:—

	Killed	Injured and Detained in Hospital	Total Serious Casualties
Sept.-Dec., 1940	21,669	30,556	52,225
1941:—			
January-June	18,698	20,451	39,149
July	501	447	948
August	169	136	305
September	217	269	486
October	262	361	623
November	89	155	244
December	34	55	89
1942:—			
January	112	61	173
Totals to date	41,751	52,491	94,242

Of those killed in January, 28 were men, 66 were women and 18 were children under 16.

The range of the Axis offensive is widening. This week has brought the first land attacks in South American waters. Enemy submarines attacked the islands of Aruba and Curaçao in the Netherlands West Indies and made off after shelling refineries on the shore and sinking and damaging seven tankers. Given the United Nations' shortage of shipping, such an action can have repercussions far wider than the immediate area of attack.

The Ministry of Economic Warfare is appealing to all firms and individuals not to include foreign directories and similar publications, particularly those concerned with enemy or enemy occupied countries, in their contributions to the waste paper campaign without first offering them to MEW (Room 1020, Berkeley Square House, Berkeley Square, W.1). The Ministry would also be glad to have particulars of similar foreign reference books which the owners do not want to part with for salvage, but which it might be able to make use of in case of need.

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

How then resolve the dilemma—the central dilemma of the concentration policy—that the circumstances require a collective structure for contraction in wartime, but a resumption of competition for post-war expansion? The suggestion—which seems obvious to the outsider—of suspending all private brands and producing only “pool chocolate” for the duration is impracticable, because it would involve using metal and labour to change the moulds, which now bear the manufacturer's name. Perhaps the solution, in this and in other industries, would be to limit the nucleus firms, for a period after the war, to their 1939 production and to set aside, out of the wartime profits of the industry, a fund for restoring the goodwill of those who close down.

AMERICAN SURVEY

The Progress of Conversion

(From Our Washington Correspondent)

January 14th

THE official raising of the sights on the American war programme, accomplished by the President's speech at the opening of the new Congress and his Budget message the following day, puts primary emphasis on the job of conversion.

Year-end figures show approximately where the old programme stood. Of a national labour force of 53,300,000, of which some 40,693,000 were employed as non-agricultural workers, 2,750,000 were in eighteen war industries. This total represented a rise in employment of 13 per cent since June, 1940, when the defence effort got under way; in the eighteen industries the rise was 72 per cent.

The national income for 1941 was about \$91.5 billions. The authorised defence programme from June, 1940, to December 31, 1941, was \$74,645 millions; by November 30, 1941, contracts had been let obligating \$47,397 millions of this amount. Total disbursements under these contracts up to December 31st were \$15,252 millions; disbursements for production in the calendar year 1941 were \$12.3 billions, or 13.5 per cent of the national income of that year.

The rate of expansion in war outpayments projected under the new programme is indicated by the figures for national defence (\$52.8 of the \$59 billions proposed in the Budget come under this item):—

Actual Expenditures, 1940-41	6,301,043,165.91
Estimated Expenditures, 1941-42	23,996,525,400.00
Proposed Expenditures, 1942-43	52,786,186,000.00

Clearly, no such total as that proposed for 1943 can be reached without the wholesale conversion of energies and equipment from civilian to war purposes. National income is now running at the rate of \$95 billions and will shortly reach the \$100 billions mark. Subtraction of the war programme would leave less than \$50 billions for non-military expenditures. That is an income like the \$50 billions that the country had in 1934 as contrasted to the \$69 billions it enjoyed in 1939, or the \$77 billions left over from military expenditures in 1941.

The conversion story has gone through a number of chapters. Not long after the defence programme got under way, OPM produced several studies on the British bits-and-pieces programme and set up a small staff concerned with "farming out" orders.

In the latter part of the year, Walter Reuther, of the United Auto Workers, CIO, brought out a plan for the use of the automobile industry's equipment for aeroplane production, which was greeted with global denunciation by technicians and manufacturers. The arguments of the powerful industrialists who opposed conversion in favour of new construction have run about as follows. During the last few years we have moved from tolerances of 1/1,000 of an inch to tolerances of 1/10,000 of an inch. It is therefore futile to try to expand capacity by grouping around a parent plant that is equipped to turn out low-tolerance machinery a series of other plants whose tools are either old or non-specialised. Where the small plants are set up as part of the parent company's original policy, and the machinery is of the same order of refinement in both, subcontracting works well; otherwise not. Germany's equipment is built in new special purpose plants; we must build new in order to compete. There is no use turning out second-grade stuff—it will only net us high casualty lists. Moreover, we want to be sure of our models before freezing our designs; we must be chary of getting into mass production on items which are still largely untried.

Quantity or Quality

The countervailing arguments have stressed the fact that it is quite possible to lose important fronts for lack of equipment while seeking perfection of models; that, while certain

types of production do require special equipment, the number of those that do not can be cited from the record of conversions in the first world war, with plants turning from table silver to hand grenades, from lipsticks to cartridges, from mouse traps to army cots. In 1914-18, on the other hand, the three years that were devoted to experimentation and improvement on the Liberty motor got it to France too late for the fighting.

A third episode came along in 1941 as the application of priorities threatened to shut down small businesses. An analysis of defence contracts made in midsummer showed that 75 per cent of the defence contracts were in the hands of 56 firms. As part of a "Save Small Business" move, trains equipped with samples of a multitude of needed objects toured the country to invite inspection and subsequent tenders by small companies. But these efforts did not add up to a great deal; at the end of the year contract allocation remained highly concentrated—53 per cent of the contracts were in the hands of 13 firms.

During this whole period, the philosophy of conversion was a philosophy of gradualness. Civilian and war production were to be like two wedges laid together to make a rectangle; the civilian wedge was to taper as the war wedge became ready to absorb its men and materials—then, and not before. Under this philosophy, pressure to maintain allocations of materials for business-as-usual was to be expected from employers, and pressure on employers to succeed in this effort was to be expected from labour.

The series of curtailment orders in consumers' durable goods that came toward the end of the year—outstandingly the automobile order stopping the production of new cars—was based upon a different theory. Such curtailment orders have a threefold effect. They prevent the use of materials which will shortly be needed for war goods. They cause widespread unemployment and dislocation. They stop the profits from business-as-usual. They give both industrialists and labour leaders a maximum incentive to transform civilian capacity to war purposes.

The Detroit Technique

The test of this approach to the problem is now going on in Detroit. It has a number of aspects. Detroit is the international symbol of mass production, of the technique that attracted scores of visiting committees of German industrialists in the years just before Hitler took power. This is the technique which, if it can be used, can deliver the Axis-beating figures of 60,000 planes and 45,000 tanks cited in the President's message. The sheer weight of industrial capacity represented by the motor industry is indicated by its peace-time consumption of almost a fifth of the nation's steel production. The auspices under which conversion will take place have a further significance. Detroit has also been the symbol of twentieth-century captains of industry; a collective bargaining is less than five years old in the motor plants—Ford was not organised until 1941. But the Reuther plan was a trade-union demand for conversion made a year before the fact. The union has therefore been pressing for a considerable share in the execution of the change-over. OPM has now appointed a seven-man board to "assist in the development" of a conversion plan, with three members recommended by industry, three members recommended by the United Auto Workers, and, as chairman, Cyrus S. Ching, possessor of an excellent record in regard to labour, and member of the National Defence Mediation Board (predecessor of the new War Labour Board). Behind this committee, as it goes to work, is the pressure of idle machinery and unemployment in Detroit; men with relatives in the armed forces are among the unemployed. Before it is the pressure of technical problems combined with the resistances to pooling and similar characteristics of competitive industry.

The Copywriters' War

[FROM OUR WASHINGTON CORRESPONDENT]

January 31st

THE signs of the times are literally indications of current changes in the American domestic economy and the confusion that accompanies it. Take some random examples:

As the tempo quickens, the Coca-Cola advertisements that for months have made white-collar workers conscious of a need for the "Pause that Refreshes" now show an arm tugging a bottle under the word "Pause"—followed by another arm holding a tool, "Work Refreshed."

One automobile poster displays what looks like an escaped bench show with the title, "Don't Let Your Car go to the Dogs," while another, less imaginatively, presents a car key on whose case is written "Care Saves Wear."

The New York Dress Institute has been running full-page newspaper advertisements of the lady from Samothrace, urging readers to "Lend Wings to Victory" (as though what she needed weren't arms and a head) because "In the first grim reaction to war every other nation has made one same mistake. The great upsurging spirit of sacrifice, such as has been ours, has made it seem RIGHT that dampers be put on many of the normal joys of living. Then each country has painfully learned that life must go on—that there must be homes and love, recreation and even gaiety. That without these things, morale suffers. And that without morale the people perish. . . . It is no accident that the Winged Victory is a feminine figure."

Comparably interested in home defence, the mattress industry displays moonlit towns with the comment that morale depends on getting enough good sleep.

Kodak shops have signs in their windows saying, "Warning to you who do your own developing. Drastic film spool shortage. Help keep the film supply rolling. We will buy your film spools."

The prize to date should perhaps go to the Western Union for its placards of a desk with a pile of letters on it, topped by a wire, with the slogan: "Priority—Telegrams Always Get It." In this case, it is the barely decipherable text of the wire that is interesting. The message, from the Ellipse Machine Company to the American Colourtype Company, reads: "Answering your telegraphed inquiry of yesterday, can make shipment of two label die stamping machines in about twenty weeks . . ."

Priorities have caught up with some of these items. The sugar controls have the soft drink industry in mind, and restrictions on cars and tyres have now reached the stage of vaudeville gags: "Next time you're down in the dumps see if you can't pick me out a spare." But where the springs will come from for the Beauty-Rests, where the chemicals will come from for the films to go on the spools, is a question still being ignored by the copyists who produce the writing on the wall. But it seems likely that word will soon come to them as definitely as it did to the volunteer knitters, whose newly-invented slogan, "Remember, Purl Harder," was promptly blitzed by a statement of the new War Production Board that such a use of wool should be confined to garments specifically requested through the agency of the Red Cross.

American Notes

The Battle of Washington

The disastrous news from the Far East has led to a flare-up of opposition—loyal and not-so-loyal, informed and uninformed, but sufficiently violent to be referred to as "the battle of Washington." Responsible criticism centres on production, war strategy, governmental efficiency, and the activities of pressure groups in Congress; labour, the farm bloc, and the group responsible for the passing of a Bill granting Congressmen Government pensions. Admiral Standley's warning that "America could be brought to her knees" has received wide publicity. Mr Willkie delivered an opening broadside last week, which included attacks on Colonel Knox and the command of the armed forces. Some of his demands—such as the one that General MacArthur be recalled and given supreme command—seemed poorly chosen, but his further criticisms will undoubtedly get wide attention. Mr Nelson, of the WPB, has called for a greater effort, pointing out that production in 1942 is ten times more valuable than production in 1943. There is an in-

creasing demand for longer hours of work to speed up production. Present legislation provides for a forty-hour week except in Government arsenals and shipyards, where it is forty-eight, and in Government offices, where it has been raised to forty-four. It is argued that the necessity for paying overtime is a deterrent to production, and that the point of maximum production is well above forty hours. Senator Reed has introduced a Bill providing that overtime shall not be paid until an employee has worked 48 hours in one week. Red tape in Government and overstaffing of departments by men who should be in more urgent war work, has been the burden of other complaints. The President has answered this criticism by setting up a survey of Government personnel to see what men can be released to do defence work. The non-defence activities of the Government have been under fire for some time, and it seems likely that some of these will be curtailed, including the Farm Security Administration and the farm-tenant programme, the Civilian Conservation Corps and the National Youth Administration. Some have certainly become redundant in view of farm prosperity and the decline of unemployment, but in other cases it is apparent that anti-New Deal Congressmen are taking advantage of the war emergency to attack the social achievements of the administration.

Unfortunately, with all sincere constructive criticism, there is more than a hint that isolationism and appeasement are beginning to revive, temporarily taking the form of criticism of Britain and Russia, and demanding that all available supplies be reserved for the US forces. President Roosevelt referred scathingly to the "Cliveden Set of Washington" in denouncing rumours that the Government was hiding extensive damage to the US Fleet. Mr Hepburn's insulting remarks on the American Navy, coming at a time when British prestige is at a low ebb, provide a tempting line of argument for American isolationists, although cooler heads have suggested that they were simply an example of the kind of recrimination that must be avoided. Mr Thomas Dewey, a prominent Republican, in a speech last week, went so far as to say that there was a circle of active appeasers in Washington, and warned them that they would find no sanctuary in the Republican party. Mr Dewey's demand for complete victory, with no compromise and no appeasement, has been widely welcomed, and the influence of isolationists and appeasers should not be exaggerated. However, it is desirable to remember that the rôle of the opposition in the United States is not always based on the same degree of national unanimity that exists in this country. There are deep sectional and class differences on national policy. The Administration has a delicate and difficult job to do in sorting out criticism, reconciling differences, and giving a lead to the nation. Fortunately, this is a sphere in which President Roosevelt has always shown supreme ability.

The Farm Lobby Again

The farm bloc is not content to rest on its laurels. In spite of the outcry over the agricultural price clauses of the Price Control Act, farm Senators are advocating a bill to forbid the Commodity Corporation to sell its stores of wheat, corn and cotton at less than parity price levels, except for relief purposes. The fact that Government stocks could be used to keep prices within moderate bounds was the comfort that the President took in signing the Act, and it might have been thought that supplies of cheap feed for livestock from the "ever-normal granary" was a sufficient agricultural interest for the matter to be left where it stands. But the farm lobby is not content. Presumably disappointed at the attitude of Mr Wickard, the Secretary of Agriculture, toward farm prices has made further action seem urgent. Mr Wickard was given powers over agricultural prices in the hope that he would be more favourable toward high prices for farm products than the Price Controller. Such hopes have been frustrated by a recent joint statement in which Mr Wickard and Mr Henderson indicated that they would work together to see that farm prices do not get out of line. In recent speeches Mr Wickard has gone even further and elaborated the thesis that if farm commodity prices go above parity, injury will be done to consumers, the nation, and in the long run to farmers themselves. The Secretary has strongly opposed the new bill, and pointed out that if passed it would cost the consumer over \$1,000 million a year. Newspapers in the East where farm influence is weak have attacked

the proposed bill and suggest that if it is passed the President will certainly veto it. Whether the farm bloc could rally enough votes to repass it over the Presidential veto is extremely doubtful. But it will be another black mark against Congress if at this time of emergency it spends time and energy furthering sectional grabs. The country is becoming increasingly intolerant of Congressional time-wasting and log-rolling; the prestige of Congress and the position of agriculture will certainly be damaged if this attitude is maintained.

North-South Differential

The War Labour Board has ordered the Aluminum Company of America to pay a 7 cent an hour wage increase and night shift bonuses from 3 to 5 cents an hour at two southern plants. The chief interest in this decision lies in its effect upon the difference in wages between north and south, which in the past has been accepted as reflecting a difference in the cost of living. The management in this case objected that they were already paying 4 cents an hour more than the average southern wage, which is about 21 cents an hour below the average wage in the north. The majority of the Board took the position that a narrowing of the difference was desirable, and suggested that the Aluminum Company was powerful enough to set an example to southern industry generally. The contention that living costs are lower in the south is based upon lower estimates for housing, clothing and fuel, and is naturally dear to the heart of industrialists who have in increasing numbers transferred plants in order to take advantage of the cheaper labour supply. It has been questioned whether, in fact, living costs are greatly lower, and whether it is not the standard of living which is depressed. The Board appears to have adopted this point of view. In the past the south has provided, as a bait to industry, a plentiful supply of cheap, unorganised and docile labour, largely of native parentage. The press has argued that it is unfair to northern wage-earners for those in the south to attain equal wage rates. This seems an extraordinary statement in view of the unemployment caused in the north by competition from cheaper southern plants and the movement of industry. A drive for union organisation in the south is now being undertaken by the CIO. With increased industrialisation there and the labour shortages caused by the defence programme, prospects seem favourable. This perhaps explains the alarm felt by industry at the withdrawal of government support for the concept of the wage differential. The impact of the war on the economy of the southern states is likely to be more drastic than anywhere else because of the relative backwardness of the social and economic structure. The reduction of the wage differential is one of the most promising steps towards the rehabilitation of the south and the creation of an adequate standard of living and tolerable working conditions.

OSD Reorganisation

The Office of Civilian Defence is preparing to strip for action by transferring to other agencies activities only distantly related to defence. Mr Landis, Mayor La Guardia's successor as Director, has indicated that the Division of Physical Fitness will probably be transferred to the Federal Security Administration, and Mr La Guardia himself, in his final report, admitted that most of the functions carried on by the Division of Community and Volunteer Participation might well have been transferred to other branches of the Government. Mrs Roosevelt has announced her early resignation from the directorship of this division. Mr Landis has announced that specific functions will be allotted to everyone in the organisation, and that he is taking steps to see that everyone employed is able to discharge his function effectively. Thus in all respects except the appointment of Mr Melvyn Douglas, whom Mr Landis has taken under his wing, popular clamour for a more business-like approach to the problem of ARP has been satisfied. Two points which remain to be settled are the ultimate control of the organisation and the degree to which it is to be allowed to absorb man-power. There has been a demand that the Office should be put under the control of the Army and Navy. Mr La Guardia, in his report, strongly urged that it should continue as a separate civilian organisation, though co-operating closely with the services and local municipal governments. The improbability of heavy and continuous raiding, combined with a

certain scepticism about the efficiency of the War Department outside its own strictly military functions, suggests that the present framework will be continued. The second problem of whether civilian defence should be allowed to absorb the energies of over 5 million volunteers will probably settle itself as more urgent and essential work absorbs the remaining labour surplus.

Federal Employment Exchanges

Federal control of public employment services has been needed for many years. Labour shortages and dislocations caused by the defence programme have made this reform urgent and minimized local political objections. Thus, in December President Roosevelt was able to request that all state employment service personnel and records be turned over to the U.S. Employment Service, headed by Mr John J. Corson, formerly of the Social Security Board. By the end of February, the organisation expects to have completed registration of the work experience of men between the ages of 20 and 45 not already in the armed forces. Even in peace-time the workings of the state exchanges was unsatisfactory, due to the artificiality of state boundaries and to some degree to local politics. For example, an employer applying to his state exchange for workers might have to wait for weeks while the request percolated through the national co-ordinating machinery, to find at last that the labour was available only a few miles away, but in another state. The new service will operate on a regional basis without regard for state lines and will correlate information about available jobs and workers all over the country. State exchanges differed widely in their efficiency; this was inescapable because states vary so widely in wealth and trained personnel, and the extension of federal civil service standards should greatly improve the service. In 1918 President Wilson ordered employers to hire unskilled labour through public employment services only. It seems likely that the US Employment Service may have even wider powers in mobilising and distributing the available manpower to the Forces and to industry, as the demand increases. At present the urgent need is for the re-employment of those displaced from non-defence industries. Mr Corson recently told a House Committee that unemployment resulting from shortages of critical materials is about 400,000 and estimated that about 3,000,000 persons will be displaced through conversion of industries to war work. It seems improbable, and certainly undesirable, that after the war control of this essential public service should revert to the states. The inevitable dislocations of the post-war period will be greatly eased if there is in existence an efficient federal employment service which both workers and employers will have become accustomed to use.

Gun Production

Gun production has been one of the weakest parts of the defence programme. The demand for anti-aircraft guns, naval armaments, rifles, and machine guns is enormous, and the absence of a large-scale peace-time munitions industry like Vickers or Krupp has been a severe handicap. It has been found more difficult to create facilities for turning out ordnance than to build up tank, plane and powder production. Since the last war the Ordnance Department of the Army has struggled against inadequate appropriations to perfect designs and to develop methods of quantity production. While Army and Navy arsenals have done much to develop interchangeable parts and various technical improvements, the bulk of production must come from private plants and private research laboratories have been assuming increasing importance. By 1941 at least 10 important units were engaged in gun production and large-scale retooling is nearing completion. Machine guns of .30 calibre and Garand rifles have been in mass production for over four months. Production of anti-aircraft and anti-tank guns is not unsatisfactory. The most serious shortage is in medium and heavy artillery. The automobile companies have provided the main source of capacity additional to that of government plants and private arms manufacturers. Chrysler has been notably successful in adapting the specifications of the Bofors anti-aircraft gun to quantity production and in reducing machining and assembly time. Nearly one-third of the machine tools needed were drawn from the regular automobile equipment. Several General Motors divisions are turning out

machine guns and it is expected that others will be in production by next summer. In this case 1,300 machine tools had to be purchased and 332 others rebuilt and motorised. General Motors is also producing in quantity aircraft cannon and anti-aircraft guns for the Navy. The forging capacity of Bethlehem Steel is being more than doubled to accommodate the production of over a third of the vital parts of the two-ocean Navy. International Harvester is manufacturing an intermediate calibre artillery gun. Delay has levied a heavy cost in the Far East, but now that conversion is so far advanced, the deficit should be made up rapidly.

No More New Radios

The decision to convert the automobile industry—the giant among the mass-production industries—into an arsenal is being followed by similar orders to other trades specialising in the large-scale production of durable consumers' goods. At the end of last week the War Production Board ordered all radio producers to convert their facilities to the manufacture of war equipment within four months. In order to expedite the change-over, the industry has been warned that, failing voluntary conversion within the time stated, the Government might take over the equipment, labour and management and impose its own scheme of mobilisation. Though much smaller in size than the automobile industry and, on the basis of its labour force, roughly equal in size to the manufacture of refrigerators and ice-making apparatus, the radio industry's resources are substantial. The 1937 census of production disclosed that there were more than 162 plants engaged in the manufacture of radios and gramophones employing a labour force of 48,300 and that the total value of the industry's output was \$278 millions. But in view of the kind of skill and equipment employed in the manufacture of radios, and the enormous military demand for electrical equipment, the importance of the industry as a potential munition-producer cannot be judged solely by the number of employees and by the value of its output. The manufacture of sets for civilian use is expected to be suspended at the end of March, but it is reported that one million short-wave sets will be manufactured for Latin America in order to increase the facilities in those countries for listening to American broadcasts. Presumably the American Government has good reasons for believing that the prospective owners of these sets will take the broadcasts as well.

Shorter Notes

An amendment to the Treasury-Post Office Appropriation Bill designed to nullify the 1934 Silver Purchase Act has been defeated in the House of Representatives by two votes.

The first of a series of six articles released by the WPB estimates that existing industrial plant to the value of \$20,000 millions is convertible to war production. A quarter of the facilities of the automobile industry are already engaged in making military vehicles; another 25 per cent is highly specialised machinery unfit for war work, and the remaining 50 per cent has to be retooled extensively and supplemented with other machinery before it can be used for war production.

All Cabinet Officers, Under Secretaries, Federal Administrators and other agency heads must henceforth send advance copies of their public addresses to Mr MacLeish, Director of the Office of Facts and Figures, who will check them to insure that they are in harmony with public policy.

Mr Lowell Mellett, Director of the Office of Government Reports, has been asked by the President to set up a single agency at which information will be available in Washington to businessmen anxious to contribute their facilities to the war effort. This central office will integrate and co-ordinate activities concerning the release of all official information.

Murray of the CIO is said to be urging a campaign for the quick passage of an amended bill which would provide

benefits of 60 per cent of average wages up to the 24 dollar maximum.

The WPB has closed manufacturers' stocks of domestic electric refrigerators as a preliminary to some form of rationing. Refrigerator production will be halted after April 30. Retailers will be allowed to sell 100 new refrigerators or one-twelfth of 1941 sales, whichever is the larger, before the freezing order is applied.

Pooling of Atlantic Coast oil supplies and facilities will be adopted where necessary to avert the threatened oil shortage due to the diversion of tankers. A survey of stocks and supplies now being made by the oil companies is said to indicate a shortage and it is thought that a 15 per cent cut in consumption will be recommended.

The Civil Aeronautics Board has authorised the American Export Lines to establish an air service between New York and Foynes, Eire. Pan American Airways have received a permit to include Foynes as a temporary stop on the grounds that additional services to Europe were urgent.

The WPB has ordered 146 processors of silk to set all stocks on hand to the Defence Supply Corporation or face requisitioning of their inventories. The action is said to be only the first of many to make idle or excessive inventories of scarce materials available at once for war production.

The WPB has ordered heavy cuts in the use of tin cans and rubber in civilian manufacture, the latter to save an estimated 25,000 tons of rubber annually. The Price Administration has announced that from February 19 retreaded and recapped tires will be rationed, with purchases probably limited to those eligible for the purchase of new tyres.

THE WORLD OVERSEAS

The Plight of French Industry—I

(By a French Correspondent)

February 16th

STATISTICS are no longer published regularly in France. But official pronouncements and *communiqués*, though incomplete and often contradictory, at least provide an outline of the state of French industry.

Industrial France is slowly being starved by the lack of raw materials and by the inadequacy of fuel, especially coal. It is no exaggeration to say that, for Vichy as well as for the occupation authorities, the coal shortage is the outstanding problem. On an adequate supply of coal for France as a whole depends the wellbeing of the population, the activity of every section of industry which has not been electrified, the regular production of electric power itself, the production of gas, the working of the railway system and of the merchant marine.

Before the war, France consumed 70 to 75 million tons of coal yearly, of which only 45 to 50 million tons, or some two-thirds, were mined at home; a large proportion of the imports was derived from Great Britain. Two-thirds of the national output, some 30 to 32 million tons, was extracted from the mines of the Nord and the Pas-de-Calais; of the remainder, 5 to 7 million tons was drawn from the Lorraine deposits and 10 to 11 millions from the coalfields of the Centre and the Midi in unoccupied territory.

Output, which rose substantially in the first year of the war, fell sharply after the defeat from 4½ million tons in May, 1940, to two millions in July, 1940. It recovered fairly rapidly, however, to 2½ million tons in August, 3½ million tons in September and 3½ million tons in October. From this time, the mines in the unoccupied zone were nearing their pre-defeat level of output. Early in 1941 they probably surpassed it by some 30 per cent, while the mines of the Nord and the Pas-de-Calais were themselves regaining their normal production. The total production of the two zones, exclusive of Lorraine, was then about 5 per cent above the output prior to the defeat. No information is available regarding the Lorraine coal field. It is probable that its entire production serves to feed heavy industry in eastern France, which is working for Germany.

Decline in Output

These results were achieved, in spite of the reduction, from about 280,000 to 230,000, in the number of miners (owing mainly to the departure of Polish and other foreign miners), through a considerable increase in hours of work; but they could not be maintained. From the beginning of 1941, there has been a fresh decline in output. In the unoccupied zone, production fell in the Loire coalfield from 375,000 tons in December, 1940, to 343,000 tons in September, 1941, and in the Gard coalfield from 285,000 tons in March, 1941, to 246,000 in the following September. In the whole of the unoccupied zone, the decline over the first three quarters of 1941 was of the order of 15 per cent. There was a similar reduction in the Nord coalfield, and it seems scarcely possible that total French production for the whole of 1941 exceeded 40 million tons.

The reasons for the setback are legion. It was not physically possible to maintain output. Although miners received extra rations, their strength was diminished by malnutrition. On December 30, 1941, Radio Lyon discovered that less food for miners means less coal. The difficulty of obtaining food also increases absenteeism; miners leave the pit to look for food in the neighbourhood. Working hours, which in certain districts had been raised to 52 and even 56 a week, had to be reduced. The Government fixed the working week at 46½ hours, with a possible increase of one hour in exceptional circumstances. All attempts to offset the effect of these factors by increasing the number of miners have failed. A great many, some

15,000 of a total of 17,500, are still prisoners in Germany, where they apparently work in the coal mines. An attempt to make the most robust of the unemployed into miners has failed, as has also the attempt to divert into mining labour employed elsewhere. As the stocks of raw materials which were not requisitioned by the Germans run out, the coal mines experience ever-increasing difficulty in securing pit props, cement, lubricating oil and fuel oil. Pit ponies cannot be replaced, and the feeding of those which remain is a serious problem. Nor is French industry in a position to supply indispensable equipment, such as coal-cutters, winding-gear and lifts.

To these permanent difficulties must be added a series of strikes which broke out in the mines of the Nord and the Pas-de-Calais last autumn. In six mines out of ten, and particularly in the two most important, production ceased for several weeks. Apparently, the discontent among the miners was due to the inadequacy of their wages, but there is no certainty regarding this explanation.

The Germans would not and could not make good the coal shortage by deliveries of Belgian coal and coke, owing, in part, at least, to the difficult transport position. At the end of 1941, they agreed to supply 100,000 tons a month, but, judging by previous experience, this arrangement is highly unreliable.

Thus, France's economy is faced by the brutal fact that available supplies of coal have been reduced from 70 to 75 million tons per annum before the collapse to 40 million tons. From this amount must be deducted coal to be supplied to North Africa, which was formerly supplied by England, and supplies for the occupation authorities, so that the net amount available is no more than 35 million tons.

Cuts in Consumption

It is impossible to estimate the full extent of the crisis from a simple comparison of figures, for it has not been possible to reduce all forms of consumption. The Germans have assured themselves of priority for their transport, but it has been impossible to cut the consumption of the thermo-electric power stations. Shipping services between France and her colonies, especially North Africa, could not be reduced. Besides this, the shortage of fuel oil has led to some additional consumption of coal.

It has consequently been necessary to impose a drastic cut in general consumption, which has raised the question of priorities in its most acute form. A relatively slight cut involves serious difficulties, but the problem is almost insoluble in the case of as severe a reduction as has been necessary in France. The thermo-electric power stations, which in September were supplied with 100 per cent of their needs, received only 88 per cent in November, although weather conditions forced the authorities to increase this quota. Gasworks, which drew 86 per cent of their requirements in September, received only 81 per cent in November. Priority was thus given to works producing power or heat. The railways came second, their supply being cut from 84 per cent of their needs in September to 74 per cent in November. This quota, however, proved to be markedly insufficient for irreducible needs on account of German transport requirements. The *Société Nationale des Chemins de Fer Français* each month consumes 50,000 tons from its own stocks, which are being rapidly exhausted. Certain industries, such as food processing and distribution, and the cement industry, are favoured. Industry as a whole is rationed at two-thirds of its needs in the same way as schools and hospitals. As for the private household, it receives what is left.

The scarcity of coal is aggravated by a shortage of electric power. Normally, hydro-electric power stations—which produce some 35 per cent of all electric power—are fed in spring and summer by the thaw of snow and

ice. At the end of August, the thermo-electric stations come into action. The autumn rains again provide water-power, but during the winter coal must supplement the deficiency of the hydro-electric stations. The autumn of 1941, however, was the driest since 1921. Consequently, the production of the hydro-electric stations was much reduced, and it was necessary to start up the thermo-electric stations unusually early, and to reduce the consumption of electricity. The average monthly coal consumption of the thermo-electric power stations was some 262,000 tons in 1938. For November last the agreed quota was reduced to 230,000 tons. As a result of the drought, actual consumption was double this figure.

Besides this, the virtual impossibility of obtaining even strictly limited quantities of coal has led the private consumer to increase his consumption of electricity for heating. Restrictions amount to 10 per cent for persons permitted to consume 50 to 100 kw, and 20 per cent for those authorised to consume more than this. The sale of electrical heating equipment is forbidden; many stations of the Paris Underground have been closed; theatres must close once a week; and cinemas have been urged to reduce their lighting. Restrictions of unknown scope have been imposed throughout industry.

There is no recent information concerning stocks of petrol, petroleum and fuel oil, but they must be almost exhausted. The amount left by the Germans to the French Government after the armistice did not exceed 240,000 tons, to which should be added 230,000 tons in North Africa. Monthly consumption before the war reached 200,000 tons. Although, on several occasions, an agreement with Germany for the delivery of Roumanian oil has been announced, the quantities actually imported since the armistice seem to be negligible.

The Minerals of Burma and South China

(BY A CORRESPONDENT)

February 17th

SINCE the fall of Singapore, Burma has become one of the most decisive outposts of Allied, and, in particular, Empire, defence in the Far East. Not only has it an immense strategic significance; at the same time its mineral supplies, together with those of South China, are of great importance to the Allied war industries.

Although the value of the mineral output of Burma has remained below £8,000,000 per annum in recent years, of which exactly half was accounted for by oil, the country supplies over four-fifths of the Empire's tungsten ore, over one-quarter of its zinc, nearly one-fifth of its oil, and nearly one-sixth of its lead. It is also an important producer of silver (recovered as a by-product from lead-zinc refining) and of tin. South China is normally by far the world's largest producer of tungsten and antimony (used for steel alloying and lead-hardening purposes respectively), and supplied something like two-thirds of the total world output of both materials before the Sino-Japanese war. South China is also the largest producer outside the International Tin Scheme, and its annual production of tin has passed the 10,000 tons mark in recent years.

The entire metal production of Burma, except some tin and silver, has been sold exclusively to the Ministry of Supply since the autumn of 1939. Free China has also diverted certain parts of its mineral production to Great Britain, but the great bulk of its tungsten, antimony and tin has been bought by the United States Government since the summer of 1940. Besides substantial cash purchases, the United States Government in 1940 and 1941 granted two loans, of \$30,000,000 and \$60,000,000 respectively, to the Government of Free China, which are to be repaid by supplies of the three minerals.

Oil is by value the most important of Burma's minerals. The oilfields are situated in Central Burma, far away from the present danger zone, but the refineries are at Rangoon. The most important oilfields are the Yenangyaung and Singu fields; the former is situated two miles east of the Irrawaddy at Yenangyaung in the Magwe district, and the Singu field is farther north on the same bank of the Irrawaddy River. Burma's oil production, which is a virtual monopoly of the Burmah Oil Co., Ltd., has remained remarkably stable around 7,500,000 to 8,000,000 barrels (one metric ton is roughly seven barrels) for a number of years past. This

quantity approximately equals the output of Bahrein, the newly developed oil islands in the Persian Gulf, and is only one-tenth of the recent Iranian output. In fact, Burmese oil, despite its important place in Burma's total mineral output, is less significant to the Allied war effort than the country's metals.

There are many occurrences of most of the metallic minerals in Burma, but in terms of actual production only two groups have so far become important—the tin-tungsten group and the lead-zinc-silver group. The latter metals are only produced in one centre in Burma, at Bawdin in the Federated Shan States (Upper Burma)—just under 50 miles from the station of Nam Yao on the Burma Railways line to Lashio. The mines are controlled by the Burma Corporation, Ltd., which has its own smelters at Namtu near the mines, and connects both mines and smelters with Nam Yao by its own railway. Production at Bawdin in recent years has fluctuated around 80,000 metric tons of lead, 45,000 tons of pure zinc, about 6,000,000 oz. of silver and small quantities of copper matte, nickel speiss and antimonial lead produced as by-products of the treatment of lead-zinc ores. Like the Burma oilfields, the Bawdin mines are not at present threatened.

Lost Tungsten

Tin and tungsten are produced in two separate areas in Burma, of which the area south of Moulmein, with Tavoy and Mergui as chief centres, has already been lost to the Japanese. The second area is situated in the Karenni State of Bawlake, roughly 220 miles north of Moulmein, and near the town of Pazaung on the Salween River. Out of Burma's average production in recent years of about 12,500 tons of tin and tungsten concentrates (containing about 6,000 tons of metallic tin and 5,000 tons of tungstic-oxide), Mawchi Mines, Ltd., which exploits the Karenni deposits, has accounted for between one-third and two-fifths, while the rest was produced in the south. Although not easily accessible, the Karenni tin and tungsten area lies in the danger zone, and can no longer be regarded as a safe source of supply. As Burma has been, until recently, the most important source of British tungsten supplies, it is not surprising that a new iron and steel control order has been introduced in Great Britain early this week, which places high-speed steel, whatever its tungsten content may be, under a strict licensing system.

The loss of the greater part of Burma's tin and tungsten supplies, and the threat to the remainder of the country's production, could be made good by increased supplies of Chinese metals. China's annual tin output of over 10,000 tons is almost entirely produced in the Koshiu district of Yunnan Province, which is firmly in Chinese hands. More than 95 per cent of its antimony comes from Hunan Province, and this area, too, by the recent Chinese successes near Changsha, has been cleared of Japanese troops. China's tungsten is produced in a number of Southern Provinces, but the chief producing districts, situated in the Kanshow area (South Western Kiangsi), Western Kwangtung, Hunan and Yunnan, remain under Chinese control. Unfortunately, all of the normal trade routes for Chinese tungsten, antimony and tin (via Shanghai, Canton, Hongkong and Haiphong) have been cut, and the Burma road represents at present the only open route to the outside world. As a result, Chinese exports have declined seriously for some years past. In 1937 its export of tungsten concentrates amounted to 17,895 metric tons (containing 60 per cent tungstic oxide). By 1940 they had declined to 3,118 tons. In the same period, antimony exports fell from 14,702 metric tons to 5,493 tons, and tin from 9,500 tons to under 4,000 tons. Last year, a further general reduction is believed to have taken place. In recent months, however, production of the

Branches and Agencies throughout the East

FIXED DEPOSIT ACCOUNTS

Rates will be quoted on application

three metals in Southern China has increased substantially, and it is expected that the increase will be maintained as part of the Inter-Allied pooling arrangements.

Whether the increased Chinese effort, as well as the Burmese mineral output in the unoccupied areas, will make themselves felt in Allied supplies depends, of course, chiefly on the defence of the Burma road and the railway from Lashio via Mandalay to Rangoon. If the road or the railway are cut, so will be all mineral supplies from Burma and South China. Fortunately, the rapid decline of tungsten and antimony exports from China in recent years has stimulated a large-scale development in the mining of the two metals in Latin America (chiefly Mexico and Bolivia). Nevertheless, the stoppage of Burmese and Chinese tungsten and antimony supplies would be a serious loss to the Allies, as would the interruption of Burmese tin, lead and zinc supplies, especially since the large Far Eastern sources of tin have recently been lost, and the important Australian lead and zinc supplies can no longer be regarded as absolutely safe.

Wolfram Hunting in Portugal

[FROM OUR LISBON CORRESPONDENT]

February 5th

FROM February 15th, all sales of wolfram (one of the ores from which tungsten is derived) and tin must be made to a Government Commission (Commissao Reguladora do Comercio de Metais) at fixed prices, namely Esc. 150 per kilo for wolfram and Esc. 55 per kilo for tin 99.5 per cent pure; sales are to be made only by mines in

actual production and the mineral is to be such as is already prepared for marketing. Of the tin purchases, 25 per cent is to be reserved for Portugal's internal use.

This measure is intended to stop abuses due to widespread wolfram hunting, a phenomenon which has greatly prejudiced agricultural and other interests in northern Portugal. It has also other interesting possibilities, inasmuch as it does not necessarily follow that the Commission will resell for cash all the metal they obtain—it is considered probable that some, if not all, will be used for barter. The publication of an advertisement in to-day's press to the effect that the Commission "has a possibility of importing a certain amount of laminated iron, and therefore invites industrialists to let the Commission have a list of their normal needs," seems to bear out that conclusion. As the most important mines for both metals are in British, American and German possession, it may be presumed that their production will only pass through the Commission's books, since, in addition to preventing labour disorganisation, the Portuguese Government is anxious to forestall inflation, which was brought appreciably nearer by the large sums given for the wolfram to people who have as yet no habits of saving or investment and who therefore turn currency into goods in short supply. It is not possible to say how much wolfram or tin the Commission will be able to get from the independent mineowners—mostly Portuguese but also said to include a few Japanese—but it will be interesting to see where the sheet iron comes from in exchange for the much-sought metal.

An export tax of 80 centavos on each kilo will be imposed by the Commission, and out of its proceeds 25 per cent will be retained in a special compensation fund to be established, presumably to cover working expenses. Broadly speaking, the new measure is regarded here with favour; it remains to be seen whether Germany, the party most interested in increasing her imports of wolfram, will find some way of tricking the good faith of the Portuguese authorities.

German Europe Industrial Collaboration

DIRECT co-operation and sub-contracting are the main principles of Germany's system of industrial collaboration with occupied countries. They were first introduced in France, and were later extended to all western European countries, whereas in Central Europe and the Balkans direct economic penetration was preferred. Like Germany, western European countries depend on supplies of raw materials from overseas, particularly textile fibres, non-ferrous metals, and oil. Direct economic co-operation aimed, therefore, at establishing or expanding the manufacture of substitutes. Agreements were concluded between the German textile concerns and those in France, Belgium, Holland, and Norway, as a result of which Germany provided patents and technical experience for the expansion of the cellwool industries. These agreements were, however, only possible after the industries in the countries concerned had been concentrated—the famous motor-car agreement between Germany, France and Italy was based on the concentration of the leading French motor-car firms into the *Société Française de Construction Automobile*. The doubtful success of the agreement between the German and French textile industry is shown by the fact that the output of artificial textile fibres increased to only 52,000 tons in 1941, against 32,000 tons in 1938. The production programme for 1942 aims at 95,000 tons. The German chemical concern, *I. G. Farben*, and the French concern, *Kuhlmann*, jointly formed the *Francolor*, which demarcates spheres of interest for the German and French manufacturers of dyestuffs. A shortage of non-ferrous metals forced French industry to expand the output of aluminium and magnesium, which at the same time made the expansion of electric power stations necessary. Similar programmes were drawn up in Belgium, Holland, Norway, Hungary and Roumania. Everywhere Germany encouraged the production of industrial raw materials and substitutes.

These long-term programmes would doubtless have secured German monopolist interests without supplying the immediate demands of Germany's war machine. Hence Germany introduced a system of subcontracting which is based on a decree issued in October, 1940. According to this decree, German orders may be placed with firms in

occupied countries, if the German firms provide the necessary permits for raw materials. Under the price stop decree, the "shifting of orders," as the system is called, must not allow prices to exceed the German price level. The final permit for the execution of the orders is given by Central Order Offices established in Paris, Brussels, and The Hague. Just as exhibitions of the sub-contracting that could be done were organised by the regional Order Bourses in the Reich, so industrial exhibitions were organised in Paris, Brussels and later in Lyons. The German section in Paris exhibits manufactures which German firms want to place with French firms; and the French section of the permanent industrial exhibition consists of articles which French firms are able to manufacture under existing conditions. At the end of last year, 30,000 visitors were registered at the Paris Exhibition, and French manufacturers were able to execute sub-contracts for 15,000 exhibited articles. Last autumn the value of German orders placed in France was estimated at Rm. 1,500 millions, and the Brussels Exhibition was also successful. The *Essener National Zeitung*, encouraged by these successes, began publishing a regular supplement under the title "European Economic Service," which is a detailed list of sub-contracts offered by German firms. The paper declared that even firms situated in neutral countries have offered to execute sub-contracts. Last December, sub-contracting on a European basis was carried a step further by the first Reich Order-Bourse, held in Berlin. French, Belgian, Dutch and Danish firms sent representatives to this bourse, which will be repeated in Prague, Vienna, Frankfurt and in The Hague.

It is easy to see how the placing of orders is a powerful influence in changing the industry of occupied countries. In occupied France, for example, 80 per cent of the entire manufacturing industry is said to be employed on German orders. At first, orders were concentrated in Paris; later, a dispersal into the provinces of occupied France was necessary, and, recently, German orders have been placed, in steadily growing numbers, with firms in unoccupied France. During the first six months of 1941 Germany "generously" supplied the necessary raw materials mainly, no doubt, from requisitioned stocks, and employers were encouraged to retain their workers, who were put on part-time work. In the French and Belgian textile industry, for example, hours were reduced in certain places to ten a

week. During the second half of 1941, however, conditions changed. The shortage of coal and subsequently of iron and steel, not to speak of textile fibres, non-ferrous metals, and lubricating oil, became more pronounced. Yet at the same time Germany was compelled to search for firms which could execute orders from the raw materials of the respective countries. After the German model, rationalisation and concentration were introduced. Here and there skilled labour became scarce, because of the export of labour to Germany, and part-time work was first abolished in the textile industry. At the same time, inefficient factories were closed down in great numbers, and the German system of "Joint Aid" for such factories had to be introduced in France and Belgium. But the most interesting feature of industrial collaboration is the exchange of technical methods and technical experience. Firms in occupied countries must be adapted to German designs and methods. Moreover, German substitute materials must, of course, be used in executing orders, and German firms cannot avoid revealing the secret of both their manufacture and use. There are signs that French, Belgian and Dutch concerns have changed only reluctantly to new methods based on substitute materials. Nevertheless, industry as a whole has not been reluctant to accept sub-contracts from German firms.

The prospect of further industrial collaboration depends on the supply of new raw materials and manpower. The rapid expansion of the substitute industries depends on a sufficient supply of coal and electricity, but the coal output in Belgium, France and Holland seems to be decreasing. (The coal and electricity shortage in France are described in detail on page 256.) The German occupation authorities are trying to induce greater output by allowing coal-owners the free use of additional production, though sales on the black market have been expressly forbidden. Supplies of timber, an indispensable raw material, have only been secured by severe rationing of civilian consumption after Germany had been forced to reduce exports to France, Belgium and Holland. The supply of labour is also difficult, for the import of labour to relieve the shortage in Germany has virtually abolished unemployment in most of the occupied countries.

There is, thus, no doubt that industrial collaboration is at present nearing its peak. The production of substitutes is still negligible, and the continued export of labour to Germany makes a further increase difficult, if not impossible.

Foreign Workers in Germany.—The official German journal *Reichsarbeitsblatt* estimates that the number of foreign civilian workers employed in Germany increased from April, 1941, to September 25, 1941, by 600,000 to 2.1 million. The following table shows that nearly half of the workers were imported from Poland.

	(In 1,000)		
	Men	Women	Total
France	34.0	14.5	48.5
Belgium	106.8	14.7	121.5
Holland	80.8	12.3	93.1
Denmark	25.3	3.6	28.9
Poland	744.8	262.7	1,007.5
Bohemia & Moravia	111.8	28.2	140.0
Slovakia	54.0	26.0	80.0
Hungary	25.4	9.6	35.0
Jugoslavia	82.8	26.0	108.8
Bulgaria	14.4	0.2	14.6
Italy	250.0	21.7	271.7
Other Countries	137.3	52.6	189.9
Grand Total ...	1,667.4	472.1	2,139.5

At present the number of foreign civilian workers employed in Germany may have increased to more than 2.5 millions, though from September, 1941, to February, 1942, the rate of import probably decreased. It is reported that even boys have been sent from Roumania to Germany and have been offered apprenticeship in German factories. Most of the civilian workers are employed in agriculture. The recruiting of foreign workers has been extended to the occupied territories of the Soviet Union, and the first Russian prisoners of war have begun work in agriculture and in Germany's coal-mining industry. No official figures about the number of prisoners of war employed in Germany have been published.

I. G. Farben and Francolor.—The German chemical concern I. G. Farben has increased its capital by Rm. 48.5 millions to Rm. 848.5 millions. The greater part of the new capital will be used for acquiring interests in the newly established French concern, *Francolor*, whose total capital amounts to 800 million francs.

French Buna Plans.—It is reported that considerable quantities of synthetic rubber, Buna, have been exported from Germany to France. The French rubber industry has thus been able to continue the manufacture of rubber articles, and the French Dunlop company has adapted its factories to the use of Buna. Moreover, the French industry is contemplating the manufacture of synthetic rubber; in fact, even before the war, preliminary experiments had been carried out. But German patents alone will not be sufficient, for the shortage of coal and electricity are serious obstacles to the manufacture of Buna.

Concentration.—Germany's leading electric concern, the AEG (*Allgemeine Elektrizitäts-Gesellschaft*) has amalgamated with the mixed holding and operating concern, *Gesfuere* (*Gesellschaft fuer Elektrische Unternehmungen*). The AEG takes over the rights and the assets of the *Gesfuere*, and exchanges for share capital, amounting to Rm. 80 millions, for Rm. 100 million new shares of the AEG. This amalgamation is the biggest concentration in recent years. It marks not only a new concentration in the electrical industry, but also a weakening of the position of holding concerns. The AEG takes over a considerable number of operating companies, manufacturing cables, transformers, insulators, wireless parts, precision instruments, etc. The main purpose of the amalgamation is rationalisation of the different factories by concentrating the manufacture of the different products in the most modern operating companies.

The unusual circumstance that an operating concern takes over a holding concern is explained by the leading position of the AEG. The *Gesfuere* held only minor interests in the AEG, and, apart from the greater resources of the AEG, the tendency to favour the concentration of operating concerns against holding concerns has grown stronger in recent years. Since the beginning of the war leading concerns in the electrical, chemical and light metal industries have specialised their production to a great extent by amalgamating or exchanging their holdings, with the purpose of avoiding parallel production in the different holdings of the same concerns.

Reich Revenue.—The latest figures published about Reich revenue show a substantial increase in taxes.

(In million Reichsmarks)

	Total	Taxes	Customs and Excise
1940, Oct. 1 to Dec. 31	6,987	5,591	1,396
1941, Oct. 1 to Dec. 31	8,081	6,800	1,281
Increase in %	15.6	21.6	7.5
Decrease in %	...	...	...
1940, April 1 to Dec. 31	20,405	16,470	3,935
1941, April 1 to Dec. 31	23,863	20,007	3,856
Increase in %	17.0	21.5	...
Decrease in %	...	...	2.0

Second-Hand Goods.—Complete rationing of clothing, and the gradual depletion of stocks of household goods and furniture, have favoured the market in second-hand goods. Yet the greater part of the transactions in second-hand goods take place outside shops. German newspapers carry long columns of advertisements where furniture, clothing, household goods, etc., are offered or sought. These private sales of second-hand goods come outside the price stop decree, and it seems that purchasers have been paying exorbitant prices even above the regulated prices for new goods. The new price commissar has decreed a price stop for all second-hand goods, whether the purchase is made in a shop or privately. Henceforth, the basic price for second-hand goods is the price for the same new goods obtained in shops under the price stop, and then a reasonable deduction must be made for wear and tear. The price for second-hand goods must not exceed 75 per cent of the price for new goods.

THE BUSINESS WORLD

War and Patents

THE general prohibition on trading with the enemy imposed in wartime is by no means absolute. Under the Trading with the Enemy Act, 1939, a Secretary of State, the Treasury or the Board of Trade may give authority to permit trading with the enemy where such transactions are considered to be in the national interest; and among the forms of trading with the enemy hitherto permitted has been the maintenance of, or application for, patent rights by each belligerent in the country of its enemy.

Under powers deriving from the Trading with the Enemy Act, the Board of Trade has issued General Licences authorising the payment to an enemy of fees in respect of the grant or renewal of patents in enemy territory, or the payment on behalf of an enemy of fees in respect of the grant or renewal of patents in any country not being enemy or neutral territory. This should not, of course, be confused with the payment of royalties for the use of patents. Pre-war patent legislation is modified by the Patents, Designs, Copyright and Trade Marks (Emergency) Act, 1939; the most significant change introduced by this Act is that it empowers the Comptroller of Patents to grant licences permitting the exercise of enemy-owned patent rights where this is in the national interest. A number of these licences have actually been granted, on payment of royalties to the Custodian of Enemy Property. The General Licence seeks to ensure that the international patent system, with certain safeguards dictated by security

and financial considerations, is maintained despite the outbreak of war.

In the Four Years' War, a similar General Licence, issued by the Board of Trade, was in force until the early months of 1918, when it was revoked and all enemy-owned patents were vested in the Custodian. Today, it is believed that revocation is again under consideration, and expert opinion is sharply divided on the desirability of such a step. The issue is, of course, a relatively small one—financially; the business involved in maintaining and granting patent rights is not considerable. Nor is it easy to come to a decision on broad lines of principle. The Trading with the Enemy legislation has from the outset admitted the desirability of making exceptions where tangible justification could be adduced, and the case for revoking the General Licence, either wholly or partly, rests on an estimate that its continuance is, on balance, a weakness in the conduct of the war.

The function of the patent system is, of course, to reward inventors by the grant of monopoly rights, for a limited period; and, whether or not the establishment of monopolist property rights in inventions is intrinsically desirable, is a controversial problem that is not at present at issue. If the patent system is taken as a given fact, there is a *prima facie* case for maintaining the property rights of patentees, even of enemies, unless to do so would be prejudicial to the interest of the general public. If a patent is not maintained through payment of due fees, the rights lapse and may be exercised at will by nationals of the country in question. Thus, German nationals could exercise British-owned patents, and *vice versa*. The advantages and disadvantages of the existing state of affairs are thus reciprocal as between this country and its enemies. It is understood that the Nazi Government has in general adopted measures similar to those adopted here, but experience of that Government suggests that, were the balance of immediate advantage unmistakably in favour of the Allied powers, very different arrangements would have been made. In fact, the Germans have always been anxious to acquire large numbers of foreign patents and there are considerably more German-owned patents in this country than there are British-owned patents in Germany, which perhaps gives the Nazi Government an unusual interest in legality. On the other hand, the reverse is true of Italy; and today payments on behalf of British-owned patents in the whole of European occupied territory come under German control.

There is accordingly a small but definite adverse balance of payments on account of patent transactions between this country and the enemy; and this drain, if it is balanced by no adequate *quid pro quo*, must surely be inadmissible. It is believed that the Germans have scrupulously observed their engagements regarding the acquisition and maintenance of British patent rights; but there is no guarantee that this will continue. Since no payment can obviously either create or maintain rights which are enforceable during the war, it seems doubtful whether any harm would be done to British owners' patent rights abroad if the General Licence were revoked. British owners cannot work patents in enemy or enemy-occupied territory, nor can royalties accruing be transferred during the war. The interest of owners is to see that their rights are unimpaired at the conclusion of hostilities; and there is no reason why, on the only possible assumption—that of an Allied victory—the position should not be satisfactorily regulated at the next peace treaty as was done by Articles 306 and 307 of the Treaty of Versailles. These articles provided that patent rights should, in general, be re-established in favour of those entitled to them at the outbreak of war, though the victors reserved to themselves the right to impose restrictions on German nationals for a variety of purposes, including the fulfilment by Germany of all its obligations under the Treaty.

Y P 8

A minor advantage of the revocation of the General Licence would be the release of a limited, though highly trained and valuable labour supply, in the Patent Office and among patent agents, for employment on work more nearly connected with waging the war. Nor would the encouragement to public morale be negligible, for there is some dissent among the persons called upon to undertake the actual work of communicating with the enemy. Moreover, the possibility of leakage of information, though infinitely remote in view of the existing precautions, would presumably be eliminated.

It is true that revocation of the General Licence would inevitably cause a rush of applications for patents from both sides after the war, and there is no doubt that the Patent Office would be called on to work at high pressure to deal with them. This is in no way a reason for not revoking the General Licence now, since numbers of Patent Office officials, now seconded for other duties, will no doubt

have returned by then. In any case, every man not employed to-day on immediate war work constitutes a direct loss to the nation. The numbers may be small; the principle is important.

The accumulation of small advantages does make the revocation of the General Licence appear desirable. The bitter and deepening seriousness of the struggle with the Axis has brought about a definite change of emphasis; and what appeared to be harmless and, in the long run, trouble saving in the days of "phony war" seems highly inappropriate at the present juncture. The British patentee should fully appreciate the fact that the only security for his property in the last resort is not the maintenance of a certain legal and financial formulae, but the success of British arms. Any contribution to the war effort, however small, which can be made by withdrawing the General Licence is certainly in the best interests, not only of the country as a whole, but also of the interested parties.

Finance and Banking

Ampler Credit Supplies

Although the clearing banks have already begun their February making-up, supplies of credit have been more abundant this week. Some of the banks have at long last extended their bill purchases to include April maturities, and with this outlet the market has found it possible to take up the bills which it tendered for last week without having to seek the assistance of the agent for the Bank of England. A factor which is now mopping up bank cash at a considerable rate is the flow of subscriptions to Government issues swollen by the Warships Weeks campaign. The market are particularly apprehensive of the London week due towards the end of March, and in preparation for it have striven to keep in their portfolios a fair amount of bills maturing in the week in question. The easing of the credit position is reflected in the rise of £13,450,000 in bankers' deposits shown by the latest Bank return. This expansion is the joint product of an increase of £6,705,000 in the Bank's holding of securities (in part the result of some of the special purchases of bills made towards the end of last week) and of a reduction of £7,114,000 in other accounts.

Far Eastern Exchange and Bullion Markets

The spread of Japanese invasion in the Far East can be followed by the casualties in the official list of exchanges quoted in the London market. This week its already attenuated ranks have been further reduced by the disappearance of the Straits dollar. From Tokyo the Finance Ministry and the Bank of Japan have announced the winding-up of the Foreign Exchange Fund of 300 million yen which was set up to fulfil functions roughly similar to those of our own Exchange Equalisation Account. The Japanese thesis is that within the yen area as now being extended there will be no need of the foreign exchange machinery of which the Foreign Exchange Fund provided one of the principal cogs. In India the critical turn in the war with Japan has been apparent in the free bullion markets rather than in the controlled exchange market. The gold market remains free as regards dealings in gold already held within the country, and over the past ten days the open market price in Bombay has jumped from its approximate parity of 47 rupees per tola to Rs. 51 8s., subsequently relapsing to Rs. 49 4s. It is hardly surprising that the rapid approach of war to the boundaries of India should have caused some increased hoarding demand for gold. The silver market in India has also been affected by the same factor, but has not been so agitated owing to the calming influence exerted by the readiness of the Reserve Bank of India to sell standard silver at Rs. 62½ per 100 tolas. The price for fine silver in Bombay rose between February 6th and 16th from Rs. 64 6s. to Rs. 65 13s., but has since come back to Rs. 65 10s.

Note Imports in India

Another reminder of the discrepancies between the systems of exchange control operating in the different parts of the sterling area is provided by the new Indian Govern-

ment order controlling the import of all foreign currency notes. Hitherto restrictions on the import and export of notes to and from India have applied to Bank of England notes. In future all imports of foreign notes will be subject to the permission of the Reserve Bank. Certain limits have been set to the amount of specified notes which immigrants and evacuees may bring in with them. They are of £10 in Bank of England notes, \$100 of Chinese dollars, \$500 of Straits dollars, and 100 NEI guilders. No imports of Hongkong dollar, Sarawak dollar and Philippine peso notes will be allowed. These special facilities are intended for the benefit of those now fleeing to India from Japanese invasion. It is inevitable that the Japanese, in the course of their advance, should acquire an appreciable volume of the currency of the countries they are occupying, and it is prudent that precautions should immediately be taken to prevent such notes making their way into India and feeding funds from which subversive Japanese activities in that country may be financed. The Japanese have had good experience in exchange control "wangling" during the earlier phases of the China incident. It is only to be expected that they will endeavour to put that experience to some use in India, and it is reassuring to learn that the Government of India have already put appropriate counter-measures into operation.

Note Expansion in France

The latest Bank of France return to reach this country, dated January 22nd, acquires special significance from the fact that it foreshadows a further increase in the advances made by the Bank to the French Government in order to meet the latter's commitments for German occupation costs. The limit of these advances was fixed at 150,000 million francs and by January 22nd last they were outstanding to the amount of 149,445 million francs. The note circulation has been expanding with the growth of these advances, the bulk of which is withdrawn in the form of currency for use of the occupation authorities. By January 22nd last the circulation stood at 271,500 million francs, an increase of some 1,000 million on the month, or over 100,000 million francs since the German occupation of Paris. The difficulties of the monetary authorities in unoccupied France, owing to this expansion of their currency in the occupied territory, can well be imagined. There is at present no way in which the Vichy currency can be insulated from the inflation emanating from the occupied territories. Information from occupied France suggests that even the actual process of printing notes is now out of the hands of the Bank of France. The notes are printed at Rennes by the Oberthur printing works, which are under German control. All that the Bank of France does is to provide the supplies of plain bank note paper.

Free French Central Bank

The *Journal Officiel de la France Libre* has given details of the formation of a central bank which is to be responsible for the monetary circulation in all Free French

territories and for keeping the accounts of the Free French administrations. The new organisation is known as the Caisse Centrale de la France Libre. Its initial capital of 100,000,000 francs has been subscribed by the Financial Commissioner of Free France. It has already opened offices at No. 9 Princes Street, London. The decree setting up the bank stipulates that in all Free French territories where the currency medium in the past has been other than the franc, the authorities may maintain such currency or create another one. It is, however, the intention to establish monetary unity in Free French territories, and the Caisse Centrale should serve that object. Its notes will be issued either against currency already in circulation in the territories concerned, or against gold and foreign exchange. The Caisse Centrale will have the responsibility of applying the Franco-British monetary agreement of March, 1941, which virtually admits the Free French territories into the sterling area. The new bank will have the right to deal in bullion, to accept deposits, to grant credit to corporations and banks where such credits are deemed essential to the national interest, to make ways and means advances to the Free French administration, and to perform all the sundry functions of a central bank. The setting up of this bank should in time solve the difficult problems created by the circulation in Free French territories, i.e., in the sterling area, of notes secured in fact by Vichy securities and identical with those circulating in the colonial territories under Vichy control.

Thos. Cook and Grindlays

The acquisition of the business of Thos. Cook and Son by the railway companies has been followed this week by the announcement that the business of the firm's banking subsidiary has been acquired by Grindlay and Company, which, in turn, is owned by the National Provincial Bank. Earlier in the week it had become known that the main line railway companies, acting through a wholly owned

subsidiary, Hay's Wharf Cartage Company, had acquired the control of Thos. Cook and Son which had been held by the Wagons Lits Company since 1928. By virtue of the Trading with the Enemy Act this control had become vested with the Custodian for Enemy Property. The Custodian had neither the organisation nor the resources to maintain a going concern such as this, and thus entered into negotiations with the main line companies for acquiring the control of Thos. Cook and Son. With the completion of this part of the deal the time had come to separate the travel agency from the banking side of the business. The 1940 balance sheet of Thos. Cook and Son (Bankers), Ltd., showed resources of £3,152,431, while those of Grindlay and Co., at the end of April, 1941, were £5,204,022, so that the new business represents a substantial acquisition. It is stated that the travel company will continue the issue of travellers' cheques and incidental foreign exchange business.

Insurance of Hulls

Difficulties affecting the marine insurance of hulls have been referred to by the retiring chairmen at the recent annual meetings of the Institute of London Underwriters and the Liverpool Underwriters' Association. The increased hazards resulting from navigation conditions in wartime, such as voyaging in convoy without lights, and on unfamiliar routes, are, of course, common to hulls and cargoes. Superimposed on these hazards are certain problems peculiar to the insurance of hulls. Repair costs, for one thing, are continually rising, and are frequently enhanced through the removal of vessels to another port for repairs—not, as in times of peace, to a port where repairs can be executed more cheaply, but to one where facilities happen to be available—thus throwing on underwriters the additional burden of removal expenses. But a more important feature is that, because of the urgent need to keep all seaworthy

ships in service, only essential repairs are being effected; the cost of complete and permanent repairs, which will depend on conditions at some future date, are unknown and cannot be estimated with any degree of confidence. In hull insurance there is always considerable delay before the results of an underwriting year are finally ascertained, and the traditional practice is, therefore, to keep accounts open for three years, but under war conditions underwriters will need to wait much longer before they can accurately assess their position. For these reasons both chairmen stressed the

Investment

Politics Take a Hand

There is nothing surprising in the fact that the fall of Singapore, and perhaps still more the Prime Minister's intimation of our continued weakness in the Pacific, should have caused a further very general fall in all securities with substantial interests in that area. The slump in tin and rubber shares, except those of India and Ceylon, has reached a point at which no one is likely to sell except under extreme necessity, and many shares of concerns operating in contiguous areas are beginning to approach such levels. Owing largely to the action of the Commonwealth Government, there is at the moment virtually no market in Australian mining shares, and, for reasons more closely associated with military action, Burmah Oil now stand some 40 per cent below the best of this year. The virtual freezing of a considerable section of equities, not all of which were speculative by peacetime standards, has led to some sales of others whose prices had been well maintained, which helps to account for the fact that the index of industrial equities, compiled by *The Financial News*, is now some 8.2 per cent below the peak, touched on December 2nd. The selling has, however, not been large at any time, and it has been little accentuated since the deterioration of conditions in the Far East. The drop in quotations owes a good deal to cautionary marking down, and perhaps as much to the vague unrest which has arisen and been aggravated, rather illogically, by the passing of the German ships up the Channel. Apart from that incident, whose effects should be transitory, the principal cause of unrest is the growing feeling that all is not well, either in the high command or in Whitehall, and the fear, which is just beginning to be common talk, that some political upheaval may emerge. None of these factors has any direct effect on the profit-earning capacity of British industry, and it may be expected that, once the public becomes accustomed to reverses, this fact will induce renewed buying. Meanwhile, the fall in some equities has done a good deal to bring about the readjustment of their value, as against fixed interest stocks, which have declined by a mere 0.3 per cent from the peak touched more than once during the past few weeks. A few adventurous spirits are already bargain-hunting. It is not easy to look more than a few days ahead at these times, but it seems probable that a substantial proportion of next month's vesting proceeds will seek safety rather than capital appreciation.

Home Railway Results

The home railway market succeeded in staging the usual modest flutter on the eve of the dividend announcements, which, so far at least, seem to be fully up to expectations. The first statement, that of the LMS, shows an increase in total net revenue of £543,511, of which £100,000 is taken to raise the appropriation to wartime contingencies from £300,000 to £400,000, while the directors have thought fit to increase the distribution on the ordinary capital from 1½ per cent to 2 per cent. This extra half point costs £476,012, and its distribution means that the addition to the carry forward is reduced from £65,110 to £32,609. It appears that the nearest comparable figure to the company's share in the new rent charge is £14,125,602, which would mean that the total increase in net revenue, is due to changes in controlled revenue and that earnings outside that field are down by some £123,585. The preliminary statements of this company and of the Southern contain no mention of war damage nor any indication

value of cohesion between the different sections of the market, cohesion which is largely achieved through the "understandings" promulgated by the Joint Hull Committee, representative of both the companies and Lloyd's. In January, 1940, this committee fixed a surcharge of 25 per cent to meet wartime conditions, and a further 10 per cent was added a year later. No general advance is being imposed this year, but individual cases will be rated up, if necessary, on a sliding scale taking account of the experience during the past three years.

that the net revenue is after any charge of this nature. In the circumstances, the natural assumption is that the whole amount has been charged against reserves. Consequently, the decision to raise the dividend is not one which will recommend itself to the serious investor, either in the equity or in the senior issues. It is true that

	1941		1940		Price, Feb. 19	Yield
	Share in Rent Charge	Other Revenue Net	Share in Pool	Other Revenue Net		
L.M.S.	14,749,698	500,513	14,125,602	624,098	18½	11.26
Southern	6,607,639	326,621	6,570,169	185,621	16	11.57

the railways have a general cover against arrears of maintenance, but they will be no more free than other sections of industry from the need for post-war reconstruction and the establishment of adequate reserves is requisite if any semblance of independence is to be maintained. At the time of writing, full figures for the Southern Railway are not yet available. The payment on the deferred capital has, however, been raised by ½ point to 1½ per cent, at a cost of some £157,451, and £9,406 is added to the carry forward, which last year suffered a draft of £11,613. At this stage, it is even more impossible to extract really comparable figures for this line than in the case of the LMS. It appears, however, that virtually the whole of the net expansion of £178,470 occurred in non-controlled revenue, although fuller particulars may make it necessary to alter either or both of these comparisons. Actually, it may be doubted whether the figures warrant any very close study, for they throw no light on the present position of the main earning asset, the railway network. The response to both dividends was some profit taking, driving down prices, with the result that the yields on the two equities are both well over 11 per cent. This is a clear indication that payments, even at the present level, are considered beyond the normal capacity of the lines.

* * *

Drastic Measures in Australia

It is scarcely surprising that one of the groups of securities most affected by the fall of Singapore has been that of Australian companies. The expansion of Japanese conquest was, in any case, bound to have this effect, but it is difficult to escape the conclusion that the fall has been aggravated by the action which the Commonwealth Government has thought it necessary to take to control dealings in securities and to limit profits. The actual position is no clearer on these matters than on many other points of Mr Curtin's extremely drastic proposals, but it does appear that, in response to special representations, he has stated that only dealings in bonds will normally be permitted and that transfers of shares will only be sanctioned in quite exceptional circumstances. This must mean, in effect, that there will be no market in them within the Commonwealth. The probable effect of this measure on morale cannot be discussed here, but it will probably lead to endless complications, including the problems of a black bourse. The bonds in question are, for the most part, Australian issues in which the British investor has no holdings. With the shares, particularly those of Australian banking, mining and industrial companies, the position is very different, since they are dealt in in both countries. It may be assumed that Australians will not be permitted to deal here and that there will be a slight narrowing of the London market, but it is probable that the fear of further legislation

against capital will be a more potent factor in reducing prices than the decline in marketability.

Meanwhile, a heavy blow has already been struck by the substitution, apparently over the whole field of industry, of an absolute ban on profits over 4 per cent, for the War-time (Company) Tax which, starting at 6 per cent on earnings over 4 per cent, rose to 78 per cent on the excess over 14 per cent. This permitted 4 per cent is free of company income tax of 3s. in the pound, and it is based on capital, which is a minimum of paid-up capital and reserves, and may be increased if assets have been written down below the level indicated by allowances under the Income Tax Acts. Although a number of points remain to be explained, particularly with regard to allowances for the degree of risk of the enterprise—as at present stated these appear to work in the wrong direction—it seems probable that the effect of the ban will be even more drastic than EPT at 100 per cent. And there is no question of a post-war refund. Evidently, Mr Curtin is not impressed by the incentive argument as applied to company managements. He may even not have heard of it. The need for strong action in Australia is patent, but it remains to be seen whether such sweeping measures are best calculated to secure 100 per cent effort from all classes.

Thomas Cook Control

The decision of the railway companies to apply for an Act giving them power to take over the business of Thomas Cook and Son marks the entry of railway transport in this country into yet another field. It also means that the control of this company, which passed to Wagons-Lits in 1927, returns to British hands. Wagons-Lits is incorporated in Belgium, and with the entry of Germany into that country, the shares of Thomas Cook vested in the Custodian for Enemy Property, from whom, it is proposed that the railways should acquire them. The acquisition is to be effected through the Hay's Wharf Cartage Company, an affiliate of the four main lines, through which they already control several local carrier businesses. It will readily be understood that the business of Thomas Cook can scarcely be self-supporting since it is, for the time being, limited to the sale of railway tickets for journeys within the British Isles, and to the arrangement of a very modest number of overseas trips. The Custodian for Enemy Property has no funds to finance it, nor has the only British concern with an interest, namely, the International Sleeping Car Share Trust, which holds a substantial, but not a controlling interest, in Wagons-Lits, and has no other earning assets. For the duration of the war, the acquisition will mean closer co-operation between the travel agency and the railways, but it is difficult to see how it can lead to any appreciable saving, since the local offices of the latter are already closed. After the war, there may be larger economies to be secured for the railways, provided they can come to a suitable arrangement for co-operation with the European network of agencies of the Wagons-Lits. The acquisition of control carries no guarantee of any such arrangement, and it is possible that the European interests will be disposed of after the war, since it is intended to sell the extra-European foreign interests forthwith. If that is the case, although the name will presumably be retained, the institution will be but a shadow of its former self. The immediate interest of British investors in the transaction ceased with the repayment of the 6 per cent first mortgage debenture stock of Thomas Cook on February 1st.

Imperial Tobacco Profits

The Imperial Tobacco accounts for the period ending October 31st last show profits, after taxation and fees, of £7,971,241 against £8,872,829. After meeting gross preference dividends, equity earnings are reduced from £8,020,620 to £7,119,032, representing 18.9 against 21.4 per cent tax free, or 37.8 against 37.2 per cent less tax. This rise in the rate of earnings, after allowance for the influence of the increased standard rate of income tax, indicates that gross revenue was higher last year and that Imperial Tobacco, in common with the majority of tobacco companies, is among the concerns which have expanded sales and, probably, reduced costs in 1940-41. The tax free dividend is reduced from 20 to 17½ per cent through halving the tax free bonus at 2½ per cent, but there is, nevertheless, a small rise in the total less tax payment, which amounts to 35 against 34.8 per cent. General reserve receives the customary £500,000, and, in view of the increased margin between the rate of less tax earnings and the actual distribution calculated on the same basis, it is

	Years ended October 31, 1939	1940	1941

* After fees and taxation. † Gross.

possible to add £45,499 against £8,010 to the carry forward, making £1,666,436. The balance sheet shows a fall in stocks from £31,781,496, including estimated amounts recoverable under war risks insurance, to £28,527,715. Debtors, at £22,335,202 against £18,569,969, have risen ahead of creditors, including taxation, which are some £2,000,000 higher at £30,362,592. Nearly £500,000 has been added to cash holdings at £3,986,288, and more than £1,500,000 to Government and other securities at £9,815,049. The increased liquidity is largely accounted for by an increase in deposits by subsidiary and associated companies from £935,124 to £1,684,744. The accounts suggest that results last year were as satisfactory as could be hoped under wartime conditions, but that the directors have in mind the necessity of conserving resources in times of relative prosperity. There will no doubt be a further cut in the tax free rate during the current year in view of the virtual certainty of heavier taxation, and it is possible that the rate less tax will also be moderately reduced. The tax free yield on the £1 ordinary stock at 119s. 4½d. amounts to £2 18s. 7d. per cent.

Bolsover's Good Year

Total income of Bolsover Collieries rose by some £96,000 in 1941 to £1,099,638. Despite a rise in tax provision from £527,750 to £691,000, which is responsible for a decline in the amount of equity earnings from £374,014 to £306,718, equivalent to a rate of 22.9 against 24.3 per cent, the directors have decided to maintain the total ordinary dividend at 15 per cent. General reserve receives £50,000, against £100,000 in the previous year transferred to reserve for capital redemption, and the transfer to development reserve is raised from £40,000 to £60,000. The carry forward is in consequence reduced by £3,875 to £136,121. The rise in gross income is due mainly to the increased demand of the internal market last year, which to some extent outran the capacity of the company to supply it. The expansion in debtors from £422,641 to £519,723 and in creditors, including tax, from £809,739 to £1,080,393 reflects the influence of higher turnover and higher prices. There is a moderate rise in the value of stocks, at £278,712 against £266,977, while cash holdings are up from £355,609 to £514,930, and the directors state that £425,000 had already been paid in respect of income tax due January 1, 1942. Total reserves, after the latest transfers from profits, are increased from £2,687,839 to £2,775,961, while on the assets side of the account investments from Government securities are up from £1,255,042 to £1,297,911. The directors announce their intention to pay off the whole of

the company's £400,000, 6 per cent, redeemable debentures during the current year. Future prospects are clouded by the possibility of a serious labour shortage, and every effort is being made to increase the use of machinery at the collieries, which are already highly mechanised. The £1 ordinary stock, at 47s. ex dividend, offers the sound yield of £6 7s. 8d. per cent.

Further Investment Trust Results

Later investment trust accounts reveal a general moderate reduction in disclosed total profits in 1941, and a somewhat sharper setback to equity earnings. Of the six leading trusts whose results are discussed below, only two, *Omnium Investment Company* and *Debuture and Capital Investment Trust*, show a rise in total income. Equity earnings are lower in every case, although for *Omnium Investment* the rate is maintained at approximately 3.5 per cent. The most considerable setback is suffered by *Metropolitan Trust*, where net earnings are some £10,500 lower at £35,345, and the rate is down from 11.9 to 10.8 per cent. This is the only trust which has reduced its dividend, following last year's moderate contraction in available earnings, and the cut amounts to only ½ per cent to 10½ per cent. In the case of *Debuture and Capital Investment Trust*, gross earnings were more than £2,500 higher at £135,407, but the reduction in equity earnings from 5.8 to 5.6 per cent leaves a margin of cover for the ordinary payment of only 0.1 per cent. Four trusts provide an estimate of the depreciation of market value of quoted securities against book value, and in each case a marked improvement has taken

place during the last financial period. The best showing is made by *Share and General Investment Trust* with an improvement from 17.0 to 7.5 per cent. The greatest disclosed depreciation, that shown by *United States and General Trust Corporation*, does not exceed 20 per cent. Mr H. A. Jamieson, the chairman of *British Investment Trust*, announces that the total of the reserve and carry forward at £1,667,000 more than covers current depreciation. It is most unfortunate that two trusts fail to supply an actual estimate of the discrepancy between market and book value. If made on a consistent basis, the trend, if not the absolute amount, would be significant and useful to stockholders. Most of the trusts in question suffered through the vesting of American securities last year, while those with Far Eastern investments must experience a further fall in income in 1942. The chairman of *Omnium Investment*, Mr G. T. Moody, points out that the South American holdings of that concern

should prove increasingly valuable, and, if these are important, they may account for the relatively better showing of this concern.

British Industrial Plastics' Accounts

The full accounts of British Industrial Plastics for the year to September 30th last shed rather more light on the position of the company than was disclosed by the preliminary statement discussed in *The Economist* of January 31st last. It is now clear that the various charges against profits, which were mainly responsible for the marked fall in equity earnings from £21,716 to £13,477, included war damage contribution of £5,080 against nil and small rises in the provisions for pensions and ARP to £2,231 and £4,010, respectively. Moreover, tax liability, at £71,200 against £56,500, included a retrospective allocation of £3,135. After providing all directors' remuneration, the earned rate amounts to only 6.3 against 8.8 per cent, providing a narrow margin for the 6 per cent dividend. The consolidated balance sheet shows a reduction in stocks from £124,141 to £105,222 and a jump in debtors from £98,937 to £147,037. Cash holdings are nearly doubled at £66,834. The liabilities side shows a rise in creditors from £152,901 to £210,430, including a provision for taxation of £97,650. This picture suggests that turnover increased last year, but that the company was hampered by shortage of raw materials. It is too often forgotten that, although it uses materials which were originally "substitutes," it is as possible that the plastics industry will suffer a shortage of its own raw materials as that any non-substitute industry will feel the same lack during the war. Since the British Industrial Plastics group produces consumption goods on a large scale, it is bound to feel the effects of the labour shortage and may be called upon to reduce output in the national interest. There is no evidence that costs have risen unduly last year, and it may be possible for the concern to go over substantially to war production. If this is not done, the industry must expect to be treated as inessential, despite the fact that its raw material demands compete less obviously with the war effort than those of many other industries. The 2s. ordinary shares, at 3s. 3d. ex dividend, yield £3 13s. 10d. per cent.

British Tin Investment

In view of the loss of Malaya to the Japanese, it must be supposed that the final 6 per cent dividend, making a total for the year of 10 against 13 per cent, which is announced by British Tin Investment for 1941 will be the last for some time to come. The full accounts show a rise in income from investments from £287,577 to £301,444. After an increase in tax liability from £6,058 to £32,474 and a moderate rise in administrative charges, equity earnings are down from £269,761 to £256,370, despite the fact that the directors waived the right to additional remuneration of £5,000. Grossed up at the current standard rate of income tax, the rate of earnings amounts to 14.4 against 12.8 per cent and the whole of the surplus is devoted to raising the carry-forward from £33,130 to £78,992. Unfortunately for the company and its shareholders, the outlook is now completely obscured by Japanese military successes. Investments are mainly in the pick of the Malayan producing companies and until these are again in British hands prospects of income and of capital maintenance are nil. The directors state that market value of quoted securities at the date of the balance sheet amounted to £1,482,033 against book value of £2,578,484, and there must have been a further substantial depreciation. The balance sheet shows no significant change. There is a moderate contraction in debtors and creditors of some £1,500 in each case and a rise in cash from £47,664 to £54,297. The shares of British Tin Investment and of the companies which it controls still retain a definite recovery value, an aspect which, even now, has not escaped the bargain hunter. The 10s. ordinary shares, at 6s. 3d. ex dividend, yield £16 per cent.

Industry and Trade

Wages and the Cost of Living Index

The upward trend in wage rates in 1941 was almost as marked and widespread as in the preceding year. The aggregate increase in weekly wage rates reported to the Ministry of Labour was £2,080,000, against £2,213,000 in 1940, and the number of individuals affected by them was 8,036,000, compared with 8,040,000. These returns, moreover, are by no means comprehensive; they exclude agricultural workers, Government employees, domestic servants, shop assistants, clerks and, indeed, most of the changes in wage rates affecting unorganised groups of workpeople. While the rise in full-time weekly wage rates was by no means uniform as between different industries, the average increase in all the industries for which information is available, including agriculture, has been estimated by the Ministry of Labour at 9 per cent for the past year and at 26-27 per cent since the beginning of the war. During the past year the rise in the official cost of living index was appreciably smaller than that in average weekly wage rates; it amounted to only 2 per cent. As a result, the advance in average wage rates has now virtually caught up with the 29 per cent rise in the official index of the cost of living since the outbreak of war. But the estimated increase in weekly wage rates does not take account of overtime, the extension of payment by results and other factors which have affected actual earnings; as the Ministry of Labour's recent inquiry showed, the average earnings of workers in a large number of industries rose by 42 per cent between October, 1938, and July, 1941, though, like the increase in wage rates, the rise in earnings has varied considerably from industry to industry. The continued upward movement in wages has probably contributed to the maintenance of satisfactory labour relations last year; the number of days lost through trade disputes rose slightly, from 940,000 in 1940 to 1,080,000 in 1941, but was again very small in relation to the total number of working days.

Dearer Petrol

Price increases for the principal petroleum products marketed in this country were announced by the Petroleum Board, the organisation of the distributing companies, on Tuesday. The latest advances, per gallon, are as follows: petrol and vaporising oil, 1d.; diesel oil for road vehicles, 1½d.; white spirit, 1½d.; gas oil, diesel oil, fuel oil and heavy fuel oil, 1½d. The only important products not yet affected are lubricating oils and kerosene for burning (paraffin oil). Representative wholesale prices, inclusive of tax, which rule over most of the country are given, together with comparative figures, in the following table:—

WHOLESALE PRICES PER GALLON (Including Tax)			
	At Beginning of War*	Before Latest Increase	Current Price
	s. d.	s. d.	s. d.
Petrol.....	1 3½	1 9	1 10
Diesel oil for road vehicles....	1 1½	1 6½	1 7½
Burning oil.....	6½	11½	11½
Vaporising oil.....	6½	1 0	1 1
Gas oil.....	5½	9½	11½
Diesel oil.....	5½	9½	11½
Fuel oil.....	4½	8½	10½

* Owing to changes in specifications, etc., the comparison with prices ruling at the beginning of the war is approximate only.

A variety of factors, including the rise in world market quotations, the depreciation of sterling, higher freight rates and insurance charges, and increased marketing expenses, have been responsible for the substantial advance in selling prices since the beginning of the war. The growing burden of "overheads" due to a shrinking turnover has doubtless contributed to the latest price increase. Pool petrol, which now retails at 2s. 1½d. a gallon in England and Wales, had—like diesel oil for road vehicles—been unchanged in price since September, 1940. Prices of most of the other products were raised in July, 1941.

Anthracite Fuel for Buses

Three years ago Mr John F. Heaton, chairman of Thomas Tilling, Ltd., initiated the development of a pro-

ducer-gas unit suitable for buses. After overcoming a number of technical difficulties concerning the construction of the plant, a trailer-type unit has been evolved, using anthracite as fuel, which has now been in use for some time in considerable numbers by the Eastern National Omnibus Company, Ltd. As an experiment, it was decided a year ago to convert the fleet of buses at one depot to producer-gas, and May 1st was the date chosen for the commencement of regular operations. As Mr Heaton was able to report last week in his statement to shareholders of Thomas Tilling, Ltd., the experiment has been successful, not only with reference to the technical operation of buses, but also on a comparison of costs. Regularity of services and time schedules have been maintained; a charge of 320 lb. of anthracite enables a distance of seventy miles to be covered without re-fuelling. With anthracite at 85s. per ton, the cost of running buses on producer-gas was slightly higher than on diesel oil, but somewhat lower than on petrol, before the latest advance in oil and petrol prices. The experiment is regarded by Thomas Tilling, Ltd., not merely as a war-time experiment to economise imported fuel; indeed, its general adoption during the war is probably impracticable, by reason of the labour and materials required for carrying out the conversion from oil to coal. But its post-war possibilities will depend largely on the trend of the relative prices of coal and liquid fuel, but also on the technical efficiency and cost of the plant.

World Oil Supplies

Of a world crude oil production of over 2,220 million barrels, the Axis Powers last year controlled less than 60 million barrels, or about 2½ per cent. The Allied countries and their associates, on the other hand, produced some 1,830 million barrels, or 82½ per cent of the world total, and, in addition, drew considerable quantities from Venezuela, whose output has lately been running at record levels. Venezuela and the other Latin-American producers accounted for virtually all the remaining 15 per cent of world supplies. Since accurate data are now hard to come by, the following estimates of *The Oil and Gas Journal* should be treated with some reserve. They are, however, sufficiently reliable to indicate the trend of production last year:—

CRUDE OIL PRODUCTION (Thousand Barrels)

(a) Including part of Sakhalin.

(b) Including Austria, Czecho-Slovakia and Poland.

(c) Including Taiwan and part of Sakhalin.

Output in the United States showed a further marked advance, a development which is likely to be repeated during 1942. The estimates for the U.S.S.R.—never very reliable—have been revised upward in the light of official information, but suggest that production was stationary last year. The declines in the Middle East (except Egypt) and in the Netherlands Indies are attributable to the loss of markets. Output in Trinidad and Canada, on the other hand, showed a continued advance. In British and Dutch Borneo the Allies have forfeited an annual production of around 20 million barrels, and the loss of the oilfields in the Palembang district of Sumatra has deprived them of a further 30 million barrels a year, as well as of two modern refineries with a combined throughput capacity of 95,000 barrels a day. The Burma oilfields are also threatened, but Allied supplies elsewhere are secure for the time being. Japan is likely to derive little immediate advantage from her oilfield conquests, and her own tiny output remains stationary. In Roumania, Germany's main source of supplies, all efforts to reverse the downward trend have failed. Hungary, however, is now more than self-sufficient in mineral oil. In comparing Axis with Allied supplies, it must not be forgotten that the Germans have built up a large coal-oil industry, whose capacity is now probably between 35 and 40 million barrels a year, that they have made extensive use of substitute motor fuels, especially producer-gas, and that the Japanese are trying hard to follow their lead. Nevertheless, the difference in available resources is very striking.

Economy in Tungsten

In view of the loss of some of the sources of supply of tungsten in the Far East, the Ministry of Supply has decided to restrict the use of tungsten alloys to purposes for which they are absolutely essential. Tungsten alloys are used extensively in the manufacture of high-speed cutting tools, for example. In continuing to permit their use for all conventional purposes, the Ministry would have incurred the risk of using up supplies, and, therefore, of being unable to provide for all vital needs in the future. Since February 17th, high-speed steel, whatever its tungsten content, can only be acquired by licence; hitherto a licence was required only when the tungsten content was 14 per cent or more. Existing licences for high-speed steel containing 14 per cent or more of tungsten will remain in force until the end of April, but from May 1st they will be valid only for material containing up to 6½ per cent of tungsten. In an explanatory memorandum prepared by the Iron and Steel Control, the Controller of Jigs, Tools and Gauges and manufacturers of high-speed steel, the attention of consumers is drawn to the need for using alloys in which molybdenum is substituted for part of the tungsten. For many purposes these substitute high-speed steels are said to be satisfactory, though they have a greater tendency to decarbonise in forging and hardening than the standard tungsten high-speed steels. They have been made in substantial quantities in the United States and also by a number of Sheffield firms; and the experience already gained in their manufacture is set out in the memorandum. Since molybdenum is in ample supply—the United States produces more than four-fifths of the world's total output—and as tungsten stocks are substantial, the loss of a number of mines in the Far East is not likely to cause difficulties to the Allies.

Tin Supplies

The loss of Banka, Billiton and Singkep, the three Dutch tin ore producing islands off the north-east coast of Sumatra now threatened by Japan, would deprive the United Nations of their second largest source of supply after Malaya, as well as of a smelting plant (in Banka) capable of an annual output of 15,000 tons of metal. In 1940 the metal content of the tin ore produced by the three islands was 44,600 tons, or nearly one-fifth of the world's total output. Consequently, the Governments of Great Britain and the United States have taken steps to expand the output of tin in other countries, to make use of larger quantities of scrap and waste, and to economise consumption. Under the first heading, the Ministry of Supply has caused an investigation to be made into the possibilities of expanding production in Cornwall, and output in Nigeria

and the Belgian Congo is to be speeded up. The United States is planning to secure an increased output in Bolivia with the assistance of mining experts and additional machinery. Under the second heading, the Ministry of Supply has issued an Order which, on February 16th, brought alloy scrap containing not less than 12 per cent of tin, as well as clippings and tinplate waste, within the scope of the licensing system for purchases and sales; tin alloy scrap and tinplate clippings are two of the chief sources of reclaimed metal. Under the third heading, the War Production Board in the United States has prohibited, from March 1st, the use of tinplate for a number of purposes, such as the canning of pork and beans, dog food, coffee, tobacco and oil, and it has decided to introduce priority allocations for the production of tinplate. It has been estimated that, compared with 1941, the consumption of tinplate will be reduced by at least one-third and possibly by as much as two-fifths; since some 46,000 tons of tin were used in the manufacture of tinplate last year, some 15,000 to 18,000 tons will thus be economised.

Tin Prices

The Ministry of Supply's Non-Ferrous Metal Control has fixed its selling prices for tin. As was to be expected, the basis is £275 per ton, delivered buyers' premises; this is the basis on which the Control has actually sold tin to consumers since the closing of the London tin market on December 8th. There are certain additions to the basic price for special grades, sizes and forms of tin, as well as for small lots under one ton. The comparatively high official selling price—the London market quotation had fluctuated around £257 per ton in the last month preceding its closing—has given rise to a controversy regarding the price at which British holders of tin should be compensated for the metal requisitioned by the Government last December. The Ministry of Supply has offered a basis of £259 10s. per ton, but the London Metal Exchange Committee is understood to have demanded £265 per ton. The difference is to be settled by arbitration under Section 7 of the Compensation (Defence) Act of 1939, but the Arbitration Tribunal, whose decision is final, has not yet announced its findings.

Railings

In a memorandum sent to the Chancellor of the Exchequer, the National Federation of Property Owners is reported to have suggested that compensation for requisitioned railings and for damage caused by their removal would be more properly assessed under the War Damage Act than under the Compensation (Defence) Act. If effect were given to this claim, the basis of the railing requisitioning campaign, on which such high hopes have been placed, would be completely altered, and its success endangered. As the matter stands, the Ministry of Works and Buildings hopes to secure for the Iron and Steel Control, for no more than the cost of dismantling, most of the railings and cognate objects classed as redundant. At the worst, it expects to pay no more than a nominal value for the material as scrap. But standing railings are not scrap, and if their value is to be calculated at the full replacement figure, plus whatever damage may be caused to the remaining property upon removal, the cost might work out at nearer £25 than 25s. per ton. There is in addition the heavy cost of surveying and dismantling, not to mention that of arbitration, and of giving an itemised chit to each dispossessed owner. Meanwhile, the campaign is still meeting with many obstacles. In Edinburgh, for example, the Corporation is understood to have decided to take no action on a suggestion from the Ministry of Works and Buildings to carry on with dismantling railings which have been surveyed and scheduled in that city by the City Architect's Department. Edinburgh is one of the pioneers in railing removal, but the Corporation has, with some justification, drawn a distinction between railings conveyed as outright gifts and railings taken over by requisition. If the Ministry of Works and Buildings expects local authorities, not only to survey, but also to take down, railings, they should be provided with full powers to do so, and with safeguards against possible claims for damages. Meanwhile, the need for a substantial and sustained increase in the collection of all forms of iron and steel scrap is urgent in view of the reduction in supplies from the United States.

COMPANY MEETINGS

ENGLISH ELECTRIC COMPANY,
LIMITED

PROFIT MAINTAINED

The twenty-third annual general meeting of the English Electric Company, Limited, was held, on 18th instant, in London.

Mr G. H. Nelson, M.I.E.E. (chairman and managing director), in the course of his speech, said: There has been no change in the share capital and our debenture debt is reduced by the application of the sinking fund in accordance with the trust deed. Our creditors are up by £608,000, of which a very large part is accounted for by additions to our tax reserve. The substantial increase in our bank overdraft is entirely due to the financing of work in progress and will therefore be self-liquidating as and when the volume of work falls. Our liquid assets are £2,965,066, or £46,083 more than in 1940. The general reserve has been increased by a further £100,000 and now stands at £700,000.

After applying depreciation of £100,000 there is a slight increase in our fixed assets, both in buildings and plant. This has been financed from the unspent balances on depreciation from previous years. The profit carried to the balance-sheet is practically the same as 1940. We are proposing to you that we shall again pay a dividend of 10 per cent. on our ordinary stock, leaving £51,018 to be carried forward.

Your directors believe that it would be in the national interest for Parliament to translate the Chancellor's explicit statement, at an early date, into equally explicit legislation and so to place it beyond any doubt that companies which have devoted themselves without stint to the war effort will not, by the necessary severity of war taxation, be unreasonably hampered in their post-war effort to provide stability of employment for their own staff and workpeople.

I can assure you that our works are fully occupied and that we have received heartening expressions of appreciation of what we are doing and the reliability of our promises.

The report and accounts were adopted, and in addition to the 6½ per cent. preference dividend a dividend of 10 per cent. was declared on the ordinary stock.

BOOKER BROTHERS, McCONNELL
AND COMPANY, LIMITED

IMPROVED TRADING RESULTS

The adjourned annual general meeting of Booker Brothers, McConnell and Company, Limited, was held, on 17th instant, at 37/41 Gracechurch Street, London.

Sir Alfred Sherlock, the chairman and managing director, who presided, said: The trading results for the year ended June 30, 1941, are, as you will see, about £17,000 better than for the 1940, but this is offset by our having had to provide £17,500 previous year, but this is offset by the net profit for the year approximately more for taxation, leaving the net profit for the year approximately the same. Taking everything into account these results must be regarded as extraordinarily good, for which I think we should feel very thankful.

The only item in the balance sheet requiring comment is "Sundry creditors and credit balances," where you will see that the amount owing to our main sugar-producing subsidiary—Bookers Demerara Sugar Estates, Limited—is nearly half what it was in the previous year, while debts to other subsidiaries have risen a great deal. Both these differences are due merely to the fluctuating phases of our position as bankers for subsidiaries, and you will see, too, that the total amount under this heading shows a reduction of some £60,000.

There is much that I could say about general sugar producing and trading conditions in the Colony, but in existing circumstances I think it wise to make no comments. You will realise, of course, that there are many difficulties nowadays with which we have to contend.

Once more I must stress the magnificent work done by our staff in the West Indies, on our steamers, and here at home—all have been working under great difficulties. Finally, I should like, as I did last year, again to pay tribute to the Sugar Division of the Ministry of Food and to the Liner Division of the Ministry of War Transport, both of whom are always most helpful.

The report and accounts were unanimously adopted and the proceedings terminated with a cordial vote of thanks to the chairman, directors and staff.

RECORDS and STATISTICS

STOCK EXCHANGES
London

Note: all dealings are for cash

WHILE the inevitable fall of Singapore had apparently been largely discounted by the market, the actual news, combined with new Japanese thrusts against Sumatra, and disappointments nearer home, depressed sentiment considerably. Apart from the gilt-edged and home rail markets, declines were general and in some cases considerable, throughout the house, although they reflected marking down rather than selling. The gilt-edged market was generally steady throughout, 2½ per cent Consols improving at the reopening, although Local Loans lost the same amount among other smaller losses. Australian bonds were lifeless at the minimum prices, while in the foreign bond market Chinese bonds were weak. After point losses on Monday, further declines were witnessed the next day, the 5 per cent loan of 1913 falling 2 points. Among South American issues, scattered losses were registered for Chilean stocks, while Mexican loans eased slightly on Monday. The approach of the dividend announcements gave rise to some activity in the home rail market, where despite intermittent profit-taking most junior issues improved. Thus, LMS ordinary gained ½, GW ordinary and Southern deferred each ½ at the opening, while most issues advanced the next day, although the Berwick preferred and deferred issues were both ½ down, but preferred stocks advanced slightly. On the announcement of the increased LMS dividend, LMS ordinary and Southern deferred both advanced ½, only to lose it again in later dealings. The foreign rail market

reflected the general sentiment and point losses were widespread among Argentine issues. In midweek markets were less consistently weak but there was further substantial marking down of Chinese bonds.

Almost complete absence of support and marking down rather than any selling were responsible for the widespread decline throughout all sections of the industrial market, although the chief sufferers were stocks with Far Eastern interests. Brewery shares were subject to some provincial selling on Tuesday, after remaining fairly steady the previous day. Bass fell 3s. 6d. and Benskins 3s., with smaller losses for practically all other issues. The motor and aircraft group failed to maintain its earlier steadiness, and in the early part of the week moved to lower levels. Rolls-Royce were weak, losing ½ on two successive days. Declines in the heavy industrial section were generally restricted to a few pence. Textile issues showed some resistance to the trend on Monday, but the following day most issues were lower. Shipping shares were offered, but losses were small. Tobacco issues were dull throughout, BAT losing ½ and Imps ½ at the opening, with losses of ½ for other issues, while the next days Imps lost a further ½. Cable and Wireless ordinary shares were prominent in the miscellaneous section with a fall of ¾ points on Monday and 1½ the next day. Dunlop Rubber fell 1s. 6d. on Tuesday when Harrison and Crosfield deferred lost ¾ and James Finlay 1s. 6d. In later dealings breweries were conspicuously weak, while Cable and Wireless shed a further 1½ points and Jas. Finlay lost 2s. 6d.

Widespread and persistent declines were registered in the kaffir market. Dividend-

paying issues were out of favour, Geduld, Crown Mines and East Geduld all losing ½ on Monday, while losses of ¾ to 1½ were general throughout the market. War news and the proposed restrictions of the Australian Government depressed Australian mining issues. The tin market weakened on the latest war news, while the rubber market witnessed continued selling which, in the absence of buyers, led to further falls, United Sui Betong and United Patani losing 2s. 6d. on Tuesday among many other losses. Similarly, scattered selling in the tea market reduced prices, Anglo-Ceylon losing 1s. 6d. on Monday, while losses of 1s. were suffered by Single Empire of India, and Doora. The oil market was particularly depressed by the war news, and losses of ½ for Anglo-Iranian, ½ for Burmah and Shell respectively, bore witness to the dull conditions at the opening of the week. The next day the Japanese threat to Burma occasioned a fall of ¾ for Burmah, while considerable losses were general throughout the market. Midweek brought further heavy falls in the tea and rubber markets, but in the kaffir market some recovery occurred in non-producers.

New York

WITH no selling pressure Wall Street displayed a firm tendency at the end of the previous week. Events in the Far East over the week-end occasioned some precautionary marking down at the opening of the current week, but it was not until the next day that any selling developed, when, in very slow trading, losses of a point and more were widespread. Trading later was restricted but with support for a few scattered stocks.

COMMODITY AND INDUSTRY NEWS

Tin Prices.—Prices and charges have now been established by the Non-Ferrous Metal Control of the Ministry of Supply for the various grades and sizes of tin. The prices apply to all metal sold by the Control since December 9th, the date of the Control of Tin (No. 3) Order. The basis price is fixed at £275 per ton, and has necessitated the revision of *The Economist* Sensitive Price Index from December 9th. The result is to raise the raw materials index by 1.7 points and the complete index by 0.7 points.

Oils, Fats and Soap.—The rationing of soap as a precautionary measure, it is expected, will result in a saving in consumption of 20 per cent. To a corresponding extent this will relieve the call on oils and fats used by the soap industry, normally about 300,000 tons annually. There is no shortage of soap or raw materials and stocks at present are good. Soap manufacturers will require a licence to carry on their business from February 23rd. Substantial supplies of linseed oil and other drying oils are available for the paint and allied industries, and the edible trades are meeting requirements.

Export Control.—From February 24th export control will be extended to cover gas meters; certain articles made wholly or mainly of non-precious metals, such as vases, candlesticks, cigarette cases, watch cases and zipp fasteners; lead accumulator plates and grids, preparations of derris and its extracts, and a number of additional paints and chemicals. Application for licences to export non-precious metal articles will not normally be entertained. The existing licensing requirements with respect to grain products, cotton knitted goods and various types of electrical goods have been modified. From February 11th licences were required to export chlorinated rubber, including expanded chlorinated rubber and rubber hydrochloride to all destinations.

Supplementary Coupons.—Supplementary clothing coupons are to be allowed to certain types of iron and steel workers in sections of the industry not already covered by a supplementary issue. The new award covers certain workers in non-ferrous metal industries, coke and by-products and gas workers, salt, asphalt, textile and coal distributive workers and dockers. These coupons will be issued to employers for distribution to their workers.

Cotton.—Trade activity in the market has continued on a restricted scale. Some have been arranged but ordinary commercial business remains more limited than promised at an early date in regard to the number of cotton and rayon utility cloths, and representations are being made to the Board of Trade on the matter. It is

expected that particulars of the construction of the cloths will be available very shortly. The Cotton Board has held a Colour, Design and Style Exhibition in Manchester, where about 150 designs have been on view. The operative spinners and cardroom workers have made an application to the Master Spinners' Federation for an increase in wages of 3s. 4d. in the £ on current rates. It is understood that this demand is in addition to any concessions available under the agreement whereby wage rates are linked to the cost of living index figure of the Ministry of Labour. Consumption of raw cotton in the United States continues at a very high level, the total for January being 946,000 bales, compared with 887,000 bales in December and 843,000 bales in January last year. Consumption for the first half of the season has been 5,387,000 bales against 4,467,000 bales in the corresponding period of last season.

Use of Rice.—The purchase or sale of ground rice by retail and the use of any rice or rice product in the manufacture of bread or of any meat product is prohibited from May 1st, under the Rice (Control) Order made by the Minister of Food. From March 1st the purchase or sale of rice or rice products is prohibited for the manufacture of any meat product. The manufacture of flaked rice and the sale or purchase of broken rice except to or from the Minister was prohibited from February 16th. The provisions of the 1941 Rice (Control) Order, prohibiting the use of rice or rice products except for human food, are repeated. The purpose of the Order is to make the best use of available supplies of rice.

Fertiliser Packing.—The Minister of Supply, in consultation with the Minister of Agriculture, has made the Control of Fertilisers (No. 18) Order, which allows the packing of imported potassium salts (or fertilisers containing imported potassium salts) in packages of not less than 14 lbs. weight. The minimum packing was previously one cwt., but it is now possible to release some potash to allotment holders and gardeners, and the object of the new Order is to permit manufacturers to begin packing for this retail trade in the forthcoming season.

Standard Wedding Rings.—A general licence has been issued by the Board of Trade permitting the supply by manufacturers of plain wedding rings made of 9-carat gold, each weighing not more than 2 dwt. The prohibition contained in the Limitation of Supplies (Miscellaneous) (No. 14) Order is waived by this licence, but sales of the rings will be subject to quota. Each of the rings must be impressed with a special mark, consisting of two intersecting circles enclosed within a rectangle.

Transvaal Gold Output.—Witwatersrand output in January, 1942, 1,186,048 fine ozs. (1,181,502), outside districts 30,116 fine oz

have served to exclude him from office altogether. The real reason for his departure is unknown to the public, but it may be taken for granted that there was a place for him in the Cabinet if he had felt able to take it. No attempt has ever been made in these columns to minimise Lord Beaverbrook's defects as a planner and organiser. But in one thing he had magnificently succeeded—that is, in securing the confidence both of Premier Stalin and of President Roosevelt as head of a "Foreign Office of Supply" (the phrase is his own). There was a suggestion in the first announcement that he would continue with at least the American side of this work, though without Ministerial rank, but even this suggestion now seems to have lapsed. This is no time for any man of competence to retire to his tent.

Lord Beaverbrook's place as Minister of Production is not to be filled. Mr Lyttelton is to have production as his "sphere of superintendence," but the newborn Ministry is to die before it is out of its cradle. This is retrogressive, unless, as may indeed be intended, the Ministry is to reappear as the Minister of State's staff. It cannot be denied that to knock down so offhandedly what had only just been set up gives a painfully indifferent and slapdash impression. The House of Commons will be justified in securing the most definite assurances that its victory of a fortnight ago is not now to be thrown away.

The natural comparison of these changes is with the change of government in May, 1940, which brought Mr Churchill to the helm. In many ways, the emergency is graver now than it was then. It is true that there is not now so overwhelming a danger of an immediate and disastrous end to the war. Freedom has more than one citadel to-day, and even this one is far better defended. But the strategic situation is serious enough, in all conscience, and so far as this country is concerned there are dangers and difficulties which did not then exist. In May and June, 1940, the nation for the first time came fully awake; its unity and confidence were at their peak; the English spirit enjoyed its finest hour; and the changes at the top of the Government needed to be not much more than symbolic. To-day, something more is wanted. It is not enough to tell the British people to awake and be of good courage. Much more than sloth has to be removed. There have to be changes—some of them painful—in the comfortable ways of doing things, in the accustomed ways of choosing men. Now the changes are needed not only—perhaps not mainly—in the supreme direction, but at every grade of the structure of the state. In Commander King-Hall's colourful language there should be a "night of the long knives" in many parts of the administrative machine.

There is another most significant difference between May, 1940, and February, 1942. The earlier change was a union of the political parties, this change is the end of the political parties. The Cabinet of May, 1940, consisted entirely of party leaders. Apart from Mr Churchill, it was made up of Mr Chamberlain and Lord Halifax, Mr Attlee and Mr Greenwood. In this Cabinet, apart from Mr Attlee (who, without personal offence, can be called its least considerable member), there is not a single man who was a party leader three years ago. Mr Churchill was a rebel of ten years' standing. Sir Stafford Cripps had been expelled from his party, Mr Eden had resigned from the Government, Mr Bevin had never sat in the House of Commons, Sir John Anderson was barely in politics, Mr Lyttelton not at all. There could have been no clearer proof of the bankruptcy of all the existing parties. The only service they can still render to the nation is to dissolve themselves as quickly and as completely as possible.

Possibly the most encouraging feature of the events of the last two weeks has been the very healthy refusal of the public and the House of Commons to take the new Government on trust. It must prove itself. If it turns out to be a mere re-shuffle of offices, the old criticisms will reappear very quickly. But the new Cabinet has no enemies, and if it proves that it can make a new start, that it can change the whole spirit and tempo of government, it will receive overwhelming support. Almost any

audacity will be pardoned, only indecision will be unforgivable. The task is more difficult than merely to summon up the ancient virtues of a brave people; it is to cut through the institutional overgrowth of many easy decades before those ancient virtues can be fully released. There are long arrears of regeneration to be made up.

The first necessity, since it governs all the others, is a reform of personnel and methods. It has been a matter of universal agreement for nearly two years that the plans drawn up before the war for the mobilisation of the nation were utterly inadequate, not only in scale but also in method—but, by and large, the men who drew up those plans and who started to apply them in September, 1939, are still in their offices, only the political chiefs have gone. There is a crying need for new men everywhere—their very newness would be an advantage, since the over-riding failure of the war has been the inability to see that the problems were new. In the spring of 1940, Lord Ironside thought it was an advantage for the British Army that it has so many generals who had had experience of command in the last war. Many of the generals, and almost all of their civilian counterparts, are still there. What is wanted now is men of imagination and elasticity and energy, not men of knowledge or of eminence or of experience, least of all men who "represent" anything but their own competence. In a word, what is wanted now is young men. And with individual competence should go the power of decision. Let there be as many consultations as are necessary; let men with responsibility for decision meet to settle matters that concern several departments. But let the committee habit disappear.

As a special case of the need for changes in personnel and methods, the Government might begin with the Army. Perhaps the recognition of this necessity is the explanation of the appointment of Sir James Grigg—another of the breaches of tradition that have been perpetrated this week. Of the qualities of the higher command, only those who know the facts are really in a position to judge; the outsider, judging by results, cannot help but be doubtful. But every citizen is in a good position to judge the junior officers and the other ranks. Much has been made of the "democracy" of the new British Army. But is it really more than a façade? A list of old boys of a certain public school who are serving in HM Forces has just come to hand; in page after page of names there is only the merest sprinkling who are anything but officers or cadets. Can it really be said, in the face of facts like these, that there is an unbiased selection? To put the matter quite bluntly, the troops do not believe their officers are selected for their soldierly competence, but for their possession of qualities beyond the ordinary man's reach. How can there be, in such circumstances, the fullest confidence between officers and men? Again, one feature that the most successful armies of this war—the German and the Russian—have in common is that they go to great pains to develop the intelligence of the ordinary private soldier, not merely his military intelligence but his intelligence as a citizen. They convince him of his importance in the nation, they give him a sense of belonging to a community. This is what is meant by teaching the Army politics; but the British Army cannot be taught politics because nobody knows what its politics are.

Thus from whatever starting point the consideration of what must be done to win the war sets out, it arrives at the conclusion that there must be the conscious construction of a living democratic faith. A whole series of articles in *The Economist* has attempted to show the raw material out of which such a faith can be built. It is not a question of imposing doctrines on those who do not accept them, but of codifying the real agreement that already exists. It is not a question of designing something that is to be kept in cotton wool until the victory has been won, but of finding the faith that will move mountains in wartime. The Cabinet should not regard this as a distraction from their main task; it is part of their main task and after two and a half years of spiritual vacuum there are few things more urgent than to fill it.

Trial of the Republic

AFTER a delay of over a year, the Riom trials have at last opened. Two French Prime Ministers, MM. Daladier and Blum, two Ministers, M. Cot (who is in America) and M. La Chambre, General Gamelin and M. Jacomet, Secretary-General to the Ministry of National Defence, stand indicted for a variety of crimes against the nation. M. Reynaud and M. Mandel await their turn. There is an air of unreality about the whole proceedings, almost an Alice-in-Wonderland effect—if the issues were not so tragic. One could expect the 100,000 pages of evidence to have been collected on a slate with a squeaky lead pencil and one of the chief witnesses for the Crown to turn out to be a lizard—M. Bonnet, perhaps. There is the same air of bewilderment, the same difficulty in distinguishing accusers from accused, the same tendency to shout "Off with his head" on totally inadequate evidence.

The defendants themselves have been the first to point out the unconventionality, not to say flat illegality, of the trial. In one sense, they have already been condemned without a hearing. Last October, Pétain's Council of Political Justice passed judgment of "political confinement" on a number of the accused. Apparently the distinction—dear to France's new masters—between "justice" and "political justice" is to be grafted on to the French system. Yet the crimes are political, rather than moral. The indictment speaks of neglect of France's armaments, failure to co-ordinate foreign policy and military strength, faulty staff work and strategy. What is to be gained by trying these political offences again, when the Committee of "Political Justice" has already spoken? What is the point of the trials at all?

With Vichy, it is always a useful point of departure to find out what interest Berlin has in any given point of policy; here, the connection is obvious. As M. Daladier put it: "Germany, who is really responsible for this war, today by this trial wants to obtain proof of her innocence." But it is not only the Nazis who are in search of scapegoats. The way in which the Riom trial is developing, with the hushing up of all military scandal, the acceptance of General Gamelin's silence and the insistence on the faulty political conduct of the war, all point to one thing: the building up of a French "stab-in-the-back" myth. The French army—like the German army in 1918—was not beaten. It was betrayed, so the myth will run, by those who stirred up—the accusation is levelled at Blum—"social disunity and class war." The army, whose honour is in the ancient Marshal's keeping, is to emerge intact. It is the political system that is to be the real scapegoat of Riom. Both Daladier and Blum have protested against

this suppression of the military evidence. They deny that all was ill in politics and all well at the front. As Daladier pertinently remarked, "Is it [the trial] to ensure impunity for the generals who capitulated in the midst of the fight? Is it that in reality today's trial is directed against the Republic?"

This is exactly what Riom is—the trial of the Republic, the grand frame-up to throw on to the pre-war political and social system of France the whole blame for Germany's invasion and Pétain's collapse. Nearly two years have passed since the melancholy capitulation. A spate of books have been written on the state of France. Witnesses have escaped from occupied and unoccupied territory. The world outside is in a better position to judge "the truth about the tragedy of France." Perhaps it would have been wiser if Pétain had held the trials immediately when, in the confusion and terror and recrimination, his thesis of an upright honourable enemy, an undefeated army and a swarm of cowardly, incompetent politicians might have commanded assent. Today France and the world know better.

The tragedy of France was not her political and social system so much as the incompetence of that system to stand up to totalitarian war against an enemy twice as numerous. The French Republic had errors and futilities enough, yet can it seriously be maintained that the German and Italian systems of government, designed for war and maintained for the sake of war, were to be preferred? The downfall of France was not primarily due to shaky Cabinets and an irresponsible parliament—they played their part, but millions of Frenchmen lived happy, unpolitical lives whatever Government came or went—it was due to an implacable enemy bent on world conquest and to a military and economic system incapable of meeting this enemy's threat. The indictment against the Republic is that it failed to rise to the new challenge—economically, militarily and politically—not that it was responsible for the challenge itself.

Total war is waged successfully by a certain type of community—the totalitarian community. Germany and Russia are the supreme examples of this, Japan bids fair to be another. So far total war has not been waged successfully by free communities. Looking back on September, 1939, the people of both France and Britain must realise how completely unfitted they were for the ordeal. Britain had a Channel and the chance of a second wind. France relied on the Maginot Line and had no second chance. She cannot now contribute, save by way of warning, to the solution of the supreme problem; but the trial of the Republic is in one sense the trial of every free state.

War-time conditions have proved the advantages of appointing the "Royal Exchange" as Executor and Trustee under a Will. This ensures a permanent and expert administration and can be associated with a private co-trustee.

It is, of course, vital to distinguish between the weaknesses of French democracy and the weaknesses of democracy as such. The French Republic was not a perfect example of a democratic community. For example, it had a multitude of shortcomings which are not shared by Britain—a peace party on the Right waiting for the first opportunity to sell out, a mass of non-co-operative Communist opinion on the Left, and no possibility of bridging the great gaps between the various economic and social sections of society. These are faults which are not inherent in democracy as such; and there were others. The two accused Prime Ministers were right to insist that military bungling played a great part in the final collapse. There is no reason on earth why a free community should not devote some of its best research and most creative intelligence to the problems of defence and still remain a free community. On the contrary, if France had kept abreast of modern methods of warfare, she might well have produced forms of military service far less onerous and far more individually satisfying than three years' conscription and the *levée en masse*. It is a paradox that the German system, both in the relationship between officer and man and the devolution of responsibility, has produced a far more democratic army. If such changes towards greater freedom and spontaneity could be introduced within a framework of rigid dictatorship, they could certainly have been introduced into a society where equality and individual responsibility are—or ought to be—the mainsprings of action.

Another fatal weakness of the French Republic—its loss of unity and confidence—is again obviously not inherent in a democratic society. It is true that the French people had lost all sense of the things for which they as individuals and France as a nation really stood. There was little trace of a personal vocation or a national mission in the way in which France went to war. *Il faut en finir*, which began as a gesture of dogged defence, ended as a catchword of collapse. But it does not follow that no free community can "project" itself, can have a vision of its function and mission. It does not follow that there is no answer to the fanaticism of the all-embracing political

state with its creed and its discipline imposed from above. France's answer should surely have been to realise that she was fighting for the opposite principle, a community unified by agreement, a war effort sustained by voluntary sacrifice and dedication, a way of life in which politics only played its part among other activities, an economic framework within which co-operation, not regimentation, imposed the social purpose of the community. Instead of this, the onslaught of war on France brought with it some of the worst elements of the totalitarian enemy—censorship, arbitrary arrest, the concentration camp. Small wonder that, with the repression and without the fanaticism of the dictatorships, the French community collapsed.

Yet there is a fundamental sense in which a democracy can never be fully prepared for the ordeal of total war just because it is a democracy. Democracy is an order of society based on co-operation and consent and aimed towards the wellbeing—moral and material—of its citizens. Totalitarianism is a system of government based on regimentation and violence and directed towards the acquisition and exercise of power. It follows inevitably that the second system is always better prepared for war, since it demands as a regular part of the life of the community sacrifices and violations of human dignity and happiness which no free community will accept until war is actually inevitable. And there is no solution to this dilemma save, in the unhappy, discredited yet nevertheless essential slogan of the last war, "to make the world safe for democracy."

Free communities cannot cope with totalitarian dictatorship on an equal footing once the totalitarian dictator has seized power. Then all the immediate chances of war are on his side. There is one means only of meeting the threat; that is by ruthlessly maintaining a system in which the totalitarian dictator cannot arise. France has, it is true, capitulated in the immediate fight to check the wicked system she allowed to grow up on her frontiers. But a future, liberated France will rise to play her part in the even greater task of maintaining a world from which the totalitarian menace has been effectively purged.

Ten Years of Protection

JUST ten years ago, in the last week of February, 1932, the Import Duties Act received the royal assent. On March 1, 1932, Great Britain became a protectionist country. It is true that there had been protective duties before the Act of 1932: McKenna duties, key industry duties, abnormal importations duties, horticultural duties. It is true also that many new varieties of protection have since followed: Ottawa duties, agricultural quotas, subsidies, exchange restrictions. But the Import Duties Act was the dividing line. Before March 1, 1932, Great Britain was a Free Trade country, with a few exceptions. Since that date, Great Britain has been deliberately and boastfully protectionist. With the outbreak of the war, import duties, as such, ceased to have any but the slightest influence on the course of trade, and some of them have been reduced or abolished. But the tenth anniversary is nevertheless a good opportunity for an attempt to assess the effects of British protectionism.

It may be said at once that the direct effects of the Act have been much less than was expected at the time—less good than was boasted by its authors and less bad than was apprehended by its opponents. In the popular mind, it is true, this judgment would hardly be accepted. *Post hoc ergo propter hoc* is good reasoning for the man in the street, and he looks no further than the undeniable fact that Britain was chronically depressed in the last decade of Free Trade and that a recovery, which in its later stages was very rapid, began almost as soon as the Act was on the statute book. But there is really very little evidence for such a hasty conclusion. The Import Duties Advisory Committee itself investigated the change in employment in protected and unpro-

ected industries when the Act was two years old. In industries affected by that Act, the total number of persons employed in 1934 was 50,000, or 1.4 per cent, lower than in 1930; in industries not covered by the Act, employment was 392,000, or 6.2 per cent, higher.* It is possible that the feelings of confidence engendered in protected industrialists by the Act led to an increased volume of capital investment; but it is very doubtful whether this was of substantial quantitative importance. As is notorious, the great increase in investment in the recovery years was in housing, which could not have been affected by protective duties.

Indeed, it can be argued with considerable force that British recovery was attained in spite of protection rather than because of it. The first reason for so arguing is that the export trades remained, throughout these years, the great drag on recovery, and not even the most ardent protectionist would claim that import duties have a favourable effect on exports. Secondly, it can be very clearly demonstrated that the great increase in the demand for houses, for motor-cars and for all sorts of household equipment originated in the fact that the British people enjoyed all the benefits of cheap food and cheap raw materials. As was pointed out in *The Economist* at the time, the estimated expenditure of the public on food, clothes, liquor and tobacco fell by some £320 millions a year between 1924-27 and 1932, while the total paid out

* The figures can be found in full, together with much other information, in "Britain Under Protection," by Frederic Benham, published by the Macmillan Co. of New York for the Carnegie Endowment, (271 pages, 10s. 6d.) Dr. Benham's book is rather disappointingly superficial, but it brings together most of the relevant data.

in wages and salaries fell only by some £65 millions. In other words, the British public, after paying for its food and clothes, had about £250 millions a year more to spend on other things. It is fairly widely agreed that this, more than any other one factor, was the mainspring of recovery. The Import Duties Act itself did very little to interfere with cheap food and materials. But the whole protectionist movement was clearly intended as a brake on the fall in prices—and on the rise in the real standard of living.

On the other hand, it cannot fairly be claimed that import duties were a serious drag on recovery. The British tariff has remained a very moderate one, as tariffs go in the modern world. As Dr Benham reports

They [the Import Duties Advisory Committee] have tended to favour low rates of duty upon foodstuffs which are widely consumed by the working classes. They have tended to favour high duties of 30 or 33½ per cent upon luxuries and upon the products of what they regarded as key industries. On many manufactures they have not been averse from imposing an additional duty of 10 per cent, making the total duty 20 per cent. . . . They seem never to have recommended a rate of more than 33½ per cent *ad valorem* on any article not subject previously to key industry or McKenna duties, but they have recommended a number of specific duties on low-priced imports which are equivalent to a higher rate than this.

Most imports of raw materials are still free, and in 1938, when the total value of imports into the United Kingdom was £920 millions, the revenue derived from duties that can be classified as protective was only some £50 millions.

The Psychological Impact

The traceable direct effects of the Import Duties Act have thus been small. But the indirect consequences have been more important. The Act played a large part, by its psychological impact rather than by its actual effects, in the general strategy of world trade. As a disrupter of international trade it cannot compare either with the American Hawley-Smoot tariff of 1930 or with the depreciation of sterling in the autumn of 1931. But the work of reconstruction was beginning in 1932; the Lausanne Conference, which buried Reparations (and, by extension, war debts) was held in the summer, followed by the World Economic Conference in the next year. There was a distinct possibility, with a new and more liberal regime in America, that the slow recovery from the Great Depression might be accompanied by an equally gradual lifting of world trade barriers. The Import Duties Act was the first of a string of British acts which destroyed that possibility. It was not that Britain was at last turning to protection—few other countries could object to that—it was the deliberate pains that the British Government took to make it clear that they cared little or nothing for the international economy. The fall of the pound had already embarrassed a long list of countries; but the Import Duties Act was rushed through with very little discussion and no consultation. The Ottawa Conference converted the inherently reasonable proposition of Imperial preference into a weapon of offence against other countries' trade. And the crowning blow came a few weeks later when, by obstructing the Ouchy Convention, the British Government refused to allow other countries to do in the right way (by mutual lowering of duties) what they themselves had just done at Ottawa in the wrong. In the international economic history of the past decade, the onset of British protectionism will be criticised less for what was done than for the tone of voice in which it was done.

More important than this, however, have been the indirect effects of protection at home. The general scheme of the Act was to impose a duty of 10 per cent on all goods not on the free list or in exempted categories, and to provide that higher duties could be imposed on the application of the trades affected. This method would, by itself, have put a heavy enough obstacle in the way of any consideration of the public interest. When an industry made an application for higher protection, what

general criterion could the Import Duties Advisory Committee apply to it? The Act provided no guide, and if the industry could prove, as it usually could, that it would itself be benefited by a higher rate, how could the Committee justify stopping short? And, in fact, as the record proves, the Committee found it difficult to act as trustee for interests that were always general and usually invisible against particular benefits that were very tangible. They deserved sympathy for being set an inherently impossible task, and their performance of it serves to push home the lesson that, if a protective tariff is to have any chance of serving the general interest, it must consist entirely of one or more general rates, without provision for exceptions to be made on special pleading.

The Committee, however, made its task of serving the public interest considerably more difficult than it might have been. From the start, it laid down the rule that "applications should be made as far as possible by representative bodies of the trade concerned." This ruling came at a crucial period. Over a period of several decades, the old common law against combinations in restraint of trade had been losing its force. More and more, it was being flouted and ignored, but it remained in the background as a deterrent, and British industry, as it marched towards monopoly, was compelled to keep looking back over its shoulder. The new regime altered all that; the trade association was now officially encouraged; indeed, the IDAC made it clear, as in the case of steel, that a functioning "organisation" of the trade might be a condition of receiving protection, that something in the nature of a cartel was necessary lest, by some mischance of competition, any of the protection should spill over to the consumer or to the general public. The result has been far-reaching. Within the decade, British industry has become almost completely "organised." Even before the war, the price that was determined by free competition was a rarity, and the trades where any fresh breezes of entering competition were allowed to penetrate were growing fewer year by year. "Low profits and quick turnover" has become an outmoded slogan; the new one is "high profits and restricted turnover," and the results have been what might have been feared. The system has come to its finest flower since the war, with every trade "controlling" itself and with the nation left wondering why its productive effort is so sluggish. For all this, the Import Duties Act and the procedure of the Import Duties Advisory Committee are more to blame than anything else. Monopoly may not have been the expected child of the Act, but it is a far lustier and more dangerous progeny than any protection against overseas imports.

Protection for Steel

By common consent, the steel industry is the test of the new protectionism. Over nothing else has the Advisory Committee lavished such care. Unfortunately, it is difficult to disentangle the results of protection from those of general recovery and general rearmament. Certainly, the industry itself has been more prosperous than it was before and some part of the renewal of plant that was undertaken can properly be ascribed to protection. In return for these benefits, the community was to get a reorganisation of the industry to increase its efficiency. But as Dr Benham says

the "re-organisation" which the IDAC accepted in fulfilment of the pledge given by the industry was mainly administrative: a reorganisation, so to speak, on paper. The incentive of a tariff was used to induce the industry to make its trade associations . . . stronger and more comprehensive. . . . This means that the industry is now in a more monopolistic position.

For the way in which the industry has used its monopolistic position, the names of Jarrow and Ebbw Vale may be allowed to speak—or perhaps the fact that, after the statement in 1935 that "the Federation categorically renewed the assurance . . . that it is not their intention to raise prices as a result of increased protection," the Board of Trade index of iron and steel prices increased by over 38 per cent in three years. Or as a final epitaph

on the IDAC's efforts to protect the public interest in the matter of steel, some words can be quoted from Mr D. L. Burn's masterly and impartial history of the industry:

There was no question of a general plan . . . there was a marked unwillingness to interfere with the integrity and autonomy of existing firms, even where this seemed necessary for maximum technical efficiency. . . . The way to maximum efficiency is more and more cluttered up with compromises, which to the unwary count for ordered progress.

The verdict on the Import Duties Act after its first decade must, then, be that it has done little good and substantial, if indirect, harm. The days have gone when a return to uncontrolled trade can be seriously advocated—at least without a long period of adjustment and pre-

* "The Economic History of Steel-Making." By D. L. Burn. (Cambridge.)

Social Surveys

ON few occasions since it began its series of searching criticisms has the Select Committee on National Expenditure found a branch of Britain's war effort for which it has little but praise. The conclusions of its latest report are the more remarkable since the subject—the Wartime Social Survey of the Ministry of Information—was for a short time as big a butt of the daily Press as the Department that sponsors it.

As the Select Committee points out, the campaign against "Cooper's Snoopers" in July, 1940, with its complaints of Gestapo methods, was based upon nothing more substantial than the ill-advised secrecy which surrounded the Survey when it was first set up, together with a general dislike for anything that the Ministry of Information touched. There was no evidence that the public objected either to the principle of the survey or to being interviewed; indeed, it is probable that those selected for interview achieve a certain kudos in the eyes of their neighbours. As for the argument current in the summer of 1940—that social surveys are all very well, but they should be left to private investigators—it has been the experience of many people who have collected information from the public on official behalf that the phrase "for the Government" is an open sesame to confidence rather than the reverse.

But though the Survey can be acquitted of the frivolous charges brought by the Press, the question still remains whether it is really necessary. On this the Select Committee has no doubt; it considers that "the Wartime Social Survey is an essential service, performing useful work . . ." To begin with, its chief purpose was to test the effect on the public of Government instructions and publicity. This it still does; for instance, it has investigated the success of the Ministry of Food's Kitchen Front campaign and various problems of clothes rationing for the Board of Trade. But the Survey is also used as a precursor of policy as well as an investigator into its effects. To take a purely hypothetical example—it might seem to the Board of Trade that the manufacture of hats should be prohibited, and a preliminary survey could determine whether this would cause genuine hardship. The difficulty about extending the scope of the Survey in this direction is that the policy for which it is to provide the basis must remain a secret. Clearly, some of the present troubles of soap rationing would have been avoided if the Ministry of Food had been able to obtain in advance some idea of the amount of home laundry that is done and the amount of soap used in households with young children compared with other households. But the persons interviewed would not have to be very intelligent to guess the reasons for the enquiry, and the secret would be out long before the results of the survey were made known to the Department concerned.

Thus, the main purpose of the Survey is to assist in adapting and modifying policy rather than moulding it.

paration. But the past ten years, if they have taught anything, should have shown that the control of trade and the protection of industry can only be permitted if the most elaborate precautions are taken to protect the public interest. The theory of the Import Duties Act—that if the profits of manufacturing industry are protected the public interest is automatically served—is a typical piece of Brummagem economics and it should find no place in a soundly conceived economy. There are two possible lines of development from the present position: either the state, in order to secure the public interest, will have to interfere more and more deeply in the conduct of ordinary business; or else protection in Britain, as in the United States, will have to be accompanied by anti-trust legislation to enforce competition and prevent restriction. If industry regards that as a choice of evils, it must blame the Import Duties Act and the lessons that its first ten years have taught.

But it is as well to emphasise that the Survey is mainly concerned with such concrete things as hats and soap and recipes in case there are still members of the public and MPs who regard it as a thermometer in the mouth of public morale. It is true that in its early days it was used in this way, but the practice was dropped, and the Select Committee has no hesitation in recommending that it should not be revived. There is no reason why questions of public opinion, such as "Do you agree with the composition of Mr Churchill's Cabinet?" should cause resentment, as the Committee says they would, except, perhaps, among MPs who regard such an assessment of public opinion as an encroachment on their province. There has been no evidence that the public resents being cross-examined by Mass Observation or the British Institute of Public Opinion, and the Home Intelligence section of the Ministry of Information, to which the Survey is attached, presumably has its own method of watching the effects of events on public opinion. But such enquiries, though interesting and possibly useful, cannot by their nature have the same value as the factual investigations carried out by the Survey. They show the short-term fluctuations in morale, but they provide no information on which long-term policy can be based.

The distinction between these two sorts of social enquiry serves to emphasise the scientific nature of the Wartime Social Survey. In all research work of this kind, success or failure depends upon the interviewers. The best interviewers are both born and made. They must be born with a sympathetic temperament and ability to inspire confidence in strangers; they must be trained to acquire the detachment of the scientist. It is reassuring to learn from the Select Committee's report that the interviewers employed by the Wartime Social Survey are chosen with the greatest care. They are carefully trained and coached in the subject to be investigated; and before they set out on the survey they take part in experimental interviews so that they can discover the pitfalls to be avoided. The questionnaires are drawn up with the help of the Department concerned in the survey and a panel of scientific consultants, whose advice is also sought on the form of the reports. The work of the Survey would certainly expand were it not for the difficulty of finding suitable interviewers, but the Ministry has rightly refrained from lowering its standard of recruitment. It is also important to point out that, although the Survey is controlled and financed by the Ministry, neither the interviewers nor the editorial staff are civil servants, and the Ministry never sees the names and addresses of the persons interviewed.

The high qualifications required in both the interviewers and the directing staff of survey work make it a costly business. The Select Committee states that the estimated expenditure on the Wartime Social Survey is £40,000 for the current financial year, which it considers not excessive. But the Survey is being used continually, so that its

overhead cost is probably lower than that of outside organisations, whose survey staffs are only used intermittently. This question of costs is important when the future of social survey work is considered. Extremely valuable individual surveys, such as Mr Seeborn Rowntree's in York, have been carried out; but to keep together a team of twenty interviewers—the size of the Ministry's team last October—and a first-class directing staff, security of employment is essential, and probably only the State can afford to guarantee it.

Unless, therefore, social survey is to be allowed to fall into a decline after the war, the Government must be prepared to bear its cost. But if it is to continue in peacetime as an officially sponsored experiment, the question of who should control it must be settled. The Select Committee has accepted the suggestion that the Wartime Social Survey should be placed under the direct authority of a member of the War Cabinet, such as the Lord President of the Council. One reason for this recommendation—that the Ministry of Information has a bad name—carries little weight, and it is in any case a little hard on the Ministry, which has had to bear so much abuse for other people's mistakes, if it is not allowed to receive the credit when it does do something worth while. But there is a lot to be said for the other argument, that as the work of the Survey is done for more than one Department, it should not be controlled departmentally. In practice, however, as the Select Committee itself found, very good relations have been established between the Departments and the Survey, which it would be a pity to disturb by further reorganisation. Moreover, there is

a possible danger that if it were centralised, the Departments would regard it as a means of Cabinet prying into their work and efficiency and retire behind their usual secrecy.

On the assumption that the Survey continues after the war, however, the best solution for it seems to be to establish it under an independent but State-financed body like the Medical Research Council, which works under the administrative direction of a committee of the Privy Council. The MRC, one of the good things to emerge from the last war, has shown that science can be State-aided and yet retain its independence, and to place the newest form of social science under similar auspices would appear to give it the best chance of successful development.

There is finally the question of whether the Survey's reports—or, at least, their conclusions—should be made public. The Board of Trade published the results of its enquiry into the use of clothes coupons, and it is difficult to see what harm could be done by the publication of the Survey's findings—in fact, a great deal of harm might be prevented had, for instance, a survey of the ATS revealed how ill-founded was the recent whispering campaign. The public, as the Home Division of the Ministry of Information must know by now, wants facts, and much unnecessary resentment and absurd criticism would disappear if people were given the facts about themselves. At present, it is true, considerations of security possibly preclude publication; but there should be no secrecy about any social surveys that may be undertaken after the war.

NOTES OF THE WEEK

The Conduct of the War

"There is nothing which I do or have done as Minister of Defence which I could not do as Prime Minister." This sentence was the core of Mr Churchill's argument against including defence, with production, home affairs and Dominion relations, among the "spheres of superintendence" of other Cabinet Ministers. Actually, very few of his critics believed that the Prime Minister, especially when he was Mr Churchill, could cease to direct defence matters; their point was that he could not also, because of the time and energy required, direct production, lead the Commons and make almost every Cabinet decision in person. The Prime Minister dispelled the crude picture of the "Captain-General" personally conducting the war from day to day himself—which is no truer of Hitler and "that great strategist" (to quote Sir Stafford Cripps) Stalin than it is of Mr Churchill. In strategy, as in everything else, the danger is a bottleneck on the Premier's, the Fuehrer's, or the President's desk. The war is conducted from day to day by the First Sea Lord, the Chief of the Imperial General Staff and the Chief of the Air Staff, who make up the Chiefs of Staff Committee and "give executive directions and orders to the commanders-in-chief in the various theatres." In 1941, this Committee met 462 times, always once and often twice a day, and Mr Churchill presided on only 44 occasions; usually the Prime Minister is represented by Major-General Ismay, who heads a small advisory staff which is part of the War Cabinet secretariat, and he is "responsible for keeping the War Cabinet and myself informed on matters requiring higher decision." Mr Churchill made it plain that any notion of campaigns being conducted by politicians was quite wrong. The three Chiefs of Staff have professional executive control of their three Services; subject to the Prime Minister's general supervision, suggestion and guidance, they are "left alone to do their own work." If this is really so, there is a marked contrast with the pull-devil pull-baker situation of the last war.

I do not think there has ever been a system in which the professional heads of the fighting Services have had a freer hand or a greater or more direct influence or have received more constant and harmonious support from the Prime Minister and the Cabinet under whom they serve. The politicians are, of course, responsible for what is done; the three Service Ministers are the responsible heads of

their departments, and they are members of the Defence Committee of the Cabinet. But it is the Chiefs of Staff who attend the War Cabinet when military matters are discussed. Apart from Mr Churchill's general direction, as both Prime Minister and Minister of Defence, the war is being run by the professionals, who must share the praise and blame for what happens and what has happened. Obviously, there have been notable political interventions, as in the case of the Greek campaign. But, on balance, the question seems to be, not whether laymen are interfering too much with the conduct of the war, but whether Service Ministers and the Cabinet as a whole count for too little. A week or so ago the working of the Board of Admiralty was described in answer to a Commons question, and there was a feeling among some Members that the First Sea Lord was probably too powerful and the First Lord not powerful enough. Wars must, of course, be run by soldiers, sailors and airmen—and Mr Churchill—but professionalism can perhaps be carried too far for enterprise and initiative to flourish.

One More Chance

It is firmly reported that the Government has decided to offer greater freedom to the people of India. There is to be an early debate on its decision. The statement of a new policy towards India is now more than a matter of expediency—or equity. It is a matter of necessity. Indeed, it is a melancholy fact that Mr Churchill and his colleagues should only have been brought to this under duress—from Japan; and the fact that the Indian political leaders have been no more ready to meet concessions halfway is just as melancholy. The problem at this juncture is, first and foremost, one of Imperial defence. What has happened in Malaya—and Burma—is evidence of the catastrophic consequences which can result where the peoples of the Empire do not regard the war as their war and stand passively by. Whether or not the native peoples of these Eastern countries bought, in their own interests, to regard the war as their own is an academic question. Probably they should; but the fact is that they do not. Nor need the rights and wrongs, the wisdom or the folly, of the British administrations that have failed to create solidarity be too much debated. No doubt there is a host of arguments in their favour, as well as against them. But the proof of the pudding is in the eating. The task now is to

save the British Empire and win the war. It may be that, until now, Mr Churchill has felt, as he openly said seven years ago, that the way to lose India was to give the Indians greater independence; he may even fear still that responsible and representative government at the centre may bring communal conflict, disorder and administrative paralysis in its train. But now another and more likely way to lose India, with Japan at the gates, is to refuse to give the Indians more freedom. Whatever the risks of doing this—and they should not be minimised—the risks of not doing it are much greater and less escapable.

General Chiang Kai-shek has been to India. He has met Indian politicians. He has helped to forge new plans for defending the mighty Indo-Burmese-Chinese bloc of territories (Burma, cut off from General Wavell's South-West Pacific Command, now reverts to the Command of India). The Generalissimo has spoken of the common roots of nearly 1,000 million people, Indians and Chinese, in the soil and in an ancient culture. He has expressed the hope and the belief that India will now be given freedom to defend itself. Pandit Nehru has pledged a "free India" to self-defence in the battle against Axis aggression; and it is known that the British Government is prepared to act. Two points stand out: first, the wholehearted co-operation of India is necessary for successful prosecution of the war; secondly, this world war is being fought for the freedom and independence, as well as the safety, of peoples. A generous statement by Mr Churchill will have a tremendous effect. He has been silent too long on India. The old cautious promise that India will be given self-government after the war if the communities and sects can agree will not do; it is no longer believed—which may be unfair, but is, again, a fact. Probably the least that will help now is the unconditional promise of Indian autonomy at a definite date, and the offer at once of a provisional National Government responsible for the conduct of India's own war. In 1935, Mr Churchill saw himself as the realist battling against doctrinaires over the Government of India Act. Now, in cold strategic fact, the boot is on the other foot. Only Mr Churchill, by abandoning what has become a doctrinaire position, can save the situation. It is the most welcome of reports that he, in so very many ways one of history's greatest and bravest realists, is now prepared to act courageously in this question; and it may be that, in serving expediency and necessity, an even greater victory may be gained—the doing of justice.

Discontent Down Under

Australia is in great danger; and militarily and economically the country is making a prodigious effort. But, diplomatically, Australia is still not satisfied, and Mr Evatt, Commonwealth Minister for External Affairs, has said so strongly in Parliament. On one count—the status of Sir Earle Page as Australia's representative in the British War Cabinet—it is difficult to see what the British Government can do. The only difference in council between Sir Earle Page and his British colleagues is that he must refer back to Canberra; and that is Australia's business, not Britain's. Australia, unwilling to tie her hands by giving Sir Earle power to act, cannot expect Britain to tie hers. On the other count—the inadequacy of the Pacific War Council for its professed purpose—Australian protests appear to be not unjustified. This body sits in London, not in Washington, where Australia wanted it; and, although China is now to be represented on it, the United States is still not. Decisions are in fact forged in Washington by the Combined Anglo-American Chiefs of Staffs Committee; and "no Australian representative ever meets any United States representative in any war committee." This may very well be inevitable in practice, but it is not what Australia asked for and was led to expect; and the obvious riposte is for Mr Curtin to increase the diplomatic and military representation of Australia in Washington to the greatest possible strength.

Assault on Java

The battle for Java has begun. The Japanese have bases for their attack in Southern Sumatra, in South Borneo, in the Celebes and now in Timor and Bali. True, their hold on Sumatra, Bali and Timor is still contested. Their

troops have not yet been able to fight their way southwards from Palembang, where the Dutch are blocking every yard of their advance. Timor is still only partly occupied. The Bali airport, Den Pasar, has fallen, but fighting continues in the island and the invasion fleet which attempted landings *en masse* was driven off by Dutch and American warships and bombers with little loss to themselves and a toll of nineteen enemy ships sunk or damaged. For the present, the last battle of the archipelago is being waged in the air. Effective defence against Japanese landings in Java depends upon maintaining the few remaining airfields in Java and Madura. If they can be blasted out of action, then once again the defenders will be fighting without air support. There is no doubt that the resistance will be tough and efficient. The bulk of the Netherlands Indies army is concentrated in Java and the country lends itself—like parts of the Philippines—to prolonged defensive action. The interior is mountainous, and specially prepared defence positions were constructed some time ago to meet the threat of invasion. The density of a native population of some 40 millions naturally creates special problems for the defenders, but there is no lack of solidarity between the white population and the natives in Java such as fatally undermined resistance in Malaya. The fundamental difficulty is that with the Japanese installed at Timor, it is practically impossible to bring fighter reinforcements from Australia to Java, whereas the Japanese now command a string of air bases, north, east and west. Still, the resistance on the Bataan peninsula shows what can be done in the face of overwhelming odds when natural defence positions are matched by a tough fighting spirit. The battle for the South Seas will turn on whether there can be a repetition of General MacArthur's stand.

A Problem in Neutrality

The attack on Timor by Japanese forces creates a delicate diplomatic situation for the Axis. It is apparently no part of Hitler's plan that Portugal should be forced to abandon its neutrality at this stage in the conflict, and the Japanese have had to perform heroic feats of mendacity to find an explanation of their conduct which will give the Portuguese Government some loophole for continued neutrality. Thus it appears that the Japanese do not threaten the integrity of Timor. Alone of all the South Sea islands, it is to remain under the sovereignty of its pre-1942 rulers. The Japanese attack is simply designed to clear out the British and Dutch who occupied the island "in gross violation of international law." The interesting point now is that the Portuguese are surely entitled to demand the same treatment from the Japanese as they were to have received from the British and the Dutch—a temporary occupation until such time as their own troopship arrives to take over the garrisoning. But their troopship—apparently without fuel for the return journey—is already in the near neighbourhood of Timor. Are the Portuguese troops to land? If they do, will the Japanese withdraw to the Dutch end of the island? Or will they admit that they have occupied Timor for good? And in that case, how neutral will Portugal remain?

Rangoon in Danger

The Japanese troops set free by the fall of Singapore are now available for attack north or south. Southwards, they can reinforce the army in Sumatra and press on to the assault on Java. Northwards, they can be despatched to the Burmese fronts where they have already a marked superiority in men and material and where reinforcements may turn the scale. The British held the Bilin river for a week, then retired to new positions behind the Sittang—the last defence line between Rangoon and the Japanese. One of the chief difficulties facing the defenders is the variety of points from which new Japanese attacks could be launched. There has already been skirmishing on the Siam-Burma frontier beyond Chiangmai. Other obvious objectives are Thazi on the Rangoon-Mandalay railway, or Pegu just to the north of Rangoon. The Japanese have mastered more fully than their opponents the art of using jungle routes and waterways as means of communication. They have even been able to bring tanks across from Siam to Martaban. True, the fighting is now moving out into the open paddy fields where the British have some greater support in the shape of the RAF and the American Volunteer Group whose air defence of Rangoon has been beyond praise. But there is nothing in the Burmese picture to suggest an early turning of the tide

Lend-Lease Terms

The terms of the Agreement between the American and British Governments, signed by Mr Sumner Welles and Lord Halifax on February 23rd are sensible and satisfactory. In the main, the Agreement is intended to define the consideration to be given in return for Lend-Lease aid. Any "defence articles" transferred under the Act which at the end of the war have not been destroyed, lost or consumed shall be returned to the United States. Nothing could be fairer than that, even though in one particular case, that of shipping, it will leave Great Britain in a very embarrassed position. In addition to this return of unused goods, "full cognisance" is to be taken of "all property, services, information, facilities or other benefits or considerations provided by the Government of the United Kingdom subsequent to March 11, 1941, and accepted or acknowledged by the President on behalf of the United States of America." Clearly, this may mean almost anything; but it is contemplated that the valuation put on these considerations will be insufficient to discharge the obligation, since the Agreement proceeds to make provision for "benefits" to be provided by Britain to America after the war. The condition is made that in determining these benefits "the terms and conditions thereof shall be such as not to burden commerce between the two countries, but to promote mutually advantageous economic relations between them and the betterment of world-wide economic relations." How much trouble would have been avoided if there had been such a clause in the Debt agreements of the last war. The Agreement includes a comprehensive programme for world trade. The two countries are to take "agreed action . . . open to participation by all other countries of like mind, directed to the expansion, by appropriate international and domestic measures, of production, employment, and the exchange and consumption of goods, which are the material foundations of the liberty and welfare of all peoples; to the elimination of all forms of discriminatory treatment in international commerce, and to the reduction of tariffs and other trade barriers." Conversations are to be begun between the two Governments at an early convenient date "with a view to determining, in the light of governing economic conditions, the best means of attaining the above stated objectives by their own agreed action and of seeking the agreed action of other like-minded Governments." To these statements there cannot be any objection (unless it be to the fact that preferences are to be "eliminated," while tariffs are only to be "reduced"); they admirably combine a statement of the objectives with a realisation that they cannot be attained overnight. Some surprise has been expressed in England that these matters were included in a Lend-Lease agreement. But, as was said in *The Economist* of November 8, 1941, "certainly the main return, and perhaps the only return, that the beneficiaries of Lend-Lease will be asked to make is co-operation in the movement towards freer trade," and Mr Wendell Willkie has shown that this view is not confined to one party by his statement, made in praise of the new Agreement, that "hope of the survival of liberty in the United States and the world is directly dependent upon the creation, after this war, of conditions under which trade can flow as uninterruptedly as possible in the largest possible areas and among the greatest number of people."

Farm Prices

The schedule of prices to be paid in 1942 for domestic farm products (with the important exception of milk, which is deferred) that emerged at the end of last week from the long argument behind the scenes has been received by the farming community with a certain grudging acquiescence. It may be deduced from this fact that the farmers have got all that they could reasonably expect, even if they have not got all that the Minister of Agriculture asked for. The problem is complex and difficult, the more so since it has to be conducted in a statistical twilight. If the industry is taken as a whole, it is highly probable that the whole of the recent increase in wages could be absorbed by the farmers without reducing the profits of the industry to, still less below, the pre-war level. But the argument against this is that there are many high-cost producers who cannot absorb the higher wages at all and who would go out of production if not assisted. This argument is true to some extent, but nobody can say to what extent. Moreover, there are Government pledges which, however careful in their phraseology, gave rise to precise expectations in the farmers'

minds. The chief impression that has been—or should have been—created by the whole controversy is of the extraordinary clumsiness and rigidity of the present agricultural controls. The price increases show very little sign of any attempt to differentiate between the products that are most urgently and those that are less urgently needed. Farm prices seem to be regarded as a reward of virtue, not as an instrument of control, and the only thing that can be done with them is to put them up all round. Again, no attempt is made to grapple with the problem presented by the great variation of costs. If the price is put too low, marginal producers will go out of business. If it is put high enough to satisfy them, it will present the efficient farmer with large profits which, in these days of EPT, he will use to bid up the price of labour and so once more push the higher-cost producer below the surface. The Ministry of Food has shown considerable ingenuity in adapting the price mechanism to the novel necessities of war. The Ministry of Agriculture has not been able to advance its technique beyond the primitive stage of making hay while the sun shines.

Siege Economy

Finance is not a means of making war. It is a means of distributing the burden of sacrifice among civilians; and the struggle against inflation has great importance. Last week-end Sir Kingsley Wood spoke encouragingly about the progress of savings; subscriptions to all Government securities were 40 per cent higher in 1941 than 1940, and the net increase in deposits at the Post Office and Trustee Savings Banks was 73 per cent higher. But present expenditure on all purposes is at the rate of just over £5,100 millions a year, and on the war only at the rate of nearly £4,400 millions a year. Much more genuine saving—and still higher taxation—will be needed to cut down the inflationary gap in coming months. Even so, this is not the main reason why, as the Chancellor of the Exchequer suggested, people should save more and spend less. A more pressing reason was given by the Prime Minister in the Commons on Tuesday:

In the last two months there have been most serious increases in shipping losses. Our anti-U-boat flotillas and Allied naval forces of all kinds have been stretched to the utmost by bringing food, materials and munitions and by convoys carrying troops.

The fact that the Chancellor of the Exchequer is now no longer a member of the War Cabinet is a recognition that men, materials, and machines come before money in the making of war policy. The time has come, not to ask savers, but to compel everyone, to cut down consumption. It is almost incredible that the nation's diet should remain virtually uncut three months after the attack on Pearl Harbour. The ordinary family is not eating well, it is true. But it is fantastic that ample feeding off the ration in restaurants, which can buy up unrationed foodstuffs in bulk, should still be permitted; and that expensive foods, out of the reach of ordinary persons, should still be freely on sale. The "black" and "grey" markets are large and a scandal. What shipping space there is to spare, after the barest siege needs for food have been met, is required with acute urgency for materials, munitions, convoys and expeditions. It would be madness at this stage to cut down stocks and supplies of raw materials while stocks and supplies of food are kept inviolate; and the sternest rationing, wherever there is a surplus—not voluntary saving—is the remedy.

Morale and Manpower

Neither the danger of inflation nor the shortage of shipping space is the final reason for making a further drastic cut in civilian consumption. The only reserves of labour for war output now are in civilian manufacture and distribution. Sir Stafford Cripps' threat to restrain dog-racing and boxing spectacles is a gesture in aid of morale, rather than an act of economic policy; it arises from the conspicuous waste of time and energy and petrol on these peculiar occasions—and should not, it is hoped, be generalised into a wider attack on all popular entertainment. But the threat does point the way of economic wisdom and necessity at this stage of the war. Only by reducing all forms of civilian consumption, including domestic service, to the barest iron ration can more manpower, as well as merchant shipping, be saved, and the sense of urgency that Sir Stafford Cripps calls for be translated into physical fact.

Assam Highway

An announcement from Chungking toward the end of last week told the world that Rangoon had been closed to supplies for the Burma Road. This development, which, in view of Japanese progress in Burma, had appeared inevitable for several days previously, in effect deprives China of the use of the Burma Road. Nor can reliance be placed on the alternative route which proceeds up the valley of the Irawaddy via Bhamio to join the main road north of Lashio, since its southern terminus is already threatened. The Chinese Government, unshaken by this desperate blow, have announced that the Burma Road will shortly be superseded by the completion of a new road which leads from Chittagong in India over the Assam mountains in close proximity to the southern frontier of Tibet as far as Chungking. One of the main functions of General Chiang Kai-shek's visit to India was the agreement of final plans for the completion and use of this stupendous mountain highway. The possibility that the Burma Road might eventually be closed was foreseen by the Generalissimo as long ago as 1939, and work on the new road was started by March, 1940. Construction was unfortunately delayed by the hostility of the Tibetan people, who are xenophobe on religious grounds, and who have memories of an earlier Chinese incursion. This hostility was, of course, exploited by the Japanese, but it is believed that Tibetan suspicions have now been allayed. Details of the route and the progress of construction are not disclosed by the Chinese authorities for security reasons, but it is estimated that as much as three-fifths of the new road is complete. Some 40,000 Chinese coolies are busy on the remaining portion, and the work is proceeding fast. The project is breathtaking, and it is to be taken seriously. The Chinese estimate that the interval between the closing of the Burma Road and the opening of the Assam Highway will be short enough to guarantee survival.

The Struggle for Smolensk

The Red Army has celebrated the week of its anniversary by a great renewal of activity in almost every sector of the front. In the Leningrad area, very heavy pressure has been brought to bear upon the besiegers and reports suggest that effective military contact between the garrison and the Soviet forces outside may soon be re-established. To the south of Leningrad and of Lake Ilmen, at Staraya Russa, the Russians claim to have routed three German divisions and to have left 12,000 Germans dead on the field. An advance at this point along the line towards Pskov would effectively break the link between the Leningrad front and the armies round Smolensk. In the south, the Germans report a strong Russian offensive in the Donetz basin, and new Soviet landings have taken place in the Crimea. But the heaviest fighting of all has been reserved for the central sector, where the battle seems to be taking the shape of an intense struggle on the part of the Russians to surround and capture the various strong points which are the buttresses of the German defence system. Last week Rzhev was threatened and almost surrounded, but the Germans claim to have relieved the pressure and re-established the fortress. This week, with the Russian advance to Dorogobuzh, it is Vlasia that is in danger, for the town lies almost midway between Vlasia and Smolensk. If Russian forces can now press upwards from the Roslavl sector, it looks as though they

have a good chance of flattening out the Smolensk salient. Nevertheless, the fighting has still taken no absolutely crucial turn for the better. The Germans are still dug in at Rzhev, Vlasia, Bryansk, Orel, Kursk and Kharkov, and these towns form the linch-pin of the whole German defence line. The Germans admit new Soviet activity, but they repeat their claim that the initiative is passing back to them. For the moment, everything depends upon the German strong points. If they can be held, then no amount of surging about in between them will finally affect the issue.

Stalin's Order of the Day

Stalin's inspiring Order of the Day to the Red Army, while it is arousing fresh enthusiasm and fresh self-sacrifice all over the Soviet Union, will perhaps come as something of a disappointment to the ideologues of various types abroad. For the uncompromising revolutionary, whose mind has long since ceased to move in any but the strictest dialectical categories, the spectacle of the leader of the Socialist Mecca rousing his people to "a war of patriotism, of liberation, a just war," without a single reference to internationalism, the worldwide solidarity of the workers, and the inevitability of Communist revolution, must be rather like hearing the Angel Gabriel sounding the Last Trump on a Swanee whistle. Premier Stalin has restated in the most uncompromising terms the war aims of the Soviet people. They are: to liberate Soviet soil, Soviet lands, from the foreign invader—and the Soviet lands are carefully enumerated: White Russia, the Ukraine, Lithuania, Latvia, Estonia and Karelia. If in the course of ridding the country of the foreign invader, the Russians should drive out the "Fascist clique" in Germany all the better—but Stalin does not raise this point to the dignity of a war aim. For the rest, neither he nor the Russian people have any quarrel with the German people or with the German State. It is at this point that another and very vocal school of thought will grow perturbed. For Stalin there is no carping problem of what Germans are good and what Germans are bad, or indeed if there are any good Germans. He accepts the view which was widely accepted in Britain until Dunkirk, that a vast mass of the German people have been misled by gangster leadership. The whole tenor of this Order of the Day leaves the problem of Russia's future foreign policy a complete mystery. Or rather, leaves it as a field in which no commitments have been taken beyond the commitment of liberating Russia. This is not an unhelpful starting point for far closer elaboration of a common Anglo-American-Russian settlement. Ideology need interfere with it as little as it is interfering with Premier Stalin. It could be based upon a realist appreciation of security. Including, naturally, the security of the Russian people. In a word, it is an empty canvas on which a picture, either of collaboration or frustration, can still be drawn. The interests of Europe and the world obviously demand collaboration.

Old Soldiers

Quite rightly, Captain Margesson, presenting the Army estimates last week—his final act in office—reminded the House of the British Army's notable success in East Africa, Eritrea and Abyssinia when, in a brilliant campaign by General Cunningham, 280,000 Italian and native troops were wiped out. It is a success which has lasted, but the total story is still lack of achievement, and Capt. Margesson's lucid recital of the difficulties attendant upon, for instance, doubling the Territorials before the war or producing tank guns afterwards did not remove the impression that, tactically and technically, the Army is constitutionally disposed to take very much too long to get into its stride. Not all is inefficiency; and some of the most efficient fighting of the war has been done by British units. Moreover, it has repeatedly been under-equipped, under-supported and under-sized in its battles. So much so, that one would have thought that, ever since the early summer of 1940, there would have been tremendous pressure by the political and professional heads of the Army, carried in this vital matter to the point of resignation, for air units and the production of dive-bombers. It is what the Army does not do—or see—that is surprising. There may have been pressure; and there was, admittedly, a life-or-death crisis in aircraft production for the few crucial months of the Battle of Britain. But when Colonel Moore-Brabazon was at the Ministry of Aircraft Production, months after the crisis was over, he said that dive-bombers had never been

asked for. In Malaya, only a few weeks ago, a whole army—not outnumbered this time—was lost; it still had no air component of its own. It is old things that the Army does well, not new ones—except in the case of this or that general, this or that commander, this or that regiment or unit. The present feverish scramble in the Army to transfer and remuster skilled engineers is welcome and encouraging—evidence of the fresh air that the Beveridge investigation has blown into dusty places. As Permanent Secretary, and signatory of all Army Council Instructions, Sir James Grigg, it seems, was nevertheless not able to stamp his forthrightness and drive upon the attitude and organisation of the Army; perhaps, as Secretary of State, he will be more successful. Perhaps he will even be able to guarantee a general welcome for new ideas at the top and attention to new instructions at the bottom.

War by Proxy?

In this war and in the last it has been an aim of British propaganda to demonstrate Imperial solidarity. Every movement of Dominion or colonial troops has been loudly noted; every native gift of cowrie shells or rhinoceros tusks has been widely proclaimed. In each war this has acted as a boomerang. There are still Americans—and Australians—who believe that there were only Anzacs at Gallipoli in the last war; and there are ill-wishers now, in a number of countries, who describe Britain as fighting this war entirely by proxy, with arms from the United States and men from the Commonwealth and Empire—even with money from exploited natives. The best reply to such nonsense is facts. Last week, Captain Margesson gave some of the sort of figures which should have been given months ago. Of all the troops in the Middle Eastern Command, nearly half came from the United Kingdom, and just over a quarter from the Dominions, including South Africa. In the Eighth Army, which is fighting Rommel, half the men are from the United Kingdom and a third from South Africa and New Zealand, with small contingents from Australia and the Polish, Free French and Czech forces. It is no disparagement of the great fighting qualities of Dominion and colonial troops, or of the astonishingly high proportion of volunteers for military service that their small populations have achieved, to make these points. Nor would it be a disparagement of American aid, which, with American war industry, is still in its infancy, to point out, as it should be pointed out, that on the world battlefronts together, apart from Russia, the overwhelming majority of Allied aircraft and equipment is still British made; and, in Russia, the imported aeroplanes and tanks that are making more than a little difference to the fighting, have been sent out from Britain. The United States will be, must be, the arsenal of democratic victory. But Britain has been, and is, the arsenal of democratic resistance, as well as a source of fighting manpower second only to Russia and China.

French Naval Policy

While it is probably true that Marshal Pétain and the more responsible statesmen at Vichy are as opposed as ever to any kind of collaboration with the Nazis over and above the strict terms of the Armistice, there are disturbing signs that those elements in France which believe most firmly in a German victory and believe, too, that France would profit by it, are manoeuvring in the curious twilight of Franco-German politics in order to be in a better position to make their contribution when the word from Berlin comes. A good deal more help has been going to Rommel from Tunisia than the Vichy administration ever authorised. This is certainly due to disaffected officers on the spot. But, as might be expected, the chief centre of disaffection continues to be the French Fleet. The Navies of the United Nations are rounding a very dangerous corner; on every ocean the tasks they have to do exceed the resources at their disposal. Under these circumstances, the French Fleet has unavoidably become a bargaining counter of first-class importance, and clearly men of the calibre of Darlan, or of the Admirals he has scattered through the French Colonial Empire, cannot be relied upon to take no advantage of their new position of power. It is ominous under these circumstances to read of the arrival at Toulon of the battleship *Dunkerque*. Why should it not have remained in North Africa? For what purpose has it been brought to a port where German control could be easily and quietly established? The outlook in the Colonial Empire is also uncertain. Admiral Decoux has gone out of his way in Indo-

China to flatter the Japanese and co-operate in their aggression. Why should not the same principle be applied, say, in Madagascar or at Dakar? The submarine base at Dakar, heavily defended by shore guns and by the guns of the immobilised *Richelieu*, would be an enormous acquisition to the U-boats of the Atlantic. There is little evidence to suggest that the Germans have already established themselves at this crucial strategic point—on the contrary there is evidence that M Buisson, who defended Dakar so strenuously against the Free French and the British, would defend it even more strenuously against a German attempt at a sea or an air landing. The danger is that, at Dakar as elsewhere, the Naval officers are more anti-British than anti-German, and the sight of the British Navy in difficulties will not have softened these feelings. The naval policy of Vichy France must be watched with the closest attention, and it is good news that the American administration, through Admiral Leahy, is on the *qui vive*.

Local Output

It would be untrue to say that the Ministry of War Production, which lasted less than a fortnight and then vanished with its White Paper and its Supplementary Estimate, left not a wrack behind. During his brief tenure of office, Lord Beaverbrook had "under review" the local organisation of production; and he set up a committee, composed of representatives of employers' and workers' organisations and of the regional boards, to advise him. If Lord Beaverbrook, during the changes of mind and Ministers of the past two weeks, has melted away like the Cheshire Cat, Sir Walter Citrine, chairman of this committee, remains behind as his grin. When Mr Lyttelton, who is now to superintend "the whole process of production in all its aspects," lands in London, he will have to help him, not only Mr Bevin at the Ministry of Labour but Sir Walter Citrine and his committee as well. The regional organisation of production is a vastly important matter. It is as important that there should be enterprise, initiative and responsibility in each industrial area as it is that a single Minister should have drive, decision and power to act in Whitehall. In the First Two Weeks Plan for a Ministry of War Production, the present area boards, which are representative of employers, workers and the executive Ministries concerned and had been under the eyes of the Production Executive, were to be Lord Beaverbrook's special concern. They should now be Mr. Lyttelton's. They should cease to be simply committees and become agents with responsibility to see that orders from above are carried out locally with the utmost expedition and flexibility, and with the minimum of delay due to temporary shortages, at this plant or that, of labour, material or machinery available elsewhere in the region. They should add self help to central planning.

Soap Rations

No concessions have yet been introduced into the soap rationing scheme, although public opinion is very conscious of its defects. Major Lloyd George's statement in the House that pithead baths will receive soap free of the ration was

RISE IN VALUES.

All Fire Insurances effected on a pre-war or pre-Purchase Tax basis should now be increased.
