Four of the Irish banks issue half-yearly reports and hold half-yearly meetings. It is possible by studying these reports and the proceedings at these meetings to learn something about the trends in Irish banking as a whole. The following figures indicate the main movements of the four banks whose figures are available:—

(£'000)			
January-June	1940	1941	1942
Deposits	85,341	93,047	102,006
Advances and Bills	44,633	41,389	39,625
Investments	37,595	44,480	54,388
Net Profits	213	192	208

The outstanding feature is the large rise in deposits which have now reached record dimensions. This increase is the result of the active balance of trade caused by the difficulty experienced in obtaining imports from Great Britain and abroad. A great deal of money is condemned

to idleness owing to the lack of favourable opportunities for investment. To the extent to which the bank deposits have been swollen by this cause, the increase must be regarded as essentially of a temporary nature. Any improvement in the shipping position, not to speak of a cessation of hostilities, would lead to a withdrawal of deposits on a large scale. Hence the banks have increased their liquidity by holding large quantities of cash and money at call and short notice. Although one bank has experienced an increase in advances, the general trend has been downwards. This, again, reflects the lack of demand for accommodation owing to the scarcity of investment opportunities. The amount of bills outstanding is also reduced. In Ireland, the amount of bank bills is closely related to the activity of trade and commerce. All the bills are either agricultural or commercial. The Irish banks do not hold any Treasury bills, and at the present time there are no Irish Exchequer bills outstanding. One of the banks includes amongst its assets Treasury deposit receipts, but this is exceptional. The increase in deposits has its reflection on the assets side of the balance sheet in the great increase in investments. These are practically all either British or Irish Government securities. They are valued at less than their market value and constitute a very marketable asset, if not in the strict sense a liquid one. The increase in profits is a satisfactory reversal of the downward trend of recent years. It is the result of the increase in the total volume of resources together with the increased bank charges which came into operation this year. The revenue from the latter source is less than was originally hoped, since customers have evaded the charges by using cash for many transactions which they would otherwise have settled by cheque. The increased use of cash is one of the causes of the large expansion of the legal tender note issue.

The chairmen of the banks in their speeches at the half-yearly meetings reviewed the economic and financial position of the country. The outstanding feature from the banking point of view has been the growing inward balance of payments. In the six months ended May of this year, the inward balance amounted to £2,022,234. In the six months ended May, 1941, there was an outward balance of £2,970,020. This great change, aggregating practically £5,000,000, is attributable to an increase in exports of £5,475,736 against an increase in imports of only £483,482. The considerable increase in the export figure arises from increased values rather than increased volume of trade. The accumulation of sterling balances resulting from this change is the cause of some adverse criticism. In fact, however, Ireland is not exceptional in this respect. Many other countries trading with Great Britain, including the Dominions, have accumulated sterling balances, and practically every country on the Continent has accumulated similar balances in Germany. Most of the countries which have acquired sterling balances during the war have utilised them to redeem outstanding external debts. Ireland is, however, a creditor country and is not able to utilise its balances for this purpose. It is obvious, of course, that any serious depreciation in the value of sterling would have extremely adverse consequences for the Irish banks. The policy of Great Britain and the United States in combating inflation is therefore studied with interest, not untinged with anxiety, by Irish bankers and their customers.

Prosperous Agriculture

Agriculture is experiencing a period of prosperity, though nothing like that enjoyed in the last war. There is a good demand for cattle and horses, and the export of canned meat constitutes a new and growing trade. Owing to a shortage of supplies for home consumption, the export of butter and bacon has been stopped. The outlook of the dairying industry is far from satisfactory, and the problem of putting it on a profitable basis is being thoroughly investigated. In spite of the shortage of fertilisers the harvest promises to be good. If the war continues much longer there is a danger of the land being overworked. The fertility which is being used up for the new crops is not being replaced, and to this extent Ireland is living on capital. Land values are rising, but there is no sign of any boom in land such as occurred at the end of the last war. The recurrence of a boom is unlikely in view of the attitude of the banks, which advanced too liberally twenty years ago and involved themselves in some bad debts in consequence. Bank advances for the purchase of land will not, it is safe to forecast, be readily forthcoming. The secondary industries have been severely impeded by the reduction of imports of raw materials and

fuel. The supply of substitute fuels such as turf and wood is increasing, but their transport gives rise to many difficult problems. From the point of view of unemployment, the most serious shortage is that of cement, the supply of which has been drastically curtailed owing to reduced imports of coal. The biggest industry in Ireland outside agriculture is the building industry, which uses a great deal of cement. It is feared that a very large number of men will become unemployed in the building trade if increased supplies of cement are not forthcoming.

The Falange Today

[BY A SPANISH CORRESPONDENT]

THE development of a radical wing in the Falangist Party has been fostered by the very nature of Fascist doctrine, which is revolutionary and not conservative. It has also been assisted by the attempt to break down the opposition of the masses in the part of Spain occupied by the rebel army during the civil war (particularly of the peasants in Andalusia), and of the whole of the State later on. This led the Falangists—as before them the Fascists and the Nazis—to take over all the insignia of the working-class parties: the blue shirts of the Socialists, the black and red colours of the Anarcho-Syndicalists, their habit of addressing one another as "Comrade," and all the phraseology of revolutionary propaganda. The plight of the peasants, especially in the south, in Extremadura and Castile, is serious enough to move any young Falangist who honestly imagines the party to be a force that may revitalise Spain. The radicalism of these Falangists is a hedgehog attitude of defence both against the old Republican side, which charges them with subservience to the reactionaries, and against their own less radical party colleagues.

There are genuinely revolutionary elements within the Falangist ranks. Former Socialists and Anarchists have had to become members of the Falange, because nobody can get a job without showing a membership card of a Falangist syndicate. Anyone with the fatal word *Rojo* stamped on his identity papers is faced with starvation. By joining a Falangist trade union, a man can not only get a livelihood, but may also spread his own ideas cautiously among his fellows. Thus, in some places, in Barcelona for instance, employers are outraged to find that some of the very men who seized control of their businesses during the revolutionary period at the beginning of the civil war are now active Falangists, and that, in practice, there is not much difference between the old Anarchist and the new Falangist syndicates. In other districts, the fears of the upper classes are even greater, because these former left-wing elements are now to be found even in the Falangist Militia.

Some progress has been made along the path of the so-called national-syndicalist revolution. The Labour Charter, inspired by the Italian Fascist *Carta del Lavoro*, was intended as a step in this direction, although ultimately hedged with many reservations. Another step was the creation of the National Labour Syndicates, in which the workers' and employers' organisations have been merged. This was described as a step in the Falangist revolution towards the corporative state formed of "vertical syndicates" controlling all branches of economic life. In February, 1941, the railways were nationalised. State intervention in private enterprise is constantly increasing. Because of the food shortage, employers were made responsible for feeding their workers. About 140 Catalan textile magnates were court-martialled, and others fined millions of pesetas, on charges of selling goods above the official prices. Last January, there was a scare about a rumoured capital levy.

The Falange is now reported to be planning a scheme for agrarian reform, more radical than that passed by the Republic, and in accordance with the programme of the Falangist State. The scheme includes the suppression of *latifundia* (Point No. 18 of the Programme), redistribution of arable land in order to set up family estates (Point 19), and the restoration of the communal property of the villages (Point 22). It claims for the State the power to expropriate land without indemnity where ownership has been unlawfully acquired or enjoyed (Point 21).

A speech made by the Minister of Labour, Sr. Giron, to the miners at Linares in the South of Spain on May 2nd last, throws a very clear light on the revolutionary tendency of the Falange. Sr. Giron represents the party as a revolutionary force fighting on two fronts. Among the

working-class, it finds a lack of understanding, and scepticism—which he is anxious to dispel—as to the revolutionary character of Falange. With Conservatives, it is at grips with a "powerful resistance very cleverly organised." The real fight is between the Falange and the capitalist counter-revolution. What the workers really need is "more bread and fewer words." But Giron warns them that the working-class has no longer any power to start a social or economic revolution; only the Falange can do it. At present, there are people "ready to tolerate social advancement, not because they are in sympathy with the workers, but simply because they are afraid of opposing the Falange and General Franco." The Minister insists that the Falangists are not just indulging in vague revolutionary talk; they mean what they say. Revolution means "the elimination of every obstacle that hampers the development of the country." As a first step, he advocates nationalisation of the banks. The sovereign rights of the people must be released from the grip of big business. He quotes José-Antonio Primo de Rivera, the founder of the Falange: "We shall pull down the economic apparatus of capitalist ownership and substitute private, family, communal and syndical ownership." Besides the economic revolution, the Falange desires social revolution. It repudiates both the present social organisation and the social classes created by economic liberalism. Former Conservative allies, who gave encouragement and sympathy as long as they thought that only the Republic was going to be destroyed, are now showing bitterness and animosity against the Falange. General Franco made a speech on May 30th bitterly attacking the right-wing elements.

In reaction, the right wing—a minority within a minority—are now aiming at the revival of an absolute monarchy. In the good old Spanish tradition of the *pronunciamiento*, just as they plotted with the army against the Republic, they are now plotting with it against the Falange. The former Under-Secretary of the Falange, Luna Melendez, declared, on June 10th, that this "dangerous game, of which they ought to be ashamed," had failed. The latest developments [discussed in a leading article on page 323] leave the issue still in doubt.

Russia at War

The New School Year.—In the first days of September, the Soviet schools started their second school year in war time. Two million teachers and pupils have returned from the countryside, where they took part in the harvest campaign, to towns and townlets. The entire educational system has had to overcome enormous difficulties. Some idea of those difficulties is given by the fact that in Uzbekistan alone about two thousand new primary and secondary schools have been built this year; they will accommodate the children of evacuated workers. The figure gives an indication of the scale of the evacuation and of the masses of people who have been affected by it. The position seems to be more or less similar in the other reception areas throughout the Central Asiatic republics. The furniture and equipment of the new schools had to be provided by local, rural and urban organisations. Another difficulty, this time in Western Russia, has been the repair of school buildings, particularly in the areas recaptured by the Russians. It is said that no fewer than 100,000 buildings have been repaired; and in the liberated areas 2,000 schools which were destroyed, have now been rebuilt.

Interesting changes in the curriculum have been announced. Military training will figure prominently in the new teaching programmes. Rural schools will open special courses to train tractor drivers and engineers. The teachers have undergone special training in connection with these new requirements. Some 25,000 new teachers have finished special courses in agricultural subjects; and, in spite of war-time shortages, an enormous mass of new text-books has been issued. Over 15,000,000 text-books, it is said, have already been released; and many more are printing. The stress which is being laid by the authorities upon the resumption of normal teaching, frequently under the most appalling material conditions, is one of the most impressive features of Russian life in war time. The genuine enthusiasm for knowledge and education, which has been typical of post-revolutionary Russia, has not been quenched by all the recent sufferings of the Russian people.

them. All the Caucasians in a single fighting companionship will defend their Motherland—the Soviet Union.

Vegetables and Potatoes.—Five million Soviet industrial and office workers have been growing vegetables on one and a quarter million acres of allotments. This large scale kitchen gardening is to provide one of the most important food reserves during the coming year. How much importance is attached to it is shown by the fact that the Central Council of the Trade Unions has issued a special appeal to workers and their families to harvest vegetables in good time and without loss. Factories have also been cultivating their own kitchen gardens; and for the gathering in of their vegetables the workers and their families will be mobilised.

The main difficulty is proper storage of the vegetable and potato crops. Storage facilities have been short of requirements; and, some years ago, a substantial part of the crops used to rot away. Factories have therefore been obliged to prepare adequate storage facilities. Thus, the Coal Combine of Karaganda, the second biggest mining centre in Asia, has received an order to provide fifty cemented pits for pickling its vegetables. The Combine has not fulfilled this part of its "plan," and it is being pressed to make good the arrears as soon as possible.

As in the harvesting of grain so also in the harvesting of vegetables, transport shortages have been felt acutely. The shortage has been not only of tractor power; but also of horses and other draught animals. Still another difficulty is packing. Vegetable farmers have been asked to dry their vegetables; as the produce is less bulky after drying, it needs less packing materials. It also saves transport space, and is more handy for supplies to the Army. Farmers have also been urged to gather the "wild crops," of mushrooms and of all kinds of berries.

Shorter Notice

"Building Societies Year Book, 1942." Franeay and Co., Graham House, Tudor Street, London, E.C.4. 10s. 6d. net. 411 pages.

Although reduced in size, the "Building Societies Year Book" retains all its familiar features. Despite the inability to provide details of a small minority of societies which have suffered the effects of air raids, the 1942 edition is able to provide a comprehensive and accurate picture of the building society movement in the third year of war; of the financial changes attendant on the standstill imposed on private building, and of the measures which the movement is taking to prepare for the requirements of post-war rehousing.

THE BUSINESS WORLD

Window Dressing

BY "window dressing" is meant the practice followed by many public companies of so redistributing their assets on the date of their balance sheets or other periodical returns as to show a more liquid position than actually obtains on other days of the working year. It is more commonly applied to banks than to other companies. This is because the clearing banks, in preparing the monthly returns which they publish, dress their windows more often than other undertakings. Moreover, in the case of the banks, liquidity is a virtue of particular weight and publicity value; their redistribution of assets at set dates is therefore more vigorous than is customary with the general run of commercial and industrial concerns.

It is with reference to the banks' making-up that the term window dressing is most generally used, and it has for many years formed part of the accepted phraseology of the money market. Familiarity has not, however, endeared it to the banks. They have consistently objected to its alleged implications of the bogus and the meretricious. In their defence, they have evolved a justification for the practice which, at any rate until the beginning of the war, could be said to have some weight. The main argument they adduced in favour of window dressing was that it kept a healthy control over the discount market. The banks in working up their cash holding on balance sheet or "making-up" days normally do so by calling in short loans from the money market. This procedure subjects the discount market—on which the banks' second line of liquidity defence depends—to periodical tests of its own liquidity. Moreover, when all the banks are calling up loans on the same day—as on the final working days of the year and half-year—the discount market was, before the war, compelled to borrow extensively from the Bank of England. This in turn provided a severe test both of the quality and the volume of the paper which the market carried in its portfolios. These six-monthly visits to the Bank were a salutary safeguard against over-trading and against dabbling in bills which were not eligible for rediscount or collateral at the central bank.

This justification of window dressing has been largely demolished by the war. The large bulk of the bills run by the market now consists perforce of Treasury bills. No test of their quality is needed. As for the dangers of over-trading, it is not in its true discount business that the market needs control, but in its now overwhelmingly more important bond business; and in this direction the clearing banks' periodic calling up of loans can exert no control, since almost the whole of the discount market's bond financing is based on loans from other than clearing banks—the reason being that non-clearing bank money has for a long time past been available at lower rates than the fixed 1½ per cent charged by the clearing banks for bond money. It follows that the corrective of window dressing by the clearing banks does not touch that part of the discount market's activities in war-time which is perhaps most in need of occasional check and correction. In any case, the supervision of the Bank of England over the discount market can be trusted to prevent over-trading and achieve any other measure of control far more effectively than any indirect and incidental effect of window dressing by the clearing banks.

The war brought certain changes in the incidence of window dressing. Until September, 1939, each clearing bank made up its position on a certain day of the week and the monthly returns were averages of the weekly figures. On the outbreak of the war, it was announced that the monthly returns would no longer be published—presumably for reasons of "security" and to save labour. There was

an immediate outcry against this extension of the statistical "black-out," and the banks relented. The basis of their monthly returns was, however, changed. The banks ceased to make up once a week and began to do so once a month. It may be assumed that, if the banks had had their way about the discontinuance of the monthly returns, there would automatically have been an end to window dressing, except at the half-yearly balance sheet dates. It is perhaps unfortunate that the public was not allowed, for a month or two, to have this verification of the true purpose for which the banks go to the trouble of window dressing.

It might have been supposed that, with the advent of war and the virtual disappearance of such case as might previously have been pleaded for window dressing, the clearing banks would have abandoned, or at least moderated, the practice. The available evidence suggests that, on the contrary, the extent of this window dressing has increased appreciably during the past two years. The data for measuring the extent of the clearing banks' window dressing can be collected and presented with a very fair measure of accuracy; they will be found set out in the accompanying table, which goes back to 1938.

In column A the figure is given of bankers' deposits at

the Bank of England as at the close of business on Wednesdays and averaged for the periods shown. These totals have to be corrected in order to measure that part of the bankers' balances which is held for account of the clearing banks. The ratio of these two varies somewhat from time to time; but if it is assumed that clearing bank balances represent about 95 per cent of the total the margin of error will not be large. The figures of bankers' balances, so adjusted, are given in Column B. Next (in column C) are given the Bank of England's monthly compilation of notes and coins held by the clearing banks, based on Wednesday figures submitted to the Bank by the clearing banks, and, therefore, exactly comparable with the figures shown in columns A and B. By adding B and C a true figure is thus obtained of the clearing banks' total cash on each Wednesday expressed as a monthly average; these averages are shown in Column D. These figures of bank cash can be compared with the totals revealed in the clearing banks' aggregate monthly returns. These, shown in column E, will be found to exceed persistently and, latterly, by a considerable margin, the cash holding as calculated, not on the making up days, but on the Wednesdays of each week. The best measure of the discrepancy is to relate the published and true cash totals to the clearing banks' deposits (column F) and to contrast the cash ratios which appear in the banks' monthly returns (column G) with the true cash ratio (column H). Finally (in column I), the disparity between the two sets of ratios is expressed as a percentage of the higher. It should be added that even these figures tend to belittle the disparity between the true and window dressed figures. This is because four out of the eleven clearing banks do their monthly making up on Wednesdays, while the end of the year and half-year sometimes fall on a Wednesday. To that

admittedly small extent the Wednesday figures are also contaminated by window dressing, and do not accurately measure the cash position on non-making-up days.

The disparity between true and published cash ratios has increased considerably since the war. The banks may do their making up less often, but their compensation for this is to do it more vigorously. A discrepancy of less than 10 per cent in the period 1938 to 1940 grew to 17.1 per cent in 1941, while for the past 12 months the percentage has hovered around 20, exceeding that figure in the months of December and June, when, of course, window dressing reaches its half-yearly climaxes. Why this intensification of window dressing when the always slender justification for it has disappeared, and when the keen inter-bank competition, in which the brandishing of high liquidity ratios might have played some part, has been put in cold storage for the duration? The answer is probably to be found in the banks' desire to maintain profits and in their unwillingness to offend against the hallowed tradition of a minimum 10 per cent cash ratio. Given the present liberal character of the control of credit exercised by the authorities, the clearing banks no doubt consider that they can, with complete impunity, allow their cash holding to fall appreciably below the recognised traditional minimum and thus defend their profits against the encroachments made by the persistent reduction in advances, their most remunerative assets. They would be fully justified to reason thus. But if the banks are in effect working normally to an 8 per cent cash ratio, why make the pretence that the 10 per cent tradition is still sacrosanct? If the true figure were put in the shop window no confidence would be undermined, no business would be lost, and something would be gained for the cause of accuracy and integrity in banking statistics.

Finance and Banking

Fall in Bill Rate

The feature of the money market this week has been the sudden increase in the banks' demand for bills. The market has been rather better placed than in previous weeks to satisfy this demand since at last Friday's tenders for Treasury bills it obtained a 44 per cent allotment as against the previous 31 per cent figure. The higher allotment was obtained at the cost of some decline in the rate. The syndicate evidently decided that they must increase their allotments of bills, and consequently raised their price for the 91 day bills now being tendered for, to £99 15s. In order to meet this competition the official tenders had to be placed at £99 15s. 1d. and the average rate at which the £75,000,000 of bills were issued fell to 19s. 10.62d. per cent, the lowest figure recorded during the war. To the discount market the increase in the bid price means the virtual elimination of all profit on turning over bills to the clearing banks or running them

with clearing bank money, the turn being 0.164d. per cent. But the bill side of the business is now very much of a side show to the discount market. The cut in the bill rate may, on the other hand, have played some part in stimulating the rise in short-dated Government bonds which in these days are of far greater concern to the market. It is only by appreciating this pull of interest within the market between the margin of profit earned on bills and the effect of low bill rates on the bond market that one can understand the policy of the market syndicate at the Treasury bill tender. The banks' keen demand for bills is an indication of the ease of money which has been so apparent this week. The Bank return shows bankers' deposits at £831,505,000, an increase of £8,549,000 on the week. The main contribution to this expansion in bank cash was a running down of Public deposits by £6,679,000, while in addition there was an increase of £5,470,000 in Government securities. The circulation increased by a further £1,488,000 over the week.

Bank Credit Expansion

Last month's slight setback in the volume of savings reaching the Exchequer through the tap issues of the Government had its counterpart in increased direct extension of bank credit to the Government. The main movement, in this context, has been the increase in Treasury deposit receipts, this item showing an advance of £27,000,000 in the clearing banks' aggregate returns for August. In addition, discounts have risen by £10,850,000, and it may be assumed that the whole of this movement was accounted for by Treasury bills. The banks also saw fit to increase their holdings of longer term Government paper by £6,685,000 during the month. An increase of £1,527,000 in short loans reflects a larger volume of Treasury bills held by the discount market. As against this mounting tide of

Government paper held by the banks, the item of loans and advances continues to decline. The drop last month amounted to £12,344,000, and has carried the total to £783,546,000, the lowest figure since the end of 1935, when bank deposits were £1,200,000,000 lower than they are to-day. Last month's changes among assets have left the total volume of bank credit outstanding higher by £40,651,000, this being the increase in deposits. At £3,304,648,000 these are now within £24,507,000 of the record set up by the seasonally inflated figure of December 31st last. As usual, the expansion in deposits has been accompanied by an almost exactly corresponding movement in bank cash, and the latter, at £351,278,000, represents 10.6 per cent of deposits as against a ratio of 10.5 per cent for the previous month.

Mortgage Bank for Australia

Despite the almost unbroken record of failure which has attended the intrusion of the Australian States in the realm of rural banking, the Commonwealth Government is determined to push on with its plans for establishing a Mortgage Bank. Mr Chifley announced in the course of his recent Budget speech that the necessary legislation for setting up such a bank "as a new department of the Commonwealth Bank" would be introduced in the near future. With the principle of mortgage banking, it is impossible to quarrel. It is the record of its application in Australia, as well as the astonishing timing of the measure, which raise doubts about the proposal. As so many items in the Commonwealth Government's credit policy, the inspiration for the present proposal is to be found in the report of the Banking Commission which appeared in 1937. This recommended that one or more mortgage banks should be established to provide facilities for fixed and long-term lending. Much of the agricultural credit has hitherto been granted by the trading banks, and the Banking Committee suggested that the possibility of these credits being suddenly recalled, together with uncertainties about the rate of interest charged, made them an undesirable form of agricultural credit. As far as rates are concerned, the trading banks would not now be allowed to charge more than 5 per cent. At many points their agricultural credit activities have had to meet the competition of state enterprises of various kinds, pastoral finance companies and rural or credit

fancier banks. There have been some instances of such state banks being conservatively and successfully managed, but their record is in general one of failure.

The biggest of these was that of the Agricultural Bank of Western Australia, which has lost about £12,000,000 of the capital originally supplied by the State Government. It is now confining its activities to nursing existing assets which are secured by 13,000 properties, of which 3,000 have been abandoned. The Rural Bank of New South Wales, another of these institutions, had 6,140 long-term loans outstanding on June 30, 1938, and of these, 46 per cent were in arrears. Of the 10,281 overdrafts no less than 52 per cent. were in arrears. In general these agricultural banks have been launched with essentially political and not economic motives. As was stated for the Agricultural Bank of Western Australia, in evidence before the Banking Commission, "we are not a bank in the ordinary sense, we are farm builders, we used to take a virgin block of land and a man with no capital, and would set out to build a farm." Hence, it was argued that the policies of this and similar institutions should be free from the strictures of banking standards. As the proposed Mortgage Bank is to be organised and staffed by the Commonwealth Bank, one may rest assured that an effort will be made to keep clear of the mistakes perpetrated by some of the state institutions. The new bank will be able to offer more attractive terms to farmers than the state institutions, since it has already been announced that it intends to lend on long-term at a lower rate than the 5 per cent ceiling set for the trading banks' overdraft rate. It follows that the new bank will probably get the cream of such mortgage business as is available, and that its intrusion in this field will leave the various state rural and agricultural banks with even more unenviable prospects than those which face them to-day.

Australia's Overseas Obligations

A badly transmitted summary of the budget speech of Mr Chifley, the Commonwealth Treasurer, and an even more unfortunate interpretation of one of its sentences in an organ of the British press, conjured up a momentary vision of Australia defaulting on its external debt. The phrase in question was one in which Mr Chifley suggested that the Australian Government had arranged with the British Treasury to postpone the settlement of financial obligations which the Commonwealth could not meet. This arrangement, apparently, had nothing to do with the bonded sterling debt. It refers to the war indebtedness incurred by the Commonwealth in the United Kingdom and does not affect the obligations to overseas bondholders or any other contractual liability. The official correction of the false interpretation of Mr Chifley's speech, incidentally, provides the first official intimation that the war expenditure of Australia in this country has had no impact on Australian balances here, but is accounted for in separate inter-Treasury accounts which are carefully segregated from the other overseas payments and receipts of the Commonwealth. It is probable that this system of inter-Treasury accounting applies to all the Dominions, and that the arrangements are reciprocal and cover war expenditure by the United Kingdom in the Dominions concerned. In the case of Canada, the position is, of course, governed by the special "free gift" scheme. But elsewhere debits and credits are arising, comparable in their nature to the lend-lease operations, but differing from them in that they are expressed in monetary terms and recorded by the parties concerned in a series of inter-Treasury accounts.

Investment

Equity Rise Continues

With scarcely a pause, the rise in industrial equities, which was a feature of last month's markets, has continued throughout the past week, to the accompaniment of virtual stability in fixed interest stocks. While prices have risen in general, attention has centred mainly on home railway securities, with subsidiary centres of interest in the shipping and oil share markets. The dangers attaching to railway stocks in the post-war period have been stressed here often enough. But the latest rise in this class of investment is sufficiently explained by the fact that their figure in *The Actuaries' Investment Index* fell last month by about the same amount as the total index rose. It is evident that the investor is conscious of the risks he takes, but that some people find a current yield of from over 5 to as much as 10½ per cent, in the case of London and North Eastern second contingent preference, too attractive to be resisted. The rises in shipping shares and in oils are both recoveries from earlier falls which occurred against the general trend. If a wider view is taken of recent movements, the contrast between the rise in equities and fixed interest stability continues to be noteworthy. It cannot be said to have assumed striking dimensions, but, since mid-April, the fixed interest index of *The Financial News* has fallen by 1½ per cent, while the equity figure has risen 10½ per cent. The former is, however, still above the level of early December, 1941, when the latter reached its temporary peak of 83.2, compared with the present figure of 84.5. Taking a pre-war comparison, the latter figure was that ruling in early June, 1939, when the fixed interest index was around a temporary high of 120.5, against the current figure of 133.3. There is, thus, a very long way to go before anything approaching the pre-war relationship between the two figures is restored, but the general run of the figures does suggest that the effects of vesting orders, on the one hand, and of special taxation of company profits, on the other, have been exhausted. Failing the adoption of any fresh expedient, not so far in view, it is probable that longer term movements in market values will conform to a new set of values. Instead of the rise in equities being brought about by a fall in the rate of interest, induced by engineering special demands for certain types of fixed interest stock, equities will rely more and more on post-war values for their attraction. This means that the classic picture of a rise in equities going hand in hand with falling fixed interest stocks is a distinct possibility. There is, however, little sign as yet of any movement to transfer substantial sums from the latter to the former. That is scarcely likely to come until it is possible to place a term to the duration of wartime controls.

Stock Exchange Agents

The Committee of the Stock Exchange, London, has this week confirmed an alteration of the statement by which members are required to support applications of agents for admission to the general register, which has, potentially at least, important implications. In the past, a member who has put up an employee as an agent for obtaining business has been responsible for his acts, but no such responsibility has attached to the broker in the case of other agents. Now, he is required to state that, after full enquiry, he is satisfied that the applicant is a fit and proper person to be placed on the register, and that there is no information, beyond that given, which ought to be placed before the Committee to enable it to reach a decision. This appears to mean that, should an agent not conform to whatever rules of conduct obtain at the time, the member who supported his application will be liable to disciplinary action. This is another step towards securing uniformity of conduct throughout the profession, and, if the new powers are wisely used, should result in a substantial further measure of protection, both to the investor and to the more serious type of broker. Everything depends, of course, on the administration of the rule, but the time appears to be far distant when there need be any anxiety about the profession developing the undesirable attributes of the closed shop. The change becomes fully operative at once, since all registrations have to be renewed yearly, on January 1st.

Guinness Taxation

Although the accounts of Arthur Guinness disclosed a moderate fall in profit after tax from £1,391,104 to £1,230,571, Lord Iveagh was able to reveal, at the annual meeting, that trading profit was greater on the year, and that the fall in the net figure was largely due to a time lag in obtaining credit for taxation payable in Eire. It results from this that there will, in the current year, be a corresponding relief, which should be a matter of considerable importance to shareholders. Lord Iveagh's speech makes no distinction between the business in this country and that in Eire, but the company has experienced an increased demand and secured higher sales. The rise in trading profit was secured despite the exhaustion of stocks of materials purchased when prices were far below the present level, which is, in general, approximately double the pre-war figure. Unfortunately, no clue is given as to when the old stocks were used up, but attention was drawn to the position a year ago. The exhaustion of cheap stocks of materials must by now be a general experience among brewery companies, and it does not, so far, appear to have had any serious effect upon earnings. Unlike tobacco, where the very sharp increase in tax in the last budget has considerably reduced demand, the consumption of beer is still on the up grade, and is likely to be limited only by raw material supplies. This is especially true at the present time, when the arrival of troops from overseas exceeds fresh drafts to the various fronts, a state of affairs which is likely to continue until the time arrives for the final effort.

Coal Mining Yields

Owing to a printer's error, the final line of the first table in the article "Coal Mining Companies," on page 307 of *The Economist* of last week, was given as shillings and pence instead of rates per cent. The correct reading, which appeared in some copies, is Butterley 7.0, Carlton Main 10.5, Doncaster Amalgamated 7.3, Manchester 5.6, and Yorkshire Amalgamated 6.3 per cent.

Company Notes

Morris Motors Expansion

The maintenance of the tax-free dividend on Morris Motors ordinary capital at 17½ per cent, dealt with in *The Economist* of September 5th, does rather less than justice to the results as disclosed by the full accounts. These show a rise in gross profit from £1,951,164 to £2,224,087. A substantial part of this increase is absorbed by higher maintenance charges, and almost all the remainder by a sharp rise in ARP expenditure, and the doubling of special provision for rehabilitation of factories for post-war production, which took £100,000. Tax provision is, however, lower, and the dividend is covered with half a point to spare, whereas a year before it was underearned by 4.3 per cent. Details of earnings for the past three years are set out below:—

	Years ended December 31,		
	1939	1940	1941
Gross profits	2,385,122	1,951,164	2,224,087
Maintenance	313,696	329,934	455,814
Depreciation	238,980	224,818	228,504
Total surplus*	1,991,947	1,520,913	1,634,520
Taxation	628,721	774,282	608,380
Special appropriations	405,611	172,537	314,312
Preference divs.	225,000	225,000	225,000
Ordinary shares:—			
Earned	732,615	349,094	486,828
Paid	662,500	463,750	463,750
Earned %	44.2	113.2	118.0
Paid %	40	117½	117½
Dividend equalisation reserve	75,000	Dr. 100,000	25,000
Carry forward	\$248,450	233,794	231,872

* Including other income after charging staff fund allocations.
† Tax free. § After special credit £933.

Lord Nuffield states in the report that the better result is due to increased turnover at a slightly lower margin per unit. There is evidence of this in the consolidated statement of the company, and its principal subsidiaries, which shows a rise from £9,985,868 to £11,338,560 in total current assets, and from £7,380,783 to £7,786,665 in net liquid assets. The rise at the date of the accounts was due to a jump of over £3,000,000 in debtors to £4,794,775, cash and stock in trade being sharply and investments slightly lower on the year. The expansion in net liquid assets has been financed mainly by heavy depreciation, but reserves of the group show a rise of £150,000. The balance-sheet of the parent company also contains a marked increase in debtors, financed, in the main, by loans from subsidiaries. There is no special statement by the chairman, and none will be made at the meeting. There is good reason to suppose that the demand for the products of the group will continue keen during the war, and the post-war prospect must depend upon ability to adjust production to whatever the demands of that period may be. The 5s. units of ordinary stock, at 33s. 6d. cum dividend, yield some £5 5s. 8d. per cent subject to tax at the full standard rate.

Thames Haven Oil Wharves

The ban on the publication of results by London and Thames Haven Oil Wharves having been lifted, the company presents reports for the two years 1940 and 1941. It may be recalled that, early in the second half of 1940, a reconstruction scheme was put into operation. Whether for that reason, or for others, wharf profits rose from £133,909 to £165,618, but only to relapse in 1941 to £100,207, largely owing to events beyond the control of the management. The reorganisation substantially reduced the bank overdraft, and got rid of the liability on CIM Holdings preference, but it also brought into being a large preference capital, and left the liquid position still far from satisfactory. The need to provide for bank interest, as well as heavy taxation and war-damage contributions, cuts deeply into earnings, with the result that the net amount for 1940 was only sufficient to cover some nineteen months' preference dividend, the actual amount paid being for nine months. In 1941, the net figure was a mere £6,929, or not much more than two-thirds of the sum required to meet the three months' dividend paid. Thus, on the two years, dividends on the cumulative preference capital were provided for one year only and the carry forward was increased from £71,362 to £108,883. Actually, the distribution of a half-year's dividend, bringing the payment up to September 31, 1941, is recommended out of the profits of the first eight months of the current year, which show some improvement over the figure for the corresponding period of 1941. The balance-sheet is of no very great value, since no adjustment is made for damage to properties by enemy action, while the principal associate, *Compagnie Industrielle Maritime*, valued at £806,284, is in enemy hands. At the end of last year there were creditors of £112,197 and a reduced, bank overdraft of £517,832, against liquid assets of £99,689. It is not yet clear that the company will be able to earn the dividends on the preference capital, which went to shareholders of the old CIM Holdings company, and it is certain that no reward to the unfortunate investors in the old London and Thames Haven company, who hold the ordinary shares, is in sight.

Two Heavy Industrial Results

The results of two of the smaller heavy industrial concerns for the year to June 30 last are indicative of the somewhat uneven experience last year of the industry as a whole. *Vaughan Brothers (Drop Forgings)* show a decline in disclosed income, after depreciation, from £145,851 to £85,434, which, although accompanied by a reduction in tax liability from £125,327 to £68,335, is responsible for a fall in equity earnings from £19,973 to £16,549. The ordinary payment is correspondingly lower at 20 against 22½ per cent, covered by a rate of 20.4 against 23.2 per cent, and there is a small addition to the carry forward, which is raised from £13,358 to £13,730. The accounts of *Brightside Foundry and Engineering* for the same period show, on the other hand, an increase in profits after tax, except tax on dividends, and, in the latest year, after staff pensions, from £78,415 to £96,493. The ordinary capital again receives 25 per cent covered by a rate of 81.4 against 59.0 per

cent; the transfer of £25,000 to war contingencies is repeated, and the carry forward raised from £47,937 to £72,445. The divergence is no doubt partly to be explained by circumstances peculiar to *Vaughan Brothers*. The chairman Mr Frank H. Vaughan, points out that earnings in the previous year were abnormally high and that the disclosed figure was struck after providing for ARP, war damage insurance and war risks contribution. The balance-sheet of *Vaughan Brothers*, despite a sound liquid position, does, however, suggest that turnover was lower last year, since there are declines in both debtors and creditors. Stocks and work in progress, on the other hand, show a modest rise from £51,398 to £59,888. The position appears to be exactly the reverse of that experienced by *Brightside Foundry*, whose turnover, according to the chairman, Mr Ambrose Firth, increased by 10 per cent, but whose total of stocks and work in progress declined by 6½ per cent, from £3,198,575 to £2,995,954. It is very probable that the apparent contradiction is explained by the varying tempo of orders and payments, a factor which makes more apparent difference to the balance-sheets of the smaller concerns in the industry than to its leaders.

British Sugar Stocks

The principal feature of the accounts of the British Sugar Corporation for the year ended March 31st is a further growth in stocks from £8,705,515 to £13,417,450. The counterpart of this is a rise in Ministry of Food advances by £5,100,000 to £12,250,000. Other creditor items are lower on the year, while debtors, investments and cash all show moderate rises, with the result that there is a slight increase in net liquid assets to over £2,000,000. The figures of profit are very largely meaningless, since the Treasury has agreed to allow the Corporation a reasonable rate of profit, and adjusts its payments accordingly. The position as revealed by the accounts of the past three years is set out below:

	Years ended March 31st.		
	1940	1941	1942
Profit	1,182,143	777,164	863,879
General expenses	104,130	101,105	93,916
Taxation reserve	†505,000	151,000	136,000
Net interest	5,331	87,175	285,015
Debt redemption	22,989	23,648	24,305
Depreciation	220,000	210,000	201,000
War damage	...	80,000	59,265
Available for dividend	324,693	124,236	64,378
Paid on Ordinary 4½%	129,375	112,500	112,500
Carry forward	‡42,514	54,250	*36,128

† Includes £75,000 Special Duty Reserve.
‡ After £59,000 Pensions provision for past services and £155,000 Dividend Equalisation Account.
* After crediting £30,000 from Contingencies Reserve.

The rise in net interest paid is more than double the increase in the published profit figure, and although all other charges are lower, the net amount available for dividend is considerably reduced. Actually, net earnings, before providing for war damage contribution of £59,265, exceeded the amount required to maintain the ordinary dividend at 4½ per cent by only £11,143. There is no statement in this year's report as to the earnings which the Treasury consider reasonable—last year it was 3½ per cent. The Corporation received a guarantee that it should retain its due proportion of the economies resulting from the profit-sharing scheme. These have risen on the year from 1 to 1½ per cent on the ordinary capital, but as the amount actually available for that security is reduced, the value of this guarantee seems doubtful. The price of the £1 shares is near the best of recent years at 19s. 3d. ex dividend, at which the return is some £4 13s. 6d. per cent.

Industry and Trade

Coal Production

The gravity of the coal position was emphasised at the annual conference of the Trades Union Congress. Mr H. Horner, speaking for the Mineworkers' Federation, pointed out that none of the measures now in hand are likely to remove the danger of a critical situation in the coming winter; while the miners had been urged "to exercise their minds and bodies to produce more coal, the greatest care must be exercised in its use." In a statement issued last week on behalf of the Mining Association, it was asserted that there is room for the production of an additional 10-13 million tons a year, equivalent to 5-6 per cent of the 1941 output, "without any undue effort on the part of the workers." A recovery of the one in 57.8 cwt. per manshift at the coal face, lost since 1941, would yield an additional 3,500,000 tons a year; the return of the 11,300 miners to be released from the Forces should provide 3,400,000 tons a year; and a reduction of "voluntary absenteeism" at the coal face by 2½ per cent would add a further 5,750,000 tons in a year. An immediate increase in production of the order of 5-6 per cent, if it were feasible, would ease the supply position very considerably during the next winter; but it might be rash to take it for granted—"evidence to date (said the Minister of Fuel and Power in the Commons on Tuesday) is not at all reassuring." While it will obviously be impossible to satisfy all the demands for coal, it may still be possible to prevent hold-ups in production or transport through lack of coal. The total supply of coal available for home consumption is bigger than before the war, and the prospective shortage, at the current rate of production, is likely to be a shortage in relation to money demand rather than a shortage in relation to vital needs. In short, the fuel problem is one of distribution and economy in use as much as one of production.

Transport Problems

The Government's policy of concentrating as much traffic as possible on the railways, the canals and coastal shipping has been so successful this summer that a substantial unused margin of road transport capacity has emerged, with a consequent saving in petrol and rubber. Not unnaturally, this has given rise to criticism from the road haulage industry whose earnings vary with the volume of their activity. In view of the fact that the unused margin of road transport capacity is due partly to the lull in air raids—which may not continue indefinitely—and that circumstances can be envisaged which may give rise to a sudden spurt in the demand for road transport, it is vital that the "reserve" should not be dissipated. The technical and financial problems involved in its maintenance must be the concern and responsibility of the Government.

Rubber Salvage

Rubber has been added to the evergrowing list of materials which it is an offence to destroy, abandon or mix with other materials and the salvaging of which is urged. The need for the utmost stringency in the use of rubber has been apparent for some months. It is not enough to forbid the destruction of rubber. What is needed is an imaginative campaign to persuade the public to give up all articles made of rubber which are not essential. Rubber mats, for example, are to be found in use in every shop, as well as in many homes, and these and similar articles could be dispensed with, without hardship. A campaign on the lines of Lord Beaverbrook's aluminium collection in 1940 would provide a stimulus for the giving up of rubber which is still in use. Adequate receiving depots should be set up and collections must be made efficient. The requisitioning of stocks in shops and warehouses of non-essential rubber goods should be considered. It is not untrue to say that rubber is one of the United Nations' scarcest materials. No effort should be spared to find substitutes for it where possible and to augment the amount of waste available for reclamation.

Cotton as a Munition

Cotton has been ranked as a munition of war since production was required to be increased, and the industry found itself in difficulties. An exhibition is being held in Manchester to illustrate precisely in what ways cotton is an essential war material. Its activities are not confined to producing ordinary clothing for the Forces. The numerous articles which the Army classifies as "webbing equipment," such as respirator cases, cartridge carriers, ammunition pouches, rifle slings, water bottles, binocular cases and revolver holsters, are all made from cotton. In some forms cotton goes into ammunition. Tank drivers wear fire-proofed cotton overalls; cotton is used in the making of their crash helmets, and they sit on cotton-covered seats. Closely woven cotton gabardine makes windproof flying suits, and airmen wear flame-resisting cotton poplin waistcoats. Petrol tanks for aeroplanes are being made with self-sealing covers, made of rubber interposed with cotton fabric. Another new use for cotton is in alliance with plastics. Stout cotton fabric is impregnated with resin, and moulded under pressure to form rigid parts for all kinds of machinery and aeroplanes. These parts are being used to replace metal. A ½-inch board composed of fifty layers of treated cotton fabric is shown in the exhibition. The Russian climate demands the use of cotton in the manufacture of grips for ski-troops and snow suits for Arctic wear. The exhibition puts cotton in its place in the war effort, and the President of the Board of Trade said last week that the wartime organisation of the cotton industry had been settled, and was unlikely to be varied.

Six Months of Retail Trade

The retail trade report for July and the Bank of England's index numbers of the average value of daily sales appear in the *Board of Trade Journal* of September 5th. The trend of sales between June and July of the first two war years is repeated, with a fall in the index (1937=100) from 108 to 104. Before the war, the tendency was for sales to rise between these months. The index of the value of sales of apparel, at 89, was the lowest this year. Trading results for the first half of the current retail year can now be compared with the same period in 1941. Total sales this year by value, were 2.6 per cent above 1941. Only in the south of England did sales drop, and there the fall was small. In London, trade improved, probably owing to freedom from air raids. Rises in the various categories of trade were outstanding in Central and West End London. Food and perishable sales rose by 3.7 per cent over the whole country; the rise in London was 12.7 per cent. Turnover in other merchandise advanced only 1.2 per cent and decreases were recorded in the Midlands and South Wales and in the South of England. The London rise was 17.9 per cent. The total rise for the furnishing departments was as much as 23 per cent; sports and travel goods sales declined by 12.3 per cent and in most of the other categories the range was within 7 per cent, either above or below last year's sales. It is likely that the fixing of profit margins for non-utility apparel and piece goods will exert a downward influence on the indices for August.

Coal for Gas

In a Note on page 313 of *The Economist* on September 5th, figures were given showing the consumption of coal in the generation of electricity by authorised undertakings, as well as the distribution of consumption by categories of consumer. It is, perhaps, not generally realised that the quantity of coal used in the manufacture of gas by authorised undertakings was still appreciably bigger before the war (publication of statistics has since been suspended) than that converted into electricity. Thus, no less than 18½ million tons of coal were used by the gas industry in 1938, compared with about 14 million tons used in the generation of electricity. True, these figures do not provide a satisfactory basis of comparison because of the large quantity of residual products yielded in the process of carbonising coal by the gas industry. In 1938, for example,

COMPANY MEETING

ANGLO-CEYLON AND GENERAL ESTATES COMPANY, LIMITED

SATISFACTORY RESULTS

SIR EDWARD ROSLING'S STATEMENT

The 56th annual ordinary general meeting of the Anglo-Ceylon and General Estates Company, Limited, was held on the 7th inst. in London, Sir Edward Rosling (chairman and managing director) presiding.

The following is an extract from the statement by the chairman circulated with the report and accounts:—

Since we last met Ceylon has experienced air attacks, but the enemy was driven off with such loss by the sturdy defence they encountered that possibly they may not care to pay another visit.

The results of the year's working may be considered very satisfactory. The net profit, after deducting debenture interest, management expenses, and all charges, amounts to £249,856, as compared with £143,150 in the previous season, but owing to the incidence of Excess Profits Tax and

a measure of double taxation we have to set aside not less than £200,000, leaving £49,856 available for dividend, as compared with £45,908 a year ago.

DIVIDEND OF 7 PER CENT

The directors now recommend a final dividend of 4½ per cent., free of tax, which, with the interim already paid, makes 7 per cent., free of tax, for the year, carrying forward to the current season a balance of £53,764.

It will be evident to all that present legislation as regards Excess Profits Tax imperils the cash position of most trading concerns, and whilst for the time being we are able to meet the strain on our own liquid resources, there will come a day in common with other concerns when it will be difficult to meet these heavy demands if maintenance and improvements of assets are properly carried out.

This service invariably costs more than is allowed as a deduction from profits for taxation purposes, but if neglected it has a cumulative adverse effect on production in the future.

The reports from the Ceylon estates generally are satisfactory; our tea crop shows an increase of nearly 250,000 lbs., and the price realised was some 2½d. above the preceding year. The increase in the price is the result of the strong demand

from outside markets. Cacao, although not equal to last year's bumper crop, had a quite satisfactory yield of 9,244 cwt., and realised 42s. 5d., as compared with 28s. 7d. The rubber crop amounted to 334,668 lbs., an increase of 108,000 lbs.

THE SUGAR CROP

In Mauritius, also, our estates have worked smoothly, and the sugar crop, although less than that of a year ago by some 5 per cent., was still satisfactory, amounting to 39,400 tons. The Government purchased the whole of the crop.

It is difficult to speak of the prospects for the current season; we are endeavouring to produce maximum crops of both tea and rubber, although in the latter case we are undoubtedly shortening the economic life of our rubber trees, whilst any present benefit that might result is absorbed by Excess Profits Tax.

The war has, of course, made things more difficult both in Ceylon and Mauritius. We fully appreciate the difficulties under which work is carried on, and our thanks are due to our managers and their respective staffs in Ceylon and Mauritius for their wholehearted co-operation during the past year, and also our agents in Ceylon and our staff in London.

The report and accounts were unanimously adopted.

(Continued from page 342)

when 18½ million tons of coal were carbonised, the industry produced, apart from 340,000 million cu. ft. of gas, nearly 12½ million tons of coke and breeze, 237 million gallons of tar, as well as large quantities of sulphate of ammonia and certain other products. But while only about two-fifths of the electricity sold to consumers before the war was used for lighting, heating and cooking, the bulk of the supply of gas is used for domestic purposes.

Industrial Diseases

The *Ministry of Labour Gazette* publishes figures of industrial diseases as well as of fatal industrial accidents. (Statistics of the latter were given in last week's issue of *The Economist*, on page 313.) Cases of certain industrial diseases and deaths resulting from them have to be reported under the Factories Act, 1937, and under the Lead Paint (Protection against Poisoning) Act, 1926. The table below shows the number of cases reported between January and July in 1939, 1941 and 1942. Deaths include all fatal cases reported during the period whether or not they have been included in the classified figures. The most striking fact emerges that in almost all categories the cases show a sharp decline in the succeeding years. The totals are higher than before the war, but this is attributable (apart from the increase between 1941 and 1942 in lead poisoning) to the outstanding increases in cases classified as "other poison-

	INDUSTRIAL DISEASES		
	January-July		
	1939	1941	1942
Lead poisoning	69	33	46
Other poisoning	11	197	154
Anthrax	24	16	13
Epitheliomatous ulceration (skin cancer)	100	80	75
Chronic ulceration	90	74	52
Compressed air illness	11	...	...
Total	305	400	340
Deaths (from all causes)	25	21	18

ing." In 1941, of the total of 197 "other poisoning" cases, 169 were of aniline poisoning. In 1942, 127 cases of aniline poisoning were reported out of a total of 154 "other poisoning." Aniline is obtained mainly from coal-tar, and as well as its use in the manufacture of dyestuffs, has innumerable war uses. While the absolute decrease in the number of cases reported in the other categories of industrial diseases is gratifying, it must be remembered that the statistics are no guide to the relative number of cases. Figures are lacking to enable the cases to be expressed as a percentage of the number of workpeople liable to contract the diseases. Occupational redistribution must be taken into account in expressing views on the improvement or otherwise in the incidence of industrial diseases. Unfortunately, no precise data on this movement is available.

Platinum as War Material

Since the position of silver in industry was discussed in *The Economist* on August 22nd (page 247) new measures have been taken in the United States to increase supplies of silver for munition purposes. They include a War Production Board Order (No. M. 199) which prohibits the use of silver after October 1st for any purpose below A-3 priority rating. Silver, however, is not the only precious metal which has an important place as war material. On June 2nd last, the United States War Production Board issued a general Conservation Order (No. M.162) which declared platinum to be "a strategic material of war" and imposed a strict control over stocks, sales and purchases in order to prevent any supplies of it from falling into the hands of the enemy. Platinum not only has an exceedingly high melting point, which makes it suitable for use in such things as the equipment of metal furnaces, but its resistance to acids is stronger than that of any other metal. It is, moreover, extremely ductile and malleable and has the lowest coefficient of expansion of any metal. These properties make platinum indispensable for a substantial number of purposes, including its use as catalyst in the production of nitric acid for explosives and as raw material for alloys, scientific war instruments, fire-control apparatus, fuses, chemical processes and so forth. Fortunately the United Nations platinum supply position is strong, and there is at present no question of shortage. The most important platinum producing area to-day is Canada, which supplies just over one-half the total world output of between 600,000 to 700,000 troy ounces per annum, as a by-product from the copper-nickel mining operations in the Sudbury (Ontario) area. Russia, the next largest source, produces about one-fifth of the world total in the Urals. The United States, chiefly Alaska, Transvaal and Colombia (which supplies its whole output to the United Nations) are to-day the only other producers of importance, although in normal times Belgian Congo and Abyssinia used to ship sizeable quantities of platinum. The Axis countries, on the other hand, do not produce platinum, but Germany had accumulated considerable quantities, mainly of Russian origin, before June, 1941. Since considerable quantities can be recovered from jewellery—the "expropriation" of private property has been developed to a fine art in Axis countries—it would be too optimistic to expect early and major dislocation in the Axis war output from a platinum shortage.

With next week's issue of *The Economist* (September 19th), the Annual Banking Supplement will be published. Its contents will include, in addition to the usual statistical matter, articles on wartime banking in Britain, the United States and the Soviet Union.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: all dealings are for cash

THE tenacity of Russian resistance, the successful conclusion of the first phase of the battle of Egypt and Mr Churchill's encouraging statement have also served to maintain sentiment in the markets during the past week. Turnover, as reflected in the total of bargains marked, showed some improvement on the previous week, while the upward movement of equity shares continues as yet unchecked, despite profit-taking. The week has also seen a revival of interest in railway stocks, while shipping and oil shares have enjoyed renewed support. Business in the *gilt edged* market was light, irredeemable stocks easing slightly after their recent improvement, although good support was apparent for short-dated securities. In general, however, actual turnover was insufficient to affect prices markedly. In the foreign bond market, Brazilian stocks, after their recent decline, reflected renewed buying in small but persistent advances, the 4 per cent loan of 1889 being prominent with a rise of 2½ points on the week, while other issues improved to lesser extent. Elsewhere in the *foreign bond* market Chilean bonds were firm, and among European stocks French Railway Sterling bonds were in demand. The number of daily bargains marked in the *home rail* market was more than double the preceding week's total, and steady buying occasioned good gains for junior stocks. GW and LMS ordinary stocks rose ½, and Southern preferred a point, while among Berwick issues the 4 per cent 2nd preference stock was in demand, although both the preferred and deferred reacted after their advance at the close of last week. Later, some profit taking reduced earlier gains of junior issues. In the *foreign rail* market, turnover was insufficient to affect prices to any extent, but a fall of ¼ for Canadian Pacific at the week-end was only partially recovered in the early part of this week.

Average daily markings of almost 1,200 bargains reflected the continued demand for equities in the *industrial* market, while the ordinary share index of *The Financial News* continues to advance steadily. Among many small improvements for brewery stocks Guinness was outstanding with an advance of 1s. 9d. on the week, but Bass fell 2s. over the same period. There was little change in tobacco shares, although Gallaher improved slightly on moderate

support. Small gains were scattered throughout the heavy industrial section, where Whitehead Iron and Ruston and Hornsby were prominent, while Indian Iron advanced steadily. The shipping group was rather more active than of late, and in the general advance P & O deferred and Union Castle were outstanding with rises of 1s. Both the Cunard preference stocks, however, were slightly easier. In a firm motor section, J. Lucas, Thos. Tilling and AEC all advanced, while Rolls-Royce more than recovered Tuesday's loss of 1s. the following day. Textile shares failed to attract any particular attention, and the small irregular movements were without significance. Stores shares, however, were firm, Harrods, Boots and Woolworths all enjoying useful support. A sharp fall in Canadian dollar securities on tax fears before the week-end was largely recovered at the opening of the current week, International Nickel in particular advancing strongly. Elsewhere, Ramsome and Marles rose 5s. on the increased dividend, while United Molasses was bought. Among hotel shares, Savoy Hotel was in demand.

With the revival of Cape support, the idle conditions at the close of last week in the *kafir* market were followed by a fairly widespread improvement. Geduld and Rand Mines both recovered earlier losses, while among issues to advance Blyvoors, West Wit Areas and Grootvlei were outstanding. A rise of 4s. on the week for Doom Dooma on the increased dividend was the feature of the *tea* market, while a few improvements were registered in the *rubber* market. The war news and the Premier's speech stimulated sentiment in the *oil* market. Anglo-Iranian was especially firm, while good gains for Anglo-Egyptian and Burmah were witnessed. Other issues to advance were Royal Dutch and Trinidad Leaseholds, and profit taking in midweek failed to prevent a further general improvement.

COMMODITY AND INDUSTRY NEWS

New Clothing "Quiz."—A new edition of the *Clothing Quiz**, prepared by the Board of Trade, was published on September 5th. Like the earlier editions, it contains tables of the coupon rating of all garments, and a list of coupon-free articles. Full information is given on all aspects of clothing rationing affecting the consumer. The booklet is a guide to the working of the Consumer Rationing Order, 1941, and subsequent amending Orders, and is up to date to August 1, 1942.

Lactic Casein.—The Control of Casein (No. 1) Order, issued by the Ministry of Supply, came into operation on September 7th. Under the Order, the disposal of lactic casein is made subject to licence procedure. It may be purchased only

* "Your Questions Answered." The 1942-1943 Clothing Quiz. H.M.S.O., 28 pages. 2d. net.

from licensed sellers. The Order does not apply to rennet casein.

Export of Garments.—The Export of Goods (Control) (No. 36) Order (S. R. and O. No. 1749) comes into force on September 21st. It makes "garments whether finished or unfinished" subject to export licensing control, whatever their destination. The term "garments" does not include footwear, ties, hats, belts, braces, gloves, suspenders, scarves or laces for footwear or for corsets. Licences will not normally be granted for the export to any destination of garments made from utility cloth, except corsets, the export of which will be restricted to utility and surgical types only. Licences will not normally be granted for hosiery other than certain high-class goods.

Chilean Copper Price.—Negotiations between United States and Chilean Government officials have resulted in an agreement under which prices paid by the

New York

CONDITIONS on Wall Street during the past week have been quiet. Lack of any incentive, either from military or internal developments, resulted in slow trading, prices sagging slightly before the holiday on declining support. The speeches by President Roosevelt and Mr. Churchill occasioned a rather better tone at the opening of the current week, prices and turnover both showing improvement.

United States Government for its copper purchases from Chile will be raised by 10 per cent to 12.375 cents per lb., free U.S. port for the six months ending February 28, 1943. Under an agreement concluded last February the U.S. Government agreed to acquire the whole Chilean copper output over a lengthy period. The price was to be reviewed every six months. The price has been increased in order to stimulate production in Chile. Recently Chile's output was running at an annual rate of over 500,000 metric tons.

International Sugar Agreement.—The extension of the International Sugar Agreement for another two years, from August 31, 1942, has been agreed by South Africa, Australia, Belgium, Brazil, Cuba, Czechoslovakia, Dominican Republic, Haiti, Netherlands, Peru, Portugal, United Kingdom, U.S.S.R., United States (and Com-

(Continued on page 348.)

GOVERNMENT RETURNS

For the week ended Sept. 5, 1942, total ordinary revenue was £41,016,000, against ordinary expenditure of £109,553,000, and issues to sinking funds of £2,410,094. Thus, including sinking fund allocations of £5,633,059, the deficit accrued since April 1st is £1,251,982,000 against £1,300,896,000 for the corresponding period a year ago.

THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL (PAID-UP) - £3,000,000
RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST
AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches & 30 Sub-Agencies

The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.

The Bank also undertakes Trusteeships and Executorships.

Head Office: 38, BISHOPSGATE, LONDON, E.C.2

London: 117/118, LEADENHALL STREET, E.C.3

Branches: 20, CHARLES II STREET, HAYMARKET, S.W.1

Manchester Branch: 55, MOSLEY STREET

New York Agency: 65, BROADWAY, NEW YORK CITY

THE UNION BANK OF AUSTRALIA LIMITED

ESTABLISHED 1857

Capital Authorized and Issued ... £12,000,000
Paid-up Capital ... £4,000,000
Reserve Liability of Proprietors ... £8,000,000

(Not capable of being called up except in the event of and for the purpose of the bank being wound up)

Reserve Fund ... £3,250,000
Special Currency Reserve ... £1,600,000

Head Office: 71 CORNHILL, LONDON, E.C.3

West End Agency: 15 CARLOS PLACE, W.1

Drafts are granted on the Bank's Branches throughout the Australian States and Dominion of New Zealand. Telegraphic Remittances are also made. Commercial and Circular Letters of Credit, and Travellers' cheques issued. Bills are purchased or sent for Collection. Deposits are received for fixed periods on terms which may be ascertained on application.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

Incorporated in the Colony of Hongkong. The liability of members is limited, to the extent and in the manner prescribed by Ordinance No. 6 of 1929 of the Colony.

AUTHORISED CAPITAL - £50,000,000
PAID-UP AND FULLY PAID-UP - £20,000,000

RESERVE FUNDS (STERLING) - £8,000,000
RESERVE FUNDS (HONGKONG CURRENCY) - £10,000,000
RESERVE LIABILITY OF SHAREHOLDERS - £20,000,000

Head Office, HONGKONG,

temporarily transferred to

LONDON OFFICE, 9, Gracechurch Street, E.C.3
Acting Chief Manager: A. MONSEL

BRANCHES AND AGENCIES THROUGHOUT INDIA AND THE FAR EAST, Etc.

HONGKONG & SHANGHAI BANK (TRUSTEE) LIMITED

9 Gracechurch Street, E.C.3. Incorporated in England and is a member of The Hongkong and Shanghai Banking Corporation, is licensed to act as trustee and trustee in approved cases.

Full particulars may be had on application.

NATIONAL BANK OF INDIA LIMITED.

Bankers to the Government in Kenya Colony and Uganda.

Head Office: 26 BISHOPSGATE, LONDON, E.C.2.

The Political Dilemma

THERE are two statements about the present condition of British politics which would be almost universally recognised to be true. One is that neither of the two large parties evokes the slightest enthusiasm in the ranks of the people. The other is that these two parties are so firmly in command of the machinery of politics that there is no prospect for a long time to come of dislodging either or both of them. Between them, these two statements constitute the British political dilemma.

That the parties command no answering fervour among the electors is evident in everything that happens on the political stage. The present coalition is held together by one thing only—the personality of Mr Churchill, who is a party leader because he is a party leader. The members of the War Cabinet are, with one exception, men who were either party rebels or out of Parliament altogether four years ago. There is not a very great deal of enthusiasm for the Government in the country, but such as there is attaches to the fact that it has not been nominated by the party whips. There is a certain tendency on the Left to speak as if it were only the Conservative machine that had been deserted by the electors—a tendency founded on the coincidence that it is for Conservative seats that the great majority of by-elections have been fought. But there is very nearly as much disillusionment on the Left. The Labour leaders,

it is true, do not have the heavy burden of Munich to bear; they do not have to excuse the mistakes of a decade of peacetime misgovernment. But they do, by now, share to the full in the resentment that is felt at the fumbling timidity of so much of the policies of wartime. Labour leaders, on the whole, have not made good Ministers, and the public has come to believe, almost sub-consciously, that it must look for its supermen in the ranks of those whom Labour has expelled or in the ranks of those who have never borne the Labour label at all.

Without much doubt, if the elector knew of a better hole to go to, he would flock there in such numbers as to change the face of British politics. But there is no better hole. Most of the many embryonic independent parties have been strangled at birth by their own doctrinal muddle-headedness and practical ineptitude. None of those that are on offer today looks like capturing the attention of the public. Moreover, if a new party is to make its weight felt in the next two Parliaments—that is, before, say, 1954—it must be strong enough and rich enough immediately after the war to contest hundreds of seats. There is no such brand-new party in sight. Nor, moreover, is there the slightest sign of the creation of a new party by the classical method of a split among the leaders of one or more of the old parties. It is a pleasant dream to imagine the industrial protectionists of the Conservative party coalescing with the Trade Unionists (or

Labour protectionists) of the Labour party against another alliance of Socialists, Liberals and Nationalists—but it is only a dream. There is not the slightest sign of its happening. The more professionalised politics become, the more the average MP depends on his Parliamentary salary or on the supplementary payments he gets from sources commanded by the party—the less chance is there of any secessions either for conscience or for ambition.

But if there is no probability of new parties arising we shall have to make the best of the two that exist. How can they be converted into more effective instruments of governance? In part, of course, they are hampered by their own uncertainty of belief. Neither the Labour nor the Conservative Party is in the least sure what it stands for. They are nearest certainty when they are defending the vested interests of their dominant groups—the trade unions and the business men. But this is not an issue that divides them; on the contrary, it becomes yearly clearer that the devices of protectionism are very much the same whatever may be the identity of the intended beneficiary. In other words, when the parties are most sure of themselves, they are most at one, and when they try to pretend that they are poles apart in their philosophy of politics they are most inclined to talk nonsense. The truth is, of course, that the old distinction between Left and Right has become almost meaningless. The real distinction, which is emerging with ever greater clarity, is between the philosophy of the community serving the welfare of the individual and the philosophy that regards the community merely as a framework within which divergent interests can try their strength. And this is a cleavage which divides both parties equally. Neither can afford to take an open line on it, and both are therefore dumb on the only real continuing issue.

This embarrassment on principles would not, however, by itself produce the present stagnation. There have been periods in the past when party politics were vivid and brilliant without either party being certain what it stood for. The basic explanation for the present position is not that the politicians do not know what they stand for, but that nobody would believe them if they did. The fundamental defect in the present parties is the very low repute in which their active members are held. With all their defects and their equivocations and their ambiguities, the two parties between them would still suffice as instruments of government if they had between them any leaders of the sincerity of Bright, of the honesty of Peel, of the emotional power of Gladstone, of the integrity of Asquith, of the intellectual strength of Balfour or of the sheer administrative efficiency of Lloyd George. Apart from the leaders at the top, what is needed is to restore the ordinary back-bench MP to the position in the community that he used to hold, to make him representative of the best in his constituents, not of the worst.

To improve the personnel of politics, a double approach will be needed. It will be necessary, first, to discover and remove the impediments which now prevent the best men and women—the best wage-earners as well as the best business men or the best of the intelligentsia—from entering active politics. And secondly, it will be necessary, when the best men and women are willing to enter politics, to enable them to do so—which requires a willingness on the part of the two party machines to accept a radically different type of candidate.

In this connection, it is possible to make a practical suggestion which may be worthy of consideration. The American device of the primary is one that has never found a place in British politics. It is not, perhaps, a device that would be suggested for permanent use; but in the particular circumstances of British politics to-day, there is a great deal to be said for it. A primary, it is perhaps necessary to explain, is an election, held and supervised by the state, in which the members of each party choose by popular vote the party's candidate at the main election that is to follow. At the primary, the Republican voters choose the Republican candidate for, say, the Senate, and the Democrats the Democratic candidate, and the two winners fight it out at the election which follows in November. As practised in America, the primary tends, on the whole, to reinforce the machine's control of the party. But this is due rather to the incidental features of the system (especially to the pernicious practice by which the voter is placed on the register only if he takes the initiative in applying beforehand) than to the system itself. If the primary were adopted in this country, on the appointed day every voter would be entitled to vote, in his constituency, in one, but only in one, of the party primaries.

This would, in effect, be a way in which the state could say to every voter "I know you are a loyal Conservative (or Labour) elector and I am not trying to get you to vote for any new-fangled combination you don't really understand. But I do ask you to play a personal part in choosing your Conservative (or Labour) candidate and in making sure that he is the best standard-bearer you can find." If this appeal could be combined with a successful endeavour to get the best men and women of every type and walk of life to come forward, then, if there is any validity at all in the democratic faith, it would be the means of securing a vast and immediate improvement in the calibre of British politicians.

This suggestion doubtless seems fanciful at first sight. But what is in regular use in one democracy cannot be wholly impracticable in another. And the need for some revitalising force in British political institutions is urgent if the next phase in the nation's history is to be the consummation, rather than the abandonment, of the democratic ideal.

Vichy's Gleichschaltung

IT was reported last week that M. Jules Jeanneney and M. Edouard Herriot had addressed a protest to Marshal Pétain, accusing him of assuming unlimited dictatorship and of wanting to draw France, without Parliament's consent, "into the war against our allies." If such a protest has been made and its wording correctly reported, it is a startling document, coming as it does from the presidents of the Senate and the Chamber of Deputies, and its significance can hardly be glossed over. Before this, both M. Jeanneney and M. Herriot had refrained from any public utterance for more than two years. Their freedom of action was limited by the fact that they were the presidents of the chamber which voted plenary powers for Marshal Pétain. Whatever Vichy did until recently, be technically justified by that fatal vote of June, 1940. If the latest turn of events has forced the heads of the French parliament to break their silence, they must have become convinced that Vichy's new policy can no longer be reconciled even with the letter of

Pétain's plenary powers. The happenings of the last few weeks show quite clearly what line the new policy is taking. Laval has done away with the last remnants of the parliamentary system by dissolving the central offices of the Chamber and the Senate. The destruction of municipal self-government, too, has been completed. Recruitment for the *Légion Tricolore* has been intensified. The voluntary mobilisation of French labour for Germany has failed, so it has been made compulsory. And, lastly but not least in importance, the mass round-up of Jews in France, the country that was once the first in Europe to emancipate the Jews, clearly marks the point which Vichy has reached on the path of *Gleichschaltung*. What the Jews were given by the French Revolution and Napoleon has been taken away from them by the *Révolution Nationale* and Laval.

In a sense, the bankrupt cliques of Pétain and Laval act in the interests of self-preservation. The threat of a second front, strengthened by the Allies' bombardment

from the air and by the raids on St. Nazaire and Dieppe, has posed for Vichy the question of its very existence. For the belligerent nations, Allied and Axis alike, the widest issues of history are involved in a Western offensive. On it hangs the fate of the French people too. But the men who were responsible for France's capitulation are concerned with a far more selfish problem. St. Nazaire revealed to them the true spirit of the French people in the occupied zone. What they fear is another St. Nazaire—on a national scale. Laval has not missed the danger signals. He has set out to prepare for civil war and to forge the instruments by which he hopes to suppress any revolt against the German occupation and the Vichy Government.

This is the background of the reorientation of Vichy's policy, which now clearly aims at establishing a totalitarian state. It is worth pointing out that the new policy means a departure from the principles once accepted by Vichy itself. For nearly two years, the French Government officially denied any intention of imitating the German pattern. On his assumption of power, Laval himself indulged in "liberal" gestures and vague semi-democratic promises. The anti-democratic nature of the régime was always justified by French tradition. French political tradition, even that of the nineteenth century, was characterised by dualism; besides the fine record of parliamentary democracy, there was the legacy of Napoleonic absolutism and of Fouché's police state, continued by the Second Empire. To these authoritarian elements in the French political heritage Pétain professed fidelity at the same time as he declared himself opposed to the idea of a *parti unique*, a single party on the Nazi model. But now, under the pressure of danger, without and within, he seems to have overcome his scruples. The abolition of the central offices of the French Parliament has finally sealed the coffin of the Third Republic. These offices were the last remaining link between the former members of both parliamentary chambers; as such they were still a potential centre of political action and, therefore, had to be destroyed. Local government, too, was a possible threat to a Government afraid of its people. From now on, all public activity has to be placed under the strictest control of the cliques in power.

Two instruments of totalitarian control have been set up: the *Légion Tricolore* and the *Service d'Ordre Légionnaire*. The *Légion Tricolore* was originally founded as a corps of volunteers to fight on the Russian front. Its members took an oath of allegiance to Hitler and wore German uniforms. Vichy's attitude towards it was until recently non-committal; to disown it openly would have been too risky, and to approve it would have been too compromising. Vichy's recent adoption of the *Légion*, therefore, can be regarded as a measure both of its fear and of its determination to fight for survival at all costs. The *Lumpenproletariat* that swore obedience to Hitler

has now become a main buttress for the rule of Pétain and Laval. Its task is officially and loftily described as the "struggle for European unity"; its incentive is pay, which is double the amount given to regular soldiers. The Germans' attitude towards this force, whose very existence constitutes a technical infringement of the armistice terms, is eloquently patronising. The other instrument, the *Service d'Ordre Légionnaire*, is the French edition of the *Sturm Abteilungen*. And, to round off the picture, a French edition of the Nazi Party has been announced by Déat and Doriot, the two rival leaders of French fascism, who are attempting to unite their two movements. Paris, the seat of the new party, naturally moves along the totalitarian path with more determination and more quickly than Vichy. But Déat is Laval's mouthpiece; his *parti unique* has, therefore, probably been blessed by Laval.

The threat of a second front has also had a marked influence upon the French economy. It has certainly contributed to the big withdrawal of German orders from French industries. The dislocation caused by the withdrawal can be gauged by the fact that in the first months of this year, according to a statement made by the *Kriegsverwaltungschef*, Dr. Michel, German orders placed in France reached 100 milliard francs. The industries in the occupied zone have been placed under the orders of the German military administration, which hitherto was careful to leave some show of economic autonomy to the French. German army officers determine which French factories have to close down, and how the concentration of businesses, at present taking place, has to be carried out. German supervision is strictest in the building industry, which is engaged on constructing fortifications and defence points. A further reduction in the daily rates of the occupation indemnity, for which Laval hoped, has been refused, as the strength of the German garrisons in France has been increased. To meet its higher expenditure, the *Wehrmacht* has drawn on its *Reichskreditkassen* account with the Bank of France, to which the unspent part of the indemnity has been credited. Towards the end of 1941, the balance in favour of Germany was 64 milliard francs; towards the end of June, 1942, it had dropped to 49 milliards. Thus, not only are the current indemnity payments being used to meet "second front expenditure," but also the reserves accumulated before—which will inflate the volume of currency still further.

The slump on the Stock Exchanges is another significant symptom. It started in the early summer—about the time of M. Molotov's visit to London—after a long and sustained boom. The index for industrial share prices dropped on the Paris Stock Exchange from 152.5 at the end of May to 143 at the end of July; and the Vichy press itself points to the "dangers of the international situation" as one of the main causes of the

EQUITY & LAW
LIFE ASSURANCE SOCIETY

Established 1844

THE SERVICE OF LIFE ASSURANCE

Life Assurance provides the means whereby your regular savings, year by year or month by month, may be converted into the form best suited to your needs. Provision may thus be made for your retirement, for the education of your children or for your dependants after your death.

The service of Life Assurance cannot now be offered to you by personal approach owing to the absence of so many of the Society's staff on war duties. This service is, however, still available on request and will gladly be placed at your disposal.

Head Office: 163/4, STRAND, LONDON, W.C.2. Telephone: TEMple Bar 0381
(temporarily transferred from 20, Lincoln's Inn Fields)

slump. Hoarding of banknotes is the peasant's reaction to political uncertainty. And the whole system of a closed capital market, which enabled Vichy to counteract the inflationary tendency inherent in the economy of a defeated country, has now reached breaking-point. The tide of inflation is swelling; and to obtain money Vichy is compelled to rely more and more on the printing press.

Laval probably hopes that closer control over the country will help him to master the growing economic disorder. Economic and political calculations are interwoven in the totalitarian trend. But will he succeed in putting his plans into effect before the Allies join battle with the enemy on French soil? This is the vital political aspect of the second front. Allied strategy must reckon with the prospect of a France internally divided in face of an Allied offensive. But it can be said, without undue optimism, that the array of France's internal forces will not favour Vichy. In the occupied zone, Allied attacks could certainly count on the spontaneous support of the bulk of the French people. Two years' experience of German occupation has cured them of their apathy of the early phase of the war. The anti-British feelings, instilled by Nazi propaganda, have been submerged by the more recent hostility towards the German invader. In the unoccupied zone, Vichy may still be able to muster some support in its

defence. But it will hardly be able to gather the strength which can be derived from totalitarian organisation. So far, no such organisation has been erected merely by decrees from above. Hitler and Mussolini were carried to totalitarian power on the crest of great popular movements which were inspired by Fascist or National-Socialist mystiques. No such popular forces favour Laval. The hopeful paradox of France's rôle in this war is that, after three years of war and two years of armistice, the morale of its people stands incomparably higher than it stood on September 3, 1939.

Faced with difficulties on the home front, Vichy may, however, try to overcome them by some new *coup d'état* or by some desperate adventure in foreign policy. The resumption of military action in Madagascar has been exploited by Déat for his new anti-British drive. Luchaire, Déat, Doriot and other extreme collaborationists are impatient to see France finally join the "all-European crusade against plutocracy and Bolshevism." Pétain and Laval are steadily giving way to their pressure, while still trying to avoid any final and irrevocable commitments. Laval has protested against American participation in air-raids over occupied France, but his reaction to the rejection of his protest has still to be made known. In this context, M. Herriot's statement that Marshal Pétain is seeking to draw France "into the war against our Allies" may perhaps be read as a portentous warning.

The Land

THE Uthwatt Committee, whose final report (Cmd. 6386) was published last week, was set the practical task of examining the present system of land ownership and of advising on the changes that will be necessary in order to bring it into harmony with the communal interest. It was thus not concerned with the nationalisation of the land as a matter of policy and, unlike the Scott Committee, whose report was discussed in *The Economist* on August 22nd, it was not concerned with the future use of the land. Its job was simply to prepare the basis for legislation designed to remove the obstacles in the way of orderly reconstruction and development by the Government and private enterprise, and to transfer the unearned increment of land values from individual landowners to the community. It is in the light of these objectives that its recommendations must be judged. Ministerial pronouncements entitled the committee to assume that haphazard development would give way to planned development by a national planning authority, "with a high degree of initiative and control." While it holds the view that the state must determine the areas in which private initiative and enterprise are to operate, it wisely refrains from painting the picture of post-war Britain.

The preconditions of planned and imaginative reconstruction and development are set out boldly. They are three and indivisible. First, land should be purchased by the state against fair compensation, not at one fell swoop by outright nationalisation, but if and when required for reconstruction and development; land thus acquired by the state should not be resold for private development but leased for an appropriate term of years determined by the nature of the proposed use. Distinguishing between non-built-up and built-up areas, the committee recommends, secondly, that the state should purchase the right of development on the former, and thirdly, introduce a levy on the increased annual value of the latter. These three principles are unexceptionable. They are not novel; they have their roots deep in the history of British thought about the land. But, for the first time, they have been woven into a single pattern for the utilisation of the land in the national interest.

The committee only recommended the piecemeal acquisition of land by the state after careful examination of various alternatives, such as private pooling schemes, outright nationalisation, and the conversion of the land from freehold to leasehold, to be held by the present

proprietors as lessees of the state at a peppercorn rent for a uniform term of years. It has frequently been suggested in recent years that pooling schemes could achieve the same objects as state ownership without interference with private ownership. The owners of all the land and buildings in a given area would, if necessary by compulsion, sell their properties to a corporation in exchange for shares representing the value of their interest. The system is in some respects analogous to amalgamations in the industrial sphere which, as the committee was quick in detecting, often pave the way for the elimination of competition. It sees many grave objections in such pooling arrangements; not the least is that they would involve the creation of a commercial monopoly in each corporation over a wide area of land. So far as land nationalisation as a matter of general policy is concerned, the committee felt that this was not within the scope of its terms of reference. As an academic exercise without regard to administrative or other consequences, immediate transfer of the land to public ownership would, in its view, present the logical solution. But this policy is rejected as impracticable as an immediate measure; it would arouse keen controversy and therefore cause delay when speed is of the essence, and it would involve the setting up of complicated administrative machinery to deal with the whole of the land when, as was pointed out in *The Economist* on January 10th, only a small fraction of it is likely to be affected by immediate plans after the war. The third alternative, that of converting all land into leasehold, to revert to the state after a uniform period of years, is put forward by the committee for consideration. In essence, this proposal amounts to a form of nationalisation, with delayed effect. Subject to the needs of planning, there would be no interference with the present owners of the land. This alternative has attractive possibilities, though it is one upon which the members of the committee are not agreed.

The acquisition by the state of the rights of development in all land outside built-up areas (subject to certain exceptions) on payment of compensation is regarded by the committee as an essential minimum necessary to remove the conflict between public and private interest and to facilitate the planned utilisation of the land in the communal interest. In its view:

It is clear that under a system of well-conceived planning the resolution of competing claims and the allocation of land for the various requirements must proceed on the

basis of selecting the most suitable land for the particular purpose, irrespective of the existing values which may attach to individual parcels of land.

In present conditions, the realisation of this aim is practically impossible, because local planning authorities are liable to compensate the landowners concerned for deprivation of potential development value; this, the committee points out, is unquestionably the greatest obstacle to effective planning. The expectation that development will take place is an important factor in the market price of land, especially on the outskirts of towns. But, like the ball in the game of *roulette*, which can only settle on one number, the parcels of land actually selected for development represent only a fraction of the total area available. As the committee puts it, "the sum of the probabilities as estimated greatly exceeds the actual possibilities"; but it is for the sum of the probabilities that compensation has to be paid. Again, if building is prohibited on some land on the fringe of a town, its potential building value merely shifts on to other land, and aggregate values may not be substantially affected; but the owner of the land prohibited from development will naturally claim compensation for its full potential development value.

The case for vesting all development rights in the state seems unanswerable in the general context of the committee's recommendations. Its scheme envisages the prohibition of development on all land outside built-up areas, except under the authority of the Central Planning Authority; the payment of compensation for the loss of development value on the lines adopted for the state purchase of coal-mining royalties; the purchase by the state of the land itself, if and when required for approved development, whether for public or private purposes; and, in the case of approved development for private purposes, the leasing of the area to entrepreneurs.

The third main ingredient of the committee's report is its scheme to transfer to the community a large part of any increase in site values. So far as non-built-up areas are concerned, "betterment" will be secured for the nation automatically. Once the state has acquired the rights of development, building in any given area can only be carried out by the consent of the state, which then

purchases the land and, by means of the rent charged, can obtain the full increase in its annual value. In order to secure betterment in built-up areas for the community, the committee has worked out an ingenious scheme. Hitherto, all attempts to recover betterment for the community have failed, largely because it has been defined as increases in values due to the action of central and local government authorities. The committee, realising the impossibility of apportioning increases in site values between Government action and general economic tendencies, recommends a periodic levy on a fixed percentage of increases in annual site values—it suggests a figure of 75 per cent—as revealed by quinquennial assessments, from whatever cause such increases arise other than by certain expenditure of the owner. The adoption of this principle is undoubtedly sound, for increases in site values due to general economic tendencies are no less unearned increments than increases attributable directly to Government action. It is suggested that the levy should be charged not only when the increase in a site value is realised, but also when it is "realisable." Thus,

the annual value of a site would be determined by reference to the most prudent use of the property in its actual physical state of development.

The committee recommends that, subject to certain qualifications, the compensation payable on the public purchase of land should not exceed the March, 1939, ceiling, pending the introduction of the betterment scheme.

These are merely the bare bones of the committee's report, which, in its realistic treatment and detailed analysis of the implications of its proposals, stands in striking contrast to the sentimental document issued by the Scott Committee on Land Utilisation in Rural Areas. The committee admits that its recommendations may be open to criticism in detail, and one of its members has made important reservations. It will be no mean task to translate the principles laid down by the committee into legislation. In particular, the problems of valuation and compensation may give rise to many difficulties. But, taken as a whole, the proposals are sound and practical. What is now needed is the requisite legislation and the speedy creation of a Central Planning Authority.

Reflections on the TUC

THE Trades Union Congress, 1942, was marked by the growing sense of consciousness on the part of its rank and file of the vital issues facing the Labour movement at this critical stage of the war. The Congress was described by the Mayor of Blackpool in an address of welcome as second only in importance to Parliament; it certainly provided an example of vigorous democracy, for an outstanding feature of this year's meeting was the fact that the General Council was not, as so often in the past, able to secure an easy victory for its proposals. Even though it gained its way on most points, if necessary by bludgeoning, the margin was often uncomfortably narrow, and the leaders were challenged on a great many issues, where Congress felt that they were not pursuing a forward policy or giving a sufficiently definite lead.

When, indeed, the Council put forward constructive or militant proposals, it received an overwhelming vote of confidence. Thus Congress fully endorsed its action in regard to the Trade Disputes Act; Mr Churchill's letter, asking that this controversial matter should not be pressed in the interests of "national unity", was felt to be an insult to the Labour movement and, as Sir Walter Citrine said, "an abuse of national unity." Again, the Council's proposals for post-war reconstruction, notably on education and social security, met with general support. The education memorandum is one of the most hopeful documents that has ever appeared from Transport House, and the minority which opposed the report on religious grounds met with short shrift from the bulk of the Congress. Although the social security programme leaves much to be desired, especially in its

financial proposals, it has the merit of courage in standing up to the powerful vested interests represented by the insurance companies. The demand for the removal of National Health Insurance business from commercial interests and for the introduction of a death benefit will receive support from many outside, as well as inside, the trade union movement. That the only objections to these two proposals came from the Federation of Insurance Workers is perhaps a foretaste of the opposition which will have to be met by the Beveridge Committee if it proposes that these glaring defects in social insurance administration should be remedied. The acceptance by Congress of the principle of a family allowances scheme, on a non-contributory basis, is also an important decision.

One point on which the attitude of the General Council seemed to fall short of delegates' desires was shown in the demand that Labour should play a still more effective part in production. The unions which expressed themselves most strongly on this issue were significantly those most directly concerned in war production—engineers, miners, railway workers and electricians. Those which adopted a more cautious and conservative attitude were the two general workers' unions—the Transport and the Municipal Workers. The composition of the General Council is singularly unrepresentative of the new alignment of forces. Thus the Amalgamated Engineering Union, with nearly 600,000 members, elects only one representative, while the two general workers' groups, with approximately twice as many members between them, elect six representatives. Congress, stimulated by the key war production unions, passed resolu-

tions calling for increased participation in management; compulsory joint production committees with representatives of technical staffs; the establishment of a Central Planning Board to coordinate scientific and technical research; the representation of trades unions on the Ministry of Supply Controls; and increased production of rubber substitutes. Impatience with obstacles to productive efficiency was forcibly expressed—numerous examples of delay and waste in aircraft and tank factories were quoted. Mr Arthur Horner, South Wales miners' delegate, struck a realistic note in calling attention to the grave coal position and appealed for maximum economy in consumption. On the question of women in industry, there are signs that the old-fashioned prejudices among some craft unions have been broken down. The principle of the "rate for the job" and the demand for the speedier mobilisation and better utilisation of woman-power were enthusiastically supported. The present membership of women is well over a million and is rapidly increasing; the election of Miss Anne Loughlin as next year's President is a tribute to the part played by women in the war effort.

Many members of the Congress showed themselves impatient with the policy of heresy-hunting and searching for Red herrings, which they felt distracted from the achievement of unity within trade union ranks. This was demonstrated in the vote on the Black Circular—banning Communists from election to Trades Councils—on which the General Council secured a very slender majority, and in the discussion on the Labour Research Department, a body alleged to be under Communist influence, but to

which many important unions acknowledged indebtedness. The desire for unity in the international field was also expressed. Congress listened attentively to Sir Walter Citrine's account of his negotiations with the American unions, but there was considerable dissatisfaction that his mountain of labour should have produced such a very small mouse. The one-sided agreement with the American Federation of Labour was felt to be very incomplete—the CIO claims equal membership with the AFL, and represents the workers most directly concerned in war production—and the fact remains that the position is no more advanced than before the Citrine mission—on the contrary, in fact, since much bitter feeling has been aroused in America. Nor will it further the tripartite relations with the Soviet Trade Unions. Incidentally, one wonders why the Russians received no invitation to attend the Congress; this appears a surprising omission since close collaboration is said to have been achieved between British and Soviet unions; moreover, other foreign delegates were present and messages were received from many countries.

Equally noticeable was the omission from the week's deliberations of any references to wages policy, although clothes rationing, food rationing, fire-watching, income-tax, service pay and many other home front questions were discussed. The reason for this is presumably the disinclination on the part of the leadership to interfere in matters regarded as the province of individual unions. But in present circumstances it is surely a subject regarding which national trade union policy should be made known.

NOTES OF THE WEEK

It is September 19th

The battle for Stalingrad has reached what may be its final stage. During the week Von Bock seems to have succeeded in closing in on the Volga city by three converging thrusts—from the south-west, west and north-west. It may, of course, still happen that the prize eludes the Germans' grasp; the Russians may, perhaps, still be able to redress the position by a "last minute" effort. What militates most strongly against such a possibility is the enemy's great superiority in the air, as a result of which Stalingrad is being reduced to ruins as Sebastopol and Rostov were before. Marshal Timoshenko's men are apparently fighting without any means of retreat. Behind their backs there is the Volga, and, according to a semi-official statement, the river fleet has been withdrawn to the north on Stalin's personal order. The knowledge that "all the routes of retreat have been cut" may act as an additional stimulus to the high fighting spirit of Stalingrad's defenders. But, if taken literally, and carried out consistently, the order may also mean an important and risky departure from the previous tactical principle, which under similar conditions usually aimed at extricating the Russian forces from encirclement. The remarkable prolonging of the battle for Stalingrad will, no doubt, weigh upon the next phases of the campaign, no matter what are the immediate results of the present phase. The Volga is navigable only during about six months of the year; the Russians were therefore able to use the greater part of the season for shipments of oil from Baku to the north, a fact which will favourably affect the size of the country's oil reserves. But the consequences of the protracted fighting at the gates of Stalingrad may be even more important for the whole strategical outlook. It is September 19th—nineteen or twenty, Mr Lyttelton said this week, of his eighty critical days remain—and the bulk of the German forces are still pinned down on the southern front. The battles in the north—around Voronezh, Rzhev and Volkhov—may yield little in terms of territorial gain; but they are surely bound to dislocate the advanced bases which the Germans may contemplate for use later on in offensives against Moscow and Leningrad. To sum up, the fall of Stalingrad would still be a telling blow to Russia, to its striking and staying power; but the fact that the blow has been so long delayed may rob it of part of its force.

Words at Westminster

The brief reassembly of the House of Commons last week was marked by more sparring than it has seen for some time. The resentment aroused in Members by Sir Stafford Cripps's reproaches on the way the House treated Mr Churchill's war review had by the end of the week given way to open hostility towards the Government in some quarters. Partly, this hostility was but another stage in the long quarrel between Mr Churchill and Mr Aneurin Bevan. Owing to the early collapse of the debate on the war, Wednesday's sitting was given up to the financial side of the Vote of Credit, but Mr Bevan's speech was almost entirely confined to an attack on the Prime Minister, "whose continuation in office [he said] is a major national disaster." This personal animosity was revealed again after Mr Churchill's statement on India, when Mr Bevan's comments stung the Prime Minister into calling him "a merchant of discourtesy." But it was not only Mr Churchill who was the object of attack. There was also what appeared to be a recurrence of the old antagonism between Sir Stafford Cripps and the Labour party. Sir Stafford's strictures on Members' absent-eism were possibly partly responsible for provoking this; but there must have been something else behind Mr Shinwell's gibe that the Leader of the House ought to recognise the Labour party, "whatever may be his political views at the moment," and behind the bitterness of a Labour member's remark that "the man who has written those heroic pamphlets on Socialism" could defend the 6d. a day increase in Service pay. But personal quarrels were submerged in the all-party attack on the Government over Service pay and in Labour's attack on the Government's India policy. Both of these topics will probably come up again when Parliament reassembles, and though tempers may have cooled in the meantime, the Government is likely to continue on the defensive. The age and weariness of the present House of Commons, one of whose first tasks on its return will, unfortunately even though inevitably, be to prolong its life for another year, frequently make it an inefficient instrument of constructive criticism. But the main subject of dispute last week—Service pay—was more than an outlet for the discontents of captious critics; it was a matter on which the House was faithfully reflecting public opinion, and the Government would do well to treat its views on it with respect.

Woolworth Concession

The Service pay debate found the Government falling heavily between two stools. On the not unreasonable assumption that it would fail to adopt a drastic solution—to fix a ceiling for wages; to introduce forced savings; and to grant really substantial increases in pay, deferred pay and allowances—there were two practical possibilities. The Government could either have taken its now notorious White Paper *au pied de la lettre*, and contended that the financial plight of the Services was insufficiently desperate to justify further rises, or it could have announced an increase high enough to buy off discontent for the present. From the purely cynical standpoint, a rise which does not achieve this objective—which irritates as much as it soothes—fails in one of its major objectives. As far as other ranks are concerned, the concessions are a rise of 6d. a day in basic pay, bringing the minimum rate to 3s. daily; and increases in allowances for the first three children from 8s. 6d., 6s. 6d. and 5s. to 9s. 6d., 8s. 6d. and 7s. 6d. respectively. The total weekly increase in allowances for children where there are three in a family thus amounts to 5s. 6d. Unfortunately, since this concession is apparently not coupled with any modification of the terms under which War Service Grants are paid, there will be many cases where the only benefit to the soldiers' dependants will be that the 5s. 6d. will in future be automatically paid by the War Office rather than as a grant through the Ministry of Pensions. The worst single feature of the Government announcement is undoubtedly the failure to adjust the terms of War Service Grants so that the poorest receive a real benefit. But it is also very regrettable that the increase in basic pay should have been lower than 1s. daily. The present basic rate of 3s. a day is after all only 3d. higher than the normal basic rate paid prior to October 26, 1925, despite the intervening rise in the price level. The Government's declared intention to regard the new levels as final, subject to the stabilisation of the cost of living, clearly depends on how successfully this is achieved. But the disparity between civilian and service earnings should not be regarded as stabilised, whatever level prices ultimately attain. The debate, which was a stormy one, contained only two speeches sympathetic to the Government, whose statement cannot, in the circumstances, be regarded as final.

Riots in Retrospect

The Prime Minister's statement on the Indian situation has found many critics, both of its content and its manner. It must be admitted that the confident intransigence with which it was shot through has scarcely eased the solution of the present impasse. It would be a mistake to assume that Mr Churchill is not alive to the full and baffling complexity of the Indian problem or that he fails to diagnose it with blunt realism, but his approach still smacks of his oppositional phase. The two striking features of his statement were the affirmation that the principles laid down at the time of the Cripps Mission still hold good "in their full scope and integrity" and his attack on the Congress Party. As far as the riots are concerned, Mr Churchill minimised the disturbance to a greater extent than either Mr Amery in the subsequent debate or Sir Reginald Maxwell, Home Member of the Government of India, in the Assembly. There appears little doubt that for some days the calculated sabotage of communications in Bihar and the eastern part of the United Provinces reached very serious dimensions. That the riots fell short of a revolutionary scale is due to the prompt and effective action of the Government of India and to the sense of responsibility of the greater part of the Indian population. The immediate danger has been fended off, and the House of Commons, debating the matter on a motion for the adjournment, dwelt mainly on the future. The basic problem of how to enlist active and united Indian support for defence against the Japanese is further than ever from solution, nor was a convincing answer provided by any speaker. The essential difficulty remains that Indian unwillingness to resolve inter-communal difficulties has faced the British Government with the necessity of adopting a *pis aller*. Imprisonment of the Congress leaders and the use of strong measures are not the ideal way of procuring unity, but it is better than passively permitting civil war and revolution. Whether or not the Congress leaders have been actively inspired by the Japanese is an almost academic question in present circumstances. Nor can there be any real prospect of reopening negotiations until a working basis can be found. The Prime

Minister's failure to point out that all parties in India, and not the Congress Party alone, rejected the Cripps proposals robbed his statement of perspective. The efforts of Mr Rajagopalachari and others to find a formula capable of solving the communal differences, as the prerequisite of fresh negotiations, deserve every encouragement and sympathy, for they point to the ideal solution. But there can be no negotiating which detracts from the Allied ability to defend India.

Japan Retakes the Offensive

Since the failure of the enemy offensive at Milne Bay, the threat to Port Moresby from the north has become substantially more serious. An announcement from General MacArthur's headquarters on September 9th indicated that the Japanese had succeeded in breasting the Owen Stanley range and in descending ten miles toward Port Moresby. Fighting in this region has been particularly severe ever since the drive from Kokoda was renewed some fourteen days ago. The Japanese success, which appears to be mainly due to superior use of the terrain, has enabled the Allied positions to be outflanked. There is plenty of fight still left in the defenders of Port Moresby, and the more than forty miles, as the crow flies, which still separate the Allied base from the Japanese are by no means easy going. But the latest Japanese success, despite effective Allied intervention in the air which has included sustained bombing of Buna and other bases, provides yet one more demonstration that natural obstacles provide no sort of ultimate security against efficient and relentless attack. It remains true that the supply position has become more complicated for the enemy since the mountain range was placed between the advancing units and their base, while it has been correspondingly simplified for the Allies, a consideration which may explain the short lull which followed the conquest of the pass. Meanwhile, in the Guadalcanar area of the Solomons attacks on the air base have been renewed, though here the Allies are holding their ground. It may be that the renewed attack, as was the case with the enemy landings at the beginning of the month, seeks merely to reinforce and sustain the guerilla units which fled inland when the original American landing was made. But, as Admiral Nimitz pointed out in a speech at Pearl Harbour, the Japanese, so far, are by no means on the run.

The Price of Surrender

Major Lloyd George, Minister of Fuel and Power, is said to be touring the coalfields. When Parliament meets again, he will be called upon to give an account of the prospects for the coming winter and to report upon the fuel economy campaign. If the forecasts of Mr A. Horner, of the Mineworkers' Federation, and of others are in accordance with the facts, Major Lloyd George's account will be anything but cheerful. The opinion is widely held that a coal squeeze can now hardly be avoided, and that a hard winter may bring a crisis. The course of production is disappointing; the benefits of the reorganisation of the coal-mining industry can hardly be reaped before next year, and the new Essential Work Order, which is intended to tighten discipline among miners and came into force this week, is unlikely to raise high hopes. Mr Grenfell, formerly Minister of Mines, is expected to renew the demand for the release of additional miners from the Services. If, as has been evident for some time, the demands for coal cannot be met in full during the winter months, it will be all the more urgent to ensure that essential users of coal are not starved of fuel. In the absence of the requisite statistics, it is impossible to assess the rate at which supplies will be needed for vital purposes. On the other hand, calculations based on published data suggest, rather surprisingly, that supplies available for home consumption are actually 5-7 per cent bigger than in 1937, a year of heavy industrial consumption. If this estimate is at all correct, it is difficult to resist the conclusion that supplies should be adequate for vital purposes and that if present production is maintained and no serious transport difficulties arise, the prospective shortage will be the weight of the coal that could be saved. It is equally obvious that, in the absence of careful distribution, some consumers will deprive others of their bare needs. Unfortunately, the problem of distribution has not been tackled in time. In industry, which absorbs three-fifths of production, the system of allocation foreshadowed in the White Paper issued early last June is only now in process of introduction, and domestic rationing at this late

hour would involve administrative difficulties of no mean order. The price that will have to be paid for the Government's weak surrender to a vocal minority last spring may be a heavy one.

Overhauling Manpower

On more than one occasion in recent months, the Minister of Labour or one of his spokesmen has declared that the country has reached the stage of full mobilisation of manpower. It may, therefore, come as a surprise that the Ministry of Labour is to undertake a complete overhaul of the registers of men and women. For men of military age, this has been going on for some time, ever since reservation was replaced by individual deferment; but, now, men aged 41-50—the 50's will register on Saturday—will be combed-out to see if any can be transferred to industry, and women aged 18-45—the 45's will register on October 3rd—for calling up to the Services or for transfer to industry. The comb-out does not, however, mean that the existing definitions of essential civilian work will be revised. It is rather intended as a means of catching people who have left the jobs they were in when interviewed or to which they were directed. Since, however, women aged 18-30 cannot change their employment without the permission of the labour exchange, it should only apply to the older women and men. If large numbers of young women are, as a result, found available for the women's Services, it will be gratifying, but it will also be a reflection on the efficiency of the Ministry of Labour's registration and placing machinery. Nevertheless, the new comb-out does not invalidate the general premise that the mobilisation of manpower is virtually complete, so long as present definitions of essential work are maintained. Neither industry nor the Services can any longer count on large recruitments from single classes or age-groups. Moreover, industry, like the armed forces, must have reserves if it is to be constantly losing part of its full production. It, too, is continually losing part of its strength, through ill-health, old age and other causes; and the immobility of a large part of the labour force means that reserves are needed for periods when it is necessary to speed up particular branches of production. Thus, the Ministry of Labour can never, so long as the war lasts, cease combing out civilian manpower, because industry will always want more recruits. Since, however, this means that the strain on the labour force of essential civilian occupations will become greater than ever, it is the duty of the authorities concerned to see that labour which has been transferred to war industry is used as economically and efficiently as possible.

Lex Sauckel

Vichy's new labour law under which everyone living in France can be compelled to undertake work considered to be of national importance was decreed a few days after Germany's labour dictator, Sauckel, issued "regulations for the employment of workers in the occupied territories." The aim of the regulations is to harness to the German war machine all workers in occupied France, Belgium, Holland, Norway, Serbia, the Baltic States and all other occupied territories. The decree itself introduces a priority list for the employment of workers. Demands of the German war industry have first priority, which can only mean that the so-called voluntary transfer of workers to Germany is replaced by compulsion. The German armies of occupation and the German civil administration have been given first claim on the manpower that remains in the occupied territories. The demand for workers for the construction of fortifications along the Atlantic coast has certainly increased considerably. Firms working on German armament orders in occupied countries will be supplied after the demand of the armies of occupation have been met. Next in priority follow the agricultural industries, and the remainder of the labour force can be employed by the civilian industries of the occupied countries. There is no doubt that the German army, and particularly the expanded police divisions of the SS, will enforce the new regulations. Sauckel demands from all foreign workers efficiency equal to that of German workers, and for this purpose working hours are to be brought up to the German level, which means an average of 60 hours per week. Work on Sundays and holidays will, if necessary, be compulsory, and

efficiency is generally to be increased by the introduction of piece-work. German discipline will also be enforced, that is to say, heavy penalties are threatened for absenteeism and slackness. It may be expected that, apart from direct compulsion, the Nazis will employ all the methods which were first used in Germany in 1933. Unemployment benefit will be stopped and ration cards withdrawn if workers refuse to take up work. At the same time, unwilling workers will be sent to labour camps which are virtually prison camps. The *Lex Sauckel*, which has been faithfully copied by Vichy, reveals the serious shortage of labour in Germany, in spite of the fact that at present a total number of roughly six million foreign workers are already employed in Germany. From 3 to 3½ millions are "voluntary" workers; the remainder are prisoners of war. In other words, 25 per cent of the total number of workers employed in Germany are foreigners. But more are wanted to replace Germans in preparation for the production programme for 1942-43.

The Cost of War

For the third time during the current financial year, the House of Commons has granted £1,000 millions for the prosecution of the war. On the occasion of the debate on the Vote of Credit last week, Sir Kingsley Wood pointed out that the cost of the war during its first three years amounted to the astronomical figure of £10,000 millions; this is equivalent to more than twice the size of the total national income in 1938, not allowing for the intervening rise in prices. He contended that the war has hitherto been financed on sound lines and that, with equal circumspection, the tasks ahead can be faced with confidence. It is of course quite true that a larger proportion of total Government expenditure than during the last war has been financed by taxation, that the index of the cost of living has been stabilised, that the transfer of real resources from civilian to Government use has been virtually completed, and that, at present prices, Government expenditure is approaching its peak. But the equilibrium is an unstable one and there can be no justification for complacency. The rise in prices on the free market, for instance, is a sign that the seeds of inflation are taking root. Great care is still needed, and the extension of rationing and price control, which should be simplified by further measures to standardise consumption goods, seems essential. But it is doubtful whether the danger can be avoided without calling a halt to the rise in wage rates and salaries. President Roosevelt has courageously grasped the nettle of inflation in the United States, after only nine months of war; the time has surely come to stop the gaps on Great Britain's financial front.

Madagascar and the Middle East

The British operations in Madagascar which began on Thursday of last week have been successfully concluded, and in less than a week, the forces which landed at Majunga and Morondava on the west and south-west coast of the island rapidly advanced inland. That their progress met with so little opposition is hardly surprising, in view of the numerical superiority over the French, estimated to number no more than 10,000, mainly native troops. Intimating that resistance would shortly cease altogether the Governor-General in a message to Marshal Pétain, affirmed Madagascar's "irrevocable intention of remaining united to France"; and the Allied declaration of the intention to restore the island to France after the war no doubt discouraged resistance. The operation was described as a "precautionary move" to forestall Axis penetration, which had recently been intensified; the occupation of the naval base of Diego Suarez at the extreme north of the island last May was certainly an insufficient safeguard against the danger of Japanese encroachment. The delay in following up the initial landing is probably attributable to the need at that time to concentrate all available resources on the Egyptian theatre of war, since developments in Madagascar are closely related to Middle Eastern and Mediterranean strategy as a whole. The present move is perhaps also a sign of confidence in the ability of the Allies to hold Rommel in Egypt. The combined raid on Tobruk last Sunday, carried out apparently with success, reflects the same tendency. Now that all Madagascar, with its valuable oilfields, lies under Allied mili-

tary control, it should have the effect of safeguarding the Mozambique channel, in which enemy submarines have recently been active, and should greatly increase the security of the Cape route. Vichy reactions have ranged from indignation to injured innocence; some nervousness is expressed about the safety of Dakar and Casablanca, but resentment is greatest at American "responsibility." No doubt the bitterness would have been increased if Fighting French troops had been engaged in the operations; the fact that none were employed is presumably due to the Allied anxiety not to involve Frenchmen in hostilities against their compatriots.

Bombs from the East

Koenigsberg, Danzig, Schneidemuehl, Berlin, Poznan, Warsaw, Breslau, Budapest and Bucharest have been bombed by Russia. All these towns harbour important industries or are, like Schneidemuehl—roughly 160 miles to the east of Berlin—important railway junctions. Koenigsberg is the industrial centre of the predominantly agricultural province of East Prussia, the food, chemical and machine industries of Koenigsberg have been developed considerably. Danzig is, again, one of the most important ship-building centres in Germany. Berlin contains the greatest single concentration of heavy and light engineering industries in Germany. Breslau is also an engineering centre near to the industrial area of Upper Silesia. It may be assumed that the old-established engineering industries in Poznan and Warsaw have been extended under German occupation. Budapest, the capital of Hungary, contains the greatest industrial concentration in Hungary. Berlin is exactly 1,000 miles to the west of Moscow, and a glance at the map will show that the Moscow region is the most likely base for Russian bombers used in bombing Eastern Germany, Hungary and Roumania. The bombing of Berlin makes it clear that the whole territory within a 1,000-mile radius from Moscow can be bombed. This radius reaches to Rostock on the Baltic coast, and covers, in the south, the vitally important Upper Silesian industrial area, including the Polish Dombrowa district and the Czech Olsa district; the coal output of this area may have reached the coal output of the Ruhr area. Budapest, Bucharest, the Roumanian oilfields and the Bulgarian Black Sea port of Varna are all of them situated within the 1,000-mile radius. Koenigsberg, Poznan, Warsaw and Breslau are the most important supply depot bases for the German armies in Russia. No doubt all these towns are promising targets for bombing. Damage to railways, to supply depots and factories should have an appreciable effect on German fighting power. The great distances show, however, in spite of the fact that the Russians are specialists in long-distance flying, that the weight of the bombing attacks cannot be very great. The psychological effect on the German population will probably be far greater, because of the evacuation of many Germans from Western to Eastern Germany.

Raw Materials

During a debate in the House of Lords on September 10th, Lord Portal, Minister of Works and Planning, gave an account of the raw material supply position. While admitting bottlenecks in the production of war supplies, he assured his audience that there were no hold-ups due to raw material shortages. Lord Portal quoted some interesting facts and figures showing the extent to which civilian consumption has been cut down. Some 93 per cent of steel supplies are being used directly and indirectly for military purposes. Civilian consumption of textiles has been reduced to about a quarter of the pre-war level; the supply of clothing has been cut to 45 per cent, and that of household textiles to a mere 10 per cent. The salvage campaign plays an important part in the conservation of essential raw materials. An average of 26,000 tons a week of iron and steel scrap is collected by the Ministry of Works and Planning, and a further 6,500 tons by local authorities. The weekly collection of waste-paper has increased from 12,500 tons to 18,000 tons during the past nine months. Capacity for dealing with reclaimed rubber is "more than sufficient to cope with the amount which we shall be able

to use in this country." Lord Portal reaffirmed the Government's decision to rely on the United States for supplies of synthetic rubber; the question of whether it is advisable to put up a small plant here is "in course of being settled." As a record of past achievements, Lord Portal's review is impressive. But, as President Roosevelt pointed out on September 14th, the United States has little more than passed the half-way mark towards maximum possible war production. Large and growing though the raw material supplies of the United Nations are in comparison with those of the Axis, the increase in demand may give rise to difficulties. As Lord Winster aptly pointed out during the debate, "superiority in supplies is not enough; the test is how to use them." Economies in use by making a given weight of materials go further is a way of avoiding shortages practised with profit by Germany.

Calling-up Doctors

The first and second interim reports of the Medical Personnel (Priority) Committee, under the chairmanship of Sir Geoffrey Shakespeare, MP, were recently published. From the point of view of the civilian public, the call-up of doctors has not affected their health—though it is very regrettable that the intermediate medical examination of school children is to be abandoned—and has hardly affected their convenience. On the average, according to the Minister of Health, there is one general practitioner for 2,700 of the population of England and Wales, compared with one per 2,200 before the war. He gave a warning, however, that this proportion could not be maintained, since the call-up was continuing and more intense demands on medical manpower were likely to be made by the Services in the future. From the point of view of the doctors left in general practice, the call-up seems to have affected them unevenly. In spite of attempts to rationalise the mobilisation of doctors, there still appear to be some in evacuation areas who are underemployed, whereas others in reception areas are grossly overworked—while all are overburdened with purely clerical work resulting from the multiplication of certificates. The Service doctor, again, finds

Voice of the North

There are times when we need some guidance to focus the happenings of the world to our own daily lives. Why not look for that guidance in *The Yorkshire Post*? Its fearless criticisms, its forthright and independent opinions and its responsible judgments have earned it the respect of all who read it regularly.

The YORKSHIRE POST

Ask to see it at your Club,
Library or Newsagent

himself fully occupied or not, according to where he is posted. The Services are bound to be wasteful in their demands on doctors so long as there has to be a medical officer for each small unit, though it is true that men in the Services, and particularly the RAF, receive, through medical examinations, inoculations and so on, far more medical attention than they would normally ask for in civilian life. But here, too, a Service doctor's time is greatly wasted by the vast amount of apparently quite unnecessary forms he has to fill in. Even a fully occupied medical officer often finds only a small fraction of his time taken up with really medical work. It is also anomalous that hospital staffs should release doctors for the Services and that Service patients should then be sent into civilian hospitals for treatment. Even if there is no doubt that at present the nation's health has not suffered from the call-up of doctors, there is a strong case for making the medical services far more flexible than at present; plans should be made for enabling doctors belonging to one Service to be available in time of need to help those in another Service and for enabling underemployed Service doctors to help civilian doctors. It cannot be assumed that the present immunity from epidemics will continue.

Danubian Grain

German policy has hitherto aimed at stabilising wheat prices in Danubian Europe at a level corresponding to the pre-war German level of RM. 18-19 a quintal. Prices have recently been fixed for the 1942 crop at the same level as for 1941, except in Roumania, where the price has been doubled. The prices fixed (per 100 kg. of wheat) are as follows. (The equivalents in RM. are at the official rate of exchange.)

WHEAT PRICES
(per 100 kg.)

	Hungary		Rumania		Croatia		Bulgaria	
	1941	1942	1941	1942	1941	1942	1941	1942
Local currency	30	30	1,100	2,200	420-450	420-450	620	786
Rm.	18.7	18.7	18.3	36.7	21-22.5	21-22.5	18.7	23.9

In Germany itself, however, the official market price of wheat is RM.21 per quintal. But in Hungary the price is kept below the German level; in Roumania it is higher, although the price has not risen at all in proportion to the 400 per cent rise which has taken place in the general price level. In Croatia the price is the same as in Germany; and there is also a supplement of 150 kuna (RM.7.5) per quintal for early delivery. As there is not likely to be much export of wheat from Croatia to Germany, the price has probably been fixed at a relatively high level to persuade peasants to sell. But, even at this price, no wheat is forthcoming; in the early summer, wheat was selling in the Zagreb black market at 140 kuna per kilogram, that is, at three times the fixed price. Maize prices have not yet been fixed for the 1942 harvest. Here comparison with Germany is unnecessary, as little maize is grown in the Reich itself. In Roumania, price control of maize has been removed, with the result that there has been an increase in speculation by German controlled export firms; the price has now risen from 900 lei a quintal (plus a delivery premium of 150 lei) to 4,000 lei, that is, prices have risen approximately by the amount of the general price increase, and if the wheat price was decontrolled, the price might be expected to rise to 4,000 lei or more. In Hungary the official price of maize is so far unchanged. It can be concluded that the policy of the price stop cannot be maintained in these countries if supplies of food are much below normal. The problem is likely to arise very acutely when maize prices for the 1942 crop are fixed. In all the Danubian countries, the peasants are determined to keep maize back as their last safeguard against starvation, and in order to maintain their cattle and pig production.

Burial and Town Planning

The findings of the Uthwatt Committee, which are discussed on page 352, give a special significance to an investigation of the Association for Planning and Regional

Reconstruction into matters relating to the disposal of the dead. The investigation was carried out by Mr C. A. Bransgrove, and its results were given in a lecture which the Association will eventually publish. At present, according to Mr Bransgrove, the number of private graves is rapidly increasing, and, to accommodate the half-million burials per annum which take place in this country, it is reasonable to estimate that 500 acres of ground a year are required for cemetery extension. Accurate figures of burial grounds owned by private companies and individuals, by churches and chapels, by societies and institutions, are not available, but it is estimated that 25,000 acres, nearly 40 square miles of some of the most valuable land in the country, are owned by municipal authorities for occupation by the dead. The 28 Municipal Burial Boards of Greater London have between them appropriated 2,500 acres for this purpose. To acquire the land is a difficult and costly problem for the two thousand odd burial authorities in this country, "over whose functions," Mr Bransgrove declared, "there is no central control, and for whose guidance statutory legislation is negligible. It is noteworthy that the Town and Country Planning Act of 1932, whilst providing land for various purposes, does not include cemeteries, and yet the disposal of the dead is essentially a town-planning problem. . . ." Mr Bransgrove strongly criticised the high cost of dying in Britain, and though the figures he gave—£30 for an average funeral with £15 as a minimum—are probably exaggerated, particularly for country towns and villages, the average cost is excessive, nor does it include the price of the burial ground. Mr Bransgrove dealt in detail with the organisation of burials in some Swiss municipalities, where state insurance covers the cost and private enterprise has been eliminated. This aspect of burial is, however, a matter for the Beveridge Committee rather than committees on the use of land. So far as the latter are concerned, it is clear that reconstruction can hardly ignore the burial factor in town-planning; its importance can to a certain extent be measured by comparing the 25,000 acres of burial grounds in the hands of municipal authorities with the fruit acreage in Kent—some 11,000 before the war—and the entire acreage of small fruit in England and Wales, which was some 55-60,000.

Shorter Notes

Considerable satisfaction will be felt at the answer given by the Parliamentary Secretary to the Board of Trade in the House of Commons last week on the methods of the Board's enforcement officers. None of them has been found guilty of using provocation and incitement to buy, and no evidence could be found to confirm the alleged incident in Devon, which Mr Harold Nicolson related in the *Spectator* and to which *The Economist* referred in a Note on September 5th (page 296).

The announcement made in the House of Lords last week that the Ministry of War Transport and the Ministry of Labour have appointed Sir John Forster to enquire into dock labour questions on the Merseyside will give general satisfaction. The allegations recently made in the *Times* were so serious, the evidence so controversial and so many departmental corns were being trodden on, that an independent inquiry seems the best way of getting at the facts. Sir John Forster, whose report on youths in coal-mining put forward constructive proposals for the solution of one difficult problem, seems eminently suitable for the job.

At the annual representative meeting of the British Medical Association, which was held last week, the Planning Commission's interim report, discussed in detail in *The Economist* of June 27th (page 888), was discussed. The plan's proposals for central and local administrative and advisory machinery, and for the unification of hospitals under a regional body were adopted, and the establishment of health centres was approved in principle.

Canadian casualties in the Dieppe raid are officially given as 3,350, of whom 40 officers and 130 other ranks are dead, 41 officers and 592 other ranks wounded and 130 officers and 2,417 other ranks missing.

AMERICAN SURVEY

Michigan Bus Ride

(From Our Washington Correspondent)

August 31st

"BAGGAGE first, please"—the bus driver takes it in piece by piece. An old leather gladstone, with one handle pulled off and the other ripping, that had gathered dust in the garret for the decade and more since the last boom; a bright new bargain suit-case, fabric with metal reinforcements at the corners, now in process of acquiring its first scratches; a carton which had earlier contained jars for preserving, its covers kept from flopping by a series of half-hitches of strong rope; a 5 and 10 cent store paper shopping bag stuffed with necessities for the baby. One by one, they are reached up from the hands of the crowd at the bus door. Reached up to the driver who is patient enough to answer the questions of the lady who thinks each stop must be the one where she gets off, firm enough to see that the best use is made of the last available inch of seating capacity—"Here, boys, you climb up on top of these satchels so's these two men can sit down"—and tough enough to quell the occasional drunk.

Tough enough, too, in the old days, to drive the big bus on a schedule that, stops and all, averaged well over 45 miles an hour. To-day's slow driving gets him down. When one passenger discovered that the time of arrival at a point seventy-five miles down the road was five minutes too late for the train he'd hoped to catch there, a gleam came to the driver's eye—"How'd you like to have me pick up about ten minutes so's you could make it?"

The manual prepared to introduce RAF trainees to the mysteries of the American way mentions the fact that people talk to each other on trains. They tell all, on buses.

The plump farm woman (size 44, printed cotton, non-shrinkable, priced 79 cents in the larger women section at Penney's) immediately settles the baby and begins on the details of the cherry crop. They say this year's pick'll reach 50 million pounds. And five cents a pound this year instead of three because the Government's buying. Terrible time getting pickers, and pay at 30 cents a lug when some years it's been as low as fifteen. One fella offered a bonus of 5 cents above that, if they stayed and kept at it until his whole orchard was finished. They say it's going to be worse to find anybody to pick next year—there's a meeting next Tuesday with the County Agent, the growers and a man from the employment service to plan what to do then. They're even talking about finding housing for them and seeing that they get around. Twenty miles down the line,

complete with carton, shopping bag and cheerful infant, she gets off.

One reason why there'll be fewer hands on the farms next year turns up as the bus lurches to a stop. A work-worn woman is seeing off her youngest, two girls and a boy, bound for Detroit and the factories. "Take care of yourselves," she calls as she and the collic turn falteringly back to the farmhouse. Farther along, a grandmother gets on with a two-year-old child. Her son, in uniform, kisses the boy as he hands him over. "Raise him right, mom," he calls as the driver grinds into gear again.

The three youngsters are looking at the paper (it can be read in spite of the bounce). It carries a story about a kind judge and a housing problem: Boy meets girl at the factory where both work. They marry. There is no place to go. They go in with the boy's parents, in a flat also occupied by the rest of the children, two nephews and three cousins. It is the upstairs flat; the family also owns the downstairs, which lodges a comparable family. The boy is to be drafted. He wants to get possession of the downstairs for a little privacy before he leaves. The judge issues an eviction notice to let him have it.

Where does the evicted family go? In another column in the same paper, there is another housing story headlining the unfreezing of certain materials and beginning "Detroit private contractors will build 1,000 homes a month for rent to war workers, but the city's public housing programme is still in the planning stage." The youngsters skip that one, with its statistical details of surveys, inter-agency friction, insufficient materials, that leave a Farm Security Administration camp and the "Sojourner Truth" negro housing project, whose opening was attended by white pickets, as the two functioning publicly-sponsored additions to accommodations in the Detroit area. Meanwhile, local realtors have formed the Greater Detroit Property Owners and Tax Payers Association, and pledged a million dollar fund to fight the rent ceilings applied by the Office of Price Administration.

The next passengers to get on are two Roman Catholic nuns. The housing problem does not bother them. Neither does it bother the floozy on the front seat, in pink slacks and a pseudo-sailor souvenir cap cocked on her synthetic curls.

A middle-aged salesman is scanning the classified ads in the back of the paper. There are pages of them. When

BANKERS TRUST COMPANY.

NEW YORK

Incorporated with limited liability in the U.S.A.

production of consumer durables stopped, national advertising of such items as cars, ice-boxes, electrical apparatus stopped too. But lots of people had old ones that weren't worn out. The papers saw a chance to build up a new kind of advertising, and the streams of people coming to town saw a chance to get, second-hand, some of the things they couldn't get new. With average weekly earnings in manufacturing in the Detroit area running at \$53.93 this year as compared with \$34.91 in 1940, the "white market" thus established flourishes: "Attention—don't wait—buy now—a 4-room outfit \$88.00. Beautiful furniture you will be proud to own." "Smart buyers all new stock living room specials \$39.50." "You can find close-outs, repossessed, unclaimed furniture, purchased from finance bank, easy terms, open evenings."

The salesman points to the adjacent help wanted columns. That's where the money's coming from, he comments. Look at the ads offering jobs to tool designers—a whole page of 'em. And see all the places wanting fountain girls—don't even have to have experience. Don't know what the hot-shops are going to do. They gotta have waitresses—they're swamped with folks waiting to get fed—all this new money around, and boy how they do eat. But soon as a restaurant hires a girl she goes to night school and learns to operate a punch machine. Here's a taxi company offering jobs to women drivers.

The bus cranes its neck to the last passenger in the end seat as the man at the wheel stops to hail and take on an enormous middle-aged husky in a greasy grey uniform with a big pistol strapped in a holder to his left side. Plant guard. The boy with the new suit-case is visibly impressed.

Journey's End

The bus begins to get in toward town—the approach to any of the automotive cities is an almost interminably gradual increase in the density of the eateries, hot-dogs to frozen-custard stands, the sub-divisions, the bowling alleys, the trailer camps, the beer parlours, where the quickest available oblivion may be obtained with the aid of "a boiler-maker and his helper" (a double whisky followed by a beer). "There's names from every state in the Union on them licences," the salesman remarks.

City limits. Folding of papers. Gathering and dropping and recovering of minor packages. Polishing faces. Head-ducking to see out the window, a routine matter of keeping track of stops for the plant guard, the grandmother with the baby, the nuns, and the salesman; a first glimpse of the sights of new worlds for the boy with the shiny suit-case, the floog, and the youngsters from the country, in town to speed war production and look out for themselves.

American Notes

Half-way Mark

The sixth quarterly Lend-Lease report, which President Roosevelt has just sent to Congress, puts current Lend-Lease aid to all countries at the rate of \$8,000 millions a year. The recent rapid expansion of American supplies to the United Nations is apparent from the fact that from March, 1941, to August, 1942, the value of Lend-Lease goods and services transferred was \$5,129 millions, and another \$1,360 millions of goods were in process of shipment. This, however, does not do justice to the industrial contribution of the United States. Purchases by America's allies in the same period equalled approximately \$5,800 millions, bringing the total of munitions and supplies provided to nearly \$11,000 millions. At present, about 35 per cent of the supplies provided under Lend-Lease go to Russia, another 35 per cent to Britain, 30 per cent to the Middle East, Australia, and other areas. President Roosevelt's message, which accompanied the report, dwelt less on the achievements of the United States than on the need for redoubling war production and further expanding deliveries under Lend-Lease. After paying a tribute to the "formidable amount of munitions and supplies" now being placed at the disposal of American forces in Britain, Australia, and the Middle East, he went on:

In relation to their available resources, Britain and Russia have up to now produced more weapons than we have, and they are continuing to produce to the limit in spite of the fact that Russia is a battlefield and Britain an offensive base. So far the United States has little more than passed the half-way mark towards its maximum possible war production. Not until we have reached the maximum—and we can do

this only by stripping our civilian economy to the bone—can our fighting men and those of our allies be assured of the vastly greater quantities required to turn the tide.

With the growth of the American army beyond the original goal of 4½ million men originally set for 1942, and the involvement of American forces on half a dozen fighting fronts, the question inevitably will arise whether American munitions and supplies should not be reserved for American use to a greater extent than at present. President Roosevelt's recognition of American indebtedness to her allies—both industrially and on the battlefronts—and his emphasis on the importance of reciprocal aid as a means of economising transport and supplies, means that whatever sacrifices are imposed on the United States by the needs of the United Nations, they will be cheerfully borne.

* * *

Report on Rubber

The report of the Baruch Committee, appointed last month by the President to investigate all aspects of the rubber position, has given the nation its marching orders. Mr Nelson has already appointed a Rubber Controller, Mr Martin Jeffers, to carry out the Committee's recommendations, and everywhere there is relief that at last the facts on rubber have been made clear, and a realistic policy laid down. The Committee found the existing situation "so dangerous" that

unless corrective measures are taken immediately, this country will face both a military and civilian collapse.

Declaring that there was no middle course between discomfort and defeat, the Committee submitted eight drastic recommendations to conserve existing supplies of tyres, which it declared were wearing away eight times faster than they could be replaced. They include the prohibition of speeds above 35 m.p.h.; nation-wide restrictions on mileage per car, now estimated at about 6,700 miles a year, to bring essential mileage down to 5,000 miles a year; compulsory periodical tyre inspection; national petrol rationing; and the release of more rubber to recap tyres for essential civilian driving. Particular attention is drawn to the failure to accept the Russian offer, made last February, to exchange information on synthetic rubber production, and tardiness in distributing to all American companies full information on the compounding of Buna. Urging that the synthetic programme be increased from 705,000 tons to 1,100,000 tons a year, the Committee submitted figures showing that total crude rubber supplies available between July 1, 1942, and January 1, 1944, would fall short of essential military requirements by 211,000 tons, without provision for civilian needs. On the vexed question of method, the Committee recommends increases in both petroleum base and grain base types; on that of administration, the reorganisation and consolidation of the Government agencies concerned with rubber. The report is a victory for those members of the Administration who have insisted on the necessity of increased restrictions on the home front, but because of the prestige of the Committee it is being accepted wholeheartedly. What now remains is the formidable administrative task of formulating and enforcing the most severe civilian sacrifices the United States has yet been called upon to shoulder.

* * *

India: America's Business

Mr Churchill's defence of British policy in India has had a poor reception in the American press. With the exception of the *New York Herald Tribune*, always a stalwart on the Indian question, the reactions have varied from profound criticism. P.M., the *New York Times* to *Telegram*, and the *Chicago Sun* all took exception to Mr Churchill's "lack of alarm" and argued that the situation was steadily deteriorating. Although a fair degree of point of view, as in Sir Stafford Cripps' article in the *New York Times*, and the "Fifty Facts On India" produced by the British Information Service, there unquestionably is deadlock than there was at the beginning of the campaign of civil disobedience. Developments in India have consistently commanded a greater amount of attention than is determined how great an influence the press debate has on

public opinion as a whole, or, indeed, how much interest the average American feels in the Indian question. Judging from the newspapers alone, however, there is a strong feeling that India is "America's business" and that negotiations leading to a compromise should be reopened as soon as possible. Charges like those of Louis Fischer, who contends that the British Government is carrying on a "smear Gandhi" campaign and that violence is much greater than is widely realised, and Senator Reynolds' demand that India be given her freedom, have brought rebukes from some sections of the press. Nevertheless, details of the repressive action taken, and prophecies of growing revolutionary violence, have stimulated the uneasy feeling in America that British policy in India is a negation of the Atlantic Charter and the Four Freedoms. There have been persistent reports that Washington regards the situation with concern, and would not be averse to the role of mediator if the good offices of the United States were requested. This is a more controversial question, and some support is to be found for the proposition that American interference would hamper the war effort. The weight of publicity, however, and the pull of sympathy and apparent self-interest appear to lie in favour of intervention by America, China, and Russia and the working out of a United Nations guarantee to India.

* * *

Powers for the President

Congress has declined to make an issue of the President's ultimatum, and already Bills have been introduced both in the Senate and the House of Representatives giving President Roosevelt authority to stabilise the cost of living. The details of these Bills vary somewhat. That introduced in the Senate by Senator Wagner directs Mr Roosevelt to stabilise prices, wages, and other factors affecting the cost of living at the August 15th level, whereas the House Bill mentions no date, but simply authorises the President to stabilise salaries and wages so as to maintain a "fair and equitable relation" between them and farm prices. The farm price provisions are the heart of the matter. Both Bills provide that farm prices should not be fixed below parity or the highest prices prevailing in 1942, whichever is the higher. The House version goes further, however, in requiring the creation of "floors" under farm prices at parity. These are to be maintained by crop loans

and purchases. It was the President's proposal that farm price ceilings should be set at parity or recent prevailing prices, whichever was the higher, and presumably he felt that it would be useless to ask for more discretion. Farm income is to be frozen at its present swollen level. But if the House provisions concerning a "floor" under farm prices become law, this will provide an additional subsidy to certain farm groups and leave little scope for a flexible price policy designed to direct production into crops most needed for the war effort. The substantial identity of the Bills with the President's proposals should not be taken to mean that his victory is assured. Their present form is due to Administration draftsmanship and the real debate is still to come. In addition to smoothing out the differences between the House and Senate Bills, there is almost certain to be an attempt to write into the Bill restrictions on wage increases. The prospects for a real programme of stabilisation are much brighter, however, than they have appeared in recent months.

* * *

Shorter Notes

Further information suggests that the interpretation of their resignations in a note entitled "Alibi's End" was not entirely fair to the former heads of WPB's Iron and Steel Division. Their resignations followed the unauthorised publication of details of a highly critical study of the branch by Mr Libbey, a WPB consultant. Mr Nelson has disavowed the report and ordered Mr Libbey to be discharged.

Despite the objections of Mr Ford, the War Production Board has finally authorised the construction at Willow Run of housing units for 15,000 employees.

The defeat at the primaries of Governor Talmadge of Georgia gives cause for general satisfaction. Notorious as an upholder of "white supremacy," he tried to base his campaign on the issue of forbidding the use of Georgia schools to negroes training for war industry. In other respects his record is equally bad; it was not long ago that he was hung in effigy at the University of Georgia for his attempts to interfere with educational policy. His victorious opponent, Ellis Arnall, at present state attorney general, is a supporter of President Roosevelt.

THE WORLD OVERSEAS

Australia's War Effort

(By a Correspondent)

September 9th

IN the second half of 1941, Australia's war effort entered that stage whence further progress is incompatible with the continuance of normal civilian ways of life. The sudden threat of Japan, however, has not only intensified the need to accelerate the country's war effort still further, it has also helped to remove many of those obstacles—political, economic and psychological—to the adaptation of Australia's everyday life to the necessities of war. The extent to which things have changed recently in Australia can be grasped by a comparison of the budgets for 1941-42 and for 1942-43. The 1941-42 budget, which was introduced by Mr Curtin's Government in October last year, provided for an annual war expenditure of £A221 millions; the actual expenditure during the financial year surpassed this estimate by £98 millions, and the 1942-43 budget, which has now been introduced, but which may well be amended before very long, provides for an annual expenditure of £A440 millions.

A similar picture is revealed by figures of the mobilisation of man-power. Some 300,000 men and 50,000 women have been transferred to war activities between January and August, 1942—far more than was originally expected; 500,000 factory hands are working for direct military re-

quirements in a country where the total number of factory employees was well below 600,000 before the outbreak of war. Another 150,000 men and 80,000 women are to be mobilised before the end of this year.

The Government has sometimes been attributed with a tendency to use compulsory measures as sparingly as possible and to rely mostly on voluntary efforts. It has, however, used its powers fairly extensively for the military and industrial mobilisation of men, and it will conscribe women as well if an insufficient number of volunteers should come forward in the near future; but the tendency to refrain from compulsion is still discernible, for instance, in its financial policy and in the mobilisation of small incomes. The gap between estimated expenditure and estimated revenue in 1942-43 will probably be as high as £A300 millions, the bulk of which will have to be raised, in the words of Mr. Curtin, "by the sacrifice of non-austerity things" on the part of the Australian population; the new austerity campaign, which aims at reducing normal living standards by one-third, is therefore considered by the Australian Prime Minister as "the most important phase of the war, the greatest and most stirring phase of the war."

The standard of living of the Australian population was actually considerably raised during the earlier part of the

war; and, in the first few months of the present year, the volume of retail sales has apparently again been on the increase, owing largely to the general uncertainty about future supplies and to hoarding. In particular, the premature announcement of the forthcoming clothing and footwear rationing led to an unprecedented rush on retail shops in May this year. Nevertheless, such shopping activities have only been possible as long as there have been old stocks at the retailers' disposal; the volume of sales is bound to decrease with the decreasing supply of consumption goods, though a better organisation of distribution, including rationing, and a high standard of discipline on the part of the public would help to prevent undue individual hardships. Such goods as cosmetics, razor blades and many household articles are hard to obtain throughout Australia; cigarettes are scarce; tea has been rationed at 1 oz. per head per week; the production of beer and liquor has been reduced by one-third and may well be reduced again. A great many import restrictions have been introduced during recent months, and the number of building permits for new dwellings in the six state capitals, which was 1,502 in an average month of 1941, had been reduced to 185 by February, 1942. The Australian Federal Minister for War Organisation, in a review of his department's activities, said *inter alia* that the number of varieties of chocolates and sweets is to be cut to 10 per cent or less, and that the boot and shoe manufacturers would devote their capacity to a minimum number of utility types for the Services and essential civilian needs. A special problem is set for the Australian consumption goods industries by the necessity to provide essential civilian goods which hitherto were not manufactured in sufficient quantities in the Commonwealth; in such cases the Minister has to re-direct the textile and similar industries rather than to restrict them. The rationing of textiles and footwear will, it has been estimated, almost halve the previous consumption. Cinemas, sports and race meetings, which used to play a big part in Australian public life, will all be severely affected by the Government's new austerity orders.

The reluctance of the Government to ration foodstuffs (other than tea) is understandable in a country with so large an agricultural output. The double necessity of avoiding waste and of saving part of the rural manpower for other

purposes may, however, make the Government reconsider its attitude. The need to find food for the growing number of American soldiers has, moreover, put a special strain on certain sections of food production; it is largely with a view to the American forces that food manufacture has been classified as a Grade I industry which must at least maintain its former output. Nor is it the intention of the Government to stop completely the export of agricultural products; there are plans to provide plant, at a cost of £A200,000, for the dehydration of mutton with a view to sending large quantities to Britain in comparatively little shipping space. It is difficult to see how all these activities could be carried through, even in a country as rich in food production as Australia, without enforcing austerity on the dinner-table of the average citizen.

Among the other obstacles to a united Australian war effort, the competition between Federal and State Governments in the field of taxation has been eliminated and a unified economic policy has been started. The present Government has now reaffirmed its resolution not to allow the Australian States to impede its plans for either the war effort or post-war reconstruction; and the Australian Press has so far largely supported the Cabinet in its constitutional fight. Still more important, there have been no serious disturbances of the industrial peace since the Japanese threat became a reality.

The year 1942 is for Australia what 1940 was for Britain. The country has taken a decisive step in the direction of a 100 per cent war effort. The one great difference between Britain and Australia is that the latter has still not banned party strife from its political life, although, under the impact of acute danger, this failure has not so far produced a visible impediment to the national war effort.

Agricultural Reconstruction in Eire

[FROM OUR DUBLIN CORRESPONDENT]

September 1st.

THE problems that will arise in Irish agriculture after the war are already engaging attention. A committee of experts in farming science and practice has been set up by the Government to consider and report on post-war agriculture. The personnel of this committee is calculated to inspire confidence that it will produce a constructive report containing the main features of post-war policy. The translation of policy into practice depends upon the existence of local organisations of farmers. The work of the Department of Agriculture is necessarily centralised, and it is a matter of vital importance that its precepts should be brought to the door of every farmer in the country. The organisation known as *Muintir na Tire* (the People of the Land) can play an extremely useful part in the work of agricultural reconstruction. The question of the extent to which the parish councils could be used for the purpose of agricultural improvement was discussed in an interesting lecture by Mr M. Murphy, Lecturer in Dairy Accountancy, University College, Cork, entitled *The Parish as the Unit of Economic Planning*.

The lecturer emphasised the importance of external influences on the internal economic life of every locality.

The general form and direction of agricultural planning for the future will have to be conditioned by factors far removed from the farmer; in the first instance by such national plans as may be evolved for maximising non-agricultural incomes, for solving the problem of urban unemployment and for maintaining and if possible increasing our population, and, in the second instance, by the scope and vagaries of an export market which itself will be planned by an external authority.

Subject to these limitations, a local organisation can help to increase the well-being of farmers by influencing all or any of the four factors on which that welfare depends. These four factors are, first, the total farm income, including the value of the portion of farm output used for domestic consumption; secondly, farm expenses or costs of production; thirdly, household or cost of living expenses; and, fourthly, the availability of supplementary non-agricultural employment. The first of these factors—the total farm income—is determined by the physical volume of production and the price of farm products. Insofar as what the farmer produces is sold in an export market, its price is outside the control of any purely local organisation. From the point of view of

the parish, the rest of Eire as well as countries abroad constitutes an export market. Mr Murphy properly concluded that the price of farm products is, therefore, incapable of being raised by the parish organisations. He expressed the opinion that Irish farmers will have to sell in a buyers' market in the period after the war.

When the physical volume of production is being planned, regard will have to be paid to British policy in relation to agricultural imports. Great Britain may be prepared to take less Irish agricultural produce than hitherto or she may be prepared to take more. In either case, there will have to be a conscious national readjustment of our agricultural economy. If a contraction of exports is forced on Ireland, the problems of adjustment will be very painful. The rôle of the parish organisations in these circumstances will be "largely confined to the somewhat negative but very important work of spreading general hardship as equitably as possible." If British import policy calls for an expansion of Irish agricultural production, the small local organisations can assist in three ways. First, they can help in a national stock-taking of our capacity for production along different lines. A soil survey is an essential pre-requisite to a planned expansion of output. Secondly, they can play a useful part in the programme of education that will be necessary. A great increase in the number of agricultural instructors is required. The results of the most recent research should be brought to the notice of every farmer. Demonstration farms should be available in every part of the country. In all these activities, parish organisations could greatly assist the central Government agencies. They could also help to increase the supply of skilled labour by providing educational courses suitable for labourers and by acting as clearing houses or exchanges for labour in the busy season. Thirdly, the parish organisations could serve as agencies for the distribution of whatever credits will be rendered available. For this purpose, they possess many of the advantages of the agricultural credit co-operatives which have proved so useful in other countries. Mr Murphy is justified in concluding that

in relation to export markets, parish organizations can play a very important part either on their own initiative or as organs through which comprehensive national planning may reach down to the widely-dispersed individual members of the farming community.

The Home Market

The next question to be considered is the possibility of influencing conditions in the Irish home market. Here, again, prices are outside the control of local organisations. The conflict of interest between town and country and between different classes of agricultural producers prevents any local fixation of prices. Parish organisations can, however, help to expand the physical volume of output by co-operating in attempts to maximise the urban demands for rural products of all kinds. Another method of raising farm standards of living is by substituting produce grown on the farm for food purchased in shops. An increased production of home-grown food releases income which can be spent on urban products and thus maintain urban employment. Farm labourers could also increase the amount of food grown on their plots, and could, in many cases, grow a saleable surplus. These are matters which clearly lie within the scope of parish organisations. The provision of supplementary non-agricultural employment usually involves the planning of public works in areas larger than the parish.

Mr Murphy concluded his valuable and constructive lecture by stressing some of the limitations of the parish organisations in the work of agricultural reconstruction. The parish is too small a unit for many purposes, and joint action by several single parishes may be necessary in some cases. Moreover, the existing co-operative societies must be retained even when the localities which they serve are in no way related to the parochial frontiers. Agricultural organisation must take place within the larger scheme of social welfare, which is the primary object of *Muintir na Tire*. When all these limitations are stressed, there remains a vast field for local organisation of agricultural improvement in Ireland. In the early days of the Irish agricultural revival, Sir Horace Plunkett envisaged a dual system of central and local organisation. The co-operative movement never attained the success it deserved, and Irish agricultural organisation tended to become unduly centralised. In the difficult years that lie ahead, local organisation will be necessary as an agency of translating the Government's policy into practice, and the foundation and spread of the parish council movement is a hopeful sign that the necessary machinery will be available when it is required.

Ration your current account

MOST THINGS are rationed these days. So why not ration your current account in the national interest? Make up your mind what balance you feel justified in keeping at the bank. (No one requires more than a small balance these days.) Ask your bank manager to buy War Savings whenever your balance reaches an agreed sum in excess of your minimum requirements. He is quite prepared to do this. It will save you trouble and give you the satisfaction of knowing that all the money you can spare is automatically devoted to furthering the war effort.

NATIONAL SAVINGS COMMITTEE

THE SOCIAL FRAMEWORK

An Introduction to Economics

By J. R. Hicks

(Shortly)

The National Income, and the ideas associated with it, are to-day the centre of practical economic discussion; and this is not surprising, for they are the most potent of the keys forged by economic science for the understanding of the modern world. Yet although the idea of the National Income is becoming familiar to readers of the newspapers, no authoritative discussion of what it means has been available in a simple form. A book which assumes no previous knowledge of economics, and proceeds as rapidly as possible to an examination of these problems, should therefore be welcome to the general reader, and should help the teacher and student out of a difficulty. Among other topics discussed are Population, the conditions of Labour, the ownership of Capital, the balance of payments, index-numbers, and the inequality of incomes. The treatment is illustrated throughout by the best available statistics of Britain's economic position just before the outbreak of war.

THE TAXATION OF WAR WEALTH

By J. R. Hicks, Ursula K. Hicks, and L. Rostas

Second edition

Oxford University Press

German Europe

Marriages and Births

NAZI population policy seemed for a time to have provided a successful solution for the declining German birth rate. In the Old Reich, the number of births per 1,000 inhabitants had increased from 14.7 in 1933 to 20.0 in 1940. The policy of marriage loans was a stimulant, and the number of marriages increased considerably during 1933 and 1934. From 1935 to 1938, the marriage rate, as well as the birth rate, remained almost stable. The stimulant of marriage loans, and the threat of very heavy punishment for illegal abortion, had run their course. It must be said that, even without the Nazi policy, the number of marriages would have increased during 1933 and 1934, because of the large number of persons reaching the marriage age.

At the beginning of the war, the Nazis made a tremendous effort to increase marriages for the purpose of countering a possible decline in the birth rate during the war. The number of marriages in the Old Reich during the fourth quarter of 1938 and the first quarter of 1939 amounted to 308,430. During the fourth quarter of 1939 and the first quarter of 1940 the number of marriages amounted to 470,170. The impact of the beginning of war in 1914 was quite different; in 1914 the number of marriages fell by 10.3 per cent compared with 1913, and in 1915 by 45.8 per cent.

The policy of marriage loans and the special facilities for war marriages caused the upward population trend in the years 1939 to 1941. Short military campaigns and great hopes of an early victory were also favourable factors. The latest official figures give a very promising picture, until the war against the Soviet Union began, and the prospect of a long war became apparent. The number of marriages, live births, and civilian deaths were as follows, in 1,000 relating to Greater Germany, i.e., Old Reich, Austria and Sudetenland:—

12 MONTHS '000s 1938=100					
	Marriages	Live Births	Deaths		
1938	770.2	1,508.4	—	—	949.3
1939	944.4	1,633.7	108.3	—	1,099.3
1940	731.4	1,644.8	109.0	—	1,045.6
1941	589.6	1,528.3	101.3	—	995.6
JANUARY/APRIL					
1939	245.4	545.3	100.0	—	380.7
1940	305.5	613.9	112.5	—	425.3
1941	227.6	464.9	85.1	—	386.9
1942	173.3	423.1	77.6	—	363.8

The number of births in 1940 was slightly higher than in 1939, and the number of births in 1941 was still above 1938, the last full year of peace. In contrast, the number of marriages fell heavily in 1940. The full significance of the development is obvious if the years 1913 to 1917 and the years 1938 to 1941 are compared:—

	Number of Births in 1913=100		Number of Births in 1938=100
1914	98.9	1939	108.3
1915	75.2	1940	109.0
1916	56.0	1941	101.3
1917	49.6		

This comparison is suggestive. If the war had ended in 1941 with a German success, no serious decrease in the number of births would have happened.

The figures relating to the first four months of each of the years 1939 to 1942 show equally the abrupt change caused by the war against the Soviet Union. The decline in the number of marriages is even more pronounced than the fall in the number of births. Even the most liberal marriage allowances have not prevented a further decrease in the number of marriages. At present, applications for marriage loans are very frequently made, but after the loan has been granted, the marriage is either postponed or cancelled. This may frequently be due to the death of a soldier who had applied for the loan. But the authorities have prolonged to three months the period during which the loan can be taken up after it has been granted. This can only mean that people who intended to marry have been discouraged, probably because of the bad situation in Germany. There is hardly any chance of finding a flat

or of furnishing one, and it is equally difficult to find furnished rooms. The official figures and the deterioration of living conditions in Germany make it clear without doubt that, during 1942, the downward trend in the number of marriages and births cannot be halted. If the war should continue during 1943 on the same tremendous scale, it can safely be predicted that the experience of 1917, when the number of births fell to roughly 50 per cent of 1913, will be repeated in 1943.

Accident Insurance.—Some time ago, compulsory accident insurance was extended to all occupations, including domestic service, where the accident risk is comparatively small. This extension was obviously part of the policy of mopping up purchasing power. The insurance industry has now suggested people's accident insurance, covering accidents in traffic, sports, at home, and so on, in addition to the present compulsory accident insurance.

Savings Deposits.—The president of the German savings banks organisation stated that, during the first six months of 1942, new savings deposits again increased by 40 to 50 per cent. It may be assumed that the greater part of this increase was caused by the system of "iron" savings for workers and small employers. The new wave of concentration which has closed down a considerable number of small shops may have forced small business men to deposit their working capital with savings banks. The president made it clear that the current account of the savings banks, which are traditionally the bankers of the independent artisan and the small shopkeeper, are no longer of any importance in the total deposits of the savings banks. The new policy of industrial self-financing, instead of advance payments, will hardly affect the savings banks.

Co-operative Aid.—The continued concentration of industries made it necessary to extend the co-operative aid system for closed down industries to all sections of Germany's economy. This system has now been extended to the incorporated Polish provinces, which indicates that all plans for establishing civilian industries in these provinces have been abandoned. At the same time, the economic administration of the Protectorate Bohemia and Moravia has introduced co-operative aid after the German model. The new central economic federations have been empowered to accumulate the necessary financial funds by imposing a levy. Industrial concentration is also the main feature in France, and the new law for the rationalisation of French industry embodies a system of co-operative aid after the German model.

Eastern Workers.—Workers from the occupied Russian provinces, but not from the Baltic states, have been named "east workers." According to the German press, these workers arrive daily in considerable numbers in Germany. The total number of "east workers" now employed in Germany is variously estimated from 500,000 to one million, not including Russian prisoners of war. Labour dictator Sauckel made several journeys to the Ukraine for the purpose of speeding up the transfer of workers to Germany. It seems that the greater part of these workers are employed in German agriculture. In spite of the great numbers, no wage regulations have been made yet, which means that probably no wages have been paid at all.

Concentration in France.—Since the issue of the rationalisation law last December, roughly 4,000 factories of all sizes, employing 50,000 workers, have been closed down. These workers were distributed among other factories or forced to go to Germany. The continued shortage of fuel and raw materials, as well as German pressure, have required a new programme of concentration which will affect another 4,000 factories. The official announcement says that all factories not working for essential national interests will be closed down. All factories manufacturing machine tools and machinery used for civilian production will be closed, particularly those manufacturing machinery for the textile and paper industries.

THE BUSINESS WORLD

Stabilised Profits

TWO articles published in *The Economist* of May 23rd and June 6th, respectively, introduced some radical improvements in the computations of industrial profits which have been a feature of these pages for a period of over thirty years. From the beginning of this year an attempt has been made to discover more closely the truth about profits, re-interpreting that misused word to mean profits as the economist would have them be, and not merely profits as the accountant, in his wisdom, evaluates them. The main feature of the change (for details of which readers are referred to a statement on page 799 of our issue of June 6th) is to re-cast the figures given in published accounts on a consistent basis before the deduction of any charge for standard income tax. This article adds a further instalment to the story given in those two articles which has been derived from company results published in the second quarter of the year.

During this period, we received 524 company reports for which, in each case, comparable figures extending over three previous years are available. The adjustment of published profits figures of these companies to a gross (i.e., before tax) basis for the latest four years provides the raw material for Table I. On a gross basis, profits in the latest

TABLE I

* Redemption funds, deferred repairs, etc., gross.

year have shown a slight increase compared with the preceding year—£80,605,000 against £79,492,000. An increase of this order, however, is of little or no significance. Compared with the results of these same companies three years earlier—that is to say roughly the accounts published in the spring and early summer of 1939—the latest figures show a fall of 2.8 per cent. In the meantime, the standard rate of tax which is deducted from these profits (whether reserved or paid out in dividends) has increased from 5s. 6d. to 10s. in the £. Nor has the latest minor increase in gross profits meant any increase in gross equity dividends. These have absorbed £40.6 millions for the companies concerned in the latest year compared with nearly £49 millions three years ago, and the net amount distributed, as we have seen, was further drastically reduced by increased taxation. In fact, the very modest increase in estimated gross profits has been more than absorbed by a £2 millions increase in reserve allocations between the two years.

The new basis figures thus continue to display conclusive evidence of the close control of gross profits through the mechanism of EPT; there is no sign of the slightest degree of profits inflation. That fact, of course, is no guarantee that all inflationary elements in the nexus of costs

and profits are being kept under similar control. Indeed, there is a real risk that the complete control of profits may blind the onlooker to the continuing rise in the level of costs. It is the wage-earner and certain entrepreneurs in favourable positions who stand to gain from this rise—not the equity shareholder in industrial concerns. EPT, in short, is no substitute for good cost accounting, control of contract prices and a wages policy.

In the second table, the new gross figures have been allocated to the financial years in which they were earned

TABLE II
GROSS PROFITS, BEFORE TAX, BY FINANCIAL YEARS
(In £'000)

(commencing with 1938) on the lines of the first table in the article of June 6th. Owing to the lag between the earning of profits and their appearance in company reports, this table must be regarded as a moving record in which the

THE ECONOMIST NEW PROFITS SERIES.

The notes below may assist readers to follow the improvements in our profits figures.

The new figures are presented throughout on a gross basis and represent the closest estimate that can be made of industrial profits, before deducting any charge for standard income tax.

The gross profits are shown (a) under periods in which they were published and (b) under the periods in which they were earned.

(a) A four-year comparison of gross profits of companies whose accounts were published in the second quarter of this year is given in Table I.

(b) A five-year linked comparison of gross profits arranged by accounting periods is given in Table II, and this is expressed as a quarterly geometric index number of gross profits (four quarters 1938 = 100) in Table III.

The *Economist* index of net reported profits (i.e., net profits taken from the companies' accounts without adjustment for taxation) has been converted from an arithmetic to a geometric basis (July, 1935, to June, 1936 = 100) and is given in Table IV.

It is intended at a later stage to transpose the reported profits given in Tables V to VII to a gross basis.

latest two years are always incomplete. The latest figures include rather more companies than those published on June 6th, but the story they tell is closely similar. This is evident from Table III, which presents the new index of gross profits, based on accounting periods and not on dates of publication (1938=100). The index for 1939 and 1940 has been re-worked on the larger sample of companies included in Table II, but the resulting changes in the index figures are surprisingly small. In the light of this experiment, it would seem reasonable in future to treat only the last four quarters of the index as provisional and to retain earlier figures, even though some small amount of additional data may have been received which would modify them slightly.

The latest quotable index figure is for earnings in financial years ended during the fourth quarter of 1941. As a percentage of 1938 earnings, the 1941 figures ranged between 96 and 99, though these figures are subject to amendment at this stage. It is unlikely, however, that the adjustments will be significant, since the 1941 figures are based on as many as 1,801 companies out of the total of 2,192 for 1938 and 1939.

All the figures and index numbers so far considered in this article are based on the new gross profits computations. Tables IV to VII which follow are based largely on reported profits. The first gives *The Economist* index of net reported profits in its new geometric form (July, 1935-June, 1936 = 100). Owing to the mixed nature of reported profits figures, part of which are shown gross and part net, this index shows a steeper fall than the gross profits index in Table III. During the past three years, this index has fallen by one quarter; it now stands at 93.5, compared with 125.2 for the four quarters to June, 1939. The reported profits figures of the second quarter companies are given in the first two columns of Table VI; in total (so far as the accounts reveal)

they were very slightly higher at £104,757,548, an increase of £450,000 during the year. Net reported profits, on the other hand, were £24 millions lower at £50.7 millions.

The distribution percentages of Table V are derived from the estimate of gross profits given in the third column of Table VI. There is a rather regular distribution "form" for the different quarters of the year, and it is fairer to compare the second quarter this year, not with its predecessor, but with the second quarter of 1941. Out of a smaller total of distributable profits, equity shareholders have had to content themselves with dividends representing 63.4 per cent of the whole in the latest quarter, compared with 65.9 per cent for the corresponding quarter of 1941. The earnings rate on equity capital has, meantime, fallen from 10.6 to 9.9 per cent, and the gross dividend rate from 9 per cent to 8.3 per cent. These distribution figures may be compared with the percentage division of gross profits between dividends and reserves shown in Table I. The figures differ—they are not on the same basis—but the story they tell is substantially the same one of reduced gross profits distributed with greater parsimony.

The final table sets out the reported total and net profits of these 526 according to their industrial grouping. Only one feature of this table is of particular interest, and that is not entirely new: the groups which have fared conspicuously well have again been the consumption goods groups. Brewery and store net profits have increased; moreover, reports during the current quarter suggest that the increase in these groups (and in cinema earnings) continues impressively. Such results contrast sharply with the so-called war industries—coal and steel, motors and aviation. They are the symptom, at the end of the chain of consumption, of the inflation of costs to which earlier reference has been made. They are an index of failure in the "battle of the gap," to which attention should be urgently directed.

Finance and Banking

Demand for December Bills

The feature of the money and discount markets continues to be the keenness of the demand for the three months' bills now being issued. These are, of course, December maturities, and it is the glamour still attaching to them which, no doubt, induces the market to bid for them at a price which leaves a barely perceptible margin of profit. The syndicate's tender price for the December bills remains at £99 15s., and at this figure it obtained a 40 per cent allotment at last week's tenders. With the advent of October the currency of the Treasury bills to be tendered for will increase by one day, namely from 91 to 92, and this, together with the difference in the standing of a January as compared with a December maturity, will no doubt induce the market to lower its tender price to £99 14s. 11d. The keen competition for the December bills is compelling the official tenderers, whose requirements must be satisfied, to bid £99 15s. 1d. for the bills, at which figure a loss would be incurred either on running the bills with clearing bank money or in reselling to the banks at their minimum rate of 1 per cent. To these quarters, however, the rate earned on Treasury bills is largely immaterial. It does not necessarily have to be related to the money rate or to the clearing banks' buying rate for bills. Although the banks were called upon to pay £45 millions in TDR's this week, as compared with nominal current maturities of £20 millions, there has been no evidence of shortage of credit in the money market. On each day of the week one or other of the banks has been a good buyer of Treasury bills, and there has always been about enough money to meet the requirements of the market. The unevenness of conditions in the money market is matched by the latest Bank return. This shows a position which compared with the previous return is more static than any revealed since the beginning of the war. The circulation is down by £385,000, bankers' deposits by £1,854,000, public deposits by £277,000 and Government securities by £721,000. To achieve this stability at a time when Government income and expenditure are running at the exceptional levels now current, is a token of the efficacy of the authorities' technique in insulating the credit position from the potential disturbances that surround it.

The Strength of the Peso

The strength of the Argentine peso continues to be the feature of what remains of the international free foreign exchange market. In terms of US dollars the free rate has recently appreciated to 419 pesos to \$100. This tendency is mainly due to the reduction of imports, the volume of which has fallen from 4,330,000 metric tons for the first half of 1940 to 2,586,000 tons for the first half of this year. The shift of the balance of international payments in favour of Argentina is reflected in the steady strengthening of the central bank's gold and foreign exchange reserve and in the substantial net imports of bullion. The reserve on July 31 last amounted to 1,682,496,624 pesos, compared with 1,541,873,952 pesos at the beginning of the year. There were no exports of bullion or specie from Argentina during the first half of the year, whereas imports totalled 6,565,618 pesos, compared with only 301,719 pesos in the corresponding period of 1941. A substantial part of the rise in the foreign exchange holding of the central bank probably reflects the accumulation of sterling in Argentine special accounts. The shortage of imported products in Argentina is becoming acute. The position taken up by the country in relation to the war is not calculated to give it a high priority ranking in its claims for imports from the United Nations. To a small extent this has caused a shift of imports from the United States and the United Kingdom to Brazil, which has been especially marked in the matter of textile manufactures. But for such products as coal, iron, steel, tinplate and cement no such alternative sources of supply are available. In these directions, therefore, the country is suffering from exceptional scarcity while the products of the favourable balance of payments accumulate in the shape of gold and foreign exchange.

External Debt.

The external debt of the British Government has risen again this week by the grant of a further \$1,000,000 instal-

ment to the interest-free loan made to this country by the Government of Newfoundland. This brings the total of the interest-free loans advanced from this source to \$5,800,000. It is not generally realised how considerable and varied has been the new external debt of the United Kingdom, created since the beginning of the war under the National Loans Acts 1939-1941. Here are the detailed items as shown in the Finance Accounts 1941-42, and indicating the amounts outstanding at the end of the last financial year:

	£
Anglo-Netherlands Financial Agreement—	
Guilders 47,061,265	6,192,271
Reconstruction Finance Corporation—	
\$384,352,512	95,254,649
Government of Ceylon—	
Rupees 57,033,160	4,277,487
Government of Mauritius—	
Rupees 4,405,000	329,025
Government of East Africa—	
£EA 2,461,055	2,461,055
Government of Trinidad—	
\$3,702,000	771,250
Government of Newfoundland—	
Can. \$1,800,000	404,192
Other Loans Free of Interest	190,904
Total	109,880,833

The Reconstruction Finance Corporation Loan represents the operation which involved the pledging of non-marketable dollar investments as collateral. The other Government loans represent the sterling funds of these various authorities made available by way of direct loans to the British Treasury. Some are interest-free, others bear interest at rates ranging up to 3 per cent. The sundry free of interest loans are for small amounts, ranging down to 100 Iraqi dinars, and represent contributions from individuals in such overseas countries as Argentina, South Africa and Japan (this last, a pre-Pearl Harbour operation).

Smaller War Plants Corporation

An Act has been passed in the United States providing for the creation of the "Smaller War Plants Corporation." This state-owned organisation, having a capital stock of \$150,000,000, is empowered to make loans to small business concerns in order to mobilise their productive facilities in the war effort. The Act authorises the US War and Navy Departments and the Maritime Commission to make or participate in such loans. The service departments are also authorised to guarantee loans made by the Reconstruction Finance Corporation and by the Smaller War Plants Corporation to firms engaged in the defence programme. A further section of the Act excepts loans guaranteed by the service departments or the Federal Reserve banks from the limitations on loans to any one person which the national banks are permitted to make. Another interesting provision is that, where such action is required for the efficient prosecution of the war, the anti-trust laws of the United States or the Federal Trade Commission Act may be transgressed with impunity. In such cases the Chairman of the War Production Board must issue the appropriate order, and this will ensure that no prosecution or civil action follows. The new Corporation has been given a life not extending beyond July 1, 1945, except for purposes of liquidation, and if an extension is required, fresh legislation will have to be passed. The Corporation is given wide powers and its facilities are evidently intended to satisfy both the fixed and working capital needs of small-scale industrial enterprises.

Gilt-Edged Switches

While the rise in equities has continued in a rather halting manner during the past week, the movement which has attracted most attention has been that of gilt-edged stocks. Here, the longs have fallen while the shorts and those of medium date have improved, some of the shorts quite markedly. The dividing line between falls and rises has been a final maturity of 1960. The number of bargains received has shown a further falling off in this section, but the impression gained in the market is that turnover, in terms of value, has increased. A number of explanations are advanced, none of them completely satisfactory. So far as the definitely short dated bonds are concerned, it seems very probable that the explanation is the traditional one of easy money. Whether as a result of official policy, or by a series of accidents, the supply of money, both to the clearing banks and to outside institutions, has been very ample for what is now a considerable period. Some of the holders of this money, and possibly the discount houses, may have felt justified in placing it in something longer dated than bills, but it is doubtful whether this would account for the rise in medium dated stocks. Two other currents have been reported in the market, namely the sale of stocks bearing interest at the nominal rate of $3\frac{1}{2}$ per cent or over, and the investment of the money in the new Savings Bonds on tap, and the sale of long dated stock to finance purchases of equities. The former of these seems to argue the belief that anything bearing interest as high as $3\frac{1}{2}$ per cent will be paid off on maturity, the latter the opposite, namely a distrust of the Treasurer's ability to prolong the cheap money policy indefinitely. It is very doubtful whether either movement has been of really important dimensions, and it is possible that the real explanation of the fall in longs is that some important holder is in need of money, possibly for plant extension or some other war purpose. There are already signs that the movement is fading out, and it would certainly be premature to regard it as the beginning of any considerable switch from long dated fixed interest stocks into equities.

Duties of Trustees

Amendments in the information which must be provided before the Stock Exchange, London, will give permission to deal serve to draw attention to the growth of a very undesirable practice of relieving directors, or trustees, or both, of what have in the past been conceived to be their duties. The attitude of the Committee is that they cannot refuse permission to deal on the ground of these reliefs, but they feel that they must insist on their being known to the share or debenture holders as the case may be. They will, therefore, in future require publication of the relevant particulars in respect of all new issues, including conversions of existing stock. There is some reason to suppose that the inclusion of these reliefs in Articles of Association and Trust Deeds is becoming general, and, in some cases, it has been carried to a point where no duty is left to the trustee except to refrain from a fraudulent breach of trust. It is interesting to note that on this occasion the Stock Exchange Committee has refused to accept responsibility for protecting the stockholder beyond the point of insisting that he shall be put in a position to protect himself. Certainly, no investor should look twice at a security if those responsible for the conduct of the company, and those who are nominally supposed to oversee the execution of the terms of its loans, disclaim all liability. The question arises, however, whether such clauses should be permitted in Articles of Association and Trust Deeds. Are they not just another case of the ill effects of failure to amend the law so as to protect the small investor, commonly not in a position to secure the legal assistance at the disposal of most of those interested at the time when savings were in relatively few hands?

Responsibilities of Directors

According to Mr Beith, ex-chairman of the company, two directors of Horrockses Crewdson, knowing that the

EPT standard of the company would in all probability be altered so as to give it an increased profit, bought shares in the company. On that ground, they were invited by the chairman to resign. They did not do so, and at a subsequent meeting the chairman was removed from his position, but remains a member of the board. A statement signed by all the active members of the board, except the ex-chairman, says that the directors concerned have been in the habit of acquiring shares from time to time as occasion offered, since none but the qualifying shares were available to them at the time of their election. They also point out that there are many factors more important than the EPT standard which will affect the value of the shares, and they advise the proprietors to keep an open mind until the publication of the full accounts, and a statement as to the actual EPT standards. The exact motives of the directors in making the purchases may well remain a secret to themselves for all time, but it is probable that there will be some who will believe that they hoped to use special knowledge to their own advantage without disclosing their intention. In fact, this story—of which it is probable that the last has not yet been heard—well illustrates the necessity for insisting that those who deal in securities of whose value they have special knowledge, and over whose future they have control, should be compelled to disclose the transaction after a suitable lapse of time. Had the directors acted as they did with the knowledge that their action would be made public, it would be much less easy to entertain the suspicion that they were, in fact, taking advantage of special knowledge to their own benefit and incidentally to the detriment of some of those whom it is their duty to serve.

Far Eastern War Damage

The publication of a letter from the Joint Committee, representing all interests carrying on business in the British territories, now in Japanese occupation, to the Chancellor of the Exchequer and the Secretaries of State for the Colonies and Burma, on the question of compensation for war damage appears to have raised very little comment. The submissions put forward by the Committee are that the home Government, in conjunction with the local Governments, should guarantee the solvency of any Government insurance scheme in force in any of the territories, and assume responsibility for all loss or damage sustained which is not recoverable under any insurance scheme. On the former point it is evidently undesirable that a mere lack of funds at the disposal of the local Government, at the time when compensation ought to be made, should prevent the payment of covenanted benefits. The schemes ought to be implemented in the sense in which any reasonable man would read them. Where the burden of providing the necessary funds should finally rest is another matter. It is understood, however, that, even where such schemes existed, they were very inadequate, even as judged by the standard of achievement in this country, and it is a fair guess that the bulk of the damage will fall outside them. A considerable part of the letter is, in fact, devoted to stressing the effects of the scorched earth policy.

The Committee asks for no payment now, but it does ask for a clear and definite statement of policy in a sense which will help to ameliorate distress, give hope and confidence for the future, and restore firmly the belief that the burdens of war damage will be distributed in such a way as, in the words of the Prime Minister, "give effect to the feeling that there must be equality of risk and equality of treatment." It is not clear whether in their claim for total compensation the Committee includes loss of income as well as damage to property, but it may be said at once that, in this country, only the most tentative attempts have been made to provide compensation for the former. No one can pretend that anything approaching justice is being meted out in Great Britain so far as loss

of income is concerned, and there are doubts whether the compensation for loss of property will prove fair and adequate. As was pointed out on page 322 of *The Economist* of last week, the Prime Minister has committed himself to the statement that failure to distinguish sharply between war damage by bomb and shell and other kinds of loss would open up a limitless field. In these circumstances, it is admitted that one can only do what one can, and what will be possible is a function of the total damage shown to have been sustained when reconstruction can begin, and of the resources available then, and estimated to be available later. Promises now can scarcely go beyond the acceptance of a general principle that the loss shall be spread, instead of being left entirely where it falls.

Great Boulder Developments

It is satisfactory to learn from the new sole liquidator of Great Boulder Proprietary Gold Mines that there is some prospect of a scheme being evolved which should be acceptable to all who wish for the prosperity of the company. No official information as to the character of this plan is so far available, and meanwhile a new organisation, the Shareholders' Resumption Group, has arisen which is demanding, *inter alia*, that the right to manage their own affairs should be restored forthwith to the shareholders. Those who remember anything of this regrettable affair will know that the whole essence of the problem lies in the fact that a powerful group of shareholders holds that the policy of the board is against the best interests of the company, and it is perfectly evident that until this conflict of views is resolved, or one party or the other abdicates, there is not the slightest hope that the restoration of the normal machinery of company control can result in satisfactory operation. The board, in fact, still has the majority of votes. The board put the company in liquidation in order to remove its control to Australia, and to stay the liquidation would, in existing circumstances, deprive other shareholders of all say in the administration of their property. Although the matter has dragged on for years, this is in no

way the fault of the new liquidator, who has only been in office for some two and a half months. The wisest course is clearly to give him a reasonable opportunity to realise the arrangement of which he has hopes. If that fails to mature, it will be time to think again.

Company Notes

Unilever Dividend Unchanged

The fact that the net profits of Lever Brothers and Unilever for the year 1941 show a fall from £6,987,130 to £5,835,589, and that the ordinary distribution is unchanged at the level of 5 per cent to which it was reduced a year ago, appears to have caused considerable disappointment in the market. The fall is certainly heavy, and the net profit appears to be the smallest since the formation of the company. The lack of any increase in the dividend can, however, scarcely have caused surprise. The difficulties of the company must have risen during the year, and there is the probability of losses in the Far East to be considered. Further, the scheme for the pooling of profits with the Dutch company means that the British concern still has to provide against the contingency of the preference dividend not being met, as well as for an ordinary dividend equivalent to the 5 per cent on the British ordinary shares. In view of the drop in earnings, the amount available for ordinary capital has been reduced from 34.1 to some 27.0 per cent. Last year, £700,000 was placed to contingencies, and some £1,227,000 added to the carry forward. This year, the total available, after preference and ordinary payments, will be some £770,000. The preliminary statement gives the consolidated profits of the group, after EPT but before British income tax, as £10,562,540, compared with £11,225,451 for 1940. The accounts for that year do not show the latter figure but the profit after tax was £9,674,736, while income tax and NDC, excluding tax on interest and dividends, was £2,543,727. It will be noted that the fall in group earnings, on this basis, was very materially less than that in the net profit of the parent after taxation, which would suggest that either that item, or one or more of the

MILNERS SAFE CO., LTD., 21, HAMPSTEAD LANE, LONDON, N.6. TELEPHONE: MOUNTVIEW 6655

special appropriations, has increased on the year. The £1 units of ordinary stock fell 2s. 6d. to 28s. 9d. on the announcement, but this is still well above the level of a year ago, and the yield of £3 10s. 10d. per cent less tax at 9s. 9d. shows that the price still discounts a very material recovery in distributions after the war.

Courtauld's Earnings

It is doubtful whether any definite conclusions were based on the reduction in the dividend of Courtauld's for last year to 7½ per cent, announced at the end of February. The full accounts show that profit, after slightly reduced depreciation, are up from £3,291,392 to £4,227,507, but the rise is more than absorbed by the increase in tax charge, and the actual amount earned for ordinary is lower. The rise in tax is, however, due in part to the higher rate of income tax, and the percentage earned has risen from 9.4 to 9.6. It should perhaps be pointed out that the profit includes, in addition to 9½ months' interest on the compensation award, £593,940, final dividend on the old Viscose holding. This is now cut to only 5 per cent of the total capital, so that the total receipts on these two accounts will be substantially lower. The matter is, however, of rather academic interest, as Mr Courtauld states that, in view of EPT, there is not likely to be much difference between what it was expected to receive from Viscose—so long as USA taxation was high—and what the company will get under the new arrangement:—

Carry forward	316,160	323,007	494,055

† After War Damage in 1941. ‡ Employees' Pensions Reserve.

The balance sheet shows two sets of changes. First, a rise of £11,124,094 in general reserves and from some £12,824,000 to £41,034,000 in net liquid assets, accompanied by a drop of £16,000,000 in holdings in subsidiaries. Second, a fall from £4,267,366 to £2,930,967 in stock-in-trade, but a rise in debtors, which seem to suggest that, although trade is keeping up fairly well, reserves of materials are being run down. On the former point, Mr Courtauld says that trade in 1941 was much as expected,

and that the first half of 1942 has been busy, within the limits imposed by restriction and controls. These are likely to grow, but there is a reasonable certainty that the company will earn its EPT standard, and that there will be little change in distributable profits. On the news, the £1 stock units stand at 38s. 9d., returning some £3 17s. 6d. per cent.

Initial Services Recovery

The full accounts of Initial Services for the year to June 30th last show a rise in total consolidated income from £272,440 to £344,416, and in the income of the company from £262,526 to £292,890. Despite an increase in tax liability, including all tax on dividends, from £149,376 to £174,598 and in the sum written off air raid shelters from £1,441 to £4,334; equity earnings are higher, and the ordinary dividend, maintained at 16½ per cent, is covered by a rate of 17.9 against 16.8 per cent. As in the previous year, there is no transfer to general reserve, which remains at £160,000, so that the whole surplus goes to raise the carry forward from £10,044 to £15,706. The balance sheet shows an increase in debtors from £75,298 to £83,184. This, together with a jump in net loans to subsidiaries from £26,045 to £70,391 indicates a considerable expansion in business last year. The chairman, Mr. W. J. Chinneck, reports that the concern has been scheduled under the Essential Work Order. The new accounting year has started rather better than 1941-42, and, in the absence of disorganisation by a resumption of large-scale bombing, supplies of labour and materials are likely to be the limiting factor. The 5s. ordinary shares at 17s. yield £4 19s. 6d. per cent.

Odeon Theatres

The preliminary statement of Odeon Theatres for the 53 weeks to June 27th last shows a striking rise in profits, after fees, from £643,287 to £1,530,539, and the resumption of ordinary dividends with a payment of 12 per cent, the first since 1938-39. Tax liability however, has risen from £325,000 to £1,100,000. War damage and ARP require a total of £60,464 against £79,470, and there is an increase in the surplus for ordinary capital from £22,231 to £160,093. Thus, the ordinary payment is covered more than three and a half times with a rate of 36.5 per cent. The directors have transferred £134,640 to write off the balance of preliminary expenses so that the carry forward is some £18,000 lower at £78,595. The improved results are in line with the experience of Associated British Picture Corporation and demonstrate palpably that the increased entertainments tax has proved no lasting discouragement of the cinema goer. The 5s. ordinary shares at 13s. yield £3 18s. 5d. per cent.

Industry and Trade

New Steel Controller

Sir W. Charles Wright has resigned his position as Controller of Iron and Steel owing to ill-health. Like Sir Charles Wright, the new Controller, Sir J. M. Duncanson, is a member of the iron and steel industry. He is a director of the Steel Company of Scotland, a subsidiary of Colvilles, the large Scottish iron and steel concern. Sir J. M. Duncanson has long been closely associated with the Steel Control. Early in the war he was appointed director of heavy steels, shell steel and semi-finished steel, and, two years ago, he became Deputy Controller in charge of iron and steel supplies. Within the limits of its monopolistic set-up, which, if anything, has been strengthened during the war, the record of the British iron and steel industry during the past two years has not been unsatisfactory. There have been allegations of failures and mistakes—some of them serious; the history of the scrap campaign is scarcely creditable. But it must be remembered that the industry has had to contend with considerable difficulties arising from the loss of some of its main sources of raw materials and from the need to alter the balance of its output in favour of the kinds of steel needed in wartime. The reduction in iron ore imports has been largely made good by increased home production, and, in the case of scrap too, the increased use of home supplies has offset the loss of imports. The methods adopted for directing steel supplies to essential

uses, for which Sir John Duncanson has been largely responsible, have, on the whole, achieved their purpose, though they may be open to criticism in detail. Evidence of their success is the fact that 75 per cent of available steel supplies are consumed directly for military purposes and that purely civilian consumption has been cut to 7 per cent of the total. But there are many dangers ahead which will test the capacity of the new Controller to the full.

Check Trading

In order that prices, fixed under Maximum Price Orders, should not be raised to allow for the cost of giving credit, the Board of Trade issued an Order and direction on August 4th prohibiting check traders from making an additional charge for credit in the form of poundage from check trader sells "checks" or vouchers which entitle the customer to purchase goods to the amount of their face value—usually £1—at certain specified retail shops. The customer undertakes to repay this credit by weekly instalments normally at the rate of 1s. a week on each £1 check. These instalments are collected by employees or agents of check trading concerns who, in addition to collecting instalments, sell new checks to their customers. The customer is charged poundage on each check at the rate of 1s. to 1s. 6d.

in the £1. The check trader, who has agreements with particular retailers to supply goods against the presentation of the checks, repays these retailers for checks which they have exchanged for goods and he is allowed an agreed rate of discount from the retail selling price, amounting, on the average, to about 17½ per cent before the war. Thus, the check trader derives his revenue from two sources, from poundage from the consumer and discount from the retailer. It has been stated that the number of persons employed in this form of trading, including those employed part-time, may be as many as 20,000. In prohibiting poundage from October 1st, the Board of Trade has thus put the check trader on the same footing as the retail trader. In reply to criticism of the Order in the House of Commons on September 8th, Mr Dalton pointed out that there are a large number of other forms of credit trading available to persons of small means, such as ordinary retail shops giving credit to their customers, direct credit traders who themselves deliver goods through travellers to the purchasers (which the check traders do not), clothing clubs of many kinds run by shops and co-operative societies, and mail order and other agencies. All these traders have accepted the new situation by which all credit charges, all organisers' commissions and the like must be included within the margins allowed in the Maximum Prices Orders. Mr Dalton has rightly refused to grant special concessions to the check traders.

Discipline in Coal Mining

The Ministry of Labour and National Service has made a new Essential Work Order for the coal mining industry which came into force on Thursday. The Order is designed to strengthen discipline in the industry and, in particular, to tackle the problem of absenteeism. It is now an offence for a person employed in the industry to absent himself from work without reasonable excuse; to be persistently late in presenting himself for work; to fail to comply with any lawful and reasonable orders given to him; and persistently to behave at work in such a manner as to impede production. Any infringements of the Order are to be reported to the new regional investigation officers of the Ministry of Fuel and Power who may recommend the National Service officers of the Ministry of Labour to take proceedings. It would be unfair to infer from this Order that there has been a general lack of discipline and slackness in the industry. Absenteeism, it is true, is higher than before the war, but it must be remembered that the number of man-shifts worked per week has been increased and that many of the youngest and strongest miners have been called up. The Order is designed mainly to prevent slackness among the minority.

Unemployment

The total number of persons registered as wholly unemployed at employment exchanges in Great Britain showed a further rise between July and August. As in the previous month the increase occurred among boys and

REGISTERED UNEMPLOYMENT IN GREAT BRITAIN			
	Wholly Unemployed	Temporarily Stopped	Persons Normally in Casual Employment
July 13, 1942			
Men	55,953	1,710	2,173
Boys	10,163	18	7
Women	26,767	1,431	124
Girls	8,553	105	1
Total	101,436	3,264	2,305
August 17, 1942			
Men	55,693	1,744	2,541
Boys	15,615	22	7
Women	23,793	1,760	120
Girls	12,433	96	1
Total	107,534	3,622	2,669

girls; the number of wholly unemployed men and women was slightly lower. The number of persons temporarily stopped as well as unemployment among workers normally in casual employment registered a small increase. The Ministry of Labour has decided to review the registers of men aged 41-50 and of women aged 18-45 in order to ensure

that those who are no longer doing the work in which they were confirmed, or to which they were directed, at the time of interview, are not lost to the war effort.

Wages in Engineering

The engineering unions have now submitted their claim to higher wages to the Engineering and Allied Employers' National Federation. The demand is substantial. It includes an all-round increase of 11s. a week; an increase equivalent to 33½ per cent of basic rates of all time workers; and the elimination of the economy measures introduced during the trade depression in 1931. The total cost of the claim has been estimated at £100 millions a year and the number of workers who would benefit from it at two millions. Earnings in the engineering trades are already among the highest in industry, and a further increase may be expected to precipitate claims from other unions.

Concentration of Industry

On Tuesday, last week, Mr Dalton gave some interesting information about compensation arrangements which have been made by industries concentrated under the Board of Trade scheme, additional to that contained in an article on the progress of concentration in *The Economist* on August 29th. According to Mr Dalton, the total number of concentrated industries is 36. Twenty compensation schemes, covering whole industries or large sections of industries, have been approved. These naturally vary according to the circumstances of individual industries. In the majority of cases there is a central fund—raised by a levy on the machine capacity or the turnover of the nucleus firms—from which the closed firms draw compensation. In general, the amounts required for the care and maintenance of the plant and machinery of closed firms are the first charge on these funds. In the remaining 16 industries there are no central compensation schemes, and, as was pointed out in *The Economist*, the normal practice is for the nucleus firm to produce goods at cost for the closed firm, which continues as a selling organisation.

Ice Cream Traders

The Order prohibiting the manufacture and sale of ice cream and water ices after the end of this month is to stand, in spite of appeals to the Ministry of Food by the representatives of the trade. There can be no doubt that the Ministry is technically right in upholding its decision on the grounds of the need for economy in labour, transport, raw materials and packing, and for concentrating all available resources on the most essential food production. The manufacture of ice creams is largely controlled by Walls, Eldorado and Lyons, and their labour and equipment may well be put to better uses. Ice creams may be ranked as a luxury and not as a necessity, and their manufacture cannot be said to have any direct bearing on the war effort. What, however, does seem rather hard, is that traders driven out of business are to receive no compensation. It is estimated that about 100,000 retailers are involved, including 40,000 street corner men. Though the majority run ice creams as a side line to the sale of confectionery and tobacco, some are wholly dependent on the business and are small owner proprietors with no other means of livelihood. One cannot escape from the conclusion that if the trade were more powerfully organised it would have secured better treatment. It is perfectly true that it would be impracticable and undesirable for one Government department to start compensating one section of one trade, but the fate of the small ice cream traders serves to accentuate the need for a comprehensive and satisfactory scheme of compensation for economic casualties, an issue which the Government has so far shirked.

THE EASTERN BANK LIMITED

The TRANSFER BOOKS will be CLOSED from the 22nd September to the 3rd October, 1942, both days inclusive.

By Order of the Board.

C. L. MANNING, Secretary.

Crosby Square, Bishopsgate, London, E.C. 3.
14th September, 1942.

COMPANY MEETING

TELEPHONE RENTALS,
LIMITEDSATISFACTORY PROGRESS
IMPORTANCE OF COMPANY'S
SERVICES

The thirteenth annual general meeting of Telephone Rentals, Limited, was held, on the 14th instant, in London.

Mr Fred T. Jackson (chairman and joint managing director) said that the gross dividends from subsidiary companies showed a small decrease, amounting to £133,820 as against £136,268 for the previous year. This decrease arose in part from increased costs of maintenance, together with the expenditure incurred in respect of insurance against war damage, which was very considerable. These increased costs had in part been offset by a percentage increase in the annual rental charges. The result for the year, before charging national taxation, was a profit of £134,085 as compared with £136,312 for last year. There was a very large increase in the charge for national taxation, and as a result of this and of the slight decrease in net profit, they had had to reduce the transfer to the general reserve to £10,000 against £25,000 for the previous year. The reserve

accounts now amounted to £341,781. It was proposed to pay a final dividend of 6 per cent, less income-tax at 9s. 10.55d. in the £, making 10 per cent. for the year. Their total interest in subsidiary companies by way of shares and advances stood in the balance-sheet at £1,079,825 as compared with £1,066,824 a year ago. All their British subsidiaries had traded at a profit during the year.

DEMAND FOR EQUIPMENT

The accounts indicated very clearly that the company was making progress, even though trading conditions were difficult. They still held the leading position in their particular industry, which was the provision on rental of internal telecommunication and broadcasting installations, factory time and cost control systems, etc. All the apparatus they had developed was in great demand and many of the leading industrial concerns in the country were their subscribers. Telematic and chromatic services made a very important contribution to the national effort, so that this great demand was understandable in these times when the combination of speed and elimination of waste in production was so vital. The shortage of man-power and materials was still very evident, but it was recognised that all the company's equipment was of great importance and it had therefore been possible to maintain their progress.

Reference had already been made to increased costs and overheads under various headings, but it was very satisfactory that most of their subscribers had agreed to a percentage increase in the rentals charged. It was most gratifying to be able to record that since the commencement of the war their subscribers had taken many opportunities of expressing their appreciation of the service the company was providing.

Provided the material and labour position did not worsen, he saw no reason to anticipate any falling off in the financial results during the current year. Indeed, as eight months of the operating companies' financial year had passed, the known results made his forecast a reasonably safe one.

A number of skilled workmen had been released for special work of national importance and the matter of finding adequate substitutes presented serious problems. They were one of the first firms in the country to train women in the maintenance and installation of telephone and other apparatus. This experiment had proved very successful and had helped greatly in easing the labour position.

The chairman concluded with an expression of appreciation of the splendid work done by the engineering and administrative management and staff.

The report and accounts were unanimously adopted.

RECORDS and STATISTICS

STOCK EXCHANGES
London

Note: all dealings are for cash

THE level of market activity showed signs of falling off at the end of last week, and after a slight spurt at the reopening it became evident that the force of the general upswing was spent. Sentiment was overshadowed by the increasingly sober reports from Stalingrad, and long-dated issues in the gilt-edged market experienced a definite setback with almost daily losses ranging between $\frac{1}{4}$ and $\frac{1}{8}$, although on Tuesday there was on balance no change. There was some demand for 3 per cent Savings Bonds and 2½ and 2 per cent Funding, with general strength among short-dated issues. The foreign bond market was characterised by heavy selling of Brazilian and Peruvian issues early in the week, by a steady demand for Mexican stocks and by some buying of French rails before and after the week-end. Home rail senior stocks attracted some attention at the end of last week, but with the fall in long-dated gilt-edged attention was switched to junior issues from Tuesday, after which there were sharp rises in Great Western ordinary and Southern preferred and deferred and LMS ordinary. Among foreign rails, Canadian Pacific ordinary and preference corrected last week's losses with gains of $\frac{1}{8}$ and 1 point, respectively, on the same day, but there was scattered selling of South American issues throughout. Later, a modest rally among Brazilian issues encouraged the foreign bond market, and demand for home rail junior stocks continued to strengthen.

The main feature of the industrial market, where activity was on a somewhat reduced scale, was the increasing demand for motor and aircraft issues. While gains rarely exceeded 6d., they were widely spread, including Raleigh Cycle Holdings, Handley Page, Guy, Leyland and De Havilland, and on Tuesday Rolls-Royce improved $\frac{1}{4}$. Triplex, however, was sold on the preliminary statement. Business in the brewery and tobacco groups was reduced to a minimum, although Gallaher and BAT improved

somewhat, early in the week. Among heavy industrials, Tube Investments and Staveley attracted some support. London Brick failed to hold a pre-weekend gain of 6d. when, in the miscellaneous group, Lever and Unilever slumped 2s. 6d. on the preliminary figures. This week there was some selling of Brazilian Traction and International Nickel. The textile group displayed no trend, but Coats and Patons and Baldwins realised small gains early in the week. Otherwise, there was little buying and prices moved irregularly. In midweek, selective buying coupled with shortage of stock raised the Financial News index to a new high level at 85.2.

Turnover was also lower in the commodity share markets, although kaffirs enjoyed increasing Cape support. Speculative issues were mainly in demand on Monday. There was consistent buying of West Wit Areas and, later in the week, such market leaders as Sub Nigel and Crown Mines also improved. Union Corporation lost $\frac{1}{8}$ on Tuesday. There were few price changes in the rubber share market, but the demand for good-class tea shares was marked and Jokai (Assam), among others, improved steadily, on the terms of the increased Government purchase. In the oil market, pre-weekend losses in the order of $\frac{1}{2}$ by most market leaders were generally corrected on Tuesday when Burmah Oil and "Shell" Transport improved $\frac{1}{4}$. There was, however, no general recovery, and Trinidad Petroleum Development and Lobitos lost the same amount. Both oil and kaffir subsequently experienced a moderate setback and interest generally declined.

New York

AFTER sustaining a number of scattered fractional losses as investors lightened commitments, Wall Street closed quietly before the week-end. At the beginning of this week, prices were generally steady, but trading remained colourless and apathetic. There was some recovery in the demand for rail and utility issues, and later, renewed rumours of further tax relief gave rise to a burst of active trading with gains of 2 points not uncommon. In midweek, the trend was again irregular. There was a marked setback for merchandising issues, although market leaders in many other sections held steady.

GOVERNMENT RETURNS

For the week ended Sept. 12, 1942, total ordinary revenue was £32,399,000, against ordinary expenditure of £89,004,000, and issues to sinking funds of £150,000. Thus, including sinking fund allocations of £5,783,059, the deficit accrued since April 1st is £1,308,737,000 against £1,356,667,000 for the corresponding period a year ago.

War Damage.—The Board of Trade has decided, with the approval of the Treasury, that the premium payable under the Business Scheme for the whole year to September 30, 1943, shall not exceed £1 per cent. For the period of six months up to March 31, 1943, the rate of premium will be 10s. per cent and will be payable in one sum. The rate of premium for the subsequent six months will be determined in March next and will not exceed 10s. per cent.

Speed and Concentration

"IN the long run," Lord Keynes once said, "we are all dead." The phrase is being re-written with vastly deeper meaning in Russian blood. Stalingrad still holds. Incredibly, week after week, the Germans pay a mounting price for their drive to the Volga; the timing of their second assault upon the Soviet Union is thrown gravely awry; the winter approaches. The city and river lifeline may still be saved. It is an easy argument which simply sees the time won by Russian sacrifice being used in the mighty factories of Britain and the United States. What is a tragedy for Russia becomes in this reading a victory for the Allies: so many months gained to clench the stoutest fist in history for the eventual decisive blow.

It is an easy argument, and a fatal one. Time is being gained for what? Russia's resistance will only be repaid if the enemy is given no breathing space. For three years, Hitler has won battles by breathing spaces. After each campaign, he has remade his armies and replenished his supplies. Even last winter, when the Russian offensive, the first great counterstroke of the war, and Russian snows engaged the *Wehrmacht* through the months of winter-quartering, there was no pressure from elsewhere to prevent the Nazi Caesar from making ready, in factories and in barracks, for another year's aggression. The time won by Russian feats will be wasted, as the time won by the Poles and the Greeks was, if the power of the United Nations cannot be translated into deeds before the

German forces can turn and rest. Stalin, Mr Churchill tells, has no illusions; he and his people rely on their own achievements to save the Soviet Union. But they hope for more; they ask for more; they have been promised more.

It is fantastic for any layman to say when and where the blow can be struck which will lift the deadening weight of German might and malice from the Soviet Union. A great offensive is plainly being matured by Britain and the United States; on every front, except over Stalingrad, air supremacy is in the grasp of British and American machines and pilots, over both land and sea; and greater speed into action may not be possible. But it is more fantastic still for anyone to ignore the fact that the blow must be struck in swift time to achieve its purpose; the "too late" of tomorrow may be as futile as the "too little" of yesterday, a harsh fact, however unavoidable the delays may be. Three years ago, it was right for the Allies to make ready and plan for a long war; Germany was too strong and the Allies too weak for a decision to be looked for then. But it is one of the tragedies of history that the right policy bred the wrong psychology. It took the fall of France and the disaster of Dunkirk to break the complacency which said that time was on the Allied side and took for granted that the war could be won by ponderous waiting. The question now is whether that fateful attitude has gone. Everywhere

the question tends to be: Will Russia hold out? The battle before Stalingrad is regarded as so many weeks or months of grace won for the tremendous schemes of the Allies. Reports from Sweden say that the German drive in the east is cracking; in articles and broadcasts, German experts admit how strong Russian resistance and morale are; spectators in Britain and the United States applaud. From the United States, comes the news that ten million Americans will be under arms by the end of next year. But, victory, not time, is now the goal. Sir Samuel Hoare, back from Spain and the murmurs of Europe, knows this:

The question is not whether we shall win the war, but when we shall win it. Shall we win it in time?

To him, with the starving and suffering of Europe in his ears, the thing to be avoided at every cost is "a long-drawn-out war of European exhaustion." In 1939, a long war was the Allies' only hope; in 1942, a long war is Hitler's hope. Success, in the sense of a decisive triumph against all foes in the field, has faded from German aspirations. Success, in the sense of a stalemate with all Europe outside of Germany bled of power and hope, is now the Nazi aim. They would bargain their way out across the starved bodies of their victims. Back in England, Sir Samuel Hoare, who has learnt a deal since he went out to traffic with Laval in 1935 and proclaimed a golden age of peace in the spring of 1939, sees danger for the people of Europe in the very success of Britain's war achievements. He pleads

Do not let the excellence of your organisation, the adaptability of your people and the satisfaction for your achievements blunt the edge of your sense of critical danger or of the overriding need for maximum speed.

The people of this country are fully mobilised; they are healthy and well fed. The fear in his mind, and in the hearts of those Europeans who are now ready to give everything for freedom, is that the British people have "permanently settled down to a war dispensation." The long war has become a habit; time is still co-opted as the greatest ally; and, so long as this is so, Hitler's highest hope, which is to win by making the Allies weary of their waiting, is still alight. It has been said that the fall of Nazi Germany will begin when the certainty of defeat, at whatever date, dawns upon its leaders and people. It will not dawn while time, frustration and fatigue are still courted by his enemies.

The call now is to work, not for a long war, but for a short one.

We shall be wise to take every precaution against the delays and dissipation of effort that have so often frustrated the strategy and tactics of coalitions. Speed, speed, speed. I repeat the cry of suffering Europe. Concentration, concentration, concentration.

In these words, Sir Samuel Hoare asks for a single concerted effort to end the fight before the body and the soul of Europe have been broken.

Pages have rightly been written into the record about the endurance of bombed and weakened Britain in 1940 and 1941. But there is little comparison between even these privations and those of Russia now. In the ruins of Rostov, it is said, the contending armies fought in gas-masks because of the decaying bodies in their path and around them; only this week, after a remorseless bombardment such as none but Russian cities have so far seen, the last women and children are leaving Stalingrad. It is, of course, true that alliance is not a competition in suffering. When your friend suffers, as a wise man has pointed out, the remedy is not to suffer yourself, but to make your common enemy suffer. It is to make good Russia's ghastly ordeal and to end the spreading curse of this frightful war that speed and concentration in the attack are called for now; the speed which asks, not when the Allies will be fully ready, but when they must strike to deny the enemy, who is gambling all, his respite; the speed which brooks no peacetime irrelevancies of politics or bargaining or administrative procedure to impede its path; the concentration of land, sea and air arms which makes every Allied fighting force a decisive weapon; the concentration which allows no disagreement or misunderstanding between the Allies about the goal to seek or the hour to act; the speed and the concentration which, for a brief space in the history of nations, will dedicate a thousand million people to the single aim of saving their world, regardless of all else. It is a weakness as well as a strength that wars must be run by coalitions, of parties, of classes and of nations. There is a habit of bargaining constantly to be overcome. But now

We must [in the words of Sir Samuel Hoare] be a people in mission, showing all the fervour of crusaders, all the singleness of purpose of pioneers, all the righteous indignation of just avengers, all the speed of men and women who realise how fearful is the tragedy that delay means to the millions of Hitler's victims and to the cracking foundations of European civilisation.

This is not rodomontade; it is the civilised world's only hope.

The Defence of Turkey

THE arrival of German armies in the Caucasus foothills has given rise to fresh rumours that Hitler will shortly increase his pressure on the Turkish Government. The return to the Reich of Papen, German ambassador in Ankara, is interpreted in the same sense. If the *Wehrmacht* were to arrive on the Russo-Turkish frontier and gain control of the Black Sea ports of Tuapse and Batum, still in Soviet hands, Germany might consider the time ripe to force the foreign and economic policy of Turkey into the New Order. Much of this anxious gossip is premature and baseless; premature, because the invaders of the Caucasus still have a mountain range between them and the Turkish frontier, while their advance round the shores of the Black Sea proceeds with increasing slowness; baseless, because Turkish policy since the outbreak of war has been consistently determined and courageous.

There has not always been full appreciation in this country of Turkey's attitude. Disappointment that Turkey, although allied with Britain by the Treaty of Mutual Assistance of October, 1939, is not a belligerent has been almost as general as satisfaction that Turkey, through all the ups and downs of war, has chosen to remain an ally. This disappointment has been due mainly

to an unrealistic interpretation of the actual strategic and military possibilities of the situation in the Middle East. Turkish foreign policy is concerned to preserve the integrity of the Turkish state. The Turkish Government has no illusions about the dangers of neutrality in total war; its attitude has not been determined by the naïve optimism which believes that it is possible at will to contract out of world-wide hostility.

The present position, which finds Turkey after three years of war still an ally of Britain, still an independent national state and increasingly a hindrance to the eastward expansion of the Axis, is the product of unceasing and vigorous diplomatic struggle. The first crisis came in 1940 with the entry of Italy into the war and the subsequent collapse of France. The provision of the Treaty of Mutual Assistance between Britain, France and Turkey, that each of the signatories should come to the assistance of any attacked by a Mediterranean power, became operative when Italy attacked France on June 10, 1940. Turkey failed to implement the treaty, invoking the "escape" clause, which removed the obligation to act where this might involve armed conflict with the Soviet Union. What attitude was adopted by the USSR, then enjoying the doubtful

benefits of the Russo-German Non-Aggression Pact of August, 1939, is not known; in any case, only eight days remained between the date when the treaty became operative and the date when it might have been held to have lapsed with the end of French resistance. The most striking feature of this crisis is that, though the circumstances were totally changed by the *débâcle* in Western Europe, there was no corresponding reversal in Turkish foreign policy. Turkey did not repudiate the treaty, despite the disappearance of one of the foundation members, despite the appearance, almost overnight, of a hostile Syria on its southern frontier, and despite the existence in Britain of an acute shortage of all kinds of military equipment, which placed out of the question the delivery of munitions to Turkey envisaged by the treaty. By remaining allied with Britain during the critical days of that summer, Turkey gave the world a declaration of confidence in the eventual victory of the Allies.

The second crisis came in 1941, which saw the loss of Greece, Crete and Yugoslavia and the *Gleichschaltung* of Roumania and Bulgaria. The power of Turkey to resist German pressure was brought to a low ebb. Turkey was neither able nor willing to make a military alliance with Yugoslavia or to give aid to Greece. But the fevered diplomacy of that spring found Turkey equally unwilling to respond to the personal appeals which the Führer addressed to President İnönü. Turkey's unreadiness to join in a Balkan front can be understood. Yugoslavia had moved temporarily towards the Axis side and signed a pact with Hungary on February 27, 1941, the day after Mr Eden arrived for talks in Ankara. Without the Allied aid which could not be sent, Turkish military equipment was woefully inadequate. The tragedy of south-eastern and eastern Europe was the failure of the Allies to synchronise their resistance and pool their strength. As a result of the Balkan campaign, German armies arrived on the frontier of European Turkey. On June 18, 1941, in close analogy to the Russo-German pact, which came on the eve of the German invasion of Poland, Germany and Turkey signed a non-aggression treaty. Yet, even at this critical moment, the Turkish Government reaffirmed its alliance with Britain.

Today, in spite of the threat contained in the German advance along the northern fringe of the Caucasus, the bargaining position of Turkey has been immensely strengthened by the construction of an Allied defence bloc in the Middle East, in Syria, Iraq and Iran. It is true that, with characteristic independence, the Turks took strong exception to the occupation of Iran by British and Russian troops. It is true, too, that the flow of Allied equipment to Turkey has remained substantially below expectations, in part because of the pressing needs of Russia and Egypt, and in part because of the inadequacy of transit facilities at Alexandretta and Mersina. But Turkey is a beneficiary from the comple-

tion of the Istanbul-Baghdad railway in 1940. The transport crisis should be further eased by the opening up this summer of the new railway network linking Egypt, Palestine, Syria and Turkey; and Mr Wendell Willkie has given an assurance that American supplies under Lease-Lend, which was extended to Turkey last December, will be speeded up.

Germany has not failed to couple its bid for the political domination of Turkey with a vigorous policy designed to secure an economic stranglehold. Trade problems, including both the disposal of home grown surpluses and the import of essential supplies of grain and industrial raw materials, have represented a major issue in Turkish foreign policy since the outbreak of war. And it was a remarkable sign of Turkey's determination to remain independent that, even in the summer of 1941, shortly after the conclusion of the Treaty of Friendship with Germany, the Turkish Government should have broken off economic discussions with the German envoy, Clodius, and rejected German contracts for the construction of roads and bridges. The conclusion of the chrome agreement later in the year made the supply to Germany of 90,000 tons of chrome in each of the years 1943 and 1944—after the expiry of the existing agreement with Great Britain—contingent on the delivery of German war material, and, in particular, of an initial consignment to the value of £18 millions by the end of 1942; and the German delegates failed to secure an adjustment of the rate of exchange in their favour. By no means, military, economic or diplomatic, have the Germans succeeded yet in bringing Turkey to heel. It is well known that the proffered German bribes have included the resurrection of a greater Ottoman empire and the transfer to Turkey of Iran, Iraq, Syria and Palestine; it has even been unkindly rumoured that they included the return of the Italian Dodecanese. But these offers have made no appeal to modern Turkey, which is profoundly anti-imperialist in principle, and regards the inclusion of foreigners within its borders as a lively danger to internal stability. The German attempt to revive expansionist ambitions in Turkey has completely failed.

There has also been a not unskilful attempt on the part of the Axis to arouse anti-Soviet feeling. The new Turkish state has a tradition of friendship with Soviet Russia dating from the early twenties when both countries, outcasts in Europe, were struggling to establish a new regime. This friendship found expression in the Russo-Turkish Pact of Neutrality and Friendship of 1925. The course of the war has, however, given rise to Turkish anxiety on the score of Russian expansionist ambitions. Germany, by "revealing" alleged Russian demands to control the Straits, has sought to foster these fears. The degree of suspicion which had been aroused became apparent at the time of the Ankara bomb trial, when two Soviet citizens were sentenced to long terms

of penal servitude. The vigour of Russia's resistance and its success in continuing to supply Turkey with oil, despite the urgency of other calls on transport and resources, have evoked considerable admiration. In this, as in other matters, Turkey appears to have weathered a crisis, and the despatch of M. Acikalin, a very high official of the Turkish Foreign Office and brother-in-law of Atatürk, appears to herald an improvement in relations with the Soviets.

Turkey faces the threat to Transcaucasia as calmly as it faced the possibility of a landslide in Egypt last June. Its poise is the poise of a nation whose foreign policy has discounted the military progress of the war several steps in advance. In the last resort, there is no

doubt that the Turks, a fighting nation, will fight for their reborn state whatever the supply position. Their armies have not lost their spirit; the years since the outbreak of war have not been wasted. So high a proportion of Turkish manpower is mobilised, that there is a shortage of agricultural labour, and it has proved necessary to ration bread. Fortifications have gone forward. Stores of military equipment are slowly being built up. Economic development in the form of irrigation schemes, mining projects and agricultural research is being pushed forward. Yet the overriding achievement has been the success of the Turks in retaining integrity and freedom in the face of heavy and consistent German pressure—with all too little material support from the Allies.

Municipal Trading

THE management of public utilities will be a leading subject in discussions about post-war policy. Lord Reith set the ball rolling in the Lords by calling for bigger and better public boards, and provoked indignant replies on behalf of private enterprise. There has been little discussion of the third type of organisation for public utilities, namely, municipal ownership and control. As to the relative merits of these three forms of organisation, there is no ready-made answer. The answer must depend, for instance, upon the functions to be performed. A public board is probably more suitable than the other two forms of organisation for the work of the Central Electricity Board or the BBC; it may be more suitable for the work of the London Passenger Transport Board or the Port of London Authority. But when it is assumed that the public board is equally appropriate to all forms of public utility, both municipal and private enterprise have reason to demur.

The public board suffers in comparison with the private company by its blunting of the normal economic incentives. Again, it lacks the quality which animates municipal enterprise, the constant pressure of democratic control. It is probably most effective and most desirable where there is a national monopoly to be managed, such as the generation of electricity or broadcasting. But, where the monopoly is of a more local nature, there is probably a great deal to be gained by retaining the advantages of private trading—or municipal trading, which is the least discussed form of public utility organisation, though by no means the least important.

It was before the last war that the dispute about the merits or demerits of municipal trading reached its height. It was not until last year that the first authoritative survey of municipal trading for a generation appeared;* and many of the facts and figures in this article are taken from Dr Finer's book. Apart from comparative rarities, such as savings banks, docks and harbours, municipal trading is mainly confined to the supply of water, gas, electricity and transport. Local authorities supply the greater part of the country's water and electricity, and run the vast majority of its tramways and trolley-buses; only in the provision of motor-buses and gas does it take second place to private enterprise.

What most people want to know about municipal trading is how it compares in efficiency with private enterprise. It must be admitted at once that economic science is incapable of supplying the answer. Public utilities are local monopolies. Neither costs nor prices are competitive in a market, and no estimates of efficiency, based upon comparative levels of costs and prices in different areas, can have even approximate validity. This holds good, whether the public utility is municipally or privately owned; and it is as difficult to compare one municipal enterprise with another as it is to compare municipal with private enterprise. Competition does, of course, exist in a limited sense between gas and electricity, between tram-

ways and buses; but this does not make it any easier to compare, say, the efficiency of one gas undertaking with that of another. Comparison between municipal and private enterprise is further complicated by their diversity of aim. In the former, social and economic functions are inextricably mingled. An uneconomic service may be provided for a social purpose, and the net revenue of a municipal undertaking can be no guide to its efficiency when it is increasingly the practice to arrange matters so as to make neither a profit nor a loss, rather than to apply profits in aid of rates. There have admittedly been great improvements in municipal cost accountancy in recent years; but, even between municipal undertakings, direct comparison can only be made on the unjustifiable assumption that they operate in similar markets.

In the absence of statistical comparison, the only possible approach, admittedly much less precise and reliable, is the direct analysis of municipal trading achievements, and investigation on these lines has led Dr Finer to the conclusion that, with very few exceptions, municipal undertakings in Great Britain are efficiently administered; and that the best municipal undertakings are as well administered as the most successful private concerns. It is, of course, true that in municipal enterprise the incentive usually provided by the profit motive is absent; but it is replaced by other incentives which, in sum, and in their own way, appear to be effective. There is the professional emulation of managers and technicians, the public spirit of councillors (a quality which should not be too lightly derided); and the vigilance of democratic control. Municipal enterprises tend to be less eager than private undertakings to risk new capital; but, despite this hesitancy, vast amounts of new capital have been risked.

There is, of course, room for improvement in many directions. One of the most important changes required to increase efficiency is a reorganisation of municipal trading areas. Circumstances vary in different areas and in different types of municipal enterprise; but in general it is becoming increasingly clear that the technical requirements of the trading services are outgrowing the existing areas of local government. The distribution of water, for instance, is still based upon the technology prevalent nearly a century ago, when local authorities were given the power to supply water, but were not obliged to take any co-operative action. As a result, water supply areas remain remarkably small, and charges for water show an excessive variation in different parts of the country. The formation of regional water committees and joint boards is encouraged by the Ministry of Health, but there is still far too little co-ordination of supply. The drive for joint boards has been obstructed by the fact that neighbouring local authorities are more inclined to compete for water supplies than to co-operate in their utilisation. There are still only 40 joint boards among municipal undertakings which number 838. When there is a complete survey of national water resources, it should be possible to plan a far more economical distribution based on larger areas of supply.

In the case of gas, there are distinct technical limits to the economies of large-scale production and distribution. Calculations have been made showing the various distances at which it becomes cheaper to send the coal for gas production by rail, rather than to pump the gas. The dominating factor is the amount of gas required; and the conclusion is that the demand has to be large and continuous for it to be economical to pump gas for long distances. There is, however, a good case for the extension of many existing supply areas; and in the inter-war years there was considerable progress along these lines, through absorption or joint operation between municipal undertakings and private companies.

The economies of large-scale production have already been obtained in the generation of electricity by the establishment of the "grid," which has reduced the number of generating areas from 600 to eight, and the number of stations from 600 to about 140. In the distribution of electricity, however, there remains a startling absence of uniformity and co-ordination. There are over 600 undertakings of varying size and efficiency. Their load factors vary from 10 per cent to over 50 per cent; some supply alternating current, and some direct; and their voltages range from 100 to 480. The conclusion that greater uniformity and larger areas are needed is generally accepted, and it has been proposed that the Electricity Commissioners should be given powers to impose compulsory amalgamations, either by transfer to an existing undertaker, transfer to a joint board, or transfer to a public board on the lines of the LPTB.

Finally, it is particularly hard to justify any arbitrary limitation to traffic areas, such as is often imposed by the

existence of municipal boundaries. Larger transport areas would permit the planning of through routes, and would obviate the necessity for keeping many separate reserve fleets of vehicles to meet peak demand. The resultant economies would often permit a cheapening of fares. Yet the extension of transport areas has been greatly obstructed both by legal restrictions and by municipal jealousies. The legal obstacles put in the way of local authorities which wished to change over from trams to buses or to enlarge their operations are notorious. Almost equally notorious are the cases of distrust between neighbouring local authorities, which have led in extreme cases to the maintenance of a difference of gauge in order to exclude each other's trams.

The difficulties which arise from the fact that local government areas are not the optimum size for the administration of the various public utilities would not be automatically solved by the simple enlargement of these areas. The optimum local government area for the operation of one utility would probably not be the optimum for another. If the only consideration were to achieve the greatest possible economies of scale, the solution would be to plan public utility areas for that purpose and to put them under the control of joint boards of local authorities and companies or under public boards. But that is not the only consideration; it is also essential to retain the element of consumer control, which has been so largely responsible for the success of municipal enterprise. Much of the opposition among local authorities to enlarged areas for municipal trading has doubtless been due to defence of a vested interest; but much is also attributable to the genuine fear that democratic control will be weakened.

NOTES OF THE WEEK

Stalingrad Holocaust

The battle for Stalingrad, considered by many military writers as hopeless for the Russians some four or five weeks ago, still rages with unabated violence; and at the moment of writing the Germans appear to be farther from conquering the Volga town than they seemed last week. Street fighting is the element in which nobody can rival the Russians—perhaps because it was in street fighting that the new Russian regime was born. Stalingrad adds a new and amazing chapter to those written at Kiev, Rostov and Sevastopol. To a point, street fighting deprives the Germans of the advantage of their marked supremacy in the air. The defence of the city has been strengthened by the reinforcements which the Russians have been able to pour into the city. These consist of Siberian troops, which shows how deeply the war has already eaten into Russia's manpower, though a reminder that these reinforcements have been drawn from western and not from eastern Siberia is a warning against Japanese presumption. But, whatever the material factors which have contributed to the strength of Stalingrad's defenders, morale has been their strongest armour. Some military writers have called the battle for Stalingrad a prestige battle. They have suggested that the Russians unduly denuded the northern Caucasus of men and weapons in order to concentrate all available reserves around "Stalin's town." It may be that prestige has influenced Russian operations past the limits dictated by sound and orthodox military judgment. But what counts is not the motive but the effect of the Stalingrad battle. The Russians have succeeded in imposing their will on the enemy; Stalingrad has become a prestige battle for the Germans, too. On the face of it, the Germans might perhaps have achieved their vital objective—the cutting of the Volga lifeline—by striking at another, less defended point on the river, south or north of Stalingrad. But they have been lured into the Stalingrad trap by the importance which the Russians have attached to the town. The Germans, too, have denuded other sectors of their reserves in order to force a decision at Stalingrad. A strange symmetry in operations has resulted on both sides: Timoshenko and von Bock have had to switch over from mobile warfare to a *guerre de matériel*; both have had to pile up and throw into the battle prodigious masses of metal; both have been able to measure their daily gains

and losses only in tens of yards. It is too early to assume that Stalingrad has really become the Verdun of the Soviet German war. But—as in Leo Tolstoy's description of 1812—morale has once again prevailed over the "rules" of warfare and over the judgment of the staff colleges.

The Slippery Slope

The facile descent continues. A vast paraphernalia of administration to reorganise coal output and to curtail coal consumption has been erected, and if anything, the coal muddle gets worse. According to the Minister of Fuel and Power, there is a deficiency of 250,000 tons a week; "if it were possible this year to run the country without railway transport, we should just about balance the deficit." There is no sign that the measures which have been taken to increase the output of the existing labour force in the existing conditions of the industry, pending reorganisation, are likely to close the gap. It may be that the miners could do more, but it is almost certain, in view of their lack of numbers, their high average age, their wartime diet and the conditions in which they work, that they cannot possibly do enough to solve the problem. Rationing, it seems, is still taboo; the politicians will not have it. So, faith is pinned on the new regional organisation by which official controllers will make the changes in methods and management which seem needed to increase efficiency and step up output. It is already plain that this scheme, which is undoubtedly based on the right lines (the lines which the reorganisation of the coal industry should have taken long ago), will not produce any appreciable results for some time to come—which means, incidentally, that it cannot be relied upon to avert a very grave situation between now and next spring. It would be some comfort if it could be felt that no step is being neglected to make the reorganisation proceed as swiftly and as effectively as possible. Not much is known about the details of its progress, but one or two signs are disturbing. A fortnight ago, Major Lloyd George announced the salaries of the regional controllers, directors, inspectors and executive officers under the scheme. The highest is £2,000 a year; the rest range between £600 and £1,250. In themselves, they are good salaries. In a war in which every individual in the community was treated as an agent of the

* "Municipal Trading." By Herman Finer. Allen and Unwin. 431 pages. 16s.

common effort and the labour market was closed, they would be more than adequate. But the war, unfortunately perhaps, is not being run that way. These salaries are to serve as a competitive inducement. If they are compared with the remuneration of coal managers in private employment, it is as plain as a pikestaff that they may attract few, if any, of the experts needed to make the scheme work properly. The managers of the large efficient concerns will not be tempted. What the Ministry will get, apart from the sacrifice which some patriotic managers will admittedly be prepared to make, will be the managers of the smaller and less remunerative collieries and underlings from the larger pits. This is an old policy. Ever since the war started, the Government has made certain by the salaries it has offered that its expert technical posts would be staffed by inferior men—or by men still in receipt of pay from their private firms, a pernicious practice. More than half the troubles of Government construction, Government production and Government inspection arise from this melancholy state of affairs. If the regional organisation is to save this country from a chronic coal crisis next year, the Ministry must secure the best men; and there are only two ways of doing this, either by conscripting them or by offering them sufficient inducement to come. The present method makes the worst of both worlds.

Variations on a Theme

It is remarkable how the magic of phrases can bedevil good intentions and commonsense. The nature and organisation of post-war trade continue to be the subject of the most extraordinary arguments. One phrase, which properly applied has a deal to commend it, is much in vogue in the process of confusing this particular issue. The phrase is *Planning for Consumption*. In the sense of taking steps to ensure that the raw materials and foodstuffs which the world's millions must have to maintain them in life and good health are made available and accessible to consumers, planning for consumption must plainly be a prime object of post-war policy. But the phrase is being used in all sorts of other senses to justify the most bizarre programmes. One correspondent in the press, for instance, believes that the way in which plentiful supplies can best be guaranteed to the people of this country is to increase the production of home-made substitutes in order to make Britain almost completely independent of imports within a decade. Forgetful of the fact that the outstanding reason why the Germans are fighting a losing battle in the economic war is that, cut off from overseas supplies, the Reich has to devote an extravagant proportion of its labour and other resources to the production of ersatz materials, this reconstructor—who is only cited because he has put frankly what so many other loose thinkers seem to believe—points with approval to the successful development of German autarky. Moreover, again like so very many other supporters of protection and self-sufficiency, he claims that this hoisting of the British people by their own shoulder-straps would cure unemployment. The truth is that full employment, which properly means the employment of all the country's resources in the most economical and efficient way possible, is treated by these worthy planners as meaning simply the employment of every available worker on any kind of work, regardless of the relative productivity of the work done. On this basis, the best economic dictator for the post-war period would be Pharaoh—with his pyramids.

Raw materials were not scarce before the war. The problem was not to secure access to raw materials, for no nation has ever refused, with only negligible exceptions, to sell its produce. The real problem is access to markets, so that manufacturers can sell their manufactures and primary producers their raw materials in the largest possible quantities, at the cheapest possible prices and with the greatest possible regularity in both quantity and price. Given this situation, or the nearest possible approximation of it, full employment might indeed be secured—employment, that is, in each country which would engage all the resources of that country, labour, plant and materials, in the most productive and efficient work. It is perfectly true that the reverse holds good: just as the freest and fullest international trade is a necessary condition of the most productive employment in each individual country, so is the maximum employment of each country's own resources a necessary foundation for the fullest expansion of world trade. The problem to be solved by the nations after the war is that of securing full trade internationally and full employment nationally by policies which are worked out in step, in order to prevent

the fluctuations and the disharmonies which chronically dislocated world economy in the pre-war decades. If planning for consumption or full employment is to be taken to mean autarky, then the world is in for an even worse time after the war than before.

Debates in India

Both the Legislative Assembly and the Council of State in India have discussed the present political impasse. The question has not been carried any nearer to a solution by their deliberations. But a number of important facts have emerged. In the first place, it is clear that the Government of India could have acted in no other way than it has done to put down disorder and to safeguard, not only India's war effort, but also all the essential services of the country, which have been assailed by a violent minority acting, somewhat ineffectively, on a plan of strategy which might have been drawn up by the Japanese themselves. Secondly, it has been made clear that those people in this country who talk as if the Congress Party represented the only opposition to the present regime in India simply falsify the facts. Almost every vocal political group in India, right wing, left wing, racial, religious or what you will, wishes to see some transfer of power and responsibility to a representative Indian assembly choosing Ministers to have charge of Indian affairs. Too much time has been spent arguing about the minutiae of the abortive discussions which Sir Stafford Cripps had when he took his offer to India. It does not matter a scrap whether Mr Gandhi was responsible directly for the refusal of Congress to accept the offer, as Sir Stafford Cripps alleges, or whether Mr Gandhi held aloof entirely from the final discussions, as Mr Rajagopalachari contends. These are matters for the historian. The real point is twofold: first, that all parties desire some change; secondly, that the parties are utterly unable to agree among themselves. And, so long as they cannot agree, it is very hard indeed to see what more the British Government or the Government of India can do, except that they can refrain from any suggestion that this or that group of Indians is holding up a settlement upon which the remaining majority would readily agree—which is patently untrue.

Bread Policy

The Government is determined to avoid bread rationing. Unfortunately, it remains very necessary to discourage bread consumption. Hence the decision to increase the price of the loaf. It is difficult to see how this policy can serve the same purpose as rationing or restriction, that is, to save shipping space by cutting down the use—and waste—of bread. Presumably the reason for this coyness is the fear of the unfortunate effects of rationing or restrictions upon morale and their bad propaganda value abroad. But the British public, whose good health and ample diet are a staple of Ministerial pronouncements, are prepared to put up with any reductions in their wartime diet, provided the sacrifices are imposed fairly and provided minimum standards of nutrition are maintained; they are tired of appeals for voluntary restriction, whether these are uttered by the Minister of Food or the Minister of Fuel. A penny on the price of a 4-pound loaf will have little effect on the consumption of the well-to-do, but it may make a difference to the budget of the poorer sections of the community. If it makes no difference to anyone, it is just pointless. The increase in price will be neither fair nor effective. Bread is the cheapest source of energy food available and, under a rationing scheme, extra rations could be provided for heavy workers, as in the case of cheese. Dietetic experts have calculated that the calorific requirements in bread of a heavy manual worker are four times as great as those of a light worker. Another measure, which could be taken, quite independently of the decision about rationing, is the tightening up of the statutory specification for the extraction of wheatmeal flour, so that it definitely includes the wheat germ; this step is essential in the interests of both nutrition and economy of shipping space. Sir E. Graham-Little recently drew attention to the need for this measure in a letter to the *Financial News*, in which he pointed out that the present specification was so loosely worded that "there was no obligation upon the millers to use all or any of the wheat germ . . . in the flour for the national loaf." When he asked the Minister of Food in Parliament last March to introduce full wholemeal bread, which would result in a further saving of 10-15 per cent shipping space, he was told that the Minister "did not consider that the shipping position required him

to prescribe production of that type of flour." Sir Ernest, remembering the delay in the adoption of the national loaf, concluded that "a strongly entrenched vested interest has achieved a degree of infiltration at the Ministry of Food which endangers . . . the impartiality of its policy in certain respects." Whether he was right or wrong in this conjecture, it is reasonable to ask now whether the present needs of the shipping position are really being met by a policy which refuses either rationing or the restriction of bread supplies, will not look at the alternative economy of mixing potato flour with wheat, and is content to tinker exasperatingly with the price of the loaf.

Evasion Tactics

As long ago as May 21st, the Labour Party pressed for an early debate on the Government's White Paper on Shipping. No debate has been held, and Members of Parliament will want a much fuller explanation of the position than Lord Leathers gave in his letter to Mr Arthur Greenwood on September 10th. The Minister's statement that the White Paper "in no way prejudices the organisation of the shipping industry after the war" might mean anything; and no indication is given of how the agreement will affect the wartime position. The Government certainly seems to have met the wishes of the shipowners—to judge from the favourable reception which the White Paper was accorded in shipping circles. Its recognition of the "necessity of maintaining the British mercantile marine . . . in a position of full competitive efficiency," an obvious truism which, as generally stated, nobody could possibly question, is taken to square with the "primary interest" of the General Council of British Shipping, described in its annual report as being "the maintenance of private enterprise as the first essential to a prosperous and efficient mercantile marine after the war." But the point is that, quite apart from the question of the future control of the shipping industry, which could after all be settled at a later date, the agreement is open to criticism on the ground that it will not ensure maximum efficiency in wartime. Ships built on Government account are to be handed over to their prospective owners after the war, according to the chronological order in which these sustained losses. In the meantime, they will be operated by the prospective owners on behalf of the Ministry, in chronological order and irrespective of the efficiency with which they can be operated—which, in war economy, should be the sole criterion.

Planning Youth

The second report of the Conservative Sub-Committee on Education has stirred far more controversy than its first one on educational aims. It deals with the 14-18 age-group, in whom it says there is for the most part a complete lack of social purpose. To develop a sense of service, in peace as well as in war, the wartime registration of boys and girls should be continued after the war and extended to the 14-year-olds. At that age, all children should automatically become members of a new Federation of Youth, under the control of the Board of Education, in which all existing youth organisations would be included. Children still at school would receive their Federation of Youth training through the schools; the rest would be dependent on the federal organisation. Ultimately, they would all be compelled to take part in some form of national or social service. It is quite true that the compulsion envisaged need not be Fascist in its implication. Children are compelled to go to school, and to compel those who leave school at an early age to perform some social service in part of their working hours would have many advantages, though if they are to be released by their employers like this they would surely be much better in day continuation schools. But what neither the Conservative Sub-Committee nor its critics seem to have grasped is that youth movements, whether voluntary or compulsory, are not in themselves a desirable aim. The existing organisations are generally admirable and do excellent work; but they are relief measures and reflect a faulty social and educational system in the same way that unemployment assistance reflects the failure of the economic system. In the *Daily Telegraph* Mr Geoffrey Faber, chairman of the committee, defended its plan by pointing to the LCC's announcement that only 17 per cent of the 16-18-year-olds who have been interviewed have since joined any youth organisation—"an intolerable state of affairs," he declared, which must be ended. Why he should so readily

assume that "the remaining 83 per cent just drift loose," when many are happily occupied in their own homes or at school and others are at evening classes, it is impossible to say. In any case, what is really intolerable and must be ended is that so many of these adolescents should work such hours that they have no energy for their own amusements, much less for national service, and, above all, that they should see the best jobs and the opportunities for advancement reserved for the few who through the accident of birth have been to a public school. No amount of planning can give youth "a social purpose" until this social barrier has been removed.

The Penitent's Seat

The two latest arrivals from Vichy to this country have been M. Pierre Brossolette and M. Charles Vallin. The first—like M. Philip and M. Gouin—is not really a newcomer to the Fighting French movement; he has belonged to that section of the French Socialist Party which fought Vichy from the first day of the Pétain regime. But M. Vallin's arrival was sensational. He was the vice-president of the *Croix de Feu* and a close political friend of de la Rocque. Until this summer he was still active in France as a supporter of Vichy; he toured the French provinces on behalf of Vichy's Ministry of Propaganda; and his articles, adorned with the familiar slogans of the *Révolution Nationale*, appeared in the *Petit Journal* not very long ago. These facts are not recalled in order to question the sincerity of M. Vallin's metamorphosis. M. Vallin can be regarded as a symptom of a political process which is going on in France—as well as in other occupied countries—a process which surpasses in its importance any personal issues. His arrival here shows that the belief in, and the hope for, an Allied victory has taken hold even in the quarters which some time ago tended to accept the quisling policy as the lesser evil. There is a conflict even inside the Vichy camp which, at the decisive moment of Allied action on the continent, may blow the Pétain regime sky high. Meanwhile, it is obvious that any man who is prepared to play his part in earnest in the struggle against the Third Reich is welcome, no matter what his past and what his previous convictions. The Fighting French have received M. Vallin in the spirit of the Bible, affirming that, in Heaven, the penitent will attract more rejoicing than the righteous who need no repentance. But when M. Vallin tries to defend the *Croix de Feu* against the accusations of fascism and collaborationism, his arguments must be greeted with more scepticism than his own arrival in England has been. Any special pleading for Colonel de la Rocque's political tendencies is quite out of place. It is well known to what extent the cadres of the *Cagoulards* have served as the backbone for the *Légion Tricolore* and for the *Service D'ordre Légionnaire*. In any case, Colonel de la Rocque's own reply to M. Vallin's utterances suffices to dispose of any doubts on this subject. M. Vallin's individual activities, which are welcome, must in no way be used as a political alibi for the *Croix de Feu*, which is beyond redemption.

YOUR WILL

Have you thought of the anxiety which may be caused to your dependants if for any reason your affairs have not been satisfactorily arranged?

In these days when life is so uncertain, the advisability of appointing a corporation rather than an individual as the Executor of your Will or in the capacity of Trustee needs little emphasis. By so doing, continuity is preserved and you are assured of efficient administration.

Full details can be obtained from any Branch of Lloyds Bank Limited or from its Executor and Trustee Offices at

Ewhurst Place, Ewhurst (near Guildford), Surrey,
39, Threadneedle Street, E.C. 2, 5, Albemarle
Street, W. 1, 6 Pall Mall, S.W. 1, Bangor (North
Wales), Birmingham, Bournemouth, Bristol, Exeter,
Leeds, Liverpool, Manchester, Newcastle upon Tyne
and Swansea.

Norwegian Crisis

The crisis which is developing from the attempts to establish a corporate state in Norway may even involve the collapse of the whole Quisling house of cards. The growing opposition to the régime, shown in the increasing number of arrests, the tightening of police measures, the spread of illegal newspapers and acts of sabotage, has come to a head over the decree of September 11th, directed against the trade unions and employers' associations. This law gives the state practically unlimited powers of interference with organisations and associations; it demands the compulsory registration and state approval of such bodies and vetoes their right of dissolution; the state may order compulsory membership, with subscriptions deducted from workers' wages, and it may oblige organisations to perform other duties than those normally undertaken. The decree has resulted in mass resignations from the trade unions and the threat of resignations from the Federation of Norwegian Industries. The really significant feature of this opposition is that workers and employers are presenting a common front against the Quisling authorities. In many countries, the Nazis succeed in securing the employers' collaboration by threats of withholding contracts and by appealing to their fear of Bolshevism. In Norway, where most of the employers operate on a small scale, the spirit of independence and the tradition of free association are so strong that these considerations carry little weight. Quisling will probably be forced to climb down as completely over this issue as he has done over the Church struggle. There are, indeed, growing indications that Hitler is being compelled to cut his losses and abandon the pretence of an independent Norway participating of its own free will in the "great Germanic union." Recently, one of Quisling's own Ministers hinted that Germany might "reluctantly be forced to take over the leadership of Norway." The penetration by Germans of the Norwegian civil administration is increasing, and the visit of Dr Stuckart, who arranged the details of Austria's incorporation in the Reich, is significant. Large numbers of the National Samling's members are being sent to the eastern front, an easier way of dealing with over-enthusiastic supporters who might become an embarrassment than the methods of June, 1934. Norway's long coastline, with its bases for operations against the Arctic route, is of such importance to Nazi strategy and the need to defend it against the possibilities of an Allied invasion is so great that Germany cannot afford to keep up a façade which has only propaganda value.

Revolt in Manchester

It is not known how representative of the various sections of the cotton industry the assembly was which met in Manchester on Tuesday to condemn the Cotton Control, bell, book and candle. But the meeting certainly voiced strong views. The Cotton Control was described as "expensive, unnecessary, dictatorial, destructive of morale, a hindrance to the war effort and inimical to post-war trade recovery." The cotton industry has not had an easy time during the war. There have been shifts and changes in Government policy. There may well be legitimate grievances about this or that aspect of the working of the Control. Wartime administration is rarely without its exasperations and inefficiencies. But such language is plainly too violent to carry any conviction. To say that any of the wartime controls for the allocation and use of raw materials is unnecessary and a hindrance to the war effort is nonsense. The apportionment of essential materials and resources, and especially of imports which consume shipping space, is the necessary element in war economy. The Manchester meeting would have done very much better to have confined its clamour to a call for reforms in administration to secure greater efficiency or to suggestions for changes in policy to secure the same end. As it is, these men are condemned out of their own mouths; the sting of their choleric outburst is obviously in the tail—"inimical to post-war trade recovery." One speaker declared that the President of the Board of Trade intended to nationalise the industry after the war and that it is the duty of the industry to fight against this. This is really what the cotton industry, like the shipping industry, is worried about. They have every right to express their views, and fight their case for private enterprise in the post-war world. But it is sheer irresponsibility for them to make their apprehensions about the future of their industry the ground for such an unbridled attack on the whole principle of wartime control.

War Service Grants

In order to encourage women to enrol for war work, the Ministry of Pensions has announced concessions in the scale of war service grants for Service men's wives who take up paid employment. The war service grants scheme, which was introduced in its present form about a year ago, is designed to supplement ordinary Service allowances in cases of hardship. Some 400,000 wives, of whom 75 per cent have dependent children, at present draw grants averaging the very low amount of 12s. 7d. a week, though the maximum payable is £3. Hitherto, if a wife accepted paid employment, her grant was reduced by a cut, generally equal to the wages she earned. Under the new ruling, which comes into force immediately, the first 20 shillings of earned income of a wife with dependent children living with her will be disregarded, and the first 15 shillings in other cases. A woman with children drawing a grant of 40 shillings a week and earning 35 shillings a week would thus have her grant reduced to 25 shillings, instead of to 5 shillings, as under the old ruling. It is too early to forecast what the net effect of the concession will be, either in terms of increased cost to the Exchequer or of increased numbers of women undertaking part-time employment. It may be assumed that a fair proportion of wives receiving grants were in the past deterred from part-time work, since their earnings were offset by the reduction in their grants; but the small amount of the grant is not likely to have had any appreciable effect on the number undertaking full-time employment. There will still be a deterrent, but it will now be smaller. There may be a number of women, especially single women, in industry, whose earnings will be less than those of women receiving war service grants in addition to their earnings, who will resent the discrimination shown to Service men's wives; but the new concessions, on the whole, will be welcomed. The disadvantages of the war service grants scheme (described in *The Economist* on November 18th last year) still stand, however. It has a taint of charity, and it operates—probably necessarily—under the circumstances—the unpopular "means test"; it involves complicated machinery and investigation by Assistance Board officials. The recent additions to Service pay and allowances will not do much to alleviate genuine hardship, and it might be argued with justification that a more generous scale of dependants' allowances, at a level that ensured a decent standard of living for Service-men's families, would be a more satisfactory solution to the problem than a "dole" to those who could prove greatest need or who were not averse to receiving charity or facing investigation into their circumstances.

Women Fire-Guards

Registration of women, aged 20-44 inclusive, for fire-guard duty will begin on Saturday and go on for a fortnight. There has been little or no opposition from women to the scheme—in fact, the only clamant opposition has come from Liverpool's City Fathers, who see no reason why women should fire-watch in target areas of the city while many men who work in them leave for the country or suburbs every night. It is certainly desirable that a review of all male exemptions should be undertaken, and it is a little strange that the City of London should be excluded from compulsory fire-watching for women—though it is understood that a special Order for this area is under consideration. But even though all men who have wriggled out of fire-guard duty are brought back, it would still be necessary to obtain the services of every woman available. It is not likely, in fact, that the application of compulsion to women will greatly swell the fire-guard, since many are already doing it voluntarily and those with children under 14 living with them will be exempt. But it will mean that the existing fire-guard man-power will be more efficiently used. At present, some streets have more than a full quota of watchers, while others are deficient. The new scheme means that single women living at home, who do not come under the business premises order, will be liable to serve in any residential part of their local authority area. Moreover, it is hoped that enough men will be released by women in residential areas to form an adequate pool for guarding places like hospitals and churches and non-residential districts where there is a shortage. But what is just as important, when the fire-guard is allotted to its new station, is that it should be

properly trained and taught about the new incendiary bombs. In many places, this still seems to be hanging fire.

Battle Fronts

Neither in North Africa nor in the south-west Pacific has fighting been resumed on a substantial scale. Patrolling apart, Allied offensive activity in both areas has been mainly limited to attacks on supply lines. On the African coast, there have been daring raids on Tobruk, Barce and Benghazi, and a brilliant attack on the Italian occupied oasis of Jalo. The consistent bombing of Rommel's sea-borne reinforcements seek to impede and delay the enemy's preparations for a winter offensive. Considered as an isolated incident carried out by Allied troops based on El Alamein, more than five hundred miles away, the Salo manoeuvre was clearly the *tour de force*. In New Guinea, the next phase in the defence of Port Moresby has not yet opened. The Japanese have attempted to make little progress since crossing the Owen Stanley range. That the attack, when it comes, will be very powerful and that the need to stem it is very great has been emphasised by both Dr Evatt and Major-General G. C. Kenney, newly appointed chief of Allied air forces in the south-west Pacific. The latter paid a well deserved tribute to the work of the squadrons whose systematic attack on Japanese aircraft—including in the last week heavy raids on Buna, Lae and Salamaua—has won, for the present, Allied superiority in the air. He added the timely warning that the Japanese can, however, reinforce with comparative ease. The same is true of Rommel in the desert. In both these areas, actions in the past have tended to be predetermined by the supply position built up in the week preceding the offensive. The harassing actions now going on in Africa and New Guinea are vitally important. They may well determine the success of the attacks by which the present lulls in ground fighting will be ended.

Wages for Serfs

The occupied Russian provinces have become the most important source of additional workers for Germany's agriculture and industry. Civilians from the Ukraine, White Russia and all the provinces to the east of the Baltic countries have been officially defined as "east workers." The total number of them employed at present in Germany may have reached one million, of whom the greater number are agricultural workers. The working and living conditions and wages of these workers have now been regulated. They are housed in camps like most other foreign workers in Germany. The wage regulations issued for east workers have two main points distinguishing them from the wages paid to other workers. A special schedule fixes wages at from three-quarters to four-fifths of the wages paid to German workers for the same kind of work. The additional profit for the employer derived from this regulation is to be paid into the Exchequer as an "east workers' levy." No additional payments may be made to any east-worker. Overtime payments, or payments for work on Sundays and holidays, are prohibited. In agriculture, employers pay only one-half of the east workers' levy. The actual money an east worker is paid under these conditions is very small. It may be assumed that the greater part of the workers will be employed on work where a German worker would earn on an average Rm 26 per week. The east worker would be paid only Rm 16.8, of which Rm 10.5 will be deducted for housing and food, which leaves him Rm 6.3, or the equivalent of roughly 100 cigarettes—if any cigarettes were available. With remarkable generosity, the Nazis have opened special savings accounts for these penniless workers. It is true that some of the industrial workers may earn more money; but the general lack of civilian commodities will make it impossible to buy anything with it.

March on Madagascar

Last week, *The Economist* rashly took it for granted that the request of the Governor-General of Madagascar for an armistice would end the fighting. Germany's hold over the policy of Vichy and Vichy's representatives was under-estimated. The campaign, insofar as it can be so described, continued. The Governor, after suing for an armistice, announced that the British terms were un-

acceptable—though he must have known beforehand what the terms were likely to be. The futile prolongation of resistance in a struggle, the outcome of which cannot be in doubt, was clearly undertaken under pressure from outside. British troops landed at Tamatava, a port on the west coast, and have now entered the capital from the east and west, meeting opposition mainly in the form of road-blocks and blown-up bridges—a scorched earth policy which can do no more than delay the occupation, while it will inevitably make Madagascar an uncomfortable and stark place to live in the immediate future. Civilian life proceeded normally in the places which were occupied by the British, and it was obvious that the native population of the island had little enthusiasm for Vichy's policy of fighting to the end.

Shorter Notes

During July, detention orders were made under Regulation 18B against two persons, both British subjects but one of whom was of enemy origin. During the same month, 11 persons were released, and the total number under detention on July 31st was 520.

Royal ordnance factories, with three or four exceptions, have reduced the working hours of men and women to 60 and 55 a week respectively. Pieceworkers' wages are hardly affected, since these workers had themselves usually reduced their hours of work by staying away; but the lessening of overtime has reduced the pay of the time workers, and negotiations on this point are in progress.

The following table gives the number of civilian casualties in air-raids since September, 1939:—

	Killed	Injured and Detained in Hospital	Total Serious Casualties
Sept. 1939-Aug. 1940..	1,407	1,624	3,031
Sept.-Dec., 1940	21,740	27,312	49,052
Total, 1941.....	20,520	21,451	41,971
1942:—			
January	112	61	173
February	22	21	43
March.....	21	13	34
April.....	938	998	1,936
May.....	399	425	824
June.....	300	337	637
July.....	411	871	1,282
August.....	403	509	912
Totals to date....	46,273	53,622	99,895

Of those killed last month, 154 were men, 184 were women, 57 were children under 16, and 8 were unclassified, compared with 167, 160, 40 and 1 respectively in July.

AMERICAN SURVEY

The Progress of Taxation

(From our New York Correspondent)

THE extent to which the potentialities of the income tax have been exploited in the United States in the last three years, particularly with respect to incomes in the higher brackets, was scarcely realised until recently. The United States has not approached nearly as close as Britain to the point of exhausting this revenue source, but rapid progress has been made. In 1939, the top bracket began with incomes of over \$5,000,000, and the maximum rate of tax was 79 per cent. To-day, the top bracket begins at the \$200,000 level, and the maximum rate, normal and surtax combined, is 88 per cent.

Meanwhile, laudable progress has been made in broadening the income-tax base. In the Revenue Act of 1939, the personal exemption for a married couple was \$2,500, for a single person \$1,000. These exemptions were reduced to \$2,000 and \$800 respectively, in the first Revenue Act of 1940; to \$1,500 and \$750 a year later; and to \$1,200 and \$500 in the present House Revenue Bill of 1942. The effect of these changes on the tax base is brought out in the table below showing the number of tax returns filed, or to be filed, under the Revenue Bill of these years, and the number of actual taxpayers:

	Returns Filed	Taxable Returns
1939	7,500,000	3,800,000
1940	14,400,000	7,300,000
1941	22,000,000	13,000,000
1942	28,000,000	20,000,000

But the almost vertical rise in individual income-tax rates and the rapid expansion of the tax base tell only part of the story of the enormous extent to which the American Government has relied on progressive income taxes to date in the financing of the war. The National City Bank of New York has just published its semi-annual summary of the operating results of 180 of the nation's leading manufacturing corporations, and the picture presented is one of taxes rapidly outstripping earnings. Net income of these representative companies for the first half of 1942, with tax reserves set up in accord with the schedules of the House Revenue Bill, were 32 per cent under those of the corresponding period last year. For the second quarter alone, the decline was 42 per cent. During World War I, Federal taxes absorbed 23 per cent of the corporate income in 1917, 45 per cent in 1918, and 26 per cent in 1919. In the present war, this sampling indicates, they have accounted for 27 per cent in 1940, 52 per cent in 1941, and an estimated 71 per cent in 1942.

The transition of corporate tax policy from a peacetime to a wartime basis has been even more striking, if anything, than that of individual income taxes. The table below shows how the schedules have risen since the last pre-war year, 1939:

CORPORATE TAX RATES (In Per Cent.)

	Normal	Surtax	E.P.T.
1939	18	...	...
1940	24	...	25 to 50
1941	24	7	30 to 60
1942—			
Treasury	24	31	45 to 75
Ways-Means	24	16	94*
House	24	21	90

* Would be partly offset by a 14 per cent post-war rebate.

It will be seen that, where three years ago American corporations were paying only a flat normal tax of 18 per cent, they will pay in the coming year, under the provisions of the House Revenue Bill, a combined normal and surtax of 45 per cent on top of a pre-deducted excess profits tax of 90 per cent.

The Contribution of Income Taxes

What this emphasis on income taxes has meant in terms of the Budget in recent years is indicated by the accompanying table showing revenue by major sources:

	FISCAL YEARS			
	(\$ Millions)			
	1939	1941	1942	1943
Total net revenue received ..	5,165	7,607	12,799	23,050
Individual Income Taxes ..	1,029	1,418	3,070	7,951
Corporate Income Taxes ..	1,150	2,044	4,328	10,077
All income taxes	2,179	4,462	7,398	18,028
Other revenue	2,986	4,145	5,401	5,022

Progressive income taxes, individual and corporate, accounted for 42 per cent of all revenue receipts in 1939; 45 per cent in 1941; 58 per cent in 1942; and an estimated 77 per cent in 1943. The picture is even more striking when the changes by items are shown between the pre-war year 1939 and the year 1943:

	(\$ Millions)		Dollar	Percentage
	1939	1943	Increases	Increase
Total net revenue received	5,165	23,050	17,885	346
Individual Income Taxes ..	1,029	7,951	6,922	...
Corporate Income Taxes ..	1,150	10,077	8,927	...
All income taxes	2,179	18,028	15,849	695
Other revenue	2,986	5,022	2,036	68

In spite of record-breaking taxation this year, the Treasury will show a deficit by next June 30th estimated at slightly more than \$50,000,000,000. An extremely formidable task is ahead if the "inflation gap" is to be effectively closed.

American Notes

As Maine Goes ?

Maine, the only state which elects its Congressmen before November, has been won by the Republicans with 66 per cent of the votes. That hoary old proverb, "As Maine goes, so goes the nation" is now being invoked to show that a Republican landslide is imminent. Some reinforcement for this conclusion is drawn from two recent Gallup polls. The latest nation-wide poll, taken in late August, found that Republican strength in the House would have increased by 21 Representatives had the vote taken place then. This is a striking reversal since the last poll. Another survey, in New York State, gives Dewey, the Republican candidate, 54 per cent of the total vote, Bennett, the Farley Democrat, 36 per cent and the American Labour party candidate, Alfange, 10 per cent. The verdict in Maine should be taken with more than a grain of salt. Maine was one of the two states that stood by Mr Hoover in 1932, but Mr Hoover did not remain in the White House. Maine is a Republican stronghold. If Maine goes Democratic, that indeed is news, and a sign of political upheaval; if Maine goes Republican, it is merely politics as usual. The significance of the vote is lessened also by the fact that it was the lightest in twelve years. In part, this reflected the same lack of interest which has been a striking feature of the primaries; but, in part, it is also due to the migration of war workers, who by changing their address have lost the right to vote, and to the engulfment of nearly 5 million men in the Forces. This temporary disfranchisement will distort the coming election results. The poll in New York is affected by special considerations. Dewey's apparent lead is the obvious and unfortunate result of the nomination of Mr Bennett, Farley's candidate, over Senator Mead, and the consequent alienation of the Labour Party vote. There are no nation-wide indications, however, that the Republicans will gain sufficient seats in the House to enjoy a majority; and the Senate, only a third of which is up for re-election, is safely Democratic. The prospective Republican gains undoubtedly reflect a measure of dissatisfaction with

the conduct of the war and the handling of domestic issues. The prestige of Congress has never been lower, and the feeling of frustration implicates the Administration and Government agencies as well. There is a discernible estrangement between Washington and the rest of the country. The Republican theme is that they will demand more efficient prosecution of the war. But another result of Republican successes will be to strengthen the conservative cast of Congress through an alliance between Republicans and the Southern Democrats on questions of domestic policy.

* * *

Concentration of Authority

Changes in the organisation and personnel of the War Production Board, designed to increase its effectiveness and authority, are still going on. The President has given Mr Nelson full control over all aspects of the synthetic rubber programme, and has placed under his command, and that of Mr Jeffers, the Rubber Administrator, the long list of agencies which have until now been concerned in the rubber problem. They include the Rubber Reserve Company, the Office of the Petroleum Co-ordinator, the Office of Defence Transportation, and many others. At the same time, a new appointment to the Board has been announced, that of Mr Charles Wilson, president of General Electric, who will head a Production Executive Committee, and, in Mr Nelson's words, be "top production authority, with the responsibility of seeing that all programmes and schedules are met." Mr Wilson's ability is backed by no less an authority than President Roosevelt. These moves to consolidate the powers of the War Production Board make it unlikely that any substantial concession will be made to the CIO and AFL's demand that Labour representatives should be appointed to policy-making posts. Mr Nelson is convinced of the value of high production executives in his organisation, and apparently he turned down the request that union representatives should share in decisions purely as labour spokesmen. Unquestionably, there is a case for extending the field from which WPB chooses its staff; since Mr Hillman left, no high official has been drawn from the ranks of labour. What Mr Nelson has set his face against is that appointments should be made on the basis of a balance of conflicting interests, an impossible theory of organisation if decisions are to be reached quickly and carried through vigorously. The selection of union men is complicated by the existence of two great labour bodies, neither of which would step down gracefully. Some appointments will probably be made, in the interests of national unity, but whether they will carry with them much executive authority is doubtful.

* * *

Essential Work

Two steps towards the development of a national manpower policy have now been taken. To end the drain on mining and lumbering manpower in twelve Western States, the Manpower Commission has issued an order forbidding workers in these industries to change their jobs or employers to hire workers away from non-ferrous mining or lumbering without "a certificate of separation" from the United States Employment Service. At the same time, the War Production Board has ordered the establishment of a 48 hour week in the lumber industry with provision for overtime pay. As yet there is no news of any action in the field of wages, apart from the announcement that in several industries, including copper mining, wage questions will be dealt with on an industry-wide basis to iron out differences which impede production. The drain on manpower is due in part to the operation of the draft, but, in the main, to the lure of higher wages elsewhere, particularly in shipbuilding and aircraft, and to the pressure to join up voluntarily to avoid being called a slacker. The Navy still relies on voluntary recruitment, which makes Selective Service policy on deferments only partially effective. This application of the "essential work order" will not solve the manpower stringency in industries where shortages already exist. It will not put any workers back in mining or lumbering, and Mr McNutt's recent characterisation of his authority as merely the power to persuade makes it uncertain whether at present it will even be possible to enforce the order. The other step was taken when the President gave the Manpower Commission power to transfer, in accordance with priority needs, any of the over two million Federal employees. Two swallows do not make a summer, but there are signs that the days of merely talking about manpower policy are drawing

to an end. Both Mr McNutt and Mr Nelson have testified to the need for compulsion and a National Service Act. The news that married men are to be called for the Army in December is a pointer to the growing demands on manpower. The granting of compulsory powers has been held up to some extent by the argument that an effective wage policy must come first, and that an ugly situation would arise if workers were forced to move from industries with high wage scales to those with low rates of pay. But the needs of the Forces and industry will not wait for wage adjustments. Mr McNutt estimated recently that in the next year about four million new workers must be brought into industry; and the changes within industry will involve an even greater migration. It would be prudent if steps were taken now towards orderly allocation before the period of real scarcity sets in.

* * *

Relations with Russia

Mr Willkie's visit to Moscow, on President Roosevelt's behalf, shows again the Administration's realistic confidence in the Russian alliance. But a letter from Mr Thomas Lamont to the *New York Times*, rebuking American critics of Russia, draws attention to the existence of opinion which is still irreconcilably anti-Communist and anti-Russian. Mr Lamont argued that the salvation of the United Nations depends upon their standing together and pleaded for an end of the censoriousness which leads some people to attack the Soviets on account of their domestic policies.

Let us mind our own business; let us mind our own politics as we mind our own economies and our own religion. Let us be friends with our friends and do our fighting against our enemies. Russia has borne the heat and burden of the bloody battle It is our part to stand by her.

It is an impressive indication of the reversal of American opinion on Russia that the plea for more generosity comes from the chief of J. P. Morgan; but even the agony of Stalingrad is not enough to undo all the indoctrination of 20 years. The term "communist" is an easy and damning epithet; in this year's primaries, while the Russians were falling back before the Germans, O'Daniel in Texas appealed to the voters to support him against the "communist labour racketeers"—though even among the most left-wing in the trade unions there is still substantial hostility toward Russia. One must remember, too, how deeply rooted the idea of individual enterprise is in American thinking, if not always in the realities of economic organisation, and the profound influence of the churches. A great deal was accomplished by the publication of Joseph Davies's *Mission to Moscow*, and Russian heroism can leave very few unmoved. But, outside the great cities, opinion changes very slowly. The alliance with Russia unquestionably involved an enormous mental adjustment on the part of many Americans. It is not surprising if this is not yet complete.

* * *

Shorter Notes

The "trendless primaries" continue to give cause both for sorrow and rejoicing. Representative Tom Elliot, one of the most vigorous and enlightened members of the House, has been beaten in the Democratic primary in Massachusetts by ex-Governor Curley. On the credit side is the fact that Gerald L. K. Smith, one of the most notorious rabble-rousers, will not have a chance to run for Senator from Michigan.

*

The rationing of farm implements has been announced. It is not yet known how this will be done, but for some time it has been expected that the output of farm machinery, now running at about 82 per cent of normal, would be sharply cut through a scheme of concentration. Figures of 25 per cent to 50 per cent of normal production have been mentioned. Purchase of new farm machinery has been at such high levels in recent years that it is felt that farmers should be able to get along with what they have, provided production of repairs and parts continues near the current rate, which is 150 per cent of 1939-1940.

*

The War Labour Board has ruled that the wage increase granted in US Steel be retro-active to February 15th. This sweeps aside a contract which did not expire until August 9th. The Board agreed with the CIO that it would be unfair to give "Big Steel" an advantage over the little steel companies. The union also won a maintenance of membership clause.

THE WORLD OVERSEAS

Irish Population Statistics

(From Our Dublin Correspondent)

September 8th

THE General Report on the Census of Population taken on April 26, 1936, has now been published. In view of the immense amount of work involved, the completion of the Census within six years is a matter of congratulation for the statisticians responsible. As is usual with the publications of the Irish Department of Statistics, the Report is a model of its kind. There are certain differences between this Census and the previous Census of 1926. The unemployment statistics are fuller; housing densities are measured according to the "equivalent adult system"; the minimum age for statistics of occupations and industries is raised from 12 to 14 years; the Irish language statistics are compiled in respect only of persons aged 3 years and over; literacy is assumed to be universal. In all other respects, the Census is strictly comparable with the earlier Censuses by which Irish demographic history can be accurately measured back to 1841.

The population of Eire on Census night amounted to 2,968,000, compared with 2,972,000 at the time of the previous Census. It will be seen that there has been scarcely any change in the size of the population. The small decline represented a decrease in the female population; the male population actually increased. The town population increased by about 96,000, or by 10 per cent, while the rural population decreased by 99,000, or 5 per cent. Both absolutely and relatively, the increase on this occasion in the town population is the largest in any intercensal period since 1851. The City and County of Dublin increased by 81,000, or 16 per cent. The population of Dublin together with Dun Laoghaire was 507,888. Between the two Censuses, the ratio of females per 1,000 males decreased from 972 to 952. In this respect, the population of Eire is very peculiar. In every other European country, the female population is greater than the male. This abnormal sex distribution is the result of the big female emigration. In the ten years between the Censuses, the net emigration averaged about 17,000 persons per year, of whom 9,000 went to overseas countries and 8,000 to Great Britain. This volume of emigration was sufficiently great to outweigh the natural increase in the population, which continued reasonably high in spite of the falling birthrate. The volume of emigration from Ireland has been so great that it is calculated that in 1931 the number of Irish-born living abroad was equivalent to 40 per cent of the population of Ireland. In other words, for every five Irish born persons living at home, two were living abroad.

The statistics of the distribution of the population by industries shows that 49.3 per cent were engaged in agriculture; 16.6 per cent in other production; 3.1 per cent in transport and communication; 10.3 per cent in commerce

and finance; 6.3 per cent in public administration and defence; 3.6 per cent in professions; and 9.9 per cent in personal service. This is the first time at which the numbers employed in agriculture have been less than half the total employed population. In the ten years prior to the Census, the number of persons actually at work increased by 15,140, or 1.2 per cent. The decline of 37,355 in the numbers engaged in agriculture, or 5.8 per cent, was more than compensated for by the increase of 41,493, or 25.3 per cent, in the numbers engaged in non-agricultural productive industries, and of 11,002, or 2.7 per cent, in all other activities. Eire is no exception to the rule that population tends to shift from the primary to the secondary and tertiary industries. The decline in the numbers engaged in agriculture was practically confined to persons working on farms of less than 30 acres, and may be explained by emigration, internal migration from country to town, and the increased employment of rural workers on schemes of public works. The expansion of the non-agricultural productive industries was accompanied generally by a decline in the numbers engaged in small (including "one-man") firms. Despite the increase in the numbers engaged, the country is still relatively weak in the non-agricultural industries. After agriculture, the biggest productive industries are building, clothing and food. Industrial and commercial activities are very largely concentrated in Dublin.

Houses and Families

One gratifying feature in the new Census is the great improvement shown in housing conditions. In the ten years since the last Census, the number of persons per room declined from 1.19 to 1.08, and the overcrowded section of the population declined from 27.2 per cent to 22.5 per cent. Notwithstanding the great increase in population, the density in Dublin City and County decreased from 1.26 to 1.18 as a result of the increase in the number of rooms occupied from 357,000 to 449,000. There was a marked increase in the number of dwellings with four or five rooms and an almost equally marked fall in the number of very small dwellings. The average size of the private family decreased from 4.48 persons to 4.31. The diminution in the size of the average family reflects the falling fertility rate. The number of children under 15 years fell by over 47,000 and the population under 21 years by 69,000. The fall in the number of young children must be attributed to a decline in the fertility of married women, which was not the result of an increase in the average age of such women. The decline in fertility was much greater among the rural than among the town population. In rural areas, the number of children under 15 decreased by 78,000, whereas children in town areas increased by 31,000. The numbers in the age groups over 45 increased. The number of elderly persons aged 65 years or over increased by 15,000. These changes in the different age-groups have brought about a further ageing of the population, a process discernible in Irish population statistics for nearly a hundred years. Another well-marked feature of Irish demographic history, repeated in the present Census, is that the percentage of persons unmarried at the younger ages is the highest in the world. This trend has actually increased in recent years. The general impression made by these statistics is not very encouraging. A falling population, containing fewer children, more aged persons and an abnormally large number of people of both sexes unmarried, is not the most favourable environment for enterprise and progress.

Bolivian Rubber

[FROM A CORRESPONDENT IN LA PAZ]

THE rubber shortage of the United Nations, on the one hand, and, on the other, Bolivia's attempts to offset a possible post-war slump in its mining industry by developing new industries, have focused the attention of US and Bolivian experts on the rubber-growing area of Bolivia. On July 15th this year an agreement was signed between the Bolivian Government and the Rubber Reserve Company. The company will purchase the entire rubber production of Bolivia during the next five years, except for the amounts required for domestic consumption and a maximum of 250 tons a year which Bolivia may export to its neighbours. The Rubber Reserve Company is to invest \$2,125,000 for the scientific intensification of production, the improvement of the rubber growing areas, the improvement of the living conditions of the growers, and the construction of roads.

Bolivian rubber production dates from the last decades of the nineteenth century, but after a peak year in 1917, when 5,843 tons were produced, output declined and the industry was supplanted by that of the Far East. In 1911, Brazil, Bolivia and Peru together supplied the world with about 40,000 tons of rubber; Malaya produced some 10,000 tons and Ceylon nothing at all. In 1917, the three South American countries still produced 40,000 tons, but world output had reached 256,976 tons, of which Malaya accounted for 140,000 tons and Ceylon for 30,000 tons.

The rubber-growing area of Bolivia consists of forests. Former methods of exploitation consisted simply of a complete draining of the trees. This was partly due to the labour shortage—Bolivia's recurrent problem—and to the high cost of living in those far-off regions. Without regard to the future, therefore, the trees were nearly or completely destroyed. Now, the rubber forests have enjoyed a long period of rest. If modern methods of exploitation are used, and the trees duly protected, production could reach a level higher than that of the peak years of the past. According to the experts, Bolivia could produce about 7,000 to 8,000 tons a year, provided that a sufficient labour force is available.

Although large forests of rubber trees exist, these are found in regions far removed from the centres of Bolivian economy, some of them in completely uninhabited districts where, consequently, there is no labour. Thus, new extracting and administrative centres are to be established. The Bolivian Government has to revise the concessions granted at a time when Bolivia was not exposed to the competition of the Far East; the present concession holders lack financial resources as well as experience in modern methods of exploitation. It is also necessary to grant subsidies to the navigation companies and to compel the railway, Ramore-Madeira, which is indispensable for Bolivian rubber exports, to lower its exorbitant rates.

The biggest project, however, envisages new rubber plantations, since the composition of Bolivian soil and the climate favour the quick development of plants. In Far Eastern regions, rubber can be extracted from new plants within five to eight years; in Bolivia, this period could be shortened.

French Stock Exchanges

[BY A CORRESPONDENT]

September 22nd

THE slump on the French Stock Exchanges, which began in May this year, came to an end in August and was followed by a new upward movement in the quotations of industrial shares. The slump reflected less liquid credit conditions. The political factor was—to use a term coined by the Vichy press itself—the "Second Front psychosis," and, in particular, the expectation of industrial damage from RAF raids.

These slump factors have by no means disappeared. The reversal of the trend on the Bourses during August was due to certain measures taken by the Government and to some financial operations carried out by the concerns involved. The Minister of Finance has relaxed the restrictions upon Stock Exchange activities, which had been introduced at the outbreak of the war or during the prolonged boom in 1941. Joint stock companies have now been allowed to add

their reserves to their capital by making new share issues. Fusions of various concerns have also been authorised. New issues of shares by banks are impending. A beginning has been made by the *Société Générale*, which has announced a big increase in its capital. The position of the banks is extremely favourable for such operations. Their activities and profits have greatly increased since the outbreak of the war, but the prohibitive wartime legislation until recently made any adjustment in their capital impossible. The new issues of shares are to be distributed among shareholders, either for nothing or at prices considerably below the Stock Exchange quotations; hence, the increase in demand and the rise in prices. So far, bank shares have been leading the boom, though they were previously affected by the slump to a smaller extent than most of the other shares. The comparatively strong position of the banks has also partly been due to the fact that they are less vulnerable to war damage than are industrial plants. Electricity shares have come next, because of the expected increase in the price of electricity. All equities have benefited by a substantial reduction in taxation rates and in levies on Bourse operations. Enterprises engaged in the production of substitutes and of essential scarce commodities have been exempted from excess profits tax; from now on, the exemption applies to old concerns as well as to those established after the armistice.

These measures constitute a big departure from Vichy's previous financial policy. During 1941 and the spring of 1942, its main preoccupation was to divert capital from investment in equities and to strengthen the gilt-edged market. This policy was not very successful; and the recent slump threatened to paralyse the Stock Exchanges in both sectors. The Government, therefore, decided to rescue the private capital market, hoping apparently that a revival of business in this sector will perhaps favourably affect Government securities as well.

The result of the upward tendency during August was that the general index for 300 industrial shares reached the level of May, the month in which the slump began. But, significantly enough, gilt-edged securities hardly advanced at all. It remains to be seen how long the stimulating effect of recent policy will last.

Enjoy the luxury of real Cigar Tobacco. CIGARLETS are little Cigars in a cigarette paper wrapping. Made from choice imported cigar tobaccos they possess the taste and aroma of a fine Cigar.

German Europe

Food Supplies

THE cut in Germany's bread ration, which was made in April, 1942, has been fully restored. The normal consumer will again receive 79 ounces of bread each week. The meat ration for the normal consumer has been increased from 10.6 ounces to 12.3 ounces; before April 6th, the weekly meat ration was 14.1 ounces. It is a different loaf of bread that will now be supplied to the Germans. The new standard loaf contains 42 per cent of rye, 35 per cent of wheat, 20 per cent of barley, and 3 per cent of potatoes. This extraordinary mixture reveals more than any vague estimate the actual state of Germany's food situation after the third war harvest. During the winter of 1941-42, roughly 2½ million hectares of cereals were damaged, and had to be resown. According to official reports, barley was mainly used for resowing the damaged areas; and, during the harvesting period, the German people were told that barley would have to be used as a bread grain. The greater part of the barley harvest will now go into bread. In other words, the wheat and rye harvest has been a comparative failure. This makes a number of changes necessary. First, the supply of pearl barley will be smaller; secondly, the reduced ersatz-coffee ration will now be manufactured from a mixture of barley and oats; thirdly, less barley will be used for beer; and, fourthly, only very small quantities of barley can be used as feed for animals. In short, the increase in the bread ration will result in the smaller production of other foodstuffs.

Before the war, the normal procedure in compensating for a bad cereal harvest was to mix potato flour in bread. The potato situation, however, is strained. During last winter and spring, the potato ration was far below the average consumption in 1940-41. In the coming winter, a new rationing scheme will be introduced, and it is hoped to increase the weekly potato ration to 10 pounds, which is perhaps 70 per cent of the 1940-41 consumption, in spite of an increase in the acreage by 10 per cent. It may be assumed that the bread and potato rations taken together have not increased.

The increase in the meat ration can be explained by the fact that the acute lack of feeding stuffs during the spring made necessary the forced slaughter of pigs and cattle. Pork and beef have been canned, and some of the stocks will now be distributed. The situation is clear beyond any doubt. A growing percentage of feeding stuffs has to be used for human consumption, and new feeding stuffs have to be found to maintain the absolute minimum of livestock.

The lack of feeding stuffs has already forced the authorities to reduce the average weight of pigs from 150 to 100 kilogrammes. This means that, while the reduced number of pigs may be maintained, the yield of pork and lard will decrease. The tremendous effort which is going on to increase the output of oilseeds cannot compensate for this decline. The oilseed crop is very poor this year, because of extensive winter damage. Vegetables and fruit are also in short supply. Even so, the general situation is still no better than in 1917 and 1918, when Germany's food production was only roughly 50 per cent of the 1913 output.

This comparative success is largely the result of the compulsory organisation and drive for agricultural production which began in 1934. The most significant change introduced this spring is that the battle for production has become a battle for the improved collection of agricultural output. Lack of labour, machinery and fertilisers have now stopped the expansion, and particularly the intensification, of German agriculture. The extremely strained supply situation has made the requisitioning of the entire agricultural output necessary. This means a reduction in the consumption of peasants and farmers; and the Government has been forced to compensate them by increased prices and premiums. The marketing organisation has been tightened up; and the Nazi party has increased direct control over the agricultural industry by a reorganisation in the leading departments of the Ministry for Agriculture and the *Reichsnährstand*.

Germany's food requirements have steadily increased since the beginning of the war. Roughly, 6 million foreign workers and prisoners of war are now employed in Germany. Larger armies in the field require more food, and large-scale warfare means considerable wastage of foodstuffs. The question is how substantially occupied Poland and the occupied Russian provinces have contributed to

Germany's current food supplies. It may be assumed that very little food from these territories reaches Germany. The greater part of the output in Poland will probably be used for the troops on the eastern front, and the stocks found in Russia will also have been used for the supply of the army. The reconstruction of agriculture in occupied Russia seems to be proving very difficult.

South-Eastern Supplies.—The leading countries in south-eastern Europe are fully mobilised for the Russian war. Their agriculture has suffered from the lack of labour, machinery and adequate organisation. Available figures show that, during 1941, exports were very small. Winter damage to crops was slight, but cultivation plans could not be carried out in the autumn of 1941. In the spring of 1941, bad weather and widespread floods hampered activities, and the harvest was, on the average, from two to three weeks late. Estimates of acreage and crops vary considerably. All these countries reduced their bread rations during the months before the harvest. The wheat, rye and barley harvests are probably below the normal average. There are, however, some indications that the maize crop may produce average yields. Under German influence, all these countries have increased the acreage under potatoes; in Bulgaria and Roumania, it has been nearly doubled. Potatoes will be largely used as a mixture in bread. At the same time, the production of oilseeds, pulse and vegetables has been increased. In some of the countries, the labour problem was partly solved by the introduction of compulsory labour on the land on the German model; Roumania employed Russian prisoners of war. Germany delivered some tractors, and other agricultural machinery, but the total number of tractors in use in Roumania is still only some 6,000. The most remarkable experience in these countries is that the peasants actually reduced their deliveries of cereals. In Roumania, for example, cereals were used for increasing the number of livestock. Control had, therefore, to be tightened in all these countries. Threshing by flails has generally been forbidden, and threshing controllers fix the quantities to be delivered on the spot.

Deficiencies in the West.—Reports about the food situation in France are conflicting. The harvest in the occupied zone is described as good, while reports from Vichy for the unoccupied zone are pessimistic. The discrepancy between crops and deliveries has not been remedied, and all attempts to put an end to black and grey markets have so far failed. The grey market, that is to say, the direct purchases of consumers from the peasants, as distinct from the black market activities of the wholesale and retail trade in foodstuffs, is apparently on the increase. Winter damage to crops was comparatively slight in France; but the lack of labour, fertilisers and fuel is pronounced. The greatest difficulty is the shortage of feeding stuffs, and it may be assumed that further reductions in the number of pigs, cattle and sheep will be necessary.

In Belgium and Holland, crops are generally described as satisfactory. In Holland, 100,000 hectares of grassland have been ploughed. The acreage under potatoes has been increased considerably, but the expansion of the acreage under oilseeds has not been successful.

The Danish wheat crop has been a failure, but a good potato and sugar beet crop is expected. The reduction in the number of pigs has come to an end, but the slaughter of poultry is again increasing.

Europe's Food.—Germany is still the best-fed country on the continent; but, even in Germany, the diet has become extremely monotonous for the average consumer. High quality foodstuffs and fruit are reserved for the army, for the children and for sick people. During the coming winter, the civilian population will receive probably the same quantities as last year, but the quality will be inferior. Poland, occupied Russia, Greece and Norway are near actual starvation level. Everywhere in Europe, the situation is aggravated by transport difficulties, which prevent the storage of foodstuffs. The growing shortage of feeding stuffs will result in a further reduction in the number of livestock, which may mean a temporary increase in meat rations; but the vital supply of fats, of which nearly all European countries are short, will probably fall more rapidly than last year.

Russia at War

The Oil Position

THE Soviet oil industry was until recently one of the few industrial branches of the country which had sustained no serious losses in the course of this war. The loss of the Drobobitch-Borislov district in south-eastern Poland meant very little; the output of that district was below 500 thousand tons, and it was declining steadily. The first serious loss was the Maikop-Krasnodar oil district in the Northern Caucasus, with an output of more than 2.5 million tons, and a somewhat smaller refining capacity. The Third Five-Year Plan counted on an increase in the Maikop oil output to 3.7 million tons. But this figure was not reached; and complaints that Maikop was lagging behind were fairly frequent in the Soviet Press. The Maikop oil wells were developed mainly between 1914-18. In 1918, the output was 2.1 million tons, and it has remained more or less stationary since then.

The important area which has now come into the danger zone is the Grozny district. Recent data for the output of Grozny are not available. During the last decade, there were very sharp fluctuations in production. In 1931, the oil wells of Grozny yielded 8 million tons, against 2.6 millions in 1918. Later, there was a steady decline until, in 1939, the total output went down to 2.4 million tons. But the subsequent three years brought about the "recovery of Grozny," and production was reported to rise, though the target figure of 4.1 million tons for 1941 has probably not been reached. The importance of Grozny consists, perhaps, more in the quality than in the quantity of its output. Grozny has specialised in production of aviation spirit; and, since the outbreak of the war, many successful experiments in producing aviation fuel from low octane oil have been reported. Grozny is connected by pipe lines with Makhach Kala on the Caspian and Tuapse on the Black Sea; thanks to its geographical position, it was Russia's main oil exporting centre, and the decline in Grozny's output ran parallel with the decline in Russia's oil exports—from 6 million tons in 1932 to about 1 million in 1940.

The Baku district in Azerbeidjan (Transcaucasus) still holds first place among the Soviet oil producing centres. It accounted for about three-quarters of Russia's total output towards the end of the thirties. The planned development of new oil areas outside the Caucasus was to reduce Baku's share to 57 per cent. of the total. There has, however, been no evidence to show that such a reduction has really been obtained. The figure planned for Baku's output this year was 27 million tons, about 3 million tons more than actual production in 1938. It is generally believed that Baku has fulfilled the plan. The reports of the Azneft Trust, under which Baku comes, have been fairly optimistic since the outbreak of the war, though they have not contained any specific figures.

The Second Baku, as the new oil area between the Urals and the Volga is called, is still in an initial phase of development; and it is still very far from rivalling the old Baku. Its output was planned to rise to 7 million tons in 1942. Even if this figure has been reached, it is still not more than between one-fourth and one-third of Baku's output. The actual production of the Second Baku in 1939 was 2 million tons; the plan provided, therefore, for an unusually steep rise in production. The Emba oilfields to the north of the Caspian Sea were expected to yield some 2 million tons towards the end of the Third Five-Year Plan. Numerous new oil wells were also reported to have been sunk in various central Asiatic areas. Prospecting works have been carried out on a very large scale since the outbreak of the war, and new geological reserves have been discovered which, together with the reserves of the Second Baku area, are said to be much larger than those of the Caucasus. Yet, in the short run, it is not the geological reserves, but the actual output that counts. And shortage of drilling machinery and labour set fairly narrow limits to the expansion of new oil producing centres. During the last decade, oil production has lagged behind the plans, and the target figure of the Third Five-Year Plan—54 million tons—has certainly not been reached.

Most expert estimates still put the figure of the Soviet annual output at about 35 million tons.

As long, however, as Baku is intact and its oil industries are able to work, the main problem is not production, but transport. In peacetime, 40 per cent of Russia's oil was transported by rail, 35 per cent by river and sea and 25 per cent by pipe-lines. The rail, river and pipe-line connections with the Caucasus have now been cut. The Volga alone used to carry more than 7 million tons of oil. The only outlet for Baku's oil, which has still been left open, is the route across the Caspian to Chkalov and from there by the new pipe-line to Orsk behind the Urals. It is obvious that the possibility of using this route will to a large extent depend upon whether the Germans will be able to secure control over the Caspian from the air; this they may partly achieve if they reach Makhach Kala in the Northern Caucasus. The other limiting factor is the transport capacity of the Caspian tanker fleet; it is known that this fleet was greatly expanded not long before the war, but its present size is not known. Some three years ago, the total carrying capacity of the Soviet oil tankers was about 400,000 tons.

The immediate prospects for supplying the Red Army and the eastern industries with oil are, however, determined neither by production nor by transport facilities, but by the oil stocks accumulated throughout the country. It is certain that these stocks are very large, and that the principle of the widest possible dispersal has been applied to their geographical distribution.

Facilities for refining crude oil are very ample. Before the war Russia possessed 161 refineries, compared with 28 in 1918. Big new refineries have been built and completed at Saratov and Ufa as recently as 1940 and 1941, and the share of the Caucasus in Russia's refining capacity has declined from 97 per cent to about 60 per cent. The total capacity still amounts to at least 50 million tons.

An American Estimate.—The following tables contain an American expert estimate of Soviet oil production and civilian consumption during the last three years, for which no official data are available.

RUSSIA'S OIL PRODUCTION

In 1,000 barrels

	1939		1940		1941†	
	In 1,000 Barrels	As Per cent.	In 1,000 Barrels	As Per cent.	In 1,000 Barrels	As Per cent.
Kuban-Maikop (N.-W. Caucasus)	17,500	7.92	17,000	7.64	15,000	
Grozny-Dagestan (N.-E. Caucasus)	15,500	7.02	13,500	6.06	13,500	
Baku (Transcaucasus)	161,500	73.12	161,000	72.33	172,000	
Caucasus Total	194,500	88.06	191,500	86.03	200,500	82.7
Ural-Volga	14,016	6.35	18,500	8.31	27,500	11.4
Emba	3,500	1.58	3,750	1.68	4,500	1.8
Central Asia	5,600	2.53	5,600	2.52	6,000	2.5
Sakhalin	3,250	1.47	3,250	1.46	3,250	1.3
Grand Total	220,886	...	222,600	...	242,250	...

† Provisional.

RUSSIA'S CIVILIAN CONSUMPTION OF OIL PRODUCTS

In 1,000 barrels

	Motor Fuel	Kerosene	Gas and Fuel Oil	Lubricants	Miscellaneous Products	Total
1938	27,000	42,000	65,000	9,500	21,000	164,500
1939	28,000	44,000	67,000	9,600	22,000	170,600
1941	23,000	38,000	54,000	7,500	16,000	138,500

A significant fact, indicative of the Russians' confidence in their ability to defend Transcaucasus is that the oil installations of Maikop have been evacuated to Baku; and that the building of new refineries there is going on even now. One large refinery was opened in August and another is to start work in September.

THE BUSINESS WORLD

Accountants and Accounts

THERE is a very wide measure of agreement that published accounts are highly unsatisfactory, judged by any standard of modern requirements. Articles in *The Economist* on April 11th and 25th and August 8th have discussed and analysed British and American practice in this respect. It is less generally appreciated that the standard of accounts as supplied to company directorates also leaves a great deal to be desired in many cases. The fact that some concerns, which are of sufficient importance to receive direct contracts from Government Departments, are stated by the Committee of Public Accounts to be unwilling to undertake costing is suggestive. According to existing law and practice, the auditor is in no way concerned with this question of costing. He is, indeed, not obliged to take any responsibility for securing that the accounts kept by the company accountant, whether the latter is a member of one of the recognised bodies or not, do in fact put the board in possession of the information which is necessary to give a complete picture of the company's operations. He has only to say that, given the system of accounting adopted, the statement, so far as it goes, is not misleading—and not misleading to a person who understands just how much and how little it does say. While the auditor is in law the servant of the shareholder, he frequently acts, in practice, towards the board in the matter of the Companies Act very much as an income-tax consultant does towards his client in the matter of his tax claims.

Both chartered and incorporated accountants consist of three types of member grouped by function: the principals of firms of auditors; their employees—insofar as they are members; and members who are direct employees of industrial or other public companies. With a few notable exceptions in both the Institute and the Society, the first type of member is reasonably satisfied with things as they are. He has no very intimate contact with the accountants directly employed in industry or other public companies; and next to no contact with cost accountants. But it is precisely these, the accountants directly employed by industry and business and the cost accountants, who are, so to speak, in the front line. It is they who see industry working, and it is upon their work that the accounts are built—if, indeed, they do not do the whole preparation. They have, however, very little voice in the conduct of the accounting profession, which is determined by members of the councils of the two professional bodies. It is quite certain that there are wide differences of opinion among the members of each of the three types of accountants in both the Institute and the Society. Insofar as these relate to details of accounting practice, or even to general principles of the science and art of accounting, they need scarcely concern the outside world. It is, however, necessary that all should be brought to realise that there is a standard of information below which their accounts should not fall, and that the auditor in particular has a duty to see that this standard is fully maintained.

There is reason to suppose that the views of company directors also vary widely, both on the value of any but the most rudimentary accounts to the company itself and, even more, the need for telling shareholders, and therefore the public, anything beyond what is obligatory—on the most illiberal interpretation of the letter of the law. The mistrust of figures in general, and of statistics in particular, is believed to be most deeply rooted in the older industries, and it is probably also in these that the mistrust of publicity is most pronounced. These opinions are no doubt sincerely held, but they refer to a set of conditions which has now gone. There is far less room in these days for the hit or miss methods which frequently succeeded in the last century. Where scientifically marshalled facts can help, they must be used, and the ability to apply scientific standards to management necessitates the collection and publication of all relevant data.

For private enterprise to continue to "deliver the goods," capital must flow into those industries where the return is high and be withdrawn from those where it is low. Even as late as the early days of limited liability, the money needed was put up by a comparatively small class of people who lived in intimate contact with the development of industry and commerce. They knew, or could know, where their money would give the best return. For a quarter of a century at least, this state of affairs has ceased to be typical. Now, whatever method of putting up the money is adopted, the savings invested must be those of a mass of small men who need advice. The publication of frank, full and proper accounts is needed in order to disclose the position so that anyone with a modicum of grounding in accounts can grasp the facts. With all the figures available, it would no longer be possible for directorates to plough back earnings once the rate of return had fallen well below the average; and the reaping of fantastic profits, for anything but quite short periods, would also be eliminated by the rapid entry of savings into industries still under-equipped with capital. It is beyond question that such knowledge would lead to the use of savings in a manner more beneficial to the community than either the pre-war practice or the suggested alternative of a board of specialists, who, however wise and experienced, would be powerless to find their way about the ramifications of modern industry without the assistance of facts which ought to be available to all. This is the answer to those who believe that company directorates owe no duty to anyone beyond those who put up the money, or perhaps to them and their workpeople.

The desiderata are plain. For all companies in which the public is interested, directly or indirectly, a statement is needed of the original cost of fixed assets by categories, with details of provision for depreciation and all other relevant particulars, together with the source of the funds expended; possibly the allowances for income-tax purposes; particulars of the amounts due to and by the company, with any allowances; details of other floating assets; a trading account showing the sums spent on materials, wages and salaries, and gross receipts; profit and loss and appropriation accounts, showing how the net trading profit was dealt with; and a clear statement of what concerns are controlled, and how the control is exercised, and of any other substantial interests.

It is improbable that legislation alone can obtain the minimum required without demanding a great deal more than is necessary to obtain a result which would be generally acceptable. The desirable approach to the problem is that representatives of industry should agree among themselves a standard form of accounts, which would give the public the required facts. A single form should suffice for most manufacturing and extractive industry, while another could cover a large part of distributive industry. American experience shows that there is no real difficulty in obtaining the necessary elasticity. There would, doubtless, be those who would not agree; but, if they were a minority, the law could be altered to compel their adhesion after a reasonable period of trial had established a suitable standard. If a large measure of agreement to give the necessary information could not be achieved, the alternative would be for the Government Department principally concerned—presumably the Board of Trade—to exercise its powers of persuasion, as the Treasury has done in the case of financial interests. (It should be noted, however, that whereas finance has been told what business it may do and, largely, how it may do it, the suggestion here is merely that industry should be asked to render a reasonably intelligible account of what it has done.)

The preparation of published accounts of the standard required would probably mean that the general level of accounting throughout the sections of industry which are

more backward in this respect would be brought up to normal. If not, this result would have to be secured by other means, and this alone would be a tremendous gain to the industries in question, and to the country. This is not the place in which to argue the virtues of different methods of building up the balance-sheet and profit and loss account. It is, however, desirable that the accountant, like other people, should look at his job in terms of real things rather than of money.

There remains the question of the auditor, that is to say, of the first of the three types of members of the Institute and the Society. It is impossible to escape the feeling that the relations between them and accountants in industry, whether they are fellow members or not, is less than satisfactory. A much greater degree of co-operation would seem desirable. But that is by the way. For the moment, it is to the principal duty of the auditor to the shareholder and the public that attention has to be directed. Here, a radical change is needed. It must be his duty to see to it that the accounts prepared are not merely accurate, so far as they go, but that they are up to the agreed standard. Further, he must vouch for the fact that they fulfil the spirit, as well as the letter, of the law. He should be the servant of the shareholders in fact, and not only in name, and he should be barred by law from accepting any employment but that of auditor, while he retains any connection with that profession, whether through association with an auditing firm or through membership of the Institute or the Society. In fact, he should look for his rewards inside his profession

and not elsewhere and, within it, to serving society and not a particular interest. There would seem no reason to suppose that, with the enhanced status conferred by the greater responsibility, and the more stringent conditions of membership which ought to accompany it, the rewards open would not suffice to attract the right type.

Here again, if any difficulty were experienced, there would appear to be no insuperable obstacle to the creation of a new section of the Board of Trade, to be recruited in the first instance from the ranks of existing accountants, who would carry out the necessary audit in the public interest, but at the cost of the shareholders. This would, of course, remove the principal function of the Institute and Society, leaving them to train accountants for industry and applicants for the new Government service. It would, admittedly, be far preferable that accountants should agree with company directorates an acceptable minimum of information, and a demarcation of responsibility, leaving both to be given the force of law as soon as it was seen that the actual arrangement evolved was suitable.

The plan puts some increased responsibility upon company directors, and a greatly increased responsibility upon auditors. Both bodies should see to it, first that the basis of recruitment is extended; and, secondly, that the highest standard of professional conduct is maintained. If the new duties are satisfactorily performed, there should be no difficulty in securing a sufficient reward. The alternative would seem to be, for virtually the whole of both classes, merely to carry out orders from above.

Finance and Banking

Treasury Bill Tactics

Interest in the discount market has been enlivened during the past week by the unexpected development that occurred at last week's tender for Treasury bills, in the ever present struggle between the syndicate and the "outsiders." On this occasion, the syndicate, though keen to get the favourable December maturities now being tendered for, decided to drop its tender price by 1d. to £99 14s. 11d. The strategy of the move no doubt lay in the expectation that the outside houses would bid at £99 15s.—the previous week's figure—and get an inconveniently large allotment of bills. This, if it eventuated, would clear the field of some of the competition for the end of December bills to be tendered this week, and the drop in the syndicate price would, on this assumption, be a matter of *reculer pour mieux sauter*. On the whole, everything worked according to plan. The syndicate, of course, had to sacrifice the bills, and only got a 27 per cent allotment. The outsiders, almost to a man, bid at £99 15s., and got a 100 per cent allotment, which for some of them was far more than they could conveniently take up. The matter was further complicated for the outsiders by the fact that most of the clearing banks have been making up this week—a factor which had no doubt entered into the calculations of the syndicate tacticians. All this manoeuvring centred round the difference of 1d. per £100 in the price for Treasury bills, may seem much ado about nothing. But it is such minutiae that keep up what little interest and variety is still to be found in the discount market in these days. The clearing banks have been meagre buyers of bills, but despite some calling of loans connected with the monthly making-up, there has always been enough credit to go round. Needless to say, there has been no evidence of cheap outside money. The institutions concerned have had more than enough to do with their spare cash in taking up and financing their unexpectedly large bill allotment. The Bank return is again a featureless document this week, the only movements of note being a reduction of £3,271,000 in bankers' deposits, and a corresponding increase of £3,663,000 in public deposits. The note circulation shows another slight increase of £635,000 on the week.

India's Sterling Accumulation

The persistent accumulation of sterling by India, and the consequent ability of that country to repatriate between March, 1936, and January, 1943, £284,000,000 out of the £376,000,000 of sterling debt, will cause less astonishment in the light of information given this week in New Delhi about the financial relations between the United Kingdom and Indian Governments. Sir Jeremy Raisman, the Finance Member, speaking in the Assembly on his return from a

financial mission to London, announced that the following expenditure in respect of supply and defence incurred in India had been made chargeable to the United Kingdom Government:—

1939-40 actual	4 crores of rupees	(£3,000,000)
1940-41 actual	53 crores of rupees	(£40,000,000)
1941-42 revised estimates	185 crores of rupees	(£140,000,000)
1942-43 budgeted	387 crores of rupees	(£290,000,000)

This is in addition to free supplies of war materials by this country, estimated at £45,000,000 for the current financial year, and to increasing Lend-Lease aid from the United States. Moreover, no part of the expenditure incurred by using Indian troops outside India had been or will be debited to Indian revenue. With these heavy sterling grants to reinforce the considerable favourable balance of payments caused by the war, sufficient explanation is provided of the substantial net sterling income from which India has benefited since the beginning of the war.

This accumulation of sterling is still proceeding and the latest return of the Reserve Bank of India, dated September 11, 1942, shows sterling balances and securities amounting to £302,000,000. Three months ago these sterling assets amounted to £245,000,000 and six months ago to £110,000,000. There is thus an ample balance in hand to tackle the redemption of the £78,715,000 of 3½ per cent stock—the only remaining sterling loan of the Indian Government—due to take place next January. Judged by the questions showered on the Finance Member, Indian opinion is becoming greatly interested in the problem of this continued accumulation of sterling at a time when the obvious opportunities for using it in the repatriation of long-term debt have virtually disappeared. Sir Jeremy Raisman admitted that there had been some discussion in London of using part of these sterling funds to acquire shares in Indian undertakings held by British investors. With a little ingenuity, going perhaps to the lengths of mobilising Britain's direct investments in India, no difficulty should be found in providing for India every opportunity of using the sterling resources which, thanks to the war, are now flowing to that country. The difficulty will be to find the Indian investor prepared to take over this type of security.

Requisitioning of Milreis and Pesos

The Brazilian milreis and Uruguayan peso have from the beginning of this week been added to the list of "specified" currencies which, under the Defence (Finance) Regulations must, if held by residents, be

offered for sale to the Bank of England through a bank in the United Kingdom. As from last Monday, the Bank of England started quoting rates for both currencies, which previously had been quoted on the basis of the rates ruling in the domestic markets concerned. The bulk of the financial operations with Brazil and Uruguay has been conducted through special sterling accounts, and it is thus natural that the foreign exchange market between sterling and these two currencies should, in recent times, have been found in Rio and Montevideo rather than in London. This will continue to be the case. The Bank of England is not prepared to purchase blocked milreis or untransferable pesos, but details of such holdings must be notified to the Bank. The fact that the Exchange Control has seen fit to add free milreis and transferable pesos to the list of specified currencies betokens a fundamental change in the position of both currencies over the past year. Not much more than twelve months ago they were among the softest of the soft currencies. Both countries were exceptionally short of sterling, and special help had to be given in order to avoid default on commercial obligations and other sterling debt. The change in the balance of payments of both countries *vis-à-vis* the United Kingdom has been due to the twofold pressure of necessarily reduced exports from the sterling area and of increased imports of raw materials from Brazil and Uruguay. Not only have the sterling balances of both countries increased appreciably, but a number of exporters to Brazil and Uruguay have been leaving an undue part of the proceeds of their sales in the form of local currency. Any such balances must now be sold to the Bank or transferred to the appropriate special account. If milreis or peso balances are required for current commercial needs, the permission of the Bank of England must be obtained.

Northern Ireland Bills

An interesting feature of this week's tender for £900,000 of Northern Ireland three months bills was the fact that the bills were over-allotted by £10,000. The bills are payable on Friday of this week and will mature on December 29th. They are thus an exceptionally attractive maturity and were keenly competed for. Total applications amounted to £6,350,000, and the minimum successful price was £99 14s. 8d., at which tenderers obtained an allotment of 14.3 per cent. The £910,000 of bills issued went at an average rate of discount of £1 0s. 5.89d. per cent. The margin of some 3½d. above the latest Treasury bill rate is small enough to be disregarded, but if it is to be accounted for, it may be said to measure the difference between the rating of British and Northern Ireland credit and between a 91 and 95 day bill. The bills issued this week are to replace £875,000 issued last June. When this conversion is completed, the bills outstanding for the Government of Northern Ireland will be £1,410,000.

Canadian Short-Term Borrowing

The Canadian Department of Finance has recently resumed short-term borrowing from the chartered banks in order to meet current war costs in anticipation of future public borrowing. On July 29, 1942, the first sale of Dominion of Canada deposit certificates was made. This was for \$75,000,000 of 26-week certificates, bearing interest at ½ of 1 per cent. A second sale for the same amount on the same terms was made a week later. Expectations are that offerings will be made weekly for some time, until the next

large public borrowing operation. The Department of Finance in announcing these sales, drew an analogy in several respects with Treasury deposit receipts which have been issued during the present war by the British Treasury. Proceeds of the sale of deposit certificates are used by the Department of Finance to assist in meeting war expenditure, which have been estimated for 1942-43 at \$3,400 millions. In all, the total to be borrowed from the public is estimated at \$1,850 millions, a far larger sum than has previously been sold in Canada. Much of the increased tax revenue of the 1942 budget has not yet begun to be reflected in Treasury income. Borrowing from the chartered banks will bridge the gap until revenues expand commensurately with new expenditures and until a fresh war loan can be issued.

The new Canadian form of short-term borrowing from chartered banks is regarded as mildly inflationary in character in view of the circumstances in which it has been resorted to. The Canadian economy is fully expanded. Increasing shortages of manpower reflect this fact. Still greater expansion would readily be undertaken except that warning signals have been seen in shortages of labour and materials. Doubtless Treasury expenditures reflect a condition of over-expansion, and the risk of an inflationary gap appearing is seen. Under these circumstances, Treasury policy in borrowing from the chartered banks, a policy rigidly avoided except in the initial stages of the war, has attracted more than usual notice.

Inflation in Egypt

In few countries has the impact of war been left to work itself out so completely without controls as in Egypt. There is, of course, some control of the foreign exchange market, since Egypt forms part of the sterling area and the link with sterling has remained undisturbed. But there is only the hazy control of prices, profits or civilian consumption. Yet Egypt's is a war economy in the real sense of the term. The country is flooded with the additional purchasing power brought in by the large Allied armies and by such relief measures as official British purchases of the cotton crop. The rise in the note circulation has reflected this increase in the spending power, of which the counterpart has been, not so much a corresponding increase in the volume of goods available for consumption, as an increase in the country's foreign exchange reserve. It is estimated that the Egyptian banks had, between the beginning of the war and the end of 1941, accumulated the equivalent of about £80,000,000 in sterling. Without any effective scheme for the rationing of civilian consumption or fixing of prices, the latter have climbed steeply, and the index of wholesale prices is now more than twice what it was on the outbreak of the war. In consequence Egypt, to-day, presents all the contrasts of wealth and poverty, abundance and shortages, which inflation knows so well how to create. The position might have been held in check by allowing the Egyptian pound to appreciate in terms of sterling—as it would certainly have done, but for the readiness of the Egyptian banks to hold ever increasing sterling reserves. But this would have created an altogether new set of difficulties. A more direct and effective alternative would have been to subject the Egyptian economy to the rigours of wartime control which the situation called for. This may yet have to be done if social unrest is to be avoided. Present conditions may suit a small section of the population admirably; but for the masses they spell misery and resentment.

Investment

Visitors from Montreal

While it is too early as yet for optimism, it is at least good news for British holders of the stocks of the City of Montreal that Messrs Joseph O. Asselin and G. C. Marler, chairman, and acting-chairman of the Executive Committee of the City, have arrived in London for discussions with the British Stockholders Committee. At the very least, this is a recognition of the justice of the claim of the British bondholders to special treatment. This claim is, of course, based, primarily, on the terms of the loans, the specific security underlying them, and the uses for which the money was raised, uses for the most part of a definitely productive

character. The visit follows on the refusal of the general body of Canadian and United States holders to accept the original plan, not because its terms were considered unduly harsh, but because it proved impracticable to secure adequate guarantees as to the future conduct of the City's finances. This is, indeed, a crucial point without which no terms can be of any real and lasting value. It is not known in detail what the British Committee will suggest, or be prepared to accept, but any agreement must clearly take account, both of the original terms of the loans, the present state of the City of Montreal's finances, and their future prospects. There the matter may be left for the time being. But it is

an occasion for congratulation that the British Committee, starting very late, and working under the disadvantage of war conditions, should have been able to bring the City of Montreal's representatives to the point of recognising that they have special claims. It is also pertinent to recall that it was only at the end of last October, when the Committee for General Purposes of the Stock Exchange took the matter in hand, that specifically British interests achieved any organisation. Now that representatives of both sides are meeting there are much increased hopes of a reasonable settlement. It has to be remembered, however, that the actual post-settlement status of Montreal as a borrower is almost more important than the exact terms agreed.

Compensation in Burma

The report of Steel Brothers for 1941 presents a grim picture of the fate which has overtaken enterprises whose activity was centred mainly in Burma. From the standpoint of profit before tax, the company and its associates appear to have enjoyed something like a record year, and even after tax the profit is, with one exception, the highest for a decade. Preference dividends have been met in full and interims paid on preferred and deferred. As was announced some three months ago, the need to conserve cash resources makes final dividends impossible, and it is now revealed that the holders of the equity will be asked to confirm the right of the preferred shareholders to the balance of the 1941 dividend. The report states, however, that its payment must depend entirely upon the compensation received, and any earnings which may be made in the meantime. After more than fifty years of profitable trading, the company had, at the end of last year, net assets in excess of £3,250,000. It is not possible as yet to place any value on the property not in enemy hands, but it is hoped to do so in respect of the position at the end of this year. Some idea may, however, be gathered from the statement that it is hoped that the free assets will suffice to maintain the organisation of the company and to enable it to take up its activities afresh when the time comes. The deferred capital is privately held, but the market valuation of the £1 preferred ordinary is 11s. 10½d. On the vexed question of compensation, the report quotes a letter from the Burma Office, stating that it is the general aim of the Government to provide for the replacement or repair of property and goods destroyed and damaged "to such extent and over such period of time as resources permit," with the added assurance that the home Government, in conjunction with such common fund or organisation as may be established, will give what assistance it can. This seems at least to accept in principle a limited liability for physical assets, but it is not a statement which can be given a value, in terms of money, at this stage of affairs. The considerations to be kept in view are, in fact, likely to prove very complicated, and investors will have to exercise what patience they may until the possibilities are clearer than at present. Reconstruction can only be effected given extreme good will and understanding among all the United Nations.

Functions of the Auditor

According to a summary of an address to Liverpool members, Mr Richard A. Witty, president of the Society of Incorporated Accountants, touched on two points which have a distinct relevance to the matters raised in an article on page 392. He agreed that the financial audit, as known today, does not achieve all that is necessary in the way of a check on the management, and he stated that industrial accountants, that is those in the full-time employ of industrial companies, were calling for a wider view of the scope of the auditor's duty. It is a pity that a full report of the address is not as yet available, and it is to be hoped that an early opportunity will be found to expand these two points. As Mr Witty stated, the separation between industrial accountant and auditor is of comparatively recent growth, and it is quite clear that the less the latter fulfils the function of the former, the greater is the need for close co-operation between the two, and for the adequate representation of the industrial accountant in the control of the professional bodies, of which he is frequently a member. The relationship of these two groups, *inter se*, and of each to the management of companies, needs to be thrashed out, and the result must be that delimitation of responsibilities which gives the optimum service to the community.

Staveley Accounts

Despite a reduction in total disclosed profits of Staveley Coal and Iron for the year to June 30th last from £997,304 to £944,715, there is a rise in the surplus available for ordinary dividends. Current taxation requires only £347,000 against £418,581, while there is no retrospective charge. There is also a reduction from £45,587 to £9,488 in the war damage contribution. Consequently, equity earnings are up from £261,516 to £356,605, representing 10.5 against 7.7 per cent. The ordinary stockholders again receive 6½ per cent tax free and the surplus is devoted as to £50,000 to general reserve and as to £90,000 to writing down stock. After adding in £5,030 profit on the sale of capital assets, it is still possible to raise the carry forward from £133,879 to £135,466.

castle, Glasgow (Agent)

the total of cash items from £692,151 to £489,125. The liabilities side shows total reserves of £2,636,295 against £2,652,861, while there is a reduction in creditors from £866,745 to £757,000. The accounts suggest that business was eminently satisfactory last year, but that there was no substantial increase in turnover. It is far from clear why it should be necessary to write down stocks of materials by some 10 per cent at a time when prices are rising, and it is to be hoped that some explanation will be provided. The £1 ordinary stock at 46s. 6d. ex dividend yields £2 15s. 11d. per cent tax free.

Sheepbridge Lower Dividend

The full accounts of Sheepbridge Coal and Iron suggest a less favourable trading experience for the year to June 30th last than Staveley Coal and Iron. Disclosed profits are struck after taxation, but this may well have been lower on the year, so that no rise in the gross figure can be necessarily argued to offset the decline in disclosed total income from £225,049 to £207,532. In view of the reduction in war damage charge from £20,000 to £5,000, and in the absence of any charge for additional taxation, against £15,000, it is possible to place £10,000 against nil to deferred repairs and still approximately maintain equity earnings. The payment is reduced from 9 to 8 per cent tax free, but this decision is no doubt due to unwillingness to trench further on the carry forward after maintaining the transfer of £20,000 to renewals.

	Years to June 30,		
	1940	1941	1942
Profits after tax	271,016	225,049	207,532

* Including £10,000 for deferred repairs.			

As in the case of Staveley, the balance sheet suggests a satisfactory year and a sound liquid position, but relative stability of turnover. The directors state that the collieries were fully employed last year with the exception of one which was closed last December. There are few striking changes in balance-sheet items, but the decline in creditors, including taxation and sums outstanding on railway wagons, from £695,372 to £639,939 indicates that there has been no net expansion. The rise in debtors from £549,787 to £601,636 reflects the running down of stocks, which are some £77,000 lower at £399,160. The total of cash items is also higher at £293,913 against £259,440. In this case, and in the case of Staveley, it is clear that the national interest requires a substantial expansion of output. Neither report makes any reference to the vitally important question of labour supply, and, especially for this reason, the statements of the chairmen will be awaited with interest. The £1 ordinary stock, at 41s. ex dividend, yields £3 18s. per cent tax free.

National Canning Profits

Although the gross profits and turnover of National Canning attained new records during the year to May 31st last, the net dividends received by the parent company fell from £151,943 to £88,673. Owing to inter-company transfers, there is a small credit on war damage account against a larger debit. Thanks to this, and the fact that tax and tax reserve call for only £40,982 against £101,579, the amount available is very slightly increased to £50,647. This permits the maintenance of the 10 per cent dividend on the ordinary capital and of a transfer to reserve of £15,000, leaving £11,897 to add to the carry forward. Earnings on ordinary are, in fact, 22.6 against 21.9 per cent. It is impossible to discover the total tax provision, but the parent company shows a liability of £148,560, compared with £108,300 a year before. The consolidated

balance sheet gives a combined surplus of £284,678, against £247,755, both figures including £56,333 excess of balance sheet value of shares in subsidiaries over book value of net tangible assets relating to them. The same account shows a 35 per cent expansion in total liquid assets and a rise from £408,410 to £436,322 in the excess of these over current liabilities. In war circumstances, the demand for old products expanded and new products were added. This process is to continue during the current year, which has started well with excellent crops. The company is erecting plants for dehydrating vegetables, by arrangement with the Ministry of Food and, it is to be hoped, at their expense. Hitherto, expansion has been mainly along lines which may serve the company well after the war, but some of the later developments seem of doubtful application to normal conditions. In his statement, Mr S. W. Smedley, the chairman, expresses the earnest hope that controls will be abolished as soon after the end of war as is possible, since he is unable to envisage any bureaucratic system sufficiently flexible to permit men of enterprise reasonable freedom to develop new ventures. There seems no reason, with the possible exception of a shortage of tinsplate or substitutes, why profits of the group should fall during the war, and Mr Smedley appears confident that they cannot rise under existing tax provisions. The £1 ordinary shares, at 38s. 9d. ex dividend, yield £5 3s. 3d. per cent.

Anglo-Iranian Progress

The full 1941 accounts of Anglo-Iranian show a rise in total income, after payment of the royalty to the Iranian Government, from £5,826,191 to £6,222,175. Since there is a decline in tax provision from £2,975,156 to £2,920,682, the recovery in earnings is less than the addition to the available surplus, which, as suggested in a Note on the preliminary statement in *The Economist* of September 5th, represents an earned rate of 8.3 against 6.4 per cent. The following table shows a three years' trend of profits and allocations:—

	Years ending December 31,		
	1939	1940	1941
Total income†	4,951,964	5,826,191	6,222,175
Taxation	1,955,606	2,975,156	2,920,682
Extra depreciation	571,250	625,000	625,000
Fees	10,000	9,126	9,178
Prof. dividends (gross)	1,071,234	1,071,234	1,071,234
Ordinary stock:—			
<i>Earned (gross)</i>	1,343,874	1,145,675	1,596,081
<i>Paid (gross)</i>	1,006,875	1,006,875	1,510,313
<i>Earned %</i>	7.6	6.4	8.3
<i>Paid %</i>	5	5	7½
Carry forward	962,551	1,101,351	1,187,119
† After royalty payable to Iranian Government of £2,770,814 in 1939; not disclosed in 1940 and 1941.			

The chairman, Sir William Fraser, indicates that trading profits have improved still further in the current period, on account of the relatively greater importance of Middle Eastern oil supplies since the fall of Burma. The balance sheet suggests that there has been less than the usual volume of new construction. Refinery and other installations stand at £5,813,181, more than £1,000,000 down on the year. There is also a decline in net loans to subsidiaries from £7,270,277 to £4,021,375. These contractions are responsible for a marked improvement in the liquid position of the group, net current assets increasing from £99,297 to £5,304,692. The greatest rise is in marketable investments and cash holdings, which are some £5,400,000 higher at £13,717,277. Creditors are approximately stable. The concern has so far profited substantially from its ability to maintain its oilfields and installations intact. A further increase in dividend from the present rate of 7½ per cent is not precluded, since profits in the current year show a material increase, and this possibility will interest investors in Burmah Oil, directly through its substantial interest in Anglo-Iranian, and in "Shell" indirectly through joint holdings. The £1 ordinary stock at 54s. 4½d. ex dividend yields £2 15s. 2d. per cent.

Second Alliance Earnings

Stockholders in the Second Alliance Trust Company may count themselves fortunate that, despite Japan's incursions, investment revenue for the year to July 31st is virtually unchanged at £213,436. Losses in the Far East

have been offset by gains elsewhere, but the former will bear more heavily in the current year, while the latter may not. Unfortunately, tax provision is up from £67,827 to £84,989, with the result that, after repeating the 21 per cent dividend on the ordinary capital, there is only £16,008 to add to reserve and carry forward, against the figure of £26,465 for 1940-41. Earnings on the ordinary are thus 28.6, against 33.1 per cent. Changes in the balance-sheet are of very small dimensions, investments being up by less than one per mille at £3,673,144. No formal valuation of these is attempted, but the chairman, Mr James Prain, is able to give the assurance that they are now fully represented by present-day values. No classification is given, but of total revenue last year 76 per cent was drawn from concerns situated in this country, and 13 per cent from the Americas. So far, so good. Unfortunately, the full effect of the Far Eastern losses is likely to be considerable, amounting to 2 per cent on the ordinary capital. Income from India and Ceylon, so far not in jeopardy, amounts to another 2 per cent, while Australasia and the Near East share another 2 per cent equally between them. Mr Prain is reasonably confident that none of these areas is in real danger, but he makes no mention of any possible offset to the Far Eastern losses. The price of the ordinary stock is 420 ex dividend, yielding £5 per cent.

Crosses and Winkworth Report

The full accounts of Crosses and Winkworth for the year to March 25th last contain the welcome news that, since the end of the financial year, the directors have paid off rather over half the outstanding liability for interest on the old Crosses and Heaton debenture stock. This obligation was assumed at the time of the amalgamation in 1931 and ranks prior to any payment on the 6 per cent debenture stock of the present company, which is in arrears since February 24, 1932. The payment now announced absorbs £83,773, and leaves £82,625 outstanding. The profit position of Crosses and Winkworth was fully discussed in *The Economist* of August 29th last. The chairman, Mr. Joseph R. Heaton, states that, although no provision was made for depreciation, £36,487, against £57,682, was allocated for renewals and repairs, and that capital expenditure amounted to £4,767, against £13,895. He points out that the rise in stocks from £495,156 to £548,985 is due, to the

extent of £35,260, to revaluation. The real increase accounts for the rise in creditors from £92,647 to £105,815. The decline in debtors from £129,320 to £90,600 is understated to the extent of £20,000, reserve for bad and doubtful debts transferred to profit and loss account. Cash holdings are substantially higher at £264,278, against £131,787, while £29,900 advances secured against cotton stocks have been eliminated. Thus, there is a marked improvement in the liquid position of the company. If profits can approximately be maintained in the current period, the time is not far off when a start can be made on clearing off arrears of the company's own debenture interest. The 6 per cent "Heaton" debenture stock now stands at about 89.

United British Oilfields of Trinidad

Gross receipts of United British Oilfields of Trinidad rose in 1941 from £2,963,445 to £4,072,406. This is mainly due to the fact that they are now reaping the harvest of the increase in refinery capacity during 1939, and there is a contra item of £2,302,863, against £1,411,681, cost of crude and refined oils purchased. General expenses increased by some £95,000, while taxation required £345,000, against £270,000. Thus, equity earnings rose only from £67,756 to £88,399, representing 8.7, against 6.5, per cent on the ordinary capital. The ordinary dividend is maintained at 7½ per cent, so that there is a small addition to the carry forward, which is increased from £24,266 to £37,163. The report reveals capital expenditure £532,000, £242,000 of which was drawn from capital resources. The comparable figures appear to be some £650,000. Consequently, as Sir Robert Waley Cohen points out, the liquid position has deteriorated by £230,000. Cash holdings, in particular, are down from £274,061 to £140,543. The increase in creditors from £633,174 to £922,764, while debtors have remained relatively stable, is no doubt due to the inclusion of tax reserve. Sir Robert again draws attention to the unfortunate nature of the company's EPT standard, which makes no allowance for the rapid development which was taking place during the standard years, and reiterates the opinion that the existing EPT basis not only robs shareholders of reasonable profits, but inhibits further expansion of the business. The 6s. 8d. ordinary shares, at 9s. ex dividend, yield £5 8s. 1d. per cent, less tax at approximately 6s. 7d.

Industry and Trade

The Industrial Ten Coupons

Manual workers classified under as many as fifty headings are eligible for an additional ten clothing coupons during the current rationing period. The issue is intended for those whose work imposes greater wear and tear on clothing than does sedentary or light work. The list of trades and occupations is comprehensive. It begins with agriculture and allied work, and includes workers in such trades as engineering, the production of building materials, chemicals and metals, the manufacture of pottery, rubber goods and textiles, the preparation of leather and tobacco, and the cooking, preparation and serving of foods. Office and factory cleaners, roundsmen, inshore fishermen, cinema projectionists, printers, chimney sweeps, and laboratory workers are others who qualify for the ten coupons. To make certain that no manual worker is left out, the last item in the list reads:

Workers not covered by the previous sections but engaged on essential manual operations and services in connection with any of the trades listed above.

The amount of wear and tear of clothing for those listed must vary widely. For example, those engaged in the retail distribution of food would not wear their clothes as hard as "workers engaged in shifting, loading and unloading heavy, dirty or corrosive goods." To take into account each difference in the amount of wear and tear would have presented a great burden of administrative complications. The TUC agreed to the Board of Trade's proposals that the issue of industrial coupons should be at a flat rate. Classification of manual workers into two or three grades, according to heaviness of work, might not have proved too difficult and would have been worth while if a considerable saving of coupon purchasing power could thereby have been achieved.

The distribution is to be undertaken through employers and the local offices of the Ministry of Labour, and the onus of application has been wisely placed on the eligible worker.

Fish Prices Reduced

On October 5th, when the zoning scheme for the distribution of fish comes into operation, prices of certain kinds of fish will be lower. The reductions apply to the cheaper and more common kinds, and amount to 2d. per lb. for cuts and 1d. per lb. in the price of whole fish to consumers. Producers will get 6s. 3d. a stone, instead of 6s. 6d., for whole fish in the group which includes such varieties as cod, haddock, whiting and ling. The price of hake is to be reduced from 9s. to 8s. 6d. per stone for whole fish. To encourage the beheading of hake before it leaves the ports, the price for headless fish is to be raised by 3d. to 11s. per stone. Margins are to be reduced by 4d. for first wholesalers and 2d. for second wholesalers. First wholesalers' margins will not be reduced for filleted fish. The retailers' average margin is being reduced from

4s. to 3s. 6d. per stone for most of the fish concerned and the reduction for herrings is from 3s. 5d. to 3s. The zoning scheme may have influenced the reduction in prices, which still provide a fair remuneration to fish traders. Transport costs are pooled, and financed by a levy which will be increased from 6d. to 9d. a stone for white fish. A levy of 6d. per stone is being instituted for herrings, prices of which are unchanged. The system of distribution under the zoning scheme will probably mean that hitherto unfamiliar varieties of fish will be on sale in some districts. The lower prices should provide an incentive to purchasers. The more even distribution, coupled with the relative cheapness of fish, will ensure an effective and welcome addition to the nation's diet during the coming winter.

* * *

Pooled Tea Supplies

Agreement has been reached between the British Ministry of Food, acting for the Combined Food Board of the United Nations, and the Governments of India and Ceylon by which the whole tea surplus of the two countries in 1942 will be acquired by the Ministry. The agreement must be regarded as the first of a series of annual agreements which is likely to remain a feature of the international tea trade for the duration of the war. On the basis of the agreement, the Governments of India and Ceylon have prohibited exports of tea, other than those taking place on the order of the Ministry, from September 15th. The prices to be paid by the Ministry are based on average prices in 1936, 1937 and 1938, plus an addition of 2½d. per lb. on Indian tea and of 4d. per lb. on Ceylon tea. It is expected that similar arrangements will soon be concluded with the producers of East Africa. When reference was made in *The Economist* on July 4th to the negotiations which have now resulted in an agreement, it was pointed out that the Allied Governments aimed at establishing the centralised buying and distribution of tea for all the members of the United Nations. After the loss of tea supplies from Java, Sumatra and the Far East, most of the Allied countries, including the British Dominions, encountered serious difficulties in securing their tea supplies, especially as the British Government had contracted for the great bulk of supplies in the only remaining producing areas, British India, Ceylon and British East Africa.

*

The new plan aims at sharing available supplies more equitably between the various consuming areas. At 725,000,000 to 750,000,000 lb. a year, of which close on 700,000,000 lb. are covered by the new agreements with India and Ceylon, these supplies are not much below the total consumption of the United Nations in the peak years before the war. As, however, the Ministry of Food had originally bought no less than 501,000,000 lb. of Indian, Cingalese and East African tea for United Kingdom requirements in 1942, the pooling of purchases may involve a reduction in supplies to this country. This may mean a cut in the current tea ration, although the Minister of Food has recently stated that no change in the ration will be made before Christmas. Besides assuring fairer distribution, the pooling agreement is expected to facilitate shipping arrangements and production planning and to eliminate speculation. The latter will secure a novel advantage for all partners in the pooling scheme with the exception of Britain. The British Government was able to buy its tea in the past at fixed prices based on pre-war rates, while the other Allied countries had to pay the market price forced up by the shortage. The prices to be paid under the new agreement for Indian and Ceylon tea are slightly higher than those recently paid by the British Government, but they leave buying prices far below the rates recently quoted on the free markets. British consumers will probably continue to pay the current prices for their tea, as tea is one of the commodities the home retail price of which is kept stable by Treasury subsidy. In an official list published in reply to a recent Parliamentary question it was stated that the tea subsidy in the first quarter of this year was running at an annual rate of £3,000,000. Even a slight increase in buying prices will raise this subsidy very materially, for this country is drinking as much of the world's exports of tea as the rest of the world put together.

Engineers' Wage Claims

It is understood that the Amalgamated Engineering Union's claim for a wage increase will lead to combined action by the Joint Trades Movement, and that the Confederation of Shipbuilding and Engineering Unions, together with half a dozen other small unions that originally formed part of the Joint Trades Movement and are now seeking re-affiliation, are putting forward claims similar to those of the engineers. The claim falls into three parts: first, an increase of the "all in" rate by 11s.; secondly, the restoration of the pre-1931 conditions for overtime and so on; and, thirdly, a 33½ per cent increase for time workers. There still seems to be an element of doubt whether the 11s. is to be added to the basic wage, in which case it would affect piece-work rates for the engineers, or to the "war wage." On the whole, it seems as though the latter alternative would ultimately be decided upon, for two reasons. In the first place, the arbitration tribunal is likely to regard the making of permanent as opposed to wartime changes in the conditions of an industry as outside its functions. Secondly, any addition to basic wages would introduce a complicating element between engineers, who deal with innumerable jobs all individually timed, and the shipbuilders, who have a standard piece-rate tariff for what are for the most part standard jobs. The cost of the increases claimed would certainly be substantial, but some of the estimates which have been made (one was of £200 millions a year) need not be taken seriously. About one and a half million people are affected, and a rough estimate of the increase in the weekly wages bill may be built up as follows. An increase in the "all in" rate of 11s. would cost about £800,000. There are about half a million time workers, of whom perhaps 200,000 are skilled and draw a basic wage averaging about 46s., while the rest draw a basic wage of about 33s. If the 11s. is added to the "war wage" and not to the basic wage, a 33½ per cent increase would cost about £250,000 a week for the whole group. The effect of restoring pre-1931 conditions is not so easy to calculate, but £150,000 would probably cover it. The total annual increase would, on the basis of these estimates, probably be in the neighbourhood of £60 millions.

* * *

Cotton Trade Wages

Soon after the outbreak of war, employers and trade unions in the Lancashire cotton industry agreed to base wage rates on the Ministry of Labour's cost of living index. Up to the end of last year, the total advances, including a special rise of 12½ per cent, had reached 35 per cent on the rates existing in September, 1939. During 1942, there has been no change, although early in the year the operatives made an application for an extra rise of 16½ per cent. After several meetings the claim was submitted to arbitration, and in due course the arbitrators made the award that the claim had not been established. There was a good deal of dissatisfaction amongst the workpeople at this result. Last week a meeting was held in Manchester of the Manufacturers' Association and the Operative Weavers' Amalgamation to consider an application from the trade unions for a revision of wage rates. The claim of the workpeople was for a basic rate of 9d. per hour for a weaver working a full complement of looms, plus 50 per cent of the piece-rate earnings, providing always that where existing methods of payment yield a higher wage no change should be made. An example given was that if the present wage is 45s. per week the new one would be 58s. 6d. This was arrived at as follows: 9d. per hour for 48 hours, making 36s., plus 50 per cent of the operatives' present earnings (45s.), making a further 22s. 6d. The employers promised to refer the matter to their Central Committee and to reply to the Weavers' Amalgamation as early as possible. At the beginning of this week it was officially announced that an application had been made on behalf of all the workpeople employed in the spinning branch of the industry for a rise of 15 per cent on current wages, and it is expected that a joint meeting will be held with the Master Spinners' Federation next week. The wages question, therefore, in the cotton industry is once again in the melting pot. It is urged in some quarters that the workpeople should be satisfied with the system of basing wages on the cost of living index of the Ministry of Labour. It cannot be denied, however, that the operatives feel they are not getting a fair deal compared with the higher earnings of munition workers. The whole system of wage rates in the cotton industry is out of date and sooner or later will have to be revised. Conditions now present a good opportunity for this revision to be made.

A. C. COSSOR, LIMITED

DIVIDEND MAINTAINED

The fourth ordinary general meeting of A. C. Cossor, Limited, was held, on 23rd instant, in London, Sir Louis Sterling (chairman and managing director) presiding.

The following is the chairman's statement circulated with the report and accounts:—

Ladies and gentlemen,—With your permission I will adopt the usual course of taking the directors' report and accounts as read.

The accounts as presented will, I think, give you a comprehensive view of the company's activities during the year ended March 31, 1942, and as usual we have issued a consolidated balance-sheet which shows in some detail the joint position of your company, and its wholly owned subsidiary companies.

The profit and loss account shows that the net profit on trading, including the profits of the subsidiary companies and interest and dividends receivable, amounted to £78,105. This year, it will be observed, we have shown this figure after making provision for income-tax and national defence contribution.

I ought, perhaps, to say that the company's liability for the year 1942-43, which will be based upon the figures before you, is now fully provided for. The directors feel that in these times, when taxation takes such a large toll of the company's income, it is more appropriate to show the company's earnings after making provision for this tax. The company's liability under the War Damage Act, 1941, has now been determined and full provision for this liability has been made in the accounts.

ALLOCATION OF PROFIT

The net result of the company's activities and those of its subsidiaries after providing for all outgoings amounts to £66,676. After providing for the preference dividend and the interim ordinary dividend there is an accumulated balance at the credit of the profit and loss account of £69,135, out of which the directors recommend that a final dividend on the ordinary shares of 5 per cent, free of income-tax be paid, leaving a balance of £44,135 to be carried forward to next year. We are thus able to propose a dividend equal to last year, and at the same time increase the amount carried forward on the company's profit and loss account by £14,176.

Turning to the consolidated balance-sheet there are few features of any importance to which I need draw your attention. It will be seen that the stocks on hand and work in progress show a marked increase commensurate with our activities, whereas our trade debtors have now been reduced to a minimum. It is also satisfactory to note that the company's liquid position has improved, and it will be the policy of the board to continue to strengthen the financial structure from year to year.

STERLING BATTERIES AND CABLES

With regard to our two main subsidiaries, Sterling Cables, Limited, and Sterling Batteries, Limited, I am glad to say that these two companies are operating upon a highly satisfactory level, and since the date of the balance-sheet before you the former company has acquired over 90 per cent. of the share capital of Lancashire Cables, Limited, thereby enabling it to extend its production in the high-tension cable field, which is in accordance with our policy of broadening our range of activities.

In all branches of our activities it is pleasing to observe that our work does not go without due appreciation in the quarters concerned.

I now beg to propose: "That the directors' report and accounts for the year ended March 31, 1942, be approved and adopted."

Mr. T. A. Macauley (vice-chairman) seconded the resolution and it was carried unanimously.

SECOND ALLIANCE TRUST COMPANY, LIMITED

GROSS REVENUE MAINTAINED

STATEMENT BY THE CHAIRMAN, MR JAMES PRAIN

The fifty-ninth ordinary general meeting of the Second Alliance Trust Company, Limited, will be held at the registered office of the company, Dundee, on Tuesday next.

The following statement by Mr James Prain, the chairman, has been issued to the stockholders along with the annual report, and takes the place of the usual address at the annual meeting:—

The accounts for the past year show a gross revenue similar in amount to that of the previous year. Although we have suffered some loss of income as a result of the Japanese aggressions, there have been improvements in other quarters to compensate for this, and on the whole collections have been well up to expectations. I would again remind you that with taxation at the present level increasing returns can hardly be looked for from those industries which are able to benefit from present conditions, while, on the other hand, we must expect to lose from time to time some source of income when, as a result of enemy action in one part of the world or another, or by reason of restriction of supplies or other difficulties, business can no longer be carried on. In the circumstances, therefore, I am glad to be able to submit figures which show that the position has been maintained.

THE DIVIDEND

Your directors recommend once again the payment of a dividend of 21 per cent. for the year on the ordinary stock, which calls for an appropriation of £43,750. There remains a surplus for the year of £16,008, out of which there has been

transferred £15,000 to the credit of contingent reserve fund and the remainder is added to the amount to be carried forward at the credit of revenue account. Although the proposed dividend is covered by a reasonable margin of earnings you will notice that the surplus is somewhat smaller than we have been accustomed to see in the accounts of recent years, when it was possible to set aside annually to reserves sums of £25,000 or £30,000. I regret that we are not able to continue to make transfers on so generous a scale, but with income-tax at 10s. in the £ obviously some reduction in the surplus must take place. The incidence of taxation also has borne more heavily upon us this year as we are without the temporary benefit which arises in the actual years when the standard rate is increased.

THE OUTLOOK

With regard to the outlook, it is my opinion that we shall see some contraction of revenue in the current year. Estimates are of little value at this time, but we know that some of our sources of income in the Far East have dried up for the time being and we shall now have to bear a full year's reduction on these holdings. The amount involved fortunately is not large, and the effect on revenue account in a full year will be an amount equal to rather less than 2 per cent. on the ordinary stock. You will no doubt wish me to mention how much we have at stake in those regions which from time to time may appear to be more directly threatened than are we ourselves.

(Continued on page 400.)

MORRIS MOTORS LIMITED

ANNUAL GENERAL MEETING

Accounts for year ended December 31st, 1941.

NETT PROFIT - - - - - £1,634,520
TOTAL DIVIDEND - - - - - 17½% TAX FREE

The Sixteenth Ordinary Annual General Meeting of Morris Motors Limited was held on the 18th September, 1942, at Cowley, Oxford.

The Right Hon. Viscount Nuffield, G.B.E., F.R.S., M.A., D.C.L., LL.D. (Chairman), presided, supported by the Vice Chairman, Mr. W. M. W. Thomas, and the Managing Directors, Mr. H. A. Ryder, Mr. H. Seaward and Mr. J. Shaw.

The Chairman said that following the procedure adopted last year he did not propose to present to the Stockholders a detailed account of the activities and finances of the Company and its Subsidiaries, but rather to ask the Stockholders to accept the Report and Accounts as presented.

This sum is dealt with in the following manner:—

By payment of a Final Dividend of 7½% on the Ordinary Stock, free of income tax	£198,750
By transfer to Dividend Equalisation Reserve Account	£ 25,000
and by carrying forward to next year the balance of	£231,872
	£455,622

The retiring Directors, Mr. A. E. Keen, Mr. H. Landstad, Mr. E. S. Luyks, Mr. H. C. R. Mullens, Mr. V. Riley, Mr. E. C. Ruffie, Mr. T. C. Skinner, Mr. S. G. K. Smallbone and Mr. B. G. Williams, were re-elected, and the Auditors, Messrs. Thornton & Thornton, were re-appointed.

• Official rate 29.78. † Commercial Bills.

UNCERTAINTY regarding the Tax Bill and the prospective anti-inflation measures coupled with the generally uninspiring war news continue to restrict activity on Wall Street. Some buying of low-priced stocks in particular rail issues, occasioned small advances, while sporadic support of leading stocks raised several steel and motor issues a point early this week. In general, however, the volume of trading is insufficient for the development of any pronounced movement, prices fluctuating narrowly with gains and losses evenly spread.

Allowance is made for net interest accrued, and for redemption for fixed interest stocks and for changes in interim dividends for ordinary stocks.

[illegible]

(a) Interim div. (b) Final div. (c) Last two yearly divs. (d) Includes 21% not subject to tax. Yield basis 25%. (e) Allowing for exchange. (f) Flat yield. (g) Annual per share. (h) Yield to average red. and 1960. (i) Based on red. at par 1946. (n) Yield 1.55% basis. (p) Yield 24% basis. (s) Yield basis 40%. † Free of Tax.

must be moved to their stations along the three sides of the European triangle are very great. Allied and Axis statesmen alike are agreed that shipping is the crux. Ribbentrop has tried to hearten his tired compatriots by dubbing the problem insoluble. Mr Eden and Mr Noel-Baker have pointed to the great significance of the latest convoy to Northern Russia, which carried to its destination the largest total of munitions ever carried in a single voyage—described, rather over-enthusiastically perhaps, as capable of tipping the scales on the Eastern front. The air protection of convoys is now "priority Number One." The war will be won by convoys.

But the problem of deployment is only the first of the difficulties of the United Nations. The problem of concentration is no less important—and hard. The aim is to marshal the maximum striking force at each of the chosen places of attack. Unhappily, the offensive programme has been time and again upset by the distractions and diversions which the enemy has been able to contrive, because of the initiative which the Axis aggressors were able to seize at the outset and then to hold. Norway, Greece, Crete, Pearl Harbour, the Pacific islands, Singapore, the Indies and Burma—the tale of dispersed forces and defeats is familiar. The biggest distractions are still taking their toll—in the Far East and in Egypt. General Wavell himself, while recognising that the first aim must be to defeat Hitler, emphasises the need to reconquer Burma, to aid China and to strike at the Japanese heart. He has underlined, too, the importance of the Mediterranean front, where Rommel's advance into Egypt was a grave reverse; the narrow sea is ringed with German air bases, and Allied sea power is seriously restrained by the brevity of its land flank; Rommel still stands much too close to the Nile. Both the Pacific and the Mediterranean have taken away from the other fronts great quantities of aircraft of all kinds, of fighting and transport ships and of military equipment. At a time when the mounting weight of the bombing offensive against Germany is a major factor in gaining the upper hand, only one-tenth of the Allies' operational aircraft is estimated, by some unofficial pundits, to be available to further it.

All this has meant that the Allied time-table has been continuously subjected to revisions—inevitably, but always in the wrong direction, lengthening the road to be travelled. Briefly, the goal of Allied planning is to bring the decisive output of American factories and the decisive weight of American manpower into action at the crucial points, in concentrated strength. It is a tribute to President Roosevelt and his advisers that a beginning was made as early as 1940, with training as well as with the production of supplies, at a time when the United States was still aloof, and when Britain's plight seemed almost desperate. The majestic programme then roughed out will bring ten million trained and equipped Americans into the account by the end of 1943. The question is whether the time-table can now be revised again—in the right direction, towards shortening the war.

"Next summer [Mr Willkie has proclaimed] it may be too late." His eyes, when he spoke, were fixed on the state of Russia, not on Allied problems. Those problems, of deployment and concentration, of supply, transport, manpower and training, are no less real because the urgency of Russia's needs is recognised. Nor, admittedly, does the quick and effective aid which Russia needs, and has earned numberless times over, alter in the least the difficulties of Allied action. Neither Mr Willkie nor Stalin nor M. Maisky nor any other statesman or journalist, Allied or Russian, who states the need to act before Russia is too weakened to break the eastern front, denies the problems that the Allies have to solve. The timing of the world's resistance to aggression was badly awry from the outset. China fought alone for years, while British and American supplies nourished Japan's war industries. In 1938, Munich was made by Britain and France, not by Russia. A year later, when Britain and France took their stand, Russia did not; there was only one front then. The

United States was a perennial spectator. All through the story, whether it was avoidable or not, the defender nations failed to synchronise their efforts or pool their strength. In 1941, first when Mr Churchill hailed the Russian alliance as soon as the German invasion began, and then when the United States became a fully-fledged fighting ally, a new chapter started. Now, in 1942, the practical test has arrived. The will to act together is unmistakable; the trial is whether, after the long lags of unconcerted policy in the past, truly synchronised effort at the most opportune moment, which is soon, is practically possible.

Russia's Hardships

The Russian people say that it must be possible. Mr Willkie has sketched the reasons: a third of the population of the Soviets is under German rule; Russian losses in battle are 10,000 a day; the food position in Russia is grim; there is a shortage of fuel, clothing and medical supplies. The Russian people are dedicated to victory or death; so must their Allies be. It is not simply a question of saving Russia, but of winning the war. Ribbentrop and General Wavell are agreed upon the present German aim: to paralyse Russia before the western or southern doors of German Europe can be burst open and then to hold off the other Allies. Ribbentrop, whose speech to commemorate the second anniversary of the tri-partite Axis pact was markedly defensive in character and obviously intended to reassure German disappointment, was very specific: the battle of Stalingrad will be the decisive battle of the war; attempts to create a Second Front will come too late; all Europe, including European Russia, will be at the disposal of Germany, for supplies and food; the war may be long, but it will not be lost. Hitler struck the same note in his speech in Berlin on Wednesday. The strategy he described was a plan to put Russia out of business and, by military strength and economic organisation, to make German Europe self-contained and impregnable. He did not prophesy the defeat of the Allies; instead, he mocked at their lack of success in offensive operations and forecast the certain failure of any fresh attacks they might make on the European continent. This is a far cry from the ambitions of 1939 and 1940. It mirrors the failures and frustrations which Germany, too, has suffered, and reveals the chance there is to strike at the disillusioned and weary Reich, if the blow can be struck in time. Hitler's references to "reactionaries who grumble" and saboteurs, to "crimes against the community" and assaults upon working women in the streets at night, did not suggest that the German people have gained much joy through Nazi strength; and Goebbels at the same Berlin meeting found it necessary to deny that a "palace revolution" was going on among the Nazi leaders. But the claim to have made the new German Empire safe from attack shows no less clearly the Nazi hope of survival, if the blow has to be delayed too long; and Germany's weaknesses, no less than Russia's, are an argument for the promptest deeds by Britain and the United States.

Four and a-half months ago, *The Economist* echoed a warning. Russian war potential, it was hazarded in an article on May 16th, was nearing its peak; despite the miracles of effort, endurance, ingenuity and improvisation which the Russians were performing—and are still performing—the pace must slacken, it was argued, if the campaign was allowed to drag on and on, because of material losses and physical and psychical fatigue. The warning has not been falsified; the facts set out on page 420 tell the same significant story as the speeches of Mr Willkie and the despatches of Moscow correspondents. The total coal output of the Soviets is now perhaps no more than a quarter of the production of Greater Germany. Weariness and exhaustion, due to difficult food conditions, heavy over-work and the incredible strain under which the Russian people are fighting their lone battle, must make their mark upon output and efficiency. Russia will not now be beaten. But time is not on

Russia's side, and with Russia cut off and enfeebled, the Allied road to victory would be long indeed.

These are not matters for political debate or recriminations. They are questions of hard fact. Whatever the course taken, there is no need or use for any tension of opinion to develop between the Russians and their Allies; the American press is already speaking with alarm about a "rift." Recriminations will only convert the psychological strains of total war into a crisis of confidence. It is fatuous for British propaganda in Moscow to give a picture of Britain at war which by its refinement and unreality, merely mocks the miracle of Russian resistance; it would perhaps be wise, too, for Russian propaganda to do more to dispel the impatience and suspicion which inevitably arise among the labouring and suffering Russian masses. But important as they are, these are matters of words and pictures, the small change of alliance. Deeds are the test. The real task is for the Allied

leaders and commanders to search through their schemes anew to find every possible way and means of bringing the problems of deployment and concentration in attack to an even earlier solution than scheduled. "Too much and too late," would be a sad epitaph for the greatest war effort in history. The Russians have stated their hope and belief:

the time is not far off [the chief of the Communist Party propaganda department has proclaimed] when our Allies also will send their armies into action and fight the common enemy.

The raid on Dieppe and its successors are curtain raisers which will only have their full effect in winning the war if the main drama itself can be begun before the scenery changes. Speaking of the past, Mr Eden said last weekend that "We have cause to regret just because we had not enough faith"; it must not be possible for history to say this of the present, too.

Full Employment: The Aim

IS it possible to ensure Full Employment for all those who are willing to work? Of course it is. The war has provided an additional and most emphatic proof that it is technically possible to set the whole able-bodied adult population to work. But it is doubtful whether any additional proof was needed. It has always been clear that work of some kind can be provided for all who want work, if its provision is given a sufficient primacy over the other objects of state policy. The catch, of course, is in the proviso. It has always been known that Full Employment could be had at a price. What has once more been proved in the last three years is that it can always be had at the price of war. But can it be had cheaper? In particular, is it possible to secure Full Employment at a price that a peaceful democracy can pay—that is, without war or dictatorship? There can hardly be a more important question or one which the prophet, if he is an honest man, will answer with more hesitation. Yet the whole prospect of the next few decades turns on the answer. For if one thing has been made abundantly clear, it is that the mass of people in every country rate Full Employment, and the individual security it brings, higher than almost any other political object. If liberal democracy is not compatible with Full Employment, then it is liberal democracy that will go; and plans for the future will have to be laid on the assumption that the principles of Fascism (or conceivably of authoritarian Communism) will win the peace, whoever wins the war. Clearly it is a question that deserves the closest examination.

What, in a peace-time context, is Full Employment?

Full Employment does not mean the total disappearance of the unemployed. As usually understood, it is quite compatible with the continuance of "normal minimum unemployment"—that is, the stage army of men and women who are changing their jobs and drawing benefit for a week or two in the interval. Indeed, it is imperative for the elasticity of the national economy that there should be a substantial degree of mobility of labour, and not every change of job can be expected to be accomplished between night and morning. Full Employment is also compatible with a certain degree of seasonal employment. This is not to say that seasonal unemployment is not an evil which should be eradicated if at all possible—but its causes are different from those of mass unemployment, and the cure must also be devised on special lines. There is another kind of special unemployment which cannot be excluded so easily. This is the so-called "structural unemployment," the unemployment that creates Depressed Areas. To put this on one side and to say that there can be Full Employment and Depressed Areas at the same time is to invite ridicule; yet its origins are special. Britain might have been wildly prosperous in the 1920's—and there would still have been unemployment in the cotton towns of Lancashire and in the mining valleys of South Wales. But there would have been less unemployment, and all but the old and the immobile could have found work elsewhere. It would be a fatal mistake to try to argue away the aspect of unemployment that has bitten deepest into the national memory; perhaps the best working definition

Established 1844

THE SERVICE OF LIFE ASSURANCE

● Life Assurance provides the means whereby your regular savings, year by year or month by month, may be converted into the form best suited to your needs. Provision may thus be made for your retirement, for the education of your children or for your dependants after your death.

● The service of Life Assurance cannot now be offered to you by personal approach owing to the absence of so many of the Society's staff on war duties. This service is, however, still available on request and will gladly be placed at your disposal.

Head Office: 163/4, STRAND, LONDON, W.C.2. Telephone: TEMple Bar 0381
(temporarily transferred from 20, Lincoln's Inn Fields)

City Office: 30, Coleman Street, E.C.2. Telephone: KELvin 5111/2

of Full Employment is to say that it will have been attained when (a) the register of unemployed does not exceed about half a million, and when (b) any pockets of continuing unemployment that may arise in particular areas or industries are quickly drained away. If such a state would not represent perfection, it would at least be a great improvement on the 1920's and 1930's and—what is all-important—a solid enough basis to enable the democratic community to turn its attention to other matters, such as life, liberty and the pursuit of happiness. In essence, the problem of Full Employment is the problem of the trade cycle.

Within the last few years there has been a notable confluence of opinion on the causes of cyclical depressions of trade. The old joke about the inability of economists to agree may, or may not, have been justified in the past. It is certainly untrue to-day. Virtually every serious economist, in every country, is agreed on the main outlines of the diagnosis, and there is even a substantial measure of agreement as to the cure.* A depression occurs when the community spends less money than is needed to buy the whole of the output of which it is capable. There is no permanent and inescapable tendency for the community to behave in this way (which is the mistaken assumption that the cranks make). The present is plainly a period when the community is manifestly trying to spend more than is required to purchase the whole of the output of which it is capable. There are very few commodities to-day for which there is not an urgent, clamant market; and there have been similar periods of all-but-universal seller's markets in time of peace as well as in war. But from time to time communities do get into depressions; they do spend less than is required to buy their output. When that happens, it is because, in the jargon that is now familiar, Savings

* A book which is at once a striking illustration of the degree of international agreement and an able exposition of the thesis is Professor Alvin Hansen's "Fiscal Policy and Business Cycles" (Allen and Unwin). Professor Hansen writes in an American context, and he lays undue emphasis on one aspect of the matter—namely, the invigorating effects of a Budget deficit. This leads him to misunderstand recent British economic history. But, on the main essentials of policy, his book shows how completely, within the past twelve years, the debt of American, as of British, thought has been diverted into new channels.

South Sea Islanders

PEARL HARBOUR, Midway, Guam, New Guinea, Papua, the Solomon Islands—all these names have been forced on the attention of the public by the course of the Pacific war. But of the places themselves, and particularly of their inhabitants, very little has been heard, and the public may be forgiven if it continues to draw its impressions of them from Hollywood and Dorothy Lamour.

The literature on the South Seas is certainly rich enough. In a book that has just been published*, the author, Dr F. M. Keesing—professor of anthropology at the University of Hawaii—gives a bibliography listing nearly 400 publications, and even this is described as "a selected bibliography" covering for the most part works of the last two or three decades alone. Dr Keesing himself has sifted the enormous mass of information available, and, with the help of his own first-hand study of the islands, which extends over twenty years, he has picked out the main trends in the life of their inhabitants and embodied them in a book, readable and informative, which might well serve as a model for all social surveys of the kind.

The South Seas in the Modern World. By Dr F. M. Keesing. George Allen and Unwin, Ltd. 391 pages. 16s. net.

are in excess of Investment. The community is trying to save in money without saving in real terms; it is trying to enrich itself by amassing claims on itself rather than by accumulating physical property of lasting value.

This diagnosis, to repeat, is now very generally accepted. What is the cure? Broadly speaking, if the community is under-spending, any increase in spending would improve matters. At the bottom of a depression, the state can reduce unemployment by giving consumers more money to spend, either by a direct subsidy, or by putting a few million young men into uniform and giving them Army pay. This line of attack is perfectly feasible. Indeed, in so far as there is reason to believe that a modern community has an inherent tendency to Save more than it can Invest, the encouragement of consumption at the expense of saving is a sound long-term policy. But if the depression arises because of a deficiency of Investment (that is, broadly speaking, of capital construction), the direct way of meeting it would be to increase Investment. There are four solid reasons why a policy of increasing Investment is preferable, at least in the short run, to one of subsidising consumption (i.e., of reducing Saving). First, an Investment policy can, within limits, be turned on and off in accordance with changing circumstances; a subsidy to consumption, or any other direct grant to the people, once given, would be very hard to withdraw. Secondly, a given amount of money spent on increasing Investment is likely to have a larger ultimate effect (in technical language, the multiplier is larger). Thirdly, if there are to be subsidies for consumption, only the state can provide them; but it can induce others, as well as itself, to expand Investment. And fourthly, an increase in Investment is more "natural," in that it responds to the individual acts of choice that led to the Saving; it is therefore likely to be more stable.

The first pillar of a Full Employment policy must, therefore, be an Investment policy. Mass unemployment can be prevented if the community's annual Investment can be made both large enough to embody the total of Savings, and regular from year to year. That this is not merely the recrudescence of the old "public works" doctrine will be made clear in a second article, which will analyse the means of achieving the aim of Full Employment; a third article will attempt to work out the cost.

His book was completed after the fall of France, and after the New Hebrides became the first French colonial area to declare allegiance to the cause of Free France, but before the islands themselves became battle areas. Nevertheless, some idea of the effects of the war on the islanders can be obtained from the picture Dr Keesing builds up. He shows a people who have worked their way through the initial stage of break-down and disorganisation, caused by sudden, unsolicited contact with an alien culture, and who have for the most part passed through a second stage of reorganisation and restabilisation, in which elements of the new and old were successfully blended in a *modus vivendi*, into a third stage marked by more disintegration, restlessness and the testing of accepted standards. From here, some individuals, almost exclusively Hawaiians and Maoris, have been able to reach a fourth stage in which they have successfully adjusted themselves to modern civilisation—though here again the Hawaiians, who are on the way to becoming assimilated into the western culture, may be contrasted with the Maoris, who have in recent decades stressed their Maori identity, fostering worth-while Maori customs and traditional arts and crafts. Against both these peoples may be set the inhabitants of the Gilbert Islands, of whom H. E. Maude, quoted by Dr Keesing, says:

The main stream [of Western civilisation] has passed them by. . . . The attitude of the Gilbertese towards the outside world is a sensible one; he recognises the existence of foreigners and the fact that they differ from him in many respects, but he stoutly maintains his own group to be the best place for the Gilbertese. . . . He evinces little if any curiosity in the customs and goings-on of the outside world, which he will never see. . . .

But between these two extremes, the progressive Hawaiians and Maoris, who take an active part in the affairs of their homelands, and the contented but limited Gilbertese, lie the great majority of the islanders who are in the third stage of restlessness and questioning. Dr Keesing's book shows how economic factors have contributed to this new disintegration and influenced its course. From being self-sufficient subsistent farmers, perhaps carrying on minor barter and ritual exchanges of goods with their neighbours, the islanders became exposed to the vagaries of world markets. In most of the islands, coconut products account for by far the greater part of agricultural exports, and the London price of South Sea copra, which was £39 14s. a ton in 1920, fell to £8 in 1934, rose to £22 12s. 6d. in 1937, and fell again to £9 5s. at the outbreak of war. The years of the depression, says Dr Keesing,

witnessed a great setback to native participation in the modern economy. To their astonishment and inconvenience, native groups were pushed back more or less upon their older subsistence economy. With markets unable to absorb the customary shipments of island products, the merchants perforce had to refuse to buy these in the usual quantities. . . . Again, wage-earning jobs in government or private service were cut to the bone.

It would, however, be impracticable, even if it were desirable, to allow the islanders to revert to a primary peasant state, because the population is increasing too rapidly. After the severe decline which marked the early stages of contact with the foreigner, the population trend now shows a fairly sharp rise. In 1938, the crude birth-rate per thousand was 40.8 in American Samoa, 40.4 in Tonga, and 37.6 in Fiji, compared with 14.7 in England and Wales in 1933-37, though the infant mortality rate is, of course, far higher than in western countries. This decline and reversal means that the native population of the South Seas is a young one. Between 40 and 50 per cent of the population of Guam, American Samoa and of the Maoris, and over a third of the Fijians, are under 15 years old, and over 25 per cent of the same peoples are between 15 and 30.

These population trends, which are probably general throughout the islands, have two consequences. The first is a danger of over-population in some islands. Others are still sparsely populated; Dutch New Guinea, for instance, has a native population whose density is only 1.9 per square mile. But in Nauru it is as high as 198.1, and in the Gilbert and Ellice Islands it is 173.2. If the islanders are allowed to drift back into a subsistence economy, some of them may sooner or later be faced with starvation.

The second consequence is less obvious than the threat of over-population, but in the long run it may be equally dangerous. The young people who are predominant in the population are the ones, particularly the young men, who have suffered most from the economic depression. They have grown up in what for them seemed an age of promise, in an age when the wireless and the aeroplane were breaking down the islands' isolation from the outside world and from each other; they have sometimes made a grand tour of neighbouring islands; they have been attracted to the towns, have rubbed shoulders with the white man, and shown off to the tourists, and have seen what money can buy. The depression destroyed their hopes, and it left them with the choice between going home to a life they had come in some respects to despise—a Samoan leader said to Dr Keesing of the young men of the villages, "Their bodies are there, but their minds are away"—or cking out a precarious existence in the towns and ports.

It is small wonder, therefore, that there is discontent and restlessness. Nowhere is this so serious as, say, in the West Indies, but it manifests itself in more than one way—in the rise of cults and sects, and in a lack of respect for native leaders and for the white man. It has not yet led to widespread nationalism, and, except in Samoa, there has been no strong movement for political autonomy, but care must be taken if a pseudo-nationalism is not to arise from discontent. On the other hand, every encouragement should be given to the healthy trend towards political consolidation. In the '30s, for instance, Dr Keesing found educated Maoris saying "we Polynesians," and members of the Fiji archipelago count themselves Fijians rather than natives of Bau, Singatoka and so on.

The problems of the South Sea Islands are not peculiar to themselves; in greater or less degree, they are found in most other colonial areas. Nor is Dr Keesing pessimistic about their future. Unlike some anthropologists, he does not want the islanders to be preserved in their own indigenous culture away from the influence of the white man, or, for that matter, from the Asiatic influence as well. He sees that contact is inevitable and that the problem is not how to lessen it but how to make it beneficial to the natives. With this in mind, he examines the current theories of colonial government and other aspects of alien domination—economic development, land policy, missions, health services and education. It is significant that he does not concern himself with deciding which of the foreign powers in the South Seas is the best governor. He sees much to praise and blame in the rule of each, and though he recognises the cumbrousness of the condominium in the New Hebrides and the drawbacks of the mandate system, he looks for international co-operation, seen at its best in the work of the Central Medical School in Fiji, to find the right solution.

It is true that this reads like a counsel of perfection at a time when the powers concerned are fighting for the possession of the islands. The white man's prestige, which, Dr Keesing found, suffered enough in the pre-war era, in the days of depression, must have dwindled almost to nothing when the islanders found that alien domination could not give them peace any more than economic security. On the other hand, it is because of this that international co-operation will be even more necessary after the war, since it will be beyond one country's power to restore confidence and regain the natives' trust. But, whatever form the government of the islands takes, Dr Keesing makes one stipulation. The islanders must not be forced to accept alien customs, alien economics, alien standards against their will. Planning must not be imposed upon them. Government must guide and direct, with the increasing help of the islanders; but they themselves must be allowed to choose, whether consciously or unconsciously, what in the new culture they will accept and what they will reject, and to make their own adjustments and adaptations accordingly.

NOTES OF THE WEEK

Tactics versus Strategy

As October begins, the fortunes of the battle for Stalingrad are still in the balance. The Germans have made some progress in the northern part of the city. Otherwise the position has remained unchanged. The Russians continue to display a remarkable originality and inventiveness in tactics, of which the use of the Volga as a base for their artillery—gun emplacements on rafts and river craft have been mentioned in reports—is the most striking instance. The Germans boast of having outgeneralled the Russians; but they cannot claim to have “out-lieutenanted” or “out-colonelled” them. The German General Dietmar has had to pay yet another of his reluctant but unreserved broadcast tributes to Stalingrad’s defenders. What he said amounts actually to an admission that the tactical mastery of the Russians may have deprived the Germans of the fruits of their strategic initiative. The balance of the summer campaign, which is now probably being struck at the Führer’s headquarters, has gone awry. Even if the Germans succeed in capturing Stalingrad within the short space of the remaining campaigning season, their forces may still find themselves shut in “the dangerous bag” (as General Wavell has called it) between the Caucasus and the north. The latest Soviet thrust from the Volga towards the Don gives von Bock, or his successor, von List, an unpleasant foretaste of the difficult position in which the German salient may find itself when winter sets in. Unless the Germans can secure a swift and extensive widening of the wedge, they may have to withdraw from Stalingrad as they had to retreat from captured Rostov last year. This explains their recently increased pressure in the northern Caucasus; but the fighting on the Terek river, too, has so far been inconclusive. The realisation of the gravity of the German position has been apparent in General Dietmar’s broadcasts. For the first time in this war, a German military spokesman has had to complain that some of the advantages, to which the Germans have comfortably accustomed themselves in the course of this war, have now fallen to their enemies. The Russians, said the General, enjoy the advantage of operating on the inner lines; their communications are better than the Germans’, and they are more able to concentrate at single points. Dietmar may have overstated his qualms for pedagogical or propaganda reasons. But the basic facts remain, and Dietmar’s statements have found their counterpart in a more confident note in recent Russian home propaganda. Indeed, if it were not for terrible hardships and internal economic strains, the Russians might look forward with appreciably more hope to their second war winter.

America and India

There is a deal of force in the argument that opinion in the United States is being allowed to veer unreasonably against British policy in India for lack of sound and accurate information about the British case. On the other hand, a great deal too much is being made of it. The present position is that partly because of clever, large-scale propaganda in the United States on behalf of Congress, American opinion is disposed to become increasingly critical because no progress has been made on the British side towards securing a settlement of political differences in India. For a time, when Sir Stafford Cripps made his offer to the Indian parties, it did seem that American opinion was seeing the Indian problem and its obdurate difficulties in their true light for the first time. The United States seemed to realise then that a settlement was being held up simply—apart from the long legacy of distrust and misunderstanding between Britons and Indians, for which both were to blame—by the inability of the Indian parties to agree among themselves. Since then, there has been a reaction; and the demand that much more should have been done by the British authorities to keep the true perspective fresh in American minds is obviously very justified; the United States, like China, has an interest and a part to play. But this is not the whole story. After all, American editors, American journalists, American travellers, and, indeed, every intelligent American can find the true facts as readily available as his counterpart in this country. The truth is that the people of the United States, for obvious historical

reasons, are constitutionally inclined to regard all matters appertaining to the British Empire, and, in particular, to India, with the deepest suspicion; that is to say, largely because of this unfortunate tradition and because of subtle Congress propaganda—which is no new thing, but began many years ago—there is a large section of American opinion which does not really want to see the British side of the case. By all means, let more facts be given—and especially more facts about the planned sabotage and brutal atrocities which have accompanied the recent disturbances, sabotage and atrocities which have been witnessed by American journalists in person. But there is no reason at all for this country constantly to be apologising to the United States for its Imperial policy. There is a danger at the present time that an inferiority complex is being developed on behalf of Britain in the effort to carry out a one-sided publicity policy which, as in this instance, takes it for granted that the Americans are mistaken about British policy because of some British fault of exposition, whereas in fact the fault lies at least as much on the American side, where an unduly cynical attitude towards the British Empire is generations old.

Money at War

The full figures for revenue and expenditure in the six months ended September 30th are on page 433. It is a remarkable fact that total revenue, exclusive of money raised by the creation of debt, was almost exactly the same, just over £1,200 millions, in the six months which ended on Wednesday, as in the first thirty-six months of the last war. The figures are not, of course, entirely comparable. Total revenue in the period from April 1st to September 30th this year includes nearly £155 millions as a contribution from Canada and over £50 millions from revenue required to meet expenditure on the Post Office. Nevertheless, the order of comparison remains as indicated—three years of World War I, in terms of taxes, in half-a-year of World War II. Compared with the period from April 1st to September 30th last year, the yield of direct taxation has increased by over 44 per cent and of indirect taxation by nearly 31 per cent. It is true that, in this total war, expenditure is also very much higher than in 1914-18. Estimated ordinary expenditure for the whole of the current financial year, £5,286 millions, is larger by about a tenth than total expenditure in the first three years, by the calendar, of the last war; and the fact that virtually half (£2,594 millions) of the estimated ordinary expenditure for 1942-43 has already been spent in the first six months suggests that the final total may be still greater. But, proportionately, revenue holds pride of place in the comparison. In the current year, revenue from all sources will almost certainly cover 50 per cent of expenditure, as estimated—a notable achievement, especially in comparison with 1914-18 when the proportion was, perhaps, a third. It is the weight of wartime taxes, and their wide embrace, which, together with comprehensive and flexible rationing and price control, have limited the advance of inflation. Nevertheless, the advance is perceptible. It is evident in the buoyancy of indirect taxation—the unexpectedly high yield of the tobacco duties, which shows that, despite higher prices, consumption is still climbing to new levels, is a significant instance. Probably it has a share, too, in the present activity on the stock markets—and in all monetary transactions which deal with goods and services which are still unrationed. So far, the dam has held, on the whole; but the complacency shown this week by both Sir Kingsley Wood and Lord Simon about the future progress of inflation is unjustified. At the most, not much more than half of the part of the year’s expenditure not met from revenue will be covered by genuine savings; as Lord Simon has admitted, although wage rates have risen during the war by less than a third, earnings have risen by nearly half, and large claims for a general increase in wages are pending. The Government’s desire to avoid replacing collective bargaining by the state dictation of wages—and other incomes—is understandable, but unhelpful. It is surely the duty of the trade unions themselves, if their wage powers are to be sacrosanct, to come to the aid of their country—and their members—by combining with the Government in the formulation of a real wages policy.

The Octennial Act

Only nine Members voted against the second reading of Wednesday’s Bill to give the present House of Commons, which blundered into existence in 1935, an eighth year of life. The overwhelming opinion was that in war conditions, with electors away, registers obsolete and air raids still frequent, an election was not possible. But Parliament is, quite rightly, not proud of itself. Most speakers regarded the latest prolongation as at best a necessary evil. The argument of solidarity in wartime was also used, Ministerially, against an election. This argument is only sound in a sense which its users did not intend. The present coalition and truce mean that, in by-elections, seats are filled, for the most part, by caucus choices who are indistinguishable from the tired and superannuated Members who have been loitering at Westminster for so long. As the Prime Minister’s son said in the debate on Wednesday, there is a black market in Tory seats—with the gloomiest results. A coupon election or a staggered general election, such as Sir Richard Acland wants, would in truce conditions do little more than carry on this melancholy story—though Sir Richard would have hope for some of his Common Weathers, who know no truce. The position is that the Commons will not be worthy of the country until there can be an election—and a clean-out. And, even with an election, there will be no clean-out if it is merely contested by the mediocre puppets whom the rival party machines, both alike, prefer. A coupon election, filled with single-party cries of solidarity from the coalitioners, would do little more than go through the motions and, perhaps, weed out the more conspicuously senile and deficient. It would do little or nothing towards what should be the first and most important aim in reconstruction—the choice of a really able, really vigorous and really representative Parliament to carry reconstruction through. What is wanted is, first, a sound and constructive political Opposition to make the points at issue plain, war or no war; and, secondly, some method of securing that able men and women are brought forward as candidates when the time comes for an election. Better candidates mean better Members.

Reno Politics

The new political movement, Common Wealth, was formed a short time ago by the merging of the 1941 Committee with Sir Richard Acland’s movement, Forward March. A divorce has now been announced; Mr J. B. Priestley, Mr Vernon Bartlett, and Mr Raymond Gauntlett, of the 1941 Committee, have resigned. The parting was friendly; the 1941 Committee members have not the time, it seems, to devote to the laborious process of political organisation. There are some signs, however, that the episode may be an interesting example of the current difficulties inherent in the task of attempting to create an effective political movement outside of the area dominated by the established party machines. Broadly, there are two views among the independents who attempt this task. One school of thought, which is represented in this instance by Sir Richard Acland, believes—in terms of democracy, probably rightly—that the only way is to organise a mass movement which will compete in scale, organisation and creed with the parties themselves. The other school, which is perhaps less persevering and too preoccupied by other things, believes in infiltration. Its basic plea is the doctrine of the *élite*, the view that holds that the quick way to achieve results in policy is to collect and convert a cadre of experts. This *élite*—occupying, because of the expertise of its members, key positions in politics, administration and business life—will then be able to influence policy much more promptly and directly than can possibly be the case if influence has to be waited for until success is won at the polls. This is said to be, at bottom, one of the issues upon which the short-lived Priestley-Acland marriage has broken down; and it is hard to resist the conclusion that both parties, in their own ways, are right—with Sir Richard Acland considerably more right than Mr Priestley. Mr Priestley is almost certainly right in believing that Sir Richard Acland’s methods will take a very long time to bring results; Sir Richard Acland’s optimistic faith in an early landslide in his favour appears quite unrealistic, in view of the machine-ridden character of party politics in its present state. On the other hand, Sir Richard Acland is still more right, as a democrat and a believer in the Parliamentary method, in believing that his methods, protracted though they may necessarily have to be, are the only proper ones, certainly more proper than the infiltration tactics of the 1941 Committee—that is, if infiltration

means, as it runs the risk of meaning, the capture of key positions in the state and the fighting out of fundamental social and political controversies by a few people working in secret, away from the sharp light of public opinion and open discussion. It is pretty certain that Mr Priestley and his friends do not themselves intend to sponsor the seizure of power by their small *élite* by means of some sort of *coup d’état*; but the fact cannot be ignored that this unhappy and undemocratic development appears to be the logical conclusion of any short-cut argument which assumes, first, that there is a small *élite* of experts fitted to rule, and, secondly, that the right programme is to put this minority into *de facto* control of policy as soon as possible.

Coal Wanted

This week’s debate on coal in the House of Commons took place too late for adequate comment. The report of Major Lloyd George, back from a tour of the coalfields, can hardly have cheered the House. There appears to have been no improvement this year, either in the weekly output per head or in total output. In answer to a question in the House of Commons on Tuesday, Major Lloyd George revealed that absenteeism has lately shown an increase. A comparison of the five weeks which ended on September 12th with the five weeks preceding the report of the Greene Board of Investigation shows that the percentage of absenteeism rose from 13.18 per cent to 13.93 per cent among face workers, from 10.25 per cent to 10.85 per cent among other underground workers, and from 5.99 per cent to 6.60 per cent among surface workers. Unfortunately, the Minister did not distinguish between absence due to sickness, accidents and avoidable absence. A letter from the secretary of the Kent Coal Owners’ Association to the *Times* on September 30th claims that, in the Kent coalfield, the rate of absenteeism—excluding time lost through sickness and accidents—was actually lowest among miners over 40 years of age and highest among those under thirty; as the total numbers comprising the various age groups are not disclosed, it is impossible to determine the full meaning of these figures, but in view of the general assumption that the increase in absenteeism is due partly to the higher average age of coalminers, complete figures for the country as a whole should be published without delay. It is still too early to ascertain the effect of the introduction of the bonus scheme for miners which came into operation last month. But the district target which was substituted for the pit target recommended by the Greene Board, presumably in order to avoid the emergence of a wide spread between the earnings of individual workers, is too remote to inspire “competitive emulation,” and may defeat its purpose; the absence of improvement in output per head can emphasise it has placed on individual achievements. But the absence of improvement in output per head can certainly not be ascribed entirely to the miners. One of the main purposes of the reorganisation of coalmining was to achieve an increase in the output per head through the concentration of work on the most productive pits and seams. Unfortunately, there is no evidence that policy has yet been translated into action by the Ministry’s controllers. The disappointing trend of output per head can

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

hardly have been offset by the small increase in the industry's labour force, from 708,008 on January 3rd to 711,498 on September 12th; indeed, if anything, total output has probably fallen slightly in recent months.

* * *

Rationing and Manpower

In sum, a shortage of coal during the coming winter is now unavoidable; and it is therefore absolutely vital to secure the efficient distribution of supplies to obviate hold-ups in production and transport, and to minimise hardships among domestic consumers. The lack of understanding still to be found among responsible writers is astonishing. A leading article in the *Sunday Times*, on September 27th, expressed alarm

at the possible ill-effects it [rationing] would have on the health of the old and the very young. Rationing may, and should, be prevented.

It has been repeated *ad nauseam* that the whole purpose of rationing is not to cut the total allocation of fuel to domestic consumers—this will have to be fixed anyhow—but to secure a more equitable distribution of available supplies in order to prevent hardships among the individuals whose cause the *Sunday Times* has embraced. Unfortunately, the administrative difficulties of introducing rationing at this late hour are such that the scheme may have to be held in abeyance this winter. But if a shortage of coal this winter can no longer be avoided, steps should at least be taken now to ensure adequate supplies for vital purposes next year. Apart from the need for a really efficient system of distribution, arrangements must be made to secure an upward trend of production by technical reorganisation, and by the provision of an adequate labour force. By allowing young men called up to choose between the Services and coalmining, the Government has given mining equal priority. But, if equal priority is admitted, might it not be more expeditious to bring back some of the trained miners in the Services who are still in this country to their former jobs, in order to secure the immediate strengthening of the industry's labour force? True, this number is not known, and some 9,192 former underground workers have already been released this year from the Army and the RAF; but even a small addition of trained miners to the industry's labour force might secure an immediate addition to production. But, even if miners with the Services in this country are released—and at this critical stage in the war the release of trained soldiers is a very serious step to take—it will still be necessary to mount new recruits for the industry. The decision of the Government to allow men about to be called up to become miners is sound, though, in view of the time required to train miners, direction may be necessary if an adequate number of volunteers are not forthcoming within a few months. The most unsatisfactory feature of the coal problem is that it was not inevitable, but arose mainly from a lack of foresight on the part of the Government. There can be no valid excuse.

* * *

Fair Play

The new scheme of the Ministry of Fuel and Power for the distribution of house coal to merchants must arouse misgivings. Hardship in the winter is now inevitable. Only by rationing or some equivalent could that hardship be minimised by equitable distribution. It is now too late for rationing, and the Ministry's substitutes become all important. In effect, the Ministry has done precisely the thing which Sir William Beveridge, very rightly, condemned—that is, it is now intended to allocate house coal on the basis of previous consumption without any rationing of electricity or gas. The poorest consumers of fuel, who depend mainly on coal, will be heavily penalised. Well-to-do consumers, with a gamut of electrical and gas gadgets, will be in clover. People who have been extravagant in the past will be rewarded for their prodigality. Those who have been thrifty will pay for their earlier economy. There could be no more revealing proof of the unfairness and multiplied hardship which was bound to come once the politicians set their teeth against rationing.

* * *

Alienated Nationals in France

The handing over by Laval to the Gestapo of Jewish refugees from central and eastern Europe seems to have

been just the beginning of a wider campaign which may affect all Allied nationals. It is reported that the deportations are to be extended to all Poles and Czechs who entered the unoccupied zone after September 1, 1939. The anti-Jewish measures were, as usual, only the first step. Some 1,400 American subjects have been arrested in Paris; and the Parisian quisling press is waging a furious campaign against British nationals in unoccupied France. Déat, in his *L'Oeuvre*, has gone so far as to demand the transfer of all British nationals from the unoccupied to the occupied zone in order to put them into concentration camps situated near war factories exposed to RAF attacks. The French quisling thus proposes to apply to the British the methods used by Stülpnagel against French hostages. His demand has been echoed by a number of other Parisian papers, such as *Aujourd'hui* and *Le Petit Parisien*. The danger that Vichy may yield to the pressure of the gangster press ought not to be belittled; at any rate, it is inappropriate to rely on Pétain's pseudo-liberalism. Abetz' wire-pulling is too easily discernible behind the whole campaign which is obviously meant to foster anti-Allied feeling. No *ruse de guerre* can, of course, prevent the Allies from striking at the enemy on French soil; and not even the knowledge that British nationals may be placed near its objectives would stop the RAF's doing its duty. Déat's demand is, therefore, as naïve as it is barbarous. But, at the same time, specific and urgent measures ought to be taken by all the Allied Governments to protect those of their nationals who live within the grasp of Laval's police.

* * *

The Temple and the Money-Changers

In the nineteenth century the accumulation of large fortunes was not only tolerated, but even encouraged by the Church—as Lord Keynes once wrote, it was easy for a rich man to enter the Kingdom of Heaven, provided he saved. In the twentieth century the needle's eye is less wide, and genuine Christians are finding it increasingly difficult to reconcile their principles with the inequalities of wealth and the continued existence of "two nations" in modern society. At the Albert Hall last Saturday the Archbishop of Canterbury called for a new social order—for the subordination of the profit motive to that of production for the general interest, for social reform and for the end of privilege for the few. Dr Temple's excursion into the realms of high finance was perhaps unfortunate. He said that the banks represented a monopoly, whereas they actually compete; he proposed that they "should be limited in lending-power to the amount deposited by their clients," which in fact they are. In his zeal to overthrow the tables of the money-changers, the Archbishop tends to weaken the force of his general arguments and give his critics a handle for their rebukes. The *Daily Telegraph* asks that Archbishops should not meddle in economics, a subject which they cannot know anything about—why?—and letters in the *Times* have deplored the entry of the Church into "active politics." Yet it is surely obvious that, for the leaders of the Church to confine themselves at the present crisis of civilisation to discussion of ecclesiastical matters or to the elucidation of fine points of theological doctrine would be tantamount to an admission of bankruptcy, and the vast majority of the nation will regard the Archbishop's speech as evidence that the Church is conscious of its social responsibilities. All that can properly be asked is that the comments of churchmen on economic matters should be properly informed and intelligent in argument. Dr Temple, for instance, who tries hard and with devotion to learn, might ponder the fact that the mainspring of the free and competitive economy is not the greediness of individuals for profits, but their readiness to risk losses. It is risk-taking that has been mainly responsible for economic progress, in welfare as well as wealth, and any attempt to employ the nation's, or the world's, resources to the best advantage by planning will have the task of achieving the same degree of adaptability and efficiency by other means. Side by side with the Archbishop, Sir Stafford Cripps, who now appears in yet another avenue to the success in democratic reformation which was taken for granted when he became a Cabinet Minister, before a long silence fell upon his deeds and influence, reminded the Church of its duties as well as of its rights:

If privilege is to be ended, then we must be prepared to give up our privileges with the rest, not excluding the privilege of endowment and of establishment of the Church of England.

O Rus

The Scott report has inevitably unloosed a flood of comment about the relation between town and countryside. The Minister of Agriculture, who spoke at a Salisbury Diocesan Conference last week, did not contribute anything new to the discussion. Nor did he give any indication of the Government's intentions with regard to the Scott proposals. Further elucidation was left to the Prime Minister, who, in answer to a Parliamentary question on Tuesday, said that both the Scott and the Uthwatt reports were being referred to the Paymaster-General, as Minister responsible for the co-ordination of planning activities. Sir William Jowitt must not brood over these documents for long. Two things should be insisted upon: first, that a central planning authority with power to act should be appointed at once; secondly, that the principles and methods of development laid down by the Uthwatt Committee should be accepted forthwith as fundamental. The Scott Report, on the other hand, need not take up much of Sir William's time, for it begged all the real questions. Everyone will agree with Mr Hudson that the agricultural worker should be well-paid, well-fed and well-housed; that the farmer should be assured of a reasonable return on his investment; that the village should have its share of amenities; and that all the workers on the land should be happy. The only rider that the sober critic must add is that these things cannot be provided for an indefinite number of agriculturists. They can only reasonably be secured for the number of farmers and workers who can be supported at this desirable level by an efficient agriculture standing on its own feet—that is, by an agriculture of a scale and type which can compete in relative efficiency without protection or subsidy, with the alternative, mainly industrial, uses of manpower and capital resources—and with overseas farmers. If the intention is to attempt to maintain more farmers and workers than agriculture can possibly support at this higher level by its own competitive efforts and relative efficiency, then a heavy price will have to be paid by the rest of the community, who will pay in two ways: first, by higher food prices and subsidies; and, secondly, by virtue of the fact that the national income, from which the whole nation has to be supported, will be correspondingly smaller than it would be, because a considerable proportion of the nation's resources, by the un-economic expansion of agriculture, will be used less productively than they might be. To segregate the village community, to foster the development of agriculture at the expense of the town dweller, will not increase, but lessen, the wealth of the nation as a whole.

* * *

Relief by Stages

At Leamington last weekend, Mr Eden looked ahead to the period of relief and reconstruction. He emphasised that allied liberation of the occupied territories will be designed to bring immediate material comfort to the exploited peoples; that, even while the closing stages of the war are still in progress, the first stage of relief will be carried out under military supervision. The second stage, that undertaken by the civil administration will succeed the first as soon as a stable government is established in each area. Beyond this, Mr Eden did not go into details. But it is well known that relief plans are already being meticulously prepared and that the adaptation of existing organisations for the distribution of supplies is an integral part of the reconstruction scheme. This news must be got through to the much tried peoples of the occupied territories. When the invader has been driven out and the long strain of terror and resistance is over, the first and most pressing need will be for food. Certainty that the defeat of the Axis will not inaugurate a heartbreaking period of freedom to starve and administrative chaos is probably the reassurance most urgently needed by the average inhabitant of occupied Europe or of the Far East. As Mr Eden pointed out, there is no need to expect a long delay before military can give way to civil administration in Allied countries where the establishment of stable Government should be relatively simple. It remains uncertain whether the second stage of civil relief is to be in the hands of national Governments or of joint Allied commissions. There is, of course, the difficulty that all administration on a territorial basis raises immediately, and presumably prior to the peace treaty, questions of territorial jurisdiction still *sub judice*. The authority which feeds disputed areas and the authority which feeds the enemy must presumably be an international

authority until the final settlement is arrived at and relief enters upon its third and most constructive phase. It would be idle to suppose that reconstruction in Europe, or in Asia, will be concluded in a matter of months. Three or four years elapsed after the conclusion of World War I before any approach to normality was attained in central Europe. Recovery this time can scarcely be any simpler or speedier—to say the least. The submerged nations need to be assured that immediate relief will be brought to them efficiently; that humanitarian aspirations shall not compromise the ultimate resolution of territorial differences; that reconstruction will not only be immediate but enduring; and that the basic material needs of the aggressor nations will in no case be preferred to those of any of their victims. And the best means to reduce the task of post-war relief to manageable proportions is to win the war as soon as possible, before starvation, disease and anarchy take a long lease of Europe.

* * *

A New Stamp

Dr Dudley Stamp has been appointed to be the chief adviser of the Ministry of Agriculture and Fisheries on the utilisation of rural land. Dr Stamp is deservedly well known for the remarkable investigations which he and his assistants have made over a period of years into the facts of land utilisation in Britain; their maps represented a new chapter in economic geography. More recently, and much more controversially, Dr Stamp has become known as the chief architect of the Scott Report on land utilisation—the Stamp Report, as it might more properly be called. If Dr Stamp was really the power behind the throne in the drafting of this document, those people who have long felt that the organisation of the teaching and degrees of the University of London gave too much opportunity for good geographers to claim authority and a hearing as bad economists have gained a further reinforcement for their criticisms. It is a deeply disturbing thing that the man who is reputed to have been the main motive power behind the loose economic arguments of the Scott Report should now become an adviser to the Ministry of Agriculture. Dr Stamp is the greatest of authorities on the way in which land has been used in the past. There is nothing, either in his earlier record or in the Scott Report, to suggest that he can claim a similar authority in deciding how the resources of this country, land, labour and capital, can most productively and most efficiently be used in the future. Indeed, the Scott Report itself is a monumental example of the fallacious reasoning which can follow from the determination to prove that one particular form of economic activity for sentimental or other non-economic reasons, should be maintained, under protection and subsidies, at a level which the productivity of resources employed in that activity, compared with the productivity of resources in other pursuits, cannot possibly justify. There has seemed hope that the Scott Report, by the very woolliness of its well-intentioned list of incompatible recommendations, would have little influence upon policy. This optimism received a slight shock when the only publicity given to the Report by the BBC was entrusted to an agriculturist without the slightest understanding of the economic issues involved. It must be disturbed still more seriously by the appointment of Dr Stamp.

* * *

Cotton Controversy

The Manchester meeting which last week breathed fire and slaughter against the Cotton Control was not, it seems, representative of the cotton industry. It is reported that the leading organisations of the industry do not support the demand for the destruction of the present Control; and, indeed, a number of employers' organisations recently informed the Ministry of Supply of their satisfaction with the present Controller. The rebels are properly anxious to have it made plain that, in spite of their denunciation of the Cotton Control as unnecessary, they did not intend to suggest that control was unnecessary. Indeed, they put forward an alternative scheme of control, by which the Control would be headed by a leading legal figure assisted by a chartered accountant and operated by a panel of representatives of the industry. It is not easy to see how this plan, which has not won the approval of the industry as a whole, would better matters from the viewpoint of war economy.

The suggestion of a lawyer as Controller has, of course, undoubted merits. It is one of the major problems of wartime control that the unsatisfactory device of appointing Controllers to control the industries in which they are personally interested has so often been resorted to. But the Manchester protesters want to jump from the frying-pan into the fire. Government by committee is always an unsatisfactory and inefficient method. But, in place of a single interested Controller, they would appoint a whole committee of interested people to be an executive panel—a scheme which, with the best will in the world, could hardly advance the national interest in a period when harsh things have necessarily to be done to the cotton industry, as to every other economic activity, because of the exigencies of war. The chartered accountant is proposed, presumably, in order to secure that the information collected for purposes of control from the individual firms is not made known to their trade rivals, a device which is used by associations which, as described in an article on page 421, have been formed by traders to operate certain overseas transactions. Actually, this proposal merely adds a little more strength to the view suggested by the original incomplete reports of the Manchester meeting—that is, that a main concern of this particular group of cotton men is to make certain that wartime policy does not impair the post-war interests of their firms. In spite of the possible merits of one portion of their proposals, it still seems the case that the revolt is more against the harsh necessities of war economy—understandably, because Manchester, too, is only human—than, at bottom, against the working of the Cotton Control itself.

* * *

More Service Women

It needs no great discernment to see that the rapid expansion and reorganisation of the three Women's Services which is now being carried through is a harbinger of the next offensive stage of the war. The appeal for more volunteers has been made with all the urgency and authority of a major recruiting campaign. Inside the ATS, every possible device of organisation is being introduced to make the most effective use of women to release men for more active duties. The component unit or mixed regiment, first introduced with great success in anti-aircraft work, has already been extended to other branches of the Army; no doubt, the replacement of men, both officers and other ranks, in every kind of static post will proceed rapidly. It is realised, within the Services now as well as without, that the crisis of manpower and womanpower is acute and grave, and even unpalatable changes must be accepted. The main doubt which the call for more women has inspired among the general public is the question whether, if these recruits are forthcoming, sufficient women will still remain to fill the vacancies in other essential war work. The point is, however, that priority has now been given, in the case of womanpower, to the needs of the Services—for reasons which should be obvious enough, when it is considered that Britain is about to become even more of a base than an arsenal, and that the main factor which has hitherto enabled the Services to eke out their manpower successfully, namely, the absence of large-scale casualties, cannot continue for long. The problem of securing more women to fill out the Services is so plainly urgent that it is perhaps a somewhat hazardous procedure, when powers of conscription are available by law, to rely almost exclusively, as seems to be the intention, upon volunteer methods.

* * *

The Grey Market

The grey market is not black, but it is very far from white. It lives by finding evasions and loopholes in wartime Orders, restrictions and regulations. Formally, its operators work within the law, but the effect of their activities must always be to disorganise and disrupt the war economy. The grey marketeers do their business, flexibly, where they can smell it out, and the resources they use for their traffic are very liquid. They carefully watch all Government Orders for openings; they take the advice of lawyers and accountants before they set to work. A good example of their trade was the play some of them made with the Board of Trade Order which regulated the supply of cosmetics. The quotas given for cosmetics were expressed in terms of value—so much of the turnover of a basic period—and they were allocated to manufacturers, who could supply their quotas to any wholesalers. The main item

of cost in the manufacture and supply of cheap cosmetics is packing. What happened was that manufacturers supplied cosmetics to wholesalers in bulk and the packing was done by the wholesalers. This meant that the cost of packing was counted outside the quota, so that, with this large item of cost removed, these manufacturers could use their quotas to produce very nearly the same amount of cosmetics in volume as before the restriction. Manufacturers of repute, of course, went on packing their cosmetics themselves; they had to limit their supplies drastically, as the Board of Trade intended, while the grey market manufacturers and wholesalers went merrily on much as before. The loophole was stopped; wholesalers were forbidden to pack cosmetics; but the grey market operators had already made considerable profits and done much to defeat the intention of the Board of Trade. Another case was that of pickled herrings packed in jars. The Ministry of Food fixed maximum prices for cured and fresh herrings, but said nothing in its Order about pickled herrings in jars. The grey marketeers leapt upon their chance. They began immediately to pickle herrings and packed them in small jars for sale at prices very much higher than the controlled ones. Thus labour, jars and factory space were taken up simply to turn out a product not covered by control. This racket, which was unfortunately quite legal, went on for nearly six months before the Ministry stepped in and stopped it. It is impossible for every Government order to cover all possible evasions, especially when there is this ingenious and rapacious crowd always in wait to make quick money, regardless of the needs of the war effort or the interests of the community at large. The only way to limit their unsavoury antics, apart from the possibility of the Ministry of Labour making certain that all these slippery customers are so busy in the Forces or on war work as to have no time for tricks, is to take still more pains to draft all orders still more comprehensively.

* * *

Multiple Accidents

Whatever the reason for the wartime increase in factory accidents, it is clear that any investigation into the cause of industrial accidents in general is more opportune than ever. The Industrial Health Research Board—a branch of the Medical Research Council—has undertaken such a study, the result of which has been published in a report on the "Personal Factor in Accidents." The report falls into two parts. The first deals with general factors causing or contributing to accidents—such as long hours; inadequate heating, ventilation and lighting; the employment of inexperienced or unfitted workers; the rate at which work is carried on; organisation and management; and the attitude of the workpeople themselves—all these may influence the personal factor in accidents, and they have a special significance in wartime. But as investigation into these matters progresses, it becomes clear that workers may be prone to accidents in very varying degrees. The second part of the report goes very carefully into this question of the multiple accident resulting from accident proneness. Experience shows that the majority of accidents in any concern happen to a minority of workers. This scientific revelation of the old recognition that there are people "whose fingers are all thumbs" does not prove that the problem is insoluble, for to a certain extent accident proneness can be measured, and it should be possible to apply the results of the tests in the selection of factory workers. The most practicable measure, suggested in the report, would be to use tests, supplemented by a record of all accidents experienced during a certain period, for every occupation where there is a serious risk. It is the main object of the studies of multiple accidents to discover how a worker's weakness can be spotted in advance, so that he can be transferred to safer work before it has revealed itself in a serious accident. In theory this aim is certainly commendable. But in practice it is extremely doubtful whether the machinery for transferring accident-prone workers exists—or could be created in a country which has not yet established adequate machinery for re-employing partially disabled workers. It is most unlikely that, under the present workmen's compensation laws, employers will be willing to take on workers declared to be accident prone. Moreover, the border-line between the personal and the non-human factor in accidents is very fine, and there is a risk that too much emphasis on the former may detract from the ordinary, but still essential, steps of accident prevention.

AMERICAN SURVEY

Refrigerators for War

(From an Industrial Correspondent)

Cleveland, September 5th

NO industrial profit more thoroughly typifies the American expenditure on luxurious gadgetry than the mechanical refrigerator; few industries or none have now been converted more completely to war production. In 1941, the biggest year in the manufacture of domestic appliances, the makers of refrigerators turned out 3,552,000 units. By the spring of that year, the increase had been 70 per cent from the volume of two years before. A portion of this enormous acceleration was due to the spreading suspicion that the war would choke off the supply of these devices, and in this belief the public proved to be right. Though limitations on output began to take effect just a year ago, stocks of merchandise remained large to the end of the year, and retail sales in 1941 reached the phenomenal total of \$280 millions.

This was an industry which, though 30 years old, did not become important in the realm of consumers' goods until the 1920s, when a number of large companies began to manufacture at prices within the reach of salaried people. During the 1930s, the volume of output increased so greatly as to cut into the ice business. Prices were reduced until wage-earners were buying them in large numbers.

The production of all mechanical refrigerators was stopped on April 30, 1942. A number of makers had previously been taking orders for small armament parts; but they were now directed to convert almost completely to war production. Only the manufacture of replacement parts was allowed to go on. About two dozen large plants were seriously affected.

Most of the refrigerator factories are in middle-sized cities, many of them in Ohio and Indiana. Cleveland has two, including a maker, or former maker, of kerosene-operated boxes for the farm market. General Electric, General Motors, Westinghouse, Nash-Kelvinator and a few other large corporations were dominant in the industry. The refrigerator companies and the communities which depended heavily on them were some of them long fearful they could not be fitted into munitions manufacture in any effective way. The trade was one of many in the manufacture of light metal goods which had grown up since the last war. It had become so large a consumer of sheet metal as to influence the development of steel making itself. The drift of the American iron and steel industry away from plates, forgings and castings into a concentration on the lighter products, often with re-design, has actually handicapped this country's conversion to the materials of ordnance. There appeared to be little that the Army and Navy wanted which refrigerator factories could make. Cities like Mansfield and Dayton, Ohio, and Evansville and Fort Wayne, Ind., were dismayed at the outlook, particularly as some of them were making stoves and similar goods. They had supposed they were reasonably diversified, but found themselves specialised on light metal work, for which there is little demand in war.

The Process of Conversion

One city (not Cleveland) had two plants making mechanical refrigerators. One of them was employing about 4,300 persons at the time the first curtailment order was issued in the summer of 1941. This company got a number of relatively small contracts: burners for Army ranges and participations in parts for an anti-aircraft gun and turrets for aircraft. As refrigerator work dwindled, it enlarged its work on the original orders and obtained new ones. Its big opportunity came with the building of an aircraft factory in the vicinity last December, and it became a heavy subcontractor for metal parts, the greater number of which were suited to the skill of its employees. Many new machines had to be added and the plant was continually shoving equipment around. To-day, it has almost as many

employees as it had at the peacetime peak. By next year, it will have twice as many, provided they can be found. The other refrigerator plant in the same city already had several small contracts. At the suggestion of the Government, it gave them all up and threw its efforts into making small-calibre ammunition. A large ordnance plant was built in the neighbourhood, and this provided it with a continuous market.

Before the war, the city was employing 20,000 in its factories. Last September, its civic leaders feared it might become a "ghost town." To-day, it has more wage-earners than at any time in its history, and expects to have more than 40,000, including upward of 10,000 women. Poor relief has been withdrawn from all but the incapacitated. Shortages of materials and irregular deliveries still interfere with production; but the community has been free from strikes, one of few places with that distinction. Though the city is far inland, it is also making parts for ocean-going vessels.

In Reverse

The reconversion of plants to refrigerators after the war is not expected to take many months. In the meantime, the stock of new refrigerators in the hands of dealers has been exhausted in most or all cities, and in Cleveland the prices of used refrigerators two years old have advanced to their original costs. Several concerns have lately gone into, or back into, the making of ice refrigerators, including a few ice manufacturers. They use a minimum of metal parts, constructing the box of wood as in the days before steel took over the field, but they are using designs which imitate the mechanical refrigerator.

American Notes

Party Politics

According to cabled reports, the United States Senate unanimously passed a Bill on Wednesday authorising President Roosevelt to stabilise prices, wages and salaries at the levels of September 15th so far as practicable. The Bill was immediately sent to the House of Representatives, though, as *The Economist* went to press, it was unlikely that President Roosevelt would receive the powers he requested by October 1st for averting inflation. The farm bloc has fought bitterly and brazenly to preserve, and even to increase, the special privileges of the farming community. Its methods were never better displayed than in its counter-proposal—that, instead of fixing agricultural prices at 110 per cent of parity, or recent levels, whichever was the highest, the whole concept of parity should be revised in an upward direction by introducing the factor of farm wages and the value of the farmer's own work. It was calculated that this new parity would work out at about 112 per cent of the old, and that if adopted, the way would be open to increasing the cost of living by 5 per cent. On Tuesday the farm bloc's proposal to fix ceilings automatically at 112 per cent of parity was approved by the Senate. The President seemed beaten and the threatened use of his veto near. But a compromise was adopted on Wednesday. The President, nevertheless, has still not won. He is directed to raise farm price ceilings to allow for increases in labour and other costs since the beginning of last year. At bottom, in spite of the so-called compromise, this clause appears to embody the farmers' proposals in another form. Only an open clash, and certainly not inflation, seems to have been avoided. The scorn which has been poured on the farm bloc—"predatory

locusts" was not the unkindest phrase used by an American newspaper—should not be allowed to implicate the whole farming community. The farm bloc is composed of four large organisations which in the main speak for the large-scale farmer; naturally enough, it is they who have the money for pressure politics on a grand scale. The Farmers' Union, a smaller group representing the low-income farmer, and advocating co-operation with labour, has dissociated itself from the other farm organisations and has advocated the fixing of prices at 100 per cent of parity. A recent poll found that 71 per cent of Western and Middle Western farmers favoured the President's proposal. It is also probable that Congress would not have been so ready to listen to the farm lobbyists if it had not had the comforting knowledge that, in the end, the President could be counted upon to take what action was necessary. Congressmen in this case can have their cake and eat it too—at a price. That price is a further decline in the prestige of Congress and in its effective powers. There is, of course, much in the farmer's wage problem and the difficulty of securing labour; but the way to deal with these is through deferment of farm labour, or even an essential work order, not by a blanket increase in prices.

* * *

The Elephant Never Forgets

The ten-point programme adopted by the Republican members of the House of Representatives last week, and regarded as a bid for support in November, could not have been written before Pearl Harbour, but it is hard to find in it proof that America's entry into the war has provoked any very profound change in Republican thinking. There will be satisfaction that the Republicans have pledged themselves to give the President loyal and patriotic support; that they will oppose attempts to negotiate a peace before victory; and there is a pale reflection of Mr. Willkie in the recognition that the United States must work with other nations to bring about world understanding and the maintenance of peace. But even these pledges are qualified. The proviso which has aroused the most criticism in the United States reads:

In so doing we must not endanger our own independence or weaken our way of life or our government.

These are phrases which may mean nothing, or which may prove to bar the way to collective action within the framework of the United Nations after the war—if Republican strength is then sufficient to control or hamper national policy. The support of Mr. Roosevelt also is subject to conditions.

The President should not permit himself to be deterred from the responsibility which is his by those forces and influences which persist in continuing so-called social and governmental reforms at the expense of the war effort.

As in too many political platforms, what is given with one hand may be taken away with the other. The full text is not yet available; but apparently the other main points demanded utilisation of the most efficient military and civilian leadership; an end to unnecessary censorship; and investigation of war profiteers. It pledged the signatories to vigilance to eliminate waste and inefficiency. It is difficult to believe that whatever gains the Republicans may make in November will be the result of this document. Unfortunately, the urgent issues of the moment do not make pretty campaign material. The allocation of manpower, the control of prices, the drafting of the 18-19-year-olds, and international obligations, are subjects of which the Republican—or, indeed, any vote-getter—by instinct fights shy.

* * *

Victory Fleet

Tributes to the American shipbuilding industry are in order. Already they have come from Mr. Roosevelt, Mr. Churchill, Sir Arthur Salter and others. The occasion is the announcement of the Maritime Commission that, during the past twelve months, since the first Liberty ship was launched, 488 ships have been completed, a total of about 5,450,000 deadweight tons. Deliveries in September are expected to reach the record-breaking total of 90 ships and about 1,000,000 deadweight tons, an average of three ships a day. The goal of 8,000,000 tons in 1942 is almost certain of achievement, and the 1943 goal of 10,000,000 deadweight tons "reasonably certain." Average

production time for Liberty ships has been reduced from 241 days to 70; but Mr. Kaiser's magic, which has assembled the parts of a Liberty ship and launched it ten days after its keel was laid, and delivered the ship four days later, suggests that even this average may be very sharply cut. The improvement in production in September compared with August, when only 68 new merchant ships were delivered, is the best proof of the rightness of the Maritime Commission's decision to abandon the Higgins contract and concentrate the flow of materials into yards already in production. During August, a number of yards had to slow down because of the lack of steel. Todd's Richmond yard had 6 out of 21 shipways idle, California Shipbuilding had 2 idle out of 14, and Bethlehem-Fairfield two idle out of 16. It was this idle capacity, which, once the flow of materials was reorganised, made possible the sharp increase in September. Sir Arthur Salter has stated that, at last, the building of the United Nations has caught up and surpassed U-boat sinkings, and has pointed out that every ton of steel going into a ship means seven tons a year more of armaments and supplies to the battlefronts. For this turning of the tide too much praise cannot be given to American shipbuilders and shipyard workers, many of whom were completely new to the industry—which, incidentally, explains in part why, despite these achievements, productivity per man-hour in Britain remains appreciably higher through the whole process of shipbuilding from start to finish, and not simply in assembly, than in the United States.

* * *

Rubber Conservation

The recommendations of the Baruch Committee to conserve the nation's stock of tyres are being put into effect with no loss of time. Mr. William Jeffers, the Rubber Administrator, has requested the Office of Price Administration to institute nation-wide petrol rationing, and the Office of Defence Transportation has announced the imposition of a 35 mph speed limit for all rubber-tyred vehicles. In addition, motorists will have to submit their tyres to Federal inspection every 60 days. Petrol rationing on a nation-wide scale probably will begin on November 22nd, and the basic ration will be slightly less than 4 gallons a week. The extension of petrol rationing outside the present rationed area, which includes 17 states, will involve very heavy sacrifices and the drastic reorganisation of American national life. The inconveniences have been sufficiently great in the East, but in the Middle and Far West, where distances are so much greater and public transport comparatively undeveloped, an almost unbelievable revolution will be caused by the orders. The September 21st issue of *Time* lists some of the effects: 12½ million people living in communities without any public transport will have to travel almost entirely on foot (ownership of bicycles in the United States normally, is largely confined to children, and new production has stopped almost entirely); 10 million farmers and their families will relapse into the isolation of forty years ago; the \$3,000 millions a year roadside stand and tourist camp industry will wither away; immense revenues will be lost to state governments, which have depended very heavily upon taxes on petrol and cars. This dismal forecast may be somewhat modified by administrative decisions on the granting of supplementary rations, but if the Baruch Committee is taken seriously—and there is every sign that it is—these modifications, while they may prevent complete isolation, will not be very great. Apparently, the reduction of average mileage per car from 6-7,000 per year to less than 5,000 is to be achieved in the only practicable way, by the control of petrol. Even so, the administrative problem will be immense. It is fortunate that the Office of Price Administration has already encountered many of the prickliest problems in rationing the East. But there at least there was the physical absence of petrol to drive home the urgency of economy; in states where petrol flows like water, the job of persuading the public to accept a major revolution in their lives will be more difficult. The task of enforcing a speed limit of 35 mph and of providing for tyre inspection will also be formidable. No Federal organisation or police exists that can be entrusted with these duties; they will have to be undertaken by the state governments, which means that enforcement will vary widely from state to state. When all this is said, however, the fact remains that the rubber shortage is at last being squarely faced, and the necessary action is being taken without hesitation or political calculation.

THE WORLD OVERSEAS

Canada's Airmen

(From Our Ottawa Correspondent)

September 14th

THE plan of the Canadian Air Ministry to draw thousands of Canadian airmen scattered throughout the Royal Air Force into distinctive Canadian air commands in Britain is well under way, although it has encountered heated opposition from "imperialist" opinion in this country, which has raised the cry that this proposal means splitting the British Empire. The plan has the support of the majority of Canadians, and, judged by the comments made by Air-Marshal H. E. Edwards, Air Officer Commanding the Royal Canadian Air Force overseas, it has the support of the overwhelming majority of Canadian airmen serving in Britain.

Apart from the bickering between extreme nationalists and ultra-imperialists on this and other issues—a feature of Canadian affairs that seems to continue indefinitely, and which moderate Canadian opinion deplores—the proposal to "Canadianise" the RCAF in Britain appears to most Canadians as a logical development. Canadians take pride in their achievements in mobilising air power. Promptly after the outbreak of war, the first agreement covering the Commonwealth air training plan was drafted. It dated from December, 1939, and extended to June, 1942, when it was replaced by a fresh agreement, following conferences of the parties concerned in Ottawa. This new agreement provided for the policy of Canadianisation, as far as Canadian airmen were concerned. "A Canadian bomber group will be formed as soon as there are enough RCAF squadrons in existence to make this an economic formation," said that agreement. On his return from a visit to England recently, Mr. C. G. Power, Minister of Air Service, announced that a Canadian fighter group would also be formed in Britain.

The proposed Canadian bomber group will comprise 10 to 20 squadrons, and the fighter group, from 20 to 30 squadrons, making a total of 40 RCAF squadrons co-operating with the RAF.

From Training to Command

Through nearly three years, the Commonwealth air training plan has expanded steadily in Canada. It has graduated thousands of airmen who have entered the RAF. Canadian graduates are now scattered among 700 different units of the RAF. But the training plan has tied up most of Canada's senior officer material in administrative work at home. It delayed formation of distinctive Canadian units, although a policy of organising RCAF squadrons was adopted in 1940, and developed slowly, until there are now 25 RCAF squadrons in service in Britain. The pace of production of air crews has furnished tens of thousands of Canadian airmen. There are, for instance, 2,000 Canadian airmen under the Middle East command, but only one full-fledged RCAF squadron in that theatre.

Mr. Power estimated that the task of administering the air training plan has tied up personnel for 25 to 30 squadrons.

After the war, [he said recently] we must not be looked upon only as a nation that trained men and did not participate in the actual fighting. In the last war, Canada won her status because her troops fought as Canadians in Europe.

The policy of Canadianising the air force in Britain, therefore, represents the turning point at which the training of Canadian pilots and air crews can be used to create distinctive Canadian air commands overseas, instead of turning back a substantial part of the output as instructors and staff for training stations at home.

Fuel for the latent hostility towards the policy of Canadianisation was added by the forthrightness of Air Marshal Edwards, in a recent interview. He said:

Some people are talking a lot of bloody nonsense about splitting the Empire. If Canadians who see it from that point of view want to be mugs all their lives, that's their business. I can see no reason against Canadianisation.

This remark caused some Canadian eyebrows to arch, coming from a senior air officer. But majority opinion obviously supports Mr. Power. On the one hand, comment from the French-language paper, *Le Canada*, was:

Let our imperialists go into mourning! Canadian aviation will exist separately from English aviation on the battlefronts.

On the other, the *Toronto Globe and Mail* said:

What is the stigma attached to the RAF? The same exaggerated nationalism which drove different peoples at each other's throats is being pushed in Canada.

The RCAF and the War Effort

Mr. Power's reasons for Canadianisation were that the policy would aid the development of national sentiment among Canadians and pride in their air force, and that a distinctive air force would mark Canada's contribution towards fighting the war. Air-Marshal Edwards defended the policy on grounds that it would increase the happiness of Canadian boys in air service overseas and promote morale and efficiency. Speaking of the average Canadian boy in the Air Force overseas, Air-Marshal Edwards said:

The things that distract that boy can be readily adjusted only by Canadians. They involve dollars and cents instead of pounds and shillings. They involve Canadian methods of promotion and discipline. They involve the spiritual solace which he wishes to receive in the homely tongue of his fathers. They involve even the difficulty of finding baseball equipment in a country devoted to cricket.

The chief objection to the new policy deals with the question of the tactical direction of the RCAF. Mr. Power has been clear on this point, that Canada is finding no fault with the higher direction of air warfare by the RAF, and intends to co-operate fully in future with it. Personally, Mr. Power is known as an ardent advocate of air power as the decisive factor in the war. He is Canada's most notable exponent of this view, which was strengthened by his recent impressions of Air-Marshal Sir Arthur Harris's organisation for 1,000-plane raids on German objectives.

The Exploitation of Norway

[BY A NORWEGIAN CORRESPONDENT]

September 15th

SINCE May, 1940, German occupation expenses have been financed by direct loans from the Bank of Norway in Oslo. The Germans intend that these loans shall be repaid by the Norwegian state, so that the Norwegian people shall themselves meet the expenses of occupation. By the end of 1941, loans from the Bank of Norway already totalled some

LETTERS OF CREDIT AND DRAFTS
ISSUED

Kroner 3.7 milliards, and are estimated to be rising at the rate of Kroner 5-6 millions daily.

The deficit on the Norwegian state budget since the occupation is estimated at some Kroner 250 millions for the financial year 1940-41 and at Kroner 450 millions for the financial year 1941-42. In the current year, it is expected that the deficit will reach some Kroner 1,000 millions. The greater part of the deficit must, of course, be attributed directly to the occupation. It is financed in part by long-term Government borrowing, but chiefly by rediscounting Treasury bills with the commercial banks. The occupation authorities hope that Government borrowing will neutralise surplus purchasing power and will thereby prevent a rise in prices.

Inflation

There is, of course, general anxiety about the possibility of inflation. The circulation of paper money has reached proportions never before known in the history of Norwegian banking. The note circulation has risen by some 150 per cent since May, 1940, and, in the same period, production and imports have sensibly decreased. This anxiety is reflected in the inevitable stock exchange boom. With the whole investment public attempting to acquire a title to real property, equity prices have soared; shipping shares have risen in price 100 per cent since May, 1940; industrial issues by 90 per cent and bank and insurance shares by between 30 and 40 per cent.

Loot and Dearth

German plunder has considerably reduced the Norwegian national capital. Lack of fodder has been responsible for greatly increased slaughtering, and it appears probable that herds of cattle have been reduced by at least 35 per cent and the total number of pigs and poultry by some 45 and 70 per cent, respectively. There has been a very marked increase in the consumption of timber, both for military construction and for fuel in view of the blockade. Fish has become increasingly scarce, and much bitterness is felt over the introduction of very severe fish rationing in a country possessing one of the greatest fishing industries in the world. In 1941, the total catch amounted to only 60 per cent of normal, of which at least 70 per cent had to be sent to Germany. The fall in the catch is due partly to the closing of many of the best fishing grounds by the German navy and to the shortage of fishermen, vessels and equipment. Some 500 vessels have been requisitioned by the German navy and many are serving the Allied cause.

Industrial production is relatively normal. Many factories, especially in the iron and steel industries, are under German control, while shipyards and the motor industry work mainly on German orders. A number of industries, including textiles, tanning, tobacco, brewing and food production suffer from an acute shortage of raw materials.

Exploitation takes many forms. Livestock are being slaughtered, pre-war stocks run down, factory plant and equipment worn out. Perhaps the most subtle form of exploitation is, however, the fiction whereby Norway has incurred a clearing debt to Germany. The account is, of course, only charged with the expenses of occupation to a negligible extent. The Norwegian side of the account is charged with German imports into Norway, bought by the Germans in Norway with money requisitioned from the Norwegian central bank. Norwegian exports, which "pay" for these imports, pay in fact for German consumption in Norway. Up to the present, Norway has been saddled with occupation expenses which are relatively heavier than those of any other occupied territory.

War Metals from South Africa

[BY A CORRESPONDENT]

SPEAKING at a meeting of the Chemical, Metallurgical and Mining Society in Johannesburg a few days ago, Mr H. J. Hofmeyr, the South African Minister of Finance, produced a new argument for the maintenance of the country's record gold output. This time the argument was not based on economic or financial considerations, but on political grounds. Because South Africa has not a homogeneous public opinion, Mr Hofmeyr argued, the country is much

more sensitive to economic shock than other nations. Nothing could give South Africa a greater economic shock than a curtailment of its gold production, and, according to Mr Hofmeyr, there are "many politicians in South Africa who are eagerly awaiting just such a heaven-sent opportunity."

Whether this new argument will satisfy the critics of South Africa's mining policy, especially those in the United States, remains to be seen. At any rate, the criticism of the South African Government is not primarily directed against the maintenance of the gold output as such, but against the unsatisfactory state of South Africa's war metal production compared with that in the gold industry. Recently, Colonel Stallard, the Minister for Mines in the South African Government, pointed out that the maintenance of the gold output would not interfere with the development of the mines producing "strategic metals." Nothing would more effectively stop the critics of South Africa's present mining policy than putting this statement to a practical test. Although definite information on the size of South Africa's current production of strategic metals is not available, there are indications that, after a decline in operations in the first year of war, South Africa's output recovered gradually in 1941 and the early months of 1942 and will be pushed ahead more rapidly as a result of the work of a United States Mission during its recent visit to the Dominion.

The serious drawback of South Africa's mining industries other than gold is, of course, the fact that up to the outbreak of war gold inevitably proved such an attraction to the Dominion's mining interests that comparatively little had been done to develop the resources of "strategic" metals. At the outbreak of war, only about 7 per cent of the capital of South Africa's mining companies was accounted for by companies producing other minerals than gold, diamonds and coal, and in the record pre-war production year of South Africa's industrial mineral industries (1937) the mines, other than gold, diamond and coal, employed only 1,178 Europeans and 16,136 natives, compared with over 40,000 Europeans and over 300,000 natives employed by the Transvaal gold mines. In manganese, however, the South African Government helped private interests by linking the Postmasburg and Kuruman districts to the Union's railway system in 1935 and by extending the port loading facilities at Durban. Within two years, the South African production of manganese ore rose from less than 100,000 metric tons to over 631,000 metric tons. The bulk of this went to Germany, and the Dominion became Germany's largest manganese supplier in the years immediately preceding the war. After the loss of this market, production, owing to the lack of demand, fell to 412,000 tons in 1940. It picked up slightly in 1941, but has so far remained below the 1937 peak, which itself was well below the potential output, estimated at over 750,000 tons per annum. Recently, however, Colonel Stallard, the Dominion's Minister for Mines, pointed out that large quantities of manganese are now being shipped to the United States.

Chromite and Copper

Two other South African metals are engaging the attention of the critics of South Africa's present mining policy. The chromite mines attracted little interest before the war, especially as the deposits (mainly in the Transvaal and Natal) are situated too far away from the chief consuming centres. Nevertheless, production advanced to about 175,000 metric tons per annum before 1939, though it has shown a falling tendency since war broke out. With the necessary capital and equipment, the chromium output could be increased fairly rapidly, especially as transport costs are less important in periods of maximum consumption like the present. The other metal is copper. Output has been fluctuating between 10,000 and 15,000 metric tons for many years past. During the 1937 copper boom, however, the O'okiep Copper Company, with a capital of £1,600,000, was formed with the help of United States and Rhodesian copper interests to develop low-grade copper deposits in Namaqualand. It was then expected that within three years production could be raised to 50,000 tons per year. Development work, however, was largely curtailed before the war, and as the latest official production statistics show, the Namaqualand deposits were not yet in production last year.

The Union has sizeable reserves of other strategic metals, including tin, of which a new deposit has just been discovered across the border of South-West Africa. In most cases, much preliminary work will be necessary to assure a surplus over South Africa's domestic needs. Development of the manganese, chromite and copper deposits, however, would not only strengthen Allied supplies of three of the

most important strategic metals; it would also tend to set South Africa's mining industry on a broader and thus sounder basis. The importance of this from South Africa's point of view was clearly stressed in Mr Hofmeyr's speech.

Palestine's Food Problem

[FROM OUR JERUSALEM CORRESPONDENT]

August 16th

THE sharp curtailment of imports, inevitable since the deterioration in the shipping position in the Indian Ocean, has made food supplies for the civil population of Palestine a problem of vital importance. Palestine's biggest imports have been, apart from building materials, grain, animals for meat, oil-seeds, vegetables and sugar; and it is clear that the fall in imports of these must be very severe. But cattle, which were formerly imported from the Balkans, are now brought chiefly from Turkey, and it is hoped that the new Haifa-Tripoli railway will further assist this traffic. Ground-nuts and copra have been mostly replaced by cotton-seed, which is imported from Egypt. Sugar, also, comes from Egyptian refineries. The shortage of vegetables and potatoes has been to some extent made up by the increase in local production—the potato crop has doubled since 1939, and total production of vegetables in 1941 was about 190,000 tons, compared with 129,000 tons in 1939. The weak point, therefore, remains the supply of cereals for human consumption and for the maintenance of local animal farming, on which the production of milk and eggs depends.

Palestine's total wheat consumption has been estimated at about 200,000 tons per annum; but only half of it is covered by local output, and about a quarter is usually supplied by Trans-Jordan. The remainder has been normally imported from overseas, for Middle Eastern wheat only consists of the hard varieties, which are disliked by the urban population of European origin; yet, in present circumstances, this quantity too could have been obtained from neighbouring countries. The same is true for other cereals, with the possible exception of rice, which is now being supplied by Egypt in limited quantities. However, Palestine's dependence on cereal imports should not be overstressed. Its own cereal production has been steadily growing, partly through the development of Jewish intensive farming, and partly through the expansion of the area sown by the fellaheen, especially under the inducement of the high wartime prices. If vigorous steps had been taken for introducing modern methods of cultivation, it should have been possible to increase local output even more; but, unfortunately, too little has been done in this respect, and the average yield per dunum remains very small.

In 1940, Palestine enjoyed a bumper crop of 136,000 tons of wheat, but, in 1941, yields were poor and the total did not exceed 90,000 tons. This year, the acreage sown was about 30 per cent higher than that of 1939, and the wheat crop has been authoritatively estimated at about 110,000 tons, but other cereals are reported to be above average, and large surpluses for export are also expected in neighbouring countries. On the other hand, the demand for wheat has been reduced by increasing the milling ratio to 90 per cent and by blending the "standard flour" with barley to the extent of 30 per cent. Above all, the supply for human consumption could be maintained without having recourse to imports from overseas, as is shown by the following figures:—

	(Thousands of Tons)			
	1939	1940	1941	1942
Local wheat crop	89	136	90	110*
Supply from Trans-Jordan	34	52	25*	55*
Imports from overseas (incl. rye)	121	62	89	...
Substituted by barley	...	...	...	35*
Total wheat for human consumption	244	250	204	200*

* Estimates.

Black Market in Grain

The statistical position is apparently encouraging, especially as the supply during the preceding years was clearly over the genuine demand, and substantial stocks are supposed to be kept in reserve. But, in reality, the problem is greatly complicated by the difficulty of obtaining the grain from the growers. Although this year a Government monopoly was established in the grain trade, it did not prevent the existence of a "black market" for cereals, where prices are appreciably higher than the official ones, which are already nearly three times, and even four times, as high as

in peacetime (£P23-35 per ton for wheat and £P16 per ton for barley on the threshing-floor). The Government buying agencies, therefore, are encountering great difficulties in obtaining the necessary quantities of grain. Actually, production costs for the primitive fellaheen farms have not increased substantially, and agricultural wages have risen only moderately. The steep rise in cereal prices is, therefore, to be attributed to the additional military demand, and to a general tendency to speculation on the part of the local peasants and merchants, which has been lately very much strengthened by the fact that prices prevailing in Syria are far higher than those fixed in this country. The heavy demand coming from a country, which in normal times used to export grain, supports the rumours that Syrian wheat is being sent to Turkey, which is serving as a transit market for supplying German Europe.

Obviously, blame for the situation cannot be put on the local authorities alone. From the beginning, it has been clear that the grain monopoly could be put into effect only if standard prices and a uniform marketing policy were maintained throughout the whole area of the Middle East. But, meanwhile, stocks of cheaper imported wheat have been exhausted; the price of flour has consequently been raised to £P30 per ton, and even at this price the Government is suffering a loss of about £P4 on every ton of flour. A corresponding rise in bread prices has been the result, and if this upward movement is not stopped in time, a further general rise of prices is likely.

Letter to the Editor

Marine Insurance

TO THE EDITOR OF THE ECONOMIST

SIR,—In the interesting article on Marine Insurance in *The Economist* on August 29th, a statement is made that "The insurance on sea resulted in an unnecessarily large loss for the Treasury." This does not agree with the facts.

In 1919, the Government published the results of the insurance operations of the War Risks Insurance Office, which showed that the office received in premiums £197,797,800, and paid away in claims £171,462,800, showing a profit of £26,335,000. Of this profit, £10,640,000 was due to Aircraft and Bombardment risks, so that the actual profit on the marine side was £15,695,000. There was a

loss on cargo war risks because the Office stupidly maintained a fixed rate for all voyages, irrespective of the danger, and the result was they did not get the best risks. That account showed a loss of £11,000,000, but from March 7, 1917, when differential rates were fixed—that is, for only eight months—there was a profit of £3,500,000. Instead of an "unnecessarily large loss," therefore, the Treasury received a handsome credit for more than £15½ millions.

Yours faithfully,

Lloyd's.

BROWNING DICK.

[The statement criticised by Mr Browning Dick was meant to refer to cargo insurance, which, as he shows, involved the Government in a substantial loss.—EDITOR.]

Russia at War

The Coal Crisis

THE gravest problem which Russia, since the loss of the Donetz basin, has now been confronted is the shortage of coal. As Mr Willkie pointed out in a recent statement, millions of Russian families will have to go without fuel this winter. Civilian needs have to be set aside in view of the more pressing requirements of the war industries; and the Russian population seems to have reconciled itself to the prospect of a bitter winter with the same grim determination with which it endured very similar conditions during the civil war—more than two decades ago. During those years, most of the Russian homes were warmed with peat and wood; in many a town, people were compelled to use their own furniture for firewood; and not a few of the families of the Russian intelligentsia had to use their fine collections of books and paintings for the same purpose. (It was this sad necessity which at that time made a world, unaware of Russia's tragedy, accuse the new régime of iconoclastic excesses). The same tragedy may now befall Russia again, for the second time within the life of one generation.

Not only private houses, but also schools and offices will have to do without coal. The collection of firewood and peat has become an essential war-time duty of the Soviet citizen; special collecting brigades have been organised; stacks of logs piled up on the squares of Russian towns have become the typical feature of the urban landscape; and the press has been critically watching and reporting the collection campaign, dealing out praise for good work and blame for failures.

The available supplies of coal are probably being allocated to heavy industries and armament works. Textile factories have been instructed to switch over to peat and wood. Railways will only partly be able to run on coal; they, too, will have to rely largely on peat and wood. The refuelling of long distance locomotives has been re-organised on a mixed coal-peat-wood basis; on some lines, coal or peat will be provided, but on the long stretches running across forest country they will have to refuel with wood *en route*. A very considerable slowing down of transport is hardly avoidable under such conditions. Coal is probably allocated mainly to the railways which run closely behind the fronts or to special military traffic, where speed is most essential. The position even in the heavy metal industries is causing some anxiety. It has, for instance, been disclosed that the Magnitogorsk industries have succeeded so far in storing no more than 70 per cent of the fuel which will be needed for the winter; and Magnitogorsk is now the greatest centre for production of metal and munitions.

Strict economy in coal consumption has been introduced in those factories to which coal has been allocated. Armament works have arranged special graphs to control the rate at which fuel is used; and the obligation to save so many tons of coal appears invariably in all the contracts of "industrial emulation."

The margin for fuel economy has been very largely exhausted. Only a substantial increase in production could substantially relieve the strain. But there is something of a "coal crisis" of production, too. Reports on coal out-

put in the Kuznetsk and Karaganda basins—the only two important Asiatic mining centres—have struck a warning tone recently. Not only have the coal mines of those regions not been able to expand output to the full figure planned, they are also—to quote *Pravda*—"supplying considerably less coal than they could and should supply." Figures of production have not been published for a long time; but a rough guess at the 1941 output puts the total at something over 60 million tons—compared, say, with the more than 200 million tons produced in the Ruhr area and in Silesia.

The difficulties in the pits can be explained by a variety of reasons. Some of them can be removed by a very energetic production drive; others can hardly be remedied for the present. A temporary hold up was caused by transport shortages during the early part of the year; the railways were unable to carry away all the coal from the mines. Coal piled up at the pits; and the subsequent fall in output may have been due either to the physical impossibility of storing any more accumulated stocks or to a false sense of security on the part of the managers who, with large stocks before their eyes, may have allowed production to slacken. Recent articles in the press have blamed the managers—though it was admitted earlier that transport shortages were mainly responsible for the hold up. Another difficulty has been the supply of labour. The total labour supply has been sufficient, numerically, but its distribution between underground and surface staffs has been unbalanced. In the Karaganda basin, for instance, the mines have been undermanned with hewers and loaders, while surface staffs have been, perhaps, a fifth more than adequate. Yet another explanation suggests some slackness on the part of the miners; the careless use of machinery, resulting in frequent breakdowns, has also been mentioned. "A considerable section of the miners [says *Pravda*] do not fulfil their output quotas." Most of the mines of Kuznetsk and Karaganda take no part in "industrial emulation." Last but not least—probably, in fact, most important of all—difficult living conditions, and particularly poor housing, coupled with very long hours (12 hours a day seems to be the present average) could hardly fail to affect the productivity of labour adversely.

The Government has resorted to the "mobilisation" of the party organisations, as is usually the case when bottlenecks arise. Party members in the mines have been removed from surface jobs and sent underground to inspire the miners to greater effort by personal example. Apart from this:

the secretaries of the party committees and the party organisers must systematically visit the mines to see how the coal is being sent up from the mines, visit the places where the coal is loaded into wagons, penetrate into the heart of things, get to the bottom of the reason for all shortcomings and defects, working for their immediate elimination.

But the Stakhanovite method of work may itself have contributed somewhat to the present difficulties. The press suggests that some coal managers have been hunting for impressive statistical records, which more frequently than not have been the records of individual workers, not at all representative of the average level of productivity. An even pace in output can hardly be attained by a method in which more attention is paid to the records of "1,000 percenters" than to the efforts of the great mass of miners.

THE BUSINESS WORLD

Private Traders

THE exigencies of war have radically changed the composition, direction and organisation of British overseas trade. The composition and distribution of imports and exports, like industrial production, are determined by the need for building up the staying and striking power of Britain and its Allies, within the limits set by available shipping capacity; the shortage of shipping has dictated that supplies should be drawn from the nearest sources without regard to pre-war practices; and, especially before Lend-Lease, the distribution of imports and the size of exports have been influenced by the availability of foreign exchange. The adaptation of overseas trade to war conditions inevitably involved complete Government control over shipments to and from this country; the Government must obviously decide what use is made of available shipping space. Equally inevitable was the Government's decision to enter the field as an importer and, to a lesser extent, as an exporter. Apart from the large volume of military traffic, imports now consist almost entirely of essential raw materials and foodstuffs, which the Government can often handle more appropriately than private organisations by means of bulk purchases. Exports are confined to certain finished goods, designed to meet the essential needs of the Empire, America and other customers. The Government acts through its departments or through the United Kingdom Commercial Corporation—its agent—as buyer and seller of goods to or from overseas Governments and private firms. In consequence of the Government's intervention in overseas trade and of the change in the composition of the traffic, the volume of private trading has suffered a severe shrinkage; and the private trader, moreover, often labours under difficulties.

The Government has an advantage over the private shipper or importer, in that all the formalities which have had to be introduced for the control of foreign trade can be swept aside when a Government department decides to conclude a transaction as part of its general programme. When the initial negotiations have been carried through and the order is placed, the Government department concerned, unlike a private trader, is not hampered by a multitude of rules and regulations. Difficulties can be overcome by a stroke of the pen. The very department which has introduced the rules and regulations can disregard or change them to suit its purpose. On the other hand, when a private firm encounters difficulties which may be due, say, to lack of foresight on the part of a Government official, the authorities concerned often hesitate to introduce any change; it is inevitably very difficult for a private firm to obtain permission to deviate from regulations. The whole procedure of the Civil Service must be set into motion, and it takes a long time. This was illustrated when a system of quarterly import quotas was introduced for Empire or foreign goods, to be imported by private firms. In the case of seasonal products, producers cannot plan their output unless they know their customers' requirements a year ahead. Yet, when private importers tried to obtain an annual import quota, Government officials are reported to have refused to depart from the general system of quarterly quotas, even when this did not necessitate any change in the shipping programme—and involved the risk of a shortage of essential goods.

Originally, this policy of quarterly quotas was applied mainly to imports, regardless from what source they came, Empire, Allied or neutral. Exports received greater consideration, especially during the first two years of the war, when imports were largely determined by the supply of foreign exchange. But in proportion as the export drive became less important—first by the introduction of Lend-Lease and, after America's entry into the war, by the pooling of the resources of the United Nations—Government officials dealing with export licences and shipping

space changed their attitude towards private shippers, and became less tender.

Exporters and importers, because it became more and more difficult to carry on foreign trade under war conditions, sought strength in collaboration. They formed associations, most of which enjoy some measure of official blessing. These semi-independent co-operative schemes (which are usually attached to some Government department, according to the commodities dealt with) are now taking more and more trades under their control. Such schemes are mainly applied to minor commodities which the Government has not yet thought fit to import or export directly, but which are at the same time considered necessary to the war economy. The Government allows private traders to form associations with the object of controlling exports, imports and distribution. Government departments are, as a rule, in close touch, and control operations indirectly. Importers obtain information from the Government about the shipping space available for each country; as a rule, Empire countries obtain priority. The associations decide, in close collaboration with the shipping countries, to which shippers the available space should be allocated, and the Ministry concerned generally determines the price at which the goods are imported. When they arrive in this country, they are distributed by the associations to users in proportion to their pre-war consumption, and importers usually participate on a similar basis. The associations often arrange the collection of a levy on imports, out of which compensation is paid to importers whose sources of supply have been cut off by the war. In the case of exports, the governing factor is the shortage or absence of supplies. The export of such goods as are available for shipment is subject to licensing. These licences are usually individual and issued by the Board of Trade; but there are indications of the development of a system by which global export quotas may be fixed by the Government, while their allocation among export merchants is left to the association or export group of the trade concerned.

These semi-official schemes make use of the services and experience of the shippers—an excellent thing, where possible—and permit them to maintain contact with their

More than a century's accumulated business experience and conservative progress form the background of the comprehensive service which the Westminster Bank is able to place at its customers' disposal.

The Bank's vast resources, its constant touch with current affairs and its extensive system of branch offices in England and Wales and agents elsewhere, combine to enable it to offer a wide range of facilities, details of which will gladly be given on request by the manager of any branch.

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

customers, which is, of course, desirable so long as the war effort is not held back by this consideration. At the same time, they remove many of the obstacles put in the way of private importers and exporters by Government restrictions. Importers organised in such schemes obtain Government support for the shipment of all materials, machinery, tools and parts which are necessary to enable producing countries to manufacture the products concerned. The associations of importers work in close collaboration with manufacturers, distributors, packers or users of the commodities they deal with; an advisory committee, composed of both users and importers under Ministerial control, usually supervises distribution, which is often handled by a firm of chartered accountants, to whom all members of the trade make confidential returns.

The formation of traders' associations has assigned the private firms to retain at least part of their foreign trade. But most of the responsibility for the selection of overseas producers and shippers is left to the authorities in the shipping countries, which means that the selection of shippers and producers is made overseas. Buyers in this country are not enabled to select their suppliers, for the granting of import licences is necessarily conditioned by the export licences for shipments to Britain allotted to overseas countries. British importers thus have to accept offers from suppliers who have managed to secure export

licences; these offers are not necessarily the best that can be secured in the country concerned. Better results—from the viewpoint of individual British buyers, at any rate—might be obtained if the associations could advise the authorities in the shipping countries which goods they prefer.

Some of the complaints of private traders are legitimate; others are not. In the main, the difficulties of the private importer and exporter must be attributed to the war rather than to faulty Government policy. Strategic and other considerations impose frequent and often abrupt changes on imports and exports, and the nation's interests must prevail over those of private traders, even if this means a dislocation of their business. The introduction and growth of direct Government trading, and the consequent restriction of the private traders' sphere of activity, have been unavoidable. There can be no rigid dividing line between the two, no delineation of spheres of activity; when the needs of the war can best be served by direct Government trading, the private trader must yield. The needs are flexibility and efficiency—in trade as in production. But, subject to these conditions, the private trader, individually or collectively, should be allowed to go about his business without unnecessary restrictions and time-consuming formalities. And, where the nation's needs dictate his temporary elimination, due compensation should be the remedy.

Finance and Banking

The Turn of the Quarter

The turn of the quarter passed uneventfully in the money market. Although the discount market's tactics at the bill tender succeeded to the extent of securing for the syndicate a 55 per cent allotment of the bills which included the year-end maturities, the task of taking up this heavy allotment of bills occasioned no difficulty. This was partly due to the fact that the syndicate is in these days no longer allowed to concentrate its applications for bills on a particular day, but must to some extent spread them over the week. Thus the bills taken up on Wednesday, though they were the popular year-end maturities, were far from the market's total allotment for the week. The banks for their part had their position eased by having no Treasury deposit receipt payments to make this week. One may assume that, on the other hand, they had the benefit of almost the whole of the nominal current maturities of £20 millions. The bulk of these were probably due to mature on the final day of the quarter, and the banks would not have sacrificed these particular maturities by pre-encashing them. Although making-up complicated the position this week, the banks found themselves with adequate resources both to extend loans and to buy bills from the market. The Bank return, which was made up at the close of business on September 30th, shows that the disturbances to credit occasioned by the end-of-quarter factors to have been countered and smoothed with the customary adroitness of the authorities. Movements in bankers' deposits have been kept down to a net increase of £998,000, while public deposits have fallen by £1,543,000. This achievement is all the more noteworthy as the net withdrawal of notes during the week amounted to £6,273,000, carrying the active circulation to the new high record of £838,029,000. The main factor in ensuring an even keel in credit appears to have been Government borrowing on ways and means advances. This is reflected in a rise of £6,070,000 in the holding of Government securities. A rise of £14,106,000 in other securities can probably be linked with the accompanying expansion of £4,637,000 in other accounts.

Floating Debt Changes in September

The actual amount of Ways and Means borrowing at the Bank over the turn of the quarter is shown by the monthly debt return to have been £5,500,000. The debt changes between August 31st and September 30th, the period covered by the latest return, show a net increase of £257,334,000. Of this, £91,600,000 was accounted for by the floating debt. The principal movements here were an increase of £50 millions in Treasury bills (the return being made up on a Wednesday, it is impossible to split up the total as between tender and tap bills), and an increase of £65 millions in Treasury deposit receipts. The TDR redemptions over the month amounted to £85 millions, of which £11,500,000 represented pre-encashments to cover subscriptions to new Government issues. Ways and means advances from public departments fell by £28,815,000. As regards longer term issues, Tax Reserve Certificates evidently retain their attraction, and though the machinery of these certificates is now functioning both ways and £9,533,000 were redeemed last month in payment of taxes, a further £39,990,000 of new certificates were issued.

Financing Expenditure

The following table summarises the Exchequer returns of the financial year to date (September 30th) and shows the respective shares of revenue and borrowing in meeting expenditure:—

£000		£000	
Total ordinary expenditure...	2,594,024	Total ordinary revenue.....	1,163,050
New Sinking Funds.....	6,233	Loans raised:—	
Loans repaid:—		3% Def. Bonds (net).....	54,688
National Savings Bonds...	2,507	3% Savings Bonds 1955-65	46,080
Increase in balances.....	357	3% Savings Bonds 1960-70	154,634
		2½% Nat. War Bds. 1949-51	203,176
		3% Funding Loan 1959-69	121,650

	£2,603,121		£2,603,121

The items shown as net are given after allowing for repayments and receipts.

Window-Dressing in August

With the publication of the Bank of England Statistical Summary for August, the data are now available for continuing, in respect of that month, the calculations of clearing bank window-dressing which appeared in *The Economist* on September 12th last. Bankers' deposits in August averaged £133,800,000, the corrected figure for

clearing banks being £127,000,000. The clearing banks' till money for the month averaged £152,000,000, making a total of clearing bank cash, taking the average Wednesday figures, of £279,000,000. Against this, the August aggregate return of the clearing banks showed total cash holdings of £351,000,000. On that figure—the result of the customary window-dressing operations—the cash ratio appeared to be 10.6 per cent. On the true cash figure, the ratio would have been 8.4 per cent, giving an index of disparity of 21 per cent, which compares with 18.1 per cent for July, and averages of 17.1 per cent in 1941, 9.4 per cent in 1940, and 8.3 per cent in 1939. The trend towards more vigorous window-dressing is, therefore, still evident. In comparing the disparity between true and published cash ratios now and before the war, it must be remembered that the pre-war Wednesday figures on which the "true" figures are calculated were more affected by window-dressing than they are to-day. This is because four out of the eleven clearing banks make up on Wednesdays, and before the war they did so four and sometimes five times a month, whereas now they only do so once a month. But this consideration does not affect the comparison between the current figures and those for 1940 and 1941, all of which are truly comparable; and it does not invalidate the contention that the extent of window-dressing has been increasing since the war.

Another point which should be borne in mind is that in the matter of window-dressing the practice of different banks varies widely. All banks tend, quite naturally and justifiably, to let their till money run down over the week-end, since they do not attempt to remedy the effect of heavy week-end wage payments on their total cash by calling in loans from the market. But apart from this general tendency, wide variations of practice are to be found. One at least of the banks makes no attempt to window-dress its position by calling in loans on its monthly making-up day. Since this institution is far—very far—from being the smallest of the clearing banks, the impact of its policy on the aggregate figures is quite considerable, and places the showing of the other banks in a more unfavourable light than the combined returns would indicate. Among these other institutions, it is safe to assume that views as to the minimum below which the cash reserve must on no account fall, are far from unanimous; and, if daily average cash ratios were published, it would not be surprising to see certain banks showing a figure almost half that presented in the window-dressed return. Many would applaud this economy in cash as evidence of the flexibility of the credit mechanism and of the confidence commanded by the banks. They should be given the opportunity of marking their approval. It would be a very desirable innovation if all the clearing banks were to publish the average of their daily cash ratios as a footnote to their monthly returns.

South Africa's Balance of Payments

The comments of the Governor of the South African Reserve Bank, Mr J. Postmus, on the report for the year to March 31st last, were largely devoted to the question of the favourable balance of payments which the Union has enjoyed for the last few years and to the mechanics of the debt repatriation operations which have taken care of the greater part of that balance. No precise estimates can be given, as no statistics of South African imports and exports have been published since the war. But it was suggested by Mr Postmus that the surplus in the balance of payments had been by far the most important factor in the expansion of bank credit in the Union during the year under review. He added that the repatriation of Government sterling debt to the amount of £32,506,000 in the twelve months to the end of last March, had mopped up the bulk of the Union's external balance of payments for the year. This, however, tells very little, because the final balance has evidently been struck after allowing for the considerable transfers of South African securities, mainly gold shares, from British to South African ownership during the period. From the remarks of the Governor on the technique of debt repatriation, it is evident that the Union of South Africa maintains the policy of holding the favourable balance of payments in gold. On the occasion of the vesting order covering some £32,000,000 of South African sterling securities, the Reserve Bank provided the sterling required by selling gold to the British Treasury for the amount in question. The bank then took over the requisitioned securities which were subsequently retired by the Union Treasury as and when the proceeds of two issues placed in the domestic market mainly for this purpose became available.

It is in the light of this operation that the rise in the Reserve Bank's investments during the latest financial year must be interpreted. On March 31st last, they amounted to £18,566,000 against £1,681,000 a year previously. The increase represented sterling securities temporarily held pending their redemption by the Union Treasury. It was not an indication of a change of policy whereby the Reserve Bank had begun the accumulation of sterling investments. Nor was the increase in overseas bills discounted from £490,000 to £6,043,000 to be so regarded. It was explained by the transfer, towards the end of the Reserve Bank's book-keeping year, of a substantial amount by the United Kingdom authorities to meet war expenditure in the Union. Hence, it may be deduced, the policy of the Reserve Bank is to keep its sterling assets down to a minimum, and to accumulate in gold the favourable balance of payments, after allowing for the continued repatriation of various types of capital. Mr Postmus took it for granted "that the present price of gold has come to stay" and that "the future of gold is better assured than ever before." On these assumptions, of course, all should be well with the Reserve Bank's policy.

Investment

The Demand for Equities

The month now ended has brought an almost daily appreciation in the market values of British industrial equities, thus continuing the movement of July and August. Although the rise is faltering, there is no evidence that it is ended. There is a curious consistency in the movements of equities in the third quarter over each of the past three years. Each year has brought a marked rise, amounting to 10.2 points in *The Financial News* Index in 1940 to 6.1 in 1941, and to 8.6 this year. In 1940, the rise continued for another six weeks; in 1941, it began some eight weeks earlier. If the rises for the extended periods are given, the figures become 22.3, 13.2 and again 8.6. On the more extended period, the index of fixed interest stocks rose 9.2 points in 1940 and 3.0 in the following year, but this year is virtually unchanged. Comparing the three peaks—not necessarily peaks for the year—the yields of *The Actuaries' Investment Index* were 6.88, 5.25 and possibly something like 4.85 for equities, while the corresponding figures for 2½ per cent Consols are 3.33, 3.05 and 3.04. This would seem to go some way in support of the belief that the rise in equities is now based on considerations other than a falling rate of interest. When it is considered that, despite increased Government expenditure—which must mean

higher wage bills—and reduced opportunities for satisfaction of current consumption requirements, the total of Government issues is scarcely increased above the 1941 level, it begins to look as though there is an increasing element of hedging against inflation in the buying. The rise has been accompanied by a very considerable widening in the selection of investors taking part. The fact that bargains received touched a high on Monday last for the present system of marking bargains means very little, since the comparison dates back only to June. It is, however, interesting to note that more than one jobber claims to have done more bargains recently than at any time during the war. The general level of business is still said to be moderate, and the impression gained is that investors all over the country are now in the market, rather than the professional or the bigger financial and industrial concerns.

Stock Exchange Statistics

The report of the Committee for General Purposes of the Stock Exchange, London, for the year to 24th March last has just been received. One interesting calculation is the market valuation of quoted securities as on April 7, 1942. Securities quoted in the official list declined in number by 50 to 5,501, but the market value of the reduced number was some £17,457 millions against £15,224 millions for the larger number a year before. The bulk of the rise was due to further issues of existing Government loans, the market valuation being up by £1,865 millions, but there was also a marked increase in the commercial and industrial list, despite a decline in nominal value. For the supplementary list, the number of securities quoted rose from 4,270 to 4,326 but the nominal value fell from £1,166 millions to £1,157 millions, and the market value from £1,250 millions to £1,237 millions. In detail, many sections show increases, and the fall is due primarily to a drop in market value from £549 millions to £495 millions in the mining sections, due presumably to the overrunning of Malaya and Burma. Unhappily, this item is not split into its usual geographical divisions. The record of marks received, and such comparisons as are given for the activities of the Share and Loan Department, suggests an appreciable expansion in the number of bargains done, if not in total turnover. It will be recalled that this has been carried out with a staff, reduced in numbers and increasingly representing, either new recruits, or those returned from retirement.

Montreal Negotiations

The representatives of the City of Montreal are now safely home once more. During their visit to this country, there were full and frank discussions with the British Stockholders' Committee. Relations were cordial, and there is understood to be good hope that a new plan will be evolved satisfactory to all. Messrs. Asselin and Marler were, however, far from being plenipotentiaries, and although they are head of the Council they cannot necessarily carry the Council with them. It must be understood that the whole matter is at large. The Council having rejected a part of the original plan of the Canadian Committee, the whole thing falls to the ground, and a new start has to be made. In a sense, this facilitates the task of taking full account of the views of this country as to the treatment which should be accorded to the sterling issues. But nothing has so far transpired which removes the possibility that the sterling loans will receive special treatment, insofar as the terms of their issue entitle them to it. One point, which has not been sufficiently stressed, is that Messrs Asselin and Marler are new men since the default. They are responsible neither for that, nor for the financial methods which led up to it. What is essential is that there should be something like a guarantee of sound finance for the future. The plan broke down largely because the system of control by the Quebec Municipal Council, even as then amended, proved unacceptable. The problem is to amend this further, but to secure reasonable assurances as to the future, as well as reasonable terms of reorganisation. Against the tangle of local politics this may not be easy, but there are apparently some hopes that it will be achieved.

Third Quarter's Capital

New capital issues in the third quarter of 1942 were the lowest for the year, although the nine months' total is

still above the 1941 level. As in the second quarter, there was a further decline in the total of Government issues, but, unlike that period, there was also a sharp reduction in the total of non-Government issues. Total issues for the third quarter amounted to £301,553,100, including issues by "permission to deal," against £351,296,500 for the corresponding quarter of 1941, while Government issues amounted to £299,967,300, against £348,140,300. There were few notable industrial issues, and the total of the important miscellaneous manufacturing total rose only by £471,300, made up of a number of small items. The most substantial new offer of the quarter was the issue of £1,960,000 Electricity (Civil Defence) 3 per cent debentures by the Central Electricity Board. In the realm of Government issues, there was a recovery in the popularity of 2½ per cent National War Bonds, which brought in £133,039,374 against £94,217,769. Savings Certificates, Defence Bonds and 3 per cent Savings Bonds all brought in less than in the second quarter, the biggest fall being that in Defence Bonds from £40,784,755 to £23,666,005. The outstanding feature of the quarter has been the number of conversion issues, following the lifting of the Treasury ban. Thus, out of a total of £26,989,173 for the first nine months of the current year, third quarter conversions accounted for £20,724,069, among which the LPTB conversion of over £12,000,000, and the number of brewery operations were notable. The comparable figure for the third quarter of 1941 is £4,062,600. The new capital applications, which are analysed in three tables below, suggest, above all, the need for stimulating the sale of Government issues.

TABLE I—TOTAL BORROWING (MILLION £)

India Loan Agreement

The news that an agreement has been reached between the United Kingdom and Indian Governments in connection with sterling Indian railway annuities has no effect whatever on the status of the annuitants. It is merely a means of absorbing a part of the huge sterling surplus accumulating in this country. Under the arrangement, the Treasury undertakes, in return for a loan of £30,954,250, to put the Indian Government in possession of funds to meet the sterling annuity payments as they fall due. The amount involved is some £34 millions and the discount given 2½ per cent. The annuities expire at various dates during the decade ending 1958, with possibly an average life of some 13 years. This would give the loan an average duration, since it will be repaid in annual instalments, of possibly six years, on which basis the 2½ per cent rate is about right. The accumulation of sterling over the past six months is of the order of £190 millions, some of which is required for note issue cover. At this rate, the new arrangement will cover only one month's accumulation.

Company Notes

Unilever Earnings

There is nothing in the full report of Lever Brothers and Unilever, Ltd., for 1941 to suggest that there was any decline in gross earnings as against 1940. With the exception of Eire, all Empire factories oversea achieved new records, while at home large outputs were secured in most sections. Although some of these were below pre-war level, oil refining and hardening reached new high records. The overseas profits made up over 30 per cent of the total, and it may be assumed that the fall in the published figure was due mainly to the payment of EPT at the full rate, somewhat accentuated by increased provisions for repairs and maintenance. Full particulars for the past three years, so far as available, are set out below:—

Company's Share of Group Earnings:	Years to December 31,		
	1939	1940	1941
Profit after Interest	£13,300,000	£15,260,451	£14,629,540
Depreciation and Repairs	3,485,000	3,885,000	3,920,000
ARP	123,000	150,000	147,000
British Income Tax (net)*	£700,000	£1,550,715	£2,403,252
Additional Tax Reserve	...	1,400,000	1,600,000
War Damage	...	274,446	259,625
Funding Staff Pensions	1,379,657	1,403,749	...
Net Consolidated Profit	7,648,644	6,596,541	6,299,663
Retained by Subsidiaries, etc.	906,591	892,529	464,074

* Figures arrived at by deducting tax recovered on dividends, net interest, from gross charges of £4,208,439 in 1940 and £5,469,278 in 1941.

Among the above appropriations, two call for special comment—staff pensions and income tax. The 1940 appropriation for the former has been increased to the figure shown by taking over, substantially, the amount set aside a year ago for provision against the NV company's preference dividends, since paid by that company. It has not been thought necessary to provide against these this year. The funding of staff pensions is now complete, but there remains a liability of some £1,500,000 for back service pensions which it may be found desirable to deal with by a block grant at some time. Spread over a decade or so, this sum ranks as an expense for purposes of EPT and income tax. The income tax appropriation for the year, of some £5,500,000 gross, represents the liability on one quarter of 1939 and three quarters of 1940. The tax reserve appropriation, with some £400,000 over-provided for EPT, covers all special liabilities up to the end of 1941, so that, from now on, no further special appropriations should be necessary, and the net charge of under £2,500,000 should cover future liabilities. As the EPT liability was substantial, it seems that, short of a catastrophic fall in earnings, the actual consolidated profit should be approaching stability.

The above explanations make it evident that the appropriations in question ought to be spread over a longer period than the two years in which they were actually made, in arriving at any estimate of movements in the

value of the ordinary shares. Unfortunately, no such distribution is feasible, and, in the following table, earned percentages are calculated on the basis that these appropriations belong solely to the years in which they are made. On the basis of the assurance that the company's share of the sums retained by the subsidiary and allied companies enure to the benefit of the equity holders of the parent, the earned percentages in the accompanying table have, however, been calculated on the net consolidated profit of the group, less only the preference and preferred ordinary dividends of the parent. This means that the appropriation to contingencies, intended to cover the possibility of having to find the dividend of NV ordinary, is treated as being available for the ordinary shareholders of *Limited*. It seems quite impossible to say whether this will in fact be so. The liability to find the NV payment only becomes absolute subject to the resumption of normal relationship between the two companies. If it should then prove that NV has earned the money necessary to meet the ordinary dividends, the question of *Limited* finding them presumably does not arise. Further, it is probable that the question of beneficial ownership will raise problems of extreme complexity. If this appropriation is excluded, the percentages fall to 25.0, 17.8 and 13.1, respectively. Since the end of 1941, soap rationing and a number of other developments have affected the group's work, but it is improbable that they will disturb distributable earnings. With regard to losses in the Far East, the bulk of

Company Allocations:	Years to December 31,

* Gross.

† Calculated on additions to free reserves retained by subsidiaries as well as those of parent.

these concern NV, and have not been dealt with in the accounts of *Limited*. Capital losses in Burma and the Pacific Islands are amply covered by reserves, but stock on consignment and claims on third parties have been reserved in full in the 1941 accounts. The price of the £1 stock units was not affected by the report. At 30s., they yield £3 6s. 8d. per cent.

Triplex Setback

The full Triplex accounts for the year to June 30, 1942, make disappointing reading. The worst feature is the drop in trading profits from £187,041 to £87,725, the lowest level since 1931-32. The fact that this drop has only been partially passed on to equity earnings is due to the reduction of nearly £5,000 in depreciation, which receives £12,403; to the decline in tax liability from £95,000 to £50,000 and to the failure to write anything off ARP, which absorbed £16,089 in the previous year. None the less, equity earnings are reduced from £61,410 to £26,138, representing 8.1 against 18.9 per cent, so that the ordinary dividend, maintained at 10 per cent, is under-earned. Since there is no capital loss against nearly £60,000 in 1940-41, there is no transfer from reserves. Two small amounts totalling £1,643 are transferred to specific funds and the carry forward is reduced from £18,582 to £10,720. In the absence of any explanation by the directors, it is hard to see why the management maintained the ordinary dividend at 10 per cent, despite a relapse in trading profit, unparalleled in recent years, and substantially more serious than that implied in the preliminary statement. The balance-sheet indicates a rise in stocks of some £44,000 to £291,437 but a small decline in debtors. An increase in the total of cash holdings is mainly responsible for the increase in net liquid assets, excluding inter company items, from £652,445 to £700,544, despite the fact that creditors are some £100,000 higher.

The total of reserves and surplus is little changed at £915,203 against £923,065. The 10s. ordinary stock, which yields £3 6s. 8d. per cent, appears over-valued at the current price of 30s. ex dividend.

Small Aircraft Results

The results of three small aircraft producers, recently issued, show that in two cases, those of *Blackburn Aircraft* and *Folland Aircraft*, total disclosed earnings for the latest financial years reached new record levels. In the third case, that of *Boulton Paul Aircraft*, the latest results bring the story down only to July 31, 1941, and the rise from £71,119 to £83,107 for that period leaves the figure still below the record of £99,230 earned in 1938-39. Three years' earnings and dividends for the concerns in question are analysed in the following table. The incidence of war taxation has effectively restrained the trend of equity earnings and in the case of *Blackburn* the rise in tax provision from £110,000 to £135,000 is responsible for a reduction in the earned rate from 16 to 15.5 per cent. In the other two cases, surplus earnings are somewhat higher on the year, but in no case is there any increase in ordinary payments. Balance sheets show a consistent expansion in debtors, stocks, including work in progress, and indebtedness to bankers, coupled, in general, with a reduction in cash holdings. The most marked signs of expansion in turnover are provided by *Blackburn Aircraft*, where stocks and work in progress are more than £500,000 higher at £2,005,826, while there is a bank overdraft of £250,000 against nil. It is evident that the concerns are experiencing some difficulty in financing the expansion from internal resources, and the chairman of *Boulton Paul*, Mr R. G.

Company and Date of Accounts	Total Disclosed Profit	Earned for Ordinary		Div.	September 30, 1942	
		Amount	Rate		Price ex. Div.	Yield
Blackburn Aircraft:— (March 31)

† After EPT

Simpson, announces the intention of the management to extend that company's borrowing powers from £1,000,000 to £2,000,000. He is no doubt correct in asserting that the transient nature of the increase in turnover makes undesirable a permanent issue of capital to shareholders. For the present, it is clear that present dividend rates are in all cases comfortably covered. According to *The Actuaries' Investment Index*, the yield on aircraft shares fell 1½ points to under 9½ in the year to end-August. By this criterion two of the three concerns are judged to have prospects above the average.

Neepsend Steel Report

Total income of Neepsend Steel and Tool declined in the year to March 31st last from £149,083 to £136,202. In view of the decision to make no transfer, against £5,000, to investment depreciation account and of the reduction in EPT provision from £40,000 to £35,000, the decline is

ESTABLISHED 1824

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

and 48, Pall Mall, S.W.1.

not fully passed on to equity earnings, which amount to £97,037, against £100,005. The total ordinary payment for the year remains at 50 per cent, including a 20 per cent bonus, and is covered by earnings of 63.4, against 62.6 per cent. As in 1940-41, general and contingencies reserves each receive £10,000, so that the carry-forward is raised from £12,970 to £13,545. The chairman, Mr S. C. Goodwin, considers that the setback to profits is not out of line with current trends. It is most probably to be attributed to a reduction in profit margins on Government contracts. The consolidated balance sheet shows a further increase in liquid assets, indicating that turnover has risen. Net liquid assets show a considerably smaller rise from £540,492 to £561,206, due mainly to the rise in tax reserve. After the latest appropriations from profits, the total of reserves and surplus is up from £431,305 to £462,841. The company's balance-sheet shows a decline in net loans from subsidiaries from £88,061 to £57,947. The results are satisfactory, and there is every probability that dividends can be maintained. The 5s. ordinary stock, at 25s. 6d. ex dividend yields £9 16s. per cent.

Oil Company Contrast

The 1941 accounts of *Attock Oil* and *Lobitos Oilfields* show a striking contrast in earnings, although both concerns are maintaining the ordinary dividend at 10 per cent. In the case of *Attock*, which operates in India and elsewhere, total income has risen to a new high level at £795,770. The ordinary payment is covered with 0.2 per cent to spare and the carry forward is raised from £114,359 to £117,015, subject to three years' additional directors' fees, calculated not to exceed £7,000. Comparison with equity earnings of the previous year is not strictly possible, since the £500,000 provided for UK taxation in 1940 was in respect of both 1939 and 1940. There is no transfer to reserve last year or in the previous year. The accounts of *Lobitos*, the Peruvian concern, show, on the other hand, a decline in trading profits from £184,362 to £140,202, largely, as the chairman, Mr H. C. R. Williamson, points out, on account of the time lag caused by the establishment of new wartime markets. Thus, there is a drop in equity earnings from 31.9 to 16.8 per cent, and the carry forward is raised at the cost of reducing the transfer to reserve from £100,000 to £25,000. A loss on sale of investments—due to the Treasury call up of dollar securities—of £9,940 has replaced a profit of £5,519 and is debited direct to investment reserve.

* And Contingencies for Attock; Attock provision in 1940 includes that for 1939.
† Attock earnings after charging 2 years' taxation in 1940.
‡ Subject to 3 years' additional directors' fees.

The *Lobitos* balance sheet provides ample evidence of the contraction in business, which should, however, prove to be only temporary. Debtors are more than £130,000 lower at £470,874, while creditors and stocks of crude oil are also down, and there is a consequent expansion in cash from £69,983 to £383,906. *Attock* shows a similar expansion in cash holdings from £263,588 to £481,837, but stocks of oil are higher and the reduction in debtors is very modest. There is a total reduction of £114,010 in additions to capital equipment during the year, and the chairman, Sir Louis Dane, reports that the water occurrences in the Dhulian wells have reduced production. Until new oil reserves can be discovered, the future of the concern is not fully assured. The loss of the Burmah oilfields makes the maintenance of output from both *Attock* and *Lobitos* a matter of the first importance for the United Nations. The *Attock* £1 shares at 38s. 1½d. ex dividend yield £5 4s. 11d. per cent; those of *Lobitos* at 38s. 9d. ex dividend yield £5 3s. 2d. per cent.

Industry and Trade

Pooling of Inventions

It has long been recognised that, in order to maximise the Anglo-American war effort, the pooling of ideas is an essential counterpart to the pooling of raw materials and industrial capacity. A good deal has, in fact, been done towards bringing about a closer interchange of information on production processes; the principle of pooling has been formally recognised in an agreement concerning the Interchange of patent rights and information, signed by Mr Cordell Hull, American Secretary of State, and Lord Halifax, in Washington, on August 24th. By the agreement, which has now been published (Cmd. 6392),

each Government, in so far as it may lawfully do so, will procure and make available to the other Government for use in war production, patent rights, information, inventions, designs or processes requested by the other Government.

Each Government is to bear the cost of the procurement of such patent rights, information, inventions, designs, or processes from its own nationals. Unless otherwise provided, all patent rights shall be acquired and used for the purposes and for the duration of the war only. The agreement contains detailed provisions about the conditions in which the interchange of patents and other information is to take place. Both the United States and the United Kingdom can contribute much to the common pool of knowledge about the production of war materials, and, in so far as the Agreement will speed up the interchange of ideas and patents, it is to be welcomed. It is to be hoped that its operation will not end with the war, but that it will pave the way towards the unification of patent laws in the interests of the consumer after the war.

Road Transport

The Government's road haulage scheme, providing for the chartering of a nucleus fleet of lorries by the Ministry of War Transport, and, alongside it, for a pool of vehicles fed by Government traffic but managed by the industry, continues to attract criticism. As was pointed out in *The Economist* on September 12th, the main cause of the industry's dissatisfaction seems to be the fact that its facilities have not been fully utilised in recent months. From the national point of view, the emergence of an unused margin of road transport capacity is a definite gain; if the total volume of traffic has not decreased, it means that the other means of transport are being used more efficiently, and that the railways are carrying a bigger load. But the reserve of road transport capacity is precious; it will probably have to be drawn upon during the winter, and constitutes a vital nest-egg for an emergency. As Mr George Wilson, chairman of the British Road Federation, pointed out in his address at the annual meeting of the Federation,

if in the interests of economy and efficiency all goods road vehicles cannot be used all the time, then the difficult but not impossible task remains of organising the road transport industry's resources so that they may be at any time available when the need arises.

The mistake made by the Government in allowing the dispersal of part of the labour force in coalmining must not be repeated in the road haulage industry. Its reserve of unused capacity must be maintained, and the responsibility is the Government's.

Distribution of House Coal

From next Monday a new system for the regulation of the supply of house coal is to come into operation under arrangements made by the Ministry of Fuel and Power, in consultation with the house coal collieries and the Merchants' Consultative Committee. Its main feature is the introduction of a programme of weekly deliveries to scheduled depots. The coal supply officers are to inform the divisional house coal officers of the quantity of house

coal which will be available for distribution from week to week, to allocate it among the collieries concerned, and to see that each depot receives its allocation regularly. In a circular to the trade explaining the scheme, Mr H. W. Cole, the Director-General of the House Coal Distribution (Emergency) Scheme, stated that the fundamental object of this arrangement is to ensure that the limited supplies of house coal available are spread fairly among the depots so that they can in turn be shared proportionately among merchants. The distribution of the supplies reaching the depots is to be the responsibility of the divisional house coal officers. The percentage share of each merchant and dealer is to be determined, in co-operation with the local officers under the House Coal Distribution (Emergency) Scheme, on the basis partly of the actual supplies reaching the depot from week to week, and partly on each merchant's or dealer's performance during a prescribed datum period. The collieries have assured the trade that so far as possible they will preserve the normal channels of trade and the normal qualities, and that the coal will be invoiced and consigned to the individual factors or merchants as at present, but it is expected that it may not be possible always to ensure factors or merchants their appropriate percentage, and that, therefore, it may become necessary for those receiving more than their due share to transfer the excess to those receiving less. The charge for such transfers must not exceed 1d. per ton, and it is explained that the object in fixing this nominal figure is to remove the element of profit from any accidental increase in tonnage which a distributor may receive under the new arrangements. It will be seen that these very largely suspend the individualistic methods under which the house coal trade has hitherto been carried on, and difficulties and anomalies are apprehended; but in each of the eleven regional divisions advisory disposal boards are being appointed, and it is provided that any factor or merchant who may consider that he is suffering serious hardship in the process of redistribution may appeal to the house coal officer, who will have power, on the advice of his fuel disposal board, to make adjustments to secure equity. Nevertheless, merchants in many districts are said to be severely critical of the scheme and predicting either its modification or withdrawal.

Electricity Charges

Many consumers have been deterred from reducing their electricity consumption on the grounds that under certain charge systems, a smaller meter reading did not reduce their bill. So that this deterrent to saving may be removed, the Ministry of Fuel and Power has made the Electricity Minimum Charges Order (S.R. & O. No. 1927), which will begin to operate for the meter readings of the last quarter of this year. The Order removes any statutory right the electricity undertakings may have to make a minimum quarterly charge to consumers regardless of the actual amount of current consumed. Instead, it provides that a minimum charge of 25s. may be made for a twelve month period, even where the actual cost of the electricity consumed is less. The 25s. is considered to be the minimum charge for which the undertakings can provide the service of a public utility to individual consumers. The yearly basis for the minimum charge has the additional advantage of enabling the consumer to spread the cost of power over the uneven quarterly consumption periods. Tariffs such as all-in or two-part tariffs are not affected by the Order. The Joint Committee of Electricity Supply Associations has, however, recommended undertakings to allow consumers to change to a flat rate if it is to their advantage owing to reduced consumption.

New Tin Scheme

After a meeting in London last Monday, the International Tin Committee announced that a new agreement was signed on September 9th. Its signatories are the Governments of the United Kingdom, Bolivia, Free-Belgium and the Free-Netherlands, that is to say all the

partners of the last agreement with the exceptions of Thailand and French Indo-China, which have passed under Japanese control. The new agreement for the control of supplies has been put into force with effect from January 1, 1942, and thus links up with the last five years' agreement, which terminated on December 31st last. Negotiations for the new scheme started in January, 1941, and before the end of March, 1941, the partners of the previous agreement recommended unanimously the prolongation of collaboration for another five years. Later, however, difficulties arose about proposed changes in the standard tonnages of the various member countries, and before these difficulties could be settled war had broken out in the Far East and four of the seven member countries of the scheme (apart from Thailand and French Indo-China, Malaya and the Dutch East Indies) had passed under Japanese control. Only about one-third of the world's tin supplies have been left at the disposal of the United Nations. This fact in itself shows that the immediate value of the agreement is confined to the exchange of information on tin production and the maintenance of regular contact between the Governments of the producing countries outside Axis control. The communiqué issued after Monday's meeting of the ITC stated "the policy of the Committee is to encourage, during the war period, the maximum possible production of tin, in all territories not under enemy control," but it is difficult to see any new and practical steps the Committee could take in this direction. The only decisions taken during Monday's meeting appear to have been the election of the Committee's Chairman and Vice-Chairman and the adoption of a control policy for the near future. The chairman is again Sir John Campbell, while the chief Dutch delegate, Mr P. H. Westermann, has been elected vice-chairman. The policy for the time being is to be one of non-interference. The export quota has been fixed "until further notice" at 105 per cent. of the new standard tonnages, but it is expressly stated that if any territory should be able to exceed this rate the quota will be increased retrospectively. In present circumstances, the fixing of an export quota is no more than a formality, which must be observed under the agreement. It suggests, however, that the new scheme, like its predecessors, is a scheme aiming at the prevention of surplus supplies if that should prove necessary in future. As such a necessity will not arise for the duration of the war, it appears that the chief reason for the signing of the new tin agreement has been the desire of the Governments of the producing areas concerned to create an instrument to smooth the change-over of the tin industry from war to peace conditions. But if the ITC is to serve as an instrument for the regulation of tin supplies after the war, in the spirit of the Atlantic Charter, its constitution will have to be amended to give the consumer an effective voice in its decisions. The text of the new agreement was not yet available when this issue of *The Economist* went to press.

Concentration of Clothing Production

The concentration of the clothing industry presents many difficulties. There are no fewer than 25,000 firms engaged in clothing manufacture, many of them very small, scattered, and specialised. About 2,000 firms have been "designated" as producers of utility and Service clothing. Nonetheless, some younger labour in these firms may be withdrawn, and some of their factory space may need to be utilised for other purposes. In general, however, designation carries with it certain guarantees of labour and premises. The process of concentrating non-designated firms was initiated early in July, when Sir Thomas Barlow, Director-General of Civilian Clothing, met representatives of makers-up of men's, women's and children's clothing, and of the trade unions concerned. At the meeting, proposals were outlined for an orderly concentration on a regional basis, in order to release factory space and labour for more urgent needs. In the Leeds district, plans have reached an advanced stage, and the first instalment of concentration is now taking place; details are not yet available. Last week, Sir Thomas Barlow met employers' and workers' representatives in Manchester to initiate discussions for the north western region. The Board of Trade is pursuing its usual policy of allowing the industry to make its own plans; only when voluntary means have failed has it stepped in with an official plan. Clothing manufacturers in other parts of the country are now waiting to be told what degree and kind of concentration is wanted from them. Since concentration is in-

evitable, manufacturers would prefer the plans to be made with the shortest possible delay.

Fats Supplies

The Combined Food Board, which was established last June to pool Allied food resources, this week announced the introduction of a plan by which the United States and Great Britain will acquire the whole world supply of oils and fats outside Axis control. The plan is the result of a comprehensive survey of supplies recently conducted by the Combined Food Board, which has shown that, following the heavy losses of copra and palm oil in the Pacific region, the Allied supply position has become tight enough to demand central control. The United States and Great Britain are to be buyers for the pool, and buying regions have been defined. The former is to acquire all supplies of oils and fats from the American continent, including the West Indies, and excluding only the animal fat supplies of Argentina and Uruguay, and all copra from Tahiti and the Fighting-French islands in the Pacific, as well as oil and fat supplies from Liberia and Spanish and Portuguese Africa. The United Kingdom will have a monopoly for animal fats in Argentina and Uruguay, for all supplies of oils and fats in the British Empire (including only those from British territories in America, the Belgian-Congo and Fighting French Africa. Each country will release part of its purchases to meet the requirements of the other members of the United Nations. In this country the existing consumers' rations and restrictions on allocation of oils and fats to manufacturers will remain in force, while in the United States the restriction of manufacturers' allocations of oils and fats is planned. Acquisition of all available supplies on the one hand, and restriction of consumption on the other, will, according to the expectations of the Combined Food Board, allow the accumulation of substantial reserves of oils and fats to meet future contingencies. This pooling plan, following the tea pooling scheme, is the second of its type adopted by the Combined Food Board. In announcing the new oils and fats plan, the Board stated that the scheme was part of its general strategy, which aims at efficient acquisition and allocation of the more important food supplies to the United Nations to their common advantage. It is like that similar schemes for other staple foodstuffs will be introduced in suitable cases. Besides assuring adequate supplies for essential purposes, this pooling of purchases also makes for the liquidation of surpluses held by producers. The schemes, therefore, meet with approval of producers, including those in neutral countries, like Portugal and Spanish Africa, who are included in the oils and fats plan.

Food Control Order

The chief object of a recent Ministry of Food Order—the Manufactured and Prepacked Foods (Control) Order 1942—is to obtain full information about a wide variety of food manufacturing and pre-packing operations over which there is at present no control, in order to ensure that the best possible use is made of all foodstuffs and also of the limited supplies of packaging materials available. The Order requires returns to be made in respect of every food manufactured, pre-packed, or both, that is, packed in advance for retail sale in a wrapper or container. The Order does not apply to food manufactured in preparation for the production of a food of a different description, for instance, the manufacture of baking powder by a baker for use in his own cakes; nor does it apply to food manufactured by a caterer solely for the purpose of sale as a meal, or part of a meal, in his own establishment. The packing provisions do not apply to canning processes, nor to food wrapped for sale on the premises where it is packed. Certain foods are exempt from the provisions of the Order and a list of these has been issued by the Ministry. The Order also provides for the subsequent licensing of the manufacture or packing of any foods for which returns are required, as and when the necessity arises; and a further Order describing the food to be licensed and stating a date will be issued. This Order is probably a step in the right direction, in that it extends the control of the Ministry of Food over food production and preparation, and will provide the data which will enable them to take stock of the whole position.

(Continued on page 430)

COMPANY MEETINGS

LEVER BROTHERS & UNILEVER, LIMITED

THE CHAIRMAN'S REVIEW FOR THE YEAR ENDED 31st DECEMBER, 1941

will be proposed at the annual general meeting on October 8, 1942, that this resolution be taken as read and there will be no need to read it from the chair.)

THE LATE SIR D'ARCY COOPER

At the close of the year—on December 18, 1941—the chairman of the board of directors, Sir Francis D'Arcy Cooper, died. In paying tribute to a great industrial leader, whose death was rightly looked upon as a loss to the nation as a whole, his colleagues on the board have foremost in their memories his outstanding personality and sense of duty, honour and fair play, joined to exceptional abilities, and his admiration and devotion engaged in this business.

CHANGES ON THE BOARD

Besides the change in the chairmanship, other changes on the board have taken place. Mr Herbert Davis, C.B.E., and Mr Paul Rykens have become vice-chairmen. Mr A. G. Short, for many years prominently connected with the group of miscellaneous oil companies, has joined the board and taken charge of that group. Mr Albert Van Bergh, who became an advisory director in 1941 on relinquishing the post of vice-chairman, has retired after a connection with the company and its associated businesses of more than 48 years. Mr Charles Edmund Tatlow, who became an advisory director after relinquishing his directorship in 1941, has retired on completing 40 years' service with the company.

TRADING

For obvious reasons a general picture of trading can be given.

At home: Throughout 1941 our soap businesses carried out programmes laid down by the Government, production falling approximately pre-war figures. Our margarine factories operated at high rates for the account of the Ministry of Food.

Crushing activities, also under Food Ministry control, were on a large scale, used below pre-war levels. Production of the oil feeding compounds had to be curtailed. Oil refining and opening throughputs were well above normal.

The food companies experienced varying fortunes, but, in total, output continued to reflect progress. MacFisheries successfully overcame many difficulties connected with war-time distribution of fish.

Overseas: The outputs of our important Canadian, Australian, South African, Indian and other Empire soap and edible fat factories established new high records, contributory causes being virtually unrestricted raw material supplies, increased spending power and some element of speculative trade buying. Eire was a notable exception due to restriction of raw materials. During the year a soap and edible fat factory in Ceylon came into production.

The importance of the primary products of West Africa to the Allied war effort has brought added responsibilities to the United Africa Company. All departments throughout the British Colonies, Free French and Belgian territories have worked at high pressure in full collaboration with the various Governments. Many new problems connected with produce buying, storage and transport have been successfully solved. The import and merchanting side of the business has been heavily taxed to provide the volume of textiles and manufactured goods essential to stimulate the African producer to his greatest effort. The results achieved testify to the energy and initiative with which difficulties have been overcome.

All these overseas interests account for just over 30 per cent. of the combined trading profits of the company.

CAPITAL EXPENDITURE, DEPRECIATION AND REPAIRS

Capital expenditure was necessarily restricted. £1,379,000 was spent mainly upon projects initiated prior to the war, extensions necessary for war-time programmes, and additional facilities for research and for special war-time operations. Against this, £654,000 was realised by the sale of assets, of which the principal was the whaling fleet sold for £479,000. These amounts do not include expenditure on, or compensation for, assets lost by enemy action.

Revenue was charged with £1,965,000 for depreciation, £1,955,000 for repairs and maintenance, and £147,000 for additional A.R.P. installations.

PRODUCTION AND RESEARCH

Shortages of usual commodities have been an incentive to the production and research staffs to exercise successfully their ingenuity and powers of improvisation so as to maintain the quality of products.

STAFF

Excellent relations between the management and staff continue; the scheme of works committees and councils, which have operated in the larger units for many years, is now being extended to every factory in the organisation. The provision of works and office canteens has been very largely augmented to meet war-time conditions.

28,700 employees in the British Empire are members of the pension and provident funds whose investments amount to £10,641,000.

Over 10,000 employees of our regular staff are serving with the armed and civilian services, all of whom receive financial assistance from their companies and retain their membership of the pension and provident funds.

The spirit that animates the whole organisation is all that it should be, and it is largely for this reason that the standard of efficiency stands so high.

Through their war savings groups, more than 21,000 employees in Great Britain alone have subscribed close upon £900,000 to the National War Savings Campaign from its inception.

THE FUTURE

Since the close of 1941 many events have occurred which have influenced the course of our activities both at home and abroad. The fact that the resources of the company are largely devoted to products that are necessities of life fortunately tends to minimise some of the adverse consequences. What the final effect on the current year's results will be cannot be forecast with any certainty; but it is hoped that the consolidated profit will not differ materially from the 1941 figure.

GOLD MINES OF KALGOORLIE, LIMITED

The annual general meeting of this company was held, on the 29th ultimo, in London.

The following are extracts from the statement by Mr P. E. Marmion circulated with the report:—

The working profit of £121,040 was £58,854 lower than that of the previous year, chiefly due to a reduction of 0.77 dwts. per ton in the yield of gold and an increase of approximately 10d. in working costs. The mill has again operated very efficiently. The rate of production has been maintained.

Towards the end of the year it became clear that the national interest would require gold-mining operations to be considerably curtailed, in order to release men for more urgent work directly associated with the war effort. Both development work and production have already been reduced, and discussions are now in pro-

gress with the object of making the most effective use of the available manpower. These conditions will lead to increased costs and lower profits in the immediate future, but everything possible will be done to maintain the present satisfactory conditions both underground and on the surface so that, directly circumstances permit, it should be possible to contemplate an early readjustment of production to the normal level.

The report was adopted.

GOLD EXPLORATION AND FINANCE OF AUSTRALIA, LIMITED

The annual general meeting of this company was held, on the 29th ultimo, in London.

The following are extracts from the statement by Mr P. E. Marmion circulated with the report:—

Largely owing to a decrease in the total distribution by Victoria Gold Dredging and the absence of dividends from Triton Gold Mines and Western Gold Mines, the company's income was reduced from £94,337 to £52,765. On the other hand, the continued improvement in operating results of Central Norseman Gold Corporation enabled that company to reduce its indebtedness by £165,104 and the balance of £23,815 outstanding at March 31st has since been repaid. The greatly improved cash position resulting from the year's operations made possible the redemption of the outstanding notes on June 30th.

For some time prior to the close of the year operations were being carried on with increasing difficulty owing to shortage of men, and having regard to the growing difficulties of carrying on gold mining in Australia it is inadvisable to make any forecast as to the future. Stockholders, however, can rest assured that every effort will be made to continue operations to the best advantage on the properties in which the company is interested.

The report was adopted.

ATLAS ELECTRIC AND GENERAL TRUST, LIMITED

INVESTMENT VALUATION

The thirty-fourth annual general meeting of this Trust was held, on the 29th ultimo, in London.

Mr W. Sandford Poole (the chairman) said that they had submitted no valuation of their investments in last year's report, but he had estimated the depreciation at about 27 per cent. at March 31, 1941, reduced to 22 per cent. by the end of August, 1941. Since that time there had been some broadening of the stock markets, and they had therefore had an informal valuation prepared. That valuation showed a depreciation of about 21½ per cent. on the total at which the investments stood in the balance-sheet now submitted. If they eliminated the depreciation of their investments in enemy countries and in countries in enemy occupation, the depreciation would come out at less than 12 per cent.

The gross revenue received during the year amounted to £283,904. United Kingdom taxation at £125,972 increased by £17,666. The income of the Trust after taxation amounted to £157,932. The balance carried to the balance-sheet was £118,677.

The year's dividend on the preference shares, less income-tax, required £110,906, leaving a balance out of the year's revenue of £7,771.

As to the current year, he repeated what he had said in July, 1938, namely, that until they could obtain an income from the investment in the Montevideo subsidiary, he feared there was little prospect of resuming the distribution of dividends on their ordinary share capital.

The report and accounts were adopted. Resolutions relating to the constitution and remuneration of the board and the position of the managing director were proposed by a shareholder, but lost on a show of hands.

ANGLO-IRANIAN OIL COMPANY, LIMITED

INCREASED PROFITS AND DIVIDEND

SIR WILLIAM FRASER'S STATEMENT

The thirty-third ordinary general meeting of the Anglo-Iranian Oil Company, Limited, was held, on the 29th ultimo, in London, Sir William Fraser, C.B.E. (the chairman), presiding.

The following is an extract from the chairman's statement circulated with the report and accounts:—

It will be observed that the balance-sheet total does not differ very materially from that of the previous year. Creditors show a small increase due mainly to liabilities for taxation. With the depreciation provided, and little new construction during the year, a decrease of nearly £1,000,000 is shown in the refinery, tank installations, pipe-lines and buildings.

Investments in subsidiary companies, at £11,726,207, are less by £500,000, as we have considered it advisable to continue our policy of providing adequate reserves against the company's assets in enemy and enemy-occupied countries. Debtors show an increase of about £600,000, arising

through the normal course of business. It will be observed that British Government securities and cash have increased by £5,400,000, due mainly to the decrease shown under the headings of refinery, tank installations, pipe-lines and buildings, and investments in subsidiary companies to which I have referred, along with the reduction of over £2,250,000 in advances to subsidiary companies. There has also been an increase of nearly £1,000,000 in deposits by subsidiary companies. Trading profits of £6,032,347 show a welcome increase of about £300,000, while an increase of £111,000 in the receipts for interest, due to our increased holdings of Government securities, will be noted.

CURRENT YEAR'S GOOD START

I am sure that the board's decision to recommend a payment of 7½ per cent., as against 5 per cent. for 1940, will be welcomed by all stockholders. Although the increase is small and the dividend much less than that to which the stockholders had become accustomed in pre-war years, yet it is a step in the right direction. Few chairmen would be rash enough to predict future results in uncertain times like these when changes in fortune occur so rapidly. I can, however, tell you that the level of profits for the current year so far shows a material increase.

I informed you last December that two of our directors, Mr J. A. Jameson and Mr N. A. Gass, were in Iran. Mr Jameson, after a stay of more than eight months, returned to London at the end of May and has been able fully to inform his colleagues on the board of the satisfactory conduct of our operations. Mr Gass is still in Iran. It was indeed fortunate that two of our directors were in Iran at the time when the heavy losses of territory occurred in the Far Eastern theatre of war, making the Persian Gulf a still greater centre of activity in the Allied cause.

Once again it is, unfortunately, impossible for me to give you any detailed account of the company's operations. I must content myself with stating that they have proceeded as satisfactorily as possible in the conditions ruling. I may say, however, that I look forward to the day when I may speak to you freely of our activities during the war, when I feel sure all stockholders will feel gratified and proud of the achievements of the company. In the meantime, it will be realised that the company's operations, whether as regards production, refining, distribution or transport, must obviously be governed entirely by the Allied needs, so that the war may continue to be prosecuted with the utmost vigour.

Our relations with the Iranian Government remain cordial and co-operative. The report was unanimously adopted.

(Continued from page 428)

Co-operative Wholesale Trade

The turnover of the Co-operative Wholesale Society for the first six months of this year was £75,222,032, which has encouraged the directors to recommend an interim dividend of 5d. in the £, together with a special bonus of 1d. in the £ on purchases. The previous dividend was 4d. The improvement in turnover is attributed "to the adoption of fairer methods of distribution." The distributive societies will receive £1,674,964, which will assist them to maintain the rate of dividend allocated to their members. The output of the CWS productive works totalled £22,920,358 for the

period. Grocery sales rose by 15 per cent to £55,162,913, and there were increases of 7 per cent and 24 per cent in the drapery and men's wear departments, the totals being £2,860,120 and £1,702,115, respectively. The turnover of the contracts and export department was £1,844,899, an increase of nearly 2 per cent. Sales to the Ministry of Food accounted for £2,323,250, a decrease of 9 per cent. The agricultural section had a turnover of £1,661,123, a decrease of 7 per cent, but there were substantial advances in the supplies of meat and milk, the figures for these being £5,801,311 and £4,958,822 respectively. The directors have just donated £1,000 to the United Aid for China Fund, sponsored by Lady Cripps.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: all dealings are for cash

ALTHOUGH the figure of 5,656 markings on the opening day of the current week was the highest yet recorded since June last, it would appear from the trend of prices that actual turnover is rather lower than the scale of markings suggests, especially in view of the continued shortage of stock. In the gilt-edged market, certainly, turnover was of small proportions and hardly sufficient to affect prices, but apart from minor losses for Old Consols and Local Loans the undertone was distinctly firm throughout, several medium-dated stocks advancing in midweek. A similar lack of interest prevailed in the foreign bond market, Chilean bonds falling at the end of last week, although the 4½ per cent loan of 1898 recovered a point on Tuesday, when a general weakening of Brazilian stocks ensued. The 4 per cent Egyptian Unified loan was firm throughout. Average daily markings of over 400 reflected the renewed activity in the home rail market, demand being focused on the ordinary and junior preference stocks. Among the latter, both LMS and Berwick preference issues were in demand, while Southern preferred and deferred advanced ½ point on the week. There was little of interest in the foreign rail market, although quiet support occasioned small improvements for Argentine rail equities. Outstanding, however, was the

Peruvian Corporation debenture which rose 2 points on the week.

Both markings and prices continue to rise in the industrial market, although some slight irregularity became apparent in midweek. Movements in the brewery group were trendless and without significance, but the Chancellor's statement on tobacco revenue occasioned a slight rally among tobacco shares, in which Imps were especially prominent, advancing ½ after smaller previous gains. The strong upward movement in the motor and aircraft section, which at the week-end occasioned good gains for Hawker Siddeley, De Havilland, Brown Bros. and Thornycroft, was not apparent at the reopening; but further useful gains were recorded for J. Lucas and Hawker Siddeley in midweek. Colliery shares were prominent in the heavy industrial group, Staveley advancing steadily, with quiet support for Sheepbridge and Shipley, while Powell Duffryn hardened on the announcement of the projected merger with Cory Bros. Renewed demand for textile shares occasioned a resumption of the recent rise for practically all issues, Bradford Dyers, Calico Printers and Fine Spinners preference in particular enjoying useful gains; but the initial strength of the movement was not maintained in midweek. Shipping issues were without interest, but in the miscellaneous section International Nickel advanced strongly, although Brazilian Traction weakened. Among other issues to advance, Turner & Newall and United Glass Bottle were prominent with good

gains, while in a firm stores group, Selfridge preference were outstanding.

The firm tendency in the kaffir market at the end of last week failed to extend into the current week, and with the decline in support prices tended to weaken, although on balance recent gains were only slightly reduced. Apart from a fall of 1s. 6d. for Upper Assam, tea shares were firm, Nuwara Elya and Travancore both gaining this amount; while in the rubber market United Sua Betong, Tamiang and Malayalam all advanced ½ on the week. Active support for Mexican Eagles in the oil market raised the shares a few pence, while Anglo-Iranian was outstanding with a gain of ½ on the chairman's statement. Attock, however, fell 2s. on the report that water was entering the wells, but in general leading shares remained quietly steady.

New York

STIMULATED by the threat of inflation, Wall Street last week-end witnessed its most active session for some time past, although widespread profit-taking prevented any marked improvement in quotations. Despite the decline in activity in the current week, and continued profit-taking, prices in general were well maintained, with several rail issues touching new high levels for the year, while Atchison Topeka advanced to its highest price in five years on the increased dividend. In midweek the market closed steadily after a day of irregular movements.

COMMODITY AND INDUSTRY NEWS

Fireclay Standard.—The British Standards Institution has issued a specification (No. BS 1074), at the request of the Ministry of Works and Planning and in co-operation with the Ministry of Fuel and Power, for fireclay bases for use with open coal fires. The fireclay bases will replace cast iron baskets. They have been designed to economise the use of cast iron and of fuel.

Sugar Allocations.—From October 18th, allocations of sugar will no longer be granted for the manufacture of cake, pudding and sponge mixtures, breakfast cereals, and prepared breakfast foods, meat and fish pastes, and custard and blancmange powders, or for meat and bacon curing. The sugar allocations to the chocolate and sugar confectionery industry will be reduced by one-third from the same date.

Knitted Garment Restrictions.—The Making of Civilian Clothing (Restrictions) (No. 14) Order (SR and O No. 1919) which comes into force on November 1st, restricts the leg length of all men's socks to 9 inches and 9½ inches for foot lengths not exceeding 10½ inches and exceeding 10½ inches respectively. Restrictions are also imposed on the length of boys' socks. Striped and turn-down tops are prohibited for three-quarter length hose. Trimming, embroidery and appliqué work are forbidden and restrictions imposed on buttons, pockets and tabs on knitted jumpers, pullovers and cardigans. Knitted scarves may no longer have fringes, embroidery, trimmings or appliqué work.

Export Control.—The Export of Goods (Control) (No. 39) Order (SR and O No. 1907) comes into force on October 12th. Under it, licences will be required to export to all destinations, locust bean kernel gum and size, magnesium chloride and mixtures containing magnesium chloride, and papain. The existing licensing requirements in respect of various natural gums, resins, lacs, oils, fats and greases and waxes are modified. Control is extended to cover all mixtures (other than paints and medicinal preparations) containing casein and ingredients derived from casein. It is made clear that the control in respect of soap of all kinds does not cover scourers containing less than six per cent by weight of anhydrous soap.

CONVERSIONS AND REPAYMENTS

LPTB Conversion.—Following on the notice of the repayment of £12,583,000 of 4½ per cent JFA stock 1942-72 at par, it is announced that holders may exchange into LPTB 3 per cent guaranteed stock 1962-72 to be issued at 97½ together with a cash payment on January 1st next of £2 10s. per £100 stock to cover difference between redemption price of the old and issue price of the new stock. This offer closes on November 18th.

Selection Trust Limited.—It has been decided to redeem the £419,220 5½ per cent debenture stock outstanding on December 31, 1942, at 103 per cent. Existing holders are invited to convert to the extent of £400,000 into a new 3½ per cent debenture stock to be issued at 97 per cent repayable at par by a 2 per cent sinking fund to effect final redemption December 31, 1973.

Shorter Comments

Brazilian Traction, Light and Power (\$000).—Gross operating revenue in month of August \$3,995 (\$3,724), net earnings before depreciation and amortisation \$2,155 (\$2,040). Aggregate gross earnings from Jan. 1st-Aug. 31st \$30,695 (\$27,852), agg. net earnings \$16,336 (\$14,961).

Canadian Pacific Rly. (\$000).—Gross earnings in August \$22,054 (\$19,990), net earnings \$3,220 (\$3,146). Aggregate gross earnings since January 1st \$165,013 (\$139,189), aggregate net earnings \$28,437 (\$26,261).

710 successful prosecutions. Out of the successful cases, 128 were dismissed under the Probation of Offenders Act. Fines of £1 and under were inflicted in 950 cases; fines above £1 and up to £5 in 950 cases; fines above £5 and up to £10 in 154 cases; and fines above £10 and up to £20 in 74 cases. In 207 cases the fines exceeded £20, and in 32 cases sentences of imprisonment were imposed.

GOVERNMENT RETURNS

For the 11 days ended Sept. 30, 1942, total ordinary revenue was £70,868,000, against ordinary expenditure of £132,550,000, and issues to sinking funds of £300,000. Thus, including sinking fund allocations of £6,233,059, the deficit accrued since April 1st is £1,437,206,000 against £1,504,050,000 for the corresponding period a year ago.

Marsh Beings

WE have to build [Hitler said in Berlin last week] roads and paths, sometimes through marshes. If people say that the Russians can cross the marshes without paths, I reply that they are not human beings. They are a kind of marsh beings." Morale and material factors weigh in war, some experts have said, in the ratio of three to one; and the Fuehrer is deeply concerned about the continuing high morale of the Russian people. The suggestion of the bewildered Nazis is that the Russians hold on because they belong to a lower order than the "cultured" people of the German Reich. It may indeed be that the low standard of living in revolutionary Russia has bred a correspondingly high degree of endurance; for a generation, heavy sacrifices for the common good, long privations and grievous sufferings have hardened the Russian people for their supreme trial. But there is much more than physical endurance behind the Russian resistance. The present generation of Russians is, above all, a generation of pioneers. They are frontiersmen. The mental vigour, the willpower and the eagerness to learn and achieve, which were typical of those who built the British Empire and of the first generations of North Americans, are also the distinctive marks of a people which has been ready to surrender most of the comforts and joys of ordinary life in order to build, say, a Magnitogorsk or a Dnieprostroi. The

impact of revolution is far from spent. The Russian people believe that they are building a new and better order. It is true that the grandeur of their vision has time and again stood in sharp contrast to the miseries of their everyday life during the two-and-a-half decades since the revolution started. But, deep in their hearts, the hope is alive that all the sacrifices and sufferings have been no more than the necessary evils of transition, nothing but the birth-pangs of a new society.

This is the key to the enigma of Russian morale which so much baffles Hitler and his confederates. It is the double hope of social progress and national preservation which has inspired the defenders of Sebastopol and Stalingrad and sustained the men who have scoured the Russian earth. The present Russian generation has learned very little from those who went before it. It started the building of a new Russian society almost from scratch. The people of the Soviets take an ardent, and often naive, pride in their achievements; and they feel, in this war, that they are defending their life work, even when they turn to destroy their homes, their factories, their oil-fields, their coal-mines and their crops.

It is no contradiction of this unchallengeable claim to high morale that compulsion has played, and still plays, a huge part in the Soviet war effort. Indeed, compulsion has been applied in Russia throughout the years of

NUNDYDROOG MINES LIMITED

At a meeting of the Board of the Company held on 24th September, 1942, the undermentioned dividend was declared:—

Interim Dividend on account of the year ending 31st December, 1942, of 9d. per share (or 7½ per cent. actual), less Income Tax at 5s. 11½d. in the £, payable on the 30th October, 1942, to the shareholders on the books of the Company at the close of business on the 24th September, 1942.

By Order of the Board,

C. H. D. GARLAND, Secretary.

9, Gracechurch Street, London, E.C.3.

24th September, 1942.

Printed in Great Britain by ST. CLEMENTS PRESS (1940), LTD., Portugal St., Kingsway, London, W.C.2. Published weekly by THE ECONOMIST NEWSPAPER, LTD., at Brettenham House, Lancaster Place, London, W.C.2.—Saturday, October 3, 1942.

emergency, on a scale certainly unthinkable in any western society brought up in the traditions of democracy and personal freedom. But it should never be forgotten that the *leitmotiv* of Russian history, almost from its beginnings, has been the absolute preponderance of authority. The ideas of personal freedom and independence have never struck lasting roots in a country whose rural population, until the outset of this century, was organised in the *mir*-communities and whose main industries were established, not by independent entrepreneurs, but by absolute monarchs, on the basis of serf labour. History has taught countless Russian generations to regard the individual as only an atom in an immense social body—the church, the state, the *mir*, with first claim on the liberty and life of the subject. The revolution is bound up with that tradition; the slogans of Marxist collectivism have been fitted into the traditional pattern.

It is because of this spirit and these traditions that the Soviet state, long before the war started, was able to harness all the productive and human resources of Russia to its war effort, on a scale and with a consistency for which no parallel can be found. Immense masses of labour have been organised and moved from one end of the Eurasian continent to the other. Capital investments were made which, for years, left the country with a deficit in consumers' goods; war stocks were accumulated in peacetime while consumption was kept at the lowest possible level.

As far back as February, 1931, Stalin made this plea:

To slow down the pace means to lag behind; and those who lag behind are bound to be beaten. But we do not want to be beaten . . . the history of old Russia shows that our country was uninterruptedly beaten for its backwardness. We were beaten by the Mongol Khans; we were beaten by the Turkish Beys; we were beaten by the Swedish feudatories; we were beaten by the Polish and Lithuanian landlords; we were beaten by the English and French capitalists; we were beaten by the Japanese barons. We were beaten by all for our backwardness . . . Remember the words of the pre-revolutionary poet . . . "thou hast been poor and thou hast been plentiful, thou hast been mighty and thou hast been helpless, Mother Russia."

Stalin was speaking, more than eleven years ago, to Russia's economists. He was looking towards the creation of a national *mystique* around the omnipotent state—and to the war that was coming. By reference to the pre-revolutionary past of his country, he was proclaiming the mission of the Soviet state to put an end to the traditional backwardness of "mighty and helpless" Russia. There are two sides to the bright and shining medal of Russian morale. There is, first, the boundless

claim of the state on the mass of the people; there is, secondly, the belief of the people themselves in the reality of their country's mission. This is the combination which has bred the endurance of the "marsh beings" who bewilder the conqueror of Europe and his military chiefs, and its reality has been written in blood and deeds which have shaken the world. "Marsh beings," intended in contempt, may be the greatest tribute a country has ever wrung from its foes.

The Germans, too, have aided the maintenance of Russian morale. Every Russian peasant, no matter what his past grudge against collective methods, now knows that bare survival is the stake. By their rapacity the Germans have undone themselves; the agricultural new order of the Ostland, a regime of ruthless requisitioning, has done nothing to win over that part of the peasantry of Russia who may perhaps still dream of private farming; the extinction of the last traces of Ukrainian and White Russian autonomy has destroyed the last illusions of the separatists who may before have rested some hopes on Berlin; insistence on the direct and unconcealed incorporation of the Caucasus in the Nazi *Lebensraum* has shown every Caucasian that Moscow is his only hope.

There is little danger that the miracle of Russian morale will be undervalued by Russia's allies. A greater risk is that they will take too much for granted and assume that this morale is sufficient unaided. Morale is an imponderable; because men are human it goes up and down. It would be wrong to assume that, because Russian morale has achieved so much, in terrible straits, it will remain unaffected by the material worsening in Russia's staying power. The people of Britain, above all, should know how the morale of a nation at war changes and fluctuates. Even in Russian morale, there was an ebb during the long retreat of 1941 and a climax during the great defence of Moscow. The peak at Stalingrad was preceded by a slackening on the Don and Kuban. At every crisis, the Soviet Government intervened with vigour to strengthen the spirit of the people at the front and behind it by every means it commanded: political appeals, stern disciplinary measures, drives to step up supplies, all these have played their part—with very remarkable success in the Caucasus and on the Volga. But hard facts remain. Hitler's hope is that, after a second winter of war and hardship and prodigious privation, morale in Russia will break. The hope may be unrealistic. But the strain which the coming winter will put on the people of Russia cannot be denied or glossed over. In the making of Allied strategy and in the forging of Allied action, the limits of the endurance of even these magnificent "marsh beings" must be a major motive, if the Russian miracle is not to be lost and wasted.

Full Employment: The Means

THE conclusions of last week's article on Full Employment were twofold. In the first place, the problem of Full Employment is essentially the problem of the trade cycle. Not all forms of unemployment, it is true, are the products of cyclical depression. "Normal minimum" or the so-called "dynamic" unemployment is an inevitable concomitant of the mobility of labour; seasonal unemployment is as great in years of good trade as in years of bad; and the unemployment that arises from the decay of individual industries is another special—and grievous—case. But the two former could easily be cared for, and the third would be vastly alleviated, if it were possible to avoid the much larger and more widespread unemployment that comes with trade depressions; and it is with these depressions that diagnosis and cure must chiefly concern themselves. Secondly, the way to prevent recurrent depressions is to secure that the community's investment in concrete capital goods is both large enough to embody its Savings and regular in volume from year

to year. Full Employment could be secured by state subsidies in aid of consumption in bad years; but there is a variety of practical reasons for preferring a policy of stabilising investment.

One of the most important of these is that, in subsidising consumption, only the state can act, while in stabilising investment, it can stimulate the activities of others. This is a vital distinction. If the whole burden of maintaining investment were thrust on the state, the task might well be beyond its means, even in these days of enormous budgets and swollen administrations. The state, as an investor, is subject to a large number of limitations. It has difficulty in entering the field of competitive industry, and these difficulties do not arise solely from the jealousies of private capitalists. So long as there is any form of activity, publicly or privately owned which is expected to pay its way, it will naturally resent and oppose the breeding of subsidised competitors. Heavy investment by the state would lead to an inflation of the

national debt and to all the difficulties, real or imaginary, that arise in consequence. These will be the subject of a third article; but it may be interposed here that there are reasons for being more distrustful of public debt than of private debt. The state's difficulties in entering competitive spheres naturally lead it to concentrate its "public works" in fields that are not financially remunerative, such as public buildings, roads, bridges and the like. These things are necessary and desirable and they yield non-monetary dividends; but if too much of the community's savings are invested in forms that yield no money return, there will be trouble. The individuals who save do so in the expectation of monetary return on their savings. A man who has saved all his life cannot live on the magnificence of the local Town Hall or on the smooth directness of the nearest by-pass. If the standard of material living is to maintain its steady rise, it is essential that as much as possible of the community's savings should be invested in forms that will yield a tangible and material dividend in the future—and that is what any state short of the totalitarian has difficulty in doing. Totalitarianism is, indeed, the ultimate end of a "public works" policy, for if any departments of the community's economic life are to be kept independent of the state (whether or not they are collectively owned) it is imperative that they should be constantly reinforced by a stream of new capital investment.

All this is not to say that the state should never engage in capital construction on its own account—on the contrary, there is an inescapable obligation to do so if the alternative is a cyclical depression—but it is to say that "public works" should be regarded as a very poor second best. The primary object of an investment policy should be to see that private investment is kept steady at a high level, and only if that fails to close the gap by "public works." The word "private" is used here to cover investment by any persons or institutions which are financially independent of the Exchequer. A public corporation such as the Central Electricity Board or the London Passenger Transport Board is, in this sense, "private," and the doctrine that the main reliance should be on the stimulation of "private" investment is in no way in conflict with the spread of public ownership. On the contrary, the more public corporations and boards there are, the more influence the economic policy of the Government can be expected to have on the total of non-state investment. Central control over the timing of capital expenditure by these bodies is a point that should be remembered in drawing up their constitutions.

The overwhelming importance of private investment can be illustrated by a few figures. In 1938, out of a net national income (at market price) of £5,040 millions, the total of private net investment at home and of private and Government net investment abroad was £351 millions. But, in a re-armament year, a sizeable proportion of the Government expenditure at home must also

have been on capital goods; this cannot have been less than £150 millions, bringing the total to £500 millions. But these figures are all "net"; they exclude the expenditure necessary to maintain the existing capital of the country. Obviously, for practical purposes, it is impossible to distinguish between a machine that represents a new investment from one that is to replace an old machine; and for the avoidance of unemployment it is as important to see that the money set aside in depreciation funds is all spent as to see that the money set aside as savings is all invested. So, to get an idea of the dimensions of the problem, it can be said that in 1938 the British community spent about £900 millions on capital goods, £500 millions of it from savings and £400 millions out of depreciation funds. But even this sum was not enough to secure full employment; 1938 was a year of only middling trade. From what has happened since, it seems likely that the net national income of 1938 would have needed to be about 10-15 per cent higher to ensure full employment; at a guess, about £250 to £350 millions more of expenditure on capital goods might have been required to secure this. These figures are only rough, but their order of magnitude is right. At the price level of 1938, the requirement for full employment was that from £1,150 to £1,250 millions—say, £1,200 millions a year—should be spent on capital goods. This would represent approximately one-fifth of the gross national output (that is, including the maintenance of capital).

This figure is very much larger than is usually realised, and its magnitude serves to illustrate why it is that attempts by Governments have in the past so frequently failed to produce any effect on the state of trade. Mr Lloyd George's proposals a dozen years ago envisaged the expenditure of £200 millions, and though this was considered to be an impossibly large sum in terms of the public finances, it was obviously too small to exercise any dominant effect on the conjuncture. The American equivalent to the British figure of £1,200 millions would be something like \$20 or \$25 billions, and Mr Roosevelt's peacetime deficits of \$4 or \$5 billions, for all the shouting they provoked, were obviously not in proportion to the problem. Indeed, the quantitative approach provides a clear illustration of the importance of private investment. When the required total is £1,200 millions, a "public works" programme of £200 millions may easily do positive harm, if the circumstances of its announcement are such as to create an atmosphere of alarm and frighten the private individual or institution with money to lay out.

The main endeavour of a Full Employment policy must, therefore, be to maintain a large and steady volume of expenditure on capital goods by persons and institutions other than the Exchequer itself. How can this be done? The instrument that comes most readily to mind is, of course, the rate of interest, and it is certainly to the public advantage that, whenever the volume of investment shows a falling tendency, the state should ensure the

War-time conditions have proved the advantages of appointing the "Royal Exchange" as Executor and Trustee under a Will. This ensures a permanent and expert administration and can be associated with a private co-trustee.

existence of large funds available for borrowing for investment at low rates of interest. So much has been written on this subject in recent years that it would be impossible to summarise it here and foolish to attempt to add anything. But though reductions in the rate of interest may, in certain circumstances, have a very powerful effect, it would be unwise to place too much reliance on them. Even the lowest rates of interest may fail to make borrowing attractive, if the risks of investment appear to be too great. This is another very large subject—on which, however, in contrast to the rate of interest, the bulk of the writing has yet to be done—and it is hardly possible here to do more than take note of its importance. Some risks—those of war, for example—are beyond the power of economic policy to control; but by far the largest element of risk in investment would be removed if the state could firmly establish its ability to prevent cyclical depressions of trade and its determination to do so. In this respect, nothing will succeed so directly as success.

In the interim period, however, before control of the cycle comes to be taken for granted, it is unlikely that the indirect means of influencing private investment by low rates of interest and by measures to reduce the risk element will by themselves be enough. Some more direct and positive methods of stimulating investment will be required. Much could be done by means of taxation. Thus, there is no reason why the allowances that are made from the income-tax liability of industrial companies for the depreciation of plant should be immutable from year to year. In bad years, they could be doubled—provided the whole amount were spent. Much could also be done by direct control and encouragement. A National Investment Board has hitherto usually been regarded as a means for discouraging unsound investment in boom years. But it would be still more useful as a means of encouraging and facilitating investment when the state of the national economy requires it. The greater the

volume of collective enterprise, the greater should be the influence of the Investment Board, and it is by no means fanciful to look forward to a time when such a Board could, of its own motion, release very large sums for investment.

By all these and other means, the state should do its utmost to keep the volume of normal investment (including its own expenditure on capital goods such as armaments, slum-clearance schemes or post offices) at the required level. It should not be difficult to calculate, almost from month to month, the desired figure, which has here been estimated to be about £1,200 millions a year in the circumstances of 1938. The central principle of the economic policy of the state should be to see that the total of investment exactly equalled that figure, neither more nor less. The task of preventing inflation would indeed remain—in a peculiarly acute form—and to replace a chronic tendency towards deflation by a chronic tendency towards inflation would be an exchange of evils. With Investment and Savings balanced at the highest possible level of employment of resources, the dangers of the nation seeking to increase its investment in monetary terms when no real increase in employment or production is possible are plain. But if the total of investment showed this tendency to rise above the target, the state will surely have (it has already) plenty of effective means of arresting the tendency. If the total of investment showed a tendency to fall below the target, then—but only then—the Government should engage in additional "public works" to whatever extent might be necessary.

This is the barest outline of a Full Employment policy. Provided it was executed on a large enough scale, it would not fail to work. Of that there need be little question. But—as was stated at the beginning of this series of articles—what is still unresolved is the cost that would have to be paid for the attainment of Full Employment. That will form the subject of a concluding article.

Financial Strategy

THE financial side of Britain's mobilisation for war has been handled with much more success during the first three years of the present conflict than during the corresponding period of the last war. The instrument of taxation has been used more efficiently; surplus spending power has been directed into savings more effectively and at a lower rate of interest; and the shrinking supply of essential consumption goods has been distributed more equitably by means of rationing and price control. In sum, the Government has succeeded this time in appropriating, by means of taxation and voluntary savings, a greater proportion of that part of the total of individual incomes which corresponds to what it pays for the physical resources it has transferred to its own use for carrying on the war. The higher degree of financial success in this war is often ascribed with a good deal of justification to the more dexterous handling of the controls, that is, to greater skill in the tactics of finance; actually, however, it is due even more to the better understanding of the rôle of money in war, of the strategy of finance.

Taxation, especially direct taxation, is playing a much more important rôle in war finance than in 1914-18. During the four financial years 1914-15 to 1917-18 revenue (mainly taxation) provided £1,844 millions, or 26 per cent, of central Government expenditure amounting to £7,013 millions; for the financial years 1939-40 to 1942-43 (the figures for the current financial year are estimates) revenue totals £6,934 millions, or 44 per cent of the national expenditure of £15,648 millions. During the calendar years 1940 and 1941, nearly one-half of central Government expenditure requiring domestic finance was covered by revenue; in the current financial year, revenue will contribute more than one-half. Income tax and surtax are expected to yield nearly £1,000

millions during the current year, more than four times as much as in 1917-18. True, the standard rate of income tax was increased more than fourfold between 1913-14 and 1917-18 from 1s. 2d. to 5s.; but the highest rate ever reached during the last war was 6s., compared with the present figure of 10s. Moreover, the incidence of direct taxation is now much heavier on all ranges of incomes.

How severely the higher income categories have been dealt with was shown by the Chancellor of the Exchequer in receipt of net incomes (after taxation) exceeding £6,000, against 7,000 in 1938-39; in the £4,000 to £6,000 group the number was 1,170, against 12,000; in the £2,000 to £4,000 group it was 30,750, against 56,000; and in the £1,000. to £2,000 group 105,000, against 155,000. For all practical purposes, there is now a ceiling of about £6,000 on individual net incomes; and only a mere handful of individuals are able to retain net incomes over £4,000. (Details of changes in direct taxation on incomes of £2,000 and over since 1913 are given on page 466.)

Savings, too, are at a higher rate than during the last war, while rationing and price control now assure the essentials of life to the poorer section of the community much more effectively than 25 years ago. A comparison of the last and the present wars reveals how much more effectively the Government is now using the financial controls. Broadly, the rise in both prices and wages was twice as rapid in 1914-17 as in 1939-42. The *Economist* 1914-17, compared with 60 per cent in 1939-42; the official cost of living index advanced by 80 per cent against 30 per cent; and wage rates by nearly 60 per

cent against 30 per cent. Moreover, as *The Economist's* quarterly analyses show, business profits have been effectively stabilised since 1939 by EPT.

In every respect, then, British war finance in 1939-42 stands the test of comparison with the first three years of the last war. But if the controls have so far been handled more dexterously than 25 years ago, they have by no means functioned perfectly. The Government has not entirely succeeded in reducing the spending of civilians proportionately to the shrinkage in the supply of consumption goods; in other words, it has failed to withdraw purchasing power corresponding to the transfer of resources to its own war uses. Consequently it has been compelled, to some extent, to make good its own deficiency in purchasing power by having recourse, indirectly, to the "printing press." True, the dose of inflation has so far been small, and, since the prices of essential consumption goods are controlled, it has made itself felt mainly in the category of non-essentials. But the conditions of inflation, excess purchasing power side by side with a dwindling stock of civilian goods and services, do exist. The financial position at the end of three years of war is, by any standard of comparison, encouraging. But the problem now is to preserve the gains which have been made by making quite certain that latent inflation cannot become active. The task will not be easy. The country's resources are now almost fully employed. The supply of new consumers' goods available for civilian purchase must continue to decline and, inevitably, the civilian purchasing power available for their purchase will outstrip their total value at current prices at a progressive rate, even if the volume of purchasing power is not itself swollen further. Hitherto, as Mr Kalecki points out in the current issue of the *Bulletin of the Oxford Institute of Statistics*, the depletion

of stocks has cushioned the effect of the reduction in the output of civilian goods, but this cannot go on.

In the absence of a further increase in civilian spending power, the further reduction in the supply of new consumers' goods, which is inevitable, need not give rise to serious difficulties. In theory at any rate, they would be overcome by the means which have already gained so much success, by the extension of rationing and price control and by still higher taxes on non-essentials. But it is very doubtful indeed whether these existing weapons for combating inflation—taxation, savings, rationing and price control—will be adequate to deal with any further substantial increase in purchasing power due to still higher wages and salaries. Experience suggests that the time has now come for the adoption of a defensive strategy in war finance, that is, for putting the brake on further general increases in personal incomes. This is a democratic country; and on Wednesday last week the Lord Chancellor, on behalf of the Government, strongly deprecated the suggestion that collective bargaining should be abandoned in favour of state regulation of wages. But what if maintenance of collective bargaining means the maintenance of the pressure for higher wages? If the Government could effectively restrain this pressure, the arguments for preserving the peacetime machinery *in toto* would be wholly convincing. But unless the organised trade unions are ready to show more economic understanding than at present, the pressure will continue; and mere exhortations on behalf of the Government will be no substitute for a deliberate policy to restrain increases in all forms of income, salaries no less than wage earnings. Unless the rising tide of purchasing power in the hands of the public is arrested, the dam, which is already leaking, may well give way under the strain.

Banks in the Dock

NO excuse need be offered for restating the fundamental factors that determine the variations in the volume of bank credit in this country. Much of the exposition may be *vieux jeu* to most readers of *The Economist*; but it is apparently still the most exciting novelty to the many people who, at the signal given by the Archbishop of Canterbury, have recently rushed into dogmatic pronouncements on the subject—pronouncements which may well have fostered among the general and uninstructed public a feeling that they and their interests are in the hands of a clique of bankers wielding some sort of sinister and secret power, and wielding it none too chivalrously. Such an impression could do a great deal of quite unjustified harm, and, in so far as it rests upon misrepresentations of fact, it is important that these should be exposed.

The case for the prosecution may be summarised as follows: "The banks create credit; bank credit now constitutes over 80 per cent of the money circulating in this credit; hence the exercise of this power of credit creation involves a delegation to private institutions of the right of issue, which should be vested in the state; there is all the more reason for transferring this power of credit creation from the banks to the state because banking in this country has become a monopoly; finally, the banks add insult to injury by actually charging interest on the credit which they are able to create out of nothing." It is not possible to answer this charge simply by saying that "the whole case falls to the ground because no bank can lend resources which have not been deposited with it." The fact that, since the beginning of the war, the total of bank deposits in this country has risen by over £1,000 millions is sufficient proof that credit creation has been proceeding at a very considerable pace, and that this has occurred by some process of which the banks themselves cannot have been wholly unaware.

The real answer, of course, is to ask whether it is not a fact that actual responsibility for this creation of credit rests, not with the banks who are pilloried, but with the state itself, to which, so these indignant critics suggest, a total monopoly of banking should forthwith be given.

But there is one item in the charge sheet where categorical and complete refutation can be made, and it can be removed at once. There is no banking monopoly in this country. The fear of such a monopoly was engendered by the great banking amalgamations of the last war. It led to official action as a result of which Treasury and Board of Trade sanction has been required for every bank merger effected since 1918. Apart from certain agreements among the banks to limit the rates paid on deposits and to desist from active competition for business during the war (they are specified in a note on page 447), the big joint stock banks are independent and competitive units. Moreover, they are surrounded by many institutions, such as savings banks, building societies, private and overseas banks, hire purchase finance houses and the like, whose activities impinge on theirs at many points in a highly competitive way.

What then of the basis of the indictment, namely, the contention that banks create credit? The answer, of course, is that they do, but that there is nothing reprehensible or peculiar in the fact. The banks are far from unique in this respect. The tradesman who gives his customers one or three months to pay for his bills also creates credit. Any act of confidence which allows goods and services to be exchanged without immediate payment is a creation of credit and provides an addition to the

WANTED.—Joan Robinson's "*The Economics of Imperfect Competition*."—Wm. Dawson & Sons, Ltd., 43, Weymouth Street, W.1.

immediately available and effective volume of purchasing power. The banks share this power with every other corporation or individual of sufficient substance or reputation. But they wield it in a manner which acquires special importance and significance from the fact that the bulk of the purchasing power employed in this country consists of cheques drawn on bank accounts. When a bank grants a loan to a customer, or gives the Government credit by buying a Treasury bill or National War Bonds, it is making available immediate purchasing power. But it does not follow that every loan or every purchase of securities by a bank creates an equal amount of deposits. The addition to earning assets may be neutralised by a contraction elsewhere; and the process of credit creation will only be rounded off if the banks can continue to command the confidence of the public and re-attract as deposits the additional credit created by the expansion in their assets. A loan whose proceeds are taken out in the form of cash will not immediately create a deposit. Its only effect on the banking position will be to increase the loans of the bank concerned and to reduce its cash; the deposits will be unaffected.

Let it be assumed, however, that the confidence is there and that the credit circuit is not broken by any undue tendency to hoard currency. What, then, determines the extent to which banks can vary the total of their assets and so create or destroy credit? There are two fundamental factors. One is variable, that is, the amount of bank cash available (this consists of currency in the tills and balances maintained by the banks with the Bank of England); the second, the ratio of cash to deposits maintained by the banks, is more or less constant. Many practical bankers will vehemently deny that they ever create credit because, they assert, whenever they decide to make an additional loan or buy more securities, they know they have the required money in their account at the Bank of England. But this argument loses sight of the dynamic character of the credit situation; it ignores the fact that the cash used, as the loan is drawn upon or the securities bought, is not destroyed, but returns to the banking system. The total cash basis remains unaffected by this particular bank's operation, but deposits will have increased in step with the increase in earning assets. At the same time, the ratio of cash to deposits, which must have been slightly above the normal figure when the expansion in assets was decided upon, will have gone back towards normal. The important point is that the volume of this basis of credit is determined by the Bank of England acting in the closest co-operation with the Treasury. Given that the banks work to a more or less constant cash ratio, it is thus with the authorities that the decision lies as to what the total amount of bank credit is to be. The commercial banks' rôle in this mechanism is, first, to decide upon the distribution of the existing volume of credit; and, secondly, to operate the mass of credit, that is, the bank accounts, which constitute so large a part of total purchasing power. In an economic

system made up of a large number of competing and privately owned units, there is everything to be said in favour of allowing a number of banks, themselves in keen competition, to perform this function of selecting credit worthy borrowers. The dangers and abuses of monopoly are avoided; but these dangers and abuses would be courted if, side by side with free industrial and commercial enterprises, there were to be a monopoly of credit operated under complete State control.

These generalities can be clothed with facts. Two sets of facts are germane: the changes which have taken place in the banking position in this country during the war; and the remuneration actually derived by the banking system for its part in the expansion of credit—a point which seems to stick in the throats of so many people. Since August, 1939, clearing bank deposits have risen by some £1,060 millions, and the main counterpart to this movement has been an increase of £480 millions in the banks' investments and the lending of £630 millions by the banks to the Treasury in the form of six months' deposits. In other words, the propelling force in the expansion of bank credit during the war has been the accumulation of Government paper by the banks. The final cause is state policy in wartime; the trend simply reflects the wartime intrusion of the state in the national economy; and the fall of bank advances by some £200 millions during the same period is a partial measure of the corresponding contraction which has inevitably taken place in the sphere of private enterprise. The question which is most often asked, of course, is whether, in view of this switch from normal, banking operations to the purchase and discount of Government paper, the banks have not been overpaid for their services; and it must be admitted that the new type of wartime banking operation is one which calls for none of the discernment and expertness required in the making of loans and advances in peacetime. At one extreme in the clamour which has arisen around this question of the banks' remuneration, there is a suggestion that the credit thus created is "costless" and that the banks are, therefore, not entitled to any return on the assets concerned. This reflects a complete misunderstanding. The credit created has returned to the banks as depositors' money. On part of these additional deposits, interest is paid. The rest consists of current accounts and the costs of their operations, namely, of clearing cheques, effecting payments, meeting cash withdrawals, and so on, must be met, and are far from negligible. There is no such thing as "costless" credit. The additional Government paper held by the banks since the beginning of the war bears an average rate of interest of about 1½ per cent; and, certainly, if the cost of operating the additional deposits and the higher rate of taxation are allowed for, there can have been little room for profiteering. Moreover, if there were the slightest tendency towards profiteering, EPT would take care of it.

Thus the final judgment in this *cause célèbre* is plain. The banks are very far from being a monopoly. They play some part in the creation of credit, but have no say in deciding what the amount of banking credit is to be. That decision is in the hands of the monetary authorities, that is, of the central bank and the appropriate Government department. In this respect, banks are simply an instrument of state policy, and their rôle is merely to decide how the volume of credit is to be distributed—a rôle which must, of course, be exercised within ever narrowing limits during wartime when a preponderant part of the economic life of the country is under direct Government control. Nor is there any evidence that the large wartime expansion in bank credit, for which state needs have been responsible, has brought the banks any appreciable increase in profits. It is hard to avoid the conclusion that, if the current popular indictment were properly drawn, it would be directed, not against the banks, but against the Government. The hand may indeed be the hand of Esau. But the voice is the voice of Jacob—the Government—and, in war economy, it is difficult to see how Jacob could speak otherwise.

NOTES OF THE WEEK

Stalin's Statement

Mr Willkie has been followed in his "public prodding" by the Soviet Premier himself—in three laconic, but deliberate, answers to leading questions put by an American journalist. It is obvious that no amount of "prodding" can possibly bring about any quick change in the strategic conditions and the state of material preparedness for a Second Front. After all his conferences with Allied statesmen Stalin is most certainly aware of this fact. That he has nevertheless found it necessary to indicate his doubts in public shows how extremely acute the impatience for concerted Allied action has grown inside Russia itself. When he contrasts "the aid which the Soviet Union is giving to the Allies by drawing upon itself the main forces of the German-Fascist armies" with the "aid of the Allies to the Soviet Union," Stalin echoes the popular feeling which prevails throughout his country. The political implications of this mood of the Russian people deserve the closest attention; during the last war, a similar mood of impatience swept Tsarist Russia because of delays in the delivery of Allied munitions. Stalin's guarded remark about Russia's capacity to resist not only expresses the self-confidence of the Russians, who have already worked wonders: it also implies a carefully formulated warning. Stalin declared that the Soviet capacity to resist is "not less, if not greater than the capacity of Fascist Germany, or of any other aggressive power, to secure for itself world domination." But what may matter most in the short run is not the capacity of the Germans to achieve world domination, that is, to defeat Russia and Great Britain and the USA, but their capacity to strike crippling blows on Russia. On this Stalin prefers not to make any optimistic forecasts. Without illusions, he does not permit himself to be lulled into a false sense of security by the unexpectedly favourable course of the fighting on the Stalingrad front. The position remains very grave, and it may grow graver yet. In fact, this is almost certainly what Stalin meant to convey to the United Nations. His warning will surely not go unheeded as the time for action ticks away.

The Common Task

"I thought, apart from what he said about the Second Front and materials, it was a very encouraging statement," Lord Halifax's exceptions, in his comment on what Stalin told the Associated Press last Sunday, cover a rather wide tract of territory. At bottom, the problems of the Second Front and the distribution of Allied war equipment from the common pool are inseparable; they are really one problem, that of the deployment of men and supplies according to a single strategy. In its solution, the Allies can work in one or two ways—in concert or in parallel. While the United States was still at peace, the distribution of American supplies was less complicated; they went to the battle-fronts in order of urgency. Now the United States is at war as well as being an arsenal. Inevitably, American men and American supplies are applied to the building up of American forces, at home as well as abroad, forces which are intended to exercise a decisive influence on the outcome of the war, and certainly will be capable of doing so. But America, the most potent war maker in the world, is—unlike Russia, Britain and China—not a base; happily for them, the American people's fighting will be done on foreign soil; and distance, though an aid, can also be a distraction. The danger to be avoided, therefore, is the danger of building up and equipping separate American armies and armadas, at sea and in the air, while men and equipment are desperately needed for prompt action in the actual theatres of decision. Separatism in strategy or in the allocation of supplies, if carried beyond a point, means incurring the danger of "too much and too late." It is a tribute to President Roosevelt that, even before the United States became a belligerent, he saw this danger. He gave priority in the allocation of American aircraft to the battle needs of Britain; he sent American troops to Iceland, Northern Ireland, the West Indies and the Pacific. He clearly realises that the test of an army or an air force is its use in action, and not its accumulation. The problem which Stalin and, before him, Chinese spokesmen have posed is whether this realisation has been carried far enough

in the minds of the war chiefs of the United States—or those of Britain. In the bombardment of Germany, for instance, to take what is perhaps a hypothetical case, it is a moot point whether the vast output of the United States can be best used in the form of steady increments to the British air offensive or in the form of a mighty American bomber fleet to be thrown in *en bloc* at a later stage—whether to double or treble the Allied air striking power some time in the future is better than a mounting attack week by week now. The same is true at sea and on land. Stalin's implied question is whether, say, four million American soldiers in battle early would not win more for freedom than ten million later. Apart from Stalin's open doubts—which may be significant—there is no evidence before the layman that the United States, in the making of its strategy of either supply and operations, is blind to the need for integration as well as concentration in the common effort. But the point is crucial.

Nazis Speak

Goebbels, Hitler and Goering all spoke last week at mass demonstrations of the Nazi party. The occasions were the opening of the Winter Help campaign and the public decoration of agricultural leaders. Goebbels did more than give his usual report of the progress of Winter Help activities. The Winter Help principle he described as true "German Socialism," and in this light he surveyed Nazi achievements since 1932. He compared Germany's present difficult position in the world war with the Nazi party's difficulties in the autumn of 1932, when several million votes had been lost in the November elections. In spite of its setbacks, he pointed out, the party came quickly into power. In the same way, he suggested, Germany, faced by the same plutocratic enemies as confronted the Nazis ten years ago, will triumph. Hitler took up the tale where Goebbels left off. He pointed to the long record of victories in the field since 1939. He explained the slow progress of recent weeks on the eastern front by the need for caution and for reorganising the occupied territories for the immediate benefit of the German people and the material strengthening of the war power of German Europe. Hitler, too, pointed to "German Socialism" at home. There are no longer any class differences, he said: the Nazi ideal of "a people's community" has been realised. It was this social solidarity within the Reich to which both Goebbels and Hitler pointed as the chief foundation and assurance of victory. Goering went into details. In Germany, he claimed, the food situation is safe, while the German armies can live on the territories they occupy. He, too, spoke at length of the strength and justice of the "people's community" which Nazism is alleged to have brought into being. "German Socialism" and European resources, these were the two reasons which these Nazi leaders dangled before their followers to counteract the disillusionment and disappointment which have grown and spread since the glamorous conquests of 1939 and 1940. The German people will now be able to put these explanations to the test of hard fact.

Apologia

It is plain that the speeches of Goebbels, Hitler and Goering last week were attempts to allay alarm and dispel despondency. All three were obviously anxious to strengthen, if not even to revive, confidence in Nazi leadership. Goebbels, for instance, indulged in a tremendous eulogy, unprecedented for him, of the Fuehrer. Goering, in perhaps the most important part of his speech, redefined the functions of the German General Staff and restated Hitler's position as the supreme leader of the German Reich. In every unit of the *Wehrmacht*, he said, one man is in sole command; but, he emphasised, Hitler holds supreme political and military command and is alone responsible for victory or defeat. Plainly, Nazi leadership is on trial. The German people were told by all three speakers that the resources of Europe, organised as a whole, would enable Germany to continue and win the war, and make it possible for the German people to feed and be clothed and housed adequately. The argument is that, while war is in one way or another almost the normal condition of the new

German empire, the German people themselves can remain relatively secure because of the far-reaching conquests already achieved. But the mass of the German people can only be reconciled to this state of affairs if the goods promised are delivered—that is, if they have physical security and physical well-being, both of which they notably lack at present. The test of Nazi leadership is to provide these conditions; and it was the aim and object of last week's three speeches to prove that the promises made could and would be made good. This was the reason for the stress which all three put upon the so-called "people's community" and the organised wealth of German Europe. The fact remains that the material benefits which the Nazi leaders can, in fact offer, are extremely small; and the road to the crisis of confidence which has not yet come in Nazi Germany is plainly paved with heavy casualties and material shortages.

Two-Day Debate

The picture of the coal position that emerged from the two-day debate in the House is a sorry one. The discussion brought out very clearly that the present difficulties are the result of a policy of drift, indeed, of inexplicable shortsightedness on the part of the Government. Mr Grenfell, the former Secretary for Mines, was at pains to protest that his warnings after Dunkirk went unheeded and that his authority was severely limited. If Mr Grenfell had had the courage of his convictions, he might surely have resigned in time to bring the matter to a head before it was too late. Production has shown a steady decline from nearly 230 million tons in the year preceding Dunkirk to 207½ million tons in the past year and an annual rate of less than 200 million tons during the five months which ended in September this year. Major Lloyd George pointed out that, compared with a year ago, output is down by 70,000 tons a week in spite of an increase of 17,000 in the industry's labour force. He confirmed the conclusions about the distribution of absenteeism which were suggested in a letter to the *Times* from the secretary of the Kent Coal Owners' Association on September 30th. The standard of attendance among older men is much better than among the younger men; the best record is that of men between 40 and 50 and the worst that of those between 20 and 30. The Minister of Fuel and Power outlined his plans for improving the position by technical reorganisation in order to increase the output per head. But he admitted that the reorganisation of the industry will take time and is not likely to have "a very material effect" on the supply of coal this winter—*an understatement unless reorganisation is much speedier and more drastic than it has been yet.* There is no prospect of the release of large numbers of miners from the Services. Sir John Anderson pointed out on Monday that the number still in this country who could be released, including those in the field army, does not exceed 4,000 and that, in any case, the Cabinet had decided against drawing miners from the field army at this stage.

Coal for the Winter

What is the prospect for coal supplies this winter? Mr Grenfell estimated that, including export requirements of about four million tons, 124 million tons would be required during the six winter months. Stocks, he said, were millions of tons down and, after allowing for economies and a withdrawal of six million tons from reserves, some 110 million tons would have to be produced in 25 weeks, involving an average weekly output of 4,400,000 tons. The current weekly rate of output is well below this figure. Mr Shinwell came out strongly in favour of consumer rationing as a means of avoiding hardship. Major Lloyd George retorted by saying that the outlook was not as gloomy as Mr Grenfell's statement suggested. He admitted that stocks were not as high as a year ago, but added that they were much better distributed throughout the country. Production, moreover, is going up. From a weekly average of 3,921,000 tons from the middle of June to the week preceding the August Bank Holiday, output has risen to an average of 4,031,000 tons; since the introduction of the bonus scheme it has been 4,085,000 tons and during the past fortnight this figure has been exceeded. A welcome innovation is his decision to publish monthly output figures, together with a statement showing the percentage of the standard tonnage reached in each district.

I am satisfied [said the Minister] that we can get through

this winter, provided we can get the full co-operation of all, both consumers and producers—and when I refer to producers, I do not refer only to the men, but to the managements as well, and when I refer to consumers, I do not refer to domestic consumers only, but also to industrial consumers.

The Minister has reduced the allocation of domestic coal and its equivalents in gas and electricity by four million tons this winter; but, in his view, the decision to instruct merchants to give priority to consumers who normally use about one cwt. a week will prevent hardship among the poor who have not been able to take advantage of the permission to lay in stocks during the summer. This scheme is an improvement on the present position, but it is hardly an effective substitute for rationing. Despite Major Lloyd George's attempt to deprecate scaremongering, the coal debate has, if anything, underlined the extreme gravity of the coal position—which, all in all, is one of the most shocking episodes of the war.

The Black Spot

The nation's health, it is stated—with almost irritating reiteration—in the Ministry of Health's report for 1941-42 (Cmd. 6394), has remained good. But in respect of tuberculosis the situation is unsatisfactory, and there has appeared this week the report of the Medical Research Council's Committee on Tuberculosis in Wartime, which shows that, although total deaths from TB are now roughly halved compared with twenty-five years ago, the increase in mortality between 1939 and 1941—an increase of 11 per cent for males and 13 per cent for females—compares with increases of 5 per cent and 7 per cent, respectively, in 1914-16. In other words, though absolutely the position to-day compares very favourably with the last war, the retrogression during the war has been twice as severe, relatively, as in 1914-16. Tuberculosis is a social disease, and it is not difficult to find in a war—especially total war—social conditions and factors which favour its spread: the Committee enumerates the evacuation of many sanatoria in September, 1939; the black-out, which diminishes ventilation and possibly lowers general resistance; overcrowding in homes as a result of bombing and billeting; evacuation of the population, which may have introduced tuberculous persons into healthy homes and *vice versa*; evacuation of town to country, with the result that children, previously fed on pasteurised milk, may have changed over to raw milk. But if TB is a social disease, the remedies are social too, and the most striking feature of the report is the dependence of its recommendations on the policy and actions of, not one, but several Government Departments. The Ministry of Agriculture is responsible for an adequate supply of milk—"the adult population must be considered as having been inadequately supplied with milk during the winter months"—and for a safe supply of milk—either free from infection or properly pasteurised. In view of the importance of early diagnosis for successful treatment, the Committee recommends periodic mass radiography of susceptible sections of the community, particularly now of munition workers; this presumably would depend on the Ministry of Labour. But though in many cases institutional treatment will be unnecessary, early diagnosis is not enough if facilities for treating more advanced cases are inadequate. The Ministry of Health should release more beds from the Emergency Hospital Scheme and, if the shortage of nurses and domestic staff cannot be overcome by appeals and propaganda, together with an overdue improvement in pay and conditions of work, powers of direction should be used.

But, again, diagnosis and treatment are rendered nugatory if the patient has to resume full-time exacting employment too soon. Consequently, the Committee recommends proper financial support for the patient and his family to continue after the sanatorium phase is ended. At present, a tuberculous worker and his dependants may have only which to live after discharge, with the result that for convalescence he rushes back to full-time work, and frequently has a relapse. Moreover, it is fear of poverty which frequently deters people from coming forward for early diagnosis. Together with financial provision the Committee recommends modified work in factories for those on the way to recovery and even where possible for chronic tuberculous workers. Full financial and physical rehabilitation of TB cases is the joint responsibility of the Ministries of Health and Labour—unless they shelve it on to Sir

William Beveridge—and immediate action is needed if this black spot on the public's health is to be removed—as it can be.

Plans and Planners

A note on page 462 criticises the new tin agreement because, in authority and decision, it remains a producers' organisation. The Atlantic Charter asked for access on equal terms to the world's trade and raw materials. This did not mean that countries wishing to buy raw materials in the past had been physically prevented from doing so. They could always buy, if they had the wherewithal. There was no discrimination between buyers. But there was a definite discrimination in the fixing of production or prices in favour of producers against the consumers. There was, in short, the tendency towards monopoly or quasi-monopoly, which disfigured economic activity almost everywhere. This is not to say that producers were or are rogues and consumers saints. The tin producers banded together in the first place, not to secure great gains, but to protect themselves against great losses; and the point is that producers' organisations of this kind seek to protect the high-cost producer equally with the low-cost producer. The problem is an economic one. Arrangements of this kind do not make the best use, in real terms, of the world's resources because they are contrived in financial terms, in order to maintain profits or avert losses. One of the chief aims of planning after the war will be to prevent financial considerations from impeding the full employment of resources at the maximum level of output and consumption. This is surely one of the main lessons which the war has taught. Again and again, the planning of war economy has been impeded by the natural reluctance of individuals or undertakings to face financial losses, and the absence of any unified system of compensation, to prevent these purely accounting considerations from standing in the way of necessary wartime changes, has been the main drag on the progress of war production. In different circumstances, the same will be true of whatever planning may be necessary for peace and prosperity after the war.

The basic trouble of to-day is not that the principles of economics worked out by those who analysed the simpler economies of the last century have been proved wrong. What has happened is that the conditions in which these principles could work with effect have been replaced by a much more complicated system of social, political and economic institutions, bringing with them almost insuperable obstacles to the working of the principles which were also practice when markets were relatively free. Most of the restrictive measures which have been brought into being can be placed under the head either of protection or of monopoly, and arose from the desire of employers, trade unions, producers' organisations or nations to safeguard themselves against insecurity. The task of planning in the future is not, as some people have supposed, to increase these rigidities to a maximum, but rather to furnish a new set of economic conditions in which the old principles which held in the free market will once again be true in actual practice. The problem of the planner will be to give the individual security, not by impeding production or penalising consumption, but by making it no longer necessary for individuals or undertakings to engage in these malpractices in order to avert financial losses. On any estimate, it is far better to compensate a high-cost producer for going out of business than it is to permit him to levy a toll on consumers and to hold up output by arrangements designed to keep him as a going concern. The real test of post-war planning, national or international, will be whether it can achieve, at one and the same time, security and adaptability. Without security, there will be political disaster. Without adaptability—adaptability of the effectiveness which the freer markets of the nineteenth century achieved—there will be economic decadence and social decline.

The French Crisis

Two recent events—the placing of Herriot under arrest and the dismissal of Benoist-Méchin—have revealed two aspects of the crisis which has been growing in Vichy. The two names are, each of them in a different way, almost symbolic. Herriot, the most outstanding repre-

sentative of French radicalism, the head of several French Governments during the past two decades and the Speaker of France's last Parliament, has perhaps better than anybody else among the pleiad of Republican politicians embodied the political qualities of the democratically minded *Français moyen*. His attitude towards Vichy has been highly significant. At Bordeaux he fought against the capitulation; but, faced with a *fait accompli*, Herriot refrained from any open struggle against Pétain; he did his utmost to "exert pressure" upon the men of Vichy behind the scenes. For some time, he apparently still believed in the effectiveness of such methods, and preferred to appeal to the "good will" of the old Marshal rather than to push the internal division of France to extremes. His hopes, however, have been frustrated. Vichy has proved immune against any well-meaning and patriotic "pressure." Herriot has gone back to open struggle. About a year ago, he reasserted his faith in the British Alliance in an article written for the American press. As a sign of protest against collaboration, he returned his cross of the *Légion d'Honneur*. Finally, he recently openly accused Pétain and Laval of usurpation of power and of "drawing France into the war against her allies." Herriot's conduct has been the most sensitive barometer of the feelings of the great mass of democratic Frenchmen. It has faithfully reflected the evolution which led the country from the great illusion about the "victor of Verdun" to disappointment and active resistance. By the internment of Herriot, Laval has simply acknowledged this and given up any hope of reconciliation with the *Français moyen*. Benoist-Méchin, Vichy's ex-Secretary of State, comes from a completely different political environment. He has belonged to the obscure clique of Fascist speculators and gangsters, grouped around Doriot. Inside Vichy, he represented the extreme collaborationist tendency. The immediate reason for his dismissal was his participation in a Doriotist intrigue against Laval, sponsored by German protectors. His dismissal is probably indicative of the state of tension which exists between Vichy and some influential German circles in Paris. Having lost the last remnants of confidence in the eyes of genuinely French public opinion, Laval has been equally unable to placate the intransigent collaborationists.

Rising Tempers in Scandinavia

Since April 9, 1940, when the Germans overran Denmark, less news of Danish affairs has reached this country than of developments in any other occupied territory. In the last week, however, reports from Sweden and Germany have suggested that a state of acute crisis and tension has been reached between the Danes and the German authorities. A number of menacing statements issued from Germany make it appear possible that the invaders are about to introduce a regime on the quiescent model—or even to incorporate Denmark into the Reich as a formal *Gau*. The report that General Lüdke, who commands the German troops in Denmark, is to be replaced by the more ruthless General Heydeberck also indicates that the reins are to be more tightly held; and the somewhat ominous statement of the Danish Prime Minister, Hr. Buhl, in the *Rigsdag* on Tuesday did nothing to dispel the general foreboding. It is believed that the Germans

have in fact been putting increased pressure on the Danish Government since the end of August and may even have presented some form of ultimatum, demanding among other things a totalitarian adjustment of the constitution. There is no doubt that the parading of the Danish Free Corps in the streets and the behaviour of the Germans themselves has become increasingly provocative in recent weeks. Why the Germans should provoke a crisis at the present moment is best known to themselves. It is not out of the question that sabotage has begun to assume serious proportions and that the growing hostility of the most peaceful population in the world is now a genuine danger. That the crisis is inspired by strategic reasons, especially by a desire to secure communications with Norway and Finland, is perhaps less likely. The incident, which threatens to expose another nation to the full blast of Nazi terrorism, proves once more that the most conservative minimum of freedom and independence are incompatible with the war and peace aims of the Third Reich. And while Denmark faces the threat of reduction to the status of Norway, the Norwegians face an outbreak of terror of the quality hitherto reserved for central and eastern Europe, as arrests and executions follow the declaration of a state of siege in Trondheim.

Party Strife in Argentina

Before going into recess on September 30th, the Argentine Chamber of Deputies delivered a vigorous Partisan shot at the neutrality policy of President Castillo by passing two highly provocative resolutions. In a session unattended by the Foreign Minister, Señor Ruiz Guinazu, the Chamber voted, by 67 votes to 64, in favour of breaking off diplomatic relations with the Axis powers. It also voted overwhelmingly, by 71 to 9, in favour of implementing the decisions of the Rio Conference. The debate was lively and contained a number of vigorously pro-ally speeches by Radical and Socialist deputies. There is, however, no reason to suppose that this spirited display has brought Argentina appreciably nearer to war. The hard fact remains that the manipulation of elections has prevented Congress from reflecting the public mind; that the Senate, where President Castillo has a considerable majority, can override the Chamber; and that Congress does not come out of recess before May 1, 1943. In the interim, the President rules by decree, a formula which, in view of the state of siege declared last December and not yet ended, implies that there may be even more complete authoritarian control of the destinies of Argentina than during a normal summer recess. It is impossible to see how Argentina, despite the very strong and almost certainly swelling popular support for the Allied cause, could take the decision to enter the war while the constitution is worked as it is at present. President Castillo probably exercises more absolute control to-day over the destiny of his country than at any time since he succeeded Dr Ortiz in 1940. He is a determined neutral, and there is no doubt that he means to see his policy through.

The Statute of Westminster

Another quarrel is brewing in Australian politics, this time over the Government's decision to ratify the operative part of the Statute of Westminster. This curious Act of 1931, which provided that thenceforward no Act of the Imperial Parliament should extend to a Dominion unless it was expressly stated in the Act that the Dominion wanted it or agreed, was itself passed after the Dominions had "severally requested and consented" to its submission to the Imperial Parliament. But the Statute also provides that sections two to six, the operative sections, should not extend to a Dominion unless they were adopted by the Parliament of that Dominion. So far they have not been ratified in Australia, New Zealand and Newfoundland, which means that the Colonial Laws Validity Act of 1865 remains in force in respect to them and consequently any laws they may make may be void if they conflict with Acts of the Imperial Parliament which purport to extend to them. The fact that the two Pacific Dominions have not hitherto ratified the Statute shows how legalistic the whole affair is, because at the Imperial Conference of 1926 it was declared that in practice "legislation by the Parliament at Westminster applying to a Dominion would only be passed with the consent of the Dominion concerned." Nevertheless, Dr Evatt, in asking leave to introduce a ratification Bill into the Commonwealth Parliament, stated that he had been

informed that practical drafting and administrative difficulties have arisen, especially during the war, which would be greatly eased by the adoption of sections two to six of the Statute. The Opposition argues that ratification now would be misinterpreted abroad as a sign of Empire disunity. It may be doubted whether even Goebbels would bother to reap propaganda from the actual formal ratification of such an academic measure.

Disagreement in New Zealand

After about three months, the strange compromise between Government and Opposition in New Zealand seems to have broken down. New Zealand's solution of the problem of how to give the party in opposition a greater participation in the conduct of the war, without endangering the domestic programme of the party in power, was to form, first, a War Cabinet, and, last July, a War Administration, responsible respectively for war policy and the administration of that policy, and composed of members of both the Labour party and the National party. The domestic Cabinet, which is restricted to domestic affairs, has only Labour members. Last week, however, the National party decided to withdraw its six representatives from the War Administration and the War Cabinet, because of the Government's handling of a coal strike at Waikato. The strike was a serious one, and would have had grave consequences if it had been allowed to continue. The Government decided to take control of the mines for the duration, at the same time safeguarding the companies' and shareholders' interests, and about 180 miners were sentenced to one month's imprisonment. The miners then decided to resume work, whereupon the sentences were suspended. The National party caucus apparently disapproved of this leniency, although it is difficult to see why it should have expressed its disapproval so forcibly, since the handling of the coal strike was presumably carried out by the domestic Cabinet, for whose policy the National party has no responsibility. Evidence that it may have behaved too drastically is provided by the decision of two of its members, Mr. J. G. Coates, Minister of Armed Forces, and Mr. A. Hamilton, Associate Minister of Supply and Munitions, to rejoin the War Cabinet at the request of Mr Peter Fraser, the Prime Minister—though not as National party representatives. In any case, the split in coalition shows quite clearly that there can be no division in total war between domestic and war affairs.

Conservatives at Loggerheads

The Conservatives' venture into the field of reconstruction has not so far been a success. The party conference last week was mainly devoted to the two reports of the sub-committee on education, and the second, containing "A Plan for Youth," which was drafted, oddly enough, by Mr W. F. Oakeshott, High Master of St. Paul's School, was attacked from all sides. One speaker said that the proposed Federation of Youth would be a counterpart of the youth; another that the report was a slander on adequate; and another that the report was "typical of the servative Party." But though the Conservatives thus denounced their own sub-committee, they gave no indication of the sort of educational system they do want in this state of the Conservative mind that the party's official sub-committee could produce a report which has proved to be so completely unacceptable to the party itself.

Bankers as Monopolists

The charge that a banking monopoly must be counted among the ills that afflict this country is discussed in a leading article on page 441. Eleven banks are members of the London clearing house; and there are a number of Scottish and Irish banks outside their special spheres of activity, together with a host of other more specialised banks and financial institutions. The question is whether the relations between these independent institutions are so close, and the rules for restricting competition so sternly drawn, that all the evidence the answer is, definitely, no. The main agreements are those observed by the London clearing banks.

By agreement, they now limit the amount which they are prepared to pay in interest on deposits. The "ceilings" are 1 per cent on ordinary deposits and 1 per cent on special deposits. The latter are deposits fixed for 15 days and over, and the agreement by which the rate paid for them was restricted to 1 per cent dates from July, 1939. It was sponsored by the Bank of England and was primarily intended to remove an impediment to the direct flow of national savings into Government loans. Since the beginning of the war, the fixing of bank deposit rates has in effect formed part of the Treasury's control over the financial position. A more important departure was made by the clearing banks at the beginning of the war. This was an undertaking not to engage in active competition for the business handled by other banks. The agreement was an armistice, rather than an alliance, and was largely due to the shortage of staff; it places no obstacle in the way of any bank customer transferring his business from one bank to another, and does not affect the competition for new business. To conjure up monopoly out of these restrictions on competition requires a somewhat active imagination.

Facts and Fallacies

Appropriately, the Cobden Club has published a paper by Mr Francis Hirst, who sets out to expound the basic principles of political economy which remain unchallenged against the sophisms which, he says, spread like weeds in a neglected garden during wartime. Uncompromisingly, Mr Hirst denies that to work for a money incentive is in any way reprehensible, whether the worker earns wages, salaries or profits; and in this, surely, Mr Hirst is right, just as he is when he says that the real value of wages or salaries or profits depends on what they will buy, in terms of goods and services, and not on their nominal amount. It is salutary, too, to be reminded that the prosperity of a state depends upon that of its individual citizens and that, in itself, planning is a word not a policy. Not infrequently, perhaps, Mr Hirst is much less than fair to the subjects of his criticism—mainly governments and modern economists—than they deserve. Mr Hirst once said that the trouble about young people was that there was a curtain between them and the economic wisdom of the past; occasionally, it appears that there is a curtain between Mr Hirst and the increment of wisdom which has come from more recent experience and thought. Nevertheless, it is stimulating to be told again, in this time of much emptier talk, that the job of governments, among others much more disputable, is to promote equality of opportunity and freer trade, and not to foster monopoly.

Mr Hirst attacks the "fallacious" view that because it is possible to spend so many millions a day on war, it is possible to spend the same amount when the war is over on reconstruction. The Chancellor of the Exchequer, rather out of the blue, made the same point not long ago. It is an argument which needs defining. In one sense, it is obviously true. It is possible to spend so many millions a day on the war now, because so many other things have been given up for the duration. Production for civilian markets has been correspondingly curtailed; the nation is on war rations of food and clothing; civil building is at a standstill; the process of maintaining and replacing capital equipment has been largely suspended; accumulated foreign assets are being run off. War economy is a state of curtailed consumption and disinvestment. After the war, presumably, the nation's resources will be primarily required to restore peacetime standards: to produce civilian goods, to manufacture for export, to build new houses and factories, and so on. The nation's resources, at any point of time, are limited, and a Government which attempted to spend as much in peacetime on public works as in wartime it does on war production could only do so, without inflationary consequences, if it adopted at the same time precisely the same measures of restriction and rationing which make wartime Government spending possible. On the other hand, the important thing to remember is that what determines a nation's ability to do this or that is not the amount of money at its disposal but the volume of physical resources, the labour, the plant, the material, and so on. It is this which will determine the scale and scope of reconstruction, and not financial considerations. The truth is that there is no hard and fast line between the normal economic activity of peacetime and reconstruction. Properly conceived, they are inseparable, which means that their costs in money or real terms need

not be competitive—except for the fact that the coat must always be cut according to the cloth. Reconstruction, properly conceived, is merely a method of so guiding and stimulating normal economic activity that there is full and efficient employment for all the physical resources available.

Shorter Notes

The Australian advance in New Guinea has dislodged the Japanese forces from their threatening position above Port Moresby. The Japanese have steadily retreated ahead of the Australians and mainly out of range of field artillery. There has been no attempt to fight a rearguard action, and, after the initial phase, the Japanese have retreated much faster than the Australians have advanced. The Allied forces are now within 15 miles of the summit of the Owen Stanley Range, and, at a height of some 4,600 ft., their progress is becoming increasingly slow. The explanation of the Japanese withdrawal is no doubt a decision to make no stand south of the summit, for the relative advantage of the Australians decreases with their advance, as their supply lines lengthen.

Three new French Canadian Ministers have been appointed by Mr Mackenzie King to the Dominion's Cabinet in fulfilment of his pledge to restore the normal representation of Quebec in the Canadian Government. Major-General L. R. Laflèche becomes Minister of National War Services in the place of Mr J. T. Thorson, KC; Mr Ernest Bertrand becomes Minister of Fisheries in the place of Mr J. E. Michaud, KC, who has been appointed Minister of Transport after the resignation of Mr Cardin; and Mr Alphonse Fournier has been appointed Minister of Public Works.

According to the Ministry of Health's report for 1941-42, there were 331,000 schoolchildren and 275,000 mothers and children billeted in reception areas at the end of March, 1942, compared with a total for both classes of 872,000 at the end of September, 1941, and over a million at the end of February, 1941.

AMERICAN SURVEY

Stabilisation of Incomes

NO time has been lost in implementing the Anti-Inflation Bill which was passed late last week by Congress and received the President's signature immediately after. The Act directs the President to issue, before November 1st, a stabilisation order fixing wages, salaries and prices at the levels existing on September 15th. The steps already taken by Mr Roosevelt include the appointment of Mr Justice Byrnes, of the US Supreme Court, as Director of Economic Stabilisation, with complete responsibility for carrying out the provisions of the Act; the fixing of temporary price ceilings by Mr Henderson for food prices not covered by the original Price Control Law; a new rent order; and a directive to the War Labour Board freezing wages at the level of September 15th, except for corrections of inequalities or sub-standard wages, to be approved by the Board.

The post to be filled by Mr Byrnes approximates to the idea of an Economic High Command, which was so freely prophesied on all sides before the President's message to Congress in September. Mr Byrnes will formulate and administer nation-wide controls over rents, prices, wages, profits and subsidies, in order to stabilise the cost of living. He is to be assisted by an advisory board, made up of the heads of the agencies or departments most closely concerned. It will include Mr Morgenthau, the Secretary of the Treasury; Miss Perkins, Secretary of Labour; Mr Henderson, the Price Administrator; Mr Davis, of the War Labour Board; Mr Wickard, the Secretary of Agriculture; Mr Jesse Jones, Secretary of Commerce; Mr Eccles, chairman of the Federal Reserve Board; Mr Smith, Director of the Budget; and representatives of labour, management, and the farmers. Subject to the President's approval, however, Mr Byrnes' authority will be complete, and his decisions will be carried out by the Department of Agriculture, the Office of Price Administration and the War Labour Board. The good will any man would have enjoyed on undertaking this immense responsibility will be enhanced by the excellence of Mr Byrnes' relations with Congress, particularly with the Senate, where, as Senator from Tennessee, he proved himself a loyal and skilful supporter of the New Deal. It is further proof of Mr Roosevelt's political acumen that he has chosen for this delicate and highly political post a man popular with Congress and a Southern New Dealer. Mr Byrnes was appointed to the Supreme Court about a year ago; but it has been no secret that he did not feel entirely at home in the rarefied atmosphere of that august body.

Farm Compromise

The Anti-Inflation Bill reached Mr Roosevelt's desk without the farm bloc amendment, providing for a revision of the method by which parity is calculated, which had threatened to wreck the Administration plans for stabilisation. Instead, at the last moment, the Senate adopted and the House accepted a compromise, which directs the President to raise farm price ceilings when they do not reflect increases in labour and other costs which have taken place since January 1st, 1941. This is a somewhat amended version of the Administration formula, which promises to take into account increases in labour costs in fixing farm price ceilings. It bears a striking resemblance to the War Labour Board's "little steel" formula governing wage increases, which permitted them only to compensate for increases in the cost of living since January 1st, 1941.

Whether this is a genuine victory over the farm bloc or largely a face-saving compromise is hard to determine. If farm price ceilings are raised to compensate fully for higher labour costs, which have risen substantially, the farm bloc will have achieved its purpose after all. Much will depend on the interpretation and administration of the provisions of the Act. Mr Henderson's views are well known, and it is hopeful that Mr Wickard, to whom Congress last January entrusted the defence of farm

interests, recently declared himself converted to the idea of parity prices rather than the 110 per cent of parity which for so long has embodied the ambitions of the farm bloc. Mr Wickard has now been directed to keep farm prices down to the level of September 15th as far as possible.

The weekend order fixing emergency ceilings on food prices hitherto exempt brings about 90 per cent of the nation's food under control at recently prevailing prices. Many of these have risen sharply during the past few weeks. These ceilings are to last for 60 days. Permanent ceilings will be imposed later, after an investigation to determine whether present levels are justified. Most of the products now controlled are seasonal goods on which it was not felt practicable to impose ceilings earlier. A new rent order has also been issued by the Price Administrator, requesting landlords who have raised rents to reduce them to the levels of March 1st. Evasion of the rent restrictions already in force has been widespread, and regulations are now being drafted to put teeth into the law and prevent evictions through the sale of property.

Flexibility

The wage policy laid down in the Anti-Inflation Act and the President's directive to the War Labour Board provides that increases above the level of September 15th are forbidden, except by specific action of the Board, designed to adjust inequalities, raise sub-standard wages or to aid the prosecution of the war. Apparently this will bring to an end the voluntary wage increases which have been a most potent source of inflation purchasing power and of manpower "pirating" by employers. It greatly strengthens the position of the Board, whose decisions now cover the entire wage structure, instead of only the limited number of cases brought to it for settlement. It is also provided in the Act that wages and prices may not be decreased below the levels of September 15th—but this is hardly a live issue. The salary provisions perhaps sound more drastic than they are, and will have less effect in the war against inflation. Salaries of men and women receiving more than \$5,000 a year are not to be raised unless the recipient does more work or undertakes more responsibility; and no salary is to be authorised above \$25,000 a year after deductions for taxes, life insurance and other fixed obligations. There seem to be no restrictions on salary increases to those earning less than \$5,000 a year, who receive the bulk of all salary payments, or on income from investments or professional services.

To speak of "freezing" of either wages or prices under the new orders is hardly accurate. The law itself and the directives which have been issued under it, all provide opportunities for the utmost flexibility and discretion in operation. In the case of farm prices, flexibility—in an upward direction—is mandatory, and the power of the War Labour Board to increase sub-standard wages, subject to Mr Byrnes approval, is not impaired. In itself, this flexibility is desirable. Without a certain degree of elasticity in prices and wages, and the power to increase them where necessary, production would suffer. Whether the provisions will be abused depends upon the firmness with which they are administered and the co-operation that can be elicited from labour and the farmers. On his return to Washington, President Roosevelt announced that he had found the country more prepared for sacrifices than Washington or Mr Green and Mr Murray have pledged their loyal support to the anti-inflation programme. Now that a framework for stabilisation has been set up, and responsibility is centred on one man rather than on a variety of agencies, the prospects of averting a runaway inflation are improved.

The end of the process of "complementary provocation" between farm and labour incomes may be in sight. What has not yet been dealt with is the fact that the current rate of income payments already greatly exceeds the

supply of goods for civilian use, at current prices, and all indications point to a very much more drastic decline still in civilian production, now that the control over raw materials is being tightened up. The Secretary of the Treasury has already spoken of new tax proposals to be sent to Congress as soon as the present Tax Bill is passed. Mr Morgenthau mentioned a figure of "\$6,000 millions or perhaps much more." This is proof that the Administration is not content with what has been accomplished, and is thoroughly aware of the urgent need of siphoning off a larger proportion of the purchasing power already in existence. Support for a programme of forced savings has also been growing, and further rationing measures appear imminent. If the President and his supporters are as firm over this part of the anti-inflation programme as they have been over the stabilisation of incomes, a great deal will have been accomplished to ward off the worst dangers. The reaction of the people to the Stabilisation Bill is proof that they are ready for more drastic measures, and this assurance should strengthen the President's hand.

American Notes

FDR's Travels

Mr Roosevelt's "secret" 8,000 mile tour, in the course of which he was able to see for himself the progress of war production and judge the temper of the American people, has provoked an ill-natured, if short-lived, outburst of criticism. On the one hand are the critics of the press and radio, who were forced to agree to make no mention of the trip, and who were exasperated because only the representatives of three news agencies accompanied the President. On the other hand are those who, far from having wished for more publicity for the tour, are outraged at the President taking what they consider an unfair political advantage so near to the elections. This feeling was further exacerbated by the President's strictures on certain newspapers and radio commentators, on Congress and even on some minor officials, and his statement that the country was far ahead of Washington in its determination to win the war. Mr Roosevelt's inspection carried him to a Kaiser launching on the Pacific coast, to Willow Run, to Army and Navy bases, training centres, supply depots, and embarkation points, and to war factories of every description. His satisfaction with war production and with morale was evident. Production, he said, was likely to reach 94 or 95 per cent of the goals set for the year; women were proving their expertness in war factories; the spirit of the people, particularly of the farming community, was all that could be desired. The secrecy which surrounded Mr Roosevelt's tour was dictated primarily by security motives, but it may also have been argued that too much publicity would arouse antagonism on the score of turning the inspection into a campaign swing round the country. Every effort was taken to make the tour non-partisan and political contacts were kept to a minimum. It was unavoidable, of course, that the trip would provide an opportunity for Mr Roosevelt to reply to some of the criticism which has been directed at the management of war production, and for him to associate himself more directly with the country's war effort. It was a sound political stroke for him to identify himself with the dislike of "Washington" and its hesitations and manoeuvres. It is this which has aroused such bitter resentment in a few quarters. But it is highly doubtful whether the majority of Americans have much sympathy for the idea that the President should be a virtual prisoner in Washington.

The Harvest

Speaking at a Mississippi harvest thanksgiving, Mr Wickard, the Secretary of Agriculture, has given some encouraging news about the success of the 1942 "Food for Victory" campaign and the determination of the United States to increase its shipments of food under Lend-Lease. This year there is "more of nearly every product than our arms have ever produced"—twice last year's soya bean and peanut crops, a greater cotton yield, 70 million dozen more eggs than in 1941, nearly 1,000 million pounds more milk, 500 million more bushels of corn than ever before. There are more hogs, more dairy and beef cattle, and more poultry on the farm than ever before. If Mr Wickard has been correctly reported, the success has not been equal in all directions. The increase in milk production is only about half that laid down in January as the goal, and production has been less than had been hoped; these are the

NEWS

FROM THE WAR FRONTS

comes by

CABLE AND WIRELESS

LIMITED

the all-British overseas telegraph company which operates the largest telegraph system in the world, with 300,000 miles of submarine cable and overseas wireless routes.

Q This all-British undertaking carries the overseas telegraph traffic of the Empire at war, keeping the lines of communication open.

Q Far-reaching developments undertaken in time of peace made it possible to meet the new and urgent needs of war and of the Fighting Services. These must always have priority. But there are other needs. News, public and personal, is vital to the morale of nations at war.

Q 'Forces Telegrams' were introduced for the Empire Forces overseas, and 1,250,000 messages were carried at Christmas. The Empire Press rate was reduced to a penny a word, and Press news traffic is now nearly four times what it was in 1938.

Q The strain of wartime traffic is very great. Cable and Wireless is now handling more than one and a half million words a day in its unceasing service. With this, and the loss of its main Far Eastern routes, it is not always possible to give the same service as in peace time, but the Company and its Staff are doing all that is humanly possible.

results of the draining away of skilled farm labour by the draft, by volunteering and by the attractions of higher wages, particularly in New England and the Pacific States, where there has been a substantial decline in the numbers of farm labourers. The production of machinery has been cut, and farmers have had to exact more labour from their families, to accept unskilled labour—a particularly heavy blow in dairy farming—and to resort to pooling of machinery. Even so, in California, beet fields have had to be ploughed under for want of pickers; 4 million pounds of sugar are said to have been lost daily. In Arizona, half the canteloupe crop spoiled in the fields, and 10,000 acres of alfalfa went to seed uncut. Mr Wickard pointed out that, in the year ended August 1st, 600,000 million pounds of food had been shipped abroad under Lend-Lease, and promised that shipments would increase even further:

We are thankful for our opportunity to feed both the men of the United Nations who are fighting our battles and the men and women behind the lines who are backing the fighting men. Other needs for food are increasing, too. Our Army and Navy are growing steadily. We need more food for the people at home. They are working harder and longer than ever before. Also we must increase our reserves of food.

Mr Wickard is not complacent about the prospects of future harvests. He warned:

A single year could change our food position from abundance to scarcity. We must concentrate all our future efforts on production, processing, and distribution of foods that are absolutely necessary.

Even the abundance of the present harvest will not assure the maintenance of pre-war American food standards if supplies to the United Nations and the American Forces are to be maintained. Already American civilians have been warned that their food habits must change; there will be less meat, fewer eggs, less cheese; and there will have to be more use of pulses and starchy foods.

The Quality of Planes

The quality of American aircraft has been the subject of long and acrimonious public discussion during the past month, and it has been under investigation both by committees of the House and of the Senate. A dispatch from William Stoneman, correspondent of the *Chicago Daily News* in London, is typical of the complaints that have been made:

It is one of the ironies of the war that American pilots are flying British Spitfires because American planes were not good enough for the job. It is gratifying that those who command our men understood the situation and discarded false pride in American fighters.

The House military sub-committee has now submitted its report; it finds that American aircraft are "more than a match for any that have been pitted against them," and cites figures showing that, from February 1st to September 20th, American pilots on all fronts brought down 279 planes, while losing only 114 to enemy pilots. Figures for the month ended September 4th showed an even more favourable balance. This report is not necessarily the final verdict. It does not allow for the varying conditions in which American and enemy pilots fought or for the possible superiority of American pilots. Senator Truman said on September 15th:

Scarcely a week goes by without some prominent flier returning to this country and asking why we cannot give our boys better pursuit planes. . . . Our boys have proved their superiority in inferior planes. . . . The army should concentrate on the production of its best planes.

One of the most vociferous critics, both of American fighters and bombers, has been Major Alexander de Seversky, who has had some sharp clashes with other experts over his characterisation of American fighters as "dismally backward" and his complaint that American Flying Fortresses and Liberators were less well suited than British bombers for night operations over Germany. Major de Seversky complains that American designers

were forced by limited military minds to design planes for a 3-mile ceiling when other nations were building them for 5-mile ceilings. We were told not to use more than two guns and prevented from putting on adequate armour.

He goes on:

I fear that we shall continue to be also-rans in the race for aviation leadership until we bring tough realism to bear. We must recognise past errors and present shortcomings and stop this dangerous business of face-saving for firms and individuals.

American aircraft have not been without their defenders.

Mr E. V. Rickenbacker has stated that the United States is superior both in production and design, and Lieut-Gen. Henry Arnold, who has warmly praised all American types, has been called to testify before Senator Truman's Committee. Senator Truman's report will be received with interest. He has proved himself a relentless seeker after the facts on all aspects of the war effort.

Kaiser's Cargoes

Henry Kaiser has now received a contract for three experimental seven-engined flying boats, each of 60-tons capacity, to cost in all about \$18 millions. The planes will be built at the plant of Howard Hughes, the flyer and designer, who has joined up with Kaiser to create what *Time* calls "the fabulous team." The present contract is hardly what Mr Kaiser had hoped for, and many Americans will share his disappointment. His breath-taking proposal was to go into mass production of flying freighters at once, without waiting for samples or experiments. He was convinced that he could obtain the materials without interfering with the production of military aircraft, by means of sub-contracting and the substitution of materials; and the newspapers have backed him enthusiastically. Mr Kaiser was so convinced of the soundness of his scheme that he apparently used every publicity device to build up support for cargo planes, but the idea hardly needed a press-agent to commend itself to the American people. As was to be expected, the War Production Board and the Services have been harder to convince. Other experts have estimated that it would take two or three years to put cargo planes into mass production; they have questioned whether Mr Kaiser had the "know-how." A WPB committee of aircraft men is said to have been disappointed to find that Kaiser had no engineers seriously at work on the problems involved, and that, instead of converting shipyards, he now advocates the construction of a Government-built plant for the purpose. Another facet of the case has been the injunction brought against a Kaiser company for evading the price control provisions by buying steel in less-than-carload lots, the method of obtaining "black market" steel made famous in the Higgins testimony. The reluctance of the War Production Board to give Mr Kaiser *carte blanche* at a time when it is desperately trying to economise on the use of scarce materials and to establish its control over their distribution, is more than understandable. But the newspapers have conveyed the impression that Mr Kaiser was being given the runaround, and that timidity and undue conservatism in Washington, particularly on the part of the Services, were all that stood in his way.

Shorter Notes

Senator Johnson has announced that a high official of the War Production Board has informed him that the board has decided to close all gold mines immediately. This is not equivalent to an official announcement, but appears likely to be true. For several months discussions have been proceeding as to the best way of providing more miners for essential metals like copper, and the most promising solution advanced has been the transfer of gold miners to more essential work.

New appointments to WPB include that of Ferdinand Eberstadt as vice-chairman, in charge of planning the flow of materials, and that of H. G. Batcheller as head of the iron and steel branch. The new vice-chairman's position will be parallel to that of Mr Charles Wilson, recently appointed vice-chairman in charge of production. Mr Eberstadt for the past year has been chairman of the Army-Navy Munitions Board, and has close relations with the Services; it is thought that his appointment to WPB will increase co-operation between civilian and military controls.

With its issue of October 5th, the *Financial News* published an informative supplement on the various aspects of America's industrial mobilisation. Its scope is wide. There are articles dealing with the physical problem of the change-over from a peace to a war economy, as well as with its financial and social aspect. America's immense reserve of productive capacity is brought out strikingly, as well as the difficulties in the way of achieving maximum output. Of particular interest at this moment is an article on the measures taken to stem the tide of inflation.

THE WORLD OVERSEAS

Frustration in India

(From a Calcutta Correspondent)

August 31st (delayed)

THE political weather in India deteriorated at a breathtaking pace in August. The principal events of the month were the meeting of the All-India Congress Committee and the adoption of the Working Committee's resolution. The resolution introduced nothing new: the uncompromising tone was already foreshadowed in the previous Allahabad resolution of the Working Committee and in Mr Gandhi's articles introducing the slogan "Quit India," matured from the earlier plea for a peaceful withdrawal. Government action was taken immediately. On the day following the adoption of the resolution entrusting the inauguration of the non-violent struggle to Mr Gandhi's hands, the principal leaders were arrested. In the next two days, the Congress Committee and organisations were declared illegal.

It is impossible to appreciate the point of view of the Indian nationalist without an understanding of his psychological background. Political India appears to have no confidence in the good faith of British professions. The country, the Indian nationalist says, was not consulted before declaration of war and was "dragged" into it. In the face of Irish and Egyptian neutrality and the debates in South Africa on the merits of supporting Britain, the attempt to explain away this omission only made it more unconvincing to him. When Britain went to war with Germany for the independence of Poland, nationalist India felt that charity might well have begun at home, and asked for a clarification of war aims. None was forthcoming. If Mr Churchill could offer France a union of the two countries, how about Britain and India, historically bound together by many ties for well nigh two centuries? There was unbounded sympathy for the victims of Axis aggression and a desire to help by strengthening the defence resources and war efforts of the country. The demand for more recruitment was met with a cold douche by the perpetuation of those interests, who near the end of the first year of the war fixed 100,000 as the utmost limit of army establishment it could ever be asked to equip, and considered nine aeroplanes with Indian pilots in the air an ambitious undertaking. The proposals to undertake shipbuilding and the manufacture of aeroplanes and automobiles were pooh-poohed, despite the concern of the Eastern Group Supply Council. Again, the Atlantic Charter promised political and economic freedom to the peoples of the world, and the hope of political India that here at least was a promise of deliverance was dashed to the ground by Mr Churchill's announcement that it

applied only to the victims of the Axis aggression, and that India was a domestic matter.

The stalemate in good humour—the Congress and Moslem League not participating in the war effort and the Government tolerating their criticisms—could only last so long as the war was being fought far away from India's frontiers. Pearl Harbour and the catastrophic sequel profoundly altered India's conception of the war and its attitude toward it. The sudden collapse of India's bastions of defence—Singapore, Malaya and Burma—and the loss, even temporarily, of the control of the Bay of Bengal exposed the coast line of the sub-Continent and the eastern land frontier to enemy attack. The fate of Malaya and Burma, the terrible stories of the mass evacuation from these places, with heavy loss of life and property, were too shocking to a generation which had grown up with the idea that *Pax Britannica* could not cease to be. The growing fear that what overtook Burma might yet come to India was too overwhelming to the political leaders for them to stand aloof as disinterested spectators. The speeches of Pandit Nehru, after his release last year until April, reflected a new sense of responsibility and an ardent desire to galvanise the nation's resistance to any threat to its security. The views of Mr C. Rajagopalachari, another leading Congressman in the Brains Trust of Mr Gandhi, whose sense of the impending peril was too keen to repudiate co-operation with Britain, have survived the "disillusionment" of the Cripps Mission and even his membership of Congress.

The Cripps Mission

The Cripps Mission rightly attempted to canalise these ideas towards the furtherance of the war effort of India in collaboration with the United Nations. The understanding tone of the Parliamentary debates; the considerate restraint of Mr Churchill's own statement; the antecedents of Sir Stafford Cripps himself, and his previous utterances in sympathy with extreme Indian nationalists—even just before joining the Cabinet; the air of mystery surrounding the proposals themselves; and not least the American interest in a satisfactory solution of the Indian problem—all these helped to arouse considerable expectations. The proposals missed the bull's eye because they did not allow for the fundamental factor which had profoundly affected the Congress attitude. The proposals related to post-war readjustments. It was the immediate problems which obsessed the leaders. The interim regime was to be the Vice-

roy's affair, presumably modelled on the August proposals of 1940. To Congress, this seemed to be a mouse for a mountainous labour. That it was not alone in considering the proposals inadequate to meet the situation here and now is clear from the position of the other parties, which amounted to the same thing.

It may be questioned whether Congress, which has been the most vocal, represents India at all. But the Moslem League, which claims to speak for a hundred million Moslems, has acted, surprisingly enough, not differently from Congress. After the Congress members had walked out of the Assembly because war aims were not clarified, the Moslem League members did the same, though for different reasons, because of the attitude of the Government concerning Moslem appointments on the railways. The policy of non-embarrassment precluded Congress from participating in the war effort; the Moslem League held aloof on other grounds. Again, Congress found the Cripps proposals inadequate; the League feared that Pakistan was not guaranteed and found the provisions against "Hindu domination" insufficient. The reasons offered may be anything; the result is precisely the same. No other party has come forward and acted differently from Congress. The Working Committee of the Moslem League insists on a British guarantee for the status of Moslems now and for the future. The guarantee carries with it obligations and consequently responsibilities, from which the League would not relieve Great Britain. With remarkable astuteness the ex-Congress President, Mr Jinnah, has capitalised a slogan, constructed a party and contrived its solidarity by remaining in opposition. None of the predominantly Moslem provinces has gone over to the League in the sense in which seven provinces were controlled by the Congress High Command. Punjab is Unionist; the North-West Frontier Province, Congress; Sind, Coalitionist; Bengal, after its memorable League Ministry, Coalitionist; and Assam, once Congress, later and now again Coalitionist. Pakistan may be a rallying cry for dissidents, but it has not taken the League towards political power.

In the absence of the positive co-operation of the principal parties, the present regime has done its best to broaden the base of its representative character, but without any clearly visualised objectives, policy or decisiveness. The present Indian Members, it is true, have a good record of public service before the recent past, but their hold on the country and appeal to the people are circumscribed. With probably one or two exceptions, they do not talk the language of the man-in-the-street.

The other features in the Indian situation also do not make for a cheerful picture. The Legislatures of the major provinces, excepting two, have not met for three years, and the administration of these Provinces is now in the hands of their Governors and their advisers. The Central Legislature, of course, meets; but, without the presence of the two important parties, Congress and the Moslem League, constituting the largest membership, its proceedings have become unreal and stale. The remaining members, official and non-official, look bored and overworked. Members returned seven years ago are likely to be out of tune with their constituencies.

Position of the Princes

Indian India—the numerous States, the major few and the minor multitude—is not a passive spectator. Its co-operation in the present war effort is indeed substantial. The States are conscious of the implications of constitutional changes in British India and expect to have their future political interests properly safeguarded. The attitude adopted by Congress towards the States has not been friendly, and the Princes have grown apprehensive of the integrity of their States and their future status. The administration of some of the States, it is true, leaves very much to be desired; but there are others which compare very favourably with any Province in India. The extremist Congressmen of an earlier generation contrasted, with telling effect, the better economic conditions in the States with the general backwardness in British India. Now, the boot, according to Congress diagnosis, is on the other leg. The Princes are, therefore, as much the target of Congress criticism as the British Government itself. Clearly, the administration of the States should be made far more democratic; nothing can be more unhelpful to the Princes than to consider the introduction of representative institutions as an invasion of their own hereditary rights.

As the Indian States stand outside the zone of present Indo-British differences, it is on British India that statesmen will have to concentrate to resolve the present impasse. The moment appears to be ripe for a supreme act of states-

manship. It will have to achieve the twin objectives of restarting the Provincial Governments now under the Governors and bringing a National Government at the centre into being. In framing a proper policy to induce these changes, it seems to be imperative that the Viceroy should have immunity from interference and complete responsibility. The relations between the Secretary of State for India and the Indian administration have come under fire in recent months. If the India Office does not pretend to control policy, its right to further existence is questionable. On the other hand, its potentiality for mischief in Indian politics has been deemed so great that even so sober a politician as Sir Tej Bahadur Sapru has said that "Mr Amery must go." The suspicions of political India can only be removed by a conduct of policy impeccable in integrity and aggressive in its appeal to the country's vital interests. The announcement in Parliament that His Majesty's Government do not propose insisting on the "economic safeguards" for British interests in India—a topic quite specifically written into the Government of India Act, 1935—would have had a reassuring effect, had it not been obscured by the drastic measures against Congress. Fear of present declarations being whittled down by convenient interpretation later could be provided against during the interim regime. If, on questions of defence, His Majesty's Government have obligations to the United Nations, the latter could also make a joint declaration which might help to ease the tension. Above all, it should not be forgotten, particularly in Britain, that India is keen on participating in the present struggle, and is feeling humiliated that it is not being allowed to do so with dignity. Any grant of responsibility for national defence is bound to be followed by an ever-increasing and frank dependence on British advice, assistance and co-operation. If the vicious circle of stalemate to stalemate is to be broken, the country must feel free to express its sympathies spontaneously and not in a manner prescribed or dictated from without. The principal with too much insistence. But when the national life of the sub-continent begins to pulsate with a new life, hope and vigour, the resources of 400 millions will, in a real sense, be at the back of the United Nations in their heroic struggle for the freedom of man.

Industrial Developments in Portugal

[FROM OUR LISBON CORRESPONDENT]

September 12th

DURING the past two years, industrial expansion was general and profitable. Textiles, smallware, glass, paper, hardware, including cheap cutlery, sold well here and overseas at prices showing good profits, which nevertheless did not press unduly on local consumers. Technical direction is often foreign, frequently Central European refugees, but the capital and labour are Portuguese, and such business, though each transaction is individually small, has in the aggregate been most beneficial to the country and its colonial markets.

Recently, plans of much greater scope have come to light, involving foreign capital and foreign direction. Permits have been given for the erection of three sulphate of ammonia plants, a tin-smelting and tinplate works and an installation for preparing dyestuffs.

With the exception of one of the chemical plants, which is an expansion of existing production by a Portuguese company of old standing, French and Belgian capital and direction, German-controlled, are behind all these schemes. They are indeed believed to have formed a part of the Greater Europe industrial plan worked out by Germany shortly before the fall of France; and in marketing the output, not only Portugal but also Brazil and parts of the North and West Africa were envisaged. Had the Axis won the war, these works might have been deemed profitable; as things are to-day, even if war continues for a couple of years, their prospects are nebulous, while an earlier cessation of hostilities would mean a dead loss, since tin-plate, chemical products, including artificial manure, and than local production could provide. Nor does this take into consideration the fact that the volume of trade within Portugal itself is too small to give national industries of this nature a profit commensurate with the capital necessary and the risks involved in its employment.

Difficulties on the Danube

[BY A CORRESPONDENT]

ON September 26th (page 390), an account was given of the food supplies of South-East Europe, in which it was stated that for the most part the 1942 harvests were below average. Another problem confronting the authorities is how to get control of what harvest there is—the "battle of deliveries." Even German sources admit a lack of "diligence in delivery" and the prevalence of private barter in the Danubian countries. To counteract this, new and extremely stringent regulations have been issued, particularly in Hungary. The quantities which producers are allowed to retain for consumption and as seed are laid down to the minutest detail.

How far these regulations can be enforced, particularly on the small holdings, is another question. In Roumania, for instance, neither the new regulations, nor the special premia offered for quick delivery, have brought forth any response, and the Government had to abandon the control of maize, making its disposal entirely free. This complete reversal in policy may succeed in bringing to the market some of the hoarded supplies, but it is bound to drive the price of maize, the staple food of the poorer sections of the population, up to fancy figures. As for wheat, which remains controlled, the official price has just been raised by 100 per cent after pressure from the producers. Such a rise in the basic commodities will bring down the whole price structure.

Probably Germany did not, in any case, expect to receive large deliveries of bread grains; last year, out of a medium harvest, only about one-quarter of the pre-war surpluses could be exported and not all of this went to Germany. What it has been more eager to obtain are oilseeds, feeding stuffs and maize. According to present indications, little if anything will be available for export in any of these

products. Indeed, it appears that Germany has become reconciled to not receiving the original quotas of agricultural products, though not without exacting promises for increased deliveries of livestock instead. But these, too, appear more than doubtful, not only because of the serious inroads already made in the existing livestock, but because of the competing claims from the armies of the satellite countries fighting on Germany's side. The weakness of the German position in obtaining supplies from Hungary, Roumania, Slovakia and Bulgaria lies in the fact that, since these countries are now Germany's military allies, the nutritional needs of their armies, which are relatively much higher than those of the civilian population, cannot be disregarded, and some attention must be paid even to their home morale.

The Strength of Weakness

This results in the somewhat paradoxical situation that the weaker the internal position of the satellite Governments grows as a combined effect of the war and the food situation, the stronger their position becomes in face of German pressure. A firmer stand has already been shown when demands for additional military contingents were met only in part; and, more recently, in one or two countries but thinly disguised measures were taken against further German capital penetration and underhand purchases of foodstuffs by German agents. Anti-German feeling may even be used as an argument for staving off German claims.

Meanwhile, the tension between Roumania and Hungary over the Vienna award is daily growing in intensity. Roumanian revisionism is now adopted by the Government as official policy; and Hungarian official reserve on the question has also vanished in recent declarations. As matters stand to-day, it is only Germany that stands in the way of an armed clash, just as it is the hostility between them that enables Germany to press even its reduced demands, by playing off the two rivals against one another. The balance is most precarious, and a weakening of Germany's military strength or further internal strain may let loose the pent-up forces.

WELL-KEPT files, easily accessible, typify the well-run business. Milners' Steel Filing Cabinets are well designed and smooth running. They are such a pleasure to use that the filing clerk cannot fail to do her work well.

Milners' Steel Equipment of standard designs covers all usual desk and storage needs in office and factory. Special designs can be made to meet special needs.

Milners' Steel Equipment, which is produced by the manufacturers of the famous Milners' Safes, is at present available in very limited quantities; but we shall be happy to help responsible enquirers plan the fitting up of office and factory for the peacetime work ahead of us.

German Europe

The Winter Programme

AT the beginning of the fourth winter of war, Germany's conquests are greater than a year ago. More fertile land and more mineral resources are at the disposal of Germany's European war economy. In the west of Europe and in Germany itself, however, the supply of foodstuffs, raw materials and manpower has fallen; the overall production of the south-eastern countries has also declined. If Germany could reduce fighting in the winter to small scale engagements, manpower might be freed to reconstruct some of the wrecked industries in occupied Russia. Concentration in Germany itself of the most important industries manufacturing for the war would then again increase the output of war material and of agricultural machinery for the occupied Russian provinces. The main problem would be organisation. Recent German propaganda has made these points clear. By collaboration and by compulsion, Germany will try to use continental Europe's economic resources for a prolonged war, not only in Europe, but also in Africa and on the high seas.

The question arises whether actual economic conditions on the continent, and particularly in Germany, make success in this plan probable. It is hardly likely that Germany can possibly succeed if forced to fight decisively large-scale military campaigns during the winter. A military stalemate is necessary. Moreover, some degree of political stability in occupied countries, if only stability enforced by police measures, is equally necessary. During the spring and summer of 1942, Germany's main economic preoccupation was the final concentration of industry for war purposes and the replacement of called-up Germans by foreign workers. Every single business report and all the general economic surveys point to the fact that war output during the first six months of this year was at least maintained. But raw material supplies, especially coal, steel and other metals, already showed unmistakable signs of being strained to the utmost. Industries catering for essential civilian requirements were forced to release workers for the war industries, and their output fell correspondingly; during the corresponding year in the last war, the quantity of civilian commodities available was incomparably greater than during 1942. At the same time, the general state of repair and replacements in all industries deteriorated considerably.

The fact that Germany could draw on the industrial capacity of the whole Continent made it possible to maintain actual war production. The exhaustion of German manpower and the wearing out of German industrial installations were averted by withdrawing material resources, foodstuffs and manpower from the occupied countries. During the coming winter, western and northern Europe will come very near to actual exhaustion; and it will become very difficult to transfer more workers to Germany. The east is therefore the main reservoir for supplying Germany with labour. In numbers, the occupied Russian provinces can supply sufficient workers; but each worker withdrawn from Russia diminishes the possibilities of reconstructing agriculture and industry in occupied Russia. At the same time, the concentration of foreign workers in Germany may soon reach saturation point for technical, as well as political, reasons. Only the profound shock and demoralisation resulting from a complete collapse of the Soviet Union would change these conditions.

Belief in Organisation.—Nazis believe profoundly that all economic problems can be solved by organisation; and, superficially, Germany's economic successes have been achieved by novel methods of organisation. Actually, the German war economy has been built up piecemeal on the basis of an old-established and highly developed economic system. The present reorganisation of war industry, which has been coupled with the name of Minister Speer, has not been completed, and will probably never be completed. What is happening is that the economic administration, the *Wehrmacht* and the so-called self-governing economic organisations, the former industrial federations, are competing for the control of industry. The Reich Control Boards are being dissolved into Reich Co-operatives, or taken over by industrial federations. A great number of the remaining Reich Con-

trol Boards have been concentrated. Minister Speer's Committees of Organisation are still not effective. The complete concentration of industry for war production has resulted in a mechanical indexing; factories are referred to by index numbers; raw materials are allocated by a system of cheques or points; and the latest invention is the "order permit," which means that manufacturers have to apply for a permit before taking an order. The system has lost its flexibility, and will become more rigid the more deficiencies grow. Rationalisation and standardisation have undoubtedly been successful. They have been carried to an almost unbelievable pitch in all sections of the war industries, as well as the civilian industries. Every day, German papers publish news of more reductions of the number of products and standards. Rationalisation has made possible the employment of large numbers of semi- and unskilled workers, and the process of reducing the number of skilled workers is still going on.

Collecting Stocks for the Winter.—A characteristic move in the preparation for winter was the collection of scrap iron during the summer months, which has now been extended to all non-ferrous metals. Inability to expand the output of coal, steel and non-ferrous metals was the cause; and the seasonal pressure on communications to transport the harvest in the autumn months prompted the timing of the campaign for the summer months. Everything points thus to very careful preparations designed to ensure the full working of industry during the winter.

Last winter, Germany's military position and entire economy were seriously threatened by transport difficulties. Technically, that is to say, in the maintenance of permanent ways, locomotives and rolling stocks, there has been hardly any improvement. But the transport of materials has been cut down to an absolute minimum by a system of transport regions; and the utilisation of existing material has been greatly improved. The problem can again be simply stated. This winter, the transport system will work if there is no large-scale fighting in the east.

The Continental System.—Germany has not succeeded in building up a system of European collaboration. At first some of the countries were quite willing to collaborate. But German economic organisation did not work in the occupied countries; and collaboration could obviously have been successful only if Germany had been able to replace the necessary minimum of raw materials formerly imported by the occupied countries from overseas. This was clearly beyond Germany's capacity. Collaboration soon became a one-sided affair, consisting mainly of exports to Germany.

The gradual change in industrial collaboration during the summer and autumn of last year became abrupt when Germany was forced to introduce complete concentration of Europe's manufacturing industries in Germany. Instead of placing orders in foreign countries, Germany demanded the labour forces in all European countries directly. It is no longer single workers that are being transferred to Germany, but whole groups are being moved, together with their managers and foremen. Germany's gain is clearly the loss of output in the occupied countries.

Another important obstacle to collaboration is the difference in the control of prices in Germany and in occupied countries. The German system of control is constantly endangered by violent price movements in the occupied and dependent countries; and the stabilisation of Continental prices has not succeeded. In some of the occupied countries, the Germans themselves laid the conditions for a classical inflation—and they are now confronted with the task of stopping it. The pre-war economic relations between European countries have been destroyed; but Germany has not been able to build up new relations to ensure stable international conditions. The more Germany is forced in the interest of the war machine to the exhaustion of the occupied countries grows. Gains of losses in the west; and the losses in manpower on the battlefields and by starvation in occupied countries cannot be replaced.

THE BUSINESS WORLD

The Future of Unit Trusts

THE unit trust movement has been in a state of enforced hibernation for sixteen months. In May, 1941, an amendment to No. 6 of the Defence (Finance) Regulations, bringing units and sub-units within the category of securities to whose issue Treasury consent was required, was followed, within a couple of days, by a Parliamentary answer by the Chancellor specifically stating that the trusts would not be able, without the Treasury's dispensation, to issue units and sub-units in excess of the number existing when the amended Regulation came into force. The new Order was criticised, at the time, on the ground that the loophole in the "closed" capital market, which the authorities were anxious to stop, was Lilliputian. Alternatively, it was argued that it was no loophole at all, because new units and sub-units were merely documents representing the counterpart of existing securities—including Government stocks. Be that as it may, the effect was to limit the wartime activities of the unit trust management groups to "unwinding" the pre-existing issues or to "marrying" buying and selling orders. The movement is, in fact, "ticking over" with all its mechanism intact.

Has the unit trust movement any useful, specialised part to play in the re-creative period in Britain's economic life when hostilities end? Are the organisation and methods of the movement, developed before the war, the best that could be devised for its task? It is evident that to the first question no confident answer can be given till much more is known of the lines which "reconstruction" is likely to take. What is clear is that the unit trust movement will have to base its post-war claim to recognition and status on something wider than "sales appeal." To some extent, the impartial Anderson Committee, in 1936, recognised the movement's claim when it declared that the unit trust seemed, if properly conducted, to offer to the small investor facilities which he did not previously enjoy for acquiring a particular type of investment. But this official "auditors' certificate" carried three important qualifications. By implication, it suggested that the conduct of the movement's affairs might, in certain circumstances, be open to criticism; it limited the movement's potential clientele to the small investor and its article of business to "a particular type of investment."

From the movement's viewpoint, the first of these qualifications—the conduct of its affairs—is undoubtedly of greater immediate moment than the second and third, its customers and its commodity. Up to the outbreak of war, the movement had not fully succeeded, either in laying down a completely satisfactory code of good professional conduct or in securing the adhesion of all its members to a completely representative and disciplinary body for enforcing its canons. It was still in the fiercely competitive stage of development, typified by attempts to cut prices at the expense of the quality of the merchandise. Happily, such attempts were becoming rarer. Some of the strongest groups had held aloof from them from the outset. But even a small minority of unscrupulous vendors can bring a market into disrepute. The movement might be well advised to use its present period of suspended activity as an opportunity to call its practitioners together, with a view to forming a new and really comprehensive association with a body of rules to which, on some future "appointed day," national sanction can be given. The appropriate procedure would be by way of legislative amendment of the provisions which, under the Prevention of Fraud (Investments) Act, are already on the statute book, but await official action before coming into force. It would seem to be essential that any such legislation should avoid all taint of monopoly. Membership of the all-embracing and all-powerful association would presumably be open to all comers of minimum financial status, but would be revocable immediately any one of the association's rules of conduct were broken.

With an organisation, the second and third of the Anderson Committee's reservations need not necessarily be a bar to the movement's claim to a useful function in the post-war scheme of things. Whether post-war industry is to be organised predominantly under private enterprise or, in part, under public control, and whether ownership of the means of production is to be mainly public or private, new capital for industry will have continually to be provided. And present tendencies emphasise rather than diminish the part which the small investor will need to play in providing it. The "type of security" in which the unit trust movement specialises is particularly well suited to the small investor's requirements, because it provides for a spreading of industrial risks, and for ready exchange either way—cash into securities or securities into cash. It is very far from apparent, however, that any great progress has been made with the problem of reducing the cost of sale and transfer on small sums.

The eight years between the establishment of the first British unit trust and the outbreak of war were probably too short a period for any final judgment on the value of the movement's permanent contribution to capital market technique. Almost all its principles had been pioneered earlier in one form or another. The investment trusts, since the '70's and '80's, had developed the spreading of risks in a marked way. But their stocks had never been readily available to the really small investor and, for reasons largely historical, their portfolios held a considerable proportion of foreign investments. The principle of re-encashment was characteristic of practically all agencies which had successfully appealed to small savers long before the unit trusts entered the field—co-operative societies, building societies, savings banks and the Government itself by way of the National Savings Certificate. The National Savings Committee in the last war had shown how vigorous and

purposeful advertising campaign could create and maintain the investor's demand for a particular type of security. Clarence Hatry, of unhappy memory, had re-emphasised that conclusion in connection with Home Corporation stocks. The peculiar merit of the unit trust movement was that it fused all these elements in a particularly convenient and effective way. Its success in tapping resources not very far short of £100,000,000 showed that, though the price for providing the small investor with these facilities might be heavy—probably unduly heavy, for “loading charges” certainly represented no inconsiderable overhead—the small investor was willing to pay because they were precisely the facilities he wanted. The unit trusts proceeded to apply that lesson to the wares of the Stock Exchange as a whole and to risk-bearing capital—the equity share—in particular.

It would seem, therefore, that there will be a useful field after the war for the “particular type of investment” which the unit trust movement provided. Whether the movement itself should continue to be the agency for providing it is a question which turns partly on considerations of public

policy and partly, perhaps, on the extent to which the movement succeeds in living up to its best ideals. Its chief problem is, fundamentally, the same as faces many other sections of the community. How can it (in prevailing terminology) best reconcile the “profit motive” and the “service motive”? Stress on salesmanship initially led the movement into an attempt to popularise the “fixed” type of portfolio and later to appeal to the spurious concept of high yields. The latter tendency, particularly, was objectionable not because high yields in themselves were wrong—the purchase of high yielding stocks, which may be intrinsically sound but have failed to attract their due share of market attention, is merely a specialised branch of long-term investment—but because the effort to secure an additional 1 per cent led to adulteration of portfolios with assets of a wasting type.

All in all, there is a great deal the movement could do by way of setting its house in order, and it will be definitely disappointing if it fails to use the opportunity which present conditions provide for beginning the task.

Finance and Banking

Still More Currency

With the September making-up safely out of the way, and with the early-October Government distributions to add their small quota to the flow of credit entering the market, conditions have been exceptionally easy in the money market this week. The discount market obtained a 33 per cent allotment at last week's tender for Treasury bills, and has not been a particularly keen seller to the banks. In consequence of this and of the abundance of money, the banks' appetite for bills has not been altogether satisfied. The position in this respect should improve next week, when the market will have had £80,000,000 of Treasury bills to apply for. The syndicate's aggregate quota will be automatically adjusted to the higher total of bills on offer, and though the proportionate allotments may show little change, it may be assumed that the amount of Treasury bills to be canalised through the discount market will increase appreciably as long as the new figure of bills on offer remains effective. The abundance of credit this week is all the more striking in view of the heavy TDR payments which the banks have been called upon to make. New payments totalled £50,000,000, against which there were nominal maturities of £20,000,000. The Bank of England return reveals another factor which must have appreciably narrowed the volume of bank cash, namely, a further expansion of £5,213,000 in the note circulation. The increase in this item goes against all seasonal trends, and has again acquired exceptional vigour. One explanatory factor in the movement is the increase in the well-paid American army now garrisoned in this country. The further efflux of notes was, however, more than offset in its impact on the credit situation by an increase of £7,570,000 in the Bank's holding of Government securities. In addition, public deposits were allowed to run down by £4,494,000 to £5,769,000—the lowest point reached since October 15, 1913. The total of bankers' deposits was thus increased by £2,534,000 to a level of £138,244,000, which helps to explain the exceptional ease of credit during the week.

Increased Treasury Bill Offer

The total of Treasury bills available for tender has this week been increased from £75,000,000 to £80,000,000. Since the beginning of the war the weekly offerings of Treasury bills have risen from £50,000,000 to £80,000,000. They have done so in steps of £5,000,000 each, whose incidence has been largely divorced from what was known before the war as the normal seasonal variation in the Treasury bill issue. This rigidity of the tender Treasury bill issue has been possible because Treasury deposit receipts have now become the truly elastic element in the floating debt. Each increase in the weekly offering of Treasury bills has up to now been dictated by the need to protect the discount market and the banks, whose Treasury bill needs are satisfied through the market, from the competition of official bidding for bills at the weekly tenders. For a time, much of this official

bidding for bills came from central banks in the sterling area, but for over a year this particular demand for bills has in large measure been satisfied by issues of bills through the tap. In any case, there would appear to be little call for more lenient treatment of the discount market in view of the result of recent tenders, at which the market syndicate has obtained comparatively liberal allotments of bills. In addition, it is doubtful whether the official demand for Treasury bills at the weekly tender is still increasing. It is probable, therefore, that some other reason must be found for the decision to raise the offer of Treasury bills from £75,000,000 to £80,000,000. A possible explanation is that the bills to be tendered for in the next three months will be those maturing in the final quarter of the financial year, when heavy tax payments will be draining the banks' resources and when, therefore, they will be glad to hold a considerable volume of maturities. In the early months of this year, a veritable bill famine developed and the clearing banks' discounts fell to the abnormally low figure of £111,000,000 in February. The fact is that, in meeting a drain such as that occasioned by heavy tax payments, bills are a much more effective instrument of adjustment than TDRs, which can only be pre-encashed against subscriptions to new Government loans. It may well be, therefore, that the latest increase in the Treasury bill offering is merely intended to be temporary and to put into the hands of the banks a larger volume of January, February and March maturities against the heavy drain of cash to which they will be subjected in those months.

British Participation in the BIS

Parliament and the financial press have been resounding with a campaign whose object is to sever British participation in the Bank for International Settlements. The immediate occasion for the attack was the publication of the BIS report for 1941-42, a document which is not yet distributed in this country, but which appears to have received some favourable comment in the German press. To some, this fact alone is sufficient condemnation, both of the report and of the institution under whose authority it was published. The basis of attack has, however, broadened well beyond the mere fact of Axis approval of the latest report. It has been suggested that, since the Axis now controls a majority of the capital of the BIS, that institution can only be regarded as an agent of the enemy powers. Further, it has been suggested that any contact with the enemy, of shunning the contagion in this instance is to sever the British link with the BIS. Sir Kingsley Wood, who of Commons, had little difficulty in disposing of the critics. He pointed out that the President of the BIS is an American and that its conduct, which is guided by a strict policy of neutrality, is entirely in his hands. The latest report was prepared under his authority and without any collaboration with London or any of the belligerent

powers. No transactions have taken place since the war between the Bank of England and enemy central banks forming part of the BIS. The only British subjects on the staff at Basle are in subordinate positions and have nothing to do with the management or policy of the bank. On the other hand, this country has substantial interests and rights in the BIS under international trust agreements between the participating Governments, and it would not be in the national interest to sever the British connection with the bank and thus endanger these rights. Quite apart from these statements of fact, there is the promise which the BIS holds of providing after the war the germ of an international organisation which may yet fulfil the wider dreams of those who founded the bank. No danger is being incurred and no damage done by maintaining this structure alive, however little it may be called upon to accomplish for the rest of the war.

Enter the Cruzeiro

The Brazilian Government have staged their entry into war finances with a remarkable show of purposeful activity. In order to help the economic mobilisation an eight-day moratorium was decreed to begin on September 29th. Between then and Wednesday of this week, banks in Brazil were only open for cashing of cheques for wages and other urgent payments. By the time the banks were reopened details of the Government's financial plans had been issued. They involve an immediate issue of War Bonds to a total of about £37,500,000, an authorisation to increase the issue of paper currency, the setting up of a new monetary unit of account, the “cruzeiro,” and finally an announcement that the entire note issue is to be withdrawn at some as yet unspecified date and replaced by new notes—presumably expressed in terms of the new monetary unit. The cruzeiro is to be the equivalent of the milreis and will be divided into 100 centavos. Its creation had been foreshadowed by legislation passed before the revolution of 1930 but kept in cold storage ever since. The new system will avoid the inconveniences of having to divide an already modest unit of account into one thousand reis. The exchange value of the cruzeiro should equal that of the milreis, which is quoted at 84.63 to the £. The trend

of the monetary circulation in Brazil has been sharply upward since the war. It amounted to 8,002,248 contos of reis on July 31st last, against 4,787,500 contos on July 31st, 1939. The gold reserve over the same period has risen from 586,531 contos to 1,504,682 contos. The improvement in the gold and exchange reserve has been continuing, as was recently indicated by the addition of the free milreis to the list of specified currencies designated by British Defence (Finance) Regulations.

Rupee Coinage Order

Some measure of the rapidity with which the conversion of silver rupee coinage from the old fineness of 916/1,000 to the new 500/1,000 figure is proceeding has been provided by the order that all George V and VI standard silver rupees will cease to be legal tender from May 1, 1943. By then, it is hoped that the whole rupee coinage will consist of coins of the new fineness. The conversion has been a very considerable undertaking, but it may be assumed that the rapidity with which it is being effected is in part due to the disappearance of the higher fineness coins into small hoards. The big hoarder will naturally buy silver bars, since their price in India has not yet reached the coinage parity. But to small hoarders, the attraction of the full weight rupee coin must have proved considerable. The saving of silver to the Government resulting from the recoinage operation has thus been rather smaller than it would have been but for the disappearance of 916 coins from circulation. These coins have gone into hoards and have had to be replaced by new coins. The order removing legal tender attribute from the full weight coin may, however, induce a number of them to emerge from hoards before May 1st next. The decision to recoin was taken in 1940 and has been amply justified by events. At no time has the world price of silver approached the former rupee coinage parity, but the trend has undoubtedly been in that direction, and the recent move of the US Treasury in raising its price for imported metal has reinforced the wisdom of the Indian Government's precautionary move.

Investment

Speculative Buying

This week started well with a record number of bargains received of 6,440, an advance of 14 per cent above the highest achieved until then, namely, on the preceding Monday. Although Tuesday's total was lower at 6,136, it was even more striking, for it is less than 5 per cent lower than that of the previous day, whereas the experience of the past 15 weeks suggests a drop of almost 15 per cent between the first and second working days. Although virtually all equities, and possibly some industrial preference and debenture stocks, shared in the expansion in business, the principal cause of it was something approaching boom conditions in home railways, which showed signs of a “boil over” on Tuesday, but with scarcely any falling off in business. A more restricted expansion in business in oil shares, and mines, goes to support the view that interest in the markets is both widening and becoming more speculative. The eighty—or is it one hundred?—days given to Germany to achieve preparation for victory next year, are almost exhausted, and it is not impossible that some people are gambling on a definite turn for the better in the war news. If this is so, and if the buying of this sort spreads, it is far from improbable that the fundamentally strong undertone of the markets, based on the perpetual shortage of stock, will be changed to an underlying weakness. This would mean that bad news would cause a severe shakeout. Until quite recently, however, there has been no evidence that the buying was of this character, and at present the undertone is strong. More than one broker's circular of recent preparation has shown a slight preference for investment in equities, and has taken it for granted that there will be temporary peak in these before the conclusion of hostilities. This may be sound, but the recent rise has been rather indiscriminate. The equities which offer the best hope of a reasonably early increase in profit are those of companies required to work full time in war, but which can be converted readily to peacetime re-

quirements. Those which have hitherto been regarded as post-war recovery stocks have probably further sacrifices immediately ahead, and in some cases their adjustments may be such as to defer, for some time after the end of the war, return to normal production.

Sharp Fall in Yields

The full figures of *The Actuaries' Investment Index* make possible a rather more detailed stocktaking of last month's movements in the market. Although the amount of

rise varies widely, every section shows improvement, except electric supply, which suffered a modest decline for the fourth month in succession. The reason for this is clearly

fuel rationing, coupled with the decreased margin between costs and charges. These shares were little affected by the blitz. Gas stocks, which suffered severely, are still recovering, but their index is 25 per cent below that for electric supply. The largest rises on the month are in home rails, aircraft, oils and insurance shares. The advance has, in general, been accompanied by a fall in yields, which brings the aggregate index down to 4.83, the lowest since mid-November, 1937, except for a momentary low of 4.81 in the middle of the following January. Meanwhile, the price index is at its highest since mid-March, 1939. If one goes back to November, 1937, the price index, for a rather different selection of shares, was 74.9. The only sections in the industrial lists to show rises compared with that date are electrical manufacturing and cotton—both very small—and shipping—up by over 25 per cent. Against these movements, price changes in the fixed interest sections on the month are very slight—except in the case of preferences of the distributive trades, presumably railways, they scarcely affect yields. If there is any trend, debentures have caught up on gilt-edged, and preference shares on both. All this fits into the picture of a swing from safety, as reflected in a steady yield, to hopes of capital appreciation, and, in due course, of higher dividends, dictated by the continued rise in all uncontrolled prices, of which the rise in equities is itself a part.

An Index of Activity

The new system of recording bargains has been in operation for some 3½ months, and supplies, day by day, a great deal of material about one aspect of stock market activity, namely, the actual number of transactions involved. It is true that the marking of bargains is not obligatory, but it is believed that the record covers some 90 per cent of the total, and, if that percentage is virtually constant and evenly distributed, the exclusion of 10 per cent may be of no great moment. For detailed study, the official figures are excellent, so far as they go, but for a general conspectus they are rather indigestible, and *The Financial News* is to be complimented on undertaking the task of reducing them to a more generalised form. This has been affected by producing a five-day moving average of four principal sections as well as the total. The four sections are the funds, all railways, including preference and debentures, industrials in general, and mines. These are probably as good a choice as is available, and they present a considerable diversity of movement over the short period so far covered by the new system. The choice of a five-day average means that the index is essentially devoted to showing daily movements in activity, corrected for the purely adventitious factors, that Monday usually reflects some week-end accumulation, and anticipation, which brings down the Tuesday total, while Friday tends to be swollen by closing operations. The index suffers, inevitably, from two weaknesses which are inherent in the manner of presenting the original figures. First, they give no indication of the volume of money turnover; and, secondly, they fail completely, in most sections, to effect any separation between business in fixed interest stocks and those in equities. Possibly, when labour is less scarce, these defects may be remedied. Meanwhile, the new method of giving reliable figures by sections is a great advance on the old, and the new indices of *The Financial News* constitute a convenient summary of movements which should be of great value to all students of the subject.

An Interesting Conversion

The offer of conversion which Leeds and Wakefield Breweries are making to holders of all three classes of debenture stock has a number of points of interest. So far as holders of 6 per cent and 4½ per cent stocks are concerned, the offer is straightforward. They are to be repaid at 101½, in the terms of the original issues, and may take an equal amount of the new stock. The original character of the offer lies in the attempt to convert the 4 per cent irredeemable stock into the new issue, and so to effect a consolidation of all debenture issues and permit the company to repay the whole, should the time come when that policy seems profitable. Further, it appears that the holders of irredeemable stock may surrender them for cash, but in this case the payment will be at par. Holders of irredeemable stock who convert will receive the premium of 1½ per cent. Further, the new stock is repayable at a premium of 2 per cent, and, so far as can be judged, there is no sacrifice

of cover or security in the conversion. A redeemable stock would offer more protection to capital than an irredeemable one, in the event of a rise in the rate of interest. From this point of view, however, the new issue is far from ideal. It has a maximum life of 47 years, and during 42 of them the borrower has the right to repay the issue, in whole or in part, at 102 per cent. Thus, if the rate of interest falls, he will certainly be repaid, and if it rises he will have to wait until 1989. For many investors, this very long option to the borrower will remove much of the attraction the security might otherwise possess.

Brick Trade Prospects

The accounts of Eastwoods for the year to March 31st show a fairly heavy fall in gross earnings, but all charges against them, and in particular provision for doubtful debts, are reduced, and the change in distributable profits is slight. Eastwoods, although not the largest, are probably representative of manufacturers in the Flettons side of the industry, and for this reason the comments of the chairman, Sir Horace Boot, member of the National Brick Advisory Council, will be read with increased interest. The outlook is clearly dependent almost entirely on Government work. The general impression is that the demand will be substantial, but Sir Horace knows of no clear indication of what is expected of the industry, and is in some doubt as to the adequacy of the labour force, even for wartime requirements. The industry has the benefit of the Essential Work Order, and the second report of the Simmonds Committee provides for a pool of labour from factories compulsorily closed, but this labour is filtering away into other industries. There exists a very substantial stock of bricks, and these will presumably suffice for a considerable period. It is, however, necessary to see to it that the experiences of coal and cotton are not repeated in building materials. It is far better, in cases where the accumulation of stocks is feasible, to retain the necessary labour to secure an adequate stock, rather than that the problem of bringing men back should arise. Sir Horace's chief criticism of the existing set-up appears to be that insufficient use is made of the Flettons side of the trade, which, he maintains, is economical in the use of both fuel and manpower. He has, however, no doubt that, when control passes, or is relaxed, the Flettons companies will be able to take up the first shock of increased demand. The balance sheet of the company suggests that, financially at any rate, it is well equipped for this purpose. Meanwhile, some of the factories have been diverted to other war work, and surface acreages are let as farming land at rents which prove a valuable source of revenue. There will also be some financial relief in a rise in prices, but there is no chance that overheads will fall much with declining production. The point is stressed that many of the arrangements have meant the waiving of sectional interests for the national good, but on any reading of the statement the outlook appears not unfavourable in any but the quite short run.

A Curious Offer

Early this week, a cable was received from New York, apparently from the president of the company, stating that a New York firm, in possession of a list of British holders in Oriental Consolidated Mining, would shortly make an offer to purchase all British holdings in the company. In July, 1939, an offer to purchase the Japanese properties of the company was made, and eventually accepted, and in November of that year the company was placed in voluntary liquidation. Under the liquidation, two dividends of \$5 and \$4 have been received, in December, 1939, and December, 1941, respectively. Information about the exact position is difficult to obtain on this side, but it is understood that a composition was reached with Japan, as to certain assets held in local currency, just before the entry of Japan into the war. The capital stock of \$10 is quoted here at 35s. per unit, so that a considerable value is evidently attached to the proceeds of the composition, mentioned above, and to any other remaining assets. Holders on this side will be most unwise to consider any offer until they have been fully informed about their expectations in the immediate future. This is a particularly complex example of the general principle that the proprietors of a business are entitled to full information as to their property, and that they are entitled to it in advance of all others. When that information has been fully disclosed, it is perhaps in the national interest that the holdings should pass to the USA, but holders ought not to be expected to part with their

property without knowing its value. There is a growing habit in this country of making offers, of one sort or another, between the close of a financial year and the publication of accounts, and this sort of thing cannot be sufficiently discouraged.

Celanese Preference Scheme

The liability of British Celanese for EPT having been approximately determined, the directors are now able to put forward a scheme for dealing with the arrears of cumulative dividend on the 7½ per cent second preference capital of the company. The dividend is in arrears since October 30, 1931, and it is proposed to cover payments up to April 30th last; that is to say, for 10½ years, equivalent to 78½ per cent gross on the capital, ignoring interest on payments in arrears. Holders are offered, apparently in full satisfaction of their rights, 4 per cent funding certificates to the amount of 40 per cent net on their capital. That is to say, they are offered a payment, which may be indefinitely deferred, of rather over half the gross amount now due to them, and interest on this sum at 4 per cent cumulative, so far as the company is able to earn it. A weakness of the only statement so far available is that it does not make clear what priority this interest payment enjoys. It is stated to be "dependent on profits," an ambiguous expression, and it is stated that on liquidation the funding certificates rank for capital, arrears of interest and a premium of 5 per cent after satisfaction of the claims of the first preference shareholders. It seems, therefore, that the normal interest charge ranks in the same priority, but the ambiguity of the expression "dependent on profits" remains. Redemption of the funding certificates may be effected out of 25 per cent of profits remaining after the second preference dividend has been met, and in any year when an ordinary dividend is paid, a sum equal to 25 per cent of the dividend must be applied to redemption of the certificates. The price is to be not more than 21s. per certificate. When it is considered that the holders of the second preference have been without dividends for a decade during which the rate of income tax was relatively low, it is hard enough that they should be paid off when it is high. If they were paid in cash, they would receive a trifle less than is now offered in certificates, but to be offered only certificates is adding insult to injury. It will be recalled that the revised scheme of Fine Cotton Spinners provided for payment of net arrears, half in cash and half in stock. If British Celanese cannot find the cash, then the second preference holders are entitled to demand some other compensation, and it is to be hoped they will do so. In announcing the scheme, the board also say that they are abandoning certain provisions, and had this policy been adopted a year ago the second preference dividend would have been fully covered. For 1941-42 pre-tax earnings are greatly increased, from £487,257 to £1,270,000 before audit; there are also large accumulations of liquid assets. If, nevertheless, cash is not available, there remains the possibility of the transfer of a further slice of the equity. It may be well to await full details before prescribing a solution, but in any case the scheme, as it stands, is unacceptable to the second preference holder as such.

Anglo-Egyptian Oil

The full accounts of Anglo-Egyptian Oil for 1941 do not, unfortunately, reveal gross earnings from sales of oil and valuation of stocks, which rose by more than £1,000,000 to £2,248,232 in 1940. Profits, after trading expenses and taxation, amounted to £448,992 against £418,985 for 1940. Charges are, however, heavier, depreciation requiring £175,607 against £155,651, and exploration reserve £22,951 against nil. Consequently, earnings for dividends are reduced from £236,254 to £218,229, and the payment on the "B" shares, which is maintained at 12½ per cent, is underearned by 0.9 per cent. There is a consequent draft on the carry forward of £15,271, reducing it to £128,732. The main change in the balance-sheet is the jump in creditors and tax reserve of nearly £900,000 to £2,579,179. The rise in debtors is more moderate, from £956,887 to £1,543,778, and the former increase finances the accumulation of stocks of materials, which have risen from £797,641 to £1,041,234. Cash items show an increase in gilt-edged investments from £92,853 to £293,151 and a decline in bank holdings from £401,520 to £206,184. As the chairman, Sir Robert Waley Cohen, points out, there is

a decline in net liquid assets, excluding material stocks, of £221,000, making a fall of some £660,000 over the past two years. The failure to include stocks of material in the calculation is, of course, due to the fact that they are intended for productive use and not for sale. The concern is clearly buying against the possibility of future shortage and the setback to liquid assets will no doubt even itself out over the next few years. The past year, and the current period, must be assumed to be times of exceptional activity, and it is most probable that the gross figure, were it revealed, would show a further considerable expansion. In present conditions of trading and taxation, increased turnover will, however, bring little benefit to the "B" shareholder. The yield, at the current price of 58s. 9d. ex dividend, amounts to £4 5s. per cent.

Ransome and Marles Profits

The full accounts of Ransome and Marles Bearing Company show a modest rise in disclosed profits, after tax but before depreciation, from £183,729 to £184,713 for the year to June 30th last. There is a more substantial improvement in equity earnings from £73,295 to £100,567, thanks to a number of reductions in charges. Thus, depreciation absorbs £63,579 against £68,734; war damage £15,867 against £27,000, while there is no liability for additional tax against £10,000 in the previous year. The ordinary dividend, maintained at 20 per cent, is covered by a rate of 28.7 per cent, whereas in 1940-41 it was underearned by 0.4 per cent. The surplus goes to provide £30,000 against nil for contingencies, and to raise the carry forward from £76,305 to £76,872. The chairman, Sir Albert Bennett, indicates that these results are considerably better than could have been foreseen earlier in the year. The concern has clearly been very fully employed, and the expansion in debtors from £385,035 to £496,150 and in stocks from £552,161 to £696,738 in the balance sheet have been financed mainly by a bank overdraft of £127,561, and a fall in cash from £100,000 to negligible proportions. The rise in creditors is only some £9,000 to £193,443. There is, none the less, an increase in net liquid assets from £566,945 to £632,205. The reserve position is strong, the total of reserves and free surplus amounting to £577,372 after the latest transfer. In view of the possible hardship to investors the board have decided to continue interim payments, but it must be understood that no conclusions as to the results of the whole year must be built upon them in times such as these. The £1 ordinary stock at 71s. 3d. ex dividend yields £5 2s. 3d. per cent.

Beecham Maclean Holdings

Beecham Maclean Holdings, the company controlled by *Beechams Pills*, which owns the ordinary shares of *Macleans, Limited*, and other manufacturing companies, has, in contrast with the Beecham side of the group, suffered a severe drop in income from £502,144 to £304,923 in the year to June 30th last. The setback is due primarily to the imposition of quota restrictions on sales of the products of two subsidiaries, and the directors report a possibility that these restrictions may be lifted. Income has also suffered in that one of the subsidiaries has been charged with EPT formerly borne by the parent, *Beechams Pills*. In view of a decline in income-tax liability from £248,391 to £149,730, it is still possible to pay something on the ordinary dividend, but equity earnings, after preference dividends and allocations to preference redemption, are down from £107,935 to £9,340. The ordinary capital, which is all held by *Beechams Pills*, receives a net amount of £9,000, equivalent to some 2.1 per cent against a net amount of £107,312, equivalent to 25½ per cent. The carry forward is raised from £1,724 to £2,064. The directors state that the scope of the group's activities has been widened since the close of the financial year by the acquisi-

FAMOUS SINCE 1795

OTARD'S

COGNAC BRANDY

tion of the entire share capital of five outside companies, but there is no indication of the total value of these transactions. In the balance-sheet, the valuation of investments at cost is unchanged at £2,950,000, but there is a rise in advances to subsidiary concerns from £391,963 to £548,181, financed by a loan from the parent of £79,328, an increase in bank overdraft from £243,028 to £271,637, and a diminution in cash holdings of some £25,000. The accounting date is again to be changed, this time to March 31st, in order to coincide with the accounting dates of the subsidiaries. The alteration inevitably interferes with any regular comparison of earning capacity, but this defect will be more than compensated if consolidated statements are presented.

Malayan Aftermath

The dreary saga of the Malayan rubber companies receives a new chapter almost daily. There is little point in analysing separately the, by now, completely academic earnings of the past year. The outlook for all is conditioned by the prospective defeat of Japan, by the actual destruction to property and by such compensation as may be given. In the interval, the only topic of interest is the evaluation of the net liquid assets retained by managements, and the inescapable liabilities on which these sums will have to be spent. Three typical concerns, *Kepong (Malay)*, *Linggi Plantations*, and *Bukit Rajah*, reporting to various dates within the last twelve months, may serve as examples. *Bukit Rajah*, excluding debts in the East, retains £59,015; *Linggi* £72,396, subject to taxation of an unspecified total, and also to an annual debenture charge of £17,306 gross, while *Kepong (Malay)* retains £66,582, also subject to taxation, but not to debenture payments. Only the last-named concern made any payment for the latest financial period, a 5 per cent interim. Future income, until the Japanese are evicted, appears to depend on investment earnings, which in the latest years amounted only to some £2,000 each for *Kepong* and *Linggi*, and to little over £1,000 for *Bukit Rajah*. The chairman's speeches reflect full appreciation of

the stark necessities of the situation. Sir John Hay, for *Linggi*, stresses the critical difficulties of the company which must confront all concerns with debenture charges. Sir Francis Voules, of *Kepong*, joins Sir John in his earlier rebuttal of the charge of delaying production in the crucial period. Delay, then—if delay there was, and however caused—is bringing increased difficulties now. It can only be hoped that the industry as a whole will benefit from its enforced holiday to effect those economies in costs which have been urged upon it for a decade or more, as a preparation for a fresh start.

Trinidad Petroleum Development

Despite a rise in net profits of £55,660 to £398,430, the preliminary statement of Trinidad Petroleum Development scarcely conveys a reassuring picture of the company's experience in the year to July 31st last. The appropriation for tax and contingencies is raised from £175,000 to £240,000, a new high level, and compares with £200,000 in 1939-40. The directors have decided to maintain the year's payment on ordinary capital at a total of 15 per cent, with a final dividend of 10 per cent, less tax at 5s. 6d. After allowing for a full year's dividend on the newly-issued 6 per cent preference capital, which only required a payment of some 3½ per cent in the previous year, it appears unlikely that equity earnings can exceed £146,430 against £161,195. On this basis, the earned rate would amount to some 14.6 against 17.2 per cent, and there would be a draft on the carry forward of some £3,500. The company is, of course, hardly hit by the incidence of local and British taxation, and this is presumably the main charge which threatens the maintenance of the ordinary payment. There is as yet no news that the EPT standard is fixed. It remains to be seen whether the rising demand for Trinidad oil has caused the company to accelerate further the development of its natural resources, but this would appear a probable corollary of the world petroleum situation. The £1 ordinary shares, at 65s. 7½d., yield £4 12s. 3d. per cent, less tax at 5s. 6d.

Industry and Trade

Economy in Raw Materials

The United Nations possess an overwhelming superiority over the Axis in most raw materials. In the past it has often been said that this latent advantage only becomes effective when the materials are massed on the battlefield in the form of tanks, aircraft, guns and other munitions. The factories of North America and Great Britain are now rapidly converting their enormous supplies of materials into the instruments of war. Indeed, the stage has been reached when the capacity for manufacturing war equipment is beginning to outstrip the supply of materials. There are already reports of shortages of individual munition materials. But it is unlikely that the output of munitions in Allied and enemy countries is proportionate to their respective supplies of raw materials; there is a strong presumption that, ton for ton of materials, Germany's war output is still bigger than that of the United Nations. The time has therefore come when still greater efforts must be made by the United Nations to make their materials go further, not merely by cutting civilian supplies still more, but by the simplification of specifications. True, a good deal has already been accomplished, but the scope for further economy is said to be appreciable, without impairing the efficiency of equipment. It is only by using their materials as efficiently as the Germans that the United Nations will be able to bring to bear the full weight of their potential superiority in equipment.

Steel Supplies

The steel supply position is reported to be not unsatisfactory. By increasing its own production the iron and steel industry has probably contrived to make good part of the heavy reduction in shipments from the United States this year. The output of iron ore has been going up steadily and the scrap campaign has led to an increase in the supply of that raw material. By the end of August, the iron railings had been removed from about 2,000,000 houses

and the weight of metal recovered for scrap was 310,000 tons. Moreover, the Minister of Works and Planning has at last made an Order requesting occupiers of premises on which there are three tons or more of metal suitable for scrap to inform the Ministry of its existence. But satisfactory though the flow of raw materials may now be, the demand for steel is going up with Great Britain's growing munition-making capacity. It is to be hoped, therefore, that steps will be taken in good time to ensure the maintenance of the flow of ore and scrap to the steelworks. The supply of scrap, in particular, has by no means been exhausted, but the rate at which it will be forthcoming in the future will depend in no small measure on the way in which the new scrap Order will be applied. But, in order to ensure adequate supplies for all purposes, it will also be necessary to practise still stricter economy in consumption and, in particular, to avoid the use of high-grade materials, which are scarcest, for purposes where material in more ample supply will do duty equally well.

Munition Contracts

The expansion of the activities of Messrs. George Wimpey & Co., Ltd., a firm of building contractors, in Scotland has recently been the subject of criticism in the House of Commons. Mr J. L. Clyde, KC, who was asked by the Treasury to make an inquiry into the allocation of Government contracts to the firm, has now issued a report (Cmd. 6393). It reveals that Messrs. George Wimpey have, in fact, extended their operations in Scotland very considerably. The number of persons employed by the concern in Scotland rose from 3,000 at the outbreak of war to 7,000 in June, 1940, and its share of Government contracts, totalling £46,938,000, amounted to £7,055,000. But in the view of Mr Clyde the substantial share of the contracts placed by Government departments with the firm in question is attributable to its own proved merit and efficiency. While criticising the procedure adopted in allocating

8th October, 1942.

DEAR SIR (OR MADAM),

On various occasions in the past, both prior to and since the outbreak of War, it has been intimated by the Chairman at Annual General Meetings that the Directors would take the first suitable opportunity to submit proposals for dealing with the accumulated arrears of dividend on the 7½ per Cent. Participating Second Cumulative Preference Shares of the Company. The War having supervened, the Board considered that this matter could not properly be taken up until sufficient time had elapsed to allow the effects of the War upon the position of the Company to be appreciated.

The experience of war conditions which has now been gained and the fact that the Company's Profit Standard for Excess Profits Tax has now been fixed (with the exception of an outstanding claim) have led the Directors to the conclusion that the results achieved up to date enable them to put before the shareholders the proposals hereafter outlined for dealing with those arrears.

The Scheme is based on the position at which the Company has now arrived, including an estimate of profits to June, 1942, and the current trading position. It must be realised, however, that although these show an improvement it is impossible under existing conditions to forecast the future for any length of time.

The submission of the proposals is further supported by the fact that up to date the Excess Profits Tax, already paid and accruing, amounts to a substantial sum, and that should the profits of any future year during which this tax is operative fall below the standard the Company would be entitled to a credit in respect of the tax so paid or accrued to the extent to which such profits may fall short of the standard.

In order that Shareholders may have some appreciation of the position, a statement of the estimated profits for the year to 27th June, 1942, is given below together with, for the purposes of comparison, the results for each of the preceding two years, and with comparative amounts of Cash and Government Securities.

PROFIT AND LOSS ACCOUNT FOR YEAR ENDED:

	27 June, 1942.	28 June, 1941.	29 June, 1940.
Balance of Trading Account	3,038,000*	2,169,401	2,989,634
Balance after charging General Sales and Administrative Expenses, Excise Duty, Adjustments of Stock Values, Research and Advertising, Additions to Patent Rights, Directors' Remuneration	1,860,000*	1,087,521	1,556,339
Balance after deducting Depreciation, A.R.P. provision, Commutation of Royalties, Interest and Premium on Debentures, but subject to Excess Profits Tax and Income Tax	1,270,000*	487,257	955,913

* Estimates only and subject to audit.

CASH AND GOVERNMENT SECURITIES.

	27 June, 1942	28 June, 1941	29 June, 1940
	2,183,596	1,043,549	1,063,756

Whilst the increase in the Cash and Government Securities is satisfactory, it must be realised that a large amount has to be set aside thereout for Excess Profits Tax and Income Tax purposes.

The above estimate of profits for the year ended 27th June, 1942, has been compiled on the same basis and according to the same practice as those employed in compiling previous years' Accounts.

Having regard to the limitation of the profits available for dividend which results from the figure at which the Company's profit standard has so far been fixed for E.P.T. purposes, the Directors have felt it right in the interest of the shareholders affected by the Scheme that so long as the present scales of taxation of profits continue the policy of making present and future appropriations in arriving at distributable profits should be revised so far as this can be done without weakening the financial position of the Company.

One of the major items of appropriation is that of Commutation of Royalty amounting to £61,142 annually. In order to make provision for this amount (which has to be met out of taxed profits) with an Income Tax rate of 10s. in the £, the substantial sum of £122,284 has to be withdrawn from the gross amount which would be otherwise available for distribution as dividend.

This appropriation will, therefore, be omitted from the Accounts to be presented at the next Annual General Meeting, although for the purpose of comparison with previous years' profits, it has been included in the above estimate of profits for the year ended 27th June, 1942. As a result the profits available for distribution will be increased by £122,284 gross.

There are enclosed with this circular Notices of Meetings which have been convened for the 29th October, 1942, to consider Resolutions providing for the satisfaction of the arrears of Second Preference dividend to the 30th April, 1942, by the distribution rateably among the holders of these shares of Funding Certificates, which it is proposed to create for a nominal amount of £1,700,000, so that the holders of the Second Preference Shares will receive in Funding Certificates a nominal amount equivalent to 8s. in respect of each Second Preference Share of £1 held by them.

The Certificates will carry 4 per cent. interest dependent on profits but cumulative and will be redeemable out of profits by means of a fund to be established for this purpose with an ultimate right on liquidation to the repayment of the nominal amount with a premium of 5 per cent. and any arrears of interest out of surplus assets remaining after payment of all liabilities and repayment of the capital of the First Preference Shares, together with their cumulative dividend down to the date of the return of capital and a premium of 4s. per share.

The interest on the Funding Certificates will be calculated as from the 1st November, 1942. The provisions for the withdrawal of Funding Certificates are set out in full in the form of Funding Certificate which is available for inspection at the Registered Office and at the Head Office of the Company but may be summarised as follows:—

- Provided the fixed dividend on the Second Preference Shares has been paid in full to the last dividend date, the Company is free to apply in the purchase of Certificates at any price not exceeding 21s. for each £1 nominal one quarter (less tax) of the balance of the profits which would otherwise be available for distribution as dividend.
- If in respect of any year a dividend on the Ordinary Shares is declared or paid the Company is to be bound to set aside for the withdrawal of Certificates such sum as will, with the amounts applied in the purchase of Certificates since the beginning of that year or the date of the last payment of dividend on the Ordinary Shares (whichever is the shorter), be equal to at least 25 per cent. of the amount, less tax, of the dividend declared or paid on the Ordinary Shares.
- The amounts so set aside are to be applied in the purchase of Certificates in any manner at any price not exceeding 21s. per £1 nominal, with provision for drawings at a premium of 5 per cent. in the event of the unapplied balance of the fund exceeding a specified limit. Certificates drawn will be surrendered for cancellation on a date not more than seven days after the 30th June next following the drawing, on which date interest will cease to accrue on the Certificates. The Certificates will be registered and transferable by transfer in the ordinary common form, in amounts and multiples of £1.

To be effective, the Scheme must be approved by the requisite majority by the Second Preference Shareholders and the Ordinary Shareholders, voting at separate meetings, as well as by an Extraordinary General Meeting of the Company.

The Directors are of the opinion that the proposals embodied in the Scheme and summarised above represent an equitable arrangement as between the classes of Shareholders affected and they therefore recommend their adoption.

The Scheme, if approved by the Shareholders concerned, will be submitted for the sanction of His Majesty's Treasury as required by No. 6 of the Defence (Finance) Regulations and will only become effective on such sanction being given.

By Order of the Board,

W. H. POXON,

Secy

some of the contracts placed by the Office of Works and by the Air Ministry, Mr Clyde considers as unjustified any imputation of bad faith or any suggestion of a sinister or improper influence. He had felt, however, that in selecting the large firm, some of the departments had paid too little attention to the need for keeping in being smaller local concerns in existence. It appears as though the agitation had its origin mainly in the fact that Messrs George Wimpey secured more business than was to the liking of local interests. If, as is suggested by Mr Clyde, the success of the firm is due to its efficiency, Government departments can hardly be criticised for using its services. Another White Paper on the subject of contracts, issued this week by the Government (Cmd. 6398), explains the action taken on contract cases discussed in the recent report of the House of Commons Committee of Public Accounts. Attention was drawn in the Committee's report to contracts for the manufacture of guns and ammunition for the Ministry of Aircraft Production by the British Manufacture and Research Co., Ltd, whose managing director is Mr W. D. Kendall, independent MP for Grantham. During a debate on the report of the Committee of Public Accounts in the House of Commons on Wednesday, Sir Kingsley Wood said that, on the whole, prices and profits in war contracts had been reasonable, while Colonel Elliot, chairman of the Committee, emphasised the need for auditing in war contracts.

The New Tin Agreement

The text of the new tin agreement, to which reference was made on page 427 in last week's *Economist*, has now been published (Cmd. 6396). In the main it is a reproduction of the previous scheme. It starts from the assumption, it is necessary and advisable to regulate the production and export of tin from producing countries,

with the object of keeping world stocks at a nominal figure, adjusting in an orderly manner supply to demand, while at the same time making available all the tin that may be required and preventing rapid and severe oscillations of price.

The welcome addition in this statement of policy is the reference to the need for "making available all the tin that may be required." The text of the new agreement suggests that tin mining is to remain a monopoly of the Governments of producing countries. By providing against discrimination, it may comply with the letter of the Atlantic Charter, which provides for "access, on equal terms, to the trade and to the raw materials of the world"; but it contains no effective safeguards against the exploitation of consumers as a whole. True, the number of consumers' representatives on the International Tin Committee has been increased from two to three by the invitation of a representative of the American Government; but they have no voting rights. The new agreement can hardly be regarded as a satisfactory precedent for the control of raw material supplies after the war.

The standard tonnages from which quotas are to be calculated have been brought more into line with the productive capacity of the member countries in 1941. They are, with the previous standards given in brackets:—Belgian Congo 20,178 (15,035) long tons, Bolivia 46,768 (46,027) tons, Malaya 95,474 (77,335) tons, Dutch East Indies 55,113 (39,055) tons and Nigeria 15,367 (10,890) tons. The total of the new standard tonnages is 232,900 tons, while under the last agreement the total, including 18,628 tons for Thailand and 3,000 tons for French Indochina, was 209,970 tons. A special protocol added to the agreement lays down that the position of Malaya and the Dutch East Indies shall be reconsidered as soon as these territories have reverted to their mother countries and their actual productive capacity can be determined. Article 3 (i) of the agreement opens the way to the adherence of non-signatories, which probably means that after the war Thailand and Indochina (and possibly also China, until last year the only important outsider to the scheme) will be invited to rejoin the scheme. The same article, however enables the ITC to make also any other recommendations for the amendment of the agreement, a possibility which is particularly important in view of the shortcomings of the scheme.

Retail Trade

The retail trade report for August and the Bank of England index numbers of the value of average daily sales (1937=100) are published in the *Board of Trade Journal* for October 3rd. The index for all departments was 98, the same as it was in August, 1941, although this year the drop between July and August was considerably larger. So far as individual categories of merchandise are concerned, only in household goods, where the figure rose from 75 in July to 77 in August, was there any rise to record in the average value of sales. Sales in the London district have improved slightly since last year, but other districts show

PERCENTAGE CHANGE IN VALUE OF RETAIL SALES SINCE THE CORRESPONDING MONTH A YEAR AGO			
	Food and Perishables	Other Merchandise	
1941 August	— 1.9	— 10.8	%
September	— 0.8	— 8.2	%
October	+ 0.2	— 23.5	
November	— 0.4	— 2.3	
December	— 1.9	— 7.4	
1942 January	— 1.1	+ 12.0	
February	+ 1.8	+ 11.3	
March	+ 4.3	+ 5.3	
April	+ 0.9	+ 0.8	
May	+ 5.0	— 2.5	
June	+ 4.2	— 0.8	
July	+ 5.9	— 0.7	
August	+ 3.7	— 4.4	

little or no change. Except for a drop of 5 points in the southern region, between the two Augusts, the indices for the other regions diverge at most by one. The total rise in the value of sales compared with a year ago amounts to no more than 0.4 per cent, as is shown in a table on page 466. The value of stocks of merchandise in August was 5.5 per cent higher than the year before. The non-food stocks total was only 1.5 per cent more than last year, and the food and perishables total as much as 44.1 per cent higher. The excellent fruit crop obtained this summer, as well as the larger cheese ration, and somewhat better fish supplies, may have contributed to this large rise, which was also apparent in June and July.

Caterers Catered For

The fight between the caterers, now organised in a joint committee, and the Minister of Labour, about the setting up of central wage board machinery, continues, albeit a little one-sidedly. For Mr Bevin has announced, notwithstanding the trade's protestations, that he intends to introduce a Bill into Parliament, which will permanently establish the machinery he envisages. The Liaison or Joint Committee of the Catering Trades, which was set up to oppose the Ministry of Labour, comprises representatives of employers in widely varying types of catering: among refreshments, boarding house keepers, purveyors of light pie sellers and publicans. Not every section of the catering trade is, however, opposed to organisation. Those not represented on the Liaison Committee are in favour of joint industrial councils, and in the case of industrial caterers, such a council is in being, and has reached agreement on fixing minimum wages and conditions. They prefer voluntary methods of fixing minimum wages and conditions. The Liaison Committee is opposed to any form of organisation, and their opposition to official organisation is correspondingly great. Catering interests in the House of Commons can be expected to provide a lively and trenchant debate on the Bill.

Women Shipbuilders

The iron and steel industry, with 13½ per cent of its workers women, has set an example to other heavy industries in the use of women to replace male labour. Some list of occupations which women have adopted is an interesting one. It includes, among many others, coppermiths, joiners, drillers, machinists, electricians and welders. The Ministry of Labour is urging that more women should be employed in the industry. So far the numbers employed are not as great as they could be. A national agreement on wages has been reached between the Shipbuilding

(Continued on page 463)

ASPRO LIMITED

UNASSAILABLE VALUE OF "ASPRO"

The meeting of Aspro, Limited, was held, on the 7th instant, in London.

Mr G. M. Garcia (chairman and managing director), who presided, in the course of his speech, said: "There is a total available balance of £208,091. It is gratifying to record that during the past twelve months we have successfully maintained our export position. In this connection I would again stress the fact that the very considerable expansion in exports of "Aspro" since the outbreak of war provides not only a material contribution to our national economy, but also enhances British prestige abroad. Again, the past year has provided further confirmation at home and abroad of the unassailable value of "Aspro" and of its efficacy in alleviating so many of the thousand natural shocks to which the flesh is heir.

CONTRIBUTION TO WAR EFFORT

At our last meeting I gave you an outline of the manifold activities we had initiated from the outbreak of hostilities in an earnest endeavour to contribute to our utmost, directly as well as indirectly, to the promotion of the war effort. I am in the happy position of being able to say that not only have these various activities been fully maintained, but that they have even been very materially expanded.

While our immediate aim is victory, it would be inexcusable to dismiss consideration of post-war problems. In order to bring about the fullest collaboration between all nations in the economic field, with the object of securing for all improved labour standards, economic advancement and social security, it will be incumbent on many nations to adopt an entirely new orientation in regard to their economic policy. I have in mind particularly the necessity of promoting a freer exchange of goods between the nations by the removal of prohibitive customs tariffs.

It must not be forgotten that when hostilities cease the United States will stand forth as the predominant creditor nation in the world. How are the debtor nations—including ourselves—to bear the immense burden of the cost of reconstruction, apart from any question of the repayment of debts, if that great nation excludes

(Continued from page 462)

Employers' Federation and the Confederation of Shipbuilding and Engineering Unions. Women under 21 are to be paid the corresponding rates and wages paid to boys and youths, irrespective of the work on which they are employed. These rise from 19s. at 16 to 47s. at 20. Women may be paid 47s. a week for a minimum of eight months. Thereafter, a woman over 21 must be paid the same wages as a displaced male employee where she performs the same duties without extra assistance or supervision. Otherwise, the rate is 53s. 6d. in unskilled or semi-skilled classes of work and 62s. 9d. a week for skilled work.

Cobblers' Registration

It is more difficult to get a pair of shoes repaired than to buy new ones. Whereas shoes could be repaired, in some cases, while the customer waited, and usually in not longer than a week, it is now unusual for the repairer to do the smallest repairs in less than a month. He is, of course, limited by shortage of labour and material. It is important that adequate facilities for this service should be provided for the public. To this end, the Board of Trade has issued the Footwear Repairs (Control) Order (S.R. & O. No. 1984), by which all boot and shoe repairers (other than rubber footwear) must apply for registration to the Assistant Director for Footwear Repairs. After November 1st, only persons who are registered will be permitted to carry on such businesses. Powers are given by the Order to enforce

to a large extent the products of the labour of its debtors? I look to the sound business commonsense of the American citizen, as I believe that once he has grasped all the implications arising from the new situation created by totalitarian warfare, he will not fail to contribute to the fullest limit his share in implementing the principles enunciated in the Atlantic Charter and in doing so to give a lead to other nations.

A NEW ECONOMIC LIFE

The alternative is indeed a dismal outlook, since it must of necessity compel resort to self-sufficiency in excelsis, a condition bound up with a general lowering in the standards of living and its concomitant repercussion on the provision of social services, together with the use of substitutes for those materials which cannot be imported because they cannot be paid for by exports owing to closed markets. Such a condition would indeed be a negation. The equitable solution of this fiscal aspect is intimately bound up with the necessity of preserving the prosperity of primary producers.

Another factor has also to be borne in mind that may have grave repercussions in many directions. As a result of the war, steps have been taken in this country, and especially in the United States, to replace a number of products hitherto provided by nature by articles which the inventive genius of man has made possible to produce by manufacturing processes. Apart from the fact that the replacement of natural products by synthetic equivalents (and I have in mind particularly the case of rubber) may in the long run spell disaster for many primary producers; it may also adversely affect certain branches of industry.

The report was unanimously adopted.

LEVER BROTHERS & UNILEVER, LIMITED

REPORT OF ANNUAL MEETING

The annual general meeting of the members of Lever Brothers and Unilever Limited was held, on the 8th instant, in the board room, Unilever House, London, E.C.4.

Mr Geoffrey Heyworth presided.

Before commencing the business, the members present stood in silence as a tribute to the memory of the late chairman, Sir F. D'Arcy Cooper, Bart.

The notice convening the meeting and the report of the auditors having been read,

The chairman suggested that the directors' report and statement of accounts and the chairman's review for the year ended December 31, 1941, which had been issued to the members, should be taken as read, and the members agreed.

The chairman moved and Lord Leverhulme seconded that the directors' report and statement of accounts for the year to December 31, 1941, now submitted, be received and adopted.

The motion was put to the meeting and carried unanimously.

A dividend of 5 per cent. for the year 1941 on the ordinary stock payable on October 13, 1942, and a dividend of 5 per cent. for the year 1941 on the preferential certificates outstanding under the Co-Partnership Trust were declared; the retiring directors were re-elected, and the auditors, Messrs Cooper Brothers and Co., and Messrs Price, Waterhouse and Co., were reappointed.

A hearty vote of thanks to the Chairman, directors and staff terminated the proceedings.

KEPONG (MALAY) RUBBER ESTATES, LIMITED

The annual general meeting of this company is being held, on the 12th instant, at the Great Eastern Hotel, E.C., at 12 o'clock.

The following is an extract from the address of the chairman, Sir Francis Voules, C.B.E., which was circulated with the report and accounts:—

The results for 1941 would have been very favourable had matters continued normal. Our assets in cash and British War Bonds amount to approximately £247,000, subject to liability for taxation, which cannot at present be assessed.

We have made ample reserve for taxation, and your directors hope that some compensation or redress will be forthcoming from the Government for the sacrifices made necessary by military operations or otherwise, due to the Japanese invasion, and for the loss of our properties.

The directors have reduced their remuneration by more than one-half for the year to March 31, 1943.

It is impossible to say at present what the future holds, but when our estates are recovered, I am convinced that our prospects will compare favourably with those of any other producer in the East.

the keeping of records, but the Board of Trade has stated that if any records are asked for they will be simple and straightforward. Prices of footwear repairs, in common with other services, such as laundry services, are controlled. Repairers may charge not more than their charges on April 27, 1942, or one-third more than the charges made in August, 1939, whichever is less.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, Economist Newspaper Ltd.,

Brettenham House, Lancaster Place, W.C.2

In order to test the value of your publication I should like you to forward it to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: all dealings are for cash

THE course of the *Financial News* index of ordinary shares indicates some acceleration in the rate of the recent advance, which, despite record figures of over 6,000 markings daily on the first two days of the current week, is largely attributable to the continued shortage of stock. In the main, the rise has been concentrated in industrial equities, and particularly during the past week, on home rail issues. The *gilt-edged* market, however, has not been very active, actual business failing to alter prices to any extent, apart from a gain of $\frac{1}{8}$ and $\frac{1}{16}$ for 3 per cent Conversion and 3 per cent Savings Bond at the opening. Quiet conditions prevailed in the *foreign bond* market where Brazilian bonds fluctuated narrowly, but apart from a fall of a point for Egyptian Unified and a point rise for the 5 per cent Chilean bonds of 1913, prices were generally steady. Yield considerations attracted a considerable volume of business to the home rail market, over 1,000 bargains being recorded on Monday, about double the daily average for the preceding week. Demand was fixed largely on the junior issues, and despite a slight reaction on Tuesday, prices improved over the week. Thus, GW and LMS ordinary rose $2\frac{1}{2}$ and $1\frac{1}{2}$ points respectively, while both the Southern junior issues enjoyed useful advances. Among the preference stocks, the Berwick 1st and 2nd 4 per cent issues advanced more than a point, while the LMS 4 per cent stocks were also advanced a fair measure of support. The *foreign rail* market was considerably more active than of late. Among the many Argentine issues to improve, BAGS 5 per cent preference advanced 3 points on the week, while the Cordoba "B" and Peruvian Corporation debentures were 3 and $1\frac{1}{2}$ points higher respectively, with strong support for San Paulo. Elsewhere, Canadian Pacific ordinary improved slightly.

In the industrial market buyers continue to search over a wide field for suitable stock, sharp advances for leading equity stocks reflecting the increasing scarcity of good stock. Thus, among brewery shares, Guinness overshadowed the numerous widespread improvements of other stocks with a rise of 6s. 9d. on the week, and, in the tobacco group, BATS and Imps improved steadily. Albion Motors was outstanding in the motor and aircraft section with an advance of 3s. 3d., while Rolls-Royce and Leyland rose 2s. 6d. and 2s., respectively, over the same period. Gains of the order of a few pence were general in the heavy industrial group, with colliery issues particularly firm, Wm. Cory, Sheepbridge and Staveley all advancing. Numerous small movements were recorded in the shipping section without markedly affecting prices, while textile shares continued their upward trend of recent weeks, British Celanese issues remaining firm on the expectation of the dividend arrears scheme, although individual gains were

generally restricted to a few pence. The stores group was strong throughout under the leadership of Lewis Investment Trust and Woolworth, the latter rising 2s. 6d. on the week. The miscellaneous section reflected the generally firm tone of the market with good gains for Turner & Newall and United Molasses, London Brick and Reckitt & Son.

Turnover in the *kaffir* market was light over the week-end owing to the holiday in Johannesburg, but the revival of buying on Tuesday, however, found the market short of stock, and among numerous gains, Blyvoors rose 1s. 6d., Sub Nigel and Grootvlei $\frac{1}{8}$ each. The rubber market was quiet, a few improvements reflecting marking up rather than actual buying. Tea issues, however, advanced slightly on quiet support. Apart from good gains for leading issues in the oil market at the reopening, there was little of interest, Anglo-Egyptian advancing $\frac{1}{8}$, while Burmah gained $\frac{1}{8}$, Shell and Anglo-Iranian $\frac{1}{8}$, although the tendency in midweek was distinctly firm, both Attock and Anglo-Iranian improving.

New York

ACTIVE trading inspired by the prospect of the early passage of the Tax Bill, together with the better war news, occasioned a considerable advance in most sections on Wall Street during the past week. Rail and steel issues were especially prominent, considerable and widespread profit-taking failing to bring the upward movement to a halt. On Tuesday, however, Mr Morgenthau's demand for yet higher taxation restricted further buying, the market displaying a slightly easier tendency.

TAXATION ON INCOMES OF £2,000 AND OVER, 1913-42

The following table was given by the Chancellor of the Exchequer in a written answer in the House of Commons on September 30th, and shows for the years 1913-14, 1923-24, 1933-34, 1940-41 and 1942-43, the income tax and surtax (or super-tax) payable on certain incomes, together with the net annual payment required to meet the estate duty on death. The table is

on the basis adopted in their report by the Colwyn Committee on National Debt and Taxation, investment income being capitalised on a 5 per cent basis and the taxpayer being assumed to be a married man, aged 45, with three children. (The assumption of a 5 per cent return on investments is necessarily an arbitrary one.)

Year	ALL INVESTMENT INCOME					HALF EARNED INCOME AND HALF INVESTMENT INCOME				
	Total Income	Equivalent Capital	Income Tax	Surtax (or Super-tax)	Net Insurance Payment to Provide for Estate Duty	Total	Equivalent Capital	Income Tax	Surtax (or Super-tax)	Net Insurance Payment to Provide for Estate Duty

(Continued from page 464)

has borne purchase tax at prices including the tax, from September 30th to October 31st. The Order came into force on October 1st.

Animal Feeding Stuffs.—The Feeding Stuffs (Regulation of Manufacture) Order, 1942, which came into force at the end of last week, controls the manufacture of all feeding stuffs except those produced as by-products in the manufacture of human food or of articles for industrial purposes. The new Order consolidates the provisions of the Feeding Stuffs (Control of Manufacture) Order, 1941, and the Compound and Mixed Feeding Stuffs (Control) Order, 1940, as amended. It provides that, except under licence, no person may manufacture animal feeding stuffs, other than the by-products mentioned, and controls the quantity and type of compound and mixed feeding stuffs that may be produced for livestock feeding.

Starch.—Since rice is in short supply, the Ministry of Food has prohibited the use of pure rice starch for laundries and household purposes. A national blended starch, which is considered to be a satisfactory substitute, is now being manufactured to replace it. Allocations to laundries and retailers are at the rate of 25 per cent of their consumption of starch during the year ended June 30, 1939.

Paper Control.—The Ministry of Supply has made the Control of Paper (No. 50) Order, which comes into force on October 25th and amends the definition of paper of conversion given in the No. 29 Order. The main effect of the Order is to prohibit, cutting into circles and adding other than rectangular or angle cut shapes (or) pasting and laminating (under certain conditions) to the processes regarded as conversion.

Plainspoken Truth

IT is the view of the editors of *Life* that the best way to secure an all-out concerted effort among the United Nations is for each of them to express its opinions "frankly and forthrightly"; the best weapon in the armoury of alliance, they say, is "plainspoken truth, however painful." This is well said. No believer in the alliance of free peoples for common ends will deny it. But the first requisite of such frankness is that the plain speech should be true. The trouble about *Life's* open letter to the people of Great Britain, which has caused such a furore, is that its allegations against British Imperialism are vague, ill-informed and misleading.

It can, of course, be agreed, as *Life* states, that the American people are not fighting to hold the British Empire together. But it is hard to see what evidence there is for the suggestion that British strategists are planning the war to hold the British Empire together "at the expense of a United Nations victory"—and to the detriment of a Second Front. Indeed, the cause of the United Nations has been much more adversely affected by the failure to hold the Empire together than by any determination to hold it together at all costs. Would it have been better for the United Nations if Britain had left all the parts of the Empire to be occupied by the enemy? Will China be aided if India is abandoned and a decision made not to retake Burma? Would the United States have been best served if Australia had been given over to the Japanese? Perhaps the

critics have the Middle East in mind. Perhaps it is their view that the abandonment of North Africa, the Suez Canal and the Middle East would, in some subtle way, have been of advantage to the other United Nations—including Russia.

It may be that the basis of their doubts lies in their reference to India. They fail to see that "the British solution provides any evidence of principles of any kind." They add, hotly, "In the light of what you are doing in India, how do you expect us to talk about principles and look our soldiers in the eye?" A lot has happened in India since the Cripps offer was made, and perhaps busy American journalists have little time to turn back to the details of that offer. If they did, they would see that what the British Government in fact offered then was a blank cheque to the politicians of India to settle the destiny of their own country in their own way, uninhibited (it should be noted) by any considerations of Britain's financial interests there. The only reservation which was made was one with which, according to the aims set out in their letter, the editors of *Life* would surely agree—namely, that the defence of India within the framework of the strategy of the United Nations should be safeguarded. It is, of course, true that stalemate has come again in India. It is natural that Americans, traditionally distrustful of empires, should ask, as many people in this country are asking, whether the British Government has given up its search for ways

THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL (PAID-UP) - £3,000,000

RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST
AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches & 30 Sub-Agencies
The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank also undertakes Trusteeships and Executorships.

Dated, Alexandria, Egypt, the 1st October, 1942.
By Order of the Board,
T. D. KEY,
ROBERT WALTON,
Joint Managers

and means of translating the principles of the Cripps's offer—which were, after all, no more than the principles of British Imperial growth—into practice. As Sir George Schuster wrote in a letter to the *Times* on Wednesday:

... the worst weakness has been the failure to give adequate attention to what we ought now to do. We cannot allow the rightness of our present course to rest on our own record in past centuries or on the wrongness of our political opponents. We need a positive line of action now and for the future.

There has been a sad weakness in policy, but not a denial of principle. To quote Sir George Schuster again—

We claim, unanswerably as I believe, that we cannot, without the betrayal of right principles or the risk of chaos, hand over full constitutional responsibility to Indian Ministers, except on the foundation of a balanced constitution agreed upon among the main elements in India. ... But have we gone as far as we could to set up and strengthen a genuine Indian Government? Have we given right and inspiring leadership in war? ... British leadership must be conceived in a new way. The old ritual and stiff-necked officialism are out of place.

That the ghost of an old Imperial attitude still walks in India—as it does among British settlers in some of the colonies—is, indeed, true. That this attitude, or the older attitude of exploitation, is still the principle of British policy towards India or the colonies, or of the outlook of the British people upon the Empire, is wholly false.

No honest man would wish to gloss over the neglect of Imperial development which has been a fault of British Parliaments for more than a generation, or to deny the fact that progress towards self-government in many parts of the Empire has been over-laggardly. But this progress towards self-government remains the characteristic feature which distinguishes the British Empire from all other empires in history, past or present; and the cheapness and scale of, say, the economic development of India will more than bear contrast with investment in any other backward region of the earth. Like the United States, the British Dominions began as colonies; now they are free nations on the same footing as the United States themselves. For all the unrest and friction which have marked the last generation in Indian history, a remarkable advance has been made towards handing over the government and administration of India into Indian hands. Indian opinion, for instance, has dictated Indian fiscal policy, to the peculiar detriment of British trade, for twenty years. The present position is that the Indians themselves, by their unwillingness to assume the responsibility of mutual agreement, have refused the crown; and it is probably true to say that they have refused it because they know, unlike the editors of *Life*, that they will be given it in the end.

The main feature of British Imperialism, in fact, is that it does not exist. Serious neglect there has been of the economic development and welfare of certain colonies; but it has been due, not to any spirit of Imperialist exploitation, but simply to indifference and neglect. History has come round in a cycle. Now, as a hundred years ago, the people of this country are not interested in the Empire. It is a melancholy fact that the Imperial disasters in the Far East which ushered in this year hardly touched the mind of the British people at all, though for a space it troubled the heart. There is hardly a voice lifted anywhere—in spite of the strategic and economic issues involved—for the retention of any part of the Empire "in subjection" any longer. The people of this country may well be blamed for being Little Englanders, but certainly not for being Imperialists.

The editors of *Life*, then, have been misinformed. It may be, of course, that they had in mind the argument that, if the people of Malaya or of Burma had been given their "freedom" at some earlier date, these countries would not have fallen to the Japanese. But, surely, this is quite erroneous. Much more might indeed have been done to gain the goodwill of these peoples. The reasons for Japan's successes were military, not political. The greatest virtue and strength of

the British Empire was the security which it provided for all its parts by maintaining the *Pax Britannica*; and Malaya and Burma fell, the Indies fell and India and Australia were threatened, first because the British—and American—navies lost control of the eastern seas; and, secondly, because the British air and land defences were grossly unready and insufficient.

The American Century?

Britain and the United States have a common task to perform now and after the war. It is their immediate responsibility, as General Smuts said on his arrival in London, to prevent the war

from dragging on endlessly to the destruction of all the material apparatus of civilisation.

And it is their ultimate duty to organise and extend that apparatus for the benefit of all peoples. The leadership in this mission can be America's. There is a sense in which, because of the size and strength and wealth of the United States, this must be the American Century. It was the firm belief, not only of President Wilson, but also of so staunch and clear-sighted a friend of Britain as Walter Hines Page, that the right result of the last war would have been American leadership. The chance was spurned. Now the door is open again, and it is the world's need, that Britain and the United States should march through together, shouldering their responsibilities, with no narrow thoughts of prestige or precedence. To set the concept of the American Century, which has still to be understood, accepted and carried by the American people, in flat opposition to a concept of British Imperialism which is pure myth is sabotage. It is indeed of paramount importance that the two countries and the two peoples should define, not only the points of policy upon which they both agree, but also those upon which they differ. But in hammering out the right lines of their common effort they must stick to the facts. It was not to British Imperialism that President Roosevelt was referring when he said last week

In a free world, no nation must be enslaved by a race, nation or group, which calls itself a master people and demands by force or aggression the fruits of another's labour.

There is not a word in this that would not be endorsed by an overwhelming majority of the British people.

All men and all peoples must have certain rights. They must have the right to produce to the fullest extent commensurate with their ability the things they are best able to produce. This means equality of access to materials and to capital. They must have a free choice of what they will produce, governed solely by sound economic principles and a due regard for the welfare of others. Each country must have the right to exchange its own products for things which it needs and wants and which other countries can produce better than it.

There the President's message stated the plain foundations of economic freedom. Mr Sumner Welles carried the agenda still further:

The real problem of consumers is, and always has been, the means of payment. At the end of the war, the world will be impoverished and the immediate means of payment will not be visible, which will mean large and long-term financing. The United Nations must arrange this, but when the payment finally comes to be made, it can only be in goods and services. There is no other way, and those who expect to export must take the world's goods and services in payment.

The main need of all backward countries for whose interests *Life* is so rightly, if so wrongheadedly, concerned is for the development of their power to produce and trade, and the recognition of their right to self-rule. There is nothing in any programme which is likely to find support in this country that would bar the way to the growth of China, India and all the colonies to economic independence; and there is certainly no party in the state which would support the kind of Imperialist exploitation which *Life*, like the *Daily Worker* in an earlier incarnation, takes so mischievously for granted.

War of Nerves

THERE is a danger that the working people of this country may be brought into a disrepute that they do not deserve. A painful light has beaten lately on the prevalence of absenteeism in the coal pits and on a feckless strike in the Tyneside shipyards, which has now been happily settled. An impression is spreading among the general public that a substantial proportion of war workers are heedless of their responsibilities and lacking in discipline; and it is urgent, in the interests alike of the war effort and the workers themselves, that this impression should be dissipated. There is no more important task for Mr Bevin and Sir Walter Citrine to perform.

It is first of all important that these incidents should be seen in their true perspective. An outstanding feature of this war, compared with any previous period of high industrial activity, whether in peacetime or in wartime, has been the fewness of labour disputes. Set against the experience of the last war, the contrast is between turbulence and tranquillity. The causes of this remarkable industrial peace have been several. In the first place, the nation has never been less factious. In the second, this solidarity has been reflected in the actual organisation of the war effort. There is no doubt that the appointment of Mr Bevin to be Minister of Labour in 1940 was a stroke of practical commonsense; and, even before Mr Churchill made his new dispositions, the trade union movement had been harnessed to the conduct of the war by continuous consultation. The results of this alliance have been impressive. On the one hand, only a minute proportion of hours have been lost by strikes during the three years of war. On the other, after working through the ordeal of bombing and the trials of overwork, rationing and the discomforts of wartime living, the workers of this country have now succeeded in producing more war material per head than the labour force of any other belligerent country.

Why then is there this present doubt? Undeniably, there are signs of restlessness. Nor is this really surprising. The workers in collieries, shipyards, factories and workshops only differ from other citizens in their rates of pay and conditions of employment. They are no more and no less human than the millions of their fellow citizens who are engaged in other work. Three years of war is a long time. Mr Churchill put his finger on a crucial point when he spoke at Edinburgh last Monday. "The excitement and the emotion of those great days when we stood alone, undaunted against what seemed overwhelming odds, and singlehanded saved the future of the world, are not present now." War is humdrum, and material rewards grow smaller as the change-over to total war effort proceeds. It is recognised that members

of the fighting Services, who remain inactive, may be preyed to boredom. Waiting is hard, and impatience for action and the end of fighting can be potent breeders of frustration and restlessness. War workers are no more alone than members of the Services in the tendency to be "browned-off." Many employers have discovered the same mood, exacerbated by the frictions and delays of wartime administration. There are civil servants who have been made cynical by the little worth of what they do and its small result. There are journalists who are chronically jaundiced by their wartime experience. It would be unfair to single out this or that section of society for special blame because of its frailty under wartime strains.

Nevertheless, it is not enough simply to explain the ragged edges of public feeling by reference to these psychological causes. The question is whether much more could be done to minimise their effects by policy and organisation—and by leadership. The employer or the civil servant who feels himself frustrated has sometimes good ground for his querulousness in the unwieldy and often formless system of administration of which he is part. The method of collaboration by which organised labour has been made part of the war machine has its defects as well as its advantages. In essence, it is a system of checks and balances, an alliance between all the partners in industry, labour, employers and the state, designed to work out policy in practice by agreement rather than by rules and orders imposed from outside. Its linchpin is Mr Bevin, trade union leader and member of the War Cabinet; and its successes have been many. Morale and discipline under authoritarian rules are worse, not better. Its disadvantage is the absence of authority and discipline when it fails to work. It has not been possible, for instance, to work out an agreed policy for the restraint of money wages, a shortcoming which may still redound seriously against the real interests of a large section of the wage earners themselves. Nor has it been possible to prevent an outcrop of illegal strikes, negligible no doubt so far, but significant and invested with an entirely disproportionate political importance. The chief feature of the recent eight-day strike on Tyneside was the helplessness of both trade unions and the Government, who both condemned the strike, to prevent it. Neither the trade unions themselves nor the Government have been able to cope with absenteeism in the coal industry. Authority has a habit of faltering at crucial moments.

There are many employers who would go still farther in their criticism. They would argue that the main evidence of this absence of authority is not the occasional irresponsible strike but the laxity of discipline among

EQUITY & LAW
LIFE ASSURANCE SOCIETY

Established 1844

THE SERVICE OF LIFE ASSURANCE

● Life Assurance provides the means whereby your regular savings, year by year or month by month, may be converted into the form best suited to your needs. Provision may thus be made for your retirement, for the education of your children or for your dependants after your death.

● The service of Life Assurance cannot now be offered to you by personal approach owing to the absence of so many of the Society's staff on war duties. This service is, however, still available on request and will gladly be placed at your disposal.

Head Office: 163/4, STRAND, LONDON, W.C.2. Telephone: TEMple Bar 0381
(temporarily transferred from 20, Lincoln's Inn Fields)

City Office: 30, Coleman Street, E.C.2. Telephone: KELvin 5111/2

their staffs from day to day. They contend that, unable to dismiss their men for misconduct or bad work, they cannot ensure efficiency; and they complain that the officers of the Ministry of Labour, to whom the sanction for discipline has been transferred, have in fact no more authority than they. Such an indictment may go too far. It does not recognise truly the mixed character of the wartime labour force, and the peculiar stresses of work in wartime. It does not do justice to the extent to which the trade unions have abandoned their pre-war rights and standards. It certainly does not square with the vast output which has in fact been achieved. Nevertheless, the charge has substance. Wartime compromise works where there is agreement and responsibility among all the parties concerned—employers and Government officials, no less than workmen. It breaks down when agreement and responsibility are lacking. The complaints which have come from the coal industry and from Tyneside are straws in the wind. They are signs to the trade unions, to the Government and to the employers of labour

that their leadership is on trial. The "excitement and emotion" of 1940 have gone. There are small restless groups here and there, some with a vested interest in agitation, others with a permanent twist towards discontent, and others still with a genuine impatience at the futilities and inefficiencies which are still to be found in the running of wartime production, who are challenging authority. The answer is twofold: first, to insist that the agreed policy of the trade unions and the Government shall be enforced and respected in every work place—needless absenteeism in the coalmines, for instance, must obviously be stopped forthwith; and, secondly, to leave no step untaken to remove genuine grievances, financial, administrative and technical, which add fuel to impatience and resentment. Always, the story is the same—the need for men of authority in key positions with the right policy, democratically decided, and with power and the will to act. Without them, the war effort is a feather-bed, instead of being as it can be, a spring-board to triumph.

Full Employment: The Cost

TWO previous articles have outlined the policy that will have to be pursued to secure Full Employment. It was suggested that cyclical unemployment—by far the most important species of the genus—can best be remedied if the state would assume the responsibility of ensuring that the community spends on capital goods each year as much money as the public is trying to save. This policy is, of course, familiar by now; but the scale on which it should operate is less widely appreciated. If expenditure on the replacement and renewal of existing capital is included (as it must be), then the required expenditure on capital goods at the price-level and in the conditions of 1938 would be of the order of £1,200 millions a year. To name this figure is to show that the state cannot, in peacetime, accomplish the whole task. On the contrary, the main reliance of the whole policy must be on measures that will persuade individuals and corporate entities other than the state itself to expand and regularise their capital expenditure. But when it has done as much as it can by persuasion and the inducement of others, the state must stand ready to close by its own expenditure any gap that may remain. This is the policy. It remains, in this final article, to estimate its chances of success and to enquire what risks and dangers it may run.

Fundamentally, there is only one thing that could prevent such a policy from being successful—that is, a shortage of projects of investment. It has already been suggested that there is a tendency for a modern community to save more than it can conveniently invest in physical wealth. Accordingly, as a long-term policy (not merely in bad years), it will be right from now on to lay emphasis on consumption rather than on thrift. But though there may be a limit to what can conveniently be invested within the present institutional framework, it is ridiculous to suggest that there is a limit to what can possibly be invested. To maintain that would be to believe that the machine has exhausted its usefulness to mankind. To do no more than equip the whole community with the machines already invented would provide Full Employment for decades to come, even if the process of invention were to stop to-day. There need be no fear on this score.

A more reasonable apprehension is that only the state will have the resources to engage in the necessary volume of investment, and that the policy of leaving as much as possible to other agencies may prove to be unworkable. This would be unfortunate and, for a democracy, might prove to be disastrous. The reasons for keeping the rôle of the state as small as possible (to repeat) are twofold. Large-scale state financing of investment involves the stability of the monetary system; and a gradual spreading of state control, by way of capital investment, into every corner of the economic system puts the whole community

at the mercy of any political adventurer who can capture the political machine. Let there by all means be public ownership and collective control, but exercised by agencies other than the state itself. If a Full Employment policy were to lead to the very rapid growth of economic control by the state (which in this context must mean the central bureaucracy, since it depends on the financing power of the Treasury), there would be cause for alarm. This is the political risk inherent in a Full Employment policy, and it needs to be very carefully watched. The remedy is to execute as much as possible of the policy through private individuals, private corporations and publicly-owned bodies which are not financially dependent on the state. Fortunately there is good reason to believe that this can be done. If self-supporting business (private or public) can be assured of low interest rates and of freedom from the risk of cyclical depression, there is no reason to believe that, in most years at least, it will not freely engage in as much investment as is required. The control of that investment by the state will be necessary—but that is a different and much less dangerous matter.

The second risk is the monetary one. The ultimate reliance of the policy is on expenditure by the state and, however great the stimulus to private business, there is likely to be a considerable volume of state investment, especially in years that threaten to be bad. State investment, especially if it is large, almost inevitably leads to the expansion of bank credit—that is, to the creation of money. The question must therefore be asked whether a policy which envisages the periodical creation of what may be large amounts of new money may not lead to monetary instability, which would not only be undesirable in itself but also, by deranging the relationship between costs and prices, would defeat the main object of keeping the national economy in balance. Economic thought has moved a long way from the days when it was believed that the price level depended rigidly and immediately on the quantity of money in circulation. It has been proved several times in the last quarter of a century that very substantial amounts of money can be created, especially in depression years, without any effect on the value of money. But there must be a limit somewhere. It is difficult to imagine a policy of creating large amounts of money at frequent intervals without the money thus created being sometimes used by the public to bid up prices and engender the sort of inflation that would shatter all hopes of stability. Nor will it be of any use, on such occasions, to put into force the purely monetary controls that are familiar in the text-books—restriction of credit and raising of interest rates. They will work; many an inflationary bubble has been pricked in those ways; but the trouble is that they will work too well and, in preventing an inflation, will precipitate a deflation.

The problem is whether a policy which deliberately runs the risk of inflation can avoid it without going to the opposite extreme. The answer cannot be given with any assurance. But the development of new techniques of control holds out considerable hope. The old monetary techniques were too indirect, too blunt in their action. By a direct, physical control of all investment, it should be possible to avoid any excess, without there being any necessity for recourse to deflation-provoking measures such as high interest rates. If this succeeds, if the trade cycle can be stabilised at its top, a period of money-creation should be followed by one in which it is possible to convert the excess money-holdings of the public into long-term debt of the state. This is, of course, only to change the problem from a monetary one to one of the national debt—since it is most unlikely that the state will be able to pay off debt as rapidly as it is created. But the national debt, like the poor (or perhaps as an alternative to the poor), we have always with us. It will require a solution; but if, as seems likely, its nominal amount is nearly £20,000 millions at the end of this war, the amounts likely to be added by a Full Employment policy will not change the nature of the problem. In any case, in a regime of low interest rates and high income taxes and death duties, there is no need to be alarmed about the national debt.

There are, then, grounds for hoping that a Full Employment policy could be pursued without its defeating itself through severe monetary disturbance. But the danger remains, and some instability in the value of money may have to be accepted as the price of stability of employment.

The third danger is the international one. A Full Employment policy could hardly be carried out without fairly far-reaching control over international trade and exchange. It would be necessary to prevent a flight of capital; it would be impossible to regulate interest rates or credit policy by considerations of the balance of payments; the repercussions of severe crises in other countries would have to be guarded against. It is necessary to beware of a misunderstanding of these requirements. There is nothing in a Full Employment policy which contravenes the desire for a large, expanding volume of international trade, or which stands in the way of that international division of labour on which the prosperity of all nations (most of all that of Britain) depends. On the contrary, no nation can render a greater service to international trade than to keep its own purchasing power at a maximum. Depressions are worse saboteurs of international trade than any tariffs or quotas. Full Employment is not hostile to an expanding or even to a liberal system of foreign trade. But it is incompatible with the automatic techniques of the free market. It requires the working out of devices by which international trade can be kept under control without

being restricted. There is no reason why these devices should not be worked out. But it has not yet been accomplished, and until it has, the danger will remain that the attempt to secure Full Employment at home will lead to, and be frustrated by, economic strife abroad.

The fourth danger is akin to the third, but of much wider application. There is a risk lest Full Employment should lead to economic ossification. Depressions, like wars, play their part in progress. It is no complete answer to say that the weeding done by depressions or wars is cruel and haphazard—it is no answer at all until some other form of weeding can be devised, for otherwise the garden will choke. If industry and commerce are to be relieved of the haphazard risk of cyclical depression, there is all the more reason for insisting on the necessity for the maximum volume of healthy free competition within the community. The nearer the approach to Full Employment, the greater will be this necessity. Within the sphere of privately-owned business, the demand for competition should be more insistent (and more readily granted) the closer the approximation to conditions of stable prosperity. Within the sphere of collective enterprise, the need for competition is even greater; there is no reason why public ownership should be synonymous with public monopoly.

Unfortunately, it is in this respect that the recent trend of public policy in this country gives most cause for alarm. Protection for the inefficient, stability for things as they are, restriction rather than expansion, cartels rather than competition—all these are the excusable by-products of a long period of endemic depression. But they have made a very strong impression on the patterns of political thinking, and there is no present sign of their being dislodged. It is necessary, therefore, to express the warning that Full Employment, if it is accompanied by these phenomena of economic feudalism, will be Full Employment at the cost of progress, Full Employment at the present unsatisfactory standard of living. Full Employment at the expense of welfare. The aim should be to abandon the restrictive controls, the protective barriers, as the need for them disappears. The method should be to lay down the unbreakable rule that the Full Employment policy is never, however tempting the circumstances, to be made the excuse for giving particular help to individual interests. But these things will require a revolution in the political order of the moment.

The difficulties of Full Employment are, then, not those of attaining it, but of the companions it will bring with it. There is good reason to believe that it can be secured without making the state totalitarian, without debauching the value of money, without causing strife abroad or stagnation at home. But these are affirmations of faith, not evidences of proof. One of the two main tasks of democratic statesmanship after the war will be to demonstrate their truth.

Hungarian Destiny

AMONG the satellite nations, Hungary has hitherto occupied a favourable position. Its territorial gains under the Vienna Awards of 1938 and 1940; its relative immunity from domestic interference; its satisfactory food position; and the not unduly exacting nature of the demands made on the country by the Russian war, all these have conspired until now to emphasise the profitability of the German connection. Compared with Italy and Finland, Hungary has so far undoubtedly obtained a very substantial *quid pro quo*, while the liberal tradition of one section of the land-owning class has helped to preserve some measure of political independence. Until recent weeks, the Magyar nation appeared superficially to be the most solid beneficiary under the New Order.

The latest reports of renewed German pressure on the Hungarian Government are, therefore, of particular interest. Once again, it is being emphasised how impossible it is to remain in German Europe, yet not of it. The

reports are interesting, too, because they shed a searching light on the essential nature of Hungarian maladjustment, and make it plainer than ever that the lasting solution of Hungary's territorial and minority problems is a far more complex matter than can be solved merely by unmaking the Treaty of Trianon. In its attempt to organise a stable Europe, the German Government has come face to face with the perpetual unrest in the Danube basin which centres round the Magyar people. Every month that passes makes it increasingly clear that the tolerance of a subsidiary *Herrenvolk* within the New Order is incompatible with the fullest exploitation of Hungary's satellite neighbours in Germany's interest. In particular, the friction between Hungary and Roumania has proved quite as durable and obstinate in the face of German arbitration as it was under the Trianon settlement.

The substance of the latest rumours is the suggestion that German favour has been transferred from Hungary

to Roumania in return for the greater enthusiasm of the latter for the Russian war, and to the smaller satellite states of Slovakia and Croatia. Some reports have even gone so far as to suggest that Hitler is contemplating a revision of the second Vienna Award of August 30, 1940, under which Hungary received northern Transylvania and three Szekler counties from Roumania. While it may be doubted whether actual revision is in question, Hungarian susceptibilities have certainly been unpleasantly aroused by the visits to Berlin of Mihai Antonescu and the Croatian Pavelitch at the end of September and by the elaborate statements in the Roumanian press of identity of interest with Croatia and Slovakia. A carefully fostered resurrection of the Little Entente structure is occurring, with the puppet states of Slovakia and Croatia deputising for Czechoslovakia and Yugoslavia. The pre-war diplomatic pattern in the Danube valley has apparently suffered only a very temporary eclipse, and its return exposes Hungary to more effective pressure than that which Budapest faced in the inter-war period, since the Reich is anxious and prepared to bolster Hungary's encircling successors more vigorously than was the French Republic—at least after the eclipse of M. Barthou.

From a distance, it is hardly possible to sift the accuracy of each of the rumours of German pressure. The causes of the deaths of Stefan Horthy and of the younger Count Karolyi remain a mystery; the possibility that the Germans will endeavour to impose their own candidate, the Archduke Albrecht of Habsburg, for the post of Deputy Regent, can only be tested by events; the suggestion that the Hungarian Prime Minister, Miklos Kallay, is to be replaced by the more collaborationist Imredy falls into the same category. The significance of the reports is that, in present circumstances, they sound plausible in Hungarian ears. Accompanied by higher demands for agricultural exports, for industrial and agricultural labourers and for more divisions for the eastern front, as well as by the news of the latest Hungarian casualties in the fighting round Voronezh, they have undoubtedly served to arouse fresh anxiety in the minds of the minority made up of the professional and land-owning classes. The optimism engendered by the steady territorial gains between autumn 1938, when Hungary received Ruthenia and part of Slovakia as a sequel to the Munich Agreement, and the spring of 1941, when by attacking Yugoslavia and adopting a formal alliance with the Reich, it acquired the South Province, has given way to a somewhat blank disillusionment. Hopes that alliance with the Axis would point the way to the return of the millenary frontiers have all but disappeared. It is generally realised that the limit of territorial expansion has been reached, even if a reversal is not already in progress. The plums from the Russian campaign—Bessarabia and Transdnistria—are falling to the Roumanians, who, with a more assiduous performance in the Ukraine and the Crimea, remain bereft of part of Transylvania. The Hungarians have lost in independence and integrity what they have gained in territory. And, in the last weeks, even their territorial gains have come to appear wholly insecure. Outside the existing frontiers there still reside, according to the claims of the leading paper, *Magyarország*, in mid-September, 1,500,000 persons of Magyar stock.

From the Hungarian standpoint, the most serious factor in the situation is probably the decline in bargaining power which has ensued since the conclusion of the alliance. Hard pressed for men and raw materials, the Germans know that surplus resources still exist in Hungary. Bread is rationed, but Hungary is still better off than the general run of satellites. Fats are rationed only in Budapest; meat is not rationed at all, though

"Pressing Problems and Fashionable Fallacies of Political Economy" by Francis W. Hirst. Published by the Cobden Club, Dunstable, Bedford House, Heyshott, Midhurst, Sussex. Price elevenpence or post free sevenpence.

this may possibly be due to distribution difficulties. The increase in population brought about by the increase in territory, from some 9,000,000 in 1939 to some 14,700,000 according to the 1941 census, has sharply reduced the grain surplus which it is convenient for Hungary to export to Germany and Italy, and consequently increased the friction over economic questions. There has been considerable difficulty in introducing the modifications in Hungarian agriculture which Germany requires in order to integrate the Danube valley with the *Grossraumwirtschaft* as a whole, particularly over the increased production of oil seeds and soya beans. Meanwhile, the activities of the German minority, estimated by *Pesti Hirlap* in September to number some 900,000, but officially estimated by the *Volksbund* to number some 1,250,000, causes increasing anxiety; and, since it has been granted what are virtually extra-territorial rights, it has become an important pressure group. The Reich Government attempts to manipulate the political scene in Budapest both through the local *Volksgruppe* and through the various "Arrow Cross" Hungarian Nazi factions. The organ of the *Volksgruppe*, *Deutsche Zeitung*, has recently disavowed any anxiety on the part of the third party German minority for resettlement; and it is a fact that this minority has traditionally been a more contented element in Hungarian life than any minority with a contiguous national frontier. None the less, the anxiety remains that this compact foreign community, taking its orders from Berlin, might eventually opt for return to the Reich and that a certain loss of territory, for instance in the Burgenland, might ensue.

Hungary has, after all, made a bad bargain with its German masters; and its fortunes as a member of the New Order appear to be on the down grade. Propaganda uses the anti-communist line to render the war more acceptable, and there was a note of disquiet in the press after the dropping, in the course of the recent Soviet air raids, of leaflets written by Hungarian émigrés in Moscow. Official propaganda also plays upon Hungarian distaste for the French system of alliances during the inter-war period. But positive enthusiasm for the Axis cause is dwindling as it becomes plain that the set-up of central Europe has been very little altered by the change of mastery.

The lasting solution of Danubia's problems remains as elusive as ever. It has not been achieved, as some believed possible, by the minor revision of the Treaty of Trianon, involving a redrawing of the disputed frontiers where ethnographic considerations had been frankly sacrificed to strategic and economic factors. The successor puppet states remain, hostile and unneighbourly, on the fringe. The truth is that the principle of national determination, if applied to the centre of Europe, must leave substantial minorities on each side of every frontier. The Hungarian attitude, which demands the inclusion within the state of every Magyar island, must magnify the minority problem within Hungary, and minimise the possibility of solving it by assimilation. The only true alternative, the creation of a form of Danubian federation with a constitution on the Swiss model, is probably outside the realm of practical politics. This is certainly the case if, while the successor nations adhere to a democratic ideal, Hungary continues to be ruled by a landed oligarchy that land reform and liberal changes in the internal regime would ease the transition to a lasting settlement. But the essential problem remains national and not ideological. The present state of Hungary is clearly far worse than that which existed under the "dictated" peace of Trianon, and has the appearance of becoming still worse. It was perhaps necessary for the peace of Europe that the failure of the German solution, from the Hungarian standpoint, should be effectively demonstrated. The prospect of stability when the war is won depends on the extent to which Hungary—and its neighbours—accept the lesson of the past twenty years; that the only security lies in a good neighbour policy and collective determination to keep the peace.

NOTES OF THE WEEK

Queensberry Rules

Mr Churchill strongly deprecates any discussion of Germany's chaining of the Dieppe prisoners and of British counter-measures, "which might be prejudicial to the action of the protecting power [through whom the British Government has protested to the German Government] and consequently to the interests of the prisoners of war of both belligerent countries." As a result, all that can at the moment be said is that, on balance, thoughtful opinion, while recognising the strong emotional factors which cannot be ignored, seems opposed to a policy of reprisals. In any case, the most important aspect of the affair is not what measures should or should not be taken by Britain, but why Germany should ever have started it. Mr Churchill, in his speech at Edinburgh on Monday, declared that Hitler wanted to create a distraction, to divert men's eyes—German eyes—from the course of the Russian campaign. In this, the Nazis have achieved some success. The trumped-up charge, the British reply, the action and counter-action taken—all this takes up a great part of the official communiqués of the German High Command and quickly fills most of the newspapers. But there is probably a deeper and more ominous reason behind it all. In the same speech, Mr Churchill said that he had always expected that the war would become worse in severity "as the guilty Nazis feel the ring of doom remorselessly closing in upon them." Preparations for this have already been laid by the Nazis when they have accused the British of shooting sailors after their ship had been sunk; bombing hospitals and civilians, refusing water to German prisoners in Africa; and now tying prisoners' hands. Rommel, too, has added his quota to official propaganda; he has spoken of the British use in Africa of Maoris and headhunters, and has promised that these "unfair" methods would be counteracted. The Germans, in fact, are being prepared for an all-out war against the British—and Americans—with complete disregard for all conventions, the sort of war that was waged in Poland and is being waged in Russia, where the brutal acts of German soldiers were, and are, justified on the grounds of their racial superiority. The Nazis will keep the rules so long as their military campaigns are a walk-over. But once they meet determined resistance and, even more, when they are on the defensive, they will use every means to hand. For this the German public is now being prepared—in the same way as it was prepared for war, long before 1939. It was Frederick the Great who said, "as to war, it is a trade in which the least scruple would spoil everything."

Officers and Commissars

The decree of the Supreme Soviet abolishing the posts of the political commissars in the Red Army must have been a sensational surprise to the Russian public. During recent months and weeks, the Soviet press has laid great stress on the rôle of the political commissars in maintaining the morale of the fighting forces. During the critical periods of retreat, this year as well as last year, front-line reports frequently spoke of the commissar as intervening and retrieving difficult positions when the commanding officer had "lost his head." The new measure may, therefore, be interpreted as an expression of Soviet self-confidence; the fact that it has coincided with the favourable turn of events on the southern front is surely significant. But the abolition of political commissars must not be taken too literally. The functions of the political commissars have not been abolished. What has been changed is the name and status of the commissars inside the officers' corps. Henceforth, the commissars—now "political officers"—will be subordinate to the ordinary commanders as their assistants; formerly they were equal, if not superior. The dual nature of authority within the Red Army (a commander's order had no validity unless previously countersigned by the political commissar) has thus been eliminated. This will, no doubt, increase the coherence and *esprit de corps* of the commanding cadres which have been much renewed and rejuvenated in the course of the fighting. Those former political commissars who have acquired a wide military experience on the battlefield will themselves be transferred to commanding posts, after short courses of training. Thus, some gaps in the officers' corps, due to losses and casualties, will now be filled by new elements, and this is probably one of the main

motives behind the recent decree. Stalin has said that 200 ex-commissars will be promoted to the rank of regimental commanders (i.e., colonels), and 600 to the rank of battalion commanders (majors) after two months' training. This number of officers of these grades adds up to a commanding cadre for fifty divisions at least.

An Unsolved Problem

On May 13th last, Mr. Oliver Lyttelton, then President of the Board of Trade, appointed a committee to prepare a scheme for speeding-up the release of labour from the non-food retail trades as painlessly as possible and with due regard to the interests of consumers. Despite the urgency of the problem, the Committee took 13 months to prepare a draft scheme providing for the voluntary withdrawal of shopkeepers, to be financed by a levy on the turnover of those remaining in business. The scheme, discussed in *The Economist* on July 4th, encountered formidable opposition from organised sections of retail trade, and now, after a delay of nearly four months, it has been jettisoned. On Tuesday, Mr Dalton outlined his decision to approach the problem from a different angle. In the main, his new proposals are designed to secure the fair distribution of supplies between individual retailers and areas. While this is, of course, highly desirable, it should surely have been done as a matter of course much earlier in the war, irrespective of the need for concentration which arose 18 months ago. Secondly, Mr Dalton is to take steps to prevent a large number of the smaller shops from being squeezed out of business by guaranteeing them a percentage of their purchases in a standard year. This is frankly a concession to the "small man." There are, of course, many sound reasons—the need to disperse stocks, to ensure the maintenance of shopping facilities in rural areas and to economise transport—why an indiscriminate closing down of shops should be prevented. But the new policy goes further than this; it appears to make the retention of the small man a *sine qua non* of war economic policy, a limiting factor in war economy. The principle of compensation for retailers forced out of business through shortages of labour, supplies or customers has been rejected. Instead, retailers are to be kept in business, if possible; but, if they do fall into financial difficulties or are forced out of business, they are to be referred to the Liabilities (Wartime Adjustment) Act. The intention, presumably, is to maintain shopping facilities considered essential by the scaling down or suspension of the liabilities of traders threatened with bankruptcy and, in the case of those who have to close down, to prevent them from being made bankrupt. A register is to be established to "safeguard the interests" of such traders. Mr Dalton does recognise that retail trade will have to release additional labour, but the arrangements which are said to have been made for orderly withdrawal have not yet been published. In sum, Mr Dalton's proposals contain little that is new or should not have been done long ago. Final judgment will have to await the publication of further details. The proposals have little resemblance to the concentration schemes adopted in industry, which provide for compensation or profit sharing. The maintenance of retail turnover (in terms of value) this year has tended to slow down the contraction of shopping facilities. But, as Mr Dalton foresees, the need for the release of additional labour and the running down of supplies may soon end the reprieve; many traders may be forced out of business next year, unless of course the decision to keep small men in business is intended to override considerations of war economy altogether; and the only remedy which is offered them will be the Liabilities (Wartime Adjustment) Act. It seems likely that in 1943, as in 1942, 1941, and 1940, the war plan for retail trade, which has not yet been forthcoming, will still be needed.

Wanted: A Policy

The position of Sir William Jowett since he was appointed six months ago to concern himself with planning has been anomalous and difficult. He has had no clear authority and no defined responsibility. He has been sur-

rounded by established departments with their own prestige and prepossessions. Now, he has been given his chance—it is said by the personal wish of the Prime Minister. The Scott and Uthwatt Reports have been referred to him, presumably to prepare recommendations for a plan and a policy. It is imperative that he should work fast. Two things are needed: first, a central planning authority with positive powers; and, secondly, a planning policy which that authority can apply. These needs are underlined by the uncertainty which obscures the problems of the blitzed towns as they consider their reconstruction. Professor Abercrombie, it is reported, is preparing a plan for Greater London, and an exhibition is being held of the New London which the best architects and traffic engineers would like to see. But none of these plans or problems can be settled until a national policy has been decided upon and made known. London cannot be replanned until it is learnt whether or not the Government is prepared to accept the recommendations of the Barlow Commission on the control of industrial location and land development; even Greater London is part of a larger whole. The blitzed towns cannot make ready their plans until the finance of physical reconstruction has been settled. Lord Keynes has told the London planners that they need not worry about money. Unfortunately, they must worry. Lord Keynes means, of course, that the limiting factor in reconstruction is not money but resources. But no town has any guarantee that the share of national resources it will need for its replanning will be forthcoming until it knows by what financial means those resources are to be transferred to its use. The time for research, evidence and recommendations has long ago gone. What is needed now is a policy—and action.

End of a Chapter

The Anglo-American birthday present to the Chinese Republic on the Double Tenth will give scarcely less pleasure here and in the United States than in China itself. The move to end the system of extra-territoriality, now nearly a hundred years old, is to take the form of immediate negotiations for its termination and for its replacement by trade treaties negotiated between equal partners. Extra-territoriality has been in the process of modification and abandonment since the end of the last war. Extra-territorial rights were renounced by Soviet Russia after the revolution and were withdrawn from Germany by the peace treaty. In 1927, Great Britain handed back concessions in three trading centres, the most important of which was Hankow, and this move was followed the next year by abandonment of tariff restriction rights by all the powers. The case for abandonment of the system rests on the growth of China, during the last century, into a modern, vigorous and democratic nation, a process which has been accelerated since the revolution of 1911. It is well known that a statement of his desire to see the system ended, and China admitted to full *de jure* equality with the Great Powers, was included in the will of Dr Sun Yat Sen. When the system was initiated, it represented virtually the only basis on which trade of any description could be conducted with a China influenced by a profound distrust of foreign, and especially western, contacts. Extra-territoriality implied not only the right of the nationals of a country enjoying this privilege to government by their own administration, to judicial and fiscal autonomy and to special shipping rights; it also implied the basic right to reside and trade in China. Its practical justification was the doubt whether Chinese administration and justice were adequate. The final abandonment of the privilege implies the relinquishment of the international settlement in Shanghai—which, incidentally, provided a harmful loophole for Japanese activity earlier in the hostilities—and of the British concessions in Tientsin and Canton, as well as of exemption from the jurisdiction of Chinese courts for all British and American subjects in any part of China. In Free China, the agreement, when concluded, will take immediate effect. The change, which is admittedly overdue, is the formal recognition of the status which China itself has won among the United Nations as an equal partner and an honoured collaborator. The decision also serves to emphasise the honesty of the Allied purpose, which is to fight for world freedom and not for economic or political domination.

Justice

The Lord Chancellor's statement in the House of Lords last week, and the parallel announcement made by

President Roosevelt, have carried the difficult problem of the treatment of war criminals a stage nearer to clarification. A fact-finding United Nations Commission is to be set up immediately to sift evidence and establish, so far as possible, individual responsibility for atrocities perpetrated in the Axis-occupied territories. The principle that retribution for cold-blooded murder of the innocent is a war aim of the Allied peoples has already been laid down by Mr Churchill. The debate in the Lords was mainly concerned with questions of method and expediency, the most notable contribution being the Lord Chancellor's announcement of the Government's intention to make the handing over for trial of certain leading criminals a condition of the Armistice, and not, as at Versailles, of the Peace Treaty. The Government apparently contemplates trial either by military courts, which would in any case possess power to try cases of offence against the laws and customs of war, or by national courts. The question of the trial of crimes committed in Germany, over which no national court has at present powers of jurisdiction, remains obscure. Lord Simon emphasised the importance of confining all trials to crimes committed outside the actual fighting and generally recognised by all nations; murder, the infliction of serious bodily injury, torture, rape and piracy on the high seas. There was general recognition that trial would be based on the contravention of the international code of military behaviour in occupied territories, developed since the days of Grotius, and not on war guilt or the conduct of the war as such. In this distasteful subject, two things remain plain. Justice, with due safeguards of evidence, expert defence for the accused and the continued onus of proof on the plaintiff, is a necessity if mass reprisals by the tortured and much wronged victims are to be avoided. Those actually responsible for the crimes, and not merely agents, must be punished. Too many Germans fight on the assumption that they will either win or receive the treatment of the prodigal son.

Britain's Colonies

The truth of Mr Winant's words to the Royal Empire Society last July, when he said that in the United States there was a greater divergence of viewpoint on British colonial policy than on any other controversial topic, has become very apparent in the last week or two. The article in *Life*, which is discussed in a leading article on page 469, accused Great Britain of fighting a war to keep its Empire. Countering this in a broadcast address, Dorothy Thompson declared that personally she thought the days of colonial empires ought to be over, "but the fact that there have been centuries of colonisation cannot be wiped out overnight . . .". Why, she went on to ask, very pertinently, is it only Britain's Empire, and not the French Empire or the Dutch Empire, which is attacked? Again, last week in Chungking, Mr Wendell Willkie said that

we believe that this war must mean an end to the empire of nations over other nations . . . We believe that it is the world's job to find some system for helping colonial peoples who join the United Nations' cause to become free, independent nations . . . we must establish iron-clad guarantees, administered by all the United Nations jointly, that they shall not slip back into the colonial status.

In the face of such statements from leading American opinion, British spokesmen have once again been remarkably silent. Consequently, it is not surprising if Americans tend to regard all Britain's dependent colonies as potential Indias, especially since in the colonies nearest to them, the West Indies, there is serious economic distress and political unrest. They possibly forget that Malta, too, is a British colony. But since the word Empire has now undoubtedly become a cause of dissension between Great Britain and the United States, the case for a Colonial Charter, which would embody and codify the principles and promises that have been thrown out by British statesmen from time to time, is stronger than ever.

A Household Ration

There is a feeling in people's minds that it is both unfair and confusing to add household articles piecemeal to a ration which is regarded and was planned as a clothing ration. For eighteen months Board of Trade coupons have been looked upon as currency for the purchase of personal clothing—liable always, of course, to depreciation in value if the supply position became more stringent. Now the Board of Trade has seen fit to include towels in the clothing

ration. Towels are just one among the multitude of essential articles in the household linen cupboard. It probably will be necessary to ration most, if not all, textiles. If so, towels can only be the first of a series of household articles which will have to be rationed, and unless a new issue of coupons is made, they cannot all go on the clothing ration. It is evident that the reduced production of all household goods and the increasing shortage of them in the shops has created conditions in which a new and distinct ration group is needed. What is required is a household ration, on a points system, to embrace all articles of kitchen and table equipment and household linens. Ration documents could be issued to all individuals and members of a household could pool their coupons. Saucepans and cups and saucers are in shorter supply than towels; and a rationing scheme for all these articles, which would ensure fair distribution, is an urgent necessity and should not be delayed.

The Hidden Hand

It has long been recognised as a fact, by students of retail trade, that, in spite of the multiplicity of small competitive shops, almost every section of retailing is dominated in one way or another by powerful associations of large traders or manufacturers. The Motor Trades Association, in a memorandum published recently, urged that "it is necessary for all engaged in retail trade to be free from the coercive influence of suppliers." In private the Association has expanded the reasons for this. It is the old story. Retailers are compelled to sell branded articles because of the consumer insistence created by mass-advertising. The goods are sold through suppliers termed agents; and these agents must accept the conditions laid down by the manufacturers. The pistol is always at their heads. When the retailers of one make of car, which is a peculiar and important example of the branded article, have been persuaded to build luxurious showrooms to house their wares, the retailers of other makes are compelled to follow suit; and so the process of competitive ostentation goes on, with none of the genuine virtues of competition. It has never yet been demonstrated in the motor trade or in any other trade, why manufacturers cannot be content to sell their wares to retailers at the price they set, which presumably enables them to make both ends meet, and then to leave retailers to make the best bargain they can with customers. It cannot surely be supposed that retailers will put themselves out of business by fixing too low a price; and it is self-evident that it is diametrically opposed to the interests of consumers for manufacturers to dictate, not only the final selling price, but also the conditions of sale, including all the lavish shop-fittings and publicity devices for which the consumer and nobody else has got to pay.

Pacific War

The last week has seen three vitally important actions fought off the Solomon Islands, two in the air and one by sea. Of the naval actions, one was an effective Allied offensive against a threatening concentration of Japanese shipping near Bougainville Island, 260 miles north of Guadalcanar. A combined operation was undertaken in which carrier-based aircraft under Admiral Ghormley attacked enemy shipping, while army aircraft under General MacArthur attacked near-by land bases. The Navy Department claims considerable damage, including hits by heavy bombs on a cruiser and a transport. This, together with the recent heavy raids on Rabaul in New Guinea, have caused considerable satisfaction, since it is now plain how heavy and damaging the Allied air offensive in the south-west Pacific has become. Guadalcanar itself has become the scene of renewed fighting. The Japanese have succeeded in bringing in reinforcements; but energetic naval measures on the nights of October 11-12 and 13-14 succeeded in sinking eleven Japanese vessels—two heavy cruisers, four destroyers and five merchant ships—for the loss of one American destroyer; while in the air an aggressive Japanese force of thirty-five bombers and thirty fighters lost eight and four planes, respectively, for an Allied loss of two fighters. These actions are of supreme importance for the whole future of the Pacific war. They indicate that the Japanese have by no means abandoned their intention of evicting the Allies from the Solomons—that they may be prepared to sacrifice the possibility of an advance in New Guinea to

that end. They show also that the Americans are conscious of the desperate importance of pushing on, in Guadalcanar and further afield, and that their offensive activity takes the most effective possible form, that of unremitting pressure on the bases of supply. Meanwhile, in New Guinea, the Australians continue their steady advance in the Owen Stanley range, checked only by supply difficulties and rare encounters with a Japanese patrol. The ultimate battle for Guadalcanar has yet to be fought, as has also the ultimate battle for Port Moresby. From the Japanese supply standpoint, the two objectives are interdependent. Allied attack from either assists the defence of both. The satisfactory feature of the recent fighting is that the Allies are attacking from both.

Milk Costs

From the first of this month, the Milk Marketing Board became the sole buyer of milk. The Ministry of Food buys supplies from the Board and sells them to distributors according to a plan designed to satisfy all needs and to save the maximum amount of labour and transport. Milk prices, which used to be fixed by the Milk Marketing Board, a producers' monopoly, after consultation with the Central Milk Distributors' Committee, have been fixed for six months, during which time an investigation will be held into the costs of all sections of the milk trade. On the basis of this investigation, it is hoped to reduce the subsidy of £20 millions which is at present paid by the Treasury to keep prices down. Actually, there seems little reason why milk prices themselves should not be lowered as a result of this scrutiny of costs. It may be necessary to stimulate production by subsidy; but distributive margins have always been extravagantly high in the milk trade, and now, when distribution is being rationalised to fit wartime requirements, the last vestige of an excuse for the undue dearth of milk has surely gone. There is here a great opportunity. Before the war, the price of milk was far too high, largely because of the extravagant cost of distribution. In 1937, the Food Council made far-reaching recommendations for the reduction of milk retailers' margins. In 1940, the Perry Report, made for the Ministry of Food, stated that "the system of milk distribution employed in the greater part of the trade is unnecessarily costly and elaborate." There is no justification at all for this state of affairs to continue now. It is true that the Perry Report raised a storm in the industry. But, whatever the rightness or wrongness of retailers' margins in more normal conditions, it is surely obvious that the wartime rationalisation of distribution should have removed much of the costly elaboration which was so characteristic of the trade before the war. Lord Woolton said on October 6th that the intention was to save 25 per cent of the manpower and 40 per cent of the petrol cost of distribution. In wartime, of course, it is these material savings which count far more than any considerations of price. Nevertheless, if these savings are made, the consumer should surely benefit. It would be fantastic if the inflated prices and inflated margins of peacetime were to be preserved under austerity conditions—and under the

cloak of a heavy subsidy. Presumably, the investigation into costs which is going on will reveal the same sad facts as those which similar investigations have revealed in the past. This time action should be taken—in spite of the very energetic resistance of a number of representative associations of the different branches of the trade.

Welfare and Productivity

Over 50 million man-hours are lost per month through industrial accidents. This estimate, which he says is "probably an understatement," is arrived at by the Chief Inspector of Factories in his 1941 report. The "very high and almost startling" increase in accidents during the year is largely accounted for by accidents to women, which represent an increase over 1938 of 192 per cent, compared with 42 per cent for men. This high figure is attributable to the large number of women entering employment, including dangerous occupations, since the war and not to any greater accident proneness, although the report passes some severe strictures on "the modern style of hairdressing." In addition, many firms pay far too little attention to safety precautions and to training inexperienced workers. The situation is most satisfactory in firms where workers are represented on safety committees, and the report recommends that production committees should concern themselves with accident prevention. It is astonishing that it should take so long to learn the lesson that overlong hours lead to reduced production, and it is difficult to understand why, when the Inspectorate are fully aware of this fact, and, indeed, quote instances of output being actually increased when shorter hours are worked, the number of "permissions" granted to relax the provisions of the Factory Act should have been nearly doubled since 1940. A definite lead from the Minister of Labour on the question of hours, especially of women and young persons, would be of very great value. The importance of canteens in raising efficiency is stressed, and there has been a distinct improvement in this direction; 2,814 factories subject to the Factory Canteen Order were operating canteens in 1941, against 1,164 in 1940, and the total number of industrial canteens, including docks and building sites, was 6,952. The position in smaller and dispersal factories still seems unsatisfactory.

Workers' Health

The section on health is the least satisfactory part of the annual report of the Chief Inspector of Factories. Although it states that the general standard of health has been well maintained, largely owing to the provision of canteen meals, it leaves much unsaid. There are few constructive suggestions for improving the factory medical service. There is no mention of facilities for preventive treatment or for medical attention on the spot. There is no recommendation on the time when a pregnant woman should leave her employment, though this is a matter on which an authoritative opinion would be welcome, since there is a great deal of evidence that many women, for financial reasons, stay at work far too long before their confinement. No figures are given for the increase in dermatitis, which is admitted, but apparently not considered important enough to be quoted—but since the number of cases notified increased from 2,195 in 1938 to 4,744 in 1940, and is known to have been steadily increasing, the omission is not only unscientific but deplorable. Finally, the number of wholtime works medical officers, 150, seems very inadequate for the total number of establishments, though there are, of course, many more part-time factory doctors. It is quite true that the Services have first call in the mobilisation of doctors, but more use could surely be made in factories of qualified Allied refugees. It would be interesting to know how many man-hours are lost by avoidable sickness; if the rate of production is to be maintained during the coming winter, it seems essential that the provision of a comprehensive and, above all, a preventive industrial medical service should have first-class priority.

Prompt Measures

The Ministry of Health is to be congratulated on the prompt action it has taken to implement the recommendations of the Medical Research Council's Committee on

tuberculosis. The day the report was published, Mr Ernest Brown announced in Parliament that the Ministry has obtained priority for the supply of some 30 sets of equipment for mass radiography, and has arranged for the training of the necessary expert staff. As the equipment is received, it will be allocated to large centres of population. So much for diagnosis. Institutional treatment will be expanded by allocating additional beds and by a better distribution of the trained nurses now available; a priority list of hospitals in which the need for nurses is urgent will be drawn up; and the training schools will be asked to provide a quota of the nurses who have finished their training to be allocated to these hospitals. Most important, financial assistance will be given by the Exchequer, through the local authorities, to provide for the maintenance of the dependants of the patient. It will not be administered by the Assistance Board after a means test, but by the public health authorities; and there will be a flat rate for maintenance, together with extra grants for standing charges such as educational costs and rent. Unfortunately, not a word was said by the Minister of Health about rehabilitation. This, it is true, does not come within his province—or at least not solely within his province—but it is a pity that a statement was not made at the same time by the Minister of Labour on the excellent recommendations of the Committee with regard to modified and supervised work in factories, together with the subsidisation of wages where necessary—so that ex-tuberculous patients can be enabled gradually to resume their normal occupations under normal conditions. It is true that certain tuberculous workers are included in the Ministry of Labour's Interim Scheme for Training and Resettlement of Disabled Persons, but the Committee points out in its report that the number of cases to which the scheme can apply is very small and in practice they are those who need it least. Tuberculosis is a long-term disease, and the care of its victims must be prolonged and thorough. In diagnosis, treatment and rehabilitation there must be no half-measures and no cheese-paring.

The Dangers of the Black-out

During the recent debate in the House of Commons, Major Lloyd George and Mr Grenfell between them gave a very full statistical picture of the coal situation, while shoals and showers of crucial facts and figures have been tossed to the press—albeit not a little polemically—by the Mining Association, that is, the employers. No figure seems too secret—or of too great value to the enemy—to be revealed. Major Lloyd George gave the figure of production in 1939-40 and the rate of output in the current coal year ending next April. He also gave estimated consumption in the United Kingdom this year, including, notably, the estimated increase in consumption by "certain important munition industries," and the current estimated deficit. Finally, he gave the output in the week ended September 26th and promised to give output figures for the whole country every month in future, together with the percentage of the standard tonnage reached in each district—a clear indication to the Germans which are the most efficient mining areas to bomb. Mr Grenfell gave interesting figures of stocks, at the beginning and end of 1940-41 and 1941-42, and between them the Minister of Fuel and the ex-Secretary of Mines gave the present number of miners, including those working at the coalface. It may, therefore, be pertinent to ask why, since all these figures have in the event been revealed, there was ever any ban on their publication. It has apparently been decided now that they do not give away information of value to the enemy, and those who wish to give helpful criticism on the nation's war effort are grateful for the decision. On the other hand, it may be pointed out that, if there had been no ban of figures of output and the rest, criticism of the Government's coal policy would have been far better informed and consequently would have carried more weight. It is accordingly not presumptuous to believe that the need for the reorganisation of the industry and the economy campaign might have been forced upon the Government's attention very much earlier—perhaps, even, in time. Since, moreover, the dangers of the statistical black-out have now been made so painfully apparent in this instance, is there not a case for relaxing it in other fields—that, for instance, of shipping losses, where the publication of delayed figures covering broad periods would reveal the basis of policies designed to restrict supplies and imports? And might it not be a positive advantage to United Nations' good relations if the curtain were drawn more often and more fully on Great

Britain's achievements, by giving, for instance, full figures, in general categories, of the mobilisation of man power and woman power?

Regional Machinery

Statements by the Minister of Production on Wednesday, together with a speech by the head of the regional division of the Ministry to the Engineering Industries' Association last week, provide a welcome indication that the effective scope of the Ministry and its regional machinery is to be expanded. Hitherto there has been some suspicion that the regional production boards were not exercising the full influence which the Citrine Committee recommended they should, and that co-operation with other departments was not always as satisfactory as it might be, and it certainly seems that insufficient publicity has been given to their work. As the *Times* recently commented

"They . . . have as yet scarcely made a ripple on the waters of industry. Their modesty and unobtrusiveness are indeed so great that even their whereabouts may be unknown to manufacturers in the areas in which it is their business to organise production."

There are now 53 regional and district capacity offices whose business it is to secure the correct "loading" of industrial capacity, in their areas. Highly specialised items such as ball-bearings and capacity already adequate supervised through direct contracts, are outside the scope of the regional boards, which are primarily concerned with the ordinary sub-contract type of orders. Mr Lyttelton announced that the future location of industry is to be more strictly controlled, and measures taken for dealing with firms whose use of resources is wasteful, either by rearranging their work, regrouping firms or, if necessary, forbidding them to accept further orders. Full use will be made of the local knowledge of the regional boards, which will investigate every case, and try to create the "minimum of disturbance." Joint production committees are being encouraged to refer to the regional boards questions involving more than domestic factory issues. On paper the pyramidal structure for national production organisation is admirable, and it remains to establish it in practice. Their efficiency with which the regional controllers fulfil their duties must depend (as was pointed out in *The Economist*, on May 23rd), on the degree of authority with which the Minister of Production himself is vested. The Minister now has a Parliamentary Secretary and has recently acquired a Permanent Secretary, an important step towards recognition in the hierarchy of the Civil Service. As the Citrine report emphasised, his representatives in the districts should exercise the same control in the regions as the Minister can at the centre, in order to "concert and supervise the activities of the Supply departments." The birthpangs of the Ministry of Production were long and complicated; its teething troubles are not yet over. The devolution of executive authority through regional machinery is an integral part of its growth; and it is essential that the regional boards should be enabled to develop freely, without encountering the same impediments and prejudices that faced the central departments in its early days.

Debate on Contracts

Last Wednesday's debate in the House of Commons on the recent Report of its Public Accounts' Committee served a useful purpose, not so much for the duel between Mr Kendall, speaking for the British Manufacture and Research Company whose activities were under discussion, and Lieut.-Colonel Elliot, chairman of the Committee, as for the attention that was drawn to the need for careful costing as a means of avoiding waste of physical resources in the production of war equipment. Sir Kingsley Wood, in expressing his indebtedness to the Committee for the useful work it is doing, frankly admitted that EPT itself is no protection "against uneconomic or wasteful methods of production." He gave an effective answer to suggestions that prices do not matter because everything goes in EPT. Waste of labour and materials can only be avoided by careful costing, and to this end Government departments must have ready access to the books of contractors, a power which was only granted at the time of the passing of the

Ministry of Supply Act. Early in the war Government departments had neither the facilities nor the experience to keep as close a watch over contractors' expenditure as may have been desirable. But costing has become progressively more efficient and, in so far as contracts for established equipment is concerned, Government departments now have acquired a good deal of experience in tracing and checking wasteful and inefficient methods of production.

Tu Quoque

The *New Statesman* has thought it proper to reprove those people who are not a little uneasy lest an attempt should be made to implement the vague, incompatible and costly recommendations of the Scott Report. It is not impossible that this distinguished and successful contemporary had *The Economist* in mind when administering its rebuke—with all the judicial temper of the up-to-date intellect. If this is so, then the rebuke was misdirected. This can be simply proved. Modern thought, as represented by the *New Statesman*, in contrast to what it calls "the ancient passion of the surviving free traders," lays down three conditions for the future of farming—repudiating indignantly, by the way, any demand for "a post-war régime of high agricultural protection or subsidy." First of all, the farmer must not be left at the intemperate mercy of world fluctuations. This has consistently been the view of *The Economist*, which supports, in general and in detail, a policy of guaranteed prices for farm products, if only because the period of gestation in agricultural production is dictated by nature and not by policy. Secondly, it is said that nothing must be omitted to improve the efficiency of farming. This is again *The Economist's* view. The point is that the technical efficiency of farming must be such as to make the use of resources in agriculture economically efficient by comparison with the use of resources for other alternative, and mainly industrial, pursuits—and in comparison with the use of resources in the agricultures of overseas countries. Finally, it is urged that there must be specialisation on those types of holding and of products which offer the best prospect of economic returns. This is indeed the real point at issue; and the main point of the Scott Report was that, by its general plea for a balanced agriculture of the traditional kind, it ruled out precisely this kind of specialisation—despite its concurrent plea for a greater contribution by British farming to the solution of nutritional problems. It remains a fact that the Scott proposals, in so far as they were consistent, did add up—by virtue of the fact that they posited certain conditions in the countryside as the beginning of their argument, instead of proving them to be the result of the policies they urged—to a demand that agriculture after the war should be maintained at a certain level, regardless of the cost to the rest of the community, regardless, that is, of whether or not it was economically efficient.

AMERICAN SURVEY

Financing War Industry

(From Our New York Correspondent)

September 20th

IT has long been a cardinal principle of American commercial banking practice that a bank might not lend more than 10 per cent of its capital funds to any single borrower. Since the capital, surplus and undivided profits of the banking system at the present time amount to about \$8 billions this would mean that, under normal conditions, no one borrower might, even by employing the facilities of all the banks of the nation, establish a credit line of more than \$800,000,000. Yet it was recently announced that the General Motors Corporation had completed arrangements for a loan of \$1 billion, and that the transaction would be handled by a group consisting of only about 250 of the country's more than 14,000 commercial banks.

This huge war credit—it is ten times greater than the largest previously obtained by an American firm—has been made possible by the newest in the series of mechanisms that have been devised during the last two years for financing the war production of American industry. This is the mechanism known as Regulation "V." It originated in an Executive Order issued by the President on March 26th this year authorising the War and Navy Departments and the Maritime Commission to enter into contracts with any financial institutions, guaranteeing them against loss of principal and interest on loans, discounts and commitments entered into for the purpose of financing any contractor, sub-contractor or other engaged in a business or operation deemed "necessary, appropriate or convenient for the prosecution of the war."

New Loan Standards

The machinery for working this Order is contained in a Regulation published by the Federal Reserve Board eleven days later, on April 6th. Under this Regulation, designated Regulation "V," the three procurement agencies named in the President's Order are authorised to guarantee commercial banks, Federal Reserve banks or the Reconstruction Finance Corporation against loss on loans for the performance of war orders. The idea underlying this process by which the Government will underwrite war loan risks is effectively summed up in a declaration of the Board that "peacetime credit rules or standards must not be permitted to hold up the production of war supplies needed by the armed forces." In other words, production is henceforth to be the prime, if not the sole, basis for loans to war industry.

Before discussing this newest development in American wartime finance in greater detail, it might be well, perhaps, to trace what may briefly be called the trial-and-error way by which it arrived. The problem of industrial finance in this country, as elsewhere, has been a twofold one, involving the task of providing for plant construction and expansion, on the one hand, and for working capital, on the other. This has been, and promises to be, a particularly formidable problem here for two reasons: first, the fact that, boasting no munitions industry of its own up to 1939 (in the European sense of the term), America has had to do more than the normal amount of arsenal building and plant conversion; secondly, the sheer dollar magnitude of the defence and war programme, involving as it does, not only the arming of this nation, but also production under Lend-Lease for some thirty other nations.

Plant expansion has been financed largely through three mechanisms, all set up since the all-out defence effort was launched in the summer of 1940. The Second Revenue Act of that year, which became law on October 8th, encouraged companies to borrow for expansion by liberalising the terms

of amortisation for tax purposes, so that the entire cost of such investments might be written off over a period of sixty months. Meanwhile, in July, 1940, the Emergency Plant Facilities Contract had been created, and a month later the Defence Plant Corporation had been set up. Under the first of these, a contractor negotiates an agreement with the Army and Navy under which he builds a plant with his own funds and holds title to it until the Government reimburses him. Repayment by the Government begins upon completion of the plant and takes the form of sixty monthly payments. This procedure contains a pronounced element of Government guarantee, since the contract may be assigned to a bank as collateral for a term loan. Such contracts are not numerous, and have been confined largely to the shipbuilding and aircraft industries. The Defence Plant Corporation, a subsidiary of the Reconstruction Finance Corporation, has been a much more important element in the war plant picture than the EPF, especially in recent months. Where a company such as Chrysler goes into large-scale wartime production of tanks, the Government itself, through the DPC, builds the plant and leases it to the firm. Or, under a variation known as the "arsenal plan," it pays the company a fixed fee for operating it. In either case, the Government assumes and retains title to the plant, though the manufacturer may be given the option of acquiring it at the end of the emergency at cost less depreciation. On June 30th, total Government commitments for war plant expansion stood at \$13,524,000,000.

Before the defence effort got well under way, industry depended for working capital on its own resources and ordinary commercial bank loans. In a survey covering the operations of 5,362 banks over the period April 16th-May 15th this year, the results of which were made public in its August *Bulletin*, the Federal Reserve Board found that, out of \$2.2 billions of loans and renewals in that period, about one-third were for the production and distribution of war goods. About 40 per cent of all new loans, it found, were for this purpose. Two other agencies have stood ready, in theory at least, to lend their support to the commercial banks: namely, the Federal Reserve banks, which are permitted to loan directly to industry under the so-called Regulation "S" of June 19, 1934; and the Reconstruction Finance Corporation. Neither has been an important factor, however. At the end of July, this year, direct RFC loans totalled \$170 millions and advances under Regulation "S" were less than \$15 millions.

The Banks Outgrown

As the defence effort expanded, it outgrew the capacity of the banking system—as the latter functioned under normal peacetime conditions. A company which would ordinarily require, say, \$100,000 in working capital found its needs suddenly expanded to five or six times that amount, the result being a demand for credit which could not be met by the banks with due regard to accepted risk standards. The first attempt to deal with this problem was the Act of June 22, 1940, under which the Army and Navy were authorised to advance payments on their contracts. Originally such advances were limited to 30 per cent of the amount of the contract. Later, an additional 20 per cent was allowed, but this was to apply only in cases where there was sub-contracting and was to go to the sub-contractor or sub-contractors. Formerly interest-free, these advances now bear 2½ per cent. To date, they have totalled over \$2 billions. This system of "progress payments" was supplemented on October 9th with the Assignment of Claims Act. This Act permitted, for the first time, the assignment of any claim

due from the Government unless the contract expressly forbade it. Under the assignment, the lending institution receives from the Government all payments made as the contract is satisfactorily filled. The virtue of this arrangement is that it gives the contractor an asset which he can put up with his bank as collateral for a loan which possibly might otherwise be unobtainable.

Neither of these mechanisms has provided an adequate answer to the working capital problem. The system of progress payments has been a constant headache to the Services, which have found themselves to all intents and purposes in the banking business and under the necessity of satisfying themselves, both as to the credit position of the companies with which they were dealing and as to the degree of the latter's contract performance. The Assignment of Claims formula has been a great convenience, but it has not expanded appreciably bank lending facilities.

Regulation "V"

The banking community believes that the new mechanism represented by Regulation "V" does do this, and both the Services and the bankers hope through it to wean industry away from the awkward and burdensome progress payment system. This should not be a particularly difficult problem, for Regulation "V" is calculated to commend itself quite as much to the contractor as to these interested parties. Any borrower engaging in work necessary for the war effort is eligible for a "V" loan, whether a prime, sub or sub-sub contractor. Regulation "V" loans can be, and have been, guaranteed up to 100 per cent; but the Government did not contemplate and does not look with favour on such a set-up. The bank is expected to participate as generously as it can, consistent with sound banking practice. The guarantor is the actual Service concerned—the Army, the Navy or the Maritime Commission—and the Federal Reserve bank acts as fiscal agent. A fee for the guarantee is paid by the bank to the Service, and ranges from 10 per cent to 40 per cent of the interest collected. The larger the guarantee the higher the fee. The borrower's contact is with the bank, which services and polices the loan. The bank works out the terms

with the borrower, decides what guarantee it needs, and submits an application to the Federal Reserve bank of its district. The Reserve bank works out the details and final terms.

Both the bank and the borrower are protected in the event of the borrower's contracts being cancelled at the Government's convenience. The bank is protected by the so-called "step-ladder" clause, which, if not less than 25 per cent of the borrower's war contracts are cancelled, reduces the unguaranteed portion of the loan in the same proportion as the percentage of cancelled contracts bears to total unfilled orders. Thus, if a loan was initially 60 per cent guaranteed and half the borrower's war orders were cancelled, the bank's guarantee would be raised to 80 per cent. If all orders were cancelled, as would happen in the event of the war's termination, the guarantee would become 100 per cent. The borrower, in the event of such cancellation, is allowed a waiver of interest and extension of maturity on related loans until he has settled with the Government on account of the cancellation. The percentage of his loan extended is equal to the percentage of his war contracts cancelled.

All-Out Financing

When Regulation "V" was promulgated, it was expected that small manufacturers with inadequate credit would be the chief beneficiaries. And for a time this was the case. Early in August, the total of such loans was only \$450,000,000, and they ranged in size from millions down to as little as \$400. But in recent weeks the nation's biggest war industries have discovered in Regulation "V" a convenient and flexible medium for financing their huge working capital needs, and a new and vigorous expansion in commercial bank loans now seems to be in prospect. Allis-Chalmers negotiated a "V" loan for \$40,000,000 late in August, and Radio Corporation of America followed a few days later with one of \$60,000,000. And now General Motors has made financial history with its gigantic war credit of \$1,000,000,000. It can now be said with much truth that industrial financing in the United States, like industrial production, is at last on an all-out war basis.

The War factories need GAS —SAVE IT

Out of buried forests of the past comes the wealth of British coal; and like a giant tree, from this coal the British Gas Industry has grown up.

The making of gas enriches the nation not only with gas, but with coke and with a wealth of by-products of inestimable service. In addition to benzole, no less than half a ton of coke is made from every ton of coal used in the gas-works. From the tar produced, more than 2,000 substances are obtained—explosives, motor spirit, drugs, dyes, disinfectants and plastics, to mention only a few. Ammonia is another by-product of gas, and provides fertilisers, explosives, and cleaning preparations; sulphuric acid comes from the sulphur extracted in gas-making.

The gas economies you make at home will release more gas for the war factories. Remember that gas, as well as its by-products, is vital in the Battle for Fuel—so play your part and SAVE GAS.

BRITISH COMMERCIAL GAS ASSOCIATION,
LONDON, S.W.1 (1)

American Notes

Manpower and Strategy

The problems of manpower policy have provided the staple diet of official and unofficial discussion during the past week. President Roosevelt, in his fireside chat on Monday, forecast the need to follow the rationing of materials by the rationing of manpower. Already several Bills have been introduced in Congress providing for national service legislation of one kind or another. The pressure on the domestic front for manpower decisions comes largely from the shortage of farm labour. A request has already been made by a group of Senators for the deferment, for at least 90 days, of men engaged in dairy farming or livestock production; they point out that, once the men have joined the Forces, it will be exceedingly difficult to get them back on the farms again, if later it is found that agricultural production is seriously endangered. Shortages of skilled industrial labour, like that in Willow Run, also point to the necessity for some more effective method of manpower allocation. It is widely realised, however, that the problem is not primarily domestic, and that the fundamental decision to be made is whether the most useful contribution of the United States to a United Nations victory is to take the form of production of weapons now for the fighting fronts and of food, or the form of a mass army of 10 million or more men which would not be equipped for action for, say, a year or more. Mr Nelson has already suggested that the aim of an army of 10 million in 1943 may have to be reduced somewhat in view of the United States' industrial commitments to its Allies. It is obvious that a decision on the size of the army is necessary before any plan for agricultural or industrial mobilisation can be determined, and it is fortunate that there is an increasing understanding in the United States of precisely what the alternatives involve. A number of publications, among them *Fortune* and the *Atlantic Monthly*, in addition to the daily press, have made it clear that the building up of a large army, particularly for home defence, will mean substantial changes in the volume of production available for the fighting fronts under Lend-Lease.

Lewis Breaks Away

The decision of the United Mine Workers to end their membership of the Congress of Industrial Organisations comes as no great surprise. It had long been expected that, at the most favourable opportunity, John L. Lewis would break the very tenuous relationship between the miners and the CIO. The building up of District 50, which has attempted to organise dairy farmers, chemical and coal by-product workers and others into an organisation affiliated to the Mine Workers, has made it plain that Mr Lewis was preparing to exploit his position to the utmost. The secession deprives the CIO of 500,000 members and a very considerable source of financial strength; but, in view of the strained relations between the two, these must have very largely been written off long ago. It is reported that Mr Lewis is already negotiating for the readmission of the Mine Workers to the American Federation of Labour, and there are fears that the isolationist and anti-Roosevelt elements in both organisations would be strengthened by such a move. Mr Lewis evidently regards the present time, when negotiations are again under way to arrange a merger between the CIO and AFL, as promising the most juicy pickings for himself. One of the difficulties in merging the AFL and CIO has been the desire, on the one hand, of the AFL to re-absorb the CIO, and on the other, the insistence of the CIO that it should be treated as equal in strength and prestige to the parent organisation. If the Mine Workers become part of the AFL the bargaining position of the CIO will be greatly weakened. Rather than advancing the prospects of unification, this would embitter the CIO and make negotiations more difficult if not impossible. This isolation of the CIO and embitterment of relations is probably one of Mr Lewis's aims, second only to his own rehabilitation and the greater scope he would have with a larger organisation like the AFL. The prospect of the labour war which is brewing can hardly be to the liking of President Roosevelt, who has used his influence to have negotiations reopened between the AFL and the CIO.

Victory Tax?

The 1942 Tax Bill has now been approved by the House and goes to the House of Representatives for adjustment. Those will centre on the Senate's new Victory Tax and the rates to be paid by corporations. As it now

stands, the Tax Bill will add at best about \$8,000 millions to the \$17,000 millions of existing Federal revenues. The Senate has added something less than \$2,000 millions to the \$6,300 millions bill passed by the House; Senator George has called it "the biggest, meanest and toughest tax in US history." It still, however, does not reach the Treasury goal of an increase of \$8,700 millions, which Mr Morgenthau said was the least the American people could afford to provide. The Victory Tax, which is Senator George's brainchild, and the chief contribution of the Senate toward more drastic taxation, provides for a 5 per cent levy on all incomes above \$624 a year. As far as is practicable this will be paid at source. Up to a \$500 limit, 25 per cent of the Victory Tax will be returned to single taxpayers, after the war, and 40 per cent to married taxpayers with an additional 2 per cent for each child, a reflection of current forced saving discussion. The yield of the tax has been estimated at from \$3,104 millions to \$3,600 millions a year, and it is scheduled to go into effect on January 1st. According to reports, it was passed in defiance of the Treasury, which had proposed a withholding tax, only to apply to incomes already subject to income tax; it will, therefore, affect several million more taxpayers than the Treasury proposals. The Senate's position on corporation tax rates has been less drastic than that of the House, which proposed a 90 per cent excess profits rate in addition to a 45 per cent normal and surtax rate. After hearing testimony that such rates would seriously endanger the efficiency of war production, and impede the accumulation of post-war reserves, the Senate has recommended that an 80 per cent ceiling be placed on the total tax of any corporation. The influence of the Senate Conference representatives is generally greater than that of those of the House; but, in view of the reported dissatisfaction of some Senators with the Bill, it is possible that both the Victory Tax and corporation rates may be subject to further changes. Whatever tinkering goes on, however, it is still plain that the Tax Bill, very heavy indeed though it is, will not cover more than a third of the country's expenditure this year. Even when state and local taxes of about \$9,000 millions are added in, it will fail to cause a substantial reduction in spending, which is estimated at \$76,000 millions—or to close the \$20,000 millions "inflationary gap" between purchasing power and available civilian goods.

Aircraft Metals

For the first time since the outbreak of war, the United States aluminium and magnesium supply position has begun to improve. There are still no supplies available for civilian uses, but the more regular flow of light metals to the munitions factories has reduced delays in war production which were still considerable as recently as the first quarter of this year. In a note published in *The Economist* on June 27th (page 903), details were given of revised United States aluminium and magnesium production schedules. Further information from Mr Batt, chairman of the Requirements Committee and the Light Metals Branch of the PBW, reveals that the initial United States war programme for aluminium plant covering an annual output of 850,000,000 lb., has been completed, and is now in production. The second expansion programme, begun a year ago, and aiming at an annual output of an additional 640,000,000 lb., is also complete. This quantity is to be produced in seven Government-owned works which started production between May and August. A third US expansion programme of the same size as the second was initiated following the United States' entry into the war. For this "a great deal of preliminary work has been accomplished," and production is expected to start early in December, 1942. Altogether Mr Batt expects this year's United States' production of aluminium to be 1,083,000,000 lb. Mr Batt is also convinced that Canada will be able to supply the contracted 450,000,000 lb. of aluminium to the United States next year, which will raise United States' supplies of primary aluminium in 1943 to something like 2,500,000,000 lb., compared with 330,000,000 lb. in 1939. The sums allocated so far by the United States Government for its aluminium programme amount to \$568,000,000, to which another \$85,000,000 invested by private industry must be added. The achievements of the United States magnesium expansion programme are still more impressive. Here five new works have started production this summer, and Mr Batt expects a United States output of 170,000,000 lb. in 1942, compared with no more than 6,450,000 lb. in 1939. Progress would have been even more marked but for the fact that supplies of electric power are limited. Through the development by the National Academy of Sciences of

the so-called ferro-silicon process, which employs gas instead of electricity, these obstacles have been partly overcome; and it is now expected that next year the United States will produce 600,000,000 lb. of magnesium, and that by the end of 1943 the whole expansion programme—aiming at an annual capacity of 725,000,000 lb.—will be completed. According to official information released in Ottawa, Canada is now producing magnesium. The Dominion's first works started early in September.

Shadow Boxing

The "Open Letter to the People of England" concocted by the editors of *Life*—"this boyish sermon" as the *Herald Tribune* called it—has aroused indignation in the United States. The letter emphasised the need for common strategy and common war aims, but laid the failure to develop either to Britain's determination to preserve her Empire at any cost. In particular, it was suggested that the opening of the Second Front was being delayed because it might not be to the advantage of the Empire; an invidious contrast was drawn between American devotion to principle, as evidenced by the Civil War, which according to *Life* was fought solely to free the black man, and British indifference to principle as evidenced in the Indian problem. The sharp retorts of writers like Miss Thompson and Major George Fielding Elliot and radio commentators like Ed Murrow and Bob Trout have flatly denied *Life's* claim to speak for the American people. The *Life* letter reflects the obdurate suspicion of British Empire which can never be neglected entirely in dealing with American public opinion, and it focuses attention upon Britain's inability wholly to convince America of the rightness of her Indian policy. What is most remarkable is its publication at a time when responsible American opinion, far from being critical of British strategy, is increasingly concerned with what is called American "strategical

nationalism." *Life's* usually slick sense of timing appears to have broken down.

Shorter Notes

The Truman committee last week heard testimony from Major-General Oliver Echols, Chief of Air Forces Material, who is reported to have admitted that the Army realised its aircraft were not the most manoeuvrable in the world, but claimed that they were the safest and carried the heaviest fire-power. Other points made were that American pilots use Spitfires over England because they are specially adapted to European conditions, and that six Axis airplanes are shot down for every American aircraft shot down. Senator Truman said the record showed improvement, and was evidently impressed by Major-General Echols' statement that the Army is making every effort to better its aircraft.

The War Production Board recently began criminal prosecutions against firms misusing critical war materials. Previously the only penalty has been a three months' suspension order. Disciplinary action has been undertaken so far against 100 firms.

The War Labour Board has rejected a request for a wage increase from Ford employees on the ground that it would not be compatible with the principles laid down in the Board's "little steel" decision. This is interesting as proof that the Board continued to be guided by the formula which provided increases in wages sufficient to compensate for the rise in the cost of living between January, 1941, and May, 1942. In this case as increases amounting to 25 per cent had already been granted, no further increase could be given, but presumably in other cases the Board will feel free to grant rises up to 15 per cent of January, 1941, wage rates.

THE WORLD OVERSEAS

Changes in China's Economy

(By a Correspondent)

October 12th

SINCE victory in modern war depends so vitally on economic strength expressed in terms of war production, China has been fighting under a serious disadvantage for over four years. Its industry had seen an extraordinary expansion in the last years preceding the Japanese invasion, but this expansion was almost exclusively confined to the coastal regions. Within the first year of the campaign, almost all the new Chinese industrial districts and most of the old-established ones were under Japanese occupation.

At the time of Japan's aggression, the Chinese National Resources Commission was engaged on a three-year programme for the development of industries in the Central Chinese provinces of Hunan, Hupeh and Kiangsi. This programme was at once revised and made the nucleus for state development in the interior of China, far beyond the borders of the provinces for which it was originally designed. Up to last year, the Commission had developed over seventy big industrial and mining projects in the interior of China, of which twenty-nine covered heavy industry, twenty electrical engineering and twenty-two mining concerns. In addition to these state enterprises, private initiative was stimulated by financial aid and technical assistance through the "Industrial and Mining Adjustment Administration of the Ministry of Economics." This included, first, the shifting of some 450 factories, with all their equipment and 12,000 skilled workers, from the coastal zone (chiefly Shanghai) to the interior. Later it concentrated mainly on the setting up of new industries under private ownership. By the end of 1940, 1,354 new factories had been established in the interior. Their combined output in that year amounted to 4.7 thousand million

Chinese dollars, of which textiles accounted for roughly one-third, chemicals for another third, and miscellaneous products for the remainder. This private activity in industry has been supplemented since the autumn of 1938 by a rapidly growing co-operative movement. The number of industrial co-operatives reached a total of 2,000 in March last. Their membership now exceeds 30,000 and their monthly output is valued at \$20,000,000, comprising all sorts of light industrial products including certain types of munitions.

In communications, many thousands of miles of highways have been developed. Among these, the Burma Road, which was built in two years by some 150,000 ill-equipped workers, is only one. Another highway of importance is the Chinese-Soviet road from Sian via Lanchow to Tachen on the Soviet border (over 2,000 miles), where it links up with the Russian Turk-Sib Railway, and to-day carries the entire traffic between the two countries. Among the many new internal Chinese highways, the Szechwan-Yunnan road from Chungking to Kunming (some 750 miles) is to-day the most important. Besides road construction, railway development has not gone neglected in Free China, although here the shortage of rails and rolling stock has frequently required the breaking-up of some old lines, which were endangered by the advancing Japanese, before new lines could be built.

Agriculture and Mining

The opening up of the interior laid the foundation for a reorganisation of agriculture and mining. This involves the reclamation and irrigation of vast tracts of lands which

were made available for the settlement of war refugees, and are now producing substantial surplus crops. Co-operative farming has been greatly extended, with the result that surplus supplies have rapidly increased. The loss of the leading silk-producing regions (Kiangsi and Chekiang) to the Japanese has led to the development of new and extensive silk-growing industries in the interior, with Kweichow, Yunnan and Szechwan ranking first. In mining, much work has been done to improve the efficiency of the tungsten, antimony and tin industries. Transport difficulties have kept down current production, but the latest official data speak of a current yearly output of 7,500 tons of antimony, 9,000 tons of wolfram and 17,000 tons of tin. These quantities are large enough to assure China the first place among the world's antimony and tungsten producers and, together with Nigeria, the third place among the tin areas still under Allied control. Certain industries have been started to utilise agricultural and mineral products. These include power alcohol and oil cracking industries, which use potatoes, sugar, grain and wood alcohol as a basis. Moreover, charcoal is produced in large quantities, but the lack of gas generators has prevented these supplies from compensating the stoppage of petrol imports and thereby assuring the maintenance of motor traffic.

Trade in the interior of the country has naturally greatly expanded in recent years. To prevent private profiteering, the state is supervising this trade very strictly, and in some districts has introduced public or co-operative trading. On

the other hand, foreign trade transactions, which had been under state control since the early part of the Sino-Japanese war, have been freed from restrictions since the outbreak of the Pacific war. It is thought that the increased difficulties which the latter has caused have been more effectively countered in many cases by private initiative. To-day, however, Free China's foreign trade consists only of its exchange of goods with Soviet Russia over the Sino-Soviet highway. The great bulk of this trade consists of tea, tin, bristles, wool, hides and raw silk, against which Russia supplies certain war materials. The great bulk of the goods to and from Russia is transported in stages by human and animal carriers. Last year, this transport moved more than 500,000 tons of goods over a distance of no less than 19,000 miles. Nothing shows better than these figures the enormous effort made by Free China to maintain its economic life, but nothing shows more clearly also the odds with which it has to contend.

A Feat of Improvisation

Undoubtedly, the country has achieved a great feat of improvisation in adapting its industry, agriculture, mining and trade to the necessities of the war. Moreover, since most of the industries lost in the coastal regions were foreign owned, while the new ones are native, the process has a peacetime significance as well. But China's industrial resources are too limited and its reserves of war weapons

too small to assure the Chinese army offensive strength over a long period against the well-equipped Japanese invasion force. The weapons it can make are mostly small arms, useful for guerilla warfare, but that is all. In referring the other day to the re-occupation of Burma and the re-establishment of direct contact with the Chinese as one of the earliest military tasks of the United Nations, General Wavell clearly drew the only possible conclusion from these facts. But the re-establishment of contact with Free China would not only be of great value from the point of view of military operations in the Far East. It would also strengthen the offensive power of the United Nations in other theatres of war by relieving some of their most serious shortages in materials. The Free Chinese Government recently revealed that it has not stopped the production of export goods since the closing of the Burma Road. "Pending the resumption of large-scale transportation," the official Chinese statement says, "raw materials are bought for storage at key points ready for shipment to India and beyond." The raw materials expressly named include tung oil, tungsten, silk, tin and antimony, all of which are of outstanding military importance and all of which are in short supply both in the United States and in Great Britain.

Europe's Future

[BY A CORRESPONDENT.]

A BOOK* has just been published which collects the opinions of various Allied statesmen in London about the future of Europe. Here are sketched out in broad outline the views of spokesmen for the free Governments of Poland, Belgium, Greece, Yugoslavia, Czechoslovakia, Luxembourg, Norway and Holland on political, military and economic matters. In the main, it is their belief that the political foundations of the New Europe must be laid first.

Thus, Poland's Foreign Minister, Count Raczynski, is concerned primarily with political resettlement. Dr Gerbrandy, the Dutch Prime Minister, says: "We need statesmen more than economists." Prime Minister Pierlot of Belgium calls for "First and most of all security." M. Tsuderros, Prime Minister of Greece, speaks of "Justifiable national claims." And President Benes, of Czechoslovakia, stresses the paramount importance of a "peace of punishment." M. Hervé Alphand, in an interview not included in the series done for the *Sunday Times* or printed in this book, has expressed the same view for Fighting France: only 30 per cent of the post-war resettlement, he holds, can be solved by economic means; the remaining 70 per cent is political. Only M. Bech, Luxembourg Foreign Minister, dissents; he maintains that "the future of Europe is likely to be determined more by economic than by political considerations."

Continental or Atlantic?

The core of most of these statements is the problem of inter-state federation. Dr Benes and Count Raczynski point to the scheme for a Polish-Czech Confederation; M. Tsuderros and the Yugoslav Foreign Minister, M. Nintschich, to the agreement for a Balkan Union. Count Raczynski speaks also of new federal structures such as Northern and Southern Slav Federations in Central and Eastern Europe; M. Tsuderros of an Eastern Mediterranean Union; Dr Benes of a German Confederation; M. Nintschich of a revived and strengthened League of Nations; M. Alphand of a Western European Union based on France and including Italy and the industrial districts of Western Germany; and M. Bech of a United States of Europe.

But a note of reserve on these questions is sounded by the spokesmen of Norway, Belgium and Holland. Prime Minister Nygaardsvold of Norway stresses the need for homogeneity, for a common democratic spirit and common economic interests as the necessary conditions for closer collaboration between different nations. M. Pierlot enters the warning that "by extending the area indefinitely the strength and cohesion of the system may be diminished." For Holland, Dr Gerbrandy says: "We have no use for an unreal conception such as a purely European grouping of nations, a United States of Europe." Holland's vast overseas interests and Norway's position as a great shipping

* "Rebuilding Europe." A series of interviews given to Mr Valentine Heywood for the *Sunday Times*, with a foreword by Mr. Eden. Cassells.

and seafaring nation are given as explanations of why these countries lean toward an "Atlantic" rather than a "Continental" system, with their emphasis on close collaboration with the British Empire and the United States of America.

The vital importance of Britain not holding aloof from the European system is stressed no less strongly by those who take the "Continental" view. Count Raczynski calls for British-Polish economic rapprochement. M. Tsuderros points out how Germany has usurped Britain's place in Balkan trade. M. Nintschich states emphatically that "Britain is in Europe and of Europe, and must play her part if peace and prosperity are to be achieved in Europe." The need for Russia's collaboration in post-war Europe is also generally agreed. Dr Benes declares that "I have always fought against the idea that Britain and Russia do not belong to Europe." M. Nintschich believes that only a European organisation including Britain can give hope for the disappearance of the mutual suspicion which might result because of the differences in internal regime between the Soviet Union and the other states of Europe.

Free or Planned

Economic questions are not ignored in these statements; and on the choice between Free Trade and Planned Economy these Allied spokesmen are somewhat divided. Count Raczynski deprecates the "uncontrolled play of so-called natural forces." Dr Gerbrandy, more rightly perhaps than he realises, regards economic planning as the modern expression of the medieval theory of the "just price." Both M. Tsuderros and M. Nygaardsvold believe in planned economy. But Dr Benes only accepts these views with considerable reservations; and both M. Pierlot and M. Alphand largely disagree. M. Pierlot has "no confidence in a purely planned economy with at its head one or several men in sole charge of thinking and planning." M. Alphand believes in a happy medium between the liberal form of economy and planning.

Great stress is laid by most of the speakers on the economy of large-scale territorial units and on the necessarily international character of post-war economics. All insist upon the necessity of establishing a sufficiently high standard of living and developing adequate buying power in every country. M. Pierlot shows how Belgium must export or starve. M. Nygaardsvold emphasises the fact of Norway's shipping services as its only means of payment for imported raw materials. M. Tsuderros stresses the need for large-scale British purchases of raw materials in the Balkans. M. Alphand points to the all-important part which the creditor nations, mainly the United States, will have to play in determining the character of international trade after the war. Dr Benes and Count Raczynski are most concerned with the peculiar economic difficulties of Central and Eastern Europe, the need for carefully planned industrialisation and modernised agriculture in this "distressed area."

The views expressed are many and varied. Sometimes they are in conflict. As Mr Eden points out in his foreword, the views in this book sometimes differ from each other and from the views of His Majesty's Government. It is better so. Diversity gives life and resilience to an Alliance.

Crucial problems are made plain and solutions are suggested. It is now for the United Nations, in frank discussion, to hammer out the final practical remedies.

WHY WE BUY

3%

DEFENCE BONDS

Because I'm business man enough never to gamble, and when I back Britain to win I back a certainty.

I find the half-yearly interest, paid direct into my Savings Bank account, is a grand way to save.

I'm too old to fight, but in times like these everybody should do something for the country.

3% DEFENCE BONDS. Can be bought for cash in units of £5 from any Bank, Stockbroker, Post Office or Trustee Savings Bank, or by instalments with National Savings Stamps (6d., 2/6 or 5/-). Interest paid half-yearly and Income Tax not deducted from it at source. (You can have your interest paid into a P.O. Savings Bank account, where it will continue to accumulate.) Bonds repayable in 10 years with bonus of 1/- for each £5 invested. Individual holdings limited to £1,000. Can be cashed at par at 6 months' notice.

German Europe

Financial Makeshifts

A MODIFIED financial policy came into force in Germany on October 1st. The stop on advance payments for armament orders will temporarily reduce short-term borrowing. The equalisation payments of house-property owners to cover the abolished rent-tax, which amount to roughly Rm 8,500 millions, must be completed by the end of the year. These measures followed the registration and the call-up of shares which resulted in a virtual standstill of business on the share markets. Speculation in shares came to an end, and the share price index fell slightly to 154.68 (1924/26 = 100) in September against the record level of 159.6 in September, 1941. A great number of shares are no longer quoted, and the strange situation has arisen that there is now a lack of demand for shares. Meanwhile, the Government has accumulated a considerable stock of shares in exchange for Treasury bonds, but there is no indication that these funds will be used for intervention.

The necessity for paying Rm 8,500 millions as equalisation for the abolition of the rent-tax led to some movement in fixed interest securities which have been an almost completely blocked market for several years. Individual house-owners and particularly savings banks and insurance institutions, which hold large house properties, have been forced to realise securities for the purpose of paying the equalisation. At the same time, new mortgage bonds, amounting to roughly Rm 2,000 millions, are to be issued and will be used to finance the equalisation payments of house-property owners who are unable to realise capital for the purpose. The mortgage bonds will be issued at 102.5, which is the stabilised price. These movements have resulted in a general fall in the prices of industrial obligations, communal loans and some series of Treasury bonds—which is interpreted by the press as a necessary levelling up of the difference between the yields of shares and fixed-interest securities. As usual, the press hopes that the new measures will re-establish almost normal conditions on the capital markets. But the most that can be expected is a few months of abnormal activity in fixed-interest securities, which will temporarily ease public borrowing, the strain on which has been reflected by the continued preponderance of short-term borrowing.

Industry and banks will be equally affected by the new measures. Financial liquidity in industrial circles will undoubtedly decrease because of the stop on advance payments by the Reich. The banks already report an increase in loans. Naturally, after a relatively short time, the old position will be restored, because of the continued financial demands of the Government. Average monthly borrowing by the Government amounts to roughly Rm 4-5,000 millions. There are indications that the financial demands of the Government have been increasing at a greater rate lately, while there is no longer any increase in revenue.

The question is being asked in the press whether the state will derive any real advantages from the new measures. It is obvious that no new resources have been opened up to tap. The Exchequer will receive, however, the equivalent of 10 annual instalments of the rent-tax in a period of three months. But a considerable part of these payments will be made in Treasury bonds, and the result is a reduction in the interest payments to be made by the state. It can safely be said that the new measures will not change the general trend—a more rapid increase in the rate of borrowing, coupled with an almost stationary rate of revenue receipts. Temporarily, short-term borrowing will fall, and, again temporarily, the market for fixed-interest securities will become brisk.

Coalmining.—There is no longer any doubt that all efforts to increase Germany's coal output have failed. Costs of production are steadily rising, and the reports of coal-mining companies for 1941 again show smaller profits. A considerable reduction in the number of skilled miners is one of the main causes, and there are indications that the *Wehrmacht* was asked some time ago to release miners. Foreign workers and prisoners of war are being employed in the industry in considerable numbers; their efficiency can hardly be satisfactory. The peculiar working conditions in the mines, that is, the fact that miners work in gangs, mean that there has been an actual decline in the wages

of German miners because of the reduced payment to foreign workers. This is the main reason why Goering has announced an increase in the wages of coal-getters. The press makes it clear that the new decree simply restores the wages which were paid before. Exceptionally high wages earned under favourable mining conditions will at the same time be reduced.

Coal supplies for the civilian population have deteriorated, and coal rations for this winter will be much smaller than last year. Generally speaking, the rations depend on the supplies which the Coal Board will allocate to retailers; and it has been announced that the quantities will be smaller. The heating of rooms and offices is forbidden until the opening of the heating period is officially announced. This has not yet been done. Each household may heat only one room. Hot water may be supplied only on two days each week. Consumers are asked to get their coal themselves in sacks or small carts from the retailers because of the lack of transport and workers. It is expressly stated that applications for additional coal will be of no use. Apart from the armament industry, only agriculture, bakers, butchers, commercial gardeners and dairies will get full supplies. The quotas for offices, restaurants and schools will be only 50 per cent of normal consumption.

Stocktaking.—The manufacture of stoves, hardware and household utensils has been reduced even below the bare minimum, and, as a result, stocks in factories, wholesale and retail trade are dwindling. The greater part of these commodities are also used by the *Wehrmacht*, and preparations are being made to secure the necessary supplies for the *Wehrmacht* from available stocks. All stocks of stoves must be registered with the Control Board, and 25 per cent must be kept in readiness for delivery to the Board. Wholesalers and retailers are also ordered to make an inventory of stocks of hardware, household utensils and agricultural implements. It may be assumed that statistical material is being collected in preparation for rationing—which has already been practised locally or individually by retailers.

Transport Regions.—Even before the war, Germany tried to organise transport regions for agricultural products based on the system of compulsory marketing. Big towns were allotted regions for the supply of milk and butter. Continued transport difficulties have now resulted in extending this scheme to eggs and vegetables. For certain commodities, general transport limits have been fixed. Bread may no longer be transported over distances exceeding 31 miles. For the transport of beer the limit is 150 miles. In the tobacco industry, each factory will be allotted a supply region. In industry, similar restrictions have been in force for a long time for coal and coke. The latest move in this direction is the creation of a central department which will act as a kind of clearing station. This central department will determine which factory is to execute orders in such a way that transport distances may be drastically reduced.

Belgian Trade.—For the first time since the Germans occupied Belgium, information has been published about changes in Belgian foreign trade. Before the war, 44 per cent of Belgium's imports were supplied by overseas countries, which received 37 per cent of Belgium's exports; the value of exports amounted to 91 per cent of imports. In 1941, Belgium's total exports amounted to 157 per cent of total imports. The share of the most important countries in Belgium's foreign trade was as follows (as percentages of total imports and exports):—

	Imports		Exports	
	1938	1941	1938	1941
Germany	11.0	66.0	12.0	72.0
Holland	9.0	12.0	12.0	13.0
France	14.0	11.0	15.0	10.0
Italy	0.94	2.2	1.15	0.46
Switzerland	1.19	2.64	2.71	0.66
Hungary	0.16	1.22	0.07	0.10
All other countries..	63.71	4.94	57.07	3.78

Unfortunately, the official Belgian report gives no information about the actual value and volume of foreign trade. There is, however, no doubt that the volume decreased considerably.

Russia at War

Social Services

THE scope of the social insurances guaranteed to Soviet workers and employees by the state has in principle been very wide. Workers and employees have been entitled to receive medical services free of cost; rest homes and sanatoria have been reserved for the sick; and the families of incapacitated and old-age pensioners have been entitled to regular allowances. In practice, however, this very generous legislation has been implemented only in part. In peacetime, medical services for workers were relatively well organised in the capital cities and the largest industrial centres; their quality was poorer in the provinces. Rest houses and sanatoria were far too few to meet the needs of all the working population; and, consequently, they were reserved mainly for the Stakhanovites and the higher stratum of Government officials. But the policy was progressive, and it definitely aimed at the utmost extension of social services; it was simply that the lack of adequate facilities placed limits on the pace of progress.

The war has inevitably entailed a sharp curtailment of social services for the civilian population. This has happened, not through any changes in legislation, but rather as a consequence of the prevailing conditions. The wartime shortage of doctors and of medical supplies has been very acute. The hospitals have been overcrowded with wounded soldiers. So have been the rest homes and sanatoria. The Army, naturally enough, has first claim on the existing facilities. But the press has recently launched a campaign for an improvement of health services in the rear.

In any matters connected with health preservation [says *Pravda*], whether it is a question of staff or medical supplies, the front is to be considered first. But this does not dismiss the question of care for the rear which is producing new fighters, healing wounded and sick men and Commanders of the Red Army, securing steady work in defence industries and in agriculture.

Confronted with a shortage of medical supplies, local health departments sometimes applied to the central authorities for help. They have now been warned not to rely on any such help, and to mobilise their own "local resources." Provincial Soviets have been obliged to start producing drugs and medicines on the spot. Shortage of fuel is another grave preoccupation of the health departments, which have been put under the obligation to supply hospitals and rest homes with fuel reserves before November 1st. It has also been made the task of the local Soviets to lay in special stores of vegetables for the use of health institutions. Industrial managers have been reminded that their preoccupation with matters of immediate production should not lead them to disregard the need for sanitary and medical services. In some industries, special "factory insurance councils" have been set up to look after the organisation of social services in the factories.

The needs of evacuated and homeless children is one of the gravest problems with which the social services are confronted. Hundreds of thousands of such children have been accommodated in the Asiatic republics, where they have been provided with communal housing, feeding and with educational facilities. The Central State Bank has recently started a special money collection for their benefit. Homeless and uprooted children—it should be remembered—were a most tragic feature of Russian life during the first years after the civil war. They lived in gangs in the great towns, or wandered around the country, defying all the efforts of the authorities to bring them back to normal life. Juvenile delinquency assumed a prodigious scale, and it took the Soviets many years to liquidate that sad consequence of the civil war. To prevent the recurrence of a similar disaster, and to save for Russia its young generation—of which so high a proportion has been orphaned or rendered homeless—has therefore rightly been set before the organisers of the social services as their supreme task.

ARP in Winter.—The ARP organisations are preparing for the winter. Their male personnel has been heavily depleted by call ups during the year; and the new inexperienced staff is now undergoing intensive training. The peculiar problems of ARP work arise from the severe climatic conditions of the Russian winter. Last year, for

instance, the frost frequently made roof-spotting impossible. This year, a "continuous fire service" with uninterrupted roof-spotting has been demanded by the press. ARP organisations have been instructed to supply the roof-spotters with warm uniforms and to build huts or shelters on the roofs for their protection against wind and snow. The restoration of damaged water and gas pipes during the frost is another difficulty; those responsible for this job are urged to prepare in advance the necessary stocks of standard parts and of constructional and protective material. ARP detachments have been subjected to military discipline in order to secure "the maximum unity and organisation as well as the continuous training and hardening" of the personnel.

Production in September.—The latest monthly production records have been very encouraging. A substantial increase in output has been reported from all branches of industry. The most unexpected report comes from the coal mines of the Kuznetsk basin, which were only a few days ago sharply reprimanded for "lagging behind." It is now stated that the Kuzbass increased its coal output by about 10 per cent during September. The supply of electricity to industrial plants is also said to have increased, in some cases by 13-19 per cent. The production of machine tools was 27 per cent higher during the third quarter of the year than during the second quarter. The output of tanks and aircraft is also reported to have "risen steeply"; many aircraft factories exceeded the plans for September by 7-9 per cent.

A special industrial drive has been started throughout the country in connection with the forthcoming 25th anniversary of the October Revolution. Most factories have undertaken to produce for the anniversary large additional quotas of munitions, in excess of their normal plans. Simultaneously, a new campaign to strengthen labour discipline in industry has been started. The powers of foremen in the factory have been widened. And the press has urged the courts not to show any indulgence to workers tried for absenteeism. An absentee who leaves his district without permission is tried as a deserter. Only the worker who is absent from work without actually leaving the district is tried for absenteeism. *Pravda* has recently demanded that the deserter-clause should in cases of particular persistent absenteeism also be applied to such offenders who do not leave the district.

State Labour Reserves.—M. Moskatov, the chief of the central administration of labour reserves, in a recent press interview, summed up the results of the work of his department in two years. The state labour reserves were organised soon after the collapse of France, with a view to the anticipated demand of war industries for an additional supply of skilled labour. According to M. Moskatov, the labour reserves have in the meantime trained about one million skilled workers; and, within the next few months, five hundred thousand new trainees will be released for work in defence industries and in transport. The mass of the trainees consist of youths substantially below the military age. M. Moskatov has also announced that, in the coming year, the training of young people will be continued on a mass scale so as to release the maximum possible number of adults for military service.

Special working squads for collecting arms, equipment and metal scrap on the battlefields have been set up. The squads are to be responsible for preventing the arms from being spoilt on the fields.

A great irrigation canal was opened at Stalinabad, the capital of the Tadzhik Republic. The canal is 30 miles long. Fifty thousand collective farmers were employed in the building work. The canal will increase the area of arable land by nearly 100 thousand acres.

The famous Saltykov-Shchedrin Library has been evacuated from Leningrad to the east. The same library was evacuated from St. Petersburg during the Napoleonic war.

THE BUSINESS WORLD

The Supply of Fish

BEFORE the war, the fish trades were in the class of problem trades. Catches had to be sought increasingly far from home waters. Trawlers and drifters were ageing and replacements were few. The system of distribution from port to consumer was wasteful in the extreme. It had never been redesigned in the light of improved transport facilities; it remained as it was when the only way to move fish quickly was by passing it through many hands in small quantities. Port wholesalers bought fish when it landed, and sold it, sometimes to other wholesalers, who parcelled it out again, but mainly to inland wholesalers throughout the country. Billingsgate is perhaps the best known inland market. From the inland markets, the fish travelled to the retailers. Port wholesalers, who sold direct to retailers and fish-fryers in a few cases, greatly increased their numbers during the peace years.

The consumption of fish rose. Estimates made by the Ministry of Health put the weekly consumption in the United Kingdom at 0.79 lb. a head in 1909-13; it had hardly risen by 1924-8, but by 1934-5 it was 0.87 lb. a head. Not only did consumption increase, but the kind of fish consumed changed. The herring drifters fell on bad times. The development of the steam trawler enabled longer journeys to be made to the white fishing grounds. In addition, the cod's whiteness and lack of bones appeared to compensate the fish-eater for its poverty of flavour, and what the cod gained in popularity the herring lost. Between 1913 and 1937, landings of cod were more than doubled, and herring landings had fallen to less than half.

The fish-fryer was probably responsible to a large extent

for the rise in consumption, and the swing-over to cod and other white fish. His activities began in the north, where he is now an institution. The provision of ready-prepared hot meals for the family supper table solved the problem of the working housewife. Fryers spread to the south, and by 1937 there were nearly twice as many fish-fryers as fishmongers, and about half the white fish consumed passed through their hands. Their staple was cod. A publicity campaign boosting the herring hardly affected sales.

The need for reorganising the fish trade was well recognised, and between the wars was the subject of much Government activity. In 1935, the Herring Industry Board was set up, and although it did useful work, it was not able to achieve the drastic measures needed to remodel the industry; it was scarcely able to arrest the decay into which the trade was falling. The White Fish Commission's problems were not, perhaps, so great, but it hardly had time to do more than register persons engaged in the industry before war was declared. The outbreak of war was the signal for both organisations to wither away.

Fish was the first foodstuff to be affected by the war. Fishing grounds and the routes to them were mined; the Admiralty requisitioned trawlers; and fishermen were sent minesweeping. Probably no other foodstuff has presented so many difficulties to the Ministry of Food. There are two main reasons for this, both largely unavoidable. Fish is the most perishable of foods, and the quantities available for distribution depend on numerous uncontrollable factors. The Food (Defence Plans) Department, unfortunately, made no plan for fish. Three years were taken to work out plans for meat; and, under peace conditions, fish might well have taken longer. There is no evidence that steps were taken to store fish in cans, which would have provided a food stock against future shortage, and helped the fishing industries over lean times.

The Ministry of Food has admitted that its earliest attempt at wartime control failed partly through lack of adequate planning. But it also claims with some justification that it had bad luck. It had been thought that the ports and London would be immediate objectives of the *Luftwaffe*, and a hurried plan was made involving the closing of Billingsgate, and the decentralisation of distribution. The "bad luck" was freedom from air raids, the interference with transport caused by the unfamiliar black-out, the unexpectedly small supplies of fish, and the opposition and complaints of the fish trade. The normal distribution process was resumed after about two weeks.

Meanwhile, prices soared. According to the figures given in the *Ministry of Labour Gazette*, the retail price of fish rose by 35 per cent, between August 1st and October 15, 1939, although the prices of other foods scarcely changed. Prices of herrings and some herring products were controlled in October, 1939. A year elapsed before control was extended, by which time prices were almost two-thirds higher than before the war. Imported cod fillets were the subject of the next step in price control, followed in March, 1941, by Icelandic cod. These measures did nothing to arrest the upward trend of prices, because for a variety of reasons, imports of cod stopped.

Prices had risen to their highest in April, 1941, when they were 120 per cent above the pre-war level. A more determined effort was made to reduce them in the following June, when prices for all fish, except shell-fish, salmon, trout and pickled herrings were fixed, in the teeth of trade opposition. The effect of these reductions was to bring the general level down to 60 per cent above the August, 1939, level. Further reductions were made in October, 1941, and later salmon prices were controlled, scaling prices down to less than 50 per cent above the peacetime level. The most recent reduction in prices took place on October 5th, and affected only cheaper varieties of fish.

Maximum prices were accepted by the trade under threat of control of distribution. It was evident that at least some tidying up of distribution was essential. This year internal transport problems have become more acute, and the

Minister of Food has initiated a series of sector schemes for the transport of various foods. These are designed to limit transport as far as possible within the regions in which the foodstuffs are produced. Fish could not remain an exception, and its own zoning scheme comes into operation this week-end.

Fish landed at the ports is distributed only within the prescribed zones, which are based on the relationship between the estimated landings at the ports and the population within each area. Allocations are made at each stage of distribution. The scheme has involved a reshuffling of customers, which has been undertaken by the trade itself. Inland wholesale merchants are limited to deliveries within 20 miles of their premises. The Birmingham area draws supplies from Fleetwood and Hull. London supplies may come from any port, and the area within which London merchants may deliver fish is wider than the 20-mile limit imposed on other zones. If the zoning scheme can achieve an adequate and equitable distribution of fish, it may prove to be outstanding among the Ministry of Food's many triumphs. It is to be hoped that the fish trades will co-operate despite their early objections.

Finance and Banking

Expanding Circulation

The note circulation has again entered one of its periods of rapid and persistent expansion. Over the week to last Wednesday a further net outflow of £3,035,000 of notes took place, carrying the total active circulation to £846,277,000 and the reserve of unissued notes down to £33,965,000. Further increases in wage rates, the continued absorption of women into industry and the regular arrival of well-paid United States troops are among the main contributory factors in this movement. There is no particular seasonal explanation to advance for it, and one must assume that the secular trend in the circulation is still strongly upward and that in consequence a further adjustment in the fiduciary issue will have to be made within the next few weeks. The loss of the Government securities which were transferred from the banking to the issue departments of the Bank of England on the occasion of the last increase in the fiduciary issue is gradually being made good as the notes then created go into circulation. Thus over the week to last Wednesday a further addition of £6,340,000 was made to the Bank's holding of Government securities, carrying the total to £154,777,000, or within £12,000,000 of the figure at which this item stood on July 22nd last, just before the latest expansion in the fiduciary issue. By this gradual rebuilding of Government securities, the deflationary effect of the withdrawal of notes on the volume of bank cash is effectively neutralised. Bankers' deposits fell by £2,938,000 over the past week, but this movement was approximately balanced by an increase of £2,389,000 in public deposits from the exceptionally low level to which they had fallen the week before.

Record Bank Deposits

By the close of September the seasonal contraction in bank deposits which, helped by the issue of tax reserve certificates, had carried them some £258,000,000 below their previous record of £3,329,155,000 reached on December 31, 1941, had been more than recovered. Between the August and September making up days, the total deposits had risen by £53,601,000 to the new record of £3,358,249,000. The expansion in the banks' holding of Treasury deposit receipts continues to be the main factor in this expansion of credit. Last month, this item rose by £59,000,000 and thus more than accounted for the whole increase in deposits. Concurrently, the banks' investments rose by £15,213,000, but these increases in Government paper were to some extent offset by a further reduction of £9,133,000 in advances, of £6,886,000 in bills discounted and of £6,428,000 in short loans. Their contrary movements are bringing advances and TDR's into close proximity, and the day does not appear far distant when advances, which in June, 1941, yielded first place among assets to investments, will yield second place to TDR's. Last month's expansion in bank credit was based on a slightly smaller volume of cash, the total falling by about £2,000,000.

It remains doubtful, however, how far this latest control measure will go towards eliminating waste in the fish industry—a waste which begins with the enormous number of fish eggs laid which never come to fruition, and ends only when the housewife throws away the heads and bones, and scraps from the plates of her family. In the August number of *Scope*, what is claimed to be a "revolutionary plan" for reorganising the fishing industry is outlined. It has been worked out by Mr C. S. Townsend, who describes himself as an industrial development consultant. The plan is ingenious. It is modelled on the practice of the American meat packing firms, which process animal by-products at the canning factories. The edible parts of fish would be separated from the rest. Only the fillets would eventually reach the customer, either fresh, smoked, quick frozen, or treated by a new process. From the remains of the fish, a wealth of chemical and medicinal substances would be obtained. The demand for these products would, he claims, not only rehabilitate the fishing industry, but extend its scope. Whether such a plan could be imposed upon the industry at the peak of the national war effort is another kettle of fish entirely.

Whether this was due to smaller indulgence in window dressing will be ascertainable when data of the clearing banks' average holdings of till money for September become available.

Floating Debt Policy

For the second week in succession, the amount of Treasury bills offered for tender has been increased by £5,000,000. The total tendered for this week will be £85,000,000, and next week's payments for Treasury bills will thus exceed the maturities by £10,000,000. This rapid increase in the issue of Treasury bills clearly reflects a change of some moment in the Treasury's floating debt policy. The rigidity which kept the weekly offerings of bills at £75,000,000 for 39 consecutive weeks from April 18, 1941, to January 9, 1942, and again for the 33 weeks from February 20, 1942, to October 9, 1943, is probably making way for a partial return to the former elasticity of the Treasury bill issue. Admittedly, Treasury Deposit Receipts have usurped Treasury bills as the principal floating asset of the banking system. The clearing banks, according to their latest statements, held some £700,000,000 of TDR's, against some

THE SOCIAL FRAMEWORK

An Introduction to Economics

By J. R. Hicks

7/6 net

The National Income, and the ideas associated with it, are to-day the centre of practical economic discussion, and this is not surprising, for they are the most useful keys forged by economic science for opening the door of understanding on the modern world. But no authoritative discussion of what these ideas mean has so far been made available, and it is to fill this gap that the present book has been undertaken. It assumes no previous knowledge of economics, and should be widely popular, among teachers as well as among general readers.

£260,000,000 of Treasury bills. But as a means of adjusting the cash position by countering a heavy seasonal drain, such as that caused by the particular incidence of tax payments in the final quarter of the financial year, TDR's are not a particularly effective instrument. To endow them with all the virtues as a "quick asset," they should be made discountable at their rate of issue—1½ per cent—against tax payments, just as they are against subscriptions to new Government loans. In the absence of such facilities, it is on the now narrow margin of Treasury bills held by the banks that must fall the main brunt of evening out drains on cash caused by factors other than subscriptions to Government loans.

The consequences of this disparity between the banks' discounts and the task they may be called upon to perform was well illustrated in the early months of this year when, for some weeks on end, the clearing banks virtually ceased to buy any bills from the discount market. During this period, the discount market continued to apply for its normal quota of bills at the weekly tenders, but it was selling bills back to the authorities at 1 per cent almost as fast as it was buying new bills at 1 1/32 per cent. There is every reason why the authorities should avoid a repetition of this absurd procedure. The best way of ensuring that the banks are not frozen out of the discount market by the seasonal incidence of heavy tax payments in the months of January to March is to provide them with a larger volume of bills maturing in those difficult months. That is what is being done now. The discount market contends that no part of the increased application for bills on Friday of last week was made on its behalf. It must, therefore, have been content with the modest increase in its allotment from the previous week's figure of 33 per cent to 35 per cent. Even if there be no rigid adjustment of the discount market's quota to the actual amount of bills on offer (anything rigid or automatic is anathema to the mechanics of the London money market), it must be assumed that measures will be taken to ensure that a considerable part of the increased issue of Treasury bills will find its way to the discount

houses. It is from them that the clearing banks obtain the bulk of their Treasury bills, and it would defeat the whole object of the current expansion in the Treasury bill issue if the excess were to by-pass the discount market.

Bombay Bullion Dealings

Although the Bombay bullion market has been officially closed since August 26th last, except for the settlement of outstanding transactions, a small private business both in gold and silver has been taking place. The quotations which ruled when the market was closed on the outbreak of civil disturbances were Rs84 annas 6 per 100 tolas of fine silver and Rs54 annas 2 per tola of fine gold. Unofficial business reported at the beginning of this week was being transacted at Rs101 for silver and Rs59 annas 8 for gold. By mid-week these prices had risen to Rs103 and Rs60 respectively. The business passing at these quotations is small, and undue significance must not, therefore, be given to them. But the trend of prices they indicate cannot be altogether ignored. The latest Bombay quotation for silver gives a straight London parity of 45½d. per standard ounce, or very nearly twice the price at which silver continues to be fixed day by day in London and at which it is sold to approved buyers by the Indian Government. The London price is also lower than the New York quotation, which now rules at an equivalent of about 25d. per standard ounce. If the drain on Indian reserves caused by United Kingdom industrial requirements for silver were not so small, the subsidy being granted to domestic users of silver at Indian expense would have drawn some protests from that country (the fact that most of the potential protestants are in prison perhaps accounts for the silence on this subject). The current Bombay quotation for gold is equivalent to a sterling price of £12 an ounce. It is interesting to note from the rising trend of gold prices in India that the keenly sensitive and discerning local operator has found little of which to be frightened in the recent measures taken to restrict severely the production of gold in the United States and Canada.

Investment

Guidance for Shareholders

According to the published figures, the trading profits of Triplex Safety Glass rose from £102,355 in 1939-40 to £187,041, only to fall back in 1941-42 to £87,725, the lowest for a decade. On the announcement of the figures, the price of the 10s. units of ordinary stock fell from 33s. 6d. to 30s. 3d., and, on the speech, declined further to 29s. In commenting on the former fall, the chairman and managing director, Mr Graham Cunningham, is reported, according to an abridged version of his speech, advertised only in the *Times* and the two financial dailies, to have said:—

In 1940, I forecast a good year, but last year I gave a warning hint to you, but many did not heed me. What is the use of my addressing stockholders each year if they do not listen to my words? We expend money on publishing what I say; yet it seems it is not read.

What was this "warning hint" which is now considered to have been sufficient guidance for shareholders at a time when a ten-year low record in trading profits was anticipated? Repeated inquiries have failed to secure full copies of the chairman's recent speeches, and it is only possible to quote from the abridgement of last year's speech, as advertised on October 9, 1941. The only relevant paragraph ran as follows:—

Last year I said we had every reason to look forward to this year's accounts with optimism. . . . Happily, my forecast was right. This year I do not propose to anticipate the future, so that next year I think you will again agree that I was right.

Does the chairman really consider a statement of this sort a sufficient pointer to the company's prospects or a suitable basis for an investment policy?

If Mr. Cunningham wishes to reach his shareholders, of whom, he says, there are over 10,000, his choice of papers to advertise the contents of his speeches is, perhaps, not the best possible—when it is borne in mind that the speeches are not circulated. Despite the pleas of the Minister of War Transport, Mr. Cunningham continues to exhort the proprietors "to attend the meeting and hear about their company for themselves." But a large

number of people comb chairman's statements daily as a guide to investment policy, and this poor technique of distribution would not explain the price movement; it would only mean that many people got the information before the bulk of the shareholders. In plain fact, Mr Cunningham's "hint" is just a rather exaggerated instance of the widespread practice of treating the owners of the business, as though they were to be dismissed with the barest minimum of information. Short of prophecy, which is not to be expected, it should be possible, in the fourth month of the accounting year, to give some indication of progress. Without endangering national security, a statement that profit margins were narrowing, and that earnings might be down, despite increasing business, would have been possible. Actually, a "hint" on this point is now available. For Mr Cunningham discloses that the company's policy is to make margins "such as to render to the country the greatest sacrifice we can afford." He does, however, go on to say that the board do not expect any noticeable change for the better. Having relented so far, perhaps he will next year go a step further. His latest speech, as advertised, could have been printed twice over on the blank pages of the report and accounts. Or, if this is too much to ask, those responsible could please the Paper Control by printing the advertised report, as it stands, on about half the paper now used at a small sacrifice of appearance.

Newfoundland Power Conversion

Of a further group of conversion operations the most interesting is the proposal to replace £1,692,600 Newfoundland Power and Paper 5½ per cent "B" debenture stock by £1,777,200 3½ per cent stock, of similar rank, of Bowater's Newfoundland Pulp and Paper Mills, which assumed, some years back, responsibility for the maturing issue. This is to be repaid, in the revised terms of issue, at 105 on January 15, 1943, and holders are offered in exchange an equal amount of the new stock, plus 5 per cent premium in cash. The Pulp and Paper company is controlled by Bowater's Paper Mills, who hold all the common shares. It is part of the arrangement that this company shall buy the whole preference capital, at present held by Securities

Management Trust, subsidiary of the Bank of England. In consideration for this, the trust will help in underwriting the new issue. The other underwriters are the Newfoundland Government and Bowater's Paper Mills, none of whom receive any commission. Thus, the British company increases its investment and the Bank of England's subsidiary its liquidity, possibly in preparation for larger tasks in some post-war sphere. The Newfoundland Government guaranteed the maturing issue as to both principal and interest, and will continue its guarantee. The new stock is repayable 1960-70, the final date being that to which the old stock was extended from 1943. The Pulp and Paper company, who offer the new debenture, has had a somewhat varied experience. During the five years 1928-32, total earnings, after depreciation and debenture service, aggregated some Can.\$3,500,000. In the following six years there was a corresponding debit of Can.\$1,500,000 odd, and, in the three years 1939-41, a credit of nearly Can.\$2,500,000, closing with Can.\$42,677 for 1941, which is not likely to be repeated in 1942. On this showing alone, the debenture service is well covered, if profits can be approximately maintained, and this performance, plus the Newfoundland guarantee, made the 5½ per cent yield attractive. Newfoundland is now prosperous, although its direct loans still carry the backing of the home Government under the Newfoundland Act of 1933. Neither backing alone warrants a 3½ per cent basis. The investor would like to know the state of Newfoundland's finances, and whether the British Treasury stands behind the Newfoundland guarantee. It will be interesting to see the reception given to the offer.

The Future of Gold

This week has witnessed the 450th anniversary of the discovery of San Salvador by Christopher Columbus, an event which ushered in both the discovery of the New World and the first of the great additions to the Old World's stock of gold. Within a matter of days before, the United States had announced that gold mining, as such, was to be suspended, to release the labour force for the war effort. Almost within hours, a similar, if rather less drastic, decision was taken in Canada. Earlier, a partial transfer of workers from gold mining to base metal production had been effected in Australia, and the process continues. So far, there is no news of any effective curtailment in India, but in South Africa, although production goes ahead, some schemes of new development have had to be abandoned, while much of the above-ground staff of the Rand is occupied in direct contribution to the war effort in one way or another. Elsewhere, within the Empire, where the labour employed is even more predominantly lacking in any alternative training, and the opportunities for alternative employment are restricted, there is a considerable probability that production will be curtailed by lack of materials and supplies. In a couple of decades, the bulk of the European accumulation of four and a-half centuries has found its way into the coffers of the United States Treasury. Apart from the industrial demand, which is far below the rate of output, there is only one final buyer of the metal, and his appetite must long ago have been satiated. It is very difficult to see, in the postwar financial system, as now envisaged, the place for gold. One may be found, but from being the one commodity for which there was always a certain market, and—thanks to the prevalence of debasement and inflation—usually at rising prices, gold may drop to a comparatively humble place in the scale of the world's preferences. Admittedly, this is still in the realm of speculation and far from certain. A way may well be found to restore the monetary function of gold. The chance that this will not be so is, however, sufficiently great to make it very desirable that any country, or district, which relies mainly on gold production should take it most earnestly into account. Professor Frankel, of Johannesburg, has recently pointed out the need for a greater diversification of output within the Union. There is no other country in the world which relies as extensively on gold production for its prosperity as does South Africa, but there are many considerable areas to which the advice is equally applicable.

Metropolis and Bradford Sale

The decision of Associated British Picture Corporation to part with its 25 per cent holding in the 8s. 3d. "B" shares of Metropolis and Bradford Trust, appears to complete the separation of this group from the Gaumont-British interests. The Metropolis company controls Gaumont-British through a holding of some 2,915,000

ordinary shares, but only the "A" shares of the Trust have voting rights, and it was never very clear why the late Mr John Maxwell, then chairman of ABP, acquired the "B" interest without taking part of the "A" capital. Nothing is known of the price he paid, but the present sale price is evidently based on the market quotation of rather over 12s. 6d. for the Gaumont-British ordinary. The buyer is not disclosed, but it is generally assumed that it is General Cinema Finance Corporation, controlled by Mr J. Arthur Rank, chairman of Gaumont-British and Odeon. It is to be hoped that the former company will publish more informative accounts than in the past, and it would go some way toward restoring confidence among conservative investors if the structure of the group were disclosed. So far as it goes, the promise of a consolidated statement for Odeon is a step in the right direction.

Odeon Finance

Mr J. A. Rank made it quite clear to the shareholders of Odeon Theatres that the remarkable rise in profits was due solely to increased box office receipts—55,000,000 more seats were sold than in 1940-41—only partially offset by higher wages and prices for all commodities bought. It is evident that the continuance of such attendances is in part dependent upon factors beyond the control of the management, but it is also obvious that the cinema is the most economical of all wartime entertainments, and the group has shown its confidence in it by taking over, at a cost which is unhappily not disclosed, the four Paramount companies. For the rest, Mr Rank raised three matters which may have a material effect on the future of the group, although its extent cannot be judged in the absence of more details. Details are promised for next year, at least to the extent of including a consolidated statement in the accounts. Two financial operations have been undertaken. First, the liquid position has been greatly improved by funding liabilities, more or less current, by the issue of debentures to the tune of £3,500,000 to the company's bankers. A number of valuable properties have been transferred to a new company, Odeon Properties, which has issued these debentures. The remainder of the capital, £1,000,000 second debentures and £1,500,000 ordinary, is held by the parent company. In the second place, the £1,440,000 6 per cent debenture stock of the parent, falling due next year, has been exchanged for £1,512,000 5½ per cent second debenture stock, and 288,000 ordinary shares of 5s. This slightly increases the annual charge for interest and dividend, but repayment is to be effected over 15 years. This will be a substantial charge on profits, but it is estimated to be well within the capacity of the group. In all the circumstances, the arrangements seem satisfactory, as is the assurance that, in future, acquisitions will only be made from resources already available. Finally, it was disclosed that a staff pension scheme is in preparation. No idea of the probable cost is given, but it must be considerable, while wage increases have still to have their full impact. Net profits are, however, protected by EPT.

British Celanese Opposition

A week's consideration has only added to the criticism of the scheme for dealing with the arrears of dividend on the 7½ per cent second cumulative preference capital of British Celanese. Apart from actual comment, the Association of Investment Trusts has advised its members to reject the proposals, while Mr Austin E. Kavanagh, who shepherded the Fine Spinners negotiations to a successful conclusion, has formed a committee of shareholders to oppose the scheme. While the committee has not prepared a detailed alternative, they express the view that the sum

payable to the shareholders should be 11s. per share; that is, the dividends less tax at the standard rates prevailing at the times the payments fell due. And they suggest that this sum should be met, partly in cash and partly in ordinary shares. They also ask for disclosure of the EPT standard, and characterise the proposal of the board to suspend the appropriation for commutation of royalty as fundamentally unsound. There appears very little to add to the comments made in *The Economist* of October 10th, except on the point of abandoning the commutation provisions. In any circumstances, it would be unsound to abandon the only contribution to writing down intangible assets when they represent over 20 per cent of the balance-sheet total. Under the terms of the scheme, however, 75 per cent of the funds made available for distribution by this policy may go to holders of the equity—in which the second preference have admittedly a share. Were these funds retained in the business, they would stand to benefit the second preference *in toto* before they conferred any gain on the equity. For the rest, the two fundamental points remain. It is in the highest degree undesirable that holders should be asked to sanction such a plan while they are ignorant of the true position of the company, and that position is known and can be disclosed. Further, a debt of £100 due in cash now can only be liquidated by the transfer of assets which will realise £100 in cash now. The scheme fails by both tests.

United Steel Profits

The latest accounts of United Steel Companies show that, for the year to June 30th last, profits, after depreciation, continued their downward trend. The disclosed figure of £2,096,723 compares with £2,247,835 for the previous year. The rise in equity earnings is due to lower tax requirements, and in particular to the absence of any retrospective provision. The ordinary payment is maintained at 8 per cent, covered by a rate of 9 against 8.2 per cent, but as the chairman, Sir Walter Benton Jones, points out, that free surplus is insufficient to devote to reserves. Thus, the carry forward is raised from £427,177 to £477,156.

	Years to June 30,		
	1940	1941	1942
Total profits after depreciation	2,440,977	2,247,835	2,096,723
Taxation	1,493,000	1,341,250	1,154,000
Obsolescence	125,000	125,000	125,000
Interest and deb. redemption	222,366	221,305	220,236
Fees and pensions	138,028	141,198	161,508
Ordinary shares:—			
<i>Earned</i>	462,583	419,082	435,979
<i>Paid</i>	461,994	404,094	386,000
<i>Earned %</i>	8.0	8.2	9.0
<i>Paid %</i>	8	8	8
Carry forward	412,189	427,177	477,156

The accounts point to the maintenance of the previous year's high level of activity, despite the slight fall in debtors in the consolidated statement from £4,945,479 to £4,896,433. Stocks are nearly £300,000 higher at £3,946,257, and creditors some £760,000 higher at £6,471,856. The company's balance-sheet shows a rise in net loans to subsidiaries and associates from £6,818,881 to £6,886,625. While the falling trend of gross earnings may indicate nothing more than increasingly generous depreciation provisions, it is probable that there has been some real decline in profits in view of the known rise in costs, and the narrowing of profit margins on Government work. The concern will have continued to profit from the improvement in the fortunes of John Summers. Fluctuations in net earnings will be cushioned by the incidence of EPT. The £1 ordinary stock, at 24s. 9d. ex dividend, yields 6s. 9d. per cent.

The Debenham Group

The accounts of both *Debenhams* and the leading subsidiary, *Harvey Nichols*, for the year to July 31st last, show a marked improvement in trading results. In his statement, circulated with the *Harvey Nichols* accounts, the chairman, Sir Frederick Richmond, goes so far as to suggest that the trough of the war-time depression may have been passed. In any case, total income of *Debenhams* is up from £627,244 to £707,328, while that of *Harvey Nichols* has risen even more strikingly from £21,292 to £105,548. After placing £50,000, as in the previous year, to tax reserve, *Debenhams* have realised earnings for equity of 42.6 against 22.6 per cent. The management are distributing 12½ per cent against

nil, which compares with 8½ per cent in 1938-39 and over 20 per cent in the three years prior to that. After maintaining the customary transfer of £50,000 to general reserve, the carry forward is raised from £265,292 to £290,689. *Harvey Nichols*, after allocating £13,717 against £8,390 for taxation and meeting £3,755 loss on the sale of steel no longer required, are able to pay off the two years of preference arrears outstanding, requiring £60,000 gross. By bringing in £9,259, placed to general reserve in the previous year, there is created a carry forward of £6,801 against nil. As Sir Frederick points out, the basis of the recovery has been the cessation of bombing in London, the consequent return of numerous potential customers, and the tendency to spend for quality as a result of the introduction of clothes rationing. There has also been some improvement in provincial business, but *Debenhams* has suffered the destruction of premises at Exeter and Norwich in "Baedeker" raids. The balance sheet figures of fixed assets, not adjusted for air raid damage, consequently provide little guidance. *Debenhams'* accounts, now much improved by the provision of a consolidated statement, show surplus liquid assets of the group at £1,394,029. Net loans to subsidiaries are reduced from £822,090 to £471,609. Cash loans of the parent to unspecified debtors, although nearly £30,000 lower, still stand at some £890,000. The outstanding balance of the *Harvey Nichols* debenture issue, at £397,589, is deposited with *Debenhams*. The balance sheets of both concerns show declines in the value of stocks in the order of £50,000, reductions which clearly understate the fall in terms of volume, and represent the least hopeful feature of the accounts. The *Debenhams* rs. ordinary shares, at 38. 1½d., ex dividend, yield £4 per cent.

Montague Burton Further Setback

In the year to March 31 last, total profits of Montague Burton show a fall of nearly £250,000 to £808,690, compared with one of only some £45,000 in the previous year. Despite the decline in war damage liability of £107,500 to £60,000, and of nearly £20,000 in depreciation to £187,596, there is a deficit before ordinary dividend of £34,400 against earnings in 1940-41 of £56,669. Thus, the payment of the 5 per cent ordinary dividend involves a draft on the carry forward of some £90,000, reducing it to £152,503. The following table shows the three years' trend of earnings and allocations:—

	Years ended March 31,		
	1940	1941	1942
Total profits	1,096,572	1,051,805	808,690
Depreciation	209,400	205,913	187,596
Taxation	320,059	257,500	245,000
Staff funds and fees	53,729	28,302	28,169
War damage	...	167,500	60,000
Deb. and other interest*	206,343	220,921	222,325
Preference divs.	130,000	115,000	100,000
Ordinary shares:—			
<i>Earned</i>	177,041	56,669	Dr. 34,400
<i>Paid</i>	64,088	55,729	55,729
<i>Earned %</i>	13.8	5.2	Nil
<i>Paid %</i>	7	5	5
General reserve	50,000		
Carry forward	241,692	242,632	152,503

* Including loan stock sinking fund.
† After writing off £35,794 new issue expenses.

The decline in profits last year, nine months of which covered the first year of clothes rationing, is no doubt mainly due to a very definite curtailment of demand. Logically, rationing should mean a larger demand for quality. But the utility suit only effects savings when production is on a large scale. This may have meant transfers to bespoke tailoring. Moreover, on utility suits and Government orders, the profit margin is no doubt narrower than that on the normal trade. The balance-sheet certainly suggests a contraction of business. Debtors and creditors are both lower—the latter by more than £265,000—and there is a fall in net loans to subsidiaries from £581,614 to £307,481. The decline in stocks of some £450,000 to £1,106,024 is also somewhat ominous, and the consequent accumulation of cash items, which raises the total of net liquid assets from £642,650 to £787,286, is small compensation. The outlook for the immediate future scarcely indicates a marked improvement, and there appear grounds for supposing that a 5 per cent dividend, if maintained, will overtax the company's resources under present conditions. In the circumstances, it might have been more satisfactory to make an immediate cut. The rs. ordinary shares, at 11s. ex dividend, yield £4 11s. per cent, which clearly discounts post-war recovery.

Industry and Trade

Location of Industry

Control over the utilisation of factories and storage space has become an essential counterpart to control over the employment of able-bodied men and women and over the use of raw materials. In the spring of 1941, the Board of Trade created a "clearing house" for factories and storage space, in order to ensure their utilisation in the national interest and to facilitate the speedy substitution of alternative premises for those that may be damaged or destroyed in air raids. In order to avoid any confusion and dislocation of production programmes, arising from the uncontrolled movement of industry, the Board of Trade went a step further in July last year, when it made the Location of Industry (Restriction) Order. This Order made it obligatory for industrialists—but only in the case of premises of 3,000 square feet and over—to obtain a licence from the regional offices of the Control of Factory and Storage Premises before changing the use of existing factories and storage premises or converting other buildings into factories and storage premises. A new Order, which came into force on October 12th, extends licensing to the smaller premises; in fact, a licence must now be obtained whatever the size of the premises. The reason for tightening up the control over the movement of industry is probably twofold. First, the supply of the larger premises may have been exhausted, thus giving rise to a greater demand for smaller ones for work of national importance. Secondly, the Order may be designed to prevent the haphazard growth of small factories, which are often less productive than the larger factories; it is in the national interest that labour and raw materials should be used as efficiently as possible. The extension of the licensing system is justified on either ground.

Coal Production

In a statement on the coal position, the Mining Association has recorded the fall in production since the outbreak of war and analysed its causes. The following table compares the trend of production since 1938 with its course in 1913-18.

OUTPUT OF COAL			
Million		Million	
Year	Tons	Year	Tons
1913	287	1938	227
1914	266	1939	231
1915	253	1940	223
1916	256	1941	206
1917	248	1942	200*
1918	228	...	...

* Annual rate of output during five months ended September was stated by Major Lloyd George to have been "something under 200 million tons."

Although circumstances were in many respects different during the last war, the trend of production was the same as since 1938. Surprisingly, moreover, the percentage fall in production between 1913 and 1916 was almost the same as between 1938 and 1941, that is to say 10.8 per cent, against 9.2 per cent. Again, in 1917, as in 1942, the downward trend continued.

The Mining Association shows in its memorandum that, apart from the coalmining industry's loss of operatives during the first two years of the present war, the main causes of the fall in production were the reduction in output per miner and the growth of absenteeism other than absenteeism due to accidents or sickness. The output per manshift at the coalface has fallen by 1.8 cwt. since 1941, equivalent to a loss of output of 128,000 tons a week or more than 6 million tons a year. Absenteeism among coalface workers rose from about 8 per cent in 1938 to 13.93 per cent. On the assumption that 7 per cent of the total time lost is due to voluntary absenteeism, the Mining Association has calculated that the loss of output due to this cause is equivalent to 330,000 tons a week or about 17 million tons per annum. Moreover, it is shown that the increase in absenteeism is not due to slackness among a minority of coal miners, but is fairly widespread, especially

among the younger workers. If output per head could be restored to the 1941 level and if voluntary absenteeism could be eliminated and the increased number of shifts maintained, the annual rate of production of the industry's present labour force could be raised by 23 million tons, and the coal problem would be solved. The statistics marshalled by the Mining Association are certainly impressive, and they do suggest that the efficiency of the industry's labour force has tended to decline. No doubt there is scope for an improvement in output with the existing labour force, especially if the Ministry of Fuel and Power pushes ahead with its plans for technical reorganisation. But it would be optimistic to assume that the annual rate of production will increase by 23 million tons during the next few months.

Organisation of Chemical Industry

Mr C. F. Merriam, the chairman of the Association of British Chemical Manufacturers, was only following precedent when, in his address to the annual meeting of the Association on October 12th, he devoted part of his speech to its future organisation. A trade association, he pointed out, can only expect to carry weight with the Government if it is fully representative of the industry concerned. After suggesting that it may be necessary to consider the whole structure of the chemical industry to determine whether it is organised to give the most efficient service to the community, he went on to outline certain aspects of the organisation of the Association which may be involved in the shaping of post-war plans. They include

whether it is desirable for membership of a trade association, such as the ABCM, to be compulsory for all firms in the industry; whether such an association should be in a position to enforce its decisions; whether it should exercise control over production and prices.

The chairman of the ABCM did not attempt to answer the questions he raised. But their nature is symptomatic of the present tendency towards enlarging the scope of trade associations and strengthening their authority.

Pit Production Committees

Certain differences between South Wales colliery managers and the Ministry of Fuel and Power over the functions of the new pit production committees have been temporarily adjusted by an assurance from the regional controller that the powers, duties and responsibilities of managers under the Coal Mines Act would not be affected by the detailed instructions which have been issued to these committees. At a meeting of the council of the National Association of Colliery Managers held in London on Wednesday, October 7th, particular exception was taken to a clause in the new constitution providing for the appointment of two chairmen, one from each side, to preside alternately at the weekly meetings, principally on the ground that it would make the maintenance of discipline, already weakened under the provisions of the Essential Work Order, still more difficult and affect unfavourably the management of the collieries. The detailed instructions which have been communicated to the industry by the regional controllers certainly—at any rate on paper—secure for the workmen an effective voice in the control of mining operations. They bring within the scope of the official functions of the pit committees constant and systematic supervision of underground and surface working conditions.

ROYAL BANK OF CANADA

DIVIDEND No. 221.

NOTICE IS HEREBY GIVEN that a DIVIDEND of 1½ per cent., being at the rate of 6 per cent. per annum, upon the paid-up capital stock of the Bank has been declared for the three months ending 30th November, 1942, and will be PAYABLE at the Bank and its branches on and after 1st December, 1942, to shareholders of record 31st October, 1942.

By Order of the Board,
E. B. MCINERNEY, London Manager.

6, Lothbury, London, E.C.2.
October 14th, 1942.

In regard to production, the committees have been officially instructed to consider any factor that may impede maximum production. The committee must, for example, listen to representations from the workmen's side about such matters as (a) the examination and maintenance of haulage roads and return airways; (b) defects in machinery; (c) organisation of the pit with a view to reducing interruptions of work, and ensuring that the cycle of operations is completed each day with a minimum of overtime; and (d) the introduction of underground man-riding facilities whenever possible, as well as other relevant matters. From the management side, representations may be made concerning non-co-operation by workmen in maintaining or increasing output, and failure to clear faces; and although under the Government scheme the committees have been relieved of all responsibility for dealing with individual cases of absenteeism, they are now authorised to deal with the question in general and to pass resolutions. Moreover, it is one of the functions of the committees to investigate the reasons for any failure to reach the output target and to adopt steps to avoid its repetition; while, as regards supplies, they are to consider any shortage of materials or delay in deliveries with a view to making such representations as may be necessary to the regional production director.

It must be left to experience to show how far the exercise of these important functions affecting colliery management and technical conditions governing production can be wedded to the fundamental principle laid down in Section 2 (of the Coal Mines Act, 1911) that "every mine shall be under one manager, who shall be responsible for the control, management and direction of the mine," but where there is mutual good will there is little that industrial co-operation may not achieve, and the new experiment can succeed if it is conducted with the sole purpose of serving the national interest. The root of the matter was stressed by one regional controller in his inaugural communication to the secretaries of the local pit production committees when he reminded them that "in this work you are not meeting as management on the one side and as workmen on the other, but as a body of experts contributing each his own specialised skill and experience to the achievement of a common purpose."

Unemployment in September

After a slight rise in the number of persons registered as unemployed at employment exchanges in Great Britain in July and August, the number on September 12th was down to 104,108, the lowest figure since the war. Decreases were recorded mainly in the number of wholly unemployed. The registration of men and women under the Registration for Employment Order has now been completed. Men born in 1892 registered on September 19th and women born in 1897 on October 3rd. Over 23½ million people are now mobilised in the armed forces or on full-time work. This number may be expected to increase slightly when all the

men and women who have been registered have been interviewed and where possible placed in war work. Schemes for the concentration of certain industries, particularly the clothing industry, which are now being discussed and put into operation, will result in the transfer of workers to more essential work. The new demands of the Forces, including the women's services, for more recruits, will thin out the

labour force engaged in non-essential work and shrink the pool of those still available for war work.

Electrical Contracting—Essential Work

The latest industry for which an essential work Order has been made is electrical contracting, which is defined as being the installation, connection, repair, maintenance or removal of electric lines, fittings, apparatus or appliances for lighting, heating or motive power. The Order (SR and O 2071) follows for the most part the lines laid down by previous essential work Orders made for other industries in regard to the rights and duties of employers and employees and in regard to the scheduling of undertakings. It does, however, differ from them in some respects, in order to preserve the mobility and flexibility of the industry. On this subject both employers and trade unions made strong representations to the Ministry of Labour, which have influenced the provisions of the Order. No permission is required to be obtained from a national service officer where an employee is lent to another scheduled undertaking for less than a week. For the purpose of calculating the guaranteed minimum wage, the rule for Sunday work payments varies. Where work is being done on a scheduled building site and in shipbuilding or repairing, the rule is the same as that laid down in the essential work Order applying to such undertakings. Otherwise, Sunday work is deemed to be paid at ordinary rates. Where no directions are made requiring labour to be employed on a particular site or for a particular time, there are no restrictions.

Now, three years after the beginning of the war, one of the most important reserves of specialised labour for the war effort has been protected. One of the greatest assets possessed by this country when the war started was the fact that, between 1929 and 1939, the number of workers employed in precisely the industries which are most important in producing the specialised goods of modern warfare had gone up by leaps and bounds. The number employed in the manufacture of electrical cables, apparatus and lamps went up by nearly 100 per cent; the number in motors, cycles and aircraft by nearly 90 per cent; the number in electrical engineering by 45 per cent. Here was a firm foundation for mechanised warfare. Yet, now it appears that labour in electrical contracting, one of the most important minor parts of this array of special occupations, has apparently been allowed to drift away—apart from the limited deterrent of the schedule of reserved occupations—until this late hour. It may be good news that the stable door has now been locked; but there must be more than a suspicion that a fair number of the horses have already departed.

Clothing Coupon Value Changes

On October 11th the Board of Trade announced a number of adjustments in the clothing ration, which came into effect on the same day. The most important of the changes is the inclusion of towels on the ration, at one to three coupons each, according to size. This is discussed in a Note on page 476. The other adjustments are changes in the coupon rating of certain garments. Rates for men's woollen underwear have been raised: woollen vests with sleeves and woollen pants with long legs now require six coupons instead of four and sleeveless woollen vests and woollen pants with short legs are raised from four to five. Women's fully fashioned stockings are now three coupons a pair instead of two coupons and girls' woollen stockings and fully fashioned stockings have been raised from one coupon to two a pair. Women's unlined woollen and lined non-woollen jackets and blazers have been reduced from ten to eight coupons and short-sleeved non-woollen men's shirts are four coupons instead of five. The date on which the red coupons—the last block of twenty in the current ration book—may be used has been advanced from April 1st to March 15, 1943. These adjustments have introduced some new principles to clothes rationing. Previously, coupon ratings were based approximately on the amount of material used. The reason given for the changes in men's underwear is that priority for woollen underwear must be given to the Forces, and at the old coupon rating civilian demand would exceed supply. The extra labour involved in the manufacture of fully fashioned stockings is the reason why the Board of Trade is attempting to lessen the demand for them by raising the coupon value.

COMPANY MEETINGS

RANSOME AND MARLES BEARING COMPANY, LIMITED

SIR ALBERT BENNETT'S REVIEW

The twenty-sixth annual general meeting of Ransome and Marles Bearing Company, Limited, was held, on the 9th instant, at Newark-on-Trent.

Sir Albert Bennett, Bt., the chairman, presided.

The chairman said: Gentlemen,—I have pleasure in submitting for your approval the balance-sheet at June 30, 1942, together with the board's recommendations as to appropriations.

I referred last year to the increased amount of working capital required, and the figures now before you show that there has been a further substantial increase in stocks and debtors, which explains the bank overdraft. The company's financial position is, however, quite satisfactory, current assets exceed current liabilities by £625,034, and our plant and machinery stands at a figure far below its original cost, and bears no relation to its much higher present-day value, for which it is insured under the Compulsory War Damage Insurance.

NEW RESERVE FOR CONTINGENCIES

You will observe that we propose the allocation of £30,000 to a new reserve for contingencies, and we hope to be able to continue to increase this amount from time to time. The wisdom of this step, in view of the unknown possibilities of the post-war period, is, I think, self-evident.

I come now to the dividend. The board are very pleased that they have been able, on the results for the full year, to propose a final of 15 per cent. to make up the total distribution to the 20 per cent. paid for several years previously. At the time of the decision with regard to the interim many factors existed which made it extremely difficult to judge as to the probable final profits, but they did indicate a substantial reduction. Those of you who are engaged in industry at the present time will realise how quickly conditions can change, and will, I am sure, appreciate how difficult it is to arrive at a figure of interim distribution which will not prove misleading one way or the other when final and definite results for the year are available.

The difficulty is increased by the fact that under war conditions no explanatory information can be published. The board have seriously considered whether, in view of the circumstances, it would not be better to suspend the payment of interim dividends, but, on the whole, feel that this might prove a hardship to certain stockholders. We therefore propose to continue our policy of making an interim payment, but I would ask you to bear in mind what I have just said.

TRIBUTE TO STAFF AND WORKPEOPLE

As you will realise, this has been a difficult year for the executive staff and all our workpeople. All departments have been obliged to carry on with depleted staffs and many changes in personnel. Many of our former employees, both men and women, are serving in His Majesty's Forces, and I feel sure you would like me to express our sympathy with the relatives of those who have lost their lives, or who are wounded, missing, or prisoners of war.

In concluding, I would like to express on my own behalf and on that of my co-directors our appreciation of the work of our joint managing directors, staff and workpeople, and also to those members of our A.R.P. organisation who have carried out their duties so competently. I now have pleasure in proposing: "That the report and accounts as submitted be adopted, and that the board's proposals for the allocation of the balance of the profit and loss account, as set out in the report, be approved."

The resolution was carried unanimously.

ODEON THEATRES, LIMITED

SOUND FINANCIAL POSITION

The fifth annual general meeting of Odeon Theatres, Limited, was held, on the 9th instant, in London.

Mr J. Arthur Rank (the chairman) said that during the period covered by the accounts the cinema industry as a whole had enjoyed great prosperity and the company had secured its full share of such prosperity, for the profits at £1,530,000 were nearly two and a-half times greater than those of the preceding year. Unfortunately, taxation took a very large part of the profits earned. They had had to operate at increased costs, and the results, therefore, were due entirely to the substantial increase in box-office takings; over 55,000,000 more patrons had come to their theatres than in the previous year.

It seemed very sad that their late chairman, Mr Oscar Deutsch, should not be with them and receive from the shareholders congratulations on the results now presented, which were, to such a large extent, the reward of the early years of struggle and anxiety, the burden of which had been borne by him.

REFINANCING ARRANGEMENTS

The growth of Odeon had been so rapid that it had not always been possible to provide long-term finance when required, with the result that a large portion of the group's funds had been short-term finance, which was apt to cause anxiety in times of temporary difficulty. Consequently, the directors had been giving considerable attention to the refinancing of the group during the last six months. Since the close of the financial year arrangements had been made which placed the finances of the group on a sound basis. It had been agreed to create a wholly-owned subsidiary company known as Odeon Properties, Limited, which was acquiring at book value 110 properties from subsidiary companies, including some properties of Odeon Theatres acquired since 1937. The transaction would assist in clarifying the company's balance-sheet.

Then the short-dated 6 per cent. debenture stock, £1,440,000, falls due for repayment next year. Arrangements had been made with the holders to surrender the stock against an issue, fully paid, of 288,000 ordinary shares and a new 5½ per cent. second debenture stock in the sum of £1,512,000 redeemable by means of a sinking fund over 15 years commencing July, 1943. That new debenture stock ranked after the 5 per cent. first mortgage debenture stock, and therefore they had dealt with the short-term indebtedness of the group. He was sure it would be agreed that the arrangements were very satisfactory.

It was the intention of the directors to acquire additional properties from time to time, but the theatres should only be acquired on the basis of a price which would show a favourable return on the capital employed under normal conditions. Since the close of the financial year they had acquired the whole of the issued share capital of the four Paramount companies operating at Liverpool, Glasgow, Birmingham and Tottenham Court Road.

As to the future, they had, in their opinion, made every possible provision for any eventuality which might arise, and he was confident shareholders would agree that the prospects of their company were encouraging. The directors considered that the cumulative effect from the fine properties owned by the company in all parts of the country, the solving of its financial problems, and the confidence which it placed in the present management of the group under the able guidance of the joint managing directors, Mr F. S. Bates and Mr John Davis, left them well equipped to take in their stride difficulties which might arise in the future and ensure the continued prosperity of the company.

The report was unanimously adopted and the proposed dividend of 10 per cent. was approved.

EASTWOOD'S LIMITED

SIR HORACE BOOT'S REVIEW

Sir Horace Boot, K.B., M.Inst.C.E. (chairman and managing director), presided at the twenty-second ordinary general meeting of Eastwoods, Limited, held on the 15th inst.

The chairman, in his statement circulated to shareholders, said:

During the winter there was a substantial reduction in demand which led to accumulation of stocks. The position has since been eased, and we were able to offer immediate delivery of bricks at a time when it would certainly have been difficult to provide for any sudden increase of production.

The construction of the war factories, camps, hospitals, shelters, etc., has entirely redistributed national demand. In order to conserve transport, petrol has been allocated for road haulage only within a limited area, and rail facilities have not been accorded outside a radius of 75 miles, except by licence from the Ministry of Works and Planning. Certain works will be selected for compulsory closure, and there will be a progressive reduction of output for the larger units. The stocks now held are valuable national assets available to bridge the gap between production and increased rate of usage, provided current output is absorbed.

Although we may have difficult times ahead, there will, on the conclusion of hostilities, be a large demand for bricks, which has in the past been met by those manufacturers in the best position to expand rapidly, and to distribute their production over wide areas. I therefore look forward confidently to the prosperity of our interests in the years to come, although we may anticipate some adverse effect on profits during the war.

Production costs have risen and there has been some adjustment in selling prices.

The report and accounts were unanimously adopted.

CABLES INVESTMENT TRUST, LIMITED

The seventh ordinary general meeting of the Cables Investment Trust, Limited, was held, on the 14th instant, at Electra House, Temple Place, London, W.C., the Rt. Hon. Lord Pender (chairman of the company) presiding.

The chairman said: There is nothing calling for any special attention and I feel sure you will agree that in the present circumstances the result of the year's working is very satisfactory.

I beg to move, therefore: "That the printed report and accounts of the company for the year ended June 30, 1942, submitted to this meeting be and the same are hereby approved, and that a final dividend of 3 per cent., less income tax, on the ordinary stock be declared, making, with the previous payment, 5 per cent., less tax, for the year."

Before putting the resolution to the meeting, I shall be pleased to answer any questions.

Mr. C. E. Tavener (managing director) seconded the resolution and it was carried unanimously.

Every year many hundreds of Companies publish Reports of their Annual General Meetings in *The Economist*, thereby reaching thousands of investors in the quiet of their own homes.

In time of war the value of this practice is greatly enhanced because *The Economist* provides valuable information which is not otherwise available to investors, who therefore read it more carefully than ever.

Full particulars of the charges for inserting these reports may be obtained on application to The Reporting Manager, *The Economist*, Brettenham House, Lancaster Place, W.C.2.

RECORDS and STATISTICS

STOCK EXCHANGES
London

Note: all dealings are for cash

THE fairly substantial decline in turnover as shown by the course of daily markings this week has not been accompanied by a corresponding movement in prices. Nevertheless, the advance of industrial equities has been more hesitant and profit-taking has occasioned some irregularity. Apart from a few improvements in long-dated and irredeemable stocks, the gilt-edged market was devoid of any particular interest. In the foreign bond market Brazilian stocks reflected renewed support with substantial gains. Chilean issues enjoyed some quiet support, while some speculative interest was shown in Japanese stocks. Junior issues in the home rail market fluctuated narrowly, but mid-week saw a general rally. Argentine stocks improved in the foreign rail market, BA Pacific consolidated debenture rising 2 points. Elsewhere, Canadian Pacific ordinary advanced nearly a point. Despite some irregularity and profit-taking, most sections of the industrial market were steady in tone. Rolls Royce was outstanding in the motor section, but Triplex further weakened on the chairman's statement. Small improvements were widespread throughout the heavy industrial section, while in the shipping group Union Castle and Clan Line received quiet support. Exceptionally among textiles, British Celanese weakened on the scheme. Stores shares tended to slightly lower levels, while brewery issues were barely steady. In the tobacco section BAT was firm, but in the miscellaneous section Emmies fell on the dividend statement.

Absence of support from the Cape led to very quiet conditions in the *kaffir* market early this week, but renewed buying from Johannesburg in mid-week occasioned a general rally. Rubber shares were steady, but tea issues advanced sharply early this week. Anglo-Iranian fluctuated erratically in a generally quiet oil market, several issues showing small improvements.

New York

ACTIVITY on Wall Street at the end of last week reached the highest level for many months past. Good gains were widely distributed, the strong tendency being attributed to the war news and improved taxation prospects. Motion picture stocks rose sharply on the prospective release of blocked British funds, while General Motors and Chrysler touched new peaks for the year. While the undertone remained distinctly firm, widespread profit-taking prevented any further advance after the holiday.

COMMODITY AND INDUSTRY NEWS

Cakes Control.—The Cake and Flour Confectionery (Control and Maximum Prices) Order, made by the Ministry of Food, relates to all types of flour confectionery except articles containing meat and fish. The maximum retail price for any cake is fixed at 1s. 6d. per lb., but if the price is over 1s. a lb. it must not exceed three times the cost of the ingredients. The weight of cakes may not include more than 20 per cent of oils and fats, nor more than 30 per cent of sugar. These individual maxima may be exceeded provided that the combined weight is not more than 45 per cent of the finished weight. Only one edible substance, such as jam or chocolate, may be added after baking. These provisions come into force on October 26th. The Order also provides that from November 14th all producers of cake and flour confectionery must be licensed.

Quota for Hats.—The only control hitherto exercised on the manufacture of headgear has been by means of restrictions on felt hat hoods and on cloth supplies. Under the Headwear Directions (SR and O, No. 2047) the Board of Trade is to compile a register of manufacturers, who will be required to restrict their supplies during the period October 8, 1942, to January 31, 1943, to 10 per cent by value of their supplies during the year 1941. The rate of quota restriction is about 31.5 per cent. Unregistered manufacturers must restrict supplies of their own manufacture to £50 a month. Alternatively, they can, by giving notice to the Board of Trade, supply headgear, whether of their own manufacture or not, to a total value of £80 in any month. The manufacture of headgear is defined as including any process of manufacture, trimming, altering, repairing or remodelling. Special licences may be granted to supply men's utility caps, industrial headgear and infants' headgear in addition to the quota. Discussions are to be

opened on arrangements for concentrating manufacture.

Laundry Charges.—After consultation with the Central Price Regulation Committee, the Board of Trade has made the Laundry (Maximum Charges) (No. 5) Order (SR and O, No. 2011), which came into operation on October 12th. It permits increases from 1d. to 4d. in the 1s. on pre-war prices, according to area, in the charges to be made for laundering personal and domestic articles.

Fluorspar Control.—The Minister of Supply has made the Control of Fluorspar (No. 1) Order, which comes into operation on October 19th. It makes the disposal and acquisition of fluorspar containing more than 60 per cent. calcium fluoride subject to licence. The Order has been made to ensure the most efficient distribution of supplies to meet the rising demand. It will be administered by the Chrome Ore, Magnesite and Wolfram Control of the Ministry of Supply.

THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL (PAID-UP) - £3,000,000
RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST
AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches & 30 Sub-Agencies
 The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.

The Bank also undertakes Trusteeships and Executorships.

Head Office: 38, BISHOPSGATE, LONDON, E.C.2

West End Branch:

28, CHARLES II STREET, HAYMARKET, S.W.1
 Manchester Branch: 52, MOSLEY STREET

New York Agency: 65, BROADWAY, NEW YORK CITY

THE BANK OF AUSTRALASIA

(Incorporated by Royal Charter 1835)

Paid-up Capital ... £4,500,000
 Reserve Fund ... 2,500,000
 Currency Reserve ... 2,000,000
 Reserve Liability of Proprietors under the Charter ... 4,500,000
£13,500,000

Court of Directors:

D. F. ANDERSON, Esq. HON. GEOFFREY C. GIBBS.
 J. F. G. GILLIAT, Esq. EDMUND GODWARD, Esq.
 C. G. HAMILTON, Esq.
 F. V. C. LIVINGSTONE-LEARMONTH, Esq., D.S.O.
 DAVID J. ROBERTS, Esq.
 SIR JOHN SANDERSON, K.B.E.
 ARTHUR WHITWORTH, Esq.

HEAD OFFICE: 4 Threadneedle Street, London, E.C.2

Numerous branches throughout the States of VICTORIA, NEW SOUTH WALES, QUEENSLAND, SOUTH AUSTRALIA, WESTERN AUSTRALIA, TASMANIA, and the DOMINION of NEW ZEALAND.

The Bank offers facilities for the transaction of every description of Banking business in Australia and New Zealand. Negotiates or collects Bills, Issues Telegraphic Transfers, Letters of Credit and Drafts, also Circular Credits and Travellers' Cheques issued. Deposits received at interest for fixed periods on terms which may be ascertained on application.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in the Colony of Hongkong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

AUTHORISED CAPITAL - £50,000,000
ISSUED AND FULLY PAID-UP - £20,000,000
RESERVE FUNDS - £20,000,000
RESERVE LIABILITY OF SHAREHOLDERS £20,000,000

Head Office: HONGKONG,

temporarily transferred to
LONDON OFFICE, 9, Gracechurch Street, E.C.3.
 Acting Chief Manager: A. MORSE.

BRANCHES AND AGENCIES THROUGHOUT INDIA AND THE FAR EAST, Etc.

HONGKONG & SHANGHAI BANK (TRUSTEE) LIMITED
 9 Gracechurch Street, E.C.3, a Company incorporated in England and an affiliate of The Hongkong and Shanghai Banking Corporation, is prepared to act as Executor and Trustee in approved cases.
 Full particulars may be had on application.

THE ENGLISH, SCOTTISH & AUSTRALIAN BANK, LTD.

Head Office: 5 Gracechurch Street, E.C.3

Subscribed Capital ... £5,000,000
 Paid-up Capital ... 3,000,000
 Further Liability of Proprietors ... 2,000,000
 Reserve Fund ... 1,755,000
 Special Currency Reserve ... 1,385,000

Chief Office in Australia:

Collins Street, Melbourne

and many Branches and Agencies throughout Australia.

With its widespread connections, this Bank offers every facility for the conduct of all classes of Banking and Exchange business with Australia.

J. A. CLEZY, London Manager and Secretary.

BANK OF SCOTLAND

Constituted by Act of Parliament 1695

Mr Lyttelton's Plans

INDUSTRIAL mobilisation has reached its peak, but the output of weapons, equipment and munitions has not. Thus, aptly, Mr Lyttelton summarises the state of war production. He has made known his plans for the next stage in the industrial effort. The task now is to make the most efficient and productive use of the manpower and plant which have been mobilised. Briefly, this will be done by two means: by moving the most skilled workers to the most modern machines and the most urgent jobs; and by diverting war orders from overloaded firms and congested areas to plant and orders where, relatively, manpower and machines are under-employed. The end is to attain the optimum number of the most productive man hours and machine hours; the means is to be the regional production boards. These, furnished with a register of industrial capacity in their areas and a record of the load of orders upon local firms, will act as clearing houses—as traffic policemen to direct the flow of orders and special contracts to the points where men and machinery are most available.

Here is a plain statement of the current problem and a clear account of the method proposed for its solution. What special arrangements, if any, have been made to compensate the firms and men who are to be closed down or moved in this radical reshaping of war industry remain undisclosed. Possibly they, like many other similar victims of war economy and industrial concentration, are either to be squeezed out or, even worse, permitted to slow up

important changes for lack of a financial policy to prevent their hardship from being the enemy of the nation's need. The plans announced are already in operation. The degree of success they achieve will be of immense importance in the next stages of the war. British war production has lately been taken too much for granted. On the one hand, it has been lightly assumed by many people that, with the achievement of the highest output per head of war material of any belligerent, the last chapter had been written; on the other, the massive performance of American production and its still greater promise have been allowed to overshadow the responsibilities of British factories. The rate of Axis output, probably in every item of war supplies, has been well outstripped by the joint rate of Allied factories. But it has been by the accumulation of great stocks of war material that the enemy has been able to maintain warfare on the largest scale into the fourth year of war. The need to build up accumulations for the still larger enterprises which the United Nations have in preparation is pressing. Moreover, it cannot be assumed that weapons and munitions made thousands of sea and land miles away in the United States are always interchangeable in Allied calculations with weapons and munitions produced in Britain. Availability, in every sense of the word, is a factor of great importance.

When Mr Lyttelton became Minister of Production seven months ago, there were doubts about his chances

of success in gaining control and superintendence over the whole area of war production. Those doubts have not entirely gone. The policy Mr Lyttelton described last week for securing the maximum results from the resources already harnessed is indubitably the right one. The question is whether the machinery of performance is adequate to apply the policy. When Mr Lyttelton was appointed, certain limitations were set upon his authority—probably inescapably. The vast and crucial field of labour supply was excluded from his personal province and left to be decided by agreement between him and Mr Bevin. The existing machinery for the allocation of machine tools was left autonomous. An important area of Admiralty work was reserved. The allocation of raw materials was placed under a dual system; they remained under the control of the Minister of Supply, though the Minister of Production was answerable for their final apportionment. The fear was freely expressed that a Ministry of Production had been set up too late and that the structure of output organisation was too set and established for the single authority of Mr Lyttelton, imposed upon it at the eleventh hour, to be fully effective. The test of the new Ministry's performance must be, not some ideal system of central control, but results. Necessarily Mr Lyttelton has moved forward by compromises. With his wings clipped from the outset, he has only been able to walk. If the long agony of co-ordination and consultation has produced a workable procedure, though it may not be the best procedure conceivable in theory, his appointment will have been more than justified. Original doubts about his powers have not been lessened by the delays which, to the layman, have been characteristic of his work, nor by the questioning which has been provoked by various appointments made to his staff. The question to be answered now, in the practical working of the new arrangements, is whether the single control exists to make the new policy announced by Mr Lyttelton effective during the coming crucial months.

It is impossible for any observer or critic to return a categorical answer to this question. Every support and encouragement is due to the effort to make the promptest and most productive use of the nation's mobilised resources; and no predilection or prepossession should be permitted to obscure the practical tests. One test, however, after seven months, can be applied at once. In March, when Mr Lyttelton was appointed, *The Economist* said:—

Mr Lyttelton will be well advised to devote his attention first to the central planning of the production programme and to the quality of the management both in the Ministries and in industry, who will have to execute it.

The test is whether, by the activities of Mr Lyttelton's department, the flow of materials, labour, tools and orders has been so synchronised as to rule out every avoidable delay and hold-up; and whether, in the field of actual productive technique, Mr Lyttelton has asserted a sufficient degree of authority to insist upon the highest standard of management in every productive enterprise engaged on war orders, to replace bad managers—and bad civil servants—wherever they occur and to replace them by more efficient men. The outside observer is in no position to apply these tests definitively. The extent of his success in carrying productive resources and strategic requirements at the highest level of decision will be proved only by the event. But it can be said that there has been little sign so far that any really drastic policy with regard to management and administration has been possible on the part of Mr Lyttelton. And it can be added that, as in so many other branches of war policy, the results aimed at in Mr Lyttelton's newly announced plans can only be secured if there is the disposition and the determination to act as drastically in the achievement of quick, tangible results as the needs of the hour, and of the next offensive stage of the war, require.

On Guard

IN 1940, the Germans captured the Maginot Line. Now, if various commentators are to be believed, the Nazis have annexed the Maginot mind. The basis for the view that the Germans are about to fall back on the defensive is a double one. First, various statements have been made by Axis propagandists. Secondly, there are the facts: the Germans are now held in the east, in the west and in the south, and the balance of military power is turning against them. In the rate of output and in the bulk of supplies, the Allies are already superior to the Axis. In fighting skill, too, the scales have been tipped: the air-raids against Cologne, Bremen, Kiel, the Renault works and Le Creusot, together with the successes of the American Flying Fortresses, have suggested the opening of a new stage in air strategy; the defences of Britain against the reply of the Luftwaffe are immensely strong. In their bitter battle against the Russians, the Germans have incurred great losses, and, although they are almost certainly better placed, better prepared and better supplied for the eastern winter than they were last year, they still have acute problems of supply and movement to solve—problems which the failure to gain Stalingrad would make much more acute.

In his measured survey of the scene to Parliament on Wednesday, General Smuts stated the prospect at its sober best: "the defence phase is now ended. The stage is set for the last, the offensive, phase." It was Britain's glory, he said, to stand in the breach in 1940. Now, in 1942, "the appalling blood-letting which is necessary for Hitler's ultimate defeat is being administered by the Russians, and they alone can do it." The "final alignments" have been made. The resources of the United Nations, already "developed and mobilised on a very large scale," are growing. Those of the enemy are being

depleted. In the subject countries, "the spirit of unrest is moving and rising." "The situation is ripening for far-reaching developments."

But it must be doubted whether defeatism has yet dawned upon the Nazi mind. When Nazi spokesmen speak of a defensive strategy, it is time to be wary. There is little doubt that the talk of a defensive strategy—in German propaganda for overseas and not for home consumption—has been a *ballon d'essai*, designed to test Allied reactions. The belief that the Germans now intend to wait behind their battlements for the certain Allied assault is unsubstantial. Goebbels paints another picture.

There is nothing in the English claim that the Reich has turned to the defensive. We digest what we have swallowed, and the process of digestion will come to an end some time. The first thing was to break the offensive power of the Bolsheviks, and that has been partly achieved. The second thing was to establish the security of the Reich, and this has been fully achieved.

There is no such thing in strategy—except in the unbelievably unrealistic Allied strategy of 1939—as the pure defensive. The point was put by Clausewitz.

We can therefore in a defensive campaign fight offensively. . . . The defensive way in war is therefore no mere shield, but a shield formed of blows delivered with skill.

The bounds of German conquest may have been reached, but not the end of German attacks. The Nazi notion of peace and war is essentially aggressive. In it there is no room or time for defence; they must fight or fall. They weaken their potentially stronger enemies political means before they strike at them in battle. defensive rôle has up to now been imposed upon the

Allies, General Smuts pointed out in his oration, not only by "the intensive secret preparations of the enemy for six years before the war," but also

by the false sense of security he had sedulously fostered among us, and by the mood of appeasement which had thus been created.

This political offensive, begun by the Nazis in their own country from the outset of their career, is still in spate. It was the Bolshevik bogey and all its affiliated fears for property, prestige and precedence which gave the Nazis support at home and appeasement abroad. In 1941, when the decision was made to strike at Russia, the hope was high that, once again, the fear of revolution would prevail against the fear of Germany in the policy of Britain—and the United States. The hope was dashed. The alliance of the United Nations was made. Battered Russia was nourished with the offer of Allied supplies. But the hope is not dead. The Nazis know well that, if the United Nations pull their full weight together, there is no single chance of making good their promise to keep the *Herrenvolk* well supplied and secure in the European fortress. But they still hope that the political weakness of the Grand Alliance will neutralise its military strength. To the citizens of democracies there is a sharp division between politics and war. To the Nazis there is none. "War (as Clausewitz said) is only a continuation of politics by other means." The panzer spearhead of Nazi war politics is still the Bolshevik bogey. The Nazis believe that the conditions of appeasement can be recreated, that the doubts which exist between Russia and its Allies—and the clash between the "rival imperialisms" of Britain and the United States—will kill the will of the free nations of the world to pool their power against the aggressors. In a broadcast on Tuesday, Laval stated the doctrine of his Nazi masters:

Germany rose up against Bolshevism and, with all those who are fighting at her side, she is checking it and preventing it from sweeping over all Europe. . . . If Germany was beaten the Soviet Union would rule Europe to-morrow.

It is a subtle lure, and an old one. As an offensive weapon it works two ways. First, Laval everywhere swallow it hook, line and sinker. Secondly, to take only one example, the Communists in this country, surely the most maladroit and sterile politicians of modern times, show by their totally unfounded insistence that there are Laval in office in Britain holding back the Second Front that they, too, have taken the Nazi bait; they permit themselves to be tricked into playing the Nazi game of divide and rule. In the same way, the speech of Mr Cowles, of the US Office of War Information, discussed on page 511, must have given joy to Germany.

Politically, the Nazis are still on the offensive. They have failed utterly to swing the citizens of either Britain or the United States or even Europe to the side of their Russian "crusade." But hope has not gone. That is the point. The "defensive" strategy of Germany in coming

months will be bitingly offensive. Militarily, every possible offensive action to divide the Allied forces will be attempted; and the Reich is still very strong. Politically, the offensive to split Right from Left and Ally from Ally will continue.

It is in this light that the Allies should regard their obligations and responsibilities in the months to come. There can be no question of waiting for the walls of Jericho to crumble at a trumpet blast. It is the aim of Axis propagandists, by appearing Maginot-minded themselves, to restore Maginot-mindedness among the makers of Allied strategy. To implant the belief among the Allies that Germany can, and will, attack no more, would be a victory in itself. By staving off Allied action, it would give that breathing space which is so much needed for the process of digestion of which Goebbels speaks—and for recovery from the great failure in the attempt to annihilate Russian military resistance. It would break the hearts of those who resist and suffer and starve and wait in Europe; and it would frustrate and embitter the spirit of those in Britain and the United States who look to early action to embody their will to fight beside the people of Soviet Russia.

There can be no waiting for the over-ripe plum to fall. There must be action; and, above all, there must be solidarity. Whatever may be thought of the deliberately awkward Soviet agitation for the trial and punishment of Hess, it remains an important fact that Hess is a symbol. He came to Britain in 1941 to switch the war from Germany to Russia. And the Russian clamour is a token of a shrewd recognition that the Germans still hope to do by politics what they have failed to do in battle. That such a demand can be made so loudly and so widely in Russia is a sign, not only of the distresses, dreads and disappointments of the Russian people, but also of the gaps that still exist in the political and strategic planning of the Allies. It is easy to say what the task is: to deploy with the utmost strength and the utmost speed every atom of power against the enemy before his well-laid politico-military plans can do more evil; to resist every effort of the Nazis to win by propaganda or political suggestion the victories they have failed to consummate in battle; and to take as the end of every effort the aspirations of the ordinary man, which is to deal a knock-out blow against the common enemy as soon as possible.

The course for the Allies to follow [General Smuts declared] is clear. Whatever help in whatever form we can give to Russia to sustain her in her colossal effort should be given in fullest measure and with the utmost speed.

Have the right ways and means of joint planning and common action, over the length and breadth of the Grand Alliance, yet been devised. This is the vital question which is being obscured, no doubt to the great glee of Goebbels, by parrot talk about Germany's "defensive strategy" and by the gossip of chattering tongues and poison pens about "ideological" differences between the Allies.

The Burden of Taxation

THE burden of taxation is never a matter of indifference to the public, and when it is as onerous as it is to-day it becomes a subject of the greatest public importance. The more is the pity that there is so little information on the real burden of taxes. Great play is made with the burden of income tax and surtax, since they are easily calculable. But in the last complete financial year the yield of these two taxes was not much more than a quarter of the total of the compulsory levies raised from the public by the national Exchequer and by local authorities. The incidence of the other levies entirely changes the picture of the way in which the burden of taxation is distributed that is derived from looking at income taxes alone. Hitherto the most recent authoritative estimate of the burden of taxation on incomes of different sizes was that made by the Colwyn Committee in 1925-26. The new estimate, bringing the estimates up to 1941-42, made by Professor Findlay Shirras and Dr L. Rostas, under the auspices of the National Institute of Economic and Social Research,* is therefore particularly welcome, the more so since it goes into far greater detail and covers a wider scope than any previous enquiry.

The full burden of taxation is not capable of exact distribution among the incomes that bear it. Even income tax, which is simple to calculate, has its pitfalls, since such details as claims for expenses, allowances for life assurance and the like affect the result; and the incidence of some other taxes is even less calculable. But almost everyone consumes, say, tea and sugar, and the burden of these duties can be imputed without serious inaccuracy. Professor Shirras and Dr Rostas group income tax, surtax, employees' social insurance contributions, tea duty, sugar duty, and a few other small indirect duties on such things as matches, as the "unavoidable" burden of taxation, and for them they give precise estimates in a wealth of detail. Outside the "unavoidable" group, however, the certainty of estimate is much smaller. Death duties cannot be avoided by those who leave property, but their burden on income is difficult to calculate. The burden of duty per pint of beer or per pound of tobacco is known; but how many pints or pounds does the representative taxpayer consume? There are some data to work on: the total consumption is known, family budgets give some guidance, and the experience of the trades concerned is helpful. But the "estimate" is no more than a series of guesses which are consistent with each other and fit the known facts. Again, it would be misleading to give a figure for, say, the tobacco consumption of a representative taxpayer with an income of £500. It is necessary to guess at the consumption of a man who, within his means, is a heavy or a light smoker and drinker. The two chapters in which these detailed estimates are carefully worked out are among the most interesting in the book (though they do not, of course, include the heavy increases of this year's Budget). The results, as the authors emphasise, are no more than guesses; but they cannot be very far from the truth.

There are other taxes whose incidence is even harder to assess, such as the purchase tax, protective duties, taxes on public motor transport (which are passed on in the fares charged), taxes on business profits, the Post Office's profits, and local rates. In many of these cases, the authors made an attempt at an estimate; in others the task of allocation is impossible, but 82 per cent of the total tax burden of 1937-38 is tentatively allotted to the incomes that bear it. The chief omission that,

from its nature, is susceptible of estimate is the burden of local rates, but that, as the authors remark, awaits a closer knowledge of the methods of valuation.

From the theoretical point of view, much the most interesting chapter in the book is that which deals with the burden on income of death duties. Past inquiries, including that of the Colwyn Committee, estimated the burden of death duties by the simple method of stating the cost of taking out a life insurance policy sufficient to cover the duties and leave the capital intact. But when this method is applied to the present rates of taxation it gives fantastic results, running up to figures in excess of 100 per cent for the largest incomes. Now to say that a rich man pays in taxes more than 100 per cent of his income is to imply that he (or his heirs) would be better off if he had less property—which is patently absurd. The authors were therefore under the necessity of finding some other method of estimating the burden of death duties, and they have adopted a method devised by Mr Nicholas Kaldor (who contributes part of the chapter). Mr Kaldor points out that the burden of death duties on a given property income depends, not only on the value of the property now, but also on how much of the income from it is saved between now and the time of death. The insurance method makes one assumption—namely, that everyone saves enough, but only just enough, to keep his capital intact—and leads straight to the ridiculous result that a rich man is presumed to be willing to draw on his capital in order to keep his capital intact. The problem is therefore to make reasonable assumptions about the volume of saving done by those liable to death duties. No one assumption is valid, and Mr Kaldor therefore makes two. The first is that there is no net saving at all, which gives a minimum estimate of the burden of death duties. The second is that saving is done to exactly such an extent as will, over time, provide the maximum income from the property. For the details of these statistical ingenuities, the reader must be referred to the book.

It is quite impossible within the compass of a single article to give more than the briefest examples of the results of the enquiry. These are contained in the tables printed herewith, all of which are summaries of much more detailed tables in the book itself, which will serve as a most valuable source of reference for all manner of information relating to the rates and burden of taxes and to the consumption of dutiable articles. But the extracts here given, together with the chart, are enough to illustrate the main conclusions that emerge. The first is almost too obvious to state: the present burden of taxation is very much heavier, on all classes of income, than ever before. It is, for example, distinctly higher than at the end of 1918-19; for the lower and middle incomes (those up to £2,000) the burden is, at most levels, about twice what it then was.

The other main conclusion is that the British system of taxation has been getting noticeably more equitable. The test of an equitable taxation system is, of course, whether it is progressive—that is, whether the proportion of income taken in tax rises steadily as income rises. On the chart, a progressive burden would be represented by a line that rose steadily from left to right. It will be seen that the taxes of 1913-14 were not at all progressive; the line is almost horizontal. During the last war and the years of readjustment up to 1925-26 taxes were increased on all incomes; but the increase was inequitable, and the man with £100 actually paid twice the proportion of his income in taxes that the man of £500 a year did. This inequity was not substantially altered (except towards the top end of the scale) on the eve of the present war. But wartime taxes have gone a long way towards correcting it. It is true

* "The Burden of British Taxation." By G. Findlay Shirras and L. Rostas. The National Institute of Economic and Social Research Studies No. 2. Cambridge University Press. 240 pages. 15s. net.

that the line still dips, instead of rising, in the lower incomes and that the £100 taxpayer still pays as high a proportion of his income (though no longer twice as high) as the £500 taxpayer. But the married man with three children and an income of only £100 a year is now, it must be hoped, a very rare bird and, where he exists, must draw substantial extra benefit from the

expenditure of the state (which is nowhere included in these estimates). From £200 a year (or a little more) upwards, the present tax curve is progressive and in the upper reaches it is confiscatory. Whatever else may be its defects, substantial equity has been achieved. This is not the least of the social triumphs of the war; and it is one that should be retained when the war is over.

I.—BURDEN OF UNAVOIDABLE TAXES

Income	Fully Earned Income. Married Man with Two Children					
	1937-38			1941-42

(a) Negligible.

II.—TOTAL BURDEN OF TAXATION

Note.—The following two tables take account of all taxes whose incidence can be distributed between individual incomes. They assume a consumption of alcohol and tobacco which is moderate for each income, and also, where appropriate, a moderate amount of private motoring. The taxpayer is assumed to be married and to have two dependent children.

(a) Earned Incomes

Income	1937-38				1941-42			
	Un-avoidable Taxes	Tobacco and Alcohol	Other Taxes	Total	Un-avoidable Taxes	Tobacco and Alcohol	Other Taxes	Total
£ 100	5.6	8.0	4.3	17.9	7.5	15.0	4.9	27.4
150	4.0	7.4	5.0	16.4	5.3	13.5	5.2	24.0
200	3.1	6.5	5.6	15.2	4.0	12.1	5.4	21.5
250	2.6	5.9	5.4	13.9	3.2	11.2	5.2	19.6
300	2.1	5.5	5.4	13.0	2.6	10.1	5.1	17.8
350	1.9	5.1	5.3	12.3	2.3	9.6	5.1	17.0
400	1.7	4.8	5.3	11.8	2.1	9.1	5.1	16.3
500	1.5	4.4	5.3	11.2	1.9	8.6	5.1	15.6
1,000	10.6	2.4	6.3	19.3	30.4	2.6	4.4	46.0
2,000	16.5	2.0	5.0	23.5	43.2	2.2	3.9	49.3
5,000	28.3	1.8	4.3	34.4	55.2	1.3	2.5	59.0
10,000	38.5	1.0	3.1	42.6	67.9	0.6	1.6	70.1
20,000	47.6	0.3	1.6	49.5	80.5	0.3	0.9	81.7
50,000	56.6	0.1	1.0	57.7	90.7	0.1	0.5	91.3

(b) Investment Incomes

Note.—The difference in the burden of taxation on earned and investment incomes lies in the burden of income taxes. The figures for indirect taxes are consequently the same as in the table above. The divergence between "minimum" and "maximum" estimates arises from the method of calculating the burden of death duties.

Income	Total Burden of Taxes, 1937-38		Total Burden of Taxes, 1941-42	
	Assuming the Minimum Estimate for Death Duties	Assuming the Maximum Estimate for Death Duties	Assuming the Minimum Estimate for Death Duties	Assuming the Maximum Estimate for Death Duties
£ 100	16.4	16.5	25.3	25.4
150	16.1	16.2	23.4	23.5
200	15.5	16.0	21.3	21.8
250	15.0	15.1	21.3	22.2
300	14.4	14.7	21.3	22.9
350	14.7	15.1	21.3	23.1
400	14.7	15.1	21.3	23.1
500	14.7	15.1	21.3	23.1
1,000	27.6	31.1	37.1	47.4
2,000	31.9	38.2	47.4	53.4
5,000	33.3	41.0	55.8	63.8
10,000	39.4	52.0	63.7	75.4
20,000	47.2	66.7	73.5	79.4
50,000	55.2	70.4	83.2	86.4
	63.2	69.6	91.3	93.6

III.—NET INCOME AFTER ALL TAXES

Note.—This table shows, for a married man with two children, the amount of his gross income left after direct and indirect taxation in 1937-38 and in 1941-42, both in the case of earned income and investment income.

Income	Fully-Earned Incomes		Fully Investment Incomes	
	1937-38	1941-42	1937-38	1941-42
£	£	£	£ (a) (b)	£ (a) (b)
100	82	72	84-84	75-75
150	126	114	126-126	116-116
200	170	156	170-170	158-158
250	215	200	213-213	198-198
300	264	237	258-258	225-225
350	311	266	303-303	252-252
400	345	345	400-390	315-300
500	430	600	720-690	530-470
1,000	1,520	1,080	1,360-1,240	940-720
2,000	1,875	1,275	1,680-1,480	1,100-780
5,000	3,350	2,050	3,050-2,400	1,800-1,250
10,000	5,900	3,000	4,300-3,300	2,700-2,100
20,000	10,000	3,600	9,000-6,000	3,400-2,800
50,000	21,000	4,500	18,500-15,000	4,000-3,000

(a) Minimum estimate for Death Duties.

(b) Maximum estimate for Death Duties.

IV.—THE RISE IN TAXATION

Note.—In the next table the total of direct and indirect taxation (omitting certain small items) is shown as a percentage of gross income (fully earned) in respect of a married man with three children, for selected years from 1903-04. It gives a broad picture of the rise in taxation since the beginning of the present century, at various income limits.

For incomes up to £2,000 the rise in the burden of taxation on earned incomes is illustrated in the following chart.

BURDEN OF TAXATION ON SMALL AND MIDDLE INCOMES
(Husband, Wife and three Children. Fully earned Income)

DIRECT AND INDIRECT TAXATION FROM 1903-04 TO 1941-42

Income	1903-04	1913-14	1918-19	1923-24	1925-26	1930-31	1937-38	1941-42

NOTES OF THE WEEK

The Battle of the Red Barricade

The army which used to overrun whole European countries in a few weeks has spent the past week in storming single blocks of flats and factory sheds at Stalingrad. The Red October and the Red Barricade plants have become prizes of almost as great an importance for the Fuehrer's GHQ as Paris or Brussels were two years ago. Hitler has staked his prestige on the outcome of the Stalingrad fighting. His promise to capture the town has now to be redeemed at any cost. But, besides Hitler's prestige, there is a more material issue involved in the battle. The problem with which both the Russians and the Germans are now confronted is where the front line in the south is going to be set for the winter; and it is on the delays in the Stalingrad fighting that the solution of this problem hinges. Should Stalingrad fall within the next few days, the Germans might still have time enough to organise their winter front on a line running south from Stalingrad along the Ergeni hills, if not along the lower Volga. They might also be able to bring the battle for the north-eastern Caucasus to a conclusion, and thus secure for themselves an almost impregnable defence line for the winter. A further prolongation of the battle of Stalingrad would almost certainly deprive them of this chance. The main defence line would then have to be established somewhere to the west of Stalingrad; and a local Russian counter-offensive might well succeed in pressing it back to the Don and to Rostov—a rather unpleasant prospect for the Germans after their costly advance from the Don to the Volga.

Winter and Morale

The climatic conditions of the Volga region and of the Northern Caucasus forbid large-scale moves no less than do the severe frosts of Northern Russia. Towards the end of November Hitler's armies will have to take up their winter quarters. The question is how will a second Russian winter affect his soldiers? That their morale was near the cracking point last winter Hitler himself has admitted. That the strain will be very great this winter, too, is certain. But it would be unwise to place exaggerated hopes on this. The *Wehrmacht* will probably be able to stand the second Russian winter better than it stood the first one. It has gained some costly but valuable experience in making itself frost-proof. The Todt organisation has made a tremendous effort to make the conditions of hibernation as tolerable as possible. Transport facilities in the occupied Russian territories will, no doubt, be better organised than they were last year, though the communication lines in the south have been dangerously lengthened in the meantime. Yet another advantage which the Germans enjoy is the fuel base of the Donbass situated conveniently near to the front line. Probably the technicians of the Todt organisation have by now restored some of the damaged pits, and it would not be surprising if they succeeded in getting out of this mining area, which used to supply the whole of European Russia, enough fuel to heat the dug-outs, huts and barracks of the invading army. The Russian armies, unfortunately, cannot hope for coal supplies. General Winter will not, at any rate, take the Germans by surprise this time, as he did last year—though valiant Russian guerillas may. The conclusion from all this is that it would be unwise to expect any decisive break in the morale of the German forces in the east. In fact, the morale of the German home front may well be more vulnerable than that of the front line this winter, if the season is used for intensive and unrelenting bombardment.

Post-war Lend-Lease

One of the oddities about current discussion is the anxiety which even the best-equipped minds display to find simple, painless escapes from economic realities. One example is the tendency to say, after having discovered master, that finance does not matter at all. Another is the disposition which several people show to treat the problems

of post-war trade in the same easy-going way. It is the old search for a nostrum, a philosopher's stone, a Gyges ring—mapped out with all the subtlety of able dialecticians. The occasion of the visit to this country of Mr Henry Morgenthau, secretary to the US Treasury, is being taken to restate the argument which has now become familiar, namely, that the problems of world trade after the war can be neatly and finally solved simply by applying to world trade the principles of Lend-Lease. In two senses, of course, this is a truism. In the first place, immediately after the war is over, there will be many countries in need of relief, support and supplies, which will be in no position for a considerable period to pay for these things by the normal processes of exchange. They will be in precisely the same position as the belligerent who cannot, at one and the same time, export and make war. It has already been made plain by the United States that Lend-Lease will be a main instrument of this relief variety of reconstruction. Secondly, it is true that, even after the processes of world trade have been restored, the only hope for a continually expanding commerce between the nations will be an agreement between them not to permit short-term financial considerations to impede either the establishment of full employment in each separate country, or of full trade among all the nations. This does not mean, however, that the various countries of the world will become, or can possibly become, the permanent pensioners of the United States. It means rather, as Mr Stettinius, US Lend-Lease administrator, put it the other day, that the Lend-Lease partnership must be continued after the war in order to contrive by international agreement "the institutions which will turn the processes of reconstruction into the processes of international trade." General Smuts put it neatly in his speech on Wednesday.

We have accepted the principle of international help underlying the Mutual Aid Agreement. The helping hand in international life is thus already a matter of practical politics and could be suitably extended after the war. The conception of "the United Nations," he declared, is a new conception "much in advance of the old concept of a League of Nations." On its basis, "practical machinery for the functioning of an international order" can be built. After the war, Lend-Lease, after the period of relief to ravaged and exhausted countries, will mean, first, international co-operation; and, secondly, as President Roosevelt said recently, the establishment of "stable exchange relationships and liberal principles of commerce." These are the basic points.

The Principles of Trade

A week or so ago, Mr Harry Hawkins, of the US State Department, pointed out that if the United States were to insist on repayment under Lend-Lease either in cash or in kind, it might "ruin its best customer, at a time when it would need as never before prosperous foreign markets." Mr Hawkins was not, by this, envisaging a future in which the United States would continuously and permanently make free gifts to the rest of the world. He was merely pointing out that war debts differ from the debts which arise from the normal processes of investment and trade in so far as they do not beget goods and services by which the obligations which they represent can be discharged. In its war aspect, Lend-Lease may indeed never be repaid in full; in fact, the principle of equal sacrifice, which President Roosevelt has laid down as the basis for striking the final account, would leave a very much smaller balance due from, say, this country or China than the mere figures of aid given and received would suggest. Similarly, the relief work which will be done under Lend-Lease after the war may require the same sort of adjustment of obligations incurred to the ability to pay. But, in its final form, Lend-Lease will surely merge into the regular procedure of world development by long-term world investment, with its obligations being discharged as the fruits of investment appear. In their search for a short cut, too many people run the risk of forgetting that the determinants of regularity, prosperity and progress in world economic relationships will remain, after the war as before, the free movements of goods and capital and the stability of international exchanges.

Achievement

When he moved the supplementary vote of credit in the House of Commons on Tuesday, the Chancellor of the Exchequer was rightly pleased with the state of this country's war finances. In the earlier stages of the war, there was a chronic tendency, which persisted far too long, to underestimate the increases in the rate of war expenditure which the progress of mobilisation for total war would necessitate. This period has ended. The estimates for 1942-43, both of expenditure and of revenue, are likely to be proved roughly right. Indeed, there is some likelihood that it will be not expenditure but revenue which has been underestimated this time. Broadly, the country's resources are now fully mobilised—though greater efficiency in organisation and technique may still step up output considerably—which means that the rate of war expenditure now tends to run at a steady pace from month to month without striking increases. Sir Kingsley Wood compared the figures of finance for the first three years of this war and the last one; that is, he set the figures for 1939-42 against those for 1914-17. The results of such a comparison, as was pointed out in *The Economist* a short time ago, are remarkable. Expenditure in 1939-42 was two and a-half times as great as expenditure in 1914-17; the yield of taxation was four times as large, taxes representing two-fifths of expenditure in the first three years of this war against barely one-fifth in the first three years of the last war. Moreover, in bridging the difference between expenditure and revenue, the superior achievements of this war are equally outstanding. In 1914-1917, the small investor contributed something like £200 millions to Government loans; in 1939-42, the small investor lent £1,500 millions. In addition, Sir Kingsley Wood pointed out that, while the average rate of interest on the increase in Government indebtedness between 1914 and 1927 was five per cent, the figure for 1939-42 was only two and a-half per cent. To some people, of course, these notable figures mean little or nothing. There is a school of thought which believes that the physical controls by means of which the state appropriates resources for its own purposes and denies them to civilians are so comprehensive and effective in this war that finance does not matter.

All Clear?

It is, of course, perfectly true that—in spite of the fact that even the relatively successful methods of financing which have been adopted in this war have left a gap between expenditure, on the one hand, and revenue plus genuine savings, on the other—there have been few inflationary consequences so far. That is to say, price control (with its concomitant of subsidies to keep prices down), wide rationing and the limitation of supplies have prevented the scramble for goods which is the signal for inflation. It would be a rash man, however, who would seriously argue either that inflation, actual or potential, has been entirely avoided or that the situation may not change sharply if there is any further appreciable increase in excess purchasing power. The logical argument of the "realists," carried to its ultimate end, implies, not only that there is no need for fresh taxes or further savings to mop up in excess incomes, but also that there is little or no need, because of the success of the physical devices of control, for the taxes and savings which already exist. This cannot surely be meant. Moreover, there is a point, if earnings are permitted to rise greatly in the next months, where the pressure upon costs represented by this piling up of labour charges cannot be prevented from progressively puncturing the present price ceilings—when not even a drastic policy of subsidy could preserve the present price structure. A combination of physical and financial devices has so far enabled the nation's resources to be fully mobilised without any drastic and inequitable alterations in the value of money; but Sir Kingsley Wood cannot take it for granted that this gratifying state of affairs will continue indefinitely and in any circumstances. There are already signs, seen on the fringe of unrationed goods and services, of an inflationary scramble; and that fringe is by no means so unimportant as some people would suggest. It includes, not only a great range of pernicious black and grey markets, but also the wide and important fields of public entertainment, public travel, fuel, land and even stocks and shares; here is the material for social friction, inequity and discontent. If the argument of the "realists" is taken at its face value, a primrose trip would be begun which might conceivably end, quite suddenly, in a widening fear among the public for the

stability of the currency and a much more dangerous flight into real goods than has yet been even suggested.

Collective Bargaining

During the debate on the Vote of Credit in the House of Commons on Wednesday, several speakers drew attention to the danger of an uncontrolled upward movement in wage rates. Mr Summers, definitely overstating his case, said that the floodgates had been opened and that the very stability of the wage structure was in doubt. Other speakers took the opposite view; Mr Clement Davies stated unhesitatingly that the present danger of inflation would disappear if rationing were complete. But the general feeling of MPs was one of anxiety about a policy of drift. In his reply to criticisms, Mr Bevin, Minister of Labour, strongly defended the system of collective bargaining, buttressed by arbitration in case of disagreement between trade unions and employers. No unprejudiced person can disagree with the Minister's claim that the present system has served the country well. Production per man-hour has increased. Shipbuilders on the Clyde and the Tyne are giving double the output per man of those in the United States. No doubt the yield of war equipment per man is influenced by earnings, and the remarkable results achieved in British war factories are not unconnected with the steady rise in wages. The processes of collective bargaining have so far been peaceful and effective, and there is much to be said for their preservation, but only so long as the upward movement in wages is held in check—and so long as the incipient trend towards more strikes is arrested. If wage claims were allowed to deteriorate into a general scramble they would defeat their own objects. The dangers of such a scramble are well known to the Government; they were fully set out in the White Paper on Price Stabilisation and Industrial Policy issued by the Government in the summer of last year. But, in the absence of Government control of wages, which would be difficult to introduce and operate now, the trade unions alone can impose that measure of restraint upon demands for wage increases which is essential to the maintenance of an efficient system of collective bargaining. The time has come for the trade unions, in agreement with the Government, to formulate and announce a policy.

Darkest Africa

Official quarters in Washington have kept very dark about movements in Liberia, and it was left to Reuter's correspondent to make the announcement that American troops had landed at Monrovia, the capital of the negro republic, last Saturday. The name of President Roosevelt's representative has not been disclosed, nor has the subject-matter of his discussions with President Barclay. To make up for Allied reticence, Axis spokesmen have been indulging in an orgy of speculation about the significance of the landing and about possible developments in Africa—not impossibly as an overture to their own moves

in these parts. The Vichy press and radio reflect alarm about the threat alleged to be presented to Dakar, hinting that participation by the United States in any offensive directed against the French Empire might lead to a rupture of diplomatic relations. The Governor-General of Dakar has declared that the port needs no outside help for its defence; but the paper *Aujourd'hui* reveals that the Vichy Government last April refused an offer of assistance from the Japanese in the defence of Madagascar with disastrous results and warns against a similar fate overtaking Dakar. The German radio comments on the coincidence of Admiral Darlan's visit to Algiers "at a time when the landing of US troops in Liberia has made defensive measures by the French military command necessary." A glance at the map, however, should suffice to show that there are far more favourable jumping boards for an attack on Dakar in the British colonies of Gambia and Sierra Leone than Liberia, which is nearly 700 miles away as the crow flies. It is reasonable to suppose that the landing is in the main a precautionary measure, designed to safeguard the vital Cape route. There have been reports of increasing U-boat activities in the Cape Palmas area, and the long undefended sandy coastline of Liberia offers admirable facilities for submarines. Moreover, Monrovia is one of the nearest points in Africa to South America, its distance from Brazil being only 50 miles longer than that from Dakar.

French Labour

Laval has made a last attempt to honour his bargain with Germany about French labour. In a broadcast on Tuesday, he openly admitted that the only alternative to the "voluntary" recruitment of workers for Germany is the application of the Sauckel decree to occupied France. He asked the French to share his admiration for the German generosity which has allowed him, Laval, to substitute his own press gangs for the German ones. Faced with the failure of the whole deal, Sauckel and Laval have resorted to cunning. They now try to make the wives of the prisoners assist the press gang. The Fuehrer has consented to allow French women to join their prisoner-husbands in Germany and to work there, provided the required number of French workers are supplied. Thus the women of France are to drive the workers into the trap, before they themselves fall into it. The trick is much too transparent to succeed. Laval, therefore, evokes the "higher interests" of France. He states that the peace conditions which Germany will impose on France will depend on the contribution of French labour to the "new order." But he has the difficult task of dispelling the open scepticism of his people about Germany's chances of winning the war and dictating the peace. The bogey of Bolshevism, which Laval flaunted, can hardly impress or frighten the metal workers of the Parisian *ceinture rouge*. The Germans themselves do not seem to place much reliance on the effectiveness of Laval's appeals, threats and flatteries; and the labour census which is now being taken in Occupied France is obviously meant as a preliminary step to the application of the Sauckel decree. The resistance of the French workers has, in the meantime, grown into a strike movement. The position is very tense. Much political explosive stuff has been accumulated; and the great problem of the French underground movements now is how to combine effective resistance with the avoidance of a premature outburst.

Bread and Milk

The season of comparative abundance is over, and the lean period is beginning, in which Lord Woolton prophesied some weeks ago that big changes in the nation's diet would occur. The changes announced this week seem innocuous enough. At long last it has been decided to save shipping space on bread grain by adding home-produced flour to wheat flour. Advantage has been taken of the good oats and barley crops to add small proportions of oat and barley flour to the national loaf, which will improve its appearance, according to Lord Woolton, but not alter its taste. Potato flour is still being experimented with, and when its quality and quantity are approved, it will be used as well. Lord Woolton is possibly being too kind in altering the national loaf; the step is long overdue and ought not to have waited upon the susceptibilities of the national digestion—or upon the no less tender susceptibilities of millers and bakers. Moreover, it may still be desirable that bread should be rationed—not to cut down consumption, for the ration could be ample for even big bread eaters—but to prevent waste. The waste of bread in private households is bad enough, but in restaurants it is worse; and the time has surely come for an end to be

made to the almost automatic grant of a roll with a meal. Lord Woolton's other main announcement this week was disappointing. From Sunday, the allowance of liquid milk to non-priority consumers will be reduced from 3 pints to 2½ pints a week, and a further fall to 2 pints is likely later on. Since the first cuts have come even earlier than last year, when the non-priority ration in the winter months was also only 2 pints a week, it is difficult to square this announcement with Lord Woolton's previous statements, made quite recently, that there should be more winter milk this year than last. It looks as if once again there has been some conflict between the Ministry of Agriculture and the Ministry of Food. Moreover, in view of the great importance of liquid milk as a food, the Ministry of Food's decision to continue manufacturing a certain amount for the time being may not be wise, especially since many people are not taking up their full cheese ration. It should not be forgotten that the Committee on tuberculosis declared that the adult population was inadequately supplied with liquid milk last winter. What the nation requires is less bread and more milk.

Necessary Journeys

The vital importance of road passenger transport to the war effort is stressed in the latest report of the Select Committee on National Expenditure. It finds that transport facilities still fall far short of requirements, and gives the warning that any further reduction of services, in the interests of petrol and tyre economy, may have adverse effects on industrial production. The problem is how to achieve maximum economy in fuel and rubber—especially rubber—while at the same time maintaining the efficiency of road transport services. The Committee reports a definite shortage of vehicles; the industry has received only 1,100-1,200 double-decker buses during the first three years of war instead of the normal increment of 5,000 a year. The position in regard to spare parts has eased, and the chief difficulty is shortage of labour and the very high rate of absenteeism (which in some districts amounted to 30 per cent during the winter months) among conductresses. The Committee recommends that the Minister of Labour should make more use of his powers to direct women into the industry; that more women should be trained for the maintenance grades; that part-time workers should be introduced; and that facilities should be given for women to do their shopping. In addition to the now familiar reasons for absenteeism among married women, such as domestic ties, shopping difficulties, lack of nurseries, the problem is accentuated in an occupation like bus conducting, where the work involves constant physical and nervous strain, and where welfare arrangements are difficult to organise. Much more could undoubtedly be done in many districts in the way of providing canteens and rest-room facilities, an aspect which the report ignores. Among the remedies recommended the staggering of factory hours, a system to be worked out for each locality by the local Transport Control areas; the earlier closing of shops; and greater use of railway facilities where suitable. Measures should be taken to eliminate unnecessary cross-travelling and to prevent the anomaly whereby Birmingham workers travel to Wolverhampton and *vice versa*; the Committee suggests that the Ministry of Labour should investigate the position and, wherever possible, direct workers to employment near their homes. It is a matter which might very well be taken up by the Regional Production Boards. Mr Lyttelton's recently stated plans to take work to the workers rather than *vice versa* are, for this among other reasons wise and prudent.

Belgian Resistance

Comparatively little is heard about conditions in Belgium, where the movement of resistance to the Nazi occupation, if not so spectacular as in France or Norway, is vigorous and growing in volume among all sections of the population. The Belgians experienced life under foreign domination in the last war and have a deep-rooted hatred of the Germans. The Catholic Church, although not persecuted to the same extent as the Church in Norway, is making a firm stand against the attacks by the authorities on religious freedom. The Archbishop of Malines recently declared: "It is a duty to resist oppression," and he is supported in his attitude by Canon Cardijn, founder of the Jocist (Young Catholic Workers) movement, who has now been arrested and interned. There are reports of increasing acts of sabotage and terrorism, and of open

opposition among the workers to being forced to work in Germany, where it is estimated that some 300,000 have been sent. "Go slow" tactics are being adopted in industry and some 60 illegal newspapers circulate throughout the country. The majority of the employers, too, are refusing to collaborate—seven prominent industrialists recently declined to send their technical personnel and employees to Krupp's works in Essen; and many employers have been heavily fined for refusing to supply the authorities with lists of their workers. The UTMI (*Union de travailleurs manuels et intellectuels*), the corporate trade union founded by Henri de Man, is boycotted by employers and workers alike. M. Delfosse, Minister of Propaganda and Justice to the Belgian Government, who escaped the other day, estimated that not more than 5 per cent of the population were collaborating with the Nazis. But it seems that even this minority of Rexist and Flemish Nationalists are growing disillusioned and the former Rexist leader Degrelle has been discredited and sent to the eastern front. M. Delfosse struck the same note as Sir Samuel Hoare recently in appealing for the utmost speed on the part of the Allies in rendering assistance to Belgium, in view of the desperate economic situation and food shortage which must inevitably undermine the capacity to resist.

Bygones?

Mr Bevin, like Mr Morrison, is often accused, by his friends as well as by his enemies, of having a blind spot in his views on Communists. Indeed, the allegation has been made against both these leading Labour figures, not only that their hostile regard for the extreme Left is detrimental to Labour unity, but also that it is detrimental to the war effort, since the Communists now favour the continuing of the struggle against the Axis. This is most unfair; and Mr Bevin's outburst last week, when he stated that he would never forgive those people who worked, agitated and plotted against the British war effort in the hours of Britain's greatest danger, was timely. The association of the Communists and their kindred with the war effort at the present time is welcome and useful. But it does not conceal the facts of 1939 and 1940, when the war was regarded by them as an "imperialist" war, and their policy was peace by appeasing the aggressor. They have an explanation of Russia's policy during these years which fits in very badly with their own conduct. Russia's pact with Germany and the occupation of the Baltic States and parts of Poland is interpreted in this argument, which is not unconvincing, as the necessary strategic preliminary to the assault which Hitler was bound to make upon the Soviet Union when the occasion arose. But, if Hitler's assault was certain, then it was equally certain that one of Russia's main props and stays when the attack came would be the friendship, support, assistance and alliance of the democracies; and it was to Russia's advantage to remain at peace as long as possible; it was equally to Russia's advantage that the western belligerents, who were fighting the Nazis then with no Second Front, should become as strong and as militant as possible. Deliberately to weaken them, as the Communists set out to do, was sabotage, not only against the interests and security of Britain, but also against the intimate interests of the Soviet Union itself. It surely behoved those people who are now calling most loudly for a Second Front to make certain in the years that went before that the material and psychological means for this Second Front were in active preparation on the utmost scale and at the utmost pace possible. It is not easy to forget these things when the accusation is being made at this moment in Communist circles that the war effort and the Second Front are now being sabotaged by certain mysterious appeasers of the Right who, it is claimed—without the submission of any evidence at all—are still lurking in Government office.

Financial Manpower

The report of the Kennett Committee on manpower in banking and insurance businesses makes several practical recommendations to secure the release of labour from these occupations. The Committee admits that the fruits of its labours must, in terms of men freed for service in the armed forces, be small. The sub-committee dealing with banking and allied businesses recommends the further closing down of bank branches and the elimination of some of the refinements of service rendered to bank customers (including a 2.30 p.m. closing hour for the

public throughout the year), and makes a number of technical suggestions about increased mechanisation, centralised bookkeeping and the pooling of staffs at large branches and headquarters. These recommendations may release some 500 men of military age now employed by the clearing banks and 125 by the Scottish banks. These institutions, it is proposed, should be immediately required to operate with 90 per cent of their pre-war staffs and to reduce the proportion to 85 per cent by next March. The Stock Exchange, where the numbers employed have fallen during the war from 14,000 to 6,052, of whom only 282 are men whose calling up has been deferred, is not expected to do much more. In its references to the insurance industry, the main point made by the Committee is that too much staff is still engaged in the search for new business, or in inducing business to be transferred from one office to another. It recommends that, over and above the self-denying ordinance by which many insurance firms discourage competition for business, means should be found to prevent the transfer of business from one insurer to another, except where adequate justification can be advanced. Throughout the report, stress is placed on the need for a regular review of deferments. It now remains for the industries concerned to give the recommendations of the committee practical expression. Many of the recommendations, though they come from outside, will be found to be practical and to reveal short cuts to labour economy. The actual number of men who may be released as a result of the enquiry is small. But the enquiry may well be found to have been very worth while.

Shorter Notes

The issue in the Solomon Islands still hangs in the balance. Last week, the Japanese effected a landing at Guadalcanar, succeeding, despite heavy losses inflicted by American naval forces, in bringing up substantial reinforcements. The Japanese bombarded American positions from the sea; and Americans have since bombarded enemy positions from both the sea and the air. As Colonel Knox, Navy Secretary, reminded a press conference in Washington on Tuesday, it seems that the Japanese have not yet made use of their maximum force in the Solomons fighting. In New Guinea, it remains to be seen whether the Japanese have been adopting a strategy of *reculer pour mieux sauter* or whether their retreat is, as it may well be, an admission of failure in this particular sector.

In a Note called "The Hidden Hand" which appeared on page 477 of *The Economist* last week, the Motor Agents Association was inadvertently referred to as the Motor Trades Association. Actually, the Motor Trade (not Trades) Association is a manufacturers' organisation and quite different from the Motor Agents Association, which claims to be "the representative trade association of the motor vehicle retail and repairing trade throughout Great Britain and Northern Ireland." The burden of the Motor Agents Association's complaint, which was discussed in last week's Note, is the way in which single motor manufacturers load their accredited agents with oppressive selling conditions.

AMERICAN SURVEY

The Manpower Squeeze

(From Our Washington Correspondent)

October 3rd

THE bitterness of the antagonism of the commercial farm group against labour over the last few years has been compounded of a number of factors. One is the long-term trend by which urban America, over the decades, has come to outweigh rural America. During the last war, the Hamiltonians edged Jeffersonians off the road. To-day, there are not only about six city dwellers for every four countrymen; but, also, because the farms serve as the nurseries of the nation, and its place of retirement, there have been four city members of the nation's labour force in recent years to every one on the farm. These figures are basic to the exchange of courtesies in which the city man calls the farmer a hick and the farmer calls the city man a slicker.

The hick's feeling toward the slicker has been exacerbated as high mechanisation and trade unionism have combined to increase the return city workers get for their labour, and legislation has put a floor under wages and a ceiling on hours; the hick knows at first-hand that the sky is the limit to hours on farms. And this feeling has been fed by city conservatives playing for rural political support. It is worth noting that a number of the more vociferous labour-baiting members of Congress come from agricultural districts where industry is conspicuous by its absence, but where manufacturers' associations keep in close touch with the political machines.

The city's siphoning-off of the more vigorous members of the rural community at their most productive age has in normal years been a process of gravitation. But since war production has got under way, farm youngsters have been sucked out as if by an hydraulic pump. And now the reservoir is running dry. Voluntary enlistments and inducements under the draft are part of the story; a part that, since it is not a competitive matter, is recognised but not felt. The part that is felt is the competitive attraction of the wages at war plants. Farmers feed each other on accounts such as that carried by the current issue of *Cow Country*, official bulletin of the Wyoming Stock Growers' Association:

The following editorial from the *Denver Post* touches the most difficult problem now confronting farmers and stockmen: "Riding to Washington on a train, I met a man who was foreman in an Ohio defence plant. He stated he had twenty-three men working under him, all earning \$90 to \$130 a week on work that could be learned by any person in one day, and which could be done by women. Yet all of them enjoyed an occupational deferred classification."—Congressman Jonkman, of Michigan.

One of the most serious problems confronting this country is a farm labour shortage. It already is so acute that warnings of the danger of food shortages next year are being issued. Former Governor Lowden, of Illinois, who is recognised as one of the leading agricultural authorities, says, "there is a growing scarcity of labour in all branches of agriculture," and declares that "unless something is done to stop this draft of experienced farmers from the farm, I fear not only a food shortage, but in all probability a food famine." In both houses of Congress, investigations are being launched in hope of correcting the situation before it gets beyond control.

The farm labour shortage is the direct and inevitable result of administration war policies. Both the army and war industries have been stripping the farms of their manpower. Farm operators and farm workers have been drafted into the military service without any regard for the effect such a policy would have upon agricultural production. Such fancy wages have been offered in defence and war industries that farmers have been unable to compete with them.

But the city also has its sorrows over being short-handed. The limitations on the output of war goods which kept last month's production, as Donald Nelson recently announced, 14 per cent below schedule were in considerable part shortages in materials, and by early winter, in spite of the fact that many factories have been hoarding labour

(that is, padding their work force so as to have men on hand as operations expand), the pinch may have shifted to shortages of men. Or, rather, to the training and employment of women. Ordinarily, more than four-fifths of the male population, 14 years of age and over, are in the labour market, but only one-fourth of the female population. The gap between these proportions is likely to be greatly narrowed in the months immediately ahead. Over the past year, the number of women in the labour force has increased by 1,100,000, while the number of men has decreased by 1,300,000. The Bureau of the Census estimates that the country's total labour force in August of this year (excluding persons in institutions and in the armed forces) was 56.2 millions. Of this total, 54 millions were employed, 39.7 million men and 14.3 million women.

The Distaff Side

A memorandum of the Work Projects Administration, issued in April, underscores the extent to which future additions to the country's labour force must come from the distaff side. According to its figures, the country had last spring a labour reserve of 7.6 million persons, over 14 years of age, and not in the labour market at the time, but available for full-time work if a job opened up in their community within 30 days. Of this group, 6.5 million were housewives and half a million students. The great majority of this reserve would have to be trained—2.2 millions were entirely inexperienced, and of those who had worked at one time or another not far short of half had been out of the labour market for at least five years.

Surveys of work which women can do, and are doing, have been made by various agencies: the Manpower Mobilisation Committee has estimated that 80 per cent of the jobs—937 occupations—in 21 industries can be so handled. The Department of Labour's survey of the aircraft industry shows that women

are now scattered through many departments as operators in the machine shop; fabricating and forming sheet metal; doing detailed and precision assembly in electrical, radio, instrument, tubing and cable departments; building up minor and major assemblies of control surfaces for the wings, fuselage, empennage and final assembly welding; working with plywood, fabrics, and sound-proofing; working in tool and storerooms, and as part of the planning, clerical and messenger service.

In many cases, women are already being hired untrained, and given on-the-job instruction later.

A comparable training problem exists with regard to the student group which provides a large temporary labour reserve during the summer months (of particular interest to farmers), and makes a large annual permanent addition to the labour force—1.4 million in 1941.

The tighter the manpower squeeze becomes, the greater the pressure that will be exerted for Government direction to ensure its best use. Will concentrations of non-war industry increasingly take the form of shut-downs to release men for other effort? Will the categories of deferment under the draft, in respect to farm workers, for instance, be changed to provide occupational balance among war goals? Will workers be frozen in their present jobs to prevent pirating? Recent action of the War Manpower Commission in directing lumbermen and miners in certain areas to stay where they were is perhaps an opening wedge in this direction. Will workers be directed to move from areas of the country where there is little war work to areas where workers are needed? New York, for instance, is an area of current surpluses; Syracuse is expected to require 12,000, and Buffalo 40,000 additional women workers in the next ten months.

American Notes

War Information

The Executive decree which established the Office of War Information last June gave its Director, Elmer Davis, virtually unlimited power to formulate and carry out an information policy

provided only that it be consistent with the war information policies of the President and with the foreign policy of the United States.

In a trial of strength with the Services, the Information Office's wings were clipped somewhat. A more formidable test appears to be at hand now that its budget must be ratified by Congress. There are good grounds for thinking that the Republican opposition will concentrate much of its fire on information and censorship policy. The fortunate divorce of censorship from information which has been established in the United States will relieve OWI of the thankless task of defending a censorship which still causes much dissatisfaction by withholding the publication of losses, presumably in accordance with Service requests. But the Office of War Information is unlikely to avoid either a thorough-going investigation of its activities or Congressional strictures on their scope. The latitude which OWI enjoys, and which is in such marked contrast with the more modest rôle of the British Ministry of Information, was illustrated last week by the publication of a report on the quality of American aircraft, and by a speech delivered at Des Moines by Mr Gardner Cowles, Assistant Director of War Information. The aircraft report is striking both in its candour and its lucidity; as far as a layman can judge, it does a first-rate job of striking a balance between the achievements and failures of American aircraft design and production. It points with pride to the superiority in all theatres of Fortresses and Liberators and medium and light bombers; but it admits frankly the deficiencies of American fighters, particularly in the European theatre, and holds that early losses of naval aircraft were largely due to the Navy's use of obsolete planes. It further states that the problem of producing an efficient American fighter has yet to be solved completely. Presumably the report was based on evidence submitted to the Congressional committees investigating aircraft design; it would be interesting to know whether it was published with consent or at the instigation of the Services. In some respects, it is so sharply at variance with official Service statements that it is difficult to believe that there will not be violent reactions in some quarters. The full text of Mr Cowles' speech is not available, but quotations suggest that it poses even more sharply the degree to which an information service can serve as an independent policy-maker. Mr Cowles accompanied Mr Willkie on his recent tour of Russia and China; and parts of his address raise the most controversial issues. At one point he is reported to have said:

Differences are becoming so intense between England and China and England and Russia that it may virtually be impossible to put the world together again in some sort of workable and permanent peace.

Later, he gained a wider circulation for the story that

Stalin is said to have told Churchill that the three things necessary to beat Hitler are blood, materials, and time. The story continues that Stalin said Russia is supplying the blood, the United States the material and Britain the time.

He criticised very greatly the announcement which was interpreted as a promise to open a Second Front. But the most extraordinary passage reads:

Russia is fully aware of American aid towards Britain, which is enormous. Russia does not object to this aid if it is used for offensive action but feels it is vastly too much if Britain intends to use it only defensively. The Russians are beginning to feel that there is little difference between the Churchill Government and the former Government of Chamberlain which practised appeasement and indicated willingness to let Russia go under.

American agencies and officials enjoy a far greater autonomy than their British counterparts, but these quotations seem to conflict so directly both with the President's recent statements and other official statements that it will be surprising, and unfortunate, if they do not lead to clarification of the responsibility and functions of information policy.

United Nations

The emphasis which Assistant Secretary Berle laid on the soundness of American relations with Britain can only be interpreted as a rebuke to the accounts of dissension

over policy which have recently been given so much currency. The tribute was the more striking in that Mr Berle has never been known for immoderately pro-British sentiments. Speaking in Alabama on "The Realist Base of American Foreign Policy," Mr Berle argued that military developments would place the United States in a permanent front line, and that therefore it was imperative that the United States should maintain a close working relationship with Britain, Russia, and China after the war. On relations with Britain he said:

During a century and a quarter, though Britain has been a great maritime Power, a great competitor and our nearest overseas neighbour among the Powers, we have been at peace with Britain and have twice been her ally. No dispute has arisen which could not be solved by reason and common sense. I think our relations with Britain rest on our good sense rather than sentiment. . . . We have found that a strong and serene British Commonwealth of Nations is a great guarantee of the kind of world in which we want to live. . . . We do not even forgo our right to puff, grunt, complain about and argue with each other. In all crises we necessarily and instinctively hang together—and both of us have been safer and better off on that account.

After stressing the fact that the munitions resources of Britain and America constituted a common pool, Mr Berle went on to emphasise the necessity for maintaining this pooling machinery after the war, as a means of distributing scarce supplies until new arrangements can be made to reopen normal trade channels. But this co-operation is to outlast the period of reconstruction; Mr Berle gives official encouragement to the idea of applying the principles of reserve banking on an international scale. Mr Berle is an economist of note, and made good use of parallels drawn from American banking development and capital movements after the Civil War. He suggested that if this idea had been followed out after the last war, it would have created more employment, better wages, and a higher standard of living, and concluded:

The first world war taught us that military victory depended on united action. The second world war has given us a vision of limitless economic power achieved by co-operation. We must not again lightly throw away that power in the moment of triumph.

Puts vital information at your fingertips

Shannoblic folders never slip under or rise up because they hang on a steel frame. They are easily removed and replaced. The hangers carry the weight, and heavy catalogues or a few papers can be filed with equal ease and neatness. Large, angled, celluloid tabs, adjustable to one of five positions, allow flexibility of indexing and give immediate identification of folders.

Shannoblic Suspension Filing will fit YOUR filing cabinets and desk drawers. Let us send you details.

Or the Shannoblic Desk Top Unit, a rigid all steel frame with 20 Shannoblic Suspension Folders, is ideal for use on war-time emergency desk tables or as an extra desk top filing drawer. Price complete, 37/7 quarto, 42/7 foolscap, including Purchase Tax. Post free in Great Britain only.

Army Manpower

In fixing the US Army's goal for 1943 at 7,500,000 men, and outlining the way in which it is proposed to use the men, Mr. Stimson and General Marshall have made clear the Army's view of its own functions, and opened the way to a national manpower policy. The Army's demand for men is substantially below Mr. Nelson's suggested ten million, which he thought might have to be reduced. And any intention of raising a mass army has been specifically denied. Of this "conservative estimate" of 7.5 millions, 2.2 millions are destined for the Army Air Force—"the largest, with sustaining units, which production and transportation will allow." A million men will go into the supply units of the Services; another million will be in training; and the remaining 3.3 million will constitute a highly trained ground striking force. Mr. Stimson went out of his way to repudiate the suggestion that it was intended to maintain a large defensive force in the United States:

I want to say that, whatever the size of the Army, our sole criterion for gauging its strength will be its striking power, based on the calculation of mobile forces capable of offensive action, which is the only way we can win the war.

The purpose of the statement was to convince Congress of the need of amending the law to permit the drafting of 18 and 19-year-olds into an army which, according to Mr. Stimson, has too large a proportion of older men. The intention is to release these older men, many of whom are highly skilled, for essential civilian jobs, as boys under twenty, of whom there are about 2,000,000, join up. Once convinced of the military necessity, Congress has acted with speed. Even the proposal that boys in their teens should not be assigned to combat duty until after a full year's training was discarded after the receipt of a letter from General Marshall arguing that it would impose an impossible administrative task. The demands of the Army are not the only priority call on the nation's manpower. The Navy and the Marines will number about 2,000,000 at the end of next year, making a total for the armed Forces of about 9,500,000. Already the raising of half that figure has helped to produce manpower shortages in a variety of essential civilian occupations, particularly in the mines and on the farms. The withdrawal of younger men will cause less dislocation than the call-up of more highly trained older workers. But the time for the enunciation of a national manpower policy is plainly at hand. A House committee report issued this week strongly criticises the failure to

develop a clear programme of manpower allocation, and states that employers have no way of knowing how many skilled workers they will be allowed to keep. A public statement from the Manpower Commission's Management and Labour Policy Committee, which is expected shortly, is reported to oppose compulsion. Other reports indicate that a voluntary system will be given a trial before resort is made to National Service legislation on the British model. The Army's need for men has set the pattern of mobilisation; what remains to be settled is the degree of authority to be invoked, and a decision is needed as to what agency is to be entrusted with drawing up and administering the allocation of labour.

Shorter Notes

Both the House and Senate have now completed action on the Tax Bill. About \$8,000 millions of new taxes have been authorised, raising total revenues for 1943 to \$25,000 millions. Appropriations and contracts authorised or pending for war or defence purposes now total more than \$222,000 millions; and the Treasury is expected to request an additional \$6,000 millions in taxes almost immediately.

The price administrator of Oklahoma (a dry state) has ruled that speakeasies must post the ceiling price of whisky like any legal establishment.

Unnaturalised Italians living in the United States, who number about 600,000, will no longer be regarded as enemy aliens, and coming changes in the naturalisation law have been announced to make possible the naturalisation of 200,000 of them over 50, who have been continuously resident in the United States since 1924, without their being required to pass the literacy test. This provision is significant because so many older Italians, living in small foreign communities, have never learned English. In 1930, there were 1,790,000 American residents born in Italy, slightly more than the number of German-born. The new provisions mean that the 600,000 who have not been naturalised will no longer have to carry special identity cards or be subject to other restrictions.

THE WORLD OVERSEAS

The Balkan Satellites—I

(By a Correspondent)

"EX ORIENTEPANIS" is the new German slogan. The promised land of the Ukraine will supply Germany with wheat, meat, and fats. But the Ukraine is still but a promise, if not a *Zukunfts-musik*. To digest it may take far longer than those who make the promise seem to realise, and it is this year's yield of grain and fats in Roumania, Hungary and Bulgaria which will to a large extent determine Germany's food prospects in the immediate future. The Balkans had two years of poor harvests in 1940 and 1941. Available reports show that the 1942 harvest has at best been only slightly better than those of the previous years. Slovakia reports roughly the same grain output as last year: 300 thousand tons of wheat and 200 thousand tons of rye; only in barley and oats has any improvement been reported. Strict rationing will enable Slovakia to cover its internal consumption, and no export surplus will be available. Hungary's harvest, according to the estimate of the Hungarian Institute of Economic Research, has been somewhat below the average. No exact figures have been published, but official statements suggest that the export surplus will come almost exclusively from the former Yugoslavian Backa region, which has been incorporated in Hungary. Hungary has, in fact, taken over this fertile Danube province as Germany's sharecropper; the whole grain surplus of the territory has by a special agreement

been assigned to Germany. Croatia has a considerable grain deficit, caused by the spread of guerrilla activities from Serbia to Croatia. In the northern provinces, outside the range of the guerrilla fighting, the peasants have been compelled to switch over from tobacco to grain production in order to meet the needs of local consumption, and it will depend on the maize harvest whether or not the country will experience famine conditions. In Roumania, only about 90 per cent of the plan for sowing has been carried out; black-soiled Southern Bessarabia was not ploughed at all. The wheat harvest is estimated to be somewhat below 2,000,000 tons, that is, considerably below the average. Nevertheless, the requirements of the home market are assured, and some maize should be available for export. There will be hardly any supplies from Bulgaria. There, the yield per hectare has dropped very considerably, and it is still doubtful whether the Bulgarian output will be enough for the needs of the home market—about 1,100,000 tons of wheat is estimated as the minimum consumption under conditions of severe rationing.

The expansion of oil seed cultivation—the most essential part of the German agricultural plan for the Balkans—has also not come up to expectations. The German plan was to make the Balkans cover the European deficit in oil seeds, a deficit amounting to two-thirds of the total consumption.

Roumania alone had to increase its area under oil seeds by no less than 300 per cent; but the actual expansion achieved during 1940-42 has amounted, according to a statement by the Roumanian Prime Minister, to not more than about 180 per cent. German disappointment with the results in the Balkans was openly voiced by the *Frankfurter Zeitung* on October 7th:—

The South-Eastern States, from which some people expected particularly abundant grain deliveries during the war, have not fulfilled such hopes by a long way.

Breadless Days

To improve the position rations have, in most cases, been reduced, and stricter regulations for grain deliveries have been imposed on the peasants. The bread rations are very small indeed, and there have even been breadless days. The Hungarian daily ration is 200 grammes (100 grammes = 3½ oz.); the Slovakian is 134 grammes; the Croatian ration for townspeople is 150 grammes; the Bucharest ration is 250 grammes; and in Bulgaria the peasant's ration was recently cut by more than 50 per cent.

A new method in exacting foodstuff deliveries from the country districts was introduced in Hungary and Bulgaria during recent weeks. Henceforward, the rates of deliveries will be fixed in proportion, not to the harvest gathered by the peasants, but to the number of acres possessed. The reform is obviously meant to counteract the passive resistance of the Balkan peasantry, which has tended to reduce agricultural labour to a level that would give no export surpluses at all. Now, under the threat of penalties, the peasants will have to observe some minimum limits to output.

The peculiar feature of the Balkan position is that Germany's satellites have been losing their economic value to Germany in proportion as they have turned into military assets. Germany approaches them with conflicting claims; they are asked to fight for their master and to feed him at the same time. But even Hitler is unable to have the Balkan cake and eat it. Apart from the ordinary wartime difficulties, such as the shortage of agricultural machinery, fertilisers, animal fodder and so on, the Balkan countries have been experiencing a shortage of labour. Roumania and Hungary have both contributed their manpower to the Russian campaign. But there has been a marked contrast between the "sacrifices" made by the Hungarian and the Roumanian satellites. Roumania has indeed suffered a heavy drain on its manpower, whereas Hungary's mobilisation has been on a much more modest scale. Roumania has so far mobilised more than a million men; its casualties are conservatively estimated at about 300,000, and the strength of the Roumanian forces on the eastern front is said still to amount to 400,000. Hungary has sent to the front not more than about 300,000 men.

Hungary's Holy Mission

This striking contrast has been due to a variety of reasons. The Hungarian ruling clique has proclaimed its holy mission to act as the "guardian of order in the Danube region"—which means keeping down the Serbs in the south and watching the Roumanians who claim the return of Transylvania. Both these tasks have, no doubt, pinned down a large part of Hungary's forces on its new frontiers. On the other hand, Hungary's trained military reserves have numerically been incomparably weaker than those of Roumania, if only because of the limitations of the Trianon Treaty, not denounced by Hungary before 1938. Another reason is that Hungary joined the Axis after it had obtained its spoils through the Vienna award, and its Government was more inclined to digest the acquisitions than to waste its resources on military adventures. Roumania, on the contrary, had to try to win the favour of the Axis and to do penance for the benefits it had derived from the Versailles Treaty. It had, therefore, to provide more cannon fodder for the Russian campaign. The Roumanian Prime Minister disclosed in a recent statement that Roumania's war expenditure during the last two years had amounted to 130,000 million lei, a sum equal to the country's total military expenditure between 1928 and 1940. The strain on Roumania has been very heavy, and the country is now confronted with an acute crisis in its finances and manpower, which can hardly be mitigated by imports of agricultural machinery, amounting in value to three milliard lei, from Germany.

Bulgaria's contribution to the anti-Bolshevik crusade has been almost negligible. It, too, has been busy digesting slices of Greek, Yugoslav and Roumanian territory won without a shot; and the mood of the Bulgarian peasantry

could hardly have encouraged any large-scale mobilisations against Russia. So far there has been little evidence of any German pressure on Bulgaria to increase its share in the "all-European fight for civilisation." Bulgaria seems to have been assigned a less ambitious job of a local character; Hitler probably prefers to see the Bulgarian forces keeping Turkey in check on the Bulgarian-Turkish frontier.

Liberia and the United States

(BY A CORRESPONDENT)

October 21st

LAST weekend, it was reported that United States troops had arrived on Liberian territory. The strategic significance of this is discussed in a Note on page 507. But the interest of the United States in Liberia is not only military. Since its acquisition by the American Colonisation Society in 1817, Liberia has always had the closest links with the United States. Originally regarded as an area for the settlement of freed United States negro slaves, the country has up to to-day received close interest and support from the United States. Although the number of "Americo-Liberians" is now less than 20,000 out of a total population of between 1,500,000 and 2,000,000, this minority forms the nucleus of Liberia's politically minded and commercially minded population, and the earliest United States negro settlements—Monrovia is a place name based on the name of the United States President Monroe—are the centre of its commercial activities. The Liberian Constitution and Government are modelled on those of the United States; its official accounts are kept in American dollars, although the private trade is largely transacted on a sterling basis; its official language is English; and its export and import trade are largely confined to the exchange of goods with the United States. Whenever the Liberian Government required financial support, it has found it in the United States, and, on the basis of one of its financial agreements, the Liberian Government has agreed to appoint only United States citizens as its financial advisers. Moreover, the head of the Liberian customs service is an American.

Agricultural Products

The Liberian climate is tropical with heavy rains during the greater part of the year, except for a short dry season from December to February. Over three-quarters of the country is covered with dense and largely undeveloped tropical forests. Apart from some handicrafts, Liberia has not so far shown any trend towards industrial development. Mining, too, has hardly been developed, although there are known deposits of copper, lead, iron, tin, gold and other metals, and, in the area bordering Sierra Leone, even diamonds have been found.

Agriculture is to-day the basis of its economic activities. At one time Liberian coffee and cocoa had substantial markets, which, however, have been lost through the competition of the larger producing countries. To-day, rubber, oil palm products and piassava fibre (the fibre of the raffia palm, used mainly for brooms and brushes) are the main export products. Of these, the first two are of considerable interest to the United States. Rubber production averages 10,000 tons per annum. Although there are big reserves of wild rubber trees, almost the whole output comes from the huge Firestone plantations. This United States tyre concern had, in 1925, leased from the Liberian Government a million acres of land in the neighbourhood of Monrovia, of which about 80,000 acres have so far been planted with rubber. The ground for further plantations, however, has been prepared, and the country is likely to benefit greatly from the Allied rubber production drive. The oil palm resources of Liberia are also extensive, but so far are only partly developed. Under the recent arrangement regarding the pooling of oils and fats between Great Britain and the United States, the acquisition of all Liberian supplies of vegetable oils and oilseeds has been assigned to the United States Government. In this respect, too, Liberia can expect new developments with United States help. As a result, Liberia's trade is likely to increase. In 1940, the last year for which data are available and the best Liberian trade year for a long time past, total exports reached \$3,242,000, against \$2,714,000 in 1939, of which shipments to the United States accounted for 90 per cent. The re-

maining 10 per cent was divided among a small number of other countries, with Great Britain, Holland, and, until the outbreak of war, Germany ranking first. Rubber accounted for nearly four-fifths of all exports by value in recent years. Liberian imports in 1940 amounted to \$2,236,000, against \$2,003,000 in 1939. Here the United States supplied two-thirds and the United Kingdom one-fifth. Imports consisted chiefly of rice and other foodstuffs, tobacco, textiles, chemicals, motor trucks, and iron containers for Liberian exports.

Besides the expansion of rubber and palm oil products, Liberia's economy may receive stimulus from the improvement of transport facilities by the United States forces. Although Liberia has 11 ports of entry on its 350 mile seacoast, so far none has any modern loading facilities. The country has, moreover, no railways and, only a very small mileage of roads for light motor traffic, and, with the exception of the internal system of the Firestone rubber plantations, no telephone or telegraph communications. It is connected by cable with Europe and the United States, but the cables run through Dakar and its four wireless stations are of low power. If, therefore, the United States landing parties are to stay in Liberia, communications must be improved. The importance of this for the country's economic future is obvious.

Irish Bank Bill Discussions

[FROM OUR DUBLIN CORRESPONDENT]

October 5th

THE debate in the Senate on the Central Bank Bill was vastly superior to that in the Dail. The Minister for Finance, introducing the Bill, stated that it was one of quite modest pretensions. It was not being claimed that the establishment of a Central Bank would cure the evils of unemployment and poverty, nor was the Bill capable by itself of grappling with the inescapable difficulties that would arise after the war. The whole question of the Central Bank must be examined in relation to the background of events since the appointment of the Banking Commission in 1934. During the four years of the Commission, Eire was involved in the economic war with Great Britain, which played havoc with Irish export trade. The Commission was, therefore, much impressed by the depletion of the country's sterling assets, and its report was largely directed towards preventing a further decline. In 1938, the year in which the report of the Commission was issued, the economic war came to an end, and in the following year the European War broke out. Since the outbreak of war, the greatest difficulty has been experienced in obtaining imports, with the result that Irish sterling balances are now accumulating. The problems of to-day are in many respects different from those which the Commission had to investigate. In periods of such rapid change and frequent crisis, calm deliberation and settled policy become well-nigh impossible.

The criticism which the Bill encountered in the Senate came from three different quarters; the Labour Party, the spokesmen of agriculture and, finally, the bankers. The Labour Party used the occasion to criticise the Government's social policy in general, and went far outside the discussion of subjects relevant to the Bill. The retention of the parity with sterling was criticised, but the grounds of the criticism were not apparent. The Minister for Finance emphasised that the link with sterling was the result of the free choice of the peoples' representatives, and could be broken any time. Any change in the existing parity would involve endless difficulties in relation to the banks' business in Northern Ireland. He indicated that no variation in parity could isolate Eire from the evil consequences of inflation in the sterling area. He further issued a warning of the dangers of internal inflation in Eire, which could not be prevented by anything the Central Bank could do if the Government's policy in relation to prices, wages and taxation were unsound. The Labour Party pressed for a policy of extensive borrowing by the Government and local authorities from the Central Bank, quoting New Zealand as a precedent. The Minister for Finance repudiated the suggestion that the function of the Central Bank was to finance public borrowing, which, he said, found ample accommodation on the part of the commercial banks and the public.

The criticism of the Bill by the agricultural interests was that it did nothing to provide credits for farmers or to reduce rates of interest. The Minister explained that the Central Bank was not designed to lend direct to the public. Farmers, he explained, never borrow at Bank rate in England or in other countries possessing central banks.

Long loans for agriculture everywhere involve fairly high rates, and rates in Ireland are lower than in most other countries. Nobody will deny that there is a problem regarding agricultural credit in Ireland. It is a problem, however, which must be investigated in relation to agricultural policy in general and not merely in relation to central banking. At the present time, Irish agricultural policy after the war is being thoroughly investigated by an expert committee, which will no doubt make recommendations regarding the issue of credit for suitable purposes. The opinion is widely held among economists and bankers in Ireland that agricultural credits should be granted in kind rather than in cash. In any event, agricultural credit is a problem connected with commercial rather than central banking.

The Bankers' View

The Bill was criticised on behalf of the banking interests by the Governor of the Bank of Ireland, who complained that some of the powers contained in the Bill were unduly extensive. He complained particularly of the powers to coerce the banks in certain circumstances to maintain minimum deposits with the Central Bank and to clear their English cheques through the Central Bank. These powers would interfere with the freedom of the banks and would tend to raise their operating costs. The Governor replied to the suggestion which had been made in the Dail that the banks can create unlimited credit out of nothing. He pointed out that the possibility of each bank's expanding credit is limited by the cash in its possession, which, in its turn, is the result of the decisions of innumerable private individuals. He also dealt with the alleged shortage of cash in the Irish banking system by explaining that there is no upward limit on the amount that can be issued by the Currency Commission. If the public demands accommodation, the Irish banks are in a position to meet such demands within very wide limits. If such additional credits necessitate the issue of more cash, the provisions of the Central Bank Bill ensure that such cash will always be readily obtained.

The Minister for Finance invited Senators to submit amendments designed to improve the Bill. In response to this invitation, the Labour Party moved an amendment to the effect that the function of the Bank should be to ensure that "currency and credit shall be issued in correct equation to the economic needs of maximum production and full employment." In the course of the debate on this nebulous proposal, the discussion ranged over a wide field, including the parity with sterling, schemes of public works financed by loans from the Central Bank and the extent to which banks create credit. The papal encyclicals and the recent pronouncements of the Archbishop of Canterbury were freely quoted. Other amendments were concerned with the composition of the board of the Bank, and with the powers of the Bank to pay interest on deposits, to make advances to the Government and to farmers and to regulate the interest rates of the commercial banks. All these amendments were either withdrawn or rejected, and the Bill has emerged from the Committee stage unaltered. When it has once more been formally passed by the Dail it will become law and the Bank will be established. The selection of the Government's five directors will be awaited with considerable interest.

Chile and the Democracies

[FROM OUR SANTIAGO CORRESPONDENT]

August 31st

As is known, Chile and Argentina were the only two South American Republics which did not break off diplomatic relations with the Axis Powers at the Rio de Janeiro Conference. At that time, Chile was still mourning the death of its President, and elections were due to take place shortly after. The country was very divided on the issue of foreign policy, as well as on domestic policy, and Axis propaganda was working overtime in an endeavour to impress upon almost defenceless Chile the dangers of breaking-off diplomatic relations; these dangers were more theoretical than real, but were sufficient to cause alarm in the strong pro-German element within the Conservative party and the Services. These agents played on the fear of the Chilean landed class of Communism or Socialism, and on the fears of the Services about the fewness of trained troops and the lack of efficient and modern weapons of war. The length

of Chile's coastline was prominently mentioned; fears were instilled into the official mind that the Navy, though efficient, was not capable of attending to this task, and that North American help could not be given owing to its commitments on the other side of the Pacific. Another clever argument put forward by Nazi agents was that no good could come from breaking off relations since practically all of Chile's trade was with North America. Minerals, such as copper, iron, manganese, nitrate and iodine, wool, etc., were all shipped to the USA, and this trade might be interrupted through naval action if a firm line were taken.

The country was not sufficiently united to carry through a different policy, and though there was no severing of relations, Chile made it clear that it would co-operate with all other western hemisphere countries. Since the declaration of war by Mexico, an old and respected friend of Chile, and particularly since Brazil's entry into the war, the temper of the country has changed rapidly, and the Government, heedful of public opinion, has declared these countries non-belligerents. Police guards have been placed on important Axis business premises after stones were thrown at the windows. The country appears to be impatient, and is fully expecting that relations will be broken

Russia at War

State Farms.—The main part in the expansion of agriculture in the eastern provinces of Russia has fallen to the Kolkhozes (collective farms), which nominally belong to the peasants. Besides the collective farms, the Sovkhozes, that is the state farms, have also been assigned an important rôle in the process of agricultural readjustment. The newly published plan for state farming has put the eastern Sovkhozes under the obligation to extend their areas under grain crops by about one and a half million acres. About one million acres is to be sown in 1943 and the rest in 1944. Obligatory minima of grain output have also been fixed, and 590,000 acres of virgin soil will be ploughed up by the state farms during this autumn. It is hoped that the state farms will be able to carry out the plan without undue difficulties, because they have recently received considerable numbers of tractors evacuated from the state farms in the southern provinces.

The managers of the state farms have been allowed to grant increases of wages to their personnel. Tractor drivers will, in addition to their money wages, receive bonuses in kind amounting to one and a half kgs. of grain for the fulfilment of a day's quota in the autumn ploughing; the administrative and the technical staff of the state farms which fulfil the plan will receive bonuses to the amount of three months' salary.

At the same time, an important reform is being carried out which will result in the breaking up of the big Siberian state farms into smaller units. These farms were large-scale enterprises specialised in the cultivation of grain, industrial plants and cattle breeding. The lowering of technical standards, as well as the tendency to make every farm self-sufficient in foodstuffs, seem to have made a deconcentration of farming unavoidable.

Cattle Breeding.—The difficulties in cattle breeding reported last winter seem to have been partly overcome during the spring and the summer. The slaughter of cattle, especially of evacuated cattle, has been stopped. The warm season has mitigated the hardships due to shortages of fodder and accommodation; and severe penalties for cattle slaughter have served as deterrents. With the approach of winter, a series of steps has now been taken to protect the heavily depleted cattle population. Minimum quotas of fodder must be stored by farms for the winter. One-third of the feeding-stuffs required for the cold season must be kept in readiness to ensure the regular feeding of cattle when bad weather, blizzards and thaws make roads impassable and the transport of fodder from central stores impossible. Monthly rations of fodder have been set for both collective and state farms; and the managers of the farms have been made responsible for observing the regulations about economy in fodder. Yet from a number of regions shortages of feeding-stuffs have been reported. Farmers have been urged to collect the straw from the fields; and special bonuses, amounting to between one-fifth and one-half of the total gathered, have been offered to them as an inducement to a rapid collection of straw.

Another difficulty is the insufficient number of sheds and

off in the very near future. This attitude became more apparent after the invitation of President Roosevelt to the Chilean President, Don Juan Antonio Rios, to visit the USA. This visit was expected to take place during October, and Congress approved his request for leave of absence. The representatives of the main parties wholeheartedly supported the request, with the exception of the Conservative party, whose representative said that the motives and necessity for the visit were not clear, and only voted in favour of it on the assumption that the visit was merely a diplomatic one, without any other understanding. The Socialist party, the second largest in the Congress, openly expressed its wish for breaking off relations with the Axis, and it is well known that a large section of the President's own party, the Radicals, is also in favour of such a decision. The ex-Minister of Finance, Don Marcial Mora, a leading Radical, has frequently spoken on public platforms in favour of the democracies.

Chile has been misjudged in its isolationist policy since the Rio de Janeiro Conference. The Government has wisely awaited the awakening of the public to the dangers of this policy and, when a decision is taken, it will have the wholehearted support of the mass of the people.

the lack of fuel to heat them. November 5th has been fixed as the latest date on which sheds built throughout the eastern regions have to be completed. *Pravda* has recently published a warning to irresponsible farm managers who fail to take the necessary protective measures in time. "It is not to be tolerated (says the paper) that cattle should perish . . . in wartime conditions, when every hundred-weight of agricultural produce is valuable."

Coal Output in October.—Reports about coal output during the first half of October have not yet recorded any very large increases. But big percentage increases in production have been reported from second-class mining centres. In the Kuznetsk Basin, only one Coal Trust is said to have fulfilled the plan, although total output has risen by about 6 per cent compared with September. The latest review of the Commissariat of Coal Industry says nothing about the position in the important Karaganda Basin. New restrictions on fuel consumption in industry and transport have been announced. The rate of fuel consumption in factories has been reduced by 10-15 per cent compared with the last quarter of 1941. The press has again sharply criticised railway staffs for causing hold-ups and delays in the delivery of coal to the most vital defence industries of the country.

Tinned Meat and Fruit.—The output of tinned meat has been doubled since July, 1941. New factories are being opened continuously in the Asiatic provinces. A big new cannery in Alma Ata produces 100,000 tins of meat a day. New meat-packing plants will soon be put into operation in Tashkent, Ashkhabad and Stalinabad; and 15 big fruit canneries are also to be opened soon.

Tobacco.—Four thousand tons of tobacco and *makhorka* have been delivered to the State from the current harvest. The harvest in the east is expected to be two and a-half times as big as last year. Fourteen new tobacco factories have been built in the east.

With the approach of the winter skiing has become a major topic in the press. "Millions must be put on skis" is the slogan. The campaign began under the auspices of the trade unions. Workers, peasants, officials, youth and even children are being trained in skiing. The programme of training includes grenade throwing and bayonet fighting on skis. As all the ski factories are working exclusively for the Army, civilians have been urged to provide themselves with home-made skis.

Jewish farmers from Bir-Bidjan, the autonomous Jewish region on the Amur, have won a first prize in an all-Union contest in ploughing. Bir-Bidjan has absorbed many Jewish families evacuated from the Ukraine and White Russia. The children of Bir-Bidjan have sown three thousand acres of land with tobacco and they have made the harvest a gift to wounded soldiers.

THE BUSINESS WORLD

The BIS Report

THE sections of the annual reports of the Bank for International Settlements dealing with economic conditions in general have always tended to attract more attention than those more specifically concerned with the activities of the bank. This is not merely a compliment to the distinguished economist whose task it has been to prepare these reports. It is rather a reflection of the ambitious aims for which the BIS was established and of the wide margin by which its actual achievements have—through little fault of its own—failed to reach those ideals. One of the bank's immediate and primary concerns, the practical task of collecting and distributing reparation payments, was abruptly terminated within two years of its formation in 1930. Between the moratoria of the Hoover Plan and the outbreak of the war in 1939, the BIS went some little way towards achieving its wider objectives of promoting co-operation among central banks and providing additional facilities for international financial operations. But the progress was small in relation to the enormous task that had to be tackled—though in certain technical spheres, such as the provision of international gold clearing facilities, some valuable work was done. All this work was stopped on the outbreak of war in September, 1939. Since then, the BIS has been in a state of suspended animation. There has been no contact between the directors separated by the barrier of war, and the task of keeping the bank "ticking over" has become the sole responsibility of the President. It is hardly surprising, therefore, if the twelfth annual report issued in Basle last August should have been scanned, much more even than its predecessors, with far greater interest for its comments on the international economic situation than for those on the bank's own activities.

Among these general comments two merit special attention. One deals with the need for enlarging the unit of international economic organisation; the other discusses the problem of interest rates. On the first, the President of the BIS, under whose sole authority the report was issued, speaks as follows:

A great war has a double aspect: on the one hand, a severance of relations with the enemy and, on the other, a closer association among countries on the same side of the barrier. Thus, contrasting with the element of isolation, an active element of collaboration is present. In planning for the future, this element of collaboration is regarded as essential by all parties, not least in the field of economic and monetary relationships. . . . But a difference in conception exists whether collaboration should in the first place be worked out in separate politically defined areas, with arrangements for trade between these areas as larger entities. . . . The conception that better economic collaboration is a necessity in the modern world, so often stressed in official declarations, has unmistakably taken root in the minds of a wider public, in spite of the nationalism engendered by the war. This same public is certainly aware that difficulties beset the creation of a system based on collaboration, but it feels instinctively that a way can and must be found to establish effective co-operation without impairing the vital interests of individual countries. . . . Experience has proved that the policy, only too often adopted before this war, of protecting the immediate interests of a particular economy by creating hindrances to trade, leads to such disturbances in the world generally that even the country applying the policy fails to attain the ends envisaged.

It is not easy to find in this passage the applause of Germany's ideas of *Grossraumwirtschaft* which some critics of the BIS in this country have detected. The need for widening the unit of international collaboration is common ground among men of good sense and good will. All that the report says, without any show of preference, is that the process can either proceed on a world basis or by the formation of large politically defined areas—an important truism, taken gratuitously by the critic to refer to Germany's European *Grossraum*, but actually applicable much more

to such entities as the British Empire or the sterling area. Indeed, the reference in the report to the need to achieve this co-operation "without impairing the vital interests of individual countries" can at least as well be read as an implied criticism of the Nazi New Order.

On the problem of interest rates the report declares that:

At a time when public debts are piling up to unprecedented heights, it is naturally in the interests of each nation that money should continue to be cheap. . . . But, notwithstanding the obvious fiscal interest of the state, there has been some reaction recently against too low interest rates, partly because it is believed that savings may thereby be discouraged and partly on account of the adverse influence on life assurance companies and social funds and, through the narrowing of interest margins, on the banking system. . . . With regard to the future, both the British Chancellor of the Exchequer and the President of the German Reichsbank have said that cheap money will continue to be the official policy when the war is over. But it is obvious that, with the great demand for capital which may be expected when that time comes . . . conditions may arise which will make the uninterrupted reign of cheap money more difficult to maintain. Special steps may have to be taken to ensure a large volume of savings even after the war—which means, *inter alia*, that for some time the public must not expect to be able to use for its immediate needs the purchasing power piled up during the war.

Some commentators have discerned in these seemingly innocuous remarks the cloven hoof of the "hard money school." It is difficult to follow their argument that the BIS, on this evidence, stands for a return to dear money. The slight reaction from abnormally low rates is a question of fact for which the report quotes sufficient evidence. As for the question of interest rates in the post-war capital famine, it is one which will have to be decided upon in the light of the then prevailing economic system. If Governments continue to restrict consumption, to control the movements and investments of capital and to ordain rigorous priorities for the uses of material and labour, the interest rate may remain unaffected by the enormous demand for capital that will be let loose upon the world. But if the sphere of economic freedom is allowed to widen again, the task of keeping interest rates where they stand in the mobilised economies of to-day must inevitably be difficult. In stating this, the BIS report is not polemical; it states what is obvious.

The fact is that the full text of the BIS report substantiates none of the charges of prejudice and bias which have been levelled against it. Admittedly, the clamour which has recently been raised in favour of severing the British connection with the BIS rests on the contention that the Axis Powers are now in full control of the bank. But, in so far as this charge is based on a count of the shares issued to enemy and enemy occupied countries, it shows abysmal ignorance of the bank's constitution. The shareholders have no rights of control. Limited powers of control are vested in the directors, most of whom are appointed *ex officio*. But the board has not met since the outbreak of the war, and for the routine purposes of approving the accounts and electing auditors the necessary proxies have been sent to the president of the bank. In any case, the representation of the countries now in enemy occupation has not been settled; no attempt has been made to enlist the voting power vested in these countries on the side of either of the belligerents. Such power as is exercised in the determination of policy is vested in the person of the American president, Mr Thomas McKittrick, and there is no vestige of evidence to suggest that that power has been wielded to the disfavour of the Allies. If the critics had their way and this country severed its connection with the BIS—a move which, incidentally, would involve a unilateral breach of several international agree-

ments—all that would have been achieved would be to place at the undisputed disposal of the enemy the substantial interests which this country and friendly Powers still have in the BIS. The field would be open for complete Axis control. This might be followed by such steps as the repudiation of debts to Allied central banks, the cancellation of the

amounts owing to Allied Treasuries under the annuity Fund and the acquisition of such assets (gold, cash and bills) as may be deposited in Switzerland. The clamour which has arisen on this question is as irresponsible as it is ill-informed. It can best be summed up in the phrase, "*Ces Messieurs ont perdu une belle occasion de se taire.*"

Finance and Banking

Fewer Bills for Market

The discount market has not yet felt the benefit of the larger weekly offerings of Treasury bills. At last week's tender for the £85 millions of bills on offer total applications jumped by over £16 millions to £181,230,000, a figure only exceeded on one previous occasion. The discount market applied for the bills at the customary figure of £99 14s. 11d., and on this basis obtained a 27 per cent allotment. Assuming that the syndicate applied for the whole of the bills on offer, it would have received about £23 millions of bills. By way of comparison it may be noted that in the last three months of the £75 millions weekly offerings, the market appears to have obtained on the average £28 millions of Treasury bills each week. In consequence, the market has not been an over keen seller of bills to the banks this week. They, on their part, have been good buyers despite the fact that the October making up has begun to make its effect felt. The prevailing abundance of money has probably induced the private "outside" applicants for Treasury bills to increase their tenders, though a jump in applications such as that recorded last week probably reflects some increased demand by official quarters. The banks were called upon to pay £50 millions in TDRs this week, a figure which compares with nominal maturities of £40 millions, but with effective maturities appreciably smaller than this figure owing to recent heavy encashments against subscriptions to National War Bonds and tax reserve certificates. The Bank return reflects the monetary ease, the total of bankers' deposits having risen over the week to last Wednesday by £3,426,000 to £138,732,000. Government securities have risen by an almost equal amount, namely by £3,445,000 to £158,222,000. The note circulation continues its rise, though the curve is temporarily flattening, the week's increase amounting to £764,000. This, as a factor on the volume of bank cash, has been rather more than neutralised by the reduction of £910,000 in public deposits.

The Slump in Bills of Exchange

The annual reports of the Commissioners of Inland Revenue have become one of the statistical casualties of this war. Among the interesting information thus lost is the detailed classification of receipts from stamp duties which provided the required data for calculating the number of cheques issued and the volume of bills of exchange outstanding year by year. Fortunately, that gap in statistical data has been made good by the curiosity of a Member of Parliament who has obtained the required information by questions put in the House of Commons to the Chancellor of the Exchequer. The information relates to the net receipts from the stamp duty on bills of exchange and promissory notes, on cheques and (by deduction from the global figures given in the Finance Accounts) on bankers' bills and notes. The figures for each of the last five financial years are as follows:—

NET RECEIPTS FROM STAMP DUTIES
(In £000's)

Year	Cheques	Bills of Exchange and Prom. Notes	Bankers' Bills and Notes
1937-38	4,061	594	96
1938-39	3,914	518	98
1939-40	3,910	417	103
1940-41	3,242	214	120
1941-42	4,193	149	141

The most striking movement revealed by the above table is the collapse in the revenue obtained from the stamp duty on bills of exchange. It is possible from these figures to get an estimate of the fall in the volume of commercial paper outstanding. Since the duty on bills is 1s. per cent, and if it

is assumed that the average currency of bills is three months, it will be seen that, whereas the total of commercial paper outstanding over the financial year 1937-38 was £297 millions, it had fallen to £107 millions in the first full year of war, and to £74,500,000 in the year which ended last March. This series of figures gives exact definition to a trend of which the banks and the discount market had been thoroughly aware. The foreign bill has largely disappeared from market circulation, and though some acceptance houses have switched their activities to the field of domestic finance, and have been able to grant acceptance credits to war industries, the ease with which overdraft facilities can now be obtained from the banks, and the cut rates at which such business is transacted, have greatly handicapped this adaptation of acceptance business. Thus the volume of bills (other than Treasury bills which, of course, bear no stamp) being drawn recently has been about one-quarter of the figure which obtained just before the war. That, in its turn, was about half the figure which obtained in 1930-31 before the collapse of the international acceptance business with Central Europe.

Fluctuations in Cheques

The fluctuations in receipts from stamps on cheques appear at first sight difficult to explain. Thus, the fall in these receipts from £3,910,000 (indicating 469,200,000 cheques) in 1939-40 to £3,242,000 (indicating 389,040,000 cheques) in 1940-41, and the subsequent sharp recovery in 1941-42 do not correspond to any other evidence bearing on the circulation of credit. A possible explanation may be provided by the juxtaposition of two facts: (1) that 1940-41 was a year of heavy air raids; (2) that cheques are highly inflammable. The number of cheques issued does not, according to these figures, appear to have kept pace with the growth of bank deposits, or with the increased turnover at the Clearing Houses. This suggests that the average amount for which cheques are being drawn has increased appreciably. This may be due to the growing practice of effecting small regular payments by standing bankers' orders. Another explanation is provided by the extent to which the credit circulation is now swollen by Paymaster-General warrants and other payments by Government agencies which do not bear stamp duty. The receipts from stamp duties on bankers' bills and notes are almost wholly derived from the Scottish bank note circulation. The steady increase in the yield of this source of revenue is a true reflection of the expansion in the issue of these notes.

Rupee Melting Point

The rise in the Bombay price of silver has been resumed, and has carried the quotation to Rs. 107 per 100 tolas. This is within two rupees of the point at which it would be profitable to melt rupee coin of the former eleven-twelfths fineness, and the position is thus becoming most interesting. Owing to the foresight of the authorities in beginning some time ago the recoinage of 500/1,000 fineness, fortunately no graver adjective than "interesting" need be applied to the situation. During the last war, it was precisely this phenomenon of an increased price of silver which forced the rupee to appreciate well beyond its nominal sterling parity. A good many of the 11/12ths coins which have recently been withdrawn from circulation have gone into private hoards, and as the price of silver reaches melting point, it may be expected that some of these coins will emerge from their hoards. But there will be nothing automatic about this process, since the bullion value of these coins will naturally rise with the price of silver, and the fact that they will cease to be legal tender during 1943 will be no deterrent to their being hoarded. It has been questioned whether the Indian Government

should not re-enter the silver market in India to prevent the price from climbing beyond the melting point for the old coins. It is unlikely that this will happen. In any case, it would hardly be politic for the Indian Government to sell silver in Bombay at 109 rupees, and to continue to sell in London at 23½d., which is about half the sterling equivalent of this rupee price. The position in the Indian market must be allowed to adjust itself; the main psychological brake on the speculative rise is the possibility that from one day to another the Government may re-enter the market as a seller at its former "ceiling" price of Rs. 62 annas 4 per 100 tolas. This fear is, however, losing its force as a deterrent to speculation, for the longer such a move is postponed, the less likely it is to be made.

* * *

The Franc in Tangiers

When financial freedom exists in so small an enclave as the territory of Tangiers, and is surrounded, as it is there, by the massive and mostly conflicting exchange controls of Spain, France and the various belligerents, that freedom can easily degenerate into anarchy and chaos. The latest news from Tangiers appears to indicate that this has in effect happened. Although Spain has, for all practical purposes, seized the territory of the former international administration, the remonstrances from the United Kingdom

and France have at least extracted assurances from Madrid that the special economic and financial régime of the territory would remain undisturbed. This means, among other things, that the Moroccan franc, which is equivalent to the Vichy franc, is still the basic currency. The peseta has, however, been made the currency for a large and increasing number of transactions. All purchases of goods imported from Spain must be paid for in pesetas, and this, in present circumstances, means that the greater part of the trade in foodstuffs is financed in that currency. There is no exchange control in Tangiers, and the two currencies which circulate freely within the territory are thus liable to fluctuate violently. Owing to the severity of the exchange control in Spain, there has been an increasing shortage of pesetas in Tangiers, and the rate of exchange between pesetas and francs has thus been moving persistently against the latter. The normal parity was 4.50 francs to the peseta, but recently the rate has moved to 8.50 francs, and the cost of living, in terms of francs, has been leaping up. There is a local market in sterling in which the peseta rate has, within the last three months, moved from 78 to 58 pesetas to the £. The franc has for some time been quoted at 550 to the £—an interesting indication of the relation which may ultimately be fixed for the sterling rate of the Vichy franc. This exchange instability, and the absence of any price control in the territory, have produced a measure of chaos and dislocation which should be the very antithesis of economic freedom.

Investment

A Temporary Peak

There have been signs for the past week or more that the rise in equities was, in stock market parlance, "bumping on the ceiling." There have been numerous recessions, relieved by a continuous and very marked rise in home railway equities, and in particular in Transport "C" stock. Whatever one may think of the future of the main lines, there is a case for supposing that the volume of traffic in greater London must recover after the war. This should bring some expansion in distributable profits, and to that extent the "C" stock is in a different category from the other securities of this market. But for this section it is probable that the usual indices would show a decline, and in home rails there are said to be sellers waiting for the first sign that the buying is nearing exhaustion. If equities in general fall back, it seems improbable that it will be more than temporary, and it is a fact that the number of bargains received is well above recent averages. This is putting considerable pressure on the reduced staffs of brokers' offices, and the decision of the Bank of England to vary its demands with regard to some of the many forms attending transfer is particularly welcome. The principal effect is that, from now on, a simple declaration that neither buyer nor seller is a non-resident, or acting for one, will end all formalities in registered securities. It is a further advantage that this declaration need no longer be signed by the buyer or seller himself, but only by his agent. The other changes effect a saving of paper as much as of labour, and it remains a mystery why some of them have not been instituted earlier. This applies also to the decision to print the substitute for the old "D" Form on the back of transfers, as was done in the last war. Whether the saving in labour will more than offset the effects of the recent expansion in business is doubtful, and the Kennet report, which is discussed on page 509, has been awaited with some impatience.

* * *

Supplementary Savings Certificates

Sir Kingsley Wood took the opportunity, when introducing the latest Vote of Credit, to announce the Treasury decision on the matter of the extension of the maximum holding of National Savings Certificates. He disclosed that some 5 per cent of the total number of holders had already reached the limit of 500 certificates, or £375 cash if the holding were all in the current, seventh series. The number is some 750,000 in all, of whom 40 per cent took the whole in one block. Of the remainder a considerable proportion must be small men, so that there is some case for extending the limit. Faced with the enigma that, if he

fixed the tax-free rate on the new issue high, he would lose a considerable amount of tax, whereas if it were too low he might discourage further saving, he has made a drastic cut in the rate. The new certificates, to be issued some time in January, cost 20s. and accumulate to 23s. in ten years. The corresponding figure for the existing issue would be 27s. 4d. The rates of interest are given as £1 8s. 2d. on the new against £3 3s. 5d. on the old. Evidently the new will only compete with more marketable Government securities in the case of those paying a considerable rate of surtax. If the small man takes them it will be because they are convenient and familiar. If he pays tax only at 6s. 6d. in the pound he can obtain £1 13s. 9d. net per cent on savings bank deposits, and in his own interest he should do so. Thus the Treasury has made little real concession. It will benefit if, through the fact that the savings groups tend to concentrate upon subscriptions to Savings Certificates, the man with a taxable income of £140 or less takes the new certificates instead of deposits. For the man in the lower income brackets, who pays some tax at 10s., as for the surtax payer in the upper brackets, the new certificates may be attractive, although the yield on 3 per cent Defence Bonds is higher.

* * *

Reform of Accounts

In the issue of last Saturday *The Accountant*, the recognised organ of the chartered accountants, paid *The Economist* the compliment of reproducing in full the article "Accountants and Accounts," with editorial criticism. One general and two special points seem to call for comment. Virtually nothing is said about the original suggestion of *The Economist* for a conference of auditors and directors, and a good deal is made of the ill-effects of the alternative—advanced only as a last resort—of making audit a matter of state responsibility. The first special point concerns the creation of the Taxation and Financial Relations Committee of the Institute. It is true that this committee has been formed to remedy some of the ills complained of. It is, however, so new that it is difficult to say what it may achieve, although its composition is encouraging. It is, however, purely advisory, and it is permissible to doubt whether it is capable, in its present form at least, of acting with the speed which may well prove necessary. It has been the object of *The Economist's* articles to point out the need for a radical change in outlook. The second point concerns extra-legal pressure. Having agreed that this is the best means to the end, *The Accountant* suggests that it should be exerted, not by the auditor, but by the Committee of the Stock Exchange. Ignoring the statements in the article "American Accounts" in *The Economist* of

August 8th, *The Accountant* imputes the effects of the SEC Acts of 1933 and 1934 to the New York Stock Exchange, and states that, although such extra-legal force has hardly been tried here, the London body did achieve the publication of consolidated accounts "in the case of applicants for new quotations by a stroke of the pen." The italics are ours; and there's the rub. The London Committee cannot—at least, until public opinion is converted to the need for publicity rather than public ownership—make its edicts retroactive for all the thousands of companies in whose shares it deals. Nor could it evolve, without full and lengthy consultation with auditors, accountants and industrial managements, forms of accounts suited to each of these numerous enterprises. *The Economist* would like to see the Committee in London move faster than it has; but the Committee cannot perform this task alone. Men of good will in the other groups concerned must play their part.

* * *

Control by Inspection

As a footnote to a series of articles on the reform of accounts and the need of a new outlook by both directors and auditors, of which the latest appeared in *The Economist* of September 26th, a word must be said about the accounts of monopolies. Most monopolies, recognised as such, are still those inherited from the nineteenth century. They are for the most part public utilities dependent on wayleaves. It has been sought to control these by the expedient of linking higher dividends with lower prices to the consumer. But this expedient has fallen short of complete success, because it takes insufficient account of technical progress. Having secured a basis which permits the payment of a dividend which may be as modest as 4 per cent on its equity capital, with a reasonable margin to spare, the company can rest on its laurels. The average broker will recommend the shares as a gilt edged equity; they will stand correspondingly high, and the directors will take credit each year for maintaining a steady rate of distribution. To secure the effect originally intended, a continuous review of conditions would be necessary. Further, the institution of holding companies permits discriminations which may be undesirable. It seems evident that, wherever monopoly conditions exist, whether of the old type or brought into being by recent changes in the legal framework, full inspection of accounts is essential—inspection, that is, of the full accounts of every operating concern—and the accounts must be such as to reveal all valuable information. A permanent committee should be created for this purpose, with provision for fairly frequent changes in personnel. Its reports should be published in such form, and at such intervals, as would permit really informed criticism of the performance of individual bodies. The report would at least disclose all the main items of costs. A comparison of the figures for individual concerns, *inter se*, and with those from outside sources, ought to provide a sufficient indication whether advantage is being taken of technical progress, and how far, if at all, the concerns in question were contributing to it. The inspection should apply to all monopolies, whether of the old or of the newer and, in many respects, much more insidious types, and the system of inspection and report should be complementary to, and not in substitution for, the presentation of informative accounts to shareholders, in those cases where private ownership exists. The fact that a monopoly is controlled or created by the state should not exempt it from the inspection of this independent body.

* * *

Great Boulder Once More

The latest development in the affair of Great Boulder Proprietary, now in voluntary liquidation, is the issue of a further circular by the Shareholders' Resumption Group, whose *raison d'être* is to have control of the company returned to the shareholders. The circular makes it evident that the Shareholders' Committee has not thought it worth while to co-operate with the Group, but that Mr Claude de Bernales, chairman of the company, is prepared to do so. The last-named has consented to the publication of two letters written to the liquidator, but the latter will not permit publication of his letters. The only useful information to be gleaned from the published letters is that in August the liquidator was attempting to secure general agreement to certain changes in the Articles of Association, and to the appointment of a new board with an irrevocable

life of five years. Mr de Bernales was prepared to accept a new board, provided he liked it, but he was not prepared to accept its appointment for five years. It is possible to imagine circumstances in which such an appointment might be desirable, but it is scarcely worth while to discuss the proposal *in vacuo*, especially as there is no certainty that it still holds the field. The circular goes on to point to the poor price likely to be realised in the event of liquidation, and draws attention to the formation of a corresponding group in Australia. This group apparently wishes to take control away from the liquidator, and it is the intention of the London group to make an application to the Court in that sense unless the liquidator accedes to its appeals. It is to be hoped that, after raising the expectation of independent shareholders by his statement of a month ago, the new liquidator will not be forced to admit that his estimate of the position was over optimistic and that no solution is to hand. But it would be an even greater pity if the independent shareholders, after waiting so long, were to abandon the position they have taken up. The whole question of whether a board should remain in control when a large section of independent shareholders no longer feel confidence in them needs re-examination. But in this particular case, despite the very full reports of Sir William McLintock on the company and its affiliates, the whole position is still far from clear. Further developments will be awaited with particular interest.

Company Notes

Wall Paper Manufacturers' Preliminary

The preliminary statement of the Wall Paper Manufacturers reveals that profits for the year ended July 31st last have risen, after tax and war damage provision, from £377,292 to £489,073. This latest figure is only slightly lower than the earnings in the opening eleven months of the war, and suggests that, since last year's setback, the company has been able to adapt itself more completely to the new

Three Point Programme of

THE FREE TRADE LEGION—THE REALIST LIBERAL LEAGUE

Though the existing political parties adhere to a truce between themselves there is abundant evidence to show that the public mind does not stand still.

On the one hand there is a reviving recognition of the value and importance of old and proved principles. On the other there is a tendency towards unwise experiments unsuited to the economy on which our population was built up.

Accordingly the Free Trade Legion has decided that it is vital for the national stability that public education on economic and political problems should be carried on and that the alternative opinion which it represents should be more widely known.

The programme of the Free Trade Legion comes under three heads:—

1. Internal freedom of trade with a return to the control of bureaucracy by Parliament.
2. A return to reliable money.
3. A declaration of Britain's intention to return to Free Trade regardless of the policies of other Nations.

These three points cut across the interests of many sections of the community. Despite that fact, their importance for the salvation of the Nation is regarded as being so great and so urgent that all personal or sectional interests must be set aside.

The Realist Liberal League urges all men of good will to send for its leaflets amplifying the three points and to help to spread the gospel. Business men everywhere are the leaders of public opinion. It is their duty to inform themselves on these vital problems, which affect not only their business but the children of the Nation. Send for information to:—

Hon. Secretary,
Free Trade Legion, The Realist Liberal League,
38, Bedford Street, W.C.2.

conditions. If this is so, it is not improbable that the company can look forward to relative stability of earnings for the duration, but to the extent that depletion of stocks is the explanation, the reverse is the case. Interest and dividend payments on the preference and ordinary shares are on a gross basis and unchanged from previous years at £285,610. Earnings on the deferred stock, which again receives 4 per cent, to which level it was reduced last year from an actual 5½ for the broken period, total £193,463 against the extremely narrow margin of £91,682 a year ago, providing cover of 13.2 against 4.1 per cent. The company is thus able to place £100,000 to a reserve for rehabilitation against nil last year, although a similar amount was put to general reserve in 1940. The transfer of £10,000 to employees' pension fund is resumed after last year's interruption, and the carry forward slightly increased to £225,777. It is hardly likely that receipts from wallpaper sales have much exceeded those of last year, when the shortage of materials was stressed, but probably demand from domestic consumers has been transferred to other products such as distemper and paint, while Government orders have doubtless kept the group well occupied. It is improbable, however, that these results have been achieved without a further substantial liquidation of stocks, which in the case of wallpaper cannot be replaced. It will be interesting to learn how far exports have been maintained in view of the current shipping position. The price of the deferred units at 29s. 6d., yielding only £2 14s. 11d., reflects the market's confidence in the company's ability to maintain these results, and above all in its extremely favourable post-war prospects.

Bristol Aeroplane Results

The latest accounts of the Bristol Aeroplane Company bear testimony to the current activity of the aircraft industry. Net profit for the year ended December 31st last, struck after providing undisclosed depreciation and EPT charges, has risen from £766,537 to £985,579. Since EPT was charged at the full 100 per cent and the company has, according to the chairman, Mr Verdon Smith, been working on still lower profit margins, these figures fail to reflect the expansion in turnover. Taxation, however, requires £580,000 against £355,000, but interest, fees and preference dividends are only slightly changed at some £135,000. The dividend is maintained at 10 per cent, but the cover is slightly higher at 16.4 against 15.9 per cent, and after again allocating £100,000 to general reserve, the carry forward is increased almost £5,000 to £19,141. The course of profits and their distribution is shown in the following table:—

	Years to December 31,		
	1939	1940	1941
Total income after depreciation*	989,992	766,537	985,579
Taxation	635,000	355,000	580,000
Interest and fees	35,017	115,843	120,710
Preference divs.	19,500	17,250	15,000
Ordinary shares:—			
Earned	300,475	278,444	269,869
Paid	199,650	174,900	165,000
Earned %	15.1	15.9	16.4
Paid %	10	10	10
General Reserve	100,000	100,000	100,000
Carry forward	10,727	14,272	19,141

* After EPT in 1940 and 1941.

The chairman explains that some of the largest balance-sheet changes are due to technical considerations. The jump of some £877,000 in debtors to £4,763,502 arises from the delay in settling contract prices with the Ministry of Aircraft Production. Agreement has since been reached. Similarly a fall in stock is due to changes in the method of recovering progress payments. Additional tax provisions are largely responsible for an increase of some £580,000 in creditors, etc., at £6,143,397, but the bank overdraft at £2,692,585 is little altered. The liquid position of the company has improved, assets exceeding liabilities by some £2,080,000 against £1,852,226 a year ago, a fact which will assist the company to adapt itself more easily to post-war conditions, to which the chairman looks forward with confidence. The 10s. shares at 14s. 1½d. yield £7 4s. 2d., which is rather lower than the average for the industry.

Cannock Associated Earnings

Despite the difficulties of the past year, the accounts of Cannock Associated Collieries for the twelvemonth ended June 30th show virtually no change. In March, the board

must have felt some uncertainty about the outlook, for the interim dividend was passed, but early this month a final of 8½ per cent was declared, which was the same as the total in each of the two preceding years. The concern is a holding company, and the absence of any consolidated profit and loss account makes comment on the performance impossible; but the amount earned on the ordinary capital, which just before the war had risen to 14.5 per cent, is now back to 11.3, the figure for 1936-37, the first year of the new group's life. As was the case in each of the two preceding years, £20,000 is added to general reserve, while there is a small increase in carry forward. The consolidated balance-sheet shows that depreciation has been provided for the year at 10 per cent on waggons, and at rather under 2 per cent on collieries and other properties. New additions are small, and total fixed assets have dropped from £1,504,847 to £1,477,152. Total liquid assets are up from £1,734,787 to £1,809,538, while the net figure has increased from £1,328,098 to £1,389,490. Stocks are moderately lower, while all other items are up, except that cash is down from £303,984 to £291,087, and there is a new holding of £60,000 in tax reserve certificates. The balance-sheet is rather more informative than many, but the lack of a consolidated profit and loss account is a great weakness. The company's collieries are spread from Staffordshire to Yorkshire, and it is perhaps better placed than some of the small concerns to retain its business in face of the radical adjustments of production which are desirable. The £1 ordinary at 22s. ex dividend yield £7 14s. 6d. per cent.

Covent Garden Properties

Total net revenue of *Covent Garden Properties* in the year ended June 30th last is further reduced from £237,495 to £220,743. This result compares with a fall of nearly £60,000 last year, and a total drop of some £110,000 from the earnings of the last pre-war year. The decline is again attributed to the reduction in market receipts, which were £61,000 below 1939, but the chairman, Mr Philip Hill, announces a slight improvement in net income from the company's other properties to a level only 8 per cent lower than the 1939 figure. This result, however, arises in the main from London's immunity from bombing, and maintenance of these results must be considered with due regard for this factor. Nevertheless, the company is again compelled to pass the cumulative preference and preferred dividends, which are now two years in arrears. Taxation is only some £3,000 lower at £128,386, and after meeting debenture interest and fees the amount available for dividends is £14,890, against £24,300. The balance-sheet reveals that the liability for War Damage contributions is £5,000 higher at £130,000, of which the chairman states £50,000 has been paid. The situation in respect of loans on mortgage made by the company, which stand at £202,051 after deduction of £100,000 special reserve, remains unaltered, repayments of capital and interest charges having in some cases not been met. In view of the conditions prevailing, the chairman is not prepared to state whether or not this reserve will prove adequate. The improvement in investment values has raised the market value of the company's investments nearly £40,000 to £166,806, against a balance-sheet valuation of £367,659. Both debtors and creditors are slightly higher, but cash, other than that held by the debenture stock trustees, is slightly lower. In common with all property companies, earnings are, for the duration, determined by the severity and extent of bombing, but provided the capital assets of the company do not suffer, there is some reason to suppose that the arrears of dividends may be cleared fairly quickly with the return of peace. The £1 cumulative preferred shares stand at 12s. 6d., the £1 ordinary at 9s.

Gestetner Stability

Despite the difficulties of the times, the latest accounts of D. Gestetner to August 31st last reveal that the company's earning capacity is little impaired. Profits after EPT are slightly lower at £221,778, against £229,621, but after reducing the depreciation allocation from £17,593 to £14,231, and the provision for tax reserve by £35,000 to only £45,000, earnings for the equity total £133,391 compared with £104,010. This represents an improvement in the cover for the dividend, maintained at 25 per cent by a final payment of 12½ per cent, from only 26.6 to 41.1 per cent. The sharp reduction in tax provision permits, for the

first time since 1937, a transfer of £30,000 to reserve—on this occasion to contingencies—the carry forward being raised some £2,500 to £39,790. The continued shortage of office equipment appears to be due to increased demand, rather than shortage of supply, for the chairman, Mr S. Gestetner, states that sales have been well maintained, and the works have been operating at full capacity. The balance-sheet position is sound, while changes during the past year are slight. A reduction of cash and trustee securities from £221,152 and £171,310 to £178,489 and £105,214 respectively, is more than counterbalanced by a new holding of £200,000 of tax reserve certificates, but sinking fund policies are some £50,000 lower at £104,125. While the subsidiaries' indebtedness to the parent has fallen some £30,000 to £110,945, other debtors and loans are almost £50,000 higher at £175,556. Investments in subsidiary companies have dropped from £20,292 to £8,154, the Far Eastern subsidiary having been written off over recent years. Stock, however, is some £20,000 higher at £183,587. On the basis of recent results and the future prospects of the company, the present valuation of the 5s. ordinary share at 26s., to yield £4 17s. 5d. per cent, is distinctly reasonable.

United Dairies Earnings

In the absence of consolidated profit and loss and balance sheet figures, the accounts of *United Dairies* for the year ended June 30th last are valueless as an index of earning power, since profits have again been brought in only to the extent necessary to cover the dividend. Actual trading profits were, according to the chairman, Mr J. H. Maggs, higher than last year, in which, however, provision was made for practically the whole liability under Part I of the War Damage Act. Total disclosed profits are £528,383 against £522,838. Disclosed earnings on the equity after meeting interest and preference dividends afford a cover of 13.0 against 12.6 per cent for the payment of 12.5 per cent, which has been maintained over the past decade, the surplus of £6,186 raising the carry forward to £177,673. The most important feature of the balance sheet is the considerable improvement in the company's liquid position, net liquid assets having risen from £87,036 to £769,649, owing mainly to the repayment of loans made to

subsidiaries. The greater part of this is placed in a new holding of £500,917 of tax reserve certificates and an increase in gilt-edged stocks of over £70,000 to £599,423. Cash is nearly £60,000 higher at £309,869, while there is an almost equal reduction of creditors to £562,694. Freehold and leasehold properties stand some £80,000 lower at £2,643,490. The repayment of loans reflects, presumably, reduction of stocks. The experience of the group under rationing suggests that there is no reason to expect any marked change in the near future. The £1 shares at 56s. cum dividend offer a sound yield of £4 10s. 5d.

Coast Line Assets

The full accounts of *Coast Lines* for 1941 may disappoint some hopes raised by the resumption of ordinary dividends, with a payment of 2½ per cent, announced early this month. The earnings of the group, after all appropriations, other than directors' fees and taxes, amount to £338,771 against £300,034. Tax is, however, up from £63,500 to £101,500, so that the net amount available is virtually unchanged. Profits from earlier years have been brought in to the extent of £55,010 against £25,867, but profits on sale of assets are only £2,902 compared with £21,987. Most of these adjustments arise out of delays in settling normal trading matters. The dividend, which absorbs £50,000 gross, is made possible by placing only that sum, instead of twice as much, to tonnage replacement, after which there is a small draft on the carry forward. Fixed assets show a modest decline, to which it is impossible to give an exact significance in the absence of any depreciation figures. The really important changes in the balance sheet are a rise from £169,871 to £1,035,854 in the net amounts due to subsidiaries, and the repayment of sums, aggregating £382,779, mainly to bankers, in connection with new tonnage and other matters. Excluding all these items, the balance of liquid assets over current liabilities is up on the year from £382,564 to £1,081,452. Evidently this represents a transfer of liquid funds from the subsidiaries to the parent, but the absence of a consolidated balance sheet makes it impossible to say why this happened, or how the assets have arisen. As its name implies, the group concentrates on coastwise and short sea transport. The £1 ordinary shares standing at 13s. 6d. ex dividend yield some £3 14s. per cent.

Industry and Trade

Below the Target

The three years' blackout of the statistics of coal production, which did a good deal more harm than good, was lifted this week when the Ministry of Fuel and Power announced that the weekly average output of saleable coal during the four weeks ended October 3rd amounted to 4,076,100 tons. The figure is encouraging; it reveals an increase of 155,100 tons over the average weekly output during four weeks in June and July, and suggests that the downward trend in production has been stopped. But it is, nevertheless, disappointing; output last month was still well below the national target of 4,173,000 a week, set by the Greene Board. Production has, admittedly, been affected

PERCENTAGE* OF DISTRICT TARGETS REACHED DURING FOUR WEEKS ENDED OCTOBER 3RD

* Percentages based on output, adjusted for tonnage lost through holidays and circumstances beyond the industry's control.

by holidays in certain districts, and for that reason a further improvement may be recorded this month. The national target is said to be well within the industry's capacity. As the accompanying table shows, seven out of twenty-four districts actually exceeded their district targets last month. Miners in Shropshire, which exceeded its target by no less than 5.4 per cent, will receive a bonus of 1s. 3d. a shift. In addition to the recorded output for the four weeks ended

October, some 50,000 tons a week are now being produced from opencast workings. Mr Tom Smith, Joint Parliamentary Secretary to the Ministry of Fuel and Power, stated last Sunday that the save fuel campaign had so far been "remarkably successful," "both in the industrial and domestic fields"; there had been a saving of coal, gas, and electricity ranging from 17 per cent to over 50 per cent. Such figures are deplorably misleading unless they compare overall consumption, in terms of coal, with the corresponding period a year earlier. If there had been a general reduction in consumption of the order indicated by Mr Smith, the Ministry of Fuel and Power would soon be faced with the problem of surplus production. The real test will come with the impact of winter conditions on demand, and on the production and transport of coal.

Utility Furniture

By the utility furniture scheme, complete control is exercised by the Board of Trade over domestic furniture production. It provides a contrast with clothing. In the first place, only utility furniture may be manufactured after November 1st. (Furniture already in production may be completed after that date.) Secondly, while there are only

FAMOUS SINCE 1795

OTARD'S

COGNAC BRANDY

negative restrictions on the design of clothing, whether utility or non-utility, furniture must conform to the Board of Trade designs, which are being registered with the Patent Office as national designs. Thirdly, while utility clothing may be bought by anyone on the surrender of coupons, there is no universal ration system for the purchase of utility furniture; permits must be obtained, and preference is to be given to people with special needs, such as the bombed, and newly married couples. There is no restriction on sales of remaining stocks of non-utility furniture. Production of the new furniture is about to begin and will be confined to firms licensed by the Board of Trade; some will be on sale by the end of the year. Prices have not yet been fixed and no decision has been reached about the question of purchase tax on the furniture.

In designing the furniture, the advisory committee, which was appointed in July, has been limited by the material available for production. No plywood could be used, metal springs are scarce, only home-grown timber is available, paint is needed for more essential use, and the usual polishes are unobtainable. Over three-quarters of the material used is hard board, a compressed paper and wood pulp mixture, veneered on both sides. The furniture is designed in such a way that the maximum strength is given to the finished article, though it may not have the durable qualities of pre-war production. In appearance the furniture is neat, and its lines are simple and pleasing. It is, as far as it can be, in the school of good, plain, modern furniture designing.

Another Campaign

Another scrap drive was inaugurated on Monday, this time for the collection of non-ferrous metals. Scrap is to be collected through special local depôts, together with other salvage by local authorities, and by scrap dealers. It would be wrong to infer from the new drive that supplies of non-ferrous metals available to the United Nations are dwindling. Far from it. Apart from tin, which was derived in large quantities from the Dutch East Indies and Malaya before their occupation by Japan, supplies of most non-ferrous metals are increasing. The production of aluminium, copper and magnesium have been rising steadily. Indeed, as has been pointed out before, the growing scarcity of non-ferrous metals, as of other raw materials, is due largely to the expanding needs of the munition factories in North America and Great Britain. The growth in demand for raw materials is tending to outpace the growth in their production. Consequently, the need for economising in the use of materials and for collecting scrap is becoming even more urgent if the huge Allied munition programmes are to be fulfilled. So far as Great Britain is concerned, one additional reason for the new drive is the need for economising shipping space. It is impossible to estimate the tonnage of the various non-ferrous metals available for scrap and, consequently, the yield of the drive. But since many persons remember to their sorrow the serviceable aluminium pots and pans which they gave up two years ago, it should be made clear what kind of materials should be handed over and that the articles will not remain indefinitely on the scrapheap.

Dissipated Activity?

The latest monthly bulletin of the Building Industries National Council contains an interesting account of its activities during the ten years of its existence, spiced by the usual castigation of the Ministry of Works and Planning, "which is essentially the (building) industry's own child." For example,

under the pressure of war, a metaphorical cloud of locusts, in the form of administrators, has fallen upon the industry. The industry is still in the unfortunate position of being unable to organise its full resources because the wartime building needs, which can only be compiled by the Government, have not yet been expressed in physical or any other measurable terms. There is still no organised and properly collated building programme. The general position in the building industry remains one of divided, and in consequence dissipated, activity.

It is difficult to follow these flights of fancy and to understand the precise meaning of phrases such as "dissipated activity." No doubt the Ministry has made, and is making,

mistakes, and criticism of specific failures can only do good. But it is difficult to believe that the Government has no organised building programme; if this charge were true, the position would be serious indeed. So far as it is known, the building programmes of the various Government Departments are carefully collated and related to the industry's resources. But in present conditions, even the most carefully prepared programme is often upset by a change in circumstances. Admittedly, this does not mean that there is no scope for improvement; indeed, a good deal remains to be done. The problem of concentration, too, will give rise to many difficulties.

Paint and Varnish Industry Concentration

The scheme for the concentration of production in the paint and varnish industry has reached an advanced stage. Nucleus certificates have been issued to firms which have been nominated by the Board of Trade, in agreement with the Ministry of Supply and other Government Departments interested in the use of the industry's products for essential purposes, and the Ministry of Labour. The National Federation of Paint and Varnish Manufacturers has a list of nucleus firms, and the "closers" can arrange for their production to be transferred to the "runners." In some cases, the Board of Trade may permit the postponement of transfer until the end of the year, but in general transfers will be made forthwith. From January 1, 1943, raw materials will be allocated only to nucleus or approved firms. The labour force to be permitted to nucleus firms will be decided by joint agreement between the Ministry of Labour, the Board of Trade and the Ministry of Supply. In the meantime, key workers and immobile older workers from the closing firms may be absorbed into the nucleus factories. The industry has adopted a compensation scheme in which all manufacturers of paint, lacquer and varnish will participate, to protect the interests of closed firms; it is awaiting Board of Trade approval.

Cotton Export Trade

In view of the shortage of cotton and cotton goods for essential purposes in this country, no increase in export trade can be expected. Exports have been restricted for some time and are only permitted in accordance with allocations made by the Cotton Board. The buying power of shippers was exhausted at the end of September, and allocations have been issued for West African markets for the six months ending March 31st next, instead of the usual three months. The extended allocations have been granted to give the Cotton Controller an opportunity of planning requirements well ahead and to make continuity of production for the West African market easier. The larger allocations are expected to be used to increase the size of individual orders and not to widen the range of goods put into production. The minimum quantities which the Cotton Control, under its planning scheme, can accept for printed cloths will remain at 500 pieces of 120 yards, or 60,000 linear yards. In the case of speciality cloths, such as coloured woven domestics, brocades and some categories of coloured woven goods, minimum quantities of 24,000 linear yards will be accepted and planned. Merchants who may not be in a position to place the requisite minimum quantities may be assisted by British Overseas Cottons.

Milk Marketing Plan

On October 1st the distribution of milk from producer to retailer was begun according to the new plan. In effect, the Government took over the ownership of all milk, and by this action has affected every section of dairying. The producer now enjoys a guaranteed market at a guaranteed price, which does not, as formerly, vary according to the purpose for which the milk is used. The only price variation—between winter and summer milk—is designed to encourage winter production. A further differential will be introduced later, after tests have been made, whereby inferior milk will be paid at a lower rate. Quality premiums continue to be paid. The Milk Marketing Board buys the milk from the producer, and is responsible for transporting it from the farm to the point of first delivery, which is determined by the Ministry of Food. At this point the milk

COMPANY MEETINGS

THE UNITED STEEL COMPANIES, LIMITED

SIR WALTER BENTON JONES'S STATEMENT

The annual general meeting of The United Steel Companies, Limited, was held, on the 21st instant, at the Iron and Steel Institute, 4 Grosvenor Gardens, London, S.W.

Sir Walter Benton Jones, Bt. (chairman and managing director), presided.

The secretary (Mr R. Gresham Cooke) read the notice convening the meeting and the report of the auditors.

The chairman's statement, which had been circulated with the annual report and accounts and was taken as read, was as follows:—

In present circumstances it is not possible for me to review the business of the company in detail at its annual general meeting, as has been my custom in normal times; I think, therefore, it would suit the convenience of the shareholders if I were to follow the war-time practice adopted by the chairmen of many companies of making a statement to be issued with the directors' report and the accounts instead of giving an address at the meeting. Accordingly I have prepared this statement and at the annual general meeting I shall do no more than formally propose the adoption of the report and accounts.

THE ACCOUNTS

The report and accounts, although arranged to economise paper, are in the usual form, including a statement of combined assets and liabilities. The accounts themselves are clear and require no explanation.

War damage insurance has been provided out of the special reserve which it will be remembered was made last year by a transfer from the general reserve.

Owing to the great demands of taxation the profit earned after appropriating £125,000 to reserve for obsolescence, the

same amount as was provided last year and the year before, again leaves no margin to add to the general reserve.

There has been little change in the state of any of the company's properties. Some additions have been made and ordinary upkeep has been maintained.

Our staff and our operatives continue to devote themselves unsparingly to the single effort which is required of all in these days. While making this reference to our own people, I take this opportunity to express an opinion about the industry of the general body of workers in this country, of all grades and in all occupations. The majority of men—and women—never take their noses from the grindstone; they do not want to be talked about or eulogised; nor are they driving themselves to perform unpleasant but necessary duties; they do their utmost because they are British and have been challenged. It is the loyalty and determination of these men and women which has built up a high rate of production and which I believe can and will build still higher. To our own staff and our own operatives the shareholders will join with the directors in their appreciation and gratitude.

I cannot say anything about the operation of the company's works nor can I forecast the future. Our task is necessarily the day's work and to this end we are devoting all our energies.

The report and accounts were unanimously adopted.

THE DIVIDEND

The proposed final dividend for the year ended June 30, 1942, at the rate of 5½ per cent., less tax, making with the interim dividend already paid a total distribution for the year of 8 per cent., less tax, was approved.

The retiring directors, Sir Robert Hilton, Mr J. Henderson, Mr A. Jollie, Mr C. F. Ward Jones and Mr A. J. Peech, were re-elected; and the auditors, Messrs Peat, Marwick, Mitchell and Company, were reappointed.

The proceedings terminated with a vote of thanks to the chairman, directors and staff.

(Continued from page 522)

becomes the property of the Ministry, and is sold to distributors (who used to buy direct from producers) at a flat rate (subject to a churn allowance) of 2s. 1d. a gallon. The Ministry is responsible for the transport and allocation of milk. Allocation, of course, is based on the requirements of dairymen according to the priority and non-priority needs of their customers. New rates of remuneration are received by distributors as a consequence of the new, rationalised plan of distribution, and are now as follows:—

	d. per gallon
Depôt proprietor	1½
Wholesaler	2
Retailer in London	11
Retailer in provinces	10½

These margins are based on the services performed by distributors. In some cases, where one firm performs more than one distributing function, it is paid less than the combined rates for each function.

The general effect of the scheme is to iron out anomalies in distribution, and by rationalisation the cost of retailing has been reduced. The ultimate gain goes to the taxpayer, since the savings will reduce the milk subsidy, which at present is £20 millions a year. Distributors' margins are to continue for six months, and in the meantime costings are being newly investigated. Plans for the rationalisation of retail distribution, which apply in the first instance to localities with a population of more than 10,000, are now almost complete. It is estimated that about a quarter of the manpower engaged will be released and 40 per cent less petrol used.

Cocoa Difficulties

The West African Cocoa Scheme has entered its fourth year, and it appears to have reached a critical stage. The

DECCA RECORD COMPANY, LIMITED

HIGHLY SATISFACTORY RESULTS

The thirteenth annual general meeting of The Decca Record Company, Limited, was held, on the 21st instant, in London.

Sir Cyril F. Entwistle K.C., M.C., M.P. (the chairman), said that there was a profit for the year of £69,490, against £48,555 for the previous year. The directors recommended a dividend of 25 per cent., less tax, on the ordinary shares and the transfer of £40,000 to general reserve account, bringing it up to £100,000, and the balance to be carried forward would be £15,488. Thus in the four years since the scheme of reconstruction undistributed profits of over £115,000 had been retained in the business.

The directors had felt it advisable to build up the capital position of the company as rapidly as possible, limiting the dividends paid to the ordinary shareholders to a small proportion of the total available profits. The results for the year under review justified a much larger dividend, but he believed the shareholders would endorse the directors' decision to take a long-term view. Shareholders would not expect him to make any promise with regard to the current year, but he could go so far as to say that the directors would consider the question of distributing a larger proportion of the available profits. He felt sure shareholders would regard the results of the year's operations as highly satisfactory.

With regard to the current year, they had been subjected to various new restrictions which concerned the manufacture and sale of records, but the business of the company continued to be satisfactory. Although shareholders would not expect him to forecast the results for the whole year, based on present knowledge he saw no reason why last year's progress should not be maintained. Their business had been established on such a foundation that the directors could look to the future with confidence.

The report was unanimously adopted.

scheme was designed to prevent West African cocoa farmers from suffering despite loss of markets. In normal times, Europe absorbed over one-third of world supplies, of which West Africa produced over two-thirds. Under the Government's buying scheme, the whole British West African crop and the surplus from the Fighting French and Free Belgian areas in Africa are acquired at a fixed price. In the first war season, the Ministry of Food administered the scheme, but in the autumn of 1940 it was transferred to the Colonial Office, which acts through the Produce Control Board. Over 400,000 tons a season are acquired under the scheme—more than four times as much as the normal requirements of this country. The plan has, so far, fared better than might have been expected. In the first season, there was a loss of £263,000, but reduced buying prices and larger sales to the United States resulted in a surplus of about £1,600,000 in the second season, counter-balancing the previous loss. Any surpluses under the cocoa buying scheme will be repaid to the farmers after the war, or will be otherwise used for their benefit. Unfortunately, the surplus of 1940-41 may be swallowed up unless a new way can be found to use the controlled cocoa. The margin between the Control Board's purchases and sales of cocoa beans is rapidly widening and has reached a size which makes the scheme a risky one. One way to preserve the scheme's usefulness both to the Government and to the farmers would be to use the surplus cocoa for the production of cocoa butter. Cocoa butter requires less shipping space than cocoa beans and is a useful vegetable oil. The plant required for processing is comparatively simple and could in part be produced locally. The Produce Control Board deals with cocoa and oilseeds, so there is a clear basis for such a development. The establishment of cocoa butter extraction facilities in West Africa would be of outstanding value to native farmers now and after the war; it could help to stabilise the cocoa market through the retention of some supplies in West Africa for processing. In the past the season's cocoa crop used to be shipped in three months, resulting in such pressure on the market that prices as a rule were depressed throughout the year.

RECORDS and STATISTICS

STOCK EXCHANGES
London

Note: all dealings are for cash

MARKETS during the past week have been quiet, but despite some profit-taking early this week, there is no indication that the strong upward trend of recent weeks will not be resumed with the advent of more favourable market conditions. Both the fixed-interest and ordinary share indices of the *Financial News* continue to reflect some improvement in prices, while markings show little change on the previous week. Some investment demand at the reopening of the week had little effect on prices in the *gilt-edged* market, but quotations generally subsided the next day on the absence of support, although a number of the losses were recovered later. With the diminution of the Japanese threat to Australia, trading in Australasian stocks has been resumed, but while almost all issues are now above the minimum quotations active dealing is still relatively difficult. Apart from small fluctuations for Chilean stocks, South American issues in the *foreign bond* market were inactive. Greek stocks were bought, but the 4 per cent Egyptian Unified loan weakened. Chinese bonds, however, advanced up to a point and more on some shortage of stock. Activity in the *home rail* market was on a considerable scale, junior stocks providing the chief interest. Of these GW ordinary and Southern preferred were outstanding with rises of 2½ and 2 points on the week, respectively, prices remaining firm despite profit-taking in mid-week. Among the Berwick stocks steady gains for the first and second 4 per cent preference issues reflected some good support, while LMS preference stocks were also in demand. London Transport "C" stock was prominent this week with a total gain of 4½ points. Turnover in the *foreign rail* market was on a smaller scale, but several useful gains were recorded for senior Argentine stocks. BA Western 4 per cent debentures rose 3 points, while San Paulo ordinary and later BA Pacific consolidated debenture advanced 2 and 3 points respectively. Elsewhere Canadian Pacific issues fluctuated without any significant change on balance.

Despite some profit-taking the effect on prices in the *industrial* section was slight, the undertone remaining distinctly firm throughout. Thus, small but numerous improvements were scattered among lead-

ing brewery issues, South African Breweries being outstanding with a rise of 2s. In the tobacco group BAT and Gallaher fluctuated narrowly, but Imps remained unchanged. Small gains predominated in the heavy industrial section, advances for colliery issues providing some of the largest gains, but in general advances were restricted to a few pence. Changes among shipping issues were trendless and without significance, but in the motor section Rolls-Royce and De Havilland advanced 2s. 6d. and 2s. respectively among other smaller improvements. Triplex, however, moved against the trend, falling 2s. British Celanese issues remained indifferent to the latest developments in the second preference scheme until midweek, when the equity jumped 1s. 1½d. Textile issues generally moved narrowly and without trend, although Patons & Baldwin rose ½s. Among stores issues Harrods and Woolworths weakened, but in the miscellaneous section Hudson's Bay advanced 2s. 9d. on the week. International Nickel and Brazilian Traction were both rather better, and Dunlop advanced steadily, but Murex lost ½s.

Spasmodic Cape support occasioned narrow fluctuations in the *kaffir* market, but actual business was insufficient to affect prices to any marked degree. In midweek, however, a slightly firmer tone became apparent on renewed buying from the Cape. Rubber shares were practically unchanged, but further support was accorded several leading tea issues, Pabbojan jumping 2s. 6d. in midweek. The oil market was featureless, apart from several small declines at the opening of the week which were generally recovered in midweek.

COMMODITY AND INDUSTRY NEWS

Bread Subsidy Extended.—A temporary subsidy of 2s. a sack on the first eight sacks of bread produced by bakers in England and Wales was granted by the Ministry of Food in June, to continue until the end of September. It was made to cover the time needed by the National Association of Master Bakers, Confectioners and Caterers to investigate bread costs. The investigation is not yet complete and the Ministry is to continue the subsidy for a month from October 10th last.

Flour and Semolina Retail Prices.—The Flour (Maximum Retail Prices) Order, made by the Minister of Food, came into force on October 18th. It prescribes maximum retail prices for plain flour which vary between 2½d. and 2½d. a lb., according to the quantity bought; self-raising flour prices vary from 3½d. to 3½d. a lb. Maximum prices for semolina vary according to weight, and prepacked semolina can be sold from 4d. to 7d. a lb. For semolina sold loose the price varies from 4d. to 5d. a lb. The price of flour to bakers has been controlled since the war began.

Export Control.—The Export of Goods (Control) (No. 40) Order (SR and O,

No. 2101), which comes into force on November 2nd, extends control to cover fancy glassware; clinical thermometers; wire cloth and wire gauze; ships' propellers; certain plastic articles; plumbago crucibles; feathers and down; and additional metal manufactures, machinery and chemicals. Applications to export certain goods manufactured from non-ferrous metals will not normally be entertained.

Paper Control.—The Minister of Supply has made two new paper control Orders (Nos. 52 and 53), which come into force on October 26th. The first makes changes in maximum prices for paper and contains some new provisions for paper of lighter substances. Retail sales of 28 lb. or more of paper are price controlled. The second Order permits certain increases in the maximum prices which may be paid to waste-paper merchants. Maximum prices of waste ropes and strings are amended by this Order.

Service Laundry Charges.—The Board of Trade, in consultation with the Central Price Regulation Committee, have made the Services Laundry (Maximum Charges) Order (SR and O, No. 2091), which came

Islands and Stalingrad, Wall Street adopted a waiting policy at the end of last week. Despite many small losses on rather light selling, prices remained little below the recent peak levels, and after a dull opening buying of industrial issues based on current economic conditions occasioned a general advance, leading industrial stocks advancing a point early this week.

* Revised series.

CONVERSIONS AND REPAYMENTS

Joshua Hoyle and Sons.—The company has decided to repay, on Nov. 30th next, the nominal amount of £249,144 of the 4 per cent Secured Notes. To enable this repayment 1,835,087 new ordinary shares

of 2s. each (part of unissued share capital) are offered for subscription by shareholders at 2s. 6d. each in the proportion of one new ordinary share for every four ordinary shares already held. The new shares will rank *pari passu* with existing ordinary shares but will not be entitled to participate in any dividends paid or payable in respect of the year ended September 30, 1942.

Shorter Comment

Mexican Light and Power (Soc.)
Gross operating earnings in July, 1942, \$1,010 (\$886,125), net earnings \$360 (\$247,000). Aggregate gross earnings from Jan. to July, \$6,590 (\$5,296), aggregate net earnings \$2,201 (\$1,072).

LONDON ACTIVE SECURITY PRICES AND YIELDS

Allowance is made for net interest accrued, and for redemption for fixed interest stocks and for changes in interim dividends for ordinary stocks.

types of jute yarns, and provides that, in all transactions involving such yarns, spinners must use the descriptions specified in the Order.

Gas Charges.—The Government has authorised the South Metropolitan Gas Company to raise its charges to all gas consumers by 1d. a therm. The increase took effect for meter readings from October 14th. The rise is to cover increased cost of labour and coal.

Pepper Supplies.—The Ministry of Food is arranging quotas of pepper for shipment from India in order to make supplies available to the United Nations and neutrals. Meanwhile, exports from India are restricted to the 1939-40 level, with the ex-

ception of certain purchases made by the Ministry for the United Nations.

Joint Action

RECENT speeches have played a light on a basic issue of the war—and of the peace to follow: the difficulty that men, parties or nations find, however common their interests, in devising the ways and means of making common decisions and of taking common action. General Smuts has picked out "the United Nations" as the most fruitful conception of modern times. Mr Wendell Willkie has spoken of the pressing need for "global action" now and in the post-war world. Lord Snell has described the difficulty of arriving at agreement in a National Government of all parties on a question so controversial as national planning. Mr Herbert Morrison has admitted both the necessity and the frustration of the wartime party truce. Not many weeks ago, Sir Samuel Hoare summed up the problem. "We shall be wise to take every precaution against the delays and dissipation of effort that have so often frustrated the strategy and tactics of coalitions."

In democracies, wars are waged by coalitions—of parties and of nations. Their aim, no less than that of their foes, is to impose their will upon the enemy. The task is twofold. Ultimately, it is to act decisively: initially, it is to discover a common will and to make decisions in common. The totalitarian way is cruder: Hitler is the Fuehrer, and there are no Allies in German Europe, only satellites. The democratic way, successfully found, is more effective; no underground tides of opposition and resentment are

left to undermine and weaken the common effort. But the superiority of the democratic way in practice is only true if there is a common will which leads promptly to joint decisions and common action. In a sense, the frequent talk about the need for a Supreme Command among the Allies has fogged the issue. Plainly, there must be a single commander of all Allied forces, and of all arms, in each separate theatre of war. Plainly, too, there must be a combined command in each Allied country to ensure that the training, equipment and use of that country's forces in all elements coalesce in a single system. But supreme commanders and combined commands are the executors of policies decided by politicians who, in the democratic mode, have the first and final voice in the making of strategy. The question which has been brought up by these recent speeches is whether the proper machinery for finding the common will of the United Nations has yet been set up and whether the means of making common decisions quickly has yet been found.

Without question, the will of the United Nations to beat the enemy and win the war exists in common. Equally there is a common will to win the peace. The problem is to catch and state this will on specific questions and to translate it into decisions which can then be made active by agencies of combined action. This is equally true whether it is the problem of a Second Front or the problem of war criminals or the problem of peace or the

THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1858)

CAPITAL (PAID-UP) - £3,000,000
RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST
AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches & 30 Sub-Agencies
 The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application. The Bank also undertakes Trusteeships and Executorships.

problem of international trade and economic planning that is in question. At bottom, it involves the old issue of national sovereignty which broke the League of Nations from its beginning. It is a problem which will bankrupt the next peace, too, if it is not solved. Actually, the record of this war compared with 1914-1918 is an encouraging advance. No student of the memoirs of the last war can fail to see that in these respects at least—in the coalition of nations, in the coalition of parties and in the coalition of armed forces—the achievement in this war has been better. The astounding thing, to the student, about the last war is that it was won by the democracies in spite of their inability to work together. This time, largely because of the urgency of the world danger and because of the wide views of President Roosevelt and Mr Churchill, represented by Lend-Lease, the Atlantic Charter and the Russian Alliance, the United Nations has become a reality. No less, at home, the contrast between the political animosities of 1914-18 in Britain and the solidarity that has been secured since May, 1940, is a portent.

Nevertheless, the problem remains. There is still cause for anxiety. The democratic way depends upon two conditions. First, there is the determination to discuss and agree rather than to dictate. Secondly, there is the readiness among those who discuss and disagree to accept the view of the others—which most often in wartime is also the exigency of the hour. These two conditions are inseparable. The danger of discussion in search of agreement is that agreement may never be found; a common will may never be interpreted, a common decision may never be written down and common action may never result. In both national and international affairs, these dangers have been present among the United Nations, both in war-making and in the definition of peace aims. It is the fear that coalition has found its expression, in too many crucial matters, in frustration that has inspired speeches like those of Mr Willkie and Sir Samuel Hoare. If the price of freedom is indecision, inaction and agreement merely to differ, then democracy is too dearly bought—and too easily and wilfully sold.

The test in wartime, for a democracy no less than for a dictatorship, is action. The only effective propaganda for the ways of freedom is success in action against the totalitarian aggressors. It is not enough to rely upon the contacts of leading personalities, however freely each may be chosen by his people. The accord between Mr Churchill and President Roosevelt is invaluable. There are personal bonds between, say, Lord Beaverbrook and Premier Stalin or Sir Stafford Cripps and General Chiang Kai-shek. These are foundations. But the real question is whether decisions are being made or action taken by each or any of the United Nations out of step with the wishes or the interests of the others. It is deeply disturbing, as Mr Willkie bluntly said, that the Soviet Union should be dissatisfied with the action and the aid of its Allies, or that Free China should be disillusioned by the small support that has come, at the eleventh hour, to

nourish its five-year fight. The present machinery for making common plans and deciding common deeds among the United Nations is too personal and too sketchy. Neither Soviet Russia nor China has a permanent place in the bodies which decide Allied strategy. Because of the overwhelming weight of American output and supplies in the balance of material power, perhaps too many decisions on the distribution of the common pool have to be taken in Washington; in London, not unnaturally, the British view looms largest; and the view from Moscow, equally naturally, is no less self-regarding. The United Nations tend to think in parallel, not in unison; and the outward sign of this lack of a common system of gears is the search in Russian propaganda for an outside scapegoat and the thrust and counter-thrust of accusations between the sponsors of British and American interests.

All this is meat and drink to the Axis. It is their one firm belief that the democracies cannot act together, and that Soviet Russia will be isolated more by Allied reluctance than by German military prowess. The Japanese believe that the "China incident" will still be settled in their favour for the same reasons. The need is not for Allied statesmen to deny indignantly any gap in their consultation or command. Much more practically, it is to prove by deeds that there is a common will and a common programme. Above all, the situation must be secured where the spokesmen of this or that member of the coalition cannot question the solidarity of the coalition itself.

Only by fitting together now the machinery of joint consultation, agreed decision and common action can the war be won in that measurable time which alone will make victory worthwhile. And only by the same means can a peace be established which will make the war itself worth fighting. In the securing of these ends, the two conditions of democratic action stand first and alone: the need for full and free discussion; and the need for prompt decision, with disagreement dissolved in the readiness of the minority to accept the majority's policy. If democracy means no more than the agreement to differ, the result is futile and fatal; positive action is impossible and frustration certain. The pattern of procedure for the United Nations is the old-style principle of Cabinet solidarity, which in recent times has been allowed to slip sadly from its pivotal position in the British constitution. Once decision has been taken, after discussion and agreement, it must be accepted and acted upon by every member of the consulting body, with the utmost loyalty and a full sense of responsibility by every one. Only by these means, and by world machinery to embody this procedure, can the war be won in battle—and in time. Only thus can the several nations lay their plans for a lasting peace; and only thus, by acting now and not by postponement, can the several parties in each nation will and make together the programmes of security and progress for which every man and woman among their millions of citizens is calling.

fied itself. There is not enough bread nowadays in all Axis Italy to hide the austerity of the times, nor enough sound in all the circus drums to mute the crash of British bombs on its northern cities. A new Battle of the Mediterranean has begun in Egypt. Another and worse war winter is at hand. Most sinister of all, a tightening of the German grip is certain.

The people of Italy are not blind to these facts. There is abundant evidence of their disillusionment. But any easy optimism about their early "collapse" is unreal. The parallel which is persistently drawn with the French *débâcle* is misleading and inexact. In effect, Italy is now a German *Gau*, and as such will be forced to persevere to the end—until Germany itself is beaten or until the Italian *Gau* is captured from the Nazis in battle. Multiple cascade bombing of the plain of Lombardy, and the destruction of Italian divisions in North Africa will indeed have a far reaching influence on German-Italian relations, and on the ultimate future of Fascism. But the Italians are in no position to give in; they have surrendered even the freedom to surrender. The latest RAF raids on northern Italy are links in the strategy of the new Mediterranean campaign; Italy is the *Wehrmacht's* side exit. But their damaging effect on Italian industry is hardly less important. It is mainly in the economic field, in the sphere of supplies and deliveries, that the diplomatic struggle between Rome and Berlin has recently been fought out; and Italy's competence as a hewer of wood for the Nazis is being impaired.

From the German standpoint, Italy has acquired a status scarcely higher than that of Hungary or Finland. The persistent failures of the Italian forces, at sea, on land and in the air, have meant that Italy's main contribution to the Axis cause must be economic. Its most welcome contribution is in the form of seasonal labour, and some 300,000 Italians are to-day working in Germany. The Italian economy can only be run at a profit by Germany in conditions which in no way square with Italian interests or aspirations. It is true that both Mussolini and Gayda place before the Italian people a vision of the Axis in which mutually respected spheres of autarkic influence coexist. Italy, in this pipe dream, is no mere function of German Europe, but destined to be the centre of a Mediterranean empire, including Malta, Corsica and Tunis (the question of Nice is kept diplomatically simmering), and taking in, beyond the Mediterranean, unspecified north African territories, Ethiopia, British and French Somaliland, Lake Chad and Nigeria. The new Italian Empire is planned as substantially self-supporting, to furnish the raw materials on which to base an industry capable of raising the standard of living of the Italian peasant above the near-Balkan level to which it daily more closely approaches. It is a mirage to console the Italians for the loss of the Empire they once had.

At Munich last July, Riccardi, Italian Minister for Foreign Trade, after he had visited Berlin for conversations with Funk and Clodius, filed Italy's claim. He pointed out that a purely agricultural economy in Italy could do nothing to provide a rising standard of living for a growing population. There must be industrial development and access to raw materials. Gayda carried the argument a step further by contending that the solution of Italy's economic and political problems required the interpretation in concrete terms of the respective living spaces of the signatories of the Tripartite Agreement, Germany, Italy and Japan. This question was brought to a head by definite moves on the part of Germany to rationalise and close down Italian industry, against which Italy's claim was a protest.

In two and a half years, "economic collaboration" between Germany and Italy has been pushed to considerable lengths. The coal agreement concluded with Germany in March, 1940, was followed, on the entry of Italy into the war, by agreements for the supply of the other main industrial raw materials in which Italy is notably deficient and of which the country was deprived by the blockade—iron and steel, wood, fuel and base metals. Clodius revealed in Milan last May that, in the latest year for which figures were available, German iron and steel exports to Italy had doubled. These imports have largely kept going the leading Italian war industries in Genoa, Turin, Milan and other smaller centres. Clodius claimed that output had been increased by Italian mining concerns and by the chemical, electrical, engineering and textile industries, and forecast, optimistically, that aluminium production, which was only 11,000 tons in 1935, might be 100,000 tons in 1945-46—if the war lasts so long. To Germany, Italy exports silk, rayon, sulphur, mercury, hemp and bauxite, together with the whole fruit and vegetable surplus. More than 50 per cent of Italy's total trade is now done with Germany. The campaign to make Italy self-sufficient in foodstuffs goes forward unabated, but the gap, even with strict rationing of *pasta* and potatoes and, by western standards, a very low standard of living, is by no means closed. The German solution, put bluntly, is nothing less than a policy of de-industrialisation which will free labour for transfer to Germany or for work on the land, thereby easing the food problem, and at the same time economise the transport of industrial raw materials over the heavily loaded Brenner route.

This policy of "rationalisation," despite Italian protests that more industrialisation is needed and that monopolist concentrations of industry on the German model—and under German control—are unsuited to the Italian economy, is already being carried through. In the middle of September, it became known that the *Carbosarda* mining concern in Sicily and the *Carboarsa* mining concern in Arslia had been merged into the *Azienda Carboni Italiani*. For three winter months, textile

Twenty Years On

LAST Wednesday marked the twentieth anniversary of the Fascist march on Rome. This is a poor time to take stock of Mussolini's achievements during the two decades since he seized power. The anniversary comes when Italy has been at war as an Axis satellite for nearly two-and-a-half years. During that time, the Fascist regime has seen the loss of many of its overseas prizes. It has learned to fear the impermanence of what remains. Independence, it has lost already in the German grip. It is already plain that whoever wins the war, Italy will lose—and will lose far more disastrously than Fascist propaganda claimed it lost in the Treaty of Versailles.

It is hardly surprising that the anniversary celebrations had a somewhat half-hearted ring. A decree of

amnesty promulgated by King Victor Emanuel released some 22,000 prisoners—with the significant exception of those convicted of crimes, however minor, against the nation at war, as well as the normal exception of dangerous and habitual criminals. Social measures announced by Mussolini, headed by the creation of a new civil award, the "War Star for Labour Merit," included more material benefits—the continued insurance of all workers under arms, and an increase by 25 per cent of disablement and old age pensions (the latter concession is estimated to benefit some 750,000 persons). It may indeed be doubted whether these measures and a number of parades—the bread and circuses—are capable of convincing the Italian people that Fascism has justifi-

EQUITY & LAW
LIFE ASSURANCE SOCIETY
Established 1844

THE SERVICE OF LIFE ASSURANCE

● Life Assurance provides the means whereby your regular savings, year by year or month by month, may be converted into the form best suited to your needs. Provision may thus be made for your retirement, for the education of your children or for your dependants after your death.

● The service of Life Assurance cannot now be offered to you by personal approach owing to the absence of so many of the Society's staff on war duties. This service is, however, still available on request and will gladly be placed at your disposal.

Head Office: 163/4, STRAND, LONDON, W.C.2. Telephone: TEMple Bar 0381
(temporarily transferred from 20, Lincoln's Inn Fields)

City Office: 30, Coleman Street, E.C.2. Telephone: KELvin 5111/2

factories using thermic electricity are to close to save fuel, while labour in the industry is to be freed by a minimum 32 hour week. In the middle of September, news was published of the amalgamation of four Milan textile concerns, the *Societa Italiana Pirelli*, with a capital of Lire 500 millions, the *Societa Tessili Artificiali*, with a capital of Lire 30 millions, the *Cotonifici Riuniti*, with a capital of Lire 6.5 millions, and the *Societa Italiana Ebanite*, with a capital of Lire 5 millions. The Sardinian electrical concern, with a capital of Lire 150 millions, is reported to be taking over two smaller companies, one in Rome, with capitals of Lire 67.7 millions and Lire 3.75 millions, respectively, while the Edison electricity concern, *Societa Edison*, of Milan, absorbed six smaller companies in September, increasing its capital from Lire 1,600 millions to Lire 2,500 millions. The concentration programme is viewed with considerable concern in Italy, where it is fully realised to be the instrument of German domination.

Thus, the latest RAF raids on the plain of Lombardy are striking Italy at an extremely delicate point. They not only attack the immediate source of Rommel's supplies and impede the output of the great Italian arsenals, the Caproni, Fiat and Ansaldo works; they also weaken the position of Italy *vis à vis* Germany. Any

diminution of Italy's industrial strength has, at this juncture, a diplomatic and psychological significance far beyond the material damage inflicted. The Germans already doubt the profitability of keeping Italian industry running on a large scale. The RAF is increasing this doubt. Simultaneously, the fear among thoughtful Italians is strengthened that a German victory will kill any chance of Imperial greatness, economic prosperity or national freedom.

The twentieth anniversary finds the modern Caesar contemplating the loss of a short-lived East African Empire and many thousands of Italian fighting men, with the certainty of further loss to follow. If the Allies win, the Fascist regime will be finished. If the Germans win, there is an end of Italian independence. Italy is not a partner in the Axis, but a vassal. Caught between German *Mittleuropa* and German *Mittelafrika*, endlessly paying in the exported labour of its people for the right to consume a meagre peasant diet, the place reserved for Italy in the Nazi New Order insults a great tradition. The treatment which Signor Orlando found unacceptable at Versailles, which launched Italy on its unhappy career as a "have not" nation, and Mussolini on his cheap-jack mission, pales beside the treatment prepared for the Duce by the Führer.

The First Hundred Thousand

THE table on page 539, which is compiled from the monthly figures issued by the Ministry of Home Security, shows that the number of serious civilian air-raid casualties—killed, and injured and detained in hospital—now exceeds one hundred thousand. It thus took nearly three years of war to produce a total which, before war broke out, even the soberest estimates expected to be reached within three weeks. How far the wildly exaggerated forecasts of 1939 were based upon the reported casualties in the Spanish Civil War, grossed up in accordance with the scale of a European war, and how far they were the result of German propaganda, designed to frighten Britain into another Munich, will never be known. What has, however, been made clear, after three years of war and two years of air-raids, is that the human body has shown an astonishing resistance to bombs. From the viewpoint of civil defence, it is the building casualties rather than the human ones which have caused the most serious problem. It was not first-aid posts, ambulances, doctors, nurses and hospital accommodation—190,000 hospital beds were made available on the outbreak of war—and still less mortuaries, that were wanted when raiding began. It was food, clothing and shelter for the homeless.

Nevertheless, there have been casualties, a hundred thousand of them—apart from those who have not needed hospital treatment. How far does the state assume responsibility for them? Under the Personal Injuries (Civilians) Scheme, financial assistance is given to the victims and their dependants. A funeral grant of £7 10s. may be paid in respect of a fatal casualty, and death pensions are given to dependants. The latter are placed on the same basis as dependants of the lowest ranks in the armed Forces; widows, over 40 or with children, or incapable of self-support, are given 25s. a week, and other widows 17s. 6d.; widowers are allowed 14s. a week; and for children the allowance is 9s. 6d. for the first child, 7s. for the second, and 5s. 6d. for each additional child. The disability pensions are also based on the rates for the armed Forces. A 100 per cent disabled man, over 18 years old, is given 37s. 6d. a week, though the corresponding rate for a woman is only 27s. 6d. The allowance for a wife, or husband as the case may be, is 9s. 2d., and the children's allowance is 7s. 1d. for the first child and 5s. 5d. for each additional child.

Pensions are only given for serious and prolonged disablement. For other cases, temporary war injury allowances

are made, which vary in amount according to whether the casualty is gainfully employed or not, and is in hospital or not. It is interesting to note that, judged by the number of disability pensions which have been given, the majority of persons injured in air-raids are not permanently incapacitated, either totally or partially. The number of injured and detained in hospital, as will be seen from the table, has reached a total of 55,881; but the number who have applied for and been granted disability pensions is only 9,300. Moreover, one-sixth of this latter total are civil defence personnel, who are also covered by the Personal Injuries (Civilians) Scheme if they receive a war service injury, that is, are injured in any way—not necessarily by enemy action—while they are on duty. They are consequently included in the Ministry of Pensions' total of disabled pensioners, but not in the Ministry of Home Security's total of air-raid casualties; and though their number is probably small in relation to the latter, it can be regarded as an offset to the unknown number of disabled who, for one reason or another, do not apply for a pension.

That only a minority of the injured are permanently disabled is further proof of the resistance of the human body to the effects of bombs. But it also shows the tremendous advance that has been made in recent years in the treatment of the injured. The Ministries of Pensions and Health grasped, before the Chancellor of the Exchequer and the Treasury, that financial considerations are secondary to physical ones, and the official attitude towards air-raid casualties does not end with the grant of an injury allowance or a disability pension, but is mainly concerned with restoring the victim as far as possible to a normal life. The most striking results of this attitude are seen in amputation cases. Civilian war casualties as well as Service casualties are fitted by the Ministry of Pensions with the most up-to-date artificial limbs that modern surgery has devised. The utmost care and patience are taken to ensure that the patient learns to use his new limb as naturally as possible; the cosmetic factor is taken into account; in fact, the whole emphasis is upon normality, upon the ability of the patient to resume his life as an ordinary citizen.

Fortunately, only a minority of air-raid victims are amputation cases. But for the great number of fracture cases also the problem of rehabilitation is present, and if the germ of the national fracture service which has been implanted as a result of air-raids is fostered into a

full-grown service to include persons injured in every kind of accident, it will go far to offset the damage they have caused. In a lecture given over a year ago, which was printed in the *British Medical Journal* of March 28, 1942, Mr R. Watson-Jones stated that 85 per cent of injured members of the RAF were able to return to full duty, mainly as a result of the treatment given in RAF rehabilitation centres, which, though run in close co-operation with the fracture hospitals, are completely separate in atmosphere and in function. Facilities are probably not available for the establishment of similar rehabilitation centres to cover all kinds of injuries, including industrial accidents and road accidents, among civilians; but, in the spring of 1941, the resources of the Emergency Hospital Scheme, including special orthopaedic centres and fracture departments and clinics, were extended to war workers, and the pre-war proposals of the Delevingne Committee were thus in part put into effect.

Rehabilitation includes re-employment, and, again, one of the benefits of air-raids has been to promote co-operation between the Ministry of Labour and the Ministry of Health in the resettlement of disabled workers. A year ago, the Ministry of Labour announced its interim scheme for training persons prevented by disablement—due to any cause—from resuming their normal occupation. Officers of the Ministry get into direct touch with the disabled while they are still in hospital, and discuss with them and their doctors and surgeons the sort of employment they can take up. Allowances are paid, including dependants' allowances, during the training period.

The Ministry of Labour does not pretend that the scheme provides anything like a full solution to the question of resettlement, which is still being investigated. Moreover, as Mr Tomlinson, Joint Parliamentary Secretary to the Ministry, pointed out in last week's

debate on rehabilitation, the scheme's success cannot really be judged in wartime conditions when labour is scarce; any long-term plans must take into consideration the position of the disabled at a time when employers can pick and choose their workers, and are likely to turn down the ex-disabled unless the basis of workmen's compensation is radically changed. There is also the danger that if there is too much concentration on retraining and resettlement, full rehabilitation—the complete restoration of the worker to normal life—will become a secondary matter, whereas it ought to have priority. Nevertheless, in spite of these drawbacks and limitations, it can be said that a national rehabilitation scheme is in process of evolution, and it was air-raid casualties that laid the foundations.

There is a further aspect of air-raid casualties which deserves some comment, and that is the virtually complete absence of "shell-shock" cases and bomb neurosis among the civilian population. Possibly, this is partly due to the fact that, unlike the conditions in which soldiers fought in 1914-18, for the civilian to-day there is no escape from the front line. There is no Blighty in total war. Of even greater importance, perhaps, is the fact that no injury allowances or pensions are given to air-raid victims except for physical injuries, which include injuries to the brain directly resulting from concussion, and cases of shock due to direct exposure to blast, but not sicknesses induced by fear, however heavy the raid. By setting itself against giving pensions in such cases, the Ministry of Pensions has saved money and manpower for the nation, and, by thus refusing to give potential neurotics a motive for illness, has saved them from themselves. Those who sometimes press for a relaxation of this principle should reflect that they are being kind only, in the long run, to be cruel.

The Importance of Being Ernest

THERE is a sense of disappointment among the rank and file of the Labour movement with the performance, compared with the promise, of their leaders. There is a feeling that the part they have played in the wartime coalition has not been commensurate with the opportunities offered, a feeling very much in evidence at the September meeting of the Trades Union Congress and, earlier in the year, at the Labour Party conference. Most of the party leaders, it seems, have gained neither in popularity nor in influence, and Sir Stafford Cripps, whose independence of the party machine first earned him many supporters, has so far signally failed to capitalise his political stock. It is hardly surprising that many hopes should be pinned on Ernest Bevin, the trade unions' strong man and representative in office.

Mr Bevin has the advantage over his colleagues that he has hitherto kept out of the political arena. His early attempts to enter politics were unsuccessful, and until May, 1940, he was *au dessus de la mêlée*, devoting his energies to strengthening the industrial side of the movement, in his capacity as General Secretary of the largest and most powerful trade union. Mr Bevin is neither a politician nor a party man. But he is a partisan. He is first and foremost a trade union leader, with all the qualities and prejudices which characterise British trade union leaders—so much so that he sometimes forgets in the House of Commons that he is speaking as a Cabinet Minister and not as a member of the General Council of the TUC.

May I say on behalf of—perhaps I should not say on behalf of anybody, but I cannot remember that I am here, after so many years in another place (July 29, 1941).

He is in the Government, as it were, *ex officio*, the representative of a powerful vested interest. This dual position has had its disadvantages as well as its advantages. On the one hand, it has enabled Mr Bevin to

work out and carry through an agreed policy of mobilisation with the knowledge of the backing of organised labour. It has also given him the opportunity to introduce measures for improving the conditions and thereby the efficiency of the workers, such as the development of industrial canteens; the organisation of health and welfare in the factories; the establishment of rehabilitation and retraining centres for the disabled; the decasualisation of dock labour; and arrangements for seamen's welfare in the ports—all reforms which Mr Bevin dreamed of long before he became Minister of Labour. On the other hand, his position has often resulted in slowing the tempo of mobilisation. His deep-set preference for exhortation and conciliation has increasingly

given rise to the accusation that authority and discipline have been removed from wartime industry and not replaced by any other sanction. Admittedly, he has taken extreme care not to tread on any trade union corns. Progress towards total mobilisation has been gingerly. He has relied on "good will and national discipline" and rejected compulsion as un-British. It is fair to say that he has shown equal reluctance in applying compulsion to employers; and the measure of his success, whatever the earlier delays and frustrations, is the extent of mobilisation which has now been achieved and the degree of efficiency in war output which can be maintained in the next critical months.

On balance, Mr Bevin has been the best man for his job. The advantages of his personal link with the trade unions have outweighed the disadvantages. The absence of a Bevin in the United States may make much more difficult the task of mobilising American labour. There can be no doubt, however, that the real test of the loose rein in industry for which he has stood has still to come, in the face of restlessness and war strain; and that, in particular, the Government's inability to evolve a wages policy has been largely due to the wish not to alienate the trade unions. Mr Bevin has expressed his opinion about earnings in no uncertain terms:

I do not care how much you earn so long as you give us the goods. . . . We will pay you, but we want the output (July 5, 1941).

It is because Mr Bevin represents the trade union point of view that he arouses so much resentment among individual employers—though, significantly, he works more than well with most associations. The critics blame him for the friction and dislocation which have arisen in the switching of labour to war production. They see behind every wage claim the sinister hand of the Minister of Labour, using his influence and present position to advance the interests of those whom he represents; the catering employers have described his attempts to set up a trade board as the "thin edge of the wedge." But Mr Bevin, like the Prime Minister, has the quality of toughness—a quality too rarely found in British politics—even if his toughness at times merges into obstinacy.

Unlike the Prime Minister, however, Mr Bevin's fundamental interest is in social reform. And in view of his growing importance in the labour hierarchy it is important to know what his hopes for the future are. They are still vague and sketchy, though very decided. His many pronouncements about postwar reconstruction have been collected in a book, "The Job to be Done" (Heinemann, 204 pages, 8s. 6d.). They are the words of a devoted trade unionist: "the motive of our life must be social security." This aim, he argues, can only be achieved by the establishment of a minimum wage; the guaranteed pay week, introduced during the war, he regards as a possible basis for future security. Equally, his programme includes the extension of equality of opportunity, by means of a wider educational system.

Why [he asks] has the Russian peasant surprised everybody when compared with the Czar's army? It is easy to understand . . . he owns his soil. He is not fighting for a landlord; it is his own, his roots are in it, he owns what he is fighting for. If our country is not big enough in acreage to solve our problems by means of the land, as the peasant countries can, you have to find a substitute, and the substitute is the vested interest of social security within your own state in which all shall participate (August 18, 1941).

He rejects the narrow, nationalist approach:

No country can afford at the end of this struggle to be blinded by its own limited interest, nor can it make its contribution to the future progress of the peoples of the world unless it is prepared to look at the problems of the world as a whole.

The aim, as he sees it, must be to raise the standard of living of the masses internationally, including the colonial peoples; in order to ensure international stability, the world's raw materials and resources must be pooled.

How does Mr Bevin propose to translate these precepts into practice? He is a social reformer *par excellence*—evolution not revolution, ordered development not social upheaval, the round table not the barricade. Indeed, he passionately detests the very idea of revolutionary upheaval. Of the dangers of uncontrolled demobilisation when the war is over, he has said:

I am afraid that at the end of this war you may well slip into the most revolutionary action.

Although he pays tribute to the heroism of the Russians, he makes no secret of his dislike of the system under which they live. In June, 1940, he boasted that he

was one of those who, on more than one occasion, ventured to prophesy that Germany and Russia would come together.

Mr Bevin believes that his objects can be attained by co-operation between employers and employed:

Industrial negotiating machinery has produced the beginnings of an industrial democracy which will, as time goes on, probably take on new and more important functions.

He believes as much as any industrial feudatory on the employers' side in "industrial self-government."

We have promoted on both sides of industry a policy of self government in industry. There has been a gradual changeover to what I think holds very great potentialities, namely, negotiations of a more representative character than the old method of bargaining before the war. . . . Our aim has been to allow the collective bargaining machinery to act as a sort of trustee on behalf of the State. . . . (October 21, 1942.)

This is not the voice of a Parliament man, nor of a State Socialist. There is something ominous about the readiness of producers of all kinds, men as well as masters, to band with one another to secure corporate autonomy. In the next era of politics—as indeed, at bottom, in the last—the tussle will be between, not capital and labour, but producers and the community. And the trade union leaders are more likely to side in specific matters with the FBI than with the general public. True, Mr Bevin believes that the trade union movement which "has now become an integral part of the State" will become the dominant partner. But the Industrial Socialism which he has evolved from his experience of collective bargaining is closer to the New Feudalism of the protective and restrictive thirties than to Liberal Democracy.

May it not be that out of the vortex of this terrible struggle the creative genius of our people will be let loose, and may not there be a great renaissance resulting in a new Britain, freed from the snobbery at one end and the poverty at the other, and that the birth of a higher and nobler civilisation may be a compensation for the horrible struggle, the nightmare and the bitterness and loss of life that Hitler has imposed upon us.

To travel hopefully, said Stevenson, is better than to arrive. Ernest Bevin assuredly travels hopefully; sometimes he travels very much in the same direction as Anthony Eden, Wendell Willkie, Stafford Cripps and many others who have painted a picture of an era of international peace and justice after the war; at other times his road seems even closer to the path trodden by the new industrialists with their "employers' syndicalism." Whether confidence and toughness by themselves, without any very clear understanding of the economics or the techniques of modern society, will be sufficient to carry him to his goal has still to be seen. He has spoken of going back to his trade union as soon as his immediate job, that of harnessing the system of collective bargaining to the war effort, has been completed. Obviously he sees the future more in terms of the workshop and the boardroom than of Parliamentary politics. Many of the Labour rank and file who look to him to stay longer and do more may be disappointed. Meanwhile, the crucial test of his philosophy is whether he can continue to run his branch of war administration on trade union lines and still deliver the goods, without falling into the pitfalls of laxity and laggardliness of which his critics speak so loudly and so insistently.

NOTES OF THE WEEK

Great Issues

Two of the most decisive battles of the war are in progress. Both are crucial clashes in the struggle for communications which is the main feature of total war on a world scale. In Egypt, the Eighth Army has before it, not only Libya and Tripoli, but the Mediterranean gates into Europe and the short inside route from west to east; Germany's Italian door to Africa is a swing-door—it can move inwards as well as outwards. In the Solomons, the battle is for stepping stones, and has reached a crisis. The Japanese have apparently fared better in their thrust to hold back the American counter-offensive than reports in recent weeks had suggested. American air power by itself has failed to throw them off; and, in the use of surface vessels, they may even have shown greater daring and skill than the Allies. If they succeed in restoring their foothold in the Solomons, which is the pin upon which their continued possession of the Pacific chain from Singapore in the first place depends, the war will be not a little longer than has sometimes been hoped. Failure in Egypt, too, would be a disaster, not so much for the new dangers it would invite, but for the great opportunities that would be forfeited. So far, there is no sign of failure. The Allied forces on land and in the air moved forward as one, a great and powerful host; at sea, the fraying of the short Axis supply routes reached a new pitch of intensity. In the middle distance, the bombing of Genoa hit an Axis base vital for the campaign. So far, the progress made has been small. Wedges have been thrust into the enemy's forward defences, and they are being widened for the onrush of tanks. Rommel's bid to save the battle has not yet come; nor has the major Allied charge. Plainly, the enemy is shaken. Plainly too, he is uneasy and outnumbered in the air. But there is still no certainty about the outcome when finally the last action is joined. All that is certain is that, if the Allied forces can win the battle and march strongly westwards, a wide vista of fortunate chances will be revealed, not only in Africa and through the length and breadth of the Mediterranean, but also in Europe itself.

A Desperate Battle

The issue of the battle now being waged for control of Guadalcanal in the Solomons remains in doubt. It would be idle to deny that the Japanese have taken several tricks since their first invasion fleet was beaten off on the night of October 10th-11th. It appears that the temporary withdrawal of the United States naval forces made possible the landing of enemy troops and tanks in considerable numbers. It has been announced that, at sea, they are outnumbered. Significantly, the use of Allied aircraft, despite the brilliant manipulation of carrier-based planes, has not proved sufficient to prevent the re-invasion, and the United States marines in the island have for the moment been forced on to the defensive. To recognise that the situation, despite the gallant fight which the Americans of all Services are putting up and the enemy's heavy losses in all elements, has taken a definite turn for the worse is by no means to despair of the outcome. The Allies still hold the vital Guadalcanal airfield, and have driven back every land attack so far. The events of the past three weeks provide a further lesson in the technique of modern warfare which cannot be neglected. It appears to be as unfortunate to overestimate, as it has hitherto proved unfortunate to underestimate, the usefulness of the air arm. Invasion fleets, in the Solomons or elsewhere, cannot be checked entirely by aerial attacks. To be successful, the defence must control the seas and possess an effective military superiority capable of dealing with the enemy units that land. Air superiority is a *sine qua non*. But it is not in itself a sufficient guarantee of success. It has been clear from the first night, when US marines secured a foothold in Tulagi, that the Japanese would eventually counter-attack in force. The threat to the invader's flank, the check to his further expansion southward, the curb on his freedom of manoeuvre against the Australian bastion, all these combine to make the eviction of the Americans an absolute necessity for the enemy. The Japanese have already paid dearly for their tenacity in the Solomons. But the full price can only be exacted by a clear-cut victory for the Allies on Guadalcanal.

Bombs on Germany

For a brief space, Italy took Germany's place in the headlines of British bombing. But the communiqués of the Air Ministry show that German factories, communications and ports are being bombed much more regularly and with a vastly greater weight of bombs than a year ago. It is not possible to make a precise estimate of the damage done to material and morale. Monotonously, the Germans claim that only residential districts are hit. Casual observers, such as neutral travellers, escaped prisoners of war and foreign civilian workers, report that the people in Germany's bombed areas have been badly shaken; and the speeches of both Hitler and Goering show that the damage done and the effect on German nerves have been greater than they expected. Captain Balfour, Under-Secretary of State for Air, said in a speech a few days ago:—

We hit the German people in two ways. We shake their morale and their faith in the Nazi leaders who have deluded them; and we hit Germany's industrial war effort.

It may be that intensive propaganda and liberal relief measures after particularly heavy raids have so far temporarily localised the effects on German morale; but this can only be temporary.

Material damage [Captain Balfour said] is no matter of opinion. It can be proved by aerial photographs supported by evidence from many sources.

By these tests, the coal output of the Ruhr, Saar and Aachen districts is said to have declined by 80,000 tons a day, or about 29 millions tons a year. If coal output in these districts has been maintained at the level of 1938, this means that bombing is estimated to have reduced it by 20 per cent—a remarkable claim. In the last year before the war, the railways in Germany and Austria consumed about 15 million tons of coal; the effect of the loss of 29 million tons can be imagined. The claim means that, if the supply of coal to war industry and transport is maintained, German households will be almost entirely without coal. Coal mines are targets very difficult to put out of action for long; and the actual targets revealed by the Air Ministry in the Ruhr, Saar and Aachen districts have not been the main coal-producing centres of these areas. The loss of steel output in the Ruhr and Saar area, as a result of bombing, is estimated at 1,250,000 tons, or roughly 7 per cent; and it is surprising that the damage claimed to steel capacity which covers large tracts of ground should be so much smaller than the damage claimed to collieries—especially when, according to Air Ministry reports, the Duisburg-Hamborn-Oberhausen district, where the biggest concentration of steelworks in the area is situated, has been more frequently bombed than any other cluster of towns. Undoubtedly, the effect of RAF bombing, with its new and growing striking power and its novel and terrifyingly effective technique, is great and will be greater. But it is probable that any quantitative estimate of the actual loss of output caused is only less speculative than an assessment of the damage done to morale.

Marking Time

When, curiously enough, the Captain, Gentlemen-at-Arms, replied for the Government in last week's debate in the House of Lords on planning, he began by saying that the nation would not tolerate delay and went on to say that the nation must accept delay nevertheless. The burden of his apology was the difficulty in a coalition Government of getting agreement on controversial matters, together with the hundred-and-one details involved in the Scott and Uthwatt reports, each of which, it seems, has still to be examined and judged by every conceivable Government department. Only one thing seems certain. The Government has accepted the principle of planning. But the Government still has not the remotest idea of what it means by this. It has not been able either to agree upon a planning policy or even to work out the necessary machinery of administration. Lord Reith, who actually set up both the Scott and Uthwatt committees, did a service by calling attention to the barrenness of the land. His main point was that, even if the question of policy had still to be argued out, the machinery could be set up at once. He rebutted the old error that a vast Ministry of Reconstruction was needed to

administer the plans, social, economic and physical, which in fact must be operated by the departments and authorities concerned with the questions affected. But he fell into another and hardly less grievous error. For physical planning, that is, planning the use and development of the land, he advocates a sort of super BBC—a central planning commission, "out of politics." The one piece of machinery that has been set up is precisely the one for which the noble peers spent so much time casting around. The Minister of Works and Planning, if his new title means anything at all, is a Minister of physical planning. It may or may not be the right piece of machinery, but it is extraordinary that its existence should have been overlooked, except in the complaint made by Lord Reith, that Lord Portal, the Minister, and the Paymaster-General have overlapping functions. Of course, the respective statuses of these Ministers are ambiguous. They have been allowed, even encouraged, to drift into a peculiar state of overlapping. Actually, however, there is no reason at all why they should overlap. Rightly, Lord Reith asked, first, for a Minister of high rank to co-ordinate interdepartmental planning, including all the projects which are commonly lumped together under the heading of reconstruction; and, secondly, for an institution concerned simply with physical planning. Sir William Jowitt is a shadowy embryo of the first—too junior and too ill-defined to fill the bill (which might indeed be filled more appropriately by the Lord President of the Council, who already co-ordinates the home departments concerned with a large part of reconstruction) but, nevertheless, a beginning. Lord Portal's Ministry can fill the second requirement; there is no need at all to draw up schemes for some new and needless public corporation. What is really needed, immediately, is twofold: first, it should be made plain that the shadowy outline of Sir William Jowitt is to be blocked in to make a Cabinet Minister with inter-departmental responsibility over the whole field of planning administration. Secondly, in spite of the neuroses of Lord Snell and other Ministers about the prickly question of controversial issues, a decision must be made to make a decision about the points which must be settled if there is to be any physical planning at all: in other words, the recommendations of the Uthwatt Report about the public purchase of development rights in land should be embodied at once in a declaratory Act. Everything and everybody is ready to go; but nothing moves and nobody starts, because the Ministers concerned are still not willing to face the problem of compensation which has broken every effort at physical planning for two generations or more.

Darlan in Africa

Admiral Darlan's journey to North Africa and Dakar seems to have been a routine inspection devoid of any particular significance. It has, nevertheless, given rise to many speculations because it followed closely on the landing of American forces in Liberia and was accompanied by a renewed campaign in the German-inspired Paris press for "joint German-French defence" of *la France d'outre-mer*. Darlan himself was careful not to make any references in his various speeches to the landings in Liberia or to any other military developments in Africa. He confined himself to a general statement about the strength of Dakar's defences, natural enough for Vichy's chief of the armed forces. German and German-inspired quarters have shown some impatience at Darlan's generalities. A German newspaper report says, significantly, that Darlan was surprised when asked about the possibilities of a land attack on Dakar. He replied that Dakar is well prepared for this contingency. Marcel Déat has used the opportunity to claim yet again that the French Empire must either be defended in collaboration with the Axis or perish. The quisling press has reminded its readers that Vichy rejected a Japanese offer

for the joint defence of Madagascar a year ago; the moral is obvious. In contrast to this quisling campaign, neutral press reports have recently emphasised a significant feature of the present attitude of French public opinion towards colonial problems. At the time of the campaign in Syria, it is claimed, the Vichy press was still able to work up genuine anti-British feeling inside France; but attempts to stir up similar resentment during the fighting in Madagascar failed. The experience of another year of collaboration has not been wasted on the French people; they have learned to tell friends from foes.

Off Work

The Minister of Labour has made an appeal to industry which will come, perhaps, as a shock to some industrialists. It is often stated by employers that absenteeism has seriously increased because the old crude sanction of dismissal has been removed in the essential industries. Their case has been that the Ministry of Labour, having, through its National Service officers, taken over powers of discipline and punishment, should use them. Now the Ministry has handed back the responsibility. In a pamphlet just published on the problem of absenteeism the conviction is stated that industrial establishments must look for the solution "within themselves" rather than relying on "extraordinary powers of discipline or punishment." Much of the Ministry's argument as set out in this pamphlet is sound. A great deal of absenteeism is due to wartime conditions of work, diet, travel and home life; and no effort should be spared to adapt the organisation of employment so far as possible to the workers' convenience. It is a human and personal problem, bound up with family troubles, shopping difficulties, the care of children, the preparation of meals, house-cleaning, and so on. In large part, it is psychological; "absence is due primarily to 'feelings' as distinct from 'facts,'" to the sense of depression which, after three years of war, comes and goes in the case of most people, to the lack of direct interest in the job done and an absence of conviction that it is important and urgent. The Ministry's plea for employers, managers, personnel departments, works committees and production committees to do all they can to lessen these causes of absence is timely and shrewdly stated. Nevertheless, there is a basic problem of deliberate absenteeism for which the Ministry's soft answer offers no solution. Absence from work and persistent lateness without reasonable excuse, the pamphlet points out, are direct offences against the law in the case of employment scheduled under the Essential Work Orders. But, it is added, the proportion of absenteeism for which legal proceedings are appropriate is only small. Then comes a surprising sentence: "The great majority of those who absent themselves from work or are late in arriving either have what appears to them to be a good reason or are merely guilty of carelessness or indifference." Thus, the faults which at the front or in Soviet Russia would invite the harshest penalties are dismissed as venial.

Sanctions

The best comment on the attitude of the Ministry of Labour to absenteeism is given in the first paragraphs of the pamphlet. There it is stated that, because no more labour is available, the loss of production caused by absenteeism cannot be made up simply by taking on more staff. It can only be made up by reducing absences and lateness. There is only one test in this matter. Production must be maintained, more than ever during the next offensive phase of the war. If the deficiency due to absences and lateness can be cut down by the methods of propaganda, reorganisation and personal treatment suggested by the Ministry—and there is a great deal that all these methods can do—well and good. If not, there is only one possible course of action; that is for the utmost rigour of the law to be used against the defaulters. In return for its efforts along the lines suggested by the Ministry, industry has a right to expect no workers. Wherever it is engaged, the manpower and womanpower of this country is presumably doing essential work, either in producing weapons or in serving civilian needs. The obligation to root out slackness, implacably, rests upon all workers and all employers, and not upon war industry alone. It would certainly be fantastic, not to say scandalous, for instance, for leisured business men or politicians or journalists to talk sternly about slackers in factories before making sure that they themselves are making the maximum contribution possible during the twenty-four hours of their day.

Quantity and Quality

President Roosevelt has announced that the production programme for aircraft and tanks, set at 60,000 and 40,000 units respectively for this year, has been scaled down numerically. He was quick to add that, in terms of striking power, this change will mean an increase and not a decrease. Tanks and aircraft are to be fewer and better. The importance of securing the most effective compound of quantity and quality was emphasised by Mr Lyttelton when he addressed members of the Institution of Production Engineers in London on Friday last week. The volume of British war production has shown a remarkable expansion; total output of warlike stores is five and a-half times as high as in the first quarter of 1940; aircraft manufacture has been quadrupled and is now "incomparably the largest" industry in the country. The shipbuilding industry is producing a bigger tonnage of vessels than in 1914-18. The position has now been reached, with the virtually full mobilisation of manpower, when the men and women in war industry must be applied more carefully to the machines available in order to secure yet a further expansion in output. Output per man-hour will be bigger when the best machines are employed continuously than when all the machines, good, bad and indifferent, are employed part of the time. Mr Lyttelton's plans for increasing the yield per man-hour will involve a reshuffle which, in certain respects, is analogous to the earlier concentration of civilian industry. War production is to be concentrated on the most efficient plants; inefficient workshops with antiquated machinery will have to close down. One of the most pressing problems which Mr Lyttelton asked the engineers to tackle is that of reducing the interval between the decision to manufacture a new product and its emergence from the production line. It is by the shortening of this interval that quality can be combined most effectively and, in the next "offensive phase" most promptly, with quantity into decisive striking power.

Cool Reception

In a memorandum issued last week, the Leeds and District Chamber of Trade welcomes the intentions of the President of the Board of Trade in so far as his proposals for retail trade are designed to protect the small shopkeeper, to secure the dispersal of stocks, to ensure sufficient supplies for rural areas and to economise transport. But the Chamber doubts whether, in fact, the plans will do this. It is pointed out that the allocation of supplies between large and small retailers will not actually be affected by the plan to allot to each retailer a percentage of his purchases in a datum period. The fundamental problem in the case of pottery, hollowware and clothing, it is argued, rightly, is not the maldistribution of supplies but a general shortage. In the case of clothing, the coupon system already ensures the flow of supplies to the areas of demand. In short, the Leeds Chamber of Trade feels that there is no point in Mr Dalton's proposals; the majority of wholesalers and manufacturers, it claims, are already allocating their supplies fairly and efficiently—and, in cases where investigation shows that this is not so, the policy of the Board of Trade could be applied simply by the issue of directions to suppliers. The fact is, of course, that even the fairest distribution of supplies cannot mitigate the general and inevitable wartime shortage of wares in relation to the number of retail outlets. The crux is that there are too many shops. The Chamber regrets the complete abandonment of a concentration scheme based, with suitable modifications, on the third report of the Retail Trade Committee. The chilly reception of Mr Dalton's proposals by one trade organisation is not necessarily indicative of the general reaction to them. But it is not a good start. True, Mr Dalton revealed only one aspect of retail trade policy on October 13th; the arrangements proposed for the orderly withdrawal of shopkeepers are to be announced by the Minister of Labour; and any final judgment on the Government's retail trade policy must await Mr Bevin's statement.

Clearing the Air

Signs of a hopeful change in the relations between Russia, Turkey and Bulgaria have recently become apparent. Turkish-Soviet relations have been somewhat tense since June, 1941. The fact that Turkey concluded a pact of non-aggression with Germany on the very eve of the German attack on Russia could not fail to influence Moscow's attitude. The Turks, on the other hand, viewed with some uneasiness Russia's intentions towards its nearest neighbours.

Busily, Von Papen and his agents sowed suspicions in Ankara and sought to revive Pan-Turkish ambitions. The climax of mutual misunderstanding was reached during the Ankara bomb trial, in which two Soviet nationals were condemned for alleged participation in an attempt on von Papen's life. The Soviets asked for a new trial, claiming that the Ankara Criminal Court had dealt with the defendants in an unfair and partisan manner. A bitter polemical campaign followed in the press of both countries. But a few days ago Moscow received full satisfaction. The Turkish Court of Appeal has revoked the sentence; and the reasons given for this decision confirms nearly all the charges made previously by the Russians. The case will come before another court, which, it is hoped, will hear it more objectively. The revocation of the sentence, in itself, should help to re-establish confidence between Russia and Turkey, a confidence which Russia has well earned by its strict observance of Turkish neutrality during the difficult period of military operations in the Black Sea region. Simultaneously, some tension has developed in Soviet-Bulgarian relations. The Russian envoy in Sofia has officially protested against an anti-Soviet exhibition opened in Sofia under German auspices. The Bulgarian Government has rejected the protest. Like the Ankara trial, the Sofia exhibition is a symptom rather than the actual cause of the trouble. Bulgarian territory is at present being used by the German forces as a base. Varna, the Bulgarian port on the Black Sea, plays an important part in German operations.

New Chilean Cabinet

Ever since Señor Ríos was elected to the presidency early this year, the democracies have reserved judgment on Chilean policy. The reconstruction of the Chilean Cabinet and the issue of the President's manifesto on foreign policy provide no decisive reasons for changing this attitude. It is generally believed in the United States and Britain that the democratic sympathies of the Chilean governing parties and of the Radical President will ultimately mean a definite rupture of diplomatic relations with the Axis and alignment with the remainder of the American continent—leaving Argentina as the sole exception. The formation of the new Cabinet, which includes the pro-Ally Foreign Minister, Señor Fernandez, in place of the pro-Axis Señor Jara, and retains Señor Morales, who has been chiefly responsible for the institution of police measures against suspected German spies, as Minister of the Interior, is undeniably encouraging. Moreover, the terms of the President's announcement, which proclaimed his intention to align Chile with those "nations of the continent who are ready to defend the great principles of integrity and American solidarity" was couched in strong terms. There appears to be little doubt that President Ríos and the newly constituted executive desire full participation in a policy of continental solidarity. But it would still be premature to suppose that the decisive step will necessarily be taken in the immediate future. President Ríos, mindful of the pro-Axis and neutral sympathies of a large section of the important Conservative party, which is not represented in the new Cabinet, may continue to nurse public opinion as he has done for the last ten months.

The Manpower Squeeze

Everywhere, as Britain's final stages of mobilisation for the offensive are reached, shortages are increasingly felt, and of the three basic commodities—manpower, materials and machines—it is the first which is now most urgently wanted. After three years of the last war, a Ministry of

THE REFORM OF ACCOUNTS

The recent series of articles in *The Economist* on the Reform of Company Accounts has aroused considerable interest; and for the convenience of readers it is proposed to reprint these articles in pamphlet form. Copies will be available shortly, price 6d. The number of copies will necessarily be limited; and readers are advised to apply as soon as possible to *The Economist Newspaper, Limited*, Broadnham House, 15, Lancaster Place, London, W.C.2. (Telephone No. Temple Bar 3316.)

National Service was set up, linked to the War Cabinet through the War Priority Committee under General Smuts, whose first duty was to comb civilian labour to find recruits for the campaigns of 1918. In spite of the very heavy wastage of manpower, from both casualties and the muddled recruiting and reservation arrangements of the previous years, it found 70,000 men for the Services in the last year of war, though the production of munitions increased enormously. To-day, Mr Bevin announced in the House of Commons last week, the requirements of all three Services necessitate the calling-up of the 18-year-olds, already liable under the National Service Acts; those young men who reached this age between July 1st and September 30th will register on November 7th and many will be called up in December. This step does not, however, affect the minimum age, 19, at which men in the Army are posted abroad. But a possibly more significant measure is the bulk withdrawal of the deferments of younger men in industry. About 50 occupations will lose their young men under 25 years of age, including employees of iron and steel foundries and moulders; gunsmiths; pig-iron manufacturers; certain types of aircraft builders; building trade workers and maintenance men; cycle and motor-cycle makers, repairers and mechanics; and electricians. Even more occupations will lose their men under 30, including those in boot and shoe manufacture; clerical and office staffs; the distributive trades—including food distribution; printing operatives; and railway workers. In cases where the Ministry of Labour agrees a substitute is necessary, the man will not be called up until a substitute has been found. This withdrawal of exemption will not, perhaps, result in a net addition of many thousands to the Armed Forces, but it means that those who are called up will be young and fit, either fighting men or front-line mechanics and repairers. Moreover, since many of the occupations have been hitherto considered essential—and, in fact, in some cases are munition industries—it lends weight to the statements of Ministers and General Smuts that the time for using weapons, as well as making them, is at hand.

Insurance Personnel

The main feature of the Kennet Report on manpower in banking and insurance—a report which noticeably lacks both conciseness and precision—is that its recommendations will not release many additional men or women for other work with the Services. The smallness of the reserve held to be available for release is, of course, due in considerable measure to the fact that it has already been depleted by war calls. But it is also a measure of the Committee's negative and conventional approach to the problem. The services performed by banks, and allied institutions, by stock exchanges and insurance companies are indeed essential even in wartime. But there are degrees of essentiality. If these financial activities were subjected to the same stringent needs test as the manufacture of consumption goods has been, it might still be possible to suggest more drastic economies in manpower. The banking and stock exchange aspects of the problem are discussed on pages 547 and 549. So far as insurance is concerned, the Committee rightly draws a distinction between ordinary and industrial insurance. Before the war the personnel employed in ordinary insurance numbered 70,000, 46,000 men and 24,000 women. In the early part of this year, the total was 54,000, including 25,000 men and 29,000 women; of the men, half were under 18 or over 41, and of the other half 2,500 were awaiting mobilisation; of the women, 2,300 were awaiting call, and the remainder were divided about equally between those under and over 25. The Committee's recommendations for further pruning are three: the elimination of personnel wholly or substantially engaged in the quest for new business; a ban on the transfer of existing business from one insurer to another; and the further consolidation of insurance undertakings at present working as separate entities under the same financial control. It is reported that the insurance companies have already agreed to implement the first two recommendations. Further releases of staff will admittedly be difficult, especially in view of the work involved in the administration of some of the Government's war insurance schemes. So far as industrial insurance is concerned, the Kennet Report is disappointing. A table appended to the Report shows that there has been hardly any reduction in staff since the war; the total number employed last June was 95,000, against 101,000 before the war; the reduction in the number of men, from 88,726 to 51,172, was largely offset by the increase in women employees, from 12,512 to

43,765. The greater part of the total consists of outdoor staff, and, so long as present methods of collecting payments are continued, little economy in manpower is possible.

The Dual System

The influence of the new Archbishop of Canterbury can be traced in the interim report of the National Society on the Dual System in education. Dr. Temple has himself written the foreword, and though the policy proposed is a compromise, as he frankly admits, it is a wise compromise, not a weak one. If legislation is introduced to give effect to the policy, only the most bigoted Anglicans will see it as a victory of the State over the Church. Most people will acclaim it as a wise surrender of vested interest, which will strengthen the Church's position rather than weaken it.

The National Society would . . . be doing no service to the Church or the nation if it advocated a line of action in maintenance of some vantage ground of privilege or established rights calculated to obstruct the general progress of education for the Nation and the effecting of reforms long overdue.

The National Society does not recommend the handing over of all Church schools to the local education authorities, even in single school areas. Its policy is based on the principle that "a Christian foundation is the only and essential basis of real education," a principle expounded in the Archbishops' Five Points of February, 1941. But it approves, wholeheartedly, the Government's intention to improve primary schools and reorganise post-primary schools—which must include the Church schools, too. Nor will it oppose the closure of schools that cannot be brought up to standard. Moreover, it recommends that, where Church schools cannot afford to fulfil the legal obligations in respect of repairs and improvements, the obligation of the managers should pass to the LEA, together with the appointment of teachers. The managers should retain the right to appoint reserved teachers for the giving of denominational teaching to supplement the agreed syllabus adopted by a LEA, which, it is recommended, should be used in all Church schools. The Society would prefer that the head teacher should be a reserved teacher, but, recognising the force of the objection that some 10,000 head teachers should not be submitted to a denominational test, asks instead for consultation between the LEA and the managers in the appointments. These suggestions, and those preceding them in the report, are not, Dr Temple says, what the Church would consider the ideal method of arranging a religious education; but he claims that they are sound and practicable, and if terms such as these are offered by the Government, "it would be most unwise for the Church to hesitate to accept them." Success or failure, however, will not depend solely on the Church of England or the Government, but on the willingness of the other Churches to follow suit.

Two Nations?

It is a commonplace that a luxury, in the popular view, is unnecessary spending by the other fellow. It is certainly true that no one likes to admit that he is financially able to buy luxuries; there is, in fact, an extraordinary coyness about the rich and the well-to-do. From 1931 onwards, but particularly since 1939, there has been a sort of competition among people of the higher income levels to claim that they have reached the poverty line. The social surveyor of a hundred years hence who reads of such statements as Lord Wardington's—that a rich man to-day has no penny left after paying his taxes and commitments to buy a crust of bread—and then studies Lord Wardington's household accounts will be perplexed. This apparent shame in being wealthy was responsible for a passage of arms in last week's House of Commons debate on wages policy between Mr Benson, Labour member for Chesterfield, and one or two Conservative members. Mr Benson, whose contributions to debates on economic and financial policy are invariably refreshing and apt, was making the point that though increases in wages may defeat the wage-earner's own ends, it hardly became Conservative members to demand wage freezing in wartime, when the law of supply and demand works to the advantage of wage-earners, without stopping to think whether it should not apply in peacetime as well—and to all classes of society. In the course

of this speech he made the incontrovertible statement that, in spite of the high taxation on big incomes, the relative standards of comfort of the various classes of society are little changed. But he was immediately challenged by two Conservative members, and in the ensuing exchange one of them—a colliery director, incidentally—first of all made the extraordinary comment that the average miner can afford to buy lots of things which a rich man cannot, and then, when asked directly by Mr Benson whether he would change his standard of living for that of a miner, hid behind the equally foolish statement that his standard of living had changed very much while he saw miners getting twice as much as they did before the war. Does it not occur to people like Mr Wragg and Sir Archibald Southby that their club subscriptions alone—unavoidable commitments?—would keep a miner's family for some weeks?

"It's a very remarkable circumstance, sir," said Sam, "that poverty and oysters always seems to go together."

Mr Benson's argument does not, of course, mean that labour would be justified in doing all in its power to use its wartime opportunity to obtain a permanently larger share of the national income. But it does mean that when the not so poor are compelled to close their country houses—or cottages—dismiss their servants, lay up their cars and decide not to enter their sons for Eton, they might refrain from self-pity and spare a thought for those millions who have not more than a week's paid holiday in a year—if that—even in peacetime, who leave dingy homes to work—if they are lucky enough to have a job at all—an eight-hour day and a six-day week, even in peacetime, whose children leave school at 14 to become a supply of cheap labour. Let them stop pretending that to-day it's the poor that has the pleasure, so its earnings must be controlled—an

argument which is as irrelevant to the economic issues involved as it is false. And let them not be ashamed of being rich, if their wealth has come to them by their own talents and exertions.

Shorter Notes

The following table gives the number of civilian casualties in air-raids since September, 1939:—

	Killed	Injured and Detained in Hospital	Total Serious Casualties
Sept., 1939-Aug., 1940.	1,494	1,980	3,474
Sept.-Dec., 1940	22,282	28,522	50,804
Total, 1941	20,863	21,839	42,702
1942:—			
January	114	59	173
February	24	20	44
March	21	13	34
April	987	1,046	2,033
May	399	426	825
June	293	358	651
July	411	871	1,282
August	403	509	912
September	207	238	445
Totals to date	47,498	55,881	103,379

Of those killed in September, 87 were men, 79 were women and 41 were children under 16.

According to a parliamentary answer, Malta had been raided 1,660 times up to October 19th, and 1,069 enemy aircraft had been destroyed. Up to September 20th, 1,386 civilians had been killed and 6,704 buildings destroyed or damaged.

Letters to the Editor

Accountants and Accounts

TO THE EDITOR OF THE ECONOMIST

Sir,—We suggest, for discussion with a view to general adoption, the attached specimen profit and loss account as a suitable minimum for publication.

There has been a great improvement in published accounts in recent years, particularly as regards balance sheets, but many accountants desire further improvements, especially in the form of the profit and loss account.

It is improbable that in wartime any desirable changes can be enforced by statutory means, but we think that much can be done by voluntary action. A good example spreads, particularly in times when the public conscience is awakened.

COMPANY LIMITED	
PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 19	
(Comparative Figures Throughout)	
Expenses.	I. Net Sales.
I. Production:	
i. Wages	
ii. Materials	
iii. Works Expenses	
iv. Sub-Contracts	
II. Selling and Distribution	
III. Administration and Management	
IV. Finance	
V. Balance, being Operational Profit for the year B/d	
VI. Taxation Provisions:	II. Operational Profit B/d
i. Excess Profits Tax	After providing for:—
ii. Income Tax	Directors' Fees
(The basis of the reserve being stated, e.g., on profits to date.)	Depreciation & amounts written off
VII. Special Items (Suitably specified) e.g., War Damage Contributions. Non-Recurring items.	Assets
	III. Dividends received from:

TO THE EDITOR OF THE ECONOMIST

Sir,—I agree that there is considerable room for improvement in the general standard of published accounts. There has been, however, a marked improvement during recent years and I submit that Accountants have been mainly responsible for these forward steps.

I also agree that "the publication of frank, full, and proper accounts is needed in order to disclose the position so that anyone with a modicum of grounding in accounts can grasp the facts."

The impression the article gives me is that the writer blames Auditors for nearly all the defects in present practice. But it is the Directors of the Company who are responsible for the form of presentation of the accounts of the Company and, under existing law, the Auditor has no power to alter one word or one figure in the Directors' Accounts. His only means of effecting improvement in the form of presentation is by persuasion.

It seems to me, therefore, that the general standard can be raised only by some form of compulsion, viz., by an amendment of the Companies' Act and by the Stock Exchanges demanding an adequate standard of accounting disclosure from all companies whose stocks or shares are quoted on the Stock Exchanges.

In the very interesting article on American Accounts

in *The Economist* on August 8th, it was made clear how important has been the effect of the Securities and Exchange Commission upon the standard of disclosure in America. It is stated that the SEC requirements have had:

two advantages, namely that there is an obligation upon all Companies to present what are in effect standardised accounts, and that the obligation is a continuing one. This has meant a gradual improvement in the method of compiling accounts and in the value of the certificate submitted by the auditors. With this view I agree entirely and I submit that as the law stands at present in this country, Auditors are powerless to effect the improvements desired by *The Economist* and all thinking men including those in the accountancy profession.

Pending the introduction of some form of compulsion, the recently formed Taxation and Financial Relations Committee of the Institute of Chartered Accountants has this whole problem under active consideration, and I am certain that I can speak for my profession when I say that Accountants will be found only too willing to help in every way they can towards achieving the objects which *The Economist* has in view.

Taunton, Somerset.

Yours faithfully,

F. R. M. DE PAULA.

[A Note on page 548 makes some comment on these two letters.—EDITOR.]

AMERICAN SURVEY

The Soldier as Citizen

(From Our Washington Correspondent)

October 5th

IN anticipation of the election in November, a good bit has been heard about the soldier vote. Since the Army, by the time election day comes, is expected to number at least 3,000,000 men, a sizeable group of the population will be out of the voting. A small number of those enrolled will be near enough to their regular polling places to exercise their franchise; the rest will be in other states or overseas. A variety of efforts have been made to facilitate voting by troops who are in the United States, but in states other than those where they are registered. In all but four states, laws applicable to the coming elections make some form of provision for absentee voting; in a good many of the states whose legislatures have been in session this year, supplementary enactments have been added with special reference to the armed Forces, including provisions advancing the date of the operation of pre-election machinery (caucus or primary) so that it will take place while more of the men about to be enrolled in the Services are still at home; removing the poll tax as a requirement for Service men; authorising commissioned officers to attest the affidavits of Service men writing home for absentee ballots; instructing the Secretary of State to mail absentee ballots to men in the Service, whether or not they apply; and arranging for the registration of the men at training camps and the collection of ballots there.

That the effectiveness of many of these provisions for absent voting may be slight is indicated by the results in the recent Illinois primaries. Four years ago, of the 2,500 absent voter ballots applied for by Chicago citizens, 90 per cent were used in time to be effective for the election. This year there were 6,000 such applications, nine out of ten of them from Service men; but only 20 per cent of the ballots got back to the polling places by the time the count was made. Movement of troops from camp to camp, combined with the limitation of time between the date when ballots are printed and sent out and the date when they must be returned, reduce the soldier's chance of voting.

A number of Bills on this subject have been introduced into Congress. One proposes that everyone on active duty be empowered to vote by absentee ballot subject to the qualifications of his state for resident voters; another would eliminate poll taxes as a prerequisite to Service men's voting. The only Bill which has so far proceeded through the stage of hearings would provide for an official war ballot to be delivered by the Secretary of State to the Service authorities, who should then provide appropriate

facilities for voting at a date in advance of the election and return the ballots to the states of origin of the men for inclusion in the count.

The Army and Politics

This proposal for the establishment of polling places on military reservations sharpens some far-reaching questions which the war is raising about the relation of the armed Forces to the policy-forming functions of the state. The general assumption current through the country, that the Army is and should remain remote from politics, is rather more than a century and a half old. The Virginia Declaration of Rights of 1776 carried as its twelfth article:

that a well-regulated militia, composed of the body of the people, trained to arms, is the proper, natural and safe defense of a free state; that standing armies in time of peace should be avoided, as dangerous to liberty; and that in all cases the military should be under strict subordination to and governed by the civil power.

This idea was developed in the Second Amendment to the Federal Constitution:

A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

Until our own time, these articles served as an adequate basis for the relation of armed Forces to the state. The idea of the citizen as his own security came naturally to the coonskin-cap-and-rifle-over-the-mantel period. In the Civil War, the *levée-en-masse* that called 2,213,000 of a population of nearly 26 millions to the colours of the North, and in the South close on a million and a half of a total of just over nine millions (including the slaves), obscured the slow but inexorable part played by preponderance of *matériel* in the struggle. During the years of peace from the war with Spain, when Teddy Roosevelt's swashbuckling Rough Riders continued the vigilante tradition. In the time of economic expansion, the armed Forces were on the very margin of American thinking. So small as to be a negligible percentage of the population, they were regarded, and regarded themselves, as a nucleus for an expansible force of citizen origin. The common public attitude at the end of World War I may be summarised by the resolution on military policy passed at the first convention of the American Legion:

that a large standing army is unnecessary and un-American. National safety with freedom from militarism is best assured

by a national citizen army based on the democratic and American principle of equality of obligation and opportunity for all.

During this entire period, the military part of our society—that is to say the men actually in service—was not a factor in the making of national policy; it was small, neutral, remote. But, from the very beginning of the Republic, ex-Service men have been a political factor, much of the time a factor of great importance. The influence of the Revolutionary officers, organised as the Society of the Cincinnati, did not stop when Washington headed off a potential *coup d'état* in 1783 after their Newburgh memorial had considered the possibility of an "appeal from the justice to the fears of government." Four years later, George Mason, speaking to the question of the choice of the Federal Executive, opposed popular election on the ground that it would

throw the appointment into the hands of the Cincinnati, a society for the members of which he had great respect, but which he never wished to have a preponderating influence in government.

The veterans' organisations of the years following our two other major wars have been among the nation's major lobbies. The Grand Army of the Republic, twenty-five years after the guns of 1861-65 stopped firing, numbered 409,000 members whose political efficiency was attested by a series of laws, State and Federal, bettering the position of the brotherhood. The political efficiency of the American Legion of 1919, though its membership has not included as large a proportion of those eligible as did the GAR (its average has run something around 850,000 and its peak was 1,153,909 in 1931), has been demonstrated by repeated enlargement of the scale and coverage of benefits, culminating in the \$2 billion bonus of 1936. One reason for the Legion's political power as a lobby is the particular make-up of its membership. Of the 853,000 who belonged to it in 1935, a third owned their own businesses, while close on another third were professional men, salesmen, Government workers. This group of occupations reads like a directory of Main Street; it fits local politics like a glove.

The purposes for which the veterans' lobby has been used in the years between wars are relatively restricted. While the Legion has exerted a generally right-of-centre influence, and actively sponsored anti-Communist measures of various sorts, it has by and large exerted its leverage for a rather limited series of objectives—hospital care, insurance and cash benefits in the form of "adjusted compensation," pensions and allowances for veterans and their dependants.

After the War

Now, with World War II, a new group of ex-Service men is in the making. The 4,757,240 who served in the American Forces during World War I amounted to about one in twenty-one persons in a population of 106 millions. Suppose the American effectives in World War II reach 10 millions, that will be one in thirteen persons in a population of 130 millions. These soldiers may have difficulty in voting to-day, but when they return to private life they will form a main body of voters to-morrow. How they vote then will be a main test of the soundness of American institutions, because the issues on which they will be voting will be no less than those institutions themselves.

The veterans' votes of the past assumed a self-operating economic system, whose cash returns were subject to diversion. The concept of security toward which the Veterans' Bills were aimed was, with the exception of the hospitalisation features, a financial concept. During the depression and the recovery, the country's concept of security changed from a financial concept to a concept expressed in terms of goods. Our current experience of war production has still further concentrated our idea of scarcity and plenty on things instead of dollars. The post-war desire for security is therefore likely to centre on the operation of the economic system rather than on the division of an output that is uncontrolled; the choices that are made by ex-military men in their search for security will therefore involve the structure of the state to an extent unrealised heretofore.

Of parallel importance will be the choices of the Service men who are not "ex." The technology of this war has blasted the basis of our traditional notion of the armed Forces. The machines with which it is being fought have abridged to the vanishing point the citizen's right to keep and bear arms—one cannot hang a tank over the mantel or carry an anti-aircraft gun on the shoulder. And the

demonstrated fact that the carefully timed use of *matériel* can be more than a match for the delayed mobilisation of superior resources means that maintenance of a considerable armed force in being, particularly an air force, is to be anticipated for a long time to come. Such a force will clearly have a pivotal position in the state; and to the extent that it is used for peacetime policing it will serve as the implement of an active state policy. What will be its relation to the formation of that policy?

For the United States, and for that matter for all the democracies, here is a major problem in statecraft. The standing armies of the future must not be dangerous to liberty. We do not intend to lose our liberty in the process of mustering the force necessary to sustain it now. That means a policy of cross-section recruitment, of officers as well as men, so that the armed Forces represent the nation and not one segment that might turn against the general welfare. That means a process of education, so that the armed Forces may understand the nature and promise of the society that they now defend and the future order that they will police.

American Notes

Loyal Opposition

Mr Willkie's broadcast this week was the first outstanding instance of critical appraisal of the war effort, of unquestioned sincerity and ability, which American belligerency has yet produced. There is no lack of critics, either Democratic or Republican. But none has attempted to cover so wide a field or commands so much attention. Some of the points he raised have already been answered by spokesmen of the Administration. Mr Roosevelt has repeated that the Atlantic Charter (so called because it was signed on the Atlantic, not because it applies to the Atlantic only) applies to "all humanity," including the Eastern peoples who, Mr Willkie asserted, are sceptical. Admiral Stark has emphasised the importance of shipping in the opening of new fronts, and Mr Hull has defended the State Department from Mr Willkie's charges that American diplomatic representation, in Asia and Eastern Europe, is inadequate and incompetent. These points, however, were only subsidiary to the main burden of Mr Willkie's message, which was the warning that the United States is drawing heavily on its reservoir of good will in the East. He claimed that this was due, not only to "boasts and broken promises" in the matter of supplies, but also to growing doubt and disillusionment in the countries he had visited about American war aims in the East, and to resentment of the

half-ignorant, half-patronising way in which we have grown accustomed to treating many peoples in East Europe and Asia.

What Mr Willkie had to say about the "tragic inadequacy" of American deliveries to Russia and China will probably not be unwelcome to an Administration which has consistently emphasised the urgency of sending abroad the utmost possible. In his plea for an "orderly abolition of the colonial system" and for the fixing of dates to work for and the provisions of guarantees that the dates will be adhered to, Mr Willkie did not allow himself to be drawn into any open disapproval of British policy. Warned, perhaps, by the *Life* episode, he made it clear that he was not referring to the British Commonwealth but to "remnants of Empire" wherever they exist; and he paid tribute to the millions of British men and women working for the extension of colonial self-government. The United States, he concluded, must play an active and constructive part, with the peoples of all the United Nations, in planning a "global peace" and freeing the world politically and economically.

It is no aspersion upon Mr Willkie's sincerity—which is beyond doubt—to attempt to evaluate his broadcast in terms of his own political future. It would be pointless to welcome the emergence of a "loyal opposition"—a phrase which has been used in the United States—without realising that he is, in the words of one newspaper, "a leader without a team." The old-time Republican leaders, and the machine, are fighting to prevent his leadership of the party, and there are reports that Mr Dewey, Republican candidate for the New York state governorship, has been approached to lead a campaign to oust him. Mr Dewey is said not to be

unwilling if he is successful at the polls. Mr Willkie's policy evidently is to disregard for the time being the party organisation and further to build up his national following. Time will show whether Mr Willkie cannot afford to disregard the usual basis of political advancement. His characterisation of the United States as only 40 per cent mobilised for war, his demand that the Government should match the people's willingness to put more into the war effort, and in particular his attack upon a censorship policy which produces "atrophy of intelligence" and a sense of false security, make together the foundations of a logical and constructive policy of opposition. Whatever ambiguity there may have been about his trip, in which he was said to act for the President and speak for himself, it is plain that, rightly, he has no intention of renouncing any part of the privileges of independence. Much of what he said was not new, but it has never been given such orderly and forceful expression or backed with such personal authority. Mr Willkie may lose the support of the Republican machine; but he will probably more than make up for it by his skilful handling of the role of independent critic and observer.

On the Record

The last two months have set a record for the grasping of political nettles which is all the more remarkable because it took place before rather than after the elections. To a great extent, the initiative has been that of the President and the Administration, but there has also been a perceptible change in the attitude of Congress, which can only be due to a realisation that the country is anxious for more, rather than less speed, in the mobilisation of the home front. The most impressive achievements have been the rationalisation of the rubber situation, in accordance with the Baruch report, which trod on the corns, not only of industrial interests, but also of motorists all over the country; and the creation of a framework for economic stabilisation which had first to reconcile both labour and the farmer to at least some degree of income control. In both cases, Congress could have made difficulties for the Administration, but instead elected—after some heart-searchings—to co-operate at least partially. Although it was freely prophesied that the Tax Bill would not be passed until after November, it is already law. This, with the action on the drafting of 18 and 19-year-olds, admittedly not yet complete, is perhaps the strongest evidence of a change of heart on Capitol Hill. Mr Nelson has followed up his announcement that he would

"act tough" by ordering the closing of gold mines in the face of strong opposition from Western Senators, and has decreed the end of all building construction not considered essential to the war effort. Even the rationing of coffee and of fuel oil show a reliance on the public willingness to accept disagreeable restrictions which is markedly different from the spirit in which petrol rationing was received last spring. The solution of the allocation of manpower is not yet in sight, but the fact that already a number of Bills on the subject have been introduced into Congress, and hearings are being conducted by the Senate, is additional proof of a remarkable burst of national energy.

Shorter Notes

Mr Byrnes, Director of Economic Stabilisation, has arranged with the War Labour Board and the Treasury to bring all salaries under control. The Labour Board will regulate all salaries under \$3,000 a year, and those under \$5,000 a year which are covered by wage agreements. The rest will be controlled by the Treasury. On Wednesday Mr Byrnes issued regulations setting a ceiling of \$25,000 to individual salaries (after taxation). The President has already directed that his salary should be reduced to conform to the limit.

The news that general rationing books will be in the hands of the public by January has been supplemented by the announcement that coffee, America's staple drink, is to be rationed at the end of November. The ration will be one pound every five weeks. This is a yearly ration of just over 10 lb. a year, and compares with an average consumption of 16 lb. a head last year and 13 lb. a head in the ten years before 1941. Mr Henderson has declared that there is no excuse for hoarding, but it is not easy to see why so much time has been given for wealthy consumers to get in stocks.

Tyres in excess of five per car have been requisitioned by the Government, and a schedule of the prices to be paid has been established. All tyres are now regarded as Government property. The requisitioning will be enforced by the withholding of petrol ration books from motorists holding more than five tyres. A record of tyre inspection will be required for any renewal of ration books, and excessive speeds will be punished by the revocation of the petrol ration.

THE WORLD OVERSEAS

The Balkan Satellites—II

(By a Correspondent)

WHEN the Russian campaign started, a genuine holiday mood took hold of the ruling circles of Bucharest and Budapest. The campaign, they hoped, would be a triumphant walk-over. Cheap victories would help to overcome internal difficulties and troubles. In Roumania, the newly-established regime under the Conducator, Antonescu, was confronted with the need to find some tangible compensation for the loss of Transylvania and Dobrudja. The recapture of Bessarabia was a heaven-sent opportunity. And beyond Bessarabia was Transnistria and the great and wealthy Black Sea port of Odessa. All this was vaguely promised by the Germans as a reward for Roumania. The Conducator could at last claim that the period of national humiliation had come to an end, and that a new era of Roumanian aggrandisement had set in. Roumania was, of course, performing a historical mission by regaining the land beyond the Dniester for the "new European civilisation"; and its territorial losses to Hungary and Bulgaria faded into insignificance.

The gains which could accrue to Hungary from its participation in the Russian campaign were less obvious. Hungary had already reached saturation point in the process of aggrandisement. But Budapest was well aware that it

could not afford to rest safely on its Transylvanian laurels; it had to earn them a second time by joining the anti-Bolshevik crusade. While Antonescu hoped to make good in the east the losses in the west, Horthy was anxious to prove Hungary's "right" to retain its gains as well as its place within the new order. Among all the Balkan satellites, Bulgaria was best off; King Boris succeeded in maintaining his territorial acquisitions without having to commit himself too openly in the anti-Russian campaign.

The Balkan satellites were thus linked to the Axis by vested interests. The political opposition to participation in the anti-Russian campaign was nowhere very strong. The political life of all the Balkan countries had been completely shapeless. The backbone of the liberal and peasant movements had already been broken. The influence of the Bratianus and of Maniu had long since disappeared; they were unable to put up any resistance to the establishment of the Conducator's dictatorship. Their supporters were terrorised and demoralised to an extent which made them unable to switch over to any underground struggle. In Budapest, some appearance of a Parliamentary regime has still been kept; but the parliament has been tamed by Horthy, and the present Hun-

Rivalry Over Bolivia

[FROM A CORRESPONDENT IN LA PAZ]

September 22nd

ON September 16th, Argentina's President Castillo and Bolivia's President Peñaranda met on the Argentine-Bolivian frontier. Ostensibly, the purpose of the meeting was to inaugurate the construction of the railway Yacuiba-Santa Cruz. Under the surface of courtesies, however, more serious issues were involved.

The meeting took place at a time when co-operation between Bolivia and North America was being severely criticised by Bolivian public opinion. During their visit to the United States, the Bolivian Ministers did, it is true, secure an increase in the price of wolfram from \$21 c.i.f., delivered in North American ports, to \$22.60 f.o.b., delivered in Chilean or Peruvian ports. But, for the time being, this is the only tangible result obtained. Although the Bolivian Corporation for Industrial Development is to have available a capital of about \$26 millions, only \$15.5 millions will be lent by the United States—of which \$5.5 millions will be for the Bolivian oil industry; the remainder must be covered by Bolivia. Moreover, Bolivia was anxious to obtain machinery with the whole of the \$26 millions, but no definite promises could be given about the date of delivery.

There is also considerable dissatisfaction with the contract Bolivia signed with Rubber Reserve Company. Argentina has difficulty in obtaining the 9,000 tons of rubber it needs in a year. It has consequently shown increased interest in Bolivia's annual output of 1,500 tons, and its offer to pay 7-10 pesos (about \$1.40-2) per 100 kg., compares with the US price of 45 cents. Bolivians are thus arguing that since Bolivian rubber production has no future—because its present boom is exclusively due to the Japanese occupation of Far Eastern producing areas—it is not in Bolivia's interests to initiate a long-term production policy. Rather should it avail itself of the present boom to obtain the highest possible prices. The difference, they say, between the price actually paid by the United States and that which Argentina—and other neighbouring countries—are willing to pay is greater than the \$2,125,000 which the United States would invest for the improvement of Bolivia's rubber-growing areas. In fact, the attacks in the Bolivian Congress on the rubber contract led the Foreign Minister, Anze Matienzo, to resign, although so far his resignation has not been accepted.

Finally, the forthcoming sessions of Congress will witness vigorous attacks on the arrangement with the Standard Oil Company in Rio de Janeiro. At present there is a severe shortage of oil in Bolivia; this is attributed in some quarters to the activities of Standard Oil, which is alleged to be preventing the delivery of machinery which is indispensable if the output of Bolivian oil is to be increased.

In the light of these circumstances, what aim could Argentina have pursued in the presidential meeting? President Castillo certainly tried to obtain the allocation of a bigger rubber quota for Argentina—under the provisions of the contract with the Rubber Reserve, Bolivia places 250 tons per annum at the disposal of its neighbours. But though Argentina's offer was admittedly solely designed to serve Argentine interests, it resulted at the same time in putting difficulties in the way of co-operation between Bolivia and North America.

The meeting was, moreover, a symptom of the growing rivalry between Brazil and Argentina. Both countries are bidding to become the leading industrial and political power of South America. Argentina is at present isolated to some extent owing to its foreign policy. It produces between 2½

garian Prime Minister, Kallay, seems to have had more trouble with the intrigues of his rivals than with any organised popular resistance.

The almost uniform background to this picture was the political eclipse of the Balkan peasant movements. It looked, in fact, as if the peasantry, too, might acquire a vested interest in the new order. True, the German agricultural schemes for the Balkan countries imposed uncomfortably novel methods on the countryside; but they had at least—so it seemed for a time—the merit of providing a stable market for agricultural produce.

The fact that the "walk-over" in Russia has proved to be a costly and protracted war has changed the Balkan picture. The high-sounding official phrases about great national missions stand in sharp contrast to the nonsensical slaughter on the distant Russian steppes and to miseries of everyday life in the Balkans. Great numbers of casualties have a depressing effect upon the spirit of the Roumanians and Hungarians. This has been admitted with a rather surprising frankness by the Hungarian Prime Minister. In a recent message to the Honveds, he warned the wounded soldiers that in spreading despair and defeatism inside the country they were breaking the soldier's oath. He accused them of undermining the morale of the population in the rear, only to reverse this charge in the next sentence and to accuse the rear of undermining the morale of the army. In Roumania, Maniu and Bratianu are reported to have demanded the withdrawal of Roumanian forces from the east. But the Balkan rulers are not free to withdraw from the adventure in which they have involved their countries. New German threats and promises compel them to continue along the path they had chosen. While the Hungarians are menaced with a revision of the Vienna award, the Roumanians are blackmailed with the threat that they may have to cede Southern Transylvania, too, to Hungary. The dream of Roumanian rule in Odessa has ended in an apparent German-Roumanian condominium over Transnistria, in which the *Wehrmacht* is the senior partner. But the maintenance of even this condominium is made dependent on Roumania's readiness to "remain faithful to its mission."

Is the meantime, the Balkans have been "balkanised" more than they have ever been before. The Hungarians are busy in the magyarisation of the former Roumanian provinces; the Roumanians are carrying out the roumanisation of the Transnistria; and the Bulgars are bulgarising Roumanians, Serbs and Greeks. The whole *mêlée* of inflated hostile nationalisms is exploited by the Third Reich to impose its will upon all its satellites and to exact from them more manpower or more agricultural supplies.

Instability Increases

The feeling of relative stability, economic and political, which seemed to prevail in the Balkans a year ago, seems now to have disappeared. The advantage of a steady market for agriculture has been more than offset by the exacting character of German demands and by the general fall in productivity. Black markets have grown enormously. A striking indication of the degree to which the economic structure of the Balkans has been unbalanced has been provided by the Roumanian breach in Germany's trade policy. The official export prices for Roumanian wheat and meat have risen four and four and a half times, respectively. The continental price stop policy of Germany has thus suffered a signal defeat in Roumania, the satellite country which has made the biggest contribution to the war against Russia. In the trade with the other Balkan countries, Dr Clodius has still, on the whole, been able to maintain the price stop at the expense of the home consumer, who has had to pay the subsidies which enable the Balkan exporter to sell at the prices dictated by the Germans. It remains to be seen how long German trade there will remain "inflation-proof" and whether the Roumanian example will not prove contagious.

The peasantry of the Balkan countries is, undoubtedly, a potential ally to the cause of the United Nations. It has never shown any great enthusiasm for the territorial conquests of its rulers; and now it shows many signs of discontent. A second war winter is likely to bring it to the verge of despair. It is still leaderless and helpless. The political organisations have been eliminated, a circumstance which makes it—as a political force—unvocal in the short run, but even more explosive in the long run. It depends on Allied success on the battlefields to what an extent the explosive character of the Balkan peasantry's discontent will turn against Germany.

The MERCANTILE BANK of INDIA LIMITED

Head Office: 15, Gracechurch St., London, E.C.3

EXECUTORSHIPS AND TRUSTEESHIPS ACCEPTED

and 3 million tons of oil per annum, while Brazil has as yet undeveloped coal and iron basis for an industrial economy. Both countries look towards Bolivia because of its mineral resources—particularly oil, which is especially important for Brazil. The undeveloped oilfields of Camiri and Sanandita in Bolivia are coveted by both countries. These regions are linked to the rest of Bolivian territory by a few highways which are only usable in winter. Brazil consequently made an important move when it began the construction of the Corumba-Santa Cruz railway, to be followed by the construction of another railway from Santa Cruz to the oilfields of Camiri.

Russia at War

Anniversary Eve

IN a few days, Soviet Russia will celebrate the 25th anniversary of the October Revolution. Twenty-five years ago Kerensky's Russia was tottering under the blows of the German war machine and awaiting the *coup de grâce* which was to be delivered to the old regime by Lenin's party at the second all-Russian congress of the Soviets. To-day, the country is again bleeding from terrible wounds suffered at German hands, but it is fighting on with a stubbornness and resourcefulness which it was unable to muster a quarter of a century ago.

On the eve of the anniversary, there is very little of a holiday mood in Russia. There is scant time for anniversary reminiscences either. So far, the jubilee of the revolution has been marked only by the October industrial "emulation" to increase the supply of munitions and foodstuffs to the fronts. There has also been relatively little of the official hackneyed optimism that used to colour Soviet press comments and public statements. Instead, a great deal of matter of fact and frank discussion of the hardships and difficulties experienced in every branch of life has filled the columns of the press. It seems certain that Russia has succeeded in overcoming the dangerous internal crisis which developed during the German advance on the Don and in the northern Caucasus. The battle of Stalingrad has not only saved Stalingrad; it has also hardened and steeled the rest of the country for future trials. Now the attention of the Government and of the people alike is again turned to the great tasks of building up the country's war strength in the distant eastern centres of production.

The last week of October has been proclaimed a week of "aid for Stalingrad." Tank and aircraft factories are working overtime to supply weapons for the heroic defenders of the Volga city. Some of the percentage increases claimed are almost incredible. But throughout Russia the name of Stalingrad has an appeal strong enough to evoke the arms and munitions needed from the factories of the Volga region, of the Urals and of the Asiatic republics.

The confidence which Russia has regained as a result of the battle of Stalingrad recently found expression in a speech by President Kalinin to the Russian village youth:

Our army (he said) is now technically better equipped and better supplied than ever before. . . . This is unprecedented in Russian history. For instance, this is the first time that Russia has ever fought a war in which her army had sufficient shells.

This is certainly not an overstatement. During 1914-17, Russia mobilised no fewer than 18 million men. But at no time did the Russian army then possess more than 3 million rifles; and the Tsarist soldier was frequently given a rifle of his own only when he reached the front-line trenches. The shortage of shells during 1915-17 was felt as acutely as the shortage of footwear. Compared with this, Russia's record in this war has been a supreme achievement. No complaint about shortage of shells has appeared in any front line report during the whole of the Russian campaign, though the Russians have frequently been outnumbered in tanks and aircraft, the decisive weapons of modern warfare.

The Battle for Bread

President Kalinin's speech was very significant in the stress it laid upon the rôle of the younger generation in the country's economy and particularly in "the battle for bread."

The Komsomol and the Pioneers are now the most active and vital part of the population.

The Komsomol has in its ranks young persons from 16 years of age. The Pioneers consist of children below

This move is now being countered by Argentina in the construction of the railway from Yacuiba to Santa Cruz, whose inauguration was the occasion of the presidential meeting. This railway would go east from the oilfields of Sanandita, and would be extended to Camiri. There is no doubt that Argentina views Brazilian penetration with jealousy. Brazil's entry into the war emphasised even more strongly its close relations with the other South American countries, which have lined up in one way or another with the United Nations, and President Castillo can hardly have forgotten that Brazil has announced its intention to avail itself of the war to develop its heavy industry.

the age of sixteen. (President Kalinin gave an indication of the scope of the call-up when he said that only very few men under forty are now left in the villages.) It was to this audience in the teens that the President of the Soviet addressed his mild and persuasive appeal. He asked them not to rush to the towns in search for industrial jobs or for careers in liberal professions; he urged them to stay in the countryside for the duration of the war and to shoulder the responsibility for Russian agriculture.

It is you who in actual fact have to bear the whole weight of the war. The whole of life is before you. When we have routed the Germans—and we shall rout them, whatever happens—it is you who will have to restore what has been destroyed. It is you who will have to strengthen and build our country.

Thus, the President touched upon one outstanding change which is taking place in Russia's outlook in the course of this war. Russia, which has till now been notably a "young country," is in a sense getting even younger. In the trying years of revolution and civil war and the three five-year plans, the older generation exhausted and used up its energies at a great pace and the younger generation, too, matured much more quickly than in other countries. Under the strain of war, the process is being repeated with dramatic speed.

Coal Crisis

Apart from the problems of manpower and agriculture, the coal crisis continues to attract attention. The People's Commissar for the coal industry has just returned to Moscow from his journey to the Asiatic mining centre, the Kuzbass. In a press interview, he drew a reassuring picture of the position in Kuznetsk. He spoke highly of achievements there; the new coal industry was a hundred per cent mechanised; daily output was now 60 per cent higher than it was last spring, and a further 25 per cent increase in output was envisaged for the close of the year. He also disclosed something about the industrial evacuation of machinery and manpower from the Donbass to Kuznetsk. The evacuation of mechanical equipment seems to have been carried out on a massive scale.

Electric locomotives, conveyor belts, mechanical hewers and other machinery are being constructed for the Kuznetsk mines at mining equipment factories evacuated to the east from the Donetz basin.

The evacuation of labour seems to have affected highly skilled miners—judging by the Commissar's statement that "thousands of Donetz miners are working there."

The position in the Kuzbass remains nevertheless somewhat obscure. M. Vakhurshev's reassuring interview has been countered by another statement issued almost simultaneously by no less an authority than the Central Committee of the Communist Party. The Central Committee has acknowledged the achievement of the Moscow coal-miners who have—after the restoration of the pits—surpassed the pre-war level of output by 4 per cent. In contrast to this—

The Central Committee found and made public quite a different state of affairs in the Kuznetsk and Karagande coal basins. A number of pits of these basins have worked considerably worse this year than last year. They failed to fulfil the state plan of coal output.

The statement goes on to charge the regional party organisation with "having ceased to concern itself with coal output" and to announce—in consequence—the dismissal of the first secretary of that organisation.

The battle for coal is in full swing just as the battle for bread and the battle of Stalingrad are; and the outcome of all three battles still hangs in the balance.

German Europe

Controlling Prices

THREE years of war have changed the foundations of the German price-stop system. Time and again it has had to be adapted to new conditions. The result is a mixture of stopped prices, maximum and minimum prices, and state subsidies to hold prices down. Price stability is still the official policy; but it is recognised that complete stability is impossible. German economy has been working ever since the price-stop was decreed in 1936 under conditions of rising costs of production in agriculture, in the coal and steel industry, and most of the substitute industries.

Since the beginning of the war, and particularly since the final concentration of industries this spring, the maintenance of closed down or restricted factories has added another charge. The policy of scrapping whole factories and the remelting of unused semi-manufactures in the metal and iron industry again means higher costs of production. Added to this is the lower efficiency of foreign workers. All these increases could not be counterbalanced by the lower costs of mass production and rationalisation.

Compared with actual costs, agricultural prices are entirely artificial. The premiums paid to farmers for almost every product are either borne by the state or by a system of levies. Premiums paid by the state are estimated at Rm. 1,000 millions annually, or nearly 10 per cent of the total receipts from farm sales. During the first two years of the war, rising costs in the coalmining industry were compensated by increasing export prices. This policy is no longer possible, and the coalmining companies have been asking persistently for a rise in prices. In the iron and steel industry, a war premium is paid amounting to roughly 10 per cent of the original steel price; the cost is partly provided by a levy.

No control can change these hard facts, and even the fictitious price indices showed during the period from August, 1939, to September, 1942, an increase of 8 per cent in wholesale prices and a rise amounting to 10 per cent in the index of the cost of living. Dr Fischboeck decrees reduction where rationalisation and concentration reduce costs. But this field is very narrow, and affects only a small part of total output. The fixed or group price system for armaments has been partially successful in reducing inflated cost-plus-profit prices; and it is now being extended to civilian commodities, coupled with a general attack on cartel prices.

The economic press is divided on this problem. Some critics think that the system of group prices, if extended to the whole economy, would mean complete cartellisation because a group price is actually a price cartel. Others think that it would be better to extend cartel prices to the whole economy on traditional lines. Dr Fischboeck himself has demanded a reduction in cartel prices, and threatened to dissolve all price cartels which maintain the old prices after December 31, 1942. There are signs that Dr Fischboeck and his regional price controllers are no longer able to control individual prices; and the tendency to leave costing and the fixing of prices to the industrial federations becomes more obvious—which will make them competitors of the price cartels, a situation which was carefully avoided when the Nazis built up the compulsory economic organisation.

Price policy is discussed invariably in Germany against the background of the "classic" inflation after the last war. Every now and then suggestions are made to alter price policy so that "overhanging" or excess purchasing power will disappear, or at least be prevented from increasing to alarming proportions. Agricultural circles suggested a general increase of food prices as the best means of mopping up the purchasing power. Industrial circles, on the other hand, want most of all an increase in the coal and steel prices.

European Price Relations.—Disapproval and even alarm about the violent price fluctuations in occupied and dependent countries is growing among the Nazi authorities. In most of these countries, price control is ineffective. The Balkan countries lack the efficient civil administration which is the foundation of effective control in Germany. In western countries, the administration is paralysed by German occupation, and the new economic organisation on the German model, which could provide machinery for

control, is not functioning. European export prices are rising at a greater rate than Germany is able to increase German export prices. The discrepancy between the stabilised exchange rates, once favourable for Germany, and export prices is growing. German prices and those of Italy, Hungary, Bulgaria, Slovakia and Denmark, however, show some stability in their relationship on the basis of special agreements; these countries have either the necessary organisation for the control of prices, or else Germany's share in their economy is so great that stability can be secured for the time being. In these agreements, Germany and the five countries undertake not to increase their export prices.

German circles realise, however, that they cannot stop the general trend in the occupied countries. Various measures are therefore under consideration. The most interesting one is a policy of skimming-off excess export prices, and using the funds accumulated from this policy to reduce import prices; another suggestion is that the State should pay the difference, or that it should be paid by a levy on industry. In France, a special export tax amounting to 9 per cent of export prices has been levied for some time. Germany, however, forced the French Government to reduce this tax from 9 per cent to 3 per cent on all manufactures exported to Germany. Price movements in the occupied countries influence the situation in Germany. Manufacturers frequently demand prices above the fixed maximum because the articles have been manufactured under subcontracts in occupied countries at prices ruling in these countries which usually exceed German levels. The effects of widespread black market activities in occupied countries, moreover, makes most price agreements with Germany illusory. The dilemma is obvious. Germany is unable to supply the material means for the stabilisation of the economies of the occupied countries. Price agreements and a policy of compensation cannot change this fact.

THE BUSINESS WORLD

Fire Prevention

IN times of peace, when labour and materials are in plentiful supply, the toll of property and materials taken by fire is generally regarded from a financial point of view; fire losses are considered to be a matter between the insurance companies and the insured. In war, however, when labour and materials are scarce, fire losses assume a new significance and become a matter of national interest. The emphasis is shifted from the financial to the physical aspect, for every ton of raw materials and every machine and factory destroyed by fire represents a net reduction, however small, in productive capacity. The chief merit of the paper on fire prevention read by Mr A. S. Hinshelwood, Chairman of the Fire Offices Committee, to the Insurance Institute of London on Monday last week was its insistence on this aspect of fire losses and on the need for a concerted drive to reduce the toll taken by them of national resources.

A vast organisation has been built up to minimise the damage done by air raids. But, as Mr Hinshelwood rightly pointed out, a determined effort must also be made to reduce the wastage caused by ordinary fire losses. Unfortunately, the fire insurance offices do not assemble and publish statistics relating to ordinary fire losses. The only data available are those published by the *Times*, which are somewhat conjectural. According to the *Times*, fire losses averaged £9,316,000 a year during the eight years from 1932 to 1939. They rose to an annual average of £11,447,000 in 1940 and 1941, and during the first eight months of the current year losses, at £9,379,000, exceeded the annual average for 1932-39. It may be argued, not without justification, that the increase in losses is due to rising values and does not represent a corresponding wastage of physical resources. It may also be contended that, in view of the blackout, the rising tempo of industrial activity and other factors, the figures are not unduly high, and that, in any case, they represent only a minute proportion of Britain's total physical assets in materials, plant and buildings. But, even if allowance is made for all these factors, there is no room for complacency.

In Mr Hinshelwood's view, the figures are "a national reproach." The destruction of, say, 1,000 tons of rubber in a warehouse may be a small matter financially, but physically it represents a serious loss which cannot be made good at the present time. The argument of the insurance offices is that a large proportion—some place it at no less than 50 per cent—of fires

originate in some simple, stupid act of forgetfulness or carelessness—a burning cigarette end or lighted match tossed negligently away, inflammable materials thrown unnoticed against electric stoves, electric irons left on and forgotten.

It is contended, moreover, that fires have occurred in factories for which fire-watchers "are known or are believed to have been unwittingly responsible." An investigation recently carried out by nine members of the Fire Offices Committee into the causes of fires believed to be connected with the presence of fire-watchers on the premises showed that there were 80 fires in 1941 and the first half of 1942, of which there was evidence to support that belief—though it is admitted that, since the cause of fire is often consumed in the fire itself, such evidence can rarely be conclusive. And, on the credit side, account must be taken of the fires which have been detected and tackled at an early stage by fire-watchers. On the whole, however, the insurance offices' case "that a large proportion of fires are caused by negligence or carelessness seems conclusive; and in view of their belief that, in the absence of further corrective measures, losses will tend to grow, their emphasis on the need for more positive measures of prevention is justified.

As Mr Hinshelwood pointed out in his address, there are three parties concerned with the problem of fire prevention—the public, the Government and the insurance offices. During the many years of their existence the insurance

offices of Britain have contributed much towards the prevention of fires. In particular, the tariff system of differential rating, built up and perfected during the past 150 years, has led to an appreciable reduction in fire hazard. As long as a hundred years ago, tariffs contained provisions for penalties in rating for dangerous features, such as imperfect party walls, timber stairs and partitions, dangerous lighting and heating, floor openings, unprotected skylights, and so on. Differential rates of premium were even then charged for what were known as fireproof and non-fireproof buildings, and lists of hazardous goods and trades were in existence. The principle of differential rates has since been extended and developed. As a result of their long experience in fire prevention, the fire offices have built up an efficient organisation, and have evolved standards for many technical devices, such as automatic sprinklers and iron doors, invaluable in wartime.

The increase in fire hazards, due to the war, and the passing under Government control of thousands of factories and the greater part of the food and raw material supplies, made it necessary for the Government to collaborate closely with the insurance offices. Early in the war, under the threat of incendiary air attack, Government departments established their own organisations as a means to minimise losses caused by fires. When, with the extension of Government control over material resources, the work of these organisations and of the insurance offices began to overlap, the latter decided to make their knowledge and machinery, which had always been at the disposal of the Government, more readily accessible. In areas corresponding roughly to those of the Regional Commissioners, with special areas for Merseyside and Clydeside, the industry set up technical committees to advise Government departments on fire prevention matters, and to carry out surveys for them. Collaboration grew steadily, and many problems, especially of storage, have been successfully solved by these technical committees. Nevertheless, there are reasons for believing that the Government is not yet making the fullest possible use of the technical organisation and experience of the insurance industry. Mr. Hinshelwood's suggestion that, in the absence of a single controlling authority, serious consideration might be given to the establishment in each department of a responsible officer, charged with the duty of ensuring the provision of efficient fire prevention arrangements in all premises coming within its control, and that still greater use might be made of the experience and organisation of the insurance industry, are undoubtedly sound. It is worth emphasising that the taking of proper precautions against ordinary fire strengthens the power of resistance to incendiary air attack.

But neither the insurance industry, with its differential tariffs and organisation, nor the Government can solve the problem of fire losses due to negligence and carelessness, which, on the evidence of the fire offices, constitute a large proportion of the total toll taken by fires. The fire offices have rightly taken the view that this problem can only be mitigated by making the public conscious of its seriousness at the present time when every ton of food and materials, and every machine counts in the war effort. To this end they have in preparation a nation-wide publicity campaign which has been welcomed by the Government departments concerned—foreshadowing, for the first time in the history of insurance, the launching of a collective publicity campaign.

In sum, the waste of resources through avoidable fires is a running sore which cannot be tolerated any longer. The insurance offices have recognised that, while much can be accomplished by technical improvements and close collaboration with the Government, the assistance of the public must be enlisted to reduce the toll taken by sheer negligence. The only criticism is that the campaign was not launched long ago; but this is a criticism of the Government as much as of the insurance industry, which has now taken the initiative.

Finance and Banking

Making-Up Influences

The money market has, this week, felt the effects of the October making-up, and credit has been in somewhat shorter supply. This, however, is not to say that conditions have even approached stringency. On each day there has been an outlet for bills with one or other of the clearing banks, and though the market has had to take up a substantial amount of bills—at the last tender for Treasury bills it obtained 35 per cent of its larger applications—there has been no need to seek official assistance. It is interesting to note that the clearing banks are endeavouring to place more reliance than before on their bill maturities for window-dressing the positions on their respective making-up days. This can be seen from the increased keenness with which the banks ask for bills maturing on the day in question. The September window-dressing appears to have been up to recent standards. The cash ratio shown in the aggregate clearing bank statements was 10.3 per cent, while the true figure, calculated from the weekly bankers' deposit totals at the Bank of England and the clearing banks' till money, seems to have been about 8.3 per cent. The disparity between the two percentages would thus have amounted to 20.2 per cent, against 21 per cent for August and 18.1 per cent for July. This week's Bank return shows some exceptionally interesting movements. In the first place, the circulation continues its steady, upward course and, helped on this occasion by the usual end-of-the-month influences, has risen by £4,145,000 to the new high record of £847,030,000. Despite this movement and the heavy payments on Treasury bills and TDR's, bankers' deposits have risen by £2,368,000, and at £141,100,000 are at a level attuned to the current window-dressing period. One of the factors helping to explain the resistance of bankers' deposits is the further running down of public deposits by £3,493,000, a movement which has reduced their total to £3,756,000, the lowest figure on record for at least this century. The other active influence in the bank cash position has been a reduction of £3,012,000 in other accounts. Changes in securities cancel out, a rise of £6,892,000 in other securities being counter-balanced by a fall of £6,899,000 in Government securities.

A Treasury Bill Landmark

When the £85 millions of Treasury bills, issued by tender this week, have been taken up, the outstanding amount of Treasury bills issued through the weekly tender will have reached £1,000 millions. This landmark in the history of the Treasury bill issue gains emphasis from the fact that on the outbreak of the war the corresponding figure stood at £500 millions, and the total of such bills will have exactly doubled over the intervening three years and two months. At the same time, the total Treasury bill issue has risen from £1,118 millions to £2,693 millions (this latest available figure being that for September 30th, and it follows that the Treasury bills issued through the tap have, since the beginning of the war, almost trebled. The larger relative and absolute increase in the bills issued through the tap is not surprising. In the first place, it is from this source that the requirements of public departments are fed. Among these, one of the most important is the issue department of the Bank of England, and the increase of £300 millions in the fiduciary issue probably finds its main counterpart in an increased issue of tap Treasury bills. In addition to satisfying the requirements of public departments, the tap is also the source from which certain, but not all, of the Empire central banks are fed with Treasury bills. The weekly issues of Treasury bills by tender include some semi-official applications, including those from the banking department of the Bank of England. It should be noted that whereas the total of these bills will have doubled between September, 1939, and the end of next week, the clearing banks' holdings of bills actually showed a small drop of £2,500,000 between August, 1939, and September, 1942. Even allowing for a considerable diversion from commercial to Treasury bills in the banks' portfolios, it is evident that only a small part of the increase in the tender issue of bills has gone to the banking system, and that the bulk of it must be represented by applications of a more or less official character.

The Banks' Ten Thousand

The really important recommendations of the Kennet Committee on the release of manpower from banking are to be found in section 20 of the report of the first of the sub-committees. This section suggests that the clearing and Scottish banks (which between them account for about three-quarters of the manpower under review) should immediately be required to operate with 90 per cent of their pre-war staffs and that this reduction should be carried to 85 per cent by next March. These institutions employed 75,287 people at the outbreak of the war, and that figure has since been reduced to 73,976, with, of course, much greater changes in the sex and age distribution of the staffs. To cut the overall numbers to 90 per cent of the pre-war total will mean liberating some 6,000 people, and by next March, when the banks will be working with 85 per cent of the pre-war total, that release will have grown to about 10,000. As these banks have, since the outbreak of the war, achieved a net economy of staff amounting to 1,300 only (and that over a period which has witnessed an average 15 per cent closing of branches) it will be seen that the task facing the banks in complying with the recommendations of the Kennet Committee is not small. That it can be accomplished is implied in the fact that this, most momentous of all the Kennet recommendations, was made on the initiative of the banks themselves. The committee makes many suggestions designed to achieve this economy of staff—some of them of uncertain value, as, for example, the elimination of checks and counter-checks, which might well lead to the loss of more man-hours chasing errors than those now devoted in maintaining the high standard of accuracy.

Branch Telescoping

For banking, the basic recommendation of the Kennet Committee, however, is that "concerning the closing of branches. If this is to achieve anything like the required economy of staff, it must proceed on more co-operative lines than those which have marked progress hitherto. That may mean inter-bank telescoping, a subject so charged with difficulties that the committee have shirked even mentioning it. It is on the possibilities of further closing of branches that the recommendations of the committee stand or fall. The other suggestions made in the course of the report amount to very little. Centralised bookkeeping may economise some staff and keep machines fully employed in large centres, where the work of several branches might be handled on the machines of one office, even if night shifts have to be worked. But this reorganisation of book-keeping systems would take time to get into its stride and the consequent economies of manpower would be modest. The reduction of services rendered to the public, including shortened banking hours, may also release a small proportion of personnel. That might well be true of the suggestion that large firms be encouraged to pay smaller salaries in cash rather than by cheque. Such a course would admittedly save some of the clearing work, but it would increase the work involved in receiving and transporting currency. It might even cause an increase in the demand for currency sufficient to require additional minting of copper and silver coins, with a resulting waste of labour and materials. The problem of labour in the banking industry must not be viewed *in vacuo*, and, in some respects, the Kennet Committee have, perhaps, fallen into this error.

**FOR ALL
INSURANCE
NEEDS**

Head Offices:
LIVERPOOL LONDON
North John St. Lombard St.

As for the rest of the banking system, little is expected in the way of further manpower release. The Bank of England has increased its staff from 3,529 at the outbreak of the war to 4,194, but its work has been so swollen by the Defence Regulations (the Exchange Control alone employs 1,164 people) that the growth in numbers is hardly surprising. The trustee savings banks will release some 70 men of military age now deferred. The discount houses have reduced their staffs from 317 to 177. The accepting houses' staffs are down from 2,940 to 1,499. The scope for manpower economy in these specialised fields is thus restricted in the extreme. In all these directions, the best means of achieving the required further concentration is for the deferment of men of military age to be reviewed with greater regularity and severity than have hitherto been exercised.

Banks and Trade Terms

An interesting decision given by the Court of Appeal last week defines, with a precision which will be welcomed in all banking circles, the degree to which paying banks should be conversant with the terms of trade in various commodities, when honouring drafts drawn in conformity with letters of credit opened by them. The case arose out of a sale of Indian ground nuts by J. H. Rayner and Co., acting for undisclosed principals, to buyers in Denmark. The payment was to be made by a credit issued by Hambros Bank on the instruction of a Danish bank. Denmark was

invaded by Germany before the goods could be delivered. These goods were seized by the British Government and sold—at a loss—in South Africa. When the bill of lading was presented to Hambros Bank in London, it was found that it did not correspond with the wording of the letter of credit. The latter authorised payments of drafts against the shipment of "Coromandel ground-nuts in bags." The bill of lading, for its part, referred to "machine shelled ground-nut kernels." In view of this discrepancy, Hambros Bank, unable as they were to get in touch with their customer in Denmark, refused to honour the draft, though they had ample funds for the purpose. On the first hearing in a lower Court, judgment had been given for the plaintiffs by Mr Justice Atkinson on the ground that the two descriptions of the goods in question would be regarded as identical by the trade and that, in refusing to pay, the bank had broken its obligation under the credit. This decision was reversed in the Court of Appeal last week. It was contended by Lord Justice MacKinnon that "it was quite impossible to hold that banks must be affected with knowledge of the customs of the various trades in which their customers might be concerned," and that the bank was entitled to refuse payment on the ground that the documents did not precisely comply with the conditions on which the credit was granted. The case is of special character, since in normal times any slight hitch of this kind would be cleared up in a matter of hours by cable or telephone. But the clear definition of the banker's duty in such matters is of more fundamental importance than is implied by the unusual circumstances that led to this particular case.

Investment

Equity Yields

The index of *The Financial News*, reproduced on the accompanying chart, shows a further rise of some 3.7 per cent for equities over the past four weeks, and one of rather under 0.5 per cent in fixed interest securities. The former figure understates the position in that it takes no

Reform of Accounts

Of a number of letters received in connection with the article, Accountants and Accounts, in *The Economist* of September 26th, two appear on pages 539 and 540. Any statement of Mr de Paula must be given great weight, both on account of his wide experience, and because he is one of the most energetic and successful pioneers of informative accounts. There is no doubt that the legal position is as stated. Extra-legal action is, however, the only means of securing a rapid change, such as seems to be called for. We would repeat our suggestion of joint action among auditors. It is still possible that an approach to the problem by the profession as a whole would have results which the attempts of individual auditors, to overcome the conservatism of the average board, have failed to produce.

The authors of the second letter are also well-known protagonists of reform. The profit and loss account which they submit contains almost everything which would appear necessary in the case of the ordinary company. Total expenses—item 1—presumably give the true factory cost of the product, which it is desirable should be known. It will be noted that the authors balk at stating total remuneration of directors. A good deal has been made of this at various times, but a more useful figure would be a special item for all service contracts as part of administrative charges. Alternatively, it might be made obligatory to provide a statement, in general terms, of any special charges against profits for such purposes. Under the heading selling expenses, it would in some cases almost certainly be desirable to give the cost of advertising as a separate item, unless it proved the case that the object of this particular disclosure could be secured more easily in other ways. Subject to these comments, and the supposition that additions to, and drafts on, reserves are sufficiently informative, the statement gives all that can be expected from a profit and loss account. Its general adoption would be a tremendous step forward. As to balance-sheets, the improvement over the past twenty years has been great in many, but most still fall short of what is desirable. It is, however, evident that our correspondents' desire for reform, if it starts with the worst feature of accounts as now published, does not stop there.

Kennet Report Effects

Comment on the banking and insurance aspects of the Kennet Committee's report appears on pages 547 and 538. So far as the Stock Exchange is directly concerned, it has gained the official recognition of its utility. On the question of manpower, the report gives it one paragraph which, in substance, says that, in the general release of staff, individuals, firms and the institution itself have done all that could be expected, and that no further special measures are necessary. Similarly, the process of amalgamation can be left to the force of competition operating in the context of wartime charges and duties. There are, however, two matters which concern the market indirectly:

the project for closing the banks at 2.30 instead of 3 p.m., and the injunction to these bodies not to go out after, *inter alia*, investment business. It is not easy to say what effect the latter will have on the actual volume of stock exchange business passing through their hands. Brokers have always maintained that, on a large amount of business coming to them from this source, the expense incurred was not covered by the net commission received. If there is any appreciable change in practice, they will have the opportunity to test the truth of this belief. The recommendation that the banks should close half an hour earlier, if implemented, will presumably make no difference to the normal working day of the market. It has already emancipated itself from the habit of making its hours of opening conform to those of banks. It will, however, affect, as has been the case before, the ability to accept and deliver stock. Presumably, the hour up to which stock must be accepted will be made earlier, either by the whole thirty minutes or, possibly, by half as much, and this will mean, unless posts can be expedited—a long-standing grievance, about which it seems nothing can be done—that more stock will be held over until next day. This will mean a further slight delay in the average length of time taken to settle bargains, but it is a drawback which the investor must be prepared to accept, since it appears that earlier closing to the public will help to economise banking staffs. One thing the trustees and managers might do—namely, institute a system of "aircraft overhead" warnings as the criterion for closing the House, instead of emptying it on every alert—an astonishing relic of 1939-40.

Cunard Payments

The announcement that Cunard Steam Ship is to pay off eleven years' arrears of second preference dividend ought not to have caused any surprise. Sir Percy Bates announced his hope to effect this repayment at the annual meeting in April, and it was evident that, unless the profits of 1942 were much below those of 1941, the payment ought to have been possible. Unfortunately, in the absence of accounts

The War factories need GAS —SAVE IT

Out of buried forests of the past comes the wealth of British coal; and like a giant tree, from this coal the British Gas Industry has grown up.

The making of gas enriches the nation not only with gas, but with coke and with a wealth of by-products of inestimable service. In addition to benzole, no less than half a ton of coke is made from every ton of coal used in the gas-works. From the tar produced, more than 2,000 substances are obtained—explosives, motor spirit, drugs, dyes, disinfectants and plastics, to mention only a few. Ammonia is another by-product of gas, and provides fertilisers, explosives, and cleaning preparations; sulphuric acid comes from the sulphur extracted in gas-making.

The gas economies you make at home will release more gas for the war factories. Remember that gas, as well as its by-products, is vital in the Battle for Fuel—so play your part and SAVE GAS.

BRITISH COMMERCIAL GAS ASSOCIATION,
LONDON, S.W.1 (1)

October 31, 1942

for the operating companies, it is impossible to know what past earnings really were, let alone what the near future will be, while Sir Percy's statements suggested that he was very uncertain about post-war prospects. For all these reasons, it is rather surprising that the 6 per cent second preference shares should have risen from 138 to 151 on the news, while the first preference rose three points to 101½ and the £1 ordinary some 2s. to 21s. 9d. The explanation advanced for the high level of the second preference is that they are held by those who pay income tax on profits, not dividends, so that the arrears payment is worth more to them than the figure of 33 points net. This is supported by the fact that the ex dividend price is 106, giving a yield of £5 13s. 1d. per cent. This yield appears to presuppose a continuance of profits well above recent pre-war years for a considerable period, while the price of the ordinary, now 21s., points to the same attitude. Even if, at the moment the war ends, shipping is still in short supply, productive capacity will be tremendous, and it is probable that a supply will arise which will be surplus to normal post-war requirements. Much of this will be unsuitable, and the general process of readjustment to post-war conditions is likely to be as difficult for shipping as for any industry.

* * *

Celanese Development

The meeting of Celanese second preference holders rejected the revised scheme on a show of hands and, a poll being demanded, the meeting was adjourned to November 6th. The board had made a minor concession by raising the rate payable on the funding certificates from 4 to 5 per cent. This is, however, considered insufficient by the Shareholders Committee, and there is no reason to suppose that the Association of Investment Trusts is any more impressed by it. While the concession raises the value of the certificates, it fails completely to meet even the first requisite of such a scheme, namely, that provision should be made for rapid redemption of the certificates, placed clearly ahead of payments to the equity holders. It was, therefore, to be expected that independent holders of the second preference capital would reject the scheme. It is to be hoped that the committee will continue to urge the need for conservative policy, which is rendered the more necessary by the past history of the undertaking. Apparently the company has no intention of disclosing its EPT standard, pleading reasons of security; it thus remains impossible to form a reasoned judgment as to the best form which the offer to the preference shareholders should take.

Company Notes

Murex Accounts

The Murex accounts for the year to June 30th last show a moderate rise in total profits after depreciation from £587,013 to £629,368. The chairman, Mr George P. Joseph, points out that ARP and war damage insurance have also been charged directly to trading profits. The improvement is more than outweighed by a rise in tax liability from £370,000 to £421,500, while the directors have decided to allocate £25,000 to obsolescence reserve, which has received no contribution since £50,000 in 1938-39. There is a consequent fall in the available surplus, and the 20 per cent total payment on ordinary capital is covered by a rate of some 35.0 against 41.9 per cent. This calculation assumes that the amounts reserved against advances to a subsidiary will not be required. It is still possible to transfer £50,000 against £75,000 to general reserve, and to increase the carry forward from £107,145 to £115,339.

Mr Joseph defends the company's conservative distribution policy on the grounds that considerable funds will—as is undoubtedly the case—be necessary for reconstruction in the post-war period. He draws attention to the satisfactory development of the important subsidiary, Murex Welding Processes, and in particular to the potentialities of electrical welding. The consolidated statement shows a rise in net liquid assets from £498,497 to £538,755, for which a jump in stocks from £598,767 to £920,621 is largely responsible. There is a decline in the total of consolidated cash holdings and trustee securities of some £70,000. The company's balance sheet shows net loans to subsidiaries of £201,551

against £135,270. Consolidated depreciation allocations, according to the chairman, amount to £66,337 against capital expenditure of £166,402, while total reserves and

Thomas W. Ward

Despite a fall of some £11,000 in total profits, after tax, for the year to June 30th last, the equity surplus earned by Thomas W. Ward has been substantially maintained. Depreciation absorbs some £2,600 less at £49,008, other charges being relatively unchanged. Equity earnings, at £88,717 against £95,893, represent a fall in the rate of only 0.3 points to 16.1 per cent, so that it is clear that higher tax liability is mainly responsible for the apparent setback. The 11½ per cent dividend paid for the past three years is amply covered, the transfer of £25,000 to reserve—bringing the total of the fund to £175,000—is repeated, and the carry forward raised from £126,048 to £127,890.

	Years to June 30.

* After works expenses and taxation.

The relative stability of the net surplus is clearly due to an expansion in turnover. It is in any case clear that a concern engaged in general engineering and quarrying is likely to have handled more business last year, and the Thomas W. Ward balance sheet, with a rise in debtors from £1,162,222 to £1,364,595 and a decline in cash holdings from £165,116 to £151,204, confirms this impression. Stocks are some £78,000 higher at £618,543 and, since there is a contraction in creditors from £1,158,616 to £1,442,920, net liquid assets show a modest increase. In all the circumstances, the results are satisfactory, and there is little fear that the current rate of dividend will fail to be earned in the near future. The £1 ordinary shares at 33s. 9d. ex dividend yield £6 13s. 4d. per cent.

Harrisons and Crosfield

The rise in net profits of Harrisons and Crosfield of some £63,500 to £413,656—an all-time record—in the year

October 31, 1942

to June 30th last is the more remarkable in that it is earned after complete provision for taxation in all countries where the concern has interests. The directors state that £107,583 loss on sale of investments has been written off direct from tax reserve no longer required. The allocation of profits over the past three years is analysed in the table below. The directors are wisely transferring £250,000 to war contingencies and drawing the £26,250 required for the payment of 5 per cent dividends on management and deferred shares, against 25 per cent on the latter in the two previous years, from dividend equalisation account, which received £50,000 in 1938-39. On the assumption that the transfer to war contingencies will in fact be required, equity earnings amount to 4.9 against 27.0 per cent. The striking improvement in earnings in a year, more than half of which saw the onset of Japanese aggression, is due, as Mr H. Eric Miller pointed out, to the spread of the group's interests—which is much greater than generally supposed—and to the boom in tea prices prior to the Government purchase scheme. Mr Miller's defence of the ethics of commodity control and of the civil administration of Malaya provides the basis of his plea for the future status of the natural

* £107,583 loss on sale of investments written off from tax reserve no longer required.

rubber producer in the post-war world. Whatever the set-up then to be determined by the United Nations, Harrisons and Crosfield certainly faces the future with exceptionally good prospects, both on account of the size of its liquid resources and of the growing geographical spread of its interests. After taking account of provision for final dividends, the balance sheet shows a rise in net liquid assets—excluding those definitely stated to be in enemy-occupied territories—of £681,373 to £1,430,744, produced mainly by a rise of about £1,000,000 in cash and gilt-edged and falls of some £554,000 in stocks and £330,000 in liabilities. Inter-company items have moved £274,806 against the parent, while the valuation of subsidiary companies and commercial investments is down by £707,010, owing to writing off and sales. From this calculation, there is excluded £186,764 subsidiaries in enemy possession, which with £61,113 net liquid assets similarly placed, is just covered by the reserve appropriation. Finally, fixed assets are lower by £62,828. Total reserves are down by £126,250 and the carry forward increased by £10,856. The £1 deferred ordinary shares, at 47s. 6d. yield £2 2s. 6d. per cent.

Fairbairn Lawson Accounts

The full accounts of Fairbairn Lawson Combe Barbour, the Leeds and Belfast engineering concern, show that the resumption of ordinary dividends is amply justified by results for the year to March 31st last. Total profits rose from £163,660, after allocation of £20,000 for tax reserve, to £191,247 before tax. Despite an increase in depreciation from £17,949 to £30,101, the balance on profit and loss account, before all taxation in the latest year, is up from £111,436 to £133,115. The eventual agreement of EPT liability with the Inland Revenue authorities has resulted in the provision in the latest accounts of £225,868 for tax and contingencies in respect of the past three years. All that can be said is that £44,326 has been earned, over three years, for preferred and ordinary shares. The sum available on the year, after meeting all charges, and bringing in the carry forward, amounts to £115,173, from which the directors are paying 10 per cent on the preference capital as before, 1s per 1s share on the preferred ordinary capital—the first dividend ever paid—and 10 per cent on the ordinary capital—the first payment since 5 per cent in 1923. There remains a carry forward of £96,315, against £207,926, subject to EPT. Since total earnings last year reached the highest level of the past decade, and demand, especially for the general engineering side of the company's business, is likely to continue to expand, it is probable that the ordinary shareholders may see a further payment for the current year. The balance-sheet suggests that turnover has considerably increased. Debtors and the total of stocks and work in progress show satisfactory rises, while trade creditors, including taxation, are up from £154,777 to £430,913. The cash position is also less strained with a reduction in bank overdraft from £235,981 to £89,612, and an increase in cash holdings from the low level of £987 to £2,458. The chairman, Mr. J. K. Anderson, points out that the heavy liability for EPT makes it impossible for the present to eliminate the company's debt to its bankers. The 1s ordinary shares, at 2s 6d ex dividend, yield £4 per cent, a level which implies considerable confidence in the future.

* * *

Horden Collieries Dividend

The announcement that Horden Collieries are to distribute a final dividend of 5 per cent for the year to September 30th last, bringing the total payment on ordinary capital to 7½ per cent as in the two previous years, points to a remarkable stability of earnings. The preliminary statement shows net profits of £173,522, against £171,468 and £173,639 in 1939-40. On the assumption that debenture interest and sinking fund together require some £59,500, the rate of equity earnings would appear to have risen from 7.5 to 7.7 per cent, the same as in 1939-40. Last year, the chairman indicated that, for at least half the year, demand had outstripped the company's capacity to supply it, and it must be assumed that this position has continued throughout the latest financial period. Since prices of output are controlled by the Government, the slight rise in the net figure is no doubt due mainly to strict control of costs, which are known to have shown an upward tendency during the year in question. In all the circumstances, the preliminary results suggest successful management and the balance sheet will be awaited with interest. The £1 ordinary stock, at 24s. 6d., yields £6 5s. per cent.

* * *

Petrol Allowances

Last week, Mr Geoffrey Lloyd announced further reductions in the civilian petrol allowances, to take effect from

Industry and Trade

Census of Cars

The Ministry of Supply has decided to take a census of laid-up motor vehicles, including tyres, to be completed by November 18th. In view of the virtual cessation of private car manufacture and of the shortage of rubber, laid-up motor cars and their tyres are a valuable reserve that can be drawn upon in case of need. The size of this reserve is substantial; the number of private cars not currently in use is believed to be between 500,000 and 750,000 units. The taking of the census does not mean that large numbers of cars will be requisitioned in the near future, but it will provide the Government with the information that will enable it to meet its needs as they occur. So far as tyres are concerned, Sir Kenneth Lee, Director-General of Controls, pointed out that it would be necessary to draw upon them in order to bridge the gap until supplies of synthetic rubber

become available; his statement suggests that no synthetic rubber has yet reached this country from the United States. Serviceable tyres on laid-up vehicles can be fitted to cars engaged on essential work; other tyres can be retreaded and put into service again; those beyond repair can be used in the production of reclaimed rubber. Compensation for requisitioned vehicles and tyres will be paid after careful valuation; in case of disagreement owners will have the opportunity of appealing under the Compensation (Defence) Act.

December. In the case of motorists whose work is directly related to the war, there will be a general reduction of 10 per cent in the case of normal allowances, and more on the larger, for journeys made in the course of their work. War-working motorists who receive an allowance for journeys between home and place of duty can no longer expect to use their own car every day and must enter into sharing arrangements. The maximum allowances of persons not directly engaged in war work—doctors presumably—will be reduced by 25 per cent. Comparable reductions will be imposed on the consumption of Government Departments and Local Authorities. There will be special arrangements to discourage further the use of high-powered cars. The use of town gas as fuel for road vehicles will be restricted. On the other hand, it is not intended to make any immediate general reduction in domestic allowances, though the tightening up of the means test will be continued. The fact is that after the basic ration was, very reluctantly, abolished, the means test was applied far too liberally. There is hardly a person in the country who does not see or hear of flagrantly unnecessary motoring: cars with CD or "Doctor" on them drawn up at Hurlingham or in the country at week-ends; fleets of official cars at public functions in London; petrol allowances for visiting fox-hounds; uniformed officers on war savings business driving leisurely about the Home Counties, when a perfectly adequate train service is available; and so on. Moreover, even when a petrol ration has been granted for some necessary, semi-necessary and hardly necessary purpose, there is no check on whether the petrol is actually used for that purpose. What is to prevent a person who has a separate ration for Red Cross work, Women's Institute work, County Council work, shopping and church-going from curtailing these "duties" to a token minimum, and then using the bulk of the rations granted for pleasure motoring? Any flat-rate reductions that are made in allowances will, of course, be a corresponding increase in petrol saved. But petrol will continue to be wasted unless adequate measures are taken to check the purposes for which it is actually used. If only a few drivers on pleasure bent are stopped, prosecuted and heavily fined, and sufficient publicity is given, the example would probably serve as an effective deterrent.

Differential Food Rationing

Distribution of food in this country has been, in the main, on the basis of equal shares to individuals, without regard to need. This is not to say that there has been no differential rationing. Children get less of some foods and more of others. For pregnancy and certain illnesses, more or alternative rations can be obtained. The most important foodstuff distributed on a differential basis is milk. Foodstuffs can be distributed equally without great hardship to some sections of the community, when supplies are abundant. The Minister of Food has, however, given warning that the food situation is likely to deteriorate. This prospect throws into relief the desirability of a rationing system designed to take into account differing needs of various classes of consumers. The theory has been that canteens and restaurants would provide extra food for those who need it, and the principle of differential rationing has been applied to catering establishments. Some workers have been given extra cheese rations, but only those for whom it is difficult to provide canteens. The provision of canteens for workers is still far from adequate. Rather fewer than two meals (of all sizes) a head of the total population are taken each week in all catering establishments. The Trades Union Congress has upheld the Ministry of Food in its rationing policy, in spite of the desire of some trade unions for differential rationing. The introduction of such a system will naturally involve sacrifices on the part of those who have no special claims. This is shown by the milk distribu-

tion scheme. Nevertheless, the exigencies of the food situation now demand the extension of differential rationing. Provided it is accompanied by the surrender of coupons for meals in catering establishments, differential rationing can be worked. An efficient system is not impossible, as is shown by the experience of other countries, and in particular of Germany. Bread is a chief item of German differential rationing, and if bread were rationed in this country it would be necessary to distribute it on this principle.

German Practice

Germany's system of food rationing has been based on differentiation from the beginning of the war. Meals and food provided by restaurants and canteens were also at once included on the ration. During the course of the war rationing has been extended to almost all foodstuffs. No German is able to buy foodstuffs without his ration card or without being registered with a retailer for vegetables. Differentiation covers the main foodstuffs—bread, meat, fats and milk. The rations for sugar, eggs, jam and potatoes are uniform. Fruit and so-called "Nachmittel" (pearl barley, semolina, rice and so on) are supplied according to priority rights given to children on the basis of uniformly fixed rations. Differentiation has been carried very far, as the accompanying table shows. The rations for the different categories are expressed as a percentage of the rations for normal consumers, who are estimated to represent 40 per cent of the population. A normal consumer receives 79.4 ounces of bread, 12.3 ounces of meat and 7.3 ounces of fat

	FOOD RATIONS (Rations of normal consumer - 100)		
	Bread	Meat	Fats
Children —			
0 to 3 years	49		66
3 " 6 "	53	57.1	91.3
6 " 10 "	75.5		*129.2
Youths: 10 to 20 years	115.5	114	†143
Normal consumers	100	100	100
Night workers and workers on very long shifts	126.5	157	110
Heavy workers	162	200	148.6
Heaviest workers	207	271	279

Note.—Children up to 6 years receive the same meat ration, and children and youths from the ages of 6 to 18 years also receive a uniform meat ration. For bread, the age of the normal consumer is put at over 20 years, and for meat and fats at over 18 years.

* For children from 6 to 14 years.
† For youths from 14 to 18 years.

per week. Children up to three years are supplied with 1½ pint of milk per day, children from three to six years receive nine-tenths of a pint, from six to fourteen years half pint. Expectant and nursing mothers are entitled to nine-tenths of a pint, and a small number of workers employed in sections of the chemical industries are also given nine-tenths of a pint. Normal consumers can only buy skimmed milk. The rations are fixed locally and are frequently changed. Children's ration cards, as well as the cards for all other persons, containing the rations for normal consumers, are issued by the local food departments. The additional coupons for workers are issued by factory managements. Armament workers are also supplied at the factory with vitamin tablets. Children receive some vitamin tablets at school. During the first two and a half years of the war the differential rations were fully supplied. Since last winter, however, the distribution of supplementary rations appears to have become irregular.

Wool Marketing

The report of a special committee appointed by the Australian Woolgrowers' Council to study the postwar marketing of wool has been adopted by the Council. The committee's recommendations differ markedly from the terms of the new tin agreement (discussed in *The Economist* on October 10th). While emphasising the need for a "stable" and "reasonable" price to the woolgrower over a term of years, not only in Australia, but also in other countries, the committee expressed the view that

the price envisaged should be one that would not cause accumulations of wool to arise which would be overhanging surpluses on the world's wool markets, and also that it should be a price that would maintain the relationship of wool against competition with other fibres.

In other words, the recommendations envisage not only a stable price, but a price which will equate supply to demand.

There is no mention, at any rate, in the summarised version of the report, of production quotas. True, the conditions of wool growing differ from those of tin production. In order to achieve these aims, and to implement the Atlantic Charter, the committee recommends that the purchasing and distribution of wool surpluses should be undertaken by an international authority at the earliest practicable date, and that, pending the formation of such an authority, the British Government should be asked to continue to present bulk purchase agreements. In contrast, the new tin scheme, like the previous schemes, suggests that tin mining is to remain a monopoly of the governments of producing countries. When asked in the House of Commons on October 20th whether he was satisfied that the new tin agreement is within the letter and spirit of the Atlantic Charter, the Under-Secretary of State for Foreign Affairs, on behalf of Mr Eden, said "No." Yet, Mr Eden is one of the signatories of the agreement. Does Mr Law's reply mean that the Foreign Secretary has thought better? The creation of an international authority for the purchase and distribution not only of wool, but also of other staple commodities, may well point the way towards a rational solution of the raw material problem after the war. Mr William Batt, the American member of the Combined Raw Materials Board, said on Wednesday that his Board was the kind of machinery that might be carried on after the war to the benefit of the whole world.

Railway Transport

The maintenance of a high level of new production, and, in particular, of a regular supply of coal, during the winter months will depend in no small measure on railway transport. The task of the railways will be a heavy one, for the volume of traffic is likely to be appreciably bigger than a year ago; it has been estimated, for example, that at least 2,000 more goods trains a week will be needed to provide for the increase in military and war production traffic. Much has been done to improve the capacity of the railways, by the increase in facilities and better organisation. For example, new marshalling yards have been built and others extended; goods loop lines and sidings have been installed; running lines have been doubled and quadrupled. No fewer than 100,000 women are now employed by the railways. On the organisation side, improvements have been effected by the strengthening of central control, by the elimination of unnecessary hauls and a reduction in passenger transport facilities. Despite this record of achievement, however, a good deal more can and must be done if the railways are to pass the test of the coming winter.

Clothing Coupon Banking

The system of banking accounts for clothing coupons was inaugurated last June, and can be said to have worked smoothly and successfully. Traders have been saved trouble and labour, and frauds and black market dealings have been made more difficult. Certain relatively minor modifications to the scheme are to be introduced by an amending Order shortly to be issued. The maximum number of loose coupons which may be used in a single transaction will be reduced, from 75 to 50. It had originally been decided to make the maximum 50, but the number was raised shortly before the scheme came into operation. The new Order will permit the use of loose coupons (up to the maximum of 50) in part settlement of any one transaction. This will make for speedier settlement in dealings. It will be useful, for example, where traders have deposits with other traders, if orders are modified, or to correct counting mistakes. Coupons sent with an order may be paid into banking accounts before the order is completed; any return of coupons which may become necessary may then be made by means of a transfer voucher. Previously, wholesalers and others who accepted loose coupons from traders had to send one to the Board of Trade as a sample. This practice is to be discontinued for current coupons. Traders will be glad to be relieved of this duty. Sampling was originally intended to provide a check on fraudulent coupons. Its discontinuance may either be a reflection of the lessening of fraudulent activity, or of the impossibility of the Board of Trade's examining the coupons thus returned to them.

Secondary Metals

Last year the United States recovered non-ferrous metals valued at \$347,536,000 from scrap and residues. This

figure, compiled by the official United States Bureau of Mines, is a new record and compares with \$236,965,000 in 1940 and \$201,416,000 in 1939. As metal prices in the United States have been virtually stabilised since the autumn of 1940, the sharp increase in values is mainly due to the higher tonnages of recovered metals including those in alloys and chemical compounds. Compared with the two preceding years the recovery figures are as follows:

	(in short tons)		
	1939	1940	1941
Aluminium	53,947	68,045	106,859
Antimony	9,810	11,421	21,629
Copper	499,700	532,046	726,396
Lead	241,500	260,346	397,416
Nickel	2,920	5,150	5,315
Tin	29,160	33,222	42,033
Zinc	189,640	205,921	283,967

Source: US Bureau of Mines

As these figures include metal recovered from "new scrap," that is to say, metal such as clippings and faulty castings wasted during manufacture, the higher totals are partly due to the general increase in the United States consumption of virgin metals. In the case of three of the seven metals given in the table (aluminium, nickel and zinc), the quantities recovered from new scrap in 1941 were, in fact, larger than those recovered from old scrap. Nevertheless, in all cases, except nickel, secondary metals recovered from old scrap showed marked advances on the two preceding years and greatly helped to ensure the remarkably high level of the United States secondary metal recovery in 1941. The exception of nickel is not surprising, as nickel is used almost exclusively in alloys, and difficult to recover. As the United States started public salvage campaigns only this year—in 1941 scrap recovery was conducted on purely commercial lines—the figures for the current year are likely to show a further expansion.

The good results achieved in the United States are of direct interest to this country. Before the war Great Britain made perhaps less use of its scrap metal resources than any other large industrial country. Now these resources can no longer be neglected. Non-ferrous metal scrap has been included in the public's salvage drive since the formation of the Ministry of Supply's Salvage Department in November, 1939. So far, however, the recovery figures have been inadequate and last week the Ministry of Supply started a special non-ferrous metal salvage drive to secure better results. The publicity campaign, however, stresses only the general necessity of increased recovery and fails to set definite targets based on the quantities of metals which can reasonably be secured through a well-organised recovery campaign. The figures for the United States show how important the results of a metal salvage campaign can be and a comparison between actual and potential recovery figures might impress the public more than general references to purposes for which secondary metals can be employed.

Photography in Industry and Science

If war can be said to have any advantages, it is true that in many directions it hastens the evolution of scientific developments. This has been particularly marked in the use of photography in science and industry. Photography was used to help science as early as the 1880s, by Captain Abney. He worked at Woolwich Arsenal, and was certainly a pioneer; he may almost be termed the father of this use of photography. Since his time the science of photography itself has developed, and by its technical progress, has become an invaluable aid to science. Its use is almost daily extended. It is of incalculable value in war industries. Analysis of machine motions can be made, either by stills or cinematography. X-ray work is used to discover and examine flaws in castings, weldings and mechanical assemblies of all kinds. Models of machine parts are made in transparent material so that photographs of them show the stresses like contours on a map, thus eliminating laborious mathematical calculation. These are only a few of the manifold uses to which photography in all its forms is being put. The function of the camera can be described as being a highly sensitive eye of industry and science, and it can capture and make visible phenomena which could never be seen without it. An exhibition was opened to-day at the Royal Photographic Society, 16 Prince's Gate, London, S.W.7, at which an extensive selection of examples of the use of photography can be seen.

THE REFORM OF ACCOUNTS

The recent series of articles in *The Economist* on the Reform of Company Accounts has aroused considerable interest; and for the convenience of readers it is proposed to reprint these articles in pamphlet form. Copies will be available shortly, price 6d. The number of copies will necessarily be limited; and readers are advised to apply as soon as possible to *The Economist* Newspaper, Limited, 25 Abchurch Lane, 15, Lancaster Place, London, W.C.2. (Telephone No. Temple Bar 3316.)

TRINIDAD PETROLEUM DEVELOPMENT COMPANY, LIMITED

TAXATION AND DIVIDEND PROSPECTS

ANOMALIES OF DOUBLE TAXATION

MR. KENNETH MOORE ON VALUE OF PRIVATE ENTERPRISE

The annual ordinary general meeting of the Trinidad Petroleum Development Company, Limited, was held, on the 28th instant, at the Institute of Chartered Accountants, Moorgate Place, London, E.C.

Mr Kenneth A. E. Moore, F.C.A., chairman of the company, presided.

The secretary (Mr J. Mytton), having read the notice convening the meeting and the report of the auditors,

The chairman said: Gentlemen, in present circumstances, our first and paramount duty as producers of oil is, of course, to satisfy to the limit of our ability the production requirements indicated to us by the competent authority. We must discharge that duty whether or not it conflicts with the commercial considerations which would influence our policy in normal times.

When we can once again make public our production figures you will find that the company's war-time record is one of which you may justly be proud. It is the fashion nowadays in certain quarters to talk of private enterprise as if it were almost indecent and anti-social. The fact is overlooked that it is largely thanks to those individuals who have been willing in years gone by to save and to invest their savings in commercial ventures of one kind and another that in time of war no less than in times of peace the community has the advantage of the industries thus built up. While this is true of the whole field of essential industry, including transport, we may, in our small way, derive satisfaction from the knowledge that the enterprise undertaken with the capital subscribed by our shareholders some years ago with the motive of commercial profit is rendering great service to the war effort by its ability to produce vitally necessary supplies of oil. (Hear, hear.)

Having, I hope, made it quite clear that our policy is and must be to put the national interest before our domestic interests, I feel able, without risk of misunderstanding, to give some indication of the incidence of war-time conditions and taxation on our domestic interests.

DEPLETION OF IRREPLACEABLE RESERVES

In the first place, of course, increased production accelerates the depletion of irreplaceable reserves of oil, and so long as taxation remains at the present level there is a point beyond which no financial reward accrues to the company, but, on the contrary, its future is prejudiced. In our case, as you are aware, the company's undertaking was in the development stage in the standard years for purposes of E.P.T., and we therefore suffer from the misfortune of a pre-war standard of profits which does not represent a fair margin of profit on present-day production.

We are not unhelpful, however, that some measure of relief may be available to the company from the provisions of section 13 of the Finance Act, 1940, and section 31 of the Finance Act, 1941, in which the considerations to which I have briefly referred have received recognition.

TAXATION PROBLEMS

There is, however, one aspect of our taxation problem which seems to deserve attention at the hands of Parliament, arising from the fact that the company's oilfields are situated in Trinidad. On this account we have to pay first of all Trinidad income-tax, which was at the rate of 5s. in the £ up to December 31, 1941, from which

date it was raised to 7s. 6d. in the £. Secondly, we pay U.K. Excess Profits Tax at 100 per cent. on the remaining profits so far as they exceed our standard profits. Thirdly, we pay U.K. income-tax at 10s. in the £ on our trading profits before deducting Trinidad income-tax but after deducting U.K. Excess Profits Tax. Fourthly, we are entitled to Dominion income-tax relief at half the standard rate of U.K. income-tax, i.e., at 5s. in the £ on the amount of our U.K. income-tax assessment.

With U.K. income-tax at 10s., U.K. Excess Profits Tax at 100 per cent., and Trinidad income-tax at 5s., the effect of the present law is that on any profits we earn beyond the point at which we incur liability to U.K. Excess Profits Tax the aggregate taxation payable is at the rate of 106.25 per cent. (This percentage is somewhat increased now that Trinidad income-tax has been raised to 7s. 6d. in the £.) The result is that the more profits we earn the less is left for distribution to the shareholders by way of dividend. In fact it is possible to demonstrate that under the present law, if our profits rose to a spectacular level, there would be nothing for the shareholders, as our accounts would show a net loss after provision for taxation.

This Gilbertian state of affairs has been having our very serious attention, and representations are being made in the appropriate quarters in the hope that reason will prevail.

DIVIDEND POLICY

In the meantime the question of dividend policy has presented peculiar difficulties, but the directors are advised by the company's auditors that the reserve for taxation and contingencies, which stands in the balance-sheet at £568,364 after transferring £240,000 out of this year's profits, should prove, to the best of their ability to estimate it, more than adequate to meet our anticipated liability. In arriving at the above figures no account has been taken of that fiscal carrot, the promised refund of 20 per cent. of the 100 per cent. E.P.T. some time after the war. This refund will in any event be subject to income-tax and it has been made clear that it will not be available for dividends. After a very careful review of all the relevant circumstances the board feels able on this occasion to recommend a final dividend of 10 per cent., making 15 per cent. for the year, as before. This dividend will be subject to deduction of a net rate of income-tax of 5s. 6d. in the £ after giving effect to Dominion income-tax relief, and represents a very full distribution of the profits available out of the year's operations, after making provision for taxation. In fact the carry forward will be reduced thereby from £75,500 to £71,930. The present dividend of 15 per cent., less tax at 5s. 6d. in the £, is equivalent to 21½ per cent. gross, subject to tax at 10s.

I think it only right, however, to point out that unless our taxation position undergoes some change for the better it will be a matter of difficulty to maintain the present rate of dividend, however high our trading profits may be. In fact, as you will have gathered from my earlier remarks, the higher the profits the less will be left for the shareholders.

POSITION OF BORROWED MONEY

When I addressed you two years ago I mentioned that in connection with the

allowance for increased capital for purposes of E.P.T. an appeal was pending. That appeal was recently heard and was decided in favour of the company, but the Commissioners of Inland Revenue have now required a case to be stated for the opinion of the High Court. This case, it ultimately decided in the company's favour, will give a measure of relief down to March 31, 1940.

In any event, however, we have been deprived of that relief as from April 1, 1940, as a result of the "concession" announced by the Chancellor in honeyed words in introducing the Budget of 1941, whereby borrowed money is to be treated in the same way as proprietors' capital for purposes of Excess Profits Tax.

The avowed object of that concession was a very sensible one—namely, to meet the case of manufacturing concerns who, lacking capital themselves, could only finance an increased output of munitions, etc., by borrowing money to buy additional plant. It gave them a financial incentive (which would otherwise be almost lacking) equal to the difference between the rate of interest on the borrowed money (say 5 per cent.) and the rate allowed for increased capital for purposes of Excess Profits Tax (normally 8 per cent. or 10 per cent.).

In a case such as ours, however, where we replaced in 1937 some £800,000 of borrowed money by share capital, the effect is deplorable. Share capital after all is put into a concern permanently for better or for worse and shoulders the risks inseparable from commercial ventures. Borrowed money, on the other hand, generally has security or other privileges.

PENALISATION OF CAPITAL

While it is quite intelligible to encourage the borrowing of money to finance temporary increases in war production it is a little difficult to understand why the concession should have been framed in such a way as to penalise those who adopted what was usually regarded as the sounder long-term course—namely, to get capital into their business in permanent form. The remedy would, of course, be to make the "relief" optional, and it is to be hoped that the renewed representations which are being made on this subject will not fall on deaf ears. I have said enough to convey to you the extraordinary anomalies and uncertainties of taxation in its present form and on its present scale in a case such as ours.

A matter from which you may derive some comfort is that the company's production experience has continued to be entirely satisfactory and no doubt exists as to its ability to continue to produce large quantities of oil during the lifetime of its fields and to earn very substantial trading profits.

Once again it is both a pleasure and a duty to express on behalf of shareholders and directors alike our thanks to the company's staff and workpeople in Trinidad and at home for the success with which they have overcome the many difficulties, and our especial thanks are due to our general manager in Trinidad, Commander Lavington, upon whom a heavy responsibility devolves under existing circumstances. (Applause.)

The chairman concluded by moving the adoption of the report and accounts, and the payment of the proposed final dividend of 10 per cent., making 15 per cent. for the year, less U.K. income-tax at 5s. 6d. in the £ was approved.

Mr Richard R. Tweed, F.Inst.Pet. (joint managing director), seconded the resolution, and it was carried unanimously.

The retiring director, Brig.-General Sir William T. F. Horwood, G.B.E., K.C.B., D.S.O., was re-elected, and the auditors, Messrs Joselyne, Miles, Page and Company, were reappointed.

The proceedings terminated with a vote of thanks to the chairman and directors, and also to Commander Lavington, the company's general manager in Trinidad, and to the staff both in Trinidad and at home.

BRISTOL AEROPLANE COMPANY, LIMITED

SMALLER PROFIT ON INCREASED TURNOVER

RECORD OF USEFUL SERVICE

The thirty-second ordinary general meeting of the Bristol Aeroplane Company, Limited, was held, on the 26th instant, in Bristol, Mr W. G. Verdon Smith, C.B.E. (the chairman), presiding.

The following are extracts from the chairman's statement, which was circulated with the report and accounts:—

The amount available for distribution (£299,141) is slightly less than the amount available in the previous year. The increased volume of work has again been accompanied by a comparable reduction in profit allowed by the Ministry of Aircraft Production whilst at the same time the year 1941 carried throughout the full rate of income-tax at 10s. in the £, and excess profits tax at the full rate of 100 per cent., together with heavy premiums in respect of war damage insurance. You will realise that, judged by the standards of normal trading, the amount of profit available for distribution bears little relation to the turnover of the company. Your directors' policy has been in every possible way to develop the efficiency of the company's organisation and to safeguard its financial structure. After adding £100,000 to the general reserve, your directors recommend a final dividend on the ordinary shares of 6 per cent., less income-tax, making 10 per cent. for the year.

ACTIVITIES OF THE COMPANY

The organisation of the company has been steadily adapted and developed to meet the scale of effort required of it for war-time production. In addition to the extension and improvement of its own factories the company has devoted much concentrated attention to the development of supplementary factories specially planned to meet the programmes of the Ministry of Aircraft Production. We can justly claim that, judged by results, their management and personnel, drawn largely from the resources of the company, are second to none in the industrial war effort of the country.

War circumstances have brought to those responsible for the control of industrial organisations many problems novel and varied in their nature. There is an ever-growing realisation by managements that a study by them of all the aspects of everyday life is of the highest importance in enabling each individual to make his or her greatest contribution to output. Your company has fully appreciated the part thus played by efficient auxiliaries to production and has therefore devoted continual attention to the most suitable hours of attention to transport services, canteens and work, to transport services, canteens and medical services as well as to the many functions of a vigorous welfare organisation.

PART PLAYED BY EMPLOYEES

The company's relations with workpeople have been collaborative and satisfactory. It is recognised in our organisation that responsibility for an early victory depends upon the productive ability of the nation and that only sustained effort in workshops and offices will achieve it.

In this connection much public criticism is heard of lateness, absenteeism, and idleness, not least in aircraft factories. In these matters a proper perspective must be maintained. Everyone is agreed that every means of reducing the margin of inefficiency must be explored. At the same time faults basically due to the irresponsibility of the few ought not to create prejudice against the genuine and wholehearted readiness of the majority to work long hours, travel long distances and frequently entirely to subordinate personal considerations to the demands of their work. To young women and now increasingly to married women on part time work great credit is due. It is the duty of industry, particularly in

war time, whilst seeking out and destroying slackness and maintaining standards of discipline and supervision, at the same time to use its best endeavours to recognise intelligently the factors which create absenteeism and bad timekeeping and to make factory conditions as flexible as possible.

Official publications have continually reported from various theatres of war successes achieved by Beaufighters and Beauforts whilst Blenheims continued their long record of usefulness. Aircraft of our design are being successfully manufactured and operated both in Canada and Australia and to both Dominions we extend our congratulations on the great work they are accomplishing in the sphere of aircraft production. In a wide variety of operational and training aircraft our engines have added fresh laurels to the names Pegasus, Mercury, Taurus and Hercules.

For the present the immediate requirements of the war absorb our energies to the full. Meanwhile, however, aviation is making tremendous strides and the aeroplane has now more than ever before become a routine feature of world communication. When the opportunity comes for post-war development your directors consider that the efficiency of the production organisation and the potential resources of design and research possessed by the company will jointly be capable of carrying on as successfully as throughout the last thirty years, your company's record of useful service and progressive achievement.

SIR ROY FEDDEN

The statement was taken as read and the chairman added:—

The board regrets that the connection of Sir Roy Fedden with the company should be severed after a record of service extending over a period of 20 years, during which he has made great and valuable contributions to the design and development of aero engines. For some time past (mainly in consequence of the very large developments of recent years in this part of the company's business) the board has felt the necessity, in the public interest as well as that of the company, of reorganising the control of engine design and development. This matter was under discussion with Sir Roy Fedden for many months, the company being very reluctant to lose his services. Various proposals were made to him by which the full benefit of his continued assistance would have been retained. Sir Roy Fedden has been unwilling to accept any of the board's proposals and it has not been possible to arrive at any agreement with him. In these circumstances, the board has had to make other arrangements. They are confident that with the engine division reorganised under the control of Mr Norman Rowbotham the continued successful design and development of Bristol engines is assured.

The report was unanimously adopted.

HARRISONS AND CROSFIELD, LIMITED

In his address for the annual meeting of Harrisons and Crosfield, Limited, the chairman, Mr H. Eric Miller, expresses relief that the company has stood the shock of Japanese aggression in the Far East so well. Out of record profits a dividend of 5 per cent. is to be paid on the deferred ordinary stock.

Dealing with rubber Mr Miller says, "Suggestions have been freely made that the military debacle in Malaya is somehow linked up with unsatisfactory administration of that territory. General Smuts scotched them most effectively in his wonderful address to Parliament. After a taste of Japanese domination I shall be surprised indeed if the native populations do not welcome us back with open arms when the day of deliverance comes."

On the subject of synthetic rubber, Mr Miller quoted the views of Mr Henry Wallace, Vice-President of the U.S.A., who thinks the cost of natural rubber is likely to have a big advantage over synthetic rubber.

ALLIED INDUSTRIAL SERVICES, LIMITED

OUTPUT WELL MAINTAINED

The eighth annual meeting of this company was held, on the 23rd instant, at Netherwood Chambers, Bradford.

Mr W. H. Rhodes (the chairman), who presided, said: Ladies and gentlemen,—The copy of the accounts for the year ended June 30, 1942, incorporating a transcription of this speech, shows trading results in the third year of the war which may be considered satisfactory, particularly in view of difficulties unavoidable under war conditions. During the past year the output of your factories and the services rendered by your company have been well maintained and have continued so to be during the current year.

Before commenting on the actual financial figures I wish to place on record on behalf of my board of directors our thanks to the workers associated with our company for their good average attendance at work and their sustained efforts, and also to express our gratitude and appreciation to the members of our managerial staff who have so successfully coped with changing conditions and difficulties inseparable from their duties at the present time.

Turning now to the copy of the report and accounts you will observe that, after making proper provision for depreciation of the company's properties, plant, etc., the trading profit for the year amounts to £228,310, out of which £151,000 has been set aside to meet taxation and £10,000—as last year—has been transferred to general reserve; the balance of profit—namely, £67,310—together with the amount carried forward from the previous year—namely, £14,939—making a total of £82,249, is available for allocation as outlined in the accompanying report.

The report and accounts were unanimously adopted and a final dividend of 21 per cent., making 30 per cent. for the year, was approved.

WILLIAM DOXFORD AND SONS, LIMITED

DIVIDEND INCREASED TO 15 PER CENT

The fiftieth annual ordinary general meeting of William Doxford and Sons, Limited, was held, on the 29th instant, at the registered office of the company, Pallion Yard, Sunderland.

The following is the statement of the chairman, Mr E. P. Andrae, Ph.D., circulated with the report and accounts for the year ending June 30, 1942:—

Again this year only formal business will be transacted at the annual general meeting to be held at the company's offices at Sunderland on Thursday, the 29th instant, and this brief statement takes the place of the usual chairman's speech. I am pleased to report that the yard and engine shops have been fully occupied, and the net profit for the year has improved, the balance of £157,617 17s. 5d., after providing for taxation, being comparable with £105,931 19s. 5d. (being the net profit of £155,931 19s. 5d. less £50,000 transferred to reserve for taxation).

YEAR'S IMPROVED RESULTS

The general reserve has been increased by £25,000 to £300,000, and in view of the conditions now ruling the sum of £30,000 has been transferred to a contingency reserve account. Your directors have declared the dividend on the preference shares for the half-year ended June 30, 1942, viz., 2½ per cent., plus 1 per cent. in respect of the participating rights for the whole year, less tax. In view of the improved results for the year, your directors have decided to recommend the payment of a final dividend of 11 per cent. on the ordinary shares, less income-tax at 10s. in the £, making with the interim dividend of 4 per cent. paid May 1, 1942, 15 per cent. for the year, compared with 12½ per

cent. for the last year. If this is approved by the shareholders in general meeting, both dividends will be paid on November 2, 1942.

THE LATE MR K. O. KELLER

By the death of Mr K. O. Keller on July 22 last the company has sustained a very great loss. Mr Keller served the company for over 34 years, and for the last six years has been a director. Mr Keller's

name will always be associated in the annals of your company with the successful development of the Duxford oil engine, of which he was the pioneer, and to which he devoted his life's interest.

Mr W. H. Purdie, who has for many years been Mr Keller's chief assistant, has been appointed general manager of the engineering department with a seat on the board as from July 25 last. I am confident that Mr Purdie will prove a worthy suc-

cessor to his late chief, and that the appointment will ensure the continued personal devotion and interest, so characteristic of Mr Keller, in the progressive development of the Duxford oil engine. You will be asked to confirm the appointment of Mr Purdie to the board at the general meeting.

I again take the opportunity of paying tribute to all the officials, staffs, and work-people of the company for their loyal and unremitting efforts throughout the year.

RECORDS and STATISTICS

STOCK EXCHANGES London

Note: all dealings are for cash

With the opening of a new allied offensive in North Africa, the stock markets have resumed the strong upward movement which had recently shown signs of falling away. Not only prices, as reflected in the ordinary share index of the *Financial News*, but bargains marked have reached a new peak, with the 7,040 bargains marked on Monday. The *gilt-edged* market, however, has not participated in the advance, irredeemable and long-dated stocks actually weakening, although short-dated stocks have been firm throughout. In the *foreign bond* market, Chilean stocks have been firm on the formation of a new Cabinet, and Brazilian issues strengthened in midweek after earlier weakness. Egyptian Unified 4 per cent stocks derived strength from the initial reports of the North African advance, while Greek bonds were firm. A fair volume of business was transacted in the *home rail* market, junior stocks tending to lower levels on light selling. Southern preferred losing a point and GW ordinary, $\frac{1}{2}$. Senior stocks were firm, although some of the preference issues fluctuated narrowly. Speculative buying on a considerable scale, markings being nearly double the corresponding figure for the previous week, was reflected in large and widespread advances for Argentine rail stocks in the *foreign rail* market. BA Western 4 per cent debentures led the advance with a gain of 2 points on the interest payment, while the equity jumped $\frac{3}{4}$ points on the week. The BAGS and Central Argentine 4 per cent debentures showed similar rises, and despite some profit-taking, rather smaller gains were recorded for junior stocks. Elsewhere Peruvian Corporation rose strongly but relapsed later.

*

The *industrial* market continues as the centre of activity, markings on Monday exceeding 2,000 bargains for the first time since the inception of the system. Brewery issues were quietly firm, several tobacco shares advancing about 1s., but tobacco shares showed little movement of note. Thornycroft jumped 3s. 9d. in the motor and aircraft group, with Triplex and Leyland both showing considerable improvement. Rolls-Royce provided the exception to the strong upward trend, losing $\frac{3}{4}$. Colliery issues continue to attract buyers

in the heavy industrial section, Bolsover, Horden and Powell Duffryn all advancing, although small gains were spread throughout the section. The announcement of the payment of the arrears on the second preference stock occasioned considerable activity in Cunard issues, which rose sharply, although profit-taking later reduced the initial gains. Among textile shares, British Celanese second preference stock rose on the announcement of a higher rate of interest on the funding certificates, while Fine Spinners, Bleachers and Lancashire Cotton all enjoyed useful advances. In the miscellaneous section, London Brick was prominent with a rise of 2s. 9d., while Murex Wall Paper deferred and Sudan Plantations were both better. Elsewhere Brazilian Traction was outstanding with nearly a point rise, International Nickel improving in sympathy.

*

In the *kaffir* market, Cape buying was restricted to Far West Rand issues, among which Blyvoors and West Wit Areas advanced strongly, but for other issues gains seldom exceeded $\frac{1}{2}$. Outstanding among numerous smaller improvements in the *rubber* market was United Sua Betong with a gain of $\frac{1}{2}$. Among *tea* shares, Pabbojan, Consolidated Estates and Travancore were prominent, but some dullness was apparent in midweek. Activity in the oil market was slight, although Shell advanced $\frac{1}{2}$ at the week-end. Other issues, however, were, after minor fluctuations, little changed.

New York

PERSISTENT buying of railroad stocks provided the main feature on Wall Street at the end of last week, several issues, together with a number of leading equities, reaching new high levels for the year. Light selling,

however, restricted the advance, and early in the current week light profit-taking, occasioned by the news from the Solomon Islands, caused some reduction in quotations. In midweek there was a falling off in both prices and turnover, but selling was distinctly moderate.

COMMODITY AND INDUSTRY NEWS

Control of Food Canning.—By the Canning of Food and Feeding Stuffs (Control) Order, which comes into force on November 15th, control by licence over the canning of food is extended to cover all foods and feeding stuffs. Under the Order, canners must comply with all the requirements of the Minister of Food, and laboratory control is made compulsory. Canners who are already licensed under one of the other food-canning Orders need not apply for licences under the new Order. The previous canning Orders cover fruit, vegetables, fish, and condensed milk.

British Standards Institution.—During the past twelve months, the British Standards

Institution has published about 160 new and revised standards, bringing the total issued to 1,300. War emergency specifications have been prepared at the request of the Board of Trade and the Ministries of Supply, Aircraft Production, and Home Security. The voluntary work of some 8,000 representatives of industrial and trade organisations has been used to prepare specifications.

MPs Catering Committee.—A committee of Members of Parliament has been unofficially set up, to consider the Minister of Labour's plans for the control of the catering industry. Sir Douglas Hacking is chairman, Sir Leonard Lyle vice-chairman,

and Captain Peter Macdonald, secretary. Commander Bower, Sir John Mellor and Major Taylor are members of the executive committee. The committee is composed of Members who disagree with Mr Bevin's proposed legislation.

Salvage Collections.—According to a statement made by the Director of Salvage Recovery, local authorities have collected over 3,000,000 tons of salvage since the war, of which over half has been collected in the past year. Nearly 1,000,000 tons of waste paper, three-quarters of a million tons of ferrous metals, half a million tons of kitchen waste and 50,000 tons of rags are included in the total.

(Continued on page 560)

GOVERNMENT RETURNS

For the week ended Oct. 24, 1942, total ordinary revenue was £43,337,000, against ordinary expenditure of £99,414,000, and issues to sinking funds of £120,000. Thus, including sinking fund allocations of £6,904,215, the deficit accrued since April 1st is £1,662,352,000, against £1,705,564,000 for the corresponding period a year ago.

Waste Paper "Sector Scheme."—The Control of Paper (No. 54) Order, which comes into force on November 16th, imposes certain restrictions on the transport of waste paper, in order to economise transport. The country has been divided into areas in which the consumption of waste paper is approximately equal to collection. No waste paper may be moved from one area to another without licence. Quantities under 5 cwt. are not subject to licence. Waste paper transported other than by rail may be carried not more than 10 miles to a place in another area.

Soft Drinks Control.—From January 1, 1943, soft drinks may not be sold under a label bearing any name brand or trade mark distinguishing the manufacturer or packer. Moulded or embossed bottles may continue to be used if their use will save material and labour. Code marks on labels may be used, provided they are authorised by the Minister of Food or the Soft Drinks Industry (War Time) Association.

Pyrethrum Control.—The Minister of Supply has made the Control of Pyrethrum (No. 1) Order, under which

dealings in and the treatment, use and consumption of pyrethrum (*chrysanthemum cinerariifolium* and *chrysanthemum coccineum*), flowerheads, and products manufactured therefrom are made subject to licence. The Order came into force on October 26th.

Temporary and Military?

MILITARILY, the war goes well. It does seem that at last, in the old words of Roger Ascham, "by experience we have found a short way by long wandering." Politically, the scene is more confused. On the first day of the American landings in North Africa, President Roosevelt sent a message to the people of France. He declared "again and again his faith in liberty, equality and fraternity." He gave a pledge

that the Americans, with the help of the United Nations, are doing all they can to establish a healthy future as well as the restoration of the ideals of freedom and democracy for all those who have lived under the Tricolour.

The President's words seemed to leave no doubt about the banners under which the crusade had begun. But doubts then took root and grew. The motives which prompted the American Command in North Africa to recognise Admiral Darlan as the representative of France and the head of French administration in North Africa are very difficult to deny. They were motives of expediency. Rightly, General Eisenhower was anxious to secure the swift, smooth and frictionless working of civil government behind his lines; and not the least important reason for the success of the operations has been his success in doing this. The assumption that the French civil servants in North Africa are bound to Vichy by ties of loyalty was not groundless. With the North African drama unfolding itself against the motionless background of a passive and backward Moslem population, the only political factor

that counted in the American plan to seize a foothold was the French colony, in which the civil servants, to whom Darlan may well symbolise the legal continuity of the regime they serve, are central figures.

On Wednesday, President Roosevelt made another statement, accepting General Eisenhower's political arrangements "made for the time being in Northern and Western Africa." The present temporary arrangements, he said, have accomplished two military objectives. The first was to save lives; the second was to save time, to avoid a mopping-up period, which would have delayed an attack on Tunis and Tripoli.

I thoroughly understand and approve the feeling in the United States and Great Britain and among all the other United Nations that, in view of the history of the past two years, no permanent arrangement should be made with Admiral Darlan. People in the United Nations would never understand the recognition or reconstitution of the Vichy Government in France or in French territory. We are opposed to Frenchmen who support Vichy and the Axis.

This statement was timely and welcome. The question is whether the justification given by the President for the deal with Darlan is quite sufficient.

It is true that collaboration has been secured. But too much has, perhaps, been made of this. It is doubtful whether the intervention of Darlan altered the actual course of events by much more than a few hours at the most. The cease-fire was ordered by Darlan when the

fire was ceasing of its own accord, when Algiers and Oran had already surrendered and Casablanca was about to do so. Commander of the French Navy, Darlan failed to influence the fate of the fleet, apparently trapped by the Germans in Toulon harbour. During the most crucial phase—when the landings were being made, when the question whether or not to fight was being debated at every point of resistance, and when there was perhaps still time to bring the fleet to sea—Darlan had not made up his mind how to intervene. It was only when the die had been cast that he claimed the prestige of a *fait accompli*—even to the extent of “appointing” General Giraud, already chosen by his own worth and fame, to be the French commander.

All this, the President says, is temporary. But it is open to ask whether the ephemeral character of his return to power was clear in Darlan's mind when he took upon himself to appoint General Giraud; to proclaim himself High Commissioner; to set up a legislative council; and to vest in himself authority for all French North African administration. His proclamations have had the ring of permanence; and it is hard to escape the conclusion that the President's afterthoughts on his general's action must have come as a shock to the Admiral. What is the Allied intention? Is it to depose and restrain Darlan as soon as the battles in Tunisia have been fought? In its more general passages, the President's statement suggested drastic action of this kind. But there is a phrase which must raise reservations. “The temporary arrangement made with Darlan applies without exception to the current local situation only.” Is the President's meaning then that Vichy, however emasculated, is to remain the symbol of authority in Algeria and Morocco, while other and better Frenchmen speak and work for France elsewhere? Surely it cannot be.

It would be unwise and wrong for any person without all the facts to attempt a final judgment. It is only possible to speak, with a due sense of responsibility, about the impression which this bargain has made; and there is no use or sense in disguising the fact that the impression is ugly. It was no mere doctrinaire attitude which regarded these proceedings with scepticism and alarm. President Roosevelt's promise of liberty, equality and fraternity stirred high hopes in the numberless and nameless soldiers of underground France; and the part which Darlan, with Pétain and Laval, has played in expelling liberty, equality and fraternity from French soil is only too fresh in the memory of these same warriors. Nor is it only France which will be bemused and disheartened by the Admiral's new role. General Eisenhower is undoubtedly entitled, like every invader, to his Fifth Column. But the greatest Fifth Column of all—made up, not of traitors, but of patriots—is the people of Europe, the millions who have been carrying on the struggle against the Third Reich and its quislings, and who look to the Allied offensive to liberate their countries and to restore the independence, the freedom and the self-respect of their nations. They must then have been sadly cast down by the strange political turn that the Allies' first offensive has taken.

North Africa is the first testing ground for Allied political warfare. What is important in this context is the suggestion that amnesty can be granted to collaborators and quislings. Quislings everywhere may even be consoling themselves that, though they now help Hitler to dominate Europe, they still may have a way of escape open in case of an Allied victory. A premium is apparently put upon timely transfers from the Axis to the Allied camp; and there can be no doubt about the demoralising effect that such wrong impressions must have in the occupied countries of Europe—to encourage collaboration and to dishearten opposition at the very moment when resistance to Hitler inside the besieged European fortress has taken on supreme strategical importance. The choice between principle and expediency is no new one in war; and it is never easy. But, even from the viewpoint of expediency, the selection of Darlan as an accomplice, however temporary, must seem an awful hazard.

Two parallel Vichy regimes now exist, under Allied and German control, respectively. They have one characteristic in common—collaboration with the man with the gun. Darlan's stubbornness in claiming allegiance to Pétain, in spite of the Marshal's repeated denials, is significant. His purpose is to defend, not France, but the France of Vichy. He is determined to regard the Marshal as the source of his authority, absurd and untenable though this may seem, because he is determined that the regime which was fastened upon France in 1940, when the Third Republic fell, shall survive, come what may. In the persons of Pétain and Darlan, Vichy is backing both sides; and, by taking Darlan to their bosom, the Allies could scarcely avoid adding to their war aims the unsavoury task of making France free for Vichy—and for all that the Vichy regime stands for, in politics as well as diplomacy. Thus, the President's explanation was heard with relief. But in Britain and in the United States, no less than in France and the rest of Europe, many millions wholeheartedly endorsed the announcement of General de Gaulle and the French National Committee that

They are taking no part whatsoever in, and assuming no responsibility for, negotiations in progress in North Africa with the representatives of Vichy.

This statement came from a man on whom Vichy pronounced the death sentence at a moment when desertion was *de rigueur* in France. In the liberation of France and the French Empire, General de Gaulle wrote the first and most difficult chapter; and on the final pages his name must stand out as bright. In the dark summer of 1940. He has been charged with authoritarian tendencies; and his greatness plainly lies outside the sphere of politics. The greatest need of reviving France is for political spokesmen whose attachment to the principles of democracy has been long-standing and unimpeachable. But Darlan will attract them vastly less than General de Gaulle. Already, it is said, collaborationists, defeatists and fascists like Flandin and Pucheu are creeping under his wing. President Roosevelt may decree that the de Gaullist prisoners in French Africa must be released and that the Jews must be treated in a civilised way. But the political consequences of the deal with Darlan cannot be rubbed out simply by the words “temporary and military.” Actions speak louder than words, even in political warfare.

General de Gaulle issued his statement after he had lunched with Mr Churchill. President Roosevelt made his explanation after General de Gaulle had been frank. It is hard to believe that the politics of this North African episode have the thought-out backing of the Prime Minister, Mr Eden or General Smuts—or even President Roosevelt. This is certainly not to blame the soldiers on the spot. The conspicuous gap in Allied policy has always been the absence of any code of political warfare. The United States State Department has always regarded Vichy with somewhat more sorrow than anger. The soldiers have gone to North Africa, politically in a vacuum; and they have done the best they could to forward their military enterprise. It is of the deepest significance that the first combined attack by the Allies has revealed, first, this absence of political objectives and, secondly, a lack of collaboration among the Allies in this vital field. Soundly, Mr Willkie has demanded that “We must make sure that all these Allied peoples are fighting for essentially the same thing,” and President Roosevelt himself, on the morrow of the temporary and military arrangement in North Africa, broadcast to America and the world on “the United Nations, their creed for a free world.” There is a strange and frightening contrast between the remarkable military co-operation which has altered the entire face of the war in a fortnight and the complete absence of any political counterpart. The victories which Allied fighting men may win in Africa during the next weeks can be wasted if the Allied Governments fail to agree upon banners under which they and all the United Nations, captive as well as free, can march together and with a good heart.

Unity and Compromise

A NEW session of Parliament opened on November 11th. The suggestion of one Member that this would be the last war session was over-optimistic. But, rightly, the change in the military situation which coincided with the opening of the fourth session of war-time was reflected in the greater confidence of the speeches as a whole, and in the happier relations between the Government and the House of Commons.

The King's Speech itself showed a welcome contrast with its predecessors since 1939. They were entirely concerned with the prosecution of the war. This year

My Government's first concern must be to seek and secure the means of achieving complete and speedy victory . . .

A start has, however, been made in working out the measures which will be necessary when peace comes.

It is true that there was little attempt to specify these measures. The announcement that His Majesty's Government has received and is examining the Uthwatt and Scott reports was not news. Nor was the Speech's reference to the Atlantic Charter, or its statement that the Government is consulting with the Governments of the other United Nations on the immediate post-war needs of the oppressed peoples. Of more significance than these wide but still vague post-war aspirations is the promise of immediate domestic legislation to improve the position of old age pensioners and the firm hope that

further progress can be made with plans for the better education of My people.

Here at last is a sign that the Government realises that there are some reforms which need not and should not wait upon victory.

The chief interest in the opening of the new session, however, was to be found, not in the changed emphasis of the King's Speech, but in Sir Stafford Cripps's motion on the business of the House. It has been the custom in this war, as it was in the last, for Government business to have precedence and for only Government Bills to be presented. The justification for this has always been, first, that Parliament's time must be concentrated on measures connected with the prosecution of the war and, secondly, that the moment was inappropriate for controversial legislation to be brought forward. In introducing the motion last year, Mr Churchill quoted Mr Asquith's words on a similar occasion in 1915:

... so long as this Order is in force they [the Government] will introduce no legislation of a party or a contentious character, and that they will, indeed, confine [as we propose to confine] their legislative proposals, unless in some exceptional case in regard to which

there is general agreement, to such measures as may be found necessary to facilitate, financially or otherwise, the successful prosecution of the war.

This year, the Government's attitude has changed. Necessarily, Sir Stafford Cripps repeated the stipulation that Parliament's first concern must be measures “which are vitally connected with the effective prosecution of the war.” But, significantly, he then went on to say

Nevertheless, we have now reached a stage at which it may be necessary for Parliament to consider legislation arising from or out of conditions created by the war on which there is a general measure of agreement.

The change of wording, Sir Stafford told the House, was deliberate. But neither then, nor in this week's debate on the Address, was he definite about the sort of legislation envisaged, except that it will be directed towards post-war difficulties; and the phrase was followed by the usual stipulation that it was not an appropriate time to bring forward legislation “likely to arouse serious controversy between the political parties.”

The altered outlook is welcome, but, unfortunately, too much should not be expected. In the last war, the ban on contentious or party legislation did not preclude the great social reforms—the grant of women's suffrage and the Fisher Education Act—of the last two parliamentary sessions. To-day, however, the far greater unity that has been achieved between the political parties on the prosecution of the war seems to be a serious stumbling-block when it comes to non-war measures. In a recent Lords debate, Lord Snell contended that a coalition Government could not be expected to reach agreement on such a controversial matter as planning. Last week, Sir Stafford Cripps pointed out that there are Members of Parliament and others who want no changes which would affect the post-war situation in the country, while others again would like changes which would make “a very great and profound effect.” He then said:

In a condition of unity and compromise, obviously neither side can wholly get its own way. It is a very difficult balance to hold, but it is the function of His Majesty's Government to hold that balance. . . .

On Wednesday, he elaborated the same theme.

It is, of course, true that if compromise were to be thrown over, unity might be sacrificed as well. Justifiably, the Government may feel that such a price is too high. But there is surely a vast difference between compromise and deadlock, between neither side getting all its own way and no positive action at all. Sir Stafford Cripps himself said this week that political unity must not stultify Parliament as a democratic body. Moreover, all the party leaders have spoken in favour of a continuation

of the present coalition for at least three years after the war, because reconstruction, they have argued, is not a matter of party politics. In the light of the limitations on policy and legislation accepted by the wartime coalition this becomes not a promise but a serious threat. If it means that there is to be the same agreed timidity in dealing with the great issues of the post-war world as there is now in deciding whether or not to accept the Uthwatt recommendations, it will be reconstruction's death knell. If every advance in policy is to be smothered, both during and after the war, by the need for agreement, then this indeed is a price that is too high to pay.

The truth is that the Government is over-sensitive on the question of unity. The national unity that exists to-day—the unity of the people, that is, as distinct from the nice and negative equilibrium of cliques and individuals—is far too sturdy to be broken by disputes and disagreements inside Parliament. As Mr Greenwood said in the debate on the Address,

I think we could stand a good deal of hammer-and-tong controversy in the House without in any sense impairing the national spirit of unity of will for the purpose of winning the war. After all, it is the strength of the House of Commons that after the cut and thrust of debate . . . it can agree to differ and accept the decisions reached.

And there is no doubt that the people are prepared to go much farther along the road of reconstruction than the Government is at present allowing them, just as they have always been morally ahead of their leaders in the unfolding of the war effort.

It would be the greatest and most fatal of mistakes if the Government were to compromise so much that it ended up by wasting and frustrating unity itself. It is, for instance, reported that Mr Bevin's proposed Bill for regulating working conditions in the catering trades will be withheld because of the opposition of a minority in Parliament. Yet there has surely been "a general measure of agreement" on the principle of trade boards for industry for a long time past; the opposition to it from the caterers is, on the other hand, particular, not general. On any issue, when the Government assesses the

measure of agreement, it might, very reasonably, also attempt to assess the nature of the opposition and determine whether it is broad and general or narrow and particular. Another danger is that, even when agreement has been reached on the need for some measure, the resulting legislation may be too timidly conceived. There is to-day broad agreement among all parties on the need for educational reform, but there is far from agreement on its scope. Consequently, there is a serious possibility that the new education Bill envisaged in the King's Speech will be another compromise, another in the long line of pseudo-advances which, in practice, have barely amounted to marking time. Is it unconsciously or with intent that, in his recent utterances on the aims of reform, Mr R. A. Butler, President of the Board of Education, has replaced "equal" opportunity by the phrase "equivalent"?

It is admittedly not easy for a Government, at a time when there can be no appeal to the people, to decide how far it can go in the way of reform. Nor, however, is there any reason why a Government should expect to do only easy work. Indeed, in the context of active democratic politics, it will be a gain that the less the Government compromises and the firmer the line it takes, the better chance there will be of the real fundamental cleavages, which cut across party affiliations, becoming apparent. Despite the declarations of Ministers, it would be a grave setback for the democratic cause in this country if the present Government and the present Parliament were to continue in office for three years after the end of the war. It will be a setback no less serious if, while the war continues, unity is held to mean agreement to do little or nothing towards the solution of the crucial problems upon which reconstruction depends. When solidarity and the sabotage of all policy come to mean the same thing, democracy becomes bankrupt. Checks and balances replace the people as rulers, and interested minority groups call the tune from the wings. It is imperative that the real issues should be put before the people as soon as possible, but they will not be thrown up if the Government deems its function to be the purely negative one of holding the balance between the extreme reformers and the extreme reactionaries.

Responsibility in Production

THE war industries can no longer expect large numbers of new recruits or a substantial increase in the supply of materials. But war output, in terms of striking power, has not yet reached its peak. Two additional steps are necessary. The first involves an increase in the yield of munitions per man employed by making better use of available resources, the second is still greater improvement in the design and quality of fighting equipment. In its eighth report of the current session, published last March, the Commons' Select Committee on National Expenditure submitted a number of recommendations under these two headings. Since then, progress has been made in both directions, owing partly to the initiative of the Minister of Production. A month ago, Mr Lyttelton announced the details of a programme designed to increase production by a more careful application of men and women to available machinery; simultaneously, steps have been taken to secure greater speed in the qualitative improvement of weapons.

In its eighteenth report, published last week, the Select Committee acknowledges the progress made since the early part of the year in the arrangements for "providing the fighting forces with the right weapons at the right time." But it has proposals to make for a further advance. The Committee has been informed by the Prime Minister himself of proposed changes in organisation designed to result in more rapid improvements in the quality of equipment. Since the new arrangements are not yet final, the Committee feels bound to emphasise the factor which is, in its view, the crux of the problem, that is, the need for a clarification of responsibility.

In its earlier report the Committee reached the conclusion that

In the matter of settling the design for the weapons of war and the relative quantities of each that are required . . . the programme for manufacture as transmitted to industry shows signs of inadequate foresight and sureness of decision, as well as a tendency at times to give consideration to producing the maximum volume of certain articles rather than the exact types required by the fighting forces.

The Committee lays down three guiding principles for reform. First, in order to secure greater speed of decision in matters of production, responsibilities should be clearly defined and should rest on individuals rather than on committees. By way of example, the Committee tests the new arrangements for supplying materials to the Army. Responsibility for formulating the Army's requirements under the Secretary of State and the Chief of the Imperial General Staff is now centralised in the new post of Deputy CIGS. In practice, however, the task of the Deputy CIGS is so complex that he can only discharge it efficiently if the nature of the precise responsibilities carried by the officers, directorates or committees on which he relies are also clearly defined; and if weapon requirements are always formulated in the closest contact with producers and users. In justice, it must be said that recent changes show an appreciation of these needs; but the Committee is plainly right to insist upon a further clarification of responsibilities, wherever possible.

Secondly, the Committee suggests that, for important weapons such as tanks, with all their accessories, a com-

plete, self-contained and functional organisation should be set up, at the head of which there should be one man, "in the position of a managing director," with full responsibility for

organising and directing all the activities that go to produce the finished article, including (a) research, design, experimental work, tests and trials; (b) production; (c) progressive modification and adaptation in the light of practical experience.

The statement received by the Committee from the Prime Minister, explaining the changes made or proposed in the organisation at the War Office and the Ministry of Supply, suggests that this principle has in fact been adopted for armoured fighting vehicles. But a number of problems have still to be settled. Not the least important of these is the need for a clear definition of scope. Does the competence of the new tank organisation, for instance, include the guns to be carried in the tanks? What is its relation to the Director of Artillery? And certainly the Committee is right when it urges that the principle of the functional organisation with a single, responsible, head should be extended to other types of equipment in addition to tanks.

Thirdly, the Committee emphasises that, from the outset, the closest relations should be maintained with the manufacturing firms chiefly engaged on the production of the equipment concerned; and that there should be continuous contact between manufacturing concerns and actual Service users. In the past, when trial and error were still the rule, resources were often wasted through lack of efficient liaison between Government departments and producers. The knowledge and experience of fighting men was often insufficiently used in matters of design; they were often consulted too late or inadequately informed about production plans and their purposes. Those were the bad old days; the quantity and quality of the Eighth Army's equipment in Egypt make an impressive proof of a new enlightenment. But there can be no rest; Allied fighting men must be superior, not equal, to the enemy at all points in their equipment. In the delegation of responsibility to manufacturing concerns there are still problems of considerable difficulty to be solved; and the Committee is by no means hypercritical when it draws attention again to the need for a greater clarification of responsibility.

The Committee distinguishes four aspects of responsibility in the designing of war equipment. There is the responsibility for devising a particular weapon or item of equipment to meet a definite purpose; the responsibility for checking its worth in battle; the responsibility for giving drive and urgency to the execution of the design; and the responsibility for saying "Go ahead with production." In civilian industry—in deciding on next year's model for a motor car, for exam-

ple—these four responsibilities are carried by the head of a business. In war production, they must be divided between Government departments and industrialists; and the difficulty is to know just exactly how. Responsibility for the initiation of designs requires qualities of originality and imagination, and close contact with those who have to carry out production. If it is left entirely with private firms, the fear of being blamed for producing a design which will not stand the test of battle and the consequent attempt to produce the "perfect" design makes for delay. On the other hand, designs devised by Government departments have often betrayed a serious lack of knowledge of actual production conditions and methods and of the need for economy in man-hours, materials and machines. Responsibility for checking battle-worthiness and for deciding to start production must be the Government's. But if those duties are performed by committees, there is too often laggardliness; and the responsibility for giving drive and urgency to the execution of designs is blurred.

Actual practice in the distribution of responsibility for design varies from department to department. This in itself, as the Committee points out, points the need for investigation. The Government, clearly, cannot delegate full responsibility to private firms for the design of mechanisms whose performance is of vital importance; nor, on the other hand, can a design be created which is both effective in battle and economical in production without the closest liaison between Government departments and industry. The Committee holds that, given three conditions, the dilemma can be resolved. First, the job of designing—an "artist's job"—should be entrusted to suitable individuals; secondly, there should be an unambiguous delimitation of responsibility; thirdly, there should be a Government official with overriding power and responsibility for each of the main categories of equipment—that is, "the managing director" proposed by the Committee in its second principle of production and already appointed for armoured fighting vehicles by the Ministry of Supply.

In the main, the Select Committee was guided in its recommendations by inquiries into the production of equipment for the Army; but they are equally applicable to the other supply departments. Moreover, the extension of the principle of individual responsibility is as important in the effort to increase output from existing resources, by improved technique and organisation, as it is in the task of improving the quality of weapon design. If striking power is to be raised to the peak in time for the battles ahead, none of the further advances advocated by the Committee to ensure correct and decisive action can be ignored or dismissed.

Instruments of Government

A COMMITTEE of Ministers and an interdepartmental committee of permanent heads of departments are said to be at work considering, *inter alia*, the machinery of government. This appears a prime example of the right thing being done in the wrong way. Obviously, it is all-important for the working out of post-war policy that the administrative machine shall be fully and efficiently designed. Equally obviously, men who are in charge of departments, with all the prejudices and interests as well as the duties of their office, are the wrong people to survey the scene, at the height of their wartime activity. The reason why the Haldane Committee on the Machinery of Government at the end of the last war proved abortive was that, by and large, neither the Government nor the Departments took any notice of its recommendations. This committee is likely to be equally futile for a different reason. Hardly capable of an objective standpoint and hectically engaged elsewhere, the members of this committee can

scarcely be expected to make any fundamental recommendations for reform.

Admittedly, the machinery of government must be among the first on the list for reconstruction. All the rest of reconstruction will depend for its effectiveness upon the instruments by which it is applied. Moreover, there is now no need for deep research or long-drawn-out deliberation. The work has been done. The Haldane Committee itself made it plain that the first task is to place departmental functions of government in broad, analogous groups under the eye of individual Cabinet Ministers, so that the Cabinet has a broad surveillance of all that is going on. It made it plain, too, that departmental functions themselves must be continuously revised and re-allocated to remove overlapping, anomalies and anachronisms. Everything that has happened in the last twenty-five years has given point to these proposals. Willy-nilly, a system of Cabinet committees has been devised by which Departments carrying out continuous

duties come together for consultation and co-ordination. The pressing needs of war administration have brought this system to a new stage of development; the ideal of a Cabinet made of non-departmental Ministers, each with his group of departments to watch at one remove, has come in sight. And, where the grouping of allied functions under a single eye has not made progress, as in the case of relations with foreign countries—commercial, industrial, economic and political relations, as well as diplomatic—the gap has been sorely felt.

In addition, war experience, by testing the departmental structure of British government, has revealed certain deficiencies. For instance, there is clearly a need, after the war, to retain the Ministry of Food in order to operate a nutrition policy, the necessity for which became apparent in the pre-war years and has since been reinforced by wartime rationing. Again, just as the separate working of Supply Ministries in the provision of war goods showed the need for a central Ministry of Production, so the industrial problems of demobilisation and of remobilisation for peace purposes will urgently require a similar central organ. On the human side, too, the departmental structure has been proved deficient. Lord Nathan has pointed, for example, to the need for a Department of Welfare to oversee and safeguard the problems of homes and families, taken as entities; and this need will be greater not less when the men and women who have been serving in the forces or in factories, and the families which have been evacuated, return to seek a home and the food, clothing, shelter and employment that they have a right to expect. The Ministry of Social Security, which it is reported that the Beveridge inquiry will recommend, to integrate and co-ordinate all social payments to unfortunate and incapacitated citizens, according to common standards of need and administration, would not be a substitute for this Department. It is a prime fault of social service administration as it has grown up, that it only regards families as entities in the application of means tests. For the rest, the social

services deal with individuals only, and then solely as poor individuals, sick individuals, disabled individuals or unemployed individuals—never as whole men. Still less are they regarded, administratively, as members of a home and a family. There is almost certainly room for such a Department, working in the closest connection with the Ministry of Social Security (if such a Ministry is set up) and with the Ministry of Labour and National Service which, by reason of its control and supervision over the whole field of manpower, has unique functions to perform in the process of demobilisation.

These decisions are crucial for the whole future of democratic policy in this country; and it is vastly important that the right decisions should be made with the utmost promptitude. Far better than the present harassed committee of Ministers, each with his departmental prepossession or axe to grind, would be a small body of expert and knowledgeable people, with experience both of government and of politics, and under the chairmanship, say, of the doyen of British governmental practice, Lord Hankey. Such a committee could carry out swiftly the three jobs to be done. The first is to recommend without reservation the grouping of departmental work under Cabinet inspiration and supervision, with a special eye to the great groups of Foreign Relations, Industrial Development and Social Security. The second is to revise and tidy up the functions of the Departments, and to insist upon the key importance of such new peacetime agencies as a Ministry of Food and a Department of Welfare. The third is to demand that, with the machinery of government properly made, the process of government should be imbued at every stage from the Cabinet level down to every civil servant in a key position, with the power and the responsibility as well as the expert assistance to act promptly and efficiently. Like every other form of government, democracy will be tested, not by what it says, but by what it does. The rigours of war have proved this beyond a doubt; and the opportunities of peace will demonstrate it doubly.

NOTES OF THE WEEK

The Test

To the triumph of the Eighth Army has been added a new success by the American Navy off the Solomons, where the efforts of the Japanese to hold the islands has again been rebuffed at a crisis. In both Africa and the Pacific, however, the crucial actions have still to be fought. So far, the advance in North West Africa has been a progress rather than a campaign, a vast feat of strategical manoeuvre and surprise, a great exercise in the movement of men and supplies, but not yet a victory in the field. Hitler, shocked by defeat in Egypt, and seemingly too weak or too late to outflank the outflankers through Spain or Turkey, has apparently chosen to stand in Tunisia, for a time at any rate, in defence of a bridge and a bridgehead. Allied fighting ships control the Western Mediterranean; and Allied fighting planes can give cover again in the Eastern basin; from their bases in Italy, Sardinia, Sicily and Tunisia, it is the Axis task, against what should be losing odds, to deny the through passage—and to hold apart the First and the Eighth Armies. Everything that has so far been achieved in the first phase of offensive has now to be proved in battle.

Benghazi—and Bizerta

The two great operations in North Africa have not yet become one. The Eighth Army in Libya advanced more than four hundred miles in a week, occupying Tobruk, Bomba, Derna and Mekili, and at the time of writing is half way moving hot-foot to Benghazi. The First Army, to the west, has penetrated Tunisia; a very large airborne landing has captured a key airfield. The Germans claim to have established a sea and air bridge between

Sicily and Tunisia for their reinforcements. The strategy of both sides is now clear. That of the Allies is to catch the Axis forces between the advancing Eighth and First Armies and effect a complete victory. That of the Axis is to move away in Libya ahead of General Alexander's force until a delaying stand can be made—perhaps at El Agheila. In the meantime, such troops as can be rescued from Libya by air and such forces as can be spared from the European strategic reserve are ferried into Tunis to make a bridgehead. Axis propaganda dwells on the advantages of Bizerta rather than Benghazi as a base—the distance from Sicily being only about 100 miles. It is now clear that the original German paratroops dropped in Tunisia at the end of last week represented far more than the demolition squad which the optimists believed. They were the spearhead of a desperate and audacious attempt to retrieve the situation in North Africa; they were Rommel's reinforcements, landed not in Libya but further down the coast. The success of the battle for Bizerta is as vital to Allied grand strategy, which requires complete control of the whole north African coast, as the success of the Solomons battle in the Far East.

Second Round in the Solomons

The striking naval victory which American surface forces won against the Japanese on the night of November 13 may at last have secured Allied control of Guadalcanal. It was a most timely demonstration of the power of surface ships when properly and boldly used. Admiral Nimitz, who commands the United States Pacific Fleet, has stated that, without the reinforcements which the Japanese task force failed to bring in, the enemy in

Guadalcanal is outnumbered and can be eliminated. This, more even than the grievous Japanese loss of twenty-three ships, including one battleship and three heavy cruisers, is the significance of the victory. The Japanese will, of course, come again. Clearly, they must make another attempt to bring up their reserves, now held at Rabaul, or else they must radically modify their entire project for the investment of Australia. In all probability, they will attack again in force, and in the near future. But the battles for Guadalcanal are bleeding their strength in a sea Verdun; and their attention is at the same time being distracted by the vigorous campaign which General MacArthur is conducting in person in Papua, and which may well end in a Japanese Dunkirk at Buna. The Japanese base at Rabaul is under heavy strain to receive and despatch units to and from New Guinea and Guadalcanal. Unremitting attack, to rob the Japanese of any chance of leisurely refitting, or staggering the peak load, offers a high reward for the Allies. And a third round knock-out in the south-west Pacific would bring the Far Eastern war vastly nearer to its end—at least to the end of the beginning, which has already appeared, it seems, in Europe.

The Menace

General Smuts has asked for a supreme command to concentrate all Allied skill and resources against the submarine. He is, of course, right to pick out the U-boat as the main threat to Allied victory. It is one of the ironies of warfare that, in spite of all the technical advances which have been made, in spite of the vast paraphernalia of air power and the formidable development of mechanised land fighting, Germany's most pointed weapon is still the same as it was in 1914-18. That this should be so is, of course, inherent in both history and geography. The British Navy, now in combination with the American, has ruled the seas since Trafalgar. But Britain is a small island, and both the British Commonwealth and North America are thousands of sea miles from Europe. Command of the sea cannot in itself dispose of the vulnerability of these long sea ways, so that the one means by which the enemy can hope to prevent the concentration of a force—which must be overwhelming once it is concentrated—is to strike at Allied shipping from under water. Now, attacking no longer but defending, he falls back on the submarine, his first and last hope. But General Smuts' proposal for a supreme anti-submarine command appears to be based upon a misconception. It is true that the pooling of all Allied ingenuity might provide some new means of protection against the U-boat. But, in the main, it is not new defences that are needed, but more defences. The submarine is not a secret weapon. Far from it; the way to master it is well known. The problem is quantitative. If every ship at sea and every convoy can be given the protection which was afforded to the African armada—the finest target in itself that a submarine commander could wish to see, and it went undamaged to its destination—the submarine would be beaten. The ways of defeating Hitler's last offensive at sea are the old familiar ways—more convoys; more escort facilities; more patrolling aircraft; and the utmost possible economy in the use of shipping by civilians everywhere.

Inside France

The first week of the second German occupation was spent by the men of Vichy in ceaseless conferences, in search of a way out of the internal impasse into which they had been flung. Pétain was trying to preserve his regime, and save his face, to play simultaneously the two rôles of sovereign and hostage. This attempt to achieve the impossible was made even more unreal by the dissension and confusion within the Vichy camp itself. The regime proved incapable of collecting its *membra disjecta*. One of those, M. Pucheu, Pétain's former Minister of the Interior, a sinister Vichy figure, has landed in Africa to join Darlan. Doriot and Déat are hailing the completion of the *Révolution Nationale*; with the German army in Marseilles, France, they say, has finally been included in the framework of the New Europe. The new situation demands a thorough purge of the regime. *Attentionisme* has become untenable. Its most genuine representative, General Weygand, is reported to have been arrested; and the heads of Barthélemy, Admiral Auphan, and others have been asked for by the Germans. Amid this mêlée, the

Quixote of French neutrality preferred to confer his powers upon his Sancho Panza. Pétain has in effect abdicated, and left the dirty work of purging the regime to Laval. But before stepping aside he gave his blessing to the new dictator. There can be no doubt that Laval will use his powers to harness France to the German war machine as closely as possible. And it will depend not on his good will, but on the extent of the resistance of the French people whether the Fuehrer's desire to see Frenchmen fighting alongside Nazis will come true or not. In the meantime, Hitler is trying hard to make the pill easier to swallow. The new occupation, it has been explained, is occupation at all; the German army has traversed southern France as if in transit—and to confirm this, the old demarcation line between the two zones has been maintained. Thus, a demarcation line between two occupations remains as the symbol of French "independence." A most tangible proof of Hitler's "good-will" has been the announcement that the methods of requisitioning used in the north will not be applied in the south; soldiers have been forbidden to buy in the Midi, the franc has remained the only currency valid in the former unoccupied zone, and the Swiss border has again been manned by French soldiers. All these moves betray Hitler's uneasiness; he seems to be aware that the ground he treads on, France itself, is a huge minefield.

Non-Belligerent or Neutral?

Europe's neutrals, quick to detect a shade of emphasis in a matter in which they can claim the expert knowledge of long and varied experience, suggest that events in North Africa have made Spain more neutral than before. For whatever the outcome, Spain is facing a crisis. German troops now man the entire length of the Pyrenees frontier with the exception of the Andorran enclave, whose territorial integrity Hitler has, perhaps ominously, announced his intention to respect. There are undeniably some military factors which suggest that the Axis might derive advantage from the occupation of a friendly Spain and, in particular of Tarifa Point, overlooking the Straits of Gibraltar. This would be the outflanking reply to Allied encirclement. There is, from the Nazi standpoint, the continuing deterrent of the almost catastrophic food situation in Franco Spain, which is only rendered tolerable by the assistance of Allied imports. No doubt, the diplomatic contest is still being waged behind the scenes. A few pointers have become public knowledge. The Spanish press gave considerable publicity to the Allied guarantees of territorial integrity. On November 13th, the Wilhelmstrasse specifically denied that a German occupation of either Spain or Turkey was being contemplated. The new Spanish Ambassador to Berlin was not received on his arrival by Ribbentrop—a fact which may be wholly without significance. Yet the Spanish Government is apparently implementing defence measures. Partial mobilisation was decreed on November 17th, and, in Spanish Morocco, General Yaguez, who distinguished himself in the "War of Liberation," has been appointed Governor. The Caudillo, it seems, has received a sop in the persons of certain leading Spanish Republicans; many of them elderly, who were interned in Vichy France. They will be tried in a military court. The evidence does suggest that the Spanish Government would make a fight for its neutrality. The Germans no doubt realise that loss of influence in Tangier and the Spanish zone would almost certainly be the price of interference in the Peninsula. It is for Hitler to decide where the balance of advantage lies.

Apologia

To the German people, Rommel's defeat in Africa is still only a setback. The propagandists have been busy. They have spoken of a temporary reverse in the inevitable change

ing fortunes of desert warfare, of successful rearguard actions, of brilliant exploits in disengaging forces from the enemy who is himself confronted with the difficulties of lengthening communications. Even if Egypt is of vital importance to Britain, the Germans are told, it is no more than a minor outpost for Germany. One wonders whether, even after nearly a decade of Nazi news, the citizens of the Reich are so easily misled. Like the British people, they must know that many of the phrases used to explain away the retreat are no more than the familiar euphemisms of military disaster; and they cannot have forgotten the lime-light which has been so consistently played upon Rommel's African adventure and the march to Suez. Nor can they have failed to notice a significant change in the presenting of the news. Gone are the speed in reporting events, the wealth of descriptive stories from the front line and the fullness of expert comment to which they have been accustomed in other campaigns. Indeed, they have found their publicists much more concerned with the political explanation of events than with their military aspects. It has been a main part of Nazi propaganda that Africa is part of the *Grossraum* of Europe, a *Grossraum* already established by collaboration between Germany, Italy, Vichy France and Franco Spain. Now, suddenly and without warning, an important segment of the new *Grossraum* has been cut away. The problem for the Nazis is to explain this. In the first days of the Allied Grand Design, the episode was described as a brutal attack on the French people, an act of aggression and treachery, a breach of international law. Strong counter-measures were promised—and described. Vast submarine successes were claimed. But the facts were intractable. The rushing of Axis reinforcements to Tunisia was not mentioned until a week after the first reinforcing troops landed. Nor were political developments helpful. When Darlan first spoke in favour of the Allies, his statements were described as British forgeries. Then, a few days later, Pétain's denunciation of Darlan, admitting Darlan's change of front, was quoted without comment. Now, according to the latest German news, the Arab population of Oran is "in revolt" against American soldiers, while the natives of Tunisia are "collaborating actively" with Axis troops. So the attempt is made to keep up the fiction of *Burafrika* bound to Germany and German aspirations by links of loyalty and leadership. The Anglo-American attack is explained, not by the weakness of the Axis hold on Africa or by the readiness of African populations to greet the new invaders, but—astonishingly enough—by "revelations" of Anglo-American differences. Mr Churchill, it is said, wanted to invade Europe across the Channel; but, after the failure of Dieppe, he had to give in to American plans to make French Africa an American colony. Inevitably, documents have been "found" at the American Embassy in Vichy to prove all this. The intention is to explain away the greatest potential menace with which German Europe and Nazi Germany have been confronted. It seems more than likely that the Germans will learn, as the British did in the days of defeat, that propaganda must be proved by deeds to be effective. Facts, like murder, will out.

Painful Progress

An article on page 623 discusses the apparent difficulty which the Government finds, being a coalition, in arriving at decisions. Planning, which Lord Portal reviewed in the House of Lords on Wednesday, is a prime example. It seems that the parties have not yet been able to agree upon the proposals of the Uthwatt Report for solving the interlocking problems of compensation and betterment—the problems which, as the Minister of Works and Planning said, have hitherto been "a main obstacle to good planning." Without a decision on this matter there will be no effective planning; and, in the columns of the press and elsewhere, there are already signs of the stiffening opposition against any attempt to tap betterment values. Throughout Lord Portal's statement was guarded. Still, in general terms, the Government agrees that reconstruction areas must be planned as a whole, and that additional powers for the compulsory purchase of land are necessary; and various recommendations are being "carefully examined." But the Minister gave no indication that any perceptible headway is being made.

General Work?

The changes in the fire guard scheme, announced by Mr Morrison this week, are welcome insofar as they are

an attempt to ensure that men do their full share of fire guard duty. Thus men who do no duty at their place of work and who live in an area where compulsion has not been applied may be compulsorily enrolled for duty in any part of the area where they work; in "special areas" this will be enforced even if they live in an area where compulsion is applied. Moreover, to make more men and women available over a certain area, fire guard duty at business premises will henceforward not be shared equally among all the workers; instead, the required number will be designated for the premises—on the basis of 42 hours' duty per person per month (48 hours less six hours margin for such contingencies as sickness and leave)—and the remainder will be available for duty elsewhere in the area. This is a wise step towards rationalising the fire guard. So, too, is the prescribing of "special areas" in which all men, or if necessary all men and women, who work there may be posted to any part of it. But when they show that Mr Morrison has given way to the clamour to relax the obligation on women to do fire guard duty, the changes are undesirable. Thus women will not be liable for duty at business premises until all the available men are fully employed as fire guards; and Mr Morrison can prescribe certain premises, or parts of them, as unsuitable for the compulsory performance of fire guard duty by women—in a "special area" he can prescribe whole areas as unsuitable for compulsory duty by women in business premises, though not in residential districts. This is frankly a concession to that austere and authoritative body, the Liverpool City Council, whose male members have objected so vociferously to women being made to do duty in the docks.

The danger is that concessions like these weaken the whole case for equal compensation for women. That case, as does the case for equal pay, rests on the argument that women do the same job as men. If the advocates of equal compensation are now refused their demands, it may well be because the Government can reply that the dangers and responsibilities which women are made to undertake are not equal to men's. It will be a dishonest reply, because the Government has always been against equal compensation, or it would have announced it when compulsion for women was introduced. But it will be difficult for women's champions to counter it. Full allowance should, indeed, be made, in administering compulsion, for women's domestic responsibilities—which are extra work that men do not have to do—but the legal obligation on women should be the same as it is for men if the unanswerable case for equal treatment is to retain its full force. The professed spokesmen of women's rights in that matter have been singularly slow to take up this point. And one of the sad results will be that, irrelevantly but inevitably, the case for equal treatment and equal pay for women in the Services—where the claim for equality is opposed, not by city fathers, but negatively by the pusillanimity and inertia of high women officers who have their positions to consider—will be correspondingly set back.

Women Engineers

The Rules Revision Committee of the Amalgamated Engineering Union have been meeting in Leicester this week to work out the details of the admission of women members, the matter having been established in principle by a recent ballot which resulted in a substantial majority in favour of their admission. The AEU Monthly Journal has described the decision of its members as "rather a leap in the dark." It certainly marks a new stage in trade union practice. Apart from the Association of Engineering and Shipbuilding Draughtsmen and the Iron and Steel Trades' Confederation, the unions catering for workers in the engineering and allied industries do not admit women to their ranks. The tradition of excluding those who have not undergone a long apprenticeship, and prejudice against the employment of women as skilled workers, die hard; but the large-scale introduction of women to the industry since the war and their employment on skilled and semi-skilled work have brought about an altered attitude. The Committee will not only have to consider the appropriate rates of contribution and benefit for women members, but the complicated question of lines of demarcation. There are now over a million women trade unionists and the majority of those in engineering belong to the Transport and General Workers' Union or the National Union of

General and Municipal Workers, which have 250,000 and 240,000 women members, respectively. It is difficult to foretell how many women will wish to join the AEU and what proportion of these are at present completely unorganised and what proportion will be drawn from the General unions. The AEU are anxious not to "poach," but undoubtedly many women engineers will be attracted by the prospect of belonging to a union with the tradition and prestige of the AEU—it has increased its membership by 150,000 in the last nine months and is now over 700,000 strong. This does not mean that the General Workers' unions have not done well by their members; on the contrary, both they and the AEU have negotiated important agreements establishing the principle, at any rate, of the "rate for the job" for women who replace skilled men. The claim for a higher minimum rate for general engineering, which the General Workers' unions put forward, is now under discussion; a deadlock has been reached between the unions and the Employers' Federation who have proposed a completely new basis, and the dispute is being referred to the Minister of Labour. Quite apart from the wages issue, however, it is only logical from the point of view of modernising the structure of Trade Union organisation, that women engaged in engineering should be allowed to belong to the union that caters for engineers.

The Offensive Pound

The first currency to be issued by the British military authorities has made its appearance in French North Africa. The enemy has set many precedents for this step. The *Reichskassenscheine* have faithfully followed in the wake of the German invading armies. The military yen has percolated throughout the Japanese "co-prosperity sphere." The appearance of the military pound is but another symbol that the turning point in the war is now being rounded; sterling is now on the attack. These notes are in the denominations of £1, 10s., 5s., 2s. 6d. and 1s. They are shown to be "Issued by the British Military Authority" and will be used for the payment of British troops in French North Africa. The notes are legal tender only in the territories in which they are issued. Why, it may be asked, was it necessary to make this special issue of military sterling? One of the reasons is that to have used the money current in this country for the purpose of paying troops in North Africa would have been tantamount to driving a coach and horse through a carefully regulated system of exchange control. It would have provided a heaven-sent opportunity for the enemy to rid himself through agents in these territories of the substantial amount of Bank of England notes which must have fallen into his hands during the overrunning of the Low Countries. Similar arrangements have been made for the payment of American troops, who will receive dollar notes of the familiar pattern, but with a distinguishing mark which deprives them of their legal tender attribute in the United States. The rates of exchange fixed by the military authorities are £1=\$4=300 North African francs. The choice of this rate was necessarily arbitrary. The figure falls approximately half-way between the last official rate of the French franc, 176½ to the £, which incidentally still applies to the francs circulating in Fighting French territories, and the open market rate of about 550 francs to the £ which has recently been quoted in Tangiers for Algerian francs. In an article on French North Africa, on page 635, and in a Finance Note on page 641, reasons are suggested why the rate of exchange chosen for the military pound is fair.

Tunis, Corsica, Nice

The Italian press is treating the occupation of Savoy, Nice and Corsica with great reserve, and for some days no mention was made of the arrival of Axis forces in Tunisia. Neutral sources suggest that the occupation has in fact put some heart into the Italian population and provided some counterweight to the news of defeat in North Africa, which has not been concealed, and the renewal of air raids on Genoa, which cannot be concealed. The fact that the Italians have given the Vichy authorities an assurance that the occupation of French territory is a purely defensive measure, which does nothing to modify the legal position existing since the Armistice, has been concealed from the public—though, on the other hand, the suggestion of territorial gain has been conveyed only implicitly. The dominant theme in the press is the denial

that Italy is the weak spot in the Axis armour—that the North African victories are the prelude to invasion. This is a line of approach which is probably designed mainly for German consumption in an eleventh hour attempt to prove that Italy needs no "protection." It still remains uncertain whether Italy will be formally occupied by its allies or whether its status will continue to be that of a "Vichy" power—a puppet ally. The authorities clearly realise that the situation is critical, and the Fascist Party is attempting to strengthen its hold on the home front by renewed exhortations and minor local purges.

The Trade in Thrift

In its report on manpower in banking and insurance, the Kennet Committee readily accepted the view of the associations of employers and workers that the scaling-down of industrial assurance is undesirable and impracticable. In doing so, the Committee appears to have been impressed by the argument that, as "thrift organisations," the offices are doing valuable work in encouraging small savings and making them available to the Government, and that they are thus withdrawing from the public a large volume of purchasing power which "would otherwise promote inflation." It is surprising that the Kennet Committee should have been influenced by such specious arguments. To contend that the industry's personnel, amounting to 95,000 men and women last June, cannot be reduced because it is responsible for collecting between £70 and £80 millions in premiums each year, out of which the offices are investing annually between £25 and £30 millions in new issues of Government securities, would be absurd. A more uneconomical way of transferring purchasing power from the public to the Government could hardly be imagined. In the concentration of industry scheme, the fact that a profitable firm has been in the habit of investing part of its income in Government securities has never been recognised as a reason for special treatment. At this stage of the war, the only valid question is whether or no the services provided by an industry are essential to the community and, if they are, whether they could not be

The Yorkshire Post

performed more economically. As long as ten years ago, certain aspects of industrial assurance came in for severe criticism by a committee on industrial assurance under the chairmanship of Sir Benjamin Cohen, which reported to the Treasury in 1933. It accepted the view of the National Union of Life Assurance Workers that "a proportion of these policies on the lives of parents and other permitted relatives are purely speculative." In part, this explains why the number of paying policies, given at £90 millions, is nearly double the population. Moreover, management expenses are very high and, during the year preceding the war, absorbed about a third of the premiums collected; in some offices the expense ratio exceeds 40 per cent. True, industrial assurance is not confined to the provision of funeral benefits, and it provides for endowment policies which combine funeral benefit with the payment of a lump sum at the end of an agreed term of years. But the Cohen Committee reached the conclusion that this is "an expensive form of saving." While rejecting compulsory amalgamation on grounds similar to those given by the Kennet Committee, the Cohen report recommended the statutory limitation of expenses. If this suggestion had been adopted by the Government, the efficiency of industrial assurance would have been increased. But if it was thought possible and desirable to render this form of insurance more economical in times of peace, the argument for more economical working, in terms of manpower at least, is surely unanswerable now.

Less Milk

The forecast cut in the milk ration for the ordinary consumer will take effect from Sunday, November 22nd, when the maximum allowance will be 2 pints a week. Last year, dairymen were allowed to sell any surplus they might have "off the ration." This year, they will still be allowed to do this for any odd bottles they may have over; but under the new distribution scheme it is not expected that they will have any big or persistent surplus, for they will be expected to report their surpluses to their area offices, which will arrange for its distribution elsewhere. Thus, the national supply of liquid milk will be distributed more evenly over the country than it was last year. In spite of this, the Ministry of Food cannot guarantee that 2 pints a week will be available to every ordinary consumer, especially if winter transport difficulties arise. Hopes, officially expressed, that there would be more liquid milk for ordinary consumers this winter than last have consequently not been fulfilled. It is no use crying over less milk, but it would, in view of these official hopes, be interesting to have an official estimate of the extent to which it is due to a failure in production or to a higher demand, respectively. More priority consumers may this year be taking up their full ration than did so a year ago, which is all to the good. Moreover, condensed milk, which in peacetime was frequently preferred, especially by poorer households, and which last year was distributed by dairymen as part of the milk supply scheme, is this year only available on the surrender of points. There is thus a deterrent to its consumption, because the household milk powder, whatever its virtues, is no substitute for condensed. Former consumers of condensed milk have probably, therefore, been taking up their full liquid ration. On the other hand, it is difficult to believe that, in its earlier hopes of a larger liquid ration this winter, the Ministry of Food based its calculations on the assumption that the full ration would not be taken up by each consumer, whether priority or not; if it did, it was most improvident. If it did not make this assumption, the disappointment cannot be due to a higher demand, since demand is restricted, but to a failure in production. Even within the ban on

statistics of production, some statement seems called for on whether more milk is actually being produced this winter than last.

Housing Needs

The Minister of Health has given an impressive figure for the number of bomb-damaged houses in England and Wales—2,750,000, or one in every five. But the figure does not mean very much. Major and minor damage (apart from broken windows) is lumped together. A house destroyed and a house which is readily repairable each count as one. The figures of human air-raid casualties, if they were not divided into those killed and those seriously injured, would be quite meaningless, and the same applies to building casualties. The important question is how many houses have been totally damaged and how many require major structural alterations. That is, how many have been rendered uninhabitable? It cannot be anything approaching one in five. To know this is important, because, in order to calculate immediate post-war housing needs, this total must be added to the number of houses condemned before the war, but on which work was postponed, as well as those scheduled as unfit for human habitation in the light of higher post-war standards. Mr Brown hopes that, as soon as the urgent programme of construction for the American Forces is completed, he may be able to secure labour for necessary repair work, as well as for keeping a reserve intact in case air raids are resumed. But Mr Bevin has announced that the 28,000 building and civil engineering workers whose call-up was deferred owing to the demands of the American Forces, are now to be called up, and that "further and continuing calls on the industry may be expected in due course"; and in the offensive fourth year, with manpower at full stretch, in the field as well as in the factory, the call to arms can hardly be refused. More than ever, therefore, the problem is one of making the most of the maximum labour force left by allocating available personnel and materials in the most economical way. The first charge is plainly the need to house war workers. This problem of accommodation will be eased by Mr Lyttelton's new policy of taking work to the workers, which will reduce the need for new construction. But only after this immediate task has been done will there be time and resources to make a start with the urgent work of securing that demobilisation, and the reassembly of war-split families, do not straightway reveal acute local shortages of dwellings.

Terror in Norway

The Germans are tightening their hold over Norway and have introduced new and drastic measures against the opposition. The head of the German police has called for the "merciless crushing of every plague and sore, whether big or small, wherever found," and for the extermination of the Joessings (the Norwegian patriots), who are regarded "not only as the enemies of Nasjonal Samling, but of Germany." This threat is apparently being put into effect. Terboven's latest decree introduces the death penalty for such offences as listening to the foreign radio; entering or leaving Norway without a permit; helping prisoners of war and enemy agents; distributing or receiving anti-German and anti-Quisling literature; and for perpetrating acts of violence against quislings. The Swedish press reports that mass arrests are being made and that whole-sale deportations of "Joessings" to Germany or to the Arctic are proceeding. These measures have been made necessary by the increasing vigour of the Norwegian resistance. Despite the fact that radio sets were officially confiscated a year ago, people still continue to listen-in to the BBC; illegal newspapers and pamphlets are widely circulated; and Russian prisoners are being helped to escape and sheltered by peasants. Strikes and acts of sabotage are reported to be increasing, and in the far north guerilla activity is being organised. At the same time a systematic campaign against the Jews is being developed; the Finance Minister, Prytz, has announced that all Jewish property is to be confiscated, and whole families are being interned or deported. There is also evidence of considerable unrest among the quisling party itself. Members are accusing one another of being Freemasons or having Jewish connections, and the unpopularity of the compulsory recruitment for the Norwegian Volunteer Legion has resulted in so many members resigning from the party that an order has had to be issued banning further resignations.

AMERICAN SURVEY

New York at War (From Our New York Correspondent)

October 31st

THE casual visitor to New York City is almost certain to come away with the conviction that that metropolis is wallowing in a vast wave of war prosperity. The crowds of sightseers on the streets are reminiscent of the days of the World's Fair in 1938-39, except that to-day most of them are in Service uniforms. Restaurants and night clubs are doing a land-office business. Seats are at a premium for the better-known Broadway shows, despite the fact that there are 60 per cent more of them than there were at this time last year; and retail merchants, with no serious dent yet made in their business, are confidently looking forward to the best holiday season in their history.

The visitor would be mistaken. What might seem to him to be a reflection of glowing economic health could be better likened, perhaps, to the flush of a hectic disease. For if the war has been a boon to New York, the sightseer's mecca, and to New York, the centre of the amusement world, to New York, the manufacturing city, it has held out thus far only the promise of creeping industrial paralysis.

This is not to say that New York to-day is in a state of depression as measured by the standards, say, of the early 1930's or even by those of the "recession" of 1938. But, compared with what is happening in other industrial centres of the nation, the situation is anomalous and the outlook disturbing—so disturbing that Commissioner of Manpower McNutt recently referred to the city as the country's "number one black spot." At a time when the nation's shortage of labour is so acute that the authorities are predicting that three out of every four housewives will eventually have to be mobilised for war work, New York has on its hands a great pool of surplus labour for which it can find nothing to do. On July 17th, there were 368,000 registered unemployed in the city. By September 11th, this figure had been reduced to 288,000; but this was mainly the result of temporary seasonal re-employment in garment making. Unemployment in New York, it is true, was about 16 per cent lower in September than it was before the defence effort began in 1940, but unemployment in the country as a whole had declined in the same period by 71 per cent.

Worse to Come

If this were the entire story it might not be particularly disquieting. The disturbing aspect is that the situation threatens to become worse instead of better, as the production of civilian goods and retail sales are curtailed by priority regulations and other wartime restrictions. It must get worse, unless jobs can be found in war industry for those who face disemployment in the months ahead.

There is a rather widespread superstition that New York City has been left out in the distribution of war contracts because of its military vulnerability. This is not true. Right across the Hudson River the Newark-Jersey City area is working on more war orders than any area of corresponding size in the nation except Detroit and Los Angeles. The truth is that New York is losing out, so far as getting its proportionate share of war contracts is concerned, not because of its military vulnerability, but because of its economic vulnerability.

New York is the nation's—and the world's—largest manufacturing city. It turns out \$4,000 millions of products a year in peacetime. It gives employment to more workers than the great industrial centres of Detroit and Pittsburgh combined. Its chief misfortune in the present situation is that it happens to manufacture the wrong things. Its speciality is consumption goods. The garment industry is to New York what the automobile industry is to Detroit. Three light industries—clothing, printing and food—employ 355,000 of the approximately 670,000 workers

normally engaged in manufacturing. The nature of these industries constitutes a double-edged weakness. In the first place, it means that the city stands to suffer disproportionately as consumption is progressively restricted; in the second place, it means that its manufacturing establishments and its manufacturing equipment are ill adapted to conversion to war purposes. Of the 27,000 factories in the city, only about 2,000, representing about 150,000 employees, are among the fifteen major industries listed by the War Production Board as defence industries.

In a memorandum submitted on October 13th to the special Senate committee appointed to study the problems of American small business, George A. Sloan, Commissioner of the New York City Department of Commerce, presented a table which summed up graphically the contrast between what has happened in New York, with its large number of small plants, and Detroit, the typical city of large plants.

	NYC Industrial Area	Detroit Industrial Area	USA
No. of factories (1939)	27,174	2,772	184,230
No. of factory wage earners (1939)	534,008	311,332	7,886,567
Population (1940)	7,454,995	1,623,452	131,669,275
Army and Navy Supply contracts awarded June, 1940 — July, 1942, in millions of dollars (excluding new plant construction)	\$1,481	\$4,477	\$63,197
Value of manufactures in millions (1939)	\$4,295	\$2,719	\$56,829
Contract awards per head	\$198	\$2,750	\$480

New York City has been called upon to produce an insignificant share of the \$63 billions of war goods for which contracts have been awarded. Mr Sloan says in his memorandum:—

The basic reason for this situation is the difficulty under present methods of doing business with many thousands of small plants Ninety-seven per cent of our factories employ 100 people or less. Sixty-five per cent of our factory workers are in factories employing 100 or less, while in Detroit only 11 per cent in factories of this size. More striking is the fact that only 4 per cent of our half million factory workers normally are employed in factories employing 1,000 or more, while in Detroit 64 per cent of the workers are in 60 plants employing 1,000 or more.

New York City is the small plants city of the country. We have over 250,000 workers in 25,000 factories employing 50 people or less—more factories and workers of this size than the cities of Chicago, Los Angeles, Boston, Philadelphia and Detroit combined.

But, if the size of New York's manufacturing establishments constitutes the main difficulty in adjusting the city's economy to the defence effort, there are other complications.

1. The fact that an industrial centre includes a large number of small plants is not of itself a fatal drawback, if there are large plants in the same area which can feed sub-contracts out to these plants. Cleveland and Philadelphia have innumerable small manufacturing units, but these have in many cases received work from the big primary contractors in the neighbourhood. There are few prime contractors of that type in New York area; and to the extent that they exist, they have not meshed well to date with the small units. The Brooklyn Navy Yard, for example, has found that the metal working shops of New York, most of them accustomed to turning out light household equipment, cannot meet the tolerances required for the precision parts used by the Navy.

2. There is a substantial wartime demand for the products of New York's most important industry, garment making; but, in spite of this fact, one out of every three workers in the industry is out of a job at the present time.

THE REFORM OF ACCOUNTS

The recent series of articles in *The Economist* on the Reform of Company Accounts has aroused considerable interest; and for the convenience of readers these articles have been reprinted in pamphlet form, price 6d. The number of copies is necessarily limited; and readers are asked to apply to *The Economist Newspaper, Limited, Brettenham House, 15, Lancaster Place, London, W.C.2.* (Telephone No. Temple Bar 3316.)

The trouble here is one that antedates the war, and arises from the fact that New York garment workers are at a disadvantage as against those of other sections of the country. Nearly all of the 300,000 garment workers in New York City are members of the International Ladies Garment Workers or the Amalgamated Clothing Workers. These unions have been so successful in obtaining high wages that they have literally priced New York manufacturers out of competition with manufacturers in lower-cost sections of the country, particularly the south. The average garment worker in New York makes two or three times the \$16 a week guaranteed by the Wages and Hours law. It is figured that a pair of Army trousers which can be manufactured in the south for 67 cents costs between 85 cents and 90 cents when produced in New York City. It was charged recently by union leaders that New York, with 40 per cent of the nation's capacity, had filled less than 1 per cent of the orders placed for Army trousers up to that time. Most of the business, it was said, had gone to "mushroom" shops in the south.

3. Finally, there is the problem of unemployment outside the manufacturing industries. Despite the fact that New York is the nation's number one manufacturing city, factory workers account for only about 30 per cent of the employed. Here is how most New Yorkers make their living, according to a recent study by the Department of Commerce: Manufacturing, 670,000; wholesale and retail trade, 600,000; finance, insurance and real estate, 300,000; the service industries (hotels, beauty parlours, etc.), 280,000; and transportation, communications and other utilities, 200,000.

A Major Casualty

Needless to say, the fact that so much of the city's employment is in the field of distribution and services represents another example of its vulnerability to wartime economic readjustments. New Yorkers have already witnessed one major casualty in the distributing field, namely "Automobile Row" in the heart of midtown Manhattan. To-day the plate-glassed showrooms around Columbus Square are filled with second-hand cars, and most of the 4,000 salesmen have lost their jobs. This story can be expected to be repeated in varying degrees in other lines as consumer restrictions spread. Under-Secretary of Commerce Wayne C. Taylor, testifying on September 29th before the Senate Small Business Committee, predicted that upwards of 300,000 retail stores would have to close by the end of next year in the United States. There is certainly food for reflection in this statement for New York, with its 115,000 retail stores, employing nearly 450,000 persons.

Government officials have been co-operating with New York City officials in an effort to relieve unemployment. In recognition of the particularly favourable housing situation in New York, for example, several Government agencies have been moved bodily out of Washington to this city. This has been of at least some minor assistance to real estate and to the city's merchants and service trades. A Government aluminium plant has been awarded to the Brooklyn area. Plans are under consideration to allocate to the city contracts for goods normally produced here, even though this may involve paying higher prices than would have to be paid elsewhere. The unions have agreed to go part way in solving this particular problem by making wage concessions.

But when all is said and done, New York's central problem remains the problem represented by the small size of the city's industrial units, and this, as Mayor La Guardia recently said, means that the city's chief hope probably rests with the Smaller War Plants Corporation. This is the unit created under the War Production Board on June 11th last for mobilising the nation's small plant capacity. The SWPC has four main purposes: (1) To make loans for the conversion of small concerns unable to obtain funds elsewhere; (2) to provide the engineering skill to facilitate plant conversion and pooling; (3) to take prime contracts from Government procurement agencies and subcontract them, itself, to small concerns in pools; and (4) to certify to Government procurement agencies that selected small concerns are competent to handle war orders.

If the SWPC works out as its authors hope it will, it can perform two useful functions. It can help measurably in speeding up the war effort; and it can at the same time save many small concerns from going to seed because of inability to get into the war production picture. If the SWPC spells hope to New York, New York in turn poses the SWPC with an outstanding challenge and with a serious proving ground.

Taxing Capital Gains

[FROM OUR NEW YORK CORRESPONDENT]

October 5th

WHEN the States, on February 25, 1913, ratified the proposal of Congress authorising the federal taxation of income, they added a new amendment, the Sixteenth, to the American Constitution, and they opened up vast new sources of revenue to the Government. One of the incidental effects of that action was the creation of two problems which were to plague the nation's lawmakers for a generation to come.

One of these problems is that involving the taxation by the Federal Government of the income derived from state and municipal securities; the other concerns the taxation of capital gains, the American equivalent of what are referred to in Britain as casual profits. Neither problem has yet been satisfactorily solved. And they have not been solved because, in both instances, practical fiscal policies have run head-on into conflicting political considerations or considerations of equity and social justice.

It is almost universally agreed that, from a purely fiscal viewpoint, the exemption from taxation of billions of dollars in state and municipal securities is totally incompatible with the principle of a graduated income tax. Yet, after thirty years, this basic contradiction still lies firmly embedded in the American tax system, for the simple reason that no Congress has had the political temerity to seek an end of the anomaly through a Constitutional referendum. Similarly, it has been the considered judgment of a majority of Governments that capital gains do not constitute a legitimate—or if a legitimate, then not a practical—field for the application of the income-tax. But in the United States, where capital gains, for reasons peculiar to the financial and political climate of the country, have come to be identified more closely than elsewhere, perhaps, with stock market profits, there has been a pronounced reluctance to base national policy with respect to the treatment of such income on the single test of fiscal expediency.

Against Discrimination

Although this attitude undoubtedly finds its most extreme expression among the nation's legislators in Washington (where an anti-Wall Street bias is still all too frequently regarded as a political asset), it is by no means confined to those who may be described as politically-minded in the narrow sense of that term. It is shared quite generally, as a matter of fact, by most tax economists who are "politically-minded" in a broad social sense. Thus, Professor Robert Murray Haig, in challenging the thesis that capital gains should be ignored for income-tax purposes, asks:

What is to be said for the fairness of an income-tax that levies its toll on the pay envelope of the wage-earner and the monthly check of the salaried man . . . and at the same time exempts the winnings of the successful stockbroker?

Similarly, the special committee of the Twentieth Century Fund, which conducted an inquiry into the capital gains tax in 1937—a committee whose membership could by no stretch of the imagination be described as either radical or unorthodox—observed that:

A tax system does not achieve justice when individuals who increase their wealth by labour or services are subject to an income-tax, while other individuals, who increase their wealth by wise investment, are subject to lower income-taxes or escape taxation entirely.

Partly because this was the prevailing legislative attitude toward capital gains taxation at the time, and partly because income-tax rates were so low that the whole issue was more or less academic, the 1913 Revenue Act taxed capital gains at the same rate and on the same basis as other income, and provided full deductibility for capital losses. That practice would probably have continued down to the present time without arousing serious controversy had tax rates remained at their pre-world war level. But what had proved a workable arrangement under nominal tax rates was to develop serious weaknesses under higher rates. The first breakaway from the original formula came in the war years, 1916-1918, when the normal tax rate was rising from 1 per cent to 12 per cent and the maximum surtax rate from 6 per cent to 65 per cent. The 1916 and 1917 Acts introduced the principle of permitting deductions for capital losses to the extent of any corresponding capital gains, but the Revenue Act of 1918 returned to the earlier practice of allowing deduction of capital losses in full against income of any kind.

When the time came for the writing of the 1921 Revenue

Act, the country was in a state of acute depression. Acting on the contention of Secretary Mellon in his annual report of that year, that high tax rates were retarding capital transactions, Congress proceeded to introduce two innovations in the treatment of such profits which, in one form or another, have persisted to this day. It divided assets into (a) those held for two years or less, and (b) those held for longer periods, terming the latter "capital assets," and giving holders the option of paying a flat rate of 12½ per cent on profits realised from their sale. There was no change in the treatment of assets held for two years or less, the implication being that such assets belonged in the speculative, rather than the investment category. The combination of a comparatively low flat rate on capital gains and full deductibility of capital losses from all forms of income produced a situation in which this tax was causing net losses to the Treasury—so in 1924 credits for long-term capital losses were limited to amounts matching the tax concessions on capital gains.

The fact that no similar change was made at the time in the treatment of short-term losses paved the way for the next revision, one in which reform, rather than relief, was the motive. A sub-committee of the Senate Banking Committee, which was investigating stock market practices in the spring of 1933, brought out the fact that many prominent financial leaders, by deducting capital losses, had been able to reduce their tax payments to the vanishing point in the early depression years. None of the Morgan partners, it was revealed, for example, had paid any income-tax in 1931 or 1932, while Otto Kahn, head of Kuhn, Loeb and Co., admitted that he had paid none during 1930, 1931 or 1932. No one suggested that there had been a breach by any of these persons of the income-tax law and it was pointed out in their defence that the Morgan partners as a group had paid huge income taxes in the more prosperous years. The feeling was, however—reasonable or unreasonable though it may have been—that there was something fundamentally wrong with a tax law which permitted persons who presumably were enjoying substantial current cash incomes to avoid contributing to the support of the Government, even for a single year. This criticism led to a modification of the capital gains and losses provision of the law in 1934, under which capital gains were taxable in full, and losses were deductible as offset by capital gains, except that long-term net losses up to \$2,000 could be deducted from ordinary income.

The earlier trend toward liberalisation was resumed in the Act of 1938. This Act continued to treat short term capital gains (gains taken within 18 months) as regular income, and to make short term losses deductible only to the extent of short-term gains. But it did make a concession to the speculative element by providing that such net losses might, to a limited extent, be carried forward for a year, and used as an offset to possible short-term gains in that year. A tax ceiling of 20 per cent was placed on net gains taken on assets held between 18 and 24 months, and of 15 per cent on those held over two years. Long-term net losses were made deductible from any income, with the tax benefit limited, however, to 20 and 15 per cent respectively.

The rather sweeping liberalisations contained in the 1938 Act aroused criticism in some quarters, and seem to have been one of the reasons why the President permitted the measure to become law without his signature. Nevertheless, with the capital gains question again being opened up this year, the evidence to date is that the process of modification is continuing. The House measure, it is true, calls for the substitution of a flat tax of 25 per cent on long-term gains for the two ceilings of 20 and 15 per cent contained in the 1938 Act, in recognition of the fact that individual income-tax rates have been stepped up to 88 per cent. Otherwise, however, the Bill appears to be more liberal than most of its predecessors. Short-term gains would still be taxed at the normal and surtax rates applying to ordinary income, but the line of distinction between short and long gains would be lowered to 15 months, and losses, whether short or long-term, would be deductible from either long or short-term gains. In addition, a net capital loss up to a maximum of \$1,000, would be deductible from ordinary income. Finally, a net short or long-term loss might be carried forward for five years, and deducted from similar gains in any of those years and up to \$1,000 from other income.

Cui Bono?

A very substantial and important body of opinion still holds that the taxation of capital gains is a futile business. This group, of which Mr Elisha M. Friedman, who has made a study of the subject for the New York Stock Ex-

change, is perhaps the most articulate spokesman, takes the position that such taxation should be abandoned after the war, while urging, in the interim, elimination of the distinction between short-term gains and long-term gains, and the taxation of all capital gains at a flat rate as low as, or lower than, the 12½ per cent rate contained in the Revenue Act of 1921. The tax philosophy of this school of thought has been embodied in the so-called Boland Bill, introduced by the late Representative Boland of Pennsylvania on January 12th last. This Bill calls for a flat capital gains tax of 10 per cent.

The chief emphasis of the opponents of the tax to-day is on its weakness as a revenue-producer, a criticism which is, of course, especially effective when revenue is as badly needed as at present. Mr Emil Schram, president of the New York Stock Exchange, summed up this argument in his testimony before the Ways and Means Committee:

It seems to me that there are only two reasons why people invest their capital. Either they invest to obtain income by way of rents, dividends or interest, or they invest with the hope that they may sell the investment at a profit. Unless taxpayers are willing to buy and sell capital assets there is no possibility of deriving revenue from a capital gains tax.

The statistical evidence, as Mr Arundel Cotter has shown in a studious analysis in *The Wall Street Journal*, indicates clearly that high taxes on capital gains

have a direct and adverse effect upon tax collections, and that the yield from a relative low tax, whether the asset is held for a long or a short time, would bring the Treasury much more than is now being collected.

American Notes

News from the Pacific

Fortune has favoured the Administration by providing, in the naval victory in the Solomons, an overwhelming answer to the rising tide of criticisms of Pacific operations and information policy—which reached a climax last week in a series of charges made by Congressman Maas, of Minnesota. President Roosevelt has not been content to let events speak for themselves, although the smashing defeat of the Japanese expeditionary force provided a convincing rebuttal. In a broadcast to the annual forum held by the *New York Herald Tribune* Mr Roosevelt made a reasoned and persuasive defence of the information policy which has been the target of many attacks. Arguing that it was impossible for the Government always to give spot news to the people in wartime, Mr Roosevelt pointed out that those who knew the most about what was going on were free to say the least. After pointed reference to the "clamour of politics and criticism from those who, as we know in our hearts, are actuated by political motives," the President drove home his case by citing a recent instance in which he reproached himself for having made public the loss of an aircraft carrier at the end of October:

When we got news of the sinking of this particular ship a great issue was being raised in Congress and in the public vehicles of information as to the suppression of news from the fighting fronts. . . . I yielded to the clamour. I did so partly in realisation of the certainty that if the news of the sinking were given out two or three weeks later, it would be publicly charged that the news had been suppressed until after the election. Shortly thereafter, protests came from the admirals in command. . . . This confession of mine illustrates to the people of this country the fact that in time of war the conduct of that war with the aim of victory comes first. They know not one of their inalienable rights is taken away through failure to disclose for reasonable lengths of time the facts that Hitler and Mussolini and Tojo would give their eye-teeth to learn.

It is a shocking admission—and no doubt was so intended—that the President should be forced to reveal information of military value because of well-grounded suspicion that his refusal to do so would be used by political enemies. News from the Pacific has not been handled in a manner beyond reproach in every case. Mr Elmer Davis, head of the Office of War Information, has admitted that it was

Critical . . . Stimulating . . . Forceful

SCOPE is not a trade journal—it is Britain's only industrial magazine.

an error to hold up the news of the cruiser losses in August; but he has generously shouldered equal responsibility with the Navy for that decision. It appears, however, that the American people do not even yet fully appreciate the importance of secrecy as a military weapon; or, in the case of the Pacific theatre, the extreme difficulty of obtaining accurate information, even by the Services themselves. Beyond these human misapprehensions, there is the undoubted fact that political capital is being made out of the formidable difficulties of holding a balance between security and the speedy publication of news, good or bad. Congressman Maas is a well-known advocate of the "Pacific first" school, and his violent accusations of military incompetence and misleading communiqués must be read in this light.

Solid South

A bitter fight is being waged by Southern Congressmen against the Bill to abolish the poll tax in eight Southern states. The filibuster by Senator Bilbo and the difficulty of obtaining a quorum, which made it necessary to order the technical arrest of absent members, are only two of the weapons being employed to defeat a measure which threatens the disintegration of the "solid south." The poll tax is one of a number of measures which are used to keep the electorate small and manageable in most of the Southern states, and it is in large part responsible for perpetuating the grip of political machines like Harry Byrd's "courthouse crowd" in Virginia. Although Southern Congressmen are Democrats in name, and have loyally supported the President's foreign policy, they represent the extreme right wing of the Democratic party. On domestic issues, their stand is hardly distinguishable from that of the most reactionary Republican. The poll tax puts the privilege of voting outside the grasp of both negro and poor white; but its main effect is felt by the poor white because of the existence of so many methods to prevent negroes from voting. Apart from the threat of violence, never completely absent, registration is made impossibly difficult for negroes, and the literacy requirements are manipulated to prevent even highly educated negroes from going to the polls. In one extreme case, a Harvard Ph.D. was barred from voting on the ground of illiteracy. The soldier's vote Bill has already suspended the poll tax for the duration, as far as members of the Forces are concerned, although for other reasons the soldier's vote failed to make itself felt at the recent elections. The wider Bill was proposed originally by Senator Pepper, a New Deal Democrat. There are some reports that it is being supported by Republicans, who hope to profit from the break-up of conservative democratic control in the South. But the main result of liberalising the franchise undoubtedly would be to increase support for the President and progressive Democrats at the expense of reactionaries like Cotton Ed Smith. But the passage of the Bill is by no means certain. The fury it has aroused is illustrated by one Alabama Congressman, who called it "the worst thing since Reconstruction." It is proof of the gulf within the Democratic party that one of the members who could not be found last week, Senator Hill of Alabama, the majority whip of the Senate, has declared that he intends to oppose the measure with every means in his power.

Congress Mobilises

A Bill to establish an Office of War Mobilisation is reported to have been introduced, or to be about to be introduced, in both houses of Congress. This office would take over complete control of war production and the allocation of manpower. Particular emphasis is placed upon the substitution of civilian, as opposed to military, control in every respect, and upon the replacement of "dollar-a-year" executives lent from industry by men employed and paid in the first instance by the Government. Unfortunately, the only clue to the Bill's authorship is that it is introduced by a "group of Democratic senators." It appears however, to embody the criticisms and suggestions about the control of war production that have been developed by outstanding Congressional investigations which have taken place in the last six months. The proposal for an Office of War Mobilisation was made last month in the report of a House Committee. Senator Truman's group has consistently opposed the employment of dollar-a-year men, pointing out the risk that their judgment might be affected by the interests of the industry from which they are drawn; and an able report last August took Mr Nelson to task for giving an undue share of his authority over manpower and produc-

tion to the Services. It would appear that the Bill represents the views of firm, if critical, friends of the Administration, although some reports suggest that it is the first evidence of the determination of Congress to assert its authority over aspects of the war which have fallen increasingly under the control of the Executive. Mr Roosevelt is said to be considering some reform of his administration, and there is little doubt that some substantial improvements could be effected by consolidating authority and responsibility for policy, somewhat along the lines suggested by the Baruch Committee in connection with rubber. One step for which there is growing demand is the appointment of a food administrator. The shortage of dairy products, particularly butter, is the newest sign that the question of food supplies demands more than the part-time attention of the numerous agencies now concerned. It is doubtful whether the drastic measure of concentrating all responsibility over production and related problems in one man will be adopted; but some reforms of the administrative structure will be demanded by Congress if the Administration does not act before January.

Tap Issues for the Public

As the scale of United States expenditure increases and, with it, the lag between the yield of higher taxes and the outlay of the Government, the need to mop up excess purchasing power by means of Government loans, issued not to the banks but to the public, becomes more urgent. In October, no less than \$6,800 millions of securities were sold by the US Government. But too large a part of this had to be shouldered by the banks, and thus did little to cut into an already redundant volume of purchasing power in the hands of the public. The recent cuts in Federal Reserve rates on member bank advances secured by Government paper were an indication of the undue reliance recently placed on the banks in the Government financing programme. This is to be changed. Mr Morgenthau who, when recently in this country, was full of admiration for the work done by the National Savings Committee, has announced a new borrowing policy which is to come into force as from the end of this month. It will involve greater reliance on tap issues which, as in this country, will be made in a number of concurrent loans, each devised to appeal to a particular class of investor. The campaign to induce the public to buy more Government bonds is to be launched with the full backing of the New York Stock Exchange, the various banking associations and the Office of War Information. In addition, Mr Morgenthau has enlisted the help of the sales and advertising executives of private industry and business. One of the most popular and successful achievements of salesmanship in the War Savings Bonds campaign was to enlist the help of film stars and other lovelies who clad themselves in bonds which were torn off them by eager purchasers. Now that big business executives are to be at the helm of the campaign devices may, perhaps, be expected which will put in the shade these earlier stimuli to sound Government finance.

Shorter Notes

Owing to an unfortunate and extraordinary error in a note last week entitled "The Warp and the Woof" (on p. 604), Mr Wallace was made to refer instead to the "wasp and the wolf" of democracy. Apologies are due to Mr Wallace and to the countries involved, and thanks to the many readers who drew attention to the gaffe, both in rhyme and in prose.

Mr Churchill's phrase, "We mean to hold our own," concerning the British Empire, has provoked adverse comment in the United States. The two most prominent critics have been Mr Willkie and Senator Pepper. Out of its context, the phrase is liable to misinterpretation. Mr Willkie, whose lustre has been a little dimmed by the events of the past fortnight, is not always scrupulous about contexts as he continues to press for more effective co-ordination of strategy, particularly with Russia and China, and for the reform of the colonial system.

Shipbuilding records in the United States are made only to be broken. Mr Kaiser's latest is the assembly and launching of a naval auxiliary craft two days and 23 hours and 40 minutes after the keel had been laid. It is hard to believe that assembly time can be very much further reduced.

THE WORLD OVERSEAS

French North Africa—I

THE French African Empire came into being after the defeat of 1870. Bismarck supported French colonial expansion for two reasons. He hoped, first, to divert French energies and ambitions from *revanche* to overseas conquests. He was, secondly, anxious to fan British-French colonial rivalry in order to prevent the coalition of the two Western Powers. Hitler's policy towards the French Empire since 1940 has been a caricature of Bismarck's. Until recently, the fear of *revanche* was absent. France lay prostrate and disarmed; and a German victory would make any French dreams about redressing the position utterly unreal for an epoch. Vichy's nominal sovereignty over the African possessions was, therefore, conceived as an interim arrangement only. The great post-war readjustment was envisaged in terms of the "geo-political Eurafican" concept. The material wealth of Africa—so the theory ran—"belongs" to no particular state but to Europe as a whole, while Europe itself comes in turn under German leadership. The one real point of resemblance between Hitler's and Bismarck's policies has been the endeavour to use the colonial problem as a wedge to be driven between France and its Allies. So far as Vichy is concerned, the endeavour has not been altogether wasted. But Bismarck's policy failed to prevent the *Entente Cordiale*; and the present Hitlerian caricature is doomed to an incomparably quicker failure. The German gambit has been effectively answered by the explicit pledge of the United Nations to restore North Africa to France, a pledge the significance of which is more strongly emphasised by the fact that it has come from the United States, the only power which has hitherto refused to recognise *de jure* the French Protectorate over Morocco. This is why the *affaire Darlan* (which is discussed on page 621) is so important. The restoration of North Africa, not to Vichy, but to France, is part of the wider design to restore France itself to its former rôle in Europe, and to restore Europe to its place in a world of free and friendly peoples.

New Problems

Meanwhile, however, French North Africa has been cut off from Metropolitan France. For the duration of the war, and until France itself is freed from German occupation, the region has now come within the sphere of influence of the United Nations; and a whole series of problems arises from this change. There is, first, the need of economic adjustment. The economy of French North Africa has to a very high degree been dependent on the trade with the mother country. Before the war, Algeria shipped 75 per cent of its imports from France; and 84 per cent of its exports went there. The corresponding figures for Tunisia were 62 per cent and 56 per cent; and for Morocco 34.5 and 45 per cent. Algeria was thus linked to France by the strongest material ties. Morocco with its "open door" trade, facing the Atlantic as well as the Mediterranean, was more loosely connected.

The war has changed the whole picture. Since 1940, imports from France into the African possessions have dwindled to insignificance; and one way traffic from Africa to France has assumed a record size. In peace time, the main difficulty in French North African trade was the competitive character of the North African economy. The Algerian and Moroccan farmers with their grain and vegetables and fruits competed with the French peasants, a fact which exercised a restrictive influence upon North African agriculture. After the Armistice, the dependence of the unoccupied zone on the import of North African foodstuffs caused Vichy to adopt a more paternal attitude towards North African agriculture. But the attempts to expand output were frustrated by the acute shortage of fuel for tractors and so on throughout the whole territory.

In all the three North African possessions, there are two distinct types of agriculture: the primitive farming of the natives; and the large scale and highly mechanised farms of European settlers. The latter have sometimes accounted for more than half of the crops. Since the Armistice, substitutes and gas-generators have come into use; but the crisis has all the same remained acute and the shortage of agricultural labour due to the absence of prisoners of war has made the position even more difficult. Allied economic policy can, with comparatively modest means, bring about a genuine revival of North African farming. The quantities of petrol required are relatively small. Morocco, for instance, which last year accounted for 52 per cent of North African exports to France, used to consume not more than 35-40 thousand tons of petrol a year. Native farming, too, has been in decline during the last two years. The peasant lacked any incentive to produce more than was needed to cover his own consumption. In return for his agricultural produce, he could obtain none of the manufactured goods which used to be imported from France.

The shortage of textiles has been felt particularly acutely; and recent correspondence in Vichy newspapers described pathetic pictures of the North African hunger for textiles. The lack of clothing had its political repercussions, since it made it difficult for the native Moslems to observe some of their traditional customs; and, as so often happens in the East, the obstacles to the observance of religious rites threatened to lead to disturbances. The Moslems resented being unable to bury their dead in shrouds; and the shortage of veils kept Moslem women indoors. Vichy prohibited the manufacture of carpets, in order to provide for the clothing of the natives. The transfer of textile factories from Lyons to North Africa also had, as one of its objectives, the easing of this difficulty. In this respect, too, relatively little is needed to bring economic relief to the population and to provide the incentive for a corresponding effort in farming.

Tea, coffee and sugar have been the other shortages, while vegetables, fruit, wines, dairy products, meat and fish have been plentiful—great surpluses used to go to unoccupied France. Recently, canning of meat, fish and vegetables has developed on a large scale, although it has been hampered by the shortage of tin. The capacity of fish canneries in Morocco alone has been made equal to that of Portugal (1.5 million boxes of tins produced by 52 plants). Fifty-one Moroccan plants have been engaged in production of tinned vegetables. North Africa can thus serve not only as a convenient base for food supplies to Allied armies in Africa, but also as the producer of export surpluses which Lord Woolton may welcome.

Mineral Wealth

The two main minerals of North Africa are iron ore and phosphates. The pre-war output of iron ore amounted to some 3.5-4 million tons (2.2 million tons metal content), an output equal to, if not greater than, the whole of Spanish metropolitan and Moroccan extraction. More than three-quarters of all North African iron ore comes from Algeria and about a quarter from Tunisia. It also seems that a considerable expansion of output may be easy to achieve. It has often been said that vested interests in Metropolitan France stood in the way of a full-scale exploitation of Algerian ore resources.

The position with regard to rock phosphates is somewhat more complicated. Out of the total of about 4 million tons of annual production, more than 2 millions used to be produced in Tunisia and 1.5 million in French Morocco. During the armistice years, exports of phosphates to France and to Germany absorbed about one-third of the output. Italy used to buy up a considerable portion. The *Bureau des Recherches et des Participations Minières*

has nevertheless been compelled to limit production; the greater part of the mines have been idle and only maintenance services have been kept up. It is difficult to say what proportion of the North African rock phosphates can be absorbed by Allied countries in the near future, though phosphates will be needed in some quantity both for explosives and fertilisers.

A well thought out and enlightened economic policy can use the resources of North Africa to strengthen Allied war potential. It can also promote the economic advancement of the region to an extent which was unimaginable during the years of depression and the subsequent period, in which the restrictive influences of competitive French agricultural and mining interests set narrow limits to the development of North African economy. The Allied occupation has brought an unexpectedly quick close to the wholly artificial and economically irrational experiment of pseudo-industrialisation undertaken by Vichy under the pressure of shortages and German looting. Apart from the transfer of some textile factories from France, it has boiled down to the encouragement of small-scale, primitive handicrafts which were called upon to fill the gaps left by the falling-off of French imports. But it was clear from the beginning that the small and obsolete handicrafts could have no future before them from the moment when the competition of European manufactured goods became active again. The industrialisation scheme led the economic departments of Vichy's North African administration to undertake wasteful experiments in search of oil and coal resources. The results, even according to official Vichy statements, were very disappointing—although this did not prevent the press from publishing wildly exaggerated claims about the creation of a North African fuel base.

Another experiment, started under the pressure of the cotton shortage, but in the longer run totally unjustified economically, was Vichy's scheme to create "a second Egypt" in the French possessions. The Niger valley was singled out for this purpose; and the whole scheme was linked with the plan to build a Trans-Sahara railway, which would carry the cotton crops across the desert—northwards. The failure of the railway scheme was described in *The Economist* of May 23, 1942. The slogan of "a second Egypt inside the French Empire" figured prominently in Vichy's propaganda. It was warmly supported by the German press, which emphasised its anti-British edge and presented the whole enterprise as the French *revanche* for Fashoda. North Africa has also been partly affected by the "second Egypt" plan; and a start was made, under the auspices of General Noguès, by the *Office des Béni Amir*, which was said to have put 45 thousand Moroccan nomadic families to the cultivation of cotton.

The Currency Question

The organisation of the economic life of French North Africa will demand close co-operation between the local French administration and the proper Allied authorities. Immediate policy will have to be ruled by the requirements of the United Nations' war effort. The most urgent task is probably the settlement of the currency problem for the duration of the war. The first step has been taken by fixing the rate of exchange between the new military pound and the franc at 1:300. Inflation of currency has developed in North Africa at a quicker pace than in France itself, as the local banks of issue have had to finance the increased and one-sided trade with France. In December 1941 the Bank of Algeria was authorised by Vichy to increase its note circulation from 3 to 10 milliard francs. The volume of currency in Morocco was in August 1942 five times bigger than it was before the war. In the light of this the new rate of exchange seems to be fair to the interests of the local population.

Party Politics in Eire

[FROM OUR DUBLIN CORRESPONDENT]

November 10th

ALL the signs of a coming General Election are beginning to appear in the political world. The election is due to take place before next autumn. It would be legally possible to postpone it in view of the emergency, and at one time it was thought that such a postponement would take place.

The Government has stated that it would not make any move to postpone the election without the unanimous agreement of all parties. In view of the gains by the Labour Party at the local elections, such agreement is no longer possible. It may be taken, therefore, that the election will be held, probably in the spring. The holding of an election in present circumstances gives rise to many difficulties. The paper shortage will prevent proper canvassing, and the reduced transport facilities will prevent many voters from going to the poll. Moreover, it is regrettable that party controversy should be awakened in times of such danger. The Government, however, takes the view that these evils are outweighed by the renewed vote of confidence which it hopes to obtain. Any suggestion that the Government does not command the support of the majority in the country weakens its authority to deal with the grave internal and external problems with which it is beset. It therefore seeks a new mandate from the people.

The Government party faces the election with many advantages, and many disadvantages. Unquestionably, its greatest advantage is the personality of Mr de Valera, whose handling of the war situation has increased his reputation among all parties. Complete confidence is felt in Mr de Valera's determination to preserve the neutrality of the country, a matter upon which all parties are agreed. He has, furthermore, shown a determination in dealing with internal disorder which many of his critics would not have granted him some years ago. The conservative financial policy which the Government has pursued, and its attitude on the central banking question, have allayed the fear held by some that Mr de Valera has dangerous left-wing tendencies in economic and social matters. It would not be surprising if his party received support from certain conservative elements in the country who have hitherto voted against him.

Against all these advantages, the Government party suffers from countervailing disadvantages. Any party that has been in office for ten years is bound to experience the unpleasant sensation of the swing of the pendulum. Moreover, the last three years have been a period of exceptional difficulty. The public have suffered many deprivations and inconveniences for which the Government is, rightly or wrongly, blamed. While it cannot be denied that the supply question has been bungled in certain directions, it must be admitted that the difficulties have been largely outside the Government's control. The sudden reduction of imports has necessitated a move in the direction of self-sufficiency at a pace which has proved unwelcome even to a Government committed to a policy of autarky. It appears possible that the supply situation may improve in the future and that the evils of the transition may have been greater than those of the years to come. The main criticism of the Government comes from the Labour Party, who are dissatisfied with the wages stabilisation order. In view of the fact that both home-produced raw materials and imports have risen steeply in price, the stabilisation of wages was a courageous step if inflation was to be avoided. The stop order on wages has been tempered by a provision for raising the wages of the most lowly-paid workers and by granting bonus orders in special circumstances. Nevertheless, the measure is naturally unpopular with the trade unions, and will certainly cost the Government votes.

Votes for Labour?

It is doubtful if many of these lost votes will be given to the official opposition led by Mr Cosgrave. On external policy, this party is at one with the Government. The resignation of Mr Dillon from the party, arising out of his advocacy of going into the war, indicates the strength of its views on the maintenance of neutrality. Its programme for the election promises large interest-free loans to farmers, the derating of agricultural land, the electrification of rural areas and family allowances. Apart from the last item, this programme is calculated to appeal to the rural rather than the urban voter. The probability is that the votes lost by the Government will be given to the Labour Party rather than to the official opposition. The swing will be to the left rather than to the right.

The Labour Party occupies the same position as the present Government party did in 1932. Having had no experience of the responsibilities of office, it is prepared to make sweeping promises of social and economic betterment to the electorate. Its trump card with the working classes will be the unpopularity of the wages stabilisation order. The rising cost of living and the shortage of supplies have naturally caused a good deal of general discontent, and the Labour Party will no doubt succeed in landing some fish

from these troubled waters. It advocates an extensive programme of public works, which, however, must necessarily await the end of the war on account of the shortage of raw materials. This party has also adopted vague theories of monetary reform, based on breaking the link between the Irish currency and sterling and the financing of large-scale public works by Government borrowing. There can be little doubt that the Labour Party will gain some seats at the election.

As far as can be foreseen at the present time, the probability is that the opposition will lose some votes to the Government and the Government to Labour. It is also considered likely that many independents will be returned. It is quite possible that no single party will be sufficiently strong to form an administration. In this case, a coalition between the Government and Cosgrave parties might emerge. No other partnership seems possible in view of the bad relations between Labour and the other two parties. Many people who are critical of the wisdom of holding an election in these troublesome times ask the question whether, if a coalition is likely to emerge from the election, it should not be established immediately and the election postponed. Whatever there is to be said in favour of such a solution, it is not practical politics. Something more than the difficulties of the existing situation is necessary to bring to an end animosities as bitter as those that unfortunately prevail between the two parties which are heirs to the unhappy split over the treaty and the fraternal strife of the civil war.

The Canadian Army System

[FROM OUR OTTAWA CORRESPONDENT]

September 30th

THE resignation of Brigadier Harold J. Riley from the post of district officer commanding in Winnipeg has precipitated a controversy over the organisation of the Canadian Army, which promises to lead to reforms in the top level of military administration. The Riley resignation caused vigorous protests, not only in Winnipeg newspapers, but in much of the press of Canada, indicating that more was at stake than the local disappointment of a military administrator who commanded confidence in his own circles.

Brigadier Riley had a distinguished career as a soldier in the last war. He practised law in Winnipeg until he accepted the local command in 1940, shortly after the Hon. J. L. Ralston became Minister of National Defence. The reason for his resignation was given as poor health, but the superficiality of this explanation was evident when, shortly afterwards, Brigadier Riley accepted the post of administrator of military manpower within the new selective service system. Beyond this, the facts are not generally known. The *Winnipeg Free Press* commented:—

The official announcement contains nothing but the usual superficial statement of facts, and in view of the knowledge widely available here of the keenness of Brigadier Riley to do what he could to serve his country, the question is bound to be asked—it is indeed already being asked—whether his resignation is due to the difficulties which a man of his energy, initiative and independence is bound to encounter when attempting to work inside a military machine such as we have now developed in Canada, so largely staffed with men who are unable either by constitution or by training to deal swiftly with administrative matters. . . .

There is information available in every military district in Canada of the difficulties which have resulted from the determination of the men charged with major responsibilities to concentrate power in their own hands, to delegate as little as possible, and to effect wherever possible the advancement of those administrative officers in the army who are ready and willing to play the game according to the infinitely detailed regulations laid down at headquarters with the resulting entanglement of infinite red tape. Everyone is familiar with instances of prolonged delay in making decisions, the result of headquarters being overwhelmed in detail. Everyone is familiar with the widespread lack of initiative and the widespread lack of capacity in army administration.

The same newspaper immediately subjected the top administration of the Canadian Army to a searching analysis, with interesting results that have been noted widely in Canada. It found that the system now followed in Ottawa resembles very closely the British War Office, or, more correctly, the British Army Council system, prior to the reforms resulting from Lord Esher's report of 1904. In the present British sense, there is no Army Council in Ottawa. The Canadian Militia Act vests in the Defence

"Take a note, please,

Miss Nash

... concerning
Christmas Boxes
for the Staff"

Many business heads have already decided and made out their Christmas-box or bonus lists for employees. Why not follow their lead in your own firm and give National Savings Gift Tokens?

These gifts express perfectly your appreciation of loyal staff work under war-time difficulties. They are gifts for the future, too; gifts which grow in value from the day the Tokens are exchanged for Savings Certificates or used to make deposits in the Post Office or Trustee Savings Banks. Best of all, National Savings Gift Tokens are really patriotic presents, the only presents suitable for a time like this. Each one you give is a seasonable contribution to the Nation's war effort. You can obtain them from any Post Office or Trustee Savings Bank, or through your Savings Group in units of 15/- up to any amount.

NATIONAL
SAVINGS GIFT
TOKENS

★★★★ ISSUED BY THE NATIONAL SAVINGS COMMITTEE ★★★★★

Minister all the powers which in Britain are exercised by the Council. The Esher reforms in Britain involved the creation of an Army Council immediately below the Secretary of State for War.

In Canada, under the existing set-up, there has been no decentralisation of the kind practised in the British Army Council. All power is concentrated in the hands of the Chief of the General Staff; and the heads of other Army branches, the Adjutant-General, the Quartermaster-General and the Master General of Ordnance, occupy subservient positions. The point involved in the Riley case clearly illustrated that district commanders, too, possess no actual independence, such as would be a bar to over-concentration of authority and which would encourage initiative.

Public Interest

This discovery—for it has really been a discovery in view of public apathy towards all Army affairs before the war—has become the focal point of a fresh discussion on Army administration. It is clear from the public reaction that centralised authority in the persons of the Minister and the

Chief of the General Staff is generally regarded not only as faulty organisation, but as a cause of distrust of the ability of the professional soldier. In effect, in matters of policy, appointments and administration, the Minister, and through him the Cabinet, has the benefit of advice from only one man. In contrast, the British Army Council provides similar guidance from the collective wisdom of a Council of four military members and three civilians.

There has been no Esher report to rescue the Canadian Army from the chaos of the current system. As the *Free Press* pointed out, in Canada the Minister is his own Army Council, and the Chief of the General Staff is placed, in power and influence, in a rôle akin to that of a commander-in-chief. "The evils that afflicted the British War Office up to 1904," it commented, "are now apparent in Ottawa."

It added that Canadian experience had shown that the Chief of the General Staff represents the close-knit group of professional soldiers who are the Canadian equivalent of the old military caste which, once it is formed, can so easily dominate an army. From these fresh examinations into army organisation in Canada have come demands for reform and for remodelling the machinery at the top.

Russia at War

African Aftermath

THE news about the Allied victories in Egypt and French North Africa came to the Russian public almost on the morrow of the anniversary of the Revolution. In spite of the hardships of the second winter, which still lie ahead, there have recently been many signs of a restored and increased confidence in the country's own strength and ability to fight on. The successful defence of Stalingrad has dispelled the feeling of uncertainty which was perceptible during the summer retreat. The news of the Allied victories has acted as an additional tonic to the already climbing morale of the people.

The first reaction to the advance of the Eighth Army in Egypt was reserved. The main point in press comments was the undeniable fact that the concentration of the *Luftwaffe* on the Russian front created the lull in Egypt which enabled the RAF to obtain an overwhelming superiority over Rommel's forces. And, between the lines, there still lingered the tone of Stalin's anniversary speech, with its deprecating reference to the "four German and eleven Italian divisions" in Egypt. Even the very first news about the landings in French North Africa was received with some of the scepticism that had accumulated during the long and grim summer of "Anglo-Saxon inactivity." But, as the news from North Africa revealed the full scope of the operations, their speed, their thorough planning and their clockwork precision, the ice was broken at once; and reserve was dropped altogether.

For the first time in the course of this war, the *Wehrmacht* has been given a lesson in blitzkrieg by the Allies—this has been the keynote of Soviet press and radio comment. It is not difficult to imagine how this must have affected feeling throughout the country. The impatience for a Second Front has been markedly quietened. Allied action has provided the proof that the "inactivity of the Anglo-Saxon powers" was only outward appearance. The suspicion of sinister forces allegedly working for some sort of a negotiated peace behind the scenes, a suspicion which emerged in the articles and comments on Hess, has been countered by the most convincing deeds. And the fact that the strategic initiative has been wrested from the enemy has played a further part in the dispelling of "the myth of German invincibility." Russia was first to demonstrate the power of defence against the German blitzkrieg. What was still lacking was the proof that defensive strategy would be replaced by offensive action, the action for which Russian military commentators were calling almost daily. Now, the African campaign has been taken as a harbinger of the great turning of the tables.

The implications of the African campaign were explained by Stalin himself in terms which, naturally enough, were more cautious than the popular press comment. It is significant that Stalin gave his public acknowledgment of the campaign in the form of an interview with the same American correspondent through whom he addressed world opinion in his "prodding" statement some weeks ago. The "prodding campaign" has been called off in a most authoritative manner. Stalin's statement contained a rather significant sentence:

The campaign in Africa refutes once more the sceptics who affirm that the Anglo-American leaders are not capable of organising a serious war campaign.

The reference to "sceptics" does not appear for the first time; Stalin's anniversary speech, too, carried a similar reference. It is difficult to say who the sceptics are. So far, no distinct "sceptical" tendency or line has made its appearance either in the Russian press or on any other forum on which Russian opinion is voiced. The most likely explanation is that Stalin's remark had in mind an undefined and undefinable state of mood rather than any distinct tendency or any crystallised political attitude.

Stalin's reply to the question about "the Soviet offensive power in the east joining the Allies in the west" was unequivocal and guarded.

There need be no doubt, he said, that the Red Army will fulfil its task with honour, as it has been fulfilling it throughout the war.

Recent Russian propaganda has also tended to show considerably more reserve on this subject than before. During the winter of 1941-42, and until the summer retreat of 1942, the offensive slogans "Victory now" or "Victory in 1942" were in the forefront, although it was obvious that the conditions for a victorious offensive were then absent. The present tone of the press reflects a more sober view of the position; and, between the lines, the public is offered the suggestion that offensive activities in the east can be envisaged solely in conjunction with Allied action in the west.

Ploughing-up.—For some time, the press has carried detailed reports on the expansion of the sown area in the east. Some of these reports have been conflicting and make it very difficult to assess the actual results of the campaign. The Commissariat for Agriculture recently summed up the position, stating that the newly sown area covers 5 million acres. The achievement is a great one, but it falls short of some of the exaggerated claims which were made previously in the press.

Timber.—The People's Commissariat for Timber has published a report about timber production. Most of the timber trusts have fulfilled their plans well ahead of schedule. This has been particularly the case with the timber industries in the north. The *Karel Drev* (the Karelo-Finnish Timber Trust), for instance, completed the plan for 1942 by the end of October. The plywood industry, it is said, has doubled its output of high-quality plywood during this year. Some of the enterprises under the Commissariat for Timber have been engaged in defence production, turning out skis, aeroplane timber, aero-sledges, pontoons and so on.

Ladoga Transport.—The last weeks before the freezing of Lake Ladoga have been very intensively used to increase the supply of fuel, food and ammunition to Leningrad. Loading and unloading facilities have been improvised on the banks of the Ladoga to handle a number of ships simultaneously. The unloading of coal is carried out with the help of steam shovels, and the traffic is handled by women mainly, Leningrad's former typists and secretaries.

THE BUSINESS WORLD

Standstill Earnings

A FURTHER quarter's figures—for the period to September 30th—are now available in *The Economist's* new series of industrial profits computations. For readers who require details of the recent revision of this 30-year-old series, *The Economist* of May 23rd, June 6th, and September 19th this year will provide them. This article continues the discussion of gross profits earned by industry, before the claims of the tax collector have distorted the figures. In addition, further reforms have been introduced in the table showing the distribution of profits and returns on various classes of capital, and also in the tabulation of profits by industrial groups.

It has been apparent for some time that profits, subject to the control of 100 per cent EPT, have, in the chart-reader's jargon, been bumping along the bottom. The results of the latest quarter show a further slight rebound, already dimly apparent in the second quarter results, from the lowest levels of a year ago. It would not be safe to put too much reliance on the results of the third quarter companies, whose form (owing to the composition of the sample) has often been unpredictable. But the general conclusion is clear from Table I. below:—

TABLE I.—474 THIRD QUARTER COMPANIES' GROSS PROFITS
New Basis (in £000's)
(All Figures Gross)

	Year Three Preceding		Year Two Preceding		Year One Preceding		Latest Year	
	(1939)	%	(1940)	%	(1941)	%	(1942)	%
All interest	5,147	8.1	5,190	8.1	5,036	7.9	4,666	7.1
Prof. divs.	11,630	18.4	11,823	18.3	11,957	18.7	12,267	18.7
Equity divs.	35,815	56.6	34,604	53.6	34,241	53.5	35,094	53.6
Sub-Total	52,592	83.1	51,617	80.0	51,234	80.1	52,027	79.4
Free reserves and net carry forward	9,974	15.7	12,128	18.8	11,682	18.3	12,034	18.5
Other savings*	765	1.2	758	1.2	1,034	1.6	1,398	2.1
Profits before tax, but after EPT	63,331	100.0	64,503	100.0	63,950	100.0	65,459	100.0
Per cent. of third preceding year	100		101.8		100.9		103.3	
Rate of tax applied in grossing up...	7s.		8s. 6d.		10s.		10s.	

* Redemption funds, deferred repairs, etc. (grossed up at corresponding rates of tax).

Here are 474 companies whose profits, before standard income-tax but after EPT, have increased by just over 2 per cent, from £64 millions to £65.5 millions. The fact is more surprising in its direction than its extent, for it can hardly be said that this minor increase "puts the profit back into war." Yet it is an increase which would have been all the greater but for a substantial fall in rubber and shipping profits, and it calls for an explanation.

In part, the reason lies in the writing back into profits of certain reserves, for EPT and other special purposes, which were made on a cautious scale earlier in the war. This is hardly surprising, now that directors know their EPT standards, and also the measure of any special financial reserves demanded in the third year of war. This release of excessive appropriations made in previous years has undoubtedly played an appreciable part in the modest uptilt of profits during the last few months. Further, a number of companies which, in the early stages of the war had lost their peacetime business, and had not replaced it by war contracts, have by now successfully changed over, and have restored their profit-earning capacity at, or near, their EPT standards. Any increase in profits for such reasons as these is, indeed, to be welcomed rather than lamented. Finally, there is a limited group of companies, serving the consumption trades, which still continues to profit by generous spending on the part of certain sections of the public. Rising entertainment and brewery profits may suggest that Lord Kindersley's adjurations to save go unheeded by some people, but even here, it is well to add, the Excise

greatly profits from more water in the barrel and from crowded cinemas which cost little extra either in manpower or celluloid.

There is, then, nothing in the latest results which can be read as a challenge to the ubiquitous control of EPT throughout industry. Nor is the extent of the rebound of profits from the trough in any way remarkable. This is evident from a consideration of Table II below:

TABLE II.—GROSS PROFITS BEFORE TAX BY FINANCIAL YEARS
(In £000's)

Accounting Date Ending In	No. of Coys.	1938	1939	1940	1941	1942
1st quarter.....	596 587 328	68,941	64,660	67,282	60,474 48,648 ...	... 52,043 ...
2nd quarter.....	383 371 162	39,579	39,844	37,644 37,348 ...	39,473 21,299 ...	... 21,445 ...
3rd quarter.....	360 345 7	42,880	40,900	42,636 41,650 ...	38,457 421 ...	... 388 ...
4th quarter.....	964 752	156,236 ...	162,927 ...	154,538 131,981 ...	131,163 ...	...
Whole Year.....	2,303 2,055† 497*	307,636	308,331	302,100 277,270 ...	269,567 70,368 ...	... 73,876 ...

† Incomplete. * Incomplete results for first three quarters.

The same point is even clearer from the index number of these same gross profits in Table III. In the second quarter of this year (the latest for which reliable figures are yet available) profits were running merely 0.4 per cent higher than in 1938. And this result refers to gross profits, before deduction of income-tax. Taking net profits as reported

THE ECONOMIST NEW PROFITS SERIES.

The notes below may assist readers to follow the improvements in our profits figures.

The new figures are presented throughout on a gross basis and represent the closest estimate that can be made of industrial profits, before deducting any charge for standard income tax.

The gross profits are shown (a) under periods in which they were published and (b) under the periods in which they were earned.

(a) A four-year comparison of gross profits of companies whose accounts were published in the latest quarter of this year is given in Table I.

(b) A five-year linked comparison of gross profits arranged by accounting periods is given in Table II., and this is expressed as a quarterly geometric index number of gross profits (four quarters 1938 = 100) in Table III.

The *Economist* index of net reported profits (i.e., net profits taken from the companies' accounts without adjustment for taxation) has been converted from an arithmetic to a geometric basis (July, 1935, to June, 1936 = 100) and is given in Table IV.

As from the second quarter of 1942, the figures of Table V. have been calculated on the new gross profits of Table I., less interest. The companies given in Table VI. have been partially regrouped. The net profits are still given on the old basis, that is as reported by the companies, but gross profits are on the new basis of Table I.

in the companies' accounts themselves (these are struck, in many cases, after charging standard tax), the present level is 95.4 (four quarters ended June, 1936 = 100), against approximately 125 immediately before war broke out.

We may now introduce the further changes in our profits figures, referred to in the first paragraph. Table V below shows the revised figures for distribution of profits among, and percentage payments to, various classes of capital.

TABLE V.—DISTRIBUTION OF PROFITS AND RETURN UPON CAPITAL

	Proportion of Adjusted Net Profits			Rate of Payment (Gross)			
	Pref. Div.	Ord. Div.	To Free Reserves	Deb.	Pref.	Earned on Ord.	Paid on Ord.
1941	%	%	%	%	%	%	%
1st quarter....	17.7	73.1	9.2	4.5	6.1	16.3	14.5
2nd ".....	23.4	65.9	10.7	4.6	6.8	19.6	9.0
3rd ".....	25.7	65.0	9.3	4.5	6.9	12.1	10.6

* Provisional.

TABLE IV.—INDEX OF NET REPORTED PROFITS,
BY PUBLICATION DATE

(Revised Geometric Basis)

(Four Quarters ended June, 1936=100)

	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter
1939.....	129.3	125.2	124.4	121.6
1940.....	120.7	120.8	116.8	115.1
1941.....	112.9	104.7	101.0	98.6
1942.....	96.5	94.4*	95.4	...

* Revised Figure.

from net profits reported by the companies themselves. It has now been revised on the basis of gross profits as computed in Tables I and II. The result is to reduce the proportion of gross profits distributed on preference, and, particularly, on ordinary capital, and to increase *pro tanto* the proportion set aside to free reserves. The effect, so far as the earnings percentages are concerned, is rather irregular, and it would perhaps be wise to regard the second quarter links which are given for comparison as a mere makeshift bridge until the new series has established itself.

The revision of Table VI is twofold. First, revised gross profits figures are given for each industrial group in turn (the reported net profits figures have been retained to show what the companies' accounts say, compared with what they ought to say). Secondly, we have given a further subdivision of the large miscellaneous group, and distinguished more closely between shipbuilding, engineering and general heavy industrial concerns.

In these times, we must be content with exhibiting, rather than expounding, these quarterly industrial profits figures as they appear, at least until some major change in trend occurs. The latest figures are far from showing such change. Over industry as a whole, profits and dividends remain stable, and are likely to continue so. The recent rise in ordinary shares may have been discounting victory. No one would pretend that it was based on increases in equity earnings and dividends which are at present in sight, or are possible under present conditions.

TABLE VI.—PROFITS BY INDUSTRIAL GROUPS
(Quarter ended September 30, 1942)

Industrial Group	No. of Group	"New" Gross Profits (£000's)		"Old" Net Profits (£000's)	
		Preceding Year	Latest Year	Preceding Year	Latest Year

The New Franc Rate

One of the more interesting aspects of the introduction of British Military Authority sterling notes in North Africa is that it re-establishes an official contact between sterling and Vichy French francs which have hitherto provided the basis of the French North African currencies. When that contact was lost in July, 1941, the official rate was 176½ francs to the £, and this relation has been preserved for the francs circulating in all the French territories which came under the control of the French National Committee. But since July, 1941, the French currency and, therefore, that of the territories under Vichy control, has suffered a considerable measure of inflation and depreciation. Some measure of that depreciation was provided by the rate for the Moroccan franc in Tangiers, where up to 550 francs to the £ has recently been quoted. Some acknowledgment of this depreciation had to be made in fixing the official rates for the military sterling and dollar notes taken into these territories by the British and American forces. The rates fixed—75 francs to the \$ and 300 francs to the £—appear a reasonable compromise. But it follows that henceforward the francs circulating in North Africa will be at a considerable discount on those circulating in the Free French territories—a problem which, if the differentiation has to apply to the contiguous territories of French West and Equatorial Africa, may hold far more difficult potential than it does to-day. The differentiation also seems to preclude the new Free French central bank, the *Caisse Centrale pour la France Libre*, from fulfilling any function in the North African territories. This confusion which exists in the monetary affairs of the various French territories is but the counterpart of the prevailing uncertainty of their political set-up, and of the obstacles that stand in the way of their ultimate reunion. Inevitable as was the decision to give the North African francs an exchange value differing considerably from that of the Free French francs, it cannot be denied that it is setting up a store of forbidding problems for the future.

Monetary Regime in North Africa

The introduction of military sterling and dollar notes in North Africa is in no way intended to provide the wedge for establishing a new monetary regime in those territories. The special sterling and dollar notes are designed to meet the immediate needs of the Allied forces, and it is not expected that they will form any permanent part of the monetary circulation. The fact that they will not be legal tender outside the areas in which they are issued will deprive them of most of their attraction to local hoarders. One must, therefore, expect that as soon as they get into the hands of the local population they will be taken to the banks for exchange into local francs. Ultimately, therefore, these special notes should make their way to the banks of issue in the territories concerned. These are the *Banque d'Etat du Maroc*, whose notes circulate in Tangiers as well as in French Morocco, and the *Banque de l'Algérie*. Both banks have small metallic reserves, but the bulk of the backing for the notes they issue is provided by French Government securities. Their advances to the French Government have increased over the past two years as a result of the disequilibrium in the trade between France and the North African colonies. There has been an appreciable balance of trade in favour of North Africa. This has been reflected in expanding claims by the colonies on France, which have been converted into direct loans to the French Government. This close link of the North African currencies with the French franc must for the time being be severed, and the fixing of a rigid exchange rate between these francs and the dollar-sterling group must bring them into the Allied currency bloc. As the military notes reach the two central banks, these institutions will presumably be allowed to convert them into dollar and sterling balances, and thus the backing behind the local franc currencies will begin to acquire a specific United Nations flavour. This process will be intensified as trade begins to develop between the North African territories and the Allied nations.

The Power of Credit Creation

The London Chamber of Commerce, in the current issue of its Journal, expresses concern at the confusion which exists in so many minds about the function of money

and, in particular, about the position of the banks. It mentions, as an example of the prevailing ignorance, the fact that *The Economist* should have been able to assert "without challenge" that the banks are far from unique in their power to create credit and that this power can be wielded by merchants and tradespeople. Is this assertion really as astounding as the *Chamber of Commerce Journal* supposes it to be? If the bootmaker gives credit to his baker and the baker in his turn gives credit to the bootmaker, is not credit being created independently of the banking system? Will the London Chamber of Commerce deny that a nationwide extension in this country of the "chit" system, formerly so popular in the Far East, by which a host of transactions between shops and individuals are carried out on credit, would involve a true creation of credit? Will it deny that such credit would have a real effect on the currency and price situations? There is nothing strange about *The Economist's* assertion—certainly nothing so strange as the apparent indifference with which the bankers and merchants of the City of London, who presumably form the backbone of the Chamber of Commerce membership, have for so many years tolerated the type of economics for which the *Journal* has provided a sounding board.

Royal Bank of Scotland

The latest report of the Royal Bank of Scotland, while conforming with the expansionist trend of banking figures in this country, shows some interesting contrasts to the general experience. Deposits at £89,200,000 are £7,193,000 up on the year, thus establishing a new high record, while the balance-sheet total by reaching £108,172,000, has crossed the £100 million mark for the first time. An increase of £4,576,000 in the holding of British Government securities provides the main counterpart to the expansion in deposits. Up to this point, the experience of the Royal Bank duplicates that of most other British banks. The contrast lies in the fact that its advances, commercial bills discounted, and acceptances all show some increase over the year. The movements may be modest, but they reflect a vigorous and welcome maintenance of the genuine banking—as opposed to investment—side of the business. The net profit for the year to October 10th last amounted to £516,386, as compared with £491,522 for the previous year. The latest figure, grossed up for tax, shows that the profit before taxation was the largest declared in the history of the bank. Yet it is interesting to note that the figure shown in the report is arrived at "after providing for income-tax and National Defence Contribution." There is no mention of Excess Profits Tax, and one may assume that last year's profits did not reach the EPT standard. If that standard is in effect based not on past profits, but on the capital employed in the business, it is evident this capital must be greatly in excess of the relevant figures shown in the balance-sheet.

Finance and Banking

Note Reserve Falls

Although the November making-up has already made its influence felt in the money market this week, the credit position has been exceptionally easy. The clearing banks have been prepared to buy January maturities in limited amount, and the market has found no difficulty whatever in obtaining the finance to run any addition to its bill portfolios. The discount market had to take up a rather larger amount of bills this week, the total application for Treasury bills at last week's tender having dropped by some £15,000,000 and the proportionate allotment at the lowest price accepted having risen consequently from 31 to 36 per cent. Treasury Deposit Receipt payments by the clearing banks were stepped up from £30 million to £45 million this week, the last figure comparing with current maturities of £30 million. The pre-encashment of TDR payments over maturities can have been

little more than the nominal figure of £15 million. In spite of the heavier net floating debt borrowing during the week, Government balances at the Bank of England have made little recovery from the exceptionally low level reached the previous week. The past week's increase in this item amounted to £1,015,000, raising the total to £8,178,000. Thus the policy of maintaining these balances at the most economical level possible is being continued. Never has the immobilisation of cash in Public deposits been so persistently small as in recent months. Despite a further expansion of £2,034,000 in the note circulation, bankers' deposits have risen by £2,790,000 to reach the very comfortable level of £145,721,000. The key to this expansion is provided by the further rise of £3,210,000 in Government securities. The latest increase in the circulation only leaves £15,007,000 of unissued notes in reserve and reduces the reserve ratio to 8.1 per cent. It is generally expected that the reconstitution of both figures by the appropriate increase in the fiduciary issue will have occurred within a week.

Investment

The Fruits of Victory

It is one function of the Stock Exchange to act as a barometer and the general movement of prices over recent months has, clearly, had reference to a high pressure area which is still a very long way off. Within this general trend there are, however, minor influences at work, of which one was clearly the expectation that, this time, the efforts of the United Nations in North Africa were to be successful. There can be no doubt that some short term speculators sold on the event, but their relative lack of importance is demonstrated by the fact that the industrial index of *The Financial News* has, so far, fallen by no more than 0.749 per cent, the fixed interest figure remaining virtually unchanged. There has, however, been one important subsidiary effect. Against this background of a reversal of the trend, the publicity given to the proposals for the control of speculation has been effective. The number of bargains marked has dropped by almost one third as against the hectic days at the beginning of last week, and the gambling element has almost completely vanished from the market. In the circumstances, there is some reason to suppose that the projected agitation at Westminster will be postponed. Meanwhile, however, the special sub-committee of the Stock Exchange, London, is making a very thorough investigation as to the possibility of taking further action. It is far too early yet to say what their findings may be, but there is a general assumption, based on the experience of similar investigations here and abroad, that they will not find anything approaching a cut and dried solution. The pressure of opinion, both of the public and of the colleagues and competitors of those concerned, is the best means of securing a better standard from the backsliders, but the number of these and the volume of business, in terms of money, which they handle are almost negligible against the totals involved. Under normal market conditions, it might easily increase and, if a further investigation at this stage can produce any suggestions, that is all to the good, but it is certain that the general trend of markets, and 90 per cent of the business which has produced it, is due to perfectly legitimate anticipation of events. There will always be room for differences of opinion as to whether a given level of prices is fully justified, but if an event is regarded as finally inevitable it may be discounted a very long time ahead. The real disagreement is as to when incentive to private initiative will be restored by permitting some rise in equity earnings, beyond the very moderate one already possible. Government pronouncements bearing on this question will be watched with great interest, and they will probably determine the long term trend of prices. As to the immediate outlook, the market is still in that slightly nervous state which invariably follows the cessation of a rise of protracted character. Business may well fall off further, but there is nothing in sight, at the moment, to suggest anything more drastic than a slowing down of the rise in equities, such as is natural as the return obtainable falls towards that received on long term Government securities.

A Welcome Experiment

The board of the Brazilian Warrant Agency and Finance Company are to be congratulated upon a proposal which can do much to prevent the abuse of nominees, so far as that company is concerned. The existing proprietors are being asked to sanction changes in the Articles of Association, requiring that any transferee or purchaser of shares in the company shall sign a declaration, either that he holds the shares for his own account, or that they are held for a named person. It is intended to keep a list of these names and to make them available on the same terms as the register of the company. Should any person commit a breach of these requirements—supposing them to be adopted—power is sought to suspend his shares; and shares so suspended will carry neither dividend nor right to vote during the period of default. They immediately become normal holdings, however, upon the requirements being complied with. The directors point out that they are convinced that no member of the board has been operating in the company's shares, but they feel that the company works under circumstances which offer peculiar facilities

for others to do so. The plan is, of course, conditional upon its adoption as a special resolution, and it will not affect any existing holdings. Arrangements have been made with the Committee of the Stock Exchange so that there shall be no interference with the normal market in the shares, and it is to be noted that the Committee has, by inference, blessed the policy of control of the use of nominees.

It remains to be seen whether or not the shareholders will adopt the plan. There is good reason why they should. For operations by the ill-disposed can only harm their interests. At the same time, it is possible that some trustees will avoid investment in a company which imposes special limitations upon the freedom of its shareholders. There can be no doubt that the intention of the scheme is excellent, and it seems that the provisions have been drawn so as to make evasion as difficult as possible and, at the same time, avoiding any collision with the Companies Act. Even if it is adopted it will, however, not apply to existing nominee holdings in the company's shares, while there is no guarantee that companies as a whole will follow the example. In particular, it is scarcely to be expected that those concerns in respect of which the need is felt to be greatest will hasten to change their Articles. The step is extremely welcome. It deserves the full support of the shareholders, and it points the fact that one directorate at least is conscious of the evils of unrestricted use of nominees, which, in fact, defeats the intention of the law that the members of a company shall be able to discover who holds the shares. But the step will be most useful if it stimulates the Board of Trade to initiate legislation barring the use of nominees for reasons of secrecy. It will be no easy matter to ensure that the true beneficial owner is always disclosed, but, with good will on the part of directorates and the co-operation of the Stock Exchange, it should be possible to effect a very great improvement in this matter, which has for so long been a serious defect in company law.

General Theatre Offer

Through an intermediary, Philip Hill and Partners, the Gaumont-British Picture Corporation is offering to purchase, at 12s. 6d., 90 per cent or more of outside holdings of the 6s. 8d. participating preferred ordinary shares of the General Theatre Corporation. The latter concern is either a subsidiary or an associate of the former, but the extent of the present holding is not disclosed. The latest accounts are those for the year to March 31st, 1941, in respect of which no dividend was paid on the shares in question. Payment was resumed with an interim of 4 per cent in March last. The rights are to a 15 per cent dividend non-cumulative, and to 50 per cent of the profits. On liquidation, a premium of 15s. 4d. per share is due as a compensation for the writing off of 13s. 4d. per share in the reconstruction of 1935. For the ensuing five years, distributions averaged 12 per cent per annum, and prices ranged from 10s. 2½d. in 1936 to 18. 8½d. in 1940, while in 1933 they had touched 14s. 2½d. The sole reason given for the purchase is a desire to consolidate the interests of Gaumont-British. This is an expression which may mean anything or nothing, but Mr Rank has stated his intention to simplify the internal structure of the group. Gaumont-British manage the theatres and cinemas of General Theatres. They must know the results for the year 1941-42, and it is impossible for holders of the shares to reach a reasonable decision as to the merits of the offer until they are equally well informed. Judged by the market price prior to the offer, namely, 9s. 9d. to 10s. 9d., the offer is not ungenerous, but that price is based on a position which is now 20 months old, and holders ought not to be asked to make a decision in those circumstances. It is very difficult to tender any advice. The holders are in a very weak position in that it is quite impossible to say whether their interests coincide with those of the group as a whole. It is therefore not surprising that the shareholders' committee should have taken action. At a meeting on Wednesday they expressed the view that, owing to the conflict of interest, and the impending Board of Trade inquiry, an independent accountant ought to be appointed to investigate the position of General Theatres and report whether or no the offer of

12s. 6d. per share is fair. Following this announcement, Mr Rank stated, at the Gaumont-British meeting, the extension of the offer until seven days after the appearance of the General Theatres accounts, a tardy step in the right direction.

Rubber—A Suggestion

Mr T. H. Graham, chairman of the Malaya General Company, is among the latest to express his belief that there should be room for both plantation and synthetic rubber after the war. He bases this belief on the hope of some method of rationalisation between the two, aimed at the prevention of major slumps and booms, and he gives the arrangement between the natural and artificial nitrate producers as a possible model. It is still premature to attempt to forecast what potential production will be of either plantation or synthetic rubber after the war, but the owners of the former may at least hope that they will not be cast for the rôle of the Chilean *oficinas*. For there is not as yet any suggestion that the output of synthetic rubber can be indefinitely extended at a low cost, although it is not an impossibility that such may be the case at some time in the comparatively early future. At present, however, the indications are that the cost factor will favour the well-placed and efficiently run plantation. The two positions will, however, probably have this in common, that costs per unit are likely to decline more rapidly with increased output in the case of the factory product, with consequent weakening of the bargaining power of the plantations. Taken by and large, the best hopes of a reasonable prosperity for both sections of the industry must be based on an arrangement which ensures that the cost shall be sufficiently low not to impose any substantial barrier to the expansion of the use of the product. Granted that, and the emergence of a workable programme for the gradual development of the economically more backward countries, the wartime expansion of transport by air and road should greatly stimulate the demand for rubber, and the plantations must have a large share in satisfying that demand until the time comes—if it ever does—when the factory product is definitely cheaper. Mr H. J. Welch, in his statement to shareholders of Malayalam, expresses the view that the plantations can hold their own even if synthetic production means a considerable cut in price.

British Celanese

The revised terms of the scheme for dealing with the arrears of British Celanese preference dividend are now officially published, and will be submitted to special meetings on December 8th. They are essentially as set out in *The Economist* of November 7th, and, as they have the support of both the Association of Investment Trusts and the Shareholders' Committee, they will, presumably, be adopted. In the sense that they give to the holders of the second preference shares a security that can probably be converted into cash, over a fairly extended period, for a sum roughly equivalent to the net amount of the dividends funded, the holders of that class of security may be held to have achieved their immediate objective. The estimate of what they will probably receive over a period of years is based, however, not on a clear account of past earnings, but on an estimate of the board's, which may prove no more reliable than have some of their previous attempts to forecast the future of the undertaking. This fact, coupled with the circumstance that the future policy of the company is to be even less conservative than in the past, must cause considerable uncertainty about the long term investment value of the second preference shares at least. It may be that the duty of that class of holder was merely to obtain payment in full, but it is evident that, if that is being effected at the cost of future security, it is a very poor bargain.

Company Notes

Bass Setback

The decline in total profits of Bass, Ratcliffe and Gretton for the year to September 30th last from £1,574,417 to £1,560,942 is not considerable. Its significance lies in being against the trend of soaring brewery gross receipts. The reason for the modest setback is not apparent from inspection of the accounts. But it is very possible that indirect taxation has had a differential impact which presses

BRITISH CELANESE LIMITED.

Head Office: CELANESE HOUSE,
22, HANOVER SQUARE, LONDON, W.1.
Registered Office: FIRST FLOOR,
50/54, UNION STREET, TORQUAY.
17th November, 1942.

DEAR SIR (OR MADAM),

ARREARS OF DIVIDEND ON THE 7½ PER CENT. PARTICIPATING SECOND CUMULATIVE PREFERENCE SHARES.

Following the meeting held on the 29th October, it became clear from representations made to the Directors on the part of the Second Preference Shareholders who had opposed the Scheme submitted to that meeting, that the gap between the Scheme and the terms for which those Shareholders were contending was so narrow that every effort should be made to bridge it.

Further conversations have therefore taken place, in the course of which it has been found possible to arrive at an adjustment of the Scheme originally submitted, which the Directors feel they can put forward and which the Association of Investment Trusts have agreed to recommend to their members and the Committee of Second Preference Shareholders have agreed to support.

It has accordingly been decided to have a further series of meetings, and you will receive herewith Notices of Meetings called for the 8th December, 1942, in which Resolutions suitably revised are set out. The form of Funding Certificate has also been revised accordingly and is open for inspection as before.

The adjustment of the Scheme consists of an increase in the rate of interest on the Funding Certificates from 4 per cent. to 5 per cent. already announced to Shareholders at the Meeting of the 29th October last and the substitution of the previous provisions governing the withdrawal of the Funding Certificates by a provision that in respect of each financial year of the Company commencing with the year ending 30th June, 1943, an account is to be taken to ascertain if, and to what extent, the profits of that year (less tax) exceeded the amounts required to pay the dividend on the First Preference Shares, the 5 per cent. interest on the Funding Certificates and the fixed dividend on the Second Preference Shares, all calculated (less tax) down to the end of the year in question, including any arrears. If this account shows any such excess, 20 per cent. of the excess must be applied in the withdrawal of Funding Certificates, whether or not the Company makes any payment in respect of that year by way of participation to the Second Preference Shareholders or by way of dividend to the Ordinary Shareholders.

The compulsory redemption of Funding Certificates thus remains linked to the profits of the Company as earned from year to year, a condition which the Board has considered essential. The Board is encouraged to hope that the Scheme will now receive the fullest possible support which they have always desired.

The Scheme, if approved by the Shareholders concerned, will be submitted for the sanction of His Majesty's Treasury as required by No. 6 of the Defence (Finance) Regulations and will only become effective on such sanction being given.

By Order of the Board,
W. H. FOXON, Secretary.

most hardly on the more expensive types of bottled beer. Costs of production and distribution of bottled varieties have also almost certainly risen disproportionately. The accounts show that, if war damage contribution is not charged against profits, the 20 per cent tax free payment on ordinary capital is still covered by current earnings, although with a margin of only 0.5 per cent, against 3.5 per cent in 1940-41. The now customary transfer of £50,000 to contingencies has been maintained, so that there is a draft on the carry forward of some £40,000, reducing it to £833,474.

	Years ended September 30,		
	1940	1941	1942
Total income	1,503,980	1,574,417	1,560,942
Depreciation	78,346	66,312	55,319
Rents, rates and taxes	562,649	640,217	711,395
Renewals and fees	72,822	89,877	86,244
Debt interest	187,590	184,951	182,166
Prof. dividends	68,000	68,000	68,000
Ordinary stock :—†			
Earned	534,373	525,060	457,818
Paid	447,128	447,128	447,128
Earned %	23.9	23.5	20.5
Paid %	20	20	20
Reserves	50,000	50,000	50,000
Carry forward	844,852	872,784	833,474

† Tax free.

The balance sheet indicates that war damage contributions requiring £90,000 have been debited to contingencies reserve in the latest period, reducing the fund to £260,000 after the transfer from profits. Since this allocation is strictly a charge against profits, the earnings percentages given above must be considered a generous estimate. The slight contraction in debtors from £1,169,935 to £1,068,821, coupled with the rise in stocks from £490,880 to £714,664, provides a hint that there may have been some fall in demand last year. The jump in creditors, including tax, of some £270,000 to £1,820,084 is amply accounted for by the rise in beer duty. Net loans to subsidiaries are down from £441,346 to £426,066, and net liquid assets are reduced from £1,544,144 to £1,497,616. The balance sheet position remains sound, but the maintenance of the ordinary payment appears moderately endangered. The £1 ordinary stock at 160s. yields £2 11s. per cent, free of tax.

* * *

Singer Motors Recovery

The latest accounts of Singer Motors for the year to July 31st last show that sixteen months' arrears of dividend on the 7 per cent preference capital, cumulative since January, 1941, and one year's dividend of 6 per cent on ordinary capital, have been paid. In both cases, these are the first distributions received since the company's incorporation in 1936. The fact that the accounts show a fall in disclosed profits from £266,793 to £264,820 is due to the necessity last year of providing something for income tax and EPT, whereas in the previous year the accumulated loss obviated any transfer. In the current period, the directors point out that provision will have to be made at the full standard rate. Depreciation and maintenance require £26,331 and £87,925, against £23,282 and £51,351 respectively, but there is no provision for writing down jigs and tools, or new models which together took £40,000 in 1940-41. War damage contributions require nearly £10,000 less at £5,042, but ARP takes more than £11,000 more at £27,141. Thus, the sum available for dividends is reduced from £85,509 to £78,451. After meeting 16 months' preference dividends, absorbing £7,478 net, there is £70,973, representing 21.1 per cent for the ordinary capital. The 6 per cent payment is covered with more than £50,000 to spare, which goes to raise the carry forward from £25,267 to £76,026. The directors

state that business, as might be expected, expanded during the year. The balance-sheet figure of stock and work in progress actually declined from £189,090 to £175,469, but there was no stocktaking, and this valuation is only an estimate. Totals of liquid assets and liabilities rose substantially, while the net surplus of current assets is up from £387,974 to £430,259. Cash holdings have jumped from £167,130 to £447,613, and creditors, including taxation, from £233,394 to £481,792. The latest accounts suggest that, under the stimulus of war, the Singer concern has at last found a profitable basis for production. This conclusion must, however, be treated with caution until it is plain that a reasonable return on the equity can be paid when the company is meeting the full impact of war-time taxation. The 5s. ordinary shares, at 5s. 4½d. ex dividend, yield £5 11s. 7d. per cent.

* * *

Argentine Estates Profit

Thanks to the better price of sugar obtained under the new agreement of June, 1941, Leach's Argentine Estates were able to secure an increase in profit for the year to March 31st last from £177,331 to £189,388, despite a modest fall in turnover and an appreciable rise in costs. A frost, outside the company's area, reduced the country's production of sugar by 135,000 tons to 405,601 tons, but the company's own crop yielded a trifle more than was estimated. Its total, gross weight, production of sugar fell, however, by 6,488 tons to 28,762 tons. Sugar was responsible for 81 against 78 per cent of the company's income, but it also profited from higher prices obtained on fruit and alcohol, despite reduced output. Appropriations are virtually unchanged, and after distributing the usual 6 per cent on the ordinary capital there is £24,627 for reserve against £17,692. The balance sheet shows a rise in net liquid assets from £97,994 to £117,310, for which a jump of nearly £100,000 in debtors and payments in advance is mainly responsible. There is also a substantial increase in stores and materials from £131,072 to £221,397 occasioned by purchases against the possibility of future shortage. On the other side of the statement, creditors including taxation are up from £191,322 to £273,305, while bank overdraft is some £7,000 higher at £37,655. The vice-chairman points out that the sum likely to be required for exchange loss on dividend remittances is some £20,000, against £17,490. Total reserves stand at £464,284, against £457,147. The 1942 crop shows a further decline of some 10 per cent for the whole country, while the company's own crop is very heavily reduced. It has, however, in hand a fairly heavy carry-over, which should suffice to maintain activity until the new crop is available. In these circumstances, profit can hardly be fully maintained, especially as all costs are rising, but there is no need for serious concern. The 10s. shares, at 9s. 6d. ex dividend, yield £6 6s. 3d. per cent.

* * *

Brazilian Warrant Improvement

In 1941, the Brazilian Warrant Company, to adopt the new name suggested by the board, enjoyed the most profitable year of the past decade. Total profits of this concern, whose highly commendable attempt to regulate the position of nominee holdings is discussed above, rose from £48,861 to £91,608. After transferring £5,000 against equity of £50,774, against a deficit in 1940 of £9,184, and the ordinary shareholders receive 8½ against 6 per cent, covered by a rate of 36.7 per cent against nil. The improvement is no doubt due to the rise in United States demand for Brazilian products, including coffee, in view of the shipping situation produced by the war, and the absence at that date of shipping difficulties in the western hemisphere. After crediting tax recovered from dividends and allocating £15,000 against nil to general reserve, the carry forward is raised from £38,797 to £72,806 subject, however, to EPT for the period April, 1939, to December, 1941, and to taxation of profits acquired abroad and dividends from subsidiaries, accrued but not yet paid. The directors have also announced the intention of paying £17,500 from the carry forward as a centenary bonus to the staff of a subsidiary. The balance sheet shows a rise in net loans to subsidiaries from £36,534 to £112,428. Stocks, advances against coffee and cotton and debtors are all rather lower and there is a decline of some £9,000 in investments to £182,348. It is clear that last year's improvement, which was in the trading

side of the group's business, took place mainly through the subsidiaries and the position should be clarified by the publication of a consolidated statement. It is hard to say how the position will have been affected by the entry of Brazil and the United States into the war, but all costs must be expected to rise and demand for the import of any luxuries shipped by the company to decline. The 10s. ordinary stock, at 11s. 3d. ex dividend, yield £7 8s. 2d. per cent.

* * *

First Kaffir Results

Venterspost had another very successful year, although development was retarded by frequent intersection of water fissures. Development on the Main Reef continued to be very satisfactory, and percentage of payability on the Contact Reef again improved. Tonnage milled and grade increased, but an increase in costs reduced profits. This vast young property should be able to increase its milling plant after the war. In spite of an increased development footage, Consolidated Main Reef's reserves, representing four years' supply to the mill, again showed a serious fall in tonnage. Increased tonnage was milled, but a fall in grade and slightly increased costs reduced profits. Rather poor development over a period of years is leading to a regular fall in ore reserves. At Modderfontein East development footage was substantially reduced during the past six months, but tonnage of ore developed was greater than in the previous year. The reserves are almost maintained with a fall of 0.2 dwt. in grade. Milling results were substantially the same as for the previous year, but dividends were reduced. The mine has a long life, but the tendency

is for development values, and consequently ore reserve values, to fall. Development at Nourse was curtailed and the ore reserves show a substantial fall, but still represent about four years' supply to the mill. Tonnage milled and grade were unchanged. An increase in costs reduced profits, but dividends were maintained. The mine has passed its prime and development is now mainly dependent upon the restricted area in the south-eastern portion of the mine. Development footage in New Modderfontein was curtailed, and ore reserves show another heavy fall. All major development is finished, and the mine is fast approaching the end of its life. The shares at 13s. 6d. can only be considered as a speculation on their ultimate break-up value. Development at Blyvooruitzicht was carried on between the 2nd and 6th levels at respectively 4,050 feet and 4,830 feet vertical depth: the horizon of the 7th level was also reached in a winze. Eight thousand six hundred and seventy feet of development on reef was carried out, all of which was payable, with the very high value of 64.7 dwt. over 11.9 inches, or 770 inch-dwts. Five hundred and eighty-three thousand tons, averaging 14.8 dwts. over 45 inches, have been developed, but the greater part of this is within the area of the shaft pillar. Work is at present confined to the No. 1 Shaft, and only a small area of this large property has as yet been opened up. It would be remarkable if development continues to give indefinitely such high values. A small plant with a capacity of about 10,000 tons a month started up in February, but present returns and costs are of little significance. At 45s. the mine is now capitalised at over £11 millions, or about the same as that of Sub Nigel, and this is very difficult to justify. Large capital expenditure will be required for milling plant before the mine can be brought on to a dividend-paying basis.

Industry and Trade

Steel and Plastics

During a recent broadcast, Professor C. E. Inglis, a former president of the Institution of Civil Engineers, pointed out that engineering progress would mainly lie in the production of the materials known as plastics, which would reduce iron and steel to a position of secondary importance. As a statement of long-term tendencies Professor Inglis' forecast may be correct. But this does not mean that steel is likely to be displaced by plastics as rapidly as, say, the motor car drove the horse-drawn carriage off the road. If anything, the indications point to a further expansion in the world demand for steel side by side with a growing demand for plastics. Between 1913 and 1937, a growing demand of crude steel rose from 75 million tons, world production of crude steel rose from 75 million tons to 133 million tons; since then, there has been a further substantial increase in the world's steel-making capacity, and the current rate of production is probably at least twice as high as in 1913. Professor Inglis' professional pride led him to make the sweeping statement that the whole economic structure in its present form rests upon "the planning, the ingenuity, and the organising ability of engineers," and that they should take a leading part in the "new order which they have created." He complained that at present engineers have no place on the bridge of Government and suggested that the inducement offered to them must be "something more tempting than an occasional invitation to serve on a Government advisory committee." Professor Inglis' views are symptomatic of a confused line of thought. Whatever his contribution to modern environment, the engineer has no claim to special privilege at the helm of government. He must stand in the queue with John Citizen and prove his worth. He must even rub shoulders with the economist who, the Professor said, would have nothing to economise without the driving force supplied by his own profession.

Aerodrome Construction

Apart from its lucid analyses of the general problems of war production and organisation, the Select Committee on National Expenditure continues its methodical investigations into ways and means of improving the output of specific industries or branches of industry. The latest important aspect of war production which has been examined by the Committee is the construction of aerodromes. Its recommendations have been embodied in the nineteenth report of the current session, published last week. The principal defect the Committee discovered in aerodrome construction is that none of those visited was completed within the time specified in the contract. Although each contract contains a penalty clause, this has never been enforced.

Contractors have become so enured to seeing contract dates of completion dishonoured that they lose the inspiration of the sense of urgency and a tendency to dawdle develops.

The Committee's revelations are serious. Uncertainty of completion may have an "unfortunate effect on the operational planning of the Royal Air Force," and it gives rise to waste of resources. One of the main causes of this state of affairs, cited by the Committee, is the constant alteration of plans and the delay in the supply of plans and drawings by the Ministry. In almost every case examined alterations have been made to plans during construction and the issue of revised drawings has been delayed. The Committee was astonished to find that in no case had a comprehensive time and progress schedule been prepared to ensure completion within a specified time. Nor does the Works Directorate of the Air Ministry possess a master time and progress schedule which seems essential for the appropriate distribution of available labour. In the view of the Committee, the absence of individual and master progress schedules has hitherto prevented the disclosure of inordinate delays

FAMOUS SINCE 1795

OTARD'S

COGNAC BRANDY

in construction. On the other hand, the Committee has found little justification for the allegation that some contractors have been specially favoured by the Ministry; so far as it was able to discover, the firms which have received a large share of the work are contractors of great experience and good repute whose work has been satisfactory. The extent to which contracts have been concentrated upon a few large firms is revealed by the fact that early this year 1.7 per cent of the contractors employed were responsible for 22.5 per cent of the work in progress and 6.6 per cent of them for 40.9 per cent of the work. There has been an improvement in the pricing of contracts; the priced schedule contract has taken the place of the target contract, except in special circumstances. So far as labour problems are concerned, the Committee found that there has been a good deal of exaggeration about excessive wages, slackness and absenteeism. On no site had average earnings exceeded £5 15s. 8d., and what appeared to be excessive remuneration for individual workers was usually the result of long hours of work or of exceptional effort on a payment-by-result basis.

Still Below the Target

Although the past month has witnessed a further improvement in the production of coal, it remained below the national target. The average weekly output of saleable coal during the four weeks ended October 31st was 4,124,500 tons, compared with 4,076,100 tons during the preceding four-weekly period. It fell short of the target by 48,500 tons a week, and was 7,000 tons below the figure for the corresponding period a year ago. As the accompanying table shows, district targets were exceeded last month in twelve districts, compared with eight in September;

PERCENTAGES OF DISTRICT TARGETS REACHED

more than 190,000 miners, representing over a quarter of the industry's total labour force, are to receive bonuses varying from 3d. to 1s. 6d. a shift. While no data have yet been published, the "save fuel campaign" appears to be meeting with some success. The Ministry of Fuel and Power is of the view that in industry "large economies could be made by an overhaul of the use of heat in process work." It has appointed a special sub-committee to meet representatives of the trade and research organisations of each industry with the object of assisting them in securing economies.

Road Haulage

So far the Government's decision to take direct control of long-distance road haulage and of the vehicles engaged in it—the scheme was described on page 583 in *The Economist* on November 7th—has not provoked serious criticism in public from the interests concerned, in spite of the far-reaching changes it must involve in a highly individualistic trade. The Standing Joint Committee, representing the "A" and "B" licence-holders of many national associations, has decided to submit a memorandum on the scheme to the Minister of War Transport, but this is concerned with details rather than principles. The Committee has emphasised that every step should be taken to ensure equity for all operators, that traffic carried by Government-owned vehicles should be brought within the scheme, that care should be taken to ensure equitable financial arrangements and the continued efficiency of the scheme, and that it should not predetermine the post-war organisation of road transport. The absence of serious criticism may reflect a consciousness of the need and inevitability of measures designed to economise road transport, and to maintain its

reserve of carrying capacity in condition for immediate use. The terms of compensation suggested by the Ministry of War Transport may provide one of the chief items for discussion.

Unemployment in October

The number of persons registered as unemployed at employment exchanges in Great Britain on October 12th is a new low record, at 101,080, and a drop from September 14th of 3,028. The fall was mainly in the category of wholly unemployed, as will be seen from the accompanying table:

REGISTERED UNEMPLOYMENT IN GREAT BRITAIN			
	Wholly Unemployed	Temporarily Stopped	Persons Normally in Casual Employment
Sept. 14, 1942			
Men	51,546	1,524	2,591

Total	96,017	2,196	2,867

Labour for war purposes is being sought in every direction. A review of labour on farms is being made by the County War Agricultural Committees, on the basis of which it may be possible to direct more men into the Forces, and substitute women for them. Thousands of full-time Civil Defence workers have been transferred to munition factories. To compensate for their loss, the Civil Defence force is being made up with part-time labour. Over 100,000 men and women have been directed into part-time Civil Defence. A recent estimate puts the number of women in part-time war work at over 300,000. During October the Ministry of Labour placed 27,000 women in part-time employment. The concentration of the clothing industry is proceeding; all makers-up employing more than ten workers must make a return to the Board of Trade by November 28th. News of the Minister of Labour's plan for the withdrawal of workers from retail trade is still awaited.

The Tinplate Industry

British tinplate manufacturers have now reached agreement on the basis of a scheme for dealing primarily with the financial consequences of the concentration of production at a limited number of plants which has taken place under the pressure of war conditions. The majority of the mills have suspended operations and the buildings have been requisitioned by the Ministry of Supply for storage purposes. The main purpose of the scheme is to compensate old pooling arrangements under which the current demand *rata* to their manufacturing capacity is inoperative in pre-calculation of the contributions payable by operating from it of compensation to the owners of idle plant. The scheme is understood to command the support of the industry, and although it does not entirely fall within the scope of the Government's concentration of industry scheme, the Board of Trade has extended to it the benefits of Section 18 of the Finance Act, 1941.

Cabbages and Greens

A gap in food control will be made smaller by the Minister of Food's plan for the distribution of vegetables. Perishable foods are the most difficult to control, and the Ministry has tended, not unjustifiably, to deal with other foods first. Some vegetables have been under Ministry control for some time. The potato control scheme began in February, 1940. Carrots and onions were dealt with by the National Vegetable Marketing Company until last April. (Continued on page 647.)

COMPANY MEETINGS

GAUMONT-BRITISH PICTURE CORPORATION, LIMITED

DIVIDEND RESUMED

MR. J. ARTHUR RANK'S STATEMENT

The fifteenth annual general meeting of the Gaumont-British Picture Corporation, Limited, was held, on the 19th instant, in London, Mr J. Arthur Rank, J.P. (the chairman), presiding.

The following are extracts from the chairman's statement circulated with the report and accounts: In October last year Mr C. M. Woolf, Mr L. W. Farrow and myself were elected to the board. Mr Woolf became joint managing director of the Corporation, a position he shares with Mr Mark Ostrer, and I was appointed chairman of the board of directors in place of Mr Isidore Ostrer. In my capacity of chairman I have devoted much of my time and attention to the Corporation's affairs generally, and to the internal structure of the group in particular.

Steps have already been taken to clarify the internal position by adjustment of inter-company shareholdings, and a clearer picture in this respect will be reflected in our next accounts.

The balance-sheet of the Corporation now conforms more closely to recognised modern practice, and the profit and loss account is designed to show the earnings of the group as a whole, after providing for such necessary charges as excess profits tax, national defence contribution, and deferred repairs. In addition, a statement of the combined net tangible assets of the subsidiary group is annexed, and in each of these documents corresponding figures for the previous year are included, after adjustment, to a basis which simplifies comparison.

The satisfactory outcome of our trading operations has been achieved under conditions much more favourable to the business in which we specialise, and throughout the major part of the period business was on the upward grade. It was therefore to be expected that profits would exceed the level of more recent years.

I am pleased to report that the improved position reached at the date of our accounts and the satisfactory trend of business during the ensuing months are such as to justify your directors in recommending the payment of a dividend on the ordinary shares for the past year. Having regard to the heavy burden on profits imposed by taxation and in order that adequate provision be made in this respect, your directors have considered it prudent to set aside out of the profits of the year for the benefit of taxation reserve an additional sum of £140,000.

RESULT OF YEAR'S OPERATIONS

The earnings of the group as a whole for the year under review were £1,714,291, after deducting provisions made for excess profits tax, national defence contribution, deferred repairs and interest, other than

interest on the Corporation's outstanding debenture stock. At this level the earnings show an increase of £388,997 over the corresponding figure for the previous year.

In regard to prospects for the current year, trading profits of the theatre group have been fully maintained to date, and in other respects business is proceeding satisfactorily. On the other hand, the incidence of taxation bears hardly on your company, and by reason thereof we must expect some reduction in the earnings shown in the profit and loss account at £1,714,291. It may therefore be necessary, so long as E.P.T. operates, to reconsider certain charges against profits.

We have in our capacity of cinema proprietors operating on a large scale, participated to the full extent of our share in the relative prosperity of more recent times. The Corporation's policy of full co-operation with the various authorities responsible for the inauguration of national and social campaigns pursued through the medium of the cinema screen to further the war effort is being combined with the maintenance of entertainment of the highest class in the cinema world.

TELEVISION

With reference to the Corporation's interest in television, we have in the past sponsored the Baird system of television in pursuance of a policy inaugurated by the late chairman many years ago. Our investment having been consolidated and the management linked more closely with that of the Corporation, we are in a position to take a more direct interest in post-war developments.

The affairs of General Theatre Corporation, Limited, an important company operating cinemas and music-halls under the management of the Corporation, are progressing favourably. The music-hall section, linked with the similar business carried on by another of our associates, Moss Empires, Limited, continues to operate successfully under the able direction of Mr George Black. The activities of Bush Radio, Limited, are being devoted mainly to essential purposes.

The management of British Acoustic Films, Limited, is now more closely associated with that of the Corporation, and steps which are being taken will bring it within the subsidiary group. British Acoustic Films and its branches cover a variety of interests in the film industry, chief of which are the manufacture and supply of apparatus for recording and reproducing sound on film, the production of films of a cultural and educational nature, and the development over a period of years of a growing business in sub-standard film including apparatus for their

projection and sundry accessories. In the course of its development of the sub-standard film a wide range of subjects have been added to its library. Despite the abnormal conditions and general uncertainty brought about by the war, returns of business in this section are steadily progressing. I am pleased to report that final liquidation of our interest in the U.S.A. is now in sight. Our organisation in that country never fulfilled its early promise of success, and in recent years its activities have virtually ceased.

SUCCESSFUL SAVINGS SCHEME

In response to the national appeal a scheme for the promotion of saving was launched by the Corporation some considerable time ago, and, ably supported by our employees, has proved highly successful. Before the end of the calendar year approximately 100,000 National Savings Certificates will represent the total number issued to subscribers.

A further indication of the good work being carried on may be found in the results achieved by the cinemas of our circuit in collecting £40,000 in aid of naval welfare. Of this sum £30,000 has been expended in purchase of wool and woollen garments. In addition, we have purchased for distribution to the men of our naval forces 16,500 books, more than 10,000 games of various kinds and more than 1,000,000 cigarettes.

The report and accounts were unanimously adopted and a dividend of 6 per cent. on the ordinary shares was approved.

SECOND INDUSTRIAL TRUST, LIMITED

DIVIDEND MAINTAINED

The 31st ordinary general meeting of Second Industrial Trust, Limited, was held, on the 19th instant, in London.

Mr W. Sandford Poole (the chairman) said that the gross revenue showed a decrease of £5,127 as compared with the previous year. Some £2,000 of that decline was directly attributable to the extension of hostilities to the Far East, while income from investments in countries in Europe now in enemy occupation showed a reduction of £1,700.

It was interesting to compare the gross revenue of the past four years. The gross revenue in the year to September 30, 1931, was £72,361, in 1940, £74,989, in 1941, £74,407, and in 1942, £69,280. It was some satisfaction to find that, in spite of the extension of the war, their income for the past year had fallen by no more than £3,081 as compared with that in what was practically the last pre-war year.

The net revenue of the year amounted to £23,409. They again recommended a final dividend on the ordinary shares of 3½ per cent., maintaining the distribution at 5½ per cent. for the fifth successive year. While he did not anticipate any very serious setback in revenue during the present year, the accounts submitted did not fully reflect the effect of the catastrophic events in Burma, Malaya and the Far East last spring, and it was impossible to foretell that no further financial setbacks might arise in the course of the grim and stern struggle of the coming months.

The report was unanimously adopted.

(Continued from page 646)

when it was liquidated after a year's working and its functions transferred to the Ministry. This year, tomatoes were allocated by the Ministry, so that surplus producing areas made up supplies to deficiency areas, and maximum prices were fixed. The new measures apply to vegetables of the cabbage family: spring greens, sprouts, cauliflowers and broccoli, as well as cabbages themselves. Under the scheme, the full details of which are not yet available, the Ministry will decide when crops should be lifted and will buy direct from the growers, whose prices will be guaranteed. Normal trade channels will be used for distribution. The main purpose of the scheme is to ensure that surplus crops are

moved to areas where there are shortages, in order to achieve even distribution. In this respect, the experience gained in working the tomato scheme should be of great value. Ceiling prices will be fixed at every stage of sale. Grading of vegetables will not, under the scheme, be of the same refinement as hitherto. It is simpler to apply prices on a weight-only principle; to disregard quality and size as far as it is necessary to do so will result in a saving of transport. On the whole, success has attended the Ministry's efforts to control foods, even those which present difficult problems. In some cases, however, action might have been taken earlier. The plan for vegetables will none the less be welcome in the fourth winter of war.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: all dealings are for cash

PENDING the clarification of the position in North Africa, the markets have displayed a marked disposition to await developments before attempting a further advance. Turnover in consequence has declined considerably, the opening day's total of 6,417 bargains showing a reduction of nearly 30 per cent on the previous Monday's record figure. Although sentiment has been assisted by the American naval victory off Guadalcanal, reduced quotations in most sections reflect considerable profit taking. The earlier firmness of the gilt-edged market was not maintained, small declines for irredeemable issues in mid-week contrasting with the stability of short-dated stocks. Australian stocks, however, registered a fairly general improvement in mid-week. Good advances for European bonds, in particular Czech Rights and Belgian 4 per cent loan of 1936, reflected shortage of stock rather than any active business. Japanese issues advanced strongly on speculative support, although Chinese bonds were generally lower. After their recent spell of inactivity, Brazilian loans improved on quiet support. Turnover in the home rail market was well below recent levels, most issues weakening. Among the junior stocks, GW and Southern deferred suffered most heavily, and neither LMS nor Berwick preference issues were fully maintained. In the foreign rail market, Argentine issues declined on lack of support.

Small falls predominated in most sections of the industrial market, but selling nowhere attained any considerable proportions. Brewery issues rallied after some profit-taking early this week, Ind Coope

and Meux leading the advance with gains of 1s., but Threlfall's remained dull. In contrast to the general trend, leading tobacco shares were steady. Falls exceeded gains in the motor and aircraft section, Raleigh Cycle Holdings, Rolls Royce and Dennis Motors suffering the heaviest losses. Among numerous small declines in the heavy industrial group, Hawthorn Leslie and Firth Brown were prominent with small advances. Activity in shipping issues was slight, losses in general not exceeding a few pence. Among textile shares, British Celanese issues were firm on the revised scheme, although in an otherwise steady stores group Prices Tailors fell 1s. 9d. on the year's results. In the miscellaneous section Spillers deferred were strong throughout and James Finlay jumped 1s. 6d. on the maintenance of the interim dividend. General Theatre Corporation were marked up 2s. 3d. on the Gaumont British offer.

Kafir issues attracted little attention this week, Blyvoors, in common with other Far West Rand shares weakening, but several finance shares improved in midweek. Rubber shares were quietly maintained, while demand for tea issues was sharply stimulated by the American naval victory, New Dimbula and Pabjoian jumping 2s. 6d. and 2s., respectively, among many other good gains. The oil market was dull, leading issues fluctuating narrowly without trend.

COMMODITY AND INDUSTRY NEWS

Agricultural Wages.—The Government has decided to transfer the powers of County Wages Committees under Section 2 of the Agricultural Wages Act, 1924, to fix minimum rates of wages in the counties and the hours for which such rates should be payable, to the Central Wages Board. The Board will fix rates and hours after consultation with the county committees. This change will continue so long as the present system of nationally fixed prices and an assured market for agricultural produce is in operation.

Fur Apparel Quota.—During the four months ended February 28, 1942, the quota for the supply of fur apparel to the home market is to be continued at the present rate of 20 per cent by value. A new concession is made in that fur coats supplied by manufacturers at a price not exceeding £7 10s. and fur waistcoats not exceeding £2 10s. will count against the quota only to the extent of half their value.

Export Control.—Under the Export of Goods (Control) (No. 42) Order (SR and O No. 2289), which comes into force on December 1st, control is extended to cover closures made wholly or partly of rubber, navigational logs, and additional types of machinery. The Order also extends export control to all kinds of prepared or ready-mixed paints, including distempers, lacquers, varnishes, paste paints and painters' enamels, and to a number of additional chemicals.

Boot and Shoe Repairs.—After consultation with the Central Price Regulation Committee, the Board of Trade has made

the Boot and Shoe Repairs (Maximum Charges) (No. 2) Order (SR and O No. 2249), which amends an earlier Order. Maximum charges for boot and shoe repairs carried out in a factory (an establishment with 25 or more workers engaged on repair works) are fixed at not more than 3½d. in the 1s. over the charges being made for comparable repairs in the week beginning August 21, 1939. Other repair businesses may charge 4d. in 1s. over pre-war levels. The Order came into force on November 16th.

Shell Egg Registrations.—The Ministry of Food has announced that up to September 30th, 4,300,000 people had surrendered their shell egg registrations, either as commercial and domestic poultry-keepers, or in order to enable their neighbours or friends to obtain rations of balancer meal.

Railway Wages Claim.—The Railway Staffs National Tribunal has heard the claims of railwaymen for an increase of 10s. a week in wages. The railway companies have offered an increase of 4s. to adult male railwaymen, other than drivers and firemen, 3s. a week to women and £10 a year to the salaried staff, which would cost £17,500,000 a year. The decision of the Tribunal is awaited.

Private Cars.—The Ministry of War Transport has announced that the manufacture of private cars has ceased, except for those under construction. Licences to acquire these have already been issued. No more applications for licences to acquire new private cars for civilian purposes can

New York

SMALL but widespread losses on a much reduced turnover reflected the general reaction on Wall Street after the recent upswing. Light buying on the generally favourable war reports was fully offset by selling for income-tax purposes early this week, while "peace" issues lost earlier gains on profit-taking. In midweek the market remained lethargic with business moderate and prices little changed.

THE scenery shifts and the actors change. Sir Stafford Cripps joined the War Cabinet at a time of defeats and disasters; he leaves it at the dawn of victories. The Government changes announced last weekend came as a surprise; but, overshadowed by the heartening course of the war, they caused little stir. On the face of it, there was a simple explanation. When Lord Beaverbrook went temporarily to Washington last March on a semi-official mission, it was announced that he would be succeeded by a more permanent representative of Ministerial rank to deal with supply matters. Now, belatedly, the successor has been chosen. The Supply Ambassador is to be Colonel Llewellyn, Resident Minister in Washington. This was the first move. Into Colonel Llewellyn's place as Minister of Aircraft Production has stepped Sir Stafford Cripps; and the honours of which Sir Stafford divests himself are shared out. His seat in the War Cabinet is taken by Mr Morrison; the office of Lord Privy Seal passes to Lord Cranborne; Mr Eden replaces Sir Stafford as Leader of the House of Commons.

The significance of these moves is not perhaps so simple as the explanation. For Sir Stafford Cripps they mark the end of a chapter. When he joined the War Cabinet, he had become by chance a symbolic figure. He was the man of the hour because the hour was so heavy with uncertainties, and Sir Stafford Cripps, untried and uncompromised, was taken to represent the widespread

yearning for better things, for the effective conduct of the war above the level of party bargains and particular feuds and for the interpretation in positive policies of the aims and aspirations of the people. Now, when the war has entered a brighter stage and the people's hopes have begun to be realised in battle, the Reformer gives place to the Scientist. As Minister of Aircraft Production, in charge also of the use of wireless in offensive operations under water as well as in the air, Sir Stafford Cripps begins a new career—for which, by reason of his training in science and his skill in the handling of technical problems as a lawyer, he is well fitted. In the present phase of the war his new work is of very great importance. But what has happened to the career which popular esteem picked out for him nine months ago? It may be that he was the wrong runner to back. But it was the right race to be backed in. Is the race still to be run? Has the baton been handed on to Mr Eden, Mr Bevin, Mr Lyttelton, Sir John Anderson or Mr Morrison? The need for a spokesman of the New Democracy is not less in victory than in defeat. Indeed, the need to embody the nation's deep wants and needs in a programme of laws and deeds is more imperative than ever. The danger of losing the war has gone; but the danger of winning the war and losing the peace is still real.

The qualifications of Sir Stafford Cripps for the rôle which was thrust upon him were character and inde-

pendence of the party machines. There was nothing in his career either as a politician or as an ambassador to show for certain that he had either a policy or the quality of leadership. But he assumed the mantle willingly and with a sense of dedication. In his first speech as Leader of the Commons he took all reform as his province. His eagerness to do his duty was demonstrated when he left his high place at a crucial moment and flew to India with all his prestige at stake in a hazardous mission. Now he departs after nine months with little or nothing done; and, with the same sense of duty that sent him to India, he steps down to a supply department where his labours no doubt will be as devoted as ever. At the Cabinet table he has been succeeded by Mr Morrison. Mr Morrison has been unfairly and maliciously attacked for the way in which he has discharged his responsibilities as Home Secretary and Minister of Home Security; he has even been charged with ruthlessness, a quality which in fact he can scarcely claim. As a departmental chief, he has done well, and without doubt deserves the vote of confidence which the Prime Minister has given him by this promotion. He is dutiful, talented, persevering and right-minded. But, as a Cabinet Minister, his position differs from that of Sir Stafford Cripps in two significant ways. He is a party leader; and he is the active and energetic head of two busy departments. It is impossible to put aside entirely the fear that his appointment may mark the restoration of the old order, in which the Cabinet was openly a balance of political and departmental forces, a nice and negative equilibrium of different interests.

The spirit of government is indeed more important than its mechanics; and it would be unfair to Mr Morrison to suggest that he is less anxious or eager for reform than Sir Stafford Cripps. But the clock cannot be put back without causing misgivings among those with their eyes upon the future. The stress of war has simply shown that a Cabinet of party leaders, wholly pre-occupied by departmental affairs and chosen on a "representative" basis, is not the most suitable instrument for inspiring and initiating prompt and effective action. The requirements of peace, which now overhang all the deliberations of government, are no less exacting. The question must be asked, with some concern, whether

the things for which Sir Stafford Cripps was supposed to stand when he joined the Cabinet have departed with him. His words in the House last week have perhaps been given an added meaning by his departure. He denied the negative idea that the Government should regard its function to be the mere holding of the balance between reformers and reactionaries; he urged that political unity should not stultify policy—that if solidarity required reformers to modify their steps, it required the men conservatives no less to hasten theirs.

Perhaps these Government changes are personal and particular and have no wider meaning. The truth will soon be tested. The Government cannot go much further without proving whether or not the forward march has been called off. Some signs are ominous. The inertia into which the programme for physical planning has fallen is notorious. The lack of a definite promise in the King's speech of the broad reforms which need no argument, such as a new Education Bill or a Colonial Charter, caused widespread regret—not least perhaps, in private, to Sir Stafford Cripps. The return, in the latest Ministerial reshuffle, of the old practice of using the Colonial Office as a rest-centre or changing room is not encouraging. When Sir Stafford Cripps joined the Cabinet, the people's questioning ranged over the whole field of war and peace. Now, when he leaves it, many doubts about the war itself have been stilled; but all the wider and longer uncertainties remain. Until these doubts have been set at rest by firm proofs of the Government's intentions, many will regard the departure of Sir Stafford Cripps, rightly or wrongly, as being as symbolical as his arrival. The issue is not the merit or demerit of particular Ministers. What is at stake is the vitality of democratic leadership, which has been so grievously sapped by a decade of "national" Governments. Mr Churchill has been a host by himself in the battle; his are the laurels of the new offensive, as were those of the days of defence; and they will not fade. But the place beside him for men to look into the future, to speak the mind of Britain about what they see and to act upon it has still to be claimed. There, in the traditions and qualities of the British people, of all kinds and creeds, is the stuff of the New Democracy. Who is to seek it out?

From Strength

BAD news has become as rare as good news was for so long. The success and gathering strength of the Allies on the southern shores of the Mediterranean has been accompanied by the hammering of the Japanese in New Guinea and the Solomons and by the great Russian counterstroke to nip off the Nazi tentacles which had crossed the Don. There is still no reply to the new-style massive bombing of Germany and Italy. Almost unlimited vistas seem to be opened up as the offensive proceeds on land, at sea and in the air. Everywhere along the perimeter of Axis control, from Petsamo to Sicily, Sardinia, the Balkans and the Caucasus, there must be anxious waiting. By its new vulnerability, Italy marks the turn of the tide in a special sense; here, at least, is what looks like an Achilles heel.

All this has happened so suddenly that the necessary adjustment in attitude and policy is not perhaps easy. For more than three years, Allied diplomats and propagandists have perforce had to make all their leads from weakness. Now, abruptly, they can lead from strength. The use of Darlan to secure progress in French Africa has brought large and undoubted benefits; as Mr Eden has urged, in answer to protests; full discussion of this decision must now wait until the critical battle of Tunisia has ended. But the manoeuvre is in the old style, the style forced upon Allied foreign policy by the continued dominance of the Allies in the field—and, as an article on page 14 points out, by the limitations laid by the American position and by American politics upon the State

Department. Lord Halifax has said that "Darlan must be judged by his achievements." Undoubtedly, he will be, and the judgment will not begin with the events of November, 1942. But the Allies, in their newly proved strength, need make no more *ad hoc* bargains. The days for appeasement at last are done, and the spectre of a peace round-table surrounded by the sort of men whose outlook and actions made war inevitable before it started must now be laid. If any of those who courted war by their deeds both in their own countries and abroad turn to do a deal with the Allied victors they can be disregarded. The object is total victory, not only over the nations who wilfully brought about this war, but also over the men and the ideas which made the world of 1939 one in which war was inevitable. Total victory, unconditional surrender, no compromise—these are the banners which the United Nations can freely fly, without fear or favour, the banners which they must fly if their aim of a better and safer world is to be achieved.

It is opportune to point out these new opportunities and the new horizon. The thought of making a peace less than victory with Germany has never been entertained in this country since the first faltering months of war and there is no doubt that a Government led and inspired by Mr Churchill will be totally grim and totally uncompromising towards all foes. But, here and there, there are still remnants of loose and shoddy thinking about Italy. Not even the most sober and cautious of observer can question that Italy is headed for disaster and

that its spirit is all but broken—that, if it were not an occupied and dependent territory of German Europe, it might even be ready soon to call for quarter. But no quarter must be given. The people who remember that the Italians, like so many of the Germans, are nice folk, that the trains ran to time and the roads were good when they spent their pleasant holidays in Italian hotels, and that Italian society with a capital S was always pleasant and hospitable are barking, with characteristically British (and American) blindness, up the wrong tree. They forget, for instance, that the prototype of all that the Nazis have done by way of personal brutality in their political career, in their Brown Houses and their concentration camps, was the brutality of Italian Fascism, which began its progress towards popular infamy twenty years ago. They forget that the first spokesman of the creed of warlike aggression in the inter-war period was Mussolini, and that, in the days of his success, the nice Italian people and their charming social leaders took the Duce to their hearts. They forget the almost incredible refinements of cruelty which accompanied the building of a brief empire in Abyssinia. They forget the almost unparalleled treachery which brought the Italians boastfully into the war against France, when France was already beaten to its knees. They forget, in short, that it was Mussolini, not Hitler, who began it all, and that, whatever the Italians may feel now when retribution is at hand, Mussolini was given their backing when he was more successful. It is entirely wrongheaded to sympathise with the Italians because they have proved so much less efficient in battle than the Germans, or to wish to treat the first saboteurs of European decency and peace as merely misguided and misled, simply because some of them before the war sold ice-cream, ground organs,

waited at table, kept hotels or gave lovely parties. If the people of Germany are responsible for Hitler's deeds because they have given him support and backing for one decade, as indeed they are, the people of Italy are responsible for the support they have given to Mussolini for two.

Heavy fighting, bitter ordeals and, no doubt, disappointments and setbacks have still to come. But peace is in sight; and it is more than ever important that the people of this country and of the United States should remember why this war was begun and what brought it about. To seek a speedier peace by making terms with the men, Germans, Italians or of whatever country, whose creeds and habits brought war about would be a betrayal of all that has been worked and fought for—and a denial of the strength for retribution and justice which the United Nations have now mustered. The lead from strength must be unmistakable. Rightly, the British Government has declared its intention not to interfere in the independent concerns of other nations. But it would be wrong to interpret this as giving *carte blanche* to the return of the fascist heresies which debauched whole classes and countries before the war and found their final expression in cruel violence, brutality and naked aggression. Every nation is entitled to decide its own destiny. But it is not entitled to support for infringements of human personality and self-respect which, as was amply proved in the case of both Nazi Germany and Fascist Italy, lead inevitably to war without as well as within. The deal with Darlan must be no precedent. The United Nations must go on without compromise to the end when every aggressor will be down and out, everywhere and in every country. There is no need any longer for the Allies to falter and manoeuvre. They have the strength to win not only the war but the peace as well.

The Future of Gold

THE future of gold is more and more widely under discussion. The rôle of gold in war economy has been adequately and unflatteringly assessed by the recent decisions of the United States, Canada and Australia to stop production in order to free labour and equipment for the production of baser but more essential materials. There may be special arguments for maintaining gold production in South Africa. The entire economy of the country is so intimately geared to this one form of enterprise. But, for the rest, it seems to have been accepted, perhaps tardily, that the digging up of precious metals, except for industrial uses, should have as little place in a world war economy as the luxury trades which one after another are being stifled. The production of gold had a useful rôle to play as long as the United States remained neutral, and as long as the amount of gold offered to the United States had any effect on the volume

of assistance we obtained from that country. But that justification was considerably dimmed from the moment the Lend-Lease Act was passed, and it was altogether extinguished with the United States' entry into the shooting war. It is true that Argentina, Sweden and Switzerland still show a distinct preference for gold and have lately converted part of their foreign exchange assets into it. This preference is significant as a symbol of the esteem in which gold is still regarded. But it can hardly be argued that the cause of either belligerent side can be appreciably affected by its capacity to feed this minute neutral fringe with gold. For the duration of the war, therefore, the verdict—always excepting the very special case of South Africa—must be that the less gold is produced, the better.

It is, however, on the rôle which gold is to play in the post-war world that the main debate and the sharpest clash of views occur. Minds are now engaged on the task

EQUITY & LAW
LIFE ASSURANCE SOCIETY

Established 1844

THE SERVICE OF LIFE ASSURANCE

● Life Assurance provides the means whereby your regular savings, year by year or month by month, may be converted into the form best suited to your needs. Provision may thus be made for your retirement, for the education of your children or for your dependants after your death.

● The service of Life Assurance cannot now be offered to you by personal approach owing to the absence of so many of the Society's staff on war duties. This service is, however, still available on request and will gladly be placed at your disposal.

Head Office: 163/4, STRAND, LONDON, W.C.2. Telephone: TEMple Bar 0381
(temporarily transferred from 20, Lincoln's Inn Fields)

of shaping the grand design of the post-war monetary system. Whatever plan may ultimately be put into operation, it is certain (*pace* the Sound Currency Association) that it can involve no return to the monetary conceptions of 1925. The gold standard, as the text books described it and in the semi-automatic manner in which it sometimes operated, died in 1914. Its painful and chequered resurrection between 1925 and 1931 was perhaps part of the price which had to be paid for the understanding of economic realities. The lesson which should have derived from this interlude was not a distrust of gold as such, but a distrust of false parities, of the barren masses of international indebtedness created by the last war, of the economic nationalism, of the whole crazy pattern of economic contradictions which doomed the new gold standard—and would have made equally short work of any international monetary system.

Education did not stop at that point. What has been learned since 1931, since the departure from gold and since the initiation by Germany of the vast armament drive which, without any gold, indeed without any of the visual orthodox basis of "sound finance," was to accomplish the most stupendous and concentrated public works programme ever achieved by any one nation? This further lesson can be expressed in one sentence: the dominance of finance over economics has been overthrown. That dominance will never return, in that a concept such as a fixed gold parity will never be set up as the sole criterion of economic policy. But the baby must not be thrown out with the bathwater. The wider objective of international economic equilibrium for which the gold parity stood as a symbol cannot be disregarded. Some form of international monetary system is essential and any such system calls for discipline on the part of its adherents. The post-war system may ultimately involve a return to the free exchange markets which in the past achieved their task of clearing international payments with an efficiency and suppleness which no rigid bilateral clearing system could achieve.

But in the immediate post-war period, it seems almost certain that some measure of exchange control will be called for and that the operation of this control will make use of the technique of exchange clearing in which the wartime operations of the various currency blocs have provided much experience and led to many refinements. Whether the ultimate clearing of international payments is effected through a free market or through the reciprocal transactions of three or more currency blocs, some international standard of value and means of payment is essential. The national currency units must be expressed in terms of some uniform standard. That standard must in turn be related to the means chosen to pay uncleared balances of international indebtedness; and strong arguments support the claims of gold to fulfil these twin functions. The most important, if at the same time the most imponderable, of these arguments is the reverence in which gold is still held over the greater part of the world. That feeling goes back to the birth of civilisation. It cannot be killed in a day. At this moment, gold is quoted in the free market in Bombay and in all the black markets of the world at levels ranging to twice the official dollar and sterling prices. There is no country in the world where it is not acceptable.

The alternative to gold or to some international unit of account based on gold would be one or other of the existing currencies—inevitably the dollar, in the post-war economic set-up—as the standard of international values and payments. There might well be grave political objections to such an appointment. However dominant the dollar may become in the post-war currency world, and however complete may be the dependence of gold on the readiness of the United States to buy it at a fixed price in terms of dollars, there are solid reasons why gold should act as the cloak under the cover of which the strong currencies play their part. In a recent address to the Swiss Bankers' Association, Mr Per Jacobsson, the economist of the Bank for International Settlements, made this point with particular emphasis.

Before 1914 it was one of the great advantages of the international gold standard that it effectively ensured voluntary discipline in the monetary policy of the various countries without it being necessary for their sovereignty to be restricted.

After this war, there will be greater need than ever to dissociate the ideals of economic co-ordination among nations from those of political hegemony. Gold may serve a very useful purpose in solving that crucial problem.

In any case, the decision to use or abandon gold in the post-war monetary mechanism is one that will not be taken without reference to the immense vested interests affected. However unfortunate such an admission may be, it will be a political as well as an economic decision. These vested interests can very briefly be defined: the United States holds four-fifths of the world's stocks of gold; the British Empire controls three-fifths of its current production. It would be strange indeed if gold were found to occupy no place in the post-war currency system. But will gold continue to command its present currency price? There are strong arguments in theory for reducing the artificial price inducement which in a decade has raised the volume of annual gold production by 114 per cent, its value in terms of dollars by 182 per cent and its value in terms of sterling by 227 per cent. A monetary system must be attuned to the dynamic character of the economic system which it serves. In the gold standard of the past, the production of new gold introduced an element of dynamism, though admittedly crude and arbitrary. But with an annual output now equalling about 5 per cent of the accumulated money reserves, that dynamism may become a trifle too potent and wasteful. A good case can be made for restricting output, and this could most effectively be achieved by lowering the official dollar price as arbitrarily as it was raised ten years ago—with, perhaps, some compensation for the producing interests affected. This, too, is an issue which will be decided on political as well as economic grounds. Whether it would be politically feasible for the United States to accept the paper loss on its vast reserves of the metal—the greater part bought at the current price—or for South Africa to close down its marginal mines are crucial questions.

One aspect of the gold problem remains to be mentioned: that of the redistribution of the existing reserves. There is little chance of any kind of gold standard functioning as long as the existing maldistribution of the reserves exists; and there is no chance of its functioning at all as long as the forces which have made for this maldistribution continue to operate. The problem, in other words, is very largely dependent on the fiscal and foreign lending policies which the United States pursues after this war and on whether or not there are stable political conditions in Europe. If the tariff walls remain, if the United States return to financial isolation and if refugee capital resumes its flight from Europe, then, of course, the hope must be abandoned, not merely of seeing any return of gold to the monetary scene, but of any stable international regime. Even if the gold, or claims to it, were redistributed as free gifts by the United States, it would, in the established conditions, merely return to its Kentucky vaults. Such a prospect, however, seems too gloomy a view to take of human intelligence. It is surely permissible to hope that the end of the war will see the restoration of an international currency system, which may not indeed have the rigidity of fixed parities, but which will serve to maintain economic equilibrium between the nations. In such a system, gold must, assuredly, have a part to play. It may no longer be the arbiter of the volume of currency and credit and of the main objectives of economic policy. But it ceased to play that rôle at a much earlier date than most people imagine—certainly before the last war. As a unit of monetary measurement, as a store of value, and as a means of ultimate payment, it is, however, likely to retain its place in the monetary picture—a "relic of barbarism" perhaps, but one which the world is unlikely to outgrow in this or the next generation.

Winter in Germany—I.

The Test of Self-Sufficiency

DURING the first two and a half years of war, Germany's food rations remained virtually unchanged, in spite of two cereal harvests below the pre-war average. The experiment of agricultural self-sufficiency appeared to have justified itself. The diet of the German people was monotonous but sufficient. The third war harvest was even smaller than its two predecessors; but the cut which was made in the bread and meat ration last spring has been partially restored; and Goering has assured the Germans that the conquered Russian provinces will soon fill any gaps, while any temporary deficiencies will be made good by reducing the consumption of the occupied countries, particularly France, Holland and Denmark.

Actually, in spite of past achievements and Goering's fair promises now, the Russian war has undone German hopes. It has lasted too long; and at the moment it is the Russians, not the Germans, who are advancing. The test of the policy of agricultural self-sufficiency started as soon as Germany's huge war stocks of cereals, fats and meat had been used up, which happened last winter. In normal conditions, Europe is virtually self-sufficient in bread grain; but its deficiencies in feeding-stuffs, oil seeds and fats were always considerable—even when adequate supplies of labour, draught animals, machinery and fertilisers were available, which is very far from being the case now. Roughly 50 per cent of the total consumption of fats was imported from overseas.

Before the war, the process of organising the Balkan countries as a supply centre had been largely accomplished. Vast stocks of food had been accumulated to carry Germany through the war on moderate rations—if harvests were good, and new land could be conquered. The first stage of the struggle for self-sufficiency was already ended. No overall increase in Germany's total farm output had been achieved; but a significant shift had taken place in the kinds of produce grown. The acreage under rye had been reduced to permit an increase in wheat cultivation. Land had been diverted from barley and oats to potatoes, sugar beet, and oil seeds. Although the use of fertilisers had been increased by about 50 per cent, the yield of cereals per hectare had not been raised above the level of 1911-13; but, significantly, there was a considerable increase in the yield of potatoes and sugar beet. The trend of policy was plain. Imports of high quality foodstuffs were reduced to a minimum, while the output of bread grain, potatoes, sugar beet, and vegetables, that is to say the output of staple foods, was either maintained or increased, at exorbitant costs compared with the costs of agricultural production overseas.

No great changes were necessary when the war began. The programme was already fixed, and the cultivation and deliveries of every farm were strictly controlled. Polish prisoners of war and Polish civilian workers replaced a great part of the mobilised peasants; but the supply of fertilisers, particularly phosphates, was reduced, many draught animals were mobilised and fuel for tractors and other farm equipment severely rationed. After the collapse of France, the war stocks and surplus production of Holland and Denmark were requisitioned, which was sufficient, together with Germany's own stocks, to make up for the inevitable wartime reductions in output—and the unexpectedly bad harvest of 1940.

An ambitious plan to make use of the new lands conquered was set on foot. Western European countries were required to make the same changes in cultivation that Germany had made between 1933 and 1939. The number of their livestock was reduced; and the cultivation of cereals, sugar beet and oil seeds was extended. It was intended to concentrate livestock breeding in south-eastern Europe to remove the difficulty of transporting feeding stuffs across the continent.

The plan was ruined by Russia. If Russia had

collapsed like France, it might have solved Germany's food problems. But the war went on. Manpower was sucked away from the farms. The winter was severe. The real trial of the self-sufficiency policy had come. The surplus production of south-east Europe, much reduced during 1940 and 1941 by the disturbances caused by territorial changes, came virtually to an end with the mobilisation of Slovakia, Hungary and Roumania for the eastern struggle. War, followed by guerilla fighting in Yugoslavia and Greece, wrecked agriculture. Finland became a liability, and German and Danish foodstuffs had to be shipped there. The plan to live on the rest of Europe was broken; and it was plain that Germany would have to subsist largely on its own current production. Aid could not be gained from the occupied and satellite countries by increasing output, but only by reducing their consumption nearer still to the level of sheer starvation, which was already too near to offer any appreciable margin. First Poland, and then other countries, notably Greece, Norway and Belgium, and especially the occupied provinces of Russia, were made to starve; and, even in Germany, bread and meat rations were temporarily reduced last spring. The roughly six million or so prisoners of war and foreign workers in Germany are condemned to near famine conditions.

Can Germany even maintain its own output of foodstuffs? All available reports show that agricultural production has steadily declined in western Europe as well as in the south-east. No single country has reported an output at all comparable with the average for 1936-39. Now that the last overseas supplies from French North Africa have been cut off, Germany is more than ever dependent on its home production. Germany's policy is still that begun in 1933. To stimulate production, prices have been raised for almost all agricultural products, this time by means of bonuses paid directly by the State or out of an equalisation fund. Secondly, the large peasant population has been still more severely rationed. Finally, lower quality foodstuffs, such as potatoes and turnips, form a still higher proportion of German diet. This year's production plan demands an extension in the cultivation of potatoes, oilseeds and vegetables. The output of cereals, milk and pigs is to be maintained at last year's level. Already, the whole of the wheat, rye and barley harvests is needed simply to maintain the present bread ration. The number of pigs and cattle will inevitably have to be reduced still further in the coming year. Since 1939-40, there has been no increase in the numbers of agricultural machines and tractors available. Machinery and tractors have been pooled in the villages. Significantly, in view of Nazi promises to the peasants, the large estates with a sufficient supply of machinery are extending their holdings, while small peasant owners were frequently compelled to sell their plots—until an attempt was made to stop this by banning transfers. Nevertheless, the peasants whom Hitler promised to keep prosperous are driven in ever greater numbers from the land. The war has accelerated the flight from the land. A clear indication that the policy of self-sufficiency, which has already doubled agricultural costs, can neither feed the population nor sustain peasant agriculture is given by current discussions in the German press, which speak of the underpaid state of agriculture and demand that sales receipts should be increased again by a third.

The last hope of maintaining present German rations is the restoration of agricultural activities in the occupied Russian provinces. It may be assumed that some degree of cultivation has been restored in the former Baltic states. The central Russian provinces used to produce considerable surpluses of industrial crops, but were dependent on food supplies from other parts of Russia. Hopes are therefore based on the Ukraine. But

it is doubtful whether any substantial supplies have yet reached Germany. It is possible that German troops have been supplied with stocks found in the Ukraine; but there is no evidence that agricultural activities have been resumed on any considerable scale. The horse-drawn plough and the scythe cannot replace 87,000 tractors and 29,000 harvesters; at the start of the war, Germany

had only 67,000 tractors for all purposes. The inexorable fact is that Germany must produce the bulk of its food-stuffs from German soil, and the outlook is by no means bright. Even if the whole of Europe can be reduced to absolute starvation level in Germany's interests, the German food situation is bound to grow steadily worse as the war goes on.

NOTES OF THE WEEK

The Russian Offensive

The Soviet High Command is garnering the first fruits of the successful defence of Stalingrad; and the *Wehrmacht* is beginning to pay the penalty for its failure to widen the Stalingrad wedge. The two thrusts of the Red Army, in the north-west and in the south-west, have carried the struggle back to the points used by the Germans as the bases for the investment of Stalingrad. Names of places, familiar during the summer campaign, have come back into the news; and this alone is a measure of the Russian success. The northern thrust has so far been the stronger; it has reached far westwards in the Kletskaya region. The southern thrust has reached the Kotelnikovo region. In the centre, Kalach, the key-point for communications, has been taken by the Russians. If the Red Army succeeds in strengthening its hold on Kalach and in closing the narrow gap between Kalach and Surovikhino, then the first objective of the campaign will be reached. The besiegers of Stalingrad will themselves be besieged; and the whole German force inside the Stalingrad wedge will find itself in deadly peril. Already, the siege of Stalingrad seems to have been breached from the north, where the attackers are reported to have joined hands with the city's defenders. This success has come at a moment which might otherwise have been critical for the defence of Stalingrad, when ice floes on the Volga make the ferrying of supplies to the town almost impossible; and this has undoubtedly been one of the major motives in the timing of the present operations. Should the Kotelnikovo thrust in the south assume an impetus similar to that shown by the attack from the north, the whole operation may develop into a broad pincer movement which would make the whole German position in the south extremely precarious. The ground would then be prepared for a more ambitious drive to recapture the northern Caucasus—and, perhaps, the Donetz Basin, too. This, in fact, seems to be Marshal Timoshenko's further objective. The analogy with last year's recapture of Rostov is obvious. But there have been many portents which augur greater success this year. The concentration of manpower and weapons on the Russian side seems to be very strong; and the deterioration in the morale of the German and Roumanian soldiers has been reflected in the high number of prisoners taken, a completely new feature in the eastern campaign.

The Empire: A Side Line?

Lord Cranborne's departure from the Colonial Office to take up the onerous duties of Lord Privy Seal, without Cabinet rank, and Leader of the House of Lords invites questions. Why, for instance, is it possible for Mr Eden to lead the House of Commons with one hand and direct the Foreign Office with the other when Lord Cranborne apparently finds the leadership of the House of Lords a whole-time job? Is it because the Colonial Office is to be given a new and added importance? This would be a gratifying explanation; but it is not perhaps borne out by the substitution of Mr Oliver Stanley for Lord Cranborne—or by the absence of a promise of far-reaching colonial policy in the King's Speech. It may, of course, be that Lord Cranborne is in transit—perhaps to India, where a new Viceroy is already needed and will soon be due. Speculation on these matters is not very profitable; but one thing is certain. There have been too many Colonial Secretaries in recent years and too little colonial policy. It is the habit nowadays to use the Colonial Office, like the Board of Education, as a convenient seat in the perpetual game of musical chairs, which has been so outstandingly the characteristic of "National" Governments, especially in wartime. Yet, both the Colonial Office and the Board of Education will be chief

testing grounds of the Government's good intentions in the matter of reconstruction; and if the political chiefs, good, bad, and indifferent, are continually going out as soon as they come in, the scope for making the bold, broad new programmes required is obviously much restricted. As Colonial Secretary, Mr Stanley may win the spurs for which he has been so frequently recommended, but which he has still to gain; but neither his appointment nor its occasion invite undue optimism.

Full Employment

Almost any day now, Sir William Beveridge's report on social security, which has received more advance publicity perhaps than any other publication in recent history—its advance notices have been couched in very similar terms to those of a "super" Hollywood production—will appear. A week ago, Sir William Beveridge, addressing the Fabian Society, said something about the essential background against which his proposals will have to be set. No plans for social security will be of any avail if economic security is absent. Rightly, Sir William said that the maintenance of employment after the war is the most important and the most difficult of the problems of reconstruction. Rightly, too, he said that it is an assurance that the Government has effective plans for maintaining employment after the war that those now engaged on war service are, above all, looking for. A series of articles in *The Economist* in October discussed ways and means of ensuring full employment in peacetime conditions by state policy and direction; and a number of letters printed on page 662 carry the discussion further. Sir William Beveridge himself did not enter into the question of ways and means; but he made three important points. First, the methods of the last peace—private enterprise without national planning—cannot be relied upon to solve the problems of demobilisation and remobilisation, any more than they would have been adequate to organise the war effort itself. Secondly, if a plan is to be pursued by which the state will undertake the responsibility of maintaining investment at the level needed to support full employment, new kinds of civil servants and new civil service methods will be required. Thirdly, and most important, the use of planning brings with it, more than ever before, the need for measures to ensure adaptability, to ensure the fluidity of resources and the absence of barriers to the transfer of men and plant from one type of work to another. The indispensable virtue of private enterprise in the past was that it provided this adaptability and therefore secured immense progress.

This is the real challenge to planning, the problem of combining a new measure of security for every citizen with at least the old degree of adaptability and efficiency in the use of productive resources. *Laissez-faire* has long been abandoned because of the insecurity it brought with it; planning will fail disastrously if it cannot achieve the same flexibility in the use of resources as was achieved, more empirically, under *laissez-faire*. Oddly, Sir William Beveridge welcomed the National Policy for Industry recently signed by 120 business leaders. It is true that his welcome was only given to the "serious and patriotic spirit" in which the signatories are considering the post-war period. But it is very doubtful whether any system of rule by corporations, by which economic policy and industrial conditions are determined by the industrial interests themselves, can possibly give the adaptability and flexibility which are needed. Not unnaturally, full employment means to the

industrialist—whatever professions may be made to the contrary and however honest these professions may be—the maintenance of the numbers on his particular pay roll at their present level, which is the absolute negation of efficiency and progress and another way of defining industrial stagnation. Full employment, properly conceived, means more than the crude concept of as many people as possible at work. It is more than a quantitative problem. The quality of the work is all-important, and by quality must be meant productivity. Either full employment means the maximum use of all the nation's resources in the most productive work, or it is a cloak for the most uneconomic policies imaginable.

Extremely Critical

The course of the fighting in North Africa promises well; but nothing can yet be taken for granted. The Battle of Egypt and the success of the Moroccan and Algerian landings are now past history. The future of Allied strategy and the duration of the war depend immediately and critically on the progress made in the east by the Eighth Army and in the west by the First Army. In the last week, the speed of advance, at least of General Alexander's force, has slowed down. News from Tunisia is fragmentary and inconclusive; but it indicates plainly that none of the advancing Allied columns has as yet joined battle with the bulk of the Axis troops. All the evidence suggests that the Germans intend the decisive action for the future of North Africa to be fought in Tunisia rather than on the Libyan-Tripolitanian frontier. Reinforcements and supplies have certainly reached the Axis via Tunis and Bizerta, while the air evacuation of units of Rommel's Libyan force is still proceeding. It is clear that, on both the African fronts, the Germans, for the last week, have been fighting only delaying actions. Whether or not Rommel is to make a stand at El Agheila is, at the time of writing, still undecided; but it seems improbable that, if he does so, it can be a major action. Supplies and troops from Rommel's force are known to have already proceeded westward. The situation in Tunis is very considerably affected by the spirited assistance given to the Allies by numerous French units. Axis propaganda discusses the alleged strengthening of the Tunisian bridgehead, especially in the air, with great confidence; and there is no doubt that a very determined attempt will be made to hold the First Army and to outrun the Eighth until the Germans can dig in.

Darlan at Work

The first measures taken by Darlan in his new capacity as High Commissioner for French North Africa have been followed with the keenest interest; and all those who dispute about the *affaire Darlan* will find food for thought in the short but crowded record of the High Commissioner's activities. The decisive steps leading to the effective inclusion of the whole of French Africa in the war effort of the United Nations have been made. The adherence of French West Africa to Admiral Darlan, not (as has too often been said) to the Allies, has been secured. The defenders of the deal with Darlan can reasonably point to this as a major success "in saving lives and time." The reply will be no less reasonably, that French West Africa was already effectively neutralised by events further north; it was virtually won even without Darlan—Allied control over North Africa had cut off West Africa from France anyhow, and its Governor-General, M. Boisson, had to make the best of a position in which he actually had no choice. Meanwhile, in North Africa itself, Darlan has been hard at work. Some of the measures he has taken can only be welcomed. Five classes of reservists have been called up in Algeria. Morocco has been divided into three zones; and each will come under special war-time regulations. A special trade department has been set up to deal with economic adjustment. Algerian Jews have been called up for service, which legally implies their re-acquisition of French citizenship. But, in spite of all this, Darlan's policy is still wrapped in ambiguity. The release of the de Gaullist prisoners, for instance, has been consented to in the form of an "amnesty"; and the Fighting French have voiced their protest against the use of this form of "rehabilitation," which is normally used in the case of proved criminals. The release of 900 members of the International Brigade has been announced as a measure taken, not by Darlan, but by the Americans; the French administration is apparently not anxious to take the credit.

Darlan's decrees carry always the same formula—"In virtue of the powers conferred upon us by the Marshal..." "In the name of the Marshal of France, head of the French state..." Nor has ambiguity been absent from those of Darlan's utterances which bear upon foreign policy. The address to the Sultan, on the occasion of the fifth anniversary of his accession to the throne, was significant. Darlan spoke of "France; Morocco and the United States, the nations which have a chivalrous idea of honour and have always respected a given word." The Sultan's reply was worded more broadly and it carried a reference to the "United Nations," a term which, like the name of Britain, Darlan has so far been careful to avoid.

French West Africa

The bloodless surrender of Dakar represents a significant credit item in the African balance sheet. Up to the last, M. Boisson had vehemently declared that Dakar would never be another Madagascar and would resist Anglo-

American encroachment. The fact that not only Dakar, but the whole of the African bulge, is now closed to the Axis represents an important gain. The strategic importance of Dakar can be gauged from a glance at the map. It is the nearest African point to South America, being less than 2,000 miles from Brazil. U-boats have recently intensified their activities in the Central Atlantic and the enemy is now deprived of possible opportunities for fuelling along the West African coast. The military and economic poten-

tial of French West Africa is considerable. Dakar has a first-class harbour—the third largest in the French empire and next in importance to Marseilles and Le Havre—and a good airfield; the French West African army numbers about 100,000 men; parts of the vast hinterland are rich in natural resources. Politically, the implications of this event are the same as those raised in North Africa. The problem is somewhat sharpened, however, by the fact that French West Africa has a common frontier with French Equatorial Africa, which was one of the first colonial territories to declare for General de Gaulle and is under Fighting French administration.

Delaying Action

In the Commons on Wednesday, Mrs Tate's amendment to the Address, calling for equal compensation for men and women for war injuries, was defeated; but it was morally a defeat for the Government. Almost every speaker opposed the present policy of discrimination; and 95 votes, the most yet cast against the present administration, supported the amendment, against the faithful 229 who supported the Government. There were many abstentions. The Government's case is that equal compensation is not possible without equal pay; while pay is unequal between men and women, it is argued, equal compensation would mean either disproportionately high benefits for women or disproportionately low benefits for men. Mr Attlee, who put forward this distinctly disingenuous plea—for all its plausibility as it stands—did not suggest that his heart was in it; and his announcement that a Select Committee would be set up to look into these frightening complications made no impression on the Government's critics. Actually, the Government's line of argument was both unfair and unconvincing. Mrs Tate deliberately confined her case to the question of compensation. So the Government, simply to win the debate, switched at once to the issue of pay, saying that the two are inseparable. If they are inseparable, then Mrs Tate and her supporters must broaden their front. On balance, the women of this country are being treated as shabbily as they are doing well; and if equal compensation, which is common sense, is impossible without equal pay, which is common justice, the two must be granted together. And to set up a Select Committee, which can serve no purpose but to state (or disguise) the obvious, is sheer procrastination.

The Defence of Australia

Mr Curtin has taken a courageous step in proposing that the restriction on using the Australian Militia outside Australia should be relaxed to the extent of enabling it to be sent to the territories in the south-west Pacific. To people in this country, such a step, when Japan is already in the Pacific islands which constitute Australia's outer ring of defence, seems belated and obvious. But conscription for service outside the Commonwealth is as serious an issue to the Australian Labour Party as it is under similar circumstances for French Canadians; and it is probably fear of splitting his party, as it was split in the last war, that prevents Mr Curtin from going the whole hog and removing the restriction altogether. As it is, if his proposal is implemented, the Militia and the AIF will be regarded as an indivisible force for service in the Solomons, Timor, Netherlands Indies and New Zealand—Papua and New Guinea, being under Australian jurisdiction, are presumably not affected by the restriction. What is strange is that Mr Curtin should have chosen this particular time to make his proposal. That he should have announced it first to a Federal conference of the Labour Party, before obtaining the support of his Cabinet and before announcing it to Parliament, can also be explained by his desire to preserve the unity of his party, whose majority in Parliament is precarious enough. But the result is that the Federal conference decided that it should be referred to the party executives in the states, which should then instruct their delegates to a special Federal conference. This special conference will be held on January 4th, and not, presumably, until after then can the necessary measure be passed in Parliament. By that time, the situation in the Pacific may well have completely altered—for good or for bad. In the meantime, the Opposition, which favours the complete removal of the restriction, may be tempted to force the issue when Parliament reassembles on December 10th. Mr Curtin's courage is to be warmly applauded; but it might

have been better for his own Government's position, as well as for the defence of Australia, if he had mustered it as soon as the campaign in the south-west Pacific became of major importance in the war.

The Controllers

In a pamphlet on the Raw Material Controls, published by the Fabian Society (Tract No. 257, 4d.) Mr G. D. N. Worswick flatly asserts that the work of the controls has been done badly and that the main reason for this is the fact that the majority of the controllers have been selected from the industries they control. While *The Economist* has often criticised this principle of selection, on the grounds that it was too much to expect a business man always to make an unbiased decision when a conflict arises between his lifelong interests and the communal interest, Mr Worswick's attack upon the controllers would have carried more weight if it were supported by a more adequate basis of fact. Self-interest may occasionally have carried the day in the decisions of the controllers, but to say that, as a whole, they have failed to deliver the goods, and that a change must be made if the war is not to be prolonged indefinitely and if the risk of defeat is to be avoided, goes much too far. When Mr Worswick draws attention to the danger of maintaining the raw material controls in their present form after the war, he is on surer ground; the present set-up undoubtedly strengthens the existing tendency to monopoly and the fear that the people "will find that the big monopolies and combines are firmly entrenched within the Government machine itself" is far from groundless. If control of the supply and distribution of raw materials is to be maintained after the war, care will need to be taken to prevent the restriction of output and resistance to the introduction of new materials. In Mr Worswick's view, the solution would be to entrust the provision of materials to a separate Government department and to organise the individual controls to include groups of related materials. The heads of the controls should have no financial interest in the materials under their charge; they should be employed on a terminable contract, and the use of the machinery of trade organisations as controls should be abolished. These principles are sound and might with advantage have been adopted long ago. The real danger after the war is a repetition of the experience of the inter-war years, when high-cost producers often successfully resisted technical change and a redistribution of the centres of low-cost production. The problem is not confined to this country; it is an international one; and its solution can best be found by international collaboration designed to increase the flow of cheap materials to present and prospective centres of consumption.

Indecision

Neither the two-day debate in the House of Lords nor Sir Stafford Cripps' speech in the House of Commons last week has thrown any new light on the Government's intentions in regard to planning—beyond indicating that legislation of some sort may be expected in the course of the session. Both the Minister of Works and Planning and the Lord Chancellor denied the charge of procrastination, and pointed out that the Scott and Uthwatt reports had only been in the hands of the Government since September. This, of course, is true; but the Barlow report which, as the Archbishop of York pertinently reminded the House, can be regarded as complementary to the Scott and Uthwatt reports, was published as long ago as December, 1939; and the issues involved are at least a generation old. Lord Portal announced that the Government intended to accept two of the Uthwatt Committee's recommendations—first, that control of development must cover the whole country, and, secondly, that in war-damaged and reconstruction areas, the planning authority should be given power to purchase the areas as a whole. But no Government spokesman has touched upon the fundamental question of the central planning authority. Speaker after speaker in the Lords' debate, whatever their political complexion and whatever their particular interests, expressed their disappointment at the failure to come to a decision. The Lord Chancellor sat on the fence in his own inimitable fashion: the Minister of Works was equally evasive, perhaps because he is himself not clear where he and his department stand.

Three Years She Grew

The war savings campaign has completed its third year, and the war savings committee has celebrated the birthday by the presentation of a host of statistics designed to show that "a lovelier flower" could not have been devised. Some of these statistics are discussed in an Investment Note on page 675. From the wider viewpoint of national economic policy, it is clear that the statistics are almost meaningless. The committee apparently ignores the fact that, even if inflation were rampant, which it certainly is not, would people try to turn all their money into goods at whatever cost. Thus, even the improvement in the quality of saving during this third year may mean nothing more than that "small" savers are receiving bigger earnings. It is true, of course, that owing to the efforts of the savings committees, these additional earnings are not all spent; but it may be argued that the physical restrictions on consumption are an equally effective deterrent. What the amount of savers and savings does not mean is that people have reduced their expenditure *pro tanto* below their pre-war expenditure. It is this absolute cut in expenditure which must be secured, and is being secured, by a number of means—taxation, post-war credits, rationing, actual shortages as well as by saving, which to most people is, in effect, merely the automatic financial result of being physically unable to spend. It is impossible to be certain that if the savings campaign were dropped overnight, the effect on the national economy would amount to much more than longer queues, more crowded cinemas and an even bigger increase in the note circulation. Thus, the national savings committee might seriously consider dropping its expensive advertising of stout commandos and guerillas—which must be very irritating to the real fighters—and simply emphasise that the purchase of savings certificates is a highly profitable investment.

Algerian Food Exports

German propagandists, echoed by their Déats and Doriots, shed crocodile tears over France, which has been deprived of the North African food supplies by "Anglo-Saxon greediness." The spokesman of the German Foreign office quoted a recent article in *The Economist*, in which the significance of North Africa in economic warfare was discussed, to substantiate his "thesis." The following figures of Algerian food exports to France were published by *Le Temps* on October 17th-18th. The table gives a comparison between exports in 1938 and in 1941:—

	1938	1941
Grain (quintals)	968,000	1,780,000
Dates	113,000	207,000
Figs	74,000	55,000
Citrus fruit	590,000	720,000
Vegetables and fruit	600,000	1,136,000
Wines (hectolitres)	16,400,000	5,850,000
Horses and mules	15,000	29,000

The only exports showing a decrease are wines and figs. The increase in all the other items amounts, as in the case of vegetables and fruit, almost to doubling. Yet, with only about half of last years imports, France fed its population plentifully in 1938. In 1941, the imports were doubled, but the French population was reduced to starvation rations. The bulk of the North African food obviously went to Germany in addition to the supplies exacted from France itself. This is hardly a revelation to *The Economist's* readers. What perhaps makes the point interesting is that the proof for the assertion questioned by the spokesman of the German Foreign Office is provided by an authoritative Vichy source—only a few days before the operations in North Africa started.

Shorter Notes

The Papuan campaign appears to be reaching its final phase. Despite the bringing up of some reinforcements, at the cost of the loss of a destroyer and close on twenty planes, the Japanese have been unable to stabilise their precarious hold on the Buna-Gona coastal strip. Their elimina-

tion would represent a great triumph not only for the fighting men, but also for the administrative and supply personnel of General MacArthur's command.

The Church Assembly concluded last week its debate on the National Society's interim report on the dual system, discussed in *The Economist* of October 31st (page 538). The motion to accept the proposals contained in it was amended to include also a statement welcoming the Archbishop's assurance that paragraphs 7 and 8 of the report were to be read, not as the ideal method of arranging a religious education, but as terms which the Church would be wise to accept if the Government offered them. The amended motion was thereupon carried, the voting being as follows:—

	For	Against
Bishops	17	6
Clergy	88	62
Laity	64	24

After ten years of estrangement, Mexico, deathplace of Trotsky in the summer of 1940, and Soviet Russia are to renew diplomatic relations.

By a regrettable editorial error, it was stated in a note called "The Trade in Thrift," which appeared in *The Economist* last week (page 629), that the number of paying industrial assurance policies was £90 millions. From the context, it should have been quite clear to readers that this should have read 90 millions.

The following table gives the number of civilian casualties in air raids since September, 1939:—

	Killed	Injured and Detained in Hospital	Total Serious Casualties
Sept., 1939-Aug., 1940	1,494	1,980	3,474
Sept.-Dec., 1940	22,282	28,522	50,804
Total, 1941	20,863	21,839	42,702
1942:—			
January	114	59	173
February	24	20	44
March	21	13	34
April	987	1,046	2,033
May	399	426	825
June	293	358	651
July	411	871	1,282
August	403	509	912
September	207	238	445
October	229	370	599
Totals to date	47,727	56,251	103,978

Of those killed in October, 80 were men, 94 were women and 55 were children under sixteen.

Women are to be admitted to membership of the Amalgamated Engineering Union from January 1st.

LLOYDS BANK LIMITED

EXECUTORS AND TRUSTEES

The appointment of individuals as Executors and Trustees imposes on them heavy burdens and duties which they are not always in a position to fulfil. Especially is this the case in wartime, when life is so uncertain and so many difficulties arise in the administration of estates.

When the Bank is appointed, continuity is assured and a Testator can count on his estate having the benefit of skilled and experienced management in the disposal of securities, the payment of duties and taxes and in the many other matters incidental to its administration.

A pamphlet giving terms and particulars will be sent free of charge on application to any Branch.

Letters to the Editor

Full Employment

THREE recent articles in *The Economist* on October 3rd, 10th and 17th discussed the ways and means of ensuring full employment for all those who are willing to work. It was argued, in some detail, that mass unemployment can be prevented if the community's annual Investment (by private enterprise and, to the extent that private investment falls short of the desired level, by the state) can be made (a) large enough year by year to take up the total of annual Savings and (b) regular from year to year. Three letters are printed below which represent reasonably well the several views expressed in the many comments which have been received. *The Economist* would never claim that its reasoning in this novel field of political economy and applied statistics can claim anything like finality. If the articles have, as one correspondent put it, "enabled the discussion to be carried a stage further," they have done their work; and nothing has yet been said to upset the validity of their general thesis.

TO THE EDITOR OF THE ECONOMIST.

Sir,—The following comments are offered on the three thoughtful articles published in *The Economist* on "Full Employment":

1. Importance of the Problem.

The first article was written largely under the influence of Professor Hansen's "Fiscal Policy and the Business Cycle." American problems are not altogether English problems, or, indeed, European problems. "If liberal democracy is not compatible with full employment then it is liberal democracy that will go." It would be impossible to overestimate the importance of the solution of the problem of economic stability. Yet it might be asked whether its solution by itself would, in the Old World and especially in Britain, be sufficient for social and political stability confronted as we are with powerful new forces in the world.

Here we have a country grown old as an industrial country, densely populated and most probably at the end of the war a debtor country, faced with the necessity of restoring its export trade in order to maintain the standard of life now sustained, in a certain sense, by the Lend-Lease arrangement.

In America, on the contrary, we have a vast continent, self-supporting except for some raw materials and perhaps for some luxuries which, though pleasurable, are by no means essential; a continent not only vast, but blessed with the richest natural resources, except perhaps Russia; a continent which is relatively unpopulated, where, therefore, the marginal productivity of the individual is still sustained by the relative scarcity of man as against resources. In these circumstances, it is only to be expected that the whole of the attention of the economist there is focused on the main anomaly of the existing economic system—the periodic recurrence of unemployment, threatening to become a permanent feature of this potentially vastly rich body: thus not merely reducing total real income, but reducing it with an unequal incidence, making some people completely destitute.

The emphasis in England should be rather different. The unemployment problem has been less acute, and the growing poverty of natural resources is becoming serious, as is instanced by the present crisis in the coal industry, an industry which has been the basis of our whole economic development. In this country, I submit, attention should be given not only to whether resources are employed, but also to how they are employed. Professor Hansen, together with other American economists and most English economists, have as yet refrained from investigating more closely the working of the actual, in contrast to an ideal, economic system under individualistic capitalism. Professor Hansen, in a book of over 450 closely printed pages, has not a word to say about imperfect competition or monopoly. It is assumed by him that what expenditure private consumers and entrepreneurs themselves decide upon is well decided upon and spent in the most economical fashion.

Nothing would be false than to accept this picture, which completely excludes the most burning problem of

modern economics, the economics of corporation and quasi-monopoly. These tendencies are found not only where there are trade associations and some sort of quota allocations, not only in fields in which large-scale competitive advertisement dominates the field, establishing small separate markets for each firm, but indeed in those other fields which the layman and most economists are inclined to regard as typical of free competition—the field of retail trade, for instance, where tacit agreements, dire experience of the results of price-cutting and special human relations between customer and salesman prevent free competition from becoming effective.* The myth of production being extended until the point where profit disappears does not bear examination. Yet Professor Hansen and the writer in *The Economist* both accept, at least implicitly, the myth for a true picture.

2. Causes of Unemployment.

The articles deal essentially with the problem of the business cycle. It is suggested that there is a substantial agreement on the causes, as well as the cure, of business cycles. I am afraid I cannot share this view. *The Economist* articles suggest that business cycles occur because of a temporary breakdown of investment. In my view, the breakdown should be regarded rather as a structural phenomenon which makes itself felt periodically. Employment is dependent on consumption and investment. Wealthy communities suffer from an habitual tendency to over-saving. As capital intensity grows, the rate of interest must decline. Lord Keynes has shown that the rate of interest cannot, for technical reasons, continue to decline below a certain point under individualistic capitalism. Hence this trend will, from time to time, evoke a breakdown in the investment process. During this breakdown, investment activity cannot be stimulated by the indirect method of decreasing the rates of interest, on account of increased risk. Entrepreneurs in general will only invest if the prospective profit is far greater than the rate of interest on riskless financial investment, e.g., State Bonds. It is the tendency to over-saving at a given rate of interest, and the temporary breakdown of the investment process thus produced, which brings forth cycles, suggesting a periodic but temporary cause.

3. Cure for Unemployment.

Unemployment can be cured by stimulating either consumption or investment. Which procedure would be more "natural" depends entirely upon whether we are satisfied with the existing distribution of the national income. The state can change the distribution of income by taxation, and is already proceeding to a large extent to do so. If we accept as a duty of the state to procure a certain distribution of national income, that is to say, to ensure basic decent conditions for each member of the community, then, as the country gets richer, the basic minimum will increase and part of the tendency to over-saving will thereby be eliminated. Redistribution of income through "social security" (family allowances, more adequate old age pensions, provision for the unemployed, sick and disabled) would both increase consumption and provide opportunities for investment in supplying the needs which would be satisfied from the additional social security incomes.

Investment can be increased either by stimulating private investment or by direct investment by the state. It is suggested in the first *Economist* article that stimulus to investment is to be preferred to stimulus to consumption because:—

- (i) It can be applied or withheld as the situation demands;
- (ii) It has a greater impact-effect on the economic system than stimulus to consumption;
- (iii) Whilst investment can be stimulated indirectly, stimulus to consumption can be undertaken only by the state itself;
- (iv) Finally, a stimulus to investment is said to be more "natural" than stimulus to consumption as it "responds" to the "individual acts of choice."

The Economist prefers stimulus to private investment through various kinds of subsidies, increasing depreciation

* Mr Balogh does not presumably intend to imply that these and kindred activities have not been a main staple of critical comment in *The Economist* for nearly 100 years.

allowances for tax purposes, provision of cheap capital or guarantees of loans. This is all on the assumption that a minimum of interference with private enterprise and the existing distribution of income is desirable.

On the one hand, *The Economist* demands that the state should not enter competitive enterprise, since "subsidised" competition would "eliminate" private initiative in that field. On the other hand, it insists that non-productive state investment will endanger economic stability in the long run

as it is essential that as much as possible of the community savings should be invested in forms that will give tangible and material dividend in the future.

The writer appears to fear monetary disorders if the state, by "non-economic" investment, absorbs savings without securing any economic return with which to pay interest on the loans issued to carry out the investment, and therefore has to increase taxation. He seems to regard the increase in the national debt, not as the obvious counter-item to the increase in national collective investment, which increases the real income of the community, but as something specifically monetary. There is no earthly reason (provided appropriate direct controls are introduced and provided the state does not try to provide hyper-employment instead of full employment) why there should be an increase or decrease in the value of money in consequence of the state deficit, any more than if the state stimulates private investment. It is fundamentally only a question of economic expediency whether commodities or services supplied by the state should be financed by "commercial" sales (e.g., postage stamps) or by taxation (e.g., roads or the police).

In so far as state investment is admitted at all, it is to be regarded only as a balancing element. What are the implications of this view? It implies that, once the war is over, "effective" demand should take precedence over any consciously planned reconstruction. The duty of the state is to be restricted to providing such balancing demand as would give full employment and nothing more. The underlying assumption is that the distribution of effective demand at the end of the war will wholly coincide with the long run interests of the community as a whole. It suggests that British reconstruction is to pay no attention to priorities to be determined by common agreement, but to permit the haphazard distribution of wealth and income (especially of wealth) to exhaust the productive capacity of the country. Even the least financially minded must recognise that the productive powers of the state are not unlimited; that therefore a certain choice will have to be made as to what the community can "afford" after the war is over. Are we to proceed in future, especially in the dangerous post-war period, merely on the basis of the desires of those individuals who can make their desires effective? Are we to build palaces before restoring decent housing conditions? Are we to import luxuries when it will be, on any hypothesis, rather difficult to provide for necessities for the community as a whole? If at the end of the war "effective" demand would originate from the desires of approximately equally well-endowed individuals, the assumptions underlying the analysis of the three essays might well be granted. However far-reaching changes in economic and capital distribution have taken place during the war, surely this basic hypothesis is far from being true. It should be the state which determines the basic effective demand, i.e., plans reconstruction and provides expenditure to ensure decent basic conditions for the population as a whole, with the luxuries being the balancing factor, in the sense that, if those basic conditions are established, the margin should be permitted to be used freely, by those who can afford it, for obtaining luxury, colour and amusement.

4. Definition of Full Employment.

One of the articles explains that full employment "does not mean the total disappearance of the unemployed." It means the disappearance of cyclical unemployment. A certain amount of what one might call "transitional" unemployment is imperative "for the elasticity of the national economy" but, with this phrase, the author glides over the most important of all dilemmas with which the modern economist is faced, the dilemma between political and economic liberty. At the moment, full employment can be said to occur when acute shortages arise in the supply, not even of certain kinds of skilled labour, but of any kind of productive capacity. Once the bottleneck stage in the business cycle is reached, the stage is set for the cumulative

process ending in a boom and crash. If, therefore, "normal peacetime activity" is to be resumed after the war, and if we wish to avoid the recurrence of vast business cycles, we shall have to make up our minds to face a very considerable "transitional involuntary unemployment," estimated at between 10 per cent and 15 per cent of the economic system.

Economists have not yet realised the full scope of the problems to which a policy of full employment would give rise. Before the war, labour mobility and labour efficiency as well as monetary equilibrium were entirely provided by the threat of destitution through unemployment (even if the unemployed received some dole). As soon as employment began to be anywhere near "full," the bargaining power of trade unions increased and discipline in the shops relaxed. This state of affairs was, to say the least, unwelcome to most employers, and this undoubtedly resulted in their disinclination to embark on further investments, which automatically brought the cumulative upward movement to an end.

Full employment necessitates a change in the position and attitude of both entrepreneurs and trade union leaders. *The Economist* realises the implications of this change in regard to entrepreneurs, when it suggests that a policy of full employment necessitates the control over physical investment, or, in other words, that the elimination of risks of cyclical character necessitates the imposition of artificial restraints, in order to prevent a runaway upward spiral originating from the side of the entrepreneurs, i.e., speculation in commodities, speculation on the Stock Exchange, speculative investment. But it completely balks at dealing with the labour side in the same context. The minimum unemployment necessary to retain some elasticity in the economic system, and so to permit the smooth adaptation necessitated by economic progress, will be intimately connected with and depend upon the social and economic system which is established. If we are to rely on the present individualistic system, where the movement of productive factors is enforced by variation of income, and in the case of labour loss of income and destitution, then, indeed, the scale of unemployment necessary will be quite considerable. If, on the other hand, an economic system is established in which some measure of planning and direct control is retained, then the unemployment necessary for elasticity will be very much lower. It must be emphatically stated, however, that such a system will have to rely for discipline not on the fear of the poor of destitution, but on their sense of responsibility and co-operation with the managements.

The workers will, unless a new social equilibrium is reached, insist on using their bargaining power, increased by the state of nearly full employment, to extort as many concessions as possible. As long as there is no reality in National Unity, full employment will inevitably result in a wage inflation. On the other hand, it is obvious that the sense of justice and the political tendency both demand an equalisation of incomes. Unless some constructive solution is found, we shall see a tendency towards depression in the economic system. Capitalists will not venture their capital. This will call for a high rate of state investment and be complicated by "confidence" crises. This process must lead either to the establishment of a Fascist regime where the bargaining power of the workers is eliminated by terror or to such gradual encroachment of the state on private enterprise as would limit the scope of private initiative even in fields where it could be well maintained.

5. Flexibility in Working Hours.

There is no need, however, to assume that, after the war, full employment in any true sense of the word entails such far-reaching regimentation, especially over manpower, as has evolved in Russia, Germany, and lately even in this country. In a war economy, the aim is maximum striking force at whatever cost compatible with the maintenance in the long run of efficiency and morale. At peace, however, the leisure and ease of the population is, within certain limits, one of the main aims of economic policy. The more successfully we achieve this aim, the more there is in reserve for any temporary spurt required by economic emergencies on the part of people working in bottle-necks. This could constitute the reserve (i.e., flexibility) necessary to remove those bottle-necks. If the working day is reduced to an average of six to seven hours a day, then it would be easy to increase production without grave discomfort in certain occupations to eight or nine hours, i.e., by anything between 10 per cent and 30 per cent. Such increase in productivity should be

ample, especially if the control of investment and the plan underlying that control has not been at fault, to provide that elasticity which we require.—Yours sincerely,
T. BALOGH.
Balliol College, Oxford.

[Mr Balogh, whose letter is a notable contribution to the thinking-out of these crucial problems, would no doubt admit that a good deal of his criticism carries the subject into a province which *The Economist*, for its part, did not attempt to enter. Indeed, it is the gravamen of his charge that the policy outlined by *The Economist* was intended, modestly but with some realism, to fit the economic circumstances of this country as they are likely to be when the war is over. Admittedly, the course and details of the argument might be drastically altered by the hypothesis of very sudden and very sweeping social and political changes. But whatever the desirability or otherwise of such changes may be, this is another question.—EDITOR.]

TO THE EDITOR OF THE ECONOMIST

SIR,—In your article on Full Employment, on October 17th, you advance the argument that investment carried out by the state entails a danger of inflation, while private investment does not, because state investment is likely to be accompanied by an increase in the quantity of money. This argument appears to be based on a confusion.

Investment expenditure of any kind increases the demand for consumption goods, for incomes earned in producing investment goods are free to be spent on consumption goods. Too much investment will involve an excess of demand for consumption goods over the available supply at current prices, and so tend to drive up prices. The problem of avoiding inflation is the problem of maintaining the right amount of investment, and has nothing to do with the question of whether the state or private concerns own the investment goods produced.

The question of the quantity of money is connected with the rate of interest. An increase in the level of money income, due to an increase in productive activity, raises the demand for money, so that, if the quantity of money is not increased, the rate of interest will be forced up. If the authorities desire to see both full employment and a steady rate of interest, they must increase the quantity of money, no matter who is undertaking the investment.

The distinction between public and private investment has no relevance whatever to these problems. The importance of the distinction lies in the fact, which you point out, that public investment must involve a gradual extension of socialism. So long as you stick to the argument that socialism is a bad thing, your case is perfectly clear and ingenious, but sophistical excursions into monetary theory do not strengthen your position.—Yours, etc.,
3 Trumpington Street, Cambridge. JOAN ROBINSON.

TO THE EDITOR OF THE ECONOMIST

SIR,—You say in your articles on Full Employment that the danger of causing economic strife abroad by a policy aimed at maintaining full employment at home can and should be avoided. I am not convinced.

You admit that exchange control and control of imports will be necessary for the controlled investment policy you advocate to work; and that this policy is not compatible with the free and automatic working of the international exchanges. This I agree with, and I think it is terribly dangerous to embark with open eyes on a path which you yourself confess may lead, as it always has done in the past, to competitive economic nationalism, competitive restriction, and so on. I do not believe that the risk is worth while.

Can I draw your attention (probably unnecessarily) to what other liberal journalists have said about your scheme? The City Editor of the *News Chronicle* says that you are "willing to pay the price of unemployment in other countries in order to abolish it here," and adds, in my view correctly, that "full employment for a single country is too narrow an objective." And a writer in *The Observer* says that "what has always stood in the way of full employment in the past has been the fear of a large deficit in the balance of payments; and if full employment is achieved by stimulating industries that take the place of exports, the result is to cause unemployment abroad, which must sooner or later react on one's own export industries." I agree with these arguments.

I am not very much more impressed by the way in which you brush aside the other dangers of the planning of investment that you suggest: the danger that everything

and everybody, employment, prices, wages, etc., will have to be controlled and regimented down to the last detail; and the danger of inflation. I think your articles are very important, and, in theory, very able and logical. But I do not believe it will work.—Yours faithfully,
Salford.

J. JOHNSON.

[It was admitted in *The Economist* articles that the policy proposed for full employment carried with it distinct dangers—that of making the state totalitarian, of debauching the value of money, of causing economic strife abroad or creating stagnation at home. But it was argued that the certainty of political chaos if a bold effort is not made to cure chronic unemployment after the war more than justifies the taking of these risks. They must be taken; and, in *The Economist's* view, there is no practical reason why, given goodwill, skill, knowledge, democratic methods and international co-operation, all the risks should not be overcome. Neither in practice nor in theory is there anything in a full employment policy which contravenes the need for a large, expanding volume of international trade or which stands in the way of the international division of labour. The stress put by Mr Johnson and others on the international implications is, of course, very sound, if only because it emphasises the fact, which was not perhaps brought out distinctly enough in the articles, that the solution is to proceed by international co-operation, by the pursuit of full employment by planned investment in each country according to a concerted programme agreed among the nations, and with the minimum of impediments to the flow of goods and capital from country to country.—EDITOR.]

Two Nations

TO THE EDITOR OF THE ECONOMIST

SIR,—In your comments under the heading "Two Nations" in the issue of *The Economist* on October 31st, the following statement is made:—

The social surveyor of a hundred years hence who reads of such statements as Lord Wardington's—that a rich man today has no penny left after paying his taxes and commitments to buy a crust of bread—and then studies Lord Wardington's household accounts will be perplexed.

The inference drawn from this incorrect and incomplete quotation of my recent remarks in the House of Lords gives such an entirely erroneous impression of the whole tenor of my argument, that I feel sure you will welcome the opportunity of revising your criticism. The actual words I used were:—

These so-called rich, after paying these liabilities from which they cannot escape, will not have a penny of free income left with which to buy a crust of bread.

—and I went on to say that the so-called rich were now compelled to spend their capital—where such was available—in payment for any of their personal needs. I made it clear that I used apparently exaggerated language on purpose, in order to bring home to the general public, who were ignorant of these facts, what the actual position was. That what I stated was the absolute truth any professional person dealing with these matters can testify, and I am which *The Economist* possesses should have thrown doubt on the truth of my statement. It was evident, I think, that I was not talking of my own position, and it was equally clear that I entered no plea for pity for those who were left with no free income with which to meet their personal requirements, but who had, nevertheless, acquiesced in this deprivation for the purposes of the war without a murmur. My whole object was to let the plain truth be known, and in this I feel confident I shall have the sympathy and support of *The Economist*.—Yours faithfully,
16, St. James's Street, S.W. 1.

WARDINGTON.

[Lord Wardington has defined "these liabilities from which they cannot escape," very roughly, as "income-tax and surtax (including Schedule A on property which not only brings in no return but involves large payments in life policy premiums within the limits of one-sixth of income; jointures and family allowances; War Damage contributions; charitable subscriptions, payable annually, though not under deeds of covenant; and pensions to estate and other servants."—EDITOR.]

AMERICAN SURVEY

The End of Isolation

(From our Special Correspondent in the United States)

THE chief message Mr Wendell Willkie brought back to the American people from his world tour was that they are not alone.

I say to you, there are no distant points in the world any longer . . . our thinking and planning in the future must be global . . . America must play an active, constructive part in freeing the world and keeping its peace.

His discovery that

myriad millions of human beings of the Far East are as close to us as Los Angeles is to New York by the fastest railroad trains

has reinforced the growing American feeling that the maps Mercator drew for their schoolrooms with the two wide comforting stretches of water to east and west are somehow out of date. New maps are circulating—they can be found in the studies of college presidents, pinned up on high-school walls, displayed at party conventions—provided by the courtesy of *Time* and *Life*. They show a new projection centred on the North Pole. Japan on one side, Norway on the other, point Axis pistols at the heart of the United States, at the Great Lakes and Detroit. There is no more water but a solid land mass stretching, with the little interruption of the Behring Straits, from Narvik to Florida. Mr Willkie's intensely dramatic world flight has thrown a searchlight of publicity on the new maps. A sort of Copernican revolution is going on in men's minds.

For Americans, the end of isolation, not simply as a logical argument but as a fact of experience, means the end of one of America's most widely accepted patterns of thought. Isolationism is not only dying on the Atlantic and Pacific coasts where the Axis sinkings or the geographical proximity of Pearl Harbour and the Aleutians hammer America's accessibility home. It is dying too in the heart of America, in the flat lands between the Alleghenies to the Rockies where all modifications in American policy have finally to be sanctioned. Groups of solid farmers, meeting, say, in Iowa to discuss their country's future policy, now take it for granted that there must be a world order in which the United States must play a part. The Veterans, who until a few years back were a solid core of isolationism, met at Kansas City this September to pass a resolution in favour of United States leadership of "some international association of nations for world peace." A recent public opinion poll put the proposition

if, after the war, a union of nations that would try to solve world problems were formed, do you think it would be a good idea or a bad idea for the United States to join it?

The result was that 72 per cent considered it a good idea. These are more than straws in the wind. They mark a profound change in the outlook of the people.

This does not mean that no pockets of isolationism remain. There have been signs of it among the Armed Forces, where one school of thought has been pressing for the concentration of all American production on the equipping of a vast American army which "in 1945" would win the war singlehanded and determine the peace, unencumbered by Allies. This type of thinking appears, however, to have been scotched. There are also dangerous centres of isolationism in the political world. It is doubtful if many of the out-and-out isolationist politicians in the Republican Party have changed their spots; and by a sleight of hand unequalled in recent political history, they have managed to transfer the odium of having impeded the war effort from their own pre-Pearl Harbour obstructionism to the Administration's struggles and difficulties in mobilising a partly unwilling democracy into a total war economy. The slogan "not pre-Pearl Harbour isolationists, but pre-Pearl Harbour bunglers" has caught on. The recent election is proof of this.

But the "Willkie Republicans," the New Guard of the Party, which include such young and able men as Governor

Stassen of Minnesota and are backed by the powerful chain of Luce publications, have definitely repudiated isolationism; and they have a chance of stampeding the old-timers by their sheer ability to collect votes.

United Nations?

The problem before the American people now is to substitute a new world picture for their waning isolationism. The future position of the United States in the world is recognised almost everywhere to be an issue of immediate urgency. There is a great deal of talk about "armed might" and "moral leadership" and "sense of responsibility." The United States is going to play a leading part, all are agreed. But how? In what framework? In alliance with which other states? In what type of international organisation? There have been such discussions before, of course. The important point about the present phase of American thinking is that it is taking place in something of a vacuum. The new patterns and pictures that are emerging may become as influential as the old sense of isolationism. Such great debates are not settled only by rational points and logical arguments. Isolationism was not an argument so much as a state of mind. The Americans are acquiring a new state of mind. They are *feeling* as much as arguing their way towards it. At such times, emotional stimuli, imaginative factors, subconscious conditionings are fully as important as straight arguments. A search is going on partly for a new type of international policy which, according to balanced and rational criteria, can be relied upon to maintain world peace, but equally for an association in which the American people will feel comfortable. This is perhaps the reason why machinery and institutions figure less in popular discussion than the virtues and defects of the states with which the joint machinery will have to be worked out. This fact is not necessarily discouraging. No amount of world machinery, however excellent, will make up for the will to co-operate, if that will is lacking. The only guarantee that a consistent line in American foreign policy can be maintained through successive administrations will be a deep-seated, almost subconscious desire among the people to co-operate with other nations.

It is too early to say whether decisive new moods have emerged. The persistent attempt to "sell" Latin America to the United States has had certain superficial effects; for example, the "Copacabana" influence on girls' evening clothes and the monotonous popularity of the rumba. But the larger issues of linking up the destinies of the western hemisphere seem either to be taken for granted or left out of account. The question is not generally considered to be a serious problem. Another factor is the tendency to sheer off the problem of Europe. This is not because the solution of Europe's problems is taken for granted. It is because it is all felt to be too difficult. Some people even go so far as to say "Europe is finished. It has neither the vitality nor the resources to play a part in the great world of the future." The mood is partly traditional: Europe is the place a great many Americans came away from. It is partly impatient: Europe is the place in which world wars all start. It is partly disappointed: the collapse of France and the moral bankruptcy of the Vichy regime have weakened one of America's closest emotional links with the Continent. It is partly bewildered: is there any solution to the German problem? The net effect of the mood is to push American thinking away from Europe and small nation states and frontier problems to broader horizons, larger issues and to what Mr Willkie calls "global thinking."

Here China and Russia admirably fit the picture. Both of them are vast. Both of them have fired people's imagination by taking the brunt of the fight against the two great aggressors. Both have had popular revolutions. Both belong

to the "exploited" East, not the exploiting West. Both are believed to have tremendous futures. With China, there are of course extremely few prejudices to break down. The sympathy of America towards the Chinese people is traditional and instinctive. Russia is in a different category. The Russian system has aroused fierce and hysterical animosity. The resistance of the Russian people has silenced the critics and the popularity of Russia is growing steadily. China and Russia are creating their own *mythus*, which is of nations, forward looking, teeming, headed towards adventurous new horizons, grounded in the popular will. The picture is appealing, for when the Americans think of their own country, they think of it as young, forward-looking and grounded in the popular will. As Mr Wallace said of Russia and America: "Both peoples know that their future is greater than their past." Or as Mr Willkie put it:

Men and women of Russia and China . . . are conscious now of their potential strength. They are coming to know that many of the decisions about the future of the world lie in their hands. . . . They would like the United States to be one of their partners in this grand adventure. They want us to join them in creating a new society, global in scope. . . .

Mr Wallace and Mr Willkie are politically poles apart; but they are the nearest to "myth-makers" the American people have to listen to today. It is significant that they are both creating the same image—that of a world coalition of United Nations, dedicated to the extirpation of imperialism everywhere, and broadly based upon the work, hopes and aspirations of millions and millions of the "common people."

Anglo-American Relations

How does Britain fit into this picture? It must be admitted, badly. Although Anglo-American collaboration has gone further to co-ordinate the nations' two war efforts and two economies than ever previously in the history of any international alliance; although a multitude of genuinely international agencies—the Combined Boards, the Combined Chief of Staffs Committees—all function with a remarkable measure of unity; although the military forces of the British Commonwealth and the United States are carrying on the process of "getting mixed up together" all over the globe—there is little trace of any growing enthusiasm here for Anglo-American collaboration for the future of world order. It does not stir peoples' enthusiasm very much. It is not operating at the level of imagination and emotion. No myths are being formed. Since the Battle of Britain, which brought a wave of enthusiasm for a time, a new picture has been growing in people's minds. Happily it is still vague, it can still be dispersed, but it is undoubtedly there, at the back of people's minds, or in the under layers of their subconscious. It is of Anglo-American collaboration as a veiled attempt to perpetuate the supremacy of the white race, to maintain imperialism, to defeat the subject nations' passionate desire for freedom. It is of Britain as an old Empire, learning nothing, abandoning nothing except under the pressure of military defeat. It is of the British Government as a Tory Government committed to the old order. It is of a straight issue between imperialism and freedom, servitude and independence, peoples' governments and aristocracies—with Britain always on the wrong side.

The trend must not be exaggerated. The picture is most emphatically not the only view of Britain. The British people have their devoted friends—even their fanatical champions. In spite of all the carping and criticism, it is still certain that most Americans feel a sense of kinship with the British and it is possibly true that most of the criticism springs from the feeling that someone within the family is letting the side down. But in the shadowy indeterminate world of emotion and imagination, it would be untrue to suppose that Britain is making a good showing. India, incredibly simplified as an issue between light and darkness, is universally discussed. Singapore, Malaya, Burma

are still symbols of Imperial decadence. There is real danger that the United Nations may come to suggest to people's minds an alliance of China, Russia and the United States for the purpose of liquidating—with the highest motives—the British Empire. The celebrated letter in *Life* is not important for its inaccuracy and discourtesy. It is important as a sudden bubbling up from the subconscious of the editors of a group of publications whose influence is nationwide and whose views in part coincide with the myth-makers, Mr Willkie and Mr Wallace. One day one of the editors must have slammed his hand on his desk and said, "These British . . ." and the letter was the result. If it had been a more considered and intelligent document it would have told the British a good deal less about some underground currents in American opinion. In the form it appeared it represented a "myth" in its raw, primitive state.

American Diplomacy

[BY A CORRESPONDENT]

M. BOISSON has joined the Admiral, who, in the name of the Marshal, announces himself to be the mandatory, the voice and the representative of France in Africa. "It is only the temporary that lasts." American opinion thinks the deal well worth the low price in casualties. Diplomacy, it is argued, has victories much cheaper than war.

This is an American policy. The basic issue is involved in the necessities of American foreign policy; it is the necessary character of American diplomacy and diplomatic methods that makes the acceptance of Darlan natural. The makers of the American constitution broke the conduct of American foreign policy into two parts: negotiation (which is the President's business) and ratification (which is the Senate's business). The limitations that the constitution—and, still more, the dominant political interpretation of the constitution—impose on the directors of American foreign policy are tremendous. Behind the President and the State Department lies Congress, and, behind Congress, a public opinion conditioned over generations to regard foreign policy as a kind of luxury and diplomacy as a kind of poker game in which simple American tenderfoot players are for ever being robbed of their shirts by European card-sharpers. The tradition of American foreign policy, from the executive side, therefore, is a tradition of careful manoeuvring. Every action has strings to it, every undertaking the unexpressed condition "if Congress agrees." As the United States has become more powerful, materially, it has become less willing to use its power. A new expedition of Commodore Perry is out of the question; so is the "big stick" which Theodore Roosevelt wielded to make the Caribbean safe for the National City Bank, or the combination of oratory and force that Wilson used to impose democratic government on Mexico and the republics of Central America. The "good neighbour" policy ended all that. The State Department does not look too closely into the political title-deeds of the rulers of Cuba or Brazil. It is content with the acceptance of a common minimum policy of diplomatic and military co-operation. Ever since the days of John Hay, the State Department has had to work for successes to be gained simply by dint of negotiation and dexterity—and for successes that the American people would regard as successes.

It is against this background that State Department policy should be regarded. A great deal of attention is paid, and rightly, to the public speeches of President Roosevelt. But the skill with which he has given the impression to Europe that he can speak for his country as Mr Churchill can speak for Britain should not be allowed to hide the fact that he cannot. There are things that he can do by pure Presidential act, or as Commander-in-Chief, things that Congress cannot prevent or undo. But great, long-enduring political undertakings are not among them. So Mr Roosevelt naturally prefers to do the things he is certain he can do rather than to risk doing things that Congress might undo. The debt of the free world to Mr Roosevelt's tactical skill is so great that there is some danger of forgetting that it is tactical, that the grand strategy of peace is beyond his single power.

In this, Mr Roosevelt is simply in the position of his predecessors; and the State Department's primary utility is to enable the President to squeeze the last drop of

power out of his right to negotiate, to command the armed forces, to make temporary bargains. That is what it has been doing for Presidents for a century past. There is a tendency to think of American diplomacy as frank, rhetorical, popular; in fact, it is ingenious, technical and secretive. It recalls less the foreign policy of the Roman republic than the diplomacy of the Venetian Republic. The American people and British people underestimate both the skill needed to carry out a policy like this, and the tenacity, the competence and the conviction with which such policies have been carried out by the new professional diplomatic service of the United States in the last twenty years; and they pass over important and final decisions because their importance and finality is concealed from the vulgar eye by the admirable camouflage artists of the Foreign Service of the United States.

The decisions now being made in Africa may turn out to be of this kind. The favours of the United States, military and economic, cannot but have important political results; American arms, American food and American approval must speak volumes. Under the neo-Vichy flag of the *Etat Français* are now enrolled the most important fighting races of the French Empire, the Moroccans and the Senegalese, troops whose courage and fidelity to their commanders would have been the envy of an Italian *condottiere*. Under Darlan's control is the largest body of French citizens not controlled by Germany. There is in his hands one of the great French radio stations, a great French university, and an elaborate and skilled bureaucracy. All of this in a colonial country where public opinion, independent of the Government, has neither the means nor the tradition of self-expression. If this situation lasts a year, whatever may be thought in Washington, in a spirit of professional pride that borders on *l'égèreté*, France is provided with the material means of a Vichy restoration.

American Notes

Relief and Rehabilitation

President Roosevelt's appointment of Governor Lehman of New York to direct American relief in countries reoccupied by the United Nations has been followed by a broader assurance that the rehabilitation of Europe is an integral part of American policy. This is in accord with Governor Lehman's view that his task of rebuilding countries ravaged by the Axis extends "away beyond the end of the war." More is contemplated, therefore, than merely a sound stroke of political warfare which, beginning with Algeria and Morocco, would send relief ships in the train of the American Armed Forces and dramatically illustrate the difference between the Axis and the United Nations occupying authorities. The appointment followed almost immediately upon the publication of an article by ex-President Hoover, the American relief administrator of the last war, demanding that a plan be formulated at once to deal with the immense problem of feeding Europe's hungry millions after the war. But Governor Lehman's preliminary conversations with the representatives of the Allied governments, the Lend-Lease Administration, and the Board of Economic Warfare have been going forward for some time. Governor Lehman's record of humanitarian and conspicuously able administration in New York is proof that a better choice would have been difficult to find. He will be associated in his work with the State Department, a relationship which vastly increases the authority and influence of that department. Governor Lehman's task will be substantially greater than was that of Mr Hoover. He has called Mr Hoover's own estimates of 500 million hungry people "conservative." The terms of Governor Lehman's appointment provide for control over "American participation in United Nations relief activities"; but it is clear from the President's comments that the Administration realises that the United States must contribute a major share of the supplies of food, clothing and medical equipment that will be required. That this point of view is not unanimous is also clear. In defending his policy, President Roosevelt argued that he was not moved by humanitarianism alone, but by considerations of America's "pocketbook, America's own safety, and its future security from attack." There cannot be many who maintain an unrealistic disapproval of the United States "shelling out its food and goods and money"; but the last vestiges of this most unenlightened isolationism may make mischief.

Censorship at Home

President Roosevelt made out a good case last week for the censorship of news of operations in the Pacific; but an attack has now been launched on the censorship of cables of United Nations—particularly British—correspondents dealing with domestic issues. An article in the *Sunday Dispatch* from its New York correspondent alleges that foreign correspondents are prevented from presenting a true and full picture of American affairs; that they are not allowed to mention matters freely discussed in American newspapers; and that even quotations from American editorials are censored. These charges have provoked an immediate *tu quoque* from Mr Daniell, the correspondent of the *New York Times* in London, who complains that he was forced to moderate dispatches describing the reaction of the British public to the recognition of Darlan. Supposed censorship of American correspondents' cables from India was probably also in the mind of the *Times* leader writer who called the complaints mutual, and demanded a reconsideration of both British and American censorship policy, on the ground that mutual candour based on mutual tact would be helpful. What has not been made sufficiently clear are the premises upon which the American censorship—admittedly more severe than the British—operates. These include not only prohibitions based upon security considerations, but also the cabled transmittal of any information which is likely to furnish material for enemy propaganda. It is for this reason that taboos are placed upon such subjects as race tension and anti-negro feeling in the United States; strikes and delays in production; and expressions of American opinion which might offend British susceptibilities. There are no bars on discussions of these topics in the American press, but it is argued that, with control of outgoing newspapers and magazines, information reaches the Axis, if at all, too late to be of use. There is a case for American censorship policy; and mutual re-criminations which do not recognise the different premises upon which British and American policies are based are likely to provide more heat than light.

THE WORLD OVERSEAS

French North Africa—II

THE political outlook of French North Africa has been determined by the differences in the extent of French penetration in its various regions. In Algeria, French rule has lasted a hundred and ten years; the Protectorate over Tunisia was established sixty years ago, and that over Morocco thirty years ago. Algeria is a part of Metropolitan France, and here the policy of "assimilation," of which the French colonial administration has always been so proud, has brought the most spectacular results. In Morocco, the Lyautey tradition has been based on the principle of "indirect rule" and the assimilation of French customs and language has made only very slight progress. It should not be forgotten that assimilation has not necessarily entailed a higher degree of autonomy or of political equality for the natives than indirect rule on the British model. Although Algeria was, from the administrative viewpoint, part of Metropolitan France, and elected its own members to the French Chamber of Deputies, the bulk of its population had no right to vote. This was due to the fact that French citizenship was only granted to those Algerian inhabitants who accepted the Napoleonic Code; this would have entailed renouncing polygamy, to which orthodox Moslems would not agree. France, on the other hand, could not agree to waive the Napoleonic Code in a province which was an integral part of itself. Whatever the legal complexities of the problem, the contrast between the professed principle of assimilation and unenfranchisement was always a source of political resentment, exploited by the local Arab nationalists. "Indirect rule" in Morocco, whatever its much discussed merits and faults, has spared the French administration and the native population a similar dilemma.

The Arab movements in the three North African possessions are far from uniform. In Morocco, the disintegration of the old tribal régime is not far advanced. Arab resistance there, in the years of the Rif war until 1926, was, therefore, essentially conservative. It was directed against the penetration of the European influence, and it aimed at the preservation of the old, pre-feudal way of life. The compromise which followed the defeat of Abd-el-Krim has been an indubitable success. Marshal Lyautey's successors in the post of French Resident-General have been careful to respect all the symbols and idiosyncracies of the Sherifian Empire. The Resident-General is the Sultan's Foreign Minister, and the French administration is nominally subordinate to his imperial power. This does not prevent a well-informed traveller, A. H. Brodrick, in a recently published book on North Africa,* from stating that "the French administration is a complete autocracy more rigid than that of any modern Tsar of Russia. The people have few guaranteed civil rights nor any semblance of self-government." In spite of this, modern nationalist movements have gained little ground among the Arab population of Morocco, and it will probably be some time before the recent industrialisation of the Atlantic coastal region affects the political outlook.

* Oxford University Press, 98 pages, 3s. 6d. net.

Arab Nationalists

The picture is rather different in Algeria and Tunisia. There the penetration of European influence, particularly in the coastal provinces, has brought to the scene a politically ambitious native bourgeoisie and a native proletariat of unskilled workers. The two Arab nationalist parties, the Old and New Destour, have grown into a strong political factor in Tunisia. The influence of the Algerian nationalist tendencies seems to be weaker than that of the two Destours, but it is superior in political consciousness and organisation to its Moroccan counterpart. Its main slogan has been Arab unity and self-government and the extreme wings have asked for independence.

The most striking feature of North Africa, from the time of the armistice in 1940, was the political calm which prevailed. The Arab nationalist movements did not attempt to exploit France's troubles. During the whole dangerous period of the French defeat, no political disturbances have taken place in any of the French possessions. Not even the supporters of the Destours in Tunisia attempted to voice their claims more strongly than before, although they strongly resented being outlawed after the riots of 1938, and their underground organisations were still active. There are various reasons to account for this passivity. Fear of Italian rule prevailed over all other political considerations; the experience of the Arabs under Graziani in neighbouring Libya acted as a deterrent. And, although some Arab nationalists may have had German sympathies, the New Destour and the movements associated with it claimed allegiance to the principles of democracy. Under the Third Republic, they were in friendly contact with the French Left, and they hoped to obtain their political demands with the help of the democratic forces in France itself.

Another reason for the absence of trouble from the nationalists was the curious turn of German policy after the armistice. The Germans were confident that they had already secured *Eurafrica* for themselves and that they had no political interest in inciting the Arabs to revolt. Italian propaganda was also less violent than before; it had, in any case, little effect, for it was handicapped in Tunisia by the Arabs' dislike of the Italians, which is probably as strong as their dislike of the Jews. In both cases, there is a distinct social background to the antagonism: the Italian is the privileged skilled worker in Tunisia, whereas the unskilled worker is Arab; the Jews are prominent in money-lending, trade and the liberal professions. Vichy's policy vis-à-vis the Arabs was to buy off the discontented elements with some concessions which brought them little real benefit but appealed to the emotional side. The rule of the "strong hand" was made even stronger, and the powers of the prefects were increased; but, at the same time, the Arabs were called upon to co-operate in the *Révolution Nationale*. The *Légion des Combattants* recruited its members from Arab as well as French youth; in Tunisia, more than half of its rank and file consisted of Moslems. Simultaneously, the anti-Jewish legislation was extended to North Africa. A *numerus clausus* was established for Jews in some liberal professions—and they were barred altogether from others. The "Aryanisation" of trade was also in progress—although the process did not go very far.

Axis Propaganda Renewed

With the extension of the war to North Africa, German propaganda has resumed its old line. Axis radio stations once again call upon the Arabs to revolt, and promise the satisfaction of nationalist claims as a reward. In the military sphere the Axis is on the defensive, but it still tries to be on the offensive, at least outwardly and so far as the Arabs are concerned, in the sphere of political warfare.

British experience in this war has shown how difficult it is to gain successes in political warfare when failures and disappointments pile up on the battlefield. Now, the enemy is learning the same lesson. The problem of Arab nationalism in North Africa may, nevertheless, become urgent should the fighting in Tunisia develop into something of a protracted campaign. Even then, however, the United Nations would still have an advantage over the Axis in political warfare. Substantial economic relief will demonstrate to the native population the difference between the German-Italian policy of looting North Africa by way of Vichy and the policy of the United Nations. Another important asset on the Allied side is the great attractive power of Egypt throughout the western Maghreb. In all the three provinces, the nationalist movements have been under the spell of Egyptian independence, of Egyptian parliamentary institutions and so on. The key position for an Allied offensive in North African political warfare is, therefore, Cairo. But, apart from this, principle as well as expediency demands that the screw of the "complete autocracy more rigid than that of any modern Tsar of Russia" should be loosened. Will the French administration under Darlan be able to do this? The first step towards undoing the wrongs committed under the Vichy régime has been taken, and the anti-Jewish legislation has been abolished. Elementary justice dictated this measure. But the Jewish-Arab antagonism in North Africa, an antagonism which Axis propaganda is only too anxious to exploit, can be effectively mitigated only if due consideration is paid to the actual needs and justifiable demands of the Arab population.

Cabinet Changes in New Zealand

[FROM OUR CHRISTCHURCH CORRESPONDENT]

October 8th

A MINERS' strike in the Waikato coalfields and its settlement have led to the resignation of four National Party Ministers from the War Administration and to the breaking of a political truce of about three months' standing. A general election was due this year, but, after protracted negotiations and much public discussion, both parties in Parliament agreed to its postponement and to the formation of a War Administration, which included, besides the members of the War Cabinet, two extra Labour Ministers together with the Leader and three other members of the Opposition. There was already an Executive Cabinet of fourteen Labour Ministers, and the War Cabinet included three of these with the two most experienced Opposition members, Mr Coates and Mr Hamilton. Under the new arrangement there was a total of twenty Ministers, including Mr Nash, who is in the United States. The portfolios allotted to the new Ministers indicated some difficulty in defining their specific spheres of action, and some confusion and overlapping resulted. Now, the four Ministers who were the last appointed, after consulting the Opposition caucus, have resigned in protest against the Government's settlement of the coal strike; Mr Coates and Mr Hamilton, the two earlier Nationalist Ministers, retain their positions in the War Cabinet and have parted company with the official Opposition. The result is that the administrative organisation is as it was before the agreement, with the addition of two Labour Ministers. Since the break, the National Opposition is calling for the general election which it had previously agreed to postpone; the Prime Minister says that the Government is more preoccupied with the war; the Labour Party is accusing the ex-Ministers of going on strike in protest against a strike settlement; and most of the public are wearily indifferent.

The strike, the latest of a series spread over several years, in most of which the Government has given way to the strikers, resulted from the refusal of employers to pay minimum wage rates to men who had deliberately reduced their output. The settlement included state control for the duration of the war over the mines affected and the suspension of sentences imposed by a magistrate on 180 miners charged with an offence under the regulations. The National Disputes Committee of seven members, including a chairman, three leading members of the United Mine Workers of New Zealand and three employers' representatives, found unanimously that the miners concerned, by their own action,

We squeeze to save—

FROM every ton of coal used by the Gas Industry no less than half a ton of coke remains after gas is extracted. Not only coke, but many other essential materials are produced in making gas. Tar, for instance, from which more than 2,000 substances are derived; ammonia, source of explosives and fertilisers; benzole for motor spirit; sulphur. We squeeze all there is of value out of the coal.

Now gas and its precious by-products are urgently needed in the war factories. These needs can only be supplied if YOU economise to the utmost. So play your part in the Battle for Fuel — SAVE GAS AND SERVE THE NATION.

had forfeited their rights under the agreement and were, therefore, not entitled to the minimum wage.

The incident provides an interesting reflection on political affairs in New Zealand, where there is now a Labour Government numerically strong, a weak Left Wing Labour group, a National Opposition, weak in both numbers and personnel, and a small Independent group of ex-Nationalists, including two whose ministerial experience exceeds that of any other member. The resultant situation is summed up in the *Christchurch Press* in the following passage:

It is a disturbing paradox that, in a country which is throwing its whole resources into a battle to preserve the democratic way of life, the prestige of democratic institutions has never stood lower. In the whole period of the war, Parliament has not once discussed publicly any of the problems which are occupying the attention of intelligent citizens. The record of its debates is for the most part a record of trivialities and obscure political manoeuvrings. In secret sessions, it has no doubt discussed matters of the gravest urgency. But by refusing to discuss in open session matters which have been publicly discussed by every other Parliament in the British Commonwealth, it has abdicated the most important function of a representative assembly, which is to interpret the government to the people and the people to the government.

Fuel Shortage in Switzerland

[FROM OUR GENEVA CORRESPONDENT]

November 1st

ONE of industry's main handicaps is the lack of coal. In normal years, Switzerland imported some 3,300,000 tons of coal a year, the peak having been reached in 1939 with 3,960,000 tons. This represents on the average about 275,000 tons a month. Coal imports were greatly reduced after the outbreak of war, and they were almost stopped after the invasion of Holland, Belgium and France. Germany, which was always the chief source of supply, reduced its exports to the utmost; but, after long negotiations and in exchange for certain Swiss products, it agreed to supply about 20,000 tons a month. These consignments at first arrived regularly, but they were later slowed down by transport difficulties—canals and the Rhine waterway were frozen in winter, and there was a shortage of rolling stock. Swiss railway engines and trucks were sent to fetch the coal, but later some mines were put out of action, and, since last spring, coal imports have been reduced to very little quantities indeed.

Meanwhile, great progress has been made in the development of Swiss coal production. There are some lignite deposits at Erlenbach, Kandergrund, Sonnenberg and Gotthalden, which altogether yield about 1,200 tons monthly; slate coal is raised at Hüsliwil and Mörschwil, with a monthly output of nearly 1,200 tons; and 13 anthracite mines are being worked in Canton Valais with a production of slightly over 4,000 tons a month. The Swiss output, however, does not exceed 130,000 tons a year, and as it is not a high grade coal, there is no possibility of making good the deficit resulting from the cessation of imports. Coal for industry has been rationed, which accounts, for

instance, for the fact that Swiss cement production, which was 700,000 tons in 1941, has been lowered to under 500,000 tons.

Rationing of coal for domestic use is even more drastic: the quantity allowed to individuals for cooking and heating during the coming winter is 25 per cent of normal consumption—a Swiss winter with only one-quarter of normal requirements scarcely bears contemplation. So many trees have been felled during the past three years that wood for heating purposes has also had to be rationed. On the other hand, electricity has been so much used as a substitute for coal, in industry as well as in the home, that the present production is insufficient—except in summer—for meeting all the nation's needs. Switzerland produces about 7,800,000 kwh. a year, but one-quarter is exported in accordance with pre-war agreements. Moreover, no big power plants have been built for the past ten years; the two under construction at Innerschönenberg (Bernese Oberland) and Geneva will soon be in part operation, but even when they are finished their yield will not make it possible to fill the gap. During the coming winter months, therefore, when the level of rivers and lakes is lower, the consumption of electricity will be reduced by 15 per cent. This is why the Government, in its ten-year plan involving an expenditure of 4,680 million francs, is contemplating the construction of several new big water-power plants, two of which—the Splügen and Andermatt plants, involving the creation of huge artificial lakes and the transfer of the inhabitants to other districts—are meeting with strong opposition from nature lovers and the population concerned. It cannot be foreseen who will win: sentimentality and aesthetics, or economic needs and industry.

Labour Unrest in Portugal

[FROM OUR LISBON CORRESPONDENT]

November 6th

UNDER Decree 32,352, published on November 3rd, employees of concerns filling public services come under military discipline and are held to have committed the crime of desertion in wartime if they abandon such services as are entrusted to them. Jurisdiction will be exercised by the Minister of War and by the Minister whose department may be affected by an announcement, made after a Cabinet meeting, by Dr Salazar, in which mention is made of recent incipient trouble among the Lisbon tramway workers, employees of the Anglo-Portuguese Telephone Company, and the shipyard workers of the Union Fabril and Parry and Sons, Limited. Stress is laid on the fact that wage questions were already under official consideration in the case of the first two concerns, while the shipyard workers, drawing high wages and overtime pay, had no justification whatever for their action, which was vaguely described as being based on solidarity. Criminal agitation by a limited number of men was designed to disturb established order; this the Government is ready to suppress, together with any other acts calculated to destroy social discipline and law and order.

Being general in their scope, these pronouncements cannot very well allude to the reasonable probability that in every instance Axis influence, working through agents provocateurs who are not necessarily of Axis nationality, is the prime source of trouble. Such agents stress the low wages, high cost of living and, most of all, the supposed wealth of British employers, gained, say these agents, at the expense of their Portuguese staffs. It may be remembered that early in the war propaganda of this nature was made openly by Germany, night after night, in Portuguese by radio. But it came to nothing; now more direct means are believed to be employed, unconsciously backed up by the undeniable rise in costs of living.

It will be noted that all the concerns named in the Government announcement embody in some form or other valuable British interests which have served Portugal for many years and for but moderate rewards. Their wages lists top the labour market, both collectively and where individual pay is concerned, and there has hitherto been keen competition for employment in them between labourers, technicians and office staffs. Of all these points the Portuguese Government is aware. It will certainly bear them in mind when dealing with what may easily become a dangerous situation unless the real agitators are sought out and scotched without delay.

Russia at War

Army Reforms

THE recent abolition of the post of the political commissar in the Red Army has now been followed up by another change, which is possibly less spectacular but not less significant. It consists in the elimination of the so-called "socialist competition" from army life. This system was basically the system which is still being applied in industry. Soldiers used to vie with each other in the carrying out of the commander's orders, and the winners in the "emulation" used to be awarded special prizes. The original idea behind "socialist competition" was perhaps to appeal to the soldier's ambition rather than to formal discipline. But the "emulation campaigns" soon became monotonous routine, as they frequently are in industry. And the drawback inherent in the method was that it tended to undermine formal discipline. It was liable to make the soldier's attitude to the military order somewhat lax.

Commanders of the Red Army (writes *Pravda*) who, after issuing an order, allow or, which is worse, themselves organise competition concerning the fulfilment of the order, are, whatever their intentions, weakening the force of the order as the rule of military operations.

An order is issued to be carried out. By its very nature it does not require that Red Army men or commanders should take upon themselves Socialist obligations. They are obliged to fulfil orders as part of their duty to their motherland.

There must be no mechanical transplanting into the units of the Red Army of the forms of Socialist Emulation in industry and collective farming. This sort of emulation is not required in our army and can even be harmful to it.

What is interesting in *Pravda's* statement, and perhaps novel, too, is the clear distinction between "Socialist obligation" and "duty to the motherland." It is this latter principle which ought to rule army life. The concept of the army as of the non-political force at the service of the entire nation has thus been rehabilitated by the leading official paper.

It is obvious that this change is a sequel to the disappearance of the political commissars. It is also in line with other developments such as the renaming of the best army units as Guards regiments and Guards divisions; the introduction of medals named after the traditional heroes of Russian history (Suvorov, Nevski); the restoration to the Cossacks of their old glamour; and so on. The regime is somewhat ostentatiously, but with unquestionable sincerity and consistency, reconciling itself to the pre-revolutionary traditions and symbols, as well as to the orthodox notions of army life and military discipline which go with them. Colonel Blimp may perhaps smile with some satisfaction at what he would regard as the rehabilitation of his Russian counterpart.

But Colonel Blimp would be wrong and his rejoicing would be premature. True, the symbols of the old tradition have reappeared and have been surrounded with much respect. But, parallel to this, another process—the radical rejuvenation of the Russian officers' corps—has been going on. Even before this war, the Russian officers' corps was probably the youngest in the world. But the war has opened promotion for still younger men; and promotions have assumed an extraordinary mass scale. About two weeks ago, not less than 60 officers were promoted to the ranks of Colonel-General, Lieutenant-General or Major-General by a single decree of the Council of the People's Commissars. Most of the new captains and majors are in their twenties; and many of the new colonels and generals are in their thirties. (General Rodimtsev, for instance, the defender of Stalingrad, is 36.) The Russian officers' corps has, in fact, been to a very large extent transformed during the last year. This has been due not only, and not even mainly, to the undoubtedly high rate of casualties; it has to a perhaps even higher degree been due to the introduction of a rational method of promotion. The commanding cadres have had to pass their test on the battlefield. Those who have failed have been removed; and those who have stood the test have been placed in the highest posts. No acquired rights and no considerations of the normal hierarchy have been allowed to interfere. The number of those who failed was probably not inconsiderable during the first stages of the war. The Russian officers' corps, it will be remembered, entered the war shortly after the purges, when the lack of skilled staff

officers was somewhat acute. Those who filled the posts of their purged predecessors were not always up to their tasks. But the hard experience of a year of war brought forward new commanders; and the gap left by the purges seems now to have been definitely filled.

The new tough generation of Russian officers, which has now come on the stage, differs in its outlook from the older generation in many ways. And it will probably not be wrong to attribute the recent changes in matters of military discipline and in the army outlook at large, to the influence of the young commanders. The officer of the older generation usually started his military career in the years of the civil war; and the memories of that period weighed upon his mind rather heavily. The new colonels and generals in their thirties are undoubtedly less inclined to allow their judgment to be directed by notions which are more than two decades old. Nor did they experience the fears and the depression of the period of purges. They draw their conclusions from their immediate experience on the battlefields, and they convey those conclusions to the Commissariat of Defence. So far, the main results have been the removal of the political commissars and the abolition of "Socialist emulation" in the army.

Moscow Coal Basin.—The coal mines of the Moscow Basin have, as *The Economist* has already reported, been restored from the destruction wrought during the early winter of 1941. In September, the output reached its pre-war volume, which was usually sufficient to cover the needs of civilians and, partly, industrial consumption in Moscow and the province. But the Coal Commissariat is not satisfied with this; and it has set a new programme of production for the Coal Basin.

The Moscow Coal Basin ought to supply with fuel the electric power stations, the railway lines and the industries of Central Russia, Moscow and of the Volga regions. The Moscow Basin must compensate these areas for the temporary loss of the Donetz Basin.

The new programme is thus very ambitious. To expand output according to plan, vast additions to the existing mining equipment and labour are needed. It has been announced that appropriate measures to meet the new needs have already been taken. New equipment has been allotted to the Basin, and new workers have been directed there. At the same time, the miners have been urged to put an end to stoppages which have been due to technical hitches; owing to stoppages, it is said, "almost half the time is wasted." The Party organisation of Tula has been called to account for the position in the mines:

Heated speeches on the importance of coal are made in Tula. Tula speaks with pride of the Moscow Coal Basin if things are going well there. But better than any words is concrete help to the Basin when it comes across difficulties.

Maikop Oil.—The Soviet press has published detailed reports on the scorching of the Maikop oilfields before they came under German occupation. *Red Star* writes:

After the capture of Maikop the oilfields continued to burn for days and the fires spread to the surrounding forests. When German technicians arrived they found it impossible to discover the sites of the wells owing to the thoroughness of the destruction.

The German attempt to restart the exploitation of the oilfields has been hampered by lack of the machinery which was evacuated in good time and by lack of electrical power. The entire Maikop district was left without electricity because its huge power station, too, has been evacuated. The oil refinery at Krasnodar was blown up "at the moment when the Germans were entering the town." The oil workers have also left the district; and guerilla squads comprising Maikop's oil experts have been interfering with such German attempts to restore the wells as have been made. Throughout the district, German terror, calculated to frighten the oilworkers into surrender by repressive measures taken against their families, has been raging. In the villages, gallows, with the inscription "for sabotage of the oilfields" have been erected. The German assertion that the Maikop wells have started working has been denied by Soviet correspondents, who claim that not "a single drop of Soviet oil" has gone to the invader.

Britain Can Feed Herself

By G. P. POLLITT

"Colonel Pollitt has written a challenging book—and he supports his challenge with strong facts. His ideas are essentially peace-time planning. They form the best post-war policy for British agriculture I have yet seen."—*Daily Express*.

THE BUSINESS WORLD

Betterment

THE Uthwatt Committee, whose report was discussed in *The Economist* on September 19th, was asked to draw up proposals for removing the obstacles and anomalies in the present system of land ownership which stand in the way of an imaginative policy of reconstruction and development by the Government and by private enterprise. In the view of the Committee, the path can be cleared by the fulfilment of three conditions. First, the powers of the Government to acquire land against fair compensation need to be strengthened, and land thus acquired should be leased, and not sold, for development; the underlying principle of this recommendation is the gradual nationalisation by state purchase of land required for planned development. Secondly, the development rights in non-built-up areas should be purchased by the Government on principles analogous to those applied to the nationalisation of coal-mining royalties; when individual pieces of non-built-up land become ripe for development they would be purchased by the state against fair compensation and leased, and since the rent fixed by the Government would take account of the increase in the value of the land up to the date of first development, betterment would automatically accrue to the community. Thirdly, in order to obtain for the community part of the increment in the value of built-up areas, where development rights are not to be bought by the state, the Committee recommended the imposition of a tax on increases in annual site values.

These three conditions are interrelated. Short of outright nationalisation, they represent the minimum that is necessary for effective planning and development after the war. Unfortunately, there are signs that the three proposals may be torn apart. During the debate on the future use of land in the House of Lords on November 18th, Lord Portal did admit the need for the compulsory acquisition of war damaged and other reconstruction areas. The proposals for state acquisition of development rights in non-built-up areas and for the disposal of land passing into public ownership by way of lease rather than sale are being "carefully considered." But it seems that the Committee's plan for a levy on increases in annual site values in built-up areas may actually be shelved—on the grounds that it is controversial and technical—and could not be introduced during the war. Admittedly, the scheme for securing for the community a share of the betterment in built-up areas is technical. It is complicated, and its detailed implications have not yet

been fully worked out. This is the more reason why the principle it represents, which is politically and economically necessary for effective planning, should be officially approved forthwith, leaving the details, which are at present confusing the issue, to be worked out later.

The principle of recovering betterment due to central or local Government action is not new. It has been recognised and embodied in many Statutes. As the Uthwatt Committee shows in a lucid survey of past legislation, an attempt to recover betterment by a direct charge on the persons enjoying it was made nearly 300 years ago in the reign of King Charles II. The most recent legislation in which the principle has been recognised are the Town Planning Acts. Thus the Act of 1932 provides that the planning authority may claim 75 per cent of the increase in the value of any property—within or without the area of a planning scheme—that arises from the operation of any provision in the scheme or from works carried out under the scheme. In practice, the provisions of the Town Planning Acts have remained ineffective. In only three cases has betterment been collected in cash under the Acts of 1909 and 1925, and none has yet been recovered under the Act of 1932. In the view of the Committee, the reason why the collection of betterment has been impossible in practice is the difficulty (a) of proving in individual cases that betterment arose from the operation of a particular provision in a planning scheme or from the execution of a particular works under the scheme, and (b) of calculating the extent to which the rise in value is due to one or both of those factors. In other words, the difficulty of collecting betterment lies in the practical application of the provisions of the Town Planning Acts.

Since all previous attempts to collect betterment due to the action of central and local governments have failed because of the difficulty of segregating the causes of rises in values, the Uthwatt Committee has proposed that the knot should be cut by the extension of the principle to all cases of betterment, except, of course, where the betterment is due to the owner's own expenditure. The principle proposed is that of securing for the community a share of all community-created increases in land values. Once this extension of the principle of betterment is accepted, the only test of the Uthwatt plan is its practicability. It may be argued, admittedly, that a tax on betterment irrespective of its cause amounts to discrimination between investments in land and investments in other forms of property, and that, moreover, it does not provide compensation for loss. The objection is not altogether unjustified. But the major objective is to create the conditions for effective planning and development by the Government and by private enterprise. Set against the wider interests of the community, this objection to the new principle, which also underlies the proposal for the state acquisition of development rights in non-built-up areas, loses much of its force.

In outline, the method proposed by the Committee for collecting betterment in built-up areas is simple. Instead of a levy on increases in capital value, the Committee has proposed a periodic tax on increases in annual site values, which, in one sense, would operate like EPT in skimming off increases in incomes from sites over a standard income. In order not to discourage enterprise, the rate of tax suggested is 75 per cent, the same as that provided for in the Town and Country Planning Act of 1932. After the passing of the necessary legislation, the annual site value of every hereditament would be assessed as a basis for calculating future increases in annual values. Subsequent assessments would be made at five-yearly intervals. Thus the tax would only become payable after the second valuation, that is, five years after the first assessment. Account would be taken of increases in values due to owner's own expenditure. But the Committee suggests that these allowances should not

exceed 4 per cent of the capital cost. The following example illustrates how the scheme would operate in practice:

OPERATION OF BETTERMENT TAX					
1943	Datum Annual Site Value (A.S.V.)	50	25% allowance	12	
			Annual levy payable from 1953 to 1958	21	
1948	1st Revaluation:—				
	A.S.V.	62			
	Less datum	50	1958 3rd Revaluation:—		
			A.S.V.	140	
	Gross increase	12	Less datum	50	
	25% allowance	3		90	
	Annual levy payable from 1948 to 1953	9	Owner's allowance for expenditure 1948-1953	22	
			Owner's allowance for expenditure 1953-1958	20	
1953	2nd Revaluation:—				
	A.S.V.	100			
	Less datum	50			
		50			
	Owner's allowance for expenditure in 1948-1953	22	25% allowance	12	
		28	Annual levy payable from 1958 to 1963	36	

As a guidance valuation, the Committee lays down that—

the annual value of any particular site on the occasion of the datum valuation should be limited to the annual value of the site as then actually and physically developed and as if it were permanently restricted against any other form of development than that then existing, and similarly on the occasion of each subsequent valuation. Thus, in the case of a dwelling-house the possibility of its being converted into a shop would be ignored. On the other hand, the annual value of the site would be determined by reference to the most prudent use of the property in its actual physical state of development, that is without structural alterations; for example, if particular premises were actually being used merely for storage purposes, but without structural alteration, they could be let or used more profitably as a garage, the annual site value would be determined by reference to the possible more profitable use.

Finance and Banking

End-November Stringency

The closing days of November are normally a period of strain in the money market. Credit is temporarily immobilised in preparation for the War Loan dividend disbursements, while the customary making up by the clearing banks is making itself felt. This year the calls on the limited supplies of credit have been further increased as a result of heavier borrowing than is usual by the Stock Exchange. This last is a reflection of the increased activity of stock markets, and has resulted in the temporary disappearance of supplies of cheap $\frac{1}{2}$ per cent money normally available from non-clearing bank lenders and a considerable restriction in the supplies of such money available against bonds at 1 per cent. The general rate paid by the stock market money houses has been $1\frac{1}{4}$ per cent. Though credit has been in shorter supply, it has never been inadequate, in the aggregate, to meet the needs of the discount market; but owing to the considerable turnover of funds, borrowers have had to bestir themselves rather more vigorously than usual in finding accommodation. The latest level of bankers' deposits at the Bank of England, namely £148,793,000, showing an increase of £3,072,000 on the week, would not be indicative of stringent credit conditions did the figures not apply to a day when several clearing banks were making up. The circulation has made another leap, the past week's increase of £4,798,000 carrying the total to the new record of £870,033,000 and reducing the reserve of unissued notes to £10,208,000 and the reserve ratio to the unprecedentedly low level of 5.5 per cent. The preparation of Exchequer accounts for the War Loan dividend payments had evidently not made much headway by Wednesday afternoon, for public deposits appear in the latest bank return at the low level of £7,730,000—a fall of £448,000 on the week. Heavy ways and means borrowing thus appears to be imminent and will further supplement the addition of £10,685,000 to Government securities made by the Bank over the past week.

Fewer Treasury Bills on Offer

The offer of Treasury bills at the tender this week is being cut down to £80,000,000, compared with the figure

In other words, betterment is to be taxed only if it is realised or capable of realisation, and the tax is to be borne by the person actually enjoying or capable of enjoying the increased value. While it should be possible to assess the value of sites on the basis of their actual use, it may be more difficult to assess their value on the basis of the "most prudent use." Premises used for storage may be physically capable of being used as a garage, but whether they could in fact be used as a garage depends on demand. The principles of valuation clearly need further clarification.

The machinery for valuation is ready to hand in the machinery for local assessment to rates. Rating assessments are already made at five-yearly intervals (they have been suspended for the duration of the war), and all that remains is to add another column to the ordinary schedules. In the view of the Committee, local rating authorities, with the assistance of directions by County Valuation Committees, should be quite capable of valuing sites. Moreover, appeals against valuations could be made locally in the same way as appeals against rating assessments. The objection to the scheme on the ground that no two valuers, acting independently, arrive at the same result is an objection, not only against the present rating system, but also against all transactions and assessments which are based upon the valuation of property.

The proposals of the Committee for collecting betterment need further elaboration; their implications have to be examined in greater detail than a summary survey of a statement of principle permits. But if the principle of securing for the community part of the community-created betterment is accepted, as it surely must be, the scheme for applying it proposed by this expert Committee demands the closest and most sympathetic consideration. To reject it out of hand would be to undermine the whole of the Committee's proposals, the alternatives to which are nationalisation or stagnation.

of £85,000,000 offered and issued at the six previous tenders. The reduction tends to confirm the interpretation of the increased offerings of Treasury bills made in these columns when the increase began in the first week of October. It was then suggested that the bills which would be issued over the next few weeks would mature in the period of heavy tax collection that normally occurs towards the close of the financial year, and that more of these maturities would be acceptable to the banks in order to neutralise the effect of tax payments on their cash position. It was also suggested that on this assumption, it might be expected that the offerings of bills would again be reduced when the period in question was over. With the bills now being offered, we run into March maturities. The main income-tax pressure is felt in January and February, with usually another final burst in the last few days of the financial year. The drop of £5,000,000 in the weekly offering is thus in full accord with this explanation of the recent increased offering of Treasury bills. The fluctuations help to restore to the tender Treasury bill issue some of the merits of elasticity of which, it was thought, it had been wholly deprived by the Treasury deposit receipts issue. It is, however, interesting to note that if the additional bills issued through the tender over the past six weeks are, in effect, to reach the clearing banks, they will have to do so through channels other than the discount market. The discount

market syndicate, in accordance with its customary practice of applying for at least all the bills on offer each week, has stepped up its applications, but its proportionate allotments have fallen sufficiently to neutralise this factor. In fact, the weekly issues of Treasury bills to the discount market in the past six weeks averaged £27,400,000, against £31,100,000 in September and £28,500,000 in August when weekly offerings amounted to £75 millions only. It must thus be assumed that a larger proportion of the bills issued have gone to the customary "outside" quarters—official and unofficial—and that the banks will be fed by these between now and the end of the year.

Trading in Ransoms

The British and Dutch Governments have this week revealed a new dodge by which Germany has in recent months been endeavouring to supplement its strained foreign exchange reserves. Persons living in occupied territories are being offered exit permits by the German authorities, but at a cost of about £5,000 to be paid in foreign currency—usually in Swiss francs. The Dutch Government recently received a tentative offer to emigrate 500 Dutchmen on payment of 5,000,000 Swiss francs, the payment to be made either in cash through a Swiss bank, or by loan from a Swiss bank, the interest on which would be guaranteed by the Dutch Government. Most of these obnoxious transactions have demanded payments in Swiss francs, this currency being outside the control net of the Allied Governments. In all cases which have come to the notice of the authorities, the appropriate counter-measures have been taken. The Minister of Economic Warfare has this week explained why the British Government cannot condone this traffic in blackmail. Apart from the breaches it would make in the financial blockade of Germany, the success of such operations would merely increase the appetite of the blackmailer and "add to the sum of human misery among the peoples now under German domination." One of the counter-measures has been to place on the black list all agents who have been acting for the German authorities in this traffic.

Commonwealth Bank Report

The report of the Commonwealth Bank of Australia, covering the year to June 30 last, sheds interesting light on two crucial aspects of Australian banking: the external payments position and the continued intrusion of the central bank in commercial banking business. The report states that for the year ended June 30, 1942, the Australian balance of payments on current account, together with some capital inflow, was such that it was possible for the Commonwealth to pay £A47 millions towards the cost of direct defence imports and of the maintenance of armed forces overseas, though not without drawing to some extent, on accumulated London balances. This encroachment on sterling resources would seem, by comparison with the latest balance sheet, to have amounted to about £A15 millions. Money at short call in London has fallen over these twelve months by £A20,225,000 to £A33,774,000 and sterling in-

vestments by £A462,000 to £A11,433,000. On the other hand, sterling bills and remittances in transit have risen over the same period by £A5,519,000 to £A9,922,000. The principal overseas payments were those needed to meet the costs of maintaining Australian forces in the Middle East and elsewhere and to pay for war equipment other than that obtained on Lend-Lease terms. The extreme scarcity of shipping space has restricted both imports and exports, but the adverse effect of this restriction on the overseas payments position has to some extent been countered by the arrangements of the British Government to pay for the whole wool clip irrespective of whether or not it is shipped. On the question of commercial banking, the report states that the Commonwealth Bank has continued to provide large sums temporarily to finance wheat and other primary products pending sale. In accordance with the policy of the Government, the Bank has also provided finance against Government guarantee to manufacturers, wholesalers and others for purposes directly connected with the war. The extension of these commercial banking operations is seen in the growth of bills discounted, loans and advances from £A24,855,000 to £A35,524,000 over the year. The principal change in the balance sheet is the growth from £A37,745,000 to £A91,419,000 in the holding of Commonwealth Government securities. The ordinary deposits of the Bank have risen by only £A9,300,000 to £A129,949,000, but the special War-Time deposits by banks, which did not figure in the 1941 balance sheet, had, by the end of last June, risen to £A6,886,000. On this evidence, the expansion of central banking credit in Australia has been appreciably greater than the corresponding movement in this country. But the comparison between the two movements cannot be carried further, owing to the active competition between the central bank and the commercial banks which, in contrast to Britain, exists in Australia. Central bank credit in the Commonwealth is not merely the small apex of the inverted credit pyramid. On the contrary, it provides much of the substance of the whole pyramid.

* * *

Commercial Bank of Scotland

The balance sheet of the Commercial Bank of Scotland as on October 31st last shows changes which accord very closely with the trend of clearing bank figures over the past year. There has been an expansion, and the main driving force has been provided by increased holdings of Government securities. The balance sheet total has risen from £77,700,000 to £83,120,000, deposits are £4,117,000 higher at £68,114,000 while the notes in circulation have risen by £1,707,000 to £7,764,000. The counterpart to the increased deposits is more than provided by the increase of £5,246,000 in British Government securities. On the other hand, bills and advances have fallen by £481,000 to £9,627,000. At this level, they now take third place in the ranking of assets, having fallen below the total of Treasury deposit receipts, which remain at £10 millions. These changes in the distribution of assets have evidently made for some reduction in earnings, and the profits for the year are returned at £286,275, compared with £298,241 for 1940-41.

Investment

Longer War Bonds

After repeated and premature guesses as to the date which would be chosen to issue a new National War Bond, the market was not taken by surprise by the Chancellor's statement of Tuesday. The old issue of 2½ per cent National War Bonds, 1949-51, had been running for almost 14 months, and had reached a total of some £673 millions, or half as much again as either of its predecessors. Evidently, a stop would have to be put to it soon, and the only questions were when, and what, the new offer would be. Once again, the market has been disappointed. There is no sign of any desire to cater for the demand for a true short. The new bonds are identical with the old, except that they are repayable in the two years preceding March 1, 1953. They will be first issued on Tuesday, so they have a maximum life of 10½ years, or 5½ months more than the old had when first offered on October 8, 1941. Once more, the Treasury is borrowing on better terms, but at the cost of restricting the market for the stock, for there has

been little change in the general run of gilt-edged stock quotations over the 14 months, and 2½ Consols are actually a trifle cheaper now than then. The immediate effect of the announcement was to create a modest demand for both series of the 1949-51 bonds and for 3 per cent Conversion, 1948-53. The quotation for the "A" series of the former is now 100½, and that for the Conversion loan 103½. While the new bond doubtless fits into the scheme of maturities very well, it is not likely to be popular. The old issue was too long for the money houses, the new is still too short for the general run of investors. The banks will have to take it: the insurance companies, and some trustees will find it convenient. Against the present background of declining prices for fixed interest stocks, that is the best that can be said for it. There does not appear to have been any possibility of effecting a corresponding saving in interest in the case of the 3 per cent Savings Bonds, 1960-70, first offered seven months ago, of which some £206 millions have so far been sold.

More New Issue Control

As from December 1st, the consent of the Treasury will be required to any issue of capital in connection with the amalgamations of companies or the acquisition of one by another, even although no demand for new money is involved in the operation. This is potentially an extension of policy, although it is regarded by part of the market as merely stopping a loophole in the regulations. These have been evaded in the past by the simple expedient of forming a holding company, to take over concerns by a mere exchange of shares, and offering the shares to the public after a suitable interval. This was done sometimes by a stock market placing, and sometimes by the channels of advertisement. The former means has been blocked by the Treasury's assumption of a veto on permission to deal, a veto which is none the less binding for having no more solid backing than its acceptance by the Stock Exchange sub-committee concerned. In consequence, the principal immediate effect of the new regulation will be to restrict the activities of the unofficial market, which has been using an amount of manpower and paper out of all relation to the capital it has distributed. In these circumstances, the Stock Exchange tends to hail the regulation as a sign of Treasury enlightenment. That may be the proper attitude. But it is a fact that the new step greatly extends the scope of Treasury control, and it is an act of faith to suppose that this will be used for the benefit of the market. It is, however, to be hoped that protracted contact between the two bodies will have an educative effect.

* * *

Third Year Savings

Full figures for the third savings year are not yet available. That of "small savings" for the twelvemonth ended November 17th is £630 millions, against £612 millions for the preceding year, and some £464 millions for the first year of the campaign. These figures are gross. If there are deducted from them the repayments, shown in the monthly statements of the Treasury, the net figures are £584½ millions for 1940-41 and £587 millions for the period just ended. The latter calculation is based on the figures for eleven months. Meanwhile, there has been a 35 per cent increase in the number of savings groups operating during the year, against a rise of 138 per cent between the first and second savings years. These calculations are based on the geometric mean of the numbers existing at the beginning and end of the periods to which they refer. Whatever may be thought of the efficacy of the savings campaign among people of small and moderate means, it is evident that these figures cannot be taken as telling the true story. Indeed, they are virtually valueless as an indication, either of the effects of the efforts of that campaign, or of the share in total savings put up by the wage earners. It is, perhaps, impossible to get any really close approximation to these facts, but it is desirable that the position should be realised. There can be no question but that the quality of the saving is improving. Far less of it represents transfers from one form of investment to another, or the investment by the relatively well-to-do of lump sums, than was the case in the first and second years, but how much less the figures do not indicate. Nor is it possible to get anything like a clear picture from the various statements of Lord Kindersley and Sir Kingsley Wood. As to the figures of the past two years, a little light is provided by the details. The net addition to holdings of Savings Certificates during the past twelvemonth was almost £24½ millions, and that to Post Office Savings Bank balances £16 millions, greater than in the preceding period, while the sales of Defence Bonds fell off by £38 millions. The expansion in Post Office deposits during the past year was some 7½ per cent, whereas in the previous year it was virtually 100 per cent. These facts support the thesis of improved quality, but they do little to give a measure. The observer is left with nothing to alter the impression that far too much is still being spent, or otherwise remaining outside the net.

* * *

The Australian Conversion

On January 1st next, £16,451,403 of Commonwealth 2½ per cent stock and debentures fall due. As on previous occasions of final maturity, the British Treasury has consented to permit a conversion offer, and it has again undertaken to provide the sterling funds for the payment of any who do not accept the offer, as an alternative to allowing an issue for cash. There is no new development of technique.

ABRIDGED NOTICE.

Consent of the Treasury has been obtained to this offer under Regulation 6 of the Defence (Finance) Regulations, 1939.

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA CONVERSION LOAN

OFFER OF CONVERSION TO HOLDERS OF £16,451,403 Commonwealth of Australia 2½ per Cent. Registered Stock and Debentures, 1941-1943,

INTO
GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA
3 PER CENT. REGISTERED STOCK, 1944-1946,
at the rate of £98 per cent.

Interest payable 1st January and 1st July.
Six months' interest will be paid on 1st July, 1943.

The Government of the Commonwealth of Australia will comply with the requirements of the Colonial Stock Act, 1900; in order that **Trustees may invest in the Stock**, subject to the provisions set forth in the Trustee Act, 1925.

Commonwealth Bank of Australia is authorised by the Government of the Commonwealth of Australia to offer to holders of £16,451,403 Commonwealth of Australia 2½ per cent. Registered Stock and Debentures, 1941-1943, maturing 1st January, 1943, **Conversion**, in whole or in part, into an equal nominal amount of Government of the Commonwealth of Australia 3 per cent. Registered Stock, 1944-1946.

Holders accepting the offer of conversion must lodge their acceptances on the appropriate forms, accompanied by the relative Stock Certificates or Debentures, at COMMONWEALTH BANK OF AUSTRALIA. These forms have been posted to the holders of Registered Stock or, in the case of joint accounts, to the Stockholder first named in such accounts. Forms for conversion of Debentures may be obtained from the Bank on application.

Holders who convert will receive on 1st January, 1943, a cash payment of £2 per cent., representing the difference between the issue price of the new Stock and the redemption price of the old Loan. They will also receive on that date accrued interest at 2½ per cent. per annum from the last half-yearly dividend payment (15th September, 1942) to 1st January, 1943.

Six months' interest on the new Stock will be paid on 1st July, 1943.

Holders who do not convert will be paid off at par on 1st January, 1943, together with accrued interest from the last half-yearly dividend payment (15th September, 1942) to 1st January, 1943. An equivalent amount of Government of the Commonwealth of Australia 3 per cent. Registered Stock 1944-1946, will be taken up by Commonwealth Bank of Australia.

The revenues of the Commonwealth of Australia alone are liable in respect of this Loan and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Loan or of the Dividends thereon, or for any matter relating thereto—40 and 41 Vict., cap. 59, sec. 19.

A commission of 5s. per £100 Stock will be paid to Bankers and Stockbrokers in respect of conversion acceptances bearing their stamp.

Full copies of this Notice and Forms for Conversion may be obtained from Commonwealth Bank of Australia, 8, Old Jewry, London, E.C.2; Messrs. R. Nivison & Co., 6, Threadneedle Street, London, E.C.2, or at the Offices of the Government of the Commonwealth of Australia, Australia House, Strand, London, W.C.2.

Commonwealth Bank of Australia,
8, OLD JEWRY, LONDON, E.C.2. 20th November, 1942.
The List for Conversions will close on Friday, 18th December, 1942.

The offer has been timed to coincide with the marked improvement in the prices of Australasian loans, which has resulted from the success of the United Nations in the Solomon Islands and New Guinea. This has made it possible to offer in exchange a 3 per cent stock at 98, repayable at any time, on three months' notice, in the two years commencing July 1, 1944. It was to be expected that any conversion would be into a short. No other policy is reasonable with the enemy almost on one's doorstep. In this particular case, the form of the new stock is also appropriate, for a security carrying only 2½ per cent, and standing, thanks to its approaching date of redemption, virtually at par, should be largely in the hands of money houses and other institutions which require short-dated investments. It is, thus, very probable that the conversion offer will be accepted by a considerable proportion of holders, the actual number depending, in no small measure, on the course of military developments in the Pacific in the three weeks which have still to pass before the final closing of the conversion lists on December 18th. Holders who find a short-dated stock not to their liking, but who wish to retain holdings of Commonwealth Government stock, have also an option on this market for a like period, but it is not a very valuable one, for, if things go well, the longer-dated stocks will improve much more than the short they are offered. If they feel that the military threat to Australia is definitely removed, they should have bought already. Those who require a short may feel that the chances of a conversion of the 4 per cent stock 1943-48 before its final date are not great, and may still find it attractive at 100½, including six weeks' interest. It must be remembered, however, that conversion of optional maturities has already been permitted in the case of Australia.

Peter Robinson Scheme

The scheme of capital reconstruction, advanced by the directors of Peter Robinson, while in a different category from either the Fine Spinners or the British Celanese plans, in their original forms, seems to be dangerous from the standpoint of 7 per cent cumulative preference shareholders. The position is complicated by the fact that there is a debenture moratorium, which may extend to 1946, and because new money may be required to finance physical reconstruction. The preference shareholders are asked to forgo 2½ years of arrears, to suspend their cumulative rights until 1948, and to accept a cut in their preferential right to 5 per cent. In exchange, they, and the small amount of preferred shares, held by the staff, will be given participating rights, equally with a reduced amount of ordinary capital, up to a total of 10 per cent. Leaving out of account the arrears, the preference holders will benefit when the distributable profits exceed £41,750, and suffer when they are less. The accounts to January 31st last showed a net profit of £23,134, against a loss in the preceding year of £8,037. The company evidently wishes to reassure the debenture-holders and, probably, to clear the way for post-war borrowing. The scheme, which is well set out, is not necessarily unfair to the preference holders. The position, so far as it is known, is set out with some detail. The trouble is that it is quite impossible at this juncture to determine what the future will produce, and it is a sound principle that reconstructions should not be attempted until a fairly clear view of early prospects can be obtained. It seems probable that the best step is to defer the plan as premature.

Rhodesian Copper Outlook

Disillusioned shareholders in Rhodesian copper companies will derive some encouragement from the announcement by the board of the Mufulira company of a dividend of 11½ per cent in respect of the year ended June 30th. This was the rate to which the payment was reduced for 1939-40, but last year, despite a further increase in earnings, no payment was made, although 18 per cent was estimated to have been earned after meeting tax provisions. At that time, it was made clear that the only alternative to using current earnings for capital purposes was, in view of the unfavourable EPT base, to borrow, and this the company was most unwilling to do. The expenditure of earnings on equipment to expand production will have increased the permitted earnings, and it is possible that the company has derived some benefit from the provisions for special allowances on wasting assets. The over-riding consideration is, however, likely to have been the position with regard to capital outlays. Shareholders in Rhodesian Selection Trust,

which owns 64 per cent of the capital, can hardly fail to benefit from the dividend, but it is not clear how far the return to the full 1939-40 rate is likely to be typical of Rhodesian companies. The 5s. shares of Rhodesian Selection stand at 13s. 9d., which indicates that a return to the 13½ per cent distribution of two years ago is expected. Rhokana Corporation and "Chartered," who own the remaining Mufulira shares, should also benefit.

Company Notes

Ind Coope Progress

The full accounts of Ind Coope for the year to September 30th last show a rise in total income from £1,681,411 to what appears to be the new record level of £1,986,008. The improvement took place almost exclusively in trading profits. The table below, which analyses results over the past three years, shows, in charges against profits, a substantial rise in transfers to taxation and compensation fund, despite which equity earnings are virtually maintained at a rate of 31.7 against 31.8 per cent. After repeating the 22½ per cent dividend paid in the two previous years, the directors are able to maintain the £100,000 transfer to contingencies, to raise the allocation to Property Improvement, bringing this fund to £250,000, and to increase the carry forward by some £3,350 to £476,206. In an informative speech, the chairman, Sir George L. Courthope, makes it plain that the supply position was the dominant factor

	Years ending September 30.

last year. The group has apparently bought ahead of current shortages, but there remain considerable malting difficulties and increasing lack of skilled labour, which has notably affected the output of bottled beers and the ability to maintain transport connections. The consolidated balance sheet shows a rise in the value of stocks of the group from £1,227,290 to £1,722,913, due mainly to higher prices. There is a rise in net liquid assets of the group from £1,356,506 to £1,713,795 and a decline in net loans of the company to subsidiaries from £237,063 to £221,850. Total taxation paid by the group amounts to some £9,000,000; free reserves of the company stand at £1,514,236. There is a moderate rise in debtors of the group and of the company, and it is clear that potential demand has been well maintained. The £1 ordinary stock, at 97s. 6d., yields £4 13s. 9d. per cent.

Anglo-Iranian Interim

The resumption of interim dividends by Anglo-Iranian Oil, with a payment of 5 per cent in respect of the year 1942, can hardly have caused surprise in the market, although it was hailed as a very welcome confirmation that matters are on the mend. It is a true interim and will doubtless be followed by a final, whereas the interims of recent years have only been entitled to that name in the legal sense that they were distributed before being passed by the annual meeting. Payments for the past three years have been 5, 5 and 7½ per cent, respectively, and it is assumed, with every justification, that this year's total will exceed the last of these figures. While it is impossible under

conditions of war to know just what Anglo-Iranian, and in particular the Abadan refinery, are doing, it is clear that they must have benefited from the Middle Eastern campaign and from Indian developments. The recent course of events has been reflected in a substantial, if somewhat spasmodic, improvement in prices of the Royal Dutch-Shell group of companies. The declaration of the dividend caused a further improvement. Anglo-Iranian now stand at 78s. 9d., while Burmah Oil have risen to 59s. 4½d. and Shell to 66s. 3d.

Joshua Hoyle Accounts

The accounts of Joshua Hoyle for the year to September 30th last show a decline in profits after EPT from £211,580 to £194,332. Charges against profits are mainly constant, income-tax and depreciation again requiring £30,000 and £50,000 respectively, while £10,000, as before, is transferred to staff funds. War damage contributions, however, take some £7,000 less at £15,998. Thus, after prior charges, there is £54,731 against £61,543 for equity capital, representing 14.9 against 16.8 per cent. As in the two previous years the ordinary shareholders receive 7½ per cent, £25,000 is transferred to reserve, and the carry forward raised from £67,749 to £69,953. The virtual maintenance of profits which the management has succeeded in realising during a difficult year has, it appears from the balance-sheet, been achieved despite some contraction of turnover. Debtors and creditors are both lower, and there is a rise in stocks, financed by a reduction in cash, from £476,922 to £715,977. Net liquid assets are somewhat lower at £950,251 against £987,698, while net loans from subsidiaries are reduced from £832 to £313. The Joshua Hoyle concern has always concentrated mainly on the domestic market, and is, in consequence, relatively unaffected by last year's further restriction of exports to the Americas. The concern also profits from its position as a nucleus firm, and should be able to maintain earnings at a satisfactory level for the duration. The 2s. ordinary shares, at 3s. ex dividend, yield £5 per cent.

Industry and Trade

Future of Overseas Trade

During a speech at the Liverpool Luncheon Club on November 25th, Sir Raymond Streat, chairman of the Cotton Board, emphasised the need for translating general principles of post-war planning into detailed and workable programmes. There has been "an outburst of reports" from the great organisations of industry and trade, but, as Sir Raymond Streat pointed out frankly, "they fought shy of coming to grips with the essential issues." His own contribution was on the subject of overseas trade. Broadly, all trade agreements should be made to conform to certain overriding rules "under the insistent authority of the United Nations." They might be grouped under two headings. Under the first would come commodities which should be allowed to be exchanged freely; that is to say, they would receive identical treatment by all countries and be free of quotas and restrictions. Under the second heading Sir Raymond Streat would include key commodities singled out for special treatment; in the main, these would be certain primary products, such as wheat, rubber and tin, and war materials. But the treatment of these commodities would be scrutinised by some international tribunal in order to ensure that trade agreements conform to the principles of free access and expansion. Sir Raymond Streat's suggestions deserve careful consideration, for they represent an approach which may point towards a solution of one aspect of the problem of post-war trade organisation.

Newsprint

Last week's issue of *World's Press News* contained an interesting survey of the consumption, stocks and prices of newsprint. Since 1940, the supply position has been difficult, not only as a result of the loss of important sources of supply in Scandinavia, but also because of the shortage of shipping space. Since May, 1940, that is to say after the German invasion of Norway, supply has been centralised in the

Consolidated Gold Fields of South Africa

The full accounts of *Consolidated* and *New Consolidated Gold Fields* for the year to June 30 last show a healthy improvement in net earnings. Total income of *New Consolidated Gold Fields* actually increased from £723,501 to £842,949, the highest level of the past three years. The transfer of £100,000 to depreciation is repeated, and equity earnings are some £60,000 higher at £278,809, despite a rise in total tax provision from £209,977 to £294,566. The ordinary distribution is maintained at 10 per cent, covered by 13.5, against 9.5 per cent, and the whole surplus goes to raise the carry forward from £152,141 to £224,872. In the accounts of the holding company, income from dividends is again fully distributed, the ordinary shareholders receiving 10 per cent, less tax, at some 8s. 3d., against 6s. 11d., so that the carry forward remains at £9,673 for the third year in succession. The improvement in total income of *New Consolidated* has been realised despite a reduction in dividends received from nearly all the gold mining companies in which the concern is interested, and despite a rise in the Special Contribution required by Transvaal taxation from 16 to 20 per cent. The explanation is no doubt a further marked improvement in finance business. The directors point out that there is also an unrealised profit from the market appreciation of the company's investments. The balance-sheet of *New Consolidated* shows a rise in holdings of British Government securities of £300,000 to £1,106,900, and in total investments from £6,477,508 to £6,714,383, financed by a contraction in cash advances and mortgages. There is a considerable shift in assets, loans at short call rising from £6,663 to £115,000, while sundry debtors are reduced by some £104,000 to £204,400. A jump in cash holdings of some £360,000 has been financed by a rise in creditors from £1,028,592 to £1,359,023. The report insists on the importance for the war effort of maintaining gold production. This is, of course, a controversial topic, but, provided there is no marked change of policy, the prospects of the investor appear favourable. The £1 ordinary shares of *Consolidated Gold Fields*, at 43s. 9d., ex dividend yield £4 11s. 5d. per cent, less tax, at 8s. 2.69d., or £2 13s. 10d., tax free.

Newsprint Supply Company, Ltd., and a drastic curtailment of consumption has been inevitable. Before the war, average weekly consumption was no less than 24,000 tons; it was cut to 14,500 tons after the outbreak of war; to 6,800 tons at the beginning of July, 1940; to 5,800 tons on March 16, 1941; to 4,850 tons on April 13, 1941; and to the present figure of 4,430 tons on March 16th this year. The current weekly rate of consumption, which represents only 18½ per cent of the pre-war intake, has been confirmed by the recent agreement between the Newsprint Supply Co. and the Government, but on condition that part of requirements is met from stocks. These are substantial and, on October 1st, were equivalent to 32 weeks' requirements at the current rate of consumption. The projected reduction of stocks to a level at which they will be equivalent to 16 months' consumption, to be effected within eight months, is designed to save shipping space during a period of considerable stringency. The price of newsprint showed a marked advance in 1940, but since then it has remained fairly stable; the controlled price of £30 15s. od. per ton compares with a price of £21 10s. od. at the end of February, 1940. For the sake of uniformity, the prices of imported and home-produced newsprint have been equalised; Canadian paper has been imported at about £5 per ton below the price of home produced newsprint. On the whole, the difficult task of providing an adequate supply of raw material to the newspaper industry has been well handled.

BOOKS WANTED

The Institute of Bankers in Ireland, 20 College Green, Dublin, is anxious to obtain copies of the undernoted books and would be glad to hear from persons in possession of them with a view to purchase.

Geldart: "Elements of Economics"; Hough: "Death Duties and Probate Practice"; Strahan and Baxter: "General View of the Law of Property"; Beatty: "Practical Guide to Death Duties, 1922," or prior edition; Nelson: "Handbook on Probate Practice in Eire and Northern Ireland"; Ranking, Spicer and Pegler: "Executorship Law and Accounts."

Clothing Industry Concentration

Concentration of the clothing industry is now virtually complete in the Leeds area, and concentration is to be begun in the North-Western region. Other areas will follow suit shortly, and, in particular, Leicester, Nottingham and Birmingham. Meanwhile, preliminary surveys for the whole country (other than Leeds) will be provided by returns made to the Board of Trade by November 28th by all makers-up employing more than nine workers. There are two main aspects to clothing trade concentration: factory space and labour. In certain areas factory space is needed for more important manufacture. Leeds' contribution is three-quarters of a million square feet. In the transfer of labour, the point has been reached where there is relatively little mobile labour left. A new departure is therefore necessary—such work as can be is to be taken to the workers instead of the reverse. Clothing manufacture provides a good subject for such action; if machinery needs to be moved, this presents no great problems, for raw materials can as easily be sent to one area as another, and there are no climatic restrictions on the location of the industry. Nucleus firms will operate in areas where the demand for labour from higher priority production units is relatively small. Production of clothing will increase in Scotland, Northern Ireland, North-East England and in parts of London. Designation will go when the new scheme is complete. Sir Thomas Barlow, Director-General of Civilian Clothing, admitted that designation may have tended to keep large numbers in the industry and that it had been applied to factories employing a labour force below their reasonable capacity. The terms for the issue of a nucleus certificate to a factory are that it must be running to full capacity, that its labour force is not less than 90 per cent of the number employed before June, 1940, and, normally, that it has at least fifty workers on its pay-sheets. The usual concentration arrangements will be applied to the clothing scheme: nucleus firms will manufacture for closed firms. A special scheme is being discussed to compensate firms which have to close down without finding a factory to take over their production.

Size of Cotton Firms

The analysis of the distribution by size of individual firms in the cotton spinning, weaving and finishing trades, published in the Cotton Board's *Trade Letter* of November 17th, throws further light on the present set-up of the industry. The main features of the analysis are shown below:—

I.—SPINNING MILLS (a)		
	No. of Mills	No. of Spindles (million mule equivalent)
Less than 30,000 spindles.....	60	1.1
30,000-60,000 ".....	103	4.7
60,000-90,000 ".....	90	6.7
90,000-120,000 ".....	112	11.8
More than 120,000 ".....	89	14.8
Total.....	454	39.1
(a) Excluding waste spinning.		
II.—WEAVING SHEDS		
	No. of Sheds	No. of Looms (000's)
Less than 100 looms.....	344	17
100-500 ".....	720	186
500-1,000 ".....	277	192
More than 1,000 ".....	69	85
Total.....	1,410	480
III.—FINISHING FACTORIES		
	No. of Factories	No. of Operatives Employed
Less than 25 operatives.....	190	2,400
25-60 ".....	121	4,800
60-100 ".....	111	8,800
100-200 ".....	107	15,300
200-400 ".....	53	14,200
Over 400 ".....	11	6,600
Total.....	593	52,100

As was to be expected the spinning branch is concentrated into fewer units than the finishing and, especially, the weaving branches. The bulk of the process of spinning is carried out in a comparatively small number of estab-

lishments. Weaving, on the other hand, is still a much more specialised trade, with a comparatively large number of small and medium sized units. In the finishing section, too, there is still a preponderance of small concerns. Unfortunately, the Cotton Board does not show the changes that have taken place in recent years in the size distribution of individual firms in the three branches of the industry.

Exports of Wool Textiles

The decline in exports of wool textiles during the July-September quarter was not as marked as might have been expected in view of the restrictions imposed by the licensing and quota system which came into force on February 1st this year. Arrears of shipments due to lack of shipping space earlier this year may have had some influence on the latest returns:—

	Woolens 1,000 sq. yds.	Worsted 1,000 sq. yds.	Total 1,000 sq. yds.
1941			
January-March.....	8,907	6,406	15,313
April-June.....	10,472	4,457	14,929
July-September.....	15,468	7,407	22,875
October-December.....	23,348	9,874	33,222
1942			
January-March.....	18,393	8,763	27,156
April-June.....	10,984	5,609	16,593
July-September.....	9,930	5,895	15,825

During the twelve months ended in September, 1942, total shipments were nearly 93 mill. sq. yds compared with 66 mill. sq. yds. during the corresponding period in 1940-41, a reflection of the export drive in 1941. In recent months there has been some anxiety in the wool textile industry about the drift of workpeople from the mills to other employment, as well as into the Services. The exodus was particularly marked in the case of young women engaged in worsted spinning and to a lesser extent in worsted weaving. Many have joined the auxiliary Services, but there has also been a considerable transfer to other forms of employment which were considered more attractive and more remunerative. In order to arrest this tendency the majority of firms in the woollen and worsted trades of the West Riding of Yorkshire have been brought within the scope of the Essential Work Order. Spinners and manufacturers are now able to plan their production a reasonable distance ahead with some confidence. During the next few months the bulk of the total output will be absorbed by the Government and by the utility clothing scheme.

Beer

As the accompanying table shows, the consumption of beer has risen since 1939. The Government was faced with the alternative of cutting down the supply of beer, or diluting it, and the latter course has been chosen. In the last war, standard barrelage was reduced from 36.1 million barrels in 1914 to 13.8 million barrels in 1918. Standard barrels (containing 36 gallons of beer of an original gravity of 1055 degrees) have been kept steady in this war at about 19 million barrels.

OUTPUT OF BEER IN THE UNITED KINGDOM (in '000 bulk barrels)						
Quarter	1939	1940	1941	1939	1942	1939
1.	5,407	5,241	5,946	%	6,705	%
2.	6,481	6,649	7,365	+10	7,393	+24
3.	7,660	7,061	8,303	+14	...	+14
4.	5,983	6,557	7,488	+8	...	...
				+25	...	...
Total...	25,532	25,507	29,102	+14	...	...

Bulk barrels have risen from 25.5 millions to 29 millions, the increase in production being achieved by reducing gravity. In an article in the *Bulletin* of the Oxford Institute of Statistics for October 31st it is implied that it may not be possible to continue to allocate raw materials to brewers at the present rate, considering the alternative uses of the ingredients of beer.

(Continued on page 682)

COMPANY MEETINGS

ROYAL BANK OF SCOTLAND

ANNUAL GENERAL COURT OF PROPRIETORS

SUCCESSFUL RESULTS—HIGHLY LIQUID POSITION

FURTHER LARGE INVESTMENTS IN BRITISH GOVERNMENT SECURITIES

DUKE OF BUCCLEUCH'S ADDRESS

The annual general court of proprietors of the Royal Bank of Scotland was held, on the 25th instant, at Edinburgh, His Grace the Duke of Buccleuch and Queensberry, P.C., G.C.V.O., Governor of the bank, presiding.

His Grace said:—I assume it will be your pleasure that the annual report and balance-sheet, with auditors' report, will be taken as read.

Before dealing with the ordinary business of the meeting I should refer to the great loss experienced by the bank through the death, on June 29th last, of Sir Hugh Shaw Stewart, Baronet, who had been an extraordinary director from 1904. Sir Hugh took a keen interest in the affairs of the bank and was a regular attendee at the meetings of the extraordinary court.

The period covered by our accounts marks the third completed year of the war.

DEPOSITS AND OTHER LIABILITIES

Turning to the balance-sheet, we show total assets amounting to £108,171,956, which are approximately £10,000,000 in excess of the record figures of a year ago.

Under the heading "liabilities," deposits and other credit balances have increased by £7,192,837 to the figure of £89,199,983. These figures, as I stated a year ago, are large for a Scottish institution, but I should like to add also that they do not indicate any reluctance on the part of our clients to help the war effort. Most of our clients have been willing and regular contributors to the various war loans and have also taken up freely tax reserve certificates.

Notes in circulation at £6,357,373 show an increase over the previous year of fully one and three-quarter million pounds. When I addressed you a year ago, I referred to the factors accounting for the increase under this heading and, at the same time, I gave a warning against the dangers and folly of hoarding notes. So far as this bank is concerned, the pay-rolls of our clients have increased considerably, and there are also factors connected with the reduction in banking facilities throughout the country which must militate against the quick return of notes to the banks, but I would again repeat my warning to the public against hoarding notes.

The increase of £883,569 in the total of £2,960,755 for acceptances and indorsements of foreign bills and other obligations does not call for comment.

LIQUID ASSETS AND INVESTMENTS

On the assets side, our holdings of cash, balances with the Bank of England and other banks, money in London at call and short notice, etc., amount to almost £22,000,000. That provides evidence of a highly liquid position and, along with Treasury deposit receipts, which stand in the balance-sheet at £7,000,000, represents over 30 per cent. of our liability to our depositors and to the holders of our notes. British Government securities at £39,341,610 show an increase of over £4,500,000 on last year's figures. The increase under this heading shows that our larger resources have been mainly utilised towards helping the financing of the war.

It can be said that a higher proportion of our investments in Government stocks is in short and medium-dated loans, and that all these and other investments are valued at or under market prices ruling on the date of our balance.

Notwithstanding the paucity of commer-

cial bills, we are pleased to be able to show a portfolio including £1,500,000 Treasury bills of £2,841,915.

ADVANCES

We have also to record an increase in our advances which at £24,274,678 are up on last year's figures by £350,000. The higher figure of our advances is entirely due to the facilities granted to our customers who are undertaking vital war contracts.

I should explain that the increase of £178,563 appearing under the heading of "loans against stocks" is purely temporary and is connected with the help given by our clients to finance the war.

PROFITS

The net profit of the year at £516,386 10s. 2d. compares with £491,522 6s. 7d. shown a year ago, but is still considerably below the profits earned immediately prior to the war.

APPROPRIATIONS

The directors are pleased to be in a position to recommend that a dividend for the half-year on the capital stock at the rate of 17 per cent. per annum be declared, and that £30,000 be applied in writing off expenditure on bank buildings and heritable property, and that a sum of £49,013 13s. 4d. be contributed to the trustees of the staff pension fund. After these appropriations, there remains the sum of £76,122 16s. 10d., which it is proposed to carry to our inner reserves against contingencies.

BUSINESS OF THE BANK

The business of the bank and of our associates in England—Glyn, Mills and Company and Williams Deacon's Bank, Limited, continue to prosper.

To fill a vacancy on the board, the Right Honourable William Young Darling, C.B.E., M.C., Lord Provost of Edinburgh, was elected. The Lord Provost, who is a notable figure in Scottish life, holds office until this court, when he comes up for re-election.

In passing I might say that this is the seventh occasion that the Royal Bank have included in their directorate a Lord Provost of the Capital of Scotland and, from what we have seen of our new director at our meetings, we regard ourselves as fortunate in obtaining him as a colleague.

SCOTTISH INDUSTRY

With the whole of the country's industry concentrated on the war effort, a review of Scottish industry at the present time is hardly called for. I should, however, like to say a word on Scottish agriculture which has made an increasing contribution to the national larder. Many farmers have been handicapped by a shortage of experienced labour, and transport problems affect the remoter districts of Scotland most severely. With the general rise in prices for agricultural produce, a reasonable measure of prosperity has been restored to arable farming, but the future of hill sheep farming is still obscure.

Afforestation, both during and after the war, is of vital importance to Scotland, and the provision of essential softwood timber from woodlands in private ownership has proved in two wars of the greatest value to the country.

It is hoped that both in agriculture and forestry the contribution during this period of national emergency will be remembered and recognised after the war is over.

I should also like to refer to the important work which the Right Hon. Thomas Johnston, Secretary of State for Scotland, along with his Council of State and the Council for Scottish Industry, is doing in the drive to improve Scottish industry. Already there are signs that the effort is bearing fruit, and we wish Mr. Johnston every success in the praiseworthy object he has in view.

TRIBUTE TO OFFICIALS AND STAFF

We have at the present time 703 members of our pre-war staff serving with His Majesty's Forces. In addition to this, thirteen members of our staff have made the full sacrifice, and our sympathy goes out to their relatives. Twenty-one others are reported to be missing or prisoners in the hands of the enemy. Wherever possible we have arranged through the intermediary of the Red Cross that weekly parcels, containing books, cigarettes and suitable articles, shall be sent to these prisoners to help to ease their unenviable lot.

To meet the heavy calls on our manpower, we have closed, since 1939, 49 of our branches. We regret that the closing of so many of our offices involves the severance of business relations with clients of long standing, but we hope that in the post-war period we may be in a position to again provide banking service in the districts from which we have felt it our duty to withdraw in the present emergency.

The report and recommendations of the Kennet Committee on man-power in the banking industry which have recently been made public will, if adopted, involve a further strain on our man- and woman-power, but we shall do everything we can loyally to fall in with the recommendations of the Committee whose findings, it is felt, have shown an understanding of what the banks have done in the past three years and are now doing to help the war effort.

I know that I am echoing the views of the directors and proprietors when I express our great appreciation of the loyal manner in which the staff—male and female, permanent and temporary—have carried out their duties in these difficult times. Without their wholehearted support the satisfactory results of the year could not have been achieved. To Mr Whyte, the general manager, the assistant general managers and the officials at Head Office, London, Glasgow, Dundee and Aberdeen, our thanks and congratulations are once again due for the devoted services which they have so unsparingly given in these difficult times.

STAFF PENSION FUND

In line with modern practice a separate staff pension fund was established during the past year, and the amount formerly standing at the credit of pension reserve fund, along with a sum from the bank's inner reserves, has been transferred to the names of trustees—some of whom are members of the staff—for the administration of the fund.

OUTCOME OF THE WAR

In conclusion, I would only add that we are more convinced than ever of the successful outcome of the war, and it is my earnest hope that when I address you next year victory will have been achieved by us and our Allies.

APPROVAL OF ACCOUNTS—DIVIDEND

I now beg to propose that the report, containing a statement of the accounts and balance-sheet, be approved, and that out of the Committee, whose findings, it is felt, rate of 17 per cent. per annum for the half-year, under deduction of tax, be declared in conformity therewith.

The report was approved and the governor, deputy-governor, extraordinary directors and the retiring ordinary directors were re-elected and auditors were re-appointed for the ensuing year.

SOUTH AFRICAN DISTILLERIES AND WINES, LIMITED

BURDEN OF TAXATION

The annual general meeting of South African Distilleries and Wines, Limited, was held on the 20th instant in London.

The following is an extract from the review of the chairman, Mr H. R. Mosenthal, which was circulated with the report: Despite heavy taxation, the balance of undistributed profits of the operating companies has been increased to the figure of £128,295 S.A. currency. It is obvious that the operating companies could have made a larger distribution, and so enabled us to pay an increased final dividend here, but your board is in agreement with the policy recommended by the local boards to conserve their resources to meet possible expansion or other contingencies.

INCREASED TURNOVER

Total sales have in the year under review reached a total which we never visualised when this company was incorporated and the very substantial increase in the net profits of the subsidiaries is due to increased turnover, and, except to a minute extent, not to any increase in the rates of gross profits. In no instance have our operating companies' selling prices been based on the highest that the Control allows, and generally they are well below the limit allowed by the Price Controller. The public, therefore, have been very well treated on this score, and when I point out that when the K.W.V. (the Co-operative) were given control of good wine they immediately increased the price to the merchants, from which the farmers benefited heavily and have also raised the cost of spirits to the merchants by 10 per cent., which was to be passed on to the farmer as an increased cost allowance due to war factors, it will be seen that both the producers and the consumers have had a very square deal. For the first six months of the new operating year the sales total shows a fair increase over the very good figure for the corresponding period.

Coming now to prospects, we continue to do well, and I have no reason to assume that, when we meet next year, the position will not be equally satisfactory. Owing to war-time difficulties and restrictions, the large sales total consists practically entirely of the operating companies' own products, and they are all the time increasing goodwill to their future benefit.

Owing to these same difficulties, exports from South Africa have been terribly restricted, but fortunately our subsidiary companies have always concentrated on the South African market, and the total of exports formed an unimportant percentage of their turnover.

POST-WAR POLICY

What is to be their post-war policy? Should they, while maintaining their steadily increasing grip on the home market, endeavour to expand substantially into the export trade? It is their opinion, which I cordially endorse, that they should not attempt it on any large scale and what they do should be in quality wines only, and in so doing endeavour to increase the reputation of South African wines. To be of any permanent value to South Africa, the public must buy South African wines and spirits because they are good and not because they are cheap. I want to see South African wines marketed under their own names on their merits. The names of farms and districts are distinctive and should be used, and the measure of quality would be the reputation built up by the individual shipper. "Hock Type," "Port Type" and similar descriptions are, in my opinion, to be deplored, as they imply imitation, and as such are *ab initio* branded as inferior. Would an excellent liqueur like Drambuie have been as great a success if marketed as "Benedictine Type"?

The report was unanimously adopted.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED

STRONG POSITION MAINTAINED

The annual general meeting of Johannesburg Consolidated Investment Company, Limited, was held on the 24th instant in Johannesburg.

Mr G. H. Beatty, who presided, said that the strong financial position of the company had been maintained. The book value of the assets amounted to £9,735,716. Provision for taxation and sundry creditors, deposit and current accounts of associated companies, together with dividend No. 50, amounted to £2,050,071, which, deducted from the total book value of the assets, left a surplus of assets over liabilities of £7,685,645.

The profit for the year, after providing for taxation, for all ascertained and estimated charges and for depreciation, amounted to £533,749, which was £3,060 higher than the profit for the previous year. With the balance of £230,896 brought forward, there was an available amount of £764,645, which was dealt with as follows: The dividend at the same rate as that for the preceding year, namely 2s. per share less United Kingdom income-tax, absorbed £395,000 and £150,000 was transferred to the reserve fund, leaving £219,645 to be carried forward.

THE GOLD MINING INDUSTRY

The war was now in its fourth year and a view of the gold mining industry *qua* gold mining industry might perhaps most clearly be shown by a comparison of results in the first six months of 1941 and the first six months of 1942. During the second period 33,930,000 tons were milled, an increase of approximately 840,000 tons; the recovery at 4.059 pennyweights per ton was .088 of a pennyweight lower, the working costs were only 3d. per ton higher, but the cost per ounce had advanced by 3.2s.; both the profit and the dividends were one million pounds less.

Comparatively very little money had been appropriated in either period for capital expenditure. Normally, with one million pounds less profit the State would collect substantially less in taxes, rents and other levies, but the special contribution in respect of working profits had been increased by 4 per cent. to 20 per cent. It was the increase which resulted in one million pounds less being paid in dividends for the six months. Those figures indicated that the people of the Union had a very much larger stake directly in the industry than the actual shareholder. The indirect value of the industry to the State was of course far greater than its direct interest, for in all some four million Europeans and natives were employed in the industry.

The aggregate results of the gold-mining companies of the group for the six months ended June 30, 1942, were tons crushed 6,607,000, yield 1,072,480 ounces, yield per ton crushed 3.246 pennyweights, working costs £6,444,720, working costs per ton 19s. 6d., working costs per ounce fine gold produced 120s. 2d., and gross profit, including sundry revenue £2,629,732.

The year 1941 had shown a decided improvement in the diamond trade in spite of lack of cutting facilities for the smaller quality. The De Beers Consolidated Mines were therefore able to resume the payment of dividends on the deferred shares and the Consolidated Diamond Mines of South-West Africa had paid a dividend on the ordinary shares. Recently there had been a considerable expansion in the cutting industry in Palestine, which had proved of special value to the trade. The demand for gem diamonds during the current year (1942) had so far continued on the 1941 level, but there had been a considerable increase in the demand for industrial diamonds, which were supplied to the Allies at pre-war prices.

The report and accounts were unanimously adopted.

BLYVOORUITZICHT GOLD MINING COMPANY, LIMITED (Incorporated in the Union of South Africa)

HIGH GOLD VALUES

DR. HANS PIROW ON OUTLOOK

Dr Hans Pirow presided at the annual general meeting of Blyvooruitzicht Gold Mining Company, Limited, held in Johannesburg on the 20th inst. Moving the adoption of the report and accounts, the chairman said that expenditure charged to capital account during the year under review had amounted to £345,963, of which shaft sinking development and equipment had absorbed £320,482, the remainder being in respect of sundry general items for the seven months up to the commencement of the milling operations.

For five months to the end of the financial year, milling operations had resulted in a loss of £35,117, and funds on hand at the close of the year had amounted to £106,340.

During the year under review a total of 15,919 feet of development had been accomplished, and the quantity of ore developed was estimated at 583,000 tons, valued at 14.8 dwt. per ton, over an assumed stoping width of 45 in. Area developed to date extended roughly 2,500 feet north and south of dip of reef, and 3,000 feet east and west on strike.

Reduction plant had been completed, and was operating satisfactorily. The plant was designed to form a portion of the larger plant which would be required when the second shaft had been sunk, and underground workings had been connected with it. At present, with only one shaft connected to underground workings, the number of persons that could be employed underground at any one time was limited, and no increase in tonnage milled could be expected until the end of the war, when additional capital would be required for sinking the second shaft.

TONNAGE MILLED

The tonnage milled was drawn from the development ends, and the average mill yield, plus pulp value of rock, sent to mill during the year, had been 7.141 dwt. per ton. A certain amount of sorting was done, and it was estimated that 8.86 per cent. of waste rock had been removed from ore sent to the sorting station. Reef development rock, however, contained a large proportion of barren lines which could not be sorted, and therefore the value of ore milled had been much below what would have been obtained had the ore been produced by the stoping area that was being developed.

At present, primary consideration was given to development of the mine, and it was very satisfactory that revenue received for gold recovered from reef development, had, since the beginning of June, been sufficient to meet all charges for development.

The cost per ton of ore produced by development was naturally much higher than the cost of obtaining ore by stoping operations would be, while the yield per ton was considerably less owing to a large percentage of waste rock, which must be carried in every development.

Gold recovered by small reduction works would not produce distributable profits, but it would reduce total capital expenditure which would otherwise have been required for the development of the mine. We were fortunate in that values exposed by development to date had been sufficiently high to enable profits to be earned, but should there be any marked decrease in those values, it was possible that expenditure on development would exceed revenue from gold.

WORKING DIFFICULTIES

As the company's mine was situated approximately fifty miles from Johannesburg, and was not near any large towns, unusually heavy provision for housing employees had had to be made, and during

the year it had been necessary to build six additional blocks of semi-detached houses, and a small recreation hall.

Difficulties experienced in obtaining essential materials had increased, and every effort was being made by the gold-mining industry as a whole to reduce consumption and to conserve existing stocks.

To ensure that mining supplies were used to the best advantage, an agreement had been entered into by companies in the industry whereby stocks, purchases, allocation, distribution and rationing of such supplies were controlled by a Mine Stores Department of the Transvaal Chamber of Mines, under the direction of the executive committee.

It had also been decided not to circulate to shareholders the usual quarterly reports, nor the report of the proceedings at the meeting. Copies of those documents could be obtained, however, on application to the head office in Johannesburg or to the London office.

The report and accounts were adopted.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED

(Incorporated in the Union of South Africa)

DR. HANS PIROW'S ADDRESS

Dr Hans Pirow, chairman, presided at the annual general meeting of New Modderfontein Gold Mining Company, Limited, held in Johannesburg on the 20th inst. In moving the adoption of the report and accounts, the chairman said that the total profit for the year had been £808,613. Dividends had absorbed £350,000, and provision for taxation had amounted to £446,272. Provision on account of outstanding liability in respect of miners' phthisis compensation had been £18,150.

Difficulties experienced in obtaining essential materials had increased, and every effort was being made by the gold-mining industry as a whole to reduce consumption and to conserve existing stocks. With that object in view, the company, in common with other companies in the industry, had curtailed its development programme since the beginning of the year. To ensure that mining supplies were used to the best advantage, agreement had been entered into by companies in the industry whereby stocks, purchases, allocation, distribution and rationing of such supplies were controlled by a Mine Stores Department of the Transvaal Chamber of Mines under the direction of the executive committee. It had also been decided not to circulate to shareholders the usual quarterly reports, nor a report of the proceedings at the meeting. Copies of these documents could be obtained on application to the head office in Johannesburg or to the London office.

DEVELOPMENT WORK

Development accomplished during the year had amounted to 29,662 feet, a decrease of 23,432 feet as compared with the previous year.

Payable ore developed during the year had amounted to 585,300 tons, valued at 2.8 dwt. per ton. That represented a decrease of 78,500 tons, and an increase in value of 0.2 dwt. per ton compared with the previous year.

Available ore reserve had been re-estimated at June 30, 1942, to be 4,799,300 tons, having an average value of 3.0 dwt. over a stoping width of 47.2 in., as compared with 5,207,300 tons of the same average value over a stoping width of 47.1 in. at June 30, 1941.

The price received for gold, and the rate at which normal income-tax had been payable by the company, had remained unchanged during the year. There had been, however, an increase in the special contribution which had been raised from 16 per cent. to 20 per cent. as from January 1, 1942.

A large number of the company's European employees was absent on military service. The report and accounts were adopted.

MODDERFONTEIN EAST, LIMITED

(Incorporated in the Union of South Africa)

MR. W. M. FRAMES'S REVIEW

The annual general meeting of Modderfontein East, Limited, was held in Johannesburg on the 19th inst. Mr W. M. Frames, who presided, moved the adoption of the report and accounts.

Commenting on the accounts, the chairman said that the total profit had amounted to £960,984. Dividends had absorbed £325,782. Provision for taxation had amounted to £481,243 and provision for lease consideration had been £134,318.

To ensure that mining supplies were used to the best advantage an agreement had been entered into by the company, in common with other companies in the industry, whereby stocks, purchases, allocation, distribution and rationing of such supplies were controlled by a Mine Stores Department of the Transvaal Chamber of Mines under the direction of the Executive Committee.

In conformity with the general policy of the gold mining industry, development had been curtailed during the last six months of the period under review in order to effect economies of essential materials and to conserve existing stocks.

At 25,641 feet development accomplished had shown a decrease of 14,475 feet compared with the previous year. Payable ore developed had been estimated a 1,112,560 tons of an average value of 3.6 dwt. per ton. Available ore reserve had been re-estimated at June 30, 1942, to be 7,167,800 tons with an average value of 3.6 dwt. over a stoping width of 42 in. The available reserve had shown a decrease of 29,800 tons compared with the previous year's figure, the average value and stoping width decreasing by 0.2 dwt. and 0.5 in. respectively.

During the year four Brown tanks had been added to the reduction plant. Two tube mills were also being installed, and when they were in operation it was expected that the consumption of steel balls would show a considerable decrease.

The price received for gold and the rate at which normal income tax was payable by the company had remained unchanged throughout the year. There had been, however, an increase in the special contribution which had been raised from 16 per cent. to 20 per cent. as from January 1, 1942.

In order to conserve essential materials it had been decided not to circulate to shareholders the usual quarterly reports nor a report of the proceedings at the meeting. Copies of those documents could be obtained on application to the head office in Johannesburg or to the London office. A large number of the company's European employees was absent on military service. The report and accounts were adopted.

MALAYALAM PLANTATIONS, LIMITED

The 21st ordinary general meeting of Malayalam Plantations, Limited, was held on the 25th inst. in London, Mr W. J. Welch (the chairman) presiding.

The following are extracts from the address of the chairman circulated with the report and accounts:—In many respects the year was a record one. After writing off the unusually heavy sum of £37,372 expended during the year on buildings, machinery, etc., and £6,352 on replanted rubber areas, the profits amounted to £376,612. Except for the unusually heavy expenditure on buildings, machinery, etc., the profits would have been the highest ever recorded by the company.

The total crop of manufactured tea of over eleven and a half million lbs. was the largest the company has ever harvested, though still much below the company's maximum capacity. The rubber produced totalled 6,248,473 lbs., and was only 100,000 lbs. short of our record crop.

The report was unanimously adopted.

CONSOLIDATED MAIN REEF MINES AND ESTATES, LIMITED

(Incorporated in the Union of South Africa)

DR. HANS PIROW'S STATEMENT

The annual general meeting of Consolidated Main Reef Mines and Estate, Limited, was held in Johannesburg on the 19th inst. Dr Hans Pirow, chairman, presided, and in moving the adoption of the report and accounts said that the total profit had amounted to £635,425. Dividends had absorbed £311,900 and provision for taxation had amounted to £301,293. Expenditure on capital account during the year, after allowing for sales of plant, had amounted to £21,864, but offset against that was the amount of £9,470 received in respect of freehold and township sales, leaving a net capital expenditure of £12,394. The main items were hoisting and shaft equipment and improvements to the west compound, where additional rooms had been built to house 840 natives and new offices had been provided for the compound staff.

The development accomplished during the year had totalled 102,190 feet, and increase of 1,338 feet compared with the previous year's figure. Payable ore developed had been estimated at 1,660,000 tons of an average value of 3.4 dwt. per ton. That represented a decrease of 494,700 tons compared with the previous year's figure, the value being 0.1 dwt. higher. Ore reserve had been recalculated at June 30, 1942, to be 9,826,900 tons of an average value of 3.5 dwt. over a stoping width of 58.3 in. Compared with the previous year the available reserve had shown a decrease of 737,100 tons, the average value and the stoping width being less by 0.1 dwt. and 0.7 inch respectively.

The price received for gold and the rate at which normal income tax had been payable by the company had remained unchanged throughout the year. There had been, however, an increase in the special contribution which had been raised from 16 per cent. to 20 per cent. as from January 1, 1942.

Difficulties experienced in obtaining essential materials had increased and every effort was being made by the gold mining industry as a whole to reduce consumption and to conserve existing stocks. With that object in view the company, in common with other companies of the industry, had curtailed its development programme since the beginning of the year. Further to ensure that mining supplies were used to the best advantage agreement had been entered into by the companies in the industry whereby stocks, purchases, allocation, distribution and rationing of such supplies were controlled by a Mine Stores Department of the Transvaal Chamber of Mines under the direction of the Executive Committee.

It had also been decided not to circulate to shareholders the usual quarterly reports nor the report of proceedings at the meeting. Copies of those documents could be obtained on application to the Head Office in Johannesburg or to the London office. A large number of the company's European employees was absent on military service. The report and accounts were adopted.

LEACH'S ARGENTINE ESTATES, LIMITED

The thirtieth ordinary general meeting of Leach's Argentine Estates, Limited, was held, on the 23rd inst., in London.

The following are extracts from the statement of the vice-chairman, Baron F. A. d'Erlanger, circulated with the report and accounts:—The profit on trading at £189,356 is an improvement of £12,063 compared with the previous period. The directors now recommended the payment of the balance of 3 per cent. on the preference stock, that there be set aside £6,223 to the funding certificate redemption fund, and the payment of the 6 per cent. non-cumulative dividend on the ordinary stock.

With regard to the 1941 sugar crop, the total amount sold was a little less than the previous year, but the average price obtained showed a marked improvement.

With regard to the 1942 sugar crop, the company's production has fallen to about 16,000 tons of sugar, but fortunately we had in hand at April 1, 1942, a fairly heavy carry-over stock, which, together with this year's production, should be sufficient to carry us through until the start of the 1943 crop.

The report was unanimously adopted.

NOURSE MINES, LIMITED

(Incorporated in the Union of South Africa)

MR. W. M. FRAMES'S STATEMENT

Mr W. M. Frames presided at the annual general meeting of Nourse Mines, Limited, in Johannesburg, on the 20th instant. In moving the adoption of the report and accounts, the chairman said that the total profit for the year had been £386,150. Dividends had absorbed £176,324, and provision for taxation had amounted to £194,804.

Provision on account of outstanding liability in respect of miners' phthisis compensation had been £9,021.

Net capital expenditure on equipment had amounted to £7,331, the principal items being additional tube mill and other equipment at the reduction plant, and hoisting equipment at number 3D incline. As a result of the installation of a new classification system and other alterations at the reduction plant, considerable improvement in the residue value had been effected. The average figure for the year had been 0.185 dwt., compared with 0.257 dwt. during the previous twelve months.

Development accomplished during the year had totalled 19,026 ft., a decrease of 10,040 ft. compared with the previous year's figure. Payable ore developed had been estimated at 386,800 tons of an average value of 4.4 dwt. per ton. The drop in the development footage was in conformity with the general policy of the gold-mining industry to curtail development programmes as much as possible in order to effect economies in the use of essential materials and to conserve existing stocks.

Further, to ensure that mining supplies were used to the best advantage, agreement had been entered into by the company, in common with other companies in the industry, whereby stocks, purchases, allocation, distribution and rationing of supplies were controlled by a Mines Stores Depart-

ment of the Transvaal Chamber of Mines under the direction of the executive committee.

ORE RESERVE

The available ore reserve, as re-estimated at June 30, 1942, had totalled 3,427,400 tons of an average value of 4.3 dwt. over an estimated stoping width of 48 in. Compared with the position at June 30, 1941, the available reserve had shown a decrease of 485,200 tons, the average value and the stoping width being unaltered.

The price received for gold and the rate at which normal income-tax had been payable by the company had remained unchanged throughout the year. There had been, however, an increase in the special contribution, which had been raised from 16 per cent. to 20 per cent. as from January 1, 1942.

In order to conserve paper stocks it had been decided not to circulate to shareholders the usual quarterly reports nor the report of the proceedings at the meeting. Copies of those documents could be obtained, however, on application to the head office in Johannesburg, or to the London office. A large number of the company's European employees was absent on military service.

The report and accounts were adopted.

RECORDS and STATISTICS

STOCK EXCHANGES

London

Note: all dealings are for cash

THE further decline in markings from the levels of recent weeks has again been accompanied by any corresponding movement in quotations. Prices, in general, continue to display marked stability, while recent earnings statements have occasioned many improvements in industrial equities.

The withdrawal of the 2½ per cent National War Bond issue 1949-51, and its substitution by a new loan redeemable 1951-53, provided the main item of interest in the gilt-edged market. The effect on prices, however, was negligible, except that 3 per cent Conversion loan 1948-53 was marked up slightly, with minor adjustments for earlier short-dated stocks. The announcement of the conversion offer, combined with the successful military operations in the Far East, occasioned a strong general advance in Australian issues. Apart from scattered support for European bonds, the foreign bond market was not very active. German loans were strong owing to

shortage of stock, the 7 per cent Potash stock forging ahead. Brazilian issues were quietly maintained, while some improvement occurred in Chinese stocks in mid-week. In the home rail market, junior issues reflected renewed support with small but persistent gains. Among the preference stocks, LMS and Berwick 4 per cent issues were firm. The payment of interest arrears on the Havana Terminal debentures raised the price 8 points, while the United of Havana issues were also marked up on the statement. Elsewhere in the foreign rail market occasional improvements were registered for a few Argentine stocks.

Tin Supplies

Twelve months have passed since the publication of the last official tin production statistics. During the year ended October 31, 1941, world production of the metal, according to the Tin Research Institute, reached a total of 259,887 long tons, a record. Since then production is reported to have fallen, mainly in Malaya and the Dutch East Indies, and to have risen in producing countries still accessible to the Allies. In Bolivia the American Government last June increased the buying price for tin from 50 to 60 cents per lb., f.o.b. Chilean port; at the same time it raised the minimum of its purchases from 18,000 to 25,000 tons. In addition development loans have been granted by the United States to Bolivia, and a mission of technical experts has visited the Bolivian tin areas. In Nigeria labour conscription has been introduced to increase the labour force of the tin mines, and the fact that the Nigerian Electricity Supply Corporation, which supplies almost exclusively the tin mines with power, has increased its sales of electric power by 24 per cent on the year suggests that the increase in the labour force has led to an increase in production. In the Belgian Congo the Government, through the *Direction de la Production Minière de Guerre*, has taken an active part in developing production; in the majority of other extra-Pacific producing countries Government measures have also been introduced to stimulate output. During the year ended October 31, 1941, the countries still supplying the United Nations—exclusive of China—produced almost exactly 85,000 long tons of tin. This year their combined production will almost certainly be higher, although it is impossible to estimate accurately how large the increase will be.

It is likely that the increase in tin production will be sufficiently large to enable the United States, Great Britain and the British Empire to meet their essential requirements without serious withdrawals from stocks. Recently the United States War Production Board estimated tin consumption in that country in 1942 at 65,000 tons, that is roughly one-third less than in 1941. In this country a similar rate of curtailment would reduce requirements this year to just under 18,000 tons. Together with the relatively small requirements of the British overseas areas, therefore, a supply of some 90,000 tons would probably be large enough to meet this year's demand of the United Nations, exclusive of Russia. Before the war Russia's consumption amounted to about 15,000 tons per annum. According to a recent statement by a Chinese Government Department in London, China is now producing tin at the annual rate of about 17,000 tons; the bulk of this tin is not needed in China and could probably be sent to Russia via the North-West Highway. Russia's requirements may therefore tax the Anglo-American tin reserves to any great

extent. There remains the possibility of losses of tin in trans-shipment between the mining, refining and consuming areas. The United States Government-owned tin smelter at Texas City was started up on April 9, 1942, and is now in full production. Its annual capacity is to be extended to 74,000 short tons of fine tin before the end of this year, and a recent War Production Board statement indicated a prospective output of 40,000 tons in 1942. By producing at such a high rate the new smelter may have used up its ore reserve accumulated since the spring of 1941 by next summer. As the United States ore supply agreement with Bolivia, though modified recently, is reported to provide for the shipment of no more than 25,000 tons per annum, the smelter could not be operated at anything approaching full capacity after the exhaustion of America's stock of ore. A redistribution of ore supplies available to the United Nations may, therefore, become necessary before long. Such a redistribution would have to take place on a basis which exposes ore shipments to the minimum risk at sea. Instead of shipping Bolivian ore to this country and re-shipping part of it in the form of refined metal to the United States, more Bolivian ore may have to be treated at Texas City. Such a transfer may require an amendment to the ten-years' agreement between the Bolivian Patiño mining group and the British smelters.

Cotton Trade Wages

The wage negotiations between employers and trades unions in the cotton industry are continuing. The only section in which there has been agreement is that of card-room operatives and ring spinners; they have been granted an advance of 3s. 6d. a week for adults and 2s. 6d. a week for juveniles. It is understood that the same terms were offered by the Master Spinners' Federation to the work-people in the mule spinning mills, but these were rejected by the trades union officials, and there is deadlock in the negotiations. The application of weavers in the manufacturing branch of the industry for a basic wage of 9d. per hour, plus 50 per cent of earnings under the piece price lists, has also been refused by the Manufacturers' Association. The employers, however, have made another offer, details of which have not yet been announced. It is believed that the proposals relate to the wages to be paid to young people on leaving school and that increases are suggested for the lower paid workers in the weaving sheds. Opinion in Lancashire inclines to the view that to ensure an adequate supply of labour for the cotton industry after the war, the general standard of wages will have to be improved. The trades union officials are not prepared to discuss the reconstruction and variation of list rates until their members receive a rise in wages, which is claimed in spite of the relative stability of the cost of living index figure, on which increases have been based since the beginning of the war.

BANK OF NEW SOUTH WALES

Incorporated in New South Wales with Limited Liability.

LONDON OFFICES:

29, Threadneedle Street, E.C.2. 47, Berkeley Square, W.1.

THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED

NOTICE IS HEREBY GIVEN that the Ordinary General Meeting of Members of The Consolidated Gold Fields of South Africa, Limited, will be HELD at THE CHARTERED INSURANCE INSTITUTE, 20, Aldermanbury, London, E.C.2, on Thursday, the 3rd day of December, 1942, at 12 noon, for the purposes following, namely:—

To receive and consider the Statement of Accounts and Balance-Sheet and the Reports of the Directors and Auditors thereon for the year ended 30th June, 1942; to confirm the dividends paid on the First and Second Preference shares; to sanction the declaration of a dividend on the Ordinary shares; to elect Directors and Auditors, and to transact the other ordinary business of the company.

If at the time appointed for the Meeting referred to in the above Notice it be found impossible or inadvisable to hold the Meeting at the time and place specified, NOTICE IS HEREBY GIVEN that the Ordinary General Meeting of Members of the Company will be HELD at 49 Moorgate, London, E.C.2, on Thursday, the 10th day of December, 1942, at 12 noon, for the purposes set out above.

Holders of Share Warrants to Bearer wishing to attend or vote at this Meeting must deposit their Warrants with the Company at the Registered Office in London, 49 Moorgate, E.C.2, not later than 27th November, 1942, together with a declaration on the form obtainable at that Office.

Dated this 24th day of November, 1942.

By Order of the Board,

R. CARR TAYLOR, Secretary.

Registered Office: 49 Moorgate, London, E.C.2.
Emergency Office: Motcombe House, Motcombe, near Shaftesbury, Dorset.

The fluctuations in the industrial market were largely compensatory, the undertone throughout remaining distinctly firm. Brewery shares fluctuated without trend, and, in a minor rally early this week, previous losses were more than recovered. Activity in tobacco shares was slight, but leading issues showed minor improvement. Recent results attracted considerable attention to the motor group, Standard, Austin and Rover all advancing. Comment on conditions in the aircraft industry had an adverse effect on quotations, De Havilland and Rolls-Royce, among others, declining. Lambert Bros. were prominent in a quiet heavy industrial group, and apart from some weakness in Cunard and Union-Castle, shipping issues were quietly maintained. Textile shares were stronger in mid-week, the largest gains being registered by Patons and Baldwins and Fine Spinners ordinary. Marks and Spencer rose sharply on mid-week demand, several other issues advancing in a strong section. Elsewhere, Murex were sold, but Eastwoods and Sudan Plantations were both in demand in the current week.

Conditions in the kaffir market became rather more active in mid-week, Blyvoors partly regaining an earlier loss, with several improvements in Far West Rand shares. West African mining issues attracted some buyers on the news from Dakar. Rubber shares were firm throughout, but in the tea market prices of leading issues advanced particularly strongly. Apart from the excellent war news, the major influence in the oil market was the Anglo-Iranian interim payment, on which the shares jumped 3s. Leading issues were firm, while the VOC payment brought the recent fall to a halt.

COMMODITY AND INDUSTRY NEWS

Cotton Industry Difficulties.—During the past two weeks there has been evidence of delivery difficulties. This state of affairs cannot be described as general, but in some branches more difficulties are being experienced in securing adequate supplies of goods and demand exceeds output. The difficulties are said to be due largely to the increasing requirements of the Ministry of Supply and other Government Departments, and to some extent to the fact that the British Government is now responsible for clothing and equipping the American Forces in this country. In the circumstances, the planning Department of the Control is now busier than ever, and although efforts have been made to obtain more production, success is almost entirely dependent upon labour supply. The Controller has been able to arrange for a number of weaving sheds to be restarted, although most of them have only a limited number of looms. Should the needs of the Services increase further, some inroad may have to be made upon the production which is now allowed for clothing the civilian population.

Steel Prices.—The Minister of Supply has issued the Control of Iron and Steel (No. 26) Order, 1942, which comes into force on November 24th and amends certain of the prices established under the Control of Iron and Steel (Nos. 15-20 and 22-23) Orders, 1941-2. The amendments include an increase in price of 6 per cent for general steel castings, but otherwise they are of a minor character. In addition, the Order establishes controlled maximum prices for certain iron and steel and allied materials hitherto not covered, notably special quality steels for special purposes, cemented carbide tool tips, medium plates rolled in a sheet mill, pit props and ferro molybdenum grinding powder.

Christmas and New Year Holiday.—Attention has been called by the Ministry of Labour and National Service to the announcement made in February, 1942,

New York

THE influence of favourable war reports on Wall Street was fully offset by fairly general selling for tax purposes. Profit taking restricted spasmodic efforts to advance, but "peace" issues were supported, gaining up to a point and more.

with regard to holiday breaks in industry. It is hoped that conditions will permit of two days' holidays being taken during the forthcoming Christmas-New Year season, either Friday and Saturday, December 25th and 26th, or Friday and Saturday, January 1st and 2nd.

Farm Workers.—Farmers who have not yet sent to their Agricultural Executive Committee application forms for deferment of workers born in 1923 and the first half of 1924 are warned that they must do so immediately in order to retain men whose services are essential on their farms. Failure to apply for deferment in time will mean that such men will be available for calling up for military service.

Blankets and Rugs.—The Board of Trade have issued the Household Textiles (Manufacture and Supply) (No. 2) Directions (SR and O. No. 2344), which provide that wool blankets (other than national price-controlled blankets), the manufacture of which has been prohibited since July 9th, shall not be supplied by manufacturers from December 1st. It also prohibits (except under licence) the manufacture of travelling rugs, pram rugs and similar rugs from December 31st. The supply by manufacturers of these articles is prohibited from March 1, 1943. The Board is considering arrangements for the supply of utility pram rugs.

Domestic Pottery.—Domestic Pottery is now available in relatively larger quantities than in the earlier part of the year. A special appeal was made in September by the President of the Board of Trade for an increase in output. In October, the production of cups was 30 per cent. higher than in May and June.

Egg Control.—An amendment has been made to the Eggs (Control and Prices) (Great Britain) Order, reducing wholesale prices of shell eggs by 3d. per 120 eggs from November 23rd. Retail prices remain unchanged. Registered domestic poultry

Shorter Comments

A Correction.—On page 645 of last week's issue, in the table at the end of the Kaffir Note, the yield on the 10s. shares of New Modderfontein was inadvertently shown as nil. This should, of course, read £18 10s. 4d. per cent. at the current price of 13s. 6d.

keepers are now permitted to sell preserved eggs of their own manufacture to persons who have surrendered shell egg registration to them; the price must not exceed 2s. a dozen. Other sales of preserved eggs are still prohibited.

Perambulator Prices.—The Board of Trade, after consultation with the Central Price Regulation Committee, has made the Perambulators (Maximum Prices and Charges) Order (S.R. and O. No. 2322), controlling the price at which all children's perambulators, push chairs and folders may be sold. A manufacturer may charge the aggregate of his costs and sale, together with an amount equal to 6 per cent of such costs, or the relevant amount specified in the first schedule to the Order, whichever is the lower amount. A wholesaler dealing in perambulators described in the schedule is not permitted to add to the cost of the articles, but is entitled to a discount from the manufacturer of not less than 7½ per cent. A retailer's maximum price for models not described in the first schedule, is the price paid to the manufacturer or wholesaler, plus 50 per cent. Manufacturers may only supply models specified in the first schedule to the Order, except under licence.

GOVERNMENT RETURNS

For the week ended Nov. 21, 1942, total ordinary revenue was £39,178,000, against ordinary expenditure of £108,393,000, and issues to sinking funds of £140,000. Thus, including sinking fund allocations of £7,997,847, the deficit accrued since April 1st is £1,916,685,000 against £1,907,753,000 for the corresponding period a year ago.

REPORT BY THE COURT OF DIRECTORS OF

The ROYAL BANK of SCOTLAND

To the ANNUAL GENERAL COURT OF PROPRIETORS, on Wednesday, 25th November, 1942

The Directors now submit to the Proprietors the annexed Abstract Statement of the Affairs of the Bank at the Second Saturday of October, 1942, with relative Profit and Loss Account, certified by the Auditors.

The Net Profits of the year, after providing for Income Tax, National Defence Contribution and all bad and doubtful debts, amounted to £516,386 10 2

Dividend for half-year paid at Midsummer at the rate of 17 per cent. per annum, required £361,250 0 0

Less Income Tax 180,625 0 0

It is now proposed to pay a Dividend at Christmas for the second half-year at the rate of 17 per cent. per annum which will require £361,250 0 0

Less Income Tax 180,625 0 0

There has been written off expenditure on Bank Buildings and Heritable Property £180,625 0 0

Contributed to Staff Pension Fund 30,000 0 0

And added to Inner Reserves against Contingencies, the Balance of 49,013 13 4

76,122 16 10

£516,386 10 2

All the Bank's Investments are valued in the annexed State of Affairs at or under the prices ruling at the date of the Balance.

The Directors during the past year established a Staff Pension Fund and transferred to the names of Trustees for the administration of that Fund the sum standing at the credit of the Pension Reserve Fund along with a further sum from the Bank's Inner Reserves.

The Directors record with deep regret the death of Sir Hugh Shaw Stewart, of Greenock and Blackhall, Baronet, K.C.B., who had been an Extraordinary Director from 1904.

In virtue of the powers conferred upon them by the Royal Bank of Scotland Act, 1873, the Directors elected The Right Hon. William Young Darling, C.B.E., M.C., Lord Provost of Edinburgh, as an Ordinary Director. Mr. Darling holds office until this Annual General Court only, but is eligible for re-election.

The Governor, the Deputy-Governor, the Extraordinary Directors and the Senior Ordinary Director (Mr. Tulloch) all retire at this time, and are eligible for re-election.

Auditors also fall to be appointed for the ensuing year, and Mr. George James Gregor, C.A., and Mr. S. W. Murphy, C.A., offer themselves for re-election.

By Order of the Court of Directors,

WILLIAM WHYTE,

Cashier and General Manager.

ABSTRACT STATE OF AFFAIRS, at 10th October, 1942

LIABILITIES.	
1. Deposits with accrued Interest and other Credit Balances	£89,199,983 0 5
2. Notes in Circulation	6,357,373 0 0
3. Drafts Outstanding	1,097,254 14 5
4. ACCEPTANCES AND ENDORSEMENTS of Foreign Bills and other Obligations	2,960,755 3 11
5. CAPITAL	£99,615,366 0 0
6. RESERVE	4,125,965 5 10
7. Proposed Half-year's Dividend payable at Christmas (less Income Tax)	180,625 0 0

AUDITORS' REPORT

As Auditors appointed by the Proprietors of THE ROYAL BANK OF SCOTLAND, we have checked the Cash on hand at Head Office, Glasgow and London (City Office) verified the cash with London Bankers, the Securities for money at call and short notice, the Government Securities and other Investments, and examined the details of the other Assets and of the Liabilities set forth in the foregoing Abstract State of Affairs; and we now certify that in our opinion said Abstract State is a full and true Balance Sheet, properly drawn up, and exhibits a true and correct view of the state of the Bank's Affairs, as shown by the books, at 10th October, 1942.

Edinburgh, 6th November, 1942.

Two-Way Traffic

THREE episodes have lately underlined the stresses and strains of alliance. The Russian people, before the Allied descent upon Africa, were calling impatiently on Britain for a Second Front. Some people in the United States (as described by a Special Representative on page 762) are calling rather sternly for a statement of Britain's colonial aims. And, in recent weeks, the British people themselves have been calling on the American Government, after the deal with Darlan, to make plain the objectives of its foreign policy. This cross-questioning is natural and healthy. It is useful as well as human that, say, a question from America about the future of the British Empire should be answered by one from Britain about the future of American tariffs. Only if the process is made part of campaigns to serve the interests of particular individuals or groups does it offer danger. It is the only means by which great and different nations in alliance can arrive at a common understanding. Nor is it a reproach to Britain that the demand for a statement of British war aims should be made a plank in progressive platforms in the United States. A great and unequalled opportunity now confronts this country. When Mr Willkie asks for a definite programme to better and free the British colonies, he is pushing against a door which is already ajar; he is not asking for the reversal of British colonial policy, but for its hastening along the unique path which it has already set for itself. Nor is the chance less at home, where it is aptly symbolised by the

Beveridge Report, with all its implications. Only in a country so compact, so well-knit, so united, so developed and so civilised as Britain is it practical to look for an immediate programme to realise in the measurable future social security, full employment and economic expansion, deliberately contrived. There is no reason to look askance at the expectations which are placed in this country on both sides of the Atlantic. The doubt is rather about the capacity of Britain's rulers to take the chance.

The questioning is not one-way. A strange series of events has unexpectedly brought forward Darlan as an ally and the representative of re-belligerent France. Just as the British Empire appears to trouble the Americans, so has this odd turn in American diplomacy troubled people here. All the arguments from military expediency are recognised, but a number of queries have inevitably been raised. Was the association the result of a policy which had been carefully laid ever since Admiral Leahy left his ambassadorial post in Vichy and became Chief of Staff to the American President last June? If so, where were its limits? Did it possibly involve a programme of bargains with reactionary elements elsewhere in Europe? Or was this just a situation which had grown unplanned from the very understandable determination of the American commanders to set military necessity above all other considerations? These are the questions which have been making the east-west passage. An encouraging reply has meanwhile come from

Edinburgh, 6th November, 1942.

GEO. JAMES GREGOR, C.A., Auditor.

Darlan himself. At a press conference, under American auspices, he has protested that his only aim is to co-operate in the defeat of Germany and Italy; that he has no personal ambition; and that the French people, when liberated, will be free to choose their form of government. This statement will not end the questioning. It does not explain the sweeping claims which Darlan had previously made for his power and authority—outside as well as inside the territories where French collaboration has been so immediately helpful to the Allied venture in Africa. Nor does his plea that the Germans had him "by the throat" explain the violence of such attacks on Britain as his order of the day to Madagascar last May. The adherence at last to the Allied cause of the interned French ships at Alexandria is indeed welcome. But was it not forecast by a British Admiral on the spot before the conversion of Darlan? And may it not be due to the recognition of hard facts, now that the Axis is on the run in the Mediterranean, rather than to the magic of Darlan's summons? More light upon all these happenings, and on their implications for the future, will be looked for from across the Atlantic.

There must indeed be answers to all these questions, and none need weaken the bonds of alliance. Nor should it be forgotten that there are many even more immediate problems to be dealt with by the Allies. The future of the British Empire and the future of Europe are vitally important for the future of the world. But more important still is the prospect of victory, which depends crucially upon the ability of the United Nations, jointly and severally, to make the most productive possible use of all their resources for war purposes. The announcement that the United States, Britain and Canada have set up a Combined Steel Committee to obtain every possible ton of steel from existing Allied plant facilities next year is timely. Mr. Lyttelton's announcement to the Commons on Wednesday that definite arrangements have been reached with the United States for 1943, on a combined shipbuilding programme, the use of American ships on British account and the firm allocation to Britain of American munitions, materials, components and aircraft, marks an important advance. The minimum import programme laid down for next year will be assured by these

decisions; and the assistance of American materials and equipment will increase the British effort by a third.

In 1942, the machinery of Anglo-American collaboration was set up and put in motion. In 1943, it must be used to the full to bring "the maximum impact" against the enemy. Arrangements and agreements are not in themselves achievements. Responsibility rests upon each ally to make the best and most economical use, in the common plan, of its manpower, plant, materials and food. In Britain, a committee has been set up by Sir Stafford Cripps to survey the use of labour in aircraft factories. In the United States, there are still major problems to be solved in the economical employment of both manpower and materials, and in the division of responsibility and direction between Service and civilian chiefs. These are the questions of first weight, because upon the practical ability of the United Nations to make effective the year-old decision to pool their resources for the war depends all else; and the process of inter-Allied questioning and mutual criticism can still give as much aid in winning the war as it clearly has to contribute to winning and keeping the peace.

It would be very wrong either to write off this two-way traffic of questions or to exaggerate the evidence it gives of Allied divisions. The state of mind of the American, British and Russian peoples is just about what it might be expected to be. With all the temptations the Americans have to be self-centred and nationalistic, it is remarkable how much international-mindedness there is among them: with all the temptations they have to treat Britain as a poor relation, it is remarkable how much they treat this country as a partner. Similarly, with all the temptations the suffering people of Russia have to look cynically and sceptically at their more fortunate Allies, it is remarkable how far they have emerged from their old protective isolationism. And, with all the temptations of the British people, after their fight alone, to look with some bitterness and resentment at the doubts cast upon their integrity by more belated entrants into the struggle, it is remarkable how ready they are to recognise the vast contributions which their Allies are making. The concept of the United Nations will become more and more real as these questions are flung frankly across the oceans—but only if they are given answers no less frank.

The Financial Instrument

THE days are gone when debates on war finance were inquests on the rate of war production as measured by the rate of Government expenditure. This fact reflects the high degree of mobilisation that has now been achieved. Attention has been transferred instead to the financial system itself. There is a body of opinion which believes that wartime experience has confirmed the charge that the present banking structure and methods of public finance are inefficient, obstructive and detrimental to the common weal. The demand is made for a Royal Commission to disclose the "facts" on which a radical recasting of the system can be based; for a new Bank Charter Act, on the centenary of the first, to put an end to the banking "monopoly"; and for the clipping of bank profits meanwhile by a reduction in the cost of short-term borrowing by the Treasury.

These views, which were less evident in Wednesday's debate on war finance than was expected, cannot be accepted, not because they are heretical, but because they are erroneous. Admittedly, the experience of war economy has made plain certain vital truths, formerly too little regarded, about the nature and objects of financial policy. But, it has in no significant way discredited the existing financial instruments. If there have been deficiencies, that is, apart from the not inconsiderable fallibility of bankers and civil servants, they have been in the means pursued, not in the machinery employed to pursue them. The real discovery of wartime is not that finance is itself a humbug, but that finance is only a means

to an end. The end is the distribution of the nation's real income in such a way as, on the one hand, to secure a maximum output of goods and services from the physical resources available, and, on the other hand, to ensure a minimum of necessities for every individual and family in the community. Three years of war needs have forced the makers of policy to regard their task in terms of the real resources of manpower, plant and materials available, and not simply in terms of budgetary ways and means. The discovery has been made, as Mr Pethick-Lawrence reiterated in Wednesday's debate, that the rôle of finance is merely to make certain, by its influence on the distribution of the national income between different claimants, that financial considerations are never an obstacle to programmes which are physically possible. It is by the use of this discovery that the post-war programmes to make the most productive use of the nation's available resources can be fashioned. It should be possible to work out from statistical knowledge of the real national income, and its optimum distribution between investment and consumption, a policy for full employment; and it should be impossible to repeat the disaster of seventeen years ago, when, by the return to the gold standard at a conventional parity for purely financial reasons, resources of men and machinery were deliberately thrown out of employment, and the real national wealth was correspondingly curtailed. In other words, the basic truth which has of necessity been recognised in wartime conditions is that a nation's wealth consists, not in its monetary means or financial

devices, but in its real possessions of manpower, machinery, materials and technical skill.

Nevertheless, the discovery that finance is an instrument and not an arbiter, a servant and not a master, does not mean that finance is unimportant. The crucial point which war more than any other experience underlines is that the multiplication of money is not the multiplication of goods. Except when there is a considerable proportion of real resources already idle, the inflationary way is always wrong. In wartime or in peacetime, inflation is, above all, the way not to distribute a nation's real resources. The consequences of an inflationary scramble for goods and services, with prices and incomes in a ceaseless mutual pursuit, are always unfair, indiscriminate and inefficient. This is fully realised in wartime, when the two tasks of reserving resources for planned war production and of guaranteeing to every citizen a minimum supply of necessities are paramount. With the addition of physical controls upon the distribution of resources, by means of raw materials priorities and allocations and the rationing of foodstuffs and clothing, the orthodox methods and institutions of British finance, for all their creaking at times, have secured a signal triumph during the war in warding off inflation. This was generally recognised in the Commons on Wednesday. But the struggle is not over. Any further appreciable expansion in earnings might still give rise, not to the galloping inflation of classical theory and historical experience, but perhaps to a sufficiently strenuous pressure on costs and prices to upset the equilibrium which so far has been preserved. Moreover, the war will end, maybe quite suddenly. There will be a vast pent-up demand for goods, and a large volume of postponed purchasing power in the shape of savings, post-war credits and gratuities. If it is possible to maintain the controls on physical consumption which have been maintained during the war, the danger of inflationary developments will be minimised. But there will be a strong psychological revulsion from the wartime regimentation of consumption, both on the part of industry and the public; and there is everything to be said for lessening the prospective danger of post-war inflation by the utmost possible restraint upon the indiscriminate piling up of monetary claims—to be presented just when the needs of reconstruction will require the same kind of priorities in the use of resources as war economy. Moreover, a wartime policy, which can build up income levels with impunity because of wartime controls, may pay too little heed to the commercial dangers of an inflated structure of costs and prices in world competition when the war is over. So far, the story has been one of success; but this is no reason for ignoring the risks that may be run in the post-war future.

The way is open for the use of financial means to assist in the task of securing the most productive use of the nation's resources. This is the lesson of war economics, and not any demonstration that banking is an obstructive monopoly maintained by private vested interests, a charge which is sufficiently denied by the fact that, throughout the banking system, it is the Government and not the

bankers which has the power to call the tune. The attack on the cost of short-term borrowing, even though the gross cost to the taxpayer of borrowing a given sum in this war has been, as Sir Kingsley Wood pointed out on Wednesday, only a third of what it was in the last war, is an example of this belief. The argument is that Bank rate was at the present level of 2 per cent for some seven years before the outbreak of war, and was for part of that period at any rate accompanied by short-loan and discount rates of about half the present figures. Why, it is asked, should the Treasury be forced to pay twice the rates it paid before the war for its floating debt borrowing? It is pointed out that the level of short-loan rates and, therefore, of discount rates, is dictated among the banks. "I spy monopoly" is the conclusion. Actually, the conclusion is wrong. In the first place, the present agreed rates have the consent of both the Treasury and the Bank of England, though this may not be sufficient reason for accepting them. The real point is that the question of what are the proper and reasonable rates for the Government to pay on floating debt borrowing should be discussed, not in relation to the status of the banks, but as part of the general problem of the structure of interest rates. In the course of three years, the present structure has settled down and acquired a cohesion. The range of interest rates, from the ½ per cent on bank deposit accounts to the 1 per cent on money market loans, the 1 1/32 per cent on Treasury bills, the 1½ per cent on six months Treasury deposit receipts, the 2½ per cent on Post Office Savings accounts and medium term Government loans and the 3 per cent on longer term loans, suggests no lack of balance of a disproportionate height in the case of the shorter rates. Here is the nicely aligned structure of the Three Per Cent War; and it would be difficult to tamper with it at one point without making drastic changes elsewhere. If, for example, the critics had their way, and the bill rate came down to ½ per cent, with ¾ per cent as the TDR rate, the banks would inevitably have to cut deposit rates; and the result would be a rush of funds from the banks to the Post Office Savings Banks, a movement which would leave the Government out of pocket. If this, in turn, were countered by reducing the Savings banks rates, there would be a movement of funds into the even more expensive National Savings Certificates.

It is on these lines that this and similar problems must be judged. They are again and again misjudged because they are thought of in terms of vested interests and not in terms of financial facts. Bankers have sometimes been and still are, as foolish and shortsighted and hidebound as most. So have some Treasury officials. This affords no ground for the present root-and-branch campaign, for the whole field of finance, including the volume of credit, is already under effective public control. The critics are right when they argue that there must be no return to the financial "dictatorship" of the old days when narrow and short-sighted views of finance impeded the full use of national resources. But they are wrong to suppose

that these impediments arose from the character of Britain's financial institutions. In fact, they arise from wrongheadedness, from a wrong attitude and a wrong policy. If the lessons of the war are properly read, the right policy and the right attitude should be forthcoming after the war. Finance will be regarded as an important means

Electors and Elected

THE report of the Vivian Committee on Electoral Machinery (Cmd. 6408) comes at a time when public interest in reconstruction problems is at its height. If there is to be a far-reaching programme for social and economic reform, people are asking themselves by whom and by what means will it be carried out? Is there any way of making sure that this time the post-war Parliaments and Ministries will be able and willing to translate the nation's wants and needs into constructive action? There is a widespread understanding that the real test of representative government in this country lies just ahead.

The Vivian Committee was limited by its terms of reference to considering

whether for effecting the purposes of the present system of electoral registration improved methods and machinery can be devised . . . and to examine the technical problems involved in any scheme of redistribution of Parliamentary seats by way of preparation for consideration of the principles on which any scheme should be based.

Its findings are somewhat tentative, though attention is drawn to the existence of a great many defects in the present electoral machinery. The Committee was asked to have special regard "to the circumstances likely to obtain in the period following the termination of hostilities." It has not ruled out the possibility of a wartime election and suggests methods by which such an election could be held, if necessary. But it records its emphatic disapproval of a wartime election. With this view there will be wide agreement. The technical difficulties would be enormous; and whatever view may be taken about the present political truce, the undoubtedly unrepresentative nature of the current Commons or the character of the existing coalition, it must be admitted that to hold a general election in the middle of the war would almost certainly be hazardous and unprofitable.

But the necessity for the speediest possible return to democratic politics, and for a fresh Parliament composed of competent and representative men and women, remains very urgent. The possibility of an election very shortly after the war should be regarded as both desirable and expedient. The Vivian Committee bases its recommendations on the assumption that there will be such an election. The administrative difficulties will still be considerable. Population movements, due to mobilisation, industrial transference and evacuation, have been abnormal in the last two years. By the end of 1941, the number of civilian adults living in different constituencies from 1939 was in the order of 5 millions, or roughly one-sixth of the electorate. The present electoral register, which is based on a qualifying period between two fixed dates, is "exceptionally exposed to the disfranchising consequences of heavy population movements"; and in its place, the Committee proposes a scheme for "continuous registration," with a two months' residence qualification, which would secure that no elector is removed from the register of one constituency without being previously entered on the register of another. The Committee rightly emphasises the importance of enabling members of the armed forces to vote. Large numbers of men may still be overseas, and arrangements for them, as well as for men of the Merchant Navy, to vote by proxy must be made in advance.

When it comes to the redistribution of Parliamentary seats, the Committee is on more controversial ground. The last redistribution took place in 1918. Since then, the distribution of population has materially altered, the

to a still more important end—the full employment of Britain's resources. And, by international agreement on the problem of post-war exchanges, international finance may similarly come to be regarded, and used, as the means to a still larger end—the full employment of the physical resources of all the world.

franchise has been extended to women and two decades of peace and three years of war have brought about changes in the country's social structure. It is clear that the present distribution of seats is not in keeping with the requirement laid down by the Speaker in 1917, that "each vote recorded shall, as far as possible, command an equal share of representation in the House of Commons." The report shows that, according to the 1917 criterion, by 1939, 119 constituencies had ceased to discharge this function; 87 no longer justified their existing representation, and 32 had so increased as to require theirs to be doubled or in some cases trebled or quadrupled. By 1941, this disproportion had further increased, and the 119 had become 164. The position seems to be worst in the London area. Thus John Parker represents some 168,000 electors in Romford, while Sir Percy Harris in South-west Bethnal Green represents only 27,000.

In order to correct these anomalies and to guard against future maldistribution, the Committee advocates the establishment of a permanent Statutory Commission, to keep the state of constituencies under regular review. This is necessarily a long-term proposal, since a full redistribution would have to be based on stable population conditions, which are not likely to obtain until some time after the end of the war. The majority of the Committee therefore favour a partial redistribution on the 1939 basis; but a minority make the reservation that a partial redistribution might prejudice full redistribution later.

While a redistribution of seats may be regarded as a necessary prerequisite of securing fair representation, it must not be used as an excuse for postponing an election as soon after the war as practicable. Quite apart from the maldistribution of seats, the present House of Commons is singularly unrepresentative. It is old and tired; it is now in its eighth year, and even in 1936 the average age of its Members was 50. Most of them were elected to prevent a war and not to conduct one or to deal with its aftermath. The by-elections have maintained the status quo. Of 90 held between October, 1939, and July, 1942, Government candidates, mostly of the old sort, were returned in all but four. Mr Churchill has appealed for the preservation of national unity "in making the peace . . . to enable this country to recover from the war and, like one great family, to get into its stride again." The leader of the Liberal Party has also asked for the continuation of the political truce for perhaps three years after the war. But this is surely indefensible. For over ten years, not three, the old two-party system upon which the vitality and usefulness of Parliamentary politics depend has been in abeyance. Large numbers of the electorate have never had an opportunity to vote. No one now under the age of 28 has ever voted in a general election; if the war were to end in, say, two years' time, and national unity is maintained for another three, it would make the effective franchise age 33.

It is true that there are dangers in an election immediately after the war. The dangers of a khaki election, like that of 1918, have often been stated. But it is inevitable that the first election which this coalition Government faces should be in some measure a coupon election. The point is that the sooner it takes place the sooner a return to the vigour and clarification of open party politics can begin. The main issues before the electorate at postwar elections will be the peace settlement and domestic reconstruction. Each party will claim responsibility for victory, and each will announce a pro-

gramme of social reform. It is significant that already all three parties are taking the Beveridge Report to their bosom, and it is being said in Westminster that it can be seen which Members do not intend to seek re-election from their attitude to the report. The bewildered elector, who may be voting for the first time, or who has not voted for so long that he has forgotten how to, may be asked to choose between parties which, as far as he can see, stand for identical policies, and there is a danger that the party with the most powerful loudspeakers will get his vote. All this is true. But the elector will soon learn. And the sooner the parties have to plead for his suffrages, the sooner the real cleavages of opinion and policy, between sectionalism and the common weal, between arid doctrine and social realism, between stagnation and enterprise, will become evident enough for him to make a proper choice.

There is no doubt that the average individual has become dissatisfied with party politics and has tended to pin his faith on outside individuals like, say, Cripps, or even Beveridge. The low proportion of electors polling at by-elections, and the fact that Independent candidates have polled nearly a quarter of all the votes cast for the Government, are sufficient evidence. The experts at the

Conservative Central Office and at Transport House will have to work overtime to find ways and means of countering this electoral apathy and disgruntlement with party machines. Above all, they may be driven to revise their methods of selecting candidates. Most of all, good candidates are needed, for without good candidates there cannot be good Members. The two-party system is fundamental to British parliamentary life. It is because of these broad groups of men and measures, each ready in turn to take up the burden of office, that the King's Government can be carried on. Without them, there would be many splinters but no bundles, and the vast task of modern administration would fall into arrears. The *raison d'être* of the great number of MPs is that they belong to one or other political party. By the open statement of opposing views on crucial questions, frankly stated as they never have been for a decade, the citizen's right to choose both policy and policy-makers can be maintained. It is certain that, while the partnership of parties evolved in the stress of war must continue so long as the nation is in danger, the indefinite prolongation of the present unholy alliance would not fit in with the maintenance of healthy democracy in the British style after the war.

NOTES OF THE WEEK

The Basis of Battle

Steel remains the most important single item in the modern war chest. The setting up by the United States, Britain and Canada of a Combined Steel Committee "to squeeze every ton of steel" out of the existing plant facilities of the three countries is an important move in the arrangements that have been made in Washington (as described in an article on page 754) to integrate the industrial war effort of the Allies in 1943. In the past twelve months, it has not proved easy to balance Allied supplies and requirements of ore, scrap, iron and steel. The entry of the United States into the war meant a heavy reduction in the shipments of American steel to Britain upon which the British war production programme depended; and in the United States the process of finding ways and means of making the best use for war purposes of the steel available has been complicated and protracted. In Britain, the past twelve months has seen a further marked improvement in the use of domestic resources; all three elements, the output of ore, the collection of scrap and the production of iron and steel, have gone up. Correspondingly, however, war requirements have mounted, and the position is still strained; it was not the least important part of Mr Lyttelton's vital mission to the United States to find out the scale and character of American steel supplies to Britain in 1943. In the United States itself, the problem is still one of priorities and allocation. The right administrative technique for securing that steel is applied first and foremost to the most essential purposes has proved difficult to work out, not only because of the competition for supplies between war and civilian industries, but also because of the competing demands of the war industries themselves. To secure a right balance in the flow of steel to the different branches of the war programme has proved an obdurate task; it has been admitted, for instance, that, for a period, steel went to the making of tanks which could more usefully have been used in the making of ships to carry tanks. The solution of these administrative problems, which are part and parcel of the wider American problem of securing effective central direction over all the war programmes, is a necessary condition for the success of the new Committee.

The Committee's Task

The Combined Steel Committee is a fact-finding body. Its seven members represent the American War Production Board, the British Ministry of Production, the Canadian Department of Munitions and Supply, and the Anglo-American Combined Raw Materials Board and Combined Production and Resources Board. Its task is to look at the productive capacity and munition-making facilities of the United Nations as a single unit; to collect information

about the production of ore, scrap, iron and steel, and the requirements of the various countries; and so to enable the position to be kept under continuous review by the Combined Production and Resources Board and the Combined Raw Materials Board. An important part of its work will deal with technical matters. The recent United States Steel Mission to this country found marked differences in the methods of production and use in operation in the two countries; and it is imperative that the highest standards of technique should be made uniform throughout the pooled capacity of Allied industry. The task of securing the utmost economy in consumption is technical as well as administrative. The scarcest steels are the highest in grade, and these should only be used when it is quite impossible to substitute the lower grade metal which is more plentiful. The United Nations have vastly more materials of nearly every sort than Germany, and vastly more productive capacity. But it is still possible to claim that, because of the economy forced upon Germany by its straitened circumstances, German industry obtains more munitions per ton of materials available than the much better endowed Allies. One way to win the war quickly is to make this definitely untrue; and success in doing so will depend, not merely on joint arrangements to collect information, to co-ordinate technique and simplify specifications—urgent though these tasks undoubtedly are—but also upon the ability of the various countries, jointly and severally, to devise directive machinery which will be effective in enforcing programmes of work and distribution to derive the utmost possible quantity of finished munitions from the supplies and capacity available.

Relief for the Freed

Last week the House of Lords discussed the relief of Europe after the war. Rightly, Viscount Cecil insisted on four requirements: the accumulation of stocks, the earmarking of transport, the arrangement of finance, and, above all, the setting up of a central international authority to bring all plans and preparations together. For the Government, Viscount Cranborne admitted that preparations had not yet reached this advanced stage. Estimates of their requirements have been collected by an Allied committee from the various Allied Governments. Consultation is going on for the devising of a joint plan of action; and it is expected that the various combined war boards, for food, materials and shipping, will be important agencies in the final scheme. At present, the danger is undoubtedly that too much work will be done in parallel and too little in concert. Since 1940, when Britain, then fighting alone, assumed responsibility for accumulating stores to supply freed Europe, the Leith-Ross organisation has been at work collecting information, devising ways and means, and ear-

marking supplies. Now, with the United States as a bel-ligerent, it is plain that the major responsibility for relief and rehabilitation will rest upon the resources of that country. Governor Lehman has been appointed to direct United States relief and rehabilitation in the reoccupied countries, and he has joined in the discussions with Allied Governments. Meanwhile, the Allied Governments themselves have inevitably put this problem first in their concern. Some have appreciable financial resources, while others have not. The suggestion has been made that those with money should use it to buy and earmark supplies for their stricken countries. Piecemeal procedure on these lines would be unfortunate. It might well lead to competition, and some resentment, between the various Allied Governments, and clash with the work of the Leith-Ross and Lehman organisations. There is only one right principle on which relief can be organised—a principle of priorities according to need, based upon the prompt supply to every country of sufficient food and goods to raise every member of their population to at least subsistence level. The Leith-Ross organisation has actually worked out a method of determining minimum requirements by a system of "points rationing," based on differences in climate, privation and other factors. Such a plan could only be applied by a single organisation including both the supplying nations and the Allied Governments. In the first instance, differences in financial status are irrelevant. The need is to apportion supplies as and where they are most required; and the central feature of the joint plan, which should be produced with the utmost promptitude, will be the allocation of ships with an overriding priority to carry supplies to the re-occupied countries.

The President's Representative

President Roosevelt has appointed Mr William Phillips as his "personal representative to serve near the Government of India." Mr Phillips, who is now serving in London, was United States Ambassador in Rome, and ranks high among American professional diplomats. His appointment to Delhi probably justifies neither the high hopes of American influence upon the Indian problem which have been expressed in some quarters nor the fears which have been murmured in others about American interference. For one thing, his appointment is not a novelty. Over a year ago, an American mission was established in Delhi, and its second head, Colonel Louis Johnston, was also the "personal representative" of the President. Mr Phillips differs from his predecessors because of his high diplomatic record and, more significantly, because he has been given the "personal rank of Ambassador." President Roosevelt has straightly denied that any plan or proposal for an Indian settlement is being conveyed by Mr Phillips. In the circumstances, it would be strange if one were. Mr Phillips will have the important duty of seeing for himself the facts of the Indian situation, and conveying them to his Government. No task could be more important. And his appointment can be welcomed as evidence of the high importance which President Roosevelt gives to the Indian question, not only because of the frequently ill-informed agitation which is going on in the United States, but also because of the significance of India's future for the future of all the United Nations.

French Flux

Pétain's reply to the Führer came a month after the publication of Hitler's letter to him; the long delay is an indication of the German pressure which must have been brought to bear upon Pétain in the meantime. But the reply will hardly satisfy Berlin. True, the letter is worded very humbly; Pétain "bows to decisions" and speaks of collaboration. But, at the same time, he stresses the "painful repercussions" of the second German occupation, and insists that "collaboration can only bear fruit under the authority of a Government enjoying full freedom of action." He reminds Hitler of his most recent promise to this effect in a way which almost invites the inference that this promise, too, has already been broken. Pétain's main concern is the reconstruction of the French army under Rundstedt's supervision. His persistence in the attitude of semi-neutral collaboration, hopeless as it is, is too obvious to please the Germans. They would prefer an open alliance to the Axis on the part of Vichy. Not even Laval,

who has violently reiterated his desire for a German victory, has gone as far as this. His speech betrayed uneasiness in the face of internal opposition. "You have known (he said) a Laval who was a legendary parliamentary figure; it is a new Laval that you see before you to-day." But the metamorphosis is somewhat unreal; and the French sense of humour will easily detect the familiar parliamentary intriguer even when buskined as a French Führer. No new political force in French society stands behind the "new" Laval. And when Laval thunders that "France cannot rise again if she stays in the mud or if she relies on treason or cowardice," Frenchmen are bound to realise that he has drawn Vichy's portrait perfectly thereby. Meanwhile, M Truchu, the Mayor of Paris, has disclosed that preparations have been in progress for Pétain's return to the capital. But the much heralded reconstruction of the Government, as well as the birth of the *Parti Unique*, seems to have been delayed by internal discord. And the scope of the resistance inside France has been reflected by the reported arrests of M Deloncle, one of the fascist leaders, M Marin, the leader of the old parliamentary Right, and M Jouhaux, the head of the old Trade Unions.

Strategy and Politics

General de Gaulle's speech last week at a lunch arranged by the Anglo-American Press Association of Paris, which coincided with the opening of the secret debate on Admiral Darlan, was marked by its dignity and restraint. The General indulged in no recrimination; he mentioned no personalities, but called upon France and the French people as the only possible arbiters in the issue. He posed a number of fundamental questions. Was not this a people's war in which leadership of the people was a more important factor than military generalship? Should not strategy be directed and inspired by policies consistent with the wishes of the masses? Ought not a State to co-ordinate its military and political strategy? Was not the utmost unity between the Allied nations essential on the moral as well as on the material plane? These sentiments accord with statements by President Roosevelt, Mr Churchill, Mr Welles, Mr Eden and others—and with the declared policy of the Allies as expressed in the Atlantic Charter. General de Gaulle cannot be accused of adding to the British Government's embarrassment in face of the American arrangement with Darlan.

Beveridge and the Beanstalk

Sir William Beveridge continues his campaign of giant-killing with unabated vigour. Having defined the conditions under which the giant Want can be eliminated, he is turning his mind more and more to the problems involved in the killing of the still greater giant, Idleness. In a speech in Manchester last week, he laid down five conditions necessary for the fulfilment of Assumption C of his report—the maintenance of employment. He reminded his listeners that the figure of 1½ million unemployed, or an average rate of unemployment of 10 per cent, was regarded as a maximum; and he expressed confidence that unemployment could be kept within narrower limits, and unemployment insurance become what it was originally intended to be, a temporary benefit to tide over periods between two jobs. Unemployment had been virtually abolished during the war, and it was unthinkable to return to mass unemployment in the future. The corollary of his first condition—a national plan for using resources to meet needs—is the creation of an Economic General Staff. It has proved immensely difficult even to establish an effective planning staff for the allocation of resources in wartime, and to do so under conditions of peace may be even harder. But without such a body, control and knowledge of employment and investment will not be possible. Sir William's second condition—fluidity of labour—will also be difficult to put into operation. It will require a change of attitude on the part of the trade unions, hitherto jealous guardians of craft privileges. If a skilled man becomes unemployed because there is no longer a demand for the product on which he is engaged, he will, if the Beveridge plan is applied, undergo a period of training and emerge qualified for other work; he may even have to undertake unskilled work. Many craft prejudices have been broken down since the war—in particular, the opposition to "dilution"—but labour will inevitably ask for safeguards

on this point. The importance of the third condition—planning for exports as well as for home needs—was emphasised in an article in *The Economist* last week; it is fundamental. The fourth condition—that planning should start now and not later—is imperative. And of his final condition—determination—Sir William is himself the best champion. If the Government can show a tithe of Sir William's energy and resolution anxiety about the future will be much lessened.

Cat and Mouse

The Board of Trade's new policy for retail trade is in operation. The details are given on page 777 of the scheme which has been prepared for giving small retailers a "fair share" of the available supplies of clothing, pottery and hollow-ware. The engine has been put in reverse. The purpose of the Retail Trade Committee, which has now been disbanded, was, in accord with the necessities of war economy, to work out ways and means of economising manpower and overheads in retail trade and to suggest methods of succouring squeezed-out shopkeepers—it actually proposed compensation from a compulsory levy on all shopkeepers. Now the object is different, diametrically so. It is to spread retail business as widely as possible in order to prevent any shopkeepers from being squeezed out at all. The reasons for the policy are plain enough. Political opposition has been successful. Mr Dalton has been handed a brand new banner, the salvation of the small man. But, unfortunately, the new policy will not work. It is a wrong policy because it makes the need to economise resources for war purposes only a secondary consideration; and it is an impracticable policy because the small shopkeepers will be squeezed out just the same, only perhaps somewhat more lingeringly—simply because the supplies of goods will not be available to keep them all in profitable business. In short, it is a cat and mouse policy, and the problem of what to do with the small retailer when he is finally squeezed out for lack of business remains entirely unsolved. It is not only disturbing that Mr Dalton has allowed himself to be so far persuaded from the stern necessities of war economy; it is also disturbing that, in his efforts to provide every retailer with the minimum of stock, if not of trade, he is running counter to the principles by which a flexible system of allocation and rationing has caused demand and supply to be matched in each locality. No longer will a shopkeeper's quota depend, as it should depend, entirely upon the coupons he has received against sales. At present, goods go automatically to the areas where they are wanted and to the shops which the public chooses to patronise. Now, apparently, the shopkeeper is entitled to a minimum quota whatever his sales have been or will be. The effort to safeguard the small shopkeeper may be understandable. But this is not the way to do it.

33B

Dr Edith Summerskill's prayer that the defence regulation providing for compulsory treatment in certain cases of venereal disease should be annulled was defeated by 245 votes to 31. The regulation, whose provisions were described in *The Economist* of November 14th (page 601), has been attacked on the two contradictory grounds that it does not go far enough and that it goes too far. Holders of the first view argue that it will leave untouched the vast majority of persons infected, that it will only be applied to a handful of women, professional prostitutes or promiscuous amateurs, and that, like other infectious illnesses, venereal disease ought to be compulsorily notifiable. The other group of opponents argue that compulsion in any form is dangerous, partly because it may drive the disease underground, but mainly because it may induce a false sense of security. They would rely on propaganda and education and on more vigorous voluntary methods—the provision of more clinics and so on. Both these groups have reason on their side. Regulation 33B will almost certainly only be applicable to a comparatively small number of women. But it is these—the hard core of irresponsibles, as Lord Dawson called them in the House of Lords debate—who are mainly responsible for spreading the disease; the majority of other cases come forward for treatment of their own accord. The argument that Regulation 33B will induce a sense of security has more force. But the Ministry of Health is not relying on it alone; education and the extension of facilities for

treatment—so far as the wartime shortage of medical staff allows—are to continue, and the debate itself provided welcome publicity for the whole subject. The advantage of the regulation is that it will enable action to be taken quickly. If the merits and drawbacks of compulsory notification are to be fought out, much time will be lost.

Coal Threat Again

It is evident now that the danger of a serious coal crisis has not been wholly averted by the Government's measures since early summer. The details of recent production are given on page 778. Production in the four weeks which ended on November 28th was no bigger than production in the previous four weeks, and it was appreciably less than production in the corresponding period last year. In normal times, output increases considerably during these later months of the year. Now, it is stagnant, at best, in spite of additions to the labour force, better wages and an output bonus; and it is stagnant at a level which is still too low to provide a safe reserve for the coming months. Not a winter has passed since the war started without more or less grave difficulties in the supply of coal. This winter there is not even the vestige of an excuse. The problem was at long last brought to a head in May and June. A comprehensive scheme for rationing and a plan for raising output were produced in response to justifiably violent criticism. Then rationing was abandoned; and it appears that the plan means very much less than it seemed at the time. Its basis was a radical reorganisation of the industry to concentrate its resources on the most productive pits and seams with the use of the most efficient technical methods. It was recognised that this reorganisation could not show large effects until next year. But the position now appears to be that while the various stop-gap measures, mainly on the side of economies in consumption, have barely succeeded in arresting the tide of decline, reorganisation is much more a phrase than a programme. This week, the Ministry of Fuel and Power at length announced the names of the National Coal Board, representing producers, distributors and consumers, which is to supervise production, efficiency, labour supply, training and welfare under the Plan. Regional controllers were, of course, appointed some considerable time ago, though what they are doing in the way of reorganisation no one knows. Perhaps at this eleventh hour, a real effort is to be made. But, from the signs available to the lay observer, it seems likely that the haggling which has gone on with the industry's organised interests, both on the labour and the employing side, has made the regional plan, which had great promise, little more than a process of small-scale tinkering. It may be that the people responsible for this pusillanimous approach to a problem which touches the heart of the war effort may be saved from the full consequences of their reluctance to act decisively by an exceptionally mild winter. But whatever the weather, the problem will remain; and if the weather is bad, the Government and the industry will be judged by the poverty of their results.

Anti-Submarine Warfare

The Prime Minister has given the names of the members of the Cabinet Committee set up to deal with the U-boat menace. A Battle of the Atlantic Committee was formed in February, 1941, and the establishment of this new Committee, which is a reconstruction of the earlier

THE REFORM OF ACCOUNTS

The recent series of articles in *The Economist* on the Reform of Company Accounts has aroused considerable interest; and for the convenience of readers these articles have been reprinted in pamphlet form, price 6d. Readers are asked to apply to *The Economist Newspaper, Limited*, Brettenham House, 15, Lancaster Place, London, W.C.2. (Telephone No. Temple Bar 3316.)

body, was indicated by General Smuts in his recent broadcast. It includes all the Ministers directly concerned with the fighting and supply sides of the task (Production, Aircraft Production, Admiralty, Air, War Transport), as well as the Chiefs of the Naval and Air Staffs; and its formation is a direct recognition of the importance of the air weapon and technical devices in combating the submarine. General control and responsibility remains with the Admiralty and there is no question of appointing a Commander-in-Chief or a special Minister. Mr Churchill, as Minister of Defence, is himself Chairman of the Committee, but a great deal of the work falls upon Sir Stafford Cripps as Vice-Chairman. When Sir Stafford was originally appointed Minister of Aircraft Production, the Prime Minister wrote that "aircraft and radio technique lies at the very heart of our affairs." General Smuts has described the submarine as "the greatest danger before us." The RAF has largely removed the air threat to shipping on the western approaches; and Allied building, now phenomenally large, has managed to keep ahead of sinkings. But the underwater danger is growing, not lessening, simply because the U-boat fleet, already ominously large, is increasing in number, in spite of the greater number of U-boat sinkings and the bombing of submarine yards. There is a school of thought which believes that it is no longer possible to rely simply upon smothering the menace by sheer weight of escort vessels and aircraft—a method which is sure, but slow. They rely rather on the new radio and other techniques; and it is for this reason that they are pressing for the creation of a Scientific General Staff, on the lines advocated by Professor A. V. Hill and others. The layman is in no position to judge, though it is plain from what has been publicly announced, and from the special responsibilities laid upon Sir Stafford Cripps (in addition to his heavy duties in the sphere of aircraft production), that the new techniques of detection and destruction are not being ignored. It may be that their development in use is not so speedy and effective as it might be, because of shortages in equipment and personnel, or because of deficiencies in the official outlook. On the other hand, all that is possible may be being done. At any rate, pressure for the utmost energy and efficiency will not be wasted. The submarine is Hitler's first and last ditch—his only chance.

Amalgamating the Police

Mr Morrison has announced his proposals for amalgamating certain police forces under the powers conferred on him by the defence regulations made last July. The areas affected are Kent, where it is proposed that the nine borough forces should be amalgamated with the county force; Surrey, where the borough forces of Guildford and Reigate should be amalgamated with the county force; Hampshire, where the Isle of Wight county force and the Winchester borough force should be amalgamated with Hampshire county force; Salisbury and Penzance, whose borough forces should be amalgamated with the Wiltshire and Cornwall county forces respectively; and Sussex, where all the county, county borough and borough forces should be amalgamated into one force. A final decision on these proposals will not be taken until Mr Morrison has heard the views of all the authorities concerned, but though there may be considerable grumbling and protest, it is probable that the amalgamation will go through, since the principle was fully debated, and eventually endorsed, in Parliament last October. From the point of view of the national interest, it is clearly desirable that the military authorities should, in a time of emergency, have to work with a single co-ordinated police force rather than a number of small ones, each of which can only operate in its own jurisdiction. In fact, this parochial independence has its disadvantages in peacetime as well, and it is perhaps significant that the determining factor which induced Mr Morrison to take this step was not the possibility of invasion, which is no more imminent now than at any other time since 1940, but the arrival of "the great American armies," whose authorities are likely to find the present system too complicated for their relations with the police to function smoothly. Since the amalgamations are taking place under the emergency legislation, they will automatically lapse with the end of the war unless new legislation is passed; but if they achieve greater efficiency—

which is their object—it seems improbable that the *status quo* will be restored out of deference to local susceptibilities. The position of the individual policeman under the new arrangement is, therefore, of importance. Amalgamation with the county force means that in disciplinary matters he is subject to the complete control of the chief constable, instead of, as in the case of borough forces, the watch committee. Neither watch committees nor chief constables are the most suitable persons to be the disciplinary authorities, and Mr Morrison's proposal to extend the right of appeal to the Secretary of State—at present allowed to members of county forces in cases of dismissal or enforced resignation—to cover reductions in pay and in rank, and to include members of any police force, has much to commend it.

Persian Riots

Last week's riots at Teheran were curiously ill-timed. Symptomatic, as the disturbances undoubtedly are, of the economic dislocation which exists in Persia, as well as of the incessant character of Axis propaganda, they took place about a week after the signature of the joint Anglo-American declaration to the Persian Government, which was designed to liquidate the bread crisis. The declaration, which testifies to the wish of the British and American Governments to safeguard the peoples of the Middle East from privation even at the most critical stage of the war, guarantees that all steps will be taken to make good any deficiency in cereals below minimum needs in the period ending with the 1943 harvest. It also guarantees that adequate transport will be placed at the disposal of the Persian Government. Responsibility for the efficient distribution of foodstuffs throughout the country and for the prevention of hoarding and black market transactions remains with the Persian Government. Whether the economic assistance promised by the declaration will actually alleviate the chaotic conditions which now prevail depends almost entirely upon whether the Persian Government under its Prime Minister, Qawam es Sultaneh, who took office last August, is able to control the growth of corruption and hoarding. It is recognised by the Allies that the food position has been exacerbated by the occupation, despite very considerable imports, because of the demands which the need to supply Russia has made on the Persian transport system. But the position has been very much complicated by the inability of successive Persian Governments, despite their admitted goodwill, to control the wrecking tactics of the illegally elected legislative assembly, the Majlis, bureaucratic and commercial corruption and renewed banditry among the tribes. And, inevitably, the attitude of the Persian people towards the occupying forces and officials will be determined, not by the undoubted Allied sympathy and determination to help, but by whether the goods, in the shape of food and internal order, are actually delivered.

Canadian Conservatives

The election of Mr John Bracken, Premier of Manitoba, to the leadership of the Canadian Conservative party may be an important landmark in the history of the Dominion's political parties. Hitherto party politics in Canada were becoming almost as stagnant as in this country. The party in power for the last seven years is called Liberal; but part of Mr Mackenzie King's unexpectedly sweeping success in the election of 1940 was due to the votes given to his party by Conservatives, who were alarmed at the prospect of a National Government under their own leaders. Since then, Mr Mackenzie King's position has been seriously weakened by the overseas conscription issue, which threatens to lose him part at least of the French Canadian vote. The Conservative party, on the other hand, can stage a revival without being compromised by a Quebec connection. Its trouble hitherto has been that its political programme has been as barren as Mr Mackenzie King's. Realising this, a body of younger Conservatives formulated this autumn a statement of party aims, for both war and peace, which cut across former party barriers by its proposal that tariff policy should be guided by the extent to which tariffs contributed to the maintenance of gainful employment and adequate standards of living; and by its recognition that, while private enterprise is the mainspring

of economic prosperity, the state must assume responsibility for ensuring proper standards of employment and for encouraging private enterprise in time of depression. It also approved a national housing scheme to be underwritten by the state, and a national "Beveridge Plan" for social security. At the party convention, last week, the programme adopted did not go so far as this, and the convention did not agree to Mr Bracken's stipulation that the party's name should be changed to "Progressive Conservative." But he, an opponent of the Conservatives for twenty years and a low tariff advocate, found the party programme, placing social security at its head, and approving open immigration of like-minded peoples, regardless of racial origin, progressive enough for him to waive it. Whether the programme will seduce dissatisfied Liberals, and forestall the growing influence of the Co-operative Commonwealth Federation—the Socialists—or not, it should at least go far towards clearing away the dead wood in the Conservative party itself.

The Strength of Defence

The fighting on the Russian front has lost its recent violence, but it is still far from reaching a deadlock. The course of recent engagements has shown the relative strength of German defence. Hoth's encircled army has fought on stubbornly; and Stalingrad itself has not yet been cleared, though the Russians have been advancing slowly from house to house and from street to street, as the Germans did before. The German aim now seems to be to re-establish contact between their forces in the Caucasus and those around Stalingrad. Their main thrust has been directed at the southern end of the Russian "ring," in the Kotelnikovo sector; but this counter-attack, too, seems to have quickly spent its initial momentum. The crust of the Russian defence seems to be as hard as that of the Germans. The result might be a prolonged stalemate, were it not for the fact that the present array of forces around Stalingrad cannot possibly be maintained for a long time. In order to keep Stalingrad as a "hedgheg" position the Germans must at least cut a comparatively wide corridor to Hoth's armv. In the north, on the Rzhev and Velikie Luki sectors, as well as round Voronezh, the fighting has been temporarily brought to a comparative standstill by a sudden thaw. The puzzling military development on the Russian side, in the meantime, has been the vast reshuffle of the highest commanding staff. During the last weeks of November and the first days of December, the number of new promotions to the rank of general rose to nearly three hundred. No official comment has so far been made on the extraordinary scale of these appointments. Some of the new generals have come from the ranks of the former political commissars; but their number can hardly be higher than fifty or sixty. The rest of the appointments seem to have been of a non-political character. It is not very plausible to suggest that high casualties may have necessitated such a high rate of promotion. The formation of new reserve armies in the rear may perhaps be one reason for it, but, even so, this number of nearly 300 new generals is one of the many puzzles in which Russia's role in this war has abounded.

The Chase

After the Axis fanfares, which last week claimed to herald the onset of a stupendous armoured clash at El Agheila, the news that Rommel had decided to withdraw was something of an anti-climax. For the Eighth Army, an immediate decision would have been more satisfactory, though even now the withdrawing Axis troops do not appear to have succeeded in getting clear away from their Allied pursuers. General Alexander's aim from the start of the present campaign has been the complete defeat and elimination of Rommel's force. While even a nucleus remains intact, there is the danger that it may be reinforced and reformed. Yet, from the Axis standpoint, the retreat at El Agheila is a very marked confession of weakness. Rommel has had to abandon the intention of throwing the Eighth Army back, and for delaying tactics he is forced to rely upon mechanical contrivances—mine fields and booby traps—rather than on defensive fighting. Despite his paucity of resources, the game has, as might be expected, been skilfully played. But the abandonment of the naturally

strong and generously fortified positions at El Agheila and Mersa Brega must prejudice the whole future of the Axis hold on North Africa. There is now little possibility of preventing the forces of Rommel and of Nehring in Tunis from being caught between the First and Eighth Armies and their supporting air arms. The failure to hold General Alexander at the Tripolitanian frontier already relieves the First Army of the obligation to do more than hold the positions already won. By saving himself in the short run in order to fight a no doubt more serious action from Tunis, Rommel has admitted a severe blow to Axis strategy. His decision could only have been made in the face of the knowledge that a pitched battle at Agheila must spell immediate, rather than ultimate, disaster; and by turning and splitting his retreating forces the Eighth Army may still speed his doom.

Shorter Notes

The following table gives the number of civilian casualties in air-raids since September, 1939:—

	Killed	Injured and Detained in Hospital	Total Serious Casualties
Sept., 1939-Aug., 1940.	1,494	1,980	3,474
Sept.-Dec., 1940.....	22,282	28,522	50,804
Total, 1941.....	20,863	21,839	42,702
1942:—			
January.....	114	59	173
February.....	24	20	44
March.....	21	13	34
April.....	987	1,046	2,033
May.....	399	426	825
June.....	293	358	651
July.....	411	871	1,282
August.....	403	509	912
September.....	207	238	445
October.....	229	370	599
November.....	24	38	62
Totals to date....	47,751	56,289	104,040

Of those killed in November, 8 were men, 12 were women and 4 were children under 16.

The struggle for the coastal strip of Papua around Buna is proving one of the grimmest and most desperate of the entire war. Despite repeated and costly attempts to reinforce, the Japanese have been driven out of Gona and Buna village and their remaining forces have been split up by two Allied wedges. From the losses which the Japanese are prepared to suffer merely to delay the now apparently inevitable loss of this coastal strip, it is clear that they attach great importance to the time factor—probably in order to strengthen the defences of Lae, Salamaua and Rabaul.

AMERICAN SURVEY

America on Britain

(From Our Special Representative in the United States)

AMERICANS are on the whole not very interested in history. Temperamentally they look forward, not back. They feel themselves to be part of a young nation with new horizons opening out ahead. They are still going places. Nothing is finished yet. Everything can still be bigger than it was yesterday. The nation's emotional capital is invested in ideas of freedom and equality which they feel belong in a particular way to the United States. Whatever folk memories there may be are all tied up with the affirmation of individual liberty—the Pilgrim Fathers, the War of Independence, the Covered Wagon, the Civil War were all concerned with different aspects of human freedom. Today when the President defines American war aims he naturally turns to the idea of "Four Freedoms."

Not by any stretch of the imagination can the people of Britain be called a young people. They have far too much self-conscious history behind them. Nor to the superficial observer is Britain an equalitarian community. It has moated granges and belted earls; in the movies, through which most Americans get their mental picture of Britain, castles and aristocrats are much in evidence. And attached to Britain is an Empire out of which the Americans fought their way to independence. It is astonishing how many do not realise that Canada, Australia and New Zealand found another way out. It is perhaps not so astonishing that the Indian crisis is naïvely interpreted in terms of royal absolutism, colonial servitude and stiff-necked imperialism with Mr Churchill in the rôle of George III, Mr Amery that of Lord North and the Congress Party that of the American Insurgents.

In a word, Britain is not the kind of country the Americans would normally like. Yet they do like Britain. There are no limits to which American admiration of Britain will not go. It was so during the Battle of Britain. But if, when the smoke of the fire lifts and the grime of the night's agony is wiped off Britain's face, there seems to be the same old face, tough, elderly and arrogant, the swing of irritation is equally strong in the other direction. This state of mind is extremely precarious and very unsatisfactory. The liking for Britain is largely instinctive. The more it is frustrated and repressed by contrary emotions, the weaker it becomes.

This is the psychological situation the British Information Services have to meet. But how can they meet it if the Britain they have to project is made to look like everything Americans most dislike? It is a fact that Mr Churchill's Government is not giving America what it wants to hear. It has done so in the past. The speeches of June, 1940, the noble appeal for Anglo-American collaboration, the lonely challenge thrown to the hordes of Fascism, all roused a powerful response. It is no coincidence that the speech which most stirred America closed with the words, "But westward, look, the land is bright"—a phrase which of itself evokes new horizons and better to-morrows. But what was done in 1940 is already dead and gone. The American disregard of history covers recent history, too. People want to know what Britain is doing now and what it is going to do next.

This does not mean betraying Britain into causes the nation does not represent. It does not mean pretending to be something the British people are not and can never be. Every American who goes to Britain is astonished to find very much what he or she wanted but hardly expected to find—a people grimly engaged upon a people's war, sacrificing cheerfully their property and their rights, creating a new community in their Home Guards and Fire Guards and myriad voluntary services, discovering new kinds of economic and social justice from their wartime experience and looking and hoping for a better, richer world. The fact is that the Britain which seems to be

projected by its Government is not the Britain that really exists. What is needed to improve the feeling between the two countries is for British policy to represent what is best in the British community and to take cognisance of the new hopes and energies bred of war.

Britain's Chance

Out of the British war effort has come enough material to blow sky-high the picture of an old decadent class-ridden community run by dukes. Yet the change in Britain has not fully emerged. This is partly due to the silly vociferousness of the Communists, who spent this summer on the Second Front issue in witch-hunting for "appeasing Rightists" in the War Cabinet. It is partly due to well-intentioned Liberals who blamed everything, from military defeat in Egypt to the failure of the Cripps Mission, on to Britain's "Toryism" and sinister vested interests—a theme which is taken up vigorously in America, for example, in articles with titles such as "Mr Churchill's Tory War." But it is also due to Mr Churchill. The changes in wartime Britain—towards greater democracy, greater equality of opportunity, a fairer distribution of income—are all there. But when has the Prime Minister made one of his great and compelling speeches on the theme, not of world strategy, but of the hopes and fears of the people of Britain? So long as he is silent, Conservatism, the dominant political attitude in Britain, is silent, and Americans inevitably believe that maybe the Conservatives are out to do nothing but conserve.

Nobody is asking Britain to go Socialist. It would do harm if Britain did, for the Americans are egalitarian, not collectivist. The American people only look for some assurance that the future can be better than the past and that the Government of Britain is determined that it shall be so. They are looking, too—though probably they would not admit this—for a solution of some of their own perplexities. Britain has the background and political aptitude to work out the synthesis between enterprise and planning, freedom and control, individualism and collectivism, for which the free world is searching.

The Colonial Muddle

"Could not your aristocrats abandon their hold on Malaya?" Incredible though it may seem, this question has been asked in all seriousness at the end of a public meeting in the United States. It illustrates in a crude form the general vague connection in the American mind between a class-ridden society in Britain and imperialist sway over subject peoples. The depth and the proportions of American ignorance in the most obvious matters of Empire policy and government are unbelievable; but it is no use dismissing them on the grounds that they are stupid and unjustified. Perhaps 80 per cent are; but the important thing is to correct, not dismiss, them. Most of the misconceptions can be corrected. Mr Willkie himself recognises that "in vast areas of the world there is no longer any British Empire, but instead a proud Commonwealth of Free Nations." The facts about the Dominions speak for themselves, although it might not be bad policy to encourage more Dominion statesmen to go round stating them—General Smuts' oration to Parliament made a very deep impression.

For decades now, Britain's settled colonial policy has been "the orderly . . . abolition of the colonial system." Mr Willkie wants it to be "scheduled," too. The disparity is not great. Only one Empire in the history of man has conformed to Mr Willkie's ideal and developed into a free Commonwealth. If it had not been for Britain,

Mr Willkie would never have come on that policy at all. Britain has this achievement to its credit because it has accepted self-government as the end of its colonial policy. Thus, when talk arises over the future of the colonial system, the British Government has only to welcome the critics, congratulate them on adopting the British line and show, unequivocally, that it is undertaking a determined programme of social, educational and economic advancement among the subject peoples directed towards the achievement of their freedom.

India is a more difficult case, for the British Government has unequivocally stated the only possible policy—which has been refused. Americans have a hopelessly uninformed and naïve approach to India. Basically, the problem is for Americans to learn the complexities of the Indian situation. Both the Indian and the colonial problem will, however, become a much more serious obstacle to collaboration if recent statements made in Britain are repeated or, which would be worse, adopted as the official British attitude. Lord Croft's answer to Mr Willkie did no good at all; he only confirmed

the connection in American minds between reactionaries at home and colonial peoples in servitude abroad. Nor, it must be confessed, did Mr Churchill's statement: "We mean to hold our own," to which Mr Willkie replied:

This [a plan for world-wide economic collaboration after the war] cannot be accomplished by mere declarations of our leaders, as in an Atlantic Charter, particularly when one of the two principals to that instrument has in the last few days seemingly defended the old imperialistic order and declared to a shocked world: "We mean to hold our own."

There is no doubt the world was much less shocked than Mr Willkie. Nevertheless, the British Empire is in danger of becoming the object of a slanging match between British and American leaders. Nothing could be more unfortunate. Nothing could be more unnecessary. The Americans want to know what the British are going to do next. It should be perfectly possible to tell them in terms that might send them away whooping for joy over the British Commonwealth as the greatest, most creative experiment in the history of international relations.

Steel Alloy Metals

(By a Correspondent)

AFTER the first year of war the problem of overcoming raw material shortages has become one of the most urgent and complicated tasks with which the War Production Board finds itself confronted. The shortages of steel, copper, tin, rubber and aviation spirit, as the most obvious, have been singled out in public discussions; but to quote the words of Mr William L. Batt, chairman of the Requirements Committee WPB, and Mr A. I. Henderson, director of Materials WPB, from a recently published report, it is in the field of steel alloying materials "that the pinch is tightest." Not so very long ago this group of metals—manganese, chromium, nickel, tungsten, cobalt, molybdenum, and vanadium—was of minor importance in metallurgy; to-day their priority rating for war purposes is second to none. Their addition to steel assures the varying combinations of hardness, toughness, and ductility, as well as resistance to heat, stain, corrosion and shock without which weapons of war—and the tools to make them—would be little more effective under modern battle conditions than the bow, the arrow, and the shield.

The United States is comparatively poor in high-grade steel alloy metals. With the exception of molybdenum, of which the Climax mine in Colorado and some copper mines in Utah, New Mexico and Arizona supply together some 15,000 to 20,000 tons per annum, representing over nine-tenths of world production, the country does not play a decisive part in the supply of any steel alloy metal. The 5,000 tons of tungsten and the 1,000 tons of vanadium a year produced in the United States are the only other two examples in which a sizeable part of the country's requirements is met from domestic sources. True, there are extensive deposits of manganese ore and of chromite, the commercial source of chromium, but these are of poor quality. In all steel alloy metals, except molybdenum, the United States has, in fact, always been dependent mainly or almost entirely on imports. Moreover, nickel is the only metal—more than four-fifths of the world output is produced in the Sudbury basin of Ontario, Canada—which can be secured in large quantities from a neighbouring country. The bulk of America's imports before the war came from outside the Western Hemisphere. For example, in 1940, the last full year for which United States import statistics have been published, Russia, India and Africa together supplied three-quarters of its manganese requirements; Turkey and Africa, and some territories now occupied by the enemy—the Philippines and Greece—supplied four-fifths of the chromite, and China alone met over one-third of its tungsten imports.

In the circumstances it is not surprising that the question of steel alloy metal supplies has occupied the minds of the Washington War Department for years past, although an acute threat of approaching war was needed to get the support of a "neutrality-conscious" Congress for an actual planning movement in this critical field. Even then the scope of the legislative conversions was limited. The "Strategic Minerals Act," signed by President Roosevelt on June 7, 1939, authorised the expenditure of a total of 100 million dollars over a period of four years for the purchase of "strategic materials," which included, besides steel alloy metals, except molybdenum and vanadium, such

items as tin and rubber. The same Act, under Section 7, made available an annual sum of \$500,000 for a period of four years for the search and appraising of strategic metal deposits in the United States. This sum was wholly inadequate, but the search financed by it showed some encouraging results, and led, *inter alia*, to the discovery of a large tungsten deposit in the Yellow Pine District, Idaho, which is now being exploited.

Although the time left for an orderly buying campaign under the Strategic Minerals Act was very short—within three months of the signing of the Act Europe was at war—the American Government made the most of its powers. Sometimes its purchases showed a good deal of enterprise. Late in June, 1940, for instance, when France had fallen, the Reconstruction Finance Corporation, on the authority of some officials at Bordeaux, took possession of, and shipped almost overnight, a large load of Chinese tungsten from Indo-China, although certain supporters of Marshal Pétain were already negotiating for its transfer to the Japanese. Later in 1940, Washington secured additional funds for the acquisition of steel alloy metals by agreeing to accept repayment of loans granted by the Export-Import Bank in the form of materials. Early in 1941 the American Government started to place ore contracts in Latin America, and, at about the same time, the export of steel alloy metals from the United States was stopped by licensing orders and the distribution of these metals within the United States was made subject to a priority system. As a result of all these measures, the country entered the "shooting war" with a sizeable reserve of steel alloy metals, although the reserve was not large enough to meet the requirements of the huge war production programmes for more than a limited period.

New supplies of steel alloy metals for the United States have not dried up. The pooling of Allied raw material resources ensured the flow of a large volume of materials to the United States. India, South Africa and the Gold Coast are supplying manganese; South Africa, Southern Rhodesia, India and the Fighting French New Caledonia supply large tonnages of chromite; the Belgian Congo, Northern Rhodesia and Canada are making available considerable supplies of cobalt, and the latter Dominion and New Caledonia are the chief sources of nickel. Considerable and, stimulated by favourable prices, steadily rising quantities of steel alloy metals are also flowing into the United States under the exclusive buying agreements with the various Latin American countries, including tungsten from Bolivia, Argentina and Mexico, manganese and chromite from Cuba, Chile and Brazil, and vanadium from Peru. Despite all economy measures introduced by the War Production Board, which include the reservation of supplies for vital munitions purposes, the revision of standard specifications for alloys, the replacement of the scarcest metals by less scarce ones—such as the replacement of tungsten by molybdenum in high-speed and other heat-resistant steels—and the recovery of scrap, larger supplies are, however, needed, especially of manganese, chromium, nickel and tungsten, that is of the most important metals of the group.

These additional supplies can only be provided by the utilisation of the extensive low-grade deposits found in most parts of America, including the United States. The

United States Government did not enter the war unprepared. Since 1935, the Bureau of Mines of the Department of the Interior, in the course of its ordinary activities, has been studying methods for the concentration and refining of low-grade steel alloy metal ores. This work, done under the supervision of Dr Reginald S. Dean, until recently Chief of the Metallurgical Division of the Bureau, and now the Bureau's first Assistant Director, has resulted in the development of a number of processes which have been subjected to practical tests in a number of pilot plants erected after the collapse of France. On the basis of these tests the War Production Board has recently authorised a number of projects for Federal financing; they include developments of low-grade ore deposits, and the establishment of concentration and refining plants. Work has been taken in hand this summer, and, according to present schedules, supplies should begin to come forward early next year.

For manganese the programme aims at an annual supply of over 600,000 short tons of high-grade manganese concentrates to be produced from ore containing between 5 and 35 per cent Mn. The project includes the erection of ten plants, of which the three largest—in the course of construction in Minnesota, Nevada and South Dakota—will produce two-thirds of the planned tonnage. Simultaneously with the erection of the plant, the Metals Reserve Company, a subsidiary of the Reconstruction Finance Corporation, started to acquire low-grade ore at the middle of June last. A similar project has been initiated for chromium, by which Montana is to produce over 500,000 short tons of high-grade concentrate, while additional sup-

plies are to be developed in Northern California and Oregon. For tungsten the intensified development of the existing workings, and the starting up of the new high-grade deposit in Idaho, has been supplemented by the establishment of low-grade concentration plants, with Salt Lake City (Utah) as the chief centre. On the basis of this programme, the United States domestic output this year will be raised to three times the 1939 output, although the new concentration plants will not reach their production stage before 1943. In nickel the lack of adequate ore supplies has limited developments within the borders of the United States to two projects in Nevada and Montana, but recently the United States Government, on the advice of the WPB, has granted a loan of \$20 millions to the Nicaro Nickel Company for the financing of a refining plant to treat the extensive nickel deposits in Cuba, the ore of which does not contain more than 1 per cent Ni. The various concentration projects so far initiated, including the loan to the Nicaro Nickel Company, and certain sums invested by private interests, are costing the United States close on \$100 millions, but it is probable that this total does not represent the last expenditure on this account.

The exploitation of the extensive deposits of low-grade ore in North and Latin America, if rapidly pushed ahead, will do much to solve the difficulties caused by the rapid expansion in the demand for steel alloy metals. Nor are the benefits of technical improvements in the treatment of low-grade ores likely to be confined to the period of war; the world's resources of high-grade ores are believed to be limited, and the use of steel alloys in engineering is expected to grow.

THE WORLD OVERSEAS

French West Africa

FRENCH West Africa is one of the least developed parts of the French Empire. Adverse climatic conditions, the expansion of the Sahara desert to the west and the scarcity of native labour have been the main obstacles to economic development. The colonies which form the Federation (Senegal and French Sudan, French Guinea, the Ivory Coast, Dahomey, Nigeria and Mauritania) cover more than one-fifth of the African continent; and their populations account for about 15 per cent of the total of Africa's inhabitants. But their trade has amounted to no more than 5.6 per cent of all African trade; and the capital invested there amounts to only 2.5 per cent of the total investment in the black continent, compared with nearly 10 per cent invested in British West Africa. Financial difficulties have also handicapped the colonies. The payment of debt services used to make up about 40 per cent of French West Africa's expenditure; and the burden of the debts incurred for railway construction was out of proportion to the colonies' income or even to the increase in income due to the supply of transport facilities.

Economic life has developed mainly on the coastal belt. French policy aimed at the development of large-scale monocultural areas, based on native peasant proprietorship. Thus, Senegal has specialised in the cultivation of groundnuts. Its output amounted to nearly 30 per cent of the world's total groundnut crop before the war; and Senegal's share in all French West Africa's exports was more than 20 per cent. Groundnuts were the main staple food of the native population; and the export surplus was between 200,000 and 300,000 tons. In the years of depression, the price of groundnuts fell by about 75 per cent; and the local peasants expanded the area under cultivation deep into the interior of the country to make good part of their losses by a bigger volume of sales. This shift into the interior of the country was further necessitated by the gradual exhaustion of the coastal soil; and it was facilitated by the development of motor traffic which made it possible to transport the nut crops to the coastal railways, especially the peanut railway, St. Louis-Dakar.

Before the war, a start was made in the production of nut oil on the spot. But only a small fraction of the

crops was processed; the bulk of the harvest went to North Africa and to France to be shelled and processed there. During the Vichy period, shipping and fuel shortages forced a radical change. Shelling and oil production on a large scale were developed on the spot. Peanut shells were used as fuel by the local railways; and tractors were driven on nut oil. This year, however, the crop has been extremely poor. Vichy press estimates have put it at about 200-250 thousand tons, that is, at less than one-third of normal, and the economic position of the Senegalese must have gravely deteriorated.

Cocoa, Coffee and Cotton

French Guinea and the Ivory Coast have specialised in growing cocoa, coffee, bananas, and palm kernels. Most of the French West African cocoa (about 50,000 tons) and nearly all its coffee (nearly 15,000 tons) come from the Ivory Coast; these two items account for 12-13 per cent of all French West African exports. Palm kernels and palm oil from Guinea and Dahomey account for 8 per cent. The Ivory Coast is also rich in mahogany forests.

Finally, the French Sudan has been chosen as the rice Niger Valley was started as far back as 1925, and it was more specifically developed by the *Office du Niger* after 1932. The output of cotton, however, remained at a low level before the war; and its annual export was never more than 5,000 tons. Under Vichy, the scheme received an enormous amount of publicity. It was said that the construction of the San Sauding Barrage, which was to play an important part in the irrigation of the Niger Valley, had been completed; and this year's cotton crop was expected to reach 100,000 tons. Last May, it was announced that the organisation committee of the French textile industry had agreed to purchase the whole of the cotton crop of the Niger basin for the next five years; and this agreement also mentioned a figure of 80-100 thousand tons as the sum of annual purchases. So far, however, it has been impossible to find out to what extent these expectations were fulfilled. It is probable

that the claims were partly made for propaganda purposes, since the opening up of the Niger Valley, the shift of the West African economy from the coastal regions to the interior and the linking up of West Africa with North Africa were the main points in Vichy's much advertised colonial programme—which was intended to counter frustration in France *Metropolitaine* by an "escapist" myth of colonial achievements and expansion.

Transport Problems

West African imports, like those of the French North African possessions, consisted mainly of textiles, fuel oil and agricultural machinery; and, as in North Africa, the falling off in those imports during the Vichy period caused many hardships to the local population. The railways have been run on wood and oil-cake; and the most crazy experiments have been made to cover the fuel deficit by the use of palm oil and alcohol extracted from bananas, as well as maize and sisal. Fuel and steel shortages have made the planned expansion of railways impossible. The railway network is still confined to the coastal regions. The main lines connect the Upper Niger with the ports of Dakar and Conakry in the north-west and Bobo Dioulasso with Abidjan in the south. The extension of the Abidjan railway from Bobo Dioulasso to Quagadougou, 1,500 kilometres inland, has come to a standstill.

The problem of transport was the main point discussed at the economic conference held at Dakar, in October, 1942. Great stress was laid on the need to maintain the regular weekly motor service between Casablanca and Dakar, across the desert. The motor roads there are relatively good, a fact which will certainly be appreciated now, when Dakar serves as a transit point for supplies despatched from the United States to North Africa. An achievement of which Vichy's colonial administration was particularly proud was the development of an air service between French West and North Africa. The facilities for air transport have now, according to the agreement concluded with the Governor-General, M Boisson, become available for Allied aircraft.

The most important economic and strategic asset of the country, is, of course, Dakar itself, with its modern and conveniently situated harbour. The volume of Dakar's commercial traffic ranged from 7.5 to 17.5 million tons a year during the last pre-war decade. Recently, Dakar has been strongly fortified; and its harbour installations are said to have been considerably extended. The growth of the town is also reflected in the increase of its population, which has risen from 90,000 to 120,000. Many of the newcomers have been refugees or emigrants from France itself who sought shelter in the distant provinces of the French Empire. Their arrival caused difficulties in housing, though these may have been mitigated after the compulsory evacuation of women and children which was ordered by the Governor-General shortly before the Allied landings in North Africa.

Politically, the regime in West Africa is much the same as in North Africa. The only important difference is that the problem of native political movements has been almost absent in French West Africa. The "black Frenchmen" of Senegal have enjoyed the privileges of French citizenship to a larger extent than did the Moslems in the North; and the number of Frenchmen permanently resident in the colony was hardly more than 20,000 before the war. An interesting innovation effected under the Governor-General, M Boisson, was the decree by which only French subjects are allowed to act as commercial travellers in French West Africa.

Japan's Economic Gains

[BY A CORRESPONDENT]

December 16th

WHEN, twelve months ago, Japan started its Pacific offensive, so far as natural resources are concerned the country was the poorest of all the major industrial nations. The accumulation of large stocks of raw materials and foodstuffs had secured adequate supplies for some time, but the development of the newly conquered areas was immediately regarded by the Japanese High Command as a vital task. Civil administrators, plantation and mining experts followed the advancing Japanese armies, and as early as February a "Great East Asiatic Council," composed of Japanese industrial experts and State officials, and charged with the

task of planning the economic development of the newly acquired areas, set to work.

From the Axis and neutral press some idea of the work of the Council can be obtained. A number of important Japanese manufacturing industries are to be gradually transferred to the chief Asiatic sources of raw materials, just as the Japanese cotton spinning industry has been transferred to China. For other industries, imports of ores and other raw materials into Japan are to be replaced by imports of semi-finished materials. This has entailed, not only the re-organisation of mining and other primary stages of production in the newly conquered areas, but also the development there of new refining industries. For this purpose, the Pacific areas, according to *Wirtschaftsdienst*, were to be organised into three administrative regions—Malaya and Sumatra, the East Indies consisting of Java, Celebes and New Guinea, and Borneo. In addition to these areas, the "friendly occupied countries"—like French Indo-China and Siam—were to be included in the new sphere of development, but the local administrations were to be given, probably only temporarily, a certain measure of independence.

The natural resources of the areas occupied by Japan have made it independent of food imports; they also contain adequate supplies of most of the industrial raw materials needed by Japan. The exceptions are copper and zinc; and supplies of good coking-coal and iron-ore are not too abundant. There are deficiencies in cotton and wool, but these have almost certainly been made up from large Japanese stocks, and the extensive current output of rayon and staple fibre. Even Axis sources, however, do not conceal the fact that the occupation of the rich Pacific producing regions cannot by itself be regarded as a decisive strengthening of Japan's supply position. In the view of *Der Deutsche Volkswirt* (March 27, 1942), large supplies of industrial equipment, machinery, and means of transport, as well as time, are needed to transform Japan's new and large "raw material potential" into a "raw material effective." To this list experts and skilled labour should be added, and these are by no means readily available, since the demands of the munitions industries are taxing Japan's human skill very heavily.

Slow Progress

While reports of Japan's ambitious development plans are fairly comprehensive, information on the actual progress achieved in the past twelve months is meagre. But allowing for the obvious and clumsy Japanese propaganda in the Axis press, one has the impression that the Japanese army and war industry cannot feel too happy with the material help so far obtained from the Pacific region. Although considerations of efficiency induced the Japanese Government and army to assign private industrial firms a large share in development work—in occupied China and Manchuria this had been mainly organised by state corporations—progress so far appears to have been slow. Besides the shortage of materials and skilled labour, two main factors appear to have been responsible for this delay—destruction wrought by the retreating Allies and shortage of transport facilities.

The destruction appears to have been very effective in the oilfields and the oil refining installations. Even now Japanese propaganda claims the resumption of only a small proportion of the former regular oil output, and the use of surplus sugar and other crops, including rubber, for the production of oil substitutes is being organised energetically. On the other hand, the destruction of the tin mines, bauxite mines, iron mines, rubber plantations, and oilseed plantations appears to have been less severe than was at first believed. Owing to the nature of these mines and plantations, this is hardly surprising, especially as the time available for destruction was so short that even the large tin smelting works at Penang in Malaya, including its stocks of ore and refined metal, was captured by the Japanese with only superficial damage. In a number of cases, it appears that Japanese production in the occupied areas has been resumed on a fair scale, although nowhere does current production appear to be comparable with the former normal output of the South West Pacific.

The effectiveness of current production, however, seems to be greatly hampered by Japan's shipping shortage, which probably constitutes the weakest spot in its war economy. In 1939, Japan's merchant fleet of 5,600,000 tons gross was the third largest in the world. It has probably been increased since the outbreak of the European war (Japan's shipbuilding capacity is estimated at 750,000 tons yearly), but heavy sinkings of Japanese transports in the past twelve months have probably counterbalanced these gains; so that a recent Allied estimate, giving Japan's present merchant tonnage at about 6,000,000 gross, is probably not far

off the mark. At least half this tonnage is almost certainly being used for Japan's coastal trade and military transport, leaving at best 3,000,000 tons for trading within the Co-Prosperity Sphere. This tonnage is far too small, even according to Japanese admissions, to take advantage of the new supplies from the Pacific region. According to a recent statement of the Vice-President of Nippon Yusen Kaisha, Japan requires a merchant fleet of 17,000,000 tons to develop the Pacific trade adequately, and plans for Japan's merchant fleet of the future, designed by the Great East Asiatic Council, are said to go even beyond that figure.

Corporative Norway?

[BY A CORRESPONDENT]

It has always been the ambition of quisling Norway to gain official admission, as a full member, to Europe's "New Order." The elevation of Quisling to the dignity of Prime Minister and head of a National Government in February this year was an important step towards this goal, but, to give their country the outward appearance of an "independent allied state," the *Nasjonal Samling* Party had to reorganise the Norwegian community on Fascist lines. The plan of a corporative Norway was probably accepted by the Fuehrer on the occasion of Quisling's visit to Berlin early this year, and the latter's efforts during the following months were mainly devoted to this end. But the struggle against the régime by Norwegian judges, clergymen, workers, shipowners and so on in the years 1940 and 1941 had already proved that the Norwegian population is not prepared to tolerate, even grudgingly, an attempt at organised regimentation, and the *Nasjonal Samling* movement is not strong enough to subdue the active resistance of the people. In spite of this, and although the attempt to nazify the teachers' profession in the spring and summer of 1942 also failed, in July and August of this year the Quisling Government made hasty preparations for the inauguration of a Fascist Riksdag and the proclamation of a corporative order on the occasion of the Party Congress at the end of September. Under this draft constitution, the whole population was to be subdivided into corporations, according to the various occupations; the leaders of each corporation were to be appointed by the Quisling authorities, and the representatives of all corporations would be combined in two Chambers, a Cultural and an Economic Assembly.

One important aspect of this constitutional reorganisation would have been the further transformation of the Norwegian trade unions, which had been taken over, about a year previously, by the quislings, though the shortage of skilled Nazi trade unionists soon resulted in the reinstallation of a number of non-Nazi union officials. In some cases, less than half the ordinary subscriptions were paid, in spite of the efforts of the new union authorities; but the flight of the workers from the Nazified unions, which might otherwise have occurred, was until recently prevented by an official ban on resignation. The Free Trade Union Movement, however, appealed to the workers to desert the Nazified unions when it became clear, in August, 1942, that the Labour Union, together with the reorganised employers' associations, should constitute the new corporations for commerce and industry. This call has apparently been obeyed by a considerable number of workers, which seems to be the main reason why the quislings were unable to keep to their time-table for the inauguration of the new "national constitution."

Economically, the non-cooperation of the workers is particularly serious from the German point of view, because of the strained position of the Norwegian labour market; and the enforcement of Quisling's constitutional policy may well have been prevented by Teerboven's own intervention in order to avoid a further alienation of the working class. It should be realised that the local population is hardly sufficient to perform the huge amount of work involved by the Norwegian fortification schemes, especially since the productivity of the average worker is said to have been reduced by 30 per cent owing to food deficiencies and other adverse factors. Already, a large number of German civilians have come to Norway to take up key positions in industry; and workers from Denmark, Holland and Poland, as well as prisoners from Russia and Jugoslavia, have also been transferred to Norway. The Labour Minister in Quisling's administration revealed last June that the German military authorities required as much as a third of all Norwegian workers; the number of labourers compulsorily recruited may now be in the neighbourhood of 100,000. The majority of them are occupied with fortifica-

tion work in Norway itself, mostly for a remuneration far below their former wages. The discontent of the workers is also shown in big acts of sabotage, which are supported, even according to German sources, by a fair section of the population.

Police Methods

The quislings have so far only postponed the proclamation of the corporative order; the time, according to Quisling himself, is "nearly ripe" for the inauguration of a Riksdag. Late in September or early in October, they took steps to nazify the Norwegian industrialists' and traders' associations; they also created a new Cultural Assembly, and they appointed Nazi commissioners to the boards of the more important Norwegian banks. At the same time, both the quislings and their German masters have largely taken refuge in police methods, pure and simple, when dealing with political and social problems. Quisling leaders have complained that their previous "decency" towards the non-Nazi population has been wrongly regarded as weakness. The *Nasjonal Samling* Party is now organising a comprehensive cell system throughout the country, and every cell leader may make any investigations he deems necessary into the households of his particular district; the official Oslo police force, which is already ten times larger than before the invasion, is to be further increased; and the Hird organisation (Quisling's storm troops) has been put under the command of the local Gestapo chief. A campaign of terror against Jews and Freemasons has been started, and the death penalty has been introduced for a number of minor offences. Even the food shortage has now been turned into a political weapon for the Nazis; from now on practically no rations are distributed except to holders of labour cards, and these are only given to those who are suitably employed.

The Plight of the Jews

[BY A CORRESPONDENT]

BEGINNING with Polish and Russian Jews, a new wave of persecution has swept German Europe. Reports from neutral observers as well as from underground movements in Poland speak of mass murder and of a consistent policy of extermination. Facts and figures given by the Polish Government in London, as well as by the State Department in Washington, confirm that about two million Jews have been killed in Poland and Russia since the occupation.

It seems that a radical change in policy towards the treatment of the Jews took place last July, after Himmler's visit to Poland. Until then, life in the ghettos of Warsaw and other Polish cities was comparatively bearable. It looked as if the setting up of the ghettos was Hitler's final "solution" of the problem. He even expressed the view that the ghettos were part and parcel of his "new order." The ghettos of Warsaw, Lublin, Cracow, Lodz and so on were, therefore, originally given some shadowy form of internal organisation. Politically, the ghettos became an important centre of anti-Nazi activities. The fact that the Jews were living together in compact masses, separated and immune from German infiltration and safe from pro-German tendencies, helped the development of anti-Nazi activities. It is unnecessary to explain what this Nazi justice meant in reality. The facts of inhuman persecution and maltreatment were known only too well. But the old policy still left the mass of the Jews the hope of bare physical survival. Since Himmler's visit to the ghettos even this hope has gone. The massacre of the whole defenceless community has followed.

What was the motive behind this sudden change of policy, if the decision to assassinate millions of defenceless men, women and children can be called a policy? In spite of death penalties for leaving the ghettos and of long prison sentences for keeping in contact with people outside them, the Jews in Poland managed to keep close contact with non-Jews, and between them the underground resistance to their common enemy was organised. The narrow streets and alleys of the ghetto became centres of "black listening" and of the underground press.

Himmler and his special Gestapo envoys may have realised the enormous influence which the ghettos could exercise upon the whole Polish underground movement at a moment critical for the Germans. He decided, therefore, to liquidate them and to apply more drastic measures. The first step was to deprive the Council of Elders of the Warsaw ghetto of all its privileges and to demand from its

president the preparation of lists of people to be deported to an unknown destination. The suicide of the president was the result. The Council was then disbanded, a Commissar appointed and the terror further increased. According to available official information, at least one million Jews were tortured and murdered during the summer and autumn.

A description of the raids in the ghettos and the mass murder of tens of thousands of people is now in the hands of the Polish and US Governments. Those who were not murdered immediately were packed into cattle trucks and deported to the east in appalling conditions. Very few were able to withstand the ordeal, and the number of deaths during transportation was enormous. The whereabouts of the new settlements are in most cases unknown.

A report from Russia shows that the situation in occupied Soviet territories is no better than in Poland. The Jews had to pay a double penalty—as Jews and as Bolsheviks. Eyewitness accounts published recently by the Soviet Government tell of the horrible terror of mass pogroms organised by the German soldiers in Minsk, Kiev, Odessa, Vitebsk and in many villages all over White Russia and the Ukraine. Those Jews who still remain alive in occupied Russia live under terrible conditions. Those who managed to escape death are barely existing on the starvation rations allowed by the Germans in exchange for the performance of hard labour.

The Nazis have found good assistants in their Jew-baiting activities among their satellites. The Roumanians have, in some cases, even surpassed their Nazi masters in their treatment of the Jews in Bessarabia and in organising slaughter in Odessa. Hungary and Slovakia have introduced new anti-Jewish measures, and orders have been given by the Gestapo that the anti-Jewish laws in Belgium, Holland, Norway, Denmark and France should be enforced more strictly.

It is, however, interesting to note that this policy of mass extermination has been carried out without any publicity. Not a word was mentioned in the German press about the position of Jews in Europe. The work was done, quietly but systematically, under the supervision of the Gestapo.

Steel Industry for Peru

[BY A CORRESPONDENT]

November 30th

A CONTRACT for the establishment of a Peruvian coal, iron and steel industry, costing \$15 millions, was signed in September at Lima. The cost of construction will be met from a \$25 millions credit granted by the Export-Import Bank. This is the largest industrial programme in the modern history of the republic. The investment is self-liquidating and is to be amortised within seven and a half years after the start of production. An annual output of 100,000 metric tons of finished iron and steel products is envisaged. Nearly 4,000 men will be engaged in construction work reckoned to take two or three years, while the completed works, including auxiliary undertakings, will give employment to 5,000 workers. The Brasserie firm, which is acting as contractor, is to receive a fee of 7 per cent of the cost, exclusive of insurance and other charges, and will supervise technical operations of each new unit for six months after completion before turning it over to the Peruvian authorities.

Three main territorial divisions are being set up in connection with the undertaking. The Marcona region, within 10 or 15 kilometres of San Nicolas and San Juan bays, and 400 km. south of Callao, will furnish the iron ore. Here the ore deposits lie close to the surface. Drilling operations have disclosed reserves exceeding 10 million tons. Initial plans call for open-pit mining of 500,000 tons of ore a year for the first fifteen years. Coal to smelt the ore is to come from the Santa and Chuquincara valleys 110 km. inland from the Chimote port, which is 350 km. north of Callao. Peru has the largest known coal reserves of any South American republic. They exceed 1,000 million tons, ranging from bituminous coal to anthracite. The bituminous deposits are situated at a relatively long distance from the seaboard. To begin with, therefore, the country's anthracite deposits are being opened up. Initial output both for export and domestic consumption is planned at 500,000 tons a year, of which blast furnaces will consume 80,000 tons. As regards other essential raw materials, Peru must import annually 700 to 1,000 tons of 80 per cent ferro-manganese.

THE GIFT THAT GROWS

Here's the simple answer to all your gift problems this Christmas — Gift Tokens. They're equally welcome whatever the ages, whatever the tastes of your family, friends and staff. And they're not only patriotic—they're practical too. From the day the Tokens are exchanged for Savings Certificates or used to make deposits in the Post Office or Trustee Savings Banks your gifts start to grow in value. Another good point—Tokens are so easy to buy. You can get them from any Post Office, Trustee Savings Bank or through your Savings Group in units of 15/- up to any amount.

NATIONAL SAVINGS GIFT

TOKENS

ISSUED BY THE NATIONAL SAVINGS COMMITTEE

The third development concerns the erection of a blast furnace and steel manufacturing and finishing facilities, as well as the expansion of docks and transport facilities at Chimbote port. The establishment of a cement industry to utilise the blast furnace slag in the making of Portland cement is under consideration.

Swiss Economic Difficulties

[FROM OUR GENEVA CORRESPONDENT]

November 1st

SWISS industry is struggling on. The shortage of raw materials is felt in almost all industries, and many of them receive only 40 per cent, some even 20 per cent, of their requirements. The Federal Government has been compelled to control and restrict the use of copper, steel and cement, and a drive is now being made to collect non-ferrous metal scrap to keep the factories going. Industry has to contend with export as well as production difficulties, owing to the closure of many markets and the transport shortage. During the first nine months of the year, imports reached a value of Frs. 1,577 millions, against Frs. 1,475 millions in 1941, while exports totalled Frs. 1,106 millions, compared with Frs. 1,034 millions in the previous year. These increases are mainly due to the rise in prices as, during the same period, Switzerland imported 330,108 ten-ton truck loads of goods and exported 28,105 truck loads, which represented decreases of 7.1 and 36.7 per cent respectively.

A comparison between September, 1938, and September, 1942, shows that, during those four years, the prices of imported goods have increased by 114 per cent on the average; the rise was 206 per cent for foodstuffs, 112 per cent for raw materials, and 46 per cent for manufactured goods. On the other hand, the price of exported products has only risen by 55 per cent on the average. It is, therefore, not surprising that the cost of living has gone up. Since August, 1939, the index has risen 42 per cent, but happily the increase has recently slowed down, especially for foodstuffs, and it stood at 121 in September last (1929 = 100). The wholesale price index, which includes the principal foods and unworked raw materials, stood at 197.1 at the end of September last (August, 1939, = 100). This has compelled the Federal Government to grant a special bonus to state officials, while some industrial and commercial undertakings have raised their workers' salaries, but so far the rise in wages is not general, and is in many cases inadequate.

In spite of the difficult economic situation, there is comparatively little unemployment. There were 26,200 unemployed in January—mostly for seasonal reasons—and only 6,100 in September last. That should be ascribed, on the one hand, to the fact that a great number of persons found some employment in agriculture, which was badly in need of labour, while many others were taken up by the army.

but our whole many-sided effort to stem inflation. What of the over-harassed housewife? What of the part-time worker, whose output will undoubtedly suffer if she is excessively fatigued? And, worst of all, the longer the queue the greater the chance that urgent household needs, touching the efficiency of the war workers in it, may have to go unsatisfied, while the goods are bought by those who, by the very fact that the money could have been elicited from them by a patriotic savings appeal, would demonstrably dispense with them.

Christ Church, Oxford.

I am, etc.,

R. F. HARROD.

[Mr Harrod has apparently misunderstood the purpose of the Note. It was not intended to suggest that people should not save, but rather that they are not saving enough; and that this failure is obscured by the meaningless statistics put out by the War Savings Committee, which lead people to believe that they are doing well. Moreover, what proportion of the total of "small" savings does Mr Harrod think has been contributed by people "with a modest sum left over for pocket money"? He has also missed the point about longer queues. It is true that they would inconvenience war workers if they were for the purchase of necessities; but since the purchase of such necessities is for the most part controlled by rationing, any increase in purchasing power, due to the dropping of the savings campaign, could not affect them. The longer queues would be for the unessentials, which the harassed housewife, if she is patriotic, does not buy.—EDITOR.]

(Continued on page 783)

German Europe

Curbing Speculators

DURING October there was a revival of share buying on the German bourses. For the first time, the so-called "manipulation fund" was used to prevent an increase in share prices. Speculation must have reached considerable proportions because the press began at once to discuss again the whole problem of controlling the bourses; there is no doubt that the resources of the manipulation fund were used to such an extent that they now need replenishing. After the registration of shares was made compulsory, the actual call-up of shares began in June, and shares exceeding Rm. 100,000 in value, acquired since the beginning of the war, were exchanged against Treasury bonds. Shares were called up individually; nothing was known about the extent to which the share capital in circulation was affected. The public soon forgot the uncertainty and began buying; the demand for investments became so persistent that brokers even instituted a substitute for the prohibited forward business, hoping that the fund would supply the necessary materials at the right time. The shares of the big concerns, IG Farben, Vereinigte Stahlwerke and other leading iron and steel companies, were mainly in demand; and capital adjustments in the iron and steel concerns provided the bourses with some material.

The public obviously expected that the general upgrading of the share capital of German concerns would extend to all concerns engaged in heavy industries. The much-advertised programme for the construction of locomotives created a special interest in the shares of the leading locomotive concerns. That there was a demand, apart from capital adjustments, for the shares of industrial concerns is shown by the issue of debentures to the value of Rm. 1,089 millions during the period from January to October, 1942, against Rm. 671 millions in the whole of 1941. It remains true, however, that necessary capital expenditure is mainly financed directly by the state; and movements on the bourses no longer indicate the general state of industrial concerns. Financial liquidity remains a dominant factor, and the control of speculation has only been temporarily and partly successful.

The method of control is now a mixture of threats and restrictive measures. A year ago, Dr Funk, Minister for Economic Affairs, was empowered, for the period which will end on December 31, 1942, to take suitable measures for the registration of shares. Nothing happened until February 27, 1942, when it was decreed that April 1st should be the date for registration. Step by step, new threats were made, until the call-up of shares was decreed on June 23rd. The press takes it for granted that the original decree will be prolonged for the duration of the war. At the same time, it has already been decided that registration and call-up will be extended by lowering the limit from Rm. 100,000 to Rm. 50,000. Thus, a new element of uncertainty has been introduced. The lowering of the limit is aimed at the small investor. Yet it is openly being said that not more than 10 per cent of the registered shares acquired by big investors have been called up. No doubt the new measures will temporarily arrest the upward trend of share prices. But, after a short time, the bourses will again find that the manipulation fund was not sufficient to prevent a revival of the boom. Under present conditions, the bourses cannot be closed down, and the demand for investments tends to increase the longer the war lasts.

* * *

Cutting Wages.—The wages stop, that is, the prohibition on increases in 1939 wage-rates, is still in force in Germany, and has been extended to occupied countries. Actual wages, however, have changed considerably. Over-time pay, bonuses, more piece-work and reduced rates of pay for foreign workers, have created a diversity of wages which makes the control extremely difficult if not impossible to work. For a long time, it has hardly been possible to reduce nominal wages because of increasing prices and higher taxation. Various attempts have been made by special decree to stop the distribution of bonuses paid for regular attendance, punctuality, care of tools, cleanliness at work, and even as compensation for iron savings. Bonuses for inventions, for suggestions for im-

proving working processes, for economy in the use of fuel, and so on, were generally allowed, and limited to a fixed amount of money and a fixed percentage of the workers in any one factory. Meanwhile, Ley, the leader of the Labour Front, "simplified" and reduced the number of wage agreements until they lost all practical meaning. Rationalisation, on the other hand, made the application of piece-work rates possible for the majority of industrial workers.

Speer's timekeeping engineers, who have been controlling piece wages for several months, made the "discovery" that piece rates were too high. It was disclosed that workers engaged on rush work for armaments had almost doubled their wages. This disclosure started a general discussion of the problem of wages. Ley is engaged in making "efficiency" wages popular. He has been singularly unsuccessful in introducing these efficiency wages in the building industry. The employers asked for postponement, and continued to pay wages according to the old rates. Efficiency wages are a version of piece-work rates which set the time for the production of a particular item to be enforced over an entire industry. All working processes have to be catalogued. In other words, Ley wants to put all workers on piece-work. The list for the building industry contains the time necessary for 660 different processes, and gives 1,200 different model wages. The catalogue for the iron and steel manufacturing industry is as thick as a London telephone directory. The new system is not confined to fixing the exact working time for any process. It divides the workers hitherto distinguished as skilled, semi-skilled and unskilled into eight categories, according to the time needed for different working processes. Any worker, it is explained, can thus rise to the position of a worker in a higher category provided he overfulfils his quota. Workers remaining below the fixed quota are paid lower wages. After lists have been made for all industries, a wages order will come into force, and thus complete the planned economy by the general introduction of planned wages.

Meanwhile, Ley and Sauckel, the labour dictator, are trying to find a "just" piece-work rate because the number of time-keeping engineers and statisticians is too small to complete all the necessary lists. The Nazi leaders believe that there are still great reserves inside the factories, and it is hoped that they can be mobilised by an appeal for greater efficiency. There is talk about piece-work rates kept below the efficiency level by common consent among a group of workers, particularly skilled workers. At the same time, papers complain that unskilled workers, because of the high pitch of rationalisation, frequently earn more than skilled workers, who are forced to work to precision standards. These complaints have one thing in common. They maintain that all workers are paid too much on the basis of the existent wage rate agreements. In fact, the new Nazi wages policy intends either to cut wages or to step up efficiency without paying higher wages.

The conclusion seems to be obvious. Skilled workers in German factories may have reduced their efficiency to a level which they think equivalent to the reduced real value of their wages. It may even be that here and there groups of workers are trying to regain their bargaining power in settling wages. Ley said emphatically at a recent meeting of the Labour Front that workers must not think that the Labour Front is a trade union.

Boot and Shoe Co-operative.—Shoe manufacturers, master shoemakers, cobblers and shoe retailers have been organised into a Co-operative for shoes and boots. The new organisation takes over the activities of the Control Board for leather. As usual, it is explained that a more unified organisation has become necessary because of the growing demand for footwear. The interesting point is, however, that the supply of raw materials for the manufacture and repair of civilian footwear can no longer be controlled by the Leather Board. In civilian footwear, wood and rubber for soles and textile material for uppers have almost completely replaced leather. This makes a reorganisation of the supply system necessary. The new Co-operative has special powers to enforce rationalisation in the manufacture of boots and shoes. It may close down factories, and can also insist that labour-saving methods are used.

Gas Generators.—A special appeal by Minister Speer asks all users of lorries and motor cars to adapt their vehicles as quickly as possible for the use of generator gas. The Central Department for Gas Generators, which was

Letters to the Editor

The War Savings Campaign

TO THE EDITOR OF THE ECONOMIST

SIR,—May one who has followed your persistent advocacy of a full economic effort with unstinted admiration make a protest against the perversity of the Note in your issue of November 28th entitled "Three Years She Grew"? Scepticism about the utility of the War Savings campaign is essentially based on the experience of the well-to-do citizen, with a floating bank balance or overdraft of indeterminate amount, who submits to the painful process of going over his accounts and planning economies at rather infrequent intervals. The great mass of people conduct their lives in a very different way. So much has to be set aside for rent, so much for gas, etc., and the modest sum left over for pocket money has to last until the next payday. If a patriotic appeal elicits some of this for war savings, the buyer's consumption will be reduced by that amount. Your note does admit, but in tones of indifference, that the campaign overnight would lead to longer queues and more crowded cinemas. Is this nothing? Such a result would belittle not only the savings campaign

established in May, envisaged a gradual change over, carried out by special Government departments. This seems to have been a slow process, and the users of motor lorries are now asked to effect the change on their own initiative. It is stated that a sufficient number of generator parts have been manufactured. A special subsidy will be paid as a contribution towards the cost. It is explained that all motor-car factories and garages will be used during the winter months for overhauling the vehicles of the *Wehrmacht*. The urgency of the appeal is emphasised by stating that liquid motor fuel must be freed in greater quantities for the fighting Services.

Advertising.—The President of the Advertising Committee has ordered that advertisements must not create a wrong impression about the state of available supplies. Advertisements for commodities which are in short supply

may still be published, but it must only be stated how the consumer can economise in this particular commodity. No advertisements may be published for articles whose manufacture is prohibited. Generally, advertisements must not agitate for the purchase of particular articles.

*

Housing.—The shortage of flats and rooms has been growing considerably. Various measures have been introduced, including the partition and sharing of large flats by several households. The use of flats for offices has been generally prohibited, and great numbers of families are housed in them, as during the last war. Several departments in the Ministry of Labour have been responsible for these measures, and these have now been combined under the central authority of a Commissariat for Dwellings—headed by Dr Ley, the leader of the Labour Front.

Russia at War

Industrial Front

THE latest reports from "the industrial front" show that the process of expansion in Russia's eastern war industries has not halted. The most recent achievement is the opening of a new giant blast furnace at Magnitogorsk in the Urals. The furnace has been described as the largest in Europe, "only slightly below the capacity of the largest blast furnaces in the United States." Its annual capacity is said to exceed half a million tons of cast-iron. Its construction took only five months, and the furnace was put into operation on December 5th. Another new furnace of similar size is to be opened in the Urals within the next few weeks. The Deputy Commissar for the Iron and Steel Industries has summed up the position:

The Soviet iron and steel industry now produces every type of steel required by the war industries and is fully meeting demands. This is one of the main results of our work in 1942. All the works, including those in the Urals which before the war produced the so-called trade metal, have now been completely reorganised for the production of high-quality "war metal" used in making tanks, planes and shells.

This has been achieved not by any substantial reconstruction of the eastern ironworks, but by the addition of the Southern Ukrainian plants to the equipment in the east. The Ukrainian and Azov rolling mills and furnaces were better equipped for the output of "war metal" and armour plate than the eastern works. The modern machinery of the Voronezh, Voroshilovgrad, Rostov and Stalingrad iron and steel plants has also made substantial additions to the capacity of the works in the Urals and in Siberia. The second industrial evacuation was directed straight to those distant areas, and no chances were taken this year with any "short leaps" to the middle Volga region, which was one of the main reception areas during the first evacuation, in 1941.

The results obtained show that the loss of Krivorog iron ore, which in 1938 accounted for 60 per cent of the Soviet output, has so far not visibly affected the position in the armament industries proper. This is due to a very strict curtailment of iron production for other purposes. There are, for instance, reasons to believe that the production of locomotives and of rolling stock has been very radically reduced, if not stopped altogether. But, whatever the cuts in less essential production, the fact remains that "1942 was a year of large-scale construction work in the iron and steel industry." No hints about any shortages of iron have appeared lately in the press.

In contrast to this, the coal position has remained somewhat critical. Coal is entirely denied to civilian consumers.

FAMOUS SINCE 1795

OTARD'S

COGNAC BRANDY

Town populations have to make do with wood. Every Russian town had to lay in large stocks of timber during the autumn. (Moscow is reported to have accumulated a stock of 300 million cubic metres of wood.) Railways have also been partly turned over to the use of substitutes for coal. The latest reports say that coal output has increased by more than one-third during the last six months; but the press does not hide the fact that the supply of coal to industries has continued to be inadequate. The coal problem has been transferred for discussion from the Commissariat of Coal to the State Defence Committee, which has laid down output programmes. And, though reports about the sinking of new mines in various coal basins appear frequently, the over-all picture remains still obscure. The main trouble is the insufficient number of coal-getters in the mines and the ineffectiveness of "socialist emulation," from which the press has stated that, in the all-important Kuzbass region, the majority of miners have kept aloof. Another difficulty is the lack of skill on the part of newly recruited miners. Most of them, especially in the Kuzbass are Uzbeks and Kirghisians who only recently went down the pits for the first time in their life. Their training has been impeded by language difficulties; the Uzbeks and the Kirghisians do not speak Russian, whereas the skilled personnel seems frequently to consist of the evacuated miners of Western Russia.

Complaints about the unsatisfactory work of some Siberian railways have again been voiced. The managers of the important Tomsk-Kuzbass line have been made responsible for delays in coal deliveries. In Karaganda, as well as in the Kuzbass, coal has been piling up at the pits and obstructing the output. The hitches in transport, it is said, are not due to any shortage of rolling stock, but to the slow turn-round of the trains and the underloading of trucks. The rolling-stock of the Siberian railways has, in fact, been increased by a number of evacuated locomotives and wagons from the west; and civilian traffic has been almost entirely eliminated by the fact that civilian journeys have been permitted exclusively to holders of special travel permits, which are granted only very rarely. On the other hand, the slow turn-round of rolling-stock is undoubtedly due largely to the scarcity of actual railway tracks in the east.

Reports from the oil industry strike a different note. An official statement puts the increase in oil output outside the Baku area, in 1942, at 40 per cent above the 1941 figure. Independent information bears out those reports. Some well-informed oil experts claim that the output of the so-called Second Baku has, in fact, exceeded the figures planned for 1942 (that is, seven million tons) by a substantial surplus. In the Baku area, output has also been stepped up, and the Baku technicians have recently started an interesting experiment in exploiting oil wells in the open sea by using a specially designed floating sea-crane. What remains unknown is the proportion of Baku oil which the Russians succeed in ferrying across the Caspian Sea, at present the only route available. A report published in the first days of December spoke of a very intensive traffic between Baku and Krasnovodsk on the southern "waist" of the Caspian Sea, where the interference of winter conditions will be relatively slight and where the distances to cover are, at the same time, shorter than in any other part of the sea.

THE BUSINESS WORLD

Pit Production Committees

PIT production committees are now operating at nearly every colliery in the country. The Minister of Fuel regards them as an integral part of the machinery of production and has drawn up a model constitution, outlining their composition, procedure and functions. The standard is that there should be four or five members, representing the management and the workmen respectively, with two chairmen, one from each side, to preside alternately; annual elections; and weekly meetings, submitting minutes and reports to the regional controller, to whom the committees have direct access. The purpose of the committees, broadly, is "to discuss and advise on all questions of production and increasing output"; and they have to consider such matters as output standards, supplies and materials, and "any factor impeding maximum production at the pit." This constitution is not compulsory and can be adapted to the requirements of the individual pit or district.

The great majority of pit committees are working smoothly and efficiently. Where the management is co-operative and the miners' leadership is good, few organisational difficulties are encountered. But, in some places, the committees operate in name only or are badly out of touch with the body of the workers. For this, the history of the mining industry during the past twenty years is to blame. Many miners have grown embittered and cynical. "If the war ended to-morrow," runs a comment from a northern pit, which had worked for three years only in the last thirteen, "the owners would ask for a reduction in wages and threaten to close the colliery." The miners want a *quid pro quo*; a Government assurance on the future of the industry would contribute greatly to their willingness to co-operate now. Some of the men are so opposed to the idea of collaboration that they look upon the workers' representatives on the committee as "bosses' stooges." To serve efficiently on a pit committee may mean to court unpopularity. In consequence, the miners' side is often insufficiently representative, and the best men do not always present themselves for election. On the managerial side, there may be an equal lack of confidence in the men, and the committees are sometimes regarded as an infringement of managerial functions. As one Yorkshire manager has said,

The management side of the pit production committee has spent the whole of its working life on the question of production. Is it feasible to expect that men with no special training can acquire such experience simply by sitting once a week on the committee?

The problem, then, is how to "popularise" pit committees to make them really live and representative, and to break down the prejudices on both sides. Many suggestions have been advanced by the committees themselves—propaganda at the pitheads, leaflets and pithead newspapers, representation of a worker from every section, the appointment of a "section steward," the election of a production officer. This last expedient has been adopted at Ashington colliery, Northumberland, where a miner, elected by the men but responsible to the pit committee, acts as liaison between the committee and the face workers; the results, in terms of increased output, have justified his appointment. Doubts have arisen about the committee's rights of inspection. The men argue that, if they cannot go down the pit, they cannot be expected to know the full position; but some management are unwilling to let the men "wander about" the pit. Major Lloyd George has, however, stated categorically that committee members should have full access to the pits.

Pit production committees are debarred from discussing wages. They have also been relieved of all responsibility for dealing with individual cases of absenteeism and indiscipline, though they may discuss the general problem. This is on the whole a popular move, since the committees had tended to degenerate into absenteeism tribunals, to the exclusion of production questions. The omission of wages and absenteeism from their agenda in no sense weakens the committees' effective powers; the terms of reference are sufficiently broad to allow the discussion of

a very wide range of topics. On the actual production side, the committees examine the previous week's output in relation to the standard, and must consider how to reach and, if possible, exceed it. In some areas the men feel strongly that the present method of district award will not produce the best results, and urge that the bonus should be given on the basis of individual pits or even individual seams or coal-faces. Many suggestions have been made by the men's side for improved methods of extraction; increased mechanisation—at one committee the workers alleged that the company was trying to get too long a life out of pneumatic picks, which were used by 75 per cent of the miners; transfer to more productive seams; and the elimination of boundaries which impede maximum production. Deficiencies in supplies, such as delays in delivery, scarcity of wagons and tubs, poor quality timber, defects in machinery and shortage of spare parts, naturally bulk large in discussion; and, though the committee itself may not be able to provide the solution, it can at any rate see that the matter is referred to the appropriate authority. There is general anxiety about recruitment to the industry and the training and up-grading of new entrants. The shortage of boys to do datal work and putting has slowed down output in more than one area. Another matter of concern is the shortage of hewers and the use of inexperienced men at the face, with inevitable increase in the accident rate. The men's representatives have raised many questions affecting welfare and working conditions. Pit-head baths are asked for at collieries where there are none, and the inadequacy of canteens is a frequent source of complaint. Durham miners say that hewers cannot be expected to increase their output on a pie, instead of the beefsteak and puddings to which they are accustomed. At another pit, representations were made for the men to get more food at the local British Restaurant, as they had no canteen of their own. The burden of fire-watching and Home Guard duties, transport difficulties, housing shortage, health and safety precautions—these are but a few of the subjects which are troubling the miners and in consequence affecting their productivity.

It is probably true that many miners are ignorant on technical mining matters, and that some of the points they raise may be trivial or impracticable. On the other hand, they have practical experience and knowledge, and a large number of their suggestions have been found workable. The evidence so far available suggests that the activities of pit committees during recent months have contributed, in no small measure, to improvements in production in several districts. But, quite apart from their direct physical bearing on output, which has not been very considerable—nor in the short run was it ever likely to be—pit committees may have important psychological effects. The President of the South Wales Miners' Federation was not exaggerating when he spoke at the Blackpool meeting of the Trades Union Congress of the tremendous effects on production of "unleashing the enthusiasm of the workpeople." For the first time in history, the men feel that they are being taken into the confidence of the management, and are enabled to contribute something tangible. Grievances which might in the past have led to strike action, can be aired and frankly discussed. Above all, through the system of open election and the exercise of responsibility by those who are elected, the committees may provide an education in democratic practice and practical democracy. The average miner is accustomed to register his vote at a Parliamentary election, but Westminster seems remote from the affairs of Hetton-le-Hole or Merthyr Tydfil; the miners' lodge secretary may be used to negotiating with the management on wage questions, but not to sitting round a conference table with him, as an equal member of the pit committee. The same considerations apply equally to joint production committees in engineering factories and shipyards.

The introduction of this type of workshop or pit

democracy represents a new stage in British industrial development. Joint production committees are admittedly a wartime expedient, and the agreements setting them up provide for their termination at the end of the war. Whitleyism, which aimed at creating permanent joint consultative machinery, failed to establish itself on a national scale after the last war—largely because it was imposed from the top and because the older, well-organised

industries would not touch it. Production committees, on the other hand, have derived their main impetus from below and are firmly attached to the trade union movement. There can be no doubt that the present participation of the workers in the organisation of production and the new spirit of co-operation which is found in the best committees are bound to have far-reaching effects on industrial relations in the postwar years.

Plastics and the Investor

AFTER the Stone Age, the Bronze Age and the Iron Age—the Plastics Age; “if there are Stock Exchange booms after the war, the first will be a plastics boom”; “in future, we should plan in plastics”: these are some of the claims made for one of the newest of the new industries. Actually, the likelihood of, say, plastics ousting steel, as some enthusiasts have suggested, is still very remote; and the chances are that a growing demand for plastics will be accompanied by a marked expansion, compared with before the war, in the world demand for steel. To call plastics a new industry may seem somewhat of a misnomer: bitumen was known as a plastic in 2000 B.C.; shellac was used in pre-Christian times; cellulose plastics have been made and used for nearly 80 years; and it is 34 years since the discovery of phenolic resins opened the way to the commercial development of thermo-setting plastics which, having once hardened, remain impervious to further heat. This discovery, whose exploitation on a significant scale really began after the last war, changed the characteristic plastics products from small but useful articles, in decorative colours, to materials capable of being

* Eighteen months to September 30, 1939.

used in substitution for those of many older industries. The timber, steel and building industries are in the first line of “attack” by the plastics industry; and it is clear that a group of trades using indigenous materials, which is already producing articles ranging from tooth-paste caps to aeroplane parts, motor-car bodies and piles which will withstand a greater driving force than the hardest timber, and is chemically related to the “synthetic” textile, oil and rubber producing industries, obviously has very great potentialities.

It seems probable that the plastics industry will eventually provide investors, through the Stock Exchange, with a varied and profitable range of new securities. It may be asked why the industry and the investor are not better acquainted already. Companies engaged solely in plastics manufacture, whose shares have a market quotation, can be numbered on little more than the fingers of one hand. Their capital, as Stock Exchange companies go, is relatively small, and their shares are not always obtainable readily in the market. None of the companies in the

attached table has a paid-up capital under all headings exceeding £700,000, and the average capitalisation is little more than £350,000. Some of the companies work only a single proprietary process, and two companies have not yet reached the dividend-paying stage. Certain companies, again, were established not many years before the war, and consequently may not have a particularly high EPT standard. The industry as a whole, however, is playing an important part in the war effort; and even after EPT the equity earnings of the majority of companies in the table are running at a reasonable, though certainly not a spectacular, level. But, in the instances where there is public participation in the equity interest, the present yield basis is low. In other words, post-war progress is already discounted for some little time ahead.

Possibly, a reader of *The Economist*, who may chance upon this article at some future time, may recognise, in the names of one or more companies in this table, the “Imperial Tobacco” or “Courtaulds” of his day—some powerful “leader” of its industry and its Stock Exchange market. But it is equally possible that, by that time, the present “leaders” themselves—or one or more of several other large companies now famous for other products—may fill that rôle. Already some large companies whose main interests lie elsewhere have developed plastics as something more than a sideline. The list includes Imperial Chemical Industries, British Celanese, and Distillers, all of which have plastics subsidiaries. Among smaller but sizeable concerns with important plastics interests are E. K. Cole and Monsanto Chemicals. Thomas de la Rue have very recently registered separate subsidiary companies to take over, respectively, their plastics branch and their business in playing cards, fountain pens and stationery. The plastics subsidiary has an authorised capital of £1,000,000.

For the investor, a purchase, say, of ICI with the object of acquiring a stake in the plastics industry is like buying a house for the glass in its windows. Yet it would be hazardous to say how far the future prizes in the industry will go to the plastics producers proper or to the more general concerns which have adopted plastics as a promising youngster capable, perhaps, one day of taking over the family business. The investor at the present stage cannot possibly make up his mind.

There are, however, at the moment two considerations which, so far as they go, tend to put the odds in favour of the second group of companies, the general concerns which have adopted plastics as a sideline. The first is that, after the war their EPT refunds will be a function of their total wartime excess profits, they will be available for capital development in those branches of business which seem to offer most scope for expansion. Courtaulds, in addition, will have many millions for investment as a Viscose holding—though it is not known to have so far any considerable interest in plastics as such. Yet was it not originally a crêpe manufacturing company which boldly experimented in a new industry?

The second consideration favouring the “mixed” companies is that, as the industry is now developing, it seems to promise greater future rewards to the large than the medium or small concern. The size of the plant required—particularly for the laminated plastics—increases much more than in proportion to the size of the product. Many of the most profitable plastic products of the future will be outside the range of any but the very large unit, with plant costing probably some millions.

In any case, from experience it would seem hardly desirable, from the investor's point of view, that, after the war, there should be an exaggerated Stock Exchange boom in plastics, with a host of new and small companies competing for the investor's suffrage. It is better that capital

market history should never repeat itself in that way. The annals of many “new” industries—motors and rayon, for example—show that the first stage of large-scale development is seldom profitable to the outside public investor. It is a matter for the skilled entrepreneur and those who are prepared to back him. The investor's opportunity comes later.

Finance and Banking

Year-End Preparations

The approach of the year-end has already made its effect felt on the money market. The banks have virtually ceased to buy bills from the discount houses, and this abstention from the market may well continue until the close of the year unless the demands on the banks for Treasury deposit receipts payments are abated next week. The banks, however, continue to be abundantly supplied with funds and the discount market has encountered no difficulty in financing the steadily accumulating holdings of bills in its portfolios. The banks naturally prefer to strengthen their second line of defence at the moment, short loans being more readily converted into cash for the year-end balance sheet window dressing than bills. The market, for its part, will, unless relieved by an immediate resumption of bank buying of bills, have to seek considerable assistance from the authorities over the turn of the year. This assistance will probably be provided on open market terms and will not necessitate rediscounting at Bank rate, or borrowing on the official terms. The current abundance of resources is all the more striking in view of the exceptional outflow of notes into circulation. A further £18,800,000 of notes went into circulation over the past week, carrying the total outstanding to £908,323,000. In the corresponding week of last year the rise in the circulation amounted to £13,467,000. The latest increase leaves £41,918,000 of unissued notes in reserve, and though two more weeks of expansion have to be fed from this reserve, it will no doubt withstand the seasonal peak in the demand for currency. The effect of the increased withdrawal of notes on the credit position has been wholly neutralised by a further increase of £21,315,000 in the bank's holding of Government securities.

U.S. Silver for British Coins

It was announced in Washington this week that American silver would be made available to Great Britain and Australia on lend-lease terms. The requests were made some time ago. In commenting on the agreement, Mr Morgenthau stated that the silver would be lent on the understanding that it would be returned to the United States after the war. In other words, these operations will be treated independently of the Mutual Aid agreement, and the provisions for repayment are far more specific than in the case of other lend-lease transactions. The silver in question will not, of course, pass through the market. Even were it required for industrial purposes it would be made available direct by Government agencies to factories working for Government account. The silver in question is, in fact, required for coinage purposes. The demand for subsidiary coins is rising with that for notes, though it is interesting to note that the two movements have not followed altogether parallel lines. The expansion in the note circulation from the outbreak of the war to October was 77 per cent, compared with a 27 per cent increase in the estimated coin circulation. The authorities had prepared a special issue of Bank of England notes of small denominations for use in an emergency, but it is evidently not their intention to put them in circulation under present circumstances. The appreciable silver reserves, which existed in this country at the outbreak of the war, have probably been reduced to a small fraction of their former total. Although they have been reconstituted more than once by official purchases from the Indian Government's domestic reserves, the increased industrial demand for silver, together with the gradual disappearance of imports of newly mined metal, must have eaten deeply into accumulated stocks. If, in these circumstances, it is necessary to find substantial amounts of silver for coinage, the United States is the obvious source from which to obtain them. To continue importing silver from India would have disadvantages, since it would stimu-

The general conclusion, altogether, would seem to be that plastics has not yet reached the stage at which an outside investor can pronounce on its prospects with any degree of certainty. Unquestionably, it will be a major industry in the future. But as yet it is impossible to know which horses to back—and whose colours they will be carrying at the starting post.

late the already rapid accumulation of sterling reserves by India. It is rather surprising that the authorities should be going out of their way to import silver for coinage purposes when the domestic industrial demand for America's silver is so considerable and when an alternative form of small denomination currency is ready to hand in the form of small Bank of England notes. It cannot be a distrust of paper currency which is holding back the issue of these long-prepared notes.

One of the reactions to the news that US silver is to be made available to the United Nations has been a sharp break in the Bombay price. The spot quotation in that market has fallen this week from 104 rupees 12 annas to 96 rupees 8 annas.

Swiss Gold Market

Messages received from Switzerland appear to suggest that the authorities in that country are tightening their control over the open gold market. Dealings in that market are to be subject to licence by the Swiss National Bank, and the prices quoted will be limited to the official selling price of the central bank, namely 4,970 francs per kilo fine. The price for gold bars had risen to about 5,600 francs in the open market, while even higher equivalents have been paid for coins. It remains to be seen whether the official attempt to suppress free dealings in gold will be altogether successful. It must not be forgotten that a considerable amount of gold found its way to banks and safe deposits in Switzerland on private account in the years before the war. That gold has not been mobilised by the Swiss authorities since the war, and, with this considerable volume of privately held gold in the country, it must be difficult to prevent transactions at prices other than those decreed by the authorities. Although the Swiss National Bank has been steadily gaining gold as a result of the conversion of dollars, the whole of that substantial addition to its reserves—it amounts to 1,053,700,000 francs for the past year, representing an increase of 58 per cent—is held earmarked in New York. The holding in Switzerland itself was falling in the early part of this year, partly as a result of withdrawals of bars which were being exchanged for coin. The reason for this traffic was the high premium commanded by gold coins, not only in the Swiss open market, but more particularly in black markets throughout the Continent. The Swiss authorities consequently issued their embargo on sales and export of coins. The Swiss National Bank continues to be a somewhat reluctant buyer of dollars, as it does not relish the prospect of inflating the currency position at home against the accumulation of foreign exchange resources, even though these can be converted into gold. The position would be far more satisfactory from Switzerland's point of view if it were able to import, in the shape of materials it urgently requires, the current excess on the international balance of payments. A comparable dilemma was solved by Sweden

RESEARCH ASSISTANT

Wanted Economic and Financial Research Expert to assist a Committee during preparation of Report on Money, Banking and Taxation in connection with Post-War Reconstruction. Part-time no objection. Write, giving particulars of qualifications, experience and salary expected to Box 19, *The Economist*, Brettenham House, Lancaster Place, W.C.2. [AD VT.]

in the last war by refusing to buy more gold and letting the exchange rate of the currency appreciate. There is as yet no evidence that the Swiss authorities contemplate following the same course. The reduction in the free market price of gold, which may follow the steps recently taken by the Swiss authorities to control that market, should certainly not be taken as evidence of such a policy. On the contrary, it may well be accompanied by the establishment of a black market in which the prices quoted for gold will range appreciably above those recently seen in the free market.

Barclays Bank (Dominion, Colonial and Overseas)

The annual reports of Barclays Bank (D.C. and O.) have of late acquired exceptional interest from the fact that it is this institution which has followed with its banking services in the wake of the advancing British armies in East Africa and the Middle East. Recognition of the growing importance of the bank's business in East Africa has been provided by the formation of a local board at Nairobi, which will control the bank's branches in East Africa as well as those in Eritrea and Ethiopia. An interesting point mentioned by the chairman, Sir John Caulcutt, in his statement accompanying the report, is that only an unimportant part of the £62,574,000 of cash in hand held on September 30th, the date of the last balance-sheet, was represented by gold. The reduction in the metallic reserve is due to the fact that the bank no longer has to maintain a gold backing in respect of Southern Rhodesia notes, as the currency issue there has been taken over by the Government. Sir John Caulcutt also makes interesting references to the finances of the colonial territories in which the bank is represented. He points out that the revenues of the colonies which the bank serves have been buoyant during the war period, and that large official contributions for war expenditure were made by these territories to the British Government. In the summer of 1940, however, this policy of making outright grants was altered at the request of the British Government, and instead the contributions took the form of loans without interest. It is intended that the

sterling represented by these loans should be available for financing reconstruction work in the various colonies after the war.

Banking in South America

Lord Wardington's review of economic conditions in South America, attached to the report of the Bank of London and South America, necessarily has a melancholy strain running through it. Economic intercourse between this country and South America is dwindling to a mere trickle. The countries of South America are, on the whole, prosperous, the trade with each other has been expanding, and they have made new trade agreements with the United States. But it will take a great deal to make up for the loss of most of their European markets, while their trade with the United States and the United Kingdom has of late been acquiring a somewhat one-sided character. This is reflected in the abundance of their dollar and sterling resources. As to the dollar position, it is significant that only slight use has been made by the South American countries of the substantial credits placed at their disposal by the Export-Import Bank for capital developments. The capital goods cannot be obtained, and, if they could, it would certainly be difficult to transport them from North to South America. As regards sterling, the position is equally unbalanced, and Lord Wardington points out that sterling balances continue to accumulate in the Special Accounts of those countries which supply Britain with large quantities of foodstuffs. The future of Anglo-South American trade must to some extent be conditioned by the developments now taking place and in particular by the growing industrialisation of some of the countries concerned, and by the closer links being forged with the United States. Lord Wardington, however, sees hope in the essentially compensatory nature of much of that trade in the past—the exchange of foodstuffs for coal, for example—and in Britain's ability to provide the specialised manufactures which, as a highly industrialised country, it should be equipped to produce and sell at competitive prices.

Investment

Business Recovering

Whatever may be said as to the amount of speculative business in terms of value—and it is almost beyond doubt that it is a very small proportion of total turnover—in terms of bargains done, it appears to be very substantial. According to the indices of *The Financial News*, the changes as between the peak of the second week in November and the nadir of four weeks later in the sub-groups they select were as follows. There was a modest increase of 2½ per cent in gilt-edged business, coupled with falls of 25 per cent in rails and 33 per cent in industrials, and one of over 80 per cent in the speculative section, which includes only mining of metals. Beyond saying that a small number of the bargains done in gilt-edged are individually so large as to reduce much other business to insignificance, it is impossible to obtain any general idea of the relative importance of individual bargains. So far as absolute numbers are concerned, and including oils and rubbers in the speculative section, the number in the industrial group, which excludes home railways, *inter alia*, was almost twice as great as that in the speculative section, and five times as great as in gilt-edged. It would be necessary to make elaborate calculations as to the number of companies whose shares were dealt in in each group before it was possible to reach any conclusion as to the probability of the size of bargain falling with any given increase in numbers of transactions, but the impression gathered in the market was that the size fell off very rapidly. Despite a slight improvement in number over the past week, the figures are now almost certainly sub-normal, even for war conditions, but there is an increasing volume of inquiry. The net decline in prices is rather over a half of 1 per cent in equities and appreciably less in fixed-interest stocks. The general course of prices, excluding overseas enterprises, has been much more steady in the past eighteen months or so than for some years prior to 1941. It is not unusual for prices to improve from the commencement of the New Year. There

have been moderate rises in the first few weeks of each of the past three years, followed on two occasions by a considerable relapse, owing to a reverse in Libya and Japan's entry into the war. While it is exceptionally difficult to make a forecast, it can be said that appearances suggest an early resumption of price rises in selected equities and junior fixed-interest securities, while there is nothing at present in sight to indicate that a spectacular reverse is to be expected.

Guidance for Accountants

The decision of the Institute of Chartered Accountants to circulate to their members, and to the press, a number of recommendations as to the proper treatment of certain new items is very welcome. It is even more satisfactory that the Institute proposes, from time to time, to publish further recommendations. The matters covered by the first batch are tax reserve certificates, War Damage premiums, and a reminder about the forms of note agreed with the Ministry of Information as appropriate in cases where fixed assets had suffered war damage. These are all new problems on which a bewildering variety of practice was growing up. The recommendations appear unexceptionable. In particular, it is very welcome that the official view of war damage premiums is that, in all ordinary cases, they should be met out of current profits or free reserves. It is not quite clear whether this circular is the first fruits of the new Taxation and Financial Relations Committee, or whether it is to be regarded as the continuance of an older tradition under auditors. In either case, the real interest lies in what happens in the future. This applies both to the attitude of individual accountants and auditors to the circular, and to the intentions of the Council as to a number of knotty problems which have long awaited resolution. On the former point,

members of the Institute are free to act as they think fit. It is the belief of *The Economist*, expressed more than once in a recent series of articles, that their position *vis-à-vis* boards of directors will be greatly strengthened if they adopt the recommendations and present them as the considered view of the leaders of the profession, which is what they are. In the circumstances, it is perhaps a little unfortunate that *The Accountant* should go out of its way to stress the permissive character of the recommendations. The individual accountant or auditor has, of course, a responsibility towards his clients. But, if he believes the recommendations to be good, that is best performed by recommending them to be good, that is best performed by recommending them to be good, that is best performed by recommending them to be good. As to the doing his utmost to see that they are accepted. As to the second, and larger, point, that of securing a more uniform and informative treatment in the presentation of accounts, both published and private, it can only be hoped that this step is a beginning, and that it will be followed without delay by further action.

Discouraging Speculation

The first result of the investigation carried out by the Stock Exchange, instigated by the recent allegation of speculative activity, takes the form of a new temporary regulation. The Committee for General Purposes found some evidence that the delay, beyond the five business days allowed for passing names for stock purchased, had increased. The number of cases in which there was no evident explanation of the delay was very small—the usual reason is either shortage of staff or postal delays. Nevertheless, it has been decided that the notice of September 13, 1939, dealing with this matter shall be incorporated in the new regulation, which, in addition, requires that the name-ticket shall bear the date of the bargain. The sanction for non-compliance is that brokers should "sell out" against the defaulter. This is not made obligatory, but the whole intention of the regulation is that the broker, who does not receive the name, should more often transfer the onus for deciding whether action should be taken to the Manager of the Buying-In and Selling-Out Department. Members are further urged to expedite by every means, including increased use of telephone and telegram, all stages in the passing of names. It seems that this is as far as the Committee can go in these difficult times, and a fairly extensive experience of such matters suggests that the regulation will not fail of its effect. A further step, approaching the problem from a different angle, has been taken by suspending Rule 195 during the currency of the new regulation. This rule permits a broker to charge only one commission for buying and selling the same security for the same principal during any period of, approximately, 28 days. The suspension will thus increase appreciably the cost of such short-term speculation as exists. The suspension does not affect business in gilt-edged securities in amounts of not less than £50,000 stock. It is believed that this virtually exhausts the possibilities so far as general regulation is concerned. Action may be possible in other respects, although it is, perhaps, probable that it will be of a limited and personal character rather than of general application. The investigation tended to confirm that frankly speculative business remained, at its greatest, a minute fraction of even wartime turnover, and suggested that the changes set out above will have no striking effect, since, even when buying was ill-informed, there was very little attempt to "run" stock.

The Demand for Bricks

The decision of the board of London Brick, to postpone any consideration of a dividend for the current year until the full results are known, is the first evidence of the effect of further concentration upon the industry. The announcement was very late and shareholders must have been prepared for the result. None the less, it may prove to have been reached with reference to future earnings rather than to the actual business of the first half of the year. Concentration was to have been carried out early this year, but it was postponed by construction of quarters for the American troops, and there have been hints of a further restriction in its severity in the statement that some rehousing might prove feasible during the war. Both this and the building for troops will, presumably, be on Government contract and the profit on it is not likely to be large. Failing any relief, the full rigour of the proposed quota, coupled with the closing of selected works and a levy to

finance their maintenance, must presumably come into force. This would seem to indicate that, for the duration of the emergency, profits are likely to be low. For 1941, London Brick earned some 15 per cent and paid 10, against twice that figure in the last pre-war year. For 1942, it seems very probable that the dividend will be materially reduced. If so, the £1 shares, 3s. 9d. down at 48s. 9d., give a yield which discounts a very substantial post-war recovery. The plans for the organisation of the industry are believed to be far advanced, and it is the express intention of the Government to spread out rebuilding over a substantial period. Recent building is believed to have reduced stocks to reasonable proportions, and it is highly probable that the companies will be in a good position to do well in a buyer's market. It is, however, far from improbable that prices will be fixed, not by the trade, but by the Government. Shareholders have a right to expect a substantial return on their investment, but it is doubtful whether payments of 20 per cent and over, such as were made in the period 1933-38, should be envisaged.

Company Notes

P and O Report

The accounts of Peninsular and Oriental Steam Navigation show a decline in earnings of fleet of some £150,000 and in total profits of more than £200,000 in the year to September 30th last. As the following table, analysing three years' receipts and distributions, makes plain, the jump in equity earnings of more than £100,000 to £830,342 is due solely to the suspension of transfers to provident good service account. The 8 per cent dividend on deferred capital is maintained, covered by earnings of 28.1 against 23.8 per cent, but the transfer to tonnage replacement reserve is reduced from £250,000 to £100,000. A sum of £37,936 against £100,000 is written off properties and £350,000 taken from profits to write down investments in subsidiaries, to which is added £400,000 from the company's investment reserve. The reason for this substantial provision is, as the deputy chairman, Mr A. O. Lang, points out, the loss of tonnage by the group, with the consequent reduction in income from subsidiaries. The balance sheet shows a fall in net holdings in shipping subsidiaries from £10,602,233 to £9,869,004. Loss of the company's own tonnage is understated by the reduction in the balance

Keep warmer on BOVRIL

sheet valuation of fleet from £5,382,947 to £4,824,839, since the latter figure includes payments for new tonnage. The decline in earnings, resulting from shrinkage of the fleet, is likely to continue, since there is no sign that new ships taken over will, for some time at least, equal further losses. Tonnage replacement reserve receives a total addition of £639,465, including the transfer from profits, and this may give some indication of the company's own loss. The reserve now stands at £3,630,940, exclusive of Government

tonnage replacement account, which has risen to £568,800 by an addition of £84,300. The reduction in fleet is accompanied by a rise in holdings of Government securities from £8,134,674 to £9,500,298, an acquisition which accounts for the increase in net liquid assets from £5,581,899 to £7,439,218. Total reserves and carry forward stand at £9,393,881, against £8,779,410. Mr Lang mentions a possible extension of the interests of the group to air transport after the war. The £1 deferred stock, at 31s. 9d. ex dividend, yields £5 os. 9d. per cent.

Burmah Oil Accounts

The Burmah Oil report for 1941 covers a period which fell wholly outside Japanese occupation. Thus, apart from the fact that trading profits of companies operating in Burma are partially estimated, the accounts show little trace of the impact of the war on the Far East. The following table, which analyses receipts and distributions over the past three years, reveals a substantial increase in gross

profits and shows that equity earnings, unadjusted for Dominion income tax relief, would, after the reduction in the additional transfer to taxation from £400,000 to £150,000, have covered the previous year's 15 per cent dividend. The reduction to 12½ per cent, less tax at 6s. 9d., is, of course, due to the military events of 1942 and the complete loss of plant and installations in Burma. The transfer of £650,000 against £250,000 to general reserve brings the total of this fund to £2,000,000. The directors have attempted to provide against immediate and more distant liabilities arising out of the disaster by transferring, *in toto*, fields expenditure equalisation reserve and, in part,

fire and marine insurance reserve to a war contingency fund of £3,400,000 in the consolidated statement. This sum is, as the chairman, Sir John Cargill, points out, equivalent to the book value of the Burmese interests. No close estimate can be made of the extent to which current assets are realisable, but on the most conservative reading it is plain that total current liabilities of the group of less than £6,000,000 are more than covered by the holding of £8,426,740 of British Government securities. Moreover, cash holdings have risen from £76,593 to £1,575,879. It has always seemed probable that Burmah Oil would continue to distribute its considerable investment income during the period of stress; it is now clear that the liquidity position is far from critical. It may reasonably be assumed that, when the time comes, the resources of the group will prove adequate for reconstruction. The £1 ordinary stock at 53s. 9d. ex dividend yields £4 13s. on last year's total distribution, less tax at 6s. 9d.

Crompton Parkinson Expansion

The full accounts of Crompton Parkinson show a rise in total profits from £419,154 to £438,248 in the year to September 30th last. Net profits, which were discussed in a note on the preliminary statement in *The Economist* of December 12, 1942, provide equity earnings of 37.4 against 34.9 per cent, after including the capital allotted to Young Accumulators, as cover for the ordinary and "A" ordinary dividend, maintained at 20 per cent. The preliminary figures, however, gave little indication of the scope of the expansion which the Crompton Parkinson group underwent last year. The balance sheet of the company—which should be amplified by a consolidated statement—shows a jump in bank overdraft and short borrowing of some £900,000 to £1,001,189 and a decline in cash from £126,558 to £19,462. These movements, and an increase in creditors from £856,760 to £1,103,639, have financed an expansion in the total of stocks, work in progress and debtors of £905,107 to £2,991,361 and in net loans to subsidiaries and associates from £287,500 to £441,013. Net liquid assets are down from £1,187,098 to £934,936, but the liquid position, despite the shortage of cash, remains essentially sound. The group is supplying vital electrical equipment on an unprecedented scale and has so far contrived to control the upward trend of costs. The 5s. "A" ordinary stock, at 24s., ex dividend, yields £4 3s. 4d. per cent.

Three Midland Motor Results

The latest reports of three leading motor companies, *Alvis*, *Rover* and *Standard*, confirm the view that the period of technical adjustment to war conditions is over. Little is disclosed about the output of the concerns, except that it is now wholly on Government account. The following table shows that equity earnings of all three companies were

Company and Date of Accounts	Total Disclosed Profits	Earned for Equity		Dividend	December 16, 1942	
		Amount	Rate		Price	Yield
<i>Alvis</i> (July 31):						
1940.....	147,778	161,412	16.0	5	ex. dividend	£ s. d.

* After tax, except tax on dividends.
† After depreciation and tax, including tax on dividends.

higher in the latest year, and that, in the case of *Alvis* and *Rover*, the rise follows a setback in 1940-41. *Rover* and *Standard* have, unfortunately, in the latest year adopted the practice of showing total receipts after tax and depreciation, so that no comparison can be made of the gross figures. It is, however, clear that there has been a substantial rise. Both these concerns have passed the improvement on to shareholders with increases in payments of 2½ and 5 per cent, respectively. There is no increase in the 5 per cent *Alvis* dividend, the whole of the surplus going to raise reserves and carry forward and to write off £8,656, loss on realisation

of investments. The latest transfers will raise general reserve to £185,000 and war contingencies to £40,000. The directors of *Standard* have decided to transfer £144,258 from war contingencies, previously totalling £145,000, in order to write off stock obsolescence, and the directors of *Rover* point out that adjustments will eventually be required in certain balance sheet assets. It is, of course, clear that another and possibly more drastic readjustment lies before all these concerns and that substantial funds will be required for reconstruction and obsolescence. The present moderate boom can hardly outlast the war, and the decision of all concerns to restrain ordinary payments well below the limit of the free surplus is inevitable. The directors of *Rover* are none the less wise to have taken the initiative in instituting a progressive system of employees' benefits and pensions and in proposing the introduction of employees' shares. In the return to freer competition and choice of employment which may follow the peace, good labour relations will be a commercial asset as well as a social obligation. Yields on the equity capital of the three concerns are sound.

Turner and Newall Profits

The very full preliminary statement of Turner and Newall shows trading profits for the year to September 30th last of £2,407,550, against £2,545,721. Depreciation receives £188,196, against £188,908, and the customary £10,000 is placed to staff funds. The concern's liability for tax is £1,686,218, against £1,847,762, due in part to the rise in Dominion Income Tax Relief from 6d. to 9d. on the 10s. standard rate. Thus, after meeting preference dividends, there is a net rise in equity earnings of nearly £10,000 and the 12½ per cent ordinary payment is covered by a rate of some 16.4 against 16.0 per cent. After placing £100,000 as usual to general reserve, the carry forward is raised from £65,189 to £78,440. In the circumstances, the decline in trading profits requires explanation, which will no doubt be provided by the full accounts. In view of the world-wide and essential nature of the interests of the group, the most probable explanation is rising cost rather than declining business activity. The £1 ordinary stock, at 73s. 9d. ex dividend, yields £3 8s. 6d., less tax at 9s. 3d.

ABC Recovery

The latest accounts of the Aerated Bread Company for the year to September 30th last show a striking recovery in profits from £265,937 to £499,722. In spite of a rise in tax provision from £67,500 to £260,000, the provision of £75,000 for depreciation and the transfer of £21,088 against nil to write off ARP, it is possible to pay three years' preference dividends, thus eliminating arrears, and to distribute 5 per cent on the equity. Equity earnings amount to £34,462, against nil, representing 5.4 per cent as cover for the first payment on ordinary capital for four years. The carry forward is raised from £57,216 to £59,628. The basis of the recovery, despite rationing and higher transport costs, has, as Lord Greenwood points out, been the full utilisation of the new factory and bakeries completed in 1939. It appears that there has also been a substantial saving in labour costs as a result of the introduction of the cafeteria principle. The balance sheet shows a welcome improvement in the liquid position with the elimination of the bank overdraft of £488,261. There is still, however, a total of surplus current liabilities of £421,548 against £511,073. Net loans to subsidiaries are reduced from

£4,669 to £3,601. There is an increase in stocks from £114,448 to £123,376. The prospect for a further rise in gross receipts is good, but, as Lord Greenwood indicates, the full burden of EPT, undiminished by previous deficiencies carried forward, will have to be sustained in the current period. The £1 ordinary shares, at 19s. 3d. ex dividend, yield £5 3s. 11d. per cent.

First Kaffir Dividends

December dividends announced by the first three groups to issue statements—*Central Mining—Rand Mines*, *Union Corporation* and "*Johnnies*"—show that the process of adjustment to the last increase in Union taxation of profits is working itself out. In the "*Johnnies*" group, where cuts were made in every case last June, there is only one further reduction, that of Langlaagte from 4½d. to 3d., although it may be assumed that Van Ryn Deep will receive nothing against 6d. The *Union Corporation* group is fortunate in the possession of a number of mines not yet fully developed, so that in two cases, Grootvlei and Van Dyk, it has been possible to raise payments, and there is only one fresh reduction from 6s. 3d. to 6s. for Geduld. The

* Financial year ends June 30. N.D.—No declaration.

Central Mining—Rand Mines group, having made only three in June, has been forced to make a number now. Consolidated Main Reef, New Modder and Nourse suffer their first cut this year, while fresh reductions occur in two other cases. Thus, the dividend of Crown Mines, which was cut from 7s. 6d. to 7s. last June, is now reduced to 6s. and that of Geldenhuis Deep, which was cut by 6d. to 1s. 6d. last June, is now halved at 9d. Durban Deep alone shows a rise. As compared with twelve months before, of the 24 results two-thirds are down, while there are two increases and six unchanged. All mines of the "*Johnnies*" group show falls, while *Union Corporation* and *Central Mining* each show a rise, and the latter has maintained payments in five cases.

Industry and Trade

Small Retailers' Supply Scheme

The details of the scheme to distribute supplies to small retailers, which was outlined by the President of the Board of Trade on October 13th, were announced by him last Tuesday. The salient details are summarised, for each of the three trades concerned, in the accompanying table. Small traders have been defined for the three classes of goods covered; standard periods in which supplies are to be allocated and the percentage to be allocated are laid down. Turnover is the total turnover in all classes of goods in which a retailer deals, in as many branches as he may have. The varying percentages are governed by the standard periods chosen and by the changes in population in the different areas since the standard period. The small shop-

	Clothing	Pottery	Hollow-ware
Definition of small retailer: maximum turnover in standard period:	£5,000.	£3,000.	£2,500.
Standard period:	Jan.-Dec., 1939.	Dec., 1940, to Nov., 1941.	June, 1939, to May, 1940.
Operating period:	Quarterly.	Quarterly.	Four-monthly.
Types of goods covered:	Clothing (excluding footwear and millinery), household drapery, piece-goods and haberdashery.	Utility domestic pottery made of earthenware, china, jet and rockingham, and stoneware.	Domestic cooking utensils (included in British Standard Schedules BS/BOT 11-15), buckets and dustbins. Not hardware.
Percentage supplies, according to area:	50-100%.	80-120%.	40-60%.

keeper will be entitled to receive, as a minimum, the relevant percentage of his purchases from those wholesalers from whom he obtained his supplies in the standard period. Where rationed goods are concerned—in the case of clothing—supplies are dependent on the requisite number of coupons being supplied, but no guarantee is given that a greater number of coupons would be honoured. No compulsion is put on the individual retailer to participate; if he wishes to do so he must inform his supplier by January 31st next. Pressure will be brought to bear on wholesalers who do not fulfil their obligations. A trader may transfer his quota to another trader, provided their combined turnover in the standard year does not exceed the maximum. The scheme is to operate from January 1, 1943, and the three committees which produced the reports remain in being to administer the schemes. A criticism of the scheme in relation to retail trade as a whole appears on page 759.

* * *

Coal Output

The output of coal was imperceptibly larger in the fifth of the four-weekly periods for which figures have been published. During the bonus period ended November 28th, the output of saleable coal averaged 4,126,500 tons a week, only 2,000 tons a week more than the previous month, and 70,000 tons less than the corresponding period of 1941. Standard tonnages were exceeded by eight districts, which qualified for bonuses ranging from 3d. to 1s. 9d. per shift. In the first bonus period eight districts qualified, and in the second, twelve. The number of miners to receive the bonus was 230,500 in November, compared with 190,000 in the

previous period. The Minister of Fuel and Power admitted that output could be higher than it is. Standard tonnages, by definition, should be well within the reach of the miners. The Regional Controller for Fuel and Power in Scotland has reviewed the coal position in his region, and has reached the conclusion that output could be 52,500 tons greater than it is. In fact, the only district in Scotland which has exceeded its target is Fife and Clackmannan. Lanarkshire's output was as much as 5.1 per cent below its target in November. The Government's coal policy is discussed on page 759.

* * *

Spreading Building Contracts

According to a Press notice issued by the Ministry of Works and Planning last month, "the policy of the Government to spread the available work in the building programme among as many suitable firms as possible, has been extended in recent months." The measures adopted to this end include restrictions on the total load which individual contractors may carry, provision for compulsory subcontracting, the grouping of firms to enable the smaller concerns to undertake Government contracts, and consultation in the preparation of tender lists. In so far as these arrangements avoid hold-ups in production by a more even distribution of work, they may be of advantage. But if they are mainly designed to maintain in business some of the smaller concerns whose productivity is lower than that of the larger ones, they are most unfortunate. The building and of Britain's able-bodied male labour; in July last year the total number of operatives employed still exceeded 1,000,000. It would be regrettable, indeed, if, at this stage in the war, measures were taken which kept the labour force in building above the minimum number.

Accident Prevention

In the article on fire prevention which appeared in *The Economist* of October 31st, reference was made to the decision of the Fire Offices' Committee—the association of companies transacting fire insurance on tariff lines—to launch a nation-wide publicity campaign to reduce the heavy burden of waste by ordinary fires, in large degree the result of plain human carelessness. Mr Hinshelwood, the chairman of the committee, has described this feature of wartime economy as "a national reproach." No less a reproach is the serious wastage of man—and woman—power occasioned by accidents of all kinds: not only accidents at work, but arising also on the roads and—very important but often overlooked—in the home. In the prevention of accidents the human factor is perhaps even more vital than it is in the case of fires, and immense benefit can result from sound educational work. In the sphere of black-out accidents an excellent series of advertisements has, indeed, been appearing for some time past, and cannot have failed to help in keeping these particular accidents within bounds. But the accident departments of insurance offices must possess in their dossiers a vast quantity of valuable information concerning the causes of accidents of all kinds, and would be able by well-judged publicity to inculcate safety habits in countless different ways.

* * *

Unemployment in November

For the first time since the regular publication of the Ministry of Labour's unemployment statistics began in 1921, the total numbers registered at employment exchanges was below 100,000. The actual number was 95,442 on November 16th. In October the total was 101,080. The drop of 5,538 was almost entirely due to a fall in the numbers of boys, women and girls wholly unemployed.

REGISTERED UNEMPLOYMENT IN GREAT BRITAIN			
	Wholly Unemployed	Temporarily Stopped	Persons Normally in Casual Employment
Oct. 12, 1942			
Men	50,661		
Boys	10,108	1,355	2,742
Women	25,273	2	4
Girls	9,975	806	120
		33	1
Total	96,017		
Nov. 16, 1942			
Men	50,803	2,196	2,867
Boys	8,348	1,347	2,588
Women	23,488	12	4
Girls	8,023	652	147
		29	1
Total	90,662		
		2,040	2,740

Changes in other categories were negligible, as can be seen from the accompanying table. The number of women now serving in the Forces and employed in full-time work is reliably estimated to be approaching seven millions. The extent of the Ministry of Labour's success in mobilising women may be gauged by the fact that the number of women aged 14 to 64 who were insured against unemployment in mid-1939 was about four and a quarter million.

* * *

Railway Workers Wages Increase

The Railway Staff National Tribunal announced its decision to raise wages on December 11th, to take effect retrospectively from June 24th. Adult male members of the railways' staff will benefit by 5s. a week; adult female staff by 3s. 9d.; junior male staff by 2s. 6d.; and junior female staff by 1s. 9d. Claims for an increase of 10s. a week, or £26 a year, were originally made jointly by the National Union of Railwaymen and the Railway Clerks' Association. When the Railway Executive Committee made its counter offer of 4s. a week for men and 3s. for women to the NUR, the claim was pressed to arbitration. The RCA accepted the companies' offer of £10 a year for men, £5 a year for juniors, 3s. a week to women, and 1s. 6d. to young women. Nevertheless, under the Tribunal's award, the RCA is to have its increases raised to the level of the NUR award.

COMPANY MEETINGS

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS)

COLONIES' GREAT EFFORT

SIR JOHN CAULCUTT'S STATEMENT

The annual general meeting of Barclays Bank (Dominion, Colonial and Overseas) will be held in London on the 21st instant. The following is the statement by the chairman (Sir John Caulcutt, K.C.M.G.) on the report and accounts for the year ended September 30, 1942:—

Turning first of all to the balance-sheet, a record figure is again shown for current and deposit accounts at approximately £191,000,000.

Acceptances and other liabilities on account of customers, at £13,000,000, show a further considerable expansion.

On the assets side, the balance-sheet again shows a strong liquid position, and the cash in hand and at bankers and gold bullion is again in excess of 30 per cent. of the liabilities.

The demand for advances has been on a decreasing scale, and the bank's holdings of investments have been substantially increased. The market value of the investments is in excess of the figure shown in the balance-sheet.

PROFIT AND LOSS ACCOUNT

Turning now to the profit and loss account, the net profit for the year, after making the usual provisions for taxation and for bad and doubtful debts and contingencies, amounted to £419,611, to which must be added £196,470 brought forward from 1941, bringing the amount for appropriation up to £616,081. Of this amount £200,000 has been transferred to the reserve fund, and it is proposed to pay a final dividend of 4 per cent. (actual) on the cumulative preference stock and of 3½ per cent. (actual) on the "A" stock and on the "B" shares, subject to the deduction in all cases of income-tax at 8s. 3d. in the £ after allowing for relief in respect of Dominion income-tax.

We have also made a special allocation of £50,000 for deferred repairs to premises, leaving to be carried forward £190,930.

The reserve fund has been further increased to a total of £3,100,000 by the transfer of £300,000 from our contingency account. These transfers to the published reserve are identical in amount with the transfers made last year.

OVERSEAS SERVICES MAINTAINED

I am glad to say that notwithstanding the existing difficulties of communication, the efficiency of the control and co-ordination of our widespread services overseas has been maintained. Some evidence of this is, I think, afforded by the fact that we are able to present our audited balance-sheet within less than three months of the close of our financial year. Our staff have surmounted difficulties and solved many problems—some of them of an unprecedented nature. As an example I would mention that last summer when the position in Egypt was critical, an immense burden was thrown on the staffs of our branches there. Their loyalty and efficiency were of exceptional importance at that time, and the heavier the strain became the greater response it evoked from them. The highest credit is due to them for the way in which they carried on in that critical hour.

I think we are entitled to feel that this bank throughout the year has become increasingly useful to the common cause, largely due to the fact that many of our branches happen to be so placed as to render them of particular value to the different Governments concerned.

They have also been well placed to serve the requirements of our Naval, Military

and Royal Air Force authorities and personnel, as well as of important contingents of the armed forces of the United Nations. I have every reason to believe that the services we have been able to render are widely appreciated.

POSITION IN THE COLONIES

It is interesting to turn for a moment to the general Colonial picture.

The inter-war period had seen a steady increase in the volume of Colonial products, although the prices of some of them had been subjected to violent fluctuations. In regard to those particular commodities, such as rubber, tin, sugar and tea, which were controlled by regulation schemes, the producers had a more fortunate experience. The underlying reasons for the steady increase in the volume of production can, I think, be looked for in the general political and economic system, which gave wide scope to enterprise, British and non-British alike. We should do well also to remember the scientific advisers, many of whom have been provided by Government agencies, and who have improved planting material, advised on planting methods, and assisted in orderly marketing of products. There was also much indirect improvement through the suppression of disease and a general betterment in the conditions affecting health.

DISLOCATION OF MARKETS

The general dislocation and loss of markets which occurred through the first period of this war were met by schemes for bulk purchases of staple crops, such as cocoa, sugar and tea, these arrangements being somewhat akin to the vast bulk purchasing arrangements entered into by the British and Dominion Governments, covering the entire crops of such articles as wheat, wool and other vital necessities. All Colonial Governments were urged to stimulate the production of food, largely in order to save shipping, with the result that production rapidly increased. After the fall of France, a greatly increased demand arose for certain Colonial products, synchronising with increased difficulties for producers of other commodities, to meet which, schemes were devised to help the growers of such crops as citrus fruits and bananas. All these changes have naturally had their reactions on the business of the bank. In normal times the finance of the movement and shipment of crops and the handling of the exchange operations arising therefrom are important features of its activities. In regard to many Colonial products the course of business has been altered, but the use of banking machinery is still required, and here again the bank has been able to be of service. It has also played a full part in the schemes to assist growers of crops who have been faced with special difficulties arising from war conditions.

As a consequence of the entry of Japan into the war and the subsequent loss of some of the areas producing materials of vital importance for war purposes, great efforts have been made to develop alternative sources of supply in other parts of the Colonial Empire.

The revenues of the Colonies which we serve have been buoyant during the war period. Large official contributions have been made to the Government here for war expenditure, but in the summer of 1940, at the request of His Majesty's Government, this policy was altered and contributions gave place to loans without interest, in order that the money might be available when required in the various Colonies themselves for reconstruction work.

THE NATIONAL BANK OF SCOTLAND, LIMITED

RECORD ASSETS FIGURE

DEPUTY GOVERNOR'S ADDRESS

The one hundred and seventeenth annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 17th instant, in the bank's head office, Colonel Sir Donald W. Cameron of Lochiel, K.T., C.M.G., the deputy governor of the bank, presiding.

The deputy governor, in the course of his speech, said: It will be observed that the profits at £257,000 with the balance of £92,000 brought forward, together £349,000, provide ample funds for the dividends, which absorb £98,000 net, while allocations amounting to no less than £160,000 have been made as detailed in the report—including £85,000 credited to contingent fund and £50,000 to the staff pension fund—a balance of £91,000 being carried forward to the current year. All bad and doubtful debts have been fully provided for, as well as taxation, rebate and interest.

LARGE INCREASE IN TOTAL ASSETS

The total assets of the bank have reached a fresh high level at £68,676,000, an increase of practically £6,000,000 since the date of the last annual balance-sheet, which itself showed an increase of £10,000,000 over the preceding year. These figures, while of course materially affected by the largely increased circulation of money owing to war expenditure, afford also striking evidence of the growth and extension of the bank's connections. The increased resources at the disposal of the bank have largely been utilised in financing the country's war effort in direct lending to the Government through the various War Bond issues, and Treasury deposit receipts and bills.

TRADE AND INDUSTRY

The industrial organisation and the productive power of the country being harnessed to the supreme task of furnishing the munitions of war, there is neither occasion nor need for the customary review of commercial and trading conditions. It is none the less desirable, however, to give consideration to possible post-war problems with which the country may be faced. In Scotland in past decades we have been largely dependent upon certain very important industries, coal, iron and steel, and shipbuilding, and while it is essential to the welfare of the country that these be maintained in the highest efficiency and with the maximum of production we would do well to review carefully the possibilities of subsidiary or smaller industries so that employment might be rather better spread than hitherto and some measure of insurance against major depressions achieved by a greater variety of production. That this feeling is being more and more widely entertained is shown by the formation of the Council on Industry and by the consideration being wisely given by the present Secretary of State for Scotland, and former holders of that office, as to the means by which in the post-war period new industries might be encouraged in or attracted to Scotland. The directors of this bank are in wholehearted sympathy with any well-conceived measures towards achieving this desirable aim and will be found willing to give all the support possible.

AGRICULTURAL AND FISHING

The farming community in Scotland has responded nobly to the call for greater production, and despite the difficulties caused by shortage of experienced and skilled labour the farmers have "delivered the goods" and thereby contributed very materially to the furtherance of our cause. The experience of a second world war demonstrating again the absolutely vital factor of our home production of foodstuffs

must surely have convinced the most indifferent of the folly of ever again allowing agriculture to suffer from unfair treatment and neglect. Even now one class, the hill sheep farmer, is still battling with adverse conditions, which tend to become worse rather than better, and it is much to be desired that the Commission, at present deliberating on this problem will be able to suggest measures for putting this important branch of the industry at long last on a proper footing.

I make no apology for again referring to the fishing industry. Results as disastrous as those falling upon the hill sheep farmer were the lot of Scottish fishermen in the years before the war, and whatever may be post-war conditions, they have an unassailable claim to a square deal from the country when peace returns. The invaluable services rendered to the nation in war and the most perilous hazards unflinchingly faced entitle them to the utmost consideration, while the welfare of the country as a whole in normal times and its safety in time of war depend largely on the preservation of their calling of those hardy sons of our shores. Plans should be made now to meet the post-war needs of the Scottish fishing industry for new vessels, gear, etc., and for securing by means of assured markets and equitable freight rates the prosperity of the men and women of an industry to which the nation owes so much.

NEW HEAD OFFICE

In conclusion I would refer to an important milestone in the bank's long history, namely, the opening on June 22nd last of this handsome and commodious though not wholly completed new head office erected on the old site in St. Andrew Square. I need scarcely emphasise the benefits to the head office staff provided by a building so spacious, well-lighted and air-conditioned, and at the same time so well designed to meet the needs of the bank's customers and provide for future developments.

THE RESOLUTION

The deputy governor concluded by moving the adoption of the report and the payment of dividends at the rate of 16 per cent. per annum, less tax, on the consolidated capital stock and of 5 per cent. per annum, less tax, on the "A" stock.

The resolution was carried.

The governor, deputy governor, extraordinary and retiring ordinary directors were re-elected and the auditors reappointed for the ensuing year.

IMPERIAL SMELTING CORPORATION, LIMITED

DIVIDEND OF 4 PER CENT. MAINTAINED

The thirteenth annual general meeting of Imperial Smelting Corporation, Limited, was held, on the 17th instant, in London.

The following are extracts from the statement by the chairman (Mr. J. R. Govett) circulated with the report and accounts:—After providing for taxation, the profit for the year amounted to £235,895. The preference dividend for the year absorbed £134,538, leaving £101,357, to which must be added the amount brought forward, namely, £53,871, giving a balance available for distribution of £155,228. Your directors again recommend a dividend of 4 per cent. on the ordinary shares and, after payment of this amount, there will be a balance of £53,730 to be carried forward.

INFLUENCE OF E.P.T.

In dealing the profits of the year, it will be unnecessary for me to remind shareholders of the levelling influence of the excess profits tax. However, I must again draw attention to the annual provisions which are inadmissible in computing the group's liability to excess profits tax and income tax and accordingly reduce the profits available for distribution. The provisions to which I refer are War

Damage Contributions and premiums, reserves for debenture redemption of subsidiaries, welfare reserves, etc.

The provisions we have made in this year's accounts, together with the balance of tax reserves, are more than sufficient to meet the taxation liabilities on all profits up to and including those to June 30, 1942, although income tax on these does not become payable until January, 1944.

The Corporation and its subsidiary companies have again been most fully employed throughout the year, and our thanks are due to all those in our organisation, both staff and employees, who have contributed so loyally and willingly to the success of our operations.

INTEREST IN FERTILIZER TRADE

I must refer to the change that has taken place in regard to this company's interests in the fertilizer industry, particulars of which were published in the Press on November 4th. It will be remembered that in 1934 in co-operation with Fisons, Limited, we formed National Fertilisers, Limited, for the purpose of manufacturing and selling fertilisers in the West of England. Preference shares to the amount of £500,000 were sold to the public, and the ordinary share capital was subscribed jointly by Fisons, Limited, and ourselves. The preference shares were guaranteed as to capital and dividend jointly and severally by Fisons, Limited, and the Imperial Smelting Corporation.

Since 1934 the business of National Fertilisers has very largely increased, and in order to obtain the full benefit of the association with Fisons, Limited, an agreement has been made whereby we have exchanged our holding of National Fertilisers ordinary shares for 160,000 ordinary shares in Fisons, Limited. These shares will carry certain dividend restrictions for a period of four years, but, thereafter, will become and rank *pari passu* with the existing ordinary stock of Fisons, Limited. The report was unanimously adopted.

ELECTRIC & MUSICAL INDUSTRIES LIMITED

ANNUAL GENERAL MEETING

17th December, 1942

Accounts for year ended 30th September, 1942.

Profit for the financial year ended 30th September, 1942, after providing for Taxation and other contingencies arising from War conditions is	£ 153,560
Brought forward from last year	194,830
	348,390
Out of which has to be provided net Preference Dividend paid and accrued to 30th September, 1942, and a dividend of 6 per cent. less tax on the Ordinary Stock authorised at the annual general meeting	100,886
Leaving to be carried forward	£247,504

Mr. Alfred Clark (Chairman) presiding, stated that the omission of the usual speech was due solely to war-time conditions. The proceedings were purely formal and the recommendations of the Directors were unanimously adopted including provision for the payment of a dividend of 6 per cent. less tax on the Ordinary Stock.

The output of the factories continued at a satisfactory level.

The Company has made reserves to meet any losses so far incurred

in its foreign investments and while inventories have been conservatively valued, depreciation of the plant has been fully provided.

The fact that creditors have increased to a much smaller extent than stocks on hand, is evidence of the sound financial position of the Company.

The Chairman informed stockholders that they have good reason to be satisfied with the spirit and devotion to duty of employees of all grades.

THE GRAMOPHONE COMPANY LIMITED.

COLUMBIA GRAPHOPHONE COMPANY LIMITED.

THE MARCONIPHONE COMPANY LIMITED.

RUDGE, WHITWORTH LIMITED.

THE COMMERCIAL BANK OF SCOTLAND, LIMITED

SATISFACTORY RESULTS

THE EARL OF MAR AND KELLIE'S SPEECH

The annual meeting of the shareholders of the Commercial Bank of Scotland, Limited, was held at Edinburgh on the 17th instant. The Earl of Mar and Kellie (governor of the bank) presided.

Before commencing the business of the meeting the governor made suitable reference to the loss which the bank had sustained during the year by the deaths of Mr. H. Wilfred Mackenzie, one of the extraordinary directors, and Mr. Theodore E. Salvesen, a member of the board of ordinary directors.

RECORD OF BANK'S PROGRESS

In submitting the report, the governor said:

If I may be excused commencing on a personal note, I think you will understand my feeling of satisfaction in presiding at this annual general meeting when I tell you that it is exactly twenty-one years to a day since the shareholders did me the honour of electing me governor of the bank after I had occupied the office of deputy-governor for a period of ten years. My connection with the bank, however, is of much earlier date, as the shareholders specially honoured me, after the death of my father, who was deputy-governor, by electing me an extraordinary director. That was in 1889, so that for the long period of fifty-three years I have been closely associated with this great institution. When I became an extraordinary director, the balance sheet figures aggregated £13,000,000; by 1911, when I became deputy-governor, the figure had increased to £18,000,000; on my election to the governorship in 1921 the figure was £52,000,000, and to-day I have the satisfaction of submitting for your consideration a balance sheet exhibiting a total of no less than £83,000,000. These figures speak for themselves and indicate a measure of progress in which I think we may justly take satisfaction.

PROFIT AND ALLOCATIONS

As to this year's results, high taxation and new and increased costs of operation have left their mark upon the profit and loss account. The allowances granted to members of the staff on service now aggregate a very substantial sum, and the special wartime allowances in augmentation of salary granted to the staff still with us is a further addition to our costs. In all the circumstances, therefore, the profit of £286,275 for the year, or approximately £12,000 less than the previous year, may, I think, be regarded as satisfactory.

Out of the profit the directors have allocated £50,000 to contingency account, £20,000 to heritable property accounts, £40,000 as an addition to the funds of the pension trust, and £10,000 to increase the widows' and orphans' fund.

Interim dividends on the "A" shares at the rate of 7½ per cent. and on the "B" shares of 5 per cent., less income tax, were paid in July last, and it is now proposed that a further distribution of 7½ per cent. on the "A" shares (making 15 per cent. for the year) and 5 per cent. on the "B" shares (making 10 per cent. for the year), both subject to income tax, be approved. After payment of these dividends and allocations the carry forward to next year's account amounts to £75,113, or approximately £10,000 more than the amount brought forward from the previous year.

BALANCE SHEET ITEMS—LIABILITIES

Turning to the balance sheet, our notes in circulation have increased in the year

by rather over £1,700,000 to the figure of £7,764,000, the largest figure ever recorded by a Scottish bank. While on the subject of note circulation it may not be inappropriate once more to point out the desirability of economy in the use of currency, particularly in times such as the present, when increased employment necessitates a larger circulation. No advantage is gained by the hoarding of notes which might be used for the making of a bank deposit or the taking up of a Government security, and a definite risk is taken through possible loss or destruction of the notes.

Our deposits have increased by rather over £4,000,000, and stand at the record figure of £68,114,000.

Acceptances and other engagements on account of customers at £1,688,000, are rather less than the previous year and under war conditions it is unlikely that this figure will be materially exceeded.

ASSETS

Turning to the assets side, you will observe that the first four items consisting of cash and monies readily available, including £10,000,000 in the form of British Government Treasury Deposit Receipts, together amount to the sum of £27,504,000. Our investments, which have increased by approximately £5,000,000 to £43,000,000, are almost entirely in the form of British Government securities. These are carefully selected as to dates of maturity, and as stated in the report, the market value at the date of the balance was greater than the amounts appearing in the balance-sheet.

Bill discounted and loans and advances together amount to £9,627,000, or close upon half a million pounds less than the previous year. Our experience of a reduced loan and advance item during the war period, which has been common to most banks, is incidental to the circumstances of war-time finance. The liquidity of our position is demonstrated by this spontaneous reduction, which, however, obviously has an adverse effect upon our profit and loss account. The reduction in our advances has taken place notwithstanding a liberal attitude towards facilities required by customers in connection with contracts for Government Departments. It can be seen that we are in a very favourable position to meet the demands of our trading customers when, as we hope may be the case at no distant date, they can again profitably utilise advance facilities.

Our property accounts show only minor changes in the year.

BANK'S LARGE CONTRIBUTIONS TO GOVERNMENT LOANS

In every way we have endeavoured to play our part in the war effort, and you may be interested to know that our direct contributions in new money to the Government by way of loan in one form or another now amount to almost £29,000,000, and on behalf of customers, loan applications have passed through our hands aggregating £25,000,000, of which almost £11,000,000 represents small savings invested in National Savings Certificates or Bonds of small denomination, giving a grand total of approximately £54,000,000.

STAFF AND THE WAR

Out of a total full-time pre-war staff of approximately 1,400, 760 have gone on active service, and we are endeavouring so to order our affairs that further releases of

staff may be made possible. Of the men on Service, 21 have lost their lives, three are missing, and 15 are prisoners of war, and I feel sure you will desire me to express sincere sympathy to all relatives suffering loss or anxiety.

Up to the present it has been found necessary to close for the time being 40 full-time branches and 43 part-time branches, and the management have been faced with many difficulties of organisation to provide for the carrying on of the business with a minimum of disturbance to our customers.

It is proposed that I be re-elected governor of the bank, that Lord Milne be re-elected deputy governor, and that the extraordinary directors whose names appear on the list be re-elected. During the year the directors nominated Mr. Robert Y. Weir and Mr. Noel G. Salvesen to fill the vacancies on the board, and their appointment falls to be confirmed by the shareholders. It is also proposed that Sir Gilbert Archer, who, as senior director, retires at this time, be re-elected. Mr. Macfarlan and Mr. Annan, the auditors, being eligible, offer themselves for reappointment.

The Governor then moved the adoption of the report, and the motion having been seconded by Mr. Wood, was put to the meeting and carried.

VOTE OF THANKS TO DIRECTORS AND STAFF

At the close of the meeting on the motion of Sir George Morton, K.C., a vote of thanks was accorded to the directors and the staff for their services during the year and acknowledgment was made by Mr. Inglis on behalf of the directors and by Mr. Erskine, the general manager, on behalf of the staff.

RHOKANA CORPORATION, LIMITED

DIVIDEND OF 15 PER CENT.

The twentieth annual ordinary general meeting of Rhokana Corporation, Limited, was held, on the 16th instant, in London, the Rt. Hon. The Lord Geddes, G.C.M.G., K.C.B. (the chairman), presiding.

The following is an extract from the chairman's statement circulated with the report and accounts: Large capital expenditure has been incurred during the year to provide increased capacity for output to meet war demands. The expenditure has been met entirely from the Corporation's cash resources without assistance from the Government and without borrowing. The increasing output has of necessity compelled a further absorption of cash into working capital, represented by larger stocks of copper and cobalt as well as by general stocks and stores. The increases in unit cost due to war conditions have also necessarily increased the amount of working capital required. Only the actual amount received from the Ministry of Supply in respect of increased cost claims for the year ended June 30, 1942, has been included in the trading profit of £1,791,125. There is a comparatively small amount outstanding in respect of increased cost claims for that year which are under discussion with the Ministry.

Last year no dividend was declared by Mufukira Copper Mines, Limited, but this year a dividend of 2s. 3d. per share, which is the same amount as was paid for the year ended June 30, 1940, has been declared, and the amount received by this Corporation, namely £177,668, has been placed to profit and loss account. The directors recommend a dividend of 15 per cent. in respect of the year ended June 30, 1942, which compares with a rate of 30 per cent. for the previous year.

Throughout the year the largest possible amount of copper and cobalt has been produced and is still being produced, in spite of the many difficulties which have to be overcome.

The report was adopted.

GENERAL THEATRE CORPORATION. LIMITED

SUBSTANTIAL IMPROVEMENT

MR J. ARTHUR RANK'S VIEWS

The annual general meeting of the General Theatre Corporation, Limited, was held on the 15th instant, in London, Mr J. Arthur Rank, J.P. (the chairman), presiding.

The following is an extract from the chairman's statement circulated with the report and accounts:—

IMPROVED RESULTS

I am pleased to confirm the substantial improvement in our trading position fore-shadowed by your chairman at the last meeting. It will no doubt be remembered that the profits of the corporation fell to an extremely low level in the year ended March 31, 1941, and that this unfortunate experience was brought about by loss of earnings of the London Palladium, closed down in September, 1940, and by the Holborn Empire being put out of business about the same time. The latter theatre has since remained closed, and it is not likely to reopen before the end of the war.

In regard to the Palladium, it is gratifying to know that this theatre has regained the pre-eminent position it held for so many years in the class of entertainment in which it specialises. On the whole our music halls have done very well, and the earnings of cinemas have increased substantially.

THE DIVIDEND

I am pleased to say that the increased profits of the year covered by our accounts, and the satisfactory trend of subsequent business are such as to justify your directors in recommending the payment of a final dividend of 5 per cent., which, together with the interim payment of 4 per cent., will bring the dividend for the year on participating preferred ordinary shares up to 9 per cent.

On the other side of the balance-sheet, book values of our freehold and leasehold properties, including their contents, are stated separately, the figures being practically the same as last year. It will, therefore, be clear that no additional theatres have been acquired during the period and that increased earnings are not due to the provision of additional seating capacity. On the contrary, available seating capacity of the circuit throughout the year suffered somewhat by the loss for trading purposes of the Holborn Empire.

With a view towards the recovery of this deficiency in our West End situation, the corporation acquired a lease of the Prince of Wales Theatre. The effect of this acquisition upon the results of the year is unimportant since the theatre opened on our account with the radio success "Happidrome" in the last month of the financial year. War damage sustained during the year by the theatres of the corporation and its subsidiary companies is relatively small. In all cases of damage of this nature our position is protected by the lodging of claims under the Government scheme of insurance. We are unable to obtain information concerning a theatre property in Paris owned by a subsidiary company.

The restricted supply of labour and materials for such purposes has prevented the Corporation from carrying out its pre-war policy of theatre repairs and maintenance. It is, therefore, considered advisable to set aside out of profits the estimated cost of work of this nature which would have been carried out under normal conditions, but which must of necessity be postponed. Reserves for depreciation and amortisation of properties, including the special depreciation reserve created in 1939, have increased by the amount of £15,000 appropriated for the purpose.

The Corporation's interest in its sub-

siary companies, comprising shares, debentures, current and loan accounts, is grouped under its appropriate heading in the balance-sheet and is represented by a sum of £526,563. The reduction in book value of this asset is due largely to provision made in respect of a loss incurred by one of the subsidiary undertakings. In this connection it should be noted that profits of the year in excess of £7,000 attributable to the Corporation are retained in the books of our subsidiary undertakings.

In regard to the remaining assets, shares in associated company £15,000, cash in hands of trustees for debenture stockholders £27,490, stocks and stores £16,942, sundry debtors and payments in advance £30,521, and cash £46,179, there are, in most cases, fluctuations of a normal character brought about in the ordinary course of business.

GROWTH OF EARNINGS

The profit and loss account shows the earnings of the Corporation and its subsidiary companies as a whole at £409,399, after deducting losses, but before providing for management expenses and remuneration payable to the managers, depreciation, deferred repairs, interest on first and second mortgage debenture stocks of the Corporation, and taxation. At this level there is an increase over the previous year of £209,464. Charges made against profits of subsidiary undertakings are as follows: Depreciation of properties, plant and fixtures £17,826, against £7,137. Provision for deferred repairs—a new reserve—£4,350, and for taxation £28,107, against £8,772. War damage contributions have required £4,257 against £12,912. After deducting the total of these charges, £54,540, the group earnings are reduced to £354,859. Profits of subsidiary companies attributable to the Corporation's interest therein, retained in the accounts of the companies concerned, amount to £7,325, and the net proportion of losses applicable to outside shareholders is £104. This amount of £7,325, less £104, falls to be deducted before arriving at the net proportion of the earnings of the group, £347,638 thus made available to the Corporation, at which level there is an increase of £145,249, the corresponding figure for the previous year being £202,389.

CHARGES AGAINST PROFIT

Charges made against this sum of £347,638, which represents the profit of the Corporation, are as follows: Reimbursement to the managers of management expenses and remuneration at the fixed annual sum of £35,000. Interest on first and second mortgage debenture stocks for the full year £125,008, against £127,215. Depreciation of properties, plant and fixtures—including the special depreciation reserve of £20,000—£42,024, against £46,132. Provision for deferred repairs, a new reserve, £18,000. Provision for income-tax 1942/43 and national defence contribution, £104,009.

These charges and appropriations have reduced the available profit to £23,597. £4,726 brought forward from last year of adding the net amount of £4,470 credited to profit and loss account as a result of the transfer from general reserve, there is left a sum of £23,341 to meet the dividend of 9 per cent. on the participating preferred ordinary shares and to carry forward a balance of £4,591, against the debit balance of £4,726 brought in.

In regard to prospects for the year now current, estimated trading profits for the first six months show an increase which, after deduction of income-tax, amounts to approximately £15,000.

The report was adopted.

ANSELLS BREWERY, LIMITED

RECORD OUTPUT AGAIN

The 42nd ordinary general meeting of Ansell's Brewery, Limited, was held, in Birmingham, on Tuesday, December 15, 1942, Lieut-Colonel J. A. Fairhurst, T.D., D.L., J.P. (the chairman) presiding.

Profits (net) £547,818
Brought forward 252,543

Dividends on preference and ordinary stock (paid and to be paid) £367,500
To properties reserve 100,000
To general reserve 75,000
542,500
To be carried forward £257,861

POINTS FROM CHAIRMAN'S SPEECH

The period covered by the accounts is the third year of war, and our two breweries have worked throughout the year at full capacity turning out more beer than ever before.

This is due to the fact that the Government still recognises the advisability of maintaining the supply of beer with certain limitations. The value of this policy is apparent to those who are aware of the high pressure conditions under which the large majority of workers have to endure, and the part the National Beverage has played in providing a safety valve in relieving the tension which otherwise would have proved unbearable to many who, in spite of the high prices, persist in their demands.

I should, however, like to mention for your information that the sum collected and to be paid over by our group of companies in respect of the year to September 30, 1942, by way of Beer Duty and other forms of direct taxation exceeds £6,000,000. The quadrupling of the duty obviously is an important contributing factor in exciting the demand for higher wages by those who find themselves precluded, by reason of the price, from the enjoyment of their accustomed glass of beer.

Up to the present, although the Government have dictated the terms, brewers have been allowed to carry on their business in the best way they could; in this we have been fortunate and, I venture to say, the Government has been wise.

The problems connected with post-war planning and reconstruction are of serious moment to us. Two Government Committees known as the Scott and the Uthwatt Committees have dealt with certain aspects which concern our business, and a Home Office Committee is also sitting to consider particularly reconstruction relating to licensed premises.

I trust that their recommendations will not fetter brewers in their endeavour to provide the public with their legitimate desire to have attractive and well-conducted licensed houses, where convenient to the users.

INCREASED PROFIT

Last year it was predicted that the high cost of barley might, if other factors remained as they were, have resulted in a reduced gross profit.

Fortunately, however, by dint of strenuous application the Brewing Department has managed to squeeze out of our plant, already overworked, an increased output of beer, the revenue from which has more than compensated for the higher prices we had to pay for a substantial proportion of our requirements of barley and malt, and has made possible the increased profit.

This year the prospects of the barley crop are much better both as regards quantity and quality, and the Government has controlled the maximum price; but the labour question is more acute, so that it is very doubtful under these conditions whether or not the very large output can be sustained.

THE BURMAH OIL COMPANY, LIMITED

POSITION IN BURMA

CHAIRMAN'S STATEMENT

The adjourned fortieth annual general meeting of the members of the Burmah Oil Company, Limited, was held, on the 17th instant, in the Merchants' Hall, 30, George Square, Glasgow.

In the absence of Sir John T. Cargill, Bart., chairman of the company, Mr Robert I. Watson, managing director, presided.

The following statement by the chairman was circulated with the directors' report and accounts:—

It is unnecessary to look further than to the universal experience of the war's delaying effects on overseas communications, and to the war's extension into Burma itself for explanation of the belated completion and submission of the accounts for 1941 and for the adjournment of the annual general meeting recently held to comply with statutory provisions.

The rapidity with which the enemy brought war to, and overran, Burma unfortunately involved the loss, inter alia, of records of trading transactions, in respect of the closing months of 1941, by the company's subsidiaries operating in Burma and, as will be seen from the note on the revenue side of the profit and loss account, some estimating of these has been unavoidable which, it is believed, has been done on a conservative basis.

YEAR'S RESULTS

Results come fully up to expectations ventured by me last year and, but for the eclipse, temporary only we hope and believe, of the fortunes of Burma, they clearly would have justified as generous a distribution to ordinary stockholders as for 1940.

Lest these be of possible value to the enemy, the public interest continues to require discretion, not least by chairmen of such public companies as ours in remarks and explanations normally expected by stockholders. Subject to this, however, I shall do my best to inform you as briefly but as completely as possible on the salient facts affecting the present position and the future prospects of your Burma interests, and generally.

FINE WORK OF STAFF IN BURMA

The story of the denial to the enemy, under official instructions and supervision and in accordance with an officially pre-conceived plan, of all the assets of our fully owned subsidiaries operating in Burma, as it was so effectively carried out by our own men under conditions of great personal risk and unhappily involving some loss of life will, when it can be fully told, reveal determination, courage, and capacity of the highest degree. All stood to their tasks to the distasteful but vital end of "Denial"

and indeed essential production and "Denial" itself went on simultaneously almost up to the last. The "meritorious service" of all who took part has been recognised in "Mentions" of their leaders in a recent *Gazette*. Then nearly all these men had later to face great hardships and suffer serious illness in the arduous "trek" out of Burma into India, and our men in the Army, too, have shared, six fatally, in the rigours of the campaigns in Burma or elsewhere, several receiving decorations and "Mentions."

The company's appreciation of these splendid services has already been conveyed to survivors and, together with expressions of condolence and sympathy, to the relatives of those who have fallen in their performance.

Alternative employment of war time importance has been found for all our men who came out of Burma free and able to take it, and the way to retirement has been eased for the few whose employable time in an eastern climate was in any case nearing its end.

POSITION OF BURMA SUBSIDIARY COMPANIES

While our Burma subsidiary companies naturally look for restoration of their assets lost under "Denial," one cannot say when this may be or the conditions to which they will return. It is imperative, therefore, that we should all understand that, even assuming the best priority in respect of manufacture and shipment of the plant and equipment necessary (and we are closely engaged on the study of all this now), rehabilitation to pre-Denial stature, if that is found practicable at all, can only be gradual and may extend over a considerable time. The unhappy fact must therefore be faced that, savings in depreciation, wages, and in other ways, notwithstanding and even allowing for the fact that over the next two years, and masking the stabilised position which will later be realised, there should be something coming to them from closing off and bringing into their trading returns unsold stocks held by them outside Burma together with taxation and/or other balances, trading profits will be confined to what oil products purchased for the steeply rationed outlet available to them in India may yield and must thus inevitably show a heavy decline on past experience which will continue until rehabilitation is possible and is gradually completed to its maximum economic potential.

From similar causes, and we would hope also only temporarily, there have been setbacks to some of the sources of our investment income, but here there would appear to be some grounds for anticipating at least compensating flows from others.

BOARD'S SOUND DIVIDEND POLICY

Your directors had all these considerations prominently before them when they decided, despite them, that it would be unreasonable in the face of 1941 results and the strength of your balance-sheet to restrict ordinary stockholders to the first interim declaration of 5 per cent., less tax, in November last year. Their recent declaration of a second interim of 7½ per cent., less tax, was, however, coupled in the circumstances with the recommendation that this should be the final for the year, and I am sure that you will accept this as a reasonable compromise between earnings distributed and those retained.

VALUE OF INTERESTS IN BURMA

As the report preceding this statement tells you, our book value of our interests in Burma is estimated at some £3,400,000. Let there be no mistake about the significance of this figure or misunderstanding as to the views of our subsidiary Burma operating companies on where the cost of rehabilitation should finally lie. The figure represents neither the actual monies put into these Burma properties nor what their rehabilitation is likely to cost; either would be several times this amount. All it represents is our own book cost of our interests in Burma which we have thought it well meantime to set off by the creation of a specific reserve by transfers of this amount from our field expenditure equalisation and fire and marine insurance reserves at the expense of the elimination of the former and the reduction of the amount at the credit of the latter to £256,930. The wholly owned subsidiary companies' "balance of trading" in your profit and loss account is after meeting their administration costs and providing £168,003 for depreciation and we ourselves have added £650,000 to our general and £150,000 to our taxation reserves out of 1941 profits bringing these reserves up to £2,000,000 and £1,250,000 respectively while increasing the carry forward, at £251,920, by £15,384.

THE FUTURE

Among the many uncertainties surrounding the future there is unhappily the certainty that earnings will be considerably prejudiced for an indeterminate period by what has happened in Burma. Ordinary stockholders should, therefore, in this period draw no other conclusion from interim dividend declarations, or from the absence of any, than that the board has respectively seen its way clear to the declaration or has felt that the final results of the particular year must be awaited before making any.

The report and accounts were unanimously adopted.

The second interim dividend of 7½ per cent. (1s. 6d. per £1 unit) paid on September 28, 1942, was confirmed as the final dividend on the ordinary stock for the year 1941.

Mr W. A. Gray and Sir Kenneth B. Harper, the directors retiring by rotation, were unanimously re-elected, and the auditors, Messrs Brown, Fleming & Murray, were reappointed for the current year.

Forward Look

THE year is dying; and so it seems are the old inflexible doctrines of State Socialism. Mr Morrison's week-end speech at Swindon, which was in some ways the best speech any Minister has yet made on the future of economic policy, was doubly important. Personally, it was a challenge. While Sir Stafford Cripps, as Minister of Aircraft Production, has taken over Mr Morrison's old 1940 slogan to war workers of "Go to it," Mr Morrison was intent to prove in his speech that the departure of Sir Stafford from the War Cabinet has not left a gap; to show that he, Mr Morrison, has the vision and the time, despite his double departmental duties, to look broadly round him at the nation's problems and to scan the scene ahead. Politically, the speech was an even more significant portent. The old Socialist cry of "the nationalisation of the means of production, distribution and exchange" is apparently outmoded. Mr Morrison's plea for a balance between public and private enterprise in reconstruction was only different from the programme supported by, say, Mr Lyttelton in its different starting point. Mr Morrison laid down three principles for future policy: the development, by the state and by its citizens, of "a spirit of effort, initiative and adventure" in the making of a "preventive and posi-

tive" policy which will render the task of maintaining minimum standards itself a secondary, though essential, consideration; the replacement of fear by faith as the nation's taskmaster; and the ruthless abolition of restriction and monopoly in the building up of the nation's wealth. Here was Mr Lyttelton's plea for more of both public and private enterprise in another and fuller version. The war against restriction, to which some Ministers at least from all parties have now pledged themselves, will be as important in its own way as the present war against the Axis. There is a strange superstition among the reformers of today, struck by the need to replace scarcity by plenty in the communal interest, that the new vistas of a truly social policy in production and consumption have discredited or at least outdated the views of the so-called classical economists. Nothing could be more wrong. People in these days do not read Adam Smith; he is only a garbled folk memory. If they did read him, they would realise that the interests of the consumer and the maximum output of goods and services from all resources were the beginning and end of his thesis. A hundred and sixty-six years before Mr Morrison laid down that "we must turn our backs for ever on schemes of restriction, of goods or of labour," Adam

THE CHARTERED BANK OF INDIA AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL (PAID-UP) - £3,000,000
RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST
AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches & 30 Sub-Agencies
The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application. The Bank also undertakes Trusteeships and Executorships.

Smith said the same. It is to re-establish the conditions in which the market worked for the greatest happiness of the greatest number that the skill and ingenuity of the modern planners is now called for. First among the objectives of the nineteen forties and fifties is to place an effective restraint upon the chronic tendency of producers and traders, which Adam Smith described so inimitably, to band together in their own special interests, and so to deprive the consumer and citizen of the full flow of the goods and services he wants and needs at prices which he can afford to pay.

The means to provide this restraint have changed with the environment and history. When Mr Morrison argues that enterprise need not be private in order to be enterprise, he can point westward to the Tennessee Valley and eastward to the Dnieper Dam. But Mr Morrison agrees, it seems, equally with the view that enterprise need not be public to be socially valuable and progressive. Social control, he says, must take many forms. There is no overriding dogma, no universal panacea. Posts and telegraphs may be state-run; industrial monopolies may be best conducted by public corporations; the vast range of industries and activities, including even the apparently highly competitive business of retail trade, which come near to monopolies in effect because of mergers and trade agreements, must defer to "public guidance and public accountability"; and, outside these categories, there is the vast and fruitful field of individual enterprise, the home of the pioneer, the risk-taker and the small and medium-sized undertaking, where all that the community need call for is "proper business practice and decent working conditions."

Thus the ambit of social control may be unlimited; but the kind and degree of state interference will be infinitely varied. Its extent will depend upon the essentiality of the goods and services concerned—for the state's responsibility to guarantee a national minimum of necessities is unbreakable—and upon the scope which monopoly or quasi-monopoly may have secured. Mr Morrison is right to say that the establishment of minimum standards of living and working are a *sine qua non*, and that there are no economic or financial reasons why the necessary readjustment of real and money resources should not be carried out. But, no less rightly, he says that this is only a part of the programme; the real aim is Full National Output, and the main obstacle to this is restriction.

There has been a good deal of discussion since the Beveridge plan was published about the rôle of exports. Rightly, it has been pointed out that the fullest possible international trade is as important as full employment to this country in its search for social security. Wrongly, it has been suggested that the redistribution of income called for by the Beveridge plan will seriously impede exporting. Money costs, Mr Nicholas Kaldor has calculated, may indeed be raised by two to three per cent. But the assumption of the plan is that money costs in term of prices will already have been raised by some 25 per cent compared with pre-war levels. It will be necessary in any case to re-fix the external value of the pound after the war in the light of post-war price levels in other

countries; and the extra burden of Beveridge, if burden there is, will not be significant. The essentials of post-war exchange and trade policy are two. First, there must be no attempt, as in the nineteen twenties, to balance overseas payments by creating unemployment at home—the crazy, irrational expedient of financial stupidity. Secondly, whatever transitory controls on imports may be needed must be devised to wither away as exports grow. The opportunity will be there for British manufacturers and salesmen; and the money cost of social security, which is no real burden, need be no obstacle. The Beveridge plan implies an extra transfer of income from class to class of four to five per cent of the national income. But the elimination of unemployment after the war would in itself raise pre-war real income by from ten to fifteen per cent; and the most pessimistic calculations of Britain's international position after the war, with its income from overseas assets and services inevitably reduced, do not envisage a reduction in real national income from these causes of more than ten to twelve per cent. It is not Beveridge, the National Minimum or what Mr Morrison has called the Proper Welfare Standard that will impede British prosperity after the war. The impediment most to be feared, as Adam Smith would have insisted, is the monopolist, in his many guises.

Nowhere is the monopolist more to be feared than in the field of export trade. It is not possible for Britain to replace the employment provided by exporting simply by a corresponding addition to home investment and employment. Britain is too dependent upon overseas supplies, both for the actual materials of manufacture and the actual necessities of life, for exports to be superseded. If the proper restraints and corrections are not devised, then trade associations of the most virulent kind may find themselves in a position after the war to fix the prices of semi-processed goods and components which enter into export trade. Indeed, with the pre-war tendency to encourage trade associations in the organisation of overseas trade, a tendency which, to say the least, has not been lessened by war conditions, there is a distinct danger that a great part of export costs may be determined by trade association policy. When the monopolist works for the home market, restricting output in his own interest, it is possible to oust him by public enterprise. But when he raises exporters' costs by so fixing the prices of goods and components as to cover the weakest producers at several successive stages of production, the damage is less easily remedied. To counter this inflation of export costs by giving differential favours to exporters would be a confession of failure, for in the national interest it is vastly important that no support should be given by this country to the unneighbourly subsidising, by one means or another, of traders in overseas markets. The real remedy is to prevent the disease from starting, to stop the trade associations from being in a position to impose inflated charges by restrictive agreement upon consumers either abroad or at home.

This is only one among many answers that should be given to rebut the frequent claim that post-war policy in industry and trade should be determined and worked out by industry and trade itself. As Mr Morrison said at Swindon, the last aim of state policy should be to leave the monopolists in their glory and set up a corporate state. The foe above all of future plenty and progress is sectionalism; Mr Morrison in his speech denied the sectional claims of producers, whether entrepreneurs or workers—an important piece of plain and honest speaking. Instead, there is needed a policy to make the real national income as large as possible and to distribute it among the population in the fairest and most efficient way. This involves, as the Minister said, a National Income Policy in place of a Treasury Policy. It involves an Economic and Industrial Budget to take stock of the nation's entire resources, instead of simply an old-style Budget to cast up financial ways and means. Only by these methods can the full capacity of this country be measured and put to use; and only by the rooting out of restrictive policies, whether devised by trade associations, trade unions or financial reactionaries, can this be made possible.

Faded Laurels

ITALY'S twenty-first year of Fascism began badly enough. Its northern cities were already feeling the weight of severe British raids. In Egypt, General Alexander's offensive, which was to result in the loss of six Italian divisions, had already been launched. But the two months which have followed have brought with them much more serious happenings, from the Italian standpoint. The strategic picture has been radically changed; and the not far distant prospect of war on Italian soil has been underlined by the start of the two-front war in the air, which the Allied landings in North Africa have made possible. To continued and intensified RAF raids on the great arsenals of the Lombard plain have been added attacks on Sicily and Naples by aircraft based on North Africa. And the First and Eighth Armies are closing in. The moral of the Allies' successes has not been lost on the inhabitants of the "European fortress's" most exposed rampart. The events of the last two months have converted Italy from a nation down on its luck to a nation in deadly danger.

Neutral observers suggest that the event which did more than anything else to drive home to the Italians the implication of recent disasters was Mussolini's speech on December 2nd. The Duce was replying to Mr Churchill; he accepted the challenge; he told the world that Fascism will fight it out. His Italian listeners might presumably have been expected to take this determination for granted; the fact that it had to be stated in this way brought home, as nothing else has done, the acuteness of Italy's danger. Moreover, there is some evidence that the shattering experiences of the past two months have affected the Italian will to fight. Never very enthusiastic about fighting Germany's war, the middle and working classes in Rome, Naples and the northern cities seem to have become more vocal. There have been peace-demonstrations by the congregation of St. Peter's and by the crowds which lined the roads on the occasion of the royal visit to Genoa.

It is, however, equally clear that the Fascist party is taking energetic measures to prop up morale and strengthen its control over opinion. The detailed report given to the National Directorate of the Fascist party at the beginning of December shows that the party organisation is being used as the main agency for the distribution of relief, evacuation and billeting. Some details were given of the dimensions of the recent purge of lukewarm officials, which appears to have been severe and thorough. Meanwhile, in the *Regime Fascista*, Farinacci daily exhorts party officials to stamp out defeatism and grumbling. The Italian Government

realises that an unprecedented strain is being placed on morale. It is taking measures to retain control of the situation. And, for the present, the greatest stress is that imposed by RAF raids. The Italians are now in the throes of all and more of the problems with which this country grappled, and over which it triumphed, in the first two years of war. The decision to encourage large-scale evacuation in Italy, for instance, is bringing with it the inevitable train of problems of transport, billeting, labour, profiteering, and even currency. A quotation from the *Gazzetta del Popolo* of Turin on December 9th is revealing:—

It is irrational to withdraw all deposits that have been made, or to abstain from depositing any sums available, in order to hoard currency notes against a hypothetical day when who knows what may happen.

The fact that these problems have arisen proves nothing but the intensity of the British raids. It has still to be seen whether the Italian Government can provide solutions; but there is no doubt that there has been some panic and considerable muddle.

The Germans are as concerned as the Allies to find out Italy's capacity to "take it" and fight back. Rudolf Kircher, in the *Frankfurter Zeitung*, places elaborately argued confidence in the traditional resilience of Italians in the face of natural disasters.

There is no denying that entire residential districts of Genoa and Turin are in ruins. But are not the Italians the very people who have defied the terrible natural catastrophes of the volcanic districts of Italy and rebuilt their homes on the very spots of disaster?

And, far-fetched and unconvincing as this argument from the stoic tradition may sound, it contains a grain of truth which the Allies cannot afford to disregard. The RAF raids and the news of Axis defeats in North Africa are shaking the Fascist regime to its foundations; but so long as the regime remains based on the patient resignation and endurance of the Italian peasants, and so long as the Germans can steer and decide Italian policy, there is no great chance of a landslide. It is still less difficult for the Italian people to acquiesce in the conduct of the war than to oppose it. Nothing but the presence on Italian soil of military opposition to the regime can certainly change this position. None of the evidence which the Italian press so liberally provides of a heart-felt longing for peace, of corruption, oppression and devastation, can alter the overriding dominance of totalitarian Fascist power backed

THE SERVICE LIBRARIES AND BOOKS FUND

PRIME MINISTER'S APPEAL

10, DOWNING STREET, WHITEHALL.

For the men and women of the Forces at home and abroad I make an appeal to which every family in the Kingdom can respond.

If you have seen, as I have seen on my many visits to the Forces, and particularly in the Middle East, the need for something to read during the long hours off duty and the pleasure and relief when that need is met, you would gladly look, and look again, through your bookshelves and give what you can. If you hesitate to part with a book which has become an old friend, you can be sure that it will be a new friend to men on active service.

The procedure is quite simple. Almost any Post Office will take your books and magazines if handed in unwrapped, unstamped and unaddressed.

They will then be distributed to all the Services where most required. Malta, the Middle East, Iceland, and a dozen other places abroad will welcome your gifts, and there are lonely stations at home to be supplied. Will you contribute from your shelves, and remember when you buy a book or a magazine that there are many waiting to read it after you?

(Signed) WINSTON S. CHURCHILL.

27th September, 1942.

EQUITY & LAW LIFE ASSURANCE SOCIETY

Established 1844

THE SERVICE OF LIFE ASSURANCE

● Life Assurance provides the means whereby your regular savings, year by year or month by month, may be converted into the form best suited to your needs. Provision may thus be made for your retirement, for the education of your children or for your dependants after your death.

● The service of Life Assurance cannot now be offered to you by personal approach owing to the absence of so many of the Society's staff on war duties. This service is, however, still available on request and will gladly be placed at your disposal.

Head Office: 163/4, STRAND, LONDON, W.C.2. Telephone: TEMple Bar 0381
(temporarily transferred from 20, Lincoln's Inn Fields)

by the *Gestapo* and the *Wehrmacht*. The military events of the last two months have powerfully assisted in the psychological preparation of the Italian people for the defeat of Fascism; but this is only the beginning.

The most remarkable achievement of two decades of Fascism is the completeness of the political vacuum which it will leave behind it when it goes. Memories of the possession of civil liberties, of freedom of expression of any sort, of responsible political criticism and of free institutions have been dead for more than twice as long as they have been in Germany. It is true that the Fascists eliminated their political opponents with less thoroughness than the Nazis—though with just as much ferocity; and, in consequence, it has been possible for many years for the elements of an underground movement to survive and remain active. There may be, as Ignazio Silone suggests, a seed of free and democratic endeavour ready to form the nucleus of a more honourable Italian state. But for the present, there is no element, either inside Italy or outside it, which can be expected to rouse the Italian people against their present rulers or even to step, as welcome representatives, into the Fascists' shoes. Totalitarian government is a deadening process. Political regeneration cannot be expected to coincide in time with military defeat. Dispirited and disillusioned as the Italians

undoubtedly are, they lack any focus of resistance. They have no alternative leader or alternative ideal. Nor are they likely to find them until military defeat has shattered the prestige and the continuity of the Fascist system. To hope to make a peace with any element in Italy at present is a dangerous and insidious fallacy, for no group that has status there is independent of the Fascist regime. Not until Italy is beaten and the regime broken can discussions of any use or honesty be contemplated.

When defeat eventually comes, the interval between armistice and peace treaty will show what stuff there is in the submerged and exiled devotees of Italian freedom. To-day, they are inarticulate or out of touch. They cannot be expected to deal the death blow to a regime which retains its hold. However much evidence piles up to prove that the whole Italian nation knows that a disastrous crisis in its destiny is approaching, the occupying Germans are still able to call the tune. Mussolini recently ordered the Italians to intensify the cultivation of their laurels, in order to extend the use of oil from laurel bushes in the manufacture of soap. And the Italian nation will continue to cultivate its faded laurels—even though its enthusiasm may wane to vanishing point, until it is made unmistakably plain that the Fascist regime has for ever become a thing of the past.

Against Monopoly

DISCUSSION of the limits and mode of the state regulation of industry and trade has reached a peak. It is plain, whatever the shape of policy to come, that the control of monopoly and quasi-monopoly is a crucial question. This is a field where there is little practical experience to guide the argument. Unfortunately, perhaps, such experience as has been gained in the United States in this matter has received only scant attention.

The history of the early anti-trust legislation in the USA is fairly well known. Broadly speaking, the famous Sherman and Clayton Anti-trust Acts were failures. Monopoly continued to spread, and the field of "free competition" was progressively narrowed. The Acts tended to fall into disuse, and were only revived—often for political reasons—to wage occasional anti-trust campaigns against particularly large combines. The New Deal brought this period of spasmodic and ineffectual trust-busting to an end. Instead of trying to compel individualism to survive by law, the Government, in effect, accepted the large corporations, and began to intervene directly in the industrial field to prevent them from abusing their power. Instead of penalising, or attempting to penalise, the combines that transgressed the law, the new legislation gave the Administration power to intervene before the stage of transgression was reached. It aimed, in fact, at creating a permanent machinery for the regulation of industry by the Administration. This was clearly seen in the speech of President Roosevelt to the Senate in January, 1934: "We have created (he said) a permanent feature of our modernised industrial structure," to prevent both ruinous rivalry in industry and monopoly and restraint of trade "under the supervision, but not the arbitrary dictation of the Government itself." Unfortunately for the President's predictions, the National Industrial Recovery Administration (NIRA) lasted only two years, two years which saw a distinct growth rather than diminution of monopolistic practices and restraint of trade.

The reasons for this failure were political rather than economic. In 1931, the burning issue was unemployment, and the Administration's hand was forced by the necessity of obtaining a quick acceptance of the NIRA "codes" to promote confidence and to stimulate industrial revival. The Government had also to face the opposition of business men frightened by this new encroachment of the state in the industrial field and by the demands of New Dealers for higher wages as a means of increasing pur-

chasing power. It is not to be wondered at that the codes—which, if accepted, exempted the industries concerned from the actions of the Anti-Trust Acts—were shaped very largely by the wishes of industrialists.

But the codes are worth considering in greater detail—only because they illustrate the wishes of industrialists so clearly. They were submitted by trade and industrial associations and, when accepted by the President, were binding under the sanction of heavy penalties on the whole industry concerned, a provision which forced many to join trade associations. No exact definition was made of what would or would not be permitted, and each association went as far as it dared in demanding the restriction of competition and the control of output. The success achieved varied from industry to industry. Direct control of output was generally denied, but indirect control was often allowed, especially in the case of textiles, where, by prescribing maximum hours of plant operation, sources, however, were accorded special treatment, partly strength of the interests involved. Petroleum, copper, and iron, generally by a quota system. In each case the price of the products rose substantially; the price of crude petroleum rose as much as 25 per cent during the second half of 1933.

Almost all the codes contained some provision for the control of prices, and in almost every case such provisions were evaded to a greater or lesser degree. In a few cases, chiefly natural products, direct control of prices was allowed which, despite evasion, forced them up. More often the codes prohibited sales at less than "cost of production," and as this obviously depended on a definition of "costs of production," complicated accounting systems were prepared. Few came into operation, however, before the Act was declared unconstitutional. More important were the provisions making it an "unfair practice" to sell at less than published prices, which enabled other firms to exert great pressure to bring recalcitrant firms into line with the price policy of the industrial association. In their effort to obtain comprehensive regulation, many of the codes also endeavoured to define methods of selling, and standard and quantity discounts. In particular, retail prices were often fixed with provisions making it illegal to sell at other prices. Monopoly practices did not lose, but gained.

The increase of prices and the growing criticism of the Act by consumers would probably have brought NIRA to an end, even if it had not been declared unconstitutional. As it was, the two years of its existence barely sufficed to show the practical results which might have been expected had it survived for longer. Two very important observations can be made. The first is the antithesis between the desire for "free enterprise" professed by the manufacturers, when speaking individually, and the enormous pressure towards restrictive regulation exerted when they acted as a group. The second concerns the narrowness of the view which considers each industry separately. The most amateur student of economics can see that, if all industries pursue restrictive policies, all must suffer in the long run. The advantage derived if a single industry pursues a monopolistic restrictive policy is lost if all do so. The associations who were the first to decry "cut-throat competition" seemed the last to discern the dangers of "cut-throat restriction."

The objectives of NIRA were impossible of attainment by the means it favoured. But the New Deal is not to be judged simply by this isolated, though very significant, failure. Even while NIRA was in operation, other Acts were being prepared and passed to give the Administration—not the Supreme Court as in the early Anti-trust laws—greater power to intervene in the internal affairs of companies. The Banking Act of 1933, the Securities Act of 1933, the Securities Exchange Act of 1934, and the Public Utility Holding Company Act of 1935, were the most important. The first three were primarily financial measures; the first forbade banks and their affiliated societies to deal in securities; the second imposed heavy penalties and personal liability on directors of companies issuing prospectuses subsequently proved false in any particular; the third provided for the compulsory disclosure of Stock Exchange dealings to a Stock Exchange Committee if required, and limited the "margin" which brokers could give on security. These three Acts to a considerable extent "cleaned up" financial operations in the United States, and are still regarded as probably sufficient to prevent any recurrence of a financial boom of the dimensions of that of 1929.

The way cleared, the Public Utility Holding Company Act was carried against strenuous opposition in 1935. All companies in the public utility and steel industries were required to register with the Securities and Exchange Committee, which was given power to simplify their structure so as to restrict each company to a single integrated process. This "death sentence" clause was expected to lead to a wholesale breaking up of the utility industries. In practice, the financial difficulties of splitting up large combines, while preserving an equitable distribution between different classes of debenture and shareholders, were sufficient to postpone its large-scale application, at any rate to the outbreak of the war.

The Public Utilities Holding Company Act was followed by an experiment in a totally different method of state control—Government ownership and public corporations in competition with private enterprise. With the Tennessee Valley Authority, and such other hydro-electric schemes as the Bonneville, Grand Coulee, and Fort Peck schemes, the Government entered the industrial field proper, and in no small way. The schemes were carried through Congress despite the opposition of industrialists and member states. One of the main reasons advanced was that they would promote employment. But the Administration was still anxious to lead industry rather than to oppose it. This conciliatory attitude led the President, in February, 1939, to state again his desire for the Government and industry to work in co-operation "without problem or fear between them"; and, in pursuit of this policy, he announced that no further expansion of Government hydro-electric power plants was contemplated. This was followed by an attempt to reach agreement with existing distributors for the purchase of their concerns at market value, or by other arrangements, in order to obtain a market for the electricity produced by Government plants; the alternative would have been Govern-

ment purchase at the actuarial value of their assets or the creation of competitive distributive systems.

The reaction from NIRA was evidenced by a campaign for a new trial of the old anti-trust laws. The Temporary National Economic Committee—the "monopoly investigation"—reported in 1938, and revealed the widespread growth of combination in the country. Led by Thurman Arnold, Attorney-General in charge of the Department of Justice's anti-trust activities, and armed with the Committee's findings, considerable support was obtained for the view that a more vigorous and less corrupt application of the existing anti-trust laws might provide a solution. Little was done, however, up to the entry of the United States into the war.

The American type of war control has been fashioned by the industrial and political experience of the preceding decade. The Administration, in so far as has been compatible with the need for immediate action, has used its wartime controls to reduce monopoly rather than to strengthen it. In this country the Controls are almost exclusively in the hands of former directors of the largest firms in the industry concerned, and little if anything has been done to limit the power of the large combines. In the United States, on the other hand, a direct attack has been made on various trusts. Before the war, the American aluminium industry was virtually controlled by a single combine, but the war expansion of the industry has been attained by the setting up and expansion of four plants which are outside the combine. Again, while it is reported that the new synthetic rubber plants are to be in the hands of the leading firms of the rubber, chemical and oil industries, they are to be financed by the Reconstruction Finance Corporation and other Government agencies, which will retain a large measure of control. The same is true of the expansion of the steel and many other war industries. With vastly increased total output, this extension of Government control has not caused the rivalry once feared. But it will be different when peace comes.

The development of control in America has not been founded on clear theoretical reasoning. The solutions formulated and the measures adopted have been empirical, often opportunist. The Roosevelt Administration, which has been responsible for most of the experiments, has not been united in its views. But the broad line of development from the attempted distant control by the early anti-trust laws to the direct participation by the Administration in the industrial field is clear enough. The plea of "self-government for industry," so loud in Britain nowadays, would find little support, in principle at any rate, among the American public.

YOUR WILL

Have you thought of the anxiety which may be caused to your dependants if for any reason your affairs have not been satisfactorily arranged?

In these days when life is so uncertain, the advisability of appointing a corporation rather than an individual as the Executor of your Will or in the capacity of Trustee needs little emphasis. By so doing, continuity is preserved and you are assured of efficient administration.

Full details can be obtained from any Branch of Lloyds Bank Limited or from its Executor and Trustee Offices at

Ewhurst Place, Ewhurst (near Guildford), Surrey,
39, Threadneedle Street, E.C. 2, 5, Albemarle
Street, W. 1, 6 Pall Mall, S.W. 1, Bangor (North
Wales), Birmingham, Bournemouth, Bristol, Exeter,
Leeds, Liverpool, Manchester, Newcastle upon Tyne
and Swansea.

NOTES OF THE WEEK

Harrying the Invader

The Russian offensive around Stalingrad had hardly come to what may still prove to be only a temporary standstill when a new offensive was launched on the Middle Don. The initial impetus of this thrust was at least as strong as the first thrust of the previous ones. It has carried the Russians from their starting-points north and east of the Don to Boguchar on the right bank of the river, and from there to the Voronezh-Rostov railway, half way between the Don and the Donetz. The attackers are now well astride that railway over a distance of more than fifty miles from Kantemirovka, almost to Millerovo. It may perhaps be too much to hope that the recapture of the Donetz region is already in sight. The relevant fact is that all along the front the initiative has passed to and been maintained by the Russians. Each offensive may for the time being achieve only limited objectives in comparatively limited sectors; but each of them appears to be a link in a coherent and well thought out series of powerful thrusts which make it impossible for the German command to concentrate large forces on individual sectors—and keep the enemy guessing all the time. Should the weather permit the Soviet command to apply this technique for a considerable time, then the results of the second winter in the east will prove more fatal for the German armies than those of the first. General Dietmar, the German wireless spokesman, was probably not overstating his point when he described the present fighting in the east as the "main battle in the sense given to the term by Clausewitz." Significantly enough, Dietmar omitted in his review the once familiar references to the invaders' material superiority; he preferred to pin his hopes solely on German morale. Meanwhile, on the Russian side, the creation of new generals continues; seventy-eight more officers have been thus promoted, and with the appointments recorded by *The Economist* during recent weeks the total number of new generals has been increased to about three hundred and sixty.

Race Against Time

Last week's claim that Rommel's army had been "cut in two" by a successful action in the stretch between Marble Arch and Wadi Matratn was, perhaps, somewhat premature. It is clear that the advance forces of the Eighth Army scored a considerable tactical success by their bold stroke; and the enemy was very severely mauled in the process. But there does not seem to have been any question of large-scale encirclement, as was at first hoped. Since then, the tempo of the pursuit, which had been impeded by the very numerous minefields sown by the retreating enemy, has quickened; and Rommel's retreat continues at breakneck speed. This week his advance guard moved on to Misurata, about 300 miles east of Agheila. The RAF has kept up its unremitting attacks on enemy transport and has been operating from new advanced bases; the *Luftwaffe* has been conspicuous by its absence. Rommel's prime object now appears definitely to be to remove himself and his Afrika Korps from Eastern Tripolitania as quickly as possible. Even if he decided to make a stand at Misurata, the last feasible point west of Tripoli, this would almost certainly not amount to more than a delaying action owing to his lack of air support and his paucity of tanks and guns. Axis strategy now seems to be concentrated on the defence of Tunisia and the Sicilian Narrows. The course of the battle in Tunisia itself is not very clear. It seems that the First Army advanced with insufficient air protection and possibly underestimated the strength of the defence; it is now accumulating "massive" forces for an attack. If such an attack could be launched before Rommel joined forces with Nehring—and it seems unlikely that the Eighth Army will be able to prevent this junction—correspondingly less time would be required before the Axis forces can be finally cleared out of North Africa.

In the Rear

The time is rapidly nearing when more official light will willy-nilly have to be shed on the political situation in North Africa. The honeymoon atmosphere has now been

dissipated. General Giraud, it is said, whom everybody trusts, is not seeing "eye to eye" with Darlan, whom very few trust. Seemingly tired of waiting meekly for the free use of Radio Morocco, over which Darlan appeared to have assumed sovereign and stringent rights, the American forces have "taken it over." There was never more than one test of Darlan's usefulness; would he deliver the goods? Up to a point it seemed that he had done so, though whether or not the goods he delivered were already on their way when he lifted up his voice will remain a riddle for historians to settle. And it is surely rather significant that in Tunisia, where the battle is still not settled and it is still not easy to say for certain which side, Axis or Allies, is going to be in a position to demand "collaboration," Admiral Esteva, who is a close associate of Darlan, has not yet made any pronouncement. The test is still undecided; but the latest signs suggest that the Allies are wisely beginning to take the precautions which military as well as political expediency would seem to demand.

Laval's Negotiations

Laval went to meet Hitler and Ribbentrop after Pétain had tried to clear the air by his letter to the Führer. He went with the full powers conferred upon him recently, which empowered him to make any decisions and to accept any agreement or *diktat* suggested. In spite of this, the outcome of the week-end meeting does not seem to have been in any way sensational. The German communiqué was significantly restrained. "Topical French problems were discussed"—this is about all that has been said officially; the familiar assurances of "complete understanding" and "cordial co-operation" did not appear this time. The spate of rumours which has followed has hardly brought any more light. The allegation that Laval was preparing a peace treaty with Germany was probably based on the presence of Count Ciano at the meeting with Hitler. But a peace treaty would involve a final solution of the French-Italian territorial dispute; and, from the German point of view, the position hardly seems ripe for this yet. The suggestion that French forces would be assigned the task of policing Poland and Germany's other conquests in the east can be dismissed outright. The situation there is much too tense and the resistance much too desperate to be tackled by a not very reliable force of French Fascists. The police work which Doriot's and Déat's followers have on hand, somewhat nearer, in France itself is urgent and big enough for them just now. The only subjects on which an agreement may be reached are the working of Laval's administration in the two occupied zones and perhaps the setting up of the "new French army." Hitler is apparently anxious to leave civil administration and police work in the very few "reliable" French hands that are available and thus to avoid a further drain on German manpower. The curious feature of the situation is that both sides, Vichy as well as Berlin, have now to play the game without their trump cards. With the loss of the African possessions and the fleet, Vichy has forfeited nearly all its bargaining power. But since the occupation of Vichy territory, Berlin, too, has lost most of its power to threaten and blackmail; almost all the threats have now been carried out.

The Final Test

The achievements of this country in war production have been exciting and huge. Inevitably, there is a tendency to mistake the immense achievements of the past for future performance. Until not very long ago, production was able to expand, in spite of all kinds of trials and errors in organisation and technique, because more and more capacity and more and more workers were being brought in to swell the total. Now, there is no more slack. The only way to raise output appreciably is to overcome the trials and root out the errors. Efficiency has replaced expansion as the need. Nowhere is this truer than in the manufacture of aircraft—which, as Mr Churchill has put it, lies "at the

heart" of the war effort. The aircraft industry has grown more than twentyfold since the war began. It is now unmistakably this country's largest industry, a remarkable fact. It would be a miracle if it had swollen to its present size without a multitude of loose ends, ragged edges and wasteful and inefficient practices. The job of Sir Stafford Cripps, with Mr Lyttelton, is to see that waste and inefficiency, the industry's still considerable growing pains, are cured. This was the burden of Sir Stafford Cripps's broadcast last weekend. He made it very plain that absenteeism or irregularity on the part of aircraft workers and inefficiency on the part of managements—or administrators—are crimes against the fighting Forces in the year of greatest ordeal which lies ahead.

In one instance, the new Minister of Aircraft Production has suited deeds to words. At a large aircraft works he has put in a manager, after complaints from the workers—and presumably from other quarters. It is an astonishing thing that action of this kind has not been taken much more frequently, not only in the aircraft industry but elsewhere in war production. The Government has had these powers for a long time. When Mr Lyttelton was appointed, for instance, it was plain that possibly the most important of all his tasks was to insist upon the highest possible standard of management throughout the whole range of war manufacture. It remains a weakness of the war effort that efficient management is still not regarded as a national pool to be distributed to the places where efficiency is most needed. Whatever may be the facts regarding the case in which Sir Stafford Cripps has actually intervened, his intervention should be regarded as a precedent—and as a portent of the drive for efficiency, in both the management and engineering senses, which is above all needed in the next months. Labour efficiency is no less important: and Sir Stafford Cripps was very outspoken on this. But this is not only a matter for aircraft workers and managers, and for officials of the Ministry of Aircraft Production. It is a problem for the entire nation. The needs of the long hard final lap of the war require that every man and every woman, wherever their work may be set, in war jobs or in essential civilian employment, should work harder, more efficiently, more regularly and more earnestly than ever before. Sir Stafford Cripps's words apply to every member of the population; the one simple way in which every civilian, including every civil servant and every politician, can meet his or her debt to the fighting men is to make 1943 above all a year of sweat and toil.

The Open Sky

It is natural that alarm should be felt in this country over the future of British civil aviation. Not only has the wartime diversion of labour resulted in the manufacture of almost all transport aircraft in the United States; Pan-American Airways, though now militarised as part of the United States Army Air Corps, has also obtained through the war virtually a monopoly of air routes—in particular, it has been operating the African route, the West African-Egyptian section of which was originally opened up by Imperial Airways. Replying for the Government in last week's debate in the House of Commons, Captain Balfour stated that it has been agreed with the US Government that any rights over routes acquired by the Americans for military purposes are only for the duration. On the other hand, since Britain, which cannot now spare the designers and factories for transport aircraft, will have a lot of leeway to make up after the war, there is a grave danger that the exclusion of the United States from British spheres of influence will mean that the Empire air routes will be inadequately operated. If, therefore, the pre-war delusion of "closed skies," from which air lines of countries with different skies were excluded, is to be modified by international agreement, allocating large spheres—such as the Pacific sphere, the African sphere, the Atlantic sphere—to the air-lines of one or more countries predominantly, there will be a great responsibility on the British Government to see that British civil aviation is efficient. Before the war the British civil aviation companies could not compete with Pan-American Airways. If there is to be no competition—which is surely taking far too much for granted—but an agreed monopoly on certain routes, the danger of inefficiency is greater than ever, and there are consequently

strong reasons for placing civil aviation in a department of its own, perhaps linked with departments for shipping, railways and roads under a non-departmental Cabinet Minister of Transport.

The Future of Milk

It is earnestly to be hoped that some of the many people who are working like beavers on reconstruction plans are busy on the problem of milk. It is a matter of common agreement that more and cheaper milk should be a first charge of productive and distributive ingenuity after the war. The urgency of the need, reinforced by the extraordinary and grotesque intricacy of the Heath Robinson schemes which have been worked out to fix prices and margins ever since the Milk Marketing Board scheme was instituted nearly ten years ago, is strengthened by the fact that, inside this elaborate framework of pricing, costing and compensation, the perennial battle between producers and distributors goes on, even in wartime. The forgotten man is the consumer. Since October 1st, a new wartime scheme for milk distribution has been in force under the direct administration of the Ministry of Food. A number of milk producers, under the auspices of the National Farmers' Union, have voiced their displeasure with the new distributive price structure. Roughly, the position is this. The Ministry buys all the milk and provides retailers with whatever quantities they require at a flat price. To do this, wholesale charges over the entire country are pooled; and there is an elaborate system of refunds and rebates to cover the different distributive costs of differently sized undertakings. The complaint of the producers is that they no longer get the premiums they used to get for attaining accredited quality standards and for levelling out supplies and deliveries; in Surrey, for instance, over half the milk producers previously earned premiums; and now they contend that their costs of production are not covered by the prices allowed them. What happens now is that large distributors, that is, those distributing more than 1,500 gallons a day, receive a refund from the pool to cover the cost of their wholesale organisation and overheads in the shape of premises, storage tanks and refrigeration. Small firms, those distributing under 750 gallons a day, do not receive a refund, on the ground that the wholesaling, that is, the balancing of their supplies from day to day, is done for them by the Ministry under the new scheme. Medium sized firms, that is, those distributing between 750 and 1,500 gallons a day, receive a partial refund, and for the rest it is assumed that the Ministry balances their supplies for them.

It is very difficult indeed to know what are the rights and what the wrongs of such a complex system. Nobody outside the trade, and not all those inside it, can understand what goes on. Whether or not it is true, as has been alleged, that "premiums have been taken away from producers and handed out to the larger combines in a silver dish" is quite unknown. But this much is certain. The most necessary step, now as in the years before the war, is to carry through to the end the detailed investigation into

INSURE WITH

7, CHANCERY LANE, LONDON, W.C.2

producing and distributing costs which has been promised. This farrago of premiums, margins and rebates may or may not be necessary. It certainly confuses the issue and presents under wartime control precisely the same picture as it did under peacetime control—producers and distributors wrangling over their share of the spoils, while the supply of the greatest possible quantity of milk at the lowest possible price, which alone could justify this massive apparatus of control, apparently remains right out of sight. The comment which Lord Astor and Mr Rowntree once made on the Milk Marketing Boards, that “they have not attempted to expand consumption by reduction of price,” still remains valid, so far as any layman can see; and this is the state of affairs which must be ruthlessly got rid of when the war is over.

War Workers and Seamen

One of Mr Bevin's first actions when he became Minister of Labour was to create a department to develop welfare facilities outside the factories and, in particular, to establish a board to look after seamen's welfare in ports. The welfare department has had formidable problems to deal with, problems which have increased with the expansion of war production and the mobilisation of women workers. The transfer of workers; the setting up and management of hostels; lodging and billeting; domestic and shopping arrangements; the care of children; recreation; holidays; and workers' entertainment—all these come within its province. Unfortunately, the report of its activities during the period from August, 1941, to August, 1942, does not give a very clear picture of what has been done, or how. The number of local welfare officers, 100, seems small in relation to the magnitude of the task. The importance of such factors as accommodation, domestic arrangements and transport, their direct relation to absenteeism (which has been repeatedly stressed by the Commons' Select Committee), and the fact that many of the problems involved are human and individual, make it essential that the activities of this department should be developed as much as possible. The second part of the report is concerned with seamen's welfare in port. Until October, 1940, arrangements were left almost entirely to private societies and the religious missions, which were not always able to make the best sort of provision for seamen who, in any case, resent any element of charity. The board, working in conjunction with the voluntary organisations, has provided hostels, recreation centres and clubs for British and Allied merchant seamen in the principal ports; it has made arrangements for their medical treatment; and has advised on the welfare of British crews in overseas ports. The record is satisfactory, but there is still room for the expansion of its activities. It is certain that no effort should be spared to provide the men of the merchant navies with the highest possible standard of accommodation and recreation when on shore. For this reason, the recent decision of the Maritime Board to increase rates of pay for British officers and seamen will be generally welcomed; and it is to be hoped that radio officers, whose case is still under consideration, will also benefit from the new increases.

Shop Assistants

It is well over a year since Mr Bevin announced that shop-girls, aged 20-25, would be called up. Since then the National Service (No. 2) Act of 1941 has enabled him to add the conscription of all single women between 20 and 30 to his already existing power of directing all women up to the age of 45 into nationally important work; and women up to that age had in fact registered by October 5th of this year. Moreover, it was announced last September that there was to be a thorough overhaul of the registers of men and women. Thus, Mr Bevin's latest announcement, made in Parliament on December 17th, that all women up to 35 years of age will be withdrawn from the retail trades—other than food and coal—and all women up to 45 in a large number of the less essential sections of retail trade, had rather a hollow sound. Why, it may be asked, have the retail trades been allowed to retain women of these ages, especially the under 35's, for so long? It is possible that a great number have already been called up and that this latest announcement only affects the rump,

but the wording is not encouraging. If conscription and direction had already been properly applied to the retail trade, it would now, on the analogy of the withdrawal of young men from industry, merely have been a question of cancelling deferments; as it is, Mr Bevin stated that a maximum deferment of six months would be granted in cases where withdrawal would result in the closing down of the business or branch of the business, and that an employee could plead exceptional hardship, including hardship to her employer. In other words, in accordance with the exclusive tenderness with which the retail trades generally have been regarded by the Government, the Ministry of Labour has hitherto left their labour supply virtually untouched, so far as the women over 25 are concerned. Even now, it is worth noting, the sections which are to lose their female assistants up to the age of 45 do not include the trades engaged in distributing clothing, pottery and hollow-ware. Since, as was announced last week, small retailers in these trades are to be guaranteed a minimum percentage of supplies, they must, presumably, be allowed a minimum supply of labour to sell them. Thus has Mr Bevin's aim of mobilising every available man and woman for the great offensive been modified to fit in with Mr Dalton's apparent desire to keep as many shopkeepers in business as possible, however wasteful such a policy may prove to be.

Jockeying for Position

The agreement reached between General Jordana, the Spanish Foreign Minister, and Dr Salazar about the creation of an Iberian bloc is probably no more and no less than what it purports to be—the reaffirmation of their determination to remain neutral and to collaborate in their common interests for European reconstruction after the war. Particular emphasis has been laid on reconstruction. General Jordana declared that

the Iberian bloc creates in the world a new entity capable of playing its part in international policy in a manner highly efficacious as an instrument of peace.

And the Portuguese Prime Minister, after stressing the moral and political ties between the two nations, referred to the valuable political services which the Peninsula could render to peaceful countries after the war. The chief motive behind this move is probably General Franco's desire to take out an insurance policy, as it were, and to strengthen his own bargaining position by cementing the bonds of friendship with Britain's oldest Ally. Spain and Portugal, he recently declared, will “march forward united like brothers.” The Caudillo's paramount interest is to maintain the stability of his regime; and, with the weakening of Axis prestige throughout the Continent and the encouragement of hints of economic assistance after the war recently thrown out by President Roosevelt and Mr Churchill, he seems to be turning somewhat towards the Allies in search of the main chance. But it would be foolish to forget that, less than three weeks ago, General Franco sent a message to Hitler wishing him a speedy victory over the forces of Bolshevism, and the “ten commandments” issued to all good Falangists include such precepts as “Hate England and pity the English”—“Think daily of Gibraltar.” General Franco is plainly hoping to have the best of both worlds. Just as he aims at a compromise in internal politics between the Falange and the Requete by playing with the idea of a Monarchy based on the National Revolution, so in international politics he hopes to be able to strike a similar balance until the future outlook becomes clearer.

Local Advance

With the Allied occupation of Maungdaw, the Burmese coastal town close to the Indian frontier, General Wavell's operations have entered a new phase. Since the end of the monsoon, the active patrolling of the past months has given way to a definite move forward along the coast. The aim is undoubtedly the occupation of Akyab and control of its valuable air field. That the Japanese take the new development seriously is shown by their recent raids on Calcutta and Chittagong; and they have withdrawn before General Wavell's advance. The operation is only the distant prologue to the reconquest of Burma, and the reopening of the

Burma Road. Akyab and the coastal strip are separated from the heart of Burma by a considerable mountain range. At least one spear-head of any major attack must advance along the route by which General Alexander retreated last spring, that is, down the valley of the Chindwin, while Rangoon itself can only be immediately threatened by the power which has full control of the eastern end of the Indian Ocean. There are reports that the Chinese, who have been fighting successfully in the Yunnan province in the past few weeks, may also be preparing to take the offensive in the direction of Lashio. These are the moves which will be necessary to restart the Battle of Burma on a major scale; but it cannot be assumed that they will follow directly from the present infiltration. Meanwhile, the Japanese are said to have been reinforced by some two and a-half divisions under the command of General Teruuchi; and, if necessary, additional forces will doubtless be withdrawn from Siam and Indo-China. The history of the Papuan campaign suggests that, after a strategic withdrawal, the enemy will display a desperate capacity for defensive fighting. The attitude of the Burmese, who are to some extent being armed by the Japanese, remains obscure; but it may well cause the enemy more anxiety than it does General Wavell.

Storm Ahead

Mr Bevin's proposal to regulate wages and conditions in the catering trade is going to be one of the most keenly contested measures before Parliament in the New Year. The Labour Party will support the Bill; but an influential section of the Conservative party is already mobilising its forces in opposition. A small committee under the chairmanship of Sir Douglas Hacking, MP, was formed to consider the proposals, and is understood to have reported to the Joint Government Chief Whip an estimate of the strength of the opposition. The estimate is a formidable one. Out of 451 private members, regarded as free to express an opinion, no less than 191 or 42 per cent—all but five are Conservatives—are said to have supported in writing a demand for a “public and impartial inquiry” before any legislation is introduced. These 191 MPs include a number who have direct interests in catering establishments—Sir Douglas Hacking is himself a former vice-president of the Hotels and Restaurants Association which is responsible for organising the opposition—as well as prominent members of the 1922 Committee who succeeded in torpedoing the Beveridge fuel rationing plan. Their argument is that the proposed Bill will not be in keeping with Sir Stafford Cripps' assurance that no legislation of a character “likely to arouse serious controversy between political parties” should be introduced during the war. Mr Bevin, however, is believed to be determined to proceed with the Bill. Indeed, it is difficult to see by what stretch of the imagination a measure for the improvement of conditions in the catering trades—not in itself a very revolutionary proposal—can be regarded as disrupting national unity. To demand a public inquiry is merely to shelve the issue.

Murder

It was a spontaneous wave of feeling that moved the Commons to rise and stand in silence on Wednesday last week in protest against the German attempt to exterminate European Jewry. Members, like most people, have become case-hardened to stories of brutality in recent years. But the text of the United Nations' declaration, read by Mr Eden, was a shock. The policy of extermination that is actually being carried out on an immense scale by means of mass execution, exposure and starvation is the climax of totalitarian horror. It is fitting that it is this news which has brought home the barbaric truth about the administration of Nazi Europe. It was the persecution of the Jewish people in Germany, and the propagation of racial doctrine, which, as early as the spring of 1933, made plain the real division between Nazidom and human decency. The denial of elementary rights because of the accident of birth was the first and most telling crime that stamped and defined the Nazi Government. Little can now be done to save the tortured victims of the Gestapo. In this, as in every other matter, the first consideration is to end oppression by winning the war. No form or degree of frightfulness can be allowed to blackmail the United Nations into action which might hamper the war's speedier end. But it is well

that the Germans and their satellites, at every level of responsibility, should be informed by every channel that unflinching justice will eventually be done. As Mr Lipson rightly pointed out in the House, the acts which have been brought to the notice of the United Nations are not acts of war but of murder. There is another duty which the free peoples owe the Jews: the determination to see that, when the war is won, they are everywhere freely accorded equality of status and friendly recognition.

Beveridge Banned

The Army Bureau of Current Affairs was set up in order to provide opportunities for soldiers to discuss the problems in which they as citizens of a democratic country will have an important stake when the war is over. The scheme recognises that this is a citizen army, and is designed to prevent its members from losing their sense of citizenship while soldiering. The scheme has grown and expanded. This winter there is a special programme in a wide range of “citizenship” subjects. Automatically, when the Beveridge Report appeared, a pamphlet was prepared, by Sir William himself, to furnish the troops with the material for discussing a set of proposals which comes closer than most to the immediate problems of their life and livelihood when they become civilians again. Then an extraordinary thing occurred. It seems that, horrorstruck, someone in authority realised that the issue of this pamphlet and its discussion in units up and down the country would mean that serving men might make up their minds about the Beveridge Plan before the Government had made up its mind. So the pamphlet, it is announced, has been banned—or, rather, held up; the discussions presumably are not to be held, even though soldiers everywhere (especially, according to Mr Casey, in the Middle East) have shown tremendous interest in the Report. Obviously, unless an Army order is simultaneously made that no soldier must discuss the Beveridge Report on pain of detention or court martial, the discussion will in fact go on wherever serving men talk—informally instead of formally, and uninstructed instead of instructed. All that has happened is that, for some fantastic reason of prestige or precedence, the troops have been deprived of a first-rate summary and explanation of a subject which they are already talking about widely—and emphatically. Some day, perhaps, the powers-that-be will realise that reconstruction is not the preserve of high-placed, pompous and opinionated civilians; indeed, that it is rather the special concern above all of the men who are serving in the Forces. A simple definition of reconstruction, and a true one, would be a policy and programme which will provide the men when they come home with a decent home and a decent job; that is what most of them are fighting for.

Shorter Notes

In the House of Commons last week, Mr Eden made a declaration of the Allies' anxiety to see freedom and independence restored to Albania. This statement has been specifically endorsed by the Greek Government. Italy's earlier victim of aggression—Abyssinia—has, in the meantime, declared war on the Axis.

The Turkish Government has shown considerable understanding in refraining from pressing for deliveries of war material which Great Britain agreed to supply under the Treaty of Alliance of 1939. The recent deliveries of tanks are a welcome indication of the improvement in the Allied supply position. Future consignments should benefit from the improvement in Middle Eastern rail communications, and in particular from the recent opening of the Haifa-Beirut-Tripolis line.

A party of British economic experts, under the leadership of Mr R. Herbert of the raw materials department of the Ministry of Supply, has gone to French North Africa. It will work in collaboration with American experts and to begin with will devote special attention to the supply of iron ore and phosphates.

AMERICAN SURVEY

The Flow of Resources

(From an Industrial Correspondent)

Cleveland, October 17th.

THE central problem in the manufacture of war equipment remains that of the dispatching of materials, and apparently little progress has yet been made in removing the large number of obstacles to their free flow. The industrial worry which overshadows all others is the supply of materials.

In Detroit, where manufacturers have generally been more impatient with Government procedure than in Cleveland, a number of concerns have had to cut back their operations considerably. The contrast with Cleveland, where lay-offs have been very small, may be due in part to the well-known position of Detroit as the end point in the movement of materials. Steel mills in Cleveland, for example, have been able to run almost at 100 per cent of capacity without interruption. The fabricating plants depending on them have been doing almost as well. Their customers in Detroit, however, complain of being whipsawed by delays and an inability to schedule their production confidently.

This is oversimplifying the story, of course; but it illustrates the fact that the main chokepoints in American industry remain on the materials end of the processes and that the War Production Board in Washington has been unable to control the dispatching of these inadequate materials in a manner which would permit the makers of finished products to run smoothly. Another and fourth attempt is now being made in Washington to devise a system to manage the flow. The first method, one of simple priorities, bogged down in office detail, and was corrected by reorganisation of the staff. The second, also of priorities, led to a considerable inflation of preference ratings (as described in *The Economist* on July 18th). The top brackets for steel, for example, required more steel than can be produced. The third system, intended to take the place of priorities, was the Production Requirements Plan with its end-use allocations. Manufacturers were required (and still are) to make quarterly applications for materials; and these applications, linked up into long chains, would provide a picture of the entire circulation of materials. A large "kitty" or pool was designed to provide reserves of certain things, but this pool could never be filled. The paper work involved in the applications became so huge on both the Government and industrial sides that, before the plan was fully installed, the announcement was made that a new system would be put into effect by early next year. Not only are the allocations still being made, but the old priorities system is retained for many purposes; and both, it is expected, will continue to be employed in some degree next year.

Detroit complains that the PRP system itself led to the same old fault, the awarding of more authorisations to buy than there was material available. The form of the new system is not yet fully worked out. Steel manufacturers favour one plan, and former automobile manufacturers, meaning the Detroit district, favour another. The steel men want manufacturers to go to the War Production Board for allocation certificates. The alternative plan, credited to Ernest Kanzler, a Detroit man sent to Washington to become deputy-director of WPB, would work from the other direction—manufacturers being told how many of each item they could produce (the Government agencies having in mind the materials available), and then being allowed to do their own ordering.

The main element of difficulty seems to be the time Washington takes to make decisions required for movement of materials. The quantities of these are always changing, armament is being redesigned, and the Army and Navy are continually revising their requirements. Against this background, the machinery of decision in the WPB does not

revolve rapidly enough, particularly in view of the time it takes the materials themselves to move from plant to plant. The volume of decision is so huge that nobody seems able to devise an office and executive procedure which will accurately and coincidentally parallel the physical side of the industrial process. Washington and industry cannot make their clocks run together. Though the Army, Navy, Maritime Commission and WPB gain by experience, the volume and complexity of needs seem to grow faster.

Restricting Consumers

In order to increase and smooth the flow of the essentials, their civilian users of materials continue to be cut back. The process of reducing the consumers' drain is now running probably more swiftly than it ever did at a single time in England, even though it will probably not go so deep for another year. Shortages of labour have yet to be corrected, though the recent determination to control manpower is aimed to do so. To shorten the hauls of materials, and thus reduce their time in transit, industries are being allocated to nearer sources, and civilian trades are about to have their market areas reduced. Output of some war goods is being curtailed where manufacturers have run beyond their schedules.

The volume of complaints of shortage, arising as it does chiefly at the finishing end of industry, is continuing evidence of the discovery made last spring that manufacturing facilities in general had been built beyond the capacity of the mills to supply them. The persistence of erratic delivery, however, combined with an actual slowing down in the rate of production increase, is evidence either of the inability of the Government to handle a dispatching system so vast, or of a temporary overloading of many inventories at the expense of others, or of estimates too optimistic in the first place.

Cleveland, November 14th

To maintain balance both in the labour force of industry and in the flow of materials will jointly engage all the ingenuities of Government and individual manufacturers throughout 1943. In the central industrial region, these problems are now paramount and promise to remain so. Such questions as markets, profits and taxation have either disappeared or receded into the background.

To a great extent, perplexities over the supplies of manpower and materials key into one another, although in the individual establishment they naturally seem to be separate. They also head up separately into the Washington organisations. Shortages of materials at the plant appear largely to be the result either of shortages of workmen farther back in the industrial process, or of miscalculation on the part of manufacturers or the procurement agencies of the Government.

To correct the discrepancies, similar means are being employed, these consisting in general of time-and-quantity schedules. On the materials side, the schedules compose what is known as the Controlled Materials Plan, representing the fourth great effort on the part of the War Production Board or its predecessors to master the direction of materials movement. On the human or personnel side, the schedules will be made up of "manning tables," which all manufacturers will be expected to compile. These will show the numbers of men employed or to be required, together with the degrees of essentiality of the men currently in the working force.

Industrial executives have expressed some scepticism about whether a centralised office in Washington will be able to handle the vast statistical work involved in both

these gigantic programmes. President C. E. Wilson, of General Motors, said this week that, if the operation of the materials plan is too highly centralised, "the files will get so thick they won't be workable." The major end-product contractors will have most of the compiling of bills of materials to do; and it is suspected by *Business Week* that this operation will necessarily link up the suppliers into long trains or closely-knit aggregations of firms "clumped vertically around the big companies doing the final assembly operations."

Manpower Problem

On the manpower side, the problem is much more neatly set up. Between now and the end of 1943, more than 7,000,000 jobs are expected to have to be filled. These consist of 3,000,000 in which men yet to be drafted into the Forces must be replaced, and of 4,000,000 new jobs. Of the latter, 1,000,000 are expected to be filled from the normal population growth, another 1,000,000 from persons coming into industry from non-essential undertakings, and the remainder from groups not now employed in industry, chiefly women.

The need for and the availability of these new workers differs greatly between one industrial centre and another. Small and middle-sized cities whose factories have Government contracts report the greatest difficulties in getting or keeping labour. These troubles are increased in such communities as Akron by an extreme scarcity of housing.

The working week in Cleveland is slightly less than 46 hours in manufacturing industry, though if only those employers holding Government contracts were considered it would probably be the 47 or 48 hours which President Roosevelt says is the national average for armament industries. By Federal law, industries pay "time and one-half," or 50 per cent extra, for the hours which exceed 40 in the week, and plants running 48 hours pay for 52.

An effort is now being made in Congress (against Mr Roosevelt's opposition) to extend to 48 hours the point at which overtime premiums must be paid. This movement is supported by many employers, who say it is impossible for them to find and train enough new workers or their cities to house them. The extreme of this condition is Akron, where several thousand tyre workers are still employed only 36 hours. The Allison airplane engine plant in Indianapolis is expecting to increase its working week from 48 hours to 60, thus to pay for 70 hours weekly, because of its inability to find enough capable supervisors.

Farmers throughout the region complain that high wages and overtime premiums are depleting their labour supply, and that dairying in particular is suffering. Their products are now under price ceilings, and though prices rose rapidly just prior to the revision of the price law, this combination of labour shortage and ceiling prices no doubt accounted for some of the Republican gains in the recent Congressional election. The questions whether to accept a reduced production on the farm, or to permit prices there to rise once more, or whether on the other hand to restrict the movement of labour into the cities, make up a perplexing dilemma for legislation or executive order. The alternatives appear to be (a) civilian shortages, with rationing, or (b) higher prices, with labour complaint, (c) or longer hours of work, with labour resistance, or something of all three.

American Notes

For the Record

In his own phrase, Mr Willkie has been "smoked out." The basic statement of his views on the British Empire made public last week was provoked by the indignation aroused by rumours and reports of what he said at several "off the record" conferences in New York. This time, Mr Willkie's words are definitely, even emphatically, for the record; and if they genuinely represent his views, there is little danger of violent opposition, at least in Britain. That the post-war settlement should take account of the aspirations and responsibilities of China and Russia equally with those of the United States and Great Britain; that the pace of colonial progress should be dramatically speeded up; and that a just and equal settlement in the Near East, the Far East, and the Middle East is a prerequisite of lasting peace—these are themes with which there is a wide measure of enthusiastic agreement. In his statement, Mr Willkie made it clear that he is critical, not only of flaws in British colonial administration, but also of anachronisms

in American democracy, such as the poll tax and the position of the negro, and of American tariff policy. Although his stand on individual domestic issues has usually been well in advance of popular opinion, Mr Willkie has not always made it clear in the past—whether through oversight, or political prudence—that he was as much concerned with the failings of American policy and practice as with those of Britain. Even now he has not publicly recognised the fact that the maintenance of generous and equal collaboration with the Soviet Union after the war is certain to have a far stormier passage in his own country than in Britain. Nor is there any mention in his manifesto of the existence of the Anglo-Russian treaty, or of the record of British aid to the Soviet Union. The British misunderstanding which has incurred Mr Willkie's ire may in part be due to the thin skins of British correspondents or to the undoubtedly exaggerated importance which is now attached to his views. But Mr Willkie himself can hardly avoid the lion's share of the responsibility. He is, or should be, too experienced to imagine that the more picturesque expressions used in a series of semi-public conferences would be treated with that reserve accorded to military secrets. It would be foolish, however, despite the heated exchanges of recent months, to picture Mr Willkie as anything in the nature of anti-British. The really dangerous, because less frank, enemies are elsewhere; on the record of actions, if not of words, Mr Willkie has proved himself an ally of undisputed value and vigour.

* * *

Storm Signals

Mr Henderson's resignation, on account of ill-health, from the office of Price Administrator, coincides too neatly with the boiling up of resentment over rationing, and the advent of a new and more hostile Congress, to be taken altogether at its face value. For some time there have been signs that rationing and price control would develop into a first-class political issue. The ban on petrol sales in the eastern states over the week-end has brought to a head irritations which begin with the breakfast coffee, are inflamed by the scarcity of fuel, and occasionally continue to a meatless dinner and sugarless sweet. The sacrifice of Mr Henderson, a courageous and conscientious administrator, is not due entirely to the unpopularity generated by the thankless job of whittling down civilian consumption. Mr Henderson's tact, particularly in dealing with Congress, has never been notable. He is reported, for instance, to have said, with more valour than discretion, that oil would be shipped to North Africa even if it meant epidemic pneumonia along the East Coast this winter. Nor is it true that the rationing of coffee or petrol or fuel oil has been operated with simplicity and effectiveness. To have allowed petrol to be consumed at a rate which left no margin along the Atlantic Coast for emergency calls from North Africa is hardly a proof of prudence; and Mr Ickes was undoubtedly right when he alleged that petrol was being consumed in vast quantities for non-essential purposes. There have been other flaws. The complications of the fuel rationing scheme, which is designed to maintain a given temperature in every house under varying weather and building conditions, baffle description; and there can be no defence for the folly of announcing prospective rations days or even weeks before they are due to begin, which has been a characteristic of American rationing procedure. But these defects seem to be the excuse rather than the substance of an opposition which is apparently determined to exploit resistance to the unwelcome, but necessary, restrictions of war. It is hard to avoid the conclusion that Mr Henderson has gone, not so much because of his mistakes as because of his wholly admirable insistence on the need for cutting down the standard of living. At the Office of Civilian Supply, in the War Production Board, his place is taken by his deputy, Mr Joseph Weiner, who can be trusted to fight, to the best of his ability, for a continuation of the policy of restriction and the rationalisation of civilian supplies. At the Office of Price Administration Mr Henderson's successor, it is reported, may be Senator Prentiss Brown, whose eloquent attack on the farm bloc saved the Economic Stabilisation Bill last September, but cost him his seat in Congress. Senator Brown's appointment, like that of Justice Byrnes, would guarantee better relations with Congress for the domestic agencies of the Administration. The hatches are being tightened down; the hurricane season is at hand.

THE WORLD OVERSEAS

Eire and Beveridge

(From Our Dublin Correspondent)

December 14th

CONSIDERABLE interest has been roused in Eire by the Beveridge Report. The statement that the Social Security Plan would, if adopted, come into operation in Northern Ireland at the same time as in Great Britain has directed attention to the fact that the scale of benefits and of family allowances may be much higher north of the border than south. The possibility of attractions of this kind will lead to emigration on an even greater scale than in the past, unless some restrictive measures are taken either in Eire or in the United Kingdom. The willingness of workers who have already migrated to Great Britain to return to Eire after the end of the war will be seriously reduced by the prospect of forfeiting such substantial benefits. The solution of the acute political problem of partition will not be rendered any easier by the emergence of different standards of social and welfare services north and south of the border.

Prior to 1922, the social services in Great Britain and Ireland were for all practical purposes identical. The Childers Commission had in 1896 drawn attention to the over-taxation of Ireland under the Union. Partly with the object of remedying this injustice, the Liberal Government in the early years of the present century extended to Ireland all the new social services which it introduced into Great Britain. The old-age pensions, while naturally popular with the recipients, proved to be an exceptionally heavy burden in a country with a falling population. The Primrose Committee, which investigated the finances of the Home Rule Bill in 1912, pointed out that as the result of the old-age pensions the expenditure on Irish local services had come to exceed the revenue from Ireland. In other words, the old-age pensions had unbalanced the Irish Budget. Many critics of the last years of British administration in Ireland have blamed the British Government for saddling the poorer country with social services which it could ill afford.

Since the treaty, the social services in Great Britain and Ireland have to a large extent diverged. Many of the British services have either not been applied to Ireland or have been applied with lower rates of benefit. The system of poor relief has been drastically amended and improved. Schemes of unemployment insurance and assistance have been introduced and provision has been made for pensions for widows and orphans. The public health services, which in the last century were superior to those in Great Britain, have been brought up to date. Nevertheless, as might be expected in view of the relative poverty of Ireland, the scales of benefit in recent years have tended to lag behind British scales. The publication of the Beveridge Report brings out this contrast in clear perspective. Irish workers, it is to be feared, will cease to be content with their present rates of benefit.

The Government has been requested by some members of the Dail to prepare an estimate of the cost of applying the Beveridge scheme to Eire. It may be safely stated, pend-

ing the publication of this estimate, that any scheme at all approaching the Beveridge scheme will be impossible in Eire in the next twenty years. Sir William Beveridge assumes a steadily increasing national income in Great Britain. In view of the experience of recent years, no such assumption can be made in the case of Eire. In the years before the war, the national income obstinately failed to expand, and there is little reason to believe that it will expand materially in the post-war period. One part of the scheme which has attracted particular attention is the provision of family allowances on a very generous scale. Rumour has it that a modest scheme of family allowances will be brought into operation next year. It would not be surprising if the promise of such allowances were to form part of the Government's programme at the coming general election. Any scale of family allowances which is financially possible in Eire will necessarily appear meagre when compared with the Beveridge rates. There is a danger that the Labour Party may make a bid for support at the election by promising allowances on a scale approximating to the proposed British scale. It must be remembered that one of the justifications of family allowances in Great Britain is the effect it might have in raising the birth-rate. In Ireland, no such justification would exist, as the birth-rate, though falling, is still high, and many of the juvenile population are forced to emigrate to find employment. The sole justification for family allowances would therefore be the relief of poorer parents and the nourishment of children in poorer families. In view of this difference between British and Irish conditions, family allowances in Ireland might serve a useful purpose even if they were at a considerably lower scale than in Great Britain. Moreover, the imposition of a means test would be justified. These considerations will, however, weigh but little with the working classes in the electorate, who will behold with envious and greedy eyes the more fortunate lot of their fellows across the channel and across the border.

India's Price Problems

[FROM A CALCUTTA CORRESPONDENT]

THE problem of price control has become more intractable than ever. It was, if at all, obscured only by the political crisis in August. Since the beginning of the war, six Price Control Conferences—the latest being on September 7th—have met and achieved little beyond stressing the desirability of price control. Action was indeed taken in keeping down the prices of certain commodities. Petrol has been rationed, and the prices of newsprint, iron and steel, rubber, matches, medicines and kerosene have been fixed. But in the case of essential foodstuffs, serious difficulties have arisen. Even where supplies are known to be adequate to meet the normal demands of the country as a whole, shortage of transport interfered with distribution and led in many places to severe scarcity, abnormal prices and black markets. Rice, wheat, salt and kerosene have recently had to be given priority for movement by rail, and the general situation threatens to become even more dangerous than during the last war. The prices of rice and sugar, formerly imported from Burma and the Netherlands East Indies respectively, rose sharply with hostilities in the Far East. An attempt is being made to meet the danger of a rice shortage by a "grow more food" campaign. The change from the production of money crops—such as cotton, jute and oil seeds—to food crops may help to ease the situation considerably, but, until the results of the current agricultural season are assessed, little definite can be stated.

The efforts of the Central and Provincial Governments to fix and regulate prices appear to be successful only in

the case of state purchases, and have been, on the whole, an index of intentions rather than of achievements. The wholesale prices for all commodities (July, 1914=100) rose from 137 in June, 1941, to 182 in June, 1942, and again to 192 in August, 1942. The increase has been even greater for sugar, other food articles and metals, as may be seen from the following table:—

	(July, 1914=100)			
	Jan.	April	July	Aug.
Cereals	112	118	153	174
Pulses	127	120	151	166
Sugar	157	198	220	215
Tea	263	228	197	179
Other food articles	216	228	289	352
Oil seeds	108	104	162	167
Raw cotton	72	70	102	100
Metals	258	258	280	275
All commodities	153	157	182	192

At the beginning of the fourth year of India's war economy, the price control policy, if there is any, is still confused and amateurish. It betrays a conflict and competition of Central and Provincial objectives. That it has not been inspired as yet by economic foresight is clear from the fact that the price policy is still being tackled *in vacuo*. There is still no clearly formulated wages policy, and, curiously enough, the wage increases were initiated by the State itself by the grant of cost of living and other allowances, which have compelled a corresponding increase in the wage levels in industrial undertakings.

The question is being asked whether there is inflation in the country. Its existence was questioned by Sir James Taylor in his report on the Reserve Bank. Reviewing the facts and figures bearing on inflation—the course of prices, the extent of currency expansion, the increase in bank deposits, and the volume of bank clearings—he concluded that "although most of the recognisable elements of inflation are present, there is no evidence that inflation is present in the country in any serious form." The currency situation indeed indicates a prodigious expansion in the note circulation. From Rs. 189 crores on March 21, 1939, the volume of notes in circulation has gone up to Rs. 493 crores on September 25, 1942, an increase of 161 per cent, and there occurred a further increase of Rs. 83 crores during April-September. There is no comparison between these figures and those during the corresponding period of the last war.

The principal reserves against this large note issue consist of gold coin and bullion, standing at the constant figure of Rs. 44 crores, and sterling and rupee securities amounting to Rs. 330 crores and Rs. 102 crores respectively. The steady accumulation of sterling assets has by now come to be more than 66 per cent of the currency reserve against the note issue. Consequently, the policy of the repatriation of sterling assets is limited by the ability to increase the rupee securities in the reserve. Whether the money market can stand the present demands for financing Government requirements, and absorb the securities of the magnitude of the present figure of the sterling securities, is doubtful. But, from the point of view of the protection of the note issue, the experience of the last war will certainly not commend the wisdom of keeping a high proportion of the reserve in sterling securities.

The Sterling Assets

The Finance Member's recent visit to London appears to have led to the fructification of definite plans regarding the transfer of the sterling assets, and the recent announcement of an agreement between the British Government and the Government of India for the capitalisation of the railway annuities may be taken as an earnest of further measures. According to the agreement, the payment of the railway annuities, terminating between 1940 and 1958, and amounting to a total payment of £34,114,654, will be effected by a present payment of a capital sum of £30,054,250 to the British Government, which will arrange for the annual amounts being made available to the Government of India for payment to the annuitants. The contractual liability of the Government of India still continues, while another agency, His Majesty's Government, is introduced into the picture. The need for this can only be justified if the financial credit of the country were anything but what it is. A more satisfactory course would have been a forthright extinction of the liability by a capitalised payment to the annuitants themselves. If the present agreement suggests a new method of repatriation of the sterling debt, there are very definite drawbacks to it, not the least

being the effect on the currency and public criticism of such a policy.

The recent agreement and the payment of the 3½ per cent stock on January 5, 1942, will liquidate almost entirely the sterling portion of India's public debt. If the process is to continue, the next item will be the private capital of the company-managed railways. The policy of state management and the possession of sterling resources enabled during the current year the transfer of two more railways from company management. Notice has already been given for the acquisition during the current financial year of the Bengal and North Western and the Rohilkund and Kumaon Railways, which will leave only the Madras and Southern Mahratta, the South India, and the Bengal-Nagpur Railways company-managed. The sums involved in connection with the repayment of the private capital of these companies amount to less than £10 millions. The desire to reduce the sterling assets may lead to a transfer of these railways into state management in advance of the expiry dates of their contracts. But as the amount involved is too small to meet the demands of the situation, the only course seems to be to approach the vast fund of private investments in the country. It is exceedingly doubtful if this would offer an adequate solution as the conditions here are not analogous to those in the United States. British enterprise still forms the most organised section of Indian industry, and may not be easily replaced by national undertakings. A compromise may be found in a partial liquidation of sterling investments, which could without material loss be repatriated, leaving a substantial sum still in the form of sterling assets. Nationalisation of public utility undertakings, such as electricity, gas, coal mines, etc., may be facilitated through a repatriation of investments in these undertakings, and this will cause the least disturbance. It would be doubtful if the remaining industrial investments could be left unaffected. In formulating the policy, it is necessary to take into account the needs of post-war reconstruction, which will imply a large amount of sterling expenditure when the war is over, and the possession of sterling assets larger than required under pre-war conditions will enable it to be incurred without undue strain on India's currency system.

Russia at War

The Eastern Railways

DURING the past year the main burden of Russia's wartime transport has fallen to the eastern railways, especially to those which connect the Kuznetsk Basin with the Urals. With the evacuation of western industries, during the second half of 1941 and later during the summer of 1942, the eastern railways had to cope with a task which was beyond their normal carrying capacity. Yet, in spite of this, rail transport in the east worked, and continues to work, very efficiently. From expert descriptions, based on personal observation, it seems that the work of the eastern railways has been much better than might have been inferred from the frequent complaints and criticisms published in the Soviet press.

The pivotal line for eastern traffic remains the Trans-Siberian with its double track, which was completed shortly before the war. The most important stretch of the Trans-Siberian is the one which connects Chelabinsk and Omsk with Novosibirsk. It is on this stretch that most of the two-way traffic in iron and coal between the Kuzbass and Magnitogorsk (and the heavy Urals engineering centres to the north of it) is carried. The line is in excellent condition. All the way from Chelabinsk to Novosibirsk, it is equipped

with a most modern electrical signal system which makes possible a very high frequency of traffic. The track has been built very solidly, much more so than on some other Russian lines.

Rolling Stock

The rolling stock is also of high quality. The typical goods truck used is a big, eight-wheeled wagon with a carrying capacity of 50-60 tons. Most of the trucks are equipped with automatic devices for unloading coal and iron. Automatic coupling has also been introduced. Trucks of the older type are now only seen on railroads of minor importance. Similarly, the locomotives are up to date and efficient, and their very great pulling power makes up for their relatively small number. The Feliks Dzershinsky type used in goods traffic is said to be more powerful than similar large-sized American locomotives; its pulling power is 6,000 tons. On the Southern Asiatic lines there are locomotives running on super-heated steam, which enables them to cover a distance of a thousand kilometres without taking on water, an important advantage in the southern deserts.

The main railways, even the single track ones, have been equipped during recent years with very large marshalling yards and repair shops at the big junctions. The scarcity of track has been made good, at least partly, by the increase in rolling stock secured by the evacuation of the western railways. Trucks shifted from the Ukraine, the Donetz

Basin and Eastern Poland can frequently be seen running on the Asiatic lines. Even a part of the rolling stock of the suburban Moscow network and a number of wagons from the Moscow Underground are reported to have been transferred to the east.

The weak point in the eastern traffic is its comparative slowness. The average speed is 40 kilometres per hour, but not more than 500-700 kilometres in 24 hours. Essential war traffic, however, which is given absolute priority, runs at the rate of 800 kilometres in 24 hours. The relatively low speed is due to the weakness of the hurriedly built track beds; sleepers have not infrequently been laid on bare sand, because of the shortage of more solid material.

The famous Turksib, the cotton railway built during the first Five-Year Plan, which connects Tashkent with Semipalatinsk and Novosibirsk, is still a single track line. The same is also true of the Tashkent-Chikalov line, which has some importance for the carrying of Allied supplies from Iran and Iraq to the Urals and beyond. A double track is being laid on the line which connects Tashkent with Krasnovodsk on the south-eastern shore of the Caspian Sea.

New Routes

A number of new extensions were also started immediately before and after Russia's entry in the war. One of them is an important line connecting the lower reaches of the Pechora on the shores of the Barents Sea with Kotlas on the Dvina. This railway, built under extremely difficult conditions on the marshes and taigas of the far north, ought by now to be nearing completion or even completed; its importance is that it provides a new northern route for supplies, besides the Murmansk and Archangel routes; and it lies far beyond the reach of the Luftwaffe. Kotlas, the southern terminus of the line, is a newly-built, big and modern harbour on the Dvina, with a good connection to the central Russian rail network. Another economically important line is the Akmolinsk-Kartala single track railway, put into operation at the end of 1941; this line carries coal from the new Karaganda basin to the Urals—its importance is explained by the fact that the distance between Karaganda and Magnitogorsk is less than half of that between the Kuzbass and Magnitogorsk.

Necessary Journeys

The anxiety of the Government to shorten the distances over which coal has to be carried in the east has been the dominant factor in the expansion of the eastern railways. It is over a thousand miles from the Urals to the Kuznetsk. Iron ore and coal account for about three-quarters of the whole goods traffic; the carrying capacity left free for the transport of finished products is hardly adequate.

Passenger traffic has been cut drastically. Only one or two passenger trains run daily on the main lines. Civilians can obtain tickets only by producing special travel permits. The question, "Is your journey really necessary?" is not left to the discretion of the citizen; it is decided by the authorities. Last winter, even travel permits were not enough. Special medical certificates were needed in addition. This was meant to prevent the spread of epidemic diseases. Each train had a sanitary compartment; and during the long Trans-Siberian journeys the medical staff, attached to every train, kept a sharp watch over the health of the passengers. Hygienic conditions on the eastern trains are said to have been satisfactory.

In spite of many difficulties, the transport of vital war materials has, on the whole, been tackled very effectively. The work of the Siberian railwaymen, strenuous as it has been, has been notable; and the Government has taken much care to improve their living conditions. The railwaymen belong to the best-paid category of Soviet workers; their wages, which even before the war were much above the average, have been considerably increased during the war. Special care has also been taken, during the years of industrial expansion, for their housing. Large and modern residential quarters have been built for railway staffs near every important station along the eastern routes.

THE BUSINESS WORLD

Coinage in Wartime

(By a Correspondent)

CHRISTMAS demands for currency, on top of the steady wartime rise, are sending up the note circulation by leaps and bounds. Last week, the rise was nearly £19 millions, bringing the total to £908 millions—about £400 millions more than before the outbreak of war—and the Christmas week figure, which was not available at the time of going to press, is almost certain to be higher still.

The big demand for currency, however, has affected the coinage circulation, too, and it was announced last week that American silver would be available to Britain, on lend-lease terms, for coinage purposes. The increased demand for coins has been nothing approaching that for notes; nevertheless, the Royal Mint has had to work double shifts to supply the required amounts. Fortunately, in this war the coinage situation is better than in 1914-18. There has, first of all, been none of the upheaval of withdrawing a gold coinage and issuing notes in its stead. Moreover, for some years before 1939, the Mint's output had been greatly increased to provide additional coin because of high industrial activity. In the five years before 1939, the quantity of silver coin in the country had increased by over £7,000,000, and bronze by £2,000,000. Since the beginning of 1939, the coinage has increased by a further £20,000,000, and there is now in circulation more coin than ever before—even more than in the early 1920's, when prices touched their post-war peak.

In spite of this, during the past year complaints have been heard from various parts of the country of a shortage of coins, particularly of small silver and of pennies. The official view seems to be that there is no shortage and that the problem is purely one of distribution. It is true that no pennies at all have been struck since June, 1940, but it is felt that the 3,000,000,000 bronze coins already in circulation should be sufficient for all needs. This seems reasonable, since the number allows over 60 coppers for each man, woman and child in the country. Moreover, very many millions of pennies, formerly locked up in automatic machines and in use at "fun" fairs in holiday resorts, have now been liberated for general service. But, against this, large sums of money are immobilised in the tills of the countless canteens which are now open, day and night, throughout the country. Many of these, fearing a shortage of change, keep more till money than is necessary, and even some banks have tended to hoard their supplies of change.

The 1941 figures of the Royal Mint showed some interesting changes. For a long time, the most popular silver coin has been the sixpence, closely followed by the shilling. The circulation of these two coins had increased enormously, owing to the great extension of coin-operated meters and automatic machines, and to the growth of the 6d. and 3d. stores. During the war, however, the demand for them has not grown so much as for other silver coins, and, for the first time for many years, the florin headed the list with an issue of 24,451,079. The florin is a handy coin in paying the fighting Services, and it is said to be particularly popular in RAF stations.

Perhaps the most striking feature of last year's coinage was the very large issue of the new yellow twelve-sided

3d. piece—60,239,489, against 12,636,018 in 1940. This increase was largely due to the fact that no pennies at all were struck, and the public therefore had little choice. It was not, however, entirely Hobson's choice, for there are now signs that the public, which is always conservative in matters of coinage, is at last overcoming its prejudice against this monetary newcomer. It is only five years since this coin was introduced. The silver threepenny bit is an old coin, but when its issue was revived for general circulation in 1845 it did not win immediate approval, and it was ten years before it was generally accepted. The florin took over twenty years to establish itself, so that the yellow threepenny bit is still in its early days.

The great advantages of this coin are that it uses only about one-fourth of the metal required to make three pennies. It is, therefore, economical to manufacture, and much easier to transport than an equivalent value of bronze coin. It is, incidentally, a source of great profit to the Mint. Its alloy is cheap, and the metal required to manufacture the 1941 issue of £752,994 probably cost about £25,000—leaving a gross profit of over £700,000. Although these coins are commonly called "nickel," the alloy contains only 1 per cent of nickel; the rest is copper and zinc, that is, brass.

The arguments in favour of the new threepenny bit seem to have affected sympathetically the demand for the small silver threepenny bit. In 1941, 7,979,411 of these were minted—the highest figure for twenty years. These coins circulate freely in Scotland; they are unpopular in London, and in England generally they seem to be found in "pockets"; one locality will be always well supplied with them, while another is always short.

The issue of halfpennies and farthings in 1941 constituted in each case a new high record in the history of the Mint. The demand for halfpennies was no doubt stimulated by the introduction in London and elsewhere of the minimum 1½d fare on public transport vehicles, while both halfpennies and farthings have figured more prominently in the prices of many articles owing to the operation of the Purchase Tax and in the price-fixing of certain rationed goods.

Although the Mint has increased the output of these two coins, it has kept their issue well under control. Otherwise, there would have been little purpose in suspending the issue of pennies in 1940 to save copper. The weight of the halfpennies and farthings issued in 1941 was only some 330 tons, whereas in 1938, when large quantities of pennies were struck, the weight of the bronze coin issued exceeded 1,400 tons. The Mint estimated that by striking the new threepenny bits instead of pennies it would save 800 tons of copper annually.

No five-shilling pieces were struck in 1941. This dignified coin is more popular in the collector's cabinet than in the public's pocket. Its issue ceased in 1902, and it was not included in the new King George V coinage in 1911. It was generally assumed that the crown had met the same fate as its near relative the four-shilling piece—a coin first introduced in the Jubilee coinage of 1887 and discontinued, unmourned, in 1890. In 1927, however, largely to please collectors, the crown was restored, and limited issues were made thereafter of about 4,000 a year. In

1935, the Jubilee Crown was struck, and this so fired the public imagination that 698,224 were issued. In 1937, the Coronation year, there was a similar demand for the new crown of King George VI, of which 404,729 were issued. In these two years alone over a million crowns were thus

struck—enough to meet normal demands for two hundred and fifty years. Most of these have been returned unwanted to the banks, and, while such great stocks remain, further mintings of the five-shilling piece are unlikely.

Finance and Banking

Heavy TDR Payments

There has been no relief for the banks this week in the burden of their Treasury deposit receipt payments. The amount of new money required of them through this channel has been reduced from £80 millions to £65 millions, but as current maturities have fallen even more steeply—namely, from £60 millions to £40 millions, and as pre-encashments have been on about the same modest scale, both in respect of this and last week's maturities, the net TDR total paid by the banks has risen by £5,000,000. In view of this fact, of the approaching end of the year, and of the abnormally large encroachments made on bank cash by withdrawals of currency, the banks have continued to avoid purchases of bills from the market. The market, for its part, obtained the larger allotment of 39 per cent at last week's tender for Treasury bills and has thus been called upon to take up a considerable amount of new bills. Fortunately the banks have been ready lenders of money, though reluctant buyers of bills, and there has been little difficulty in financing the additional bill holdings. No special assistance from the Bank of England has yet been required, but it will no doubt be forthcoming on the required abundant scale before the turn of the year. It would be possible on this occasion to shift to the shoulders of the Treasury the bulk of the task of financing the market over the turn of the year. The Treasury bill maturities in the final week of the year are concentrated during December, while it would be theoretically possible to concentrate the whole of the payment for that week's new bills on Saturday morning, January 2nd. The authorities are, however, unlikely to tolerate any jockeying of the kind by the discount market syndicate, and the applications for Treasury bills from that quarter will probably have to be spread with greater evenness over the week.

South Africa's Debt Repatriation

The further repatriation of South African sterling securities announced at the end of last week (the details of the operation, as it affects the Stock Exchange, will be found in a note on page 805) almost exactly accounts for the creditor balance of payments of the Union over the past year. As usual, that balance, after meeting current commercial payments and such capital transactions as the continued repatriation of South African mining shares, has been allowed to accumulate in the form of gold held by the South African Reserve Bank. That institution has first pick of the newly mined South African gold, and the balance sold to the British Treasury is so calculated as to meet current requirements for overseas payments. According to the returns of the Reserve Bank of South Africa, the gold reserve has risen over the twelve months to November 6th last by £19 millions to £71 millions. These figures are expressed in gold calculated at the old nominal parity of 85s. an ounce. The true value of the existing reserve

is thus £142 millions, and the expansion over the past year amounts to £39 millions. This last figure is exactly the amount of gold which the Reserve Bank is to make available to the Union Treasury in order to finance the latest repatriation of South African sterling debt. This procedure follows the precedent that was set in dealing with the first South African sterling debt repatriation in October, 1941. On that occasion, the sterling securities in question were taken over by the South African Reserve Bank, the sterling price being provided by the appropriate sale of gold to the British Treasury. The securities were then cancelled by the proceeds of domestic borrowing.

Banks and EPT

Mr McKenna's recent assertion that no British bank had yet had to pay Excess Profits Tax, and his accompanying estimate that the return to bank shareholders did not represent more than 4 per cent on the total capital employed—including published and hidden reserves—were, not unnaturally, linked together; and the deduction made by many of his readers was that the banks had not paid EPT, because they were earning less than the 6 per cent that would be allowed on a capital standard assessment. There is, however, a complete *non sequitur* in this line of reasoning. Under the relevant Finance Acts, the taxpayer does not have the option of choosing a profits standard or a capital standard—whichever is the larger—for his EPT assessment. There is nothing in the Acts which would allow the banks to be assessed on a capital standard. The position is that the banks' assessment to EPT is based on a profits standard, for which they are allowed to select one of four figures—the profits earned in 1935, in 1936, the average of 1935 and 1937, or the average of 1936 and 1937. The most favourable of these, judging by the published figures, would appear to be the 1936-37 average. The 1941 published earnings of the five largest clearing banks when grossed up for income-tax were some £1,500,000 above this standard. How, then, can this fact be reconciled with the assertion that no EPT was paid in respect of last year? There can only be one answer; it is to be found in the wide disparities which occur between the banks' taxable profits and the corresponding figures which are allowed to appear in the published profit and loss accounts. The published profits are no guide to the banks' true and taxable earnings. It certainly cannot be asserted that, as the published figures suggest, the average of 1936 and 1937 profits provide the most favourable EPT standard. It is probable that the experience of each bank differs from that of other banks in this respect. The order of magnitude of these divergences between taxable and published profits can only be guessed at by those outside, but in some years the former may well have been double the disclosed figure. There are many deductions from published profits, in respect of buildings and transfers to internal reserves, which are not allowed for tax purposes. On the other hand, disclosed profits may include recoveries in respect of debts previously written off which would not be taxed in respect of that year, because the earlier provision for writing these assets off were made out of taxed profits.

But perhaps the most important divergence arises out of capital profits made through the sale of securities. Large-scale conversions of banks' securities are somewhat haphazard in their incidence, and if they yield a considerable profit on the price at which the securities were obtained, the effect on that particular year's taxable profits may be quite startling. Needless to say, no such profit would be shown in the published figures. It is not unreasonable to assume that during one of the years 1935 to 1937 such capital profits may have been substantial. This was a period

when banks were entering the market for 4½ per cent conversion loan on a fairly heavy scale. This stock was then a short-dated security, highly eligible for the banks, and commanded a premium. The premium itself might well have been written off from published profits—whereas the profits undoubtedly secured on the sale of other securities for conversion into 4½ per cent would have swollen the taxable profits, but have been entirely ignored in the published figures. It is unlikely that any such capital profits have accrued to the banks since the beginning of the war. Their trading in securities in the war years has been a wholly one-way traffic. In other words, the banks' EPT standards are appreciably higher than the published figures would even remotely suggest.

Post-War Interest Rates

One of the few occasions on which last week's House of Commons debate on war finance touched a qualitative level attuned to the occasion was in the discussion of post-war interest rates by Mr Benson, Labour member for Chesterfield. Mr Benson stated the position very clearly: the Government can borrow cheaply now because it monopolises the capital market, while by its control of labour, materials and civilian consumption it can keep capital development for other than approved purposes down to negligible proportions. After the war, the position will be radically altered; civilian industry will again become a keen competitor for capital; not only will there be prospects of large new industrial issues in the capital market, but companies, which throughout the war have been compelled to skimp plant renovation and to invest in Government securities the substantial allocations which would have financed new capital expenditure, will tend to sell their gilt-edged securities so as to put in hand long deferred renovation of

plant. What will happen to the rate of interest then? Mr Benson asks this question with all the apprehension that springs from his belief that low interest rates are the key to the success of Britain's economic reconstruction. He suggested two answers to his query. The first, of general character, was that the transition from war to peace in industry must involve some continuation of the priorities, quotas and controlled prices which form part of the present official control over capital development. The second, of more specialised technical character, is that steps should be taken to peg the low rates on short-term assets held by the banks. In particular, Mr Benson suggested that the many hundreds of millions of pounds which by the end of the war will have been invested by the banks in Treasury deposit receipts should be funded at a low rate—not exceeding the estimated cost to the banks of operating the credit created against the issue of these securities—and with special discounting provisions to be used in emergencies. This course of "bullying the banks" is always a tempting way out of an impasse such as this. It is quite possible that the ultimate fate of the TDRs will follow the lines suggested by Mr Benson. But it would be court-ting compete disillusionment to expect any such move to solve the problem of the short-term rate of interest. The market rate for new short loan accommodation will move quite independently of the artificial rate to which a proportion—however large—of bank assets has been pegged. The problem of the open market rate must be solved by more fundamental measures. There will be a famine of capital after the war and a correspondingly keen demand for capital goods and the wherewithal to finance their purchase. If no part is to be given to the rate of interest in arranging the order of priorities for the satisfaction of these demands, if the rate of interest is to be pegged and to play a static rôle, the alternative must be centralised control of priorities and planning of capital development as stringent and over-riding as exists today.

Investment

A Sympathetic Advance

The event of the week has been a renewed rise in the Funds, mainly medium and long dated stocks, as a sympathetic reaction to the news of the vesting of the South African stocks. The movement follows a familiar pattern and it is justified to the extent that a substantial part of the proceeds of the operation must, inevitably, go into gilt-edged. It is to be noted, however, that this new money constitutes only a 50 per cent addition to the India payments, due on January 5th; that a substantial part of the proceeds will go into shorts, or into issues now on tap; and that a further considerable proportion will not go to the gilt-edged market at all. This has always been the experience in the past. It can scarcely fail to be so now, especially as almost a third of the money involved is at present in stocks bearing a nominal rate of 4½ or 5 per cent. What the Funds are benefiting from at present is reinvestment in advance of the India moneys, and a proportion even of these is going into good equities. The attention of the market, and the investor, having been drawn to the possibilities of vesting orders, they may anticipate a fairly well sustained strength of fixed interest securities, and it is not improbable that there will be a further closing of yield margins between the Funds and other good fixed interest securities. For instance, it is not impossible that a modest demand for Australasian stocks owes as much to this line of argument as to the continued success in the Solomons. The effect of the India and South Africa payments will, however, be short lived and there is not a great deal of scope for further similar

Another Vesting Order

After a gap of almost eleven months, the Treasury announced the registration, and transfer to itself, of a further block of securities towards the end of last week. This time, the stocks concerned are five loans of the Union of South Africa—the second operation of that Dominion under the Defence (Finance) Regulations, some £40 millions of securities of the Union, Natal and the Cape of Good Hope having been called in October, 1941, for payment on the following December 1st. Prior to that, about £8,000,000 of 5 per cent stock had been paid off at its due date, namely July 1, 1940. On this occasion, the stocks involved are the 3 per cent of 1954-64 and the 3½ per cents of 1953-73, and 1955-65; the 4½ per cent 1955-75 and the 5 per cent 1950-70, the total nominal value being some £42 millions. A premium of little more than 12 points is paid in the case of each of the last two, so that the Union is getting out of its bargain on rather favourable terms. The consideration is, of course, based on the market price, plus interest to the date of payment, February 15th for securities in respect of which delivery has been completed by January 25th. The effect of previous vesting has, however, been to keep the price of securities carrying a high nominal rate of interest down well below the point at which the true return is at the level of 3 per cent, at which the Union could certainly borrow for a decade or so. The operation is the counterpart of the steady excess of South Africa's exports over her imports thanks to American purchases of gold. The Union does not accumulate sterling, but buys back a part of her own gold production, and, as a result of this, the holding of bullion and coin in the Reserve Bank had risen by some 62 per cent in the first ten months of this year. On the previous occasion, payment for the vested securities was made by surrendering gold, not sterling balances, and it has been announced that gold will be transferred to cover this payment, estimated to require £39 millions. The exchange aspects of the deal are dealt with on page 804. This means, in substance, that it will yield dollars. The usual arrangements have been made for the proceeds to be accepted in broken amounts in subscription for National War, Savings and Defence bonds now on tap, subject to the customary limitations as to minimum, and in the case of the latter, maximum holdings.

operations. There are municipal issues of the Union, to the tune of £20 millions, which will probably be taken over. There are certain Indian railway stocks, and there are a number of Canadian common shares, which may, imaginably, still be collected and pledged, if not sold. But the last, at least, would scarcely lead to a demand for the Funds. The investor is satiated for the moment and business done continues to fall to new low levels; but the volume of enquiry continues to increase and when the holiday and tax payments are out of the way he may still decide that it is worth risking further attacks on the rights of equity holders. According to *The Actuaries' Investment Index*, the yield margin between Old Consols and British industrial equities was still one and one-third points on November 24th. It is, probably, very similar now.

* * *

Shareholders' Apathy

Of the numerous schemes recently put forward by company directors, only one, that of Peter Robinson, has met with definite, organised opposition. In this case, the shareholders' committee received sufficient support to block the passing of the proposals and discussions are now proceeding between it and the board. In the case of the John Lewis offer to holders of ordinary capital in SPS to transmute their 7 per cent participating rights into 3 per cent cumulative preference, answers have been received from holders representing something approaching half the total independent holdings. These show a vote of over five to one in favour of the proposal by both number and value. If large holdings are excluded, the majority by value is not reduced as low as four to one in favour. In the circumstances, the company is convening class meetings to sanction the scheme. The view was expressed in *The Economist* of December 5th, that the data do not exist to determine probable post-war earnings and that the scheme ought to be rejected as premature. Insofar as they affect it at all, subsequent events only serve to strengthen this view. Meanwhile, the Gaumont-British offer to General Theatres has been only a qualified success, in that it has been accepted by only some 60 per cent of holdings, against the 90 asked for. Gaumont-British have decided to accept the smaller amount and are keeping the offer open. It seems improbable that acceptance will reach a total which will permit the buyers to enforce the decision against the minority who wish to retain their holdings, but, in the ignorance which exists as to the relations between the two concerns, it may not be wise to hold back. The English Electric offer to shareholders in D. Napier & Son is in quite a different category. Preliminary figures of earnings of the latter for the year to September 30th last have been got out well in advance of the closing date of the offer, namely Monday next. They suggest a recovery in equity earnings from 9.4 to 15.1 per cent, but the distribution is unchanged at 7½ per cent.

* * *

Permanent Proxies

Attention has been drawn to the fact that the Canadian Pacific Railway Company is issuing a form of permanent proxy to its preference stockholders. This, in effect, transfers the voting rights of the holder to the chairman and president of the company in respect of all matters affecting the company's business, and it runs until revoked in writing. The practice is believed to be quite exceptional in Canada, and it is certainly so in this country. It has been in use for half a century or so by this company, and it is believed that a fair proportion of holders do in fact transfer their voting rights. This attitude towards the responsibilities of shareholders is contrary to the whole trend of modern thought on the subject, and it is to be hoped that few, if any, stockholders will give the proxy. It is not clear whether those preference holders who do give it receive full details of the business to be transacted at the meetings of the company, but, in any case, the practice must make it slightly more difficult for those who object to any proposed step to make their objection effective.

* * *

Carreras Dispute

The publication of the full report of Carreras shows that the annual meeting is to be held on December 30th. On Friday, December 18th, Mr Justice Simonds dismissed

the motion to restrain the chairman of the company from voting against the re-election of Mr W. M. Codrington to the board. The Chairman, Sir Edward Baron, is believed to hold voting control, and, as the main action, to determine whether or not this is so, cannot be heard until next session. He will presumably be able to stop the election, if he is determined to do so. It is to be hoped that he will do nothing of the sort, but that he and other officers in charge of the direction of this undertaking will reach agreement. If they do not now, it is improbable that the ultimate decision of the courts will produce a final acceptance and the state of disharmony will be perpetuated. This is yet another instance of the evil of dissociating control from financial ownership. In the case of this concern, a holding of little over three per cent of the various classes of ordinary capital gives control, since only twice that amount have any voting rights. There are, of course, cases where it is desirable that control shall be vested in a few hands, at least for a period, but this does not appear to be one of them. That is not, however, the point at issue in this discussion. It is raised because a vote of a number of shareholders at a general meeting has a quality of impersonality which is sadly lacking from this case. Meanwhile, there would seem to be nothing greatly amiss with the direction of the company, although very little indication is given by published figures. Profit is up by more than 40 per cent at £3,121,988, which suggests a very marked expansion in turnover. The increase is more than neutralised by higher tax provision and the net amount available for equity is £533,208, against £554,644, which means a small draft on the carry forward against an addition to it of some £45,000. The feature of the balance sheet is a rise of £1,577,000 in stock in trade which almost doubles it. The bulk of the rise, presumably, reflects higher prices. This is financed by a jump in creditors, while substantial expansion in debtors and investments is financed by a fall in cash. The price of the £1 "A" shares, at 117s. 6d., ex dividend, gives a yield of £4 13s. 8d.

Company Notes

Lancashire Cotton Setback

The preliminary statement of the Lancashire Cotton Corporation shows a decline in net earnings—after taxation, fees and war damage contributions—of nearly £100,000 to £599,907. In view of a rise in depreciation from £216,989 to £225,000, equity earnings are reduced from £334,571 to £243,472, representing 21.6 against 32.4 per cent. The carry forward is, however, slightly increased at the cost of halving the previous year's £200,000 transfer to general reserve, which is now raised to £750,000. The ordinary payment, maintained at 7½ per cent, is still very generously covered by surplus earnings and there is no serious danger

that the difficult trading conditions, with which the corporation is now contending, will threaten the return on equity capital, unless the directors specifically decide on an ultra conservative policy. The setback in the net figure is not unexpected. The concern was severely hit by the disappearance of much of its skilled labour at the time when the concentration policy was implemented, and, in the previous year, was unable to work in lowest cost conditions or to supply the full demand for its products. The extent to which the labour problem has been solved is probably the most important single influence on current

earnings, but there is also some agitation to increase prices. The £1 ordinary stock, at 32s. yields £4 16s. per cent.

* * *

Smaller Aircraft Concerns

The latest results of smaller aircraft companies tend to suggest that their experience has been less favourable than that of the motor concerns whose reports were discussed in *The Economist* of December 19th. The three concerns whose accounts are analysed in the following table show, in two cases, a decline in equity earnings. Little guidance can be obtained from any of the published figures of total profits, since these are now all shown after some portion of taxation and numerous other charges and provisions. The most reasonable inference is, however, that true gross earnings have in all cases substantially risen. The reason for the decline in equity earnings of *Handley Page* and *Phillips and Powis* is almost certainly the fact that their wartime expansion has been more exaggerated than that of predominantly motor concerns, so that they suffer from an unfavourable EPT standard as well as from

Company and Date of Accounts	Total Disposed Profits	Earnings for Ordinary		Dividend	December 22, 1942

|| After tax, including tax on dividends; contingencies and, in 1942, war damage.

the effect of rising costs and narrowed contract margins. *Westland Aircraft*, in all probability, does not yet pay EPT. The only concern which is reducing the ordinary payment is *Phillips and Powis*, with an actual cut of 3 per cent less tax to 9 per cent less tax, corresponding to the reduction in surplus earnings. The dominating feature of the industrial experience of all these concerns, as well as of *Aero Engines*, which has recently issued accounts for the three years ending July 31st last, is the expansion in turnover. All balance sheets bear testimony to this rise, both in terms of increased liquid items and of stringency of ready cash. In this respect the position of *Handley Page* has notably improved. Bank overdraft of £189,918 has been eliminated and cash holdings raised from £1,604 to £52,712. The bank overdraft of *Aero Engines* stands at £420,020 and that of *Phillips and Powis* is more than £100,000 higher at £157,610. This indebtedness is the inevitable result of a sudden expansion, and, in the context of war effort, not an unwelcome sign. Yields, which range between £8 and £9 per cent less tax, are sound for this type of security.

* * *

Improved Lorry Earnings

The latest accounts of *Guy Motors* and *Dennis Bros.*, two representative concerns in the commercial vehicle section of the motor industry, show that the latest period has been no less favourable than for the light engineering section. The following table, analysing results for both companies over the past two years, shows that, in each case, total profits after tax were substantially higher. The decline in equity earnings of *Guy Motors* from £24,546 to £18,115 is due solely to the rise of some £25,000, including £5,000 for deferred repairs, in the depreciation transfer. The 15 per cent ordinary dividend is still amply covered by earnings of 18.3 against 24.8 per cent. The position is similar for *Dennis Bros.*, for although equity earnings may be estimated as having risen from £108,564 to £134,030, the rise of £30,000 in the transfer to factory renewal reserve might strictly be charged against profits and would result in a slight reduction in the earned rate. The 125 per cent divi-

dend would, however, still be covered. In neither case is there any transfer to free reserves. These results point to the two factors which govern the destiny of the truck and lorry industry: the present substantial expansion in turnover—resulting in a certain cash stringency—and the necessity to make very heavy depreciation provisions beyond

‡ Factory renewal for Dennis; Contingencies for Guy.

those permitted by the Inland Revenue authorities for tax purposes. For the present, profits appear high, but a heavy reconstruction programme must be undertaken before the companies can expect to excel in the post-war world. The balance sheet shows the expected expansion in debtors, creditors, stocks and work in progress, with a certain decline in cash holdings. The expansion appears to have been more marked in the case of *Dennis* than of *Guy*.

* * *

Diamond Payments

The decision of the De Beers directors to double the payment on the deferred capital, thus distributing 40 per cent for the first time in well over a decade, scarcely exceeded market expectations. Although there is no information as to work on the properties, the improved result is almost certainly a reflection of sales rather than production, and it is clear that the industry is one of those reaping the greatest benefit from the war. The demand for both industrial diamonds and gem stones has been good and there is every reason to suppose that both will continue to improve, unless and until the general level of taxation more than counteracts the decreased opportunities for expenditure on more usual objects. Hitherto, supply has lagged far behind demand at ruling prices, but the position is gradually improving as America and South Africa learn to replace the diamond cutters of Holland. While the outlook seems fair for the period of the war, the directors of this group of companies are, evidently, uncertain, since they postponed the interim payments. There will be some disappointment that the payment on Consolidated Diamond Mines of South West Africa should merely be maintained at 15 per cent. This is possibly due to the relatively smaller holding in the Diamond Corporation, but the accounts of neither company are of a character to permit any exact deductions. The effect of the announcement was to raise the 50s. De Beers' deferred shares to 223s. 9d. and to cause a drop of 7½d. to 15s. 1½d. in the 10s. ordinary of Consolidated. In the absence of information as to the rate at which tax is to be deducted, exact yields cannot be calculated, but the returns are around 9½ per cent for De Beers and 10½ for Consolidated, subject in each case to tax at somewhat below the full rate.

* * *

Apex (Trinidad) Higher Profits

The preliminary statement shows a rise of some £90,000 to £676,745 in the profits of Apex (Trinidad) Oilfields for the year to September 30th last. The improvement, despite the rise in costs to which the chairman referred at last year's meeting, is not surprising in view of the extension of enemy control of alternative sources of supply in the Far East. The transfer for amortisation of wells is again slightly higher at £242,084 against £235,112, and there is an increase in tax liability from £131,000 to £205,000, so that the actual rise in equity earnings is a modest one, from

£196,217 to £205,878. In view of an increase in Dominion Income Tax Relief, tax is deducted from the ordinary payment, maintained at 30 per cent, at 5s. 5d. against 6s., so that the rate of cover, adjusted for this factor, shows a slight decline from 47.4 to 40.2 per cent. General reserve receives £30,000, as in the two previous years, and the carry forward is nearly £11,000 higher at £143,168. These results are fully as good as could have been expected in view of the shortage of skilled labour and the inevitable transport difficulties. The 5s. ordinary shares at 33s. 6d. yield £4 11s. 4d. less tax at 5s. 5d. per cent, or £6 13s. subject to the full standard rate.

Further Kaffir Payments

The dividends announced by the *Anglo-American* and *Consolidated Gold Fields* mining groups for the second half-year of 1942 were rather better than the market had expected. The *Anglo-American* group possibly underestimated the resilience of profits, and in five cases the latest dividends are higher than those announced last June, although only in two cases, Western Reefs and East Dagga, which are not yet fully developed, were payments raised above those of a year ago. All the others, except New Era, show falls. There is no case of a further reduction for the latest half-year. The *Consolidated Gold Fields* group contains two reductions on the figures of last June, of which one, that of Sub Nigel, from 5s. 3d. to 5s., is due wholly to the age of the mine, which is now past the point

of maximum yield. All mines except Vogelstruisbult, whose payment is restored from 9d. to 10½d., are distributing less than a year ago, but Simmer and Jack has returned to the dividend list with a distribution of 2d. for the year against

* Financial year ends June 30.

11d. a year ago. There was some disappointment that Vlakfontein has not yet entered the dividend list, but, on the whole, market opinion is relieved that the more general downward trend initiated last summer has been checked for the present.

Industry and Trade

Highlands Electricity Development

The Government has accepted the main recommendations of the Committee on Hydro-electric Development in Scotland, which was appointed in October, 1941; and legislation will probably be introduced shortly after the Christmas recess. The Committee has produced what should be a workable compromise between the views of those who oppose any development of the Highlands for fear of spoiling natural beauty and those who press for industrial development irrespective of aesthetic consequences. The report points out that most of the undeveloped water resources of the Highlands are in lonely and inaccessible places and that intensive exploitation of similar resources has been carried out in Norway, Switzerland and elsewhere, without disfiguring the countryside or adversely affecting tourist trades. The present scheme is designed to give the inhabitants a future, as well as a past, and to revitalise what has become a depressed area. Clearly the Highlands cannot remain the preserve of land-owning and sporting interests, and there must be more useful occupations for the population than being deer-stalkers, game-keepers and ghillies. The Committee recommends the creation of a non-profit-making public service corporation, called the North Scotland Hydro-electric Board, with responsibility for electricity generation and supply in the northern area, that is, the area north of a line which runs approximately from Dumbarton to Montrose. The Board would undertake a development programme with the three main objectives of attracting to the Highlands a share in the electro-chemical and electro-metallurgical industries; developing power for the consumers of existing undertakings or for consumers in its own area; and carrying on experimental schemes in isolated districts. It would be empowered to acquire the land and wayleaves necessary by requisition, failing agreement. The vesting of responsibility for development in a public corporation rather than in a private company should act as a safeguard of the public interest, while the proposal that the new Board should be advised in framing and executing its schemes by an Amenity Committee is a wise precaution.

Wage Increases

In the prolonged absence of a unified policy for wages, rises continue to be won, haphazardly, in industry after industry. In some cases, such as that of merchant

seamen, there is abundant reason for higher pay—in others, good reasons are much harder to seek. It is estimated that during January to September this year, nearly five and a half million workers shared increases (in rates of pay) amounting to £1,250,000 a week. A new batch of rises has been announced, covering merchant seamen and ranging through various industries to canteen workers. The National Maritime Board has agreed new rates for the Merchant Navy, to operate from February 1st. Basic pay is to be increased by amounts ranging from 10s. to £4 a month, according to rank, and the "differential" payment of £2 is to be merged with basic rates. The Cotton Conciliation Committee has awarded a flat rate rise of 5s. a week to adult cotton weavers working a full complement of looms, bringing their minimum wage to 48s.; the new 200,000 shipbuilding workers are to receive a war bonus; 6s. a week is to be paid to adult males; women and youths will also benefit. In mid-January, under a new agreement, member firms of the National Society of Caterers to Industry will raise wages by 5s. a week for adults, by 4s. a week for workers aged 18 to 21 years, and by 3s. a week for younger workers.

Coal Mines Financial Control

Under the new financial control arrangements in the coal mining industry, the revenue from the 1s. a ton price increase operative from January 1st will not be retained by the colliery companies, but, like the July increase of 3s. per ton, will be diverted under a levy of at least a corresponding amount into the national pool which was created under the Coal Charges Order of June 3rd last. On current disposals the 1s. will yield approximately £9 millions per annum and will swell the annual rate of inflow into the Coal Charges Account under the control of the Ministry of Fuel and Power to above £40 millions. The chief claim of this fund is the Greene wage, which was estimated to cost over £23 millions per annum; but other charges which the pool is intended to cover are (1) assistance to necessitous undertakings; (2) guaranteed wage payments under the Essential Work Order; and (3) the additional wages under the output bonus scheme. Pending the settlement of the ultimate form and extent of Government control under requisition, the Exchequer has been temporarily financing some expenditure, but it has now been arranged that the

industry must bear all expenditure which can be said to be part of the cost of coal production. The Exchequer will bear the burden of emergency measures, including the heavy cost of the operational control now being exercised by the Ministry of Fuel through the national and regional machinery created under the authority of the White Paper of last June. Accordingly, the fund must defray expenses incurred under the special measures which have been taken for the recruitment, training, transport, and transfer of miners, and the cost of a non-recurring levy (probably not more than 1d. per ton) which it is proposed to make in 1943 under the Workmen's Compensation Bill now before Parliament.

The new arrangements provide also for a more systematic and assured remuneration for capital. Hitherto, there have been considerable disparities between the trading balances of the various districts. Some have been handicapped by debit balances while others have been showing credit balances ranging up to 2s. or more per ton. The main object of this part of the scheme is to secure a better equalisation of the available net proceeds of the industry. In the fixing of the datum, minimum, and maximum rates per ton of credit balances, regard has been had to past performances and to the desirability of stabilising them with only half-yearly opportunities for revision. For the industry as a whole the datum credit balance, it is understood, closely approximates that earned during the first half of 1939 with a maximum rate only about 6d. per ton above it, while the appropriate credit balance for each individual district is to be adjusted by abatements in the payment of the levy under the form of price allowances. The pool is to bear the drain of these price allowances as well as the cost of the other services enumerated above. It is understood that the 1d. per ton increase in the price of coal authorised by the Board of Trade last July to cover the cost of charges consequential on the wage increases granted under the Greene award is to be discontinued, but the original levy of 7d. per ton to cover assistance to necessitous undertakings and guaranteed wage payments is being reduced to 6d. per ton, and it is expected that from the beginning of the new year the total levy under the Coal Charges Order will be either 4s. 6d. per ton or 5s. if this higher rate is considered necessary. It is not expected that the fund will be equal to the payment even of the contemplated minimum credit balance in respect of 1942.

Lead Supplies

The supplies of lead available to the United Nations are less scarce in relation to demand than those of the other leading non-ferrous metals. In its latest survey of strategic materials, the United States War Production Board classifies copper, zinc, tin, aluminium and magnesium under the heading of products which are only available for military purposes; lead, on the other hand, is listed among materials which are also available for civilian needs and as a substitute for other metals. In this country, too, lead is being released more freely for non-military uses than any of the other major base metals. There are two reasons for the relatively comfortable Allied lead supply position. With the exception of some 100,000 metric tons of lead normally produced in Burma and Japan and some 225,000 metric tons in German-controlled Europe, the United Nations control the entire world output of this metal, which, before the war, was at the rate of 1,600,000-1,700,000 metric tons per annum, and has probably risen during the past two years. Secondly, the war has severely reduced the most important peace-time outlets for lead—building and the coating of electric cables—which formerly absorbed more than one-half of all supplies. Although lead consumption for military purposes—the metal has always been essential to the production of small arms munitions—has been greatly increased with the mechanisation of warfare, the reduction in its use for non-military purposes has been marked enough to assure ample supplies for current needs. The favourable lead position of the United Nations is particularly important in that this metal can be usefully employed in greater quantities for purposes for which normally scarcer metals are required, such as protective coating, solder, bearing metals and foil. The Axis is short of lead. German-Europe before the war used to absorb much more than twice the quantity of lead it produced, and Japan produced less than one-tenth of its own requirements. True the lead mines of

Burma, now in Japanese occupation, could probably meet that country's deficiency; but in view of the destruction reported to have been carried out by the retreating Allied troops, it is doubtful whether the mines are again producing at anything like maximum capacity.

Fun of the Fair

Seasonal colour has inspired the Ministry of Food to "go gay" in its campaign to increase potato consumption. Potato Pete is holding a Christmas fair on a bombed site in a busy London shopping area, and the fun of the fair is given free rein. Gone are the days when every shop in the street vied with the others to produce the gayest, most exciting show, and Potato Pete, holding the field to himself, is proving a great draw; it would have done so against all rivals. Adults walk downstairs slowly, but for the younger there is speedy progression into the fair by means of a shute. Inside all tastes are catered for. Mother can discuss food and collect recipes in the Cookery Nook, while with four balls costing twopence the children can "sink a U-boat." They must give the voucher they collect when paying their twopences to mother, for it is worth two lb. of potatoes at the local greengrocer. When they have had their fill of Potato Nursery Rhymeland, the magic garden, the lucky slide, the distorting mirrors and the lucky dig, Father Christmas gives them a hot potato from his baked potato can. Having signed his book with a promise to eat more potatoes, the family can rest in the cinema, where there is something for everyone in the programme.

The New Domesday Book

The National Farm Survey, which has been undertaken by the Ministry of Agriculture, is in the nature of a domesday book, whose object is complete knowledge of all farms. The Survey was begun early in 1941, and the field work is nearing completion. The information collected falls into three sections. A record for each farm gives data on such subjects as the conditions of tenure and occupation; the natural state of the farm, including its fertility; its equipment; weed and pest infestation; water and electricity supplies; its management and its wartime ploughing-up record. From the completed June, 1941, farm census return, statistics of crop acreage and livestock numbers have been added, and a plan of the farm is part of the survey. The county war agricultural executive committees have assumed the onerous task of collecting the material, in which they have had the assistance of practical farmers and surveyors. A good deal of the data has been assembled in the course of inspections made for other specific purposes, such as the allocation of ploughing up quotas and drainage grants. The survey has already proved of great value to the county committees, and has enabled productivity to be stepped up on individual farms. Its usefulness in post-war planning can scarcely be exaggerated. With the picture of all aspects of farms and farming it provides, whatever policy for agriculture is adopted, lack of information will not hinder its formation or operation.

Miners' Bonus—A Correction

Last week *The Economist* inadvertently repeated a mistake made, equally inadvertently, by the Ministry of Fuel and Power. In a note on page 778, entitled "Coal Output," the sentence beginning "The number of miners to receive the bonus was 230,500 in November," should continue: "compared with 290,000 in the previous period," instead of 190,000 as stated. On page 646 of the issue of November 21st the same wrong figure was given, and the same substantial correction (which has, unfortunately, not yet been made publicly by the Ministry itself) applies.

Correction

In a Note called "Another Million Acres" on page 743 of *The Economist* of December 12th, reference was made to a paper by Mr D. R. Bomford, chairman of the Tractor Users' Association. This paper was read to the Royal Society of Arts (16 John Adam Street, London, W.C.2), not, as stated, to the Royal Statistical Society.

COMPANY MEETINGS

THE FINANCIAL NEWS
LIMITED

The forty-fifth annual general meeting of The Financial News, Limited, was held, on the 18th instant, at the registered offices of the company, 20, Bishopsgate, E.C. 2, Major-General G. P. Dawnay, C.B., C.M.G., D.S.O., M.V.O., chairman of the company, presiding.

The chairman said: You will see from the directors' report that the profit for the year covered by these accounts amounted to £15,374, leaving, after provision of £8,077 for income-tax and N.D.C., a balance of £7,297. These figures compare with a profit of £10,960 for the previous year, when, after having credited income-tax recovered from preference dividends, no further provision was required for income-tax and N.D.C. Had preference dividends last year been charged net, as has been done this year, the comparable profit would have been £5,691, so that this year shows an increase of £1,606. This result has enabled us to pay our full preference dividends and to recommend the payment of a dividend of 5 per cent. on the ordinary shares, while still adding very slightly—that is to the extent of about £75—to our carry-forward. In the circumstances, this appears to your board to be a satisfactory result. The factors which I mentioned last year as tending to restrict our revenue-earning capacity, e.g., the ban on new issues, the curtailment of space for company meeting reports and so forth, continued no less in the year under review than in the previous period. On the other hand, we have dealt in these accounts very conservatively with the profits of our subsidiary companies; the results of the current financial year up to date indicate that the period in which we are now embarked should compare not unfavourably with the period covered by these accounts; and the liquid position of the company is, as you will see, satisfactory. In the circumstances, the board has felt justified on this occasion, unlike last year, in recommending the payment of the modest dividend on the ordinary shares to which I have already referred.

It will of course be understood that the present accounts reflect considerable economies, some of them sought by us and some imposed upon us, as for instance by the still further depletion of our staff during the year. This is now at the barest minimum necessary for the maintenance of the quality of our several publications. Those members of the staff who have remained with us have all had to share a greatly increased burden of work, and they have shouldered this burden cheerfully. We are continuing to supplement the pay of those members of the staff who find themselves on active service.

SUBSIDIARY AND ASSOCIATED COMPANIES

During the past year the subsidiary and associated companies have each made profits, and those profits have, as I have already stated, been dealt with conservatively. The parent company has also made a profit in spite of the fact that many of our costs, and especially printing costs, have tended to rise.

There is one point to which I propose to draw attention in connection with the balance-sheet. You will observe that our goodwill and copyrights still stand at the figure of £220,331, while our investments in subsidiary and associated companies stand at £159,159. The board thought it well recently to have an independent report made upon the value of the investments in subsidiary and associated companies. The report rendered to us indicates that the investment in subsidiary and associated companies has an actual value of nearly £72,000 in excess of the value in our balance-sheet. If this valuation be taken as reliable, which the board believe it to be, and if thereto were added the £100,000 reserve account carried in our balance-sheet, you would have £172,000 or thereabouts available to set against the figure of

£220,000 of goodwill. The difference would leave an intangible asset in our balance-sheet of only about £48,000; and the board does not conceive that there would be any difficulty in justifying a figure of that order as the effective goodwill of The Financial News. In making these calculations, you will observe that I have left altogether out of account our carry-forward of £98,729, which will be the figure remaining to the credit of profit and loss account after payment of the ordinary dividend now recommended.

As regards the liquid position, you will see that the present accounts show cash at £19,456 and marketable securities at £42,571, which latter figure has since been increased. I do not wish anything I have said to give the impression that we should look for any considerable increase in profits during the current year. Our business is, and must remain during the war, subject to the same difficulties, restrictions and limitations as those to which we have become accustomed during the past two years. But I think we may say that all our publications have maintained their positions in their respective fields, and that, at the moment at which I speak, they are holding their own, both as regards prestige and financial results.

I have only to add our thanks to our executive and the officials and staff in all departments for their able, loyal and successful work during another war year, and to wish those serving in the Forces a safe return not too long delayed.

The report and accounts were unanimously adopted and a dividend of 5 per cent. on the ordinary shares for the year ended June 30, 1942, was declared.

PENINSULAR AND ORIENTAL
STEAM NAVIGATION
COMPANYSTATEMENT BY MR. A. O. LANG,
DEPUTY CHAIRMAN

The 102nd ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held in London on the 23rd instant.

The following are extracts from the statement previously issued to the stockholders, which was taken as read:—For reasons of security many items in the accounts cannot be explained in detail. It has been considered prudent to add from profits the sum of £100,000 to "Tonnage Replacement Reserve."

Loss of tonnage results in loss of earnings, and until new ships can be built the company's revenues must steadily decrease as Government paper cannot possibly give anything like the same revenue return.

Subsidiaries are also suffering from the same disability, in some cases severely. With this in mind the directors have decided that it would be prudent to write down the holdings and, apart from the allocation from profit and loss account, £400,000 from the company's investment reserve has been utilised for this purpose.

The effect of the loss of tonnage is also prejudicial from an E.P.T. point of view as investments in Government securities are not allowed as capital employed in the business.

Opportunity was taken recently of giving notice of repayment on April 1, 1943, of the 4½ per cent. debenture stock, 1943-72, the amount involved being £53,331,185. Holders of this stock were offered £3,000,000 new 3½ per cent. debenture stock, 1953-73 at 99, redeemable at 101, and this issue has been oversubscribed and will come into being on April 1st next.

It will be appreciated that post-war conditions cannot be forecast with any degree of accuracy, but your Board is constantly considering all likely developments, and it may be that powers will require to be taken to permit of the company engaging in air transport of passengers, mails and freight as complementary to its sea service.

The report and accounts were adopted.

THE INDUSTRIAL CREDIT
COMPANY, LIMITED

STRONG FINANCIAL POSITION

The ninth ordinary general meeting of this company was held, on the 15th instant, in Dublin.

In moving the adoption of the report and accounts the chairman, Mr J. P. Colbert, said: The balance-sheet now in your hands is a sound one, as in the case of all previous balance-sheets, and is, in fact, the strongest balance-sheet which we have hitherto presented. Our investments stand at a very conservative figure in relation to current market values.

Another item in the balance-sheet on which I wish to comment is the figure for "cash in hand and at bankers" (£90,649). This may seem high, but since the date of the balance-sheet the great bulk of this sum has been absorbed into the earning asset of "loans and advances."

The net profit for the year, before charging income-tax and corporation profits tax, is £31,859, as against £50,047 in the previous accounting period. This decline does not connote a diminution in our basic earning capacity, since certain exceptional items contributed to the profits of the previous year.

Deducting the provision for income-tax and corporation profits tax, amounting to £12,182, and adding the balance of undivided profits brought forward from the last account, the total of profits available to be dealt with is £22,404.

In view of the balance-sheet position, and notwithstanding the uncertainty of the outlook, the directors recommend a repetition of last year's dividend of 2½ per cent. on the amount paid up on the shares, subject to tax.

The report and accounts were adopted.

BARCLAYS BANK
(DOMINION, COLONIAL AND
OVERSEAS)ANNUAL MEETING OF
STOCKHOLDERS

The seventeenth ordinary general meeting of stockholders of Barclays Bank (Dominion, Colonial and Overseas) was held, on the 21st instant, at 29 Gracechurch Street, London, E.C.

Sir John Caulcutt, K.C.M.G. (the chairman), who presided, said that he had dealt with the affairs of the bank for the year ended September 30, 1942, in the statement which had been issued with the report and balance-sheet to the stockholders and to the Press, and it would only be necessary, therefore, to deal with the requisite resolutions and any comments which stockholders might desire to make.

The chairman then moved the adoption of the report of the directors and the statement of accounts and the payment of a final dividend of 4 per cent. actual on the 8 per cent. cumulative preference stock and of 3½ per cent. actual on the "A" stock and "B" shares. The motion was seconded by Mr. W. M. Goodenough (deputy-chairman) and carried unanimously.

The retiring directors, Sir Ernest Oppenheimer, the Right Hon. the Earl of Clarendon, K.G., G.C.M.G., G.C.V.O., and Sir John Caulcutt, K.C.M.G., were re-elected.

On the motion of the Right Hon. Lord Ebbisham, G.B.E., seconded by Sir Frank Newson-Smith, Messrs Deloitte, Plender, Griffiths and Co., Price, Waterhouse and Co., Peat, Marwick, Mitchell and Co., and Cooper Brothers and Co. were reappointed auditors. The meeting closed with a vote of thanks to the chairman, directors and staff, and especially to those in the East and in Malta.

FIRST GARDEN CITY
LIMITED

TOWN AND COUNTRY PLANNING

The annual general meeting of First Garden City, Limited, will be held, on the 31st instant, at the Great Northern Hotel, King's Cross, London, N. 1.

The following is an extract from Mr Eric Macfadyen's (the chairman) statement to shareholders issued with the report and accounts:—

The recent publication of the Scott and Uthwatt Reports completes the survey of the problems of land utilisation begun by the Barlow Report, and these three authoritative reviews provide the public generally, for the first time, with authentic material for forming an opinion on the whole question of town and country planning. Since Ebenezer Howard first directed attention to the need of controlling the use of the limited area of the land of the country in the interests of the community it has increasingly been realised that the root of the matter lay in a just solution of the problems of compensation and betterment.

PROBLEMS OF COMPENSATION AND
BETTERMENT

The latest of those three Reports for the first time faces this fundamental question. By owning the freehold of Letchworth and the surrounding farm land our company has been able to reconcile these conflicting interests; and for over 40 years we have been engaged in developing a new town whose social amenities, economic prosperity, and public health and vital statistics entitle us to claim that it constitutes an experiment of unique and far-reaching interest. Not the least interesting feature of that experiment has been that the town has been created by private capital; a pointer to the possibilities of similar development backed by public credit. It is noteworthy that the Hertfordshire County Council, with its experience of Letchworth and Welwyn, should have laid down that Garden City principles should govern future urban development in the county.

URGENCY OF THE ISSUE

Taken in conjunction with the Barlow and Scott Reports, the Uthwatt Report propounds a solution of the underlying problem applicable on a nation-wide scale, and by doing so marks a milestone in the town and country planning movement. The circumstances of today create an unparalleled opportunity for translating theory into practice; it remains now for public opinion to insist upon action. I do not exaggerate in saying that the health, wealth and happiness of Britain for generations to come depend upon this issue being squarely faced today.

The directors recommend the payment of the 5 per cent. dividend which has been customary for so many years.

THE CHARTERED BANK OF INDIA
AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

CAPITAL (PAID-UP) - £3,000,000
RESERVE FUND - £3,000,000

Branches and Agencies throughout INDIA and the EAST
AFFILIATED BANK IN INDIA

THE ALLAHABAD BANK LTD., with 15 Branches & 30 Sub-Agencies
The Bank offers a complete Banking Service and provides exceptional facilities for financing every description of trade with the East.

Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank also undertakes Trusteeships and Executorships.

Head Office: 38, BISHOPSGATE, LONDON, E.C.2

Manchester Branch: 52, MOSLEY STREET
New York Agency: 65, BROADWAY, NEW YORK CITY

WANKIE COLLIERY
COMPANY, LIMITED

LARGER PROFIT

The nineteenth ordinary general meeting of the Wankie Colliery Company, Limited, was held, on the 22nd instant, in London, Sir John R. Chancellor, G.C.M.G., G.C.V.O., D.S.O. (chairman and joint managing director), presiding.

The following is an extract from the statement by the chairman, circulated with the report and accounts:—In accordance with custom, I shall refer to the items appearing in the balance-sheet. Provision for taxation, £302,748, shows an increase of £81,933. This increase is due partly to the larger profit earned during the year, partly to the rate of income-tax payable in Southern Rhodesia having been increased from approximately 7s. 6d. to 9s. 3d. in the £, and partly to the fact that, owing to such increase, the amount reserved for taxation in the previous accounts was under-provided.

Under the heading "profit and loss account the balance at August 31, 1941, was £105,782. After deducting the dividend of 5 per cent. for the year ended August 31, 1941, paid on January 1, 1942, £83,125, there remained £22,657, to which has been added the balance of the profit and loss account for the year ended August 31, 1942, £232,819, making a total of £255,476. From this amount has been deducted £149,500 reserved for taxation, leaving a balance of £105,976, out of which we recommend the payment of a dividend of 5 per cent., which will absorb £83,125, leaving a balance of £22,851 to be carried forward, subject to directors' additional remuneration.

Coal sales amounted to 1,282,939 tons, which shows an increase of 113,205 tons when compared with the previous year. The principal increases were on sales to the railways, Southern Rhodesian customers (mainly the municipalities and Electricity Supply Commission), to the Northern Rhodesia mines and the Congo. Sales of coke also show an increase; the total sales amounted to 83,517 tons, as compared with 75,571 tons last year.

The figures for reserve and development, etc., have again been omitted from our report, but we assure members that the position in regard to these matters is satisfactory. All the machinery and plant and electrical equipment at both collieries have been maintained in satisfactory order. To safeguard the water supply position during times when the Deka River is in flood and when frequent shutting down of the pumps is necessary to prevent excessive wear, a new brick reservoir is being built at No. 1 colliery. It was approaching completion at the end of August. Native labour has been plentiful throughout the year.

The report was unanimously adopted, the retiring director was re-elected, and the auditors having been reappointed the proceedings terminated with a vote of thanks to the chairman and directors.

MALAYAN TIN DREDGING,
LIMITED

The thirty-first annual general meeting of Malayan Tin Dredging, Limited, was held, on the 18th instant, at 73 Cheapside, London, Mr C. V. Stephens, the chairman, presiding.

The following is an extract from the chairman's statement circulated with the report and accounts:—Deducting the loss for the year, £9,396, from the balance brought forward from June, 1941, there is a credit balance on profit and loss account of £56,842. Dividends of 10 per cent. each were paid in September and December, 1941, totalling £40,000, and there remains a balance of £16,842 which the directors recommend should be carried forward to the current year.

The land owned by your company comprises two areas, the home property, of which approximately 700 acres remain to be worked, and the recently acquired Kampong Gajah block of 2,500 acres. The Kampong Gajah block is a most valuable area, the land averaging over 100 feet in depth. Sooner or later we should regain possession of our properties. Their extent should ensure a long and profitable life for the company.

As the damage to the plant was inflicted on official orders I think we may confidently expect that some reasonable measure of Government assistance will be forthcoming.

The report and accounts were adopted.

SOUTHERN MALAYAN TIN
DREDGING, LIMITED

The sixteenth annual general meeting of Southern Malayan Tin Dredging, Limited, was held, on the 18th instant, at 73 Cheapside, London, Mr C. V. Stephens, the chairman, presiding.

The following is an extract from the chairman's statement circulated with the report and accounts:—It will be seen that the accounts represent five months' working only. After writing off as lost stores at mine £75,306, and plant, machinery, buildings and furniture £79,000, the profit as shown in the profit and loss account is £55,266.

Adding the profit for the year, £55,266, to the balance brought forward from the previous year, there is a credit balance of £92,707. Dividends of 10 per cent. each were paid in September and December, 1941, totalling £86,500, and there remains a balance of £6,207, which the directors recommend should be carried forward to the current year.

The strength of the company's financial position is a source of much comfort in the difficult days through which we are passing. The position is due to the policy pursued in past years of providing adequate plant depreciation and of thus being enabled to set aside reasonable sums for the provision of new plant.

The report and accounts were adopted.

THE HONGKONG AND SHANGHAI
BANKING CORPORATION

(Incorporated in the Colony of Hongkong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

Finance

GOVERNMENT RETURNS

For the week ended Dec. 19, 1942, total ordinary revenue was £45,111,000, against ordinary expenditure of £112,723,000, and issues to sinking funds of £315,000. Thus, including sinking fund allocations of £8,722,847, the deficit accrued since April 1st is £2,197,134,000, against £2,179,142,000 for the corresponding period a year ago.

Industrial Finance in War

THE direct intrusion of the Government in the economic life of this country since the beginning of the war has nowhere been more marked than in the sphere of long and short term investment. Yet, it is in this sector that the growth of Government interference in what was previously the domain of private enterprise has attracted least notice. The Government as merchant, industrialist and distributor appears obviously enough in the guise of the Ministry of Supply, the ordnance factories, the Ministry of War Transport. But as investor and banker its activities are not so apparent to the general public. It is none the less true to say that, since the war, the Government has become by far the largest source of long term investment in this country, and that as banker it is beginning to rival in its activities the whole of the commercial banking system.

It is inevitable that this should be so. In the first place, the normal machinery through which the long term capital market functioned before the war was abruptly stopped by the Defence (Finance) Regulations which forbade all issues of capital—whether for short or long term—in excess of £10,000 unless prior permission for the operation had been obtained from the Capital Issues Advisory Committee. The procedure of that committee and the nature of its decisions were from the start based on the principle that the capital market should be maintained as a closed preserve for the insatiable needs of the Government. In consequence, applications for capital issues have only been granted in comparatively few cases. The pre-war new issue mechanism has been put in cold storage for the duration. Even if it had been allowed to continue functioning, it is most improbable that it could have satisfied more than a negligible fraction of the demand for new fixed capital financing which was caused by the war. War industry hardly represents the risks which the private investor can be asked to underwrite. Much of it, in any case, consists of enterprises directly and wholly owned by the Government as, for example, the ordnance factories. For the rest, the vast conversion of peacetime to wartime industry must involve extensions of plant and equipment of which the post-war utility and value must be highly problematical. Moreover, the total volume of long-term financing involved by the sudden expansion of war industry was too large to have been handled by the normal machinery of the capital market. The conversion has, in addition, involved a large number of small firms whose size, record and paucity of resources would have effectively barred their way to the new issue market. From the start it was evident that the only solution to the problem would be for the Government to come to the rescue. In framing its industrial war plans,

it had to initiate investment. By its tap issues of securities to the public, it acted as the channel between national savings and the direct investment of part of those savings in the industrial war effort.

This position was immediately recognised in the matter of the provision of long-term capital. The need for immediate Government intervention in this direction was enhanced by the raising of Excess Profits Tax to an effective rate of 100 per cent. This tax has encroached on current profits which have in the past been the main source for financing plant extensions, renovation of machinery and other development. Many firms involved in the war effort were in the depressed engineering group before the war and thus entered upon their period of wartime activity with exceptionally low EPT standards. Their tax burden is now so heavy as to leave next to no room for the remuneration of the capital employed or for financing plant extension. Other firms have been much more fortunate in this respect, and many concerns previously engaged in the more sheltered but, in time of war, inessential section of industry, which are now engaged in armaments work, find themselves with EPT standards which leave them with a fair margin of resources wherewith to meet the demands of capital development. But, even in such cases, it would be unreasonable to expect these firms to finance, at their own cost, permanent extensions whose peacetime value would be more than questionable.

Therefore, when a firm is called upon to erect additional plant and instal new machinery in order to enable it to meet the demands made upon it by one or other of the supply departments and when the extension in question is likely to have little post-war value for the firm, the Ministry concerned is prepared to build the factory, supply the machinery or provide the resources with which these capital extensions can be financed. The greater part of this kind of investment since the war has been done by the Ministry of Supply, but the Ministry of Aircraft Production and the Admiralty have also done their share. In such cases, the department concerned will keep the ownership of the plant. It will charge rent to the operating firm, calculating it as an element in determining the cost of the goods manufactured for the department. If the firm in question manufactures for private customers as well as for the Government, the rent for the Government owned plant will more easily be discharged by direct monetary payments; thus the complicated calculation of the proportion of the plant that is being used for Government purposes is avoided. In many cases the cost of financing such capital extensions will be shared between the firm and the Ministry. The shares borne by each will obviously be limited by the resources

which the private concern has at its disposal; but, within this limit, they will, as far as possible, be determined by the prospective post-war value of the extension.

Thus, the arrangements for Government financing of fixed capital development by firms working wholly or partly on Government orders are extremely elastic and have, in fact, assumed an infinite variety of form. One feature which is common to nearly all these arrangements is that they grant the private firm an option to acquire the new plant and machinery at the end of the war. Wherever the Ministry of Supply has had to plan a production programme—starting from zero—involving perhaps a large number of contractors whose activities had to be co-ordinated and dovetailed to a fine degree of precision, the initiative and power of direction provided by the department's provision of fixed capital—in the shape of actual plant and machinery—have proved of the greatest value. This section of the Government's capitalistic activities has given very little cause for complaint. From the very beginning of the war, the urgent need for Government intervention of this kind was too obvious to be disregarded, and the machinery has functioned fairly smoothly almost from the start.

It is in the financing of the short-term credit needs of industry that friction has been most apparent. This fact may seem highly paradoxical. Unlike the new issue market, the banking system which provides for industry's working capital was not put out of commission by the Defence Regulations. Moreover, from the beginning of the war, the credit policy of the authorities was so framed as to give the banks an ample basis of cash on which to extend credit to the industries called upon to expand their activities in the course of their participation in the war effort. The authorities evidently argued on these lines, and consequently assumed that there would be no need for special Government intervention in the provision of war industry's needs of working capital. Yet many of the difficulties which stood in the way of the private financing of war industry's fixed capital requirements after the outbreak of the war were equally applicable to the extension of private banking credit to industry. Many of the firms caught up in the war effort were small, and their capital resources hardly entitled them to the volume of credit which they required under the new conditions. Even large firms found themselves desperately pressed for working capital, for it must not be forgotten that, in the early months of war, the supply departments had only the most rudimentary machinery for effecting payments to contractors. Inordinate delays in these payments were the rule rather than the exception, and the firms concerned, called upon to expand their output, to increase their stocks of raw materials, to increase their pay roll and yet deprived for abnormal periods of payment for the goods they supplied to the departments for which they worked, were compelled to ask their banks for accommodation on a scale out of all proportion to their own resources and to the security they could make available as collateral.

The banks did their best to cope with this inordinate expansion in the demand for credit from a specialised sector of their clientele. They relaxed their customary standards of credit worthiness, but, even so, large sectors of war industry found themselves hampered at every turn

by shortage of working capital in the first months of war. The position became steadily more difficult as the extensions of fixed capital financed by the Governments found their echo in a corresponding increase in industrial turnover, and therefore in the need for working capital. The banks extended their facilities, first, against the mere knowledge that the borrowing firms were working on Government contracts, then against progress certificates issued to these firms by ministry inspectors. After six months of war had passed, co-ordinating machinery was set up between the supply departments and the banks. Liaison officers were exchanged, and provided a valuable channel for exchange of information and for the passing on of complaints by industry regarding inadequacy of working capital. But by the very nature of this machinery it could not tackle more than a fraction of the problem. The whole range of sub-contracting work was left largely outside its scope.

Gradually, there evolved the system of progress payments which is now the main channel through which flow the supplies of working capital required by war industry. Under this system, it is in effect the Ministry concerned which becomes banker. Under its contracts, the Ministry of Supply undertakes to pay up to 90 per cent of the total expenditure incurred by the contractor in monthly instalments. One of the conditions to be fulfilled before these periodic payments are made is a certified assurance that all charges for materials and for subcontracted work are being duly met. Thus, the progress payments made by the Ministry are the flow of credit out of which, not merely the contractors, but also the whole range of sub-contractors are financed. The extension of this system has naturally limited the role of the banks in financing the vast volume of war production. In large measure their task is now to tide firms over the comparatively small periods bridging the progress payments. It is in this fact that must be found the explanation of the surprisingly sharp fall in bank loans and advances since the beginning of the war. At first that movement was to be interpreted in terms of the temporary seizing up of the machine for the distribution of credit to war industries. Beyond that it was intensified by the inevitable restriction of civilian and inessential industries, by the running down of stocks, and by the repayment of personal loans. But, had it not been for progress payments, a point would long ago have been reached at which the increased industrial turnover for which working capital must be found would have more than neutralised the many factors making for a contraction in the demand for bank credit, and the total of these advances would have recovered the ground lost in the first year of war.

Nor has it only been a question of money credit. Working capital has been granted by Government departments on "real" terms comparable to those on which fixed capital is provided. It has become a general practice for the departments concerned to make "free issues" of materials and components to the firms working for them. To this extent these firms are not called upon to finance their purchases of raw materials and the stocks which they normally maintain. The repayment of these free issue loans is effected through the appropriate adjustment of the price of the manufactured articles delivered to the departments.

The Diversion of Bank Deposits

A REVIEW of the banking year which ended on June 30th this year falls naturally into two parts. The first six months, up to December 31, 1941, saw bank credit still expanding at the steady pace maintained since the outbreak of the war. In the subsequent six months, the curve measuring the growth of bank credit suddenly flattened out. During the first of these periods, the total deposits of the London clearing banks rose from £2,946 millions to £3,329 millions. By June 30th the total had fallen back to £3,263 millions and in the interim had

touched a low point of £3,072 millions in March. The only causal factor in the growth of bank credit since the outbreak of war has been the covering of the budgetary deficit by borrowing which, directly or indirectly, has been provided by the banking system. It would, therefore, seem reasonable to look for the explanation of the changed trend of bank credit in a reduction in the deficit to be financed. But the facts do not support this assumption. The explanation must rather be sought in a redistribution in the sources of Treasury borrowing and, in particular,

in the issue of tax reserve certificates. The issue of these certificates began in December last year and this development thus serves as an exact dividing line between the two phases of bank credit history in 1941-42.

Tax reserve certificates are by their nature intended to attract funds which, but for them, would have been left on deposit with banks in anticipation of future tax payments. Up to June 30th this year £282 millions of these certificates had been taken up by the public. If this total is added to the total of bank deposits on June 30th, the resulting figure would indicate an expansion in deposits over the second six-monthly period of 1941-42 approaching the increase which took place in the first six-monthly period, that is, in the second half of 1941. If this diversion of bank deposits into tax reserve certificates is allowed for, it is possible to say that in spite of the flattening in the curve of bank credit during the six months to June 30th, the forces making for credit expansion continued to operate with almost unabated strength.

It would be wrong, however, to push this relationship between bank deposits and the issue of tax reserve certificates too far. Tax reserve certificates are issued on terms so favourable to certain classes of subscribers that they so attract not only funds which would otherwise have piled up as bank deposits, but also substantial amounts which would have been invested in short to medium-term Government securities. Given the special conditions attaching to the encashment of tax reserve certificates, the total maximum amount outstanding at any particular time must be related to the tax liabilities which these securities are intended to meet. But that maximum is probably well in excess of the amount which the taxpayers in question would actually have immobilised in their bank accounts in anticipation of the incidence of these tax liabilities. This is because the tax-free accumulation of interest on the certificates and the exclusion of that interest from profits assessable for EPT make the gross yield on the certificates exceptionally attractive to payers of EPT or

surtax, and correspondingly onerous to the Treasury.

It is likely that, during the first six months of issue, these tax reserve certificates fully absorbed the bank deposits held in anticipation of tax payments. This means that any further increase in the outstanding amount of tax reserve certificates will, in the main, indicate a diversion to these certificates, not of bank deposits, but of funds which otherwise would have gone into the more liquid but less attractive Government securities. It also means that, for all practical purposes, the movements in bank deposits from June 30, 1942, onwards can again be viewed independently of the tax reserve certificate factor. The only reservation that should be made is that, so far as the corpus of income assessable to tax—and in particular to EPT and surtax—fluctuates, it may be assumed that accompanying variations in the subscriptions to tax reserve certificates will reflect what would otherwise have been changes in the taxpayers' holdings of bank deposits. The bearing of this particular factor in the future may, however, be regarded as of minor importance.

The type of deposit withdrawn from the banks in order to take up tax reserve certificates is such that the banks would be fully justified in balancing a substantial part of this movement by allowing liquid assets to run off. This is what has, in fact, occurred. The clearing banks' ratio of liquid assets (cash, short loans, bills and TDR's) to deposits, which stood at 38.4 per cent on June 30, 1941, and had risen to the inordinately high level of 43.1 per cent by the end of the year, was down to 40.9 per cent by June 30th this year. These figures are appreciably above the normal pre-war ratio. The justification for this must be found, not so much in a change in the character of deposits calling for greater liquidity, but rather in the understandable reluctance of the banking system to plunge more deeply into longer term Government securities than they have already had to do. With advances falling steadily—a movement com-

mented on in the preceding article—investments have been the only alternative method of employing the banks' expanding resources, other than running up more liquid, but far less remunerative, assets. It is true that on June 30th this year current accounts represented as much as 66 per cent of the clearing banks' total deposits compared with an average of 56 per cent for the year 1939. But this alone would not have justified more than a small fraction of the increased liquidity in the distribution of the banks' assets.

The growth in the banks' investments has thus been guided by considerations other than regard for the normal distribution of assets between liquid and other items. The main consideration was probably that of securing reasonable stability of earning power. It is unlikely that, in the long run, the banks' investment policy will be appreciably affected by the change in the national saving movements technique announced towards the middle of this year. The essence of this change is that large institutional subscriptions to Government issues, such as those from banks and insurance companies, are no longer classed for inclusion among the current savings figures under special schemes sponsored by the National Savings Committee. This means that the banks will no longer be badgered and bullied into supporting local "warships" or similar weeks. But it is more than questionable whether this "bullying" had any permanent impact on investment decisions. It merely tended to anticipate or postpone purchases of securities so as to make them fall in the particular week for which the banks' support was sought. It is certainly significant that, in July this year, the first month after the announcement of the change in question, the clearing banks should have shown the biggest jump in investments recorded since London's Warships Week.

Perhaps the most interesting of the changes in bank assets during the past twelve months have been the wide and, on occasion, contrasting fluctuations in bills and Treasury deposit receipts. The holding of bills rose from £193 millions on June 30, 1941, to £292 millions on June 30, 1942. But, in the intervening period, they had risen as high as £315 millions in September, 1941, and fallen as low as £111 millions in February, 1942. The unprecedentedly steep running down in the bill portfolio which occurred in the final quarter of last year was accompanied by an even larger increase in the holding of TDR's. These movements illustrate a certain clash between the Treasury's floating debt policy and the banks' policy of assets distribution. From the Treasury's point of view

it is in the Treasury deposit receipt that the truly live and elastic element in floating debt borrowing is now to be found. But, to the banks, elasticity is not the foremost quality that can be claimed for this new type of liquid asset. It can, it is true, be encashed, but only against the banks' or their customers' subscriptions to one of the tap issues of Government securities. This encashment cannot, therefore, be used to restore an endangered cash position. The unconditional rediscounting of TDR's at the Bank of England would be too expensive, and perhaps too undignified, a procedure to commend itself to the banks, except on very abnormal occasions. It follows, therefore, that it is by varying their short loans and, more particularly, their holdings of bills, that the banks tend to stabilise their cash position. Discount operations now consist almost wholly of Treasury bills. The weekly issue of Treasury bills is more or less fixed at £75 millions, and the proportion going to the market has for the past year proved comparatively stable. It follows, therefore, that the discount market has had to meet the impact of very considerable fluctuations in the banks' demand for bills while receiving a fairly steady stream of bills from the weekly tenders. There is no evidence to suggest that these fluctuations in the market's main outlet for bills have been compensated by corresponding changes in the volume of bills held by the market. If that had been the case the banks' short loans to the market would have reflected these variations—since the discount market now runs the bulk of its bill holding with clearing bank loans, just as it runs the bulk of its bond holdings with non-clearing bank money. But the total of short loans of the clearing banks has only varied within small limits over the twelve months in question. On June 30, 1941, it stood at £143 millions; it had fallen to £118 millions in January, 1942, and had recovered to £147 millions on June 30th last. In fact, short loans were falling, and not rising, at the time when the decline in the banks' bill holding was at its steepest. The answer to the paradox is provided by the activities of the authorities in the discount market. It was either the Bank of England or the public departments, acting through the official agents, who took from the market the Treasury bills which the houses concerned could not sell to the clearing banks. In addition it may well have been direct official purchases of bills from the clearing banks which were in part responsible for the exceptionally steep fall in the banks' bill holding between September, 1941, and February, 1942. Conversely, official direct sales may have played some part in the subsequent recovery.

Soviet Banking

THE rôle of banking within the framework of the Soviet economy has been greatly reduced by the course of the war. The most important functions of the Soviet system of credit have been largely brought to a standstill and the position in banking is now in many respects the same as it was in the early period of the Soviet regime. Figures relating to banking operations were very rarely published even in peacetime, and they have been unavailable since the outbreak of war. But the briefest consideration of the rôle of credit in the planned economy of Russia shows at once that the war must have relegated the whole of the banking apparatus to the background.

The chief feature of Soviet war finance is the absence of any financial technique in the accepted meaning of the word. All the industrial resources of the country are owned by the State. The Government's command over raw materials, machinery and labour is almost unlimited. War industries work on the basis of governmental orders and allocations. No acts of purchase enter at any stage of the process, except in agriculture. The whole of the country's industry forms, to all intents and purposes, one huge combine under a single command; the various

branches of industry are simply interdependent departments of that combine. Masses of raw materials, semi-manufactured products, manufactured goods and labour are shifted from one department to another without any change of ownership. Where there are no acts of purchase, there should be no need to acquire purchasing power in any form, and particularly in the form of credit.

In theory, the position was the same in peacetime. This gave rise to the notion of a moneyless economy, in which there should be no room left for banking operations. Planning and the direct allocation of goods to trusts, factories and individuals, has, in theory remained the ultimate goal towards which the economic life of the Soviets is supposed to be steadily developing. But, in peacetime, the gap between theory and practice was very wide. Money "withered away" only to a limited extent; and, before the war, credit operations were still carried out on a large scale. But the functions of the Soviet system of credit were very different from those performed by banking in the rest of the world. Credit was used, first, as a means of securing the proper proportion between investments in various branches of the

national economy; secondly, it was used as a means of controlling the productive efficiency of industrial establishments.

During the early period of planned industrialisation (up to 1932), there was a general scramble for raw materials and machinery between the managements of various industries. Over-investment in capital goods, the accumulation of unduly large stocks and consequently enormous immobilisation of working capital occurred in some branches of industry, while in others plans were obstructed by inadequate supplies of machinery and raw materials. Towards the end of the first Five Year Plan, the structure of the planned economy was threatened with disruption. A thorough-going reform of industrial accountancy and credit provided the remedy. Individual establishments, as well as trusts, were compelled to work on the basis of a profit and loss account. Credit facilities were strictly limited. The banks were forbidden to give any short-term credits in which a monopoly was given to the Gosbank (the Central State Bank). The other state banks were allotted special spheres of long-term credit. The Prombank (Bank for Industry) specialised in financing industrial investment in capital goods. The Selkhozbank (Bank for Agriculture) performed the same function in agriculture; the Co-operative Bank supplied long-term credit to the network of co-operative retail shops; and the Communal Bank provided the means for investment in public utilities. All these banks derived their funds from their customers' compulsory deposits and from budgetary grants. They were all, in their turn, obliged to keep balances with the Central Bank, which thus possessed complete control over the country's industrial activities. The Gosbank worked in close contact with the Gosplan, the State Planning Committee, and subordinated credit policy to the requirements of the general economic plan. Thus, during the second and third Five Year Plans, a better equilibrium between investment in various industrial branches was secured.

The anxiety to maintain the right proportions between various productive branches has, of necessity, enormously diminished since the war. So has the rôle of credit which was mainly a means of maintaining these proportions. The loss of raw materials and manufacturing capacity, as well as the evacuation of industries, has caused such tremendous dislocations that all previous proportions have been utterly upset. Even the factories established in the eastern reception areas before the war could hardly stick to any normal business standards; they have had to share their stocks of raw materials, their machinery and labour with the evacuated units. The main preoccupation has been to squeeze out the maximum of war implements from every plant within the shortest possible time by

every *ad hoc* means. Inhibitions of a financial nature would only cause undue delays in production and supply. The Soviet press has, in fact, reported cases in which industrial managers were reluctant to share their raw materials or machinery with evacuated plants; they were apparently afraid of transgressing upon the peacetime conditions of finance and credit—credit between various industrial establishments was then strictly forbidden. But such inhibitions have been overcome by the all-round militarisation of industry, by the direct pooling and allocation of resources and so forth.

The Prombank used to provide long-term money mainly through trusts which distributed it among individual establishments. But the structure of most of the trusts has been disrupted in the course of the war. Evacuated plants had to improvise new business links with new concerns, paying no heed to any money or credit aspects of their work. The Bank for Agriculture has actually lost its *raison d'être*, since no long-term investment in agriculture can possibly have been made. The same applies to the Co-operative Bank and to the Communal Bank. The demand for short-term credit, on the other hand, must have grown considerably. The wages bill of the eastern industries must have grown, as a result of the industrial evacuation, beyond their normal cash and credit reserves. It is possible, therefore, that the above-mentioned banks have had to switch over from long-term to short-term credit and to intervene in fields from which they were barred before the war. But the main pressure has almost certainly been brought to bear on the Gosbank, which specialised in short-term credit previously.

The only type of Soviet bank which has been able to work along more or less peacetime lines is the Savings Bank, although most of the sixty thousand local branches of the savings banks lay in the German occupied territories. It is said that during the first half of 1942 saving deposits grew by one milliard roubles, presumably after a substantial withdrawal of deposits during the second half of 1941. The savings banks have been instrumental in distributing the war lottery tickets and the war loan among their customers.

It seems feasible that, in spite of the abnormal conditions, no big increase in currency in circulation has taken place. The supply of raw materials and machinery has required hardly any outlay in money. The increase in currency, stimulated by a higher wages bill, has probably been to a large extent offset by the organisation of communal feeding inside the factories. The workers spend most of their wages at the shops or canteens of the Workers' Supply Departments, which are themselves parts of the factories. Thus, much of the money laid out in payment of wages returns, via the Supply Depart-

ments, directly to the factory's cashier, who can use it again to cover the next wages bill. Moreover, inflation of prices resulting from a scarcity of goods rather than from an expansion in the currency can affect only the prices of foodstuffs in the limited private sector of retail trade. It should be remembered that Russia possesses a large

New Era in US Banking

(From Our New York Correspondent)

THE year just ended was a transitional one in American banking. It saw the termination of one major episode in the nation's financial history and the beginning of what is clearly destined to be a vastly different one.

With the depletion of British gold reserves, the passage of the Lend-Lease Act and the general freezing of foreign funds the gold movement began to slow down in 1941. The total of gold imports last year is not known, since the figures are no longer made public. It is known, however, that the nation's monetary gold stocks, which had risen by \$4,351 millions in 1940, increased by only \$742 millions in 1941; that in the second half of that year the increase was less than \$162 millions; and that in the eight months period November, 1941-June, 1942, there was an actual net decrease of \$63 millions.

But while the gold inflow did not subside to anything like normal proportions until the latter half of 1941, and did not come to a full standstill until the first half of 1942, the long period of almost uninterruptedly expanding excess reserves may be said to have ended in the week of October 23, 1940, when the high-water mark of surplus reserves, \$6,940 millions, was reported (though this figure was virtually repeated as late as January 15, 1941). The reason for this is that countervailing factors had been operative in the money market for some time, and that it was at the close of 1940 and the beginning of 1941 that these finally gained the upper hand over the dwindling gold movement as the dominant influence in the banking situation. These factors were deposits and currency circulation, both of which were, and are, expanding rapidly under the influence of the war effort. Roughly speaking, every increase of \$5 millions in deposits reduces

gold reserve, since the output of gold has been greatly increased in recent years. But the reserve has not been used as cover for the rouble; it has rather been accumulated as a sort of a war treasure. Both its size and the use to which it has been put are, however, a closely guarded secret.

excess reserves by \$1 million, while currency expansion produces a dollar-for-dollar contraction.

Demand deposits of the reporting member banks of the Reserve system (which represent about 70 per cent of the total of all member banks and 60 per cent of member and non-member banks combined) have expanded by almost \$5 billions in the two-year period, June, 1940-June, 1942. At the same time currency in circulation has been increasing at an unprecedented rate, rising from \$7,780 millions at the end of June two years ago, when the all-out defence effort began, to \$12,231 millions on the corresponding date this year. This two-year increase is only \$185 millions less than the entire currency circulation in the middle of prosperous 1929. Even during the banking moratorium in 1933, when the country was for a time on a hand-to-hand currency basis, circulation never rose above \$7,538 millions.

An interesting point to be observed in connection with the rise in bank deposits is that, whereas they had for some time past been outrunning loans and investments, the reverse is now true. This is because the causal factor behind their expansion to-day is to be found in loans and investments, rather than gold imports, as had been the case earlier. The rise in these combined items between June, 1940, and the middle of this year, as shown in the figures of the reporting member banks, was \$8,006 millions. In the first twelve months of the defence effort loans accounted for 40 per cent of this expansion; but, as the Government took over more and more of the financing of the war, they rapidly receded in importance. The expansion of loans came to an end, for the time being at least, in the week of March 18th of this year at \$11,446 millions. The end of June found them standing at \$10,718 millions. Meanwhile, purchases of Government securities have continued to rise rapidly. In the twelve months ended June 24th last, holdings of the reporting member banks increased by more than \$3 billions.

The net result of all these factors has been a spectacular reversal in the trend of excess bank reserves. As has been noted above, this item reached its peak between October, 1940, and January, 1941, when it ranged around the \$6,900 millions level. By June 25, 1941, it had fallen to \$5,150 millions and by June 24th of this year to \$2,650 millions. This is a contraction of \$4,290 millions, or 62 per cent, in approximately a year and a half.

Measured by the standards of any period but that of the last half-dozen years, this would still represent a very handsome over-supply of banking funds. But there are two circumstances which make the situation unusual. One is that the decline in reserves has been accentuated by the fact that the fall in New York City, the country's chief money market, has been disproportionately large. The other is that this declining trend comes at a time when the money market is faced with the greatest credit expansion in its history. Whereas excess reserves for the country as a whole had fallen, at the end of June, by 62 per cent, those for the New York banks alone had fallen from \$3,675 millions to \$485 millions, or 86 per cent. (They touched \$190 millions on July 15th.) The principal reasons why the New York banks have been hardest hit are two. One is that they have suffered more than other banks from the halting of the gold movement since they are the principal dealers in gold internationally. The other is that, in the course of the war effort, a substantial portion of

the money raised there by the Treasury is disbursed in other sections of the country.

The problem that the banking system faces during the coming year in underwriting the war effort can be summed up in a few figures. Government expenditures for the fiscal year ending June 30th next are estimated at \$73,141 millions. Of this total, \$47,397 millions will have to be publicly financed, and roughly \$30,000 millions of that will have to be financed through the banks. That is to say, the banks will be called upon to absorb \$30,000 millions of Government paper. This means that—again speaking in general terms—even if there should be no further drain on excess reserves through loans and currency expansion, the banks face a deposit increase in the current fiscal year of \$30,000 millions. This would call for an increase in reserves of about \$6,000 millions on top of the existing \$2,650 millions.

Other Investments	1,402	1,455	1,303
Demand Deposits	10,986	10,164	10,620

The three main possible approaches to the problem are (1) open market operations by the Federal Reserve banks, (2) easing the reserve position of the member banks by lowering the percentage of reserves required against deposits, and (3) borrowing by the member banks at the Reserve institutions. (The Reserve banks hold the bulk of the country's huge monetary gold stock, or claims upon it, and they could use this as a reserve sufficient to meet any need within the realm of probability.) The banking authorities have already begun to move on the problem. In the first place they have acted to increase the supply of short-term highly liquid investment that can be converted into cash quickly and without loss, thus enabling the banks to adjust their positions quickly and to make fuller use of their funds. The Treasury has increased its weekly bill offerings from \$150 millions to \$350 millions weekly and has sold approximately \$3,100 millions in certificates of indebtedness in recent months. Supplementing this move, the Federal Reserve has committed itself to buying all bills offered at a discount of $\frac{1}{8}$ per cent. In the second place, the Reserve has indulged in open market operations designed to offset losses in excess reserves resulting from increases in currency and other factors. Between April 8th and June 24th of this year it had increased its

BOMBAY BRANCHES:
Bullion Exchange, Colaba, Kalbadevi and Malabar Hill.

OTHER BRANCHES:
Ahmedabad (Bhadra Office), Ahmedabad (Station Branch), Ahmedabad (Ellis Bridge), Andheri (near Bombay), Bandra (near Bombay), Calcutta (Clive Street, Main Office), Calcutta (Bara Bazar), Calcutta (Chowringhee Square), Jamshedpur, Karachi, Nagpur (Kingsway), Nagpur (Itwari Bazar), Poona, Poona City, Rajkot, Surat.

LONDON AGENTS:
The Westminster Bank Ltd.

DIRECTORS:
Sir Chunilal V. Mehta, K.C.S.I. (Chairman)
Mr. Ambalal Sarabhai
Sir Joseph Kay, Kt.
Mr. A. G. G. G. G.
Sir Cowasjee Jehangir, Baronet, K.C.I.E., O.B.E.
Mr. Dinsha K. Daji
Mr. Ramjiwasi Ramarath
Manager: Sir Alexander Gray, Kt.

Current Deposit Accounts.—Interest is allowed on daily balances from Rs. 500 to Rs. 1,00,000 at $\frac{1}{2}$ per cent. per annum. Interest on balances in excess of Rs. 1,00,000 allowed only by special arrangement. No credit will be given for interest amounting to less than Rs. 5 per half year.

Fixed Deposits.—Deposits are received fixed for one year or for shorter periods at rates of interest which can be ascertained on application.

Savings Bank.—Accounts opened on favourable terms. Rules on application.

The Bank acts as Executor and Trustee under Will and Settlements and undertakes Trustee Business generally. General Banking Business transacted.

NETHERLANDS BANK OF SOUTH AFRICA

(Incorporated with limited liability under the laws of the Netherlands operating temporarily from Pretoria.)

holdings of Government securities by \$339 millions, and further purchases since then have raised the total to \$1,059 millions, giving the Reserve banks holdings of \$3,298 millions, the largest total in their history. Finally, there has just been passed by Congress and signed by the President (July 7th) a measure sponsored by the Reserve

The Defence of the Pound

THREE years of war have witnessed the gradual evolution of the highly efficient machine which at present controls the foreign exchanges. The outbreak of war found the British Treasury prepared with plans to build up a financial front in defence of the pound, and all dealings in the principal foreign currencies were centralised at the Bank of England. But the task of defending the pound could not be confined to sterling, and the Treasury's plans were framed to include the currencies of the Dominions and Colonies, with the exception of Canada, Newfoundland and Hongkong. Thus, the sterling area was constituted, within which the freedom of exchange was to continue unchanged. To synchronise and co-ordinate exchange regulations between these wide and diversified territories and the outside world was a vast undertaking requiring delicate negotiations and calling for a high degree of skill and co-operation. It took bankers, merchants and others some time to adapt themselves to the new procedures imposed upon them by the Defence (Finance) Regulations. But the early part of 1940 saw the original blue print working tolerably well.

Meanwhile, certain weaknesses had become apparent, one of which had caused sterling to be quoted at a discount in various foreign countries. To correct this, and also further to facilitate payments between the sterling area and the outside world, financial agreements were negotiated with individual countries. Accordingly, there followed the system of Registered Accounts with the United States dollar area and Switzerland, and Special Accounts with most of the remaining countries outside the sterling area. With very few exceptions, a common feature of these arrangements was that payments were restricted bilaterally between the sterling area and the respective Registered Account or Special Account country. Another weakness centred on the problem of securing the full proceeds of exports, for although the original regulations ordered residents to surrender to the Treasury the specified currencies in their possession, it was found in practice that the regulations, as framed, did not cover fully the various methods of receiving payment open to exporters. Therefore, in March, 1940, the regulations were tightened up, and a new procedure was introduced which stipulated definite methods of payment in the "hard" currencies against the export to specified destinations of whisky, furs, tin, rubber, diamonds and jute, in which commodities the sterling area was then in a favourable position as a world supplier. Similar arrangements were also applied by the Dominion and Colonial Controls concerned with the export of these commodities. Subsequently, the basis of this procedure was adapted and enlarged to cover the proceeds of all exports to the Registered and Special Account countries and also to Canada and Newfoundland, and the specified methods of payment were made to dovetail into the relative payment agreements of the country concerned. As the Special Account arrangements were extended until they covered most of the trading world, so were the proceeds of exports further netted to add to the pool of exchange required to help pay for the imports necessary to the war effort.

The Registered and Special Account procedures could not conveniently be applied to the many individual non-residents who, for various reasons, maintained banking accounts in the sterling area; in most instances, therefore, they were given the option of maintaining Sterling Area Accounts. These accounts could be fed with funds accruing to them from the sterling area in the form of

Board and the Treasury which authorises the former to reduce reserve requirements in the central reserve cities without necessarily changing the requirements of the rest of the country. The effect of this will be to give the Reserve authorities the power to apply relief where and when it is most urgently needed.

salaries, pensions, dividends, rents and similar items of an income nature. On the other hand, out of these accounts they were permitted, within the sterling area, to make payments in respect of insurance premiums, payments to dependants, school fees, charitable donations and similar outgoings. The Sterling Area Account was, therefore, a brief title for the Internal Account of a Non-Resident. Credit balances on these accounts, however, are normally available for transfer to the holders in the countries of their domicile.

Another step taken in defence of the pound led to restrictions being placed on capital transfers in favour of non-residents. Already in May, 1940, sales of securities belonging to non-residents were prohibited, and in November, 1940, all forms of capital repatriation were disallowed, except proceeds arising from the sale of National Savings Certificates, 3 per cent Defence Bonds and Treasury Bill maturities. Thereafter, all other items of a capital nature could only be credited to a Blocked Sterling Account, but balances on these accounts were available for investment in a specified list of British Government securities, and the payment of the interest accruing on these securities was permitted to the non-resident in the country of his domicile. With the conclusion of the blocked sterling arrangements the end of 1940 saw the structure of the British exchange control system completed.

During 1941, financial agreements with thirteen Central American countries were concluded whereby they were treated as a group in respect of exchange transactions with the sterling area. These arrangements brought into being another new type of sterling account called Central American Accounts. Otherwise, there are no further major additions to the regulations to record, and such subsequent changes as have been enacted have been in the nature of amendments and clarifications which the light of experience and changing circumstances have found necessary. Another and welcome improvement in the organisation was the codification, in some instances, of the many instructions which had accumulated in the hands of bankers. The various types of application forms have also been reduced in number by the introduction of composite forms.

An altogether different but important feature, particularly noticeable to bankers, has been the reduced turnover of exchange. This was partly the result of the German occupation of Europe and Japan's conquests in the Far East; but by far the most significant factor, which especially affected payments for imports, was the passing of the Lend-Lease Act. Similarly, Canada's generous gift of \$1,000 millions and other financial assistance led to a reduction in the demand for Canadian dollars.

All exchange forms with their detailed information eventually return to rest at the Bank of England, and if a movement of goods is concerned a duplicate goes to the Customs authorities. It is known that very elaborate statistics are compiled from these forms, which, together with the many detailed returns rendered by the banks, should provide the authorities with useful data and vital information on the exchange aspect of wartime economy. This knowledge is essential in the tailoring of the economic straitjacket necessitated by war, and the experience gained may serve as a guide for the post-war future, when it appears to be generally admitted that controlled exchanges in some shape or form must inevitably continue for a time.

A COMPLETE BANKING SERVICE

Through its widespread organisation
and connections, Barclays Bank offers
the fullest possible facilities for the
transaction of every kind of Banking
Business, either at home or abroad.

Executor and Trustee
Business transacted.

ASSOCIATED COMPANIES:

BARCLAYS BANK (DOMINION, COLONIAL AND
OVERSEAS).

BARCLAYS BANK (CANADA).

BARCLAYS TRUST COMPANY OF CANADA.

THE BRITISH LINEN BANK.

More than a century's accumulated
business experience and conservative
progress form the background of
the comprehensive service which the
Westminster Bank is able to place at
its customers' disposal.

The Bank's vast resources, its con-
stant touch with current affairs and
its extensive system of branch offices
in England and Wales and agents
elsewhere, combine to enable it to
offer a wide range of facilities, de-
tails of which will gladly be given on
request by the manager of any branch.
